About This Bulletin

The *Undergraduate Bulletin* is the catalog of undergraduate courses and degrees of Washington University in St. Louis. The catalog includes programs, degree requirements, courses that may be offered and course descriptions, pertinent university policies, and faculty for students earning a degree through one of the four undergraduate schools: College of Arts & Sciences; Olin Business School; Sam Fox School of Design & Visual Arts (College of Architecture, College of Art); and McKelvey School of Engineering.

The *School of Continuing & Professional Studies Bulletin* is the catalog of the School of Continuing & Professional Studies (CAPS), the professional and continuing education division at Washington University in St. Louis. The catalog includes programs, degree requirements, course descriptions, and pertinent university policies for students earning a degree through CAPS.

The *2025-26 Bulletin* is entirely online but may be downloaded in PDF format for printing. Individual pages as well as information from individual tabs may be downloaded in PDF format using the PDF icon in the top right corner of each page. To download the full PDF, please choose from the following:

- Undergraduate Bulletin (PDF)
- School of Continuing & Professional Studies (undergraduate & graduate) (PDF)

The degree requirements and policies listed in the *2025-26 Bulletin* apply to students entering Washington University during the 2025-26 academic year. For more information, please visit the Catalog Editions page.

Every effort is made to ensure that the information, applicable key policies, and other materials presented in the *Bulletin* are accurate and correct as of the date of publication (July 1, 2025). To view a list of changes that have taken place after that date, visit the Program & Policy Updates page. Please note that the *Bulletin* highlights key university policies applicable to its students. Not all applicable university and departmental policies are included here.

Washington University reserves the right to make changes at any time without prior notice to the *Bulletin* and to university policies. Therefore, the electronic version of the *Bulletin* as published online is considered the official, governing document, and it may change from time to time without notice.

The next edition of the *Bulletin* will be published on July 1, 2026. Midyear changes to current courses (titles, descriptions, and credit units) are not reflected in this *Bulletin.* For more information about determining the appropriate edition of the *Bulletin* to consult, please visit the Catalog Editions page in the About This Bulletin section.

For the most current information about registration, visit the Plan for Next Semester Overview page of the Workday@WashU website. To view current semester course listings, consult the Class Schedule Search on the Office of the University Registrar website.

Degree progress is maintained in the Workday Student information system. Students are responsible for reviewing their academic progress for accuracy and remaining credential requirements. Questions around degree requirements and credit application should be directed to advisors.

Please email the Bulletin editor (bulletin@wustl.edu) with any questions concerning the *Bulletin.*

More information may be found on the following websites:

- College of Arts & Sciences
- Olin Business School
- Sam Fox School of Design & Visual Arts (College of Architecture, College of Art)
- McKelvey School of Engineering
- School of Continuing & Professional Studies

Bulletin Policies

Policies related to this catalog include the following:

Changes to the Bulletin

Every effort is made to ensure that the information, policies and other materials presented in the *Bulletin* are accurate and correct as of the date of publication. For more information about the content review process for the Bulletin, please visit the Catalog Editions page (p. 17).

The *Bulletin* for the upcoming academic year is published annually on July 1, and certain post-publication changes may be made until October 1. To view a list of changes that have taken place after the July 1 publication date, please visit the Program & Policy Updates page.

Washington University reserves the right to make changes at any time without prior notice. Therefore, the electronic version of the *Bulletin* and the policies set forth therein may change from time to time without notice. The governing document at any given time is the then-current version of the *Bulletin,* as published online, and then-currently applicable policies and information are those contained in that *Bulletin.*

Discontinued Programs

Students enrolled in programs that discontinue admitting new students during their tenure are expected to meet degree requirements published in the *Bulletin* and in place during their year of matriculation. If a program's requirements change, a student may request to change to a subsequent version effective during their enrollment, which is subject to approval by their school. Students who leave the university may not be allowed to return to a discontinued program depending on the time frame the university has agreed that the program will teach out remaining students.

Students are held to other policies in effect and as published for the current academic year.

For more information, please visit the Prior Bulletins page (p. 17).

Year of Matriculation

Students are expected to meet degree requirements published in the *Bulletin* and in place during their year of matriculation. If a program's requirements change, a student may request to change to a subsequent version effective during their enrollment, which is subject to approval by their school.

For more information, please visit the Catalog Editions page (p. 17).

Course Numbering

Washington University adopted a new course labeling structure in Fall 2025. The first part is the subject code indicating the area of study: for example, ANTHRO for Anthropology or MEMS for Mechanical Engineering and Materials Science. The second part is a four-digit course number. Course numbers demonstrate a progression of difficulty and/or depth in coursework.

- 1000 to 1999 indicates an introductory undergraduate course, usually without prerequisites.
- 2000 to 2999 indicates an introductory or intermediate undergraduate course, sometimes with prerequisites.
- 3000 to 3999 indicates an upper-level undergraduate course, often with a prerequisite of a prior course or class standing (e.g., junior standing).
- 4000 to 4999 indicates an undergraduate course or seminar with advanced content, in which a graduate student may be eligible to register.
- 5000 to 9999 indicates a graduate course, in which advanced undergraduates may request to register.

The presence of a course in this *Bulletin* signifies that it is part of the curriculum currently offered and may be scheduled for registration.

Curriculum Designators

The subject designators shown below are used in Washington University's course descriptions and listed here alphabetically by code.

A

Code	Name
ACCT	Accounting
AFAS	African & African American Studies
AHBR	Applied Health Behavior Research
AMCS	American Culture Studies
ANESTH	Anesthesiology
ANTHRO	Anthropology
APL	Applied Linguistics
ARAB	Arabic
ARC	Archaeology
ARCH	Architecture
ART	Art
ARTARCH	Art History & Archaeology
ASGS	The Graduate School

B

Code	Name
BEYOND	Beyond Boundaries
BIOCHEM	Biochemistry & Molecular Biophysics

Catalog Editions

The courses and policies listed in this *Bulletin* are subject to change at any time through normal approval channels within Washington University. New courses, changes to existing coursework, and new policies are initiated by the appropriate institutional departments, committees, or administrators. Academic policy revisions are generally implemented in the next academic year following notification thereof. Washington University publishes a new edition of the *Bulletin* each July, and its contents apply to the subsequent fall, spring, and summer terms. Occasionally a policy or requirement must be changed and implemented during the same academic year (e.g., in the case of relevant external requirements, such as state regulations). All changes must be approved by college or school personnel who oversee academic curriculum and policies.

Washington University students are expected to meet degree requirements published in the *Bulletin* and in place during their year of matriculation. Undergraduates who initially enroll in a summer term to pursue a special program follow requirements for the subsequent fall term. Students will need to check their school's processes to potentially change applicable catalog years or alter their degree requirements.

Students should review specific Washington University and individual school policies related to transfer credit, changing programs, leaves of absence, and military service.

Prior Bulletins

To find program details, course descriptions, and relevant policies, choose the year of enrollment below to find the available *Bulletins.* If the required year is not shown or the school's *Bulletin* is not available, please email the Office of the University Registrar (registrar@wustl.edu) with specifics of the needed information.

About Washington University in St. Louis

Who We Are Today

Washington University in St. Louis — a medium-sized, independent university — is dedicated to challenging its faculty and students alike to seek new knowledge and greater understanding of an ever-changing, multicultural world. The university is counted among the world's leaders in teaching and research, and it draws students from all 50 states, the District of Columbia, Guam, Puerto Rico and the Virgin Islands. Students and faculty come from more than 100 countries around the world.

The university offers more than 250 programs and 5,500 courses leading to associate, bachelor's, master's, and doctoral degrees in a broad spectrum of traditional and interdisciplinary fields, with additional opportunities for minor concentrations and individualized programs. For more information about the university, please visit the About WashU page of our website.

Enrollment by School

For enrollment information, please visit the University Facts page of our website.

Our Mission Statement

The mission of Washington University in St. Louis is to act in service of truth through the formation of leaders, the discovery of knowledge and the treatment of patients for the betterment of our region, our nation and our world.

At WashU, we generate, disseminate, and apply knowledge. We foster freedom of inquiry and expression of ideas in our research, teaching and learning.

We aim to create an environment that encourages and supports wide-ranging exploration at the frontier of discovery by embracing diverse perspectives from individuals of all identities and backgrounds. We promote higher education and rigorous research as a fundamental component of an open, vibrant society. We strive to enhance the lives and livelihoods not only of our students, patients, and employees but also of the people of the greater St. Louis community and beyond. We do so by addressing scientific, social, economic, medical, and other challenges in the local, national, and international realms.

Our goals are:

- to foster excellence and creativity in our teaching, research, scholarship, patient care and service
- to welcome students, faculty and staff from all backgrounds to create an inclusive, equitable community that is nurturing and intellectually rigorous
- to cultivate in students habits of lifelong learning and critical and ethical thinking, thereby enabling them to be productive members and leaders of a global society
- to contribute positively to our home community of St. Louis, and to effect meaningful, constructive change in our world

To this end we intend:

- to hold ourselves to the highest standards of excellence
- to educate aspiring leaders of great ability from diverse backgrounds
- to encourage faculty and students to be innovative, bold, independent, critical thinkers
- to build an inclusive, equitable, respectful, ethically-principled environment for living, teaching, learning and working for the present and future generations
- to focus on meaningful and measurable outcomes for all of our endeavors

Mission statement endorsed by the Faculty Senate Council in April 2021 and approved by the Board of Trustees on October 1, 2021.

Trustees & Administration

Board of Trustees

Washington University's Board of Trustees is the chief governing body of Washington University in St. Louis. Please visit the Board of Trustees website for more information.

University Administration

In 1871, Washington University co-founder and then-Chancellor William Greenleaf Eliot sought a gift from Hudson E. Bridge, a charter member of the university's Board of Directors, to endow the chancellorship. Soon after this endowment was received, the position was renamed the "Hudson E. Bridge Chancellorship."

The officers of the university administration are currently led by Chancellor Andrew D. Martin. University leadership is detailed on the Washington University website.

Academic Calendar

The academic calendar of Washington University in St. Louis is designed to provide an optimal amount of classroom instruction and examination within a manageable time frame, facilitating our educational mission to promote learning among both students and faculty. The dates listed here are the outline of the standard semester calendar, applicable to traditional undergraduate and many graduate programs. Certain schools or programs may have varying calendars due to the nature of particular fields of study. Please refer to the Office of the University Registrar's website for more information.

Fall Semester 2025

Date	Day	Description
August 25	Monday	First day of classes
September 1	Monday	Labor Day (no classes)
October 4-7	Saturday-Tuesday	Fall Break (no classes)
November 26-November 30	Wednesday-Sunday	Thanksgiving Break (no classes)
December 5	Friday	Last day of classes
December 8-10	Monday-Wednesday	Reading days
December 11-17	Thursday-Wednesday	Final exams

Spring Semester 2026

Date	Day	Description
January 12	Monday	First day of classes
January 19	Monday	Martin Luther King, Jr. holiday (no classes)
March 8-15	Sunday-Sunday	Spring Break (no classes)
April 24	Friday	Last day of classes
April 27-29	Monday-Wednesday	Reading days
April 30-May 6	Thursday-Wednesday	Final exams

Commencement

Date	Day	Description
May 15	Friday	Class of 2026 Commencement

Summer Semester 2026

Date	Day	Description
May 18	Monday	First Summer Session begins
May 25	Monday	Memorial Day (no classes)
July 3	Friday	Independence Day (no classes)
August 13	Thursday	Last Summer Session ends

Washington University recognizes the individual student's choice in observing religious holidays (PDF). Students are encouraged to make arrangements with instructors to complete work missed due to religious observance. Instructors are asked to make every reasonable effort to accommodate such requests.

Campus Resources

Student Support Services

The Learning Center

The Learning Center, located on the lower level of the Mallinckrodt Center and housed within the Center for Teaching and Learning, is the hub of academic support at Washington University in St. Louis. The Learning Center's programs are designed to support students in their course work by helping them develop the lifelong skill of "learning how to learn" and by stimulating their independent thinking. All services are free (with the exception of MCAT prep), and each year more than 1,800 students participate in one or more of our programs.

The Learning Center offers support for foundational courses through Peer-Led Team Learning and our drop-in mentoring programs (Residential Peer Mentoring and Drop-In Academic Mentoring). Individual peer-led coaching is available for academic skills such as time management, study strategies, note-taking, accessing resources, and managing test anxiety. Other services offered include small group mentoring for eligible students and an MCAT preparation program.

For more information, visit the Learning Center website or call 314-935-2066.

Disability Resources

Disability Resources supports students with disabilities by fostering and facilitating an equal access environment for the Washington University community of learners. Disability Resources partners with faculty and staff to facilitate academic and housing accommodations for students with disabilities on the Danforth Campus. Students enrolled in the School of Medicine should contact their program's director. Please visit the Disability Resources website or call 314-935-5970 for more information.

TRIO: Student Support Services

TRIO is a federally funded program that provides customized services for undergraduate students who are low income, who are the first in their family to go to college, and/or who have a documented disability. Services include academic coaching, academic peer mentoring, cultural and leadership programs, summer internship assistance and post-graduation advising. First-year and transfer students are considered for selection during the summer before they enter their first semester. Eligible students are encouraged to apply when they are notified, because space in this program is limited. For more information, visit the TRIO Program website.

Medical Student Support Services

For information about Medical Student Support Services, please visit the School of Medicine website.

Office for International Students and Scholars

The Office for International Students and Scholars (OISS) is dedicated to fostering an inclusive environment that celebrates our international students' and scholars' diverse experiences, cultures, and aspirations. OISS plays a pivotal role in cultivating a vibrant, intercultural atmosphere on our campus, extending support to international students, scholars, faculty, and staff through immigration sponsorship. OISS commits to ensuring a seamless integration process for those who are admitted, appointed, or employed by Washington University. Grounded in the belief that education can shape global perspectives, the OISS mission is to empower the Washington University international community with the knowledge and resources needed to navigate U.S. immigration compliance while guiding them with care and compassion at every step.

The OISS main office is located on the Danforth Campus, with an additional office located on the Medical Campus. For information about OISS's location, office hours, staff, and services, visit the Office for International Students and Scholars website, email oiss@wustl.edu, or call 314-935-5910.

Office of Military and Veteran Services

This office serves as the university's focal point for military and veteran matters, including transitioning military-connected students into higher education, providing and connecting students with programs and services, and partnering across campus and in the community. Services include advising current and prospective students on how to navigate the university and maximize Department of Defense and Veterans Affairs (VA) educational benefits, transition support, Veteran Ally training for faculty and staff, veteran-unique programming, and connecting students to campus and community resources. Military-connected students include veterans, military service members, spouses, dependent children, caregivers, survivors and Reserve Officer Training Corp cadets. There are two university policies that apply to students who still serve in the Armed Forces and students who use VA educational benefits:

- The Policy on Military Absences, Refunds and Readmissions applies to students serving in the U.S. Armed Forces and their family members when military service forces them to be absent or withdraw from a course of study.
- The Policy on Protections for VA Educational Benefit Users applies to students using VA education benefits when payments to the institution and the individual are delayed through no fault of the student.

The Office of Military and Veteran Services is located in Umrath Hall on the Danforth Campus. Please visit the Military and Veteran Services website or send an email to veterans@wustl.edu for more information.

Relationship and Sexual Violence Prevention (RSVP) Center

The RSVP Center offers free and confidential services including 24/7 crisis intervention, counseling services, resources, support and prevention education for all students on the Danforth Campus. The RSVP Center operates from a public health model and uses trauma-informed practices to address the prevalent issues of relationship and sexual violence. By providing support for affected students, it is our goal to foster post-traumatic growth and resilience and to help ensure academic retention and success. Our prevention efforts call for community engagement to engender an intolerance of violence and an active stance toward challenging cultural injustices that perpetuate such issues. Learn more at the RSVP Center website.

WashU Cares

WashU Cares assists the university with handling situations involving the safety and well-being of Danforth Campus students. WashU Cares is committed to fostering student success and campus safety through a proactive, collaborative and systematic approach to the identification of, intervention with and support of students of concern while empowering all university community members to create a culture of caring. If there is a concern about the physical or mental well-being of a student, please visit the WashU Cares website to file a report.

The Writing Center

The Writing Center — a free service — offers writing support to all Washington University undergraduate and graduate students. Tutors will read and discuss any kind of work in progress, including student papers, senior theses, application materials, dissertations and oral presentations. The Writing Center staff is trained to work with students at any stage of the writing process, including brainstorming, developing and clarifying an argument, organizing evidence, and improving style. Rather than editing or proofreading, tutors will emphasize the process of revision and teach students how to edit their own work.

The Writing Center is located in Mallinckrodt Center on the lower level. Appointments are preferred and can be made online, but walk-ins will be accepted if tutors are available.

Student Health and Well-Being Services, Danforth Campus

The Student Health Center - Danforth Campus provides medical, psychiatric, and health promotion services for undergraduate and graduate students on the Danforth Campus. Please visit studenthealthcenter.washu.edu for more information about Health Center services and staff members.

Hours:
Monday, Tuesday, Thursday, and Friday: 8 a.m. - 5 p.m.
Wednesday: 10 a.m. - 5 p.m.
Saturday, Sunday, and university holidays: Closed

For after-hours care, students should access TimelyCare.

Medical Services

Medical Services staff members provide care for the evaluation and treatment of an illness or injury, preventive health care and health education, immunizations, nutrition counseling, sports medicine, travel medicine, and sexual health services. Student Psychiatry Services staff provide ongoing medication management for students to address their mental health concerns. Student Health Center providers are participating members of the Washington University in St. Louis Physician's Network. Any condition requiring specialized medical services will be referred to an appropriate specialist. The Health Center accepts health insurance plans that have met waiver criteria for the Student Health Insurance Plan and will be able to bill the plan according to plan benefits. The Student Health Insurance Plan requires a referral for medical care any time care is not provided at Student Health (except in an emergency). Call 314-935-6666 or visit the Student Health Center website to schedule an appointment.

Appointments are also available for the assessment and referral of students struggling with substance use.

Quadrangle Pharmacy, located in the Student Health Center, is available to all Washington University students and their dependents. The pharmacy accepts most prescription insurance plans; students should check with the pharmacist to see if their prescription plan is accepted at the pharmacy.

The Student Health Center lab provides full laboratory services. Some tests can be performed in house. The remainder of all testing that is ordered by Student Health is completed by LabCorp. LabCorp serves as Student Health's reference lab, and it is a preferred provider on the student health insurance plan. This lab can perform any test ordered by Student Health Center providers or outside providers.

All incoming students must provide proof of immunization for measles, mumps, and rubella (i.e., two vaccinations after the age of one year old; a titer may be provided in lieu of the immunizations). Proof of receiving a meningococcal vaccine on or after the age of 16 is required for all incoming undergraduate students. A TB test in the past six months is required for students entering the university who screen positive on the TB questionnaire found on the student portal. It is also recommended that before beginning their studies at WashU, all students will have received the tetanus diphtheria pertussis immunization, the hepatitis A vaccine series, the hepatitis B vaccine series, the HPV vaccine series, the meningitis B vaccine, and the varicella vaccine. Failure to complete the required forms will delay a student's registration and prevent their entrance into housing assignments. Please visit the Student Health Center website for complete information about immunization requirements and deadlines.

Health Promotion Services

Health Promotion Services staff and Peer Health Educators provide free programs and risk reduction information related to mental health, sexual health, alcohol/other drugs, and community care. For more information, visit the Zenker Wellness Suite in Sumers Recreation Center, consult the Health and Wellbeing Digital Library, follow us on Instagram (@washu_healthpromotion), and/or email wellness@wustl.edu. In 2018, this department launched the WashU Recovery Community to provide an opportunity for students in recovery from substance use to connect with other students with similar experiences.

Center for Counseling and Psychological Services (CCPS)

Hours:
Monday, Tuesday, Thursday, and Friday: 8 a.m. - 5 p.m.
Wednesday: 10 a.m. - 5 p.m.
Saturday, Sunday, and university holidays: Closed

For after-hours mental health support, students should access the TimelyCare app and request a "Talk Now" visit.

Located in the Student Health Center-Danforth Campus, CCPS is staffed by licensed professional staff members who work with students to resolve personal and interpersonal difficulties. These may include conflicts with or worry about friends or family, concerns about eating or drinking patterns, and feelings of anxiety and depression. Services include individual, group, and couples counseling; crisis counseling; and referral for off-campus counseling when students' needs can be better met outside of CCPS. All full-time students who pay the university health and wellness fee as part of their tuition are eligible for services. Visit the CCPS website or call 314-935-6695 to schedule an appointment during business hours. For additional information, visit the CCPS website or send an email to ccpscoordinator@wustl.edu.

Important Information About Health Insurance and Fees for Danforth Campus Students

All full-time, degree-seeking WashU students are automatically enrolled in the Student Health Insurance Plan upon completion of registration. Students may opt out of this coverage and receive a refund of the health insurance fee if they provide proof of existing comprehensive insurance coverage that meets all university requirements. Information concerning opting out of the student health insurance plan can be found online after June 1 of each year. All students must request to opt out by September 5 of **every year** in which they wish to be removed from the Student Health Insurance Plan. The Student Health Center provides billing services to many of the major insurance companies in the United States. Specific fees and copays apply to students using Medical Services and Student Psychiatric Services; these fees are billable to the students' insurance plans. More information is available on the Habif Health and Wellness Center website. In addition, WashU has a health and wellness fee designed to improve the health and well-being of the campus community. It is assessed by the university, and it is entirely separate from health insurance. This fee helps support membership to the Sumers Recreation Center, health education/prevention efforts, the Center for Counseling and Psychological Services, and TimelyCare.

Student Health Services, Medical Campus

For information about student health services on the Medical Campus, please visit the Student & Occupational Health Services page of the School of Medicine website.

Campus Security

The Washington University campus is among the most attractive in the nation, and it enjoys a safe and relaxed atmosphere. Personal safety and the security of personal property while on campus is a shared responsibility. Washington University has made safety and security a priority through our commitment to a full-time professional police department, the use of closed-circuit television, card access, extensive lighting initiatives based on Crime Prevention Through Environmental Design (CPTED) practices, shuttle services, emergency telephones, and ongoing educational safety awareness programs. The vast majority of crimes that occur on college campuses are crimes of opportunity, which can be prevented.

The best protection against crime is an informed and alert campus community. Washington University has developed several programs to help make everyone's experiences here safe and secure. An extensive network of emergency telephones — including more than 200 "blue light" telephones — is connected directly to the University Police Department and can alert the police to a person's exact location. In addition to the regular shuttle service, an evening student walking/mobile escort service known as "Bear Patrol" and a mobile Campus Circulator shuttle are available on the Danforth Campus.

The Campus2Home shuttle will provide a safe ride home for those living in four designated areas off campus — Skinker-DeBaliviere, Loop South, north of the Loop, and just south of the campus — from 7:00 p.m. to 4:00 a.m. seven days a week. The shuttle leaves from the Mallinckrodt Bus Plaza and Forsyth/Goldfarb Hall Center every 15 minutes from 7:00 p.m. to 1:00 a.m. and at the top (:00) and bottom (:30) of the hour from 1:00 a.m. to 4:00 a.m. The shuttle takes passengers directly to the front doors of their buildings. Shuttle drivers will then wait and watch to make sure passengers get into their buildings safely. Community members can track the shuttle in real time using the WUSTL Mobile App. The app can be downloaded free of charge from the Apple iTunes Store or the Google Play Store.

The University Police Department is a full-service organization staffed by certified police officers who patrol the campus 24 hours a day throughout the entire year. The department offers a variety of crime prevention programs, including a high-security bicycle lock program, free personal-safety whistles, computer security tags, personal safety classes, and security surveys. Community members are encouraged to download and install the WashU Safe personal safety app on their phones; this app allows users to call for help during emergencies, to use Friend Walk to track their walks on and off campus, and to access many additional safety features. For more information about these programs, visit the Washington University Police Department website.

In compliance with the Campus Crime Awareness and Security Act of 1990, Washington University publishes an annual report entitled *Safety & Security: Guide for Students, Faculty, and Staff — Annual Campus Security and Fire Safety Reports and Drug & Alcohol Abuse Prevention Program*. This report is available to all current and prospective students on the Danforth Campus and to university employees on the Danforth, North and West campuses. To request a hard copy, contact the Washington University Police Department, CB 1038, One Brookings Drive, St. Louis, MO 63130-4899, 314-935-9011.

For information regarding protective services at the School of Medicine, please visit the Campus Safety page of the Washington University Operations & Facilities Management Department.

Student Complaints

WashU provides students with different processes to handle complaints depending on the nature of the complaint. The Student Feedback & Complaint Form provides information on the different avenues available, as well as a web-form for submitting complaints. Complaints submitted through the form are reviewed by the Office of the Vice Chancellor for Student Affairs and forwarded to the University office or department that would be responsible for addressing the complaint. Complaints may be made anonymously, but students have the option of providing contact information to receive a response regarding steps taken to resolve the complaint. The University's Whistleblower Protection Policy applies to students making good-faith complaints regarding violations of policy or unethical acts.

If a student has a complaint related to distance education, as a participant in the National Council for State Authorization Reciprocity Agreements (NC-SARA), WashU follows the SARA policy that provides for the resolution of complaints resulting from distance education courses, activities, and operations provided by WashU to students who participate in such courses outside of the state of Missouri (including the District of Columbia, Puerto Rico, and the US Virgin Islands, but excepting California, which is not a member of NC-SARA). Under NC-SARA Policy Section 4.5 (Process for Resolving Complaints), students are asked to seek resolution of complaints first through WashU, as described above. If the complaint is not resolved, distance education students should contact the Missouri State Portal Entity:

> Joshua Fischer, Program Specialist
> Email: joshuafischer@dhewd.mo.gov
> Phone: 573-751-2361
> Missouri Department of Higher Education and Workforce Development
> PO Box 1469
> Jefferson City, MO 65102-1469

Students who participate in distance education courses and who reside in California may contact the Bureau for Private Postsecondary Education.

Policies

Washington University has various policies and procedures that govern our faculty, staff and students. Highlighted below are several key policies of the university. Web links to key policies and procedures are available on the Office of the University Registrar website and on the university's Compliance and Policies page. Please note that the policies identified on these websites and in this *Bulletin* do not represent an entire repository of university policies, as schools, offices and departments may implement policies that are not listed. In addition, policies may be amended throughout the year.

Application to Graduate

Students are required to file an Application for Program Completion in Workday prior to the semester in which they intend to graduate in order to be eligible for degree conferral. Additional information is available from the Office of the University Registrar.

Compliance with Section 103 of the Veterans Benefits and Transition Act of 2018

It is WashU's policy to not impose penalties on individuals using Veteran Education Benefits, including the assessment of late fees, the denial of access to classes, libraries or other institutional facilities, or the requirement to borrow additional funds to cover the student's inability to meet his or her financial obligations to the institution due to the delayed disbursement of a payment by the VA. This applies to individuals who submit their Certificate of Eligibility for entitlement to educational assistance to their VA School Certifying Official (SCO).

1. Students should submit a Certificate of Eligibility not later than the first day of a course for which the student wishes to use the entitlement for educational assistance. The SCO will advise the student to provide additional Documentation and information necessary for the proper certification of enrollment.
2. If a student does not receive their Certificate of Eligibility from the VA by the start of the academic term, the student should notify their SCO of their intent to use Veteran Education Benefits and should submit additional Documentation and forms as requested.
3. In cases where a student is unable to meet a financial obligation to the university because the amount of a disbursement from the VA is less than anticipated, the university will require additional payment from the student and will provide the student with a timeline for payment before assessing late fees. Students should contact their SCO for assistance.
4. Students may request certification for previous academic terms if they were eligible for benefits at the time for which they want to be certified. In cases where Veteran Education Benefits are used to certify previous academic terms, students are responsible for any late fees incurred prior to the date of the certification request. This excludes Yellow Ribbon benefits, which are not retroactive for previous fiscal years.

Courses and Credit

Academic Calendar

Washington University in St. Louis primarily follows a standard semester-based academic calendar: a fall and spring semester of approximately 16 weeks, including sessions of half-semester lengths and intersessions beginning before the term start date, and a summer term of 13 weeks, including sessions of half-term length, an intersession beginning before the term start date, and 3-, 5- and 8-week lengths. The Doctor of Medicine program follows a yearlong calendar supporting modular curriculum delivery.

Credit Measure

Credit hours for undergraduate and graduate programs are awarded as "units." A semester-long 3-unit undergraduate lecture class may meet three times per week for 50 minutes per session or twice per week for 80 minutes per session. Teaching and learning take many forms; online and hybrid classes require considerable time in the form of digital engagements such as discussion board activities, asynchronous webinar-type instruction or other online interactions. For all modalities of learning, the University assigns 3 units of credit when at least 9 full hours of standard academic work per week are expected of students.

Washington University credit for School of Law programs on the semester calendar is awarded in credit hours as outlined by the "American Bar Association (ABA) Standards and Rules of Procedure for Approval of Law Schools" document, further noted on the School of Law website.

Courses in the Washington University School of Medicine MD program are scheduled in weeks, and credit is awarded as credit hours such that each week of instruction is valued at 1 unit of credit. A week of instruction represents at least 45 hours of direct instruction and out-of-class related academic work.

For the full policy, visit the Office of the Provost website.

Email Communication

Email is the mechanism for official communication with students at Washington University. Students are expected to read email communications from the university in a timely fashion.

All students will be individually assigned a University email address, which will be maintained in the University email directory. Official University communications will be sent to the student's University email address in order to ensure such communications reach the intended recipient.

With the exception of School of Medicine students, a student may have email forwarded from their assigned University email address to another email address of the student's choice. School of Medicine students are prohibited from forwarding their University-assigned email address to an email address external to the University other than @bjc.org and @va.gov email domains. Students who choose to have email forwarded to another email address do so at their own risk. The University is not responsible for email forwarded to any other email

address. A student's failure to read official University communications sent to the student's University email address does not absolve the student of responsibility for awareness of and compliance with the content of the official communication. Faculty and administrators should use a student's University email address when communicating via email with the student. This policy will ensure that all students will be able to comply with course and other requirements communicated to them by email from course instructors and administrators.

Graduate Student Academic Integrity Policies

Authority of Schools Over Graduate and Graduate Professional Students

1. Each school at the university may establish an academic integrity officer and/or a panel to hear and decide cases of alleged academic or professional misconduct by its graduate or graduate professional students. Schools that so choose are required to create procedures to govern the process of investigating and adjudicating the complaints filed.
    a. The school dean, or a designee, determines the composition of such a panel and the scope of the panel's authority, which will not exceed the parameters set out immediately below.
    b. The panel has authority to impose or recommend appropriate sanctions to the school dean, including suspension or expulsion, if academic or professional misconduct is determined.
    c. Appeals of decisions made by an academic and professional integrity panel of a school may be made to the school dean, whose decision is final. This includes decisions of a school's academic and professional integrity panel, where the panel is vested with such authority, and the panel's decision is to impose the sanctions of suspension or expulsion. Schools are permitted, but not required, to establish an intermediate level of appeal that must be completed before a final appeal to the dean.
    d. Except for cases falling within the immediately preceding sub-bullet, any appeal from a decision of a dean of a school to suspend or expel a student will be made in accordance with the provisions of Section VI of the Code.
2. If a school does not establish an academic integrity officer or panel or if an established officer or panel fails to function, complaints of academic or professional misconduct against graduate or graduate professional students may be heard by Academic Integrity in the Office of the Provost, the Academic Integrity Board, or the Student Conduct Board.

Involuntary Leave Policy

Policy Statement

The primary goals of this Involuntary Leave Policy ("policy") are to protect the well-being and safety of Washington University students and the university community and to preserve the integrity of the university's academic, residential and administrative functions.

An involuntary leave under this policy will not be invoked unless the student's behavior is of such a serious nature that the continued presence of the student at the university is judged to threaten the safety, well-being or health of that student and/or others in the WashU community, or the ability of that student or others to engage in customary functions and activities at the university.

Examples of circumstances where this policy may be invoked include: suicidal threats; self-starvation or purging behavior; substance abuse or addiction; threats of harm to self or others; or disturbing, disruptive or destructive behavior.

This policy is not intended to replace disciplinary actions taken in response to violations of other university polices, including the university Student Conduct Code (SCC). A student who commits a violation of any university policy before taking voluntary leave or being placed on involuntary leave may be required to defend such charges before being considered for re-admission. Temporary suspension may also be issued in accordance with the SCC and this policy.

Policy Procedures

The vice chancellor for student affairs, the dean of any school or the designees of any of the aforementioned (referred to herein as "administrator") may be alerted to a student's concerning behavior from a variety of sources on campus including the student's advisor, a college dean, residential life staff, student affairs staff, health care providers or other faculty members. If the administrator deems it appropriate, the following procedures may be initiated.

1. **Notification:** Whenever possible, the administrator will notify the student that involuntary leave is under consideration and attempt to meet with the student to discuss his or her behavior. The administrator will provide the student with a copy of this policy. During the meeting, the administrator may choose to encourage the student to take a voluntary leave of absence, thereby eliminating the need to complete the procedures for involuntary leave. If the administrator believes that the student's well-being may be in imminent danger, he or she may proceed with a case conference without notifying and/or meeting with the student.
2. **Assembly of Case Conference Committee:** If the student is unable or chooses not to meet with the administrator, or if the student chooses not to take a voluntary leave of absence and the administrator still believes that involuntary leave may be appropriate, the administrator will convene a Case Conference

Committee ("committee") of appropriate individuals or their designates to conduct a case conference regarding the need for an involuntary leave of absence. The committee may include the following:

- The dean of the student's college or school
- The assistant/associate vice chancellors for student affairs
- Student conduct administrator
- Director of the Student Health Center, Danforth Campus
- director of Counseling and Psychological Services
- Assistant director of sorority and fraternity life
- Executive director of Campus Life
- Chief of police
- Residential Life staff
- Director of the Office of International Students & Scholars
- Office of the General Counsel
- The student's advisor(s) or academic dean
- Professors, instructors, or staff who have observed the student's behavior of concern

3. **Committee Consideration:** The administrator should convene a Case Conference as soon as possible. During this conference, the committee should address whether and to what extent the student engages in, or is judged to be likely to engage in, behavior described in this policy. Where deemed necessary by the committee to facilitate a more informed recommendation, the committee may consult with other university administrators, faculty or staff familiar with the student. The committee may seek additional information from the student or enlist the assistance of other university faculty or staff members familiar with the student to consult with the student on behalf of the committee. If contacted, the student may refuse to provide information, but such refusal shall not limit the right of the committee to make a recommendation under this policy, nor limit the right of the university to mandate an involuntary leave.
4. **Committee Recommendation:** Following the Case Conference and the review of relevant information, the committee will make a written recommendation to the administrator. In lieu of recommending involuntary leave, the committee may make recommendations as to other conditions and/or requirements under which the student may remain at the university.
5. **Decision:** After review of the committee's recommendation, the administrator will decide whether to mandate an involuntary leave of absence, to mandate other requirements if the student remains at the university, or to permit the student to remain at the university with no additional requirements. The administrator will give the student written notice of this decision. This notice will provide (1) a brief summary of the reasons for decision, (2) the duration of the leave or a description of the requirements for the student to remain on campus, and (3) the steps that the student must take to request readmission if involuntary leave is invoked. The administrator may notify a parent or guardian, in accordance with the Family Educational Rights & Privacy Act ("FERPA"). Pursuant to FERPA, the administrator may also notify a spouse or partner upon obtaining the student's consent. Where an involuntary leave is mandated, the student must leave campus within the time frame established in the notice. In that event, the student's parent(s), guardian(s) or other persons may be asked to make arrangements for the safe removal of the student from the university community.

Option of Voluntary Leave: At any time prior to the administrator's decision, the student may choose to take voluntary leave. The university expects students to notify family members when they voluntarily withdraw from the university. However, when permitted by FERPA, the university retains the discretion to notify parents, guardians, spouses or partners if the student chooses to leave.

Records and Tuition: Leave may affect academic grades, credits and access to university housing or other facilities. Tuition, financial aid, and housing costs will be refunded in accordance with university policy. Regardless of whether leave is voluntary or involuntary, the student's status at the university will be updated in student systems to reflect a leave of absence, which includes a notation on the transcript indicating: "Leave of Absence" and the start date. When involuntary leave is not mandated, but a student is required to fulfill certain requirements to remain on campus, the student's in-progress status is unchanged and no notation will be made on the transcript.

Safety and Security: In cases involving serious and imminent threat to the safety, well being or health of the student or other members of the campus community, or to the ability of others in the university community to conduct their customary university functions and activities, the administrator may take immediate action to remove the student from the university community. In such event, the administrator may immediately notify the student's parent, guardian, spouse, partner, or other relevant individuals in accordance with FERPA. The parent, guardian or other person may be asked to make arrangements for the safe removal of the student from the university community pending a decision on involuntary leave.

Request for Re-Enrollment

When a student is placed on involuntary leave or accepts voluntary leave, a letter from the administrator to the student will outline the conditions for re-enrollment. Conditions for re-enrollment are at the discretion of the administrator. If the leave was for health or medical reasons, the administrator will work with the director of health services or his/her designate to formulate appropriate conditions of return, which may include requirements and/or guidance regarding treatment. A copy of this letter will be forwarded to the academic dean of the student's college or school and, where health-related, to the director of the Student Health Center.

When a student's voluntary or involuntary leave is not health-related, the procedures to request re-enrollment will be outlined in the administrator's letter.

The following process will guide re-enrollment for all students taking involuntary or voluntary leave of absence for a health-related reason:

1. The student must contact in writing both the academic dean and the director of the Student Health Center to request re-enrollment between June 1 and July 1 for the upcoming fall semester or November 1 and December 1 for the spring semester.

2. The student's health status must be reviewed by the director of the Student Health Center or his/her designate. As part of the review, the student may be asked to present written evidence that the student has been evaluated and completed follow-up measures recommended by the student's treating health care professional. This evidence may include a recitation of the health care professional's credentials, a description of their contact with the student, the evaluation method, the diagnosis, the recommended follow-up measures and the student's efforts to complete them. The student's efforts to complete those follow-up measures will be evaluated to determine whether the student used the time away from the university to address the issues that led to the separation and to acquire skills to facilitate a successful return to the university.
3. A recommendation regarding medical eligibility for re-enrollment will be made by the director of the Student Health Center or his/her designate and forwarded to the student's academic dean and the administrator. The academic dean, in consultation with the administrator, will determine academic eligibility for re-enrollment and will communicate in writing the final decision and any conditions to the student.

Appeal of Administrator Decisions

A student may submit, within 24 hours of receiving the written decision from the administrator, a written appeal to the provost who will review the written record only. A decision to affirm or reverse the administrator's decision will be rendered within 48 hours. The decision of the administrator will be affirmed if supported by substantial information appearing in the record of the case. The decision of the provost is final.

Confidentiality

The university will strive to protect, to the greatest extent possible, the confidentiality of students involved in matters of voluntary or involuntary leave. Because the university has an obligation to preserve the security of its community, the university cannot guarantee complete confidentiality where it would conflict with the university's obligation to investigate meaningfully matters which may threaten a student's health or safety or the safety and security of the university community. When some disclosure of the university's information or sources is necessary, that disclosure will be limited to the extent possible. Medical records of a student will be protected in accordance with the WashU Student Health Center Notice of Privacy Practices. The university will, to the extent permitted by law, keep confidential all records of committee reviews. The records maintained by the Case Conference Committee will be available only to the administrator and other university officials in accordance with FERPA. All records will be destroyed after a period of ten (10) years from the date of final decision on involuntary leave or the student's decision to take voluntary leave.

Nondiscrimination Statement

Washington University encourages and gives full consideration to all applicants for admission, financial aid and employment. The university does not discriminate in access to, treatment during, or employment in its programs and activities on the basis of race, color, age, religion, sex, sexual orientation, gender identity or expression, national origin, veteran status, disability or genetic information.

Policy on Discrimination and Harassment

Washington University is committed to having a positive learning and working environment for its students, faculty and staff. University policy prohibits discrimination on the basis of race, color, age, religion, sex, sexual orientation, gender identity or expression, national origin, veteran status, disability or genetic information. Harassment based on any of these classifications is a form of discrimination; it violates university policy and will not be tolerated. In some circumstances, such discriminatory harassment may also violate federal, state or local law. A copy of the Policy on Discrimination and Harassment is available on the Human Resources website.

Sexual Harassment

Sexual harassment is a form of discrimination that violates university policy and will not be tolerated. It is also illegal under state and federal law. Title IX of the Education Amendments of 1972 prohibits discrimination based on sex (including sexual harassment and sexual violence) in the university's educational programs and activities. Title IX also prohibits retaliation for asserting claims of sex discrimination. The university has designated the Title IX Coordinator identified below to coordinate its compliance with and response to inquiries concerning Title IX.

For more information or to report a violation under the Policy on Discrimination and Harassment, please contact the following individuals:

Address: One Brookings Drive, MSC 1175-0153-0B, St. Louis, MO 63130

Inquiries or complaints regarding civil rights may also be submitted to the United States Department of Education's Office of Civil Rights at 400 Maryland Avenue, SW, Washington, DC 20202-1100; by visiting the U.S. Department of Education website; or by calling 800-421-3481.

Student Academic Records and Transcripts

Under the Family Educational Rights and Privacy Act of 1974 (FERPA) — Title 20 of the United States Code, Section 1232g, as amended — current and former students of the university have certain rights with regard to their educational records. Washington University's FERPA policy is available via the Office of the University Registrar's website.

All current and former students may request official Washington University transcripts of their academic records from the Office of the University Registrar. Current students may print unofficial transcripts for their personal use from Workday. Instructions and additional information are available on the Office of the University Registrar's website.

Washington University does not release nor certify copies of transcripts or other academic documents received from other schools or institutions. This includes test score reports and transcripts submitted to Washington University for purposes of admission or evaluation of transfer credit.

Student Conduct

The Washington University in St. Louis Student Conduct Code ("the Code") sets forth community standards and expectations for university students. These community standards and expectations are intended to foster an environment conducive to working, learning, and inquiry. Each student is held to the expectations outlined in the Code.

Freedom of thought and expression as well as respect for different points of view are essential to the university's academic mission. Nothing in the Code should be construed to limit the lawful, free, and open exchange of ideas and viewpoints, even if that exchange proves to be offensive, distasteful, or disturbing to some. However, such speech must conform to university policies.

The Code also describes general procedures that may be used to ensure that these standards and expectations are upheld by all students. The university is committed to ensuring that students adhere to university policies, take responsibility for their actions, and recognize how their choices may affect others.

Complaints against students that include allegations of sex-based discrimination — including sexual harassment, sexual assault, dating violence, domestic violence and stalking — in violation of the Student Conduct Code are governed by the procedures found on the Gender Equity and Title IX Compliance Office website. These procedures are also available in hard copy from the Title IX Coordinator or the director of the Office of Student Conduct and Community Standards.

Students may be accountable to both governmental authorities and to the university for acts that constitute violations of law and the Student Conduct Code.

For a complete copy of the Student Conduct Code, visit the Student Affairs website.

For more information, visit the Student Conduct and Community Standards website.

Student Financial Responsibility

Communication

Washington University in St. Louis uses University-assigned email accounts and University-supported systems for communication with students and authorized users. Washington University will also contact students via personal email addresses, cellular phone numbers, or wireless devices from time to time regarding the Student Account or other general information. Students are responsible for reading University communications in a timely manner.

Promise to Pay

When students register for any course at or receive any service from Washington University in St. Louis, they accept full responsibility to pay all tuition, fees, and other associated charges assessed as a result of registration and/or receipt of services such as housing, dining, and other University-provided items that exceed financial support provided by the University, the University payment plan, and/or third parties by the scheduled due dates shown on the WebSTAC student account. Failure to attend class or receive a bill does not absolve students of financial responsibility as described above.

Failure to Pay

University policies regarding Student Accounts (including payment options, late fees, holds, and refunds) are published on the University's Financial Services website. If a student fails to pay the Student Account balance by the scheduled due dates, the University will place a financial hold preventing the student from registering for future courses and could assess a late fee on the past due portion until the past due amount is paid in full. Failure to pay will result in a Delinquent Student Receivable Account. Delinquent Student Accounts will be referred to University's Collection Services department. Collection Services may report the Delinquent Student Account to one or more national credit bureaus, refer the Delinquent Student Account to a third-party collection agency, and pursue all legal and equitable remedies to collect the monies owed to the University.

Student Health

Drug and Alcohol Policy

Washington University is committed to maintaining a safe and healthy environment for members of the university community by promoting a drug-free environment as well as one free of the abuse of alcohol. Violations of the Washington University Drug and Alcohol Policy will be handled according to existing policies and procedures concerning the conduct of faculty, staff, and students. This policy is adopted in accordance with the Drug-Free Workplace Act and the Drug-Free Schools and Communities Act.

Tobacco-Free Policy

Washington University is committed to providing a healthy, comfortable and productive work and learning environment for all students, faculty and staff. Research shows that tobacco use in general, including smoking and breathing secondhand smoke, constitutes a significant health hazard. The university strictly prohibits all smoking and other uses of tobacco products within all university buildings and on university property, at all times. A copy of our complete Tobacco-Free Policy is available on the Human Resources website.

Medical Information

Entering students in Danforth Campus programs must provide medical information to the Student Health Center - Danforth Campus. This will include the completion of a health history and a record of all current immunizations.

If students fail to comply with these requirements prior to registration, they must obtain the required vaccinations and tests at the Student Health Center - Danforth Campus or in the community. Students will be assessed the cost of the vaccinations and/or tests. Students will be unable to complete registration for classes until all health requirements have been satisfied.

Noncompliant students may be barred from classes and from all university facilities, including housing units, if in the judgment of the university their continued presence would pose a health risk to themselves or to the university community.

Medical and immunization information is to be given via the student portal on the Student Health Center - Danforth Campus website. All students who have completed the registration process should access the student health portal on the website. Students should fill out the form and follow the instructions for transmitting it to the Student Health Center - Danforth Campus. Student information is treated securely and confidentially.

Entering students in Medical Campus programs must follow the requirements as outlined on the Washington University School of Medicine Student Health Services website.

Time Away and Reinstatement

Degree-seeking students may be eligible to request a leave of absence for health or other personal reasons (e.g., family, military service, professional obligations, religious mission). The mechanism and process are described on the Office of the University Registrar's website. Such leaves may exceed no more than two years from the effective date of the leave; individual programs' policies may limit students to shorter leaves. Students must verify their school and program policies and any other relevant requirements related to immigration or financial aid/support policies. Students who have not requested and received approval for reinstatement after two years will have their records withdrawn.

Required enrollment reporting to the federal government will reflect a leave of absence for 180 days after it is enacted; any longer duration of institutional leave is recorded in their systems as a withdrawal.

Students on approved leave of absence will have their Washington University email addresses remain active, and they will retain access to Workday to review their records. Access to other University privileges such as recreation facilities and libraries as well as participation in activities are paused during a leave of absence.

Students are expected to request reinstatement to in-progress status to resume studies via the process outlined on the Office of the University Registrar's website. Depending on the nature of their leave, additional steps or documentation may be required and must be provided to appropriately consider the request. Students whose records have been withdrawn as a result of two years of inactivity may be allowed, depending on program-specific policies regarding the maximum time allowed to complete the program of study, to re-enter their programs. In these cases, additional requirements or steps may be required of the student depending on the circumstances, the length of time away, and whether their program of study has undergone curricular revisions since their enrollment.

Undergraduate Student Academic Integrity Policy

Effective learning, teaching, and research all depend upon the ability of members of the academic community to trust one another and to trust the integrity of work that is submitted for academic credit or conducted in the wider arena of scholarly research.

Such an atmosphere of mutual trust fosters the free exchange of ideas and enables all members of the community to achieve their highest potential.

In all academic work, the ideas and contributions of others must be appropriately acknowledged, and the work of a student that is presented as original must be, in fact, original. Faculty, students, and administrative staff all share the responsibility of ensuring the honesty and fairness of the intellectual environment at Washington University in St. Louis.

Scope and Purpose

This statement on academic integrity applies to all undergraduate students at Washington University. Graduate students may be governed by policies in each graduate school or division. To the extent a graduate school or program has not adopted its own academic integrity policy, the provisions of this policy will apply. All students are expected to adhere to the highest standards of behavior.

The purpose of the statement is twofold:

1. To clarify the university's expectations with regard to undergraduate students' academic behavior; and
2. To provide specific examples of academic misconduct (the examples are only illustrative, *not* exhaustive).

This policy and statement were endorsed by the Faculty Senate Council. Any changes to the policy are to be reviewed by the Faculty Senate Council, as described in the Faculty Senate Council bylaws.

Violations of This Policy Include but Are Not Limited to the Following:

1. **Plagiarism**
   Plagiarism consists of taking someone else's ideas, words or other types of work product, and presenting them as one's own. To avoid plagiarism, students are expected to be attentive to proper methods of documentation and acknowledgement. To avoid even the suspicion of plagiarism, a student must always:
   - Enclose every quotation in quotation marks and acknowledge its source.
   - Cite the source of every summary, paraphrase, abstraction or adaptation of material originally prepared by another person and any factual data that is not considered common knowledge. Include the name of author, title of work, publication information and page reference.
   - Acknowledge material obtained from lectures, interviews or other oral communication by citing the source (name of the speaker, the occasion, the place and the date).
   - Cite material from the internet or material generated by an artificial intelligence as if it were from a traditionally published source. Follow the citation style or requirements of the instructor for whom the work is produced.
2. **Cheating on an Examination**
   A student must not receive or provide any unauthorized assistance on an examination. During an examination, a student may use only materials authorized by the faculty.
3. **Copying or Collaborating on Assignments Without Permission**
   When a student submits work with their name on it, this is a written statement that credit for the work belongs to that student alone. If the work was a product of collaboration, each student is expected to clearly acknowledge in writing all persons or artificial intelligences who contributed to its completion.

   Unless the instructor explicitly states otherwise, it is dishonest to collaborate with others when completing any assignment or test, performing laboratory experiments, writing and/or documenting computer programs, writing papers or reports, and completing problem sets.

   If the instructor allows group work in some circumstances but not others, it is the student's responsibility to understand the degree of acceptable collaboration for each assignment and to ask for clarification if necessary.

   To avoid cheating or unauthorized collaboration, a student should never:
   - Use, copy, or paraphrase the results of another person's work or material generated by an artificial intelligence and represent that work as their own, regardless of the circumstances.
   - Refer to, study from, or copy archival files (e.g., old tests, homework, solutions manuals, or backfiles) that were not approved by the instructor.
   - Copy another's work or to permit another student to copy their work.
   - Submit work as a collaborative effort if they did not contribute a fair share of the effort.
4. **Fabrication or Falsification of Data or Records**
   It is dishonest to fabricate or falsify data in laboratory experiments, research papers, reports or in any other circumstances; to fabricate source material in a bibliography or "works cited" list; or to provide false information on a résumé or other document in connection with academic efforts. It is also dishonest to take data developed by someone else and present them as one's own.

   Examples of falsification include:
   - Altering information on any exam, problem set, or class assignment being submitted for a re-grade.
   - Altering, omitting, or inventing laboratory data to submit as one's own findings. This includes copying laboratory data from another student to present as one's own; modifying data in a write-up; and providing data to another student to submit as their own.
5. **Other Forms of Deceit, Dishonesty or Inappropriate Conduct**
   Under no circumstances is it acceptable for a student to:
   - Submit the same work, or essentially the same work, for more than one course without explicitly obtaining permission from all instructors. A student must disclose when a paper or project builds on work completed earlier in their academic career.

- Request an academic benefit based on false information or deception. This includes requesting an extension of time, a better grade or a recommendation from an instructor.
- Make any changes (including adding material or erasing material) on any test paper, problem set or class assignment being submitted for a re-grade.
- Willfully damage the efforts or work of other students.
- Steal, deface, or damage academic facilities or materials.
- Collaborate with other students planning or engaging in any form of academic misconduct.
- Submit any academic work under someone else's name other than their own. This includes but is not limited to sitting for another person's exam; both parties will be held responsible.
- Violate any rules or conditions of test-taking or other course assessment (e.g., bringing materials or devices into an exam room when disallowed).
- Engage in any other form of academic misconduct not covered here.

This list is not intended to be exhaustive. To seek clarification, students should ask the professor or teaching assistant for guidance.

Reporting Misconduct

Faculty Responsibility

Faculty and instructors are strongly encouraged to report incidents of student academic misconduct to the academic integrity coordinators in the Office of the Provost in a timely manner (normally within five business days of discovery) so that the incident may be handled fairly and consistently across schools and departments. Teaching assistants and assistants in instruction are expected to report instances of student misconduct to their supervising instructors. Faculty members are expected to respond to student concerns about academic integrity violations in their courses.

Student Responsibility

If a student observes others violating this policy, they are strongly encouraged to report the misconduct to the instructor, to seek advice from the academic integrity coordinator in the Office of the Provost, or to address the student(s) directly.

Exam Proctor Responsibility

Exam proctors are expected to report incidents of suspected student misconduct to the course instructor and/or the Disability Resources staff, if applicable.

Procedure

Jurisdiction

This policy covers all undergraduate students, regardless of their college of enrollment, as well as graduate and professional students whose schools and programs do not have a separate policy and procedure. Cases will be heard by a panel drawn from an Academic Integrity Board made up of faculty and students representing the undergraduate schools and participating graduate programs.

Student Rights and Responsibilities in a Hearing

A student accused of an academic integrity violation, whether by a professor, teaching/graduate assistant, academic integrity coordinator or student is entitled to:

- A presumption of non-responsibility unless and until a panel determines that, based upon the evidence, it is more likely than not that the student engaged in a violation of academic integrity under this policy.
- Request a mediation/facilitation session prior to a hearing.
- Review the written evidence in support of the charge.
- Ask relevant questions.
- Offer an explanation as to what occurred.
- Present relevant material that would cast doubt on the correctness of the charge.
- Determination of the validity of the charge by an unbiased and objective panel and generally without reference to any past record of misconduct.

When responding to a charge of an academic integrity violation, a student may:

- Deny the charges and request a hearing in front of an Academic Integrity Board panel.
- Admit the charges and request a hearing to determine recommended sanction(s).
- Admit the charges and accept the imposition of sanctions by the academic integrity coordinator without a committee hearing.
- Request a leave of absence from the university. The academic integrity matter must be resolved prior to re-enrollment. A notation will be placed on the student's transcript indicating there is an unresolved academic integrity matter pending.
- Request to withdraw permanently from the university with a transcript notation that there is an unresolved academic integrity matter pending.

A student has the following responsibilities in resolving the charge of academic misconduct:

- Admit or deny the charge. This will determine the course of action to be pursued.
- Provide truthful information regarding the charges. It is a student code violation to provide false information to the university or anyone acting on its behalf.

Sanctions

If Found *Not* in Violation of the Academic Integrity Policy

If the charges of academic misconduct are not proven, no record of the allegation will appear on the student's transcript.

If Found in Violation of the Academic Integrity Policy

If, after a hearing, a student is found responsible for violation of the academic integrity policy or if a student has admitted to the charges prior to a hearing, the academic integrity coordinator may impose sanctions, including but not limited to the following:

- Issue a formal written reprimand.
- Impose educational sanctions, such as completing a workshop on plagiarism or academic ethics.
- Recommend to the instructor that the student fail the assignment. (A grade is ultimately the prerogative of the instructor.)
- Recommend to the instructor that the student fail the course.
- Recommend to the instructor that the student receive a course grade penalty less severe than failure of the course.
- Place the student on disciplinary probation for a specified period of time or until defined conditions are met. The probation will be noted on the student's transcript and internal record while it is in force.
- Impose suspension or expulsion.

Additional educational sanctions may be imposed. This list is not intended to be exhaustive.

A hearing panel may also elect to refer their recommended sanctions to the SCB Chairperson for determination if, for example, the recommendation departs from their standard recommendations.

Withdrawing from the course will not prevent the academic integrity coordinator or hearing panel from adjudicating the case, imposing sanctions, or recommending grade penalties, including a failing grade in the course.

A copy of the sanction letter will be placed in the student's academic file and may be reported in accordance with the Policy on Reporting of Student Conduct Violations.

Appeals

If a student believes the panel did not conduct a fair hearing or if a student believes the sanction imposed is excessive (i.e., suspension or expulsion), they may seek an appeal within 14 days of the original decision. For cases in which the decision resulted in suspension or expulsion, the appellate officer will be the Vice Provost of Educational Initiatives or the Vice Provost for Graduate Education. For all other cases, the appellate officer will be the Chair of the Student Conduct Board. Appeals are governed by Section VI of the university Student Conduct Code.

Administrative Record-Keeping Responsibilities

It is the responsibility of the academic integrity coordinators to keep accurate, confidential records concerning academic integrity violations. When a student has been found responsible for an academic integrity violation, a letter summarizing the allegation, the outcome, and the sanction will be placed in the student's official conduct file and may be reported out in accordance with the Policy on Reporting of Student Conduct Violations.

In addition, a report of the outcome of every formal accusation of student academic misconduct will be shared with the director of university student conduct programs, who shall maintain a record of each incident.

Multiple Offenses

When a student is formally accused of academic misconduct and a hearing is to be held, the academic integrity coordinator shall query the Office of Student Conduct and Community Standards (OSCCS) about the student(s) accused of misconduct. OSCCS shall provide any information in the OSCCS records concerning prior code violations of that student to the integrity coordinator. Such information will be used in determining sanctions if the student is found responsible for an academic integrity violation in the present case. Evidence of past misconduct generally may not be used to resolve the issue of whether a student has committed a violation in a subsequent case unless the hearing chair deems it relevant.

Reports to Faculty and Student Body

Periodic (at least annual) reports will be made to the students and faculty of their school concerning accusations of academic misconduct and the outcomes, without disclosing specific information that would allow identification of the student(s) involved.

Undergraduate Study

Policies & Guidelines

Academic Standing

The faculty of the school in which a student is enrolled determines the academic standing of that student. Each school, as appropriate to their respective degree requirements, considers the following key performance indicators to determine whether a student remains in good academic standing:

- Minimum semester and cumulative GPA of 2.0 (i.e., minimum required to graduate);
- Satisfactory progress in units completed, typically 12 per semester;
- Progress in the focused area of study, as defined by school (e.g., major requirements).

Failure to maintain the above indicators may cause a student to be placed into one of the academic standing categories described below, which is a signal that minimum standards for graduating are not being met. Unless a student demonstrates improvement, thereby indicating their ability to fulfill degree requirements within a reasonable period of time, the student may be dismissed from the university. Each school will determine the appropriate standards and actions for students to take, respective to each status:

Academic Concern

Any of the following performance indicators at the end of a semester will cause the student's standing to be reviewed and may cause the student to be placed on Academic Concern:

- Receiving an incomplete (first occurrence and all subsequent occurrences)
- Earning a semester GPA of less than 2.0 (first occurrence)
- Earning fewer than a total of 12 units in a regular semester (first occurrence)

While a student placed on Academic Concern remains in good academic standing, this status is a signal to the student that academic performance is below minimum standards and, if continued, will likely cause the student to fall out of good standing. This status is not noted on the official transcript; since it does not cause the student to fall out of good standing, it will not be incorporated into enrollment verifications requesting confirmation of academic standing.

Academic Notice

Any of the following performance indicators at the end of a semester will cause the student's standing to be reviewed and may cause the student to be placed on Academic Notice:

- Cumulative GPA of less than 2.0 (first occurrence and all subsequent occurrences)
- Semester GPA of less than 2.0 (second occurrence and all subsequent occurrences)
- Earning fewer than a total of 12 units in a regular semester (second occurrence and all subsequent occurrences)
- School-specific requirements:
  - Olin students earning a professional GPA of less than 2.0 (all business courses)
  - Arts & Sciences students earning below a C- in any major-related course

If the performance indicators contributing to the status of Academic Notice are raised above the threshold (e.g., by the resolution of an incomplete grade or the change of a final grade), the status may be reconsidered.

Academic Notice status indicates that a student is not in good academic standing. Although this status is not noted on the official transcript, it will be incorporated into enrollment verifications requesting confirmation of a student's standing.

Academic Time Away

Any of the following performance indicators at the end of a semester will cause the student's standing to be reviewed and may cause the student to be placed on Academic Time Away, which is a pause in enrollment at Washington University:

- Any third time a student becomes eligible for Academic Notice
- Any second sequential semester a student becomes eligible for Academic Notice (These are typically the fall and spring semesters, since most students do not enroll in summer classes. However, if a student does enroll in summer classes after a spring semester after which they were placed on Academic Notice, their performance will be reviewed.)
- Any semester in which student earns no degree credit

Academic Time Away status indicates that a student is not in good academic standing. Because this status is marked by a break in enrollment, this status is noted on the official transcript. The terms of the Time Away are determined by the student's school.

Grades and Grade Points

The following grades are used in calculating the grade point average:

Grade	Points per Unit
A or A+	4.0
A-	3.7
B+	3.3
B	3.0
B-	2.7
C+	2.3
C	2.0
C-	1.7
D+	1.3
D	1.0
D-	0.7
F	0.0

The following grades and notations are ignored in calculating the grade point average:

Grade/ Notation	Value
Pass	Pass
No Pass	No pass
I	Course work incomplete; final grade pending
W	Withdrawal
N	No grade submitted; final grade pending
R	Retaken course
L	Successful audit
Z	Unsuccessful audit
Exam Credit	Exam credit
Transfer Credit	Transfer credit
Not Transferred	Course attempted, not transferred

Minimum/Maximum Course Load

Undergraduate degree programs in Arts & Sciences, Olin Business School, Sam Fox School of Design & Visual Arts, and McKelvey School of Engineering require full-time enrollment (p. 61). Full-time enrollment is between 12 and 21 units of credit per semester. Courses taken as "audit" are not factored into the full-time status measure since students are not pursuing them to earn credit. Undergraduate students may not enroll in fewer than 12 units without approval; recommendations for reduced course loads may be approved for documented disability accommodations or health reasons by the appropriate office in Student Affairs, or students' schools (typically if they are in their ninth semester of enrollment at Washington University and poised to complete degree requirements). Approvals for reduced course loads primarily allow students to pursue lower course loads without risking a violation of standard academic progress and standing requirements.

Enrollment in fewer than 12 units may affect undergraduates' eligibility for financial aid, athletics, immigration status and other services, and may be approved for reduced tuition but only as documented on the Tuition & Fees page (p. 62) of this *Bulletin.* Similarly, students may not enroll in more than 21 units without approval from their school, and will incur additional tuition charges (p. 62) for such enrollment.

Students should review school policies and consult advisors for information about typical course loads to make appropriate progress in their degree program, since consistently pursuing only the minimum required units will not allow a student to fulfill degree requirements in a timely manner. They should also verify with their school how dropping or adding courses may affect their academic standing.

Registration in Courses

Registration dates are published in advance on the Office of the University Registrar's website. Late registration after the term begins is permitted only until the "add/drop" deadline relevant to a student's program. Students will not earn credit for courses in which they are not duly registered. Students may not register in courses that have conflicting meeting times.

Students may drop a course by the published deadline found on the Office of the University Registrar's website; dropped courses do not appear on the permanent academic record, and no grade is recorded. Students may withdraw from a course after the drop deadline and until the published withdrawal deadline. A withdrawal will result in a W notation associated with the course on the permanent record, including the transcript. Students who wish to drop or withdraw from a course are expected to follow steps to do so by the appropriate deadline. Failure to drop a course or to withdraw by the published deadline may result in the failure of the course, and the transcript will reflect a failing grade.

Undergraduate students may request, under certain rare circumstances, to withdraw from all courses in a term, after the term is over, if circumstances beyond their control prevented them from exercising normal enrollment options described above during that term. They must submit the request according to the process and by the deadline described on the Office of the University Registrar's website.

Repeated Courses

When courses designed to be taken once are repeated, all attempts remain on the student's record, including the original grade. However, credit and grade points are only awarded one time.

Teaching and Learning

Teaching and Learning at Washington University: A Statement of Best Practices and Expectations

Undergraduate Council
November 10, 1999
Teaching Subcommittee of the Undergraduate Council
Walter Chan and Robert E. Hegel, Co-Chairs

Amended by the Teaching Learning Subcommittee of the Undergraduate Council on January 27, 2010, and October 30, 2015.

Amended statements endorsed by the Undergraduate Council on February 2, 2010, and November 2, 2015.

All members of the Washington University community share responsibility for creating an atmosphere conducive to learning. A collaborative learning environment involves the active participation of both instructors and students in the classroom and in activities outside the classroom. This environment requires:

- best efforts on the part of both faculty and students to enhance the learning experience for the benefit of all persons involved;
- recognizing that everyone present plays an important role; that all participants in the learning experience deserve respect for what they contribute; and that both faculty and students be sensitive to the importance of the others in this process;
- an atmosphere that embraces multiple identities in the classroom by demonstrating mutual respect for all persons regardless of political, racial, ethnic, religious, gender, sexual orientation, age, disability, socioeconomic or veteran status.

In response to changing classroom dynamics, we, the Undergraduate Council, make the following recommendations:

Expectations and responsibilities of the faculty

The faculty member is involved in several major roles, including those of teacher, scholar-researcher, and citizen in the university. For the unimpeded performance of these functions, the faculty member is guaranteed academic freedom. At the same time, the faculty member has clear responsibilities to the students and to the institution, particularly in the faculty member's role as teacher. Instructors should provide the basic outlines for the learning experience and provide guidance as appropriate, generally in the form of a handout or easily accessible electronic document. Such guidance should normally involve:

- presenting a syllabus that:
  - identifies the goals of the course and its prerequisites, a schedule of major assignments and examinations, and explicit criteria for how student work will be evaluated;
  - articulates ground rules for classroom interaction and consequences for infringement (How much active participation is expected of the student? Is attendance required? Is it acceptable to eat during class? What are the guidelines for collaboration inside and outside of the classroom?);
  - establishes behavior expectations for the class, including respecting every member, listening and engaging;
  - makes clear expectations for technology use during class;
  - includes links to information about inclusion and diversity, bias reporting, and accommodations based upon sexual assault and mental health;
- reminding students of and upholding the university's standards for academic integrity;
- bringing new perspectives and insights to assigned readings and other text materials;
- conducting classroom and one-on-one interactions in keeping with the university's guidelines on diversity and inclusion;
- regularly meeting and punctuality in starting and dismissing class;
- prompt and responsible grading (including midterms), with evaluative comments and opportunities for students to discuss their grades with the faculty member;
- adherence to the announced office-hour schedule and offering as many avenues as possible for contact, including by online venue, telephone or email;
- using appropriate, relevant technology both inside and outside of the classroom to enhance communication between faculty and students;
- uploading course materials and sending emails or other notifications in a timely manner;
- overseeing assistants in instruction (AIs), including the training of AIs; providing definitions of grading expectations as per the University Code of Conduct; providing detailed rubrics for grading evaluations, case studies and projects; and ensuring a faculty review in the event students contest their grade and petition for regrading, especially to ensure grading uniformity;
- regular communication between two or more professors when they share in the teaching process of a one-semester course, including agreement about responsibilities, assignments given to students, and due dates expected;
- facilitation of and reflection on student evaluations of the faculty member's teaching methods and materials, including midsemester evaluations, as a means of creating an atmosphere of shared responsibility within the classroom;
- regular communication with students regarding progress in the course, ways to improve, and grading structure;
- avoiding prohibitive costs when ordering textbooks and other course materials; making electronic texts available;
- adhering to the published final examination schedule to avoid interfering with students' preparation for other classes;
- showing up to all of the classes and giving students the full number of contact hours they deserve each semester.

Expectations and responsibilities of the students

Students must take responsibility for their own learning. Students also share with the instructor the responsibility for providing an environment conducive to learning. Students should personally:

- actively engage in learning the material and with the process of education, including meeting with the instructor and/or AI when requested to or when necessary;
  - use the course materials, faculty expertise, and expectations for learning to build their own knowledge and skills;
  - attend all classes, both lecture and discussion sessions, and participate in class discussions; leave class only for emergencies; use online resources for augmentation and review, not as a substitute for class;
  - be punctual in completing assignments;
  - behave in the classroom in a manner that demonstrates respect for all students and faculty and follows university guidelines for diversity and inclusion;

- adhere to the instructor's expectations for the use of technology during class, including laptops, tablets and phones;
- share responsibility for the flow of information concerning a course by regularly checking the course webpage, online discussion groups and university email;
- be familiar with and adhere to matters of academic integrity as identified by their instructors and their school within the university;
- participate in objective and constructive evaluations of the instructor, course content according to the syllabus, and required textbooks/materials to clarify opportunities and strengths that will help the instructor to improve the course in subsequent semesters;
- conform to the ground rules of the course as defined in the syllabus.

Learning outside the classroom

Students and instructors should consult at the beginning of the semester about the content and expectations regarding independent study, supervised internships, supervised research, fieldwork, and international learning.

Students and instructors should familiarize themselves with division/department/program policies regarding independent studies and internship opportunities.

Special student concerns

Students should take the initiative to inform the faculty of anticipated absences prior to the scheduled event and discuss special arrangements to compensate for missed instruction. Should the absence be emergent or unanticipated, it is the student's responsibility to inform the faculty in a timely manner to minimize the disruption of class progression as a whole. Students should recognize that the collective needs of the faculty and other students in a course may outweigh individual priorities. Faculty should be sensitive to individual student needs for special arrangements:

- to accommodate disabilities, illnesses, family emergencies, or academic or professional opportunities that interfere with usual class attendance or performance;
- to provide accommodations when students miss class because of religious holidays.

Responsibilities of the university administration

For its part, the university administration must:

- continue to provide facilities and ensure adequate classroom and laboratory space that is stocked with sufficient, appropriate equipment;
- give priority to supporting both faculty and students in teaching and learning;
- provide opportunities for professional, student, and leadership development in both teaching and learning;
- be responsive when normal communications between faculty and students break down by providing a process for discussion and negotiation;
- facilitate communication among various constituents of the university;
- facilitate the flow of visitors to the classroom by providing faculty with ample notice.

Where to get help

For instructors: The departmental chair or associate chair, the Teaching Center, colleagues, and the relevant dean's office offer very useful advice on teaching techniques, materials and methods.

For students: The instructor, the AIs, and the Learning Center can be counted on for guidance on best learning techniques and practices. The Writing Center can be a very helpful resource for all levels of written assignments from concept identification and document structuring through final paper editing.

Should a student concern occur, the general process of communication and request for assistance, guidance, and problem resolution is as follows:

1. Raise the concern with the faculty member.
2. If resolution has not been achieved, raise the concern with the associate chair or department chair.
3. If resolution has not been achieved, raise the concern with the student's advisor(s).

Concerns and/or disagreements that have not been resolved by this process can be addressed to the faculty-student mediator.

If the student has a concern related to discrimination or harassment, the University Policy on Discrimination and Harassment provides additional information about resources and options.

10/30/2015

Transfer Credit Policy

Recording Policy

Transfer credit is articulated on a student's permanent record and listed on transcripts. Courses transferred from other institutions of higher education do not have grades or grade points assigned and therefore do not apply toward a student's GPA.

Institutionally, Washington University participates in the Inter-University Exchange Program (p. 1176). Courses taken at St. Louis University and the University of Missouri St. Louis, according to the parameters documented, are approved to transfer to Washington University. The McKelvey School of Engineering has agreements related to dual degree programs with other institutions.

Eligible Credit

In order to be eligible for transfer articulation, courses taken from another institution — whether taken before matriculation or after matriculation as preapproved domestic or study abroad enrollment — must meet the following criteria:

- Be offered and transcripted by a fully accredited institution of higher education (either according to U.S. Department of Education standards or by the appropriate national ministry of education for non-U.S. institutions);
- Have a quality final grade of C or better;
- Be offered in a subject matter/discipline taught at Washington University and at a level by which college/university credit would normally be awarded;
- Not be applied to high school graduation requirements;
- Be taught on the campus of a college or university and enrolled in primarily by duly matriculated college students (i.e., high school graduates); and
- Not be taken while a student is on suspension for violation of Academic Integrity or Student Code of Conduct policies.

Schools may have additional specific criteria about requirement areas that cannot be fulfilled with transfer credit (i.e., that can only be fulfilled by the completion of Washington University courses) as well as limits on the number of transferred credits that may apply to degree requirements or be taken during a summer term. Please review the school academic policy sections for details.

Admission Procedures

First-Year Admission

The undergraduate admissions committee reviews each application in a holistic and individualized manner, with a goal of getting to know each student through the application process. Some of the things assessed during this process include the following:

- Academic potential and preparation
- Personal characteristics and qualities
- Accomplishments and involvement

Admission to WashU is both selective and competitive. The university receives applications from far more students than it is able to admit each year. Students who come to WashU have challenged themselves academically and personally during their high school years and are required to have earned a high school diploma or its equivalent, including home-schooled students and students holding a GED. Most applicants take advantage of honors, Advanced Placement and International Baccalaureate, and/or Dual Enrollment courses, if offered by their high schools. The admissions review takes each applicant's individual context, circumstances, and opportunities into account.

Most candidates' transcripts include the following:

- Four years of English
- Four years of mathematics; calculus is strongly recommended for majors in Architecture, Business, and Engineering; science majors in Arts & Sciences; and those who intend to pursue a pre-medicine path
- Three to four years of history or social science
- At least two years of the same foreign language since ninth grade
- Three to four years of laboratory science; chemistry and physics are strongly recommended for Engineering majors and for those who plan to do course work in the sciences and/or pre-medicine

Important components of a student's application also include the following:

- The student's academic performance (transcript), including course selection, grades, and class rank, if provided by the secondary school
- Counselor and teacher recommendations
- Essays
- Extracurricular and community involvement, including positive impacts on home and community (students who work for pay and/or have time-consuming family responsibilities should include this in their activity list)
- Standardized testing, if provided (see below)

Standardized Testing

WashU has a test-optional policy for applicants for admission in the fall semester of 2026. Applicants have the option of whether to submit standardized test scores. Students who are unable to or who elect not to submit their test scores will have the requirement automatically waived and will not be penalized. For those who do submit test scores, either SAT or ACT scores are acceptable, and neither the writing section nor SAT Subject Tests are required. Test results from any of the student's high school years are acceptable and we consider only the highest individual scores, whenever they occurred. Students may also submit additional testing (such as SAT Subject Tests, AP or IB exam scores, or other forms of testing) in addition to, or in lieu of, the SAT or ACT.

Applying for Admission

For a student's application file to be complete, we must receive the following materials by the deadline for the decision plan selected:

- Common Application or Coalition Application
- Nonrefundable $75 fee (automatically waived for students applying for financial aid)
- All required additional materials as outlined in the Office of Undergraduate Admissions guidelines, including a teacher recommendation, a school report, and official transcripts

Washington University also accepts applications through the QuestBridge Match process.

Decision Plans

WashU offers two binding Early Decision options (Early Decision I, with a deadline of November 3 and notification by December 15, and Early Decision II, with a deadline of January 2 and notification by February 14) and Regular Decision, with a deadline of January 2 and notification by April 1 each year.

If WashU is a student's first choice, we encourage the student to consider applying under an Early Decision plan. Applying Early Decision signifies a binding commitment that the student will attend WashU if admitted. This option requires the applicant to submit a nonrefundable enrollment deposit within two weeks of receiving notification of admission. If admitted, the student must withdraw applications at other schools. A student may apply to only one school through a binding Early Decision plan.

Selecting a Division

We encourage students to think about where their interests may lie at the time they apply in terms of a major and a degree path to pursue. Applicants must select one of the academic divisions (Architecture, Art, Arts & Sciences, Business, or Engineering) as the primary point of interest. In addition, the student may indicate an interest in the Beyond Boundaries program. This allows us to assess proper preparation in the application review process and to provide effective academic advising from the start to help students realize their goals. Once admitted to a division, a student must spend at least one full semester in that division before requesting a change to another undergraduate division at WashU. Students wishing to switch undergraduate divisions after the first semester do so by meeting with their dean's office. (**Note:** Olin Business School considers division transfer requests after the first year.)

If English Is Not the Student's Primary Language

International applicants for whom English is a second language are required to demonstrate evidence of English language proficiency by submitting results from the TOEFL (Test of English as a Foreign Language), IELTS (International English Language Testing System), or Duolingo English Test. Applicants may also seek a waiver, based upon specific circumstances. Students should refer to the Office of Undergraduate Admissions for additional guidance.

Portfolios

In addition to the application materials referenced above, applicants to the College of Art are required to submit a portfolio of their work and applicants to the College of Architecture are encouraged to do so. All College of Art students will be considered for the Conway or Proetz Scholarship in art; Architecture students who submit portfolios will be considered for the Fitzgibbon Scholarship.

Applicants should submit their portfolios through SlideRoom and should include 12 to 15 pieces of recent work, which may include drawings, two- and three-dimensional pieces, and photographs. (If an applicant is submitting an architecture portfolio, they should not include CAD drawings or examples of their drafting skills.) The applicant may include additional information about each piece, such as the title, medium, dimensions and date completed.

Deferred Enrollment

Admitted students who have submitted their enrollment materials but wish to begin their studies at a later date may request to defer enrollment at WashU for a period of one year, with extension possible for an additional year depending on individual circumstances. Requests to defer enrollment (“take a gap year”) are reviewed individually on a case-by-case basis and must be received by the Office of Undergraduate Admissions by May 15.

Deferred enrollment is designed for students who wish to engage in a substantive personal growth experience before enrolling or students completing compulsory national service and/or a religious commitment. Students who have deferred enrollment should not enroll as a full-time student at another institution. If a student pursues any course work during deferred enrollment, any courses taken during the deferred period are typically not accepted for credit. Final decisions about the transferability of any credit lies with the dean's office in each division.

Students interested in deferring enrollment should contact the Office of Undergraduate Admissions for important deadlines and procedures. Note: students deferring enrollment must reapply for financial assistance during the application cycle immediately preceding the date of desired entry.

Please visit the Admissions website for more information.

Statement of Admissions Conduct

Washington University in St. Louis is committed to the highest ethical and professional standards of conduct as an integral part of its mission, the promotion of learning. To achieve this goal, the university relies on each community member’s ethical behavior, honesty, integrity and good judgment. Each community member should demonstrate respect for the rights of others. Each community member is accountable for their actions. Therefore, an offer of admission and a student’s enrollment at the university are contingent upon the accurate and complete representation of information within the application for admission, as well as successful completion of their current studies. Applicants are obligated to notify the university of any changes in the information provided or responses submitted as part of their application. Washington University in St. Louis reserves the right to rescind an offer of admission or revoke a student’s enrollment at any time if we receive information that, in our sole judgment and discretion, indicates that the information provided in the application is inaccurate or misleading or if new information leads the university to determine that a student is no longer a positive presence for study or participation in our community.

Transfer Admission

Transfer admission to Washington University is selective; the university receives more applications each year than it has space to admit. Applications for transfer admission are accepted for entry in the fall semester only.

An applicant should apply as a transfer student if they meet all of the following requirements:

1. The applicant has finished secondary school and completed some college study.
2. The applicant would like to be considered for admission with advanced standing (as a second-year or third-year student) at WashU.

3. The applicant is interested in enrolling full-time in an undergraduate degree program with a specific academic focus.
4. The applicant has never attended any of WashU's full-time, degree-granting schools.

For information about transfer application deadlines, please visit the Admissions website.

Preparation for Transfer

Transfer applicants are reviewed for their preparation to successfully enroll in their division of interest. Available space in each division varies every year. Generally speaking, strong applicants will have achieved at least a B+ average from a two- or four-year college in courses across a broad academic curriculum.

Some academic divisions require specific academic achievement and the completion of specific course work. For example, students with interests in business must demonstrate strong performance in math course work, including calculus, and students interested in engineering or the physical or biological sciences must demonstrate strong performance in science and mathematics course work, including calculus. Applicants are advised to review the suggested guidelines and specific course work needed for their intended area of study or intended professional pathway (e.g., pre-med); this is available on the Admissions website.

Additionally, transfer applicants must have left their current institution and all previous institutions in good standing and be eligible to return. If an applicant has been away from a formal academic setting for more than two years, we require the applicant to complete at least one year (30 units) of work at another college or university before applying for transfer admission.

Due to the very limited number of transfer spaces available, transfer applicants are ineligible to request deferred enrollment from one year to the next.

For additional admissions information on how to apply as a transfer applicant, please visit the Admissions website.

To apply as a transfer applicant, applicants must submit their high school transcript(s), their application, official transcripts of all previous college work, a Transfer Academic Evaluation (letter of recommendation), a Transfer Registrar Report (College Report), and the nonrefundable $75 application fee (or fee waiver) to the Office of Undergraduate Admissions. Transfer applicants have the option of whether to submit standardized testing, such as the SAT or ACT.

Detailed information about applying for financial aid is available on the Student Financial Services website and in this *Bulletin*.

Transfer admission information for individual schools is listed as follows.

Transferring into Arts & Sciences

Each year, a number of students from other colleges and universities transfer into the College of Arts & Sciences. Upon their admission, the transfer student advisor reviews and evaluates their previous academic work. Full credit is normally granted for courses taken at accredited institutions, provided that the university offers comparable courses and that the student has completed the courses with a grade of C or better. **Please note: With the exception of coursework taken during the 2020-21 academic year, online coursework will not be considered for transfer credit.** In addition, transfer credit may be counted where applicable and upon department approval toward major or minor requirements. Transfer students must be enrolled for at least four consecutive full-time semesters, excluding summer terms, to satisfy the residency requirement. They must complete a minimum number of units at Washington University and a minimum number of units in the College of Arts & Sciences in accordance with the table found under the heading "Transfer Students" on the Arts & Sciences Degree Requirements page of this *Bulletin*.

All transfer students are assigned an academic advisor. When they declare a major, they also meet with an advisor in the major department. The full range of curricular opportunities offered through the college is open to transfer students when prerequisites are satisfied. An applicant should direct specific questions about transfer credit and course sequences at Washington University to the College of Arts & Sciences.

Transferring into Architecture

Places for transfer students are extremely limited and require strong performance in an arts and sciences curriculum, preferably with preparation in the visual arts. Placement into the design studio sequence is determined by a portfolio review and an evaluation of prior coursework. To assist with appropriate placement, an interview with the associate dean of students, while not required, is strongly recommended. The applicant should bring a transcript to the meeting. The applicant's previous work should parallel as closely as possible the coursework outlined on the Architecture Degree Requirements page.

Transfer applicants to the College of Architecture are **required** to submit a portfolio consisting of 12 to 15 pieces of recent work for review by the faculty through SlideRoom on the Common Application. This should include examples of work that indicate the applicant’s technical and conceptual level of accomplishment. Some drawing should be from direct observation. If possible, applicants should submit examples of work in different media to demonstrate a range of art and design experiences.

Transferring into Art

The number of studio art credits that a transfer applicant has already earned, in combination with an evaluation of the applicant's portfolio, determines the level at which the student is admitted. As much as possible, the studio art courses taken at other institutions should correspond with the program at Washington University as outlined on the Art Degree Requirements page. To assist with appropriate placement, an interview with the associate dean of students, while not required, is strongly recommended. The applicant should bring a transcript to the meeting.

Transfer applicants to the College of Art are **required** to submit a portfolio through SlideRoom on the Common Application for faculty review. The portfolio should consist of 12 to 15 pieces of recent work and show a variety of art experiences, including drawings, work utilizing

design principles, and some work in color. Applicants should include examples of work from basic drawing and design classes that indicate their technical and conceptual level of accomplishment, and some drawing should be from direct observation. If possible, applicants should submit examples of work in different media to demonstrate a range of art and design experiences. If applying to the second- or third-year level, some of the work should be in the area of the applicant's intended major.

Transferring into Business

The Olin Business School offers transfer enrollment during the fall semester. The strongest candidates for admission are able to demonstrate solid academic performance at a two- or four-year college that mirrors most of the academic requirements that our students complete during their first or second year of study. For a sophomore-level transfer candidate, this would include Calculus II at the college level. Microeconomics is recommended. For a junior-level transfer candidate, this would include financial accounting, microeconomics, and perhaps macroeconomics and managerial accounting. All transfers to the Olin Business School must have completed an equivalent to Calculus II at the college level. Students who are admitted to the Olin Business School should expect a written course evaluation from the transfer student advisor within two weeks of receiving their offer of admission; this letter will indicate the courses that will be accepted by the business school. A maximum of 60 credits will be accepted toward our undergraduate degree. Students must earn at least a C grade in the course for the units to transfer to Washington University. Typically, courses taken online are not accepted as transfer credit. However, online courses taken during the COVID-19 pandemic (Spring 2020 through Summer 2022) will be transferable. Grades will not transfer to Washington University.

All transfer students are assigned an academic advisor. Transfer students must be enrolled for at least four consecutive full-time semesters to satisfy the residency requirement.

Please refer to the Degree Requirements for the Bachelor of Science in Business Administration degree.

Transferring into Engineering

Applicants may apply for admission if they have completed a minimum of one year of college work elsewhere; however, the McKelvey School of Engineering does not accept transfer students who have already completed a bachelor's degree. The transfer applicant must demonstrate academic achievement (i.e., a grade average of B+ or better), with strength in mathematics (calculus) and science (chemistry/physics). Transfer applicants to the McKelvey School of Engineering should have completed one semester of an English composition course, two semesters of calculus-based physics, and sufficient calculus (typically three semesters) to be prepared for differential equations. Applicants interested in biomedical engineering should also have completed at least one semester of chemistry with lab and an introductory biology sequence that includes cellular, molecular and developmental biology as well as genetics. Applicants interested in chemical or environmental engineering should have completed at least one biology course and sufficient chemistry to be ready to take organic chemistry. After completing the application process, an evaluation of the applicant's record will be made to determine the transfer of college credit. Grades earned do not transfer, but the applicant must earn a letter grade of C- or better for the course credit to transfer. Courses taken on a pass/fail basis do not transfer.

To be recommended for any bachelor's degree, a transfer applicant must satisfy applicable requirements of the McKelvey School of Engineering as shown in the Degree Requirements section of this *Bulletin.* Please note that all students earning an undergraduate engineering degree are required to complete a minimum of 60 course units at Washington University.

Pre-Matriculation Credit Units

Pre-matriculation credit units are earned before an applicant's enrollment at Washington University as a first-year student and can be applied toward a Washington University degree. A maximum of 15 units of pre-matriculation credit may be counted toward an undergraduate degree; these units of credit will count toward graduation but will not count toward the distribution requirements/meet general education requirements.* Sources for pre-matriculation credit units include Advanced Placement (AP) examinations, International Baccalaureate (IB) courses, British Advanced (A) Levels, course credit earned by proficiency (e.g., Back Credit), and college credit earned after the student's sophomore year in high school. Credits earned via Arts & Sciences Pre-College Programs are considered to be pre-matriculation credit units and are subject to the same regulations. A transcript notation is made of all pre-matriculation credit units earned before enrollment in Washington University.

*

- A student in the **College of Arts & Sciences** may apply a maximum of 15 units of pre-matriculation credit toward any undergraduate degree; these units of credit will count toward graduation but will not count toward the distribution requirements. A transcript notation is made of all pre-matriculation credit units earned before enrollment in Washington University.
- A student in the **Olin Business School** may apply a maximum of 15 units of pre-matriculation credit toward the Bachelor of Science in Business Administration undergraduate degree; these units of credit will count toward graduation but will not count toward the distribution requirements. A transcript notation is made of all pre-matriculation credit units earned before enrollment in Washington University.
- A student in the **McKelvey School of Engineering** may apply a maximum of 15 units of pre-matriculation credit toward any undergraduate degree. A transcript notation is made of all pre-matriculation credit units earned before enrollment in Washington University.
- A student in the **College of Art** may apply a maximum of 15 units of pre-matriculation credit toward an undergraduate degree; these units of credit will count toward graduation but will not count toward the distribution requirements. A transcript notation is made of all pre-matriculation credit units earned before enrollment in Washington University.

- A student in the **College of Architecture** may apply a maximum of 15 units of pre-matriculation credit toward an undergraduate degree; these units of credit will count toward graduation but will not count toward the distribution requirements, with the exception that 3 units can count toward MATH 1510 and 3 units can count toward PHYSICS 1740. A transcript notation is made of all pre-matriculation credit units earned before enrollment in Washington University.

Students who wish to receive pre-matriculation credit from their College Board AP examinations, International Baccalaureate courses, and British A-Level examinations should submit their official score reports to Washington University. All appropriate test scores will have course equivalents assigned to them and will be noted on the transcript. However, a maximum of 15 units of pre-matriculation credit will be awarded, provided credit has not been already designated as the result of college course work having been transferred as well. If a student takes a course in residence for which they have already received AP/IB/A-Level credit, the AP/IB/A-Level credit will be removed from their student record.

College Courses Prior to Washington University

A maximum of 15 units of pre-matriculation credit may be awarded for college courses completed at another college or university prior to matriculation, provided no other pre-matriculation credits have been awarded. In the College of Arts & Sciences, Sam Fox School of Design and Visual Arts, Olin Business School, and McKelvey School of Engineering, college courses completed at another college or university prior to matriculation must meet the following standards:

1. Taken after the sophomore year in high school
2. Taken at a fully accredited college or university
3. Taught on a college or university campus
4. Taught by a college or university faculty member
5. Enrolled in primarily by matriculated college students (i.e., high school graduates)
6. Not listed on the high school transcript, did not count toward the high school diploma/graduation requirements, and was not part of a high school/college dual credit program

Students in the **College of Arts & Sciences** who would like to apply to receive pre-matriculation credit for college courses completed at another college or university prior to matriculation should visit the College of Arts & Sciences website.

Students in the **Olin Business School** who would like to apply to receive pre-matriculation credit for college courses completed at another college or university prior to matriculation should contact the Olin Business School.

Students in the **Sam Fox School of Design and Visual Arts** who would like to apply to receive pre-matriculation credit for college courses completed at another college or university prior to matriculation should visit the Sam Fox School website or contact the Sam Fox School registrar (samfoxregistrar@email.wustl.edu).

Students in the **McKelvey School of Engineering** who would like to apply to receive pre-matriculation credit for college courses completed at another college or university prior to matriculation should contact the McKelvey School of Engineering or email their questions about the transfer course equivalency review process to EUSS@wustl.edu.

Secondary School Coursework

Washington University does not recognize credit for courses taken in secondary schools (high schools) and taught by secondary (high school) instructors, even when offered under the aegis of a university. The university accepts credit for courses taken at a college or university and taught by faculty of a college or university, provided the course has not been credited toward the high school diploma.

Placement Examinations

Superior results on placement examinations may allow students to enter advanced courses at the beginning of their college career, fulfill some requirements for a major or a minor by examination rather than by course work, and earn credit toward their degree. Washington University Placement examinations are administered by various departments and have different requirements for advanced course placement.

Proficiency Credit and Placement

Superior proficiency results on Advanced Placement Examinations, International Baccalaureate tests, and Advanced (A) Levels (A-Levels) may allow students to enter advanced courses at the beginning of their college career, fulfill some requirements for a major or a minor by examination rather than by coursework, and earn credit toward their degree. Students will have all accepted pre-matriculation credit noted on their transcript so they may go directly into advanced courses.

Three types of examinations are recognized:

1. **Advanced Placement (AP) Examinations**. These are used for placement, partial fulfillment of major or minor requirements, and the granting of degree credit, according to the recommendations of the various departments. Examinations are given by the College Board in May of each year for secondary school (high school) students who have been enrolled in college-level courses in the same subject or subjects of the exam. Students who wish to receive pre-matriculation credit for their AP test scores must have their AP test scores sent to Washington University by contacting the College Board at www.collegeboard.org or 1-888-225-5427 (College Code 6929).

2. **International Baccalaureate**. Students who have earned the International Baccalaureate diploma or who have successfully passed examinations in the program should consult a dean in their undergraduate division of the university about advanced course placement and credit. These scores may be used for placement or granting of degree credit, according to the recommendations of the various departments. Subsidiary-level (SL) scores and Extended Essay (EE) scores are not recognized.
3. **Advanced (A) Levels (A-Levels).** These grades may be used for placement or granting of degree credit, according to the recommendations of the various departments.

SAT Subject Tests: These examinations in modern languages are administered by the College Board. They are required for study in certain languages.

College Level Examination Program (CLEP): These scores are not accepted for credit or placement.

O-Level Examinations: These scores are not accepted for credit or placement.

Advanced Placement Policy

1. A maximum of 15 units of pre-matriculation credit may be counted toward any undergraduate degree. These units will count toward graduation but will not meet general education requirements.
2. No department at Washington University offers absolute credit, without further study, for scores lower than 4. In French and German, a score of 3 confirmed by a course in residence at Washington University earns additional credit; see listings below.
3. If a student takes a course in residence for which they have already received AP credit, the in-residence course credit will show as retaken on the Workday Student Record and the AP credit will be removed from the transcript effective Summer 2025.

African and African American Studies (AFAS)

Grade 5, 4	3 units of elective credit for AFAS 2081 African American Studies: An Introduction. These units do not replace AFAS 2550 Introduction to Africana Studies, AFAS 1002 Foundations in African & African American Studies, or other specific course requirements for an AFAS major or minor.
Grade 3, 2, 1	No credit or placement awarded.

Art History (ARTARCH) — Test: AHS

Grade 5, 4	3 units of elective credit for ARTARCH 1515 Introduction to Western Art may be awarded contingent upon the completion of a 3000- or 4000-level Art History course with a grade of B or better. Students in the Sam Fox School must complete ARTARCH 1515.
Grade 3, 2, 1	No credit or placement awarded.

Biology (BIOL) — Test: BIO

Grade 5, 4	6 units of credit for BIOL 1996 (elective credit). Students who plan to major in Biology or who are pre-medicine normally will enroll in BIOL 2960 in the spring of freshman year and BIOL 2970 in the fall of sophomore year.
Grade 3, 2, 1	No credit or placement awarded.

Chemistry (CHEM) — Test: CHE

Those students who receive a 5 on the AP test in Chemistry will receive 3 units each of CHEM 1030 and CHEM 1040. Those students who receive a 4 receive 3 units of CHEM 1030. Receipt of these credits has no bearing on fulfillment of Chemistry requirements for pre-medicine or any science major and cannot be used to satisfy prerequisites for Organic Chemistry. All students who receive a score of 4 or 5 on the AP exam should enroll in CHEM 1701 rather than CHEM 1601. Students who wish to pursue a Chemistry major must take CHEM 1701 and CHEM 1702 and the associated labs, CHEM 1751 and 1752. Please note: In certain instances, students may substitute CHEM 1601/1602 for CHEM 1701/1702. Please consult the Chemistry Department's Director of Undergraduate Studies for details. Students who wish to pursue another major or a pre-professional preparatory curriculum requiring General Chemistry must take either CHEM 1601 and 1602 or CHEM 1701 and 1702 (specific requirements defined by the major program) and the associated labs, CHEM 1751 and 1752. Students who wish to exempt either the first or second semester of General Chemistry, including the labs, must pass a placement exam administered by the Department of Chemistry during the first week of classes in the fall.

Grade 5	3 units of credit for CHEM 1030 and 3 units for credit for CHEM 1040. These units do not replace CHEM 1601, 1602, 1701 or 1702. CHEM 1602 or 1702 must be completed prior to registration in CHEM 2561 or 4010 or any advanced courses in Chemistry.

Grade 4	3 units of CHEM 1030. These units do not replace CHEM 1601, CHEM 1602, CHEM 1701, or CHEM 1702.
Grade 3, 2, 1	No credit or placement awarded.

Computer Science (CSE) — A Test

Students who want to confirm their skills can take the online placement exam.

Grade 5, 4	3 units of general elective credit for CSE 1301. Students who want to confirm their skills can take the online placement exam.
Grade 3, 2, 1	No credit or placement awarded, but students who take the online placement exam may receive "proficiency" credit if a passing score is achieved.

Computer Science (CSE) — AP Computer Science Principles/Test CSP

Students who want to confirm their skills can take the online placement exam.

Grade 5, 4	3 units of general elective credit for CSE 0013. Students who want to confirm their skills can take the online placement exam.
Grade 3, 2, 1	No credit or placement awarded. Students who want to confirm their skills can take the online placement exam.

Economics–Micro (ECON) — Test: EMI

Grade 5	3 units of undergraduate general degree credit ECON 1997 may be awarded contingent upon completion of ECON 4001 with a grade of B or better. Placement into any economics course having an ECON 1501 prerequisite is permitted; however, bypassing introductory courses may be disadvantageous, and students are encouraged to consult with the department's academic coordinator. Bypassing ECON 1501 requires the completion of additional economics elective credit for the major/minors in Economics and for the major in Economics + Computer Science.
Grade 4, 3, 2, 1	No credit or placement awarded. Not recommended to bypass ECON 1501.

Economics–Macro (ECON) — Test: EMA

Grade 5	3 units of undergraduate general degree credit ECON 1998 may be awarded contingent upon completion of ECON 4002 with a grade of B or better. The credit will not count toward the economics major/minor. Placement into any economics course having an ECON 1502 prerequisite is permitted (assuming other prerequisites are met); however, bypassing introductory courses may be disadvantageous, and students are encouraged to consult with the department's academic coordinator. Bypassing ECON 1502 requires the completion of additional economics elective credit for the major/minors in Economics and for the major in Economics + Computer Science.
Grade 4, 3, 2, 1	No credit or placement awarded. Not recommended to bypass ECON 1502.

English: Language and Composition (WRITING) or Literature and Composition (ELIT) — Test: ENG

Grade 5	3 credits of elective credit WRITING 1996 contingent upon completing CWP 1500-1510 with a grade of B or better.
Grade 4, 3, 2, 1	No credit or placement awarded.

Environmental Science (ENST)

No credit or placement awarded.

French Language (FRENCH) — Test: LNF

All students who have previously studied French, regardless of their AP status, need to take the French Placement Exam before enrolling in their first class in the language at WashU. To receive Advanced Placement credit in French for a score of 3 or 4 students must complete a 3000-level course with a grade of B or better.

Grade 5	3 units of credits for FRENCH 1020 and 3 units of credits for FRENCH 2030. Students are likely qualified for FRENCH 3070, but should take the placement exam in any case.
Grade 4	3 units of credits for FRENCH 1020 is awarded, and another 3 units of credits for FRENCH 2030 may be awarded contingent upon satisfactory completion of a 3000-level course–other than conversation—conducted in the language, with a B or better.
Grade 3	3 units of credits for FRENCH 1020 and 3 units of credits for FRENCH 2030 may be awarded contingent upon satisfactory completion of a 3000-level course -other than conversation—conducted in the language, with a grade of B or better.
Grade 2, 1	No credit or placement awarded. Placement at the appropriate level is determined by departmental examination.

French Literature (FRENCH) — Test: LNF

All students who have previously studied French, regardless of their AP status, need to take the French Placement Exam before enrolling in their first class in the language at WashU. To receive Advanced Placement credit in French for a score of 3 or 4 students must complete a 3000-level course with a grade of B or better.

Grade 5	3 units of credits for FRENCH 1020 and 3 units of credits for FRENCH 2030. Students are likely qualified for FRENCH 3070, but should take the placement exam in any case.
Grade 4	3 units of credits for FRENCH 1020 is awarded, and another 3 units of credits for FRENCH 2030 may be awarded contingent upon satisfactory completion of a 3000-level course–other than conversation— conducted in the language, with a B or better.
Grade 3	3 units of credits for FRENCH 1020 and 3 units of credits for FRENCH 2030 may be awarded contingent upon satisfactory completion of a 3000-level course–other than conversation—conducted in the language, with a grade of B or better.
Grade 2, 1	No credit or placement awarded. Placement at the appropriate level is determined by departmental examination.

German (GERMAN) — Test: LNG

Grade 5	3 units of credit for GERMAN 1020 and 3 units for GERMAN 2010; students may enroll in GERMAN 2020.
Grade 4	3 units of credit for GERMAN 1020 is awarded, and another 3 units of credits* for GERMAN 2010 may be awarded contingent upon satisfactory completion of GERMAN 2020 (B- or better).
Grade 3	3 units of credit* for GERMAN 1020 and 3 units* for GERMAN 2010 may be awarded contingent upon satisfactory completion of GERMAN 2020 (B- or better).

Grade 2, 1	No credit or placement awarded. Placement at the appropriate level is determined by departmental examination. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

* Students may receive this credit only if they start their language study at GERMAN 2020.

History (HISTORY)

American History — Test: HSA (A grade of 5 on the AP exam can fulfill Introductory course requirements for the history major and minor.)

Grade 5	3 units of credit for HISTORY 1145.
Grade 4	3 units of elective credit for HISTORY 1996.
Grade 3, 2, 1	No credit or placement awarded.

European History — Test: HSE (A grade of 5 on the AP exam can fulfill Introductory course requirements for the history major and minor.)

Grade 5	3 units of credit for HISTORY 1010.
Grade 4	3 units of elective credit for HISTORY 1996.
Grade 3, 2, 1	No credit or placement awarded.

World History: Modern — Test: HSW (A grade of 5 on the AP exam can fulfill Introductory course requirements for the history major and minor.)

Grade 5	3 units of credit for HISTORY 1146.
Grade 4	3 units of elective credit for HISTORY 1996.
Grade 3, 2, 1	No credit or placement awarded.

Human Geography

No credit or placement awarded.

Latin (LATIN) — Test: LNL

Grade 5, 4	3 units of credit for LATIN 1510 and 3 units of credit for LATIN 1520 may be awarded contingent upon completion of LATIN 3010, LATIN 3020, LATIN 3170 or LATIN 3180 with a grade of B or better. Placement at the appropriate level is determined by departmental examination.
Grade 3, 2, 1	No credit or placement awarded. Placement at the appropriate level is determined by departmental examination. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

Mathematics (MATH) — Test: MAB

The Mathematics Department's placement exam is available online. All entering students planning to enroll in a calculus course should take the placement exam available on Canvas.

Grade 5	3 units of credit for MATH 1510. Students will be placed into MATH 1520.
Grade 4	Students will be placed into MATH 1520 and awarded a waiver for MATH 1510.* This waiver will be placed onto the student record to show that the student has learned the material and does not have to take MATH 1510 (students should contact their major program about department-specific requirements on math waivers).
Grade 3	Students with scores of less than 4 should consult with their advisors about placement based on the Math Department Placement Test, SAT scores and high school record. It will be helpful to advisors if students bring the title and the author's name of the calculus book they used in high school and a photocopy of its table of contents, indicating which chapters were covered.
Grade 2, 1	No credit awarded. Students will be placed into MATH 1510.

Note: Students entering the Calculus 1510-1520-2130 sequence may be awarded Back Credit for earlier courses in this sequence by successful completion of the next course in the sequence with a grade of C+ or better at Washington University (see the Back Credit policy for details). In all cases, this assumes that the student does not already have credit for the preceding courses (e.g., by transfer from another college or university).

Mathematics (MATH) — Test: MBC

The Mathematics Department's placement exam is available online. All entering students planning to enroll in a calculus course should take the placement exam available on Canvas.

Grade 5	3 units of credit for MATH 1510 and 3 units of credit for MATH 1520. Students will be placed into MATH 2130. Note: An AB Subscore of 5 will earn 3 units of credit for MATH 1510.
Grade 4	Students will be placed into MATH 2130 and awarded a waiver for MATH 1510 and for MATH 1520.* This waiver will be placed onto the student record to show that the student has learned the material and does not have to take MATH 1520 (students should contact their major program about department-specific requirements on math waivers).
Grade 3	Students with scores of less than 4 should consult with their advisors about placement based on the Mathematics and Statistics Department Placement Test, their SAT scores, and their high school record. It will be helpful to the advisor if the student brings the title and the author's name of the calculus book used in high school and a photocopy of its table of contents, indicating which chapters were covered.
Grade 2, 1	No credit awarded. Students will be placed into MATH 1520.

Note: Students entering the Calculus 1510-1520-2130 sequence may be awarded Back Credit for earlier courses in this sequence by successful completion of the next course in the sequence with a grade of C+ or better at Washington University (see the Back Credit policy for details). In all cases, this assumes that the student does not already have credit for the preceding courses (e.g., by transfer from another college or university).

Music Literature/Listening (MUS) — Test: MUL

No credit or placement awarded.	Students should take the departmental placement exam.

Music Theory (MUS) — Test: MUT

No credit or placement awarded.	Students should take the departmental placement exam.

Philosophy-Neuroscience-Psychology (PNP)

Grade 5	Waives the PNP 1000 Introduction to Psychology requirement for the Philosophy-Neuroscience-Psychology Major (for both the Cognitive Neuroscience and Language Cognition and Culture Concentrations), but no college credit is awarded.
Grade 4, 3, 2, 1	No credit or placement awarded.

Physics (PHYSICS)

Physics 1 Test — Test: P1

Grade 5	3 units of elective credit for PHYSICS 1013. This corresponds to the first semester in a two semester, algebra-based introductory physics sequence. Students who require calculus-based physics for course or major requirements should enroll in PHYSICS 1740 and PHYSICS 1741 in the Fall semester.
Grade 4, 3, 2, 1	No credit or placement awarded.

Physics 2 Test — Test: P2

Grade 5	3 units of elective credit for PHYSICS 1014. This corresponds to the second semester in a two semester, algebra-based introductory physics sequence. Students who require calculus-based physics for course or major requirements should enroll in PHYSICS 1742 and PHYSICS 1743 in the Spring semester. Students may not enroll in PHYSICS 1742 without first taking PHYSICS 1740.
Grade 4, 3, 2, 1	No credit or placement awarded.

C Test (Mechanics) — Test: PCM

Grade 5	4 total units of credit for PHYSICS 1740 (3 credits) and PHYSICS 1741 (1 credit). This corresponds to the first semester in a two semester, calculus-based introductory physics sequence. Students may enroll in PHYSICS 1742, the second semester of this introductory calculus-based physics sequence, in the Spring semester. Physics majors and students interested in an advanced treatment of introductory physics should enroll in PHYSICS 1760 and PHYSICS 1741 in the Fall semester, followed by PHYSICS 1762 and PHYSICS 1743 in the Spring semester.
Grade 4	3 units of elective credit for PHYSICS 1013. This corresponds to the first semester in a two semester, algebra-based introductory physics sequence. Students who require calculus-based physics for course or major requirements should enroll in PHYSICS 1740 and PHYSICS 1741 in the Fall semester.
Grade 3, 2, 1	No credit or placement awarded.

C Test (Electricity and Magnetism) — Test: PCE

Grade 5	4 total units of credit for PHYSICS 1742 (3 credits) and PHYSICS 1743 (1 credit). This corresponds to the second semester in a two semester, calculus-based introductory physics sequence. Physics majors and students interested in an advanced treatment of introductory physics should enroll in PHYSICS 1760 and PHYSICS 1741 in the Fall semester, followed by PHYSICS 1762 and PHYSICS 1743 in the Spring semester.
Grade 4	3 units of elective credit for PHYSICS 1014. This corresponds to the second semester in a two semester, algebra-based introductory physics sequence. Students who require calculus-based physics for course or major requirements should enroll in PHYSICS 1740 and PHYSICS 1741 in the Fall semester.
Grade 3, 2, 1	No credit or placement awarded.

Political Science (POLSCI)

American Politics — Test: POA

Grade 5, 4	3 units of undergraduate credit for POLSCI 1000 may be awarded contingent upon completion of an advanced (3000-/4000-level) course in American politics with a grade of C or better. The credit will not count toward the political science major/minor, but it waives the POLSCI 1000-level requirement.
Grade 3, 2, 1	No credit or placement awarded.

Comparative Politics — Test: POC

Grade 5, 4	3 units of undergraduate credit for POLSCI 1100 may be awarded contingent upon completion of an advanced (3000-/4000-level) course in comparative politics with a grade of C or better. The credit will not count toward the political science major/minor, but it waives the POLSCI 1000-level requirement.
Grade 3, 2, 1	No credit or placement awarded.

Psychological & Brain Sciences (PSYCH)

Grade 5	Waives the PSYCH 1000 Introduction to Psychology requirement, but no college credit is awarded.
Grade 4, 3, 2, 1	No credit or placement awarded.

Research

No credit or placement awarded.

Seminar

No credit or placement awarded.	

Spanish Language (SPAN) — Test: LNS

No credit or placement awarded.	All students wishing to enroll in Spanish must take the online placement exam. Class placement is decided solely on the basis of the placement exam and not by AP scores. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

Spanish Literature (SAPN) — Test: LNS

All students wishing to enroll in Spanish must take the online placement exam. Class placement is decided solely on the basis of the placement exam and not by AP scores.

No credit or placement awarded.	Placement at the appropriate level is determined by departmental examination. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

Statistics (SDS) — Test: STA

Grade 5	3 units of credit for SDS 2020.
Grade 4, 3, 2, 1	No credit or placement awarded.

2D Art and Design (ART) — Test: A2D

Grade 5	3 units of elective credit for ART 1996.
Grade 4, 3, 2, 1	No credit or placement awarded.

3D Art and Design (ART) — Test: A3D

Grade 5	3 units of elective credit for ART 1996.
Grade 4, 3, 2, 1	No credit or placement awarded.

Drawing (ART) — Test: DRW

Grade 5	3 units of elective credit for ART 0001.
Grade 4, 3, 2, 1	No credit or placement awarded.

International Baccalaureate Policy

1. A maximum of 15 units of pre-matriculation credit may be counted toward any undergraduate degree. These units will count toward graduation but will not meet general education requirements.
2. Washington University accepts credit for Higher Level (HL) examinations only. Standard Level (SL)* examinations and Extended Essays (EE) will not be considered for credit or listed on student records.
3. If a student takes a course in residence for which they have already received IB credit, the in-residence course credit will show as retaken on the Workday Student Record and the IB credit will be removed from the transcript effective Summer 2025.

* The Mathematics Analysis and Approaches (AA) will accept SL-level examinations.

Biology (BIOL)

Grade 7, 6	6 units of credit for BIOL 1996 (elective credit). Students who plan to major in Biology or who are pre-med normally will enroll in BIOL 2960 during the spring of their first year and BIOL 2970 during the fall of sophomore year.
Grade 5, 4, 3, 2, 1	No credit or placement awarded.

Business & Management

No credit or placement awarded.	Placement at the appropriate level is determined by departmental examination. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

Chemistry (CHEM)

Those students who receive a 6 or 7 on the IB test in Chemistry will receive 3 units each of CHEM 1030 and CHEM 1040. Receipt of these credits has no bearing on fulfillment of chemistry requirements for pre-medicine or any science major and cannot be used to satisfy pre-requisites for Organic Chemistry. All students who receive a score of 6 or 7 on should enroll in CHEM 1701 rather than CHEM 1601. All students who wish to pursue a Chemistry major must take CHEM 1701 and CHEM 1702 and the associated labs, CHEM 1751 and CHEM 1752. Please note: In certain instances, students may substitute CHEM 1601/ CHEM 1602 for CHEM 1701/ CHEM 1702. Please consult the Chemistry Department's Director of Undergraduate Studies for details. Students who wish to pursue another major or a pre-professional preparatory curriculum requiring general chemistry must take either CHEM 1601 and CHEM 1602 or CHEM 1701and CHEM 1702 (specific requirements defined by the major program) and the associated labs, CHEM 1751 and CHEM

1752. Students who wish to exempt either the first or second semester of general chemistry, including the labs, must pass a placement exam administered by the Department of Chemistry during the first week of classes in the fall.

Chemistry HL:

Grade 7, 6	3 units of CHEM 1030 and 3 units of CHEM 1040. These units do not replace CHEM 1601, CHEM 1602, CHEM 1701, or CHEM 1702. CHEM 1602 or CHEM 1702 must be completed prior to registration in CHEM 2561, CHEM 4010, or any advanced courses in Chemistry.
Grade 5, 4, 3, 2, 1	No credit or placement awarded.

Chemistry SL: No credit or placement awarded.

Chemistry EE: No credit or placement awarded.

Classical Greek (GREEK)

No credit or placement awarded.	

Computer Science (CSE)

- Students who want to confirm their skills can take the online placement exam.

No credit or placement awarded.	Students should take the the CSE 1301 placement exam. Contact the CSE office at 314-935-6160 for more information.

Design Technology (CSE)

- Students who want to confirm their skills can take the online placement exam.

No credit or placement awarded.	Students should take the the CSE 1301 placement exam. Contact the CSE office at 314-935-6160 for more information.

Economics (ECON)

Economics HL:

Grade 7	3 units of undergraduate general degree credit ECON 1997, contingent upon completion of ECON 4001 with a grade of B or better. Placement into any economics course is permitted (assuming other prerequisites are met); however, bypassing introductory courses may be disadvantageous, and students are strongly encouraged to consult with the department's Academic Coordinator. Bypassing ECON 1501 and/or ECON 1502 requires the completion of additional economics elective credit for the major/minors in Economics and for the major in Economics + Computer Science.
Grade 6, 5, 4, 3, 2, 1	No credit or placement awarded. Not recommended to bypass ECON 1501 or ECON 1502.

Economics SL: No credit or placement awarded.

Economics EE: No credit or placement awarded.

English Literature (ELIT) and Writing (WRITING)

English A Language and Literature HL, English A Literature HL, English A HL, English A1 HL, English A2 HL, and English B HL:

Grade 7	3 units of elective credit (WRITING 1996) contingent upon completing CWP 1500-1510 with a grade of B or better. Please note that no credit is awarded for writing or literature courses.
Grade 6, 5, 4, 3, 2, 1	No credit or placement awarded.

English SL: No credit or placement awarded.

English EE: No credit or placement awarded.

French (FRENCH)

No credit or placement awarded.	Placement at the appropriate level is determined by departmental examination. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

Geography

No credit or placement awarded.	Placement at the appropriate level is determined by departmental examination. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

German Al, German B (Modern Foreign Languages) (GERMAN)

No credit or placement awarded.	Placement at the appropriate level is determined by departmental examination. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

Greek (GREEK)

No credit or placement awarded.	Placement at the appropriate level is determined by departmental examination. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

History (HISTORY)

History HL, SL, EE:

American History: No credit or placement awarded.

European History: No credit or placement awarded.

African History: No credit or placement awarded.

Islamic World History: No credit or placement awarded.

South and Southeast Asia History: No credit or placement awarded.

South Asia and Middle East History: No credit or placement awarded.

Italian (ITAL)

No credit or placement awarded.	Placement at the appropriate level is determined by departmental examination. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

Latin (LATIN)

No credit or placement awarded.	Placement at the appropriate level is determined by departmental examination. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

Mathematics (MATH)

The Mathematics Department's placement exam is available online. All entering students planning to enroll in a calculus course should take the placement exam available on Canvas.

Analysis and Approaches (AA) HL:

Grade 7, 6	3 units of credit for MATH 1520.
Grade 5, 4, 3, 2, 1	No credit or placement awarded.

Analysis and Approaches (AA) SL:

Grade 7, 6	3 units of credit for MATH 1510.
Grade 5, 4, 3, 2, 1	No credit or placement awarded.

Applications and Interpretations (AI) HL

Grade 7, 6	3 units of credit for MATH 1510.
Grade 5, 4, 3, 2, 1	No credit or placement awarded.

Applications and Interpretations (AI) SL: No credit awarded.

Note: Students entering the Calculus 1510-1520-2130 sequence may be awarded Back Credit for earlier courses in this sequence by successful completion of the next course in the sequence with a grade of C+ or better at Washington University (see the Back Credit policy for details). In all cases, this assumes that the student does not already have credit for the preceding courses (e.g., by transfer from another college or university).

Music (MUS)

No credit or placement awarded.	Students should take the departmental placement exam.

Norwegian

No credit or placement awarded.

Philosophy (PHIL)

Philosophy HL:

Grade 7, 6	3 units of credit for PHIL 1040.
Grade 5, 4, 3, 2, 1	No credit or placement awarded.

Philosophy SL: No credit or placement awarded.

Philosophy EE: No credit or placement awarded.

Physics (PHYSICS)

Physics HL:

Grade 7	3 units of credit for PHYSICS 1013 and 3 units of credit for PHYSICS 1014.
Grade 6, 5	3 units of credit for PHYSICS 1013.
4, 3, 2, 1	No credit or placement awarded.

Physics SL: No credit or placement awarded.

Physics EE: No credit or placement awarded.

Psychological & Brain Sciences (PSYCH)

Psychology HL:

Grade 7, 6	Waives the PSYCH 1000 Introductions to Psychology requirement, but no credit is awarded.
5, 4, 3, 2, 1	No placement or credit awarded.

Psychology SL: No credit or placement awarded.

Psychology EE: No credit or placement awarded.

Russian (RUSS)

No credit or placement awarded.	Placement at the appropriate level is determined by departmental examination. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

Social Anthropology (ANTHRO)

No credit or placement awarded.	Credit and placement are evaluated on an individual basis by the anthropology department.

Spanish (SPAN)

All students wishing to enroll in Spanish must take the online placement exam. Class placement is decided solely on the basis of the placement exam and not by IB scores.

No credit or placement awarded.	Placement at the appropriate level is determined by departmental examination. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

Visual/Studio Arts (ART)

Visual Arts HL:

Grade 7	3 units of elective credit for ART 0001.
6, 5, 4, 3, 2, 1	No credit or placement awarded.

Visual Arts SL: No credit or placement awarded.

Visual Arts EE: No credit or placement awarded.

A-Level (Advanced Level) Tests Policy

1. A maximum of 15 units of pre-matriculation credit may be counted toward any undergraduate degree. These units will count toward graduation but will not meet general education requirements.
2. O-Level exams as AS-Level (Advanced Subsidiary) test scores are not eligible for credit.
3. If a student takes a course in residence for which they have already received A-Level credit, the in-residence course credit will show as retaken on the Workday Student Record and the A-Level credit will be removed from the transcript effective Summer 2025.

Accounting (ACCT)

Grade A, B, C, D	3 units of accounting elective credit ACCT 1996.

Biology (BIOL)

Grade A, B	3 units of credit for BIOL 1996

Business Studies (MGT)

Grade A, B, C, D	3 units of accounting elective credit MGT 1996.

Chemistry (CHEM)

Grade A	3 units for CHEM 1030 and 3 units for CHEM 1040. These units do not replace L07 CHEM 1601, CHEM 1602, CHEM 1701 or CHEM 1702. CHEM 1602 or CHEM 1702 must be completed prior to registration in CHEM 2561 or CHEM 4010 or any advanced courses in Chemistry.
Grade B	3 units for CHEM 1030. These units do not replace CHEM 1601, CHEM 1602, CHEM 1701 or CHEM 1702.

Computer Science (CSE)

No credit or placement awarded.	Students can take the CSE 1301 placement exam. Contact the CSE office at 314-935-6160 for more information.

Economics (ECON)

Grade A	3 units of undergraduate general degree credit ECON 1997 contingent upon completion of ECON 4001 with a grade of B or better. Placement into any economics course is permitted (assuming other prerequisites are met); however, bypassing introductory courses may be disadvantageous, and students are strongly encouraged to consult with the department's Academic Coordinator. Bypassing ECON 1501 and/or ECON 1502 requires the completion of additional economics elective credit for the major/minors in Economics and for the major in Economics + Computer Science.

English (WRITING)

No credit or placement awarded.

French (FRENCH)

Grade A	3 units for FRENCH 1020 and 3 units of FRENCH 2030.
Grade B	3 units for French 2030 upon successful completion of a 3000-level course with a grade of C+ or better.

German (GERMAN)

No credit or placement awarded.	Placement at the appropriate level is determined by departmental examination. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

Greek (GREEK)

No credit or placement awarded.	Placement at the appropriate level is determined by departmental examination. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

History (HISTORY)

Grade A, B	3 units of elective credit for HISTORY 1996.

Latin (LATIN)

No credit or placement awarded.	Placement at the appropriate level is determined by departmental examination. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

Mathematics (MATH)

The Mathematics Department's placement exam is available online. All entering students planning to enroll in a calculus course should take the placement exam available on Canvas.

Mathematics (MATH):

Grade A, B	3 units of credit for MATH 1510.

Mathematics (Further) (MATH):

Grade A, B	3 units of credit for MATH 1510 and 3 units of credit for MATH 1520.
Grade C	3 units of credit for MATH 1510, and an additional 3 units of credit for MATH 1520 contingent upon successful completion of MATH 2130 with a grade of C+ or better at Washington University.

Note: Students entering the Calculus 1510-1520-2130 sequence may be awarded Back Credit for earlier courses in this sequence by successful completion of the next course in the sequence with a grade of C+ or better at Washington University (see the Back Credit policy for details). In all cases, this assumes that the student does not already have credit for the preceding courses (e.g., by transfer from another college or university).

Music (MUS)

No credit or placement awarded.	Students should take the departmental placement exam.

Physics (PHYSICS)

Grade A	3 units of credit for PHYSICS 1013 and 3 units of credit for PHYSICS 1014.
Grade B	3 units of credit for PHYSICS 1013.

Psychological & Brain Sciences (PSYCH)

Grade A	Waives the PSYCH 1000 Introduction to Psychology requirement, but no credit awarded.

Spanish (SPAN)

All students wishing to enroll in Spanish must take the online placement exam. Class placement is decided solely on the basis of the placement exam and not by A-Level scores.

No credit or placement awarded.	No credit or placement awarded. Placement at the appropriate level is determined by departmental examination. Students who place into and complete higher-level courses may be eligible for Back Credit for preceding courses; see the Back Credit policy for details.

Statistics (SDS)

Grade A, B	3 units of credit for SDS 2020.

Back Credit Policy

Students who place into and satisfactorily complete higher-level courses at Washington University may be eligible for Back Credit for preceding courses per the department's review and approval. Credit is not awarded twice if a student has already earned the Back Credit units from transfer credit or AP, IB, or A-Level scores. Placement in the appropriate course is determined by examination.

East Asian Languages

Students may be awarded back credit contingent upon successful completion of the following courses with the grade of B- or better. Native speakers are not eligible for back credit; evidence of secondary or post-secondary study of the language is required.

Chinese (CHINA)

CHINA 2011 or CHINA 2012	3 units for CHINA 1512
CHINA 3011 or CHINA 3012	3 units for CHINA 1512 and 3 units for CHINA 2012
CHINA 4021 or CHINA 4022	3 units for CHINA 2012 and 3 units for CHINA 3012

Japanese (JAPAN)

JAPAN 2013 or JAPAN 2014	3 units for JAPAN 1514
JAPAN 4013 or JAPAN 4014	3 units for JAPAN 1514 and 3 units for JAPAN 2014
JAPAN 4023 or JAPAN 4024	3 units for JAPAN 2014 and 3 units for JAPAN 4014

Korean (KOREA)

KOREA 2017 or KOREA 2018	3 units for KOREA 1518
KOREA 4017 or KOREA 4014	3 units for KOREA 1518 and 3 units for KOREA 2018
KOREA 4027 or KOREA 4028	3 units for KOREA 2018 and 3 units for KOREA 4018

French (FRENCH)

Students may be awarded back credit contingent upon successful completion of the following courses with the grade of B or better. Native speakers are not eligible for back credit; evidence of secondary or postsecondary study of the language is required. No back credit is awarded for FRENCH 1010.

FRENCH 2030	3 units for FRENCH 1010
FRENCH 3070	3 units for FRENCH 2030 and 3 units for FRENCH 1020
FRENCH 3080	3 units for FRENCH 3070 and 3 units for FRENCH 2030

Germanic Languages and Literatures (GERMAN)

Students may be awarded back credit contingent upon successful completion of the following courses with the grade of B- or better. Native speakers are not eligible for back credit; evidence of secondary or post-secondary study of the language is required.

GERMAN 2010	3 units for GERMAN 1020
GERMAN 2020	3 units for GERMAN 1020 and 3 units for GERMAN 2010
GERMAN 3010	3 units for GERMAN 1020 and 3 units for GERMAN 2010
GERMAN 3020	3 units for GERMAN 1020 and 3 units for GERMAN 2010

For students who started German at WashU prior to fall 2021:

GERMAN 210D/2100	3 units for GERMAN 102D/1020
GERMAN 301D/3010	3 units for GERMAN 102D/1020 and 3 units for GERMAN 210D/2100
GERMAN 302D/3020	3 units for GERMAN 102D/1020 and 3 units for GERMAN 210D/2100

Greek (GREEK)

Students may be awarded back credit contingent upon successful completion of the following courses with the grade of B or better. Native speakers are not eligible for back credit; evidence of secondary or postsecondary study of the language is required.

GREEK 2010	3 units for GREEK 1510
GREEK 3170 or GREEK 3180	3 units for GREEK 1510 and 3 units for GREEK 1520

Italian (ITAL)

Students may be awarded back credit contingent upon successful completion of the following courses with the grade of B or better. Native speakers are not eligible for back credit; evidence of secondary or postsecondary study of the language is required. No back credit is awarded for ITAL 100 or ITAL 3010.

ITAL 2010	3 units for ITAL 1020
ITAL 3070	3 units for ITAL 2010 and 3 units for ITAL 1020
ITAL 3080	3 units for ITAL 3070 and 3 units for ITAL 2010

Jewish, Islamic, and Middle Eastern Languages

Students may be awarded back credit contingent upon successful completion of the following courses with the grade of B- or better. Native speakers are not eligible for back credit; evidence of secondary or postsecondary study of the language is required.

Arabic (ARAB)

ARAB 2010 or ARAB 2011	3 units for ARAB 1001
ARAB 3010 or ARAB 3011	3 units for ARAB 2010 and 3 units for ARAB 2011
ARAB 3010 or ARAB 3011	3 units for ARAB 2010 and 3 units for ARAB 2011
ARAB 4051 or ARAB 4061	3 units for ARAB 3010 and 3 units for ARAB 3011

Hebrew (HBRW)

HBRW 2010 or HBRW 2013	3 units for HBRW 1002
HBRW 3040 or HBRW 3041	3 units for HBRW 2010 and 3 units for HBRW 2013
HBRW 3140 or HBRW 3150	3 units for HBRW 2010 and 3 for HBRW 2013
HBRW 4010 or HBRW 4020 or HBRW 4030	3 units for HBRW 3040 and 3 units for HBRW 3041

Hindi (HINDI)

HINDI 2020 or HINDI 2018	3 units for HINDI 1031
HINDI 3000 or HINDI 3001	3 units for HINDI 2020 and 3 units for HINDI 2018

Urdu (HINDI)

HINDI 2050 or HINDI 2051	3 units for HINDI 1061
HINDI 3010 or HINDI 3011	3 units for HINDI 2050 and 3 units for HINDI 2051

Latin (LATIN)

Students may be awarded back credit contingent upon successful completion of the following courses with the grade of B or better at Washington University:

LATIN 3010	3 units of credit for LATIN 1510 and 3 units of credit for LATIN 1520
LATIN 3020	3 units of credit for LATIN 1510 and 3 units of credit for LATIN 1520
LATIN 3170	3 units of credit for LATIN 1510 and 3 units of credit for LATIN 1520
LATIN 3180	3 units of credit for LATIN 1510 and 3 units of credit for LATIN 1520

Mathematics (MATH)

Students may be awarded back credit contingent upon successful completion of the following courses with the grade of C+ or better at Washington University:

MATH 1520	3 units for MATH 1510
MATH 2801 or MATH 2802	3 units for MATH 1510 and 3 units for MATH 1520
MATH 2130	3 units for MATH 1510 and 3 units for MATH 1520
All other courses	no credit

Russian (RUSS)

Students may be awarded back credit contingent upon successful completion of the following courses with the grade of B or better. Native speakers are not eligible for back credit; evidence of secondary or postsecondary study of the language is required.

RUSS 3501or RUSS 3502	3 units for RUSS 2501 and 3 units for RUSS 2502
RUSS 2501 or RUSS 2502	3 units for RUSS 1502

Spanish (SPAN)

Students may be awarded back credit contingent upon successful completion of the following courses with the grade of B or better.* Native speakers are not eligible for back credit; evidence of secondary or postsecondary study of the language is required. Heritage speakers of Spanish may receive Back Credit if evidence is provided of secondary or postsecondary study of the language and certification by the director of undergraduate study in Spanish. All students seeking Back Credit or wishing to enroll in a Spanish class must take the Spanish placement exam first, regardless of previous experience in the language. No back credit awarded for SPAN 101 or SPAN 2023.

SPAN 2010	3 units for SPAN 1020
SPAN 2020	3 units for SPAN 2010 and 3 units for SPAN 1020
SPAN 3020 or SPAN 3021	3 units for SPAN 2020 and 3 units for SPAN 2010

* For students in the old Spanish program only:
  - SPAN 307D/3070 = 3 units for SPAN 202/2020 and SPAN 201E/2010
  - SPAN 308E/3080 = 3 units for SPAN 307D/3070 and 3 units for SPAN 202/2020

Note: Back credit for SPAN 307D/3070 can only be used for elective credit; it cannot be used toward a Spanish major or minor.

Financial Support

WashU is committed to continuing to find new ways to provide students the resources they need to engage fully in academic and campus life. Student Financial Services has worked to create a variety of special programs to ensure access and affordability for students regardless of their ability to pay tuition and fees.

WashU bases most financial assistance on a careful assessment of financial need. The university also offers a limited number of academic scholarships and fellowships awarded based primarily on academic achievement and outstanding promise for excellence at WashU. Other financing options and innovative plans — such as the university's Partners in Education with Parents program and the Installment Payment Plan (the monthly payment plan administered by CASHNet) — assist students and families with financing the university's costs.

Eligible WashU undergraduate students receive need-based financial aid, which is offered in combinations of scholarships, grants, and part-time on-campus employment.

Applicants' financial circumstances are considered individually during the financial aid process. When evaluating the extent of each applicant's need, the university considers many factors besides family income, such as the number of people in the family, the number of children in college at the same time, and special financial circumstances.

The university strives to make attendance a financial reality for qualified students, even when financial need is great. Information about application procedures may be obtained from Student Financial Services.

Veterans. Washington University is committed to ensuring the success of all military-connected students in their pursuit of attitudes, skills, and habits of lifelong learning and leadership. For more information about how we support veterans, military service members, spouses, dependent children, caregivers, survivors, and ROTC Cadets, visit the Office of Military & Veteran Services. Specific information about benefits is available.

Scholarship Funds

Many generous WashU donors provide scholarship funds to assist deserving students who need financial support to attend WashU. These scholarships are included in financial aid awards. In addition, all applicants for admission are jointly considered for scholarships offered by academic divisions based on merit and financial need. Our Signature Scholars Programs — Danforth, Ervin, and Rodriguiez — are awarded through a special application process. Signature Scholarships are awarded based primarily on merit, with consideration for financial need. For scholarship information, please visit the Admissions website.

Army ROTC Scholarships

High school seniors can apply for four-year Army Reserve Officers' Training Corps (ROTC) scholarships. Current students can apply for three- and two-year scholarships. Students pursuing a graduate or advanced degree can compete for a two-year scholarship. Army ROTC scholarships are awarded based on merit, and they cover the full amount of tuition and mandatory fees. Army ROTC scholarships also include support for textbook purchases once per semester and a monthly subsistence allowance during the period that the student is in school on scholarship status. Some students who receive Army ROTC scholarships also receive stipends from the university toward room and board. The source of the student's stipend will be the university, the federal or state government, or other scholarships, depending on the student's eligibility for financial assistance. For more information, contact the Military Science Department, Washington University in St. Louis, 700 Rosedale Ave., Suite 1550, St. Louis, MO 63112; call 314-935-5521; or visit the Washington University Army ROTC website. The Four-Year Scholarship application may be submitted through the Army ROTC National Headquarters website.

Air Force ROTC Scholarships

High school seniors may compete for three- or four-year Air Force ROTC (AFROTC) scholarships, which cover up to full tuition at Washington University, plus a monthly stipend and allowance for books. The In-College Scholarship Program (ICSP) requirements vary from year to year and require at least one semester of AFROTC participation prior to application. Extensive information and the electronic application portal can be found on the AFROTC website. Some students who receive AFROTC scholarships also receive stipends from the university for room and board. The source of the student's stipend will be the university, the federal or state government, or other scholarships, depending on the student's eligibility for financial assistance.

Different types of AFROTC merit-based scholarships are available to students studying at Washington University. However, a scholarship is not required to join AFROTC or to successfully begin a career as an Air Force officer. For scholarship details, contact AFROTC Detachment 207 at 314-977-8230 or afrotc@slu.edu.

Corporation Awards to Children of Employees

A number of companies have scholarship programs open to the children of their employees. Inquiries about such plans should be made through the parents' employers.

Loans

While our financial aid packages do not initially include loans to meet demonstrated financial need, families may elect to take loans to pay their portion of costs. Washington University participates in federal student and parent loan programs. These loans provide reasonable interest rates and long-term repayment schedules.

Partners in Education with Parents (PEP)

Partners in Education with Parents (PEP) is an innovative multiple-option program financed and operated by WashU to help parents and families pay university charges for tuition, fees, housing, and meals.

PEP continues WashU's commitment to a partnership with the families of our students. This partnership includes a variety of choices to make the family contribution as affordable as possible. Families may choose the Multiyear Option, Prepayment Option, Combination Option or Annual Option.

The PEP Multiyear Option allows families to borrow one initial amount at the start of the entering year to cover all or part of four years of tuition, fees, housing and meals charges. This option freezes the charges covered by PEP at the entering-year rate based on the percentage of costs covered by the PEP (participation rate). Families can benefit from the competitive fixed interest rate and take up to 10 years to repay. There is no penalty for prepayment.

The PEP program also offers the choice to prepay, without borrowing from WashU, all or part of the tuition, fees, housing, and meals charges for all four undergraduate years at the entering-year rate. This Prepayment Option assures families that the prepaid portion of college expenses is covered and will not be subject to later increases in university costs.

Families can also choose the Combination Option, which allows them to prepay a portion of the charges and then borrow the rest from WashU. This combination works well for families who may have saved for a portion or most of their student's college expenses and who want to take advantage of the benefit of increasing their participation rate by using PEP to finance the remaining charges.

If the family prefers to borrow for college costs one year at a time, then the PEP Annual Option might be their best choice. Each year, the family can borrow an amount up to or equal to that year's tuition, fees, housing, and meals charges and take up to 10 years to repay. There is no penalty for prepayment, and they can benefit from the competitive fixed interest rate.

Financing under the Multiyear, Combination or Annual Options requires no security or collateral from participants. A prospective participant must have a good credit rating and provide evidence of being able to meet the required monthly payments to be approved for a loan.

More information about Partners in Education with Parents is available by contacting Student & Parent Loan Programs, Attn: PEP, Washington University in St. Louis, MSC 1041-105-05, One Brookings Drive, St. Louis, MO 63130-4899; calling 314-935-4139 or 800-468-0569; faxing 314-696-0563; emailing pepfinancial@wustl.edu; or visiting the Partners in Education with Parents website.

Installment Payment Plan (Monthly Payment Plan)

The monthly payment plan, which is administered by CASHNet, provides for the payment of the total annual university charges — tuition, fees, housing and meals — in monthly installments. Information about this plan is provided to all admitted students or may be obtained directly from Student Financial Services. For details, visit the Student Financial Services website.

Federal Work-Study

If students apply for financial assistance, they are considered for the Federal Work-Study Program. Students who participate in this program work an average of 10 to 12 hours per week on campus and typically earn up to $2,500 over the course of the academic year. Money earned through Federal Work-Study is paid directly to the student, typically through biweekly direct deposit; it is not applied to the student's university account.

Academic Load Status for Financial Aid, Immigration and Enrollment Verification

Status	Enrolled Units of Credit
Full time	12+ units
Three-quarter time	9-11.99 units
Half time	6-8.99 units
Less than half time	Fewer than 6 units

Tuition & Fees

Tuition

Tuition is the major source of income to support the cost of undergraduate education. Most of the remaining cost is generously funded by gifts from the university's alumni and friends and from income from the university's endowment.

In setting the tuition rate, our emphasis is on being able to hire a high-caliber faculty and to offer extensive opportunities to our students. For the 2025-26 academic year, the tuition rate also reflects, among other things, the cost of comprehensive measures we are taking that are necessary to enhance the safety of all members of our community.

Tuition for the 2025-26 academic year is $34,120 per semester for full-time study. Typical full-time study is 12 to 18 units. If students enroll in more than 21 units per semester, they will pay additional tuition of $2,843 for each credit unit beyond 21 units. Undergraduate students may be eligible to pay the per-credit unit tuition rate if they receive approval for a reduced course load below the required minimum of 12 units (see the Minimum/Maximum Course Load information on the Undergraduate Study page (p. 36)) and if they work to adjust their registration accordingly by the add/drop deadline. Recommendations for reduced course loads may be approved for documented disability accommodations or health reasons by the appropriate office in Student Affairs or by the student's school(s). (This typically occurs if the student is in their ninth semester of enrollment at Washington University and poised to complete their degree requirements.) Students must subsequently work with their school to adjust tuition. Students withdrawing from individual courses or recommended for reduced course loads after the add/drop deadline are not eligible for tuition reductions/refunds.

If the public health situation changes such that the university must suspend in-person classes, instruction will be provided remotely or through other alternative means, and there will be no tuition refunds based on that transition. If a student chooses to withdraw, entitlement to a partial refund will be determined in accordance with normal refund policies.

First-year, first-semester students may register over the summer or after beginning orientation programs closer to the start of the fall semester. For all subsequent semesters, continuing students have the chance to register in spring for the following fall semester and in fall for the following spring semester. Students will typically be assessed tuition and other semester charges in July for the fall semester and in December for the spring semester. Students must pay charges by the due date specified under the Financials Hub in Workday or they will incur a late fee.

If a student cannot afford to pay the full balance, they should explore the university's extensive financial assistance opportunities, which are described in the Financial Support (p. 60) section of this *Bulletin*.

Many families prefer to pay educational expenses on a monthly basis. The Installment Payment Plan allows students to spread all or part of the academic year's expenses over equal monthly payments. The Washington University Partners in Education with Parents (PEP) plan offers monthly payment options over a period as long as 10 years at a competitive, fixed interest rate. The PEP plan is described in the Financial Support (p. 60) section of this *Bulletin*.

A student's family should begin planning for educational costs as soon as possible following the decision to enroll. It is important to allow sufficient time to complete financial arrangements prior to registration.

Fees

Student Activities

The mandatory student activities fee is 1% of tuition, and it supports students groups to develop engaging and unique activities, programs, and initiatives on campus. For the 2025-26 academic year, this fee is $341 per semester, but this special fee may vary from year to year. Information about the fee may be obtained from the Student Union page of the Campus Life website.

Student Health and Wellness

Washington University has a student health and wellness fee designed to improve the health and wellness of the entire Washington University community. The fee of $336 is assessed to the student each semester.

In addition, to protect the health of our entire community, the university requires all full-time degree-seeking students to have health insurance. Students either must purchase the Washington University Student Health Insurance Plan or prove that they have adequate coverage through another plan. The cost of the Washington University Student Health Insurance Plan, as well as instructions for obtaining a waiver through proof of adequate coverage, will be provided to enrolled students.

Late Registration

Students may register for classes through the add/drop period. Students in School of Continuing & Professional Studies programs who register after that period will incur a flat late fee of $50.

Returned Checks

The university assesses a service charge for handling and processing returned checks.

Enrollment Deposit

First-year, transfer, and exchange students are required to pay a deposit upon admission to Washington University. The enrollment deposit is nonrefundable. The enrollment deposit will be used to cover costs associated with first- and second-year experiences, including orientation. International students are charged an additional fee to support international-specific orientations and new student programming.

- Domestic and permanent resident first-year students: $600
- International first-year students: $885
- Domestic and permanent resident transfer students: $285
- International transfer students: $570
- Exchange students: $600

Leaves and Withdrawals from the University and Refunds

The College of Arts & Sciences, the Olin Business School, the Sam Fox School of Design & Visual Arts, and the McKelvey School of Engineering follow a standard refund schedule, listed below, when students request a leave of absence or to withdraw from the university after classes have begun in a given semester. Students must submit a request for time away (p. 25) for either a leave or withdrawal, which will be routed automatically to the appropriate school for approval and sent to the Office of the University Registrar for processing.

Refunds are typically calculated based on the date the student notifies the university of withdrawal, although for health-related leaves the date a student was no longer able to participate in course activities may be used.

If a Federal Title IV aid recipient takes a leave or withdraws from school before the end of the academic semester, Washington University must refund (send loan funds back to the lender) the unearned (amount of time in the academic semester that the student did not attend) amount of Title IV funds. Unearned Title IV funds will be returned to the Title IV program. Students will be responsible for any disbursed but unearned portion of their Title IV funds.

Tuition Refund Schedule

Withdrawal Date	Refund
1st or 2nd week of classes	100%
3rd or 4th week of classes	80%
5th or 6th week of classes	60%
7th or 8th week of classes	50%
9th or 10th week of classes	40%
After 10th week of classes	0%

Changes in Fees

The university reserves the right to change the fees stated or to establish additional fees at any time without prior written notice. When fee changes or additions are made, they become effective with the next payment due.

Nonpayment of Fees

Nonpayment of tuition or other charges due to the university or otherwise affecting the university will prohibit the student from receiving certain services. Students with outstanding financial obligations to the university will not be allowed to register. More information can be found in the university's Student Financial Responsibility policy (p. 29).

Majors (all schools)

All Undergraduate Majors, Listed Alphabetically

A

- Accounting, BSBA (p. 1054)
- Accounting, Second Major (p. 1057)
- African & African American Studies Major (p. 206)
- American Culture Studies Major (p. 218)
- Ancient Studies Major (p. 383)
- Anthropology Major (p. 270)
- Anthropology Major, Global Health and Environment Specialization (p. 272)
- Applied Mathematics Major (p. 699)
- Applied Science (Chemical Engineering) (EECE), BS (p. 1142)
- Applied Science (Electrical Engineering) (ESE), BS (p. 1128)
- Applied Science (Mechanical Engineering) (MEMS), BS (p. 1153)
- Applied Science (Systems Science & Engineering) (ESE), BS (p. 1128)
- Arabic Major (p. 667)
- Architecture, BA (p. 112)
- Architecture, BS (p. 112)
- Art History and Archaeology Major (p. 313)
- Art with Painting Concentration, BFA (p. 157)
- Art with Photography Concentration, BFA (p. 159)
- Art with Printmaking Concentration, BFA (p. 160)
- Art with Sculpture Concentration, BFA (p. 161)
- Art with Time-Based + Media Art Concentration, BFA (p. 163)
- Art, BA (p. 164)
- Art, BFA (p. 165)
- Art, Second Major (p. 172)
- Astrophysics Major (p. 796)

B

- Biology Major (p. 337)
- Biology Major, Ecology and Evolution Specialization (p. 339)
- Biology Major, Genomics and Computational Biology Specialization (p. 341)
- Biology Major, Microbiology Specialization (p. 343)
- Biology Major, Molecular Biology and Biochemistry Specialization (p. 345)
- Biology Major, Neuroscience Specialization (p. 347)
- Biomedical Engineering (BME), BS (p. 1081)
- Business and Computer Science (CSE), BS (p. 1104)

C

- Chemical Engineering (EECE), BS (p. 1140)
- Chemistry Major (p. 362)
- Chemistry Major, Biochemistry Specialization (p. 364)
- Classics Major (p. 384)
- Communication Design, BFA (p. 166)
- Comparative Literature and Thought Major (p. 404)
- Comparative Literature and Thought Major, Comparative Arts Specialization (p. 406)
- Computer Engineering (CSE), BS (p. 1096)
- Computer Engineering (ESE), BS (p. 1126)
- Computer Science (CSE), BS (p. 1097)
- Computer Science (CSE), Second Major (p. 1106)
- Computer Science + Economics (CSE), BS (p. 1098)
- Computer Science + Mathematics (CSE), BS (p. 1099)
- Computer Science + Mathematics (CSE), Second Major (p. 1107)

D

- Dance Major (p. 757)
- Data Science (CSE), BS (p. 1102)
- Data Science (CSE), Second Major (p. 1109)
- Data Science Major (p. 958)

Architecture

Sam Fox School of Design & Visual Arts

The Sam Fox School of Design & Visual Arts is a unique collaboration in architecture, art, and design education, linking professional studio programs with one of the country's finest university art museums in the context of an internationally recognized research university.

The Sam Fox School is composed of the College of Architecture, the Graduate School of Architecture & Urban Design, the College of Art, the Graduate School of Art, and the Mildred Lane Kemper Art Museum.

Architecture

Throughout history, architects have played a leading role in forming the environment and in interpreting the aspirations of societies in all parts of the world. As a practical and useful art, architecture embraces aesthetic, ethical, social, and technical responsibilities. Architecture responds to the way people live and, in turn, influences their lives.

Students considering an architectural education and architecture as a potential career express an excitement about design and building as well as a commitment to the environment. If students plan to study architecture, they should have creative ability and a good academic base. Personal interests in such areas as drawing, painting, photography, sculpture, building, and the environment suggest a possible aptitude for architecture.

Architecture reflects culture; architects must know their culture deeply. To gain an understanding of all aspects of architecture and to develop the aptitudes and skills necessary to deal with them, students must have a broad liberal arts education. This base of cultural understanding and critical thinking is combined with a curriculum that focuses intensely on the study of architecture.

Architecture is an absorbing, fascinating profession. Choosing architecture as a professional career requires a major educational commitment at the undergraduate level as well as further study in a professional degree program. With a professional degree in architecture, a graduate may choose to work in small or large architectural firms, in academia, in community or governmental organizations, with development teams, and in a variety of related fields.

Architecture at Washington University

Washington University established the Department of Architecture as part of the School of Engineering and Architecture in 1902. The School of Architecture became an independent division of the university in 1910. In 2005, as part of the formation of the Sam Fox School of Design & Visual Arts, the School of Architecture was reorganized as the College of Architecture and the Graduate School of Architecture & Urban Design.

Our four-year undergraduate degree programs emphasize both physical and digital tools and techniques, which help students to become more creative thinkers and designers. All architecture students take similar courses during their first three years; courses taken during the fourth year will differ depending on each student's choice of program.

The **Bachelor of Science in Architecture** entails a more intensive study of architecture during the senior year. Students will take senior-level design studios focused on advanced building design along with structures courses, architectural history and theory courses that cover a broad range of topics, and technology courses in environmental systems.

The **Bachelor of Arts in Architecture** offers greater flexibility. During their senior year, students complete a capstone research project. With their remaining credits, they may choose to pursue courses in other areas of interest or take advanced architecture design studios and electives.

These undergraduate degree programs offer students the opportunity to gradually focus their undergraduate studies within the College and allow them to make an incremental commitment to a career in architecture. Should students choose to pursue a professional degree, the Bachelor of Science is the optimal springboard for graduate school; however, both programs prepare students to move on to master's degrees, positioning them for leadership positions in architecture and other related fields.

The College of Architecture faculty are nationally and internationally renowned practitioners and researchers who are committed to students' undergraduate experience. As academic advisors, they work with the director and the undergraduate chair to help students build an individualized curriculum, select specific courses, and chart plans for their future careers.

Majors

Architecture is interdisciplinary in nature, drawing from various bases of knowledge and requiring collaboration with other fields. Our program balances architectural education with a strong liberal arts base. Students can take classes in any field that interests them — art, engineering, computer science, psychology, literature, business, and more — allowing them to develop their abilities to think, communicate, and work across disciplinary lines. Students select a track in architecture that hones their focus as they advance through the program. This supports them in defining the knowledge area they would like to cultivate and prepares them for graduate school and career.

We offer two degree options that allow students to individualize their educational experience. Regardless of which option they choose, students may pursue minors, second majors, and dual degrees. While the Bachelor in Science in Architecture is an optimal springboard to graduate school, both tracks prepare students to move on to master's degrees, positioning them for leadership positions in architecture and other related fields.

- Architecture, BA (p. 112)
- Architecture, BS (p. 112)

Minors

The College of Architecture offers several minors, which are available to all students at Washington University in St. Louis. Minors require a total of 15 units from approved courses. All courses applied toward an architecture minor must be taken for a grade, and students must earn a grade of C- or higher. At least 12 of the credit units must be applied exclusively to the minor and cannot be counted toward another major or minor. Architecture track (p. 100) courses count toward the minor. No individual course may count more than once toward the minor.

Elective options may vary each semester and each year. In the event that a required course is not offered during a given semester or a student has irreconcilable scheduling conflicts with required major courses or other minor courses, it is possible to substitute an appropriate alternate course with approval from the minor advisor.

- Architectural History and Theory Minor (p. 113)
- Architecture Minor (p. 114)
- Landscape Architecture Minor (p. 114)
- Urban Design Minor (p. 115)

Courses

- ARCH (p. 71): Architecture
- LANDARCH (p. 98): Landscape Architecture

Architecture

ARCH 1001 Architecture Elective (First-Year)
1000-level elective in architecture.
Credit 9 units.
Typical periods offered: Fall, Spring, Summer

ARCH 1010 Drawing
Students will learn to recognize and manipulate fundamental elements of line, tone, texture, volume, and plane with relation to representational drawing. Students work in a wide variety of media and techniques (charcoal, pencil, pastels, and wet media) from the figure, still life, and the environment.
Credit 1 unit.
Typical periods offered: Summer

ARCH 1020 Design Studio
The heart of the program, Design Studio drives creativity and discovery to foster passion and compassion in design. You'll learn how sustainability and the built environment are shaping the practice of architecture. Over the course of the program, you'll undertake a series of short design exercises that will introduce you to the design thinking process, culminating in an architectural project for review by faculty and guest critics.
Credit 1 unit.
Typical periods offered: Summer

ARCH 1110 Introduction to Design Processes I
The first year of the core studio sequence examines interactions between architecture and environments through the design of a small-scale project. Key concerns include global climate change, ecological systems, and sustainability. This year emphasizes experimentation in which students search for a conceptual position relative to architecture history, theory, and culture via the iterative development of form, geometry, space, and aesthetics. More specifically, this studio focuses on engagement with abstraction, context, and temporality in a series of design projects that include: (1) a body device, (2) a ground, and (3) a temporary structure. Exercises explore problems of translation between 2 and 3-dimension, site and climate study and design, and narrative design. Introduction to Design Processes I is the first in the series of the five required core studios in the undergraduate architecture program. All students initially register for section 01. The studio coordinator will assign students to sections at the start of the semester and students will change their section registration at that time.
Credit 4.5 units.
Typical periods offered: Fall

ARCH 1120 Introduction to Design Processes II
The first year of the core studio sequence examines interactions between architecture and environments through the design of a small-scale project. Key concerns include global climate change, ecological systems, and sustainability. This year emphasizes experimentation in which students search for a conceptual position relative to architecture history, theory, and culture via the iterative development of form,

geometry, space, and aesthetics. More specifically, this studio focuses on engagement with surfaces, flows, and assemblies in a series of design projects that include: (1) a tectonic surface, (2) land and waterscapes, and (3) a gathering space. Exercises explore problems of size and scale, object to field, and figure-ground. Introduction to Design Processes II is the second in the series of the five required core studios in the undergraduate architecture program.
Credit 4.5 units.
Typical periods offered: Spring

ARCH 1144 Architecture for Non-Architects
Architecture for Non-Architects introduces non-architecture students to the process through which architects think about, view and produce the built environment. This new course is meant to serve as an alternative to the traditional studio instruction in the major, thus allowing students who are curious about architecture to experience it without the demands and commitment of major courses. If a student decides to transfer into the architecture major later on, they will meet with the architecture minor lead advisor to jointly propose a planned course of study that addresses any missing credits and foundational skills required for successful completion of the architecture major. This foundational course proposes a combination of readings, class discussions and research that will be used to inform the design process. Field trips will initiate students into the act of seeing by challenging them to observe, interpret and critically engage with the built environment (the site) and those who are affected by it (the stakeholders) in specific scalar and temporal contexts.
Credit 3 units. EN: H
Typical periods offered: Spring

ARCH 1210 Representation I
This course introduces students to the ever-expanding, extra-disciplinary array of tools, techniques, software, equipment, and media at play in architectural representation. Organized as a lab, the course presents a series of one to three-week-long, in-class exercises that focus on skill-building and encourage experimentation within a narrow framework. Three primary areas of focus include visualization (freehand drawing, hand-mechanical projection, digital model-making, digital projection, and photography), fabrication (hand model-making, woodworking, and CNC routing), and curation (portfolio design, display, and presentation.) Representation I is the first in the series of two required representation workshops in the undergraduate architecture program.
Credit 1.5 units.
Typical periods offered: Fall

ARCH 1220 Representation II
This course introduces students to the ever-expanding, extra-disciplinary array of tools, techniques, software, equipment, and media at play in architectural representation. Organized as a lab, the course presents a series of one to three-week-long, in-class exercises that focus on skill-building and encourage experimentation within a narrow framework. Three primary areas of focus include visualization (freehand drawing, hand-mechanical projection, digital model-making, digital projection, and photography), fabrication (hand model-making, woodworking, and CNC routing), and curation (portfolio design, display, and presentation.) Representation II is the second in the series of two required representation workshops in the undergraduate architecture program.
Credit 1.5 units.
Typical periods offered: Spring

ARCH 1810 Independent Study
Credit 0 units.
Typical periods offered: Spring

ARCH 185 Practices in Architecture, Landscape Architecture, and Urban Design
This course offers first-year students in the College of Architecture an introduction to the subjects, theories, and methodologies of the disciplines of architecture, landscape architecture, and urban design. Examples are drawn from a range of historical periods, and contemporary practice highlights distinct processes of thinking and working in each discipline and areas of intersection and overlap. Concurrent registration in A46 112C or A46 144 is recommended.
Credit 3 units.
Typical periods offered: Spring

ARCH 2001 Architecture Elective (Sophomore)
2000-level elective in architecture.
Credit 9 units.
Typical periods offered: Fall, Spring, Summer

ARCH 2090 Design Process
This studio course will engage students in the process of design with an emphasis on creative thinking. Course content relates directly to the interests of engineers, arts & science, business and art students who wish to problem solve about positively shaping the texture and quality of the built world. A series of 2D & 3D hands-on problem-solving projects introduce students to design concepts as they apply to site (eco-systems and outdoor places), to humanistic place making (personal and small public spaces), to structure & materials (intuitive exploration of structural principles though model building), to environmental issues (effects of climate, light, topography, context and sensible use of natural resources). No technical knowledge or special drawing/model-making skills are required. There will be informal group and individual discussions of each person's stages in inquiry. The investigations will take the form of study models made of recycled materials. Guest lecturers will participate throughout the semester. The concluding project for the semester will allow each student to work with their unique academic and personal interests, utilizing the process of lateral thinking.
Credit 3 units. Art: CPSC
Typical periods offered: Fall, Spring

ARCH 2110 Architectural Design I
The second year of the core studio sequence examines interactions between architecture and technology through the design of a medium-scale project. Key concerns include transformative emerging technology, cultural and material production, and labor practices in relation to digital tools and systems. This year emphasizes choice as students are supported in clarifying their conceptual position relative to architecture history, theory, and culture via the iterative development of form, geometry, space, and aesthetics. More specifically, this studio focuses on engagement with materials, cladding, and interiors in a series of design projects that include: (1) modules, (2) a screen, and (3) a live/work space. Exercises explore problems of part-to-whole relationships, cladding and ornament, and public and private space. Architectural Design I is the third in the series of the five required core studios in the undergraduate architecture program. All students initially register for section 01. The studio coordinator will assign students to sections at the start of the semester and students will change their section registration at that time.
Credit 6 units.
Typical periods offered: Fall

ARCH 2120 Architectural Design II
The second year of the core studio sequence examines interactions between architecture and technology through the design of a medium-scale project. Key concerns include transformative emerging technology, 8 cultural and material production, and labor practices in relation to digital tools and systems. This year emphasizes choice as students are supported in clarifying their conceptual position relative to architecture history, theory, and culture via the iterative development of form, geometry, space, and aesthetics. More specifically, this studio focuses on engagement with representation, technology, and circulation in a series of design projects that include: (1) a drawing device, (2) a fabrication analysis, and (3) a production and display space. Exercises explore problems of representation and mediation, architectural labor and automation, and mass and volume. Architectural Design II is the fourth in the series of the five required core studios in the undergraduate architecture program.
Credit 6 units.
Typical periods offered: Spring

ARCH 2210 Architectural History I: Antiquity to Baroque
This lecture course will introduce major historical narratives, themes, sites, and architects from ancient Greece to the end of the Baroque period. We will take an extended look at the dawn of the modern period during the 15th and 16th centuries through a global perspective, turning eastward from Renaissance Europe to the Ottoman, Mughal, Chinese, and Japanese empires. The great chronological and geographic span of this course will be pulled together around the themes of classicism and its subsequent reinterpretations as well as the pursuit of the tectonic ideal. Our aim is to recognize how these ideological pursuits of modern architecture evolved out of longer historical processes. We will also pay close attention to major sites of landscape and urban-scale work. Requirements will include a mid-term exam, a final exam, and a series of short papers.
Credit 3 units.
Typical periods offered: Fall

ARCH 2220 Architectural History II: Architecture Since 1880
An introductory survey of the history and theory of architecture and urbanism in the context of the rapidly changing technological and social circumstances of the last one hundred and twenty years. In addition to tracing the usual history of modern architecture, this course also emphasizes understanding of the formal, philosophical, social, technical, and economic background of other important architectural directions in a global context. Topics range from architects' responses to new conditions in the rapidly developing cities of the later nineteenth century, through early twentieth-century theories of perception and social engagement, to recent efforts to find new bases for architectural interventions in the contemporary metropolis.
Credit 3 units.
Typical periods offered: Spring

ARCH 2810 Independent Study
Prerequisite: Sponsorship by an instructor and permission of the Dean of the School of Architecture. Sophomores may register for 1 unit.
Credit 1 unit.
Typical periods offered: Fall

ARCH 2811 Independent Study
Prerequisite: Sponsorship by an instructor and permission of the Dean of the School of Architecture. Sophomores may register for 1 unit.
Credit 1 unit.
Typical periods offered: Spring

ARCH 3001 Architecture Elective (Junior)
3000-level elective in architecture.
Credit 9 units.
Typical periods offered: Fall, Spring, Summer

ARCH 3031 Innovative Bamboo
In this seminar we will explore bamboo as a sustainable material for innovative structures. Bamboo is a natural composite with high tensile and compression strength and grows in a cylindrical form that is optimal for carrying longitudinal forces. Furthermore, it is fast growing, sequesters more carbon than timber, produces more oxygen than a boreal forest, and even absorbs heavy metals from soil. Students will look at historic and contemporary precedence of bamboo as engineered products and as structural construction using simple poles. We will play with ways to connect, assemble, and build with this natural material. Finally, we will build large-scale models and prototypes of structural designs. The goal is to explore the wide range of design and engineering potential of this natural, often overlooked, structural grass.
Credit 3 units.
Typical periods offered: Fall, Spring

ARCH 3110 Architectural Design III
The third year of the core studio sequence examines interactions between architecture and society through the design of a large-scale project. Key concerns include architectural agency, community activism, and socioeconomic justice. This year emphasizes voice as students adopt their own conceptual position relative to architecture history, theory, and culture via the iterative development of form, geometry, space, and aesthetics. More specifically, this studio focuses on engagement with tectonic assemblies, public space, and programming in a series of design projects that include: (1) a precedent analysis, (2) a detailed study of the project's urban context, and (3) a mixed-use vertical structure. Exercises explore problems of grids and frames, urban and architectural space, and programmatic interrelationships. Architectural Design III is the fifth in the five required core studios in the undergraduate architecture program. All students initially register for section 01. The studio coordinator will assign students to sections at the start of the semester and students will change their section registration at that time.
Credit 6 units.
Typical periods offered: Fall

ARCH 3120 Architectural Design IV
The third and fourth years introduce a selection of option studios to students. This year emphasizes voice as students adopt their own conceptual position relative to architecture history, theory, and culture through the iterative development of form, geometry, space, and aesthetics. More specifically, this studio focuses on advanced architectural design and an in-depth study of a specific topic through rigorous design development.
Credit 6 units.
Typical periods offered: Spring

ARCH 3121 Architectural Design IV (Urban Design + Landscape Systems)
The third and fourth years introduce a selection of option studios to students. This year emphasizes voice as students adopt their own conceptual position relative to architecture history, theory, and culture through the iterative development of form, geometry, space, and aesthetics. More specifically, this studio focuses on advanced architectural design and an in-depth study of a specific topic through rigorous design development.
Credit 0 units.

Typical periods offered: Spring

ARCH 3310 Environmental Systems I

Environmental Systems I is the foundation course in the architectural technology sequence. This course addresses the relationship between buildings and an expanded idea of context, including ideas of environment, landform, energy, material and space. The class places an emphasis on each student developing his or her own attitude toward architectural sustainability, its role within the design process, and its relationship to architectural form. The class is organized around the themes of climate, site and energy. The theme of climate addresses macro- and micro-climates, and the roles they have in developing architectural form through 'passive' strategies. The theme of site expands the idea of the architectural project to examine landform, position, access and region. The theme of energy looks at architecture as both embodied energy and a consumer of energy, to understand how the architect helps to control and direct these flows at macro and micro levels. Two goals for the class are to provide students with ways of thinking about and of working with issues of sustainability, which can inform their design practice, and to equip them with the basic knowledge needed to continue within the technology sequence.

Credit 3 units.

Typical periods offered: Fall, Spring

ARCH 3340 Building Systems

Building Systems will examine the performance and properties of building materials, both traditional and new, through an analysis of assemblies and related systems. Investigations of wood, masonry, steel and concrete and the integration of relevant building systems will provide the fundamental structure for the course. All systems will be investigated relative to their architectural purpose, impact on the environment, relationship to culture/context, technical principles and will also consider manufacturing, construction, our profession and the society in which we practice. Moreover, the course will also examine the performance characteristics of contemporary enclosure technology and explore the impact these technologies are having on design thinking. Although we will focus primarily on the aforementioned topics, we will also identify and consider the impact of other parameters on design and performance such as building codes, role of the profession, health and life safety, systems integration, sustainability and industry standards. The course strives to provide students with a sound familiarity and understanding of traditional building systems in wood, steel and concrete; as well as the skills necessary to represent these systems. The course also seeks to expose students to the material and poetic potential of these technologies related to the making of architectural environments.

Credit 3 units.

Typical periods offered: Fall

ARCH 3401 Drawing On the City

Drawing on the City brings together two seemingly disparate but actually complementary threads - the ability to draw and the opportunity to understand the city and its histories and issues in some breadth and depth. The course is open to both graduates and undergraduates, to students who are in the Sam Fox School and those who are not, and to students with any level of drawing ability - including none to start. During the first half of the semester, the drawing instruction is dominant, with the neighborhood visits becoming dominant in the second part of the semester. Generally a half-dozen or so neighborhoods are visited, and in most cases you will get to meet and spend time with residents. As the semester evolves, the two threads of the course will merge, and you will use your drawing ideas and your understanding of the city to create an ongoing book [writing, drawing, photography] of the semester, as well as a large, highly-individualized, ongoing drawing that builds on some aspects of the city experience that you wish to explore visually.

Credit 3 units.

Typical periods offered: Spring

ARCH 3402 Unveiling the Detail: A Lesson in Forensic Drawing & Discovery

This course will explore architectural detailing from the quotidian to the sublime to posit architectural design intent. Through fieldwork and research, students will study the role of architectural detailing in the configuration and execution of architectural space making. Students will be asked to carefully observe their own constructed environment and architectural precedents to understand the truth and fiction in construction. This course seeks to help students understand the role of the architectural detail in articulating and reinforcing architectural concepts. It will strengthen the student's understanding of material properties, opportunities and limitations, construction sequencing, and design execution. Students will gain a new appreciation for the exquisitely executed architectural detail and strengthen the skill to anticipate and navigate detailing challenges in their own design work. Students will be asked to explore architectural details through various drawing methods, modeling, and modes of representation. This course is open to architecture students at all levels with an interest in drawing and realizing architecture as a constructed practice.

Credit 1.5 units.

Typical periods offered: Spring

ARCH 3404 Community Building

This course looks at the intersection of the built fabric and the social fabric. Using St. Louis as the starting point, this course takes students out of the classroom and into a variety of neighborhoods -- old, new, affluent, poor -- to look at the built environment in a variety of contexts and through a variety of lenses. Almost every week for the first half of the semester, students visit a different area of the city, with each trip highlighting some theme or issue related to the built environment. These include topics such as architecture, planning, American history, investment and disinvestment, community character and values, race, transportation, immigrant communities, and future visions. Running parallel to this, students will be involved in an ongoing relationship with one particular struggling neighborhood, in which students will attend community meetings and get to know and become involved with the people of the community in a variety of ways. Students learn to look below the surface and beyond the single obvious story for multiple stories to discover complexity, contradictions and paradoxes. They also come to consider the complex ways in which architecture and the built environment can affect or be affected by a host of other disciplines. College of Architecture and College of Art sophomores, juniors, and seniors have priority. Students will add themselves to the wait list and will be administratively enrolled in the course. This course fulfills the Sam Fox Commons requirement.

Credit 3 units. Art: CPSC

Typical periods offered: Fall, Spring

ARCH 3406 Historic Preservation, Memory and Community

Whose history is significant enough to be worth preserving in physical form? Who gets to decide, and how? Does the choice to preserve buildings, landscapes and places belong to government, experts or ordinary people? How does the condition of the built environment impact community identity, structure and success? This place-based course in historic preservation pursues these questions in St. Louis' historically Black neighborhood The Ville, where deep historic significance meets a built environment conditioned by population loss, disinvestment and demolition. The course explores the practice of historic preservation as something far from neutral, but a creative, productive endeavor that mediates between community values,

official policies and expert assertion. Critical readings in preservation and public history will accompany case studies, community engagement and practical understanding. This course is open to both undergraduates and graduates.
Credit 3 units.
Typical periods offered: Fall

ARCH 3407 Re-Discover the Child
It is said that at this time in history the entire country must make a commitment to improve the positive possibilities of education. We must work to lift people who are underserved; we must expand the range of abilities for those who are caught in only one kind of training; and we must each learn to be creative thinkers contributing our abilities to many sectors of our society. In this course, during the semester we will expand our views about learning by experimenting with the creative process of lateral thinking. We will learn about learning by meeting with some brilliant people at the university and in the St. Louis community who are exceptional in the scholarly, professional, and civic engagement work they are accomplishing. We will learn about learning by working in teams to develop exciting curricula (based upon the knowledge and passion WU students bring from their academic studies and range of interests) for middle school students from economically disadvantaged urban families. Each week of the semester, we will learn about learning by giving 2-D / 3-D hands-on problem solving workshops, once a week for one hour each week, for elementary school students. You and your WU teammate will implement the workshops you create. In this course we celebrate the choices of studies we each pursue, and we expand our experience in learning from each other's knowledge bases and learning from each person's particular creativity in problem-solving. This course seeks students from all disciplines and schools, freshmen through seniors. Course fee applies to mandatory background check and is not refundable.
Credit 3 units. Art: CPSC
Typical periods offered: Fall, Spring

ARCH 3409 Cycles
Students design and build human-powered vehicles from discarded bicycles. The course collaborates with student mechanics involved with Bicycle Works (Bworks). Bworks collaborates in teams with Washington University students to design and build the work.
Credit 3 units. EN: H

ARCH 3415 Digital Fabrications
This course will focus on fabrications both real and virtual. The ubiquity of computers in design, studio art, communications, construction, and fabrication demand that professionals become comfortable with their use. It is also important in a group of ever-specializing fields that one know how to translate between different software and output platforms. This comfort and the ability to translate between platforms allow contemporary artists and designers to fabricate with ever-increasing freedom and precision. This course will introduce students to 3D software with a focus on 2D, 3D, and physical output. Through a series of projects, students will learn to generate work directly from the computer and translate it into different types of output. Starting from first principles, this course will cover the basics from interface to output for each platform used. This course will also familiarize students with a range of CNC technology and other digital output for both small- and large-scale fabrication. The course will be broken into three projects. In the first project, students will focus on computer-generated geometry and control systems. In the second part, students will generate physical output and line drawings. The final project will focus on rendering, context, and cinematic effects. The software covered in this course includes, but is not limited to Rhinoceros 3D, Maya, Illustrator, Photoshop. Additionally, students will use the 3D printer, laser cutter, and/or other digital output tools.
Credit 3 units.

ARCH 3416 Digital + Craft : Textile
The seminar blurs the distinct boundaries between Digital computing modeling and manual Craft making. The ease and immediacy of the hand in Craft making is channeled into the process of Digital computer modeling. The seminar dwells in the material complexity and the aesthetic allure of Textile and through the manner of Digital + Craft, begins to blur the classic opposition of structure and ornament.
The seminar begins with the modeling of Textiles in the computing environment, using the parametric controlled materials constraints of Cloth in Autodesk Maya or other Physics simulation software. CAD CAM capabilities will be employed to output pattern layout and cutting. The students are asked to design and fabricate an architectural assembly that uses Textile as the main form generator.
Credit 3 units.
Typical periods offered: Fall

ARCH 3419 Anxious Vision: Real Time and the Architecture of Video Games
What can architects learn from examining the visual structures of 3D video games? How have they influenced the culture of architectural representation? Why should the gaming perspective view and level structure be considered essential elements for contemporary architectural theory? How is video game theory instrumentalized in the creation of architecture? To begin, video game engines are becoming ubiquitous features in architectural rendering culture. Platforms like Unreal, Unity, and Twinmotion offer designers tools to create environments that can be explored and interacted with in real time by the user-client. Although 3D modeling, rendering, and animation platforms have been commonplace in architecture schools and experimental studios since the 1990s, accessible, interactive, real-time rendering platforms are a more recent and less studied phenomenon. The architecture of level design and the companion art of worldbuilding constitute a new representational paradigm. In this seminar, we will examine the spatial structures of contemporary gaming titles and explore a series of historical and theoretical texts from Video Game Studies. The final assignment will be project-based and designed using the Unreal Engine.
Credit 3 units.
Typical periods offered: Fall

ARCH 3420 Evolution of a Section: Architecture and Machine Learning
Throughout human history, architecture was seen as static, a quality attributed to its inherent physicality. This seminar encourages students to conceive of an architecture, through the medium of an architectural section, that mutates across space and time. Using Machine Learning processes, the class intends to propose an alternative and nonlinear means of production to the linear process of architectural design from conception to construction. Machine learning engages graphic information differently than designers do. All fidelity towards visual, cultural, political, and geometrical context is lost, resulting in a new class of compositions that are unique but not critical. The systems, including Generative Adversarial Networks, Convolutional Neural Networks, and Diffusion Models, are explored with input (images/texts) and analyzed as output images. We will collectively conjecture on how to 'train' the AI models to understand spatial features typical of an architectural section. We will rely on the rich history of architectural sections, across time, styles, and media, to inform the potential trajectories that our section follow. The works of contemporary artists and architects, like Matias Del Campo, Gabriel Esquivel, Helena Sarin, Refik Anadol, etc. who work with Machine Learning technologies, will be analyzed to understand approaches towards AI and Design.
Credit 3 units.
Typical periods offered: Spring

ARCH 3421 1 House
In this seminar, students will research and develop designs for a completely off-the-grid small house in Boquete, Panama, for Kaylee and Jordan of the Nomadic Movement YouTube channel. With input from Kaylee, Jordan, and their crew, students will research traditional sustainable building practices in Panama and develop schematic designs for a small house to be built by them on their property in Boquete, with construction beginning in May 2021. The course will include instruction in residential design, structure, and materials and methods of construction. A subtext of the course will be entrepreneurship and beginning one's practice as an architect. To this end, students will be asked to write a prospectus for their architectural practice, including naming, branding, and producing their first YouTube video.
Credit 3 units.
Typical periods offered: Spring

ARCH 3423 Matsumoto Modern
Between 1948-1961, the Japanese American architect George Matsumoto designed more than 30 award-winning residences in North Carolina. The houses -- demonstration homes for General Electric and Westinghouse, vacation houses sponsored by Women's Day and the Douglis Fir Plywood Association, and homes for clients interested in new ideas in architecture -- served as prototypes for domestic living inspired by postwar logics of mass production. The experimental homes provided opportunities to challenge norms and amplify particular design aspects through focused investigations of the potential of new materials, innovative construction systems, or provocative formal capabilities. Like the more well-known Art and Architecture magazine's Case Study House Program on the West Coast, Matsumoto's houses aspired to be functional, beautiful, and affordable while providing a model for modern American domesticity. Students in the course will undertake archival research for selected George Matsumoto-designed modern homes throughout the semester. Course work will include experimental, analytical drawings; archival research and writing; museum-level physical models; and other representations of residential work by Matsumoto. The resulting work is anticipated to be included in a future publication, an exhibition, and as a featured part of the larger research project Beauty in Enormous Bleakess: The Interned Generation of Japanese American Designers, which aspires to tell an urgently needed new chapter in design and architectural history that acknowledges the signal contributions of Japanese Americans to post-war culture and cultural life.
Credit 3 units. Arch: CAST, GACS
Typical periods offered: Fall

ARCH 3424 Urban Books
Since the beginning of the 20th century, art, architecture, and urbanism together have investigated the production of images that shape the symbolic dimension of our experience of large cities. The main goal of this course is to critically embrace this tradition through the format of the artist's book. St. Louis is the focus for our observations because it is familiar to our everyday lives and also because it provides key situations for understanding contemporary forms of urbanity and how urban space is produced and imagined. The course bridges the curricular structures of art and architecture by enhancing the collaboration between the practical and scholarly work developed in both schools, with additional support from Special Collections at Olin Library. It combines the reading, lecture, and discussion format of a seminar with the skill building and creative exploration of a studio. This course is divided into three progressive phases of development: the first consists of weekly readings, discussion, and responses in the form of artist's books. The second phase focuses on the Derive with physical activities and assignments based on interacting directly with the urban environment. The third phase focuses on individual research, documentation, and final book design and production. College of Architecture and College of Art sophomores, juniors, and seniors have priority. Fulfills Sam Fox Commons requirement.

ARCH 3425 Sustainability
This student-initiated course seeks to define sustainability and its relation to our built environment through the lens of anthropology, environmental science, business, law and architecture. The course networks the University's resources by bringing professors from varying disciplines to speak weekly on the issues of sustainability and design. We will examine broad issues from history, philosophy, and literature to practical studies of current land use, climate and technology.
Credit 3 units.

ARCH 3426 Biomimicry: A Biokinetic Approach to Sustain(able) Design
There is a conceptual similarity between the way an organism and a building engage their respective environments. A biological system responds to the unique condition of its ecosystem; architecture responds to the unique conditions of the site. Building on this principle are the fields of biomimicry, the study of design and process in nature, and biokinetics, the study of movement within organisms, and their ability to address architectural problems with elegant, technologically advanced, sustainable solutions. Biomimicy: A Biokinetic Approach to Sustain(Able) Design focuses on kinetics as an essential element of biomimicry in the context of architecture and employs the study of the kinetic aspects of biological systems - structure, function, and movement - to inform the design and engineering of buildings. A systematic approach to researching and translating the kinetic function of organisms leads to a successful bridging of biological and architectural concepts.
Credit 3 units.

ARCH 3427 Biomimicry, Teleology & Organic Architecture
This seminar is intended to develop an understanding of the history and evolution of Biomimicry as a significant design tool from the emergence of Biology as a science in the early 19th century to the present. Biology was the first discipline to confront the problem of teleology, of design in nature. For the past one hundred years, biological references and ideas are present in the work of architects and in the writings of architectural theorists. Biomimicry, a term coined by Janine Benyus, has developed into a new discipline that studies well-adapted organisms designs and processes and then imitates life's genius to design human applications, aiming at a sustainable development. The intent of this seminar is to establish a systematic approach to research and analysis of the history and theory of this biological analogy and its influence on the history of environmental architecture, as seen through the lens of biomimcry. In addition to a historical analysis, students will analyze case studies that exemplify the relationship of architecture to biology, focusing not only on built work, but on the writings and the designer's positions in terms of this relationship. Classes will consist of a combination of formal lectures and facilitated discussion periods. In addition, each student will choose a particular architect and, through research and analysis, will assess the influence of biomimicry in his/her work and present these results in a paper that includes a critical analysis and a proposal on how to advance the architect's work to the highest level of biomimicry.
Credit 3 units.

ARCH 3429 In Detail: Observation, Drawing, & Discovery
This course explores architectural detailing from the quotidian to the sublime to posit architectural design intent. Through fieldwork and research, students will study the role of architectural detailing in the configuration and execution of architectural space making. Students will be asked to carefully observe their own constructed environment and architectural precedents to understand the truth and fiction in construction. This course seeks to help students understand the role of architectural detail in articulating and reinforcing architectural concepts. It will strengthen students' understanding of material properties, opportunities and limitations, construction sequencing, and design execution. Students will gain a new appreciation for the exquisitely executed architectural detail and strengthen the skill to anticipate and navigate detailing challenges in their own design work. Students will be asked to explore architectural details through various drawing methods, modeling, and modes of representation. This course is open to architecture students at all levels with an interest in drawing and realizing architecture as a constructed practice.
Credit 3 units.
Typical periods offered: Spring

ARCH 3432 The Corner Problem
The corner problem is a classic architectural challenge of how a material, pattern or system turns a corner. In particular, the class will focus on facades that include sun shading elements, thus increasing the thickness of the assembly. Turning a corner sounds benign until you consider that all materials have thickness, and then the problem reveals itself. This too often results in an oversimplification and thus reduction of the design intent. This course will focus on designing custom facade systems using advanced digital modeling techniques and testing through physical prototypes. Knowledge of material systems and modeling techniques will be supplemented through discussions with industry leaders in facade design and fabrication.
Credit 1.5 units.
Typical periods offered: Spring

ARCH 3434 Body as Site: Jewelry Design as Architecture
In this course, students will undertake a 3D printing and casting process to realize an architecturally conceived set of jewelry in metal and create drawings and renderings of this set. Often, metal 3D printed parts are used as industrial components and engineered mechanical parts. This project will reverse that to create delicate objects that engage with skin. Students will create a parure (a set of related pieces of jewelry) that will examine the human body as an architectural site and test the potential of metal 3D printing in architecture. We will use Autodesk Maya to create hyper-articulated surfaces and employ lost wax and lost plastic metal casting, consequently blurring the line between traditional and contemporary techniques. As a result, we will not simply conceive of a project and outsource its production. Instead, we will use the foundry to provide firsthand experience with material processes. The set of pieces will share characteristics of form and geometry as well as tactics of physical interconnection with the human body, adjusting through site-specific responses to finger, wrist, neck, ear, or head. In addition to a set of renderings and drawings, students will produce wax hand-carved models and 3D-printed plastic objects for lost plastic casting. For artifacts that require fine detail, students will outsource their projects to wax 3D-printing and casting facilities. (Outsourcing for a typical ring costs approximately $15 in steel and $35 in silver. Total course costs are estimated to be $100.)
Credit 1.5 units.
Typical periods offered: Fall

ARCH 3435 Furniture
This seminar will explore the work of the Italian architect Enzo Mari, with a focus on his autoprogettazione? furniture and book project of 1974. The book offers free designs of furniture that can be built with only a few tools, simple materials, and basic skills, such as measuring, cutting, and hammering. In 2015, Mari granted the Berlin-based CUCULA: Refugees Company for Crafts and Design the rights to redesign and sell the furniture. Students will take up this charge and redesign the furniture from autoprogettazione? again, with each student building a redesigned chair. Please note that this seminar will require students to acquire the following tools: a measuring tape, a hammer, a hand saw, and a hand drill and bits (approximate cost of $75.00 new, $25.00 if the student is resourceful). (The professor will contact the student in 25 years and ask if they still have the tools.)
Credit 1.5 units.
Typical periods offered: Spring

ARCH 3436 Service Learning Course: Environmental Issues
This interdisciplinary service-learning experience allows WU students to bring their knowledge and creativity about the many subjects they are studying to students at a St. Louis City elementary school. WU students will learn about the creative process of lateral thinking (synthesizing many variables, working in cycles, and changing scales). WU students will work in teams to experiment with the design of 2-D and 3-D hands-on problem-solving workshops for small groups of students to accomplish. WU students will devise investigations for the workshops about environmental issues embracing fields in the natural sciences, humanities, social sciences, architecture, art, engineering, and business with the community. In this course, we celebrate the choices of studies we each pursue, and we expand our experience by gaining from each other's knowledge bases and each person's particular creativity. This course is for Arts & Sciences students of differing majors and minors, business, social work, architecture and art students, and engineering students from all engineering departments. Course fee applies to mandatory background check and is not refundable.
Credit 3 units. Art: CPSC
Typical periods offered: Fall, Spring

ARCH 3437 Isamu Noguchi's Models: Of Measurement, of Place, of Situation
"It's extremely interesting to me, this whole business of measurement, of place, of situation… You can say that architecture is sculpture as an experience to be completely experienced, not just looking at it… You're encased in it." Isamu Noguchi, "Towards a Reintegration of the Arts," College Art Journal 7 (Autumn 1949): 59. In 1946, architect Harris Armstrong commissioned the Japanese American sculptor Isamu Noguchi to design a sculptural lobby ceiling in the American Stove Company headquarters building in St. Louis. Noguchi's ceiling was one of three built lunar landscapes inspired by his incarceration at the Poston Internment Center, which he voluntarily entered in 1942. Noguchi created dozens of plaster models of lunar landscapes; however, only three were built: a ceiling in the Time and Life Building in New York, the interior wall of the SS Argentina Ocean Liner, and the American Stove Company ceiling in St. Louis. The American Stove ceiling, though only recently uncovered in 2016, is the only lunar landscape still in existence today. The earlier models, often misunderstood as sculptures, were proposals for spaces meant to be inhabited. Noguchi identified himself primarily as a sculptor and had no architectural training; however, he commanded an extraordinary understanding of space. He designed spaces at various scales, from the body to urban design proposals to outer space, as well as a range of functions: furniture, theater sets, memorials, and monuments. The course will revisit his work, and, through models and photography, reimagine them as inhabitable spaces. Students will individually analyze selected models of Noguchi's realized and unbuilt work in tandem with a discussion of texts by Noguchi and others that explore his life and career. Coursework will include experimental visualization

techniques, archival research and writing, physical model building, and photography. The class will include a visit to the U-Haul facility (formerly the American Stove Headquarters) to view Noguchi's ceiling, as well as the WashU archives and SLAM to review archival models and drawings of the space.
Credit 1.5 units.
Typical periods offered: Fall, Spring

ARCH 3438 Carbon Neutrality in Architectural Design
Team WashU aims to create a solar home to educate the public on a state-of-the-art, carbon-neutral, adaptive healing space for occupational therapy services using innovative interior, architectural, and system design to meet the users' physical, social, and emotional challenges. The study will focus on design, materials, and renewable energy by illuminating the role of carbon in the built environment, and it will help students understand the principles and application of carbon assessment methods and Life Cycle Analytical (LCA) tools. Students will integrate carbon-neutral design principles into design, fabrication, and construction processes, testing the limits of conventional sustainable design practices and developing new strategies for designing carbon-neutral buildings. Students will work individually to create preliminary design schematics (and their associated structural morphologies, enclosure systems, and MEP systems). They will be fused around a single design strategy developed as a group design project, analyzed for its environmental impact and carbon footprint, and finally built by the student team. The course encourages students to participate in the fabrication and construction process developed as collaborative research, design, and construction effort and support professional consultants or manufacturing partners.
Credit 3 units. Art: CPSC
Typical periods offered: Spring

ARCH 3439 Materials of Memory: Designing a Pavilion for Peace Park
In Wounded Cities (2012), Karen E. Till writes, Artistic interventions advance the difficult 'work' of memory in wounded cities marked by particularly violent and difficult pasts. Such projects also may offer possibilities of place-based mourning and care work across generations that build self-worth, collective security, and social capacity. In this course, architecture students will work alongside art students enrolled in a parallel seminar to develop integrated designs for an open air pavilion, a bus shelter, and educational signage for North St. Louis's Peace Park. This seminar is the current phase of an ongoing collaborative between Washington University and the College Hill Community to find tangible actions that can address past injustices, respect memories of the neighborhood, begin a process of healing in the present, and build infrastructure for the future. Students will conduct memory work by collecting narratives from local residents, exploring the recent and distant history of the site, and examining past placemaking projects that have successfully utilized memory work to create healing spaces. This foundational work will be used as the basis for the design and construction of large operational presentation models to be placed on display for the local residents. This collaborative process will continue after this semester and will result in a built project by the end of the summer of 2023.
Credit 3 units.
Typical periods offered: Fall

ARCH 3440 Design, Build, Scale: Entrepreneurship in the Built Environment
Are you ready to break into the world of entrepreneurship and create a thriving business—or even transform an existing one? Design, Build, Scale: Entrepreneurship in the Built Environment offers students an in-depth exploration of the entrepreneurial process with an emphasis on foundational steps of starting and scaling a business. This course examines the principles of entrepreneurship as critical tools for building and sustaining successful ventures in architecture, construction, and related industries. Topics include developing a growth mindset, crafting effective business models, establishing business structures, acquiring clients, and navigating the challenges of scaling a successful business. Special emphasis will be placed on financial considerations, including personal finance, business finance, and project financing. Students will be encouraged to approach professional practice with the same levels of creativity as they would any design project. Additionally, students will explore entrepreneurial opportunities within existing organizations and address unique challenges in business that impact the built environment.
Credit 3 units.
Typical periods offered: Fall, Spring

ARCH 3445 The Art Museum: History, Theory & Design
This course will study the conceptual basis of the institution of the art museum in the United States and Europe, including its history, theoretical foundations, design, and cultural function. We will begin with the origins of the modern museum in the 18th century and earlier; trace the development in the 19th century of the earliest national art museums in the United States and Europe; consider the opportunities and problems of museums of modern and contemporary art in the 20th century; address the question of appropriate architectural strategies for art museums of the past and the present; and consider a variety of developments in the art museum today. Prerequisite: Introduction to Modern Art (L01 211), Architectural History II (A46 2284/4284), or permission of instructor. Students in the College of Architecture may register for this course under the assigned College of Architecture course number.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARCH 3449 Designing Sustainable Environments
The seminar will introduce fundamental concepts of sustainability and sustainable development. Emphasis will be placed on understanding natural systems, the development of the built environment within natural systems, and the economic, social, ecological, ethical, philosophical, political, psychological, aesthetic, and cultural issues that help shape design decisions. Students will evaluate a range of methods that may be used to identify and select sustainable solutions to design problems, improve existing solutions, and develop critical thinking. The LEED Rating system will be presented within the context of its role in professional practice and larger issues of human and environmental health, including how LEED fits into the realm of high performance design and the effective use of the LEED Rating System and principles of sustainability. The course will be divided into three phases: 1) research current interpretations of sustainability in architecture, examining theories and practices that encourage the development of ecological consciousness as the context of Sustainable Design; 2) critical comparison of the underlying principles of sustainability and design proposed by the different rating systems available today and evaluation of the ways of assessing the sustainability of the built environment currently in use, including the LEEDTM rating system; and 3) the development of a project design in studio that will follow the LEED-NC Version 2.2 Manual as the organizing structure. In this final project, students will be required to obtain a minimum of 26 points on the LEED-NC rating system in order to have their project certified. Students will produce the necessary documentation required for LEED-NC certification and make an oral presentation to a panel of guest critics.
Credit 3 units.
Typical periods offered: Fall, Spring

ARCH 3450 Biomimicry: Toward a Sustainable Design
The construction and operation of buildings consume the majority of the world's natural resources and energy, and contribute to expand the landfills. Buildings have diverse effects on the environment during their entire life cycles. Although the tangible impacts are visible only after construction begins, the environmental consequences can be prevented in the first stages of design. The building form and envelope should respond to specific site conditions to help achieve environmental sustainability in architecture. The seminar will be a collaborative studio that welcomes students fo disciplines such as Biology, Engineering, and Architecture, among others. The goal of this course is to create environmental awareness; understanding building ecosystems, and increase the ability to design sustainable buildings from an interdisciplnary perspective. Based on scientific principles, concepts, and methodologies required to understand the relationships of the natural world, the students will analyze alternative solutions for resolving and/or preventing specific environmental problems. The aim of this seminar is to prepare the students to participate in cross-disciplinary design teams that can develop workig methods to study complex architectural problems and challenges, and facilitate a technical, as well as aesthetically successful, durable and sustainable design. This course will research and study the structure and function of biological systems as models for the design and engineering of materials for buildings. It will involve the study of nature's design and processes as a tool to bring a solution to an architectural problem that will push technology forward while helping us minimize our environmental impact.
Credit 3 units.
Typical periods offered: Fall, Spring

ARCH 3451 Portfolio Design
Architecture portfolios play an essential role in framing and presenting work in academic and professional contexts. The portfolio serves as a record of one's creative and intellectual thought, production, and experience. Through the highly personal and reflective act of re-presenting images and texts, the portfolio frames an individual's position in the field of architecture. Architecture Portfolio Design facilitates the production and development of a comprehensive portfolio and covers the essential concepts and techniques of contemporary portfolio production.
Credit 3 units.
Typical periods offered: Spring

ARCH 3453 Projective Excavation: Drawing Out the Untold History of St. Louiss Chinatown
From 1869 to 1966 in downtown St. Louis, a small but thriving Chinese immigrant community existed in the area that is now occupied by the Spire Headquarters. St. Louis's Chinatown was home to laundromats, grocery stores, restaurants, shops, and residences until it was razed for urban renewal as part of the Busch Memorial Stadium project in 1966. After the last residents were forced out, the site remained a surface parking lot for decades. Today, St. Louis's Chinatown (or Hop Alley, as it was often referred to) only resides in historical fragments and memories. Working in collaboration with the Chinese American Collecting Initiative at the Missouri Historical Society, students will develop drawings and models that reveal the suppressed history of this site that formed the backdrop of everyday life for Chinese Americans in St. Louis. Focusing on the daily rituals, events, and activities sourced from photos and personal stories, students will develop projective representations of the interior lifeworld of St. Louis's Chinatown. Using techniques adapted from graphic novels, architectural drawing, Chinese landscape painting, and 19th-century panoramic maps, students will investigate how we can use the disciplinary tools of architecture to reveal hidden histories and construct new narratives.
Credit 1.5 units.

ARCH 3455 Y.E.S. (Year End Show): Curatorial Practice
This course offers selected students the opportunity to lead the curatorial design and execution of Y.E.S., the annual Year-End Show for the College of Architecture and the Graduate School of Architecture & Urban Design. Students are selected through a competitive proposal process juried by faculty. One undergraduate and one graduate curatorial team are chosen each year. Selected students are responsible for the conceptualization, design, coordination, building, and installation of the exhibitions, featuring the work of graduating students. Graduate student work will be exhibited in Steinberg Hall Gallery, and undergraduate student work will be displayed in Weil Hall 121–122. Students work closely with faculty advisors, staff, and their peers to realize a public exhibition, developing skills in curatorial strategy, project management, exhibition design, and collaborative leadership.
Credit 1.5 units.
Typical periods offered: Spring

ARCH 3460 Reverence and Revolution: Traditional Construction and Post-WWII Built Environment
This course examines the evolution of building and furniture construction techniques throughout the 20th century, focusing on the shift from traditional materials like wood, masonry, and forged metal to industrial materials such as plastics, plywood, and tube steel. Students will explore the historical context and technological advances that transformed construction, particularly in the post–World War II era. Topics include traditional wood frame craftsmanship—joinery, framing, and furniture-making—and how these were altered or replaced by mass-production techniques. The course investigates why materials like plastic and plywood gained popularity, emphasizing how their development led to faster, cheaper, and more temporary construction methods. It also addresses the rise of planned obsolescence and its impact on postwar housing, suburban growth, and the disposability of modern building elements. Through case studies, students will analyze the social and economic implications of these changes. The course integrates research and hands-on practice through 3D CAD, manual fabrication, and CNC processes, encouraging a critical understanding of both traditional and modern construction. By the end, students will grasp how material innovation has shaped architecture, design, and the economics of the built environment.
Credit 1.5 units.
Typical periods offered: Fall, Spring

ARCH 3520 Bathrooms: The Design History of an Overlooked Space
Today, the bathroom is one of the most essential and familiar spaces in modern architecture, one that students design again and again in studio. But what exactly goes into a bathroom and when did it take the form that we are familiar with today? How the bathroom is designed, which technologies are used in it, and what functions it serves depend on the specific social and cultural needs of a particular time and place. The bathroom of today, with its flush toilets, showers, baths, and sinks, is a rather new formation. This seminar will explore the history of the bathroom and its design across time and space, challenging students to reconsider exactly what a bathroom is and inviting them to think about new ways of designing it. Weekly readings will introduce students to the ways in which changing hygienic norms, the spread of a “culture of flushing,” and access to new materials and technologies shaped how architects designed bathrooms from Roman communal toilets and public baths to Japanese high-tech “Washlets” and prefabricated bath units. For their final projects, students will identify, research, and respond to a key social, environmental, or technological issue related to present-day bathrooms.
Credit 3 units. Arch: CAST, GACS
Typical periods offered: Fall, Spring

ARCH 3534 Furniture Design
This course explores design and fabrication methods for objects of human interaction. Each student will design and build a table, based on a unique concept. To this end, it is up to the individual student to define what the particular table is for, and clearly communicate his or her intentions and ideas. Contemporary technologies will be combined with traditional techniques of metal fabrication, woodworking and plastic forming in the design and production. The course objective is for students to learn how to work directly with machinery and materials in the realization of their design. It is expected that students will have basic shop skills addressed in course prerequisites. Advanced techniques will be introduced, and students will select those most appropriate to their work to build upon. A high level of craft and a great deal of independent investigation are required to excel in this course. Students propose and develop ideas using drawings, models and mock-ups in order to realize the maximum potential for their design.
Credit 3 units. Art: FAAM EN: H
Typical periods offered: Fall, Spring

ARCH 3535 Digital Lighting Design: Rapid Prototyping and the CNC
Students in this course will develop an intimate understanding of CNC technology and its ability to rapidly prototype and fabricate within an iterative design process. Through an accelerated feedback loop, the class will work quickly through maquettes, renderings, prototyping, and fully formed products multiple times within the semester. Lectures will include both current and historic approaches to lighting design to better inform the initial drawing process. This course will also include technical instruction on CNC, processes specific to the equipment at Sam Fox. Coursework will culminate in an exhibition of lighting displays and relevant documentation to accompany the research. Students wishing to enroll in this class should have a functioning knowledge of Rhino.
Credit 3 units.
Typical periods offered: Fall, Spring

ARCH 3570 Historic Preservation in Practice: Keeping Wright's Edward Irving House
The Edward Irving House is a Midwest Prairie-style house in Decatur, Illinois. Frank Lloyd Wright drafted preliminary sketches for the house in the fall of 1909, right before he departed for Europe, to work on the Wasmuth Portfolio. Marion Mahony, Wright's draughtsman at the time and later one of the first licensed female architects in the world, completed the designs for the house with the engagement of George M. Niedecken, who designed a floor-to-ceiling mural depicting sumac and other prairie flowers for around the house's fireplace. The first component of this course will trace the preservation impulse in the Midwest Prairie from the Dana-Thomas House, the Robie House, to the Edward Irving House. The students will explore its origin, aesthetic, furnishing, fabrication, and historical backgrounds. They will also explore the house's current conditions, potential hazards, and possible restoration strategies onsite by visual observation and manual measurement, with the support of cutting-edge digital preservation devices and techniques, such as LiDAR, photogrammetry, etc. The course will conclude with survey documents qualifying for the Charles E. Peterson Prize 2026.

ARCH 3752 Impossible Collaborations: Architecture and Machine Learning
The mass availability of Machine Learning processes makes individuals with limited experience of the tools perceive themselves as 'AI Experts'. The ever-evolving forms of the technology make it challenging to identify its vast potential influence on the design workflow. This course investigates how the presently available AI tools can productively disrupt prevailing design norms. Student projects will leverage Machine Learning's ability to disassociate from cultural affinities to defy preconceived notions of the architectural canon. These projects will imagine collaborations between canonical architectures and underrepresented, historically ignored architectures. We will rigorously speculate on how these hybrids become relics of a world beyond time, space, and identity by absorbing the exceptional qualities of their origins and introducing a novel method of interpreting precedents in architecture. We will explore AI processing tools like Google Colab, Automatic1111, RunwayML, Adobe Firefly, and Midjourney and delve into transposing/spatializing these images onto architectural elements using 3D modeling software like Rhinoceros, Blender, and Z-Brush. The final deliverables will be a series of estranged architectural models.

ARCH 3827 The Space Within: Interior Experience as the Origin of Architecture
An undergraduate seminar structured around the themes put forward in the book, The Space Within: Interior Experience as the Origin of Architecture, by Robert McCarter. Throughout human history, and particularly in the modern period, interior space and its experience has served as both the beginning, the initial inspiration for the design of architecture, as well as the end, the final purpose of architecture as it is evaluated through inhabitation. Since the beginning of the modern period, and continuing today, pivotal discoveries in architectural design may be traced back to a generative ideal of intimate interior experience, and the quality of the interior spatial experience of the inhabitants may be shown to be both the primary determinant of the architectural design process, as well as the means of appropriately evaluating a work of architecture after it is built. This seminar explores how interior space has been integral to the development of modern architecture, and how generations of modern architects have engaged interior space and its experience in their design processes, enabling them to fundamentally transform the traditional methods and goals of architectural composition. For the leading modern architects and for the most recognized and respected architects practicing today, the conception of the interior spatial experience continues to be the necessary starting point for design, and the inhabitation of interior space remains the primary reason to construct works of architecture.

Each class will consist of both faculty lectures based on the chapters of the textbook, The Space Within, and, parallel with the textbook themes, student analyses of selected interior spaces in Florence and Venice, to be visited during the first half of the fall semester. Analytical methods employed in the course cover the full range of contextual, cultural, material, constructive, and experiential attributes of buildings, with particular emphasis on the manner in which the spaces of a building are ordered by the patterns of occupation and the poetics of use, as well as the poetics of construction, or the way in which a building is built, and of what materials it is made, and how all these combine to construct the experience of those who inhabit it.

Credit 1.5 units.

Typical periods offered: Fall

ARCH 3828 Lets Go to the Market

Set against the backdrop of the heavy stone walls of the Renaissance city, the Florentine piazza serves as a hub of rotating events and informal activity centered around the exchange of goods and culture. Concerts, football matches, temporary exhibitions, and markets upon markets fill the public space, contrasting old and new, temporary and permanent. This seminar is intended to get students out of the studio and into the city to observe and engage with these lively spaces through a series of field studies. Students in the course will explore the city and document their observations through various media and techniques, including drawing, printmaking, scanning, and model-making. Using techniques adapted from graphic novels, painting, and traditional and contemporary architectural drawing, the final project will take the form of a field guide that frames Florence as a living system, focusing on themes of mobility, permanence, exchange, and daily life.

Credit 1.5 units.

Typical periods offered: Fall

ARCH 3910 Disegno: Encounters in Public Space (Florence)

One of the origins of the term design is the Italian word 'disegno,' which delineates drawing both as a mark-making process and as a form of critical inquiry. Building upon this dual trajectory, this architectural design studio focuses on a series of site-specific projects that explore public space as a visual and conceptual phenomenon--a space of social encounter that is drawn, re-drawn, and ultimately (re)designed through a series of drawing strategies, including freehand drawing, drafting and making. The projects engage architecture, culture and identity using modern metropolitan Florence as a laboratory for visual experimentation. By embracing the complexities of contemporary Italian society--including its evolving ethnic, cultural and social dynamic--the projects explore the critical dichotomies of past-present and global-local. This course is a dynamic learning environment that encourages students to develop a unique way of working by building upon their intellectual curiosity and diverse educational backgrounds. Course requirements include studio work, discussions and field trips.

Credit 6 units.

ARCH 3915 Building Pictures: The Architectural Imaginary of Italian Renaissance Painting (Florence)

Italian Renaissance painters such as Antonello, Botticelli, and Crivelli, and their contemporaries, often depicted architectural spaces – buildings, streets, piazzas - in their works. The rendered spaces were both religious and secular, ancient and modern all within the two-dimensional canvas surface. The masterpieces, often intertwining real and imagined spaces were depicted as hyper-real with tremendous amounts of focused detail on the specific setting, lighting, ornament, historical elements, and artifacts. Perspectival linework and architectural frameworks were often drawn onto the canvas at the start. In this course, students will build architectural models of selected paintings exploring their formal composition, materiality, light sources, staging, and details. The models, crafted out of paper, paint, and marmorizzazione will prompt the class examine the role of architecture in painting while engaging the fantastical spaces within the architectural imaginary of Italian Renaissance Painting. The class will include visits to the Uffizi and the Galleria dell'Accademia to research and view some of the artworks in person.

Credit 1.5 units.

Typical periods offered: Fall

ARCH 3919 The Space Within: Inside / Outside (Florence)

This seminar will engage the Dutch architect Aldo van Eyck's understanding of the concept of "interior space" as including all spaces designed for human inhabitation—whether interior or exterior—and so extending from the interior room, to the "inside-outside" courtyard (Le Corbusier), to the exterior piazza and street. Inside / Outside will take the subject of the piazza as a field of study to speculate through drawing, photography, and Rhino how we experience being inside an outside space. We will adopt the premise that the material of a space and its construction contribute to its experience. The first order of business will be for each student to become a spider and search out and locate a particular and unique piazza (veranda), piatzzetta (little piazza), campo (in Venice). There are more than 30 in the center of Florence, but we will find others. We will visit these in subsequent classes and then draw (photograph, model) them in such a way that the subject of our experience which is generally in the background becomes foregrounded. Of particular attention will be the materials and how the materials are rendered through the labor of construction.

Credit 1.5 units.

Typical periods offered: Fall

ARCH 3921 Fifteenth & Sixteenth Century Florence, Rome & Venice: Rethinking Renaissance Visual Culture

The Early Renaissance - also known as the quattrocento - usually denotes the period from circa 1400 to circa 1500. In those 100 years, Italy, particularly Florence, witnessed an extraordinary coming together of artistic talent, a passionate interest in the art and culture of Greek and Roman antiquity, a fierce sense of civic pride and an optimistic belief in the classical concept of Man as the measure of all things. This course examines the principal artists who contributed to this cultural revolution. In order to take full advantage of the special experience of studying the renaissance in the very city of its birth, the stress is mainly, although not exclusively, on Florentine artists who include sculptors such as Donatello, Verrocchio, and Michelangelo, painters such as Giotto, Masaccio, Uccello, Botticelli, Leonardo, and Raphael; architects such as Brunelleschi and Alberti up to Sangalo.

ARCH 3922 Florence as a Cultural Artifact: The History of Architecture as the History of the City

This course combines seminar and workshop activities aiming at the understanding of the rich urban and architectural history of Florence, the place of students' work and temporary living during the study abroad program. These activities will be in dialogue with the design studio and art history courses. The intellectual framework of the course is informed by Giulo Carlo Argan's seminal work La storia dell'arte come storia della città (The history of art as the history of the city, Einaudi, 1983), presenting the city as a complex time-space phenomenology of cultural artifacts. While Florence is well known for its cultural contribution to Western cultural history during the 1400s and 1500s, little is known about the full span of its millennial history, including its contemporary developments. The seminar activities will cover such aspects through readings and lecture-cum-sketching urban and architectural documentation tours in the first part of the semester, leading to the development of individual artists' book projects to be completed in the second part of the semester for the program's semester exhibition.

Credit 3 units.

Typical periods offered: Fall

ARCH 3980 Transect: Bangkok

Bangkok, a global mega city of 15 million people, is located at the mouth of the Chao Phraya River, in an expansive deltaic landscape. The city sits roughly 5 meters above sea level on a soft bed of sediment, and is slowly subsiding. Over the past century, the city has expanded along its historic canals, covering water ways and exchanging porous land for impermeable surfaces. Climate change is resulting in more intense rain storms which inundate the city, straining infrastructure and putting the vast majority of the city at risk of increasingly long floods. Sea level rise is eroding the coastal area of the city, displacing communities at the outskirts of the city. At the same time, intense development pressure continues, and the few remaining open spaces in the city are under threat of being paved over. While the challenges facing the city are manifold, Bangkok continues to be a vibrant, culturally diverse place with a deep history of living in balance with the River. In Bangkok we see the confrontation of politics, climate change, globalization, and everyday life. While in the field, students will divide their time between direct observation, urban documentation, lectures from designers working to adapt and transform infrastructure, and recuperate natural systems, to increase the city's resilience and enrich the public realm. We will be joined by Kotchakorn Voraakhom, the Pulitzer Artist in Residence. By working between embodied experience (field work) and abstract representations of the city (mapping), students will grapple with the cultural and environmental implications of climate change.

ARCH 4001 Architecture Elective (Senior)

4000-level elective in architecture.

Credit 9 units.

Typical periods offered: Fall, Spring, Summer

ARCH 4110 Architectural Design V

The third and fourth years introduce a selection of option studios to students. This year emphasizes voice as students adopt their own conceptual position through the iterative development of form, geometry, space, and aesthetics. More specifically, this studio focuses on advanced architectural design and an in-depth study of a specific topic through rigorous design development. All students initially register for section 01. Studio section assignments will be made through a lottery process at the start of the semester and students will change their section registration at that time.

Credit 6 units.

Typical periods offered: Fall

ARCH 4111 Architectural Design V (Florence)

The third and fourth years introduce a selection of option studios to students. This year emphasizes voice as students adopt their own conceptual position through the iterative development of form, geometry, space, and aesthetics. More specifically, this studio focuses on advanced architectural design and an in-depth study of a specific topic through rigorous design development.

Typical periods offered: Spring

ARCH 4121 Architectural Design VI (Urban Design + Landscape Systems)

The third and fourth years introduce a selection of option studios to students. This year emphasizes voice as students adopt their own conceptual position through the iterative development of form, geometry, space, and aesthetics. More specifically, this studio focuses on advanced architectural design and an in-depth study of a specific topic through rigorous design development.

Credit 6 units.

Typical periods offered: Spring

ARCH 4190 Senior Capstone in Architecture

The Senior Capstone in Architecture allows undergraduate students in their final semester of study to pursue individual research projects. All students will participate in shared discussions and presentations, as well as pursue a highly individualized line of research inquiry that potentially starts where a former project left off, supplementing current or previous coursework, or investigating a previously unexplored route. The course will culminate in a presentation and defense of a well-articulated and developed research project.

Credit 3 units.

Typical periods offered: Spring

ARCH 4340 Structures I

Statics and Strength of Materials through Beam and Column Theory. Loads are defined and states of stress are identified and analyzed. The context of structural behavior is identified and optimal structural behavior and material efficiency structural design is reviewed. Form-active, bulk-active and vector active structural options are explored relative to the transference of load along the length of structural members. The course applies structural theory to the analysis and design of structural members - beams, trusses, arches and columns.

Credit 3 units.

Typical periods offered: Fall

ARCH 4350 Structures II

Continuation of ARCH 4340 Structures I, with consideration of the effects of forces on structural members of various materials. Introduction to the design of structural members in steel, reinforced concrete and wood.

Credit 3 units.

Typical periods offered: Spring, Summer

ARCH 439 Environmental Systems II

We as architects have to analyze and address complex issues and relationships, synthesize them, and then make them manifest through clear design strategies. Building systems must reconcile solar heat gain, glare control, daylight levels, thermal insulation, ventilation, acoustics, air quality, structure and fabrication - all in relation to the scale and comfort of the human body. The development of environmental systems into a clear, comprehensive, and elegant design solution cannot be an afterthought; it must be a synthesized and integral part of the design process, with a clear strategy that operates at multiple scales. Building upon the passive strategies explored in

Environmental Systems I, this course will lay the foundation for the integration of active environmental systems with enclosure, space, and the requirements for human occupation. This will be done through the study of climate, air, temperature, water, light, sound, and energy. Each topic will be assessed against problems, principles, possibilities and potential. This course focuses on how important it is to consider active systems as part of an integrated design strategy addressing both FORM and PERFORMANCE throughout the design process. Prerequisites: Environmental Systems I & Building Systems I

Credit 3 units.

Typical periods offered: Spring

ARCH 4416 Performance Enhancing

The term Performance has many meanings that are either quantitative, qualitative, or both simultaneously through a range of design professions. The suggested goal of Performance is an optimistic enhancement to a designed entity or idea and holds the potential to be highly provocative relative to the method it is deployed when arguing for a particular design procedure or effect. The double entendre suggested by the term performance relates to both how the system technologically improves a functional aspect along with a more theatrical act of performing. Design in both architecture and fashion relies on both interpretations to create a multi-dimensional discourse necessary to advance conceptual design investigation. The seminar class will explore issues of performance of complex surfaces at the scale of the human body. The class will consist of lectures, discussions, readings, physical material manipulation, and 3D digital modeling and digital fabrication. The use of Rhino (with T-splines and / or Grasshopper) or Maya will be deployed for the digital design of the skin systems. Material systems will be explored initially through manual experimentation and then combined with the digital investigation for the final a digital fabrication using tools such as 3D printing, lasercutting, CNC milling, and thermoforming, resulting in a final garment for the human body. The class is offered to both fashion and architecture students and the investigations would occur in teams of two where ideally one from each discipline is represented.

Credit 3 units.

ARCH 4418 Mapping Complex Spatial Sequences

New methods of spatial practice have changed the way architects and designers work. As designers, we are no longer tied to static, projection-based drawings as a means to develop and represent our ideas. Time based digital imaging allows us to simultaneously examine the narrative, formal, experiential and spatial aspects of a particular place. Students will map a site through digital photography focusing on a specific spatial sequence much like how a director would set up a scene, moving fluidly from one space to another. During the first half of the semester, this spatial sequence will be used to create a drawing of the entire site as one multilayered composite image with particular attention to the interaction of time, space and movement. The site will then be reconstructed digitally through models or drawings, using the composite drawing as base. Finally, relationships between the drawing and model will be outlined resulting in a more complete experiential spatial sequence.

Credit 3 units.

ARCH 4419 Building Performance for a Solar Powered House

We will study the state of the art of building integrated solar systems, and design such a system for a house and assess its performance using computational tools. Topics include the fundamentals of solar energy systems, energy management, and its implications to design, either passive or active approach. The course involves building performance simulations using Ecotect, Energy+, HERS, and other tools. Students will use simulation data to study the relation between design and its performance. The course will consist of lectures, review, and student projects. The course will be parallel with several Engineering courses, including ESE 437: Sustainable Energy Systems and EECE 428: Sustainability Exchange. Projects will involve teamwork with Engineering students of different backgrounds. The course will contribute to Team WUSTL solar decathlon with the following features: Energy efficiency: passive design; high performance enclosure; Net-zero energy: renewable energy; heat recovery; Sustainability: water recycle; carbon neutral; lean construction; Resilience: prefabricated house to mitigate natural disasters; Smartness: advanced sensors network; energy management; data visualization; Human-centered living adaptability: flexible space; human comfort and perception controls to operate the house to improve productivity and health; An interdisciplinary effort for renewable energy and sustainable buildings.

Credit 3 units.

ARCH 4420 Fabricated Drawings

The course will focus on digital fabrication tools, techniques and image theory to uncover new methods of producing physical images. Images are built in a myriad of methods including physical media or from data. Physical images, as defined in the context of this seminar, will be transcend a 2D limitation to develop thickness. The increase to 2.5D or 3D opens opportunities to investigate the use of digital fabrication tools to construct images. In particular, the class will focus on the way information technology continues to have a profound effect on the way we perceive our built environment and the way we represent it. The images that surround us are becoming increasingly easy to generate through information technology. Access to technology both in terms of digital design and output affords the opportunity to reconceive the nature of images. Images are developed through analog, digital or hybrid processes. Their generation is a collaborative interaction between intuition and information processes through clearly defined rules. The scientific theoretician, Peter Galison, discusses the tension between intuition and information on the nature of images in the arts and sciences. Images reveal the intricacy of relations and knowledge, but they are simultaneous deceptive because they bypass the mathematics of pure science. The tension in the arts tends to be between the intuitive, interpretive ability of images as representation versus the image as evidence of a computation-based process. Architectural theoretician Mark Linder talks about how images in architecture are moving away from representations of something else toward a more literal and non-idealized result of a procedure. The image is literally the process of making visible the end result of an operation. Therefore, images are the evidence of the process by which they were generated. As such, the class will develop innovative processes for our digital fabrication equipment to construct images. The projects will develop new methods to use the CNC mill, laser cutters, knife plotter and 3D printer. New tools may need to be developed and built to enable the image fabrication process. In parallel with technological development is material experimentation. Students will be highly encouraged to test new materials to program their behavior and interaction with technology.

Credit 3 units.

Typical periods offered: Spring

ARCH 4427 Digital Ceramics

The production of ceramic building materials spans from individually constructed and handcrafted to industrial and mass produced. Some of the earliest examples of permanent structures include clay-based building components. At the turn of the century, the Hydraulic Press Brick Company in St. Louis was the most innovative brick company in world, producing 100 million bricks per year by 1900. The abundance of clay and the affordability of bricks contributed to the longevity of building stock, where even modest homes had ornamental bricks, corbeling, recesses, and extensions. Historically, fired clay building components were valued for their strength, modularity, fire resistance, raw material availability, and aesthetics. Ceramic building units are pervasive in their use in the built environment, but they have been underappreciated in contemporary architecture practice. Digital Ceramics examines new possibilities for masonry and ceramics in

architecture through computational design and digital fabrication. Algorithmic design techniques, digital fabrication, and ceramic research will be merged for the design and production of nonstandard ceramic components in aggregated assemblies. Readings, tutorials, and guest lectures throughout the course will focus on innovations in digital technology, digital fabrication, advanced geometry, and material practices. Student work will include the creation of 3D-printed and/or CNC-produced molds and slip-cast ceramic components. Additional course work will include drying and firing clay components, staining and glazing techniques, and clay body research. Students will also be introduced to ceramic 3D printing during the course. Digital Ceramics confronts the seemingly disparate modes of physical making and digital form-giving with the introduction of a new material system that expands the aesthetic and performative potential of aggregated enclosure assemblies. In recent digital discourse, we have seen the ability for endless variation and customization through the use of parametric design software. This course intends to underscore a thoughtful consideration of the relationship between technology and adaptability. Through material behavior and calibrated irregularities, we have the capacity to make each component unique. Experience with digital modeling (Rhino) and digital fabrication is strongly encouraged.
Credit 3 units.

ARCH 4430 American Architecture and Modernism in St. Louis
This advanced history and urban issues seminar will explore the history of urbanism as it developed in the United States in the late nineteenth and early twentieth centuries and trace some of its international outcomes. We will examine changing theories of how urban environments should be shaped, placing efforts by designers to transform the built environment within the context of major social, cultural and political changes. These include public urban parks and parkways, City Beautiful neo-classical urban environments, regional planning, auto-based planned communities and shopping centers, highrise hotels, theme parks, and megastructural airports. We will explore the relationships between the built environment, social change, political struggle, and design theory. We will, in addition, track the establishment, professionalization, growth and contests over the fields of architecture, landscape architecture, urban planning and design. We will pay close attention to shifting conceptions of, conflicts over, definitions of the urban public, the boundaries of the public sphere, the relationship between public and private spaces, and the role of government in shaping and policing the urban landscape. By using historical methods to analyze documentary evidence, the course will facilitate greater understanding of the complexity and layering of the urban landscape and critical urban design and landscape practices.
Credit 3 units.

Typical periods offered: Fall, Spring

ARCH 4432 Modern vs. American: Rethinking the Architectural Relationship
What is American about American architecture? Architects, historians, and theorists have asked this question throughout our nation's history, but it gains renewed importance in this age of globalization. Can we, should we, continue to apply national labels to our architecture? This seminar will examine the architectural culture of the United States in the twentieth century, with special attention to the relationship between national identity and the internationalizing forces of modernity, particularly European modernism. Through analysis of theoretical writings, developments in education and practice, and key projects like the Chicago Tribune Tower Competition, the Illinois Institute of Technology, and U.S. embassies around the world, students will gain insight into the dynamic between the local and the global in the design of the built environment. Course requirements include in-class presentations, field trips, and a substantial research paper. Fulfills History/Theory elective requirement.
Credit 3 units.

ARCH 4433 Modernism in St. Louis
This seminar allows students to examine modernist architecture in St. Louis through a series of lectures followed by building tours of local examples. Lecture topics will include: Classicism Reevaluated, The FLW Influence, The International Style, Concrete Forms, Utopian Visions, and Personal Statements. Among the works to be visited will be that of Charles Eames, FLW, William Bernoudy, Harris Armstrong, HOK, Buckminster Fuller, Carl Safe, and Adrian Luchini. Each student will be asked to document one of the buildings visited for an exhibition at the end of the semester. The course is limited to undergraduate seniors. The availability of a car is required.
Credit 3 units.

ARCH 4434 Building Detectives: A Practical Seminar On Researching Historic American Architecture in St. Louis
The purpose of this seminar is to both acquaint students with and give them practical experience in the methods of researching historic architecture, both in archives of primary documents and in the field. Initial course sessions are aimed at giving students necessary background in understanding both the formal (stylistic, technological, and material) and spatial content of historic buildings. Reading buildings for what they reveal about the social and material aspects of everyday life will be emphasized. Then students will learn how to use the documentary record to both uncover the history of individual buildings, as well as their urban and social contexts, by visiting local archival repositories. The remainder of the course sessions will be spent in a group collaborative project, recording and documenting a particular building or set of buildings in a St. Louis neighborhood and uncovering the hidden histories encoded in structure, space, and the historical record. It is anticipated that aournd one-half to two-thirds of the class will be spent in archives and in the field. Given the collaborative nature of the final project of this course, students will be expected to be diligent in their attendance and to pull their own weight in helping to complete the final project. The site and the product of the course will depend to some extent on enrollment--the more people in the class, clearly the more ambitious the project will be. At the very least, a visual (photographic and drawn) record of a historic building will be produced, and a documentary record will be established for it, and these will be assembled in a form appropriate for public presentation. This documentation will be intended to aid local St. Louis heritage/preservation/civic efforts.
Credit 3 units.

ARCH 4435 Marina City: Bertrand Goldberg and the Aura of Chicago Modernism
This seminar explores the mid-century architectural modernism and its relationship to visual imagery, finance, and labor. It focuses on Bertrand Goldberg's Marina City, a pioneering mixed-use housing complex completed in 1964 in Chicago. With its unique circular form, Marina City quickly became a popular icon of modern lifestyle and was often represented in film, magazines, and on the CD covers. A study of Marina City's design, construction, promotion and reception will extend into a detailed study of Goldberg's entire opus, contextualizing his work within the larger trajectory of the Chicago School of Architecture. The course will draw comparisons to the work of Goldberg's educators, such as Mies van der Rohe and Josef Albers, as well as the work of other Chicago architects such as Walter Netsch and Harry Weese. Goldberg's work will be conceptualized within a broader socio-economic context, illuminating his buildings with a selection of primary theoretical texts relevant to architectural modernism. Course requirements include weekly reading summaries, in-class discussions, presentations and a substantial research project.
Credit 3 units.

Typical periods offered: Fall, Spring

ARCH 4436 Gender, Race, and Architecture in the American City, 1865-1960

Architecture and the built environment of the American city has been an instrumental force in the ongoing construction and definition of racial, gender, and sexual identities. Through intensive reading, discussion, and visual presentations students in this course will investigate the spatial structuring of racism, segregation, and desegregation, the relationship between suburbanization and the middle-class ideology of separate spheres, the impact of the integration of women in the factory and office, and the role of gender and race in the design and programming of public and private institutions, including libraries, parks, schools, Masonic temples, the YMCA, and the YWCA. During the semester students will write weekly response papers, give several in-class presentations, and develop an independent research project.

Credit 3 units.

Typical periods offered: Fall, Spring

ARCH 4437 American & International Urbanism

This advanced history and urban issues seminar will explore the history of urbanism as it developed in the United States in the late nineteenth and early twentieth centuries and trace some of its international outcomes. We will examine changing theories of how urban environments should be shaped, placing efforts by designers to transform the built environment within the context of major social, cultural and political changes. These include public urban parks and parkways, City Beautiful neo-classical urban environments, regional planning, auto-based planned communities and shopping centers, highrise hotels, theme parks, and megastructural airports. We will explore the relationships between the built environment, social change, political struggle, and design theory. We will, in addition, track the establishment, professionalization, growth and contests over the fields of architecture, landscape architecture, urban planning and design. We will pay close attention to shifting conceptions of, conflicts over, definitions of the urban public, the boundaries of the public sphere, the relationship between public and private spaces, and the role of government in shaping and policing the urban landscape. By using historical methods to analyze documentary evidence, the course will facillitate greater understanding of the complexity and layering of the urban landscape and critical urban design and landscape practices. Fulfills History/Theory elective requirements. Fulfills Urban Issues elective requirement.

Credit 3 units.

ARCH 4438 Urbanism: Cambridge Ma

This design research seminar will focus on urban buildings adjacent to two transit stops adjacent to two major university campuses, Harvard and MIT, in the City of Cambridge, a Boston area city of about 105,000 people. Its continuing rapid growth as a center of research and digital economic activities have led to continuous transformations in its urban form, particularly in the past few decades. This seminar will combine historical and field research on some of the many architectural urban design interventions in Cambridge near the Harvard and Kendal Square subway stations. A class field trip will take place, and students with choose among several topic areas to produce detailed drawings and digital models of specific Cambridge urban interventions. There will likely be a publication of the work. Topic areas include the campus planning and built work of Josep Lluis Sert and others near Harvard Square; buildings on the MIT campus by Eero Saarinen, Frank Gehry, Fumihiko Maki, and others; and recent Kendall Square area corporate urban developments by Maya Lin and others.

Credit 3 units.

Typical periods offered: Fall, Spring

ARCH 4439 Urbanism: Chicago

This design research seminar will focus on the urban infrastructure and associated buildings of central Chicago, in and around the areas near the Loop. The Chicago metropolitan area is the third largest in the United States, and from 1870 until the 1950s, Chicago was America's second city, surpassed in size only by New York City. It remains the densest and most urban of the cities of the Midwest, with many examples of complex interconnections between rail lines, highways, and various kinds of pedestrian-oriented urban environments. This seminar will combine historical and field research on some of the many architectural urban design interventions in Chicago. Students with choose among several topic areas to produce detailed drawings and digital models of specific urban interventions. There will likely be a publication of the work. Topic areas for digital documentation include the pedestrian relationships between transit lines and various buildings and urban complexes, including the large Millennium Park interventions by SOM and others over the Illinois Central railway lines adjacent to Lake Michigan, and Wacker Drive, a 1920s underground limited access highway along the Chicago River, and other projects. Fulfills History/Theory and Urban Issues elective requirement.

Credit 3 units.

ARCH 4440 Unbuilt Sert

This design research seminar will focus on the digital simulation of the unbuilt architectural design projects of Josep Lluís Sert (1901-83). This spring we will document and analyze Sert's drawings for St. Botolph's Chapel (1963) designed for the Boston Government Center complex with the goal of virtually 'building' it. Sert practiced in Barcelona in the 1930s during the era of the Spanish Republic and later in the U.S. as both architect and planner. He was the President of CIAM (International Congresses of Modern Architecture) from 1947-56, and Dean of the Harvard Graduate School of Design from 1953-69 where he developed urban design as a discipline and academic program. The chapel was an effort to combine elements of Catalan modern architecture with his concept of a modern New Monumentality suitable to the postwar world. The seminar will also visit several of Sert's major built projects in the Boston area, and will include presentations by Dean Emeritus Edward Baum, who was job captain on the St. Bololph's chapel project with the Sert, Jackson firm. Students will work in teams to produce detailed digital models of the project to simulate the 'built' chapel inside and out. Publication of the work is anticipated.

Credit 3 units. Arch: GACS

ARCH 4441 Designing the Modern City

This course, which is based on the textbook Designing the Modern City: Urbanism Since 1850, is a lecture course that examines designers' efforts to shape modern cities. Topics covered include the technical and social changes in mid-19th century industrial cities, notably London, Paris, and Barcelona, as well as varied efforts to shape urban extensions and central new interventions elsewhere. These include reform housing efforts for the working class in 19th-century London and New York, Städtebau (city building) in German-speaking environments, the Garden City Movement, the American City Beautiful movement, town planning in Britain, and urbanisme in France (the source of the contemporary term urbanism). Less well-known topics that will also be addressed are urban modernization in East Asia before 1940 and suburban planning in the United States, including Frank Lloyd Wright's Broadacre City. The book also addresses social change and modern urbanism in Europe in the 1920s, including the emergence of CIAM (International Congresses for Modern Architecture), which met from 1928 to 1956; the political, technological and urban transformations of World War II; the expansion of racially segregated decentralization in the United States; and some European and Latin American postwar urbanism. It also addresses urbanistic aspects of

postwar architectural culture, including critiques of modernist planning by Jane Jacobs and others and more recent responses to the ongoing challenges posed by efforts to create organized self-build settlements and to make more ecologically sustainable cities.
Credit 3 units. Arch: GAMUD, GARW, GAUI, RW
Typical periods offered: Fall, Spring

ARCH 4442 Modern St. Louis, 1940 to 1974: Art, Architecture and Social Change
This seminar addresses the research question, How did modern art and architecture become such a major aspect of St Louis's cultural life in the middle decades of the 20th century? Offered in preparation for a fall 2022 exhibition on this topic at the Kemper Museum, the seminar will research this question, both by presenting notable works of modern architecture that were built here and by examining art collecting and philanthropy here during this time period, where new and more socially inclusive values then associated with modern art had a significant impact on changing both the political and artistic culture of this large metro region. Architectural works to be researched include the works of Harris Armstrong; Cloethiel Woodard Smith (a Washington University architecture alumna); Samuel Marx; Frederick Dunn; Eric Mendelsohn; Eero Saarinen; Dan Kiley; Joseph Murphy and Eugene Mackey, Jr; George Hellmuth, Minoru Yamasaki and Gyo Obata; and Charles E. Fleming.
Credit 3 units. Arch: GARW, RW
Typical periods offered: Fall, Spring

ARCH 4443 The Chicago Skyscraper
This seminar will consider a set of projects by Burnham and Root, Holabird and Roche, Wm. Le Baron Jenney, Louis Sullivan, and others. A central example will be the Monadnock Building, with its two sections by Burnham and Root (1891) and Holabird and Roche (1893). As one of the main lines of inquiry, we will define the skyscraper type, evaluate examples through comparative study, and unfold intersectional aspects of the buildings with respect to race, gender, and labor. Special attention will be paid to symbolism and the relationship between structure, tectonics, and ornament programs. Circumstances permitting, the seminar will apply photogrammetric techniques to the documentation and study of architectural details, entailing a field trip. Space will be reserved for undergraduate students. Prerequisite: Architectural History I or II.
Credit 3 units. Arch: GARW, RW
Typical periods offered: Fall

ARCH 4444 Peking and Forbidden City
The life history of China's imperial capital from the 13th-century Khanbaliq visited by Marco Polo to the Peking of the last emperor, Pu Yi. Topics include Chinese city planning and symbolism, timber-frame architecture, ceremonial and mortuary sites, domestic architecture and gardens. Readings in primary sources.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM, IS
Typical periods offered: Fall, Spring

ARCH 4445 Urban Topographies
This digital seminar introduces students to the basics of Geospatial modeling at both regional and local scales, with an emphasis on the creative application of GIS data towards design thinking, site analysis, and speculative urban design. The course explores the potential for GIS data as more than just for inventory and mapmaking, but also as an invaluable creative design tool. A series of digital workshops will touch on a range of cross-platform workflows, from digital cartography to parametric modeling to 3D animation. Tying this together will be a speculative urban landscape project that the students will model and visualize utilizing the software introduced. This year's iteration will lean more towards an experimental and explorative use of GIS for design, art, and visualization. This course is intended to give students the flexibility to approach the syllabus as an independent study or as a supplement to their studio work. Software that will be covered includes ArcGIS, Autodesk Infraworks, 3DSMax, and Grasshopper.
Credit 3 units. Arch: ECOL

ARCH 4447 Meso-American Architecture
The first half of the course will trace the major civilizations of central Mexico from 1500 BC until the Spanish conquest after 1400 AD, focusing on developments in architecture and landscape, calendarics and cosmology, ceramics, the ballgame and sacrificial rituals, gods, myths and legends, language and hieroglyphics, and political, religious, and social organization. The survey will feature detailed and extended tours of specific sites by means of drawings, maps, slides, and digital images, we may even attempt a couple of virtual tours on-line. In the second half we will deal with the Mayan area, ranging from the lowland jungles of Chiapas and Yucatan to the Peten and the highlands of Belize and Guatemala. High points include the Jaguar dynasty of Yaxchilan, the reign of Pacal at the hybrid site of Palenque, and the demise of 18 Rabbit in the city of Copan, Honduras. Tikal will be featured as the culmination of Mayan culture, and the Chenes, Rio Bec and Puuc styles will also be examined. See a complete and independent cultural development going back at least 7000 years, and equal in greatness to Egypt, Greece, or Rome. This is also a chance to examine civilizations existing at the margins of ecology and sustainability, and how they may at times succumb when the limits have been reached. Students will be encouraged to focus on a particular area of interest for further inquiry, to be developed into a paper or a project.
Credit 3 units.
Typical periods offered: Fall, Spring

ARCH 4448 Discover Latin America: Literature, Culture & Cinema
This seminar aims to explore the identity of Latin America through its own literary production and cinema. Our point of departure will be the popular image of Latin America in a permanent state of crisis. We will analyze how this extended condition has determined a resliient search for original survival strategies. We will take these artistic forms as the space of resistance against social, historical, economic and cultural impositions. We will particularly study the short story tradition within Latin America and its main contributions to the self-exploration process. We will concentrate on issues such as the confrontation between nature/environment and man, tradition vs. change, the economic struggle and social exclusion/inclusion, the urban movement and the realist portrait, the fantastic exploration and the power of the unconscious, the Latin American boom and new directions, the strategies of humor and transgression, and the female voice and its personal challenges. In turn, we will discuss a selection of films that depict the diverse range of Latin American realities in connection with specific scenarios of crisis--the literary crisis (the fantastic representation, the magical realist answer, the neo-baroque turning point), the political crisis (dictatorships, revolutions, wars, national mythologies, exile, censorship), and the social/cultural crisis (mainstream machism, patriarchal traditions, imperialism, language andorigins, hybridity, gender issues, poverty, injustice, margins). The course consists of the critical reading/watching and formal literary/visual analysis of the selected texts and films. The main goal is to open an engaging dialogue among participants to better understand what we call Latin America, and also to learn to think critically when it comes to tradition, identity, and paths of self-discovery.

Typical periods offered: Fall, Spring

ARCH 4449 Latin American Literature

This course will explore the process through which different Latin American countries have come about. We will concentrate on a selection of literary texts that somehow represent the quest for a national voice in each case. The "labyrinth" of Latin American self-exploration strategies implies a diversity of artistic paths. Thus, we will include other cultural forms involved in the on-going and current self-constructing protrayal of Latin America--films, theater, current events, art exhibits, music, and tango/milongas, among others. We will pay especial attention to those films that have a literary inspiration or are the adaptation of a literary piece in order to study the connection between literary and visual discourses in particular. Through this analysis, we aim to enhance the experience and understanding of Latin America as a vibrant cultural system. The seminar attempts to shed light on the different nation-building processes and on their permanent search of identity. The main goal is to open a critical and engaging dialogue through which students will be able to learn about Latin America's past and present, as well as to integrate their own first-hand impressions from the unique immersion opportunity they will have while being in Buenos Aires.

Credit 3 units.

Typical periods offered: Fall, Spring

ARCH 4450 American Architecture and Urbanism

This seminar will focus on new ways of thinking about American architecture and urbanism in the 20th century. It is part of an effort to offer new conceptual frameworks to understand American architecture within its larger context of social, political, and urbanistic change. Unlike an architectural history survey course, it will not only focus on the canonical works of well-known designers such as Ludwig Mies van der Rohe and Louis Kahn, but it will also situate architecture within the various new social, spatial, technological, and legislative directions that have shaped American metropolitan areas since then. Students will present selected readings and pursue individual research projects for this course.

Credit 3 units. Arch: GARW, RW

Typical periods offered: Fall

ARCH 4452 The Design of Practice in America

The Design of Practice in America will trace the changes and developments of architectural practice in the United States from the mid-nineteenth century through the present. Through historical case studies, students and professor will explore how architects and designers shaped and responded to the changing demend for their services in the marketplace through periods of growth, depression, and change. Key examples will illustrate how figures like Frank Lloyd Wright, Albert Kahn, and john Portman developed working structures, partnerships, and business models to put forth their ideas and designs and make a living. We will look at a variey of strategies that architectus have developed over time to define, vallidate, and sell architecture as a n artistic enterprise, community service and profession. Weekly discussion will focus around themes in the creative design of architectural practice. Local practitioners will be invited to class to share their experiences in a variety of practice settings. Students will also undertake a semester-long research project on a St. Louis firm whose papers have been preserved or whose history is maintained through oral history. The goal is to familiarize the students with the process of primary research and the inner workings and development of a firm.

Credit 3 units.

Typical periods offered: Fall, Spring

ARCH 4453 Architecture in the Age of Identity: Race, Gender, Ethnicity and Their Discontents

Identity is both an individual and social category. It is deeply personal, woven with memories, feelings and emotions, but also collective, informed by history, society and culture. Consequently, this gap between individual self-expression and societal conformity remains one of the fundamental tensions of human existence, but also a source of inspiration and imagination in our rapidly changing world. Categories such as race, gender, class and ethnicity-as well as their intersections and overlaps-remain dynamic. They constantly evolve, responding to the changing socio-economic context and engaging an ever-expanding array of cultural production-from literature and film to philosophy and sociology. This course expands the conversation even further, examining the relationship between design and identity in architecture, with a particular emphasis on architectural education. Covering a range of case studies that emerged after World War I, the course moves freely across various divides-between North-South and East-West, between socialism and capitalism-examining the representation of identity through a variety of architectural media, including drawings, texts and buildings. The course probes architecture schools and practices as both disciplinary enterprises and as hubs of identity formation, suggesting the capacity of equity and representation to serve as agents of both political and architectural emancipation. The course content includes lectures, discussions and presentations, as well as reading and research.

Credit 1.5 units. Art: CPSC

Typical periods offered: Fall

ARCH 4454 Modern Architecture, Race, and Ethnicity

This course will review the issues mentioned in the title as represented in recent literature and historical examples, focusing mainly on the urban context but more on architecture than urbanism. Themes will include the history and theory of architecture; architecture as art and as service; architecture and social class; and technology and intersectionality. An emphasis will be placed on information literacy, including the use and management of primary and secondary sources, accessed digitally. Assignments will include a series of short papers and a final paper. Space will be reserved for undergraduates. Prerequisite: Architectural History II or equivalent.

Credit 3 units. Arch: GARW, RW Art: CPSC

Typical periods offered: Fall, Spring

ARCH 4455 Decoding Sustainability

This course engages worldwide conversations regarding current global environmental issues in relation to the production of building materials. Students will begin by defining dilemmas faced by designers and architects in the selection of materials, followed by introductory information on Biomimicry, Natural Capitalism, True Cost, and LIfe Cycle Analysis. This course will then look at national, international and industry environmental standards that govern building materials with respect to the triple bottom line: environmental impact, economic impact and social equity. By anaylzing specific certified building materials, students will see how much or low little is being measured and how transparent the certification processes are. Building materials and the environmental standards that govern them will continue to evolve throughout the entirety of a designer's life. Therefore, developing a thinking/filtering process to employ in the selection will aid each designer in theri career. This course seeks to develop design thinking in relation to the environment while developing tools to understand how building materials can be evaluated for sustainability.

Credit 3 units. Art: CPSC

Typical periods offered: Spring

ARCH 4456 Precarious Structures: Composition/Anti-Composition
This design seminar will explore the construction of architectural compositions as time-based events using motion graphics, physics engines and scale models. Design exercises will be supplemented by readings and lectures that track intersections between abstract painting, color theory, choreography, video game physics, and architectural space. The suite of digital videos and models generated during the course of the workshop will make an argument for animation software as an architectural-form-generation technique. This workshop is designed as a visual-studies-focused exploration of material assemblages. In his recent text entitled Bad New Days: Art, Criticism, Emergency, theorist Hal Foster analyzes contemporary visual artists like Thomas Hirschhorn and suggests the term precarity to describe one of the major emerging themes in post-2001 art; this is a meta-category that he puts forward alongside the abject, mimetic, archival and postcritical. These terms, Foster suggests, might replace the postmodernist overprivileging of images and language. Following the work Foster highlights in his text, we will engage with what sculptor Robert Morris calls anti-form: the material and optical territory of the formless (all that is horizontal, unconstructed, and otherwise base). It is without doubt that the specters of postminimalism -- Alice Aycock, Robert Morris, Eva Hesse and Mary Miss, for example -- loom large in contemporary aesthetic research. This pervasive (if underarticulated) interest in base materialism, elemental tectonics, and provisional structures owes much to the antiformal revisions of minimalism that these artists celebrate in their work (so many piles, ruins, stacks, stick-frame forts, huts, and shelters). Can architecture revitalize these types and add elements (spatial, economic, political and technological complexity) to the sculptural articulation of precarity? Can we design with formal provisionality at the forefront? Requirements: Beginners with no background in the following platforms are welcome. However, some familiarity with Rhino 3D, the Maya platform, and processing will be helpful.
Credit 3 units.
Typical periods offered: Spring

ARCH 4457 Surface It, With Pieces
The seminar will focus on the in-depth understanding and development of ideas based on the technical, experiential and aesthetic exploration of one material: concrete, into a specific application; pavers. The students will design a module and then explore different pattern options. The pattern modules will consider the limitations of the material in terms of strength, weight, size, etc. The goal is to make a single piece or pieces that can be lifted by a single person without much effort and combine them in different ways in order to create an artificial topography. Students will learn about the material itself as well as the act of construction, assemblage, and mass production; which will include methods and technology, ranging from tools to form work. The forms for the concrete pieces will be built through a process of CNC milling and/or vacuum formed plastic. The challenge will be to define environmentally sensitive strategies for problem solving, conceptual development and poetic expression at both levels of the design process, conceptual and real. Sustainable principles, such as the use of recycled materials as an aggregate in the concrete mix, will be an important consideration for this class. They will be also asked to investigate water run off in a given area and alter the percentage of open grids as a way to create a pervious, though walkable surface. Construction will be the ultimate goal.
Credit 3 units.

ARCH 4458 Furnish It, With Pieces
Public space is a key constituent that determines the character of a neighborhood and a city. It is embedded the urban fabric and it can mediate the relationship between people and their particular surrounding landscape. Urban furniture and hardscape can play an important role in offering a wide range of uses for public spaces. The design of such pieces affects the way people live and experience a particular environment. The ultimate goal of this course is to design, fabricate and install a set of repeatable units to equip a vacant urban lot in order to offer opportunities for social interaction. The seminar focusses on the in-depth understanding and development of ideas based on the technical, experiential and aesthetic exploration of one material: concrete, into one specific application: urban furniture. This seminar builds up on the scope of the Creative Activity Research Grant awarded by the Sam Fox School of Design & Visual Arts where 5 porous concrete pavers were designed for a vacant plot in North St. Louis. The challenges are to adapt the given pavers to a new site condition and to propose new urban furniture made out of concrete. It involves the construction of pieces able to equip a gathering space as well as sidewalks that can offer local residents the opportunity to interact with others. This provides not only aesthetic appeal to the residents and visitors, but also allows the possibility of implementing an actual project in an abandon plot in Old North. We will enrich the community with a wide range of training opportunities as each step in the process of making the plaza will be used for teaching purposes, from making pavers and other pieces, to salvaging, reusing or repurposing recycled material. Students are asked to design and build concrete urban furniture necessary for the gathering area. The pieces can encompass a wide range of uses: chair and benches, tables, raised beds, planters, litterbins, modular fencing and mobility-related pieces such as bike racks, bollards and car stoppers. This is an opportunity for hands-on experience. These pieces have to consider the limitations of the material in terms of strength, weight, size, etc.; learning about the material itself as well as the act of construction, assemblage and mass production, which will include methods and technology, ranging from tools to molds. The formwork for the concrete pieces will be built through a process of CNC milling and rubber molds or vacuum formed plastic. The challenges are to define environmentally sensitive strategies for problem solving, conceptual development and poetic expression at both levels of the design process, conceptual and real. Sustainable principles such as the use of recycled materials as an aggregate in the concrete mix will be an important consideration. Construction is the ultimate goal of this class. We will be working in collaboration with Anova, a local manufacturing company dedicated to the design and production of site furnishings. Anova will provide some materials and bring their expertise to the project.
Credit 3 units.

ARCH 4459 Precast Concrete Enclosures
In contemporary construction practice, building enclosures are sophisticated assemblies conceived through complex processes that merge design, science, technology and craft. The outermost layer of the exterior wall is the most exposed to natural forces and therefore it needs careful attention as it must work effectively over the lifetime of the building. The primary goal of this fabrication seminar is the construction of full-scale mockup pieces that function as part of real building envelopes; this is an opportunity for hands-on experience. Students will design, develop and build enclosures out of different types of precast high-performance concrete assemblies as critical components of building envelopes. The course will be developed in partnership with Gate Precast, a leader company in the precast concrete industry. Supported by a grant from the PCI Foundation, students will have a budget of $12,500 to design and prototype precast mockups of building envelopes. Students will start by conducting research and analyzing historic and contemporary buildings, focusing on their skin properties and configurations. Then, they will proceed to identify specific environmental condition(s) and develop an enclosure as a response to such condition(s), advancing the design through detail drawings and study models, culminating in a full-scale mockup mold. Construction of the molds will be done at Washington University's facilities combining digital and analog methods of fabrication, including CNC milling, laser cutters, 3D printers, and vacuum-formed plastic, among other methods; a fully equipped wood shop is also available. Once the molds are finalized, they will be transported to Gate's architectural plant in Ashland City, TN, for

reinforcing and concrete casting; this project will culminate in the demolding of full-scale precast mockup pieces. Students will tour the facility and participate in the entire fabrication process, including mold preparation, reinforcing, casting, demolding, handling and finishing of the final panels.
Credit 3 units.
Typical periods offered: Spring

ARCH 4460 Advanced Grasshopper
With a base knowledge of the Rhino+Grasshopper interface, this class will focus on developing an entirely scripted building system. Each student will be given a set of initial parameters (building volume, square footage, percent of transparent/opaque facade, required programmatic elements/size, etc.) They will begin by selecting a formal precedent that will help them determine a structural system. Within this framework, students will develop an algorithmic logic to organize program and then articulate a responsive skin. The goal of this exercise will be to develop understanding of the potential use of scripting in design. Scripting allows the designer to transform their design dynamically as the parameters change or update. The final output of this class will be detailed, annotated drawings of each student's structural system as well as a 1/4 scale model of a small portion of their design utilizing available tools in the FabLab such as 3D printing and CNC routing. Students taking this course must have working knowledge of Grasshopper. This class is an advanced class exploring design through generative modeling.
Credit 3 units.

ARCH 4461 Information Modeling & Technology
This foundation-level course will introduce students to the digital tools of Geographic Information System (GIS), Building Information Modeling (BIM), and Building Performance Analysis (BPA). Its goal is to equip the student with the ability to gather information, analyze it, and make decisions within the information-rich environment of architectural design and construction. Students will develop an understanding of these three seemingly distinct approaches and their role in preserving the quality and quantity of accumulated information for 'upstream' use. The topics addressed in the course will be further developed in more advanced courses during subsequent semesters. The introduction of information-gathering principles within GIS will expose students ot the wealth of information, such as maps and census data, that is already available, as well as methods of turning raw data into analytical material for use in their design work. This segment of the course not only provides a foundation to ArcGIS, but also leads toward use of this information within applications like Revit Architecture. Creating and managing an information pool of digital GIS and design and construction data and making it available throughout the lifecycle of a project is commonly referred to as BIM. In the second part of this course, we will explore how BIM is being utilized today and learn the basics of one of the leading BIM compliant applications, Autodesk Revit Architecture 2010. During the third part of this course, students will be introduced to BPA, a process that embodies a holistic approach toward the integration of sustainability and design. By understanding when and how to apply sets of analytical exercises via applications like Ecotact Analysis within the context of Information Modeling, students will develop an understanding of how design decisions have a profound and lasting impact on the overall building sustainability and performance.
Credit 3 units.

ARCH 4462 BIM in Practice
BIM (Building Information Modeling) is a developing method of creating, sharing and managing project data through a visualized 3D or 4D model. While it continues to deliver on an initial promise to increase design consistency and efficiency while minimizing errors, the focus of attention is shifting to the use of BIM to facilitate integrated methods of project delivery. The course will explore the use of the BIM platform and the development of data exchange methods in architectural design through a case study and subsequent design project. Students will be provided instruction in Revit covering the creation, management, and extraction of data from a model, but will also look at the technology more broadly, discussing the changes advanced by the deployment of BIM processes in practice.
Credit 3 units.

ARCH 4463 Coding Growth: Scripting & Computational Methods for Design
The course will cover an array of advanced design techniques using scripting within the rhino/grasshopper environment. Although, thorough knowledge of grasshopper is not required, it will help to ease the transition away from graphic algorithm creation, and into the C# scripting language. C#, while slightly more difficult than its technical equal, VB, the language can be used in a wide variety of other programs and applications, such as 'Processing and the Arduino micro-controller, which students will have the opportunity to explore should they feel comfortable in those environments. The foundation of the class will be based around three major categories: Mathematical Systems, Agent-Based systems, and simulated Growth. Before covering the base material, a three-week intensive overview of grasshopper will cover nearly everything students will need to know in order to proceed successfully. We will begin basic scripting exercises by duplicating existing grasshopper components and proceed to the advanced categories from there. In the first category, mathematical systems, students will learn how to create and control useful L-Systems like branching, fractals, and generational scaling. We will then move into topological algorithms, in order to learn how to sort and search through the scripted results to quantify their success or failure. Once single codes can be executed relatively successfully, the course will progress into agent-based systems. The topic will be introduced through simple investigations in basic geometrical relationships like circle packing and mesh relaxation. We will then study the behaviors of birds, ants, fish, and termites in order to extract the necessary parameters to mimic their behavior. Building complexity yet again, students will investigate the ways in which one can code growth. This will ultimately lead to an architectural project at the pavilion scale where students will be asked to design a single unit that will mutate and deform itself iteratively in order to achieve explicit performance criteria that have been laid out for them. Students will learn how to use genetic and generative algorithms, (a combination of the previous lessons) to design the building unit and appropriate transformation criteria, and, hopefully, by the end of all of this, each student will have designed a site-adaptable, feasible pavilion without knowing what that pavilion will look like in any given application.
Credit 3 units.

ARCH 4464 Advanced BIM in Practice
While the adoption of BIM continues to grow across the industry, criticism of its effectiveness as a design tool remains. The foundation of BIM, the creation and management of geometric objects with associated non-geometric data, is often at odds with established methodologies of design. Current practice typically manages this schism by separating design from the use of BIM for documentation and construction. The class will seek to develop methods of design within a BIM environment, not through the translation or reshaping of traditional techniques, but through the design of a methodology that seeks to capitalize on what BIM enables: direct, digital collaboration and the facile management of large data sets. This is not an introductory class. Basic knowledge in Revit (or an alternative BIM software) is required. Skill in other parametric and 3D modeling software as well as a basic knowledge of Grasshopper or other algorithmic processes is strongly preferred. Students will investigate and design digital processes using a short design brief to enable the investigation.
Credit 3 units.

ARCH 4465 Designing With Grasshopper
The best way to learn how to design with Grasshopper is to use it. Each student will be guided through five different projects incorporating computational design logic throughout. The outputs of this course will be published on Instagram (@wustlhopper) and/or reddit (r/generative). The course will build in complexity as it progresses through Grasshopper methods and plugins. At the end of the course, each student will have completed a 2D patterning project going from Rhino to Illustrator/Photoshop, another 2D patterning project animated in Grasshopper through Photoshop, a 3D patterning project animated in Grasshopper through Photoshop, a simulated interaction using Kangaroo and animated, and a fully rendered looping model incorporating all of the lessons from throughout the course.
Credit 3 units.
Typical periods offered: Fall

ARCH 4466 Digital Diversions
This course will employ advanced digital computing tools to examine the fabrication and assembly of materials diverted from the construction industry waste stream for new possibilities within design. While current digital fabrication techniques are commonly used to produce cut sheets and fabrication instructions for the assembly of cousom components, this often results in a large amount of raw material entering the waste stream despite complex nesting (cut sheet configuration) softwares. In addition, the EPA estimates that building-related construction and demolition debris totals approximately 136 million tons per year, accounting for nearly 60 percent of total non-industrial waste gereration in the U.S. Given the scale of materials available and the introduction of powerful, advanced computing techniques, this course will closely consider the construction waste stream as a point of entry for the digital design of highly repetitive assembly systems. Students will research and develop desigh proposals that minimize the production of waste using standard CNC production techniques or porpose innovative methods to employ digital tools to assemble materials destined for the waste stream. Students will follow a research trajectory throughout the semester that utilizes one or more of the advanced computing techniques being addressed in the course (scripting and/or parametric modeling) to design a prototypical assembly system that makes "something out of nothing."
Credit 3 units.
Typical periods offered: Fall, Spring

ARCH 4467 Expanding Skin
In the 1957 text The Pliable Plane: Textiles in Architecture, Anni Albers wrote, if we think of clothing as a secondary skin we might enlarge on this thought and realize that the enclosure of walls in a way is a third covering, that our habitation is another 'habit'. In this text, Albers proposed the concept of skin as an inhabitable layer, first as a covering for the body and then as an expanded layer of enclosure. This course will explore Albers' concept of a second skin by developing new strategies for constructing complex surfaces at the scale of the human body, particularly in the context of digital fabrication and computational design. Emphasis will be placed on assemblies that yield innovative visual or tactile effects while also engaging specific material performance. How can we design with a focus on performative pattern that can enclose the body and its structural and geometric complexities? How can we conceive of patterns that are not disrupted by these complexities but rather enhanced by them? The course will consist of lectures, readings and seminar discussions, tutorials, iterative material investigations, 3D digital modeling, and digital fabrication. Student projects will focus on the design of inhabitable, layered constructions while engaging constructive techniques from both the fashion and architectural disciplines. Rhino (with Grasshopper), Maya or Z Brush will be utilized for the initial digital investigations. Students will experiment with materials and develop innovative construction methods that engage digital fabrication tools such as the 3D printer, laser cutter, and CNC mill for the production of a second skin in the form of a garment for the human body.
Credit 3 units.
Typical periods offered: Fall

ARCH 4468 Modern Architecture in Japan
Japan was among the first non-Western countries to emerge as a major center of international modernism. This seminar will examine major movements, events, figures, sites, and other contingencies associated with this historical process. Themes will include national style, technology, architecture and art, tradition and historiography, historic preservation, housing, and institutions of architecture, such as schools, journals, construction industry, and codes and regulations. The seminar will start with the Meiji period when 19th century European architectural styles and construction methods were transplanted into Japan. We will end the course with the recent past, such as the early careers of Ando and Ito. Students in Architecture should have completed the Architectural History I & II sequence.
Credit 3 units.
Typical periods offered: Fall, Spring

ARCH 4470 The Japanese House
This seminar examines the Japanese House as a modernist idea as it evolved over the course of the 20th century, both within Japan and internationally. The single-family, tofu-cutter house came to define Japan's suburban, industrialized landscape in the postwar era, but the type historically emerged out of a certain modernist imagination of Japan's pre-modern architecture, as architects and critics such as Bruno Taut and Arthur Drexler projected their specific readings of shoin and minka architecture onto a mandate for contemporary practice. The seminar will investigate major strains of domestic architectural design in postwar Japan, paying particular attention to the formalist exercises of Shinohara Kazuo and technology-driven designs of Ikebe Kiyoshi. More contemporary pursuits by SANAA and Atelier Bow-Wow in materiality, transparency, smallness, and urban complexities will also be covered. This course satisfies the History/Theory elective requirement.
Credit 3 units.

ARCH 4471 Aviation & Architecture: Air Terminal Design and Emergence of AIrport Cities
As seaports and train stations were once hubs of commerce and trade, airports serve as vital engines to today's economy, linking cities and regions to the globalized economic landscape. Surrounding airports, entire cities are emerging both organically and in planned developments, building upon the business related to air travel with office parks, conference centers, hotels, entertainment districts and retail. This seminar will be structured in three parts. In the first part, we will examine the fundamentals of transportation architecture and the way air terminal design has developed. Starting as simple structures on an airfield in the 1920s, airports were designed as heroic modern structures from the 1940s to 1980s, ubiquitous terminals in the 1980s thru early 2000s, and most recently as regionally expressive terminals in the 21st century. Students will research, analyze and present case studies, mapping an understanding of the basic architectural components of air terminal design. In the second part, we will explore the rise of airport cities. Students will work in teams of two to research and analyze the planning, governance, impact and growth of airport cities. Sites we will study include developments around Singapore's Changi, Amsterdam's Schipol, London's Heathrow, Paris' Charles de Gaulle and Chicago's O'Hare. The third part of the seminar will allow students to select a topic of special interest that spans the scale of terminal design and airport cities. Students will initiate independent research to deliver a final paper and presentation on the topic of their

choice related to aviation, transportation architecture and planning. Seminars will be supplemented with guest lectures and will be highly conversational. We will explore opportunities for site visits to both airports and airport cities.
Credit 3 units. Arch: GACS

ARCH 4472 Art and Architecture
From Ancient Greece to the Renaissance, architecture, painting, and sculpture were regarded as the principal fine arts. In later years, the visual arts were relegated to a separate sphere, independent from buildings and removed from the expediencies of use; however, these positions are perennially contested. How have the distinct positions of art and architecture in private and public spaces been articulated -- and unmade and reworked -- around imperatives such as education, economy, equity, or environment? When has the tension between art and architecture been a problem or a source of inspiration and origin of form? This seminar looks at selected models and the situations, ideologies, and concerns that attended or motivated them. Examples will be drawn from Ancient and Classical periods to the present.
Credit 3 units. Arch: GARW

Typical periods offered: Fall, Spring

ARCH 4474 Dubois Meets Churchill: Social Justice & the Built Environment
Winston Churchill famously stated, We shape our buildings and afterwards, our buildings shape us. W.E.B. DuBois equally famously stated, The problem of the Twentieth Century is the problem of the color-line. This course is about what happens (and has happened, and perhaps could happen) at the intersection of those two quotes. With the built environment always in the middle of the table, but never in isolation, students in this course will consider its role relative to social justice as viewed through a multitude of lenses. Schedules permitting, faculty from other schools in the university might also offer their perspectives on how their respective disciplines touch on issues of social justice and the built environment. There might also be field trips to a few selected locations around St. Louis where some of these issues have played out or are playing out. This course will deal with many of the issues that the fall course, Community Building/Building Community, deals with, but in a lecture format. This is partly the result of weather constraints (the Spring semester is not as amenable to extensive field trips as the Fall semester is), but it will also allow students who can only take a Spring course to do so, and in a more traditional lecture format, without as many tours and without the community service requirement.
Credit 3 units.

ARCH 4475 Community Design Sprints
In this course, students will provide scoping, phasing, programming, and conceptual design for small-scale yet pressing St. Louis needs through selected projects for community members and small organizations. Students will work directly with a local organization over 7 weeks in to clarify and move forward a community project; students will learn community engagement, facilitation, and communication skills, as well as practicing research, representation, and design skills.
Credit 1.5 units. Art: CPSC

Typical periods offered: Spring

ARCH 4476 Way Beyond Bigness...or Towards a Watershed Architecture
2015 marked the 10- and 20- year anniversaries of two seminal events that have challenged architects' relationships to large scale, complex societal issues: 1) the publishing of the S,M,L, XL in October 1995 that featured Rem Koolhaas' manifesto of Bigness; and, 2) the landfall of Hurricane Katrina just outside of New Orleans in August 2005 that catapulted fields of design into an unprecedented post-disaster context. Students will reconcile these two disciplinary jolts by understanding these seemingly incongruous snapshots of history as jumping off points for new modes for architectural activism and opportunism. Students will design a manifesto, in newspaper format, for a future-based discipline of architecture that sails uncharted realms that are Way Beyond Bigness. This will require the simultaneous submersion and assertion of architecture within other disciplines; the formulation of alternate modes of representations for emerging practice-based models; the blurring of academic and professional agendas in the urgency of activism; and, the integration of multiple scales, interest groups and agendas in ridiculously complex and antagonistic situations. Underpinning Bigness and Hurricane Katrina will be additional case studies, guest lectures and field trips that cover: CIAM and the emergence of urban design; Koolhaas' thesis and OMA's early practice; mega-scale urban renewal projects in St. Louis; contemporary investigations into territorial scales of design; and, multiple scales of contemporary, integrated Water-based designs, post-Katrina efforts and beyond. This course fulfills the History/Theory Case Studies elective requirement.
Credit 3 units. Arch: GACS

ARCH 4477 Segregation By Design: A Historical Analysis of the Impact of Planning and Policy in St. Louis
This course aims to examine the causes and consequences of American Apartheid and racial residential segregation in metropolitan St. Louis and propose a report that suggests potential mitigation strategies for a given community. This transdisciplinary seminar, bridging humanities and architecture, introduces students to research, theories, and debates currently being conducted on issues of segregation, city planning, urban policy, and sustainability . By placing these debates in a historical and local context, students will discover how policy and decision-making are entrenched in racial, cultural, physical, and socio-economic segregation and engender the spatial transformation of America's divided cities. Students will learn to evaluate and analyze policy and planning throughout the history of the neighborhood to ultimately understand the physical manifestation of segregation during growth and decline. Taking advantage of the academic resources in the region, the course offers a cross-university, cross-disciplinary environment to respond to the importance of this issue. Student teams develop mitigation plans for selected communities in the St. Louis metropolitan region. The teams will be assisted by volunteer professional mentors from diverse fields and residents from the selected communities. The final product of the student teams will be a book that will be a compilation of the work of the students in detailing the history of the communities, causes, and consequences of segregation, as well as potential policy and design strategies.
Credit 3 units. Arch: CAST, GACS Art: CPSC EN: S

ARCH 4478 Radical Mapping
Maps are instruments of power. We have seen this, for example, in the racially-motivated 'redlined' maps that legitimized urban clearings of entire neighborhoods in American cities in the 1930s. But maps are also instruments of resistance, for visualizing lived experiences and critiquing political systems and relationships of power. Maps are tools for re-writing dominant narratives and spatializing truths. Maps stage new design possibilities. This class will introduce students to the agency and potential of maps and mapping, a skillset all designers need in the face of our current moment of social and environmental justice collapse-a moment that has long been occurring. The course will cover interdisciplinary theories of mapping; critical cartography; American sub/urbanism; issues of race and place; and techniques of visualization. Students will build a radical 'atlas of spatial politics' centered on selected themes, focused on a common American first ring suburban site-either Ferguson, MO, or Kenosha, WI or similar. There are no formal pre-requisites for the class, but knowledge of Adobe

Illustrator and In Design are a must. Students will initially work with GIS ArcMap/ArcPro, a geospatial software-provided free, alongside an introductory tutorial and troubleshooting session/s with the WashU Geospatial Library analysts.
Credit 3 units. Arch: GAMUD, GAUI Art: CPSC
Typical periods offered: Spring

ARCH 4479 Information Modeling for Sustainable Design
This course will focus on the principles of sustainable design as examined through Building Performance Analysis (BPA) and applied Building Information Modeling (BIM) methodology. The foundation for this course will be an introduction to BIM and BPA and the significance of both for the future of sustainable architectural design practice supported by analytical modeling. This emphasis on the suitability of building modeling for analytical purposes and on the interpretation of such data will provide the basic knowledge necessary for the second phase of this course, in which students will use a previous or current studio project for an in-depth study of their building's performance in the context of its chosen site. Exploring the interaction between the simulated environment (climate, isolation) and the virtual building with its physical characteristics (materials, assemblies, passive design strategies, heat transfer, daylighting, embedded energy), we will attempt to confirm and test the principles of sustainable design at the schematic level of project development. The model analyzed by each team will provide sufficient comparative information for a design approach whose desired goal is carbon neutrality in the lifecycle of the building. Students will be encouraged to investigate the suitability of analytical modeling software, in the context of critical design methodology. Prerequisites for this course are a basic understanding of BIM methodology and insight into sustainable design practices. Fulfills Digital elective requirement.
Credit 3 units.

ARCH 4480 Articulating an Idea
Architecture has always related to other practices: painting, scenography and theater in the Renaissance, photography and film in the modernist era. Techniques of representation such as drawings, model-making, photography, cinematography or videography, etc. allow for different modes of interpretation, production and communication of architecture. Other systems that are not visual, such as music and literature, are transposed into architectural form through the different mechanisms at play in the process of representation (such as metaphors) in a purely symbolic manner. Architecture often operates metaphorically, trying to emulate other fields, in particular philosophy and science. In this case, architectural representation (through experimentation in drawings and other media) works as a shifter that allows codes of one system -- science, geometry, mathematics or physics -- to be switched to another, culture, painting or architecture. While new vocabularies are developed in this process generating stylistic changes, the mechanism or production and communication of ideas remains untouched. Most of the time more than one tool is required to illustrate an architectural idea thoroughly. To articulate this seminar, we will research five of these tools: Sketch (DaVinci, Siza, Luchini, Holl); Photomontage (Picasso, Miralles, Hockney, OMA); Diagrams/maps/notations (Tschumi, Big, Allen, OMA); Iconography (Venturi, FOA, Diller Scofidio, Holl); and Animation/parametric (Shop, Andrasek, Asymptote, Lynn). The sequence of research shall proceed as a series of focused exercises designed to build the student's knowledge in a cumulative fashion. As a final exercise of this seminar, students will be asked to articulate the idea of their current project to create a strong link between this seminar and the studio work.
Credit 3 units.
Typical periods offered: Fall, Spring

ARCH 4481 Pattern Recognition
Interrogates a recent history of architecture replete with pattern. Case studies of patterning in contemporary projects will be undertaken through the production of analytical, computational models to reveal an underlying logic of performance and construction. In parallel, the course will present a theoretical survey of related issues in art, psychology, computation, and ecology. In this context, pattern will be understood as a performative expression of an ecological system, distinct from historical issues of ornament and representations. Informed by the analysis, students will then digitally produce an original pattern, both graphically operative and spatially materialized.
Credit 3 units.

ARCH 4482 Constructing Ideas
Constructing Ideas is about creating design concepts and transforming these into built architecture. We will learn how conscious imagination and coherent interventions lead us to ideal realities. This class examines the design and construction process as academic research. We consider the practice of making architecture as a synthesis of analysis, interpretation and transformation. Studies will teach us how a building idea influences its construction and how the knowledge about construction can become the starting-point of an idea. Interrogating design problems and investigating existing typologies as a methodology will lead us to specific answers. We will explore conceptual-artist practices and examine their strategies, learning to lead with intent, play with parameters and question the givens. From there, we will look at examples of Swiss Architecture whose early integration of construction in the design process has a long tradition. One could say, that the bearing itself gets designed in Switzerland. We will consider invisible structures and material specificity. Learning this language gives us the ability to transform our ideas into specific architectural expressions and precisely tailored solutions. The form of the seminar is experimental. We consider our meetings to be spatial and contextual interventions, precisely designed like architecture. Sessions will vary, from a lecture to an exhibition, talks, a dinner- the goal is to be very conscious about what we are doing. This process is going to be documented through the whole semester. Each student will create his own design thesis and realize an installation that reflects it. The results will be exhibited and presented to the public.
Credit 3 units.

ARCH 4483 Design Strategies for Energy Efficiency
High-performance, zero-energy buildings are an integral part of addressing climate change, pollution, social inequality, and other urgent contemporary issues due to the outsized impact the built environment has on global energy use. The course will allow students an opportunity to learn the technical skills required to design highly efficient buildings using energy modeling and simulations. The energy impact of the building's orientation, thermal envelope, fenestration, shading, air sealing, thermal bridging, thermal mass, ground contact, natural ventilation, and mechanical systems will be examined. Emphasis will be placed on cost, performance, sustainability, renewable energy, and the professional designer's role in efficient buildings. The course concludes with each student completing a cumulative project which encompasses a whole building approach to energy efficient design. Each of these projects will be specific to the individual student and focused on the energy efficiency design principles which relate to the type of building, occupancy, climate, and design aesthetics of the project. Students will need to exhibit mastery of the concepts and techniques used throughout the semester in order to synthesize the existing constraints with energy efficiency, sustainability, and design excellence.
Credit 3 units.
Typical periods offered: Fall, Spring

ARCH 4484 Invisible Cities
This graduate and advanced undergraduate seminar takes as a point of departure the famous 1972 Italo Calvino text that reframes a single city (Venice) as multiple cities, told through a sequence of discrete narratives and descriptions. Each of Calvino's Invisible 'cities' reflect different emotional and physical environments and possibilities-or impossibilities-for their inhabitants, yet are all still connected through an overarching narrative. Invisible\Cities, the course, builds on this premise that a city is not a one-size-fits-all experience (nor a monolithic construct with a uniform constituency), but instead is comprised of radically different environments all selectively accessed, depending on one's positionality or relationship to urban redevelopment processes. In places like St. Louis-but in fact in all American cities-residents live out different urban realities or imaginaries, with unequal access to the same services, provisions and processes. A highly visible instance of this occurs along Delmar Blvd in St. Louis where two contrasting lived experiences play out in neighborhoods across from each other on the north-south divide. However, this class posits that much less visible instances of the duplicitous city also exist, in spaces not geographically divided, but (more insidiously) overlaid. The course will focus on this conceptualization of inequality where both privileged and underserved populations co-exist in much more intertwined ways. Within any given block, neighbors live according to different opportunities, for education, health access, police services, or routes to property acquisition and financing. These are the invisible, spatially simultaneous cities; the urban realities that are much harder to see-at least to those who do not live those realities on a day-to-day basis. Like in Calvino's world, urban and lived space is endlessly continuous and accessible for some; for others it is fragmented, even disorienting or opaque. This course will examine, frame, collect and document the various manifestations of invisibility together with the political instruments and policies that produce-and reproduce-it. We will use the St. Louis region as our primary focus, with comparisons to other sites. Our studies will involve a close re/reading of many of the mechanisms of daily governance and urban design such as policies, planning tools, legal, financial and real estate protocols and of course design decisions and processes; ie the apparatuses of urban redevelopment that exist right before our eyes. The seminar welcomes both graduate students and advanced undergraduate students from across disciplines. Support for Invisible\Cities is provided by the Washington University in St. Louis Ferguson Academic Seed Grant Program granted through the Offices of the Chancellor and Provost and the Olin Business School. Fulfills Urban Issues and MUD Track elective requirement.
Credit 3 units. Arch: GAMUD, GAUI

ARCH 4485 City Life and Urban Worlds: An Introduction to the Urban Humanities
The urban humanities is an inter-/anti-disciplinary project that brings together theory, practice, and methods from fields in architecture, urban design, and the humanities to interrogate the urban condition. In this core course, we will delve into key theorists, texts, and methods that inform the urban humanities through seminars, site visits, and design projects. We will debate emerging perspectives in critical urban theory and then explore the applicability of these positions in St. Louis through mapping, street ethnography, and subtraction. In addition, this seminar is designed to introduce urban scholars from across the humanities and design fields to each other. Participants will be encouraged to experiment, trade, and engage in dialogue across their fields. What, we will ask, is the status of the urban commons in an era of enclosures and privatization? What can postapocalyptic cyberpunk from Lagos teach us about smart cities? How do built environments get their politics? Can these politics be redirected or subverted?
Credit 3 units. Arch: GAMUD, GAUI Art: CPSC

ARCH 4486 Architecture and Photography
Seminar that deals with issues raised by use of photography by architects, historians, and critics. Seminar will confront the assumption that our knowledge of notable buildings and architectural space is based primarily on the photographic image. Photographs are tacitly accepted as objective facts, and the pervasiveness of photography in magazines, books, and exhibits as substitute for direct experiences are rarely questioned. Goal of seminar: to foster a healthy skepticism of photographs, and to investigate the role of photography as a means of record and convey complex spatial conditions by the ordering conventions of the frame. While not technical, the course will introduce students to technical aspects of photography that are particularly relevant to architectural photography: parallax, lighting, lens distortion, depth of field, format and grain, cropping, photomontage, and point of view. Fulfills History/Theory requirement.
Credit 3 units.

ARCH 4487 Art, Design, and Entrepreneurship: Creative Placemaking Beyond the City
This course invites students from diverse areas of interest to engage with the cultural landscape of Marion County and Hannibal, Missouri - a region that, through the work of Mark Twain, popularly epitomizes both rural life and the allure of the Mississippi River. While a quarter of a million tourists visit this area each year to follow in Tom Sawyer's footsteps, the work of local artists, designers, and entrepreneurs are innovating the narrative of this place and opening up room for consideration of African-American experience, local food systems, and the complex series of social and economic connections within life along the Mississippi. This course puts that spirit of collaboration and imagination in the hands of students, challenging them to think beyond the borders of their disciplines to create projects that present new connections between place, community, and culture to both rural and urban audiences. The National Endowment for the Arts defines creative placemaking as an opportunity when public, private, not-for-profit, and community sectors partner to strategically shape the physical and social character of a neighborhood, town, tribe, city, or region around arts and cultural activities. Through fieldwork, research, and idea-creation, students will collaborate with mentors on the ground to create locally appropriate projects that address questions of culture and design in the region. Occasional off-campus visits will be joined in the classroom to a wide range of readings, case studies and webstreamed conversations with national leaders across fields. The course will conclude with small teams designing a specific plan, event, or project that could later be implemented in the community.
Credit 3 units.

ARCH 4488 Disappearing Act
What does erasure make, and how might we reconstitute what has been lost? This seminar will explore the architecture of ghosts: things thought to be lost or destroyed, or which can no longer be accessed. This representation-forward class will test a range of drawing and making techniques in various media and scale to foster a dialog about what drawing misses and the presences and absences of the built environment. We will frame our work and ideas in architectural discourses of subtraction, palimpsest, and productive removal. Our work will capture the dynamism and logic of the built environment.
Credit 3 units.
Typical periods offered: Spring

ARCH 4489 Appraising the Opaque: Studies of Architectural Opacity
From the early decades of the 20th Century, transparency has been a critical concept in the theorization and practice of modern architecture. Transparency's other -- opacity -- was typically associated with the past, specifically the Beaux-Arts tradition, and was shunned by the avant-garde. Lacking apologists, opacity went unrecognized and

unrewarded. However, the weight of opacity can clearly be felt in many canonical examples of twentieth-century architecture: Wright's Ennis House (1924), Le Corbusier's Notre-Dame du Haut (1956), and Kahn's Trenton Bath House (1959), to name a few. Likewise, today's renewed interest in transparency runs in parallel with explorations in opacity such as OMA's Casa da musica (2004), Zumthor's Brother Claus Field Chapel (2007), and Herzog & de Meuron's Caixa Forum (2008). This seminar will assess the role of opacity in modernist discourses, and will explore its relevance to contemporary architectural practice. Students will gain an art historical understanding of opacity in the conception and realization of architectural works, and delve specifically into the tectonic and sustainable aspects of opacity.

Credit 3 units.

Typical periods offered: Fall, Spring

ARCH 4490 On the Thresholds of Space Making: Contemporary Japanese Architecture

This seminar is offered in preparation for the exhibition, On the Thresholds of Space Making: Installation Art by Young Japanese Architects, to be held at the Kemper Art Museum in Spring, 2014. With contemporary architecture being bombarded with an ever more daunting array of formal, social, technological, and environmental exigencies, the seminar and exhibition will revisit a series of core artistic and representational issues of architectural design through installations by a new generation of Japanese architects. Kshigami Junya, Nakamura Ryuji, Nakayama Hideyuki, and Kikuchi Hiroshi represent a highly energized and promising collective of young creative talent pushing the frontiers of architectural design, unrivaled in contemporary global practice in their intellectual rigor and stylistic coherence. This collective evolved out of Japan's avant-garde architectural culture of the 1970s, spearheaded by Toyo Ito, who synthesized two opposing ideals of architectural design of the previous generation, represented by Shinohara Kazuo and Kikutake Kiyonori. The seminar will trace the genealogy of this collective from Shinohara and Kikutake in the 1960s, Ito in the 1980s to 90s, and SANAA in the recent past. Fulfills History/ Theory elective requirement.

Credit 3 units.

ARCH 4491 Edges of Privacy

In collective housing, interactions between neighbors occur in often tight spaces of shared access. In hallways, walkways, stairs, and landings, proximity to the private spaces of the dwelling is extreme. Many architects have been experimenting with open-walkway access type in collective housing beyond an economical means of circulation. Buildings that use open-walkways-which in colder climates can be glazed-often provide energy savings, as they allow for the cross-ventilation of units and can serve as climatic buffers and passive heat sources. Additionally, these spaces offer potential scenarios of both conviviality and conflict, a contrasting condition to be reconciled through design to create housing for diverse groups of people. In this seminar, students will explore selected historic and contemporary housing examples with open access walkways-both successes and failures- in Europe and Latin America. Through lectures, research, analysis, discussions, and rigorous redrawing of selected buildings, students will examine-organizationally, spatially, and socially- the modes of interaction afforded by design and the potential for this access type. The seminar is part of the ongoing research project Edges of Privacy. Open Access Walkways in Collective Housing and the work may result in a publication and exhibition. It is open to undergraduate juniors and seniors and graduate students who have completed the core sequence.

Credit 3 units.

Typical periods offered: Spring

ARCH 4492 Continuity and Transformation

Throughout history and across cultures, certain ideas, concepts and organizational strategies have persisted in architecture, despite advances in social ideals and technological capabilities. The seminar explores the phenomenon of this continuity with the goal of uncovering the manner in which these ideas and strategies are transformed. Whether classified by use, characteristic form, or compositional device, the continuity of these notions is clearly traceable as a body of knowledge waiting to be revealed, understood, assessed and, when valid, built upon. The transformation of ideas and strategies is one of the most fundamental activities of the designer, but relies on careful study. We will discover evidence of this phenomenon in vernacular architecture, patterns of settlement and habitation, and in the work on many of our most influential practitioners, such as Le Corbusier, Kahn, Moneo, and Zumthor, as well as in the realm of painting and sculpture including Cubism, Suprematism, and Expressionism.

Credit 3 units.

ARCH 4493 Landscapes Through Time: The History of St. Louis' Built Environment

From the Mississippian mound builders to the urban conditions of the present day, this course will investigate the different approaches of various cultures to creating built environments that meet the needs of their time in terms of landscapes and structures. Using the City of St. Louis as an example, the course will examine the layout and infrastructure of the city at various periods, discussing the effects of technological changes in the creation of structures, improvements to transportation, facilitation of trade and the effects of these forces on the cultural and built landscape of the city. The course will also trace the history of inequity within the city and the imposition of racial apartheid. Each class session will discuss the structures and landscapes that defined individual eras in the history of the city, and the ways in which these were successful or unsuccessful. This course fulfills the History/ Theory Case Studies elective requirement. Requirements will include a mid-term paper, two in-class reports and a final paper.

Credit 3 units. Arch: CAST, GACS

ARCH 4495 Mid-Century Modernism in St. Louis 1930-1965

St. Louis is home to many significant architectural works of Mid-Century Modernism, design by local, national, and international architects of great repute. One of the most powerful ways to understand and appreciate architecture is to experience it firsthand. In this course, we will tour significant extant works after brief presentations of the design architect's work by the course lecturers or visiting lecturers. In addition to site visits, the course will involve architects and historians (to the greatest extent possible) who have firsthand knowledge and experiences of Mid-Century Modernism of St. Louis through lectures and site visits, culminating in a round table discussion with the class able to ask questions after a semester of exploration, discovery and focused investigation. Each week, students will document their observations of each site visit through writing, photography, sketching, diagramming concepts, and additional research of the architecture, architect or historical context. A private blog site will be created to post information and assignments so that all in the class may read and contribute to the body of research being developed. Also, each student will be expected to research a topic of their choice from a list of 20 or so buildings selected by the instructors. This semester project will culminate in a thirty-minute class presentation and subsequent discussion. Ultimately, the weekly and semester projects will be documented in an 8.5" x 11' format to be incorporated into a booklet documenting the student's cumulative efforts.

Credit 3 units.

Typical periods offered: Fall, Spring

ARCH 4496 Modern Architecture in St. Louis, 1930s-70s
This seminar will examine postwar modern art and architecture in St. Louis within the changing design and social contexts of the postwar era, which included massive spatial and racial transformations. Using artworks, photographs, films, and architectural drawings and models, this course will bring together design and social documentation to understand this remarkable creative and conflicted period in St. Louis's history. Michael Willis, FAIA, will also give several lectures and lead two tours. Students will present selected readings and pursue individual research projects for this course.
Credit 3 units. Arch: GARW, RW Art: CPSC
Typical periods offered: Fall, Spring

ARCH 4500 Algorithm and Assembly: Material Logic in 3D-Printed Clay
This course will investigate the use of ceramic 3D printing to design and prototype varied aggregated assemblies of architectural elements. The current forms produced through large-scale robotic extrusion look exceedingly similar. In this course, we will use an exploration of calculated error to create new models for 3D printing at the building scale. Students in the course will engage in a rigorous workflow focusing on the relationship between the designer, the tool (3D printer), and the material (clay) and establish a feedback loop that reconsiders architecture's emphasis on anthropocentric notions of precision and control. Students will use a Potterbot ceramic printer during the seminar to explore 3D printing with clay. Over the course of the semester, students will engage in a series of assignments, tutorials, and workshops intended to create a strong understanding of the methods for robotic deposition and working with clay while also challenging the prominence of precision and control associated with digital fabrication technology. Additional coursework will include drying and firing clay components, post-printing physical manipulation, staining and glazing techniques, and clay body research. *Students are required to have proficiency in Rhino modeling software to enroll. Grasshopper is not required, but recommended.*
Credit 3 units.
Typical periods offered: Fall, Spring

ARCH 4501 NOMA National Design Competition
The NOMA Student Design Competition Seminar will allow students to work collaboratively on the annual Barbara G. Laurie national design challenge. The students will have an opportunity to research the prompt, gather physical geographic, neighborhood context, and demographic data. They will also work together in developing an exhibition and other related digital graphics. The seminar is open to both undergraduate and graduate students.
Credit 3 units. Art: CPSC
Typical periods offered: Fall, Spring

ARCH 4502 American Architectural Culture Since 1945
This seminar focuses on new ways of thinking about American architecture in the postwar period, to develop new conceptual frameworks to better understand American architecture in the postwar years in its larger context of social, political, and urbanistic change. Unlike a history survey course, it will not only focus on the canonical works of well-known designers such as Mies van der Rohe or Louis Kahn, but will also situate such work within the various new spatial, technological and social directions of the postwar era. It will begin by examining how American architecture changed from the neo-classical and arts and crafts inspired directions of the prewar years into the more fragmented and complex situation after 1945. This course will also consider the complicated ways that American cities in that period were transformed from dense, street-car based industrial environments into sprawling suburban metro areas, typically also becoming racially divided in this process. It will also look at some of the complexities within modern architecture itself, some of which developed directly into post-modenism. These included important innovations in spatial organization, environmental planning, and new building technologies, as well as fundamental changes in landscape design, campus design and public school design which have since become part of mainstream practice. Improtan changes in building technology in this era, which have also tended to be undervalued in the shadow of later concerns about building imagery, will also be addressed.
Credit 3 units.
Typical periods offered: Fall, Spring

ARCH 4503 Architecture Service Learning Practicum
The Sam Fox School of Design & Visual Arts, College of Architecture, and Graduate School of Architecture & Urban Design, is giving a problem-solving studio workshop about architecture, community, and the environment. Fourth through tenth grade students from schools in the St. Louis Public School District will do 2D and 3D hands-on problem-solving projects, use the libraries and computer labs on campus, and be introduced to the field of architecture through lectures and discussions about design projects they will undertake. Washington University graduate and undergraduate students in architecture will participate in the important responsibility of being teaching assistants.
Credit 1 unit.

ARCH 4504 Explore & Contribute: Collaboration Between Washington University & Henry Elementary School
A major goal is to have elementary school students explore sustainable ways to live during the 21st. century. To this end, we will offer students curriculum ideas which will emphasize ecological sustainability, environmental health, personal responsibility, leadership, and a high-quality academic program. We will place emphasis on the environmental sciences, energy alternatives and conservation, recycling, organic gardening and the food sciences, and the emerging green economy. We will work to help the students improve their math, science, writing, and hands-on skills - using the range of topics about sustainable living as the vehicle. This course invites both undergraduate and graduate students from different fields of study to apply their discipline to the goal of designing and teaching hands-on problem -solving projects for elementary students. Gay Lorberbaum, with advising from administrators at the elementary school, will work individually with each WU student and each WU team to develop the right fit between the creative contribution each WU student will offer and the range of emotional and intellectual needs of the elementary school students. WU students enrolled in this course will work on-site at the elementary school during the scheduled weekly meeting times.
Credit 3 units. Art: CPSC
Typical periods offered: Fall, Spring

ARCH 4505 In\visible St. Louis: People, Place, and Power in the Divided City
This course approaches the study of segregation and inequality in St. Louis as deeply relational and contextual -- that is, embedded in a particular space and place and constituted through social-political relations. Students will be immersed in the history, theory and contemporary academic debates surrounding inequality, segregation, and social justice initiatives in urban cities across the United States. The course pairs this theoretical base (conceiving of segregation as multifaceted and durable, historical, spatial, and interpersonal) with intensive research experiences drawing on the methodological tools available across sociology, urban design, and architecture (archival research, data collection, mapping, diagramming, interviewing, field observation). Students will initiate collaborative research projects aligning with the needs of local organizations that serve the city's historically disadvantaged populations. Local guest speakers (scholars, community leaders, residents) will enhance students'

classroom learning, as will site visits and other discussion formats. This interdisciplinary course bridges the Department of Sociology and the Sam Fox School of Design and Visual Arts, a collaboration supported by The Divided City initiative.
Credit 3 units. A&S IQ: SSC, SC BU: BA EN: S

ARCH 4506 Mixed-Reality Fabrication
The translation from digital design to physical construction has long presented challenges and opportunities for architects, engineers, technologists, fabricators and contractors. Mixed-reality is a process of overlaying virtual objects in real-world space. Wearing a HoloLens or similar assists construction workers to accurately locate the correct parts where they are needed. In lieu of using robotics, humans are already quite adaptable for different types of construction and mixed-reality enhances their skill and precision. While accuracy and efficiency are benefits to the contractor, the benefit to architects is allowing for non-standardization to be more easily incorporated in the design. The course will explore the use of mixed reality in half-scale to full-scale fabrication prototypes to understand its challenges and benefits.
Credit 3 units.
Typical periods offered: Spring

ARCH 4507 Fields and Frames
The 3D printer is widely known for its ability to produce models with endless variation and customization, and its output is typically characterized as precise, fixed, and immaterial. However, when combined with clay, a soft, visceral material that slumps and oozes when extruded and layered, the 3D printer's tectonic language becomes highly idiosyncratic. This course will investigate the use of ceramic 3D printing for a collaborative temporary public artwork with a community partner. During the seminar, students will use Potterbot ceramic printers to explore 3D printing with clay in tandem with an investigation of the architectural frame that structures the artwork. With new materials and digital fabrication technology, we have the potential to rethink the relationship between structure and frame. Students in the course will engage in a rigorous workflow focusing on the relationship between designer, tool, material, and frame. Over the course of the semester, students will engage in a series of assignments and tutorials intended to create a strong understanding of the methods for robotic deposition and working with clay while also challenging the prominence of precision and control associated with digital fabrication technology. Central to the class discourse will be the exploration of the relationship between the highly articulated frame and the field of ceramic components, focusing on notions of authorship, precision/imprecision, loose fit, scale, and tolerance. Additional coursework will include drying and firing clay components, post-printing physical manipulation, staining and glazing techniques, clay body research, and full-scale prototyping. Proficiency in Rhino is a requirement for the course.
Credit 3 units.
Typical periods offered: Spring

ARCH 4508 Aesthetic Subcultures: Identity, Values, and Architecture
Aesthetics is about belonging. Visual codes or styles express cultural identities and values, and they can be used to create a sense of exclusivity, separating those who get it from those who do not. For some subcultures - like punk and hip-hop - being difficult to decipher has served the goal of creating an identity in opposition to a complacent or oppressive mainstream. Some aesthetic movements - like avant-garde modernism and afrofuturism - have sought to offer visions of a better world and glimpses of how this world might be designed. This course asks: What are the aesthetic subcultures that drive architectural production today? Where did they come from? What are their motivations and how are these expressed? The underlying premise throughout the semester will be the idea that subcultures construct their own cultural spheres around shared experiences - for instance, an experience of violence that demands social justice or an environmental crisis that demands a different relationship with ecological systems. To decode the meanings and motivations behind any unique style of architecture, we need first to understand how it is situated within a historically-specific social, economic, and political system. In the modern western world, consumerism and the fashion system have been key. The first part of the course begins with the architectural consequences of the consumer revolution in 18th century England before exploring the mass production of cultural objects in the 19th century, visionary modernist movements, and the cultural fragmentation of postmodernism. The second part of the course focuses on contemporary aesthetic subcultures in architecture that have formed around new technologies, protest and justice movements, explorations of new forms of collectivity, and other phenomena. Case studies in architecture will be presented alongside key theoretical texts. Assignments will ask students decode a selected aesthetic subculture through writing as well as speculative design.
Credit 3 units. Arch: GARW, RW
Typical periods offered: Spring

ARCH 4509 Towards Common Ground
Given that free market interests and extraction dominate contemporary urbanization, this class will explore socio-spatial configurations towards commoning that are surfacing within today's urban reality. With this in mind, you are invited to explore opportunities towards a common ground via the creation of a game. The debate on urban commons and commoning has grown exponentially in the twenty-first century. We are confronted with a significant amount of literature on commons, commoning, and the common, while the contemporary urban world is dominated by socio-economic disparities, privatization, inadequate resource distribution, and excessive resource extraction. As these forces and challenges unfold, the urge of urban inhabitants to collectively come together is on the rise. We generally see commoning as a base for collaboration and solidarity. Commoning, however, is a complex process as it relates to sharing knowledge and resources, and with regard to conflict and power struggles. Commoning in this context is an act of collective self-regulation and of self-awareness, as the sharing of resources, knowledge, and power create constantly changing rules for commoning and Commoners alike. As the philosopher Jacques Rancière reminds us, flourishing processes of commoning need both narrators and translators. Together, they enable commoning; they help facilitate the connection between people to enable new spatial configurations and stories to unfold. This course organized through two main principal agendas that are intertwined with one another - (re)search analysis and the development of a game revolving around the idea of commoning. The final product of this course will conclude with a play/presentation of the game you develop.
Credit 3 units. Arch: GAUI

ARCH 4510 Under the Scramble Suit
Materiality points to the whirling complexity and entanglement of diverse factors in the digital (and post-digital) age, in which material, which like sound or language can now also be something that is not physical, is an effect of an ongoing performance. By surveying the pseudo-archeology of the term materiality, from the specificity discussions to post-medium conditions, we investigate a material and environmental turn in the media studies and visual culture. We explore the way media mediate materials and a possibility for the media to be understood as environments in an age where the collapse of realism is already widespread through the visual discourse.
Credit 3 units.
Typical periods offered: Spring

ARCH 4511 The Promiscuous Project: Artifacts of Cultural Transgressions

Diverse cultures throughout history have developed creative architectural practices that often became inseparably entwined with their cultural ethos. The homogenization of global architectural values, under the guise of modernity, has undermined the cultural legacies that protected local and traditional building practices to the extent that many such practices are at risk of being lost forever. The Promiscuous Project utilizes generative AI's ability to disassociate from the imposed socio-political hierarchy of history to mine underexplored architectural qualities tied to cultural practices and hybridize them, drawing unexpected threads across time and space. In an increasingly mobile world, cultures are often practiced far from where they originate and are constantly evolving in response to their surroundings. This course seeks to parallel this cultural transgression in architectural production. This iteration of the seminar will focus on the cultural, architectural, and religious significance of domes in well-known Gothic churches like Notre Dame in France and lesser-known Persian and Ottoman mosques like the Shah Mosque in Iran. We will closely study their formal and ornamental qualities and speculate on how the hybrid domes are derivative of their origins while also deviating from them. We will explore virtual 3D scanning tools such as Trnio and RealityScan, AI processing tools like Google Colab, Automatic1111, and Adobe Firefly, and 3D modeling software like Rhinoceros, Blender, and ZBrush. The final deliverables will be a series of estranged physical objects that make productive the inevitable clash between diverse cultures and their spatial affinities.

Credit 3 units.

Typical periods offered: Spring

ARCH 4512 Design Agendas: Modern Architecture in St. Louis, 1930s-1970s and Beyond

This seminar, offered parallel to the current exhibition at the Kemper Museum, will examine postwar modern art and architecture in St. Louis within the changing design and social contexts of the postwar era, which included massive spatial and racial transformations in this region. Using site visits, potographs, films, architectural drawings and models, and guest lectures, the seminar will bring together design and social documentation to understand this remarkable creative and conflicted period in St. Louis's history. Students will present selected readings and pursue individual research projects for this course.

Credit 3 units. Arch: GARW, RW

Typical periods offered: Fall, Spring

ARCH 4513 Immeasurably Small and Inconceivably Immense

The path one takes when 'following the materials' is not a linear one. Rather, one encounters complex and anachronistic layers, incorporating references that point beyond canonical boundaries. This course is the second installment of the media and materiality seminar. In addition to mapping the genealogy of the formation of materiality as a concept, this course brings up notions of matters and materials, dematerialization, immateriality, intermateriality, transmateriality, and material in-formation in contemporary media studies. We will continue our investigations of way that media mediate material relations and explores possibilities for the media to be understood as varied environments. The course format consists mainly of small lecture sessions and active reading discussions which are moderated by the faculty but led by the students. In addition, there is a semester long and hand on materiality in-formation project. Through this project, we will utilize visualization and 3D projection mapping to bring focus on the moments when materials leave behind the confines of their conventional roles and become willful actors to engage the audience with layers of critical fabulation about potential futures of eroded pasts, roads not taken, and stories untold.

Credit 3 units.

Typical periods offered: Fall, Spring

ARCH 4514 Encountering the Otherwise

The real is saturated with the spaces of projection, possibility, and the new that we now designate as virtual in order to keep them contained behind the glassy smoothness of the computer screen. The virtual reality of computer space is fundamentally no different from the virtual reality of writing, reading, drawing, or even thinking: the virtual is the space of emergence of the new, the unthought, the unrealized, which at every moment loads the presence of the present with supplementarily, redoubling a world through parallel universes, universes that might have been. Elizabeth A. Grosz Focused on Media and Materiality, we will be mapping the genealogy of the formation of materiality as a concept and will investigate ways that media mediate material relations. Heavy emphasis is given to possibilities for the media to be understood as varied environments. The course format consists mainly of small lecture sessions and active reading discussions which are moderated by the faculty but led by the students. There is a semester-long hands-on project. Through this project, we will utilize visualization and 3D projection mapping to bring focus on the moments when material relations point to incorporeal environments.

Typical periods offered: Spring

ARCH 4516 Decon & Recon: Design a Pavilion to Demonstrate Circular Economy in Architectural Design

A genuinely circular architectural design requires the Reuse of the salvaged materials from Deconstructed buildings (DeCon) at their highest quality in new Construction (ReCon). Team WashU will explore the opportunity to design and build a unique pavilion, about 50-200 square feet, at Forest Park or the Botanical Garden based on a fully circular economy concept using various harvested materials in St. Louis. The pavilion will present innovative architectural solutions for salvaged building materials, demonstrate their possibilities, and give the material a new life in the new structure. The pavilion will be wooden, light-gaged steel, or a combination skeleton strapped with steel connectors. The students will investigate a new approach to easily reversible component connections in the pavilion without needing nails or glue. In this way, Team WashU will tackle global challenges, such as climate change, linked to the meaningful social justice transition.

Credit 3 units.

ARCH 4519 Urban Mining in Architectural Design

Urban Mining, encompassing deconstruction, salvage, and reuse, aims to recover materials and components from existing old buildings to repurpose them in new construction, which can significantly reduce embodied energy and carbon footprints while creating new forms. Design for Urban Mining (DfUM) presents a new paradigm for architectural design for sustainability. In Spring 2025, team WashU will investigate DfUM concepts, methods, and processes by experimenting with (1) design with salvaged material for future construction, (2) design with the concept of future deconstruction, (3) showcasing urban mining innovations through an experimental living unit, potentially contribute to, Chicago Architecture Biennial (CAB 2025). Students will use design/build as a vehicle to study how architectural design deals with resources from the city and how it can create attractive architectural forms. The course will include literature review of the state of the arts, and the research may be transformed into a formal journal or conference publication.

Credit 3 units.

Typical periods offered: Spring

ARCH 4520 Grounds for Play
How can we provide for the possibility of public space to become a ground for social interaction - a ground for participation to contribute towards the idea of collective play? Exploring the intersection of art making and play, this course will experiment with the design of a playful and non-conventional obstacle course that embraces participatory imagination and collaboration for children between the ages of 6 to 11. With this in mind, we will develop a kit of parts that will allow for collaboration, inventive thinking, and interconnective activities among children. We will create interactive devices, made of shapes and forms that allow for the adaption and transformation of the obstacle course. This will allow for a site-specific sequencing of the obstacle course. It is encouraged you bring curiosity, playfulness, and knowledge of digital design software (such as Rhino, SketchUp, and illustrator) to the course. In addition, it would be helpful if you are familiar with the fabrication-shop at the Sam Fox School as the final product will be a 1:1 scale obstacle course you will build as a team. Each team member will develop one part of obstacle course, contributing to the greater assemblage. We will test the obstacle court at the end of the semester with invited guests from a nearby elementary school. Note: This course meets every other week for the length of the semester.
Credit 1.5 units.
Typical periods offered: Spring

ARCH 4521 Pathways: A Collaboration With Sumner High School
Students will work as mentors to collaborate and undertake a co-designed installation project with the students in the Sumner High School Studio Lab in the Ville. In the course, students will hone their architectural expertise to develop strategies to connect design pedagogy to a high school learning environment through peer-to-peer learning. The class will consider how we can extend the knowledge of our discipline to community engagement, creating pathways for architectural education. Together with the students from Sumner, Wash U students will explore an architectural project focused on digital fabrication, pattern, and color that engages historic and contemporary compositions of the Ville neighborhood. The specific co-designed project will engage themes of temporality and permanence, cultural memory and projected futures while looking to the Sumner School and Ville community history to envision a new architectural imaginary. This course will be held in the Sumner Studiolab.
Credit 3 units.
Typical periods offered: Spring

ARCH 4710 Special Topics
Special Topics electives vary each semester.
Credit 3 units. EN: H
Typical periods offered: Fall, Spring

ARCH 4810 Independent Study
Prerequisite: Sponsorship by an instructor and permission of the Dean of the School of Architecture. Credit: to be determined in each case. Maximum credit 3 units.
Credit 5 units.
Typical periods offered: Fall

ARCH 4811 Independent Study
Prerequisite: Sponsorship by an instructor and permission of the Dean of the School of Architecture. Credit: to be determined in each case. Maximum 3 units.
Credit 3 units.
Typical periods offered: Spring

Landscape Architecture

LANDARCH 2040 Shared Ecologies and Design
This interdisciplinary course will introduce biological, social and cultural ecology concepts to proactively address current stressors that impact and are being impacted by design and the built environment. These effects and affects range from (but are not limited to) climate change science; racial and social justice impacts; sustainability, resiliency and adaptation-design strategies; systems-based and multi-scalar understandings; and interrelational human and non-human environments bound in both acting and being acted upon locally and globally.
Credit 3 units.
Typical periods offered: Fall, Spring

PhD, University of Erlangen–Nürnberg

About Us

The Sam Fox School of Design & Visual Arts is a unique collaboration in architecture, art and design education that links professional studio programs with one of the country's finest university art museums in the context of an internationally recognized research university.

Composed of the College of Architecture, the Graduate School of Architecture & Urban Design, the College of Art, the Graduate School of Art and the Mildred Lane Kemper Art Museum, the Sam Fox School is an inspiring place for learning, making, and creative research. Its six-building complex features numerous exhibition and maker spaces, a dedicated art and architecture library, and a world-class art museum. Students have unparalleled resources that support a positive creative culture.

The **College of Art**, founded in 1879, was the first professional, university-affiliated art school in the United States. In the 1940s, its broad-based core program helped set the standards for the bachelor of fine arts degree. Faculty over the years have included Max Beckmann, Philip Guston and other internationally known artists.

The **College of Architecture**, established in 1910, was one of eight founding members of the Association of Collegiate Schools of Architecture. In 1962, Architecture launched one of the nation's first Master of Urban Design programs. Four winners of the Pritzker Prize, considered architecture's highest honor, have taught at the school.

The **Mildred Lane Kemper Art Museum** dates back to 1881, making it the first art museum west of the Mississippi River. The collection has historically focused on contemporary work. Today, the Kemper Art Museum holds roughly 3,500 important paintings, sculptures, photographs and installations by 19th-, 20th- and 21st-century American and European artists, along with significant antiquities and a large number of prints and drawings.

Additional collaborative opportunities are provided by the Department of Art History and Archaeology in Arts & Sciences, the Kenneth and Nancy Kranzberg Art & Architecture Library, and the Dowd Illustration Research Archive.

Inquiry, Creativity and Synthesis

The Sam Fox School offers rigorous art, design and architecture education at both the undergraduate and graduate levels, within the unique context of an independent, nationally prominent research university.

The student body is composed of approximately 324 undergraduate and 45 graduate students in Art as well as 239 undergraduate and 132 graduate students in Architecture. In all, they represent 25 countries, 38 states, the District of Columbia, and Puerto Rico. Roughly 15% of undergraduates pursue combined studies with another university area and 20% of graduate students in Architecture are pursuing joint degrees.

Both core and advanced studios integrate contemporary theory and practice. Among the innovative programs offered are the following:

- Multidisciplinary courses are co-taught by Art, Architecture, and Art History and Archaeology faculty. Recent seminars have explored the history of illustrated entertainment, combined urban theory with book design and production, and crafted a variety of online publications.
- International studios in Barcelona and Florence are taught by Washington University faculty and offer a range of distinctive programs in art and architecture.
- Sam Fox School faculty, students, and staff work with individuals, organizations, governments, and communities — especially in St. Louis — through research, teaching and practice. This includes community-engaged teaching, service programs, research projects, and additional types of socially engaged practice.

Uniting Creativity and Scholarship

The Sam Fox School boasts a unique combination of academic and intellectual resources.

The Architecture faculty includes practicing architects, urban designers and landscape architects as well as eminent architectural theorists and historians and a select number of international visitors. The resident, full-time faculty members have won national and regional awards for design excellence and planning, including more than two dozen from the American Institute of Architects alone.

Art's full-time faculty members include prominent painters, sculptors, printmakers and mixed-media artists as well as leading illustrators, graphic designers, fashion designers and photographers. Design faculty have won numerous professional honors, and fine art faculty regularly feature in solo exhibitions and group shows, both nationally and internationally.

The nationally recognized Kemper Art Museum maintains a vital program of exhibitions, publications and educational events. Major thematic shows are drawn from institutions and private collections around the world, highlighting nationally and internationally emerging artists. The acclaimed permanent collection includes key works by modern and contemporary artists, from Henri Matisse, Pablo Picasso and Jackson Pollock to Christian Boltanski, Candida Hoefer and Olafur Eliasson.

Public events include concerts, film screenings, lectures and discussions with distinguished visitors, and museum tours led by student docents. The museum also provides workspace for faculty- and student-curated exhibitions (usually relating to Sam Fox School curriculum). Courses in Art History and Archaeology further complement the critical and practical study of exhibitions while facilitating student involvement in professional curatorial projects.

A Comprehensive Campus

The Sam Fox School is housed in a comprehensive, six-building campus for design and the visual arts located on the eastern portion of the Danforth Campus. Conceived around a central courtyard, it both reflects and updates Washington University's original campus plan, which was developed in 1895.

Anabeth and John Weil Hall, designed by the internationally acclaimed architecture firm KieranTimberlake, houses state-of-the-art graduate studios, classrooms and digital fabrication spaces. With its abundant natural light and flexible, loft-style studios and workspaces, Weil Hall is a locus for teaching, study, creation and critique. The William A. Bernoudy Architecture Studio — along with studios for graduate architecture, landscape architecture, urban design, illustration & visual culture, and visual art — houses programs for the Graduate School of Architecture & Urban Design and the Graduate School of Art. The Roxanne H. Frank Design Studio houses the Graduate School of Art's Master of Fine Arts in Illustration & Visual Culture.

Another component of Weil Hall — the luminous, two-story Kuehner Family Court — features a living green wall, skylights, and glass walls that allow for visual connectivity between studio spaces, providing students with a feeling of simultaneity and participation in a larger community. As the conceptual heart of the building, the Caleres Digital Fabrication Studio allows students and faculty across programs to execute complex projects using state-of-the-art tools. Other notable spaces include the Ralph J. Nagel Dean's Suite and Weil Hall Commons, which includes a commissioned art wall that features new works by alumni each year.

Earl E. and Myrtle E. Walker Hall brings together the undergraduate sculpture and painting areas. The sculpture area includes undergraduate studios, a wood shop, a metal shop, an installation room, and a faculty office, all on the ground level and first floor. The undergraduate painting studios are on the second floor.

William K. Bixby Hall, completed in 1926, has grown and changed to meet the needs of the students, faculty and administration of the College & Graduate School of Art. The building currently houses teaching and studio spaces for first-year art and design students, the undergraduate fashion design and printmaking majors, and the Nancy Spirtas Kranzberg Studio for the Illustrated Book. The Dubinsky Printmaking Studio, a state-of-the-art facility, is located on the first floor beside Island Press, a research-based printmaking workshop that creates and publishes innovative prints and multiples by many of today's most influential artists. On the ground floor, an administrative suite is home to student services, financial services, and the director of Art.

Joseph B. Givens Hall has been architecture's home since 1932. It features a variety of studio spaces, including large drafting rooms with 15-foot ceilings, large windows, and skylit ateliers. The building's compact and elegant Beaux-Arts design has at its heart a grand central stair often used for socializing and informal meetings. Givens Hall also houses a lecture hall, review spaces, classrooms and the office of the director of Architecture.

Mark C. Steinberg Hall, completed in 1960, was the first commission by Fumihiko Maki, then an architecture professor at Washington University. Formerly home to the Gallery of Art, the Department of Art History & Archaeology in Arts & Sciences, and the Art & Architecture Library, Steinberg Hall now houses Career Services and the undergraduate communication design and photography majors on the lower level; public spaces such as Steinberg Hall Gallery and Etta Eiseman Steinberg Auditorium on the main level; and architecture and communication design studios on the upper level.

The **Mildred Lane Kemper Art Museum**, completed in 2006, is another commission by Maki. The elegant, 65,000-square-foot limestone-clad structure — a gathering point for scholars and the general public — includes more than 10,000 square feet of exhibition space and art storage facilities. The museum also houses the Kenneth and Nancy Kranzberg Art & Architecture Library and the Department of Art History & Archaeology.

In 2019 Washington University completed one of the most significant capital projects in the recent history of the Danforth Campus. The comprehensive transformation of the east end of the campus included a significant expansion of the Kemper Art Museum, designed by the architecture firm KieranTimberlake. The new and reconfigured galleries more than doubled the exhibition space for the Museum's permanent collection.

Lecture Series

The Sam Fox School invites distinguished academics and professionals to lecture, attend critiques and visit major studios.

Degree Requirements

Undergraduate Degree Programs

The College of Architecture offers course work leading to two undergraduate degrees: the Bachelor of Science in Architecture and the Bachelor of Arts in Architecture. The requirements for both degrees are the same through the junior year. Students choose which degree program they wish to pursue. Further information about the particular requirements and curricular structures of the undergraduate degree programs is listed below.

Students in the College of Architecture select, in consultation with their advisors, a course of study that satisfies the formal degree requirements, addresses their interests, and best meets their overall goals.

Students begin with a design studio and take required courses in the College of Arts & Sciences in addition to electives across the university. To encourage students to focus their academic and professional interests, they are required to select one of five tracks in architecture (p. 102).

For the Bachelor of Science degree, students continue to study architecture in depth through the senior year. For those in the Bachelor of Arts program, the fourth year offers the flexibility of studying outside of architecture or pursuing other electives.

Continuing for Graduate Study Years

Students receiving the Bachelor of Science in Architecture degree can apply to two-year Master of Architecture programs. Students receiving the Bachelor of Arts degree with a major in architecture usually apply to three-year Master of Architecture programs. Please visit the Graduate School of Architecture & Urban Design section of this *Bulletin* for more information.

College of Architecture Requirements

Students in the class of 2028 and beyond must fulfill the following degree requirements. For class of 2027 academic requirements, see the 2023-2024 Bulletin (p. 17). For class of 2026 and prior classes, refer to the 2022-2023 Bulletin.

Academic Requirements (18 units)

1. College Writing (3 units): Every student must demonstrate proficiency in reading and writing the English language and must begin to develop mature skills in framing and revising arguments by completing course work as determined by the College Writing Program (CWP), with a grade of C- or better. Transfer students must fulfill the writing requirement by taking an approved writing course or by review of a writing portfolio. For more information, visit the College Writing Program website.
2. Calculus I (3 units): All students must complete MATH 1510 Calculus I (Natural Sciences/Math) with a C- or better. Transfer credit cannot be used to fulfill the Calculus I requirement; the requirement can be fulfilled with Advanced Placement (AP) or International Baccalaureate (IB) credit.
3. Physics I (3 units): Students must complete PHYSICS 1740 Physics I (Natural Sciences/Math) with a C- or better.
4. Humanities (3 units): Humanities courses examine the human condition as it has been documented and expressed in both past and contemporary times. This area includes courses from literature (both in English and other languages), Classics, History, Philosophy and Religious Studies, as well as some courses in the creative arts such as Dance, Drama, Music and Writing. Courses tagged *HUM Humanities ArtSci IQ* fulfill the humanities requirement.
5. Social and Behavioral Sciences (3 units): These courses use qualitative and quantitative observation to explore the social environment, relationships with society and forms of human behavior. This area includes courses from Anthropology, Economics, Education, International and Area Studies, Political Science and Psychological & Brain Sciences as well as courses from other areas, including interdisciplinary studies. Courses tagged *SSC Social and Behavioral Sciences ArtSci IQ* fulfill the social and behavioral sciences requirement.
6. Art History (3 units): Students must complete ARTARCH 1515 History of Western Art, Architecture & Design with a C- or better; this course may not be taken Pass/No Pass.

Major Required Courses: Bachelor of Science in Architecture*

Code	Title	Units
ARCH 1000	Practices in Architecture, Landscape Architecture, and Urban Design	3

Tracks in Architecture

All students must complete a track in architecture as part of their degree requirements. In consultation with their major advisor, students select a track during their third semester. Tracks consist of 9 units of coursework in a focused area of study. A minimum of 6 units of track courses must be taken in the Sam Fox School, with up to 3 units permitted from the College of Art. Up to 3 units taken outside the Sam Fox School can also count toward this requirement. Track courses may fulfill Humanities and Social Sciences distribution requirements (tagged *HUM Humanities ArtSci IQ* or *SSC Social and Behavioral Sciences ArtSci IQ*), History/Theory Research and Writing elective requirements (*AR Research & Writing*), or open elective requirements, and they may also be counted toward minors.

Students choose one of the following five tracks:

Ecologies and Sustainable Environments

Total Units Required: 9

- College of Architecture coursework: 3-9 units

  - Any URST (Urban Studies) course listed at the 3000 level or above
  - Any WGSS (Women, Gender, and Sexuality Studies) course listed at the 3000 level or above

Regulations

1. Students may take one *non-required* course on a Pass/No Pass basis each semester.
2. Students may enroll for credit in only one supervised performance course during any semester. Students may earn a maximum of 9 units toward the degree in supervised performance and/or in group or individual performance courses, internships, and independent studies combined. School of Continuing & Professional Studies courses do not count toward degree requirements.

Combined Studies

Washington University offers students the option to study across disciplines and to take advantage of the wide range of courses available. Students may choose to major in architecture and minor in another subject in architecture or to major in architecture and choose a minor or second major in an area from a different undergraduate school.

Major requirements (i.e., any course required to be taken within the Sam Fox School) may not be double-counted for another degree, major, or minor unless specifically allowed by a Sam Fox School minor. Open/general electives and Arts & Sciences distribution requirements are permitted to double-count for another degree, major, or minor.

Academic Honors & Awards

Dean's List: In recognition of exceptional scholarship, first-year, sophomore, junior and senior art/design students who have earned at least 14 credit units under the letter grade option (excludes courses taken pass/fail or audit) and earned a semester grade-point average of 3.6 or higher during a semester will be cited on the Dean's List.

Latin Honors: Graduating Bachelor of Science or Bachelor of Arts in Architecture degree students may also be considered for Latin Honors (cum laude, magna cum laude or summa cum laude) as determined by academic performance.

Special Awards, Medals and Prizes

Association of Licensed Architects Student Merit Award. The Association of Licensed Architects (ALA) presents this award to acknowledge a student, chosen by the director of Architecture, who has exhibited exemplary achievement throughout their academic tenure.

Civic Engagement Award. This award is given to one graduating student to recognize their deep engagement with systemic social, economic, and/or environmental issues through their work and efforts.

*Betty Lou Custer Award***.** The St. Louis Chapter of the AIA presents a book award in memory of Betty Lou Custer, the longstanding executive director to the chapter, in recognition of her service to the profession of architecture. The book is awarded to an outstanding undergraduate student who has contributed service to the College of Architecture.

Excellence in Craft Award. This award is given to a member of the graduating class, either undergraduate or graduate, to recognize outstanding achievement in craft.

Faculty Book Awards. These awards are given for recognized achievement in individual programs as voted on by the faculty.

Frederick Widmann Prize. In honor of Frederick Widmann, architect and philanthropist, one graduating member from both the undergraduate and graduate classes is selected based on merit in design.

Hugh Ferriss Award for Architectural Drawing. This award honors Hugh Ferriss (Washington University in St. Louis class of 1911 and Honorable Master of Architecture in 1928), a distinguished architect and renderer. A book award is given to a graduating student, either undergraduate or graduate, who has excelled in architectural drawing in any medium.

*James Walter Fitzgibbon Prize***.** Mrs. James Fitzgibbon and friends of the family established a fund to honor Professor Fitzgibbon's memory and to recall his long and distinguished service on the faculty of Architecture. The annual income from this fund provides for the Fitzgibbon Prize, given to a 3000- to 6000-level student who has the winning solution to a one-day sketch problem.

Sophomore Book Prize. This award is presented to an outstanding sophomore who has completed the basic design sequence within the college. It is given in honor of Leslie J. Laskey, professor emeritus, whose inspired teaching formed the basis of the basic design program and whose influence is carried on in the lives and work of the students who studied with him.

St. Louis Community Partnership Award. This award is given to one graduating student in recognition of their deep and reciprocal relationships and partnerships in the St. Louis Community.

Scholarship Funds

St. Louis Chapter American Institute of Architects Scholarship Fund

This scholarship is awarded to students from the St. Louis metropolitan area who have completed the first two years of their architectural studies. Inquiries should be addressed to the St. Louis Chapter AIA, 911 Washington Ave., #100, St. Louis, MO 63101. Separate application is required.

The James W. Fitzgibbon Scholarship in Architecture

The James W. Fitzgibbon Scholarship in Architecture recognizes outstanding academic performance and promise in the field of architecture. Washington University's College of Architecture offers the scholarship to an entering first-year student who plans to pursue the Bachelor of Science in Architecture or the Bachelor of Arts in Architecture.

At this time, one full-tuition scholarship and up to five partial scholarships are awarded annually. These are renewable for each year of undergraduate study, as long as the scholar is making satisfactory progress toward a degree.

Each College of Architecture applicant who submits a digital portfolio will be considered. No separate scholarship application is required.

Scholars in Architecture

The Scholars in Architecture program provides named scholarship funds that have been donated to the university by individuals or companies specifically for this purpose. Selection is based on financial need and academic achievement. There is no application process. The total amount of the student's financial assistance package does not change.

The Elizabeth S. Schmerling Endowed Scholarship

This scholarship was established in memory of Elizabeth Schmerling, who graduated from Washington University in 2003 with a Bachelor of Science in Architecture. Elizabeth excelled in her studies and sought to help others study and understand the field she so loved. She continued her academic career at the University of Pennsylvania with the goal of earning master's degrees in both architecture and landscape architecture. Shortly after embarking on her graduate school studies, Elizabeth was diagnosed with brain cancer. For 19 months, while courageously pursuing treatment, she stayed focused on her graduate studies and on a life filled with architecture. Elizabeth died on April 26, 2005, when she was 23 years old. Her parents and brother chose to honor her memory by establishing an endowed scholarship at Washington University.

The Elizabeth S. Schmerling Endowed Scholarship is a prestigious award that provides financial support for talented rising seniors who are on track to earn a bachelor's degree in architecture. The scholarship is awarded annually to one or more recipients. Selection is determined by a committee of four faculty based on superior academic performance and scholarship; innovative thought and approaches to the science and art of architecture; and a commitment to the study and understanding of architecture that serves as an inspiration to professors and peers alike.

In addition to the scholarship, each recipient receives a significant architecture book as a memento to enhance their lifelong library. The book includes a custom-made bookplate, designed by two prior scholarship recipients, that is inscribed with each recipient's name and the date the scholarship was awarded.

Policies

To receive the Bachelor of Arts or Bachelor of Science degree, students must meet the requirements of the College of Architecture and take academic courses with other undergraduates. Work in architecture can be combined with studies in art and design, business, engineering, humanities, natural and social sciences, and the other arts. Students may take these courses for educational and intellectual enrichment or in direct correlation with their primary interests. Courses in the School of Continuing & Professional Studies do not count toward degree requirements.

Academic Integrity

Students and members of the faculty of the university have an obligation to uphold the highest standards of scholarship. Plagiarism and other forms of cheating will not be tolerated. When a student has violated the integrity of the academic community, an instructor may recommend that the student be brought before the Committee on Academic Integrity. A list of university policies can be found on the website of the University Registrar.

Advanced Placement Credit

A maximum of 15 units of pre-matriculation or non-Washington University transfer credit may be counted toward an undergraduate degree. This includes Advanced Placement, International Baccalaureate and British A-Level exams. Credit cannot be granted for College-Level Examination Program (CLEP) tests.

Pre-matriculation units count toward open/general electives. They do not count for second major or minor requirements. Advanced Placement can fulfill the Calculus and Physics requirements but cannot fulfill other Arts & Sciences distribution requirements.

Applying for Program Completion

Students are responsible for applying for program completion in Workday in order to have the degree conferred. No degree will be awarded if this task has not been completed by the appropriate deadlines. Students who do not complete their degree requirements by their intended graduation date must reapply for the next graduation date.

Attendance

Regular attendance at all classes and studio meetings is expected. The instructor of each course is allowed to decide how many absences a student may have and still pass the course. Instructors are expected to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their faculty the reasons for any absences and to discuss with them the possibility of making up missed assignments.

In addition, Washington University has a policy for absences related to religious holidays (PDF).

Credits and Grades

Credits are assigned to courses based on measures of time in class and academic activities, and engagement between instructors and students, defined in university policy (p. 25). Grade points per course are calculated by multiplying the number of units of a course by the grade points earned. The Undergraduate Study (p. 36) page details the grades and grade points in use.

Minimum Grade Requirement

Undergraduate students in architecture must complete all required courses with a grade of C- or better. This includes required History & Theory Research & Writing electives, required 3000-level or above architecture electives, Calculus, Physics, History of Western Art, and any course taken to fulfill the writing requirement.

Minimum Grade Point Average

Students in the College of Architecture must have a minimum grade point average of 2.0 to be eligible to graduate.

Pass/No Pass Option

Students may take one *non-required* course on a Pass/No Pass basis each semester.

Incomplete Grades

Students who, following the last day for withdrawal from courses, experience medical or personal problems that make the satisfactory completion of course work unlikely may request a grade of I (incomplete). Students in this situation must take the following steps:

1. Contact the instructor before the final review, critique, or exam to discuss the request.
2. If the instructor consents, confirm a due date for outstanding work.

The instructor is under no obligation to award a grade of I (incomplete).

Incomplete marks in all architectural design studios must be removed by the first day of classes of the following semester. Failure to remove the I (incomplete) grades will prevent the student from continuing in another architectural design studio.

In all other courses, the grade of I (incomplete) must be removed no later than 120 days after the final grade deadline. Upon failure to make up an incomplete grade within 120 days, the student will automatically receive an F in the course. An F grade that is so received may not be changed. Students will not be allowed to continue in courses that require prerequisites if the prerequisite has a grade of I (incomplete). A student who carries more than 9 units of grades of I (incomplete) may be declared ineligible to re-enroll.

F grades for a semester may be changed only through the last day of classes of the following semester and then only in extraordinary circumstances. The director will approve no changes of F grades after this time.

Repeating or Retaking a Course

Most courses are designed to be completed once, and credit may only be earned once. A student may retake such a course if a higher grade is required, for example if the initial final grade is below that required to apply to major requirements. Students may not register themselves for another instance of a course in which the initial final grade is a B or higher, an incomplete, a successful audit or a Pass. For a student retaking a course, credit is only given once and both grades earned remain on the record, but only the higher grade is used to compute the grade-point average. An R notation is added to identify the retaken course.

Some courses are eligible to be repeated, such as internship or thesis. Students eligible to take them may register themselves for additional instances.

Auditing a Course

With prior approval from their academic advisor, students may audit an elective course if the instructor allows.

Independent Study

Opportunities for independent study are available to undergraduate students. Registration in an independent study requires the student to submit a written proposal and obtain the approval of the sponsoring faculty, advisor, and program chair. Approved proposals must be submitted to the Sam Fox School Registrar's Office by the semester course add deadline. Proposals received after the deadline will not be considered.

A maximum of 3 units for juniors and seniors and of 1 unit for first-year students and sophomores can be taken per semester. Independent study cannot replace architectural design studios or other required courses.

A maximum of 9 units may be applied to degree requirements from the following areas: physical education, lessons, and/or independent studies.

Enrollment Status

Definitions of *full-time study, half-time study,* and so on are based on federal regulations. Enrollment status impacts eligibility for campus services as well as Washington University's reporting obligations. Alignment with policies in financial aid, international student services, student health insurance, VA benefits, and athletics is critical.

Washington University's definition for full-time undergraduate study is at least 12 credit-bearing units (semester hours) per term. Units taken under the audit grade option do not factor into enrollment status calculations, so they cannot count toward the 12 units required for full-time enrollment.

Financial Obligations

Students are responsible for fulfilling their financial obligations to the university. If a student account becomes overdue, a late payment fee will be assessed, and a hold will be placed on the account. Students with a poor payment history may be restricted from utilizing certain payment options or receiving tuition remission until course credit has been earned. Non-payment of tuition and other expenses due to the university will be cause for exclusion from class or refusal of graduation, further registration, or transfer credit. In addition, students are liable for any costs associated with the collection of their unpaid bills, including but not limited to collection agency costs, court costs, and legal fees. Past due amounts can also be reported to a credit bureau.

Grievance Procedures

The dynamic and creative studio culture at the heart of the Sam Fox School strives to be safe and inclusive for all members of our community. Our faculty, staff, and students join together in their commitment to creating learning environments of mutuality and respect. When concerns or disagreements arise about conduct, grading, or other matters in the Colleges of Art and Architecture, policies exist for pursuing proper resolution.

Grade Dispute Policy

The Sam Fox School aims to provide each student with a fair assessment of their academic work and studio. Students have the right to dispute their overall course grade (not individual assignments) if they believe that grade does not accurately reflect the quality of their work. A grade dispute must be submitted to the faculty member who assigned the grade within 30 days of receipt of the grade. The Sam Fox School stresses that every effort to resolve such a dispute be made by the faculty and student involved. A student's eligibility for advancement in sequential course work requires timely resolution of the grade dispute. If the student is a graduation candidate, the dispute process must comply with the Intent to Graduate submission deadlines set forth by the Office of the University Registrar or else the degree conferral will be delayed by one semester or until resolved.

In general, the dispute process will occurs and be resolved as follows:

1. The student presents their question about the grade in writing to the faculty member and clearly states the reasons for questioning the grade.
2. The faculty member and the student review the grading procedures as stated in syllabus and discuss the determining factors of the student's grade.
3. If the case is not resolved between the student and the faculty member, the student may put forth their complaint in writing with supporting evidence to the chair of the academic program, with a copy given to the faculty member involved with the dispute. The student should provide the course syllabus and all of the materials relevant to the assigned grade within two weeks of the complaint. If a conflict of interest exists between the student and the chair (e.g., the chair is teaching the course), the case will be referred to another chair in the Sam Fox School or to the director of the college.
4. The chair of the academic program will review the materials. The chair will resolve the dispute by working with the faculty member and the student to arrive at a determination.

Integrity and Ethical Conduct

Washington University and the Sam Fox School of Design & Visual Arts are committed to the highest ethical and professional standards of conduct and consider these to be integral to their mission of the promotion of learning. To maintain these standards, the university relies on each community member's ethical behavior, honesty, integrity, and good judgment. Each community member should demonstrate respect for the rights of others, and each community member is accountable for their own actions. Washington University policies state that members of the university community can expect to be free from discrimination and harassment. Students, faculty, staff, and outside organizations working on campus are required to abide by specific policies prohibiting harassment, which are posted on the Compliance and Policies page of the university's website. Should a situation arise in which a member of our community believes they have cause to file a grievance, there are two categories of grievance to consider: academic and non-academic. Academic grievances can either be when a student

challenges a course grade or when a fellow student or faculty member feels a matter of academic integrity is at issue. Student grievances filed to challenge a grade that the student feels has been given incorrectly must follow the procedures outlined in the Grade Dispute Policy above.

Academic integrity grievances are made when a faculty member or fellow student feels a student has compromised the environment of honesty and ethics in the school. Academic integrity infractions follow the procedures laid out in the Sam Fox School and University policies and are managed in the Sam Fox School by the Academic Integrity Officer. Please refer to Washington University's Academic Integrity Statement for additional information.

Non-Academic Concerns

If a member of our academic community feels that the ethical and safe environment of the classroom has been compromised, for whatever reason, they may seek guidance through the school's Faculty-Student Mediator. Students may also consult Washington University's Grievance Policy and Procedures for Allegations by Undergraduate Students Against Faculty. In addition, University Resources available for support include the following:

- Title IX (for issues related to discrimination, sexual harassment, and sexual violence)
- Mental health concerns (Student Health Center)
- Drug and alcohol concerns (Student Health Center)
- Immediate physical/mental health concerns (Washington University Police Department)
- Center for Diversity & Inclusion (for issues related to bias, prejudice, or discrimination)

Interschool Transfer Policy: Transferring Into the College of Architecture

Undergraduate students enrolled in the College of Arts & Sciences, McKelvey School of Engineering, Olin Business School, or the College of Art may apply to transfer into the College of Architecture. Transfer requests must be made in Workday by the last day of final exams of the semester before the effective semester. It is strongly recommended that students meet with a four-year advisor in the Sam Fox School prior to registration to ensure that they know what classes to take the following semester and are given waitlist priority. Otherwise, enrollment in the required studios for the semester of entry may not be possible. All Washington University students must spend their first semester in the academic division that admitted them.

Minimum Criteria

The following requirements must be met for an internal transfer into the College of Architecture:

1. Achieve a cumulative GPA of 3.0 or higher. Students with GPAs below 3.0 are required to meet in person with the chair of undergraduate architecture for an interview and academic record review.
2. Present an academic record that supports the conclusion that the student will be able to complete a Bachelor of Science in Architecture or Bachelor of Arts in Architecture degree in a typical time frame. Depending on the student's level at the time of transfer, additional semesters and/or preapproved summer school may be required.
3. Be in good academic standing.

A portfolio of creative work is not required, but students are invited to bring visual examples of their work when they meet with the associate dean of students in the Sam Fox School (details below).

Each application is evaluated on a case-by-case basis. Meeting these requirements does not guarantee admission into the College of Architecture.

To Begin the Transfer Process

1. Request a change to your primary program of study in Workday and complete the Change Program questionnaire.
2. Meet with the associate dean of students in the Sam Fox School for an interview and optional portfolio review.

Leave of Absence

A student may request a leave of absence for one or two semesters when individual professional, medical, or personal circumstances warrant it. Petitions are reviewed and approved by the Sam Fox School Registrar's Office. Any requests extending beyond one year will be reviewed on a case-by-case basis. In addition to a written petition, the student requesting a medical leave of absence must submit a medical recommendation from the Student Health Center.

A student returning from a leave of absence must submit a written request for reinstatement at least six weeks prior to the desired semester of return. In the case of a medical leave of absence, a letter of clearance is required from the Student Health Center before the student will be permitted to re-enroll.

International students requesting a leave of absence must contact their advisor at the Office for International Students and Scholars to discuss how the leave might affect their visa status.

Students who are on a leave of absence for medical, mental health, academic, family, personal, or any other reason are not eligible to participate in a registered student group, hold a student group leadership position, or attend/plan a student-group–sponsored event as a representative of said student group. Depending on the type of leave and any corresponding policy restrictions, students on a leave of absence may or may not be able to attend campus-wide events as a guest of a current Washington University student.

Minimum and Maximum Loads

Students must enroll in an average of 15 to 16 units each semester to complete degree requirements in eight semesters. It is strongly recommended that students enroll in no more than 18 units each semester in order to focus on studios and required courses.

Full-time enrollment is 12 units. Enrollment below 12 units may be granted only with the consent of the associate dean of students.

An enrollment above 21 units will be charged at the established university rate per hour for the additional credits and must be approved by the director or undergraduate program chair.

Refer to the section of this *Bulletin* that covers tuition and fees (p. 62) for both the annual tuition rate and the per-credit-unit breakdown applicable to the College of Architecture.

Students are expected to proceed at a pace that enables them to finish their degree within the appropriate time limit. For undergraduates, this is usually eight semesters. Exceptions to these minimum standards may be granted only with the written consent of the associate dean of students.

Prerequisites

Students enrolling in College of Architecture courses without the prerequisites must seek permission from the instructor; registration without this permission does not guarantee enrollment in the course.

Retention of Student Work

The College of Architecture and the Graduate School of Architecture & Urban Design reserve the right to retain any student work submitted for course credit. Normally this work will be returned to the student at the end of the semester, except for that work which has been retained for publications, exhibitions, or accreditation reviews. It is highly recommended that students photographically reproduce or electronically store their work to keep a record.

Satisfactory Academic Progress and Academic Standing

Satisfactory Academic Progress is demonstrated through completed credits and a minimum grade point average (GPA). Students are expected to proceed at a pace that enables them to finish their degree within an appropriate amount of time. For undergraduates, this is usually eight semesters, requiring a minimum pace of 66⅔% (number of credits earned divided by the number of credits attempted). Per the requirements of 34 C.F.R. 668.34(a)(4(ii), the federal student aid program requires students to maintain a minimum GPA of 2.0 (C average) to maintain eligibility for financial aid. A minimum cumulative GPA of 2.0 is also required for students in the College of Architecture to be eligible to graduate.

As long as students demonstrate Satisfactory Academic Progress, they are considered to be in good academic standing. The College of Architecture considers the following key performance indicators to determine whether a student remains in good academic standing:

- Minimum semester and cumulative GPA of 2.0;
- Satisfactory progress in units completed (66⅔%, calculated by the number of credits earned divided by the number of credits attempted); and
- Progress in the focused area of study (e.g., major requirements).

All of the above indicators combined demonstrate Satisfactory Academic Progress. A deficiency in any of the three performance indicators will trigger a review that may cause a student to be placed into one of the academic standing categories described below, which is also a signal that minimum standards for graduating are not being met. Unless a student demonstrates improvement, thereby indicating their ability to fulfill degree requirements within a reasonable period of time, the student may be dismissed from the university. Although the College of Architecture desires to give all students the opportunity to prove themselves, it is not in the best interest of either the students or the college to permit students to continue indefinitely in educational programs in which they are not producing satisfactory results.

Academic Concern

Any of the following performance indicators at the end of a semester will cause the student's standing to be reviewed and may cause the student to be placed on Academic Concern:

- Receiving an incomplete (first occurrence and all subsequent occurrences)
- Earning a semester GPA of less than 2.0 (first occurrence)
- Earning fewer than a total of 12 units in a regular semester (first occurrence)

While a student placed on Academic Concern remains in good academic standing, this status is a signal to the student that academic performance is below minimum standards and, if continued, will likely cause the student to fall out of good standing.

A student may also be placed on Academic Concern when their earned semester pace or GPA is below the terms of Satisfactory Academic Progress because of outstanding or incomplete grades. Once all grades are received, the student's record is reviewed to determine satisfactory or other status.

An Academic Concern status is not noted on the official transcript; since it does not cause the student to fall out of good standing, it will not be incorporated into enrollment verifications requesting confirmation of academic standing.

Academic Notice

Any of the following performance indicators at the end of a semester will cause the student's standing to be reviewed and may cause the student to be placed on Academic Notice:

- Cumulative GPA of less than 2.0 (first occurrence and all subsequent occurrences)
- Semester GPA of less than 2.0 (second occurrence and all subsequent occurrences)
- Earning fewer than a total of 12 units in a regular semester (second occurrence and all subsequent occurrences)

Academic Notice status indicates that a student is not in good academic standing. Although this status is not noted on the official transcript, it will be incorporated into enrollment verifications requesting confirmation of a student's standing. Students placed on Academic Notice are notified in writing of the status and of any requirements resulting from the status change.

Academic Notice serves as a warning that, unless the quality of work improves, the student may be required to take time away due to academic deficiency. A student may be removed from Academic Notice when their cumulative GPA is above 2.0 and they are meeting the pace of 66⅔% for Satisfactory Academic Progress.

To support a student on Academic Notice status, the Sam Fox School Associate Dean of Students Office may require the student to develop and follow an Academic Improvement Plan. To succeed, the student must understand the causes of their current situation, identify what needs to change, and implement those changes. The student may be required to meet regularly with the Associate Dean of Students to review progress.

Academic Time Away

Any of the following performance indicators at the end of a semester will cause the student's standing to be reviewed and may cause the student to be placed on Academic Time Away, which is a pause in enrollment at Washington University:

- Any third time a student becomes eligible for Academic Notice
- Any second sequential semester a student becomes eligible for Academic Notice (These are typically the fall and spring semesters, since most students do not enroll in summer classes. However, if a student does enroll in summer classes after a spring semester after which they were placed on Academic Notice, their performance will be reviewed.)
- Any semester in which a student earns no degree credit

Academic Time Away status indicates that a student is not in good academic standing. Because this status is marked by a break in enrollment, this status is noted on the official transcript. Students placed on Academic Time Away are notified in writing of the status and of any requirements resulting from the status change, including the minimum number of semesters until they are eligible to request reinstatement. Students on this status are not allowed to enroll in any classes at Washington University during their Academic Time Away period, including courses offered by the School of Continuing & Professional Studies. Academic Time Away is not viewed as a punitive action. Rather, it is an academic pause applied when it is clear that something is interfering with a student's ability to complete degree requirements. It is not in the student's best interest to continue unless they are able to apply changes that will allow them to make successful academic progress toward graduation.

First Appeal Option

A student who wishes to appeal their Academic Time Away status must present a written appeal within 48 hours of receiving notification stating the reason(s) why they believe their situation should be reconsidered. This statement must be sent as outlined in the notice of Academic Time Away. In this statement, the student must explain why the unsatisfactory academic performance occurred and, if they are allowed to return, what they would do differently. The student will then be given an opportunity to present their case in an appeal hearing. Failure to appear at an appeal hearing will be considered a withdrawal of the appeal.

The Sam Fox Registrar is responsible for coordinating appeal hearings, which consist of a faculty committee of a minimum of three Sam Fox School faculty members. The Associate Dean of Students may attend as a non-voting member of the committee. The committee will have access to the student's academic record, written appeal, any previous academic improvement plan, and any other information deemed relevant to the review. The student will have an opportunity to speak on their behalf and to answer questions posed by the committee. After the appeal hearing, the student is informed of the outcome in writing within 48 hours.

After deliberation, the faculty committee will make a determination based on a simple majority vote to either grant the appeal or to deny the appeal. If an appeal is granted, the student is reinstated for the upcoming semester and placed on Academic Notice. If the appeal is denied, all original terms of the original Academic Time Away remain in effect.

Second Appeal Option

The decision by a faculty committee may be appealed to the director of the student's academic division on any of the following grounds:

- *New evidence of a substantive nature:* New, significant evidence regarding factors affecting the student's academic performance becomes available that was not available at the time of the original appeal hearing. Information is not considered new evidence if the student did not attend the original hearing or voluntarily withheld information during the original hearing.
- *Substantive procedural error:* A specified procedural error or error in interpretation of university policies resulted in the student being denied a fair hearing, or the error prevented the faculty committee from making a fair decision.

Should the student wish to appeal the decision of a faculty committee, a written request must be sent within 48 hours of receiving the committee's decision to the director of the student's academic division. The written request should be of sufficient detail to stand on its own without accompanying testimony to permit the evaluation of the merit of the grounds for appeal. The director will determine whether there is sufficient basis to modify or uphold the original determination of the faculty committee. If the appeal criteria are not met, the appeal will be denied. The review method used to make a determination is at the discretion of the director.

The student is informed of the outcome of their second appeal option in writing. If an appeal is granted, the student is reinstated for the upcoming semester and placed on Academic Notice. If the appeal is denied, all original terms of the original Academic Time Away remain in effect.

Reinstatement After Academic Time Away

If a student on Academic Time Away would like to return to the university in the future, they must petition and be approved for reinstatement. There is no guarantee that a student on Academic Time Away will be allowed to return. If the student is granted reinstatement, they are placed on Academic Notice upon return. Failure to achieve and maintain Satisfactory Academic Progress after reinstatement may result in a second status of Academic Time Away without an option for reinstatement.

Study Abroad

Students have an opportunity to study in Florence, Italy, for a semester or over the summer term. The program is led by faculty from Sam Fox School and leverages its unique location by inviting local artists, designers, and architects to serve as instructors and visiting lecturers; incorporating local sites into course assignments and studio projects; and arranging numerous excursions to nearby sites and cities. The Florence program works hand-in-hand with the School's curriculum to ensure that students can study abroad while earning required degree units.

Undergraduate students are also eligible to participate in the university's study abroad programs. To receive academic credit for participation in a non-Sam Fox program, students must submit a written proposal and garner approval in advance. Students should contact the Special Programs Manager if they are considering a study abroad program to ensure eligibility and transferability of credits. The Inside Sam Fox website's WUSTL Programs page has details about eligibility, credit policy, deadlines, and required proposal materials.

Students pursuing study abroad during the summer need to seek preapproval from the Sam Fox Registrar's office as outlined in the Transfer Credit policy.

Summer School

The College of Architecture offers a limited number of courses during the summer.

Transfer Credit

A maximum of 15 units of pre-matriculation or non-Washington University transfer credit may be counted toward an undergraduate degree. A student wishing to transfer credit for courses completed at another institution must bring a full catalog description of the course(s) to the Sam Fox School Registrar's Office for preapproval. Upon receipt of an official transcript indicating a grade of C or better, courses will be considered for transfer. Grades for transfer courses will not appear on the student's Washington University record and will not figure into the student's GPA.

- College courses that appear on a student's high school transcript will not be considered for transfer.
- Washington University does not transfer credits for courses taken online.
- Transfer credit cannot be used to fulfill Sam Fox major or minor requirements; it can only count toward the open elective or Arts & Sciences distribution requirements for the BA or BS degree.
- No transfer credit will be awarded for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or Academic Integrity Policy.
- Students deferring admission or taking a gap year are not eligible to earn transfer credit.
- Transfer credit cannot be used to fulfill the Calculus I requirement; the requirement can be fulfilled with Advanced Placement (AP) or International Baccalaureate (IB) credit.

Withdrawals and Refunds

A written request for a refund must be submitted to the Sam Fox School Registrar's Office for consideration. Approval is required to officially withdraw from the university. Tuition adjustments will be processed based on information received, and refund checks will be issued only after the fourth week of classes. Material fees for architecture courses will not be refunded after the course drop period for the semester. For any student whose medical condition makes attendance for the balance of the semester impossible or medically inadvisable, the university will make a pro rata refund of tuition as of the date of withdrawal when that date occurs prior to the twelfth week of classes, provided that the condition is verified by the Student Health Center or a private physician. The date of withdrawal may correspond to the date of hospitalization or the date on which the medical condition was determined.

Withdrawal Date	Refund
Within 1st or 2nd week of classes	100%
Within 3rd or 4th week of classes	80%
Within 5th or 6th week of classes	60%
Within 7th or 8th week of classes	50%
Within 9th or 10th week of classes	40%
After 10th week of classes	0%

Summer Withdrawals and Refunds

The Sam Fox School reserves the right to cancel a course if it has not enrolled a minimum of eight students before the first day of class. If a course is canceled, all enrolled students will be notified and dropped from the class, and they will not be charged tuition and fees.

If a course is not canceled, a student may be released from their obligation to pay full tuition and fees by canceling their registration according to the schedule below:

Withdrawal Date	Refund
Prior to the first class meeting	100% + fees
Prior to 15% of published meeting dates	100%
Prior to 30% of published meeting dates	80%
Prior to 45% of published meeting dates	60%
Prior to 60% of published meeting dates	40%
After 61% of published meeting dates	No refund

Requests for refunds must be made in writing to the Sam Fox School Registrar's Office.

Students may drop a summer course without penalty through the 80% tuition refund deadline and withdraw from a course through the 40% tuition refund deadline.

Administration

Aki Ishida
Director, College of Architecture and Graduate School of Architecture & Urban Design
Sam and Marilyn Fox Professor
MSAAD, Columbia University

Constance Vale
Chair, Undergraduate Programs
Associate Professor
MArch, Yale University

Majors (directory)

The College of Architecture offers Bachelor of Science in Architecture and Bachelor of Arts in Architecture degrees. For more information, visit the following pages:

- Architecture, BA (p. 112)
- Architecture, BS (p. 112)

Architecture, BA

The **Bachelor of Arts in Architecture** is a more flexible course of study that allows students to take additional architecture design studios or to pursue courses in other areas of interest across the University.

For additional information about current requirements, please visit the Degree Requirements (p. 100) page.

Year-by-Year Plan

All architecture students take similar courses during their first three years; courses during the fourth year will differ depending on the student's choice of degree option.

First Year

- Beginning design studio focused on environmental questions and the exploration of materials and media
- Introduction to architecture practice through case studies in focus areas including environment, society, technology, history, and entrepreneurship
- Introduction to architectural representation including analogue and digital drawing, model-making, photography, and image-making
- Additional coursework in the liberal arts

Second Year

- Design studio focused on technological questions and the exploration of geometry, form, and space
- Interdisciplinary track electives bridging architecture; art; design; and other focus areas, including environment, society, technology, history, and entrepreneurship
- Architectural history courses
- Ecological systems course
- Additional course work in the liberal arts

Third Year

- Design studio focused on social questions and honing knowledge of assemblies, structure, sustainability, landscape, and urban environment
- Building systems course
- Architectural theory course
- Additional course work in the liberal arts

Fourth Year

- Student-directed capstone research
- Ultimate flexibility to complete a second major or an additional minor or to explore other areas of interest
- Option to take additional architecture course work, including the student's choice of advanced architectural design studios and elective courses

Architecture, BS

The **Bachelor of Science in Architecture** offers a more intensive study of architecture during the senior year. Students will take upper-level design studios focused on advanced building design, along with structures courses, architectural history and theory courses that emphasize urban design issues, and technology courses in environmental systems or landscape architecture.

For additional information about current requirements, please visit the Degree Requirements (p. 100) page.

Year-by-Year Plan

All architecture students take similar courses during their first three years; courses during the fourth year will differ depending on the student's choice of degree option.

First Year

- Beginning design studio focused on environmental questions and the exploration of materials and media
- Introduction to architecture practice through case studies in focus areas including environment, society, technology, history, and entrepreneurship

- Introduction to architectural representation including analogue and digital drawing, model-making, photography, and image-making
- Additional coursework in the liberal arts

Second Year

- Design studio focused on technological questions and the exploration of geometry, form, and space
- Interdisciplinary track electives bridging architecture; art; design; and other focus areas, including environment, society, technology, history, and entrepreneurship
- Architectural history courses
- Ecological systems course
- Additional coursework in the liberal arts

Third Year

- Design studio focused on social questions and honing knowledge of assemblies, structure, sustainability, landscape, and urban environment
- Building systems course
- Architectural theory course
- Additional coursework in the liberal arts

Fourth Year

- Option to choose from a selection of advanced architectural design studios
- Structures courses
- Architectural history and theory coursework, with an emphasis on urban design issues
- Technology courses in environmental systems or landscape architecture

Minors (directory)

Below is a list of minors offered by the College of Architecture. Visit the individual program pages for more information about a specific minor.

- Architectural History and Theory Minor (p. 113)
- Architecture Minor (p. 114)
- Landscape Architecture Minor (p. 114)
- Urban Design Minor (p. 115)

Architectural History and Theory Minor

The Minor in Architectural History and Theory introduces foundational aspects of visual literacy and critical analysis of architecture in terms of its cultural resonance and social impact. Students study the built environment, including cities, buildings, and landscapes on every continent throughout human history. You will develop expertise in visual analysis and verbal expression, ideal for general liberal arts education or pre-professional preparation to write, teach, and curate as an architectural historian. The minor engages with diverse methods and perspectives, examining the place, time, material, technology, forms, concepts, ideals, and identities that shape and are shaped by environments and buildings. The Minor in Architectural History & Theory is open to all students at Washington University in St. Louis, regardless of major.

At least 12 of the 15 credit units must be applied exclusively to the minor and cannot be counted toward another major or minor. Architecture track (p. 100) courses count toward the minor.

Students interested in the minor should contact the minor advisor.

The requirements below apply to students who declared a minor in architectural history in Fall 2025 or later. Students who declared a minor prior to Fall 2025 should refer to the 2024-2025 Bulletin for minor requirements.

Units required: 15

Required Courses:

- 3 units of Architectural History Surveys:

Code	Title	Units
ARCH 2210	Architectural History I: Antiquity to Baroque	3
ARCH 2220	Architectural History II: Architecture Since 1880	3

- 3 units of Methodology:

Code	Title	Units
ARCH 6901	Theories & Methods of Historical Research	3
or other methodology-based course approved by the minor advisor		

Architectural History Electives:

- 9 units of Electives:

Code	Title	Units
A maximum of 9 units selected from the following		
Any 3000-level or above architectural history and theory course*		
ARCH 2210	Architectural History I: Antiquity to Baroque**	3
ARCH 2220	Architectural History II: Architecture Since 1880**	3
A maximum of 3 units selected from the following		
ARCH 1110	Introduction to Design Processes I***	4.5
ARCH 1144	Architecture for Non-Architects***	3
ARCH 3910	Disegno: Encounters in Public Space (Florence)	6
ARCH 4190	Senior Capstone in Architecture	3

* Courses with *AR Research & Writing* and *AR Case Studies* course tags fulfill this requirement.

** Only if course is not counting toward the Architectural History Survey requirement.
*** Non-architecture majors only.

Architecture Minor

The Minor in Architecture is intended to introduce students to architecture fundamentals and to cultivate an appreciation for buildings, cities, and environments and their role in society. The minor includes foundational coursework, such as ARCH 1144 Architecture for Non-Architects or ARCH 1110 Introduction to Design Processes I, which provides an overview of the discipline by highlighting contemporary issues of architecture worldwide with a focus on introductory methods of design and representation. The minor also includes architectural history courses, highlighting the importance of global historical and cultural contexts, and open architecture electives, allowing students to explore their own interests. The Minor in Architecture is open to all students at Washington University in St. Louis outside of the College of Architecture.

At least 12 of the 15 credit units must be applied exclusively to the minor and cannot be counted toward another major or minor. Architecture track (p. 100) courses count toward the minor.

Students interested in the minor should contact the minor advisor.

Units required: 15

Required Courses:

- 3 units of Architectural Design selected from the following:*

Code	Title	Units
ARCH 1144	Architecture for Non-Architects	3
ARCH 1110	Introduction to Design Processes I *	4.5
ARCH 3231	Architectural Apparitions: City of Collective Memory (Florence, Italy)*	6

* If more than 3 units are taken, the extra units will be counted in the elective category.

- 3 units of Architectural History selected from the following:**

Code	Title	Units
ARCH 2210	Architectural History I: Antiquity to Baroque	3
ARCH 2220	Architectural History II: Architecture Since 1880	3
ARCH 3921	Fifteenth & Sixteenth Century Florence, Rome & Venice: Rethinking Renaissance Visual Culture	3
Another architectural history course approved by the minor advisor		

** If more than 3 units are taken, the extra units will be counted in the elective category.

Architecture Electives:

- 9 units selected from the following:

Code	Title	Units
Any ARCH courses at the 3000 level or above		
ARCH 1120	Introduction to Design Processes II	4.5
ARCH 1210	Representation I	1.5
ARCH 1220	Representation II	1.5
ARCH 1000	Practices in Architecture, Landscape Architecture, and Urban Design	3
BEYOND 1007	Designing Creativity: Innovation Across Disciplines	3

Landscape Architecture Minor

The Minor in Landscape Architecture introduces foundational aspects of practice and scholarship central to shaping landscapes and the broader built environment. The discipline of landscape architecture thrives in diversity, embracing the nuances and complexities of material, biological, and climatological systems. This minor exposes students to a range of design scales, from the urban environment to the garden scale, with a focus on public space, infrastructure, and new and old media. Courses introduce how the design of landscape affects the social, cultural, and ecological dimensions of the world. History and theory complement science and the arts to equip students with the tools, knowledge, and innovative skills to enrich any major. The Minor in Landscape Architecture is open to all students at Washington University in St. Louis, regardless of major.

At least 12 of the 15 credit units must be applied exclusively to the minor and cannot be counted toward another major or minor. Architecture track (p. 100) courses count toward the minor.

Students interested in the minor should contact the minor advisor.

Total Units Required: 15

Required Courses

- 3 units of Design Methods selected from the following:

Code	Title	Units
Non-Architecture Majors:		
ARCH 1110	Introduction to Design Processes I *	4.5
ARCH 1144	Architecture for Non-Architects	3
Architecture Majors:		
ARCH 3121	Architectural Design IV (Urban Design + Landscape Systems)*	6
ARCH 4121	Architectural Design VI (Urban Design + Landscape Systems)*	6

* Only 3 units count toward the minor.

- 3 units of Landscape History:

Code	Title	Units
LANDARCH 6360	Landscape Architecture History & Theory	3
LANDARCH 6370	Modern and Contemporary Landscape Architecture	3

- 3 units of Ecology selected from the following:

Code	Title	Units
LANDARCH 2040	Shared Ecologies and Design (non-architecture majors only)	3
LANDARCH 5330	Landscape Ecology (spring only)	3

Landscape Architecture or Environmental Study Electives

- 6 units selected from the following:

Code	Title	Units
Any LANDARCH 3000-level or above courses		
ARCH 4190	Senior Capstone in Architecture**	3
BEYOND 1007	Designing Creativity: Innovation Across Disciplines	3
BEYOND 1014	Environmental Racism and the Health of Everyone	3
ENST 3310	Beyond the Evidence	3
ENST 3330	Multiparty Environmental Decision Making	3
ENST 3340	Writing Skills for Environmental Professionals	3
ENST 3600	Field Methods for Environmental Science	3
ENST 3710	Applications in GIS	3
INTER 4004	Sustainability Exchange: Community and University Practicums	3

** Bachelor of Science in Architecture students only.

Urban Design Minor

The Minor in Urban Design provides a platform for students to explore issues related to the urban condition that is unfolding in the twenty-first century. Within this framework, students explore urbanization processes in the context of design applications and tools, critical urban issues, urban history, theory, and their application to real-world scenarios. Aging infrastructure networks; pressures on access to education; overextended healthcare systems; loss of public investments; false securities in the housing market; spatial exclusion based on class, race, and gender; the dispossession of local inhabitants from common resources; food supply interruptions; the vulnerability and degradation of the environment; and wasteful forms of consumerism for the sake of capital accumulation all seem to be thriving themes in and around urbanization today. Over the last three decades, the field of urban studies has received overwhelming attention from design disciplines as well as disciplines outside the world of design. This has led to an outpouring of scholarly and political discourse, challenging the image as well as the perception of what is considered urban today. The Minor in Urban Design is open to all students at Washington University in St. Louis, regardless of major.

At least 12 of the 15 credit units must be applied exclusively to the minor and cannot be counted toward another major or minor. Architecture track (p. 100) courses count toward the minor.

Students interested in the minor should contact the minor advisor.

Total Units Required: 15

Required Courses:

- 3 units of Design Methods selected from the following:

Code	Title	Units
Non-Architecture Majors:		
ARCH 1110	Introduction to Design Processes I*	4.5
ARCH 1144	Architecture for Non-Architects	3
Architecture Majors:		
ARCH 3121	Architectural Design IV (Urban Design + Landscape Systems)*	6
ARCH 4121	Architectural Design VI (Urban Design + Landscape Systems)*	6

* Only 3 units count toward the minor.

- 3 units of Foundations selected from the following:

Code	Title	Units
ARCH 3404	Community Building	3
ARCH 4441	Designing the Modern City	3

- 3 units of advanced courses selected from the following:

Code	Title	Units
URBDES 6210	Metropolitan Urbanism	3
URBDES 6220	Metropolitan Development: What's in A Plan?	3
URBDES 6230	Metropolitan Sustainability	3

Urban Design Electives:

- 6 units selected from the following:

Code	Title	Units
Any URBDES 3000-level or above courses		
ARCH 3424	Urban Books	3
ARCH 4190	Senior Capstone in Architecture**	3
ARCH 4477	Segregation By Design: A Historical Analysis of the Impact of Planning and Policy in St. Louis	3
BEYOND 1007	Designing Creativity: Innovation Across Disciplines	3
INTER 4004	Sustainability Exchange: Community and University Practicums	3

**Bachelor of Science in Architecture students only.

Art

Sam Fox School of Design & Visual Arts

The Sam Fox School of Design & Visual Arts is a unique collaboration in architecture, art, and design education, linking professional studio programs with one of the country's finest university art museums in the context of an internationally recognized research university.

The Sam Fox School is composed of the College of Architecture, the Graduate School of Architecture & Urban Design, the College of Art, the Graduate School of Art, and the Mildred Lane Kemper Art Museum.

A Professional Art and Design College Within a University

The College of Art offers students the opportunity to study art or design while taking both required and elective courses through other schools and divisions of the university. The College of Art, which has its own faculty and facilities, has been a degree-conferring division of Washington University since 1879.

Undergraduate students at the College of Art have a wide variety of options from which to choose to meet their individual needs and satisfy their interests. The curriculum has been designed around the philosophy that the study of art has no natural boundaries; all human experience — intellectual, technological and social — can at some point become part of the purposes of an artist or designer. College of Art courses provide a structural base upon which students are able to build.

Students in the College of Art at Washington University may choose to pursue a Bachelor of Fine Arts (BFA) degree or a Bachelor of Arts (BA) degree. BFA students can major in communication design, fashion design or art. BFA Art has optional concentrations in painting, photography, printmaking, sculpture and time-based + media art. BA students can major in art or design. BA Design has optional concentrations in communication and fashion.

Undergraduate students in Architecture, Arts & Sciences, Business and Engineering can add a dual degree, second major or minor in art or design to their existing degree path. These opportunities help students foster creativity, expand horizons and explore opportunities for careers in art and design.

Our diverse student body is composed of young people who have records of high achievement in both art or design and in academics. Because the College of Art provides such a comprehensive learning environment, it is an excellent place for a student to mature as an artist or designer.

Facilities

The Sam Fox School is comprised of six buildings located on the east end of the Danforth Campus. Studios, classrooms and maker spaces are located in William K. Bixby Hall, Joseph B. Givens Hall, Mark C. Steinberg Hall, Earl E. and Myrtle E. Walker Hall, and Anabeth and John Weil Hall. In addition, the Mildred Lane Kemper Art Museum includes more than 10,000 square feet of exhibition space, the Florence Steinberg Weil Sculpture Garden, the Kenneth and Nancy Kranzberg Art & Architecture Library, and the Department of Art History & Archaeology in the College of Arts & Sciences.

In addition, the Dowd Illustration Research Archive — a division of Washington University Libraries' Special Collections — is a preeminent site for studying the history and culture of American illustration, and it is comprised of original art and printed material from many fields of popular American pictorial graphic culture. The collection focuses on 20th-century illustration, and it includes artists' working materials and sketches as well as original artwork from books, magazines, and advertising.

Majors

Bachelor of Fine Arts

First-year students take Drawing, 2D Design, 3D Design, Digital Studio, and Practices in Art + Design.

Second-year studio courses introduce students to the different areas of focus.

A student's last two years include intense study in their chosen area(s) and a capstone experience. The capstone studio brings together all seniors in the studio areas and separately in the communication design and fashion areas for critical dialogue beyond disciplinary boundaries to guide preparation for a culminating BFA exhibition.

Throughout the studio courses and the final capstone, the BFA degree places an emphasis on developing a portfolio that displays the student's mastery of art and design skills. Graduates are prepared to pursue careers as artists, illustrators or designers.

For specific degree requirements, visit the following pages:

- Art, BFA (p. 165)
- Art with Painting Concentration, BFA (p. 157)
- Art with Photography Concentration, BFA (p. 159)
- Art with Printmaking Concentration, BFA (p. 160)
- Art with Sculpture Concentration, BFA (p. 161)
- Art with Time-Based + Media Art Concentration, BFA (p. 163)
- Communication Design, BFA (p. 166)
- Fashion Design, BFA (p. 171)

Bachelor of Arts

First-year students take Digital Studio and two additional foundation courses that may include Drawing, 2D Design, 3D Design, and so on. Upper-level studio courses and Sam Fox electives introduce students to different areas of focus.

With fewer required courses and no capstone studio, this degree provides an opportunity for students to explore art and design in the context of a rigorous liberal arts education. The BA program is ideal for students who are interested in studying art and design as a cultural phenomena, as a practice for strategic thinking, or as preparation for a career alongside artists and designers. Working within and between traditional disciplines, students will explore how ideas can shape materials and how materiality can shape ideas.

For specific degree requirements, visit the following pages:

- Art, BA (p. 164)
- Design, BA (p. 170)
- Design with Communication Concentration, BA (p. 168)
- Design with Fashion Concentration, BA (p. 169)

Second Majors in Art & Design

A student pursuing a bachelor's degree in Architecture, Arts & Sciences, Business, or Engineering may also pursue a second major in the College of Art. Second majors are offered in art and design. The design program has optional concentrations in fashion and communication. Any student in good academic standing may declare a second major. Upon completion of the requirements, the student's transcript will show the second major along with their earned degree. Only one diploma is granted; no reference to the second major is noted on the diploma.

For specific degree requirements, visit the following pages:

- Second Major in Art (p. 172)
- Second Major in Design (p. 173)
- Second Major in Design: Communication Concentration (p. 173)
- Second Major in Design: Fashion Concentration (p. 173)

Second Majors and Minors Outside the College of Art

Students may earn a second major or minor in the College of Arts & Sciences, the Olin Business School, or the McKelvey School of Engineering, or they may earn a minor in the College of Architecture while completing the requirements for the BFA or BA degree. Students who choose this path will graduate with their chosen art or design degree and major (BFA or BA) alongside the additional major or minor.

Students must successfully complete all of the degree requirements for the College of Art and all of the requirements for the second major or minor.

The second major or minor option can be completed within four years if careful planning begins during the first year. If a student is interested in these options, they should consult with the associate dean of students in the College of Art.

Art Education

Students who wish to teach art at the elementary and secondary levels may obtain Missouri state certification by taking additional units of required education courses offered by the university's Department of Education in the College of Arts & Sciences. These courses may be taken as academic electives within the BFA or BA program. For more information, visit the Department of Education's Teacher Certification page.

Minors

The College of Art offers several minors, which are available to all students at Washington University in St. Louis. Minors require a total of 15 or 18 units from approved courses. All courses applied to an art minor must be taken for a grade, and students must earn a grade of C- or higher. For minors requiring 15 units, at least 12 of the credit units must be applied exclusively to the minor and cannot be double-

counted toward another major or minor. For the 18-unit Human-Computer Interaction minor, 15 units must be applied exclusively to the minor. No individual course may count more than once toward the minor.

Minors are offered in the following areas:

- Art (p. 174)
- Creative Practice for Social Change (p. 174)
- Design (p. 174)
- Human-Computer Interaction (p. 174)

Courses

- ART (p. 120): Art
- DESIGN (p. 133): Design
- FASHION (p. 143): Fashion

College of Art majors have enrollment priority in ART courses. Elective courses may be offered at the 1000 to 4000 levels; students must enroll as applicable: 1000-level courses are for first-year students, 2000-level courses are for sophomores, 3000-level courses are for juniors, and 4000-level courses are for seniors.

Art

ART 1050 Drawing
An introductory course that teaches the student to recognize and manipulate fundamental elements of composition, line, form, space, modeling and color. Students will explore drawing as a diverse and multi-faceted activity. Working from both observation and imagination, emphasis will be placed on making work through a range of drawing methodologies. Students work in a variety of media. Demonstrations and illustrated lectures supplement studio sessions and outside projects.
Credit 3 units. Art: FAAM, FADM EN: H
Typical periods offered: Fall, Spring

ART 1101 Practices in Art + Design
This course offers students an introduction to the programs, people, and resources of the College of Art and the Sam Fox School. Weekly presentations by faculty and staff, current and past students, and practitioners in the field will introduce students to some of the many possible paths of study in art and design and deepen students' knowledge of the Sam Fox School's major creative and intellectual pursuits and their areas of influence and intersection. The course also includes practical resources to help students flourish in their studies.
Credit 1 unit. EN: H
Typical periods offered: Fall

ART 1110 2-D Design
An introduction to basic design principles and their application on a two-dimensional surface. Investigation of the functions and properties of the formal elements and their organization through the use of relational schemes. Includes an introduction to color and basic color theory. Problems stress systematic approach to visual communication.
Credit 3 units. Art: FAAM, FADM EN: H
Typical periods offered: Fall, Spring

ART 1120 3-D Design
An introduction to basic design principles and their application to three-dimensional form and real space and time. The design vocabulary is broadened through exercises that deal with mass, volume, weight, gravity, and movement. Students learn to use hand and power tools.
Credit 3 units. Art: FAAM, FADM EN: H
Typical periods offered: Fall, Spring

ART 1151 You Are Here: Engaging St. Louis's Racial History Through Site + Story
By acknowledging the pressures and pains of our political moment -- a time of crisis for many in our city and nation, but also a long-awaited reckoning with issues of social justice -- this course engages the complex history of race and racial injustice in St. Louis through site- and story-based exploration. It offers an opportunity to learn about the city's landscape, history, systems, culture, form and identity while wrestling with fundamental questions of power, positionality and perspective.You Are Here references orientation, discovery, otherness and place, and it serves as a provocation for reconsidering how designers, artists and architects engage St. Louis. This course may count toward the minor in Creative Practice for Social Change if bundled with Engaging Community: Understanding the Basics. Priority wil be given to first-year Sam Fox students.
Credit 1.5 units. Art: CPSC EN: H
Typical periods offered: Fall, Spring

ART 1152 Engaging Community: Understanding the Basics
What does it mean to engage in community as a creative practitioner? Community engagement must be grounded in authentic relationship building and an ability to understand and act within the historic context and systems that impact communities. We will practice the skills of listening, observation, reflection, and improvisation. We will cultivate mindsets that focus on community assets and self-determination. Workshops will teach facilitation and power analysis, with the intention of upending the power dynamics between community and creators. It may count toward the minor in Creative Practice for Social Change if bundled with You Are Here: St. Louis' Racial History Through Sites and Stories.
Credit 1.5 units. Art: CPSC, FAAM
Typical periods offered: Fall, Spring

ART 1154 Contemporary Discourses: Art + Feminism
This course investigates the impact of feminism on contemporary art, focusing on artwork produced between the 1960s and the present day. Through an examination of global practices in a wide range of media, including artworks in the university's Kemper Museum collection, students will delve into innovative aesthetic strategies that criticize assumptions of gender, race and social class and consider the intricate tie between the identity of the author and the content of the work. This course is taught by a practicing artist, who together with the students will uncover historical developments and epic omissions. This is a lecture course with a discussion component. Requirements include participation in weekly discussion sections, regular response papers, and a final written curatorial project.
Credit 3 units. Art: CPSC, FAAM, VC EN: H
Typical periods offered: Fall, Spring

ART 1155 Eco-Art
Eco-Art explores the intersection of art, ecology and ethics. Though the movement is broad and growing, eco-art re-envisions our relationship with the natural world by informing, challenging, inventing, and reclaiming. This studio-based course introduces various artistic

practices and working methodologies related to environmental art, exploring green methodologies, repurposed objects, land art, ecoventions, social sculpture, and community activism. The course is organized around art historical precedents, and it is supported by critical essays and examples of contemporary practice, including discussion of eco-design and sustainable architecture. Projects are open to multidimensional solutions in a wide variety of media.
Credit 3 units. Art: CPSC, FAAM
Typical periods offered: Fall, Spring

ART 1219 The Poetics of Image-Making: People, Place & Space
This painting elective course examines the poetics of image-making, with a focus on the representation of people, place, and space--both observed and invented. Students learn the practice of painting and develop works through fundamental exercises as well as the shared exploration of painting processes. Work outside of class for the beginner is project-based; advanced students produce an independent body of work. Critical assessment of work is complemented by faculty and peer discussions, readings, and field study. Required text: The Poetics of Space by Gaston Bachelard.
Credit 3 units. Art: FAAM
Typical periods offered: Fall

ART 1318 History of Photography
Same as F20 227A, 327A, 427A - First-year students (only) register for F20 127A. Survey of the history of photography and a look at the medium form the camera obscura to contemporary developments. Social and technological developments examined in terms of their influences on the medium.
Credit 3 units. Art: FAAM EN: H
Typical periods offered: Fall, Spring

ART 1319 Experimental Photography: Cameraless to Polaroid, Form to Content
These days, everyone is a photographer, right? But how does that image snapped with your smartphone arrive on your screen? As technology marches forward, we have images literally at our fingertips, yet the actual process of producing the picture is, ironically, more elusive. In this course, we will dive into experimental processes and examine how physically making the picture can affect the content of that picture. As you craft images, ideas become tied to process and suggest new directions, strategies and subjects. We will begin with cameraless techniques, such as the photogram and cyanotype; we will investigate the principle of the camera obscura; we will test out rudimentary cameras such as the pinhole and disposable models; and we will experiment with printing techniques such as Polaroid and Xerox transfer, examining artists using these various techniques along the way. As we move through the semester, students will learn the various ways that light can create images, and they will begin to find their own particular voice within these mechanizations and create original work.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 1328 Contemporary Portraiture
Historically, portraits were painted of the royal or wealthy to document an accurate likeness and to display status and power. However, with the advent of photography, artists were freed to develop interpretations in style, process, and medium. With subjects such as family, friends, strangers, celebrities, and the self, the portrait has been used to reflect culture, identity, and the relationship between the artist and the sitter. Issues of race, sexuality, gender, vanity, and status continue to be relevant to contemporary practice. This is primarily a drawing class; students combine the study of contemporary portrait artists with a studio practice that encourages the development of a unique voice. Students consider how pose, gesture, lighting, and other factors work together to support their intentions. Initial assignment prompts progress to guided independent pursuits. Students will be encouraged to experiment with image, materials, and processes. Live models will be used as well as other source material.
Credit 3 units. Art: FAAM

ART 1403 Color Systems
This course is a sustained investigation of color. Students study how color is affected by light, by space, by arrangement, by culture, and by commerce. The course aims to deepen the understanding of color's complexity and pervasiveness as a fundamental element of shared visual culture. The course develops both technical and conceptual skills to aid in visual translation. In addition to color-specific inquiry, another goal of this course is to expand ideas of research and enable students to integrate various methods of acquiring knowledge into their art and design practice. Throughout the course, students discuss various processes of making/constructing, the connection between color/form/concept, and strategies for idea generation and brainstorming. The course allows for much individual freedom and flexibility within varying project parameters.
Credit 3 units. Art: FAAM, FADM
Typical periods offered: Fall, Spring

ART 1417 Guerilla Printmaking
This is a studio course in printmaking that explores the ideology of print as a cultural, social and political activity. Through our projects, we will embrace the value of the multiple in printmaking as a democratic medium. Our primary weapon will be in the domain of distribution. Strategies for projects done in this class may include site specific work, audience participation projects, performative work, ephemera produced around an event, time-based work, etc. Projects will be both collaborative and individual. Students will learn to write proposals and manifestos, document their work in situ and make digital presentations in support of the projects. Students may also learn and use print techniques such as woodcut, lithography, Pronto plates, Gocco printing and digital applications to accomplish goals. However, technique will be dictated by the idea for each project AND will not be limited to the traditional forms of printmaking. In other words, low-tech/low-cost alternatives and philosophically relevant approaches will be part of the mix.
Credit 3 units. Art: FAAM EN: H
Typical periods offered: Fall, Spring

ART 1515 Sculpture
Explores contemporary sculptural concepts and processes in various media, including latex, plaster, plastics, metal, and wood fabrication, with emphasis on development of technical skills at whatever level of advancement is suited to the experience of the student.
Credit 3 units. EN: H

ART 1516 Sculpture: Foundry
Same as F20 213F, 313F, 413F - First-year students (only) register for F20 113F. The focus of this course is to introduce students to the basic principles of bronze and aluminum casting according to the lost wax method. Students will learn mold making, direct organic burnout, ceramic shell investment, metal chasing, and patination in order to create finished sculpture. In addition to metal casting, students will use other materials such as plaster, resin, steel, wood, rubber, plastic, and foam to create a mixed media project that explores a specific idea or theme. Additional work outside the regularly scheduled class time is required.
Credit 3 units. Art: FAAM EN: H
Typical periods offered: Fall, Spring

ART 1519 Compositions in Clay
In this course, students will broaden their understanding of clay as a viable medium of visual expression and three-dimensional exploration. Students will learn basic hand-building techniques to create sculptural constructions, discover the practical applications of wheel throwing through form and function, and explore ceramic tools and equipment to create installation projects. Each student's skill level will be considered, and projects will be adjusted accordingly. Emphasis will be placed on critical assessment and articulation of material.
Credit 3 units. Art: FAAM EN: H
Typical periods offered: Fall, Spring

ART 1520 Contemporary Sculptural Concepts
Students will explore and define an understanding of space through sculpture. Systems of stucture, such as metaphor, will be explored in relation to transformative processes. Ephemeral and stable materials including plaster, fibers, wax, metal and wood will be investigated. Technical skills to be developed appropriate to individual student's experience.
Credit 3 units. EN: H
Typical periods offered: Fall, Spring

ART 2212 Anatomy Figure Structure
This rigorous drawing course explores traditional and new representations of the figure through the study of its structure and contemporary contexts. Research involves basic anatomy lectures and sketchbook activities that provide a vehicle for discovering the figure's architecture, mechanics and proportions. Art production is based on in-class and outside projects. Lectures, presentations, critical readings and the analysis of historical and contemporary figurative works support students in their investigations.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 2213 Painting
Introduction to painting processes and materials. While there is emphasis on oil painting, students are also introduced to watercolor and acrylic paints and a wide variety of painting surfaces. Subject matter is varied, beginning with still-life material and ending with direct painting from the model. Technical skills and content are dealt with at the individual student's level.
Credit 3 units. Art: FAAM EN: H

ART 2214 Intro Painting: Poetics of Image Making
This painting course examines the poetics of image-making, with a focus on the representation of people, place, and space--both observed and invented. Students learn the practice of painting and develop works through fundamental exercises as well as the shared exploration of painting processes. Work outside of class for the beginner is project-based; advanced students produce an independent body of work. Critical assessment of work is complemented by faculty and peer discussions, readings, and field study.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 2218 Intro Painting: Duration, Space, Time
In this studio course students explore the challenges of painting space and motion, relaying time, and portraying kinetic content. Expanded practices, such as temporal processes and research-based approaches are also discussed and investigated as possible vehicles for generating visual metaphors. Classes include off-site visits, discussion of past and present artists and art movements engaged in the problem of time and motion. Studio production is assignment based, evaluated through individual instruction and group critiques. This introductory course can serve as a prerequisite to upper level classes in Painting.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 2222 Intro Painting: Strategies of Abstraction
This course explores various strategies for creating abstract paintings. Students will develop their own themes through diverse approaches including chance operation, diagrammatic, materials and process-based abstraction. Abstraction in the expanded field will be explored including hybrid digital techniques and non-traditional support structures. Readings and discussions in the theory and history of abstraction will complement these practical approaches by addressing topics including aesthetics, non-Western abstraction, the modernist abstract canon and historical exclusion of artists and approaches in the field of abstract art. Prerequisite: Sophomore standing
Credit 3 units. Art: FAAM
Typical periods offered: Spring

ART 2263 Drawing: Idiosyncratic Systems
This studio course links the activity of drawing with conceptual inquiry. Projects will introduce an array of conceptual drawing methods including analog tracing, language systems, notational scores, recording and diagramming, and iterative systems of production that grow exponentially. Covering examples of technologies invented or operated in a drawn way - from the stylus to computers - the course will emphasize drawing as a tool for seeing and thinking. Course content will be delivered dynamically between ideation, production, lectures, group discussions, and topical readings. This course is open to students at all experience levels, including those with no experience in art and design. No prerequisite
Credit 3 units. Art: FAAM

ART 2264 Experimental Drawing
This class explores creative and non-traditional approaches to drawing. Through lectures, demonstrations, and course projects students will investigate a wide range of drawing techniques and media, including non-standard methods as well as the ways drawing intersects with other media such as installation, performance, and new technologies. Students will also consider ways drawing can be used as a tool to tell stories, map narratives, create worlds, and develop artistic thinking. All students will produce a personal body of work. Coursework will be evaluated through group critique and instructor feedback. Prerequisite: sophomore standing
Credit 3 units. Art: FAAM
Typical periods offered: Spring

ART 2271 Intro Painting: Painting as Verb
This studio course engages painting's active, performative, and expressive potential. Students explore systematic and embodied modes of painting, prioritizing iterative processes. Assignments challenge students to work with abstraction, series, structures, arrangements, and other active approaches to constructing a painted image. Course content is delivered through assigned projects, readings, and group discussions that engage with historical precendents and contemporary examples of systems-based methods in painting. Coursework is evaluated through class critique and one-on-one reviews with the instructor. This introductory course can serve as a prerequisite to upper level classes in Painting.
Credit 3 units. Art: FAAM

ART 2321 Intro Photo: Black+White Photography
This studio course provides an introduction to the fundamentals of black and white photography. There is emphasis on the control of film, paper, and black-and-white photographic processes in the classical fine arts tradition. Topics may include portrait, landscape, street photography, the figure, and contemporary issues in photography.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 2325 Intro Photo: Digital Photography
This introductory studio course will explore digital technology for capturing, enhancing and producing still lens-based images. The course will address basic digital camera operations, the visual language of camera-generated images, computer workflow and the connoisseurship of digital image output. The course assumes no prior knowledge or experience with digital imaging technologies or materials. Students must provide a digital camera.
Credit 3 units. Art: FAAM EN: H
Typical periods offered: Fall, Spring

ART 2326 Photography: Curation – Building the Exhibition
This class will introduce students to strategies for curating and presenting photography and other lens-based media. In the first part of the semester, working in connection with the Weitman Gallery, students will curate and present an exhibition of work from outside artist(s), managing the process from initial call through design, installation, and closing. Alongside this work or curation, students will develop their own body of work for exhibition. Course sessions will review key exhibitions from the late 20th and 21st centuries, introduce strategies for presenting photographs, and include critiques of personal work. Students will be evaluated on their participation, curatorial work, final portfolio of images, and in-class work.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 2329 Photography: Studio Lighting
In this studio course, studio lighting for portraits and tabletop photography will be introduced through demonstration and hands-on practice. Strobe and continuous lighting systems and their accessories will be used. Both commercial and fine art applications will be discussed along with the principles of quantity, color temperature, and direction of light. Assignments will be produced as inkjet. Students must supply their own dSLR camera. Prerequisite: F20 1183 / F20 4183, Digital Photography
Credit 3 units. Art: FAAM
Typical periods offered: Spring

ART 2410 Intro Printmaking
This studio course is a survey of printmaking that covers basic processes in intaglio, lithography, relief, and monotype. Emphasis is on mixed media and experimentation with a foundation in traditional, historical, and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.
Credit 3 units. Art: FAAM EN: H
Typical periods offered: Fall, Spring

ART 2411 Intro Printmaking: Themed and Boxed
Students will experiment with image making in thematically unified bodies of work in the form of a print portfolio. The history of the artform as well as the techniques used in its development will be covered in slide presentations as well as in demonstrations. The student will create a print portfolio based on a particular theme during the semester.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 2420 Intro Printmaking: Contemporary Processes
This studio course is designed to give a broad introduction to contemporary processes and approaches in printmaking, including digital technology. Emphasis will be on image development through the manipulation and combination of techniques to create one of a kind prints and variable editions. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests. This introductory course can serve as a prerequisite to upper level classes in Printmaking.
Credit 3 units. Art: FAAM

ART 2430 Intro Printmaking: Printmaking and the Built Environment
This course will cover printmaking processes including silkscreen, polyester lithography, and relief to create works on paper concerning the built environment. Through field trips, students will document and respond to the cycle of development and razing in the city of St. Louis with the goal of learning more about the urban environment and our relationship to it. Personal research, lectures and studio practice will give students the foundation to create projects responding to their experience of the city. Student work will be evaluated through critique and instructor feedback. Students are also encouraged to bring their own experiences with the built environment to their studio work.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 2510 Intro Sculpture
This studio course introduces the materials, processes, and concepts specific to sculpture. Students develop an understanding of, and dexterity with, multiple materials and modes of production such as additive, subtractive, assembled, molded and modeled. This course promotes independent working and problem solving in regard to content and intention. Students engage in discourse about their work through critical analysis and explorations of historical and cultural precedent. This course involves lectures, material and process demonstrations, and assigned readings along with creative and technical explorations.
Credit 3 units. Art: FAAM EN: H
Typical periods offered: Fall, Spring

ART 2515 Intro Sculpture
This studio course introduces the materials, processes, and concepts specific to sculpture. Students develop an understanding of, and dexterity with, multiple materials and modes of production such as additive, subtractive, assembled, molded and modeled. This course promotes independent working and problem solving in regard to content and intention. Students engage in discourse about their work through critical analysis and explorations of historical and cultural precedent. This course involves lectures, material and process demonstrations, and assigned readings along with creative and technical explorations. This introductory course can serve as a prerequisite to upper level classes in Sculpture.
Credit 3 units. Art: FAAM EN: H
Typical periods offered: Fall, Spring

ART 2527 Sculpture: Metal Fabrication
Metal is the backbone of our modern world, and it is a viable medium for self-expression. It can be employed as structure or as surface, it can be plastically deformed to create compound shapes, and it can be connected to most any other material. Students will explore the creative potential of this material in the fabrication of sculptural forms. Students learn to weld using both gas and electric arc machines as well as the safe operation of drilling, grinding, and finishing tools.
Credit 3 units. Art: FAAM EN: H
Typical periods offered: Fall, Spring

ART 2529 Digital Fabrication for Object Makers
This course explores the potential of digital tools in the creation of tangible objects. We will focus on component manufacture as a means of sculptural production, i.e., creating linkages, universal fittings, and adaptors that connect disparate materials. Toys, mechanical systems, and construction products will be researched as a point of inspiration. Students will be introduced to various modeling software such as Rhino, AutoCAD, and SolidWorks and explore the potential of these platforms to design 3-dimensional forms. A variety of output tools will be used but we will focus primarily on the planning for and use of laser cutters, 3D printers, and CNC routers. We will develop, design, and manufacture components that, when combined with readily available materials, can be used to create sculptural forms. This class will use iterative processes that move between digital and analog model-making and sketching. Students will be introduced to the concept of kitbashing, and the modification of salvaged and found parts. This course introduces these concepts to artists, designers, engineers, and anyone interested in exploring the possibilities of digital fabrication tools towards the creation of sculpture.
Credit 3 units. Art: FAAM, FADM
Typical periods offered: Fall, Spring

ART 2532 Sculpture: Multiples as Transformation
This studio course will explore sculpture through the creation of multiples. We will think through sculpture as alchemy, considering how a shift in material changes an object's meaning. We will learn to adapt objects through both digital and physical processes, applying 3D printing and mold-making techniques. Our studio practice will be supported by a discussion of artists working in the field, with readings, guest lectures, and group discussions that situate our studio conversation in a contemporary art dialogue. Skills covered: metal casting, ceramic plaster molds, silicone rubber casting, 3D scanning and printing. Open to students with no experience in art and design. Prerequisite: sophomore standing or higher
Credit 3 units. Art: FAAM
Typical periods offered: Spring

ART 2533 Ceramics: Form, Material, Concept
Ceramics: Form, Material, Concept is an intermediate course designed for advancing study in ceramics. Sculptural processes and techniques are explored in concert with conceptual development using clay and glaze chemistry, and other materials. Research will cover hand-building, casting and modeling. Course content is delivered through lectures, demonstrations and exploration-based projects. Course work is evaluated through group and individual critiques.
Credit 3 units. Art: FAAM
Typical periods offered: Spring

ART 2535 Up-Cycles: Form, Function, and Design
This course explores the art and craft of bicycles. Students enrolled in the course design and build their own bike, trike, unicycle, or other human-powered vehicle. Students learn metal fabrication techniques such as cutting, welding, and machining that are used to make steel frame bikes. Through class assignments students learn the mechanics necessary to propel, stop, and steer their designs. Class sessions focus on technical instruction, discussion of the history of bike design, and collaborative workshops with local bike organizations. Student technical assignments and bike project designs are evaluated through class critique.
Credit 3 units. Art: FAAM
Typical periods offered: Spring

ART 2617 Intro Time-Based Working With Time
This studio class supports the production of time-based media artworks and provides an overview of the last fifty years of the history of contemporary art practices that are time-based and use a variety of analog and digital tools including video art, sound art, performance art and media art. Students in this class create several projects in video, sound, performance and other media of choice. Technical and conceptual instruction accompanies this production intensive studio course. Visiting artists, lectures, class critiques, interdisciplinary collaborations, and select short readings accompany the course.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 2621 Time-Based: Performing Solitude
In this performance studio, students work with their own bodies as their tool of expression, focusing on states of solitude in the context of global histories. Students create interdisciplinary artworks that merge performance art with other forms of art making, including visual, digital, musical, choreographed, textual, and/or cinematic. Students create hybrid, performance-based works assessed through critique. Readings and short lectures accompany this studio.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 2622 Intro Time-Based: Projection Mapping
In this studio course, students are introduced to how to use projection mapping as a creative tool for their video and animation designs. Through lectures, readings and discussion, students are introduced to fundamental concerns and the possibilities and limitations of projection mapping. This course introduces technical skills for popular video, animation, and projection mapping software. The course will equip students with the skills to design and map visuals and incorporate these techniques into their own studio practice. This introductory course can serve as a prerequisite to upper level classes in Time-Based Media. This class has no prerequisite courses and are open to students with sophomore standing and above.
Credit 3 units. Art: FAAM
Typical periods offered: Spring

ART 2623 Intro Time-Based: Kinetic Image/Digital Video
This studio course addresses the use of digital technology and software for capturing, editing, and producing moving images. The course examines the visual language and poetics of moving images while providing students with foundation knowledge of camera operations, production storyboarding, software tools and presentation strategies. The course assumes no prior knowledge or experience with kinetic imaging technologies or software. This introductory course can serve as a prerequisite to upper level classes in Time-Based Media. This class has no prerequisite courses and are open to students with sophomore standing and above.
Credit 3 units. Art: FAAM EN: H

ART 2624 Time-Based: Animation Tools and Methods
In this animation studio, students are introduced to a range of digital and analog production techniques for the practice of animation. It presents fundamental concepts and issues that define this creative form. Students create animations through structured projects and are assessed through collective critique.
Credit 3 units. Art: FAAM, FADM
Typical periods offered: Fall, Spring

ART 2627 Time-Based: Fantastic Voyage/Scales of Wonder
This studio focuses on affective encounters with scale--from viewing particles through a microscope to wandering through architectural environments--making us aware of our bodies in relation to the world around us. This course examines scale and explores encounters with built environments and designed objects alike. Readings and discussions span media archeology and affect theory. The course also examines the impact of film, documentary, and fiction. Students create time-based responses and are assessed through collective critique. No prerequisites. Sophomore or higher standing.
Credit 3 units. Art: FAAM, FADM
Typical periods offered: Fall

ART 2628 Time-Based: Digital Film/City Stories
DIGITAL FILMMAKING: CITY STORIES is a cross-University video art course for students interested in making short films through a transdisciplinary and time-based storytelling in both narrative and non-narrative formats. Whether documentary or abstract, individually produced or collaborative, all projects in this course have a required social and urban engagement component. In this course, the City becomes a laboratory for experimentation and contribution. Students meaningfully engage St. Louis and their projects address sites of concern to explore the complex fabric of the city by way of framing and poetic juxtaposition. CITY STORIES merges several arts and humanities disciplines, including experimental cinema and documentary journalism and creates an opportunity for empathic listening and inquiry as students discover stories built from collective as well as individual memories.
Credit 3 units. EN: H
Typical periods offered: Fall, Spring

ART 2629 Artificial Intelligence and Art
This studio course serves as an introduction through various projects to the transformative role of AI in digital media art. Projects will include creative coding, development of a fine-tuned language model, image generation, and sound classification. The course will equip students with basic skills to innovate at the intersection of art and AI, emphasizing the significance of engaging conceptual concerns. Additional topics will provide an overview of the field's current challenges and opportunities including; ethical considerations, historical context, and AI in the art institution. Coursework will be evaluated through instructor feedback and group critique.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 2630 Time-Based: Visualizing Otherness
In this documentary studio, students create video works that address personal and social interconnections, which help us understand ourselves and the world we inhabit. Othering occurs when individuals or groups are defined as not fitting within societal norms, and is often linked to racism, sexism, xenophobia, transphobia, and classism. In this course, we tell stories through documentary video to expand notions of who belongs, how we belong, and how we see ourselves and each other. Students engage in self-directed research for a final project and are assessed through collective critique. Required prerequisite is Digital Studio or permission of instructor; and sophomore or higher standing.
Credit 3 units. Art: CPSC, FAAM

ART 2631 Seminar: Media Art Practices
Media art-including digital and electronic art, and interactive media-has expanded the fields of contemporary art and design globally. While media art histories developed alongside art and cultural histories, film studies, and computer science, they remain distinct. Emphasizing key concepts that drive practices this seminar begins with the Industrial Revolution and early optical devices, and ends with the rise of electronic goods, the Internet, AI, and technoculture. Through lectures, oral presentations, and written papers, students gain an overview of the aesthetic, social, and political entwinements that have evolved between art, design, and technology over the past two centuries.
Credit 3 units. Art: FAAM, VC
Typical periods offered: Spring

ART 2632 Timescale Projects
Timescale Projects is a studio-based course exploring deep time and the long durée, considering human and planetary timescales and how art can function to envision our world - its past and potential futures. We'll research artists whose practices engage cosmic time, climate change, and event-based human history. We'll do critical readings, meet with researchers across disciplines, travel to local sites, and create individual as well as collaborative studio projects. A variety of artistic processes, media, and
methodologies will be introduced to achieve project outcomes. Students are evaluated on participation
and project development through individual assessment and group critique.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 2700 Semester Abroad Program Seminar
This course will prepare students participating in the Sam Fox School's Semester Abroad Programs. The seminar will meet 8 times over the course of the semester. Attendance is mandatory for students going abroad.
Credit 1 unit. EN: H
Typical periods offered: Fall, Spring

ART 2751 Italian Language (Florence)
This course covers Italian grammar and conversation for study abroad students in Florence. Taught entirely in Italian. There is an emphasis on class participation accompanied by readings and writings. The student develops facility speaking the language on an everyday basis.
Credit 3 units.
Typical periods offered: Fall, Spring

ART 3014 Site as Origin: Sculpture and Expanded Media
Site-specific art leaves the studio to confront and explore site as context. This understanding of site includes built architecture, landscape, social order, public space, the exhibition space, our living space, the fictional space, even the digital space. At its core, site-work is the practice of deeply considering the intricacies of a place, then using this inquiry as a starting point to drive the work's creation. Moving from research to production, students will create a response to their chosen site that transforms, augments, or adapts a viewer's relationship to that space. A key challenge will be the choice of medium. The course will provide support for students to consider and practice a wide range of choices, from the traditional sculptural techniques of woodworking, metalworking, and moldmaking, to expanded media options that include sound and video installation, digital projects and augmented/ virtual reality.

Credit 3 units. Art: FAAM

Typical periods offered: Spring

ART 3050 Advanced Art Seminar

Advanced Art Seminar is a course designed for BA Art students and Art Second Majors. In this course, students develop a public presentation that is the synthesis of their art experience and their university research interests from outside of Sam Fox. For their presentation, students choose to curate or create work for a public art exhibition, write a thesis paper or another project approved by the faculty member. Each option requires an equivalent number of hours of development. Class sessions include discussion, project critique, and analysis of ideas and methods relevant to the presentation project. Concurrent enrollment in a studio art course is strongly recommended.

Credit 3 units.

Typical periods offered: Spring

ART 3110 Methods and Contexts I

This course integrates and synthesizes knowledge resulting from Art Practice and related courses. Supported by lectures, class discussions, and student critiques, this course fosters a creative environment and critical discourse surrounding artistic practices. Students are guided through the art-making process, from conceptualization to resolution, with an emphasis on experimentation with various methods of production and distribution. The goal of this course is to help students contextualize their own artistic interests within the contemporary art field by promoting the critical analysis skills necessary for initiating, interpreting, and evaluating artistic production.

Credit 3 units. EN: H

Typical periods offered: Fall

ART 3120 Methods and Contexts II

Required for BFA in Art majors. This team-taught course expands on methodologies encountered in Methods and Contexts I and related courses. Students are encouraged to take charge of their artistic process through faculty-supported and self-directed creative investigation. Through lectures, class discussions and critiques, students critically engage the evolving manner in which visual culture is produced and distributed. Students learn how to best present their work and incorporate discourse inherent to and generated by their practice. The goal of this course is to ensure a strong Capstone experience by helping students develop their artistic position within the public realm and contemporary contexts.

Credit 3 units. EN: H

Typical periods offered: Spring

ART 3153 Freund Visiting Artist Laboratory

The studio/seminar will be taught by this year's visiting Freund Fellow who will be living in St Louis for the fall semester while preparing their solo exhibition at SLAM scheduled for next year. The class will be constructed and offered by the fellow with specific content details to be advertised later. The class will be a combination studio and seminar around a particular subject. Junior BFA, senior BFA and MFA students are eligible to enroll.

Credit 3 units. Art: FAAM

ART 3165 Hashtag St. Louis

This experiential seminar course (#STL) introduces students to St. Louis' rich cultural art resources through weekly field trips to art institutions within the metro region. Over the course of the semester the class will visit a wide variety of cultural institutions, from artist-run spaces to established institutions, and gain insight into each institution's unique opportunities and challenges. Course assignments will include reflection papers, a culminating paper, and a proposal for a new arts institution or organization that can respond to and address a need or opportunity unique to St. Louis.

Credit 3 units. Art: FAAM

Typical periods offered: Fall, Spring

ART 3210 Painting: Art Practice (Special Topics: Narrative Systems: The Frame, the Grid, the Screen)

This studio course focuses on various narrative strategies in relation to painting's mythology and its function in contemporary culture. Topics to include narrativity, the politics of lens and screen, invented fictions, social vs. virtual spaces, and site specificity. Instruction will encompass technical, conceptual and creative skills for taking an individually conceived project from idea to fruition. Students will be encouraged to consider traditional and alternative forms of painting as well as digital imaging, installation, net art, etc. Lectures, critical essays, and analysis of historical precedents and contemporary practitioners will support students in their course work.

Credit 3 units. Art: FAAM EN: H

ART 3211 Painting: Art Practice (Language of Abstraction)

This course examines strategies of abstraction and non-objective image-making that originate in the painting studio, including those that are driven by concept, material, space and/or process. Readings and discussion will examine the evolution and history of abstraction and its present applications within a contemporary studio practice. The course will engage students in both assigned and self-directed work that will enable them to experiment with a broad visual vocabulary while understanding the relationship between form and content.

Credit 3 units. Art: FAAM

Typical periods offered: Spring

ART 3214 Painting: Art Practice (Expanded Painting)

This advanced studio course examines the expanded practice of painting in the contemporary studio. Students are required to produce a self-generated body of work, exploring painting via the incorporation of such things as new technologies, other visual disciplines, site-specificity, etc. Readings and discussion related to the course will examine the history and evolution of the painting practice and its present status and application within contemporary art production.

Credit 3 units. Art: FAAM

Typical periods offered: Fall, Spring

ART 3215 Painting: Art Practice (Body Image)

This is a rigorous painting/drawing studio course investigating various methods of pictorial construction (historical, contemporary) and the role of figuration in contemporary art practice. Students will be required to produce an independent body of work based on a theme and generated from a variety of references (imagination, life, photography, painting, film, etc.) Discussions to include contemporary notions of identity structures, social and gender politics. Lectures, critical readings and the analysis of historical and contemporary modes of figural representation will support students in their investigations.

Credit 3 units. Art: CDES, FAAM

ART 3216 Painting: Art Practice (Place and Space)

This course examines ideas of place and space-both observed and invented-established through the surface and materiality of paintings. Students develop a unique body of work through shared exploration of painting processes and materials, along with independent research. Critical assessment of work is complemented by faculty and peer discussions, readings, written critical analysis and field study.

Credit 3 units. Art: CDES, FAAM

ART 3217 Painting: Art Practice (Figure Structure)
This rigorous painting/drawing course explores new representations of the figure through its structure and contemporary contexts. Initial research involves anatomy lectures and extensive sketchbook activities that provide a vehicle for discovering the figure's architecture, mechanics and proportions. Students develop an independent body of work accessing visual data from a variety of sources (paintings, photography, sculpture, memory, model sessions), with the goal of developing expressive qualities with image-making. Lectures, presentations, critical readings, and the analysis of historical and contemporary figurative works support students in their investigations.
Credit 3 units.

ART 3220 Painting: Art Practice (Speculative Propositions)
This studio course investigates the possibility of utilizing painting, in all its elements (traditional, expanded, and all things in-between), as a tool for explorative artmaking. Students investigate painting as a vehicle for experimentation, wherein they can cultivate methodologies that are both unique and, at times, parallel to other established research mediums. Class discussions, course readings, and critique sessions deepen student's methodological inquiries. Course sessions include off site visits to museums and experimental spaces. Students produce a self-generated body of work. Student work is evaluated through individual instruction and group critiques.
Credit 3 units. Art: FAAM

ART 3260 Drawing: Art Practice (Collage: History and Practice in Contemporary Art)
This course will examine the role of collage in contemporary studio practice. Students will be required to assemble an archive of images from various sources, found and self-generated, to produce a body of work based on a specific theme. Readings and discussion related to the course will examine the evolution of collage and its present status and application within contemporary studio practice.
Credit 3 units. Art: CDES, FAAM EN: H

ART 3262 Drawing: Art Practice (Conceptual Methods in Drawing)
Drawing is a communicative device; it is a primary means of conceptual strategy leading to effective visual exploration and expression, from thought to form. This studio course looks at the practice of drawing in the context of language, scientific paradigms, complementary and alternative art forms, socio-political theory and history as they relate to visual culture and invention. Lectures, critical readings, and analysis of historical and contemporary modes of drawing support students in their course work. Projects in this course may consider mapping, language systems, formulaic constructions, material essentialism, physiologic/kinesthetic approaches, and performative aspects of drawing.
Credit 3 units. Art: FAAM EN: H

ART 3310 Photography: Art Practice (Methods of Distribution)
One of the most effective aspects of the photographic image today is its speed. The way that physical and virtual images are presented and distributed has changed significantly since the initial branding of photography as the medium of reproducibility. This class focuses on photography-based uses of the image through various distribution formats like the book, the poster, the newspaper, television, web, design, film, apparel, architecture, music, etc. The students make, read, look, listen, and experience 20th and 21st century photography practitioners who engage a range of disciplines and methods of distribution as they try to synthesize methods/models of their own. Rigorous student project critiques are complemented with discussions, writing assignments, and readings on media theory and contemporary uses of photography outside of the traditional exhibition-based contexts.
Credit 3 units. Art: CDES, FAAM EN: H
Typical periods offered: Fall, Spring

ART 3311 Photography: Art Practice (Constellations, Sequences, Series)
Series are the prevalent method for exhibiting photographic images. Through assignment-based and self-generated projects, students discover how photographic series are conceptualized, structured and sequenced. Special attention is given to the material meaning embedded in print size, order and spatial placement. The course provides in-depth coverage of image capture through medium-format analog and full-frame digital systems as well as intermediate digital editing and printing techniques. Students also explore various documentary and set-up strategies through narrative and non-narrative photographic approaches. Through a rigorous critique structure, course readings and critical writing, students engage the historical discourse surrounding the series as a tool for artistic expression.
Credit 3 units. Art: CDES, FAAM
Typical periods offered: Fall, Spring

ART 3312 Photography: Art Practice (Studio Location and Lighting)
This studio course introduces techniques and strategies for using artificial light sources to interpret subject matter, build narratives, and develop creative environments. Studio sessions will cover the use of continuous lighting systems, strobes, and hot shoe flashes. Course lectures will address principles of light, expanded applications of studio lighting, and editing strategies. Class projects will challenge students to apply lighting techniques in studio and on-location settings. Field trips will provide opportunities to work in a variety of built and natural environments and in conjunction with partner organizations.
Credit 3 units. Art: CDES
Typical periods offered: Fall, Spring

ART 3313 Photography: Art Practice (The Constructed Photograph)
In this course we will consider the dimensionality of the photograph and the ways manipulations of its space, surface, and form can create new opportunities for presenting content. Class demonstrations will introduce a breadth of techniques for experimenting spatially with a photograph. For example, we will look at how digital fabrication methods and tools—such as the laser cutter—can offer new strategies for activating the surface of a photograph, and explore strategies for creating photographic environments and objects. Students will complete a series of assignments to build technical fluency and a self-directed final project. Work will be evaluated through critique and instructor feedback.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 3315 Photography: Art Practice (Art, Environment, Culture & Image)
The medium of photography offers multiple ways to engage with critical social, political and environmental issues. Throughout this course, a wide range of photographic tools and modes of production will be explored, including digital and film-based materials and a variety of printing techniques. The course will also consider the integration of alternative methods of lens-based communication and working to construct images within relevant contexts of meaning. Through presentations and readings, students will be introduced to a range of

contemporary artists working with essential topics such as climate change, ecological sustainability, energy production and extraction, and the human body and technology. Students will work to build a final and self-directed project identified through their ongoing research and image production.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 3317 Photography: Art Practice (Documentary Photography in the 21st Century)
This praxis-based course explores the evolution of documentary practice in photography from the 1930s until the present-day. Lectures, readings, and film screenings will introduce students to the history, problems, and promises of documentary photography, as conceived by photographers, critics, and art historians. Studio and critique sessions will assist students in developing a personal documentary project and attaining new visual strategies for engaging a photographic form that originates from the entanglements of life. Course will also discuss documentary photo books, and strategies for editing a documentary series for book production. Students will have the option of producing a photobook. Prerequisite- Photography Studio: Material and Culture. Open to BFA /BA students who have taken the prerequisite, and others, including minors, with consent of instructor.
Credit 3 units. Art: CDES, FAAM
Typical periods offered: Fall, Spring

ART 3320 Photography: Art Practice (Slow Image: Large Format Photography)
This course provides an in-depth study of the large format analog camera and its unique formal position. Using the 4x5 format, students examine this slow, high fidelity photographic medium both technically and conceptually. Students employ a comprehensive photographic process, including loading sheet film, applying the zone system, scanning large format film, editing digital images, and creating large format digital inkjet prints. Class activities include rigorous student project critiques, as well as reading and discussion elements focusing on the history of large format and its contemporary descendants in the Dusseldorf School, abstract photography and installation art contexts. Class participants investigate the role of high fidelity images. Assignments may address portraiture, still life, interior and exterior architecture, landscape, and abstract photography. Large format 4x5 cameras will be available for use.
Credit 3 units. Art: CDES, FAAM EN: H
Typical periods offered: Fall, Spring

ART 3323 Art Practice: Photography (Black and White Master Printing)
This course offers an introduction to black and white master printing techniques for analog and digital outputs. The first part of the course will focus on advanced darkroom printing techniques, as well as the use of developers, papers, and toners. The second part of the course will cover advanced digital b/w strategies, including quadtone RIPs, specialty papers, and Photoshop workflows. Course lectures will look at the role that master printers have played in the history of photography. Visits to the Kemper and Saint Louis Art Museum print rooms will complement lectures and activities. All students will develop a portfolio of personally driven work in black and white. Prerequisite: Photography: Material & Culture, Black and White Photography I, or Digital Photography
Credit 3 units. Art: FAAM
Typical periods offered: Spring

ART 3330 Photography: Art Practice (Photographing Fiction)
Photography has always contained fiction. The visual and ideological frame of the artist is subjective. A person is operating the machine. Fiction can sometimes disclose something about truth that reality cannot, reframing existing narratives and creating new ones. In this studio course, students develop their own lens-based work using fiction as a tool of communication while studying contemporary artists who have stretched assumptions of reality within the photographic medium. This is a studio-based course with a discussion component. Students are evaluated on coursework and participation in discussion and critiques.
Credit 3 units. Art: FAAM
Typical periods offered: Spring

ART 3331 Photography: Art Practice (Picturing Place)
Working with photography and taking inspiration from geography, environmental studies, urban design, and cultural anthropology, this studio course explores how relationships to place are constructed. It considers how a sense of place has been understood over time and across cultures and how photography can help shape new narratives of belonging. The course builds knowledge through readings, discussion, guided assignments, and personal projects.
Credit 3 units. Art: CDES, FAAM
Typical periods offered: Fall

ART 3412 Printmaking: Art Practice (Propaganda to Decoration)
This course uses the print multiple as a starting point to explore a continuum that runs from propaganda to decoration. The fundamental attributes of the multiple, including its accessibility and repeatability, arc from private to public and from political to aesthetic. Reproduction, distribution, urban communication, social space, intervention and site specificity are explored through course lectures, readings, and discussions. Collaboration, exchange, and relational practices provide frameworks for self-directed projects using traditional and alternative techniques in print media, including lithography, screen printing, stencils, and photocopy.
Credit 3 units. Art: CDES, FAAM EN: H
Typical periods offered: Fall, Spring

ART 3418 Printmaking: Art Practice (Feedback Loop: Process and Print)
This course focuses on variability, mutability, repeatability and play within the process of printmaking, using etching, collagraph, monotype and digital methods. The course explores practices and contexts in printmaking as a contemporary art form and promotes advanced conceptual and technical development through creative practice, readings, discussions and critiques. Projects are self-directed and based on course topics that engage different approaches to process-based work, ranging from the improvisational to the systematic. Emphasis is placed on the shift from object to process, from the single manifestation to the series, from fixed to flux and back again.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 3419 Printmaking: Art Practice (The Printed Image)
This course explores the printed image as storyteller, educator, political tool, and narrative. Historical precedents and contemporary examples of political prints, graphic novels, posters, and narrative suites are examined as possible models for self-directed projects. Readings and discussions include strategies for drawing and appropriating imagery. Students will have the opportunity to produce a thematically unified body of work while gaining technical expertise in woodcut, etching, and lithography.
Credit 3 units. Art: FAAM EN: H

Typical periods offered: Fall, Spring

ART 3420 Printmaking: Art Practice (Extra Dimensional Printmaking)
Pushing the boundaries of printmaking, prints move beyond the wall and into sculpture, installation, and time-based work. Relief, silkscreen, and intaglio processes are explored, with an emphasis on print as theatre, object, and immersive environment. Through readings and discussions, students will engage with historical precedents and contemporary principles that support the creation of self-directed work that is extra-dimensional in physical and conceptual scope.
Credit 3 units. Art: CDES, FAAM
Typical periods offered: Spring

ART 3510 Sculpture: Art Practice (Sculptural Bodies)
This course investigates the sociopolitical issues of the body, the figure, and their potential in contemporary art practice. The term body is used as an organism, in an expansive way, to investigate the metaphorical, physical, emotional, cultural, and spiritual bodies. A variety of media and methods are explored, with an emphasis on three-dimensional work and object-based performance. Lectures, demonstrations, and readings contextualize the potential of sculptural systems to constitute the meaning of a contemporary body.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 3511 Sculpture: Art Practice (Iterative Systems)
This course investigates iterative approaches to making as a means to generate multiple works and ideas simultaneously. Activities such as mold-making and nontraditional drawing will be explored along with other process-based methods of capturing thoughtful gestures. Through readings and discussions, students will engage with historical precedents and contemporary principles that support the creation of self-directed work informed by the iterative mindset. Required for the BFA in Art sculpture concentration. Prerequisite: Sculpture Studio: Material and Culture. Open to BFA and BA students who have taken the prerequisite and others, including art minors and MFA students, with the permission of the instructor.
Credit 3 units. Art: CDES, FAAM
Typical periods offered: Fall

ART 3512 Sculpture: Art Practice (Material as Metaphor)
All materials carry meaning. This course familiarizes students with the histories and fabrication processes intrinsic to sculpture. The course uses demonstrations and hands-on experiences -- primarily but not exclusively with metal and woodworking processes -- to show how such materials inform a studio practice. Lectures and techniques contextualize an understanding of preformed and found materials as formal and conceptual components that result in a final work of art. In a critical environment, students formulate their own material language and defend their art practice and creative decisions.
Credit 3 units. Art: FAAM EN: H
Typical periods offered: Fall, Spring

ART 3513 Sculpture: Art Practice (Symbiosis)
This course explores numerous scenarios that create different levels of sculptural interactivity from low to high tech. Students construct devices ranging from simple mechanisms to large-scale installations fostering physical, analogue or digital interaction between the viewer and the sculptural environment. Viewer-activated systems create multiple interactive platforms, initiating a responsive relationship between the sculpture and the viewer. Lectures, demonstrations and readings devise a broad understanding of the histories and potentials of symbiotic relationships between a work of art and its audience.
Credit 3 units. Art: CDES, FAAM EN: H

ART 3514 Sculpture: Art Practice (Itinerant Artworks)
Who said you can't take it with you? Itinerant Artworks is a course in which students create work in any medium that is built for travel (not speed) and that can be set up, knocked down, or installed in a variety of locations at a moment's notice. Students will document their work at a range of sites throughout St Louis. For the final project, the class will stage an off the grid outdoor exhibition in Forest Park. Typically, artworks are either site-specific or are agnostic to their placement and location. Itinerant Artworks proposes a third model, where an artwork can be mobile, responsive, and highly adaptable to various environments or sites. Itinerant Artworks is intended to be a response to the current condition for making and viewing art. Despite the unpredictable and ever-changing circumstances of this moment, you can take it with you.
Credit 3 units. Art: FAAM
Typical periods offered: Spring

ART 3531 Structural Ceramics
This course is designed for advancing study in 3D practices within clay processes and in sculpture. Several techniques in clay will be explored, and hand-building will be emphasized. Methods of creating will include coiling, slab building, casting, and subtractive modeling. In this course, we will understand and research clay as a material that engages in structure and introduces new sculptural ideas that define scale, balance, form, and so on. Surface design with cold finishes and glazes, firing processes, and mold making will be explored as means of building and finishing content. Discussions and presentations will focus on the history and contemporary traditions of ceramic structures and sculptures. Emphasis will be placed on the critical assessment and articulation of material.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 3533 Sculpture
Explores contemporary sculptural concepts and processes in various media, including latex, plaster, plastics, metal and wood fabrication, with empahsis on development of technical skills at whatever level of advancement is suited to the experience of the student.
Credit 6 units.

ART 3601 The Book as Lens: Photography and Books
This course will examine the function of the photograph in the sequential book format, with an emphasis on narrative development. The semester work will include researching historical photo books; experimentation with found photography; making an original photo series; alternative book structures; designing pages with photos and text; and alternative printmaking techniques on a wide variety of materials. This course is for designers, photographers, and anyone interested in the way photo books function.
Credit 3 units. Art: CDES, FADM EN: H

ART 3610 TBMA: Art Practice (Mediated Performance)
In this performance art studio, students explore the body as a medium of expression to create cinematic and sonic performance-based projects mediated through electronic or digital technology and performed or screened in public. Students make a series of conceptually rigorous and technically convincing artworks informed by individual research and readings in media theory. Collaborative, individual, political, and poetic performances, and happenings are encouraged. Prerequisites: Intro TBMA or TBMA Material + Culture or any Time-Based elective, or permission of the instructor.
Credit 3 units. Art: FAAM EN: H

ART 3611 TBMA: Art Practice (Sound Environments)
In this sound art studio, students compose a body of works in digital and acoustic sound for space or for headphones. Discussion of current sound art and experimental music practices includes examples of works that offer alternative experiences of space, historical time, and individual or collective memory. Individual projects, including acoustic performance, sound recording, and digital postproduction, are critiqued. Course activities include listening sessions, screenings, readings, and improvisation. Prerequisites: Intro TBMA or TBMA Material + Culture or any Time-Based elective, or permission of the instructor.
Credit 3 units. Art: CDES, FAAM
Typical periods offered: Fall, Spring

ART 3612 TBMA: Art Practice (Expanded Cinema)
In this experimental video art studio, students create a body of work in digital film/video, silent and with sound, created for space and for screen. Current and historical video art and experimental film practices are discussed. Studio projects are grouped under such themes as dream versus reality, film as an expansion of space and time, and sound as film. The course includes production and post-production techniques, screenings, readings, and indoor and outdoor filming.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

ART 3613 TBMA: Art Practice (New Media in Art)
In this new media studio, students explore the intersection of art and technology creating time-based new media works. Through the production and critique of time-based digital works, students learn about compositional choices, narrative and non-narrative strategies, and ethical and political responsibilities of media art making. Students gain advanced knowledge of digital tools as they pertain to their individually created artworks. This course includes readings, writing, and discussion of works by contemporary and historical time-based and media artists. Prerequisites: Intro TBMA or TBMA Material + Culture or any Time-Based elective, or permission of the instructor.
Credit 3 units. Art: CDES, FAAM
Typical periods offered: Spring

ART 3614 TBMA: Art Practice (Animation for Buildings)
In this animation studio, students create and are critiqued on projection-mapped animations that transform three-dimensional structures such as building exteriors and interior spaces. Through lectures, readings, and discussions, students are introduced to fundamental considerations that inform projection mapping-based creative work such as site-specificity and the perception of public space. This course introduces technical skills for popular 2D animation and projection mapping software. Prerequisites: Intro TBMA or TBMA Material + Culture or any Time-Based elective, or permission of the instructor.
Credit 3 units. Art: CDES, FAAM
Typical periods offered: Spring

ART 3626 Time-Based: Beyond Words, Beyond Images
Focusing on art in the public domain, this seminar examines contemporary practices that engage collective memory and the city, inviting students to consider their own studio practice in the context of public space. Students investigate examples of public projects contributing to global discourse. Weekly lectures, readings, screenings, discussions, and individual research inform the final paper. Studio consultations culminate in an individually conceived final project in a medium of choice.
Credit 3 units. Art: FAAM, VC
Typical periods offered: Fall

ART 3628 TBMA: Art Practice (Immersive Environments)
In this new media installation studio, students create artworks that incorporate forms of participatory art and/or immersive environments that enhance a viewer's perception of their body and heighten awareness of spatial relations. Key mechanisms and strategies include captivating visual phenomena and/or moving projections. This course explores the making and critique of installation artworks that use evolving technologies or time-based media to effect a viewer's awareness of their bodily presence.
Credit 3 units. Art: FAAM, FADM
Typical periods offered: Fall

ART 3630 Critical Theory for Artists: Texts & Contexts
As critical theory is ever more embedded in the dialogue of contemporary art, artists not only engage in theoretical arguments but help shape them. This course equips students with the language, background, and context to enter the theoretical arena and expand conceptual inquiry within their own practice. Readings include foundational philosophical, art historical, and contemporary critical texts, covering a wide variety of topics from deconstruction to spectatorship to gender performance, threaded through with the artist's voice as author, subject, and critic. This course is a reading and writing seminar, and requires discussion participation, presentations, and a final research paper.
Credit 3 units. Art: FAAM, VC
Typical periods offered: Fall, Spring

ART 3635 Time-Based: Art Practice (Phantom Bodies and Moving Pictures)
Phantom Bodies and Moving Pictures is a studio course that begins with a survey of media art from the '60s to the present. While Media Art histories developed alongside Art History, they remained distinct despite sharing common ground. In this course, students will produce time-based works using the software and technologies of their choice. Projects will reflect a consideration of the major concepts that define image and sound-based work. This course will also look at the ways in which time-based work is intertwined with the field of media archeology and various cultural practices from which evolving technologies emerged. Key theorists and media art historians will also be discussed.
Credit 3 units. Art: FAAM
Typical periods offered: Spring

ART 3720 Light, Color, and Installation: Stained Glass in Florence I
In this studio course, we will venture into the neighborhoods and piazzas of Florence to experience stained glass in situ, studying how the medium of glass and light has historically been used to inspire awe in architectural space. Back in the studio, we will use what we find as the foundation for our studio practice. We will think through how to harness the mediums of glass and light to adapt and respond to our surroundings- creating 2D and 3D objects that manipulate light and space. After developing foundational skills in soldering and glass cutting, we will expand into sculpture, using CAD digital tools to make patterns for the creation of glass works with complex geometry. Working between 2D and 3D forms, we will create installations that can be installed both in the gallery and in situ as temporary site interventions. This course has no prerequisites. This course counts as a Design Major elective or Art Practice elective for BFA, BA and second majors. This course counts toward the Minor in Art and the Minor in Design.
Credit 3 units. Art: FAAM, FADM
Typical periods offered: Summer

ART 3721 Light, Color, and Installation: Stained Glass in Florence II

In this studio course, we will venture into the neighborhoods and piazzas of Florence to experience stained glass in situ, studying how the medium of glass and light has historically been used to inspire awe in architectural space. Back in the studio, we will use what we find as the foundation for our studio practice. We will think through how to harness the mediums of glass and light to adapt and respond to our surroundings- creating 2D and 3D objects that manipulate light and space. After developing foundational skills in soldering and glass cutting, we will expand into sculpture, using CAD digital tools to make patterns for the creation of glass works with complex geometry. Working between 2D and 3D forms, we will create installations that can be installed both in the gallery and in situ as temporary site interventions. This course has no prerequisites. This course counts as a Sam Fox Elective for BFA, BA and second majors. This course counts toward the Minor in Art and the Minor in Design.

Credit 3 units. Art: FAAM, FADM

Typical periods offered: Summer

ART 3750 Site-Responsive: Art and Design Studio Practice in Florence

This course will help students develop a site-responsive studio practice in relationship to the cultural landscape of Florence. We will consider the unique identity of particular sites and structures, land use, and use our experiences on-location to inspire and frame ideas for our work. Open to students in all disciplines, participants will work both in the studio and on-site in the city. Practical and didactic learning will include a complement of methodologies: texts, lectures, films, demonstrations, site visits, field work, and travel to Venice and other sites outside of Florence. Students will develop a series of visual projects in art, design, or a hybrid of the two, through a series of prompts. Students may choose to use resources such as the on-site letterpress studio and the printmaking and photography facilities to explore a variety of art and design media. Ultimately, all students will have the power to make independent work that explores their own visual and media interests. Student will exhibit their work in Florence, and at an exhibition at Washington University in the fall semester. Open to all university undergraduates. No prior experience in art or design is required. Counts for two 3-credit studio elective courses in the BFA, BA, art and design second major and minor programs

Credit 6 units. Art: FAAM, FADM

ART 3751 Methods and Context II (Florence)

Required for BFA in Art majors. This team-taught course expands on methodologies encountered in Methods and Contexts I and related courses. Students are encouraged to take charge of their artistic process through faculty-supported and self-directed creative investigation. Through lectures, class discussions and critiques, students critically engage the evolving manner in which visual culture is produced and distributed. Students learn how to best present their work and incorporate discourse inherent to and generated by their practice. The goal of this course is to ensure a strong Capstone experience by helping students develop their artistic position within the public realm and contemporary contexts.

Credit 3 units. EN: H

ART 3752 Art Studio (Florence)

Art Practice and Methods & Contexts are linked pedagogically and conceptually in the Sam Fox curriculum. In Florence, the 2 courses will be merged into a broader 6-credit art studio course. The city of Florence today serves as a living, breathing museum that offers a glimpse into the materials and methods of its past, while offering a fertile ground for contemporary art practices that focus on critical investigation. In this course, students will engage a diverse set of art practices that operate between past and present, between the technical and conceptual, exploring the relationship between the Renaissance's reinterpretation of classicism and its revolutionary spirit that sparked innovation in the arts, sciences and society in general. Six hundred plus years later, students will examine artistic/visual conventions of the Renaissance and re-contextualize them to twenty-first century ideas and issues. Students will also integrate and synthesize knowledge resulting from Art Practice. Supported by lectures, discussions and critiques, the course will foster a creative environment and critical discourse surrounding artistic practices. Students are guided through the art-making process, from conceptualization to resolution, emphasizing experimentation with various methods of production and distribution. Students will be challenged to contextualize their own artistic interests within the contemporary art field by promoting critical analysis skills necessary for initiating, interpreting and evaluating artistic production. The course will make use of these myriad opportunities through field trips or site visits, lectures, technical demonstrations and readings that will supplement these investigations.

Credit 6 units.

Typical periods offered: Fall

ART 3753 Advanced Studio Practices (Florence)

In this advanced studio art course, students focus on learning what it means to be a contemporary artist. All art media may be used throughout the semester, though students may choose to concentrate on one medium if that is their chosen pathway. Professors introduce prompts to students as a means to encourage them to think conceptually about their work. Practitioners will ultimately be required to push their artwork to a high degree of resolution by assessing and contextually clarifying how their work addresses the contemporary artistic landscape. Studio work is augmented by readings meant to provide further investigative material in relation to cultural production. At the end of the semester, students are expected to have an understanding of what it means to be a working studio artist and to take this knowledge with them into the real world.

Credit 3 units.

Typical periods offered: Fall

ART 3754 Strategies: Working On Site (Florence)

Sketchbook in hand, how does one respond to the overwhelming complexity of a specific environment? There are multiple correct answers to this question. Many possible answers will be explored through specific exercises and open-ended assignments. Much of the studio's class time will be spent on location, exploring interior and exterior environments, and the transitional spaces between them. A specific sketchbook, purchased in Florence, will be required. Students will be able to work in a wide variety of media, including photography and digital.

Credit 3 units. Art: CDES

Typical periods offered: Spring

ART 3757 Drawing in Italy

In this course, students broaden their knowledge of the principal elements of drawing and explore their relevance to contemporary art practice. Through a series of structured exercises, they begin to locate themselves within an art historical context and to use this rich history as a field from which to draw inspiration for contemporary works. They conduct research in the museums, churches, piazzas, and markets of Florence and their sketchooks serve as visual documentation of their experiences, providing a resource for current and future works. Students investigate the practice of drawing as both a medium and a form of critical inquiry that can engage broader questions, from identity politics to social issues. Course requirements include drawing on-site, in class and independently; lectures and readings contextualize this work. Students are also required to complete a midterm and final project. Previous drawing experience is beneficial but not required.

Credit 6 units. EN: H
Typical periods offered: Summer

ART 3758 The Italian Renaissance in the City of Florence
The Early Renaissance - also known as the quattrocento - usually denotes the period from circa 1400 to circa 1500. In those 100 years, Italy, particularly Florence, witnessed an extraordinary coming together of artistic talent, a passionate interest in the art and culture of Greek and Roman antiquity, a fierce sense of civic pride and an optimistic belief in the classical concept of Man as the measure of all things. This course examines the principal artists who contributed to this cultural revolution. In order to take full advantage of the special experience of studying the renaissance in the very city of its birth, the stress is mainly, although not exclusively, on Florentine artists who include sculptors such as Donatello, Verrocchio, and Michelangelo, painters such as Giotto, Masaccio, Uccello, Botticelli, Leonardo, and Raphael; architects such as Brunelleschi and Alberti up to Sangalo.
Credit 3 units. Arch: RW Art: AH
Typical periods offered: Fall, Spring, Summer

ART 3759 Italian Language Workshop
Through this one-week workshop offered in partnership the Italian Language School Europass, students immerse themselves in the study of language while experiencing the complexity and active cultural, social, and artistic life of the Tuscan region. The workshop, based on the island of Elba, is open only to students enrolled in the two-month summer study abroad program and is geared toward students with little or no previous experience with the Italian language. Application deadline: February 15.
Credit 1 unit. EN: H
Typical periods offered: Summer

ART 3760 Performance Art (Florence)
The course is open to all students, ready to get involved in shared creative experience, to discover new expression means - neither dance or theatre talents nor athletic attitudes are required, but the availability to use body in warming up sessions will be necessary. This studio art course is dedicated to the aesthetics and the practice of performance. Although a studio course, there will be a strong theoretical aspect which aims to outline a historical and cultural framework that shows how performance art was born and traces how we comprehend the practice today. The aim of which is to better understand how this special, all-embracing art language will be understood in the future. Physical activities along with actions involving individual exploration of public space are fundamental to the creative process. Performance art needs bodies, it needs space, it needs action, it needs an audience. Students will come away from this course with a strong knowledge of these fundamental ideas.
Credit 3 units.

ART 3761 Painting in and Around Florence
Students will spend an intensive month painting in and around Florence. This course will provide daily opportunities for investigation of the city and a range of experience oil painting, from one-day sketches to more finished work. Students will work from direct observation, painting on a French easel and will spend the first day buying any necessary materials. Students will record their daily visual experiences of the city in oil sketches at Piazzas Signoria, Annuciata, Santo Spirito, San Marco, and Santa Croce. The class will investigate some of the city's famous sites including the Duomo, the Battistero, and set up along the Arno to paint the Ponte Vecchio. For a more panoramic approach, work will be done in the relative calm of the Boboli Gardens and Belvedere Fortress and San Miniato al Monte and Piazzale Michelangelo. Studens will also visit teagarden dei Semplici and the gardens at Villa Medicea di Castello. Trips to nearby towns of Fiesole and San Gimignano will offer a change of pace and an opportunity to paint the Tuscan landscape.
Credit 3 units.

ART 3762 Painting and Drawing in Italy
Experience working on-location in Florence and the surrounding region. Day trips to places such as Lucca, Settignano, Siena, Pisa and San Gimignano will allow students to develop a series of paintings and drawings based on subjects unique to Italy while discovering their own individual approach. Students will explore light-filled, natural landscapes/topographies as well as dense, urban environments overflowing with Renaissance art and architecture. Emphasis will be on transportable media such as watercolor. Students provide their own art supplies.
Credit 3 units.

ART 3763 Special Topics in Florence

Typical periods offered: Fall, Spring

ART 4110 Capstone Studio I
This is an advanced course in studio art conceptualization and production. Students develop creative concepts, objects, and gestures; successful completion of the course entails the development of, and commitment to, an artistic position, evidenced by studio production, presentation, and writing. Responsibilities include preparation of

drawings, models, maquettes, and other documentation. This course anticipates the work of Capstone Studio II, which culminates in a senior exhibition. This course includes practice, critique, and occasional museum/gallery visits.
Credit 3 units.
Typical periods offered: Fall

ART 4120 Capstone Studio II
Continuation of Capstone Studio I. Course participants design, prepare, and complete a body of materially and conceptually resolved work for the spring Capstone exhibition. The course fosters an intellectual dialogue among seniors making the transition from studio to artist. Completion of a body of work is accompanied by intensive critical analysis of the ideas and methods from which it arises. Course includes practice, critique, and occasional museum/gallery visits.
Credit 3 units. EN: H
Typical periods offered: Spring

ART 4851 Museum & Gallery Operations
This is a practicum for students to learn museum and gallery operations, including exhibition design and installation. Through workshops, field trips, and readings, this course addresses the logistics of running a museum or gallery. At the conclusion of the semester, students co-organize an exhibition at the Des Lee Gallery and give a presentation reflecting on their experience. Class sessions are supplemented with visits to local arts organizations with arts professionals. Students author weekly written responses to class topics and field trips and are assessed on their overall engagement in the course, skill acquisition, attendance, and writing.
Credit 3 units. Art: FAAM
Typical periods offered: Fall, Spring

Design

DESIGN 1001 Design Elective (First-Year)
1000-level elective in design.
Credit 9 units.
Typical periods offered: Fall, Spring, Summer

DESIGN 1110 Design Across Disciplines
The field of design is shifting from disciplines based on the items they produce (e.g., graphics, apparel, built environments) toward the design of strategies that may incorporate many designed elements. This requires a more cross-disciplinary approach, across both academic disciplines at large as well as disciplines of design. This course introduces students to core skills of strategic design through individual and group projects, readings, discussion and journaling. Students explore systems thinking, strategic framing, iteration and collaboration. We will discuss how designed things affect and are affected by the social systems around them.
Credit 3 units. Art: FADM EN: H

DESIGN 1210 Digital Studio
This course provides a robust introduction to creating in a digital landscape. Students learn how to solve visual problems using a range of digital tools. Projects explore ideas of visual narrative, two dimensional relationships, and motion using relevant digital imaging and graphics software. The course contextualizes these tools and associated techniques within a historical frame and considers the broader social impact.
Credit 3 units. Art: FAAM, FADM EN: H
Typical periods offered: Fall, Spring

DESIGN 1265 Visual Principles for the Screen
The demand for graphic literacy in contemporary culture is only increasing, redefining our need to understand how design functions and why. How can products and communication be crafted with the user in mind? How can design facilitate seamless, intuitive digital experiences? This studio course will address considerations for web, mobile, and other screen-based applications, including hierarchy, typography, iconography, layout, color, and image. This course is ideal for students seeking to learn fundamental graphic design and messaging principles and who want to produce robust, researched website and mobile application prototypes. Studio work will be supplemented by supporting lectures and readings.
Credit 3 units. Art: FADM EN: H
Typical periods offered: Fall, Spring

DESIGN 1404 Collage as Material Play
This studio course explores the diverse world of collage as a medium of creative expression. Lectures, demonstrations, workshops, and projects will cover the history, practice, tools, and techniques of collage. Students will be assessed on projects that use processes from printmaking, graphic design, textiles, and works on paper. Course content will build on 2-D and 3-D design principles to emphasize experimentation, layering, mixed media, and found materials. This course is open to students at all levels, including those with no experience in art and design.
Credit 3 units. Art: FAAM
Typical periods offered: Spring

DESIGN 1410 The Licensed Image: Development and Distribution
Same as F20 135G, 235G, 435G - Juniors (only) register for F20 335G. An introduction to the concept and image development, design, market distribution and methodology for creating licensed products. Projects will involve product idea development, market and the development of image-driven products using images and design. Traditional drawing skills not required. Students can work by hand or on the computer. Ideal course for students whose work focuses on images and those interested in developing visual products, including business students.
Credit 3 units. Art: FADM EN: H

DESIGN 1418 Making Comics
From hieroglyphics to newspapers, drawn pictures in sequence have told stories for thousands of years. This course is an introduction to writing and drawing short form comics. In readings and discussion, students will explore a wide variety of genres and visual approaches to comics. Through exercises and assignments students will learn how to make clear and evocative comics. All skill levels of drawing experience are acceptable.
Credit 3 units. Art: FADM

DESIGN 1421 Illustration Entrepreneur
In this course, students will create images appropriate for surface design application to products. Students will work toward developing icons and motifs using shape-based illustration, design, composition, hierarchy and thoughtfully considered color. Exploration will include visual content, artists, audiences, and trends in a fluid marketplace. Projects for this course will be in the applied context of gift and home decor markets, fabric design, stationery products, and toys. All skill levels of drawing and digital proficiency are welcome. This course is appropriate for art students whose work focuses on images/packages, design minors, and non-Sam Fox students interested in developing visual products.
Credit 3 units. Art: FADM

Typical periods offered: Fall, Spring

DESIGN 1502 Introduction to Animating in Three Dimensions
This course explores 3D animation in the short film format. Students move from an overview of the process and visual vocabulary of animation to defining filmic ideas, the visual gag, and character driven content. Cinematic shot design, timing, character design, and sound design are studied for determining the most effective means of communicating desired content. Hand drawn sketches are imported into a 3D animation program as the basis to model and animate characters, create settings, and add special effects. An animated sequence is produced to show evidence of personal inquiry and level of expertise. Prereq: F10 101 (Drawing) or equivalent or permission of instructor.
Credit 3 units. Art: FADM EN: H

DESIGN 1503 Animated Worlds
This course explores traditional and experimental 3D animation in a short film format. Beginning students will learn polygon and NURBS modeling, texturing, lighting, rigging props, and characters in Maya. A storyboard, animatic and final rendered short will be developed for two major projects. Advanced skill sets include development, character design, 3D modeling, rigging, visual effects, sound, and rendering.
Credit 3 units. Art: FADM
Typical periods offered: Fall, Spring

DESIGN 1504 Advanced Animation
This course focuses on completing a short animated film as a group project using a workflow similar to that used in the animated feature film industry. The class will first develop a story. Individuals will then be assigned tasks according to strong areas of interest to create a storyboard and an animatic. Key moments will be identified to be animated first. After a plan is agreed on, students will be able to choose to work in various parts of the pipeline, including character design; layout and set design; 3D modeling; rigging; animation; textures; special effects; sound; rendering; and editing. Finally, all of these parts are put together as a short. This is an advanced course that assumes some student experience with Maya or a similar 3D program; it is best suited for those who have already developed skills in any form of animation. Prerequisite: Introduction to Animating in Three Dimensions or permission of instructor.
Credit 3 units. Art: FADM EN: H

DESIGN 1551 Communication Design and Business
This course will provide an introduction to business communications in a visual environment. Subjects to be addressed include visual organization, introductory typography, basic identity development, message construction and business presentation development.
Credit 3 units. EN: H

DESIGN 1601 Letterpress & Book Arts: A Collaborative Affair
This course will take advantage of the best of the Illustrated Book Studio. Students will learn letterpress and other image-making techniques on the Vandercook proofing presses. Students will combine these skills with basic book structures to develop and oversee the production and completion of a project. Students will work collaboratively to explore theme, sequence, image and text. The class will culminate with the production of an editioned portfolio or bound book.
Credit 3 units.

DESIGN 1602 Introduction to Book Binding
This course will serve as an introduction to the book as an artifact of material culture. A variety of traditional and non-traditional book structures will be explored. Students will learn from historical approaches to constructing the codex form, including the single-signature pamphlet, the multi-signature case binding, the coptic, and the medieval long stitch. Students will learn Japanese binding and its many variations. Several contemporary variations will be introduced, including the tunnel, the flag book, the accordion, and the carousel. Students will explore the visual book using found imagery and photocopy transfers, and they will produce a variety of decorated papers to be used in their bindings.
Credit 3 units. Art: FADM EN: H
Typical periods offered: Fall, Spring

DESIGN 1603 Introduction to Letterpress Printing
This class will serve as an introduction to printing with the Vandercook handpress. Through a series of assignments students will learn a systematic approach to planning, arranging and printing type on a page. The students will receive a basic introduction to typography, history of letterforms, and history of the book. The mechanics of relief printing with the cylinder proof press, ink composition, and resolution of the typographic image will also be explored. As an exploration of the publishing process students will produce a chapbook of a short literary work. The class will primarily focus on typographic composition, but one assignment will employ a combination of word and image.
Credit 3 units. Art: FADM EN: H
Typical periods offered: Fall, Spring

DESIGN 2001 Design Elective (Sophomore)
2000-level elective in design.
Credit 9 units.
Typical periods offered: Fall, Spring, Summer

DESIGN 2201 Typography I
This course introduces the language and standards of typography. Through a series of exercises and projects, students explore type as a vehicle for conveying information and as an expressive and interpretive tool. This course introduces the language and standards of typography. Through a series of exercises and projects, students explore type as a vehicle for conveying information and as an expressive and interpretive tool. STUDENTS PURSUING THE BFA MAJOR IN COMMUNICATION DESIGN SHOULD PLAN TO TAKE THIS COURSE IN THE SPRING IN COMBINATION WITH WORD & IMAGE I. The fall offering is for students pursuing the BA Major in Design: Communication Concentration or the Second Major in Design: Communication Concentration. This course is an option for the Second Major in Design: No Concentration.
Credit 3 units. Art: FADM
Typical periods offered: Fall, Spring

DESIGN 2202 Typography and Letterform: The Design of Language
This course presents an investigation of the formal qualities of familiar objects: in this case, letters. This is an introductory course in design methodologies using letterforms as our area of exploration. Students explore the design strategies required to make individual forms into a family of types through exercises in tracing, drawing, letterpress printing, and collage. Particular emphasis will be devoted to the concept of modularity, including an assignment to design and print a modular typeface. This course may be counted as a sophomore BFA in Communication Design major elective, and it is open to non-majors and minors as space permits.
Credit 3 units. Art: CDES, FADM EN: H
Typical periods offered: Fall, Spring

DESIGN 2203 Word and Image I
This course centers on the creation of word-image relationships. It focuses on intensive visual methodology and clear communication. Students make illustrations, explore typography, and bring visual elements together into a unified whole. Projects take the form of posters, image sets, books, icons, maps, labels, infographics, etc. As the course progresses, the student works to narrow his or her focus within the field of visual communications by selecting particular projects from a suite of offerings. Required in the sophomore year for students pursuing the BFA major in Communication Design. This course is required for students pursuing the BA major in Design: Communication Concentration or the 2nd-major in Design: Communication Concentration. This course is a major option for the 2nd-major in Design.
Credit 3 units. Art: FADM EN: H
Typical periods offered: Fall, Spring

DESIGN 2205 Reading and Making Comics
In this course we will explore how comics work through reading and making. Mixing seminar-style reading and study with studio projects, students will examine the elements of comics, think about how comics function, and read examples of groundbreaking comics by diverse artists. Students will also put theory into practice, creating a group of short comics over the course of the semester. Course readings will serve as jumping-off points for students' own comics, with all texts to be provided by the instructor. This course is open to students of all experience levels, including those with no drawing experience.
Credit 3 units.
Typical periods offered: Fall

DESIGN 2216 Communication Design I
An introduction to the field of communication design, combining principles from the fields of graphic design, advertising and illustration/image construction. Through studio exercises and lectures, students will be exposed to the broad range of conceptual, aesthetic and strategic issues inherent to the field. Additionally, the similarities, differences and points of overlap within the three areas will be discussed. An excellent introduction to the subject as a tool for business and marketing.
Credit 3 units. Art: FADM EN: H

DESIGN 2217 Communication Design II
Same as F20 236K, 336K, 436K. First-year students (only) register for F20 136K. Building on the fundamentals of Communication Design I, this course will offer students the opportunity solve more complex visual communication problems. Information design (explanatory graphs and charts), multi-page sequences (book/magazine design) and persuasion (advertising/propaganda) will be some of the topics covered. Various methodologies for defining problems, generating ideas, exploring possible visual solutions and evaluating work-in-progress and finished designs from the previous course, will be reinforced. This course will introduce students to a range of media, including digital and alternative forms. Emphasis will be placed on finding visually compelling solutions, no matter the media. The computer will be used as a tool to assemble and refine. Students will be encouraged to use online tutorials to augment in class instruction. Prerequisites: Communication Design I.
Credit 3 units. Art: FADM EN: H
Typical periods offered: Fall

DESIGN 2258 Interaction Design: Understanding Health and Well-Being
Through a blend of presentations from practitioners, classroom lectures, readings, discussions, and hands-on exercises, this course will engage principles and methods of interaction design within the context of health challenges. Broadly defined, interaction design is the practice of designing products, environments, systems, and services with a focus on behavior and user experience. We will take on an in-depth challenge in the area of health and well-being and work in cross-disciplinary design teams with an external partner organization. Students will gain experience in planning and executing a human-centered design process that features research, ideation, synthesis, concept development, prototypes, and a final presentation, which may include visual design, animation, and sound. Students will work in teams to develop several intermediate project deliverables, such as prototypes and sketches. No prior course work is necessary, although experience with Adobe Photoshop, Illustrator, and InDesign is helpful.
Credit 3 units. Art: CPSC, FADM EN: H
Typical periods offered: Fall, Spring

DESIGN 2310 Design in Social Systems
This multidisciplinary seminar course will cover historical and contemporary contexts of socially engaged work within art and design disciplines. Students will explore various processes that artists and designers use to address, influence, and inspire change around systemic social issues. In addition, through in-class collaborative workshops, students will apply a systems thinking approach to a select number of real-world social issues in order to gain a better understanding of how these issues are shaped by policies and individual experiences. This course will also include a final group project completed in partnership with a local community-based organization in which students will apply creative-problem solving processes, such as human-centered design, equity-centered design, design activism, and social justice to arrive at collective impact. Models of social change from other disciplines -- such as social entrepreneurship and innovation, non-profit models, and public-interest design -- will be featured through guest lectures, field trips to community-based organizations, case studies, readings and written reflections.
Credit 3 units. Art: CPSC
Typical periods offered: Fall, Spring

DESIGN 2402 Pictures for Communication
Students investigate the realm of functional pictures through pictograms, comic strips, visual metaphors and narratives. Each project focuses on a particular aspect of conceptual and formal clarity. Significant attention is paid to aesthetics. Students use a variety of media, including the Adobe suite.
Credit 3 units. Art: CDES, FADM EN: H
Typical periods offered: Fall, Spring

DESIGN 2403 Image and Meaning
This course explores the use of digital imagery in contemporary design practice through a range of analog and digital experimentation. Using a variety of methods from basic printmaking to emerging technologies, students will complete a series of image-making investigations. The study of both hand and computer-based approaches provides an opportunity to work beyond the constraints of the screen and build an understanding of how imagery can be used to enhance visuals, communicate ideas and convey meaning. No prerequisites. This course may be counted as a sophomore BFA in Communication Design major elective. This course is open to non-majors and minors as space permits.
Credit 3 units. Art: FADM
Typical periods offered: Fall

DESIGN 2405 Image Making for Graphic Design
This course explores the use of photographic imagery in contemporary design practice through a range of analog and digital experimentation.Using a variety of methods, students will complete a series of image making investigations. The study of both hand and computer based approaches provides an opportunity to work beyond the constraints of the screen and build an understanding of how imagery can be used to enhance visuals, communicate ideas and convey meaning. This course also explores the use of digital imaging applications. Topics such as image correction and manipulation, resolution and color and production practices will be covered. Students will become familiar with the tools and creative capabilities of the software. This class will utilize lecture, demonstration, discussion, and hands-on learning assignments.
Credit 3 units. Art: CDES, FADM
Typical periods offered: Fall, Spring

DESIGN 2414 Visualizing Literature: Texture/Structure
This course examines the intersection of literary writing and the visualizationof language. It challenges students to function as reader-designers, to develop new relationships between the written word and the seen word. Drawing on reading literary works, students complete 4-5 studio and writing projects in which they employ typographic methods to amplify the power of words, express personal stories through writing, and visualize narrativestructures in fiction and non-fiction. All projects are assessed through critique. No previous experience necessary.
Credit 3 units. Art: FADM

DESIGN 2506 Digital Game Design
Designing a digital game that is both entertaining and usable requires understanding principles of user interface, game theory, and visual design. In this course, students will be introduced to basic game design strategy and practice in the development of their own game projects. Using both paper and the digital screen as canvases for design, students will explore gameplay iterations and create visual components. No prior experience in visual design, coding, or digital games is necessary.
Credit 3 units. Art: FADM
Typical periods offered: Fall, Spring

DESIGN 2605 Zines as Critical Practice
In this studio, students develop zines as a vehicle for creative research. Zines (short for 'fanzines') are short, experimental DIY publications made in small editions. Project-based assignments introduce students to the history and political practice of zine-making while exploring a number of visual themes, editorial approaches, and studio processes that may include risograph printing and other hands-on methods for reproduction. Students will engage with WashU special collections, such as the Dowd Illustration Research Archive and TL;DR Zine Archive.
Credit 3 units. Art: FADM
Typical periods offered: Spring

DESIGN 3001 Design Elective (Junior)
3000-level elective in design.
Credit 9 units.
Typical periods offered: Fall, Spring, Summer

DESIGN 3143 Analog Media for Illustration
This studio course explores analog (non-digital) mixed-media and its usage in contemporary illustration practice. Students will explore a variety of hands-on media such as pen and ink, brush and ink, watercolor, gouache, acrylic, monotype printmaking, cut paper, collage, and an assortment of drawing materials. Demonstrations will be given for each media assigned, including lectures on artists and illustrators pertaining to each new material. Students will be assessed on their comprehension of media through the execution of individual assignments. At the conclusion of the semester, students will be well-versed in analog media and equipped to navigate their own artistic development.
Credit 3 units.
Typical periods offered: Spring

DESIGN 3160 Reading Pictures: Illustration History
This course will explore illustration as a cultural practice interwoven with writing, printing, publishing, and design in North America, Europe, and East Asia from the early modern period with emphasis on the 19th and 20th centuries. Topics will include vernacular languages and the rise of reading, verbal and pictorial competition and complementarity, industrial image production and associated labor systems, the interdependence of illustration and photography, and illustration as a participant in the histories of race and gender as well as a marker of cultural memory. Course work includes lectures, discussions, and hands on work with Rare Books and DIRA materials in the department of Special Collections.
Credit 3 units.
Typical periods offered: Fall

DESIGN 3201 Typeface Design
Typeface design deals with language, culture, technology, visual perception, and systems design. Students will explore these areas in addition to the basics of typeface design. They will define clear purposes and outcomes for their work including research, designing letterforms and spacing, and creating functional fonts with professional software. The course introduces concepts, technologies, and current issues in the field. We will focus on text and display typefaces for the Latin script; however, we will introduce a range of historical models and explore the cultural impacts typefaces can have. Software used is Mac only, lab computers will be available if student does not have access to a Mac laptop. Prerequisites: Digital Studio and Type 1
Credit 3 units. Art: CDES, FADM
Typical periods offered: Spring

DESIGN 3202 Communication Design: Typography II
This course builds on the typographic principles introduced in Typography I (DESIGN 2201). Students generate typographic systems and expressions relevant to professional practice.
Credit 3 units. Art: FADM EN: H
Typical periods offered: Fall

DESIGN 3203 Communication Design: Word & Image II
This course continues Word & Image I (F10 238B), presenting design and illustration projects simultaneously. It focuses on methodologies for a range of problems. It emphasizes the development of content, illustration, typography, sequential narrative and information design. Students are expected to become self-directed about their synthesis of word and image and select an area of emphasis within design and illustration for deeper study.
Credit 3 units. Art: FADM EN: H
Typical periods offered: Fall

DESIGN 3204 Comm. Design: Experimental Typography
In this studio course, students will learn to challenge typography's role as a tool for communication through alternative methods in mark-making and redefining what or how it is communicated. The course will introduce material exploration, emerging software/technology, and sensory/spatial considerations while challenging the purpose of type. It

will be organized into multiple units, each with a different opportunity for the student to explore new methods. Students will apply their own areas of disciplinary expertise to the final project. Students will need a laptop and may need to acquire inexpensive or free software. This course is appropriate for juniors through graduate students with or without visual training who are interested in typography, communication, visual expression, and computer programming.
Credit 3 units. Art: CDES, FADM EN: H
Typical periods offered: Fall, Spring

DESIGN 3207 Communication Design: Curation, Collection, and the Archive
This course investigates forms of design media outside of the digital screen. Students explore the presentation and organization of complex visual, material, and text-based information by analyzing the design of physical and virtual environments. Students examine how design considerations such as dimension, scale, sequence, time, movement, color, and material influence the manner in which people understand content.
Credit 3 units. Art: CDES, FADM

DESIGN 3208 Type in Action: Multimedia Typography
Typography is a medium that can carry meaningful and complex communicative weight, and it affords designers with endless opportunities to engage others and to invite interpretation. In this form-making course rooted in typography, students will seek to manipulate and enact letterforms to create projects that communicate narrative in new and inventive ways -- breaking rules, scaling things up, using a range of materials, and making things move. Projects will span a range of formats, with the course serving as a catalyst for investigation of the myriad ways that letterforms, typography, and language can function as a provocative, interaction, platform, installation, image, and more. An openness to materiality, play, and experimentation is essential. Prerequisites: Digital Design, Typography I+II, or permission of instructor.
Credit 3 units. Art: CDES, FADM EN: H
Typical periods offered: Spring

DESIGN 3212 Multilingual Type
In an interwoven world, engaging multiple languages in shared surfaces and spaces is essential to communication. How do we design for audiences with varied backgrounds and fluencies? How can designers navigate visual and conceptual balance? This studio course engages type-driven, multilingual projects, inviting the opportunities, questions, negotiations and challenges that arise. Studio projects are grounded in conversations about visual hierarchy, density, and texture, reading direction, sequence, identity as it relates to language, and designing for a multilingual audience. Learning is bolstered by lectures, readings, and writing exercises. Students do not need to know a second language.
Credit 3 units. Art: CDES, FADM
Typical periods offered: Spring

DESIGN 3218 Illustrated Typography
In this studio course, students learn to create drawn letterforms using various methods. Projects challenge students to build on prior experience with digital type to create illustrated lettering for editorial, persuasive, and narrative contexts. Students will explore the anatomy of letterforms, contemporary and historical practices for drawing typography, and diverse media (digital and analog). Students will be evaluated on formal and conceptual clarity, depth of investment, and participation in critique.
Credit 3 units. Art: FADM
Typical periods offered: Spring

DESIGN 3250 Interaction Design: User-Centered Applications
This course is a hands-on application of interaction design for digital media (primarily browser-based). We will explore how user-interaction adds bi-directionality to communication, examine the intricacies of seemingly simple digital interactions, and familiarize ourselves with the attributes of digital device as 'canvas'. We will work both independently and collaboratively to design interactive solutions for a selection of communication challenges. Our focus will be to learn by doing: first-hand experience gained while undertaking real-world projects will provide the context and framework for discussion and instruction. Project work will likely be (but not required to be) accomplished with tools available in the Adobe Creative Suite: Adobe Dreamweaver, Adobe Illustrator, and Adobe Photoshop. Web browsers on both desktop computers and mobile devices will also be used extensively. No prerequisites. This course is appropriate for seniors in the Communication Design major.
Credit 3 units. Art: CDES, FADM
Typical periods offered: Spring

DESIGN 3251 Interaction: Non-Linear Narrative
This is an advanced interaction major elective exploring the experiential and occupiable nature of the internet. Through studio projects, reading discussions, workshops, and exercises students will explore the theoretical premise that defines the physical reality of internet, investigate the structural hierarchy of how it works, and investigate new ways of developing/working with databases and navigating through complex content. Work in this course could be browser-based but may also have physical components including artifacts, books, and exhibitions.
Credit 3 units. Art: CDES, FADM

DESIGN 3253 Advanced Interaction Design
This course emphasizes immersive and multisensory user experiences in complex structural applications for a range of devices and contexts. Students will creatively apply advanced concepts in html, css, and javascript in the development of delightful and adaptable user experiences. Through studio projects, critiques, readings, discussions, and lectures, students will build on foundational knowledge in creative coding. They will explore new tools, languages, and processes as well as enhanced forms of user research, usability testing, and experience architecture.
Credit 3 units. Art: CDES, FADM
Typical periods offered: Spring

DESIGN 3254 Communication Design: Interaction Foundations
This course is a hands-on application of interaction design for digital media (primarily browser-based). Participants will learn and apply the fundamentals of HTML and CSS, explore how user interaction adds bidirectionality to communication, examine the intricacies of seemingly simple digital interactions, and become familiar with the attributes of digital device as canvas. Students will work both independently and collaboratively to design interactive solutions for a selection of communication challenges.
Credit 3 units. Art: FADM EN: H
Typical periods offered: Fall, Spring

DESIGN 3255 Comm. Design: Interaction Design II
The class will explore designing usable, useful, and desirable relationships and interactions between people and the digital products and services they use. Students are introduced to human-centered research methods in the context of designing screen-based experiences. Small ethnographic field projects build to inform the basis for idea generation and prototyping concepts. Students then synthesize insights to design a digital solution. The class has a series of smaller exercises that build to two larger design projects with an

overarching theme of public health or sustainability. Graphic design and typographic fundamentals will be addressed throughout in the context of interaction. Class time will be mixture of lectures, in class exercises, and studio based work. Students will need a laptop with Adobe Illustrator, InDesign and Photoshop and moderate experience with these programs.
Credit 3 units. EN: H

DESIGN 3259 Interaction Design: Applications for Public Health
Through a blend of presentations from practitioners, classroom lectures, readings, discussions, and hands-on exercises, this course will engage principles and methods of interaction design within the context of health challenges. Broadly defined, interaction design is the practice of designing products, environments, systems, and services with a focus on behavior and user experience. We will take on an in-depth challenge in an area such as transportation or community health resources and work in cross-disciplinary design teams with an external partner organization. Students will gain experience in planning and executing a human-centered design process featuring research, ideation, synthesis, concept development, prototypes, and a final presentation, which may include visual design, animation, and sound. Students will work in teams to develop several intermediate project deliverables, such as prototypes and sketches. No prior course work is necessary, although experience with Adobe Photoshop, Illustrator, and InDesign is helpful.
Credit 3 units. EN: H

DESIGN 3260 UX Research Methods for Design
User experience research can make or break a design. It is an essential way to better understand whether and how a given design meets intended needs and outcomes. This studio course explores the foundations of user research appropriate for digital and analog products. Through projects, discussions, and readings, students will build an understanding of the role of research in interface design. Students will practice research methods including interviews, surveys, contextual inquiry, peer analysis, and heat mapping. Students will create artifacts that contextualize research within the broader UX design process, including personas, journey maps, user flows, and low-fidelity prototypes.
Credit 3 units. Art: CDES, FADM EN: H
Typical periods offered: Fall, Spring

DESIGN 3300 Designing for Businesses
In this seminar course, students will explore the role of design within global enterprises including business objectives, organizational models, career frameworks, design leadership roles, and success metrics. Businesses recognize design as a powerful driver and differentiator, and make major investments by hiring skilled designers and building internal design teams. How design is applied, integrated and organized in these companies varies depending on scale, scope, industry, region, and other factors. Through lectures, readings, projects, and presentations, students will learn the fundamentals of how design provides value for businesses. Students will author written and visual responses to class topics and are assessed on their engagement in the course, skill acquisition, and completion of assignments.
Credit 3 units.
Typical periods offered: Spring

DESIGN 3301 Design & Research
Design research can have many meanings: learning about user needs in order to improve the design of our tools and services; designing things that enable us to learn about people and our relationship with the world around us; or even researching the process and meaning of design as a practice.This course will combine studio- and seminar-style learning to broadly explore three modes of design research: exploratory, learning about people's needs in order to frame a design brief; evaluative, using sketches and prototypes to learn about and improve an idea; and speculative, creating artifacts from fictional societies in order to question our basic structures and systems. Each component will involve readings, lectures, case studies, written reflections and exercises to be applied to an ongoing team project, enabling students to think critically about each practice while experimenting with its methods. Throughout, students will present their findings, translating research into design briefs and calls for action.
Credit 3 units. Art: CDES, CPSC, FADM

DESIGN 3302 Conditional Design
New technology changes the way we receive, consume, and interact with information. Making work that can adapt to its context, environment, and user's preferences is a vital skill for artists and designers. This studio course explores the design and development of adaptive design systems to generate customizable and variable outputs. Through projects, readings, presentations, and discussions, students explore the use of procedural process, logic, and variable input to generate forms and experiences in both physical and digital space. Projects will cover traditional and digital mediums ranging from generative books and posters to interactive websites and performative experiences. Prerequisite: Communication Design: Interaction Foundations or Introduction to Computer Science.
Credit 3 units. Art: CDES, FADM
Typical periods offered: Fall, Spring

DESIGN 3303 Content to Cover: The Design of Books
This studio course considers the design and poetics of books in their totality. Projects engage in depth with book pacing and sequence, page composition, typographic detail, images, and construction. Assignments invite students to interrogate the book form and explore its materiality and object quality. Coursework addresses print production, binding methods in industry, and bookbinding techniques. Visits to two campus library special collections, a research assignment, relevant readings and discussion will guide students in building a critical book design vocabulary. Work will be evaluated based on participation, process, conceptual thinking, visual application to form, and craft.
Credit 3 units. Art: CDES, FADM EN: H
Typical periods offered: Fall, Spring

DESIGN 3304 Integrated Design Projects
In this interdisciplinary studio, BA and Second major students in Communication Design will develop design projects linking to another field of study (e.g.: anthropology, literature, biology). Students will think critically about elements of visual design, design process, and design thinking by framing independent projects, developing content, writing, and iterating. Topics will include audience, relevance, design process, and craft. Students will yield several portfolio projects articulating their areas of emerging skill and voice. Appropriate for juniors and seniors who, nearing the completion of their major, want a synthesizing experience to position their post-college future.
Credit 3 units.
Typical periods offered: Fall, Spring

DESIGN 3307 Graphic Design History
This course introduces students to the histories of graphic design from the development of ancient writing systems to the advent of digital graphics software. In lectures and discussion, students will ask how graphic design as a profession has been shaped by political, social, and technological change. Grounding our sweeping survey will be close analyses of graphical artifacts in archives, museums, and

everyday objects. Students will learn methods of archival research through hands-on examination of a wide range of graphic artifacts (from papyrus to phone screens) and hone their skills as design critics through regular writing exercises.
Credit 3 units. Art: FADM, VC
Typical periods offered: Fall, Spring

DESIGN 3308 African American Design History
This course surveys African American contributions to the design arts and professions from 1619 to now, from media of print and textiles to ceramics and architecture, from the scale of community crafts and protest to corporate business enterprise and mass social movements, from the diaspora to outer space. African American history not only offers a critical perspective on design history but also challenges us to reconsider what design is and what it can do as a medium of cultural expression, social transformation, and political change. While learning this history via lectures, readings, and hands-on archival research, students will develop their own artifact-based public history project. No prerequisite
Credit 3 units. Art: VC

DESIGN 3309 Race and Design
This seminar introduces students to the relationship between race and design in history, theory, and practice. How have racial ideologies shaped the formation of design? How has design mediated the reproduction of racial ideologies across time, space, and social forms? While tracing the tangled history of race and design, we will engage current critical writing and design practices. Topics include: material cultures of slavery and racial capitalism; racism in the design industry; racial politics of modernism; architectures of incarceration and surveillance; and antiracist practices. Students will develop their own perspective on these issues through site visits and a final research project.
Credit 3 units. Art: VC
Typical periods offered: Fall, Spring

DESIGN 3310 Readings in Design: Work and Industry
What is a designer? An artist, or an entrepreneur? A professional, or a worker? A maker of things, or an administrator of systems? A community leader, or agent of capitalism? In this seminar, we will explore recent writing by design scholars and design practitioners who are, in different ways, asking about the role of designers in society. While learning the histories and theories guiding current debates, the course offers a space for students to reflect critically on the present and future of the design professions in discussion, weekly writing exercises, and a semester-long research project.
Credit 3 units. Art: VC
Typical periods offered: Spring

DESIGN 3402 Panel By Panel: Narrative Comics
Comics are a medium with a long history. The desire to tell a story through a sequence of images has existed since humans began drawing and documenting. This course teaches students to create comics, with both fiction and nonfiction narratives. Students will be introduced to historic and contemporary examples of comics over the course of the semester. Through assignments and in-class workshops, students will learn the basics of making comics, including panel transitions, the relationship between words and pictures, pitching a concept, breaking a plot down into a script, production. Assignments will span a range of narrative lengths; exploration of digital and print formats is encouraged.
Credit 3 units. Art: CDES, FADM
Typical periods offered: Spring

DESIGN 3403 Visual Journalism and Reportage Drawing
This course combines studio practice, work in the field, subject reporting and nonfiction writing to explore a rich tradition that dates to the mid-19th century. The special artists who reported on the American Civil War, the urban observers of the Ashcan School and the New Journalism illustrators of the 1950s, 60s and 70s brought vision and force to their work as reporters. Today, the reportage tradition is being re-invigorated in online outlets and periodicals. Students will produce a series of works documenting observations of contemporary people, sites and events, culminating in a zine designed for print and/or a digital slideshow with supporting text. This course will provide plentiful drawing experience. Supplemented by historical material in the collections of the Modern Graphic History Library. This course is appropriate for juniors in the Communication Design major. (Students with an interest in visual journalism grounded in street photography and visually engaged writers may be admitted to the course by permission of instructor.)
Credit 3 units. Art: CDES, FADM

DESIGN 3404 Illustration as Practice
This major studio elective focuses on the professional practice of conceptual illustration while enabling students to cultivate individual voice. We practice the methodology of creating visual metaphors, visualizing concise ideas, and working under short deadlines. Projects in this course cover a range of image making in the professional illustration world today, including editorial, portraiture, lettering, and lifestyle, as well as art direction. Students continue to develop their portfolio in the context of these projects and to learn about best practices in communication, pricing, and workflow. Students will be assessed on their projects in a final critique. Prerequisite: F10 337E, Word & Image II.
Credit 3 units. Art: CDES, FADM
Typical periods offered: Spring

DESIGN 3406 Illustration for Games
How must a drawing be constructed, both formally and narratively, to function inside of a game? This course, which is intended for image-makers, will concentrate on the assets and aesthetics of game design. Students will engage the subjects of character development, 8-bit graphics, user interface, simple animations, and background design. Beginning with foundational questions of how and why we play games, students will create their own images, which will be built upon exploratory research into existing games and frameworks.
Credit 3 units. Art: FADM
Typical periods offered: Spring

DESIGN 3408 The Narrative Image: Form/Structure/Function
All human cultures tell stories, and these narratives fulfill multiple roles in establishing meaning for a society. This course will examine the ways that a visual narrative can be approached. How can an image-based story be structured? What roles can point of view play? What are stylistic tropes for narratives? How can ideas be implied? In what ways can we refresh and retell well-known narratives? Students may elect to work in multiple media and in single or sequential narratives. A self-directed final project will be required.
Credit 3 units. Art: CDES, FADM
Typical periods offered: Spring

DESIGN 3409 Programming Design
In what unconscious ways do your design tools influence your work? Would your work look different if you made all of the tools used to create it? What will design look like when machine learning automates many design tasks? How will you adapt when your software changes? What does design look like when you are building systems to create outcomes? How do you design for different contexts at the same

time from the same content? What would computer-aided design iteration look like? These are all questions that students may confront in their careers as designers. This course will explore these questions through in-class demos, solo and group projects, readings, and talks from practitioners in the field. The class will teach students the Python programming language, which will be used in the free DrawBot application for MacOS and with the PageBot code library to create design applications and tools. Students will learn how to think systematically about design, how to work in teams, rapid iteration using the computer, sketching, the design of software applications, how to translate digital experiences to analog (and vice versa), and how to learn from failure. The course assumes no prior experience with programming and no knowledge of Python. Open to junior and senior students, with preference given to communication design majors and minors. This course is experimental and team-driven. Students must be fundamentally curious and willing community participants who are capable of self-learning and tolerant of failure. Prerequisites: Word & Image 1, Typography 1, and Digital Studio.
Credit 3 units. Art: CDES, FADM
Typical periods offered: Spring

DESIGN 3410 Storytelling Across Multiple Media
This interdisciplinary course addresses how the elements of a single visual and textual narrative are distributed across multiple traditional and digital media platforms to form a unified and cohesive entertainment or branding experience. Assignments will challenge students to examine the specific attributes of each medium to determine its role in the greater experience. Students will work in small teams to coordinate and execute media integration per their individual disciplines, skill sets and areas of interest. Students will learn how storytelling across multiple media can expand the market for an intellectual property, provide various points of entry for different audience segments, and heighten audience participation, interaction, understanding and engagement in the content. Prerequisites: Word + Image II or Type II.
Credit 3 units. Art: CDES, FADM EN: H
Typical periods offered: Spring

DESIGN 3415 Visualizing the Data of Place
What makes a place a place? This course explores physical and human aspects of place through the lens of data visualization. Studio and writing projects challenge students to consider the places that mean the most to them, and how corresponding data can be visualized to tell meaningful stories. Depending on student interest, particular topics could include topography, climate, color, water levels, green space, economic equity, and public infrastructure. Readings are in cartography, information design, and site-specific history. The course's 3-5 projects span print and digital delivery. Open to any university student, sophomore and above, interested in the display of data for impact.
Credit 3 units.
Typical periods offered: Fall

DESIGN 3420 Narrative Art of the Picturebook
For over 300 years, picture books have depicted everything from morals to dreams. This wide variety in content has yielded diverse graphic approaches with a common commitment to narrative pictures. This studio course will interrogate the picture book as the confluence of writing, image-making, and design. Students will explore the mechanics of a picture book, with a particular focus on word-image relationships and page design. Critical readings and a visit to the Dowd Illustration Research Archive will provide a contextual framework. Students will complete several short studio projects and creative writing assignments as well as execute a picture book pitch over the course of the semester.
Credit 3 units. Art: FADM
Typical periods offered: Spring

DESIGN 3501 Motion Graphics for Designers
This course offers a route to learning theories, techniques and principles of motion graphics that builds on the fundamentals of graphic design. Areas of focus will include careful deployment and control of image, color, text, tone, pacing and editing. Students will capture, generate and manipulate audiovisual material. Various tools and methodologies for making time-based media will be introduced, such as animation, creative coding, filmmaking and sound editing. Experimentation is encouraged.
Credit 3 units. Art: CDES, FADM
Typical periods offered: Fall, Spring

DESIGN 3507 Animating Illustration
Adding motion to an illustration both complicates and expands its potential for storytelling. This studio course develops creative methods for animation-based illustration and explores contemporary techniques in the field of motion design. We will cover the fundamentals of animation production, working both independently and collaboratively on animation. Skills we will explore include expressive character animation and design, storyboarding, keyframing, and file setup. Contemporary and traditional techniques will be covered. We watch animation, talk to working animators, and discuss relevant topics in animation theory.
Credit 3 units. Art: CDES, FADM
Typical periods offered: Fall, Spring

DESIGN 3508 Game Design Principles & Practice
In this studio course, students are introduced to basic principles, practices, and strategies for developing non-digital games with a focus on prototyping game design concepts around familiar materials such as cards, dice, and game tokens. Students explore narrative and visual design in this process and consider how playtesting and player feedback informs their work. This practice-based approach is supplemented with lectures, readings, and discussions about fundamental theories. Students complete the course having created a series of small scale prototypes. Evaluation is based on their ability to successfully apply course concepts to projects and class participation.
Credit 3 units. Art: FADM
Typical periods offered: Fall, Spring

DESIGN 3550 Branding & Identity
Students will learn about brands as 1) identity; a shorthand for a company or product, 2) as an image; where an individual perceives a brand as representing a particular reality, and 3) as a relationship; where an individual reflects an experience through a product or service. To learn from their research, students will concept, design, and implement a brand, challenging them to realize the full breadth of a brand's reach.
Credit 3 units. Art: CDES, FADM
Typical periods offered: Spring

DESIGN 3604 Designing Creative Non-Fiction
This writing and studio course explores the creation of non-fiction stories and essays through the integration of words and visual material. Students will write several pieces, and create typographic, information design, and other visual responses to their words. Projects will take the form of digital and printed books, posters, and animatics, and will be evaluated for writing and voice, visual material, and design. This course is ideal for students who have experience or interest in non-fiction storytelling and journalism through writing, typography, data visualization, graphic design, photography, or illustration.
Credit 3 units. Art: FADM

Typical periods offered: Spring

DESIGN 3750 Methods: Verbal to Visual (Florence)
Do different types of text and their meanings require different approaches for image making? Maybe. A variety of different texts will be assigned, each accompanied by a different image-making methodology. There will also be a variety of applications for the resulting images. Students will be able to explore a wide range of media, and image making. The goal is to assist students in understanding and developing their own approaches to this complex process.
Credit 3 units. Art: CDES EN: H
Typical periods offered: Spring

DESIGN 3751 Experimental Typography (Florence)
Spanning the spectrum between informational and poetic, type design and typography work is a medium unto itself, as one might view painting and sculpture. In this course, we will engage closely, experimentally, and rigorously with typography as medium. This course is a space for experimentation, research, and invention. Building on the fundamentals of typography, coursework will set varied scenarios for rigorous and exploration of typography as form, emphasizing generative processes. Projects will engage with materality, format, scale, motion, hybridity, legibility, and expression.
Credit 3 units. Art: CDES EN: H

DESIGN 3754 Structure of the Visual Book
This course will examine the book as the ultimate multi-media experience. What will result is a kind of personal catalogue of your visual experience of Florence and Italy. The class will explore up to 10 different book structures, all of which have an effect on how one thinks about the information the book holds. Students will also investigate the role it plays in making art, especially in the Italian tradition.
Credit 3 units.
Typical periods offered: Spring

DESIGN 3756 Making Meaning (Florence)
As you transition into a new culture and environment, there lies an opportunity to acutely examine shifts in behavior, emotion, expectation, and perspective - both within yourself as well as amongst your classmates. This shared (yet diverse) experience makes for a great opportunity to flex your empathy muscles. To better understand this, each of you will be 'the designer' as well as 'the audience'; investigating ways to help each other live in a new culture.
Credit 3 units. Art: CDES
Typical periods offered: Spring

DESIGN 3850 Signs of the City (Florence)
This studio course is dedicated to the exploration of typography's multifaceted potential, from ideation to practical application, fostering innovative typographic solutions. Students will be challenged to build graphic communication and printed matters related to the world of graphic design practice. They will create work that will take them through the whole process-from the concept to the final products (such as postcards, posters, booklets etc.). This will include thinking about all the design decisions (format, layout etc), and also consider the production process and related problems.
Credit 3 units. Art: FAAM
Typical periods offered: Spring

DESIGN 3851 Illustrated Entertainment: Pictorial Graphic Culture From Early Printing to Television
This course will address the production, distribution, aesthetics, and cultural significance of illustrated entertainment in Europe and especially the United States. The course will serve as a typological survey; that is, it will address important practitioners in significant categories of a very broad field. Subject coverage will include early printing, caricature and the art of the gazette, the development of comics, 20th century American magazine illustration, early animation, the animated TV series, and, if time permits, online animation. Topics of consideration will include: the interplay of art, entertainment, and communication; the role of the individual creator versus the corporate concern; the impact of the editor and art director, the self-image of the creator, the social context of the work, and the role of technological change.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

DESIGN 4001 Design Elective (Senior)
4000-level elective in design.
Credit 9 units.
Typical periods offered: Fall, Spring, Summer

DESIGN 4120 Capstone in Design 1: Research Methods (Form and Function)
This course explores the development of compelling and refined visual vocabularies to respond to a wide variety of narrative and interactive contexts. Students hone their methods for brainstorming and visual iteration with emphasis on composition, type, color, and word and image relationships. An expansive approach making to visual work is then linked to a set of ideas about design function and user response, ultimately providing students with tools to develop wide-ranging design artifacts that perform specific kinds of work. Some projects are done in collaborative groups; all projects have components that students create individually. Artifacts may include books, maps, apps, and presentations.
Credit 3 units.
Typical periods offered: Fall

DESIGN 4125 Senior Design Capstone: Narrative Design
Students will select a subject and create a narrative book, magazine, zine, or screen-based work. Students will conduct subject research, develop content, write copy, pursue visual investigation, sequence audience interaction, and take the project to final execution. The course will emphasize coherent organization, clear communication, typographic refinement and the successful integration of word and image. Semester culminates in formal presentation and professional project review.
Credit 3 units.
Typical periods offered: Spring

DESIGN 4130 Capstone in Design 1: Research Methods (Form and Interaction)
This course helps students to develop and refine methodologies for making strong and varied visual work in the context of interactive products. Specific deliverables may include apps, websites, presentations, and user research studies.
Credit 3 units.
Typical periods offered: Fall

DESIGN 4135 Senior Design Capstone II: Interaction
This course is intended for students interested in developing an interactive capstone project. Students will select a subject and create a narrative website, app, screen-based work. Students will conduct subject research, develop content, write copy, pursue visual investigation, sequence audience interaction, and take the project to final execution. The course will emphasize coherent organization, clear communication, typographic refinement and the successful execution of interactive and experiential storytelling. Semester culminates in formal presentation and professional project review.
Credit 3 units. EN: H
Typical periods offered: Spring

DESIGN 4140 Capstone in Illustration 1: Research Methods (Image and Story)
Required for senior majors in Communication Design with an emphasis in illustration. An advanced course in image-making for functional contexts. Students develop projects, which isolate issues of approach, production, distribution and market in the landscape of illustration and cartooning today. Targeted research questions are posed in response to invididual student work. Successful completion of the course requires the development of and commitment to an aesthetic and creative position within the fields of illustration and cartooning. Readings address the history and culture of illustration, comics and animation.
Credit 3 units.
Typical periods offered: Fall

DESIGN 4145 Senior Illustration Capstone: Visual Stories
Students will spend the semester creating a long form visual story. The source material for this story should be an existing story, song, legend, myth, historical event, book or other documented text. Using both nonfiction and fiction source materials, students will produce a single narrative in the form of an illustrated book, graphic novel/mini-comic or digital experience. The project will be expansive and cover a large range of professional practices, from visual conceptual development to final execution.
Credit 3 units.
Typical periods offered: Spring

DESIGN 4190 Design Leadership
This seminar course will focus on the role of executive leaders in the growing landscape of user experience (UX) design and its impact on businesses. Through a range of readings, guest lectures, and projects, this course introduces the core concepts of design management and leadership to future design and business leaders. Students will delve into the dynamic relationship between design innovation, technological advancement, and market viability, and will examine quantifiable and qualifiable methods for measuring and articulating the value design brings to the enterprise. Students author written and visual responses to class topics and field trips and are assessed on their engagement in the course, skill acquisition, and communications including projects and presentations.
Credit 3 units.
Typical periods offered: Spring

DESIGN 4211 Type as Image: Experiments On Press
Working in the Kranzberg Studio for the Illustrated Book, students will use printing to explore the expressive possibilities of typography both as language and as image/illustration. Graphic shape, line, tone, color and type can all be used as raw materials in the construction of messages, stories and ideas. In this course, students will respond to prompts and create self-generated expressive and experimental projects that explore the language of design in a tactile form. Students will be introduced to both basic and advanced typographic knowledge as they ground thier work in the visual expression of language. Prerequisite: Communication Design: Word & Image II.
Credit 3 units. Art: CDES, FADM
Typical periods offered: Fall

DESIGN 4215 Communication Design: Informational Books
Students enrolled in InfoBooks will select a subject and create a single or set of books. The project will move from content development and research to concept, visual development, and final execution and craft. Emphasis will be placed on clear communication of the content through a mix of complementary visual languages (typographic, information design, photographic, illustrated, etc.). Appropriate for students who are interested in pursuing professional work in publishing, book design, information design, and brand/print collateral literature. Students must enroll in any two courses numbered F10 438x at times that do not conflict. Prerequisites: F10 337B, 337C, 337D, 338B, 338C, 338D. Senior standing, College of Art majors only.
Credit 5 units. EN: H

DESIGN 4219 Communication Design: Visual Voice
Design is a powerful tool that creates meaningful dialogue between the work and its intended audience. This exchange can profoundly impact our culture and society. This course explores the methods used by designers to create visual messages that inspire ideas, elicit emotions and encourage actions. Through class discussion and course readings we will examine the role and responsibility of the designer within our society. Students will create work that integrates their individual perspective and personal experiences supported by research, writing and design applications.
Credit 3 units. Art: CDES, FADM
Typical periods offered: Fall

DESIGN 4270 Advanced Visual Principles for the Screen
This course explores user-centered interface design for screen-based, interactive experiences. Applying information design principles and programming design strategies, students will create advanced functional prototypes while practicing the UX/UI process, including research, content architecture, wireframing, usability testing, visual design and iterative development. Students will deliver responsive websites and mobile applications, investigate the unique possibilities of mobile devices, and consider alternate digital canvases. The course will emphasize clear organization and communication, typographic refinement and visual execution. Studio work will be supported by lectures and readings.
Credit 3 units. Art: CDES, FADM
Typical periods offered: Fall, Spring

DESIGN 4280 Design with Artificial Intelligence
This studio course introduces AI's transformative role in creative practice, teaching students to integrate AI into workflows, build AI-powered tools, and develop methodologies to collaborate with artificial intelligence. The course equips students with skills to innovate at the intersection of art, design, and AI. Students learn basic data science and model training foundations by making projects with methods such as creative coding, language model fine-tuning, image generation, and sound classification. Additional topics including readings and discussions will provide an overview of the field's current challenges and opportunities including ethical considerations, historical context, and AI in an academic institution.
Credit 3 units.
Typical periods offered: Fall, Spring

DESIGN 4290 Design for Emerging Technology: Physical Computing
This course focuses on designing physical interfaces that integrate seamlessly with human actions. Students will learn to create devices that enhance human capabilities by capturing and interpreting physical inputs—such as motion, light, sound, and touch. Covering both tangible and intangible interactions, the course combines visual design, design systems, fabrication, and digital craftsmanship. Foundational programming for prototyping interactive devices will be introduced. Through hands-on studio projects, design exercises, and readings, students will gain a deep understanding of physical computing and how to design technology that harmonizes with human interactions and physical actions.
Credit 3 units.
Typical periods offered: Fall

DESIGN 4305 Design for Social Impact
Designers are capable of creating transformative social change by engaging in socially conscious design practices. Throughout this course, consequently, students will learn how to utilize appropriate design research methods and tools to prioritize the needs of the end users and their local contexts. Students will conduct design research, analyze data, and discover innovative solutions to issues in the community while also working collaboratively.
Credit 3 units. Art: CDES, CPSC, FADM
Typical periods offered: Fall, Spring

DESIGN 4408 Illustration Concepts & Media
Advanced projects in applied illustration and the first step in development of a professional portfolio. The class will explore creating images with smart and concise ideas across a spectrum of media. Students will be instructed on a range of illustration media to create visual solutions under rigorous deadlines. The projects will cover the range of editorial and conceptual image making in the professional world today including portraiture, multiple images, responding to text and specific time and media restrictions. Prerequisite: Word and Image 2. This course is open to juniors and seniors in the Communication Design major.
Credit 3 units.

DESIGN 4409 The Illustrator's Sketchbook
The sketchbook has long been seen as the artist's personal playground. In this course, students will be making images that explore concepts and visual narratives--but the raw materials for these illustrations will come from exploration inside the pages of their sketchbook. This course will develop a discipline of daily drawing. In addition to sketchbook work, project assignments will include both conceptual and applied projects like illustrated book jackets and short stories. Significant time will be spent in media exploration, development of technique and professional practices.
Credit 3 units. Art: CDES, FADM
Typical periods offered: Fall

DESIGN 4410 Applied Illustration
This course will explore drawing and conceptual development in the landscape of professional picture-making and illustration. Using the lens of an applied professional process, students will make work that explores and establishes an artistic viewpoint. Focused research, idea development, formal experimentation, and class critique are vital to these goals. Using this contextual practice, students will advance toward the development of an individual voice. This course is applicable to anticipated career directions in image making, illustration, comics, picture books and visual storytelling.
Credit 3 units. Art: CDES, FADM

DESIGN 4418 Structuring Data for Effective Visualization
A primer on techniques for acquiring and structuring data in preparation for visualization. We will discuss common data formats (CSV, XML, and JSON) and how to access and translate from one format to another. Students will gain familiarity with the R language via the RStudio environment, as well as d3.js for interactive web-based visualizations. Students will develop concrete skills in preparing data for exploratory data analysis, as well as documenting workflows for reproducibility.
Credit 1 unit. Art: FADM

Fashion

FASHION 1001 Fashion Elective (First-Year)
1000-level elective in fashion design.
Credit 9 units.
Typical periods offered: Fall, Spring, Summer

FASHION 2001 Fashion Elective (Sophomore)
2000-level elective in fashion design.
Credit 9 units.
Typical periods offered: Fall, Spring, Summer

FASHION 2220 Introduction to Fashion Design
This studio course combines structured discourse about fashion systems with the design process. Project briefs emphasize the body as site for apparel-related products. Students explore both two-dimensional and three-dimensional expressions of fashion design concepts. Students are evaluated on in-class engagement, participation during peer critiques and project quality.
Credit 3 units. Art: FADM EN: H
Typical periods offered: Fall

FASHION 2230 Fashion Drawing
This studio course employs foundational drawing strategies to communicate apparel and accessory designs. In-class work and projects consider conventions for presenting the figure in fashion design within the context of personal expression. Through exercises and projects students will learn various approaches to fashion drawing, illustration, and technical drawing while engaging various types of garments, accessories and textiles. Throughout the semester, work is critiqued for compositional effectiveness, ability to visualize designated materials and garments, and technical accuracy. Laptop computer with Adobe Illustrator and Photoshop required. Required in the sophomore year for students pursuing the BFA major in Fashion Design. The course is a major option for students pursuing the BA major in Design, the BA major in Design: Fashion Concentration, the 2nd-major in Design, and the 2nd-major in Design: Fashion Concentration.
Credit 3 units. Art: FADM EN: H
Typical periods offered: Spring

FASHION 2240 Textiles and Surface Design
A survey of all types of materials used as 21st Century textiles, Textile Design introduces the student to the ways that textiles function as a basic building material. Students will study, test, and manipulate textiles to gain understanding of appropriate and viable choices for end use. Class activities include field trips, application of a variety of textile techniques for surface design, manipulation and finishing of various fabrics. Students may draw upon design problems from their specific area of study to realize a final project. Required in the sophomore year

for students pursuing the BFA major in Fashion Design. The course is a major option for students pursuing the BA major in Design, the BA major in Design: Fashion Concentration, the 2nd-major in Design, and the 2nd-major in Design: Fashion Concentration.
Credit 3 units. Art: FADM EN: H
Typical periods offered: Spring

FASHION 2410 Business of Fashion
This seminar course is an academic analysis of the business of fashion. Discussions focus on marketing fashion products, consumer behavior, brand development, markets, promotion/distribution, and emerging technologies. Students study fashion merchandising and product development, including seasonal deliveries, line development, basic costing practices, and retail math. Case studies engage students in current fashion business practices. Students are evaluated on critical thinking and the ability to integrate course concepts into project work. Open to all students.
Credit 3 units. Art: FADM
Typical periods offered: Fall

FASHION 3001 Fashion Elective (Junior)
3000-level elective in fashion design.
Credit 9 units.
Typical periods offered: Fall, Spring, Summer

FASHION 3110 Sustainable Design in Materials and Production
Typically textile design and garment production occurs in a collaborative setting and often across a global span of locales. In this course students learn essential information about sustainable textiles and fashion, engage in research, and collaborate to design and promote sustainable products or services. Required for junior Fashion Majors, Open to Soph-Senior non-majors.
Credit 3 units. Art: FADM
Typical periods offered: Spring

FASHION 3220 Fashion History and Research
This seminar studies the cultural and social influences to comprehend how these impact the evolution of fashion and are expressed in clothing at various junctures in history. Review of general academic research methods will be covered as well as research methods and strategies of particular significance to fashion design. Coursework will focus on using research as an avenue to original and effective design concepts. Required for junior Fashion Majors, Open to Soph-Senior non-majors.
Credit 3 units. Art: FADM

FASHION 3230 Fashion Design: Collaboration Studio
This is a university collaboration course that involves Fashion Design, Occupational Therapy, Mechanical Engineering and Business working together to develop design proposals and prototypes for specific customer profiles. Teams of students from different majors will design for various community and industry partners. They will work to solve an apparel or accessory design problem with innovative new concepts. The team will consider the person's lifestyle and occupation as well as environmental factors that influence a design's functionality. A client-centered approach is used. Students will be evaluated on how well the design proposal meets the expressed aesthetic and functional needs of the client.
Credit 3 units. Art: CDES, FADM

FASHION 3401 Knit Design and Production
This studio course addresses knit design and production. Students learn knitting fundamentals by hand and machine. Building on technical and design knowledge gained throughout the course, students design, pattern, and realize either apparel or art 3D objects. A sample notebook of both manual and machine techniques provides foundational skills to design and realize a final machine-knit project. Work is evaluated based on creative expression as well as technical and aesthetic qualities. No prerequisites.
Credit 3 units. Art: FADM

FASHION 3402 Fiber Manipulation
This course explores fiber techniques and their application in design and art. Students will study a spectrum of fiber and textile treatments such as surface design, shibori, wax resist, digital design, needle applications, heat applications, and a variety of three-dimensional structuring strategies. Projects will integrate techniques into appropriate design strategy for the fine arts or design. This course is part of the BFA in Fashion, and it is also open to non-BFA students across the university. Counts toward the design minor.
Credit 3 units. Art: FADM
Typical periods offered: Fall

FASHION 3403 Fashion Design I: Pattern Drafting
This studio course provides an introduction to flat pattern drafting applied to various aspects of garment creation. Construction techniques and industrial pattern drafting methods are applied to specific structural design problems. Students undertake realization of garment from sketch to pattern draft and sample construction. Projects are evaluated based on both aesthetic and technical qualities.
Credit 3 units. Art: FADM EN: H

FASHION 3404 Fashion Concept Development
Review and practice of applicable material from Visualizing Apparel course for presenting the figure in garment design. Students will explore a variety of media for expressive fashion communication and learn to combine page elements with compelling design strategies. Research and study of landmark and innovative illustrators will be conducted as well as application of their ideas in practice. Additionally, the course will cover incorporation of technical drawings, text, and textile swatches with illustration style to convey design vision for fashion presentation. Prerequisites: Introduction to Fashion: Materials, Volume and the Body, Fashion Illustration: Visualizing Apparel, Fashion History and Research, Textile Design, Patternmaking and Production. Required for juniors in the BFA Major in Fashion Design. Required Equipment: Mac Computer, CS5 or newer, Wacom Tablet and pen.
Credit 3 units. Art: FADM EN: H
Typical periods offered: Spring

FASHION 3405 Fashion Design II: Draping
Study of fundamental apparel design issues. Students will begin with basic draping methods and explore evolution and craft, decoration, and adornment for apparel. Research for class exercises will be based upon the most elementary forms of historical and contemporary dress. Prerequisites: Introduction to Fashion: Materials, Volume and the Body, Fashion Illustration: Visualizing Apparel, Fashion History and Research, Textile Design, Patternmaking and Production. Required for juniors in the BFA Major in Fashion Design.
Credit 3 units. Art: CDES, FADM EN: H
Typical periods offered: Spring

FASHION 3406 Fashion Product Development
This studio course takes product design from concept to pre-production. Using industry-based software for CAD and 3D rendering, students will develop components of technical packages for production including vector-based drawings, specifications, costing, and sourcing of both materials and manufacturing. Principles of economic, environmental and ethical practices in the global market will be explored. Exercises and projects will emphasize technical precision and critical thinking, and result in production-quality technical packages for fashion products.
Credit 3 units. Art: FADM EN: H
Typical periods offered: Spring

FASHION 3407 Fashion Promotion and Exhibition
Fashion styling, marketing, and public relations techniques are engaged to develop and execute a promotion and exhibition plan for fashion products. Empasis is on creativity and innovation, particularly by harnessing technology, to enhance contemporary fashion promotion and exhibition. Students plan and execute the annual Fashion Design Show, highlighting the fashion design Senior Capstone collections. In-class discussions, lectures, guest speakers, and active planning are accompanied by readings, video analyses, and on-site production work.
Credit 3 units. Art: FADM EN: H
Typical periods offered: Spring

FASHION 3408 Experimental Fashion Design
This course introduces students to an experimental and conceptual approach to textile and fashion design. Students will explore a variety of media for the expressive communication of surface and structural design. The course addresses the relationship, crossover and theories of fashion design and art. Studio work will be informed through research, experimentation and prototype development.
Credit 3 units. Art: FADM

FASHION 3750 Fibers in Art (Florence)
This course is designed to guide the students through a range of approaches to textile and fiber based practices. The course embraces technological and antiquated techniques both within and beyond the field of art and engages artisan inspired practices as content that fosters the questioning of socially assigned gender roles, craft and art distinctions and the exploration of functionality. Basic weaving, knitting, braiding and sewing are explored against the backdrop of fiber's history as art. Prerequisite: none
Credit 3 units.

FASHION 3752 Patternmaking and Production
An introduction to flat pattern drafting. Principles will be applied to various components of garment creation. Construction techniques and industrial methods explored within specific structural design problems. Students will undertake realization of garment from sketch to pattern draft and finally construction of muslin (toile). This course is to be taught using the Imperial measurement system. This course will be offered in Florence, Italy.
Credit 3 units. EN: H

FASHION 3754 Sustainable Fashion and Ethical Clothing
This course focuses on the study and understanding of sustainable clothing and its influence in today's fashion industry and modern life. Ethical fashion refers to the use of fabrics derived from eco-friendly resources, and the study of how these fabrics are made. Being green in fashion today means reducing the amount of clothing discarded to landfills, and decreasing the environmental impact of agro-chemicals in producing conventional fiber. Special emphasis will be placed on the vintage phenomenon and on recycling as fundamental parts of this complex subject. The course will analyze the impact of the reduction of raw materials and virgin resources, as it relates to fitting in the context of a more powerful globalized fashion industry as these two worlds often collide. The course will also look at how sustainability in the clothing industry can provide a new market for additional job opportunities. This course will be taught in Florence, open to Fashion majors.
Credit 3 units.
Typical periods offered: Spring

FASHION 3755 Special Topics in Florence
This is a Special Topics course for students studying abroad in Florence.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

FASHION 3756 Special Topics in Florence
This is a Special Topics course for students studying abroad in Florence.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

FASHION 3757 Special Topics in Florence
This is a Special Topics course for students studying abroad in Florence,
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

FASHION 4001 Fashion Elective (Senior)
4000-level elective in fashion design.
Credit 9 units.
Typical periods offered: Fall, Spring, Summer

FASHION 4219 Fashion Design: Capstone I
In this studio course students develop a signature collection. Mentored by the professor and an industry specialist, students examine the fashion system, research the zeitgeist, inspiration, materials, and end users. Student experimentation and incubation lead to a cohesive collection of clothing. At mid-term students present a portfolio of the collection to industry professionals for feedback and curation. Fashion drawings are then transformed into prototypes. The final review includes the fashion design portfolio and prototypes. Work is evaluated for relevance, creativity, cohesiveness and technical precision.
Credit 3 units.
Typical periods offered: Fall

FASHION 4220 Fashion Design: Capstone II
In conjunction with Fashion Studio B, students create the culminating work of their study in fashion through realization of signature collection and portfolio documentation of collection. This studio will be undertaken with tutorials and guidance on tailoring, dressmaking, presentation, and documentation. Enrollment required of and limited to senior fashion design majors.
Credit 3 units. EN: H
Typical periods offered: Spring

FASHION 4230 Professional Practices: Portfolio Development
Students will work toward establishment of necessary construction, crafts skills, and signature illustration style required for completion of capstone project. Each student will draw together and organize evidence of vision and skill into a coherent presentation representative of their abilities as an emerging design professional. Work from this course will be submitted for outside professional review. Enrollment required of and limited to senior fashion design majors.
Credit 3 units. EN: H
Typical periods offered: Spring

FASHION 4407 Advanced Patternmaking and Production
This studio course explores complex pattern making and production processes to realize original student designs. Students learn advanced digital and analog pattern development techniques for the fashion industry, including 2D and 3D digital tools for product development and production. Work is evaluated for technical precision and creative expression.
Credit 3 units.
Typical periods offered: Fall

About Us

The Sam Fox School of Design & Visual Arts is a unique collaboration in architecture, art and design education that links professional studio programs with one of the country's finest university art museums in the context of an internationally recognized research university.

Composed of the College of Architecture, the Graduate School of Architecture & Urban Design, the College of Art, the Graduate School of Art and the Mildred Lane Kemper Art Museum, the Sam Fox School is an inspiring place for learning, making, and creative research. Its six-building complex features numerous exhibition and maker spaces, a dedicated art and architecture library, and a world-class art museum. Students have unparalleled resources that support a positive creative culture.

The **College of Art**, founded in 1879, was the first professional, university-affiliated art school in the United States. In the 1940s, its broad-based core program helped set the standards for the bachelor of fine arts degree. Faculty over the years have included Max Beckmann, Philip Guston and other internationally known artists.

The **College of Architecture**, established in 1910, was one of eight founding members of the Association of Collegiate Schools of Architecture. In 1962, Architecture launched one of the nation's first Master of Urban Design programs. Four winners of the Pritzker Prize, considered architecture's highest honor, have taught at the school.

The **Mildred Lane Kemper Art Museum** dates back to 1881, making it the first art museum west of the Mississippi River. The collection has historically focused on contemporary work. Today, the Kemper Art Museum holds roughly 3,500 important paintings, sculptures, photographs and installations by 19th-, 20th- and 21st-century American and European artists, along with significant antiquities and a large number of prints and drawings.

Additional collaborative opportunities are provided by the Department of Art History and Archaeology in Arts & Sciences, the Kenneth and Nancy Kranzberg Art & Architecture Library, and the Dowd Illustration Research Archive.

Inquiry, Creativity and Synthesis

The Sam Fox School offers rigorous art, design and architecture education at both the undergraduate and graduate levels, within the unique context of an independent, nationally prominent research university.

The student body is composed of approximately 324 undergraduate and 45 graduate students in Art as well as 239 undergraduate and 132 graduate students in Architecture. In all, they represent 25 countries, 38 states, the District of Columbia, and Puerto Rico. Roughly 15% of undergraduates pursue combined studies with another university area and 20% of graduate students in Architecture are pursuing joint degrees.

Both core and advanced studios integrate contemporary theory and practice. Among the innovative programs offered are the following:

- Multidisciplinary courses are co-taught by Art, Architecture, and Art History and Archaeology faculty. Recent seminars have explored the history of illustrated entertainment, combined urban theory with book design and production, and crafted a variety of online publications.
- International studios in Barcelona and Florence are taught by Washington University faculty and offer a range of distinctive programs in art and architecture.
- Sam Fox School faculty, students, and staff work with individuals, organizations, governments, and communities — especially in St. Louis — through research, teaching and practice. This includes community-engaged teaching, service programs, research projects, and additional types of socially engaged practice.

Uniting Creativity and Scholarship

The Sam Fox School boasts a unique combination of academic and intellectual resources.

The Architecture faculty includes practicing architects, urban designers and landscape architects as well as eminent architectural theorists and historians and a select number of international visitors. The resident, full-time faculty members have won national and regional awards for design excellence and planning, including more than two dozen from the American Institute of Architects alone.

Art's full-time faculty members include prominent painters, sculptors, printmakers and mixed-media artists as well as leading illustrators, graphic designers, fashion designers and photographers. Design faculty have won numerous professional honors, and fine art faculty regularly feature in solo exhibitions and group shows, both nationally and internationally.

The nationally recognized Kemper Art Museum maintains a vital program of exhibitions, publications and educational events. Major thematic shows are drawn from institutions and private collections around the world, highlighting nationally and internationally emerging artists. The acclaimed permanent collection includes key works by modern and contemporary artists, from Henri Matisse, Pablo Picasso and Jackson Pollock to Christian Boltanski, Candida Hoefer and Olafur Eliasson.

Public events include concerts, film screenings, lectures and discussions with distinguished visitors, and museum tours led by student docents. The museum also provides workspace for faculty- and student-curated exhibitions (usually relating to Sam Fox School curriculum). Courses in Art History and Archaeology further complement the critical and practical study of exhibitions while facilitating student involvement in professional curatorial projects.

A Comprehensive Campus

The Sam Fox School is housed in a comprehensive, six-building campus for design and the visual arts located on the eastern portion of the Danforth Campus. Conceived around a central courtyard, it both reflects and updates Washington University's original campus plan, which was developed in 1895.

Anabeth and John Weil Hall, designed by the internationally acclaimed architecture firm KieranTimberlake, houses state-of-the-art graduate studios, classrooms and digital fabrication spaces. With its abundant natural light and flexible, loft-style studios and workspaces, Weil Hall is a locus for teaching, study, creation and critique. The William A. Bernoudy Architecture Studio — along with studios for graduate architecture, landscape architecture, urban design, illustration & visual culture, and visual art — houses programs for the Graduate School of Architecture & Urban Design and the Graduate School of Art. The Roxanne H. Frank Design Studio houses the Graduate School of Art's Master of Fine Arts in Illustration & Visual Culture.

Another component of Weil Hall — the luminous, two-story Kuehner Family Court — features a living green wall, skylights, and glass walls that allow for visual connectivity between studio spaces, providing students with a feeling of simultaneity and participation in a larger community. As the conceptual heart of the building, the Caleres Digital Fabrication Studio allows students and faculty across programs to execute complex projects using state-of-the-art tools. Other notable spaces include the Ralph J. Nagel Dean's Suite and Weil Hall Commons, which includes a commissioned art wall that features new works by alumni each year.

Earl E. and Myrtle E. Walker Hall brings together the undergraduate sculpture and painting areas. The sculpture area includes undergraduate studios, a wood shop, a metal shop, an installation room, and a faculty office, all on the ground level and first floor. The undergraduate painting studios are on the second floor.

William K. Bixby Hall, completed in 1926, has grown and changed to meet the needs of the students, faculty and administration of the College & Graduate School of Art. The building currently houses teaching and studio spaces for first-year art and design students, the undergraduate fashion design and printmaking majors, and the Nancy Spirtas Kranzberg Studio for the Illustrated Book. The Dubinsky Printmaking Studio, a state-of-the-art facility, is located on the first floor beside Island Press, a research-based printmaking workshop that creates and publishes innovative prints and multiples by many of today's most influential artists. On the ground floor, an administrative suite is home to student services, financial services, and the director of Art.

Joseph B. Givens Hall has been architecture's home since 1932. It features a variety of studio spaces, including large drafting rooms with 15-foot ceilings, large windows, and skylit ateliers. The building's compact and elegant Beaux-Arts design has at its heart a grand central stair often used for socializing and informal meetings. Givens Hall also houses a lecture hall, review spaces, classrooms and the office of the director of Architecture.

Mark C. Steinberg Hall, completed in 1960, was the first commission by Fumihiko Maki, then an architecture professor at Washington University. Formerly home to the Gallery of Art, the Department of Art History & Archaeology in Arts & Sciences, and the Art & Architecture Library, Steinberg Hall now houses Career Services and the undergraduate communication design and photography majors on the lower level; public spaces such as Steinberg Hall Gallery and Etta Eiseman Steinberg Auditorium on the main level; and architecture and communication design studios on the upper level.

The **Mildred Lane Kemper Art Museum**, completed in 2006, is another commission by Maki. The elegant, 65,000-square-foot limestone-clad structure — a gathering point for scholars and the general public — includes more than 10,000 square feet of exhibition space and art storage facilities. The museum also houses the Kenneth and Nancy Kranzberg Art & Architecture Library and the Department of Art History & Archaeology.

In 2019 Washington University completed one of the most significant capital projects in the recent history of the Danforth Campus. The comprehensive transformation of the east end of the campus included a significant expansion of the Kemper Art Museum, designed by the architecture firm KieranTimberlake. The new and reconfigured galleries more than doubled the exhibition space for the Museum's permanent collection.

Lecture Series

The Sam Fox School invites distinguished academics and professionals to lecture, attend critiques and visit major studios.

Email:	samfoxschool@wustl.edu
Website:	https://samfoxschool.wustl.edu/academics/college-of-art/

Degree Requirements

To receive a degree from the College of Art, a student must meet the requirements and take academic courses with other undergraduates. Work in art and design can be combined with studies in architecture, business, the humanities, the natural and social sciences and the other arts. Students may take these courses for educational and intellectual enrichment or in direct correlation with their primary interests. All major requirements must be completed in residence at WashU.

Bachelor of Fine Arts Degrees

Students must complete 121 credits to earn the Bachelor of Fine Arts degree. BFA students can major in Art, Communication Design, or Fashion Design.

Bachelor of Fine Arts Major in Art

- Art, BFA (p. 165)

Optional Concentrations

BFA Majors in Art can choose to concentrate in one of the following five areas: Painting, Photography, Printmaking, Sculpture, or Time-Based Media. A concentration requires one Intro Art course and four Art Practice courses in the area of concentration.

- Art with Painting Concentration, BFA (p. 157)
- Art with Photography Concentration, BFA (p. 159)
- Art with Printmaking Concentration, BFA (p. 160)
- Art with Sculpture Concentration, BFA (p. 161)
- Art with Time-Based + Media Art Concentration, BFA (p. 163)

Bachelor of Fine Arts Major in Communication Design

- Communication Design, BFA (p. 166)

Bachelor of Fine Arts Major in Fashion Design

- Fashion Design, BFA (p. 171)

Bachelor of Arts Degrees

Students must complete 120 credits to earn the Bachelor of Arts degree. BA students can major in Art or Design.

- Art, BA (p. 164)

Bachelor of Arts Major in Design

- Design with Communication Concentration, BA (p. 168)
- Design with Fashion Concentration, BA (p. 169)
- Design, BA (p. 170)

Combined Studies

Washington University offers students the option to study across disciplines and to take advantage of the wide range of courses available. Students may choose a major in art or design and a minor in a different subject in the College of Art, or they may major in art or design and choose a minor or second major from a different undergraduate school.

Undergraduate students in Art, Arts & Sciences, Business and Engineering can add a dual BFA degree, a second major, or a minor in art or design to their existing degree path. These opportunities help students foster creativity, expand horizons and explore opportunities for careers in art and design.

When pursuing a dual degree, a student is eligible to graduate once the requirements for both degrees have been fulfilled.

Students may not choose the Bachelor of Arts for a dual degree. Students should instead choose a second major.

Major requirements (any course required to be taken within the Sam Fox School) may not be double counted for another degree, major, or minor unless specifically allowed by a Sam Fox School minor. Open/general electives and Arts & Sciences distribution requirements are permitted to double count for another degree, major, or minor.

Academic Honors & Awards

Dean's List: In recognition of exceptional scholarship, first-year, sophomore, junior and senior art/design students who have earned at least 14 credit units under the letter grade option (excludes courses taken pass/fail or audit) and earned a semester grade-point average of 3.6 or higher during a semester will be cited on the Dean's List.

Latin Honors: Graduating Bachelor of Fine Arts or Bachelor of Arts degree students may also be considered for Latin Honors (cum laude, magna cum laude or summa cum laude) as determined by academic performance.

Prizes and Awards

The Scholars in Art Program provides named scholarship funds that have been donated to the university by individuals or companies specifically for this purpose. Selection is based on financial need and academic achievement. There is no application process unless noted.

Academic Scholarships

The College of Art offers one full-tuition and up to five partial-tuition scholarships each year solely on the basis of merit. Applicants for this award may also qualify for scholarship aid based on need and will be considered for this as well. The full-tuition Conway or Proetz Scholarship is awarded to an entering first-year student whose artistic and academic potential is judged outstanding by a faculty selection committee. The scholarship is supported by two endowed funds. The Fred Conway Scholarship was established in memory of a distinguished professor of painting in the College of Art. The Arthur and Esther Proetz Scholarship was established to honor the commitment and dedication to the arts of these two individuals.

At this time, one student is chosen to receive the full-tuition scholarship, and the other finalists are awarded partial scholarships. These are renewable for each year of undergraduate study, as long as the scholar is making satisfactory progress toward a degree.

Each College of Art applicant who submits a digital portfolio containing 10 to 20 pieces will be considered. No separate scholarship application is required.

Awards and Prizes

Several awards are made each year to art students who are selected by the faculty. These awards and prizes include the following:

- Anderson Ranch Scholarship (application required)
- The Paul Edward Birdsall Award in Visual Communications
- The Susan Sanders Block Silver Ripper Award in Fashion Design
- The Belle Cramer Award in Printmaking
- Catalyst Award
- The Eda L. and Clarence C. Cushing Memorial Prize in Painting
- The Fashion Design Citizenship Award
- The Anne Fuller Dillon Prize in Graphic Communications
- The Mary Cowan Harford Award in Watercolor
- The Marsha Hertzman Blasingame Award in Printmaking
- The Morris M. Horwitz Award in Photography
- The Hazel H. Huntsinger Memorial Prize in Painting
- The Caroline Risque Janis Prize in Sculpture
- The John J. and Marjory B. Lewin Photography Prize (application required)
- The Peter Marcus Prize in Printmaking
- The Dominic Michael Silver Scissors Designer of the Year Award
- The John T. Milliken Foreign Travel Award (application required)
- The Al Parker Award for Excellence in Illustration
- Riverbend Textiles Sustainable Design Leadership Award
- The Jayne Ball Rousseau Memorial Prize in Graphic Communications
- Saks Fifth Avenue Honorary Designer
- Stars Design Group Award
- The Margo Trump Memorial Award
- Truth and Beauty Award
- The Jack Unruh Award in Illustration
- The Jeffrey Frank Wacks Scholarship Award (application required)
- Robert Weaver Award for Excellence in the Visual Essay
- The Lillie Willemsen Prize
- Yale/Norfolk Summer Residency (application required)

Policies

To receive the Bachelor of Fine Arts or Bachelor of Arts degree, students must meet the requirements of the College of Art and take academic courses with other undergraduates. Work in art and design can be combined with studies in architecture, business, engineering, humanities, natural and social sciences, and the other arts. Students may take these courses for educational and intellectual enrichment or in direct correlation with their primary interests. Courses in the School of Continuing & Professional Studies do not count toward degree requirements.

Academic Integrity

Students and members of the faculty of the university have an obligation to uphold the highest standards of scholarship. Plagiarism and other forms of cheating will not be tolerated. When a student has violated the integrity of the academic community, an instructor may recommend that the student be brought before the Committee on Academic Integrity. A list of university policies can be found on the website of the University Registrar.

Advanced Placement Credit

A maximum of 15 units of pre-matriculation or non-Washington University transfer credit may be counted toward an undergraduate degree. This includes Advanced Placement, International Baccalaureate, and British A-Level exams. Credit cannot be granted for College-Level Examination Program (CLEP) tests.

Pre-matriculation units count toward open/general electives. They do not count for Arts & Sciences distribution, second major, or minor requirements.

Applying for Program Completion

Students are responsible for applying for program completion in Workday in order to have the degree conferred. No degree will be awarded if this task has not been completed by the appropriate deadlines. Students who do not complete their degree requirements by their intended graduation date must reapply for the next graduation date.

Attendance

Regular attendance at all classes and studio meetings is expected. The instructor of each course is allowed to decide how many absences a student may have and still pass the course. Instructors are expected to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their faculty the reasons for any absences and to discuss with them the possibility of making up missed assignments.

In addition, Washington University has a policy for absences related to religious holidays (PDF).

Credits and Grades

Credits are assigned to courses based on measures of time in class and academic activities, and engagement between instructors and students, defined in university policy (p. 25). Grade points per course are calculated by multiplying the number of units of a course by the grade points earned. The Undergraduate Study (p. 36) page details the grades and grade points in use.

Minimum Grade Requirement

Undergraduate students in the College of Art must complete all required courses with a grade of C- or better. This includes any course taken to fulfill the writing requirement.

Minimum Grade Point Average

Students in the College of Art must have a minimum grade point average of 2.0 to be eligible to graduate.

Auditing a Course

Studio courses in the College of Art cannot be taken with the audit option. With prior approval from their academic advisor, students may audit an elective course outside the College of Art if the instructor allows.

Pass/No Pass Option

A student may take one non-art course per semester on a Pass/No Pass basis (exclusive of courses that must be taken Pass/No Pass). Any additional courses taken Pass/No Pass in a given semester will not be counted toward the degree. All courses in the College of Art must be taken for credit, unless otherwise noted in the course description. Any course taken to fulfill the writing requirement must be taken with the credit option.

Students not majoring or minoring in the College of Art may petition to take one art or design course on a Pass/No Pass basis by contacting the Sam Fox School Registrar's Office.

Incomplete Grades

Students who, following the last day for withdrawal from courses, experience medical or personal problems that make satisfactory completion of course work unlikely may request a grade of I (incomplete). Students in this situation must take the following steps:

1. Contact the instructor before the final review or exam to discuss the request.
2. If the instructor consents, complete an Incomplete Grade Petition signed by both the instructor and the student.
3. Return the signed petition to the Sam Fox School Registrar's Office for final approval.

The instructor is under no obligation to award a grade of I (incomplete).

The grade of I (incomplete) must be removed no later than the last day of classes of the next full semester. Upon failure to make up an incomplete grade within the next semester, the student will automatically receive an F in the course unless explicitly excused by the director of art. An F grade that is so received may not be changed. Students will not be allowed to continue in courses that require prerequisites if the prerequisite has a grade of I (incomplete). A student who carries more than 9 units of with grades of I (incomplete) may be declared ineligible to re-enroll.

F grades for a semester may be changed only through the last day of classes of the following semester and then only in extraordinary circumstances. The director will approve no changes of F grades after this time.

Repeating or Retaking a Course

Most courses are designed to be completed once, and credit may only be earned once. A student may retake such a course if a higher grade is required, for example if the initial final grade is below that required to apply to major requirements. Students may not register themselves for another instance of a course in which the initial final grade is a B or higher, an incomplete, a successful audit or a Pass. For a student retaking a course, credit is only given once and both grades earned remain on the record, but only the higher grade is used to compute the grade point average. An R notation is added to identify the retaken course.

Some courses are eligible to be repeated, such as internship or thesis. Students eligible to take them may register themselves for additional instances.

Independent Study

Opportunities for independent study are available to undergraduate students in limited circumstances, such as a conflict which would affect a graduation timeline. Registration in an independent study requires the student to submit a written proposal and to obtain the approval of the sponsoring faculty, advisor, and program chair. Approved proposals must be submitted to the Sam Fox School Registrar's Office by the semester course add deadline. Proposals received after the deadline will not be considered.

A maximum of 3 units for juniors and seniors and of 1 unit for first-year students and sophomores can be taken per semester. Independent study cannot replace required courses.

A maximum of 9 units may be applied to degree requirements from the following areas: physical education, lessons, and/or independent studies.

Digital Technologies

Technology plays a critical role in the educational experience. The College of Art is committed to the integration of relevant technology into the curriculum. Students are required to have a specified computer and software beginning with the first semester of study. Supplemental purchases (e.g., monitors, scanners, tablets) may be necessary as students advance and declare a major. Information is available on our Digital Technologies webpage.

Enrollment Status

Definitions of *full-time study, half-time study,* and so on are based on federal regulations. Enrollment status impacts eligibility for campus services as well as Washington University's reporting obligations. Alignment with policies in financial aid, international student services, student health insurance, VA benefits, and athletics is critical.

Washington University's definition for full-time undergraduate study is at least 12 credit-bearing units (semester hours) per term. Units taken under the audit grade option do not factor into enrollment status calculations, so they cannot count toward the 12 units required for full-time enrollment.

Financial Obligations

Students are responsible for fulfilling their financial obligations to the university. If a student account becomes overdue, a late payment fee will be assessed, and a hold will be placed on the account. Students with a poor payment history may be restricted from utilizing certain payment options or receiving tuition remission until course credit has been earned. Non-payment of tuition and other expenses due to the university will be cause for exclusion from class or refusal of graduation, further registration, or transfer credit. In addition, students are liable for any costs associated with the collection of their unpaid bills, including but not limited to collection agency costs, court costs, and legal fees. Past due amounts can also be reported to a credit bureau.

Grievance Procedures

The dynamic and creative studio culture at the heart of the Sam Fox School strives to be safe and inclusive for all members of our community. Our faculty, staff, and students join together in their commitment to creating learning environments of mutuality and respect. When concerns or disagreements arise about conduct, grading, or other matters in the Colleges of Art and Architecture, policies exist for pursuing proper resolution.

Grade Dispute Policy

The Sam Fox School aims to provide each student with a fair assessment of their academic work and studio. Students have the right to dispute their overall course grade (not individual assignments) if they believe that grade does not accurately reflect the quality of their work. A grade dispute must be submitted to the faculty member who assigned the grade within 30 days of receipt of the grade. The Sam Fox School stresses that every effort to resolve such a dispute be made by the faculty and student involved. A student's eligibility for advancement in sequential course work requires timely resolution of the grade dispute. If the student is a graduation candidate, the dispute process must comply with the Intent to Graduate submission deadlines set forth by the Office of the University Registrar or else the degree conferral will be delayed by one semester or until resolved.

In general, the dispute process will occur and be resolved as follows:

1. The student presents their question about the grade in writing to the faculty member and clearly states the reasons for questioning the grade.
2. The faculty member and the student review the grading procedures as stated in the syllabus and discuss the determining factors of the student's grade.
3. If the case is not resolved between the student and the faculty member, the student may put forth their complaint in writing with supporting evidence to the chair of the academic program, with a copy given to the faculty member involved with the dispute. The

student should provide the course syllabus and all of the materials relevant to the assigned grade within two weeks of the complaint. If a conflict of interest exists between the student and the chair (e.g., the chair is teaching the course), the case will be referred to another chair in the Sam Fox School or to the director of the college.

4. The chair of the academic program will review the materials. The chair will resolve the dispute by working with the faculty member and the student to arrive at a determination.

Integrity and Ethical Conduct

Washington University and the Sam Fox School of Design & Visual Arts are committed to the highest ethical and professional standards of conduct and consider these to be integral to their mission of the promotion of learning. To maintain these standards, the university relies on each community member's ethical behavior, honesty, integrity, and good judgment. Each community member should demonstrate respect for the rights of others, and each community member is accountable for their own actions. Washington University policies state that members of the university community can expect to be free from discrimination and harassment. Students, faculty, staff, and outside organizations working on campus are required to abide by specific policies prohibiting harassment, which are posted on the Compliance and Policies page of the university's website. Should a situation arise in which a member of our community believes they have cause to file a grievance, there are two categories of grievance to consider: academic and non-academic. Academic grievances can either be when a student challenges a course grade or when a fellow student or faculty member feels a matter of academic integrity is at issue. Student grievances filed to challenge a grade that the student feels has been given incorrectly must follow the procedures outlined in the Grade Dispute Policy above.

Academic integrity grievances are made when a faculty member or fellow student feels a student has compromised the environment of honesty and ethics in the school. Academic integrity infractions follow the procedures laid out in the Sam Fox School and University policies and are managed in the Sam Fox School by the Academic Integrity Officer. Please refer to Washington University's Academic Integrity Statement for additional information.

Non-Academic Concerns

If a member of our academic community feels that the ethical and safe environment of the classroom has been compromised, for whatever reason, they may seek guidance through the school's Faculty-Student Mediator. Students may also consult Washington University's Grievance Policy and Procedures for Allegations by Undergraduate Students Against Faculty. In addition, University Resources available for support include the following:

- Title IX (for issues related to discrimination, sexual harassment, and sexual violence)
- Mental health concerns (Student Health Center)
- Drug and alcohol concerns (Student Health Center)
- Immediate physical/mental health concerns (Washington University Police Department)
- Center for Diversity & Inclusion (for issues related to bias, prejudice, or discrimination)

Internships

Students may elect to do an internship as part of their degree. An internship is a structured and supervised professional experience related to a major within the College. The maximum number of units that can be earned per internship is 1 (50 hours or more). No additional credit is awarded for hours over 50. Students may only complete one internship per semester, including summer. Students may apply no more than three total internship units toward their degree requirements. Grading is on a Pass/No Pass basis.

In order to be registered for an internship, a student must submit an approved "Learning Contract" prior to starting work. If the internship is in the fall or spring semester, the approved "Learning Contract" must be submitted before the drop/add deadline. Students must be enrolled for the internship during the same semester in which they complete the professional experience. Students cannot receive internship credit for an experience completed in a prior semester.

Students must submit an "Internship Performance Evaluation" from their supervisor within 30 days of completion. Students must also submit (within 30 days of completion) either a daily journal, a reflective essay (five pages), or a portfolio. The student's responsibility is to make sure that all paperwork and supporting documents are received by the Sam Fox School Registrar's Office (Bixby Hall, Room 1), or credit will not be awarded. Please visit the Inside Sam Fox website for the necessary forms related to internships.

Leave of Absence

A student may request a leave of absence for one or two semesters when individual professional, medical, or personal circumstances warrant it. Petitions are reviewed and approved by the Sam Fox School Registrar's Office. Any requests extending beyond one year will be reviewed on a case-by-case basis. In addition to a written petition, the student requesting a medical leave of absence must submit a medical recommendation from the Student Health Center.

A student returning from a leave of absence must submit a written request for reinstatement at least six weeks prior to the desired semester of return. In the case of a medical leave of absence, a letter of clearance is required from the Student Health Center before the student will be permitted to re-enroll.

International students requesting a leave of absence must contact their advisor at the Office for International Students and Scholars to discuss how the leave might affect their visa status.

Students who are on a leave of absence for medical, mental health, academic, family, personal, or any other reason are not eligible to participate in a registered student group, hold a student group leadership position, or attend/plan a student-group–sponsored event

as a representative of said student group. Depending on the type of leave and any corresponding policy restrictions, students on a leave of absence may or may not be able to attend campus-wide events as a guest of a current Washington University student.

Major Declaration and Transfer

A student declares their major by using the university's online registration system (Workday Student). A student must declare a major no later than the beginning of the spring semester of the sophomore year. Once a student has declared a major, they must be approved to change to another major. Students requesting to change their major must be in good academic standing. Credit transfers between majors are at the discretion of the program chair.

Interschool Transfer Policy: Transferring Into the College of Art

Undergraduate students enrolled in the College of Arts & Sciences, McKelvey School of Engineering, Olin Business School, or the College of Architecture may apply to transfer into the College of Art. Transfer requests must be made in Workday by the last day of final exams of the semester before the effective semester. It is strongly recommended that students meet with a four-year advisor in the Sam Fox School prior to registration to ensure that they know what classes to take the following semester and are given waitlist priority. Otherwise, enrollment in the required studios for the semester of entry may not be possible. All Washington University students must spend their first semester in the academic division that admitted them.

Minimum Criteria

The following requirements must be met for an internal (interdivision) transfer into the College of Art:

1. Submit a portfolio of 10 to 20 images of the best and most recent artwork.
2. Achieve a cumulative GPA of 3.0 or higher. Students with GPAs below 3.0 are required to meet in person with the associate dean of students in the Sam Fox School for an interview and academic record review.
3. Present an academic record that supports the conclusion that the student will be able to complete a Bachelor of Fine Arts or Bachelor of Arts degree in the College of Art in a typical time frame. Depending on the student's level at the time of transfer, additional semesters and/or preapproved summer school may be required.
4. Be in good academic standing.

Each application is evaluated on a case-by-case basis. Meeting these requirements does not guarantee admission into the College of Art.

Portfolio Requirements

The portfolio should consist of 10 to 20 pieces of artwork such as drawings, paintings, photographs, illustrations, videos, sculptures, storyboards, websites, or other types of relevant work in art and design. Work from any studio courses previously taken in the Sam Fox School must be included in the portfolio. Artwork should be submitted as high-resolution digital images no larger than 2 MB each. Students should include only one image per file. Detail images or alternate views of work may be included as individual files. Each file should be in .jpg or .jpeg format and labeled using the following format: Lastname Firstname_01.jpg (e.g., Smith John_01.jpg).

The portfolio must also contain a numbered image list that corresponds to the file names. For each piece, students should list the course in which it was made (if applicable), the title/assignment, the media used, the size, and the year of completion. The image list may be a .pdf or .doc file.

The images and image list must be uploaded to a folder that the student will be informed how to access.

To Begin the Transfer Process

1. In Workday, request a change to your primary program of study and complete the Change Program questionnaire.
2. Upload the portfolio and image list as instructed.
3. Meet with the associate dean of students for an interview and portfolio review.

Second Major Declaration Policy: College of Art

Undergraduate students enrolled in the College of Arts & Sciences, McKelvey School of Engineering, Olin Business School, or the College of Architecture may declare a second major in art or design in the College of Art. Second major declarations must be made in Workday by the last day of final exams of the semester before the effective semester.

Minimum Criteria

The following requirements must be met to pursue a second major in the College of Art:

1. Submit a portfolio of 10 to 20 images of the best and most recent artwork.
2. Achieve a cumulative GPA of 3.0 or higher. Students with GPAs below 3.0 are required to meet in person with the associate dean of students in the Sam Fox School for an interview and academic record review.
3. Present an academic record that supports the conclusion that the student will be able to complete a second major in art or design in a typical time frame.
4. Be in good academic standing.

Each declaration is evaluated on a case-by-case basis. Meeting these requirements does not guarantee acceptance into the second major program.

Portfolio Requirements

The portfolio should consist of 10 to 20 pieces of artwork such as drawings, paintings, photographs, illustrations, videos, sculptures, storyboards, websites, or other types of relevant work in art and design. Work from any studio courses previously taken in the Sam Fox School must be included in the portfolio. Artwork should be submitted as high-

resolution digital images no larger than 2 MB each. Students should include only one image per file. Detail images or alternate views of work may be included as individual files. Each file should be in .jpg or .jpeg format and labeled using the following format: Lastname Firstname_01.jpg (e.g., Smith John_01.jpg).

The portfolio must also contain a numbered image list that corresponds to the file names. For each piece, students should list the course in which it was made (if applicable), the title/assignment, the media used, the size, and the year of completion. The image list may be a .pdf or .doc file.

The images and image list must be uploaded to a Box folder that the student will be informed how to access.

To Begin the Declaration Process

1. In Workday, add a program of study.
2. Upload the portfolio and image list as instructed.
3. Meet for an interview and portfolio review with the advisor of the declared second major program.

Minimum and Maximum Loads

Students must enroll in an average of 15 to 16 units each semester to complete degree requirements in eight semesters. It is strongly recommended that students enroll in no more than 18 units each semester in order to focus on studios and required courses.

Full-time enrollment is 12 units. Enrollment below 12 units may be granted only with the consent of the associate dean of students.

An enrollment above 21 units will be charged at the established university rate per hour for the additional credits and must be approved by the director or undergraduate program chair.

Refer to the section of this *Bulletin* that covers tuition and fees (p. 62) for both the annual tuition rate and the per-credit-unit breakdown applicable to the College of Art.

Students are expected to proceed at a pace that enables them to finish their degree within the appropriate time limit. For undergraduates, this is usually eight semesters. Exceptions to these minimum standards may be granted only with the written consent of the associate dean of students.

Prerequisites

Students enrolling in College of Art courses without the prerequisites must seek permission from the instructor in consultation with the chair; registration without this permission does not guarantee enrollment in the course.

Retention of Student Work

The College of Art reserves the right to hold a student's work(s) for exhibition purposes and holds reproduction rights of any work(s) executed in fulfillment of course requirements.

Satisfactory Academic Progress and Academic Standing

Satisfactory Academic Progress is demonstrated through completed credits and a minimum grade point average (GPA). Students are expected to proceed at a pace that enables them to finish their degree within an appropriate amount of time. For undergraduates, this is usually eight semesters, requiring a minimum pace of 66⅔% (number of credits earned divided by the number of credits attempted). Per the requirements of 34 C.F.R. 668.34(a)(4(ii), the federal student aid program requires students to maintain a minimum GPA of 2.0 (C average) to maintain eligibility for financial aid. A minimum cumulative GPA of 2.0 is also required for students in the College of Art to be eligible to graduate.

As long as students demonstrate Satisfactory Academic Progress, they are considered to be in good academic standing. The College of Art considers the following key performance indicators to determine whether a student remains in good academic standing:

- Minimum semester and cumulative GPA of 2.0;
- Satisfactory progress in units completed (66⅔%, calculated by the number of credits earned divided by the number of credits attempted); and
- Progress in the focused area of study (e.g., major requirements).

All of the above indicators combined demonstrate Satisfactory Academic Progress. A deficiency in any of the three performance indicators will trigger a review that may cause a student to be placed into one of the academic standing categories described below, which is also a signal that minimum standards for graduating are not being met. Unless a student demonstrates improvement, thereby indicating their ability to fulfill degree requirements within a reasonable period of time, the student may be dismissed from the university. Although the College of Art desires to give all students the opportunity to prove themselves, it is not in the best interest of either the students or the college to permit students to continue indefinitely in educational programs in which they are not producing satisfactory results.

Academic Concern

Any of the following performance indicators at the end of a semester will cause the student's standing to be reviewed and may cause the student to be placed on Academic Concern:

- Receiving an incomplete (first occurrence and all subsequent occurrences)
- Earning a semester GPA of less than 2.0 (first occurrence)
- Earning fewer than a total of 12 units in a regular semester (first occurrence)

While a student placed on Academic Concern remains in good academic standing, this status is a signal to the student that academic performance is below minimum standards and, if continued, will likely cause the student to fall out of good standing.

A student may also be placed on Academic Concern when their earned semester pace or GPA is below the terms of Satisfactory Academic Progress because of outstanding or incomplete grades. Once all grades are received, the student's record is reviewed to determine satisfactory or other status.

An Academic Concern status is not noted on the official transcript; since it does not cause the student to fall out of good standing, it will not be incorporated into enrollment verifications requesting confirmation of academic standing.

Academic Notice

Any of the following performance indicators at the end of a semester will cause the student's standing to be reviewed and may cause the student to be placed on Academic Notice:

- Cumulative GPA of less than 2.0 (first occurrence and all subsequent occurrences)
- Semester GPA of less than 2.0 (second occurrence and all subsequent occurrences)
- Earning fewer than a total of 12 units in a regular semester (second occurrence and all subsequent occurrences)

Academic Notice status indicates that a student is not in good academic standing. Although this status is not noted on the official transcript, it will be incorporated into enrollment verifications requesting confirmation of a student's standing. Students placed on Academic Notice are notified in writing of the status and of any requirements resulting from the status change.

Academic Notice serves as a warning that, unless the quality of work improves, the student may be required to take time away due to academic deficiency. A student may be removed from Academic Notice when their cumulative GPA is above 2.0 and they are meeting the pace of 66⅔% for Satisfactory Academic Progress.

To support a student on Academic Notice status, the Sam Fox School Associate Dean of Students Office may require the student to develop and follow an Academic Improvement Plan. To succeed, the student must understand the causes of their current situation, identify what needs to change, and implement those changes. The student may be required to meet regularly with the Associate Dean of Students to review progress.

Academic Time Away

Any of the following performance indicators at the end of a semester will cause the student's standing to be reviewed and may cause the student to be placed on Academic Time Away, which is a pause in enrollment at Washington University:

- Any third time a student becomes eligible for Academic Notice
- Any second sequential semester a student becomes eligible for Academic Notice (These are typically the fall and spring semesters, since most students do not enroll in summer classes. However, if a student does enroll in summer classes after a spring semester after which they were placed on Academic Notice, their performance will be reviewed.)
- Any semester in which a student earns no degree credit

Academic Time Away status indicates that a student is not in good academic standing. Because this status is marked by a break in enrollment, this status is noted on the official transcript. Students placed on Academic Time Away are notified in writing of the status and of any requirements resulting from the status change, including the minimum number of semesters until they are eligible to request reinstatement. Students on this status are not allowed to enroll in any classes at Washington University during their Academic Time Away period, including courses offered by the School of Continuing & Professional Studies. Academic Time Away is not viewed as a punitive action. Rather, it is an academic pause applied when it is clear that something is interfering with a student's ability to complete degree requirements. It is not in the student's best interest to continue unless they are able to apply changes that will allow them to make successful academic progress toward graduation.

First Appeal Option

A student who wishes to appeal their Academic Time Away status must present a written appeal within 48 hours of receiving notification stating the reason(s) why they believe their situation should be reconsidered. This statement must be sent as outlined in the notice of Academic Time Away. In this statement, the student must explain why the unsatisfactory academic performance occurred and, if they are allowed to return, what they would do differently. The student will then be given an opportunity to present their case in an appeal hearing. Failure to appear at an appeal hearing will be considered a withdrawal of the appeal.

The Sam Fox Registrar is responsible for coordinating appeal hearings, which consist of a faculty committee of a minimum of three Sam Fox School faculty members. The Associate Dean of Students may attend as a non-voting member of the committee. The committee will have access to the student's academic record, written appeal, any previous academic improvement plan, and any other information deemed relevant to the review. The student will have an opportunity to speak on their behalf and to answer questions posed by the committee. After the appeal hearing, the student is informed of the outcome in writing within 48 hours.

After deliberation, the faculty committee will make a determination based on a simple majority vote to either grant the appeal or to deny the appeal. If an appeal is granted, the student is reinstated for the upcoming semester and placed on Academic Notice. If the appeal is denied, all original terms of the original Academic Time Away remain in effect.

Second Appeal Option

The decision by a faculty committee may be appealed to the director of the student's academic division on any of the following grounds:

- *New evidence of a substantive nature:* New, significant evidence regarding factors affecting the student's academic performance becomes available that was not available at the time of the original appeal hearing. Information is not considered new evidence if the student did not attend the original hearing or voluntarily withheld information during the original hearing.
- *Substantive procedural error:* A specified procedural error or error in interpretation of university policies resulted in the student being denied a fair hearing, or the error prevented the faculty committee from making a fair decision.

Should the student wish to appeal the decision of a faculty committee, a written request must be sent within 48 hours of receiving the committee's decision to the director of the student's academic division. The written request should be of sufficient detail to stand on its own without accompanying testimony to permit the evaluation of the merit of the grounds for appeal. The director will determine whether there is sufficient basis to modify or uphold the original determination of the faculty committee. If the appeal criteria are not met, the appeal will be denied. The review method used to make a determination is at the discretion of the director.

The student is informed of the outcome of their second appeal option in writing. If an appeal is granted, the student is reinstated for the upcoming semester and placed on Academic Notice. If the appeal is denied, all original terms of the original Academic Time Away remain in effect.

Reinstatement After Academic Time Away

If a student on Academic Time Away would like to return to the university in the future, they must petition and be approved for reinstatement. There is no guarantee that a student on Academic Time Away will be allowed to return. If the student is granted reinstatement, they are placed on Academic Notice upon return. Failure to achieve and maintain Satisfactory Academic Progress after reinstatement may result in a second status of Academic Time Away without an option for reinstatement.

Study Abroad

Students have an opportunity to study in Florence, Italy, for a semester or over the summer term. The program leverages this unique location by inviting local artists, designers, and architects to serve as instructors and visiting lecturers; incorporating local sites into course assignments and studio projects; and arranging numerous excursions to nearby sites and cities. The Florence program works hand-in-hand with the School's curriculum to ensure that students can study abroad while earning required degree units.

Undergraduate students are also eligible to participate in the university's study abroad programs. To receive academic credit for participation in a non-Sam Fox program, students must submit a written proposal and garner approval in advance. Students should contact the Special Programs Manager if they are planning to participate in a study abroad program to ensure that they are eligible and that credits will transfer. The Inside Sam Fox website's WUSTL Programs page has details about eligibility, credit policy, deadlines, and required proposal materials.

Students pursuing study abroad during the summer need to seek preapproval from the Sam Fox Registrar's office as outlined in the Transfer Credit policy.

Transfer Credit

A maximum of 15 units of pre-matriculation or non-Washington University transfer credit may be counted toward an undergraduate degree. A student wishing to transfer credit for courses completed at another institution must bring a full catalog description of the course(s) to the Sam Fox School Registrar's Office for preapproval. Upon receipt of an official transcript indicating a grade of C or better, courses will be considered for transfer. Grades for transfer courses will not appear on the student's Washington University record and will not figure into the student's GPA.

- College courses that appear on a student's high school transcript will not be considered for transfer.
- Washington University does not transfer credits for courses taken online.
- Transfer credit cannot be used to fulfill Sam Fox major or minor requirements; it can only count toward the open elective or Arts & Sciences distribution requirements for the BA or BS degree.
- No transfer credit will be awarded for courses taken while a student is suspended from Washington University for violations of the university Student Judicial Code or Academic Integrity Policy.
- Students deferring admission or taking a gap year are not eligible to earn transfer credit.

Withdrawals and Refunds

A written request for a refund must be submitted to the Sam Fox School Registrar's Office for consideration. Approval is required to officially withdraw from the university. Tuition adjustments will be processed based on information received, and refund checks will be issued only after the fourth week of classes. Material fees for art courses will not be refunded after the course drop period for the semester. For any student whose medical condition makes attendance for the balance of the semester impossible or medically inadvisable, the university will make a pro rata refund of tuition as of the date of withdrawal when that date occurs prior to the twelfth week of classes, provided that the condition is verified by the Student Health Center or a private physician. The date of withdrawal may correspond to the date of hospitalization or the date on which the medical condition was determined.

Withdrawal Date	Refund
Within 1st or 2nd week of classes	100%
Within 3rd or 4th week of classes	80%
Within 5th or 6th week of classes	60%
Within 7th or 8th week of classes	50%
Within 9th or 10th week of classes	40%
After 10th week of classes	0%

Summer Withdrawals and Refunds

The Sam Fox School reserves the right to cancel a course if it has not enrolled a minimum of eight students before the first day of class. If a course is canceled, all enrolled students will be notified and dropped from the class, and they will not be charged tuition and fees.

If a course is not canceled, a student may be released from their obligation to pay full tuition and fees by canceling their registration according to the schedule below:

Withdrawal Date	Refund
Prior to the first class meeting	100% + fees
Prior to 15% of published meeting dates	100%
Prior to 30% of published meeting dates	80%
Prior to 45% or published meeting dates	60%
Prior to 60% of published meeting dates	40%
After 61% of published meeting dates	No refund

Requests for refunds must be made in writing to the Sam Fox School Registrar's Office.

Administration

College of Art

Amy Hauft
Director, College and Graduate School of Art
Jane Reuter Hitzeman and Herbert F. Hitzeman Jr. Professor of Art
MFA, School of the Art Institute of Chicago

Majors (directory)

Below is a list of majors offered by the College of Art. Visit the individual program pages for more information about a specific major.

- Art with Painting Concentration, BFA (p. 157)
- Art with Photography Concentration, BFA (p. 159)
- Art with Printmaking Concentration, BFA (p. 160)
- Art with Sculpture Concentration, BFA (p. 161)
- Art with Time-Based + Media Art Concentration, BFA (p. 163)
- Art, BA (p. 164)
- Art, BFA (p. 165)
- Communication Design, BFA (p. 166)
- Design with Communication Concentration, BA (p. 168)
- Design with Fashion Concentration, BA (p. 169)
- Design, BA (p. 170)
- Fashion Design, BFA (p. 171)
- Second Major in Art (p. 172)
- Second Major in Design (p. 173)
- Second Major in Design: Communication Concentration (p. 173)
- Second Major in Design: Fashion Concentration (p. 173)

Art with Painting Concentration, BFA

To receive a degree from the College of Art, a student must meet the requirements below and take academic courses with other undergraduates. Work in art and design can be combined with studies in architecture, business, the humanities, the natural and social sciences and the other arts. Students may take these courses for educational and intellectual enrichment or in direct correlation with their primary interests.

This curriculum includes the capstone studio for seniors in any BFA program in the College of Art. The capstone studio brings together all seniors in the studio areas and separately in the communication design and fashion areas for critical dialogue beyond disciplinary boundaries and to guide preparation for each area's culminating BFA exhibition.

A total of 121 units are required for the BFA degree, with the specified number of credits in each area detailed below.

Distribution Requirements (12 units)

Writing (3 units): Students must complete a College Writing course with a C- or better during the first year of study. Transfer students must fulfill the writing requirement by taking an approved course or by review of a writing portfolio. For more information, visit the College Writing Program website.

Humanities (3 units): Humanities courses examine the human condition as documented and expressed in both past and contemporary times. This area includes courses in literature (both in English and other languages), Classics, History, Philosophy, and Religious Studies, and some courses in creative arts such as Dance, Drama, Music and Writing. Courses tagged *HUM Humanities ArtSci IQ* fulfill the humanities requirement.

Natural Sciences or Mathematics (3 units): These courses help the student understand the natural and physical world using objective and empirical observation and controlled experimentation. This area includes courses in Biology, Chemistry, Environmental Biology or Policy, Earth and Planetary Sciences, Math and Physics, and some courses from departments such as Anthropology and Psychological & Brain Sciences. Courses tagged *NSM Natural Sciences and Mathematics Art Sci IQ* fulfill this requirement.

Social and Behavioral Sciences (3 units): These courses use qualitative and quantitative observation to explore the social environment, relationships with society, and forms of human behavior. This area includes courses in Anthropology, Economics, Education, International and Area Studies, Political Science and Psychological & Brain Sciences, and courses from other areas, including interdisciplinary studies. Courses tagged *SSC Social and Behavioral Sciences ArtSci IQ* fulfill the social and behavioral sciences requirement.

Art History and Visual Culture (15 units)

These courses provide context for art and design studies by examining the cultural and historical impact of artworks and artifacts. The BFA degree requires two 3-credit introductory courses (ARTARCH 1515 History of Western Art, Architecture & Design and ARTARCH 2020 Introduction to Modern Art, Architecture and Design) and three additional courses. Courses in the subject area Art History and Archaeology (ARTARCH) at the 2000-level or above or tagged *FA Visual Culture* fulfill this requirement.

Code	Title	Units
ARTARCH 1515	History of Western Art, Architecture & Design	3
ARTARCH 2020	Introduction to Modern Art, Architecture and Design	3
Other Courses	Select 3 from (ARTARCH) at the 2000-level or above or courses tagged FA Visual Culture	9
Total Units		**15**

Foundations (13 units)

Code	Title	Units
ART 1050	Drawing I	3
ART 1110	2D Design	3
ART 1120	3D Design	3
DESIGN 1210	Digital Studio	3
ART 1101	Practices in Art + Design	1
Total Units		**13**

Sam Fox Electives (12 units)

Code	Title	Units
Any courses in ART, DESIGN, FASHION, ARCH, LANDARCH or URBDES		12

Open Electives (30 units)

Code	Title	Units
Any courses in the following Schools: Sam Fox, Arts & Sciences, Business, or Engineering*		30

* A maximum of 15 non-Washington University units (including Advanced Placement, International Baccalaureate, and transfer credit) is permitted. No more than 9 units may be applied to physical education, lessons, independent study, and internships. No units from the School of Continuing & Professional Studies will be accepted.

Major & Concentration Requirements (39 units)

BFA Majors in Art can choose to concentrate in one of the following five areas: Painting, Photography, Printmaking, Sculpture, or Time-Based + Media Art.

A concentration requires one Intro Art course and four Art Practice courses in the area of concentration.

Intro Art and Art Practice studios have two identifying course tags:

- Either *FA Intro Art Studio* or *FA Art Practice Studio*
- *FA Major Studio* tag in one of the following areas: Painting, Photography, Printmaking, Sculpture, or Time-Based

Code	Title	Units
Sophomore Intro Art Studio Requirements (6 units)		
Painting Concentration	Select one Intro Painting Studio	3
Additional Sophomore Intro Art Studio	Select one Intro Art Studio outside the area of concentration (Photography, Printmaking, Sculpture, or Time-Based)	3
Junior/Senior Art Practice Studios (21 units)		
Painting Concentration	Select four Painting Art Practice Studios	12
Additional Junior/Senior Art Practice Studios	Select three additional Art Practice Studios from outside the area of concentration	9
Other Major Requirements (6 units)		
ART 3110	Methods and Contexts I	3
ART 3120	Methods and Contexts II	3
Capstone I & II (6 units)		
ART 4110	Capstone Studio I	3
ART 4120	Capstone Studio II	3
Total Units		**39**

Art with Photography Concentration, BFA

To receive a degree from the College of Art, a student must meet the requirements below and take academic courses with other undergraduates. Work in art and design can be combined with studies in architecture, business, the humanities, the natural and social sciences and the other arts. Students may take these courses for educational and intellectual enrichment or in direct correlation with their primary interests.

This curriculum includes the capstone studio for seniors in any BFA program in the College of Art. No more than 9 units may be applied to physical education, lessons, independent study, and internships. No units from the School of Continuing & Professional Studies will be accepted.

Major & Concentration Requirements (39 units)

BFA Majors in Art can choose to concentrate in one of the following five areas: Painting, Photography, Printmaking, Sculpture, or Time-Based + Media Art.

A concentration requires one Intro Art course and four Art Practice courses in the area of concentration.

Intro Art and Art Practice studios have two identifying course tags:

- Either *FA Intro Art Studio* or *FA Art Practice Studio*
- *FA Major Studio* tag in one of the following areas: Painting, Photography, Printmaking, Sculpture, or Time-Based

Code	Title	Units
Sophomore Intro Art Studio Requirements (6 units)		
Photography Concentration	Select one Intro Photography Studio	3
Additional Sophomore Intro Art Studio	Select one Intro Art Studio outside the area of concentration (Painting, Printmaking, Sculpture, or Time-Based)	3
Junior/Senior Art Practice Studios (21 units)		
Photography Concentration	Select four Photography Art Practice Studios	12
Additional Junior/ Senior Art Practice Studios	Select three additional Art Practice Studios from outside the area of concentration	9
Other Major Requirements (6 units)		
ART 3110	Methods and Contexts I	3
ART 3120	Methods and Contexts II	3
Capstone I & II (6 units)		
ART 4110	Capstone Studio I	3
ART 4120	Capstone Studio II	3
Total Units		**39**

Art with Printmaking Concentration, BFA

To receive a degree from the College of Art, a student must meet the requirements below and take academic courses with other undergraduates. Work in art and design can be combined with studies in architecture, business, the humanities, the natural and social sciences and the other arts. Students may take these courses for educational and intellectual enrichment or in direct correlation with their primary interests.

This curriculum includes the capstone studio for seniors in any BFA program in the College of Art. The capstone studio brings together all seniors in the studio areas and separately in the communication design and fashion areas for critical dialogue beyond disciplinary boundaries and to guide preparation for each area's culminating BFA exhibition.

A total of 121 units are required for the BFA degree, with the specified number of credits in each area detailed below.

Distribution Requirements (12 units)

Writing (3 units): Students must complete a College Writing course with a C- or better during the first year of study. Transfer students must fulfill the writing requirement by taking an approved course or by review of a writing portfolio. For more information, visit the College Writing Program website.

Humanities (3 units): Humanities courses examine the human condition as documented and expressed in both past and contemporary times. This area includes courses in literature (both in English and other languages), Classics, History, Philosophy, and Religious Studies, and some courses in creative arts such as Dance, Drama, Music and Writing. Courses tagged *HUM Humanities ArtSci IQ* fulfill the humanities requirement.

Natural Sciences or Mathematics (3 units): These courses help the student understand the natural and physical world using objective and empirical observation and controlled experimentation. This area includes courses in Biology, Chemistry, Environmental Biology or Policy, Earth and Planetary Sciences, Math and Physics, and some courses from departments such as Anthropology and Psychological & Brain Sciences. Courses tagged *NSM Natural Sciences and Mathematics Art Sci IQ* fulfill this requirement.

Social and Behavioral Sciences (3 units): These courses use qualitative and quantitative observation to explore the social environment, relationships with society, and forms of human behavior. This area includes courses in Anthropology, Economics, Education, International and Area Studies, Political Science and Psychological & Brain Sciences, and courses from other areas, including interdisciplinary studies. Courses tagged *SSC Social and Behavioral Sciences ArtSci IQ* fulfill the social and behavioral sciences requirement.

Art History and Visual Culture (15 units)

These courses provide context for art and design studies by examining the cultural and historical impact of artworks and artifacts. The BFA degree requires two 3-credit introductory courses (ARTARCH 1515 History of Western Art, Architecture & Design and ARTARCH 2020 Introduction to Modern Art, Architecture and Design) and three additional courses. Courses in the subject area Art History and Archaeology (ARTARCH) at the 2000-level or above or tagged *FA Visual Culture* fulfill this requirement.

Code	Title	Units
ARTARCH 1515	History of Western Art, Architecture & Design	3
ARTARCH 2020	Introduction to Modern Art, Architecture and Design	3

Other Courses	Select 3 from (ARTARCH) at the 2000-level or above or courses tagged FA Visual Culture	9
Total Units		**15**

Foundations (13 units)

Code	Title	Units

Design with Communication Concentration, BA

To receive a degree from the College of Art, a student must meet the requirements below and take academic courses with other undergraduates. Work in art and design can be combined with studies in architecture, business, the humanities, the natural and social sciences, and the other arts. Students may take these courses for educational and intellectual enrichment or in direct correlation with their primary interests.

A total of 120 units are required for the BA degree, with the specified number of credits in each area detailed below.

Distribution Requirements (12 units)

Writing (3 units): Students must complete a College Writing course with a C- or better during the first year of study. Transfer students must fulfill the writing requirement by taking an approved course or by review of a writing portfolio. For more information, visit the College Writing Program website.

Humanities (3 units): Humanities courses examine the human condition as documented and expressed in both past and contemporary times. This area includes courses in literature (both in English and other languages), Classics, History, Philosophy, and Religious Studies, and some courses in creative arts such as Dance, Drama, Music and Writing. Courses tagged *HUM Humanities ArtSci IQ* fulfill the humanities requirement.

Natural Sciences or Mathematics (3 units): These courses help the student understand the natural and physical world using objective and empirical observation and controlled experimentation. This area includes courses in Biology, Chemistry, Environmental Biology or Policy, Earth and Planetary Sciences, Math and Physics, and some courses from departments such as Anthropology and Psychological & Brain Sciences. Courses tagged *NSM Natural Sciences and Mathematics Art Sci IQ* fulfill this requirement.

Social and Behavioral Sciences (3 units): These courses use qualitative and quantitative observation to explore the social environment, relationships with society, and forms of human behavior. This area includes courses in Anthropology, Economics, Education, International and Area Studies, Political Science and Psychological & Brain Sciences, and courses from other areas, including interdisciplinary studies. Courses tagged *SSC Social and Behavioral Sciences ArtSci IQ* fulfill the social and behavioral sciences requirement.

Art History and Visual Culture (6 units)

These courses provide context for art and design studies by examining the cultural and historical impact of artworks and artifacts. The BA degree requires two 3-credit courses in the subject area Art History and Archaeology (ARTARCH) at the 2000-level or above (with the exception of ARTARCH 1515) or tagged *FA Visual Culture*.

Foundations (9 units)

Design Major Elective	Select any 3000- to 4000-level course tagged FA Communication Design	

Design with Fashion Concentration, BA

To receive a degree from the College of Art, a student must meet the requirements below and take academic courses with other undergraduates. Work in art and design can be combined with studies in architecture, business, the humanities, the natural and social sciences, and the other arts. Students may take these courses for educational and intellectual enrichment or in direct correlation with their primary interests.

Students in the class of 2029 and beyond must fulfill the following degree requirements. For academic requirements for the class of 2028 and prior classes, see the 2024-2025 Bulletin (p. 17).

A total of 120 units are required for the BA degree, with the specified number of credits in each area detailed below.

Distribution Requirements (12 units)

Writing (3 units): Students must complete a College Writing course with a C- or better during the first year of study. Transfer students must fulfill the writing requirement by taking an approved course or by review of a writing portfolio. For more information, visit the College Writing Program website.

Humanities (3 units): Humanities courses examine the human condition as documented and expressed in both past and contemporary times. This area includes courses in literature (both in English and other languages), Classics, History, Philosophy, and Religious Studies, and some courses in creative arts such as Dance, Drama, Music and Writing. Courses tagged *HUM Humanities ArtSci IQ* fulfill the humanities requirement.

Natural Sciences or Mathematics (3 units): These courses help the student understand the natural and physical world using objective and empirical observation and controlled experimentation. This area includes courses in Biology, Chemistry, Environmental Biology or Policy, Earth and Planetary Sciences, Math and Physics, and some courses from departments such as Anthropology and Psychological & Brain Sciences. Courses tagged *NSM Natural Sciences and Mathematics Art Sci IQ* fulfill this requirement.

Social and Behavioral Sciences (3 units): These courses use qualitative and quantitative observation to explore the social environment, relationships with society, and forms of human behavior. This area includes courses in Anthropology, Economics, Education, International and Area Studies, Political Science and Psychological & Brain Sciences, and courses from other areas, including interdisciplinary studies. Courses tagged *SSC Social and Behavioral Sciences ArtSci IQ* fulfill the social and behavioral sciences requirement.

Art History and Visual Culture (6 units)

These courses provide context for art and design studies by examining the cultural and historical impact of artworks and artifacts. The BA degree requires two 3-credit courses in the subject area Art History and Archaeology (ARTARCH) at the 2000-level or above (with the exception of ARTARCH 1515) or tagged *FA Visual Culture*.

Fashion Design, BFA

To receive a degree from the College of Art, a student must meet the requirements below and take academic courses with other undergraduates. Work in art and design can be combined with studies in architecture, business, the humanities, the natural and social sciences and the other arts. Students may take these courses for educational and intellectual enrichment or in direct correlation with their primary interests.

This curriculum includes the capstone studio for seniors in any BFA program in the College of Art. The capstone studio brings together all seniors in the studio areas and separately in the communication design and fashion areas for critical dialogue beyond disciplinary boundaries and to guide preparation for each area's culminating BFA exhibition.

A total of 121 units are required for the BFA degree, with the specified number of credits in each area detailed below.

Distribution Requirements (12 units)

Writing (3 units): Students must complete a College Writing course with a C- or better during the first year of study. Transfer students must fulfill the writing requirement by taking an approved course or by review of a writing portfolio. For more information, visit the College Writing Program website.

Humanities (3 units): Humanities courses examine the human condition as documented and expressed in both past and contemporary times. This area includes courses in literature (both in English and other languages), Classics, History, Philosophy, and Religious Studies, and some courses in creative arts such as Dance, Drama, Music and Writing. Courses tagged *HUM Humanities ArtSci IQ* fulfill the humanities requirement.

Natural Sciences or Mathematics (3 units): These courses help the student understand the natural and physical world using objective and empirical observation and controlled experimentation. This area includes courses in Biology, Chemistry, Environmental Biology or Policy, Earth and Planetary Sciences, Math and Physics, and some courses from departments such as Anthropology and Psychological & Brain Sciences. Courses tagged *NSM Natural Sciences and Mathematics Art Sci IQ* fulfill this requirement.

Social and Behavioral Sciences (3 units): These courses use qualitative and quantitative observation to explore the social environment, relationships with society, and forms of human behavior. This area includes courses in Anthropology, Economics, Education, International and Area Studies, Political Science and Psychological & Brain Sciences, and courses from other areas, including interdisciplinary studies. Courses tagged *SSC Social and Behavioral Sciences ArtSci IQ* fulfill the social and behavioral sciences requirement.

Art History and Visual Culture (15 units)

These courses provide context for art and design studies by examining the cultural and historical impact of artworks and artifacts. The BFA degree requires two 3-credit introductory courses (ARTARCH 1515 History of Western Art, Architecture & Design and ARTARCH 2020 Introduction to Modern Art, Architecture and Design) and three additional courses. Courses in the subject area Art History and Archaeology (ARTARCH) at the 2000-level or above or tagged *FA Visual Culture* fulfill this requirement.

Code	Title	Units
ARTARCH 1515	History of Western Art, Architecture & Design	3
ARTARCH 2020	Introduction to Modern Art, Architecture and Design	3
Other Courses	Select 3 from (ARTARCH) at the 2000-level or above or courses tagged FA Visual Culture	9
Total Units		**15**

Minors (directory)

Below is a list of minors offered by the College of Art. Visit the individual program pages for more information about a specific minor.

- Art Minor (p. 174)
- Creative Practice for Social Change Minor (p. 174)
- Design Minor (p. 174)
- Human-Computer Interaction Minor (p. 174)

Art Minor

The Art Minor (15 units) allows students to select courses from across the art curriculum. Each student may choose to select a narrow or wide-ranging set of courses based on their interests and goals. For students earning degrees in the College of Art, the minor is available to non-art majors only. Courses tagged *FA Art Minor* fulfill this requirement.

Creative Practice for Social Change Minor

The Creative Practice for Social Change Minor (15 units) allows students to apply creative practices from art, design and architecture to address systemic economic, environmental, and social challenges. The course DESIGN 2310 Design for Social Change (3 credits) is required; students must take four additional 3-unit courses of courses tagged *FA Creative Practice Social Change* (12 units). At least 12 of the 15 units must be applied exclusively to the minor and cannot be double-counted toward another major or minor. No more than 3 units may be taken outside of the Sam Fox School.

Design Minor

The Design Minor (15 units) allows students to mix and match courses in areas such as communication design, fashion design, and the illustrated book studio to suit their interests and schedules. For students earning degrees in the College of Art, the minor is available to non-design majors only. Courses tagged *FA Design Minor* fulfill this requirement.

Human-Computer Interaction Minor

The Human-Computer Interaction Minor (18 units) is a collaboration between the College of Art and the McKelvey School of Engineering, with a mix of required and optional courses in each school. Students are able to gain a multidisciplinary understanding of the principles and applications of human-computer interaction (HCI), and they are introduced to the techniques and processes necessary to create effective user interfaces.

The HCI minor is intended for students who are interested in the design of user-centered interactive technologies and those desiring jobs that include user interface creation, product design, UX/UI design, app development, and virtual and augmented realities. For students in the College of Art — particularly designers and computationally intrigued artists — the minor provides a more in-depth knowledge of back-end development skills. For students outside the College of Art, an HCI minor supports their studies with a clear track in a hybrid pursuit of design and programming.

Students pursuing the minor must complete two pillar courses, one integration course and three approved electives. Courses listed below are considered approved elective offerings between the Sam Fox School and the McKelvey School of Engineering. Students will be permitted to count only one course toward the HCI minor that is also counting for another major or minor.

Units required: 18, including the following:

Pillar Courses (6 units):

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
DESIGN 1265	Visual Principles for the Screen	3

Integration Course (3 units):

Code	Title	Units
CSE 2506	Introduction to Human-Centered Design	3
DESIGN 2258	Interaction Design: Understanding Health and Well-Being	3

Electives (9 units, with at least one course each from ART and CSE):

Code	Title	Units
CSE 2004	Web Development	3
CSE 3300	Rapid Prototype Development and Creative Programming	3
CSE 4308	Mobile Application Development	3
CSE 4500	Video Game Programming	3
CSE 4507	Introduction to Visualization	3
CSE 5506	Human-Computer Interaction Methods	3
CSE 5507	Advanced Visualization	3
DESIGN 2506	Digital Game Design	3
DESIGN 3250	Interaction Design: User-Centered Applications	3
DESIGN 3253	Advanced Interaction Design	3
DESIGN 3254	Communication Design: Interaction Foundations	3
DESIGN 3260	UX Research Methods for Design	3
DESIGN 3261	Interaction Design: Layout Systems	3
DESIGN 3302	Conditional Design	3
DESIGN 3508	Game Design Principles & Practice	3
DESIGN 4270	Advanced Visual Principles for the Screen	3
DESIGN 4280	Design with Artificial Intelligence	
PNP 2000	Introduction Cognitive Science	3
PSYCH 3600	Cognitive Psychology	3

Arts & Sciences

The College of Arts & Sciences is the largest undergraduate program at Washington University, offering students the most diverse range of courses in more than 50 different fields, ranging from anthropology and biochemistry to mathematics and performing arts.

The College draws on the rich and varied resources that this distinguished university has to offer: a creative and internationally recognized faculty, a diverse and able student body, a superior library, and excellent opportunities for advanced study and mentored research. As the center of intellectual life on the campus, the College of Arts & Sciences benefits from and contributes to the studies of architecture, art, business, engineering, law, medicine, and social work.

Of central importance to the life of the College is the quality of teaching. Undergraduate students have the opportunity to learn from and work beside stimulating teacher-scholars who are leaders in their fields. Our nationally recognized faculty, which numbers more than 600, is made up of artists, biologists, chemists, economists, historians, philosophers and poets, all of whom bring the excitement and diversity of new ideas into the classroom.

Governance

The College of Arts & Sciences is bound by the charter of the university and ultimately responsible to the University Board of Trustees, which delegates the administration of the university to the chancellor. In turn, the chancellor delegates the responsibility for the College's internal governance to the deans and faculty of the College of Arts & Sciences.

Because the College is continually reassessing its objectives and policies, faculty and students alike may take the initiative in proposing changes in curriculum and policies. New programs or proposed modifications are reviewed by committees with members who represent the diverse points of view of the academic community.

By action of the faculty of Arts & Sciences in January 1969 (revised in May 1971), the ArtSci Council, a student committee, shares joint responsibility with the faculty for College-wide degree requirements, the grading system, and those policies that directly affect the lives of students. The ArtSci Council appoints student representatives to various standing and ad hoc College committees.

The Curriculum

The College of Arts & Sciences fosters the quintessential qualities of a liberal arts education in its students: a heightened spirit of inquiry, an ability to organize and synthesize information, skills in written and oral expression, and a familiarity with the ways in which thoughtful people discover those commitments and values that make life worthwhile. By incorporating the College's manifold intellectual resources — people, libraries, laboratories, and studios — Arts & Sciences students "learn how to learn," developing both the flexibility and the habits of thought necessary to the ever-evolving worlds of work and global citizenship.

The College's academic program has two principal objectives. First, it provides students with an understanding of the range of human knowledge and attainment by developing an appreciation of the characteristic problems, achievements, and limitations of the various fields of human endeavor. The curriculum works to ensure this understanding by requiring a minimum amount of study (9 units/three courses) in each of three broad areas of study — the Humanities; Natural Sciences & Mathematics; and Social & Behavioral Sciences — and three to four courses (9-12 units) in a fourth area, Language & Cultural Diversity. Collectively, these area requirements make up approximately one-third of the units needed to graduate.

Second, the College's academic program gives students the opportunity to study a subject or area in a sustained, intensive way. After a period of initial investigation (typically two to three semesters) during which students explore the richness inherent in the various fields of study, a student declares an area of concentration: the major. The College offers more than 30 traditional subject majors — such as chemistry, English, and music — and more than 20 interdisciplinary majors — such as American culture studies; global studies; and women, gender, and sexuality studies. Students also may develop an individualized special major.

In all departments, students are encouraged to proceed as their strengths and interests lead them. Placement examinations are used in many departments to enroll undergraduates in courses at the levels their previous training warrants; in other departments, proficiency examinations are available (visit the Proficiency and Placement Examinations (p. 41) section of this *Bulletin* or the College's placement webpages under Credit for Test Scores and College Coursework Prior to WashU).

The degree requirements and policies in the *2025-26 Bulletin* apply to students entering Washington University during the 2025-26 academic year. To consult catalogs from prior years, refer to our Prior Bulletins.

Academic Advising

To assist students with their undergraduate planning, the College provides a closely coordinated academic advising program. Matriculating students have a specially selected four-year academic advisor with whom they meet regularly during the first year to help with the transition into the university and to help select courses for the fall and spring semesters. After the first year, students meet with their four-year academic advisors prior to registration each semester to discuss interests, goals, and academic coursework. Students are encouraged to consult with their four-year academic advisors any time they need assistance throughout the school year.

Upon declaring a major, students are also assigned a major advisor in the department of their principal area of study. The extent of the advisor's assistance depends on a student's individual needs and wishes. Consultation with a major advisor, in addition to the four-year academic advisor, is required each time a student prepares to register for courses.

Students with problems or questions related to academic issues are invited to visit the College Office at any time. One of the advisors is available, on a walk-in basis every day, to answer questions or to provide references to an appropriate source of help. Individual faculty members with particular specialties are among these sources of help and may be able to answer students' questions. In addition, the Center for Career Engagement, the Student Health Center, the Learning Center, and the Writing Center provide a wide range of services, including individual and group instruction, interest tests and advice, individual sessions with trained counselors about educational and personal challenges, and information about the improvement of learning skills.

Pre-Matriculation Credit

Students may earn pre-matriculation credit for college-level courses completed before enrollment at Washington University as a first-year student. Sources for pre-matriculation credit include Advanced Placement (AP) examinations, British Advanced (A) Levels, the International Baccalaureate (IB), course credit earned by proficiency (e.g., back credit), and college credit earned after the sophomore year of high school that was not applied to high school graduation. Although all accepted pre-matriculation work is noted on the transcript so that the student may go directly into advanced courses, the maximum number of pre-matriculation units of credit awarded is 15. Pre-matriculation coursework does not fulfill distribution requirements but may fulfill requirements for majors and minors. If a student enrolls in and completes a course equivalent to that for which pre-matriculation credit has been granted, the pre-matriculation units for the course in question will be removed from the student's record. For more information, please refer to the Pre-Matriculation Credit Units (p. 44) section on the Admissions Procedures page of this *Bulletin*.

Major Fields of Study

A major consists of both introductory coursework and a minimum of 18 advanced units (3000 level and greater), all of which must be letter-graded and completed with at least a C-. Individual departments may specify additional units or stricter minimum-grade requirements. Students should refer to the department program pages in this *Bulletin* for program-specific requirements.

A student graduating with a Bachelor of Arts (BA) may receive no more than a total of two majors and one minor *or* one major and two minors.

Major declaration is initiated online through Workday. A representative of the department that owns the major the student has declared will follow up with the student regarding any additional action(s) required by the department. When the declaration of the major is complete, the new major will appear on the student's record in Workday, and an advisor for the new major will be assigned by the department.

Second Majors

Students may complete more than one major, including a second major in the College of Art through the Sam Fox School of Design and Visual Arts, in the McKelvey School of Engineering, or in the Olin Business School. (Programs of study in the School of Continuing & Professional Studies, including minors and certificates, are not permitted.) A second major is not required to earn a degree.

Students with two majors may count only introductory courses (1000 and 2000 level), where relevant, toward the requirements for both majors. Advanced courses (3000 level and greater) may not count for both majors. If both majors require the same course, a departmentally sanctioned elective must be chosen to replace the course in one of the programs.

Students may not earn multiple credentials (e.g., a second major or a major and a minor) in the same discipline. Two credentials may be earned within the same department (e.g., Romance Languages and Literatures or Comparative Literature and Thought) but not within the same discipline (e.g., a major in French with a minor in French is not permitted, but a major in French with a minor in Italian is permitted).

Students in architecture, art, business, or engineering may choose to pursue a second major in the College of Arts & Sciences. These students will receive one degree, a BS or a BFA, with two majors: one in the professional school and one in the College of Arts & Sciences.

Minor Fields of Study

Students who develop a significant interest in one or more fields of study beyond the major may choose to pursue a minor in those fields. A minor is not required to earn a degree. Minors may be fulfilled in an area closely related to the major or, to add more breadth to the student's educational program, in a very different area of study. A minor consists of a minimum of 15 units of credit, all of which must be letter-graded and completed with a grade of C- or higher. Individual departments may specify additional units or stricter minimum-grade requirements. At least 9 of these units of credit must be at the 3000 level or above, and at least half of the courses must be completed in residence at Washington University. Specific course requirements for a minor are determined by each department or program and are detailed in the department program pages in this *Bulletin*.

Students with a major and one or two minors may count only introductory courses (1000 and 2000 levels), where relevant, toward the requirements for the programs. Advanced courses (3000 level and greater) may not count for more than one of the programs. If more than one program requires the same course, a departmentally sanctioned elective must be chosen to replace the course in the other program(s).

In addition to pursuing the broad array of minor programs offered through the College, students may undertake minors in the Sam Fox School of Design and Visual Arts, in the McKelvey School of Engineering, or in the Olin Business School. (Programs of study in the School of Continuing & Professional Studies, including majors and certificates, are not permitted.)

Students may not earn multiple credentials (e.g., a second major or a major and a minor) in the same discipline. Two credentials may be earned within the same department (e.g., Romance Languages and Literatures or Comparative Literature and Thought) but not within the same discipline (e.g., a major in French with a minor in French is not permitted, but a major in French with a minor in Italian is permitted).

Minor declaration is initiated online through Workday. A representative of the department that owns the minor the student has declared will follow up with the student regarding any additional action(s) required by the department. When the declaration of the minor is complete, the new minor will appear on the student's record in Workday, and an advisor for the new minor will be assigned by the department.

Part-Time Study: Nontraditional Students

The university recognizes that, for certain students with high educational goals, full-time study may not be feasible or appropriate. Employment in demanding positions, extensive family responsibilities, or other obligations may prevent an otherwise serious and competent student from completing the bachelor's degree at a rate of 15 units a semester. With their varied experiences outside the university, such students make valuable contributions to the classroom environment as they pursue programs of study suitable to their special circumstances. Please contact the School of Continuing & Professional Studies (CAPS) at 314-935-6700 for more information about part-time study.

Tuition Reduction

Students who have completed eight full-time semesters, excluding summer terms, in the College of Arts & Sciences and paid full tuition for their eight semesters may seek reduced tuition for a ninth or subsequent semester, provided that they have fewer than 12 units remaining to complete their degree. Students must petition the College Office, Arts & Sciences, Cupples II Hall, Room 104. Students who successfully petition for tuition adjustment for the ninth or subsequent semester will pay only for the units of credit that they attempt (proportionate to the full-time standard for tuition). Students approved for reduced tuition under this policy will have their term bills adjusted after the semester's add/drop period has concluded.

Army ROTC and Air Force ROTC

Students have the opportunity to participate in either the Air Force ROTC Military Aerospace Science Studies (p. 1177) program or the Army ROTC Military Science (p. 1177) program. Scholarship information for both programs can be found in the Scholarship Funds (p. 60) section of this *Bulletin*. For information about counting ROTC coursework toward the degree, refer to the Academic Regulations (p. 1007) page of this *Bulletin*.

African & African American Studies

The Department of African & African American Studies (AFAS) offers students opportunities to explore the social, political, and intellectual history as well as the literature, culture, and artistic life of Black people and communities worldwide.

Recognizing that today's most pressing challenges demand interdisciplinary thinking, the Department of African & African American Studies offers students the opportunity to explore a wide range of experiences, issues, debates, and theories that are not only central to Black communities but vital to understanding humanity and the human condition as a whole. Courses draw from the humanities, social sciences, and performing arts, ensuring that students gain a rich, multidimensional understanding of Africa and its diasporas. AFAS emphasizes both the diversity of the African continent and the distinctive impact of people of African descent on the Americans, Caribbean, Europe and global histories and cultures. Majors graduate with critical tools for analyzing and addressing complex problems — skills that are essential not only within Black Studies but in the broader world. In addition to intellectually engaging classroom experiences, AFAS fosters a vibrant intellectual and social community through sponsored programs, events, and travel opportunities that help students cultivate shared purpose, belonging, and leadership.

Specialized Tracks: Students majoring in African & African American Studies are encouraged to design a course of study that focuses on a particular area of interest or a more comprehensive examination of Black culture and life. Students can also choose one of our specialized tracks, which include:

- Health & Medicine
- Law & Policy
- Humanities
- Environment, Geographies, and Design

Senior Capstone: The major culminates in a Senior Seminar, where students pursue a Capstone Project on a topic of their choosing and with guidance from faculty. Projects often grow out of previous coursework, independent research with a faculty or an internship experience with a community partner and are presented individually and as part of a collective Senior Showcase. Students are encouraged to use the capstone to deepen an existing area of interest while making an original contribution to the field. In addition to serving as a culmination of their academic journey, the capstone is designed to produce a polished project that can strengthen graduate school applications or serve as a portfolio piece for future careers.

Opportunities Beyond the Classroom: A cornerstone of AFAS is an experiential, hands-on learning approach, allowing students to apply critical analyses to real-world issues. Beyond the Classroom opportunities include conducting research with esteemed faculty members, interning with a community partner, studying aboard, or receiving funding to design their own projects. These experiences develop students' professionalism and help prepare them for future careers and graduate studies.

Courses

AFAS 1002 Foundations in African & African-American Studies
Designed to introduce the student to issues in African & African American Studies and how students with AFAS degrees utilize their knowledge in graduate and professional programs or the working world. Particular attention will be paid to the discipline of African & African American studies, which engages with the artistic, cultural, historical, literary, and theoretical expressions of the peoples and cultures of Africa and the African Diaspora. Faculty members as well as Saint Louis professionals will give one-hour lectures on their particular disciplinary approach, their research, or their professional life. Students will be required to attend 3 outside lectures or performances. May be taken before declaring major, and may be taken by non-majors.
Credit 1 unit. A&S IQ: HUM Art: CPSC BU: HUM EN: H
Typical periods offered: Fall

AFAS 1022 The Rioting on the Wall: Crisis and Graffiti
How does it feel to bomb a train? Who would write their name all over a city? Why would you stop in the middle of a protest to paint a wall? Is spray paint dangerous? This class will address these questions and more by examining the significance of graffiti as a cultural practice. It will consider the historical context of graffiti's emergence from the urban ruin of New York City in the 1970s, as well as the social dynamics that have driven the practice of graffiti into the heart of recent uprisings and revolts, from Cairo to Istanbul to Santiago to Minneapolis. Graffiti is considered by some to be art, by others to be criminal vandalism. What happens if we consider it as both, or, even better, as neither? What if we consider graffiti as a kind of monument, or as a kind of political discourse? In such a way, we might begin to see how a cultural practice like graffiti expresses a desire to change the world, and that the form in which such desire is expressed matters as much as its content. This semester we will read accounts directly from graffiti writers themselves, as well as studies of and reactions to major and minor moments and figures over the course of graffiti's emergence and development. We will be guided in our work by theories of Black culture, study and struggle, and grapple with these theories' relation to the history of racial capitalism. We will analyze film, photography, and other media, and leave the classroom and campus for at least three off-site visits.
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Fall, Spring

AFAS 1100 First-Year Seminar: Gender, Sexuality and Power in 19th and 20th Centuries
Gender is a powerful lens through which to examine Africa's past. Defined as the behaviors, attitudes, and roles that society assigns the sexes, gender is one of the principles that has shaped African societies from the earliest times to the present. This course provides a broad introduction to major themes and debates relating to gender in African history. We will examine how gender has been produced, reproduced and transformed in the lives of African women and men from the latter parts of the 19th to the 20th century. We will highlight African agency and structures of power as we seek to examine gender as a social and historical construct in Africa. We will also analyze how gender intersects with race, sexuality and politics. Beginning with some of the methodological questions about gender in African history, our case studies -- drawn from a range of sources, including articles, book chapters, novels and films -- will cover topics such as domesticity and the colonial encounter, the reconfiguration of gender relations, nationalism and the women's question in African history, and sexuality and the state. For first-year students only.
Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM BU: HUM
Typical periods offered: Spring

AFAS 1102 Freshman Seminar: Civil Rights
This course examines both the chronological and thematic frameworks of the American civil rights movement: the architecture of segregation; its evolution as a social movement; and aspect of the movement's legal strategies, student activism, and militancy. The course ends by considering the varied goals and outcomes, raising questions about the meaning of race and rights in contemporary America. Although based in scholarly readings, the course also uses films, music, memoirs, biographies, art, fiction, and theatre as the vehicles through which activists recorded their own histories. Freshmen only.
Credit 3 units. A&S IQ: HUM BU: BA, ETH, HUM

AFAS 1103 First-Year Seminar: Monumental Anti-Racism
As sources of national memory and identity, public monuments, place names, historical markers, and other elements of commemorative landscapes are potential sites of cultural violence (e.g., alienation, disrespect, and erasure) contributing to broader conflict and inequality; they are therefore important considerations in movements for equal opportunity and justice. Some contend that memory sites are the new lunch counters, where our racial politics are worked out. This course examines the racial politics of commemorative objects and practices as well as commemorative intervention as a strategy of anti-racist activism. We begin with an historical survey of various ways that racism has been inscribed on the commemorative landscape, and readings in history, political theory, cultural studies, and other fields will be used to gain insight into these contested commemorative objects, their development, and social significance. We then turn to a critical assessment of efforts to remove and recontextualize commemorative objects and to erect new objects commemorating neglected figures and issues. We consider how these reparative efforts relate to what political theorists call remedies of recognition and specifically how they might aid in advancing equal opportunity and justice. Through our study and engagement with contested commemorative landscapes (including local, national, and global cases), students will become familiar with the burgeoning interdisciplinary field of memory studies, diverse forms and sites of commemoration, local and global efforts to advance what has been termed commemorative justice, and the challenges being faced.

Typical periods offered: Fall, Spring

AFAS 1104 First Year Seminar: Contextualizing Problems in Contemporary Africa
Africa is typically presented as a continent in constant turmoil in the U.S. and international media present. This freshmen seminar challenges this simplistic and common myth by exploring the historical and global roots of key issues facing contemporary Africa. Case studies include the 1994 genocide in Rwanda, post-apartheid violence in South Africa, HIV/AIDS in Africa, oil and corruption in Nigeria, the legacy of colonialism, the quest for modernity, refugees and forced migration, and commercial sex work. In each of these cases students will explore how the issue emerged within a specific historical, social, and global context. We investigate the implications of various forms of inequalities (e.g., between the global north and global south, within Africa, and among generations and genders) in shaping each topic and how differently situated people within Africa understand, respond to, and cope with everyday realities. Readings will include anthropological and historical analysis, African literature, journalist's accounts, and popular articles. By the end of the course, students should be able to critically assess the value of using a contextual analysis in understanding problems in contemporary Africa. This class is a discussion-based seminar and students are expected to actively participate. Students will be graded on a series of analytical essays, a final project, and in-class participation.
Credit 3 units. A&S IQ: SSC Art: SSC BU: IS EN: S

AFAS 1105 First-Year Seminar: Imagining and Creating Africa: Youth, Culture, and Change
The goal of this course is to provide a glimpse into how youth reshape African society. Whether in North Africa with the Arab Spring, in West Africa with university strikes, or in East Africa through a linguistic full bloom, youth have been shaping social responses to societies for a long period. In this course, we will study social structures, including churches, NGOs, developmental agencies as well as learn about examples of Muslim youth movements, and the global civil society. The course will also explore how youth impact cultural movements in Africa and how they influence the world. In particular, we will examine Hip-Hop movements, sports, and global youth culture developments that center on fashion, dress, dance, and new technologies. By the end of the course, students will have enriched ideas about youth in Africa and ways to provide more realistic comparisons to their counterparts in the United States. Course is for first-year, non-transfer students only.
Credit 3 units. A&S IQ: LCD BU: IS EN: H
Typical periods offered: Fall, Spring, Summer

AFAS 1106 First-Year Seminar: Afro-Futures: A First-Year Seminar for the End of the World
Afrofuturism as a concept is only 25 years old, but the aesthetic practice of imagining and constructing alternative techno-futures, presents, and pasts while placing Blackness and people from Africa and the diaspora at the center of these narratives certainly predates the word. As a genre that includes literature, music, and visual arts, Afrofuturism is closely linked to magical realism, science fiction, and Afropunk. In this course, we will conceive of Afrofuturism as a global practice. In the spirit of imagining alternative histories, this course resists the standard narrative of the genre that it began in the West and was then later picked up by African artists. The readings and syllabus are designed to bring together literature, music, and film from African artists and intellectuals, who often resist bounded categories but nevertheless engage in the practice of daring to imagine otherwise.
Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: CPSC, HUM BU: BA, HUM, IS EN: H
Typical periods offered: Spring

AFAS 1107 Freshman Seminar: Self & Identity in African American Literature
For whom should the black author write? In this seminar we will consider how African American literature examines the meaning of African American identity, the individual's relationship with the community, and the often vexed relationship of the black author to the American mainstream. We will read classic authors as well as some less familiar ones. W.E.B. Du Bois, Nella Larsen, James Baldwin and Octavia Butler are just some of the possibilities. Class participation and regular reading logs are required. FRESHMEN ONLY.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, ETH, HUM EN: H

AFAS 1108 Introduction to African Literature
James Bond, in Casino Royale, introduces us to Africa with a group of men betting on a fight between a mongoose and a snake; Hotel Rwanda creates an Africa of beautiful landscapes marred by the violence of genocide; Casablanca positions Africa as the site of wartime fantasy, intrigue and romance. These imaginary Africas, however, obscure the continent's irreducible complexity. As many as 3,000 languages are spoken across Africa's 54 countries, each defined by a unique blend of urban and rural cultures. The people of the Central African country of Chad belong to more than 100 ethnic groups. From their regional affiliations to their sociocultural perspectives, Africa's writers are no less diverse, its literary traditions no less dynamic. By examining texts from various genres and regions, we will trace

the development of African literature by considering its roots in the oral traditions and colonial history of the continent, its role in the articulation of African subjectivity on the road to independence, its response to the challenges of the post-independence era, and its present-day stronghold within the global literary marketplace. Readings will include works by Ferdinand Oyono, Nadine Gordimer, Ousmane Sembène, Assia Djebar, Chinua Achebe, Chimamanda Ngozi Adichie, and Dinaw Mengestu, among others. No prior knowledge of the literature of Africa is required.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM, IS EN: H

AFAS 1109 Introductory Seminar: Literature of the Middle Passage
Arguably the Middle Passage was the crucible in which racial identity and consciousness as we know it developed. All who experienced it, captives and captors alike, were irreversibly changed. In this course we survey the history of the Middle Passage and explore its lingering cultural legacy.
Credit 3 units. Arch: HUM Art: HUM BU: BA

AFAS 1110 Freshman Seminar: Black Power and Black Arts
This course will survey the literary, artistic, intellectual, and political work of the Black Power and Black Arts movements of the 1960s and 1970s. It will look at the emergence of these movements from earlier forms of black nationalism, socialism, pan-Africianism, mainstream civil rights struggle and earlier black cultural movements. Film, music, and readings may include works of Malcolm X, Angela Davis, Amiri Baraka and Don Lee. Freshmen only.
Credit 3 units. Arch: HUM Art: HUM BU: BA

AFAS 1111 First-Year Seminar: Travel Noire: Consumption and the Gaze in the Black Travel Movement
This course explores the growing industry of leisure tourism that caters to Black people. It takes as its premise that tourism is more than just voluntary, recreational travel; it is an encounter shot through with desire, intimacy, and ideology. We approach the tourism encounter from both sides -- the consumer and the consumed -- as we explore various types of tourism from domestic and international tourism to sex tourism and heritage tourism. If tourism is a desire machine, what desires of self and other are reflected in the discourse about travel noire? Who is being consumed and what is being made consumable in this growing market space? Students will be required to create a travel itinerary based in Missouri during the course and to propose a narrative revision to a local tourism destination. This course is for first-year, non-transfer students only.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall

AFAS 1112 Introduction to African American Images in Film: A Freshman Seminar
This seminar for Freshmen will introduce students to an array of films depicting African Americans at different points in the history of film making, as well as the relevance of these films to the advancement of civil rights in America, and, by extension, the world. Students will be introduced to elementary documentary film production in collaboration with Washington University library staff and hands-on utilization of the Henry Hampton Archive. The course provides a balanced introduction to various civil rights topics that are relevant to African Americans, their depiction in film, and knowledge of how documentary film production can be used to overcome past discrimination.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

AFAS 1113 Images of Africa in Literature and Art, C. 1800 to Present Day
This course examines representations of Africa, African peoples, and African cultures from the early nineteenth-century to the present day. Drawing on a wide variety of African and colonial source materials-including novels, photographs, art, advertising, and movies-we will critically explore the ways in which historical developments and cultural products helped to shape conceptions of African identities and ethnicities. Among other issues, we will address the legacy of the slave trade; gender and the construction of cultural traditions; colonial society, nationalist resistance, and the rise of pan-Africanism; and South African Apartheid. Emphasis will be placed on critical engagement with the source materials through written assignments and participation in class discussion. Freshmen only.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

AFAS 1114 First Year Seminar: African-American Women's History: Sexuality, Violence and the Love of Hip Hop
Black women, much like their male counterparts, have shaped the contours of African American history and culture. Still, close study of African American women's history has burgeoned only within the past few decades as scholars continue to uncover the multi-faceted lives of Black women. This course will explore the lived experiences of Black women in North America through a significant focus on the critical themes of violence and sexuality. We will examine African American women as the perpetrators and the victims of violence, as the objects of sexual surveillance as well as explore a range of contemporary debates concerning the intersections of race, class, and gender, particularly within the evolving hip hop movement. We will take an interdisciplinary approach through historical narratives, literature, biographies, films and documentaries. This class is for first-year, non-transfer students only.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, HUM EN: H
Typical periods offered: Spring

AFAS 1122 Topics in AFAS
Topic will vary semester by semester
Credit 3 units.
Typical periods offered: Fall, Spring

AFAS 1130 Introduction to Race
This course serves as an introduction to the analytic category race. Students will be exposed to major theories concepts, processes, frameworks, and scholars of race. They will develop the skills and language to critically examine and discuss race, with emphasis on how conceptions of race and collective identity have deep historical roots and have changed over time. This course takes the position that race-like gender, class and sexuality-is socially constructed. That said, while race is socially constructed, this course also emphasizes that racialization and racial categories have social, political, and economic consequences in people's everyday lives. Meaning the socially and historically constructed category of race has real implications for people and communities. Ultimately, the purpose of the course is to teach students to read, think and write critically about one of today's most contentious topics-race-by exposing them to readings and other course materials that consider race and the process of racialization in specific contexts and time periods throughout the world.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, HUM EN: H

AFAS 1151 Freshman Seminar: The Atlantic Slave Trade
This course is an examination of the Atlantic slave trade (1445-1870), arguably the world's first sustained globalization process. It involved the dispersal of approximately 12 million enslaved Africans to the western hemisphere and Europe, thereby linking the historical destinies of

Africa, Europe and the Americas. This course will not only detail the horrors of the Middle Passage but also demonstrate how the African presence transformed the Americas and became a central factor in our modern conceptions of race.
Credit 3 units. BU: BA

AFAS 1175 Confronting the Past: Transformative Justice in St. Louis and Beyond
Legacies of historic injustice are among the world's most pressing problems. This rotating Ampersand course examines how communities understand and grapple with legacies of historic injustice, especially relating to colonialism, slavery, genocide, and other systematic violence, using strategies of community remembrance and repair to advance transformative justice. The course combines grounding in reckonings with historic injustice in the context of greater St. Louis with comparative engagement with other U.S. and global contexts. Engaging these issues from a variety of perspectives — spanning the humanities and social sciences, art and design, public health, law, and education — we will apply theoretical and empirical frameworks to existing or potential approaches to transformative transitional justice. Our core aim is to work together to consider and build comparative and collective understanding of community reckonings with the legacies of historic injustice, informing local, national and global reparative efforts. The 2025-2026 Ampersand on Reckonings with Historic Injustice combines a local focus on St. Louis with global studies in the U.K., engaging academic and community partners in Belfast, Northern Ireland, and Bristol and Liverpool, England. We will broadly engage and reconsider “The Troubles,” looking across U.S. and U.K. histories of slavery and colonialism, and considering how local-to-global communities are confronting their legacies today.

Typical periods offered: Fall, Spring

AFAS 1240 Beats, Rhymes & Life: A Cultural History of Hip-Hop
There is something cinematic about Hip-Hop. Indeed, the vividness of the genre's greatest lyricist or the evocative tonnage of its greatest producers are often described as feeling like a movie. Over the past 50 years, this phrasing has proven to be both figurative and literal. From Spike Lee's resonant usage of Public Enemy's rebellious Fight the Power in Do The Right Thing to Hype William's haunting rendering of Nas's One Love in Belly, Hip-Hop has functioned as the soundtrack and aesthetic muse for nearly a half-century of Black film making. In the second half of this yearlong Ampersand course, students will build upon the cultural history established in the fall semester to explore how Hip-Hop-inspired, re-imagined, and soundtracked the world of film. Over the course of the semester, students will engage with a wide array of films, including documentaries, independent films, biopics, music videos, live performances, and various feature films. Films will be supplemented with traditional and multimedia sources within Hip-Hop Studies and Film and Media Studies, including articles, books, interviews, magazines, lyrics, and photography. This course is for students in the 50 Years of Hip Hop Ampersand program only.

AFAS 1511 African American Representation in Popular Culture
This course will explore how American society has historically represented African-Americans and how black people have represented themselves internally to the black community and externally to the world. Furthermore, how black representation is co-produced through interactions by the mass media, American society and the black community will be examined by focusing on specific themes. Some of the areas of black representation that will be discussed are visual (photo and video), scientific, technological, music, sport, black men, black women, sexuality, black poor, black affluent, black nationalism and black conservatism.
Credit 3 units. BU: BA

AFAS 1530 Topics in African American Art
A survey of the development of African-American artists from the earliest phase of mass emancipations after the Revolutionary War to the Harlem Renaissance with a brief look at slave crafts. Lectures focus on the integration of African Americans into the mainstream western art market and their eventual exile from the social restraints of post-Reconstruction United States. The course examines the role of significant African-American content in seemingly mainstream works of art.

AFAS 1550 Afro-Hispanic Literature: An Introductory Course
In The Black Atlantic: Modernity and Double Consciousness, Paul Gilroy defines the 'Black Atlantic' as a culture that is not specifically African, American Caribbean, or British but all of these at once. This cultural phenomenon will be explored by analyzing selected poems, novels, short stories, essays, and dramas of Spanish speaking writers of African descent from Latin America, the Caribbean, and Africa. Utilizing the theoretical framework of Paul Gilroy, Stuart Hall, and Frantz Fanon, the texts will be analyzed considering their socio-historical, geographic, and racial implications and their respective literary movements beginning with the 1900s to the present. No prior knowledge of Spanish is required since this course will be taught in translation.
Credit 3 units. Art: HUM

AFAS 1560 Conceptualizing Danger: Love and Politics in the Time of HIV/AIDS in Africa
Students will explore the HIV/AIDS epidemic in sub-Saharan Africa through a variety of analytic perspectives. Course materials include historical analysis, anthropological perspectives, development literature, African film and literature, and the mass media. Students will conduct a semester-long research project using on-line newspapers from Africa. This course is limited to freshmen only.

AFAS 1610 Beginning Swahili I
A beginning language course emphasizing acquisition of reading, writing, and conversational skills in Swahili language. Through video and other multimedia presentations, students are also introduced to the culture of Swahili-speaking communities living in over a dozen African countries. Five hours a week including culture and language laboratory hours. This course is strongly recommended for students participating in the Summer in Kenya Program.
Credit 5 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall

AFAS 1620 Beginning Swahili II
Second semester Swahili language course emphasizing conversational competence and knowledge of Swahili-speaking cultures of East Africa. In addition to learning grammar and vocabulary sufficient enough to allow a student to perform basic survival tasks (asking for directions, buying a ticket for travel, checking into a hostel, ordering food) in Swahili, students will also be introduced to authentic Swahili texts including plays, short stories, and newspapers. Students will have an opportunity to practice their acquired language skills by interacting with Swahili-speakers in the St. Louis region. PREREQ, AFAS 103D.
Credit 5 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Spring

AFAS 1630 Intensive Introductory Wolof
This course is an intensive introduction to Wolof for students participating in the Senegal summer program. Wolof is a West African language spoken in Senegal and the Gambia. It is also spoken on a smaller scale in Mauritania, Mali, French Guinea, and in the migrant communities in the US and France. Students will practice speaking, reading, and listening but the primary focus of the course will be gaining oral proficiency. Each module will begin with a thematic and practical dialogue from which we can study vocabulary, aspects of grammar as well as a cultural lesson. Interactive material, images, videos, films, and audio, will be provided as well as organized trips outside of the classroom (markets, bodegas, etc.) to practice dialogues. Its aim is to provide students with knowledge of the basic structures of the language and the ability to communicate.
Credit 3 units. A&S IQ: LCD EN: H
Typical periods offered: Summer

AFAS 1640 Wolof Language and Culture
This course introduces students to Wolof language and culture. Wolof is a West African language spoken in Senegal and the Gambia. It is also spoken on a smaller scale in Mauritania, Mali, French Guinea, and in the migrant communities in the US and France. This is the first course of a beginning-level of a Wolof program. In order to acquire a basic proficiency, students will practice speaking, reading, writing and listening. Each module will begin with a thematic and practical dialogue from which we can study vocabulary, aspects of grammar as well as a cultural lesson. Interactive material, including texts, images, videos, films, and audio, will be provided. Its aim is to provide students with knowledge of the basic structures of the language and the ability to communicate. Students will also learn important aspects of life and culture of the Wolof. For AFAS majors, this course counts as Area Requirement 4.
Credit 3 units. A&S IQ: LCD EN: H
Typical periods offered: Fall

AFAS 1650 Wolof Language and Culture II
This course continues the introductory study of Wolof language and culture. Wolof is a West African language spoken in Senegal and the Gambia. It is also spoken on a smaller scale in Mauritania, Mali, French Guinea, and in the migrant communities in the US and France. This is the second course of a beginning-level of a Wolof program. Students will practice speaking, reading, writing and listening. Each module will begin with a thematic and practical dialogue from which we can study vocabulary, aspects of grammar as well as a cultural lesson. Interactive material, including texts, images, videos, films, and audio, will be provided. Its aim is to provide students with knowledge of the more advanced structures of the language and the ability to communicate. Students will learn important aspects of life and culture of the Wolof.

AFAS 1800 First-Year Seminar: Black Constellations: Mapping Trajectories in 20th Century Black Poetics
How might we map the evolution of African American poetry in the 20th century? Both formally and thematically, can we identify and analyze patterns, transformations, and differences to better understand African American poetry and its monumental growth over the course of the 20th century? As an integral and expansive realm within American poetry, influencing and influenced by American poetics as a whole, in what ways are the thematic concerns and craft techniques found in African American poetry different from 'American' poetry (if at all)? This discussion-based class will analyze and map African American 20th century poetic trajectories (literary legacies, inheritances, and genealogies) with the goals of 1) developing a language for the evolution of a major field of American poetry in the 20th century, 2) questioning and broadening the 20th century American canon, and 3) crafting new, more precise questions that examine black poetic identity in the past century.

AFAS 2022 Black Theatre Workshop
A performance-oriented course that explores the black experience through acting, directing, and playwriting. Students will do short performances during the semester. They will also be required to attend three to five plays. Each student must participate in a final performance which is in lieu of a written final examination.
Credit 3 units. A&S IQ: HUM BU: HUM

AFAS 2031 Caribbean Identities: An Interdisciplinary Approach
The primary goal of this course is to explore scholarly research and cultural materials dealing with Caribbean identity. We will survey, examine, and discuss issues that bear on Caribbean identities including topics in contemporary language use and policy, literature, music, and other forms of popular media (television, radio, newspapers, etc.) to illustrate how various islands in the Caribbean identify and distinguish themselves from others. The course will focus on theory-based and research oriented information as well as critical essays and popular media that will provide you with knowledge to have an intelligent and informed discussion about issues dealing with Caribbean identities.
Credit 3 units. A&S IQ: SSC EN: S

AFAS 2045 The Writer as Witness: Mourning and Memory in the African Novel
This course introduces students to the histories and traditions of the African novel. While paying attention to the anticolonial legacies of the African novel, this course explores questions of memory and mourning in African writing. Through analyses of works by writers such as Chinua Achebe, Wole Soyinka, Chimamanda Ngozi Adichie, Tsitsi Dangarembga, Nuruddin Farah, Nadine Gordimer, Zakes Mda,

J.M Coetzee, and others, we will trace how African writers have used their novels to imagine creative ways of bearing witness to their pasts and imagining their futures. In addition to novels, we will also read secondary critical writing on African literature.

AFAS 2050 The Linguistic Legacy of the African Slave Trade in Interdisciplinary Perspective
This course explores the linguistic consequences of the African slave trade, and in so doing introduces students to basic concepts in linguistic science that are relevant to human language development and controversial educational theories that are based on race. Anthropological, linguistic, and psychological dimensions of African American culture are embedded within complementary evaluations of educational controversies surrounding the teaching of (standard) English to American slave descendants, including the Ebonics controversy and its relevance to larger questions of social efficacy, and the affirmative action debate that has consumed the nation. Students will work individually or in groups to produce a major intellectual artifact (e.g., a term paper, a scholarly web page, or a project pertaining to the linguistic plight of citizens within this African Diaspora). Students will be introduced to foundational African American studies in anthropology, education, English, linguistics, and psychology.

Typical periods offered: Fall

AFAS 2060 Blackness and the Politics of Recognition in Latin America
In 2015, for the first time in Mexico's history, there was an official count of its population of African descent, thus leaving Chile as the only nation in the hemisphere not have done this. A year prior, Brazil introduced a quota system for all federal jobs, leading to new questions about who qualifies for these positions. These examples and more highlight a new era in Latin America that questions who counts -- both literally as with censuses and figuratively as with affirmative action -- as Afro-descended in a region characterized by racial mixture. In this course, we will analyze the new turn toward racial governance as we grapple with the following questions: How does the racial governance of the 21st century upend or echo the racial governance of the colonial era? How does this new era affect our understanding of race and identity? What is lost and gained by counting people as black? For AFAS majors, this course counts as Area Requirement 4.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, IS EN: S
Typical periods offered: Fall

AFAS 2070 Topics in African American Studies: Native Sons and Daughters Gender & Sexuality of African American
This course will focus on the relationship of race, gender and sexuality in the context of the cultural and political transformations of the two postwar periods, the Civil Rights and Black Power Movements, the Sexual Revolution, the war on drugs and the Obama era. The primary focus will be to consider how gender and sexuality inform cultural imaginings and representations of African American experience since WWII. Emphasizing close reading of canonical literature paired with critical representations of blackness in film and visual art we will examine how African American artists employed aesthetic expression for cultural critique of American racism and how fiction served as an arena for advancing a critique of racist injustice and for raising fundamental questions about the concept of race itself. Course content will be guided by the following questions: Why are gender and sexuality important to consider when reading African American cultural texts? How do discourses of gender and sexuality affect the meaning of blackness? How does gender impact racial representation and its political meanings? Finally, what are the cultural impacts of these gendered sexualized and politicized racial representations?

AFAS 2081 African-American Studies: An Introduction
Lectures, readings, films, and discussions reflect a range of academic approaches to the study of African American people. Course materials drawn from literature, history, archeology, sociology, and the arts to illustrate the development of an African American cultural tradition that is rooted in Africa, but created in the Americas. Required for the major.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: HUM EN: H

AFAS 2090 African Studies: Mapping Urban Languages and Resistance in Africa
This course will introduce students to a variety of approaches to the study of Africa by considering the ways that scholars have understood the African experience. It will expose students to the history, politics, literary, and artistic creativity of the continent. Emphasis will be placed on the diversity of African societies, both historically and in the present, and explore Africa's place in the wider world. Required for the major.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H

AFAS 2120 Topics in African Francophone History
This course seeks to demonstrate how the French colonial administration conceptualized empire in West and Central Africa, and further examines how various African populations responded to the politics of language, culture, and assimilation throughout Francophone Africa. Beginning with the Berlin Conference (1884-1885) and an introduction to Senegal, one of France's oldest colonies (1891-1960), this course uses oral historical accounts of African participation in both world wars. It also highlights U.N. imperialism in Central Africa-beginning with the trusteeship of Cameroun, culminating with the assassination of Patrice Lumumba, and subsiding with the Belgian Congo's second independence. It ends with a discussion of topical themes in political science discourse such as democratization, development, globalization, and human rights.
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM, IS

AFAS 2140 Juvenile Justice in the Black Experience
This course examines the sociolegal past, present, and future of American juvenile justice, with a focus on the Black American experience. The course is organized in three parts. Part I surveys the late 19th- and early 20th-century development of the parental state, including its institutional centerpiece (the juvenile court), its principle legal subjects (dependents and delinquents), and how these took shape alongside the contemporaneous rise of American Apartheid. Part II examines several key changes and challenges in contemporary juvenile justice, including the transformation of this institution in the wake of the Civil Rights Movement and the endurance of racialized juvenile social control in the post-Civil Rights period. Finally, Part III considers possible futures of youth justice in the United States and beyond as well as practical strategies for achieving equal protection within and beyond the law. For AFAS majors, this course counts as Area Requirement 2.

Typical periods offered: Fall

AFAS 2151 St. Louis Black History, Culture and Civic Engagement
Discover the stories of Black Saint Louisans and their contributions to the city, the region, and the nation. From Dred and Harriet Scott to J. D. and Ethel Lee Shelley, from Scott Joplin to Chuck Berry, from James Milton Turner to Tishaura Jones, the course will engage first-hand accounts and innovative scholarship to examine St. Louis's deep and

rich history of Black life, culture, resistance, and civic engagement that has shaped the city for three centuries. Beyond the classroom, students will experience this history through visits to key sites in the city's African American past, tour local Black museums, and learn directly from area history-makers and custodians of African American history. Students will apply their learning through collaborative work with a community partner that elevates histories of the African American experience in St. Louis.

Credit 3 units. A&S IQ: HUM BU: HUM

Typical periods offered: Fall

AFAS 2153 Topics in African American Studies: Afro-Latin America On Camera

In this course, we will see how the camera, in still and moving photography, has served to register blackness in Latin America as a structure, experience, and representation frequently neglected in popular media. Starting with the images of enslavement and freedom in the form of painting, sketches, prints, daguerrotypes, and other early photographs in nineteenth-century Latin America, we will explore how the camera has marked the passing of time and created racial histories-actual and fictional-that educate us, move us, and influence how governments make policy. We will view an array of films, video, and still photography, across multiple genres, that center the histories and present-day joys and struggles of black people in Latin America while actively considering how our own consumption of media informs our racial perceptions of Latin America. The work that we view and read about will be used to question Latin America's perceived racial exceptionalism narratives, such as mestizaje, mulatismo, and racial democracy, and how they depend on sugarcoated histories of race mixture during slavery and colonization. This course will also focus heavily on how image-making becomes a persuasive means to make one's blackness known in the framework of the Latin America nation-state, to stake claims to rights, and to document black life in productive, pleasurable ways that do not always center the ongoing gentrification, annihilation, and genocide of black communities.

Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM, VC BU: BA, ETH, HUM EN: H

Typical periods offered: Fall

AFAS 2154 Topics in African-American Studies: The Struggle for Black Reparations

This course will take an interdisciplinary approach to understand reparations. Drawing on histories of injustice, newspaper articles, economic analyses of the cost of reparations, Senate hearings, and H.R. bill 40, we will interrogate the historical and contemporary impact of white supremacy and anti-Blackness on African American life that drive demands for redress. The course readings are divided into three parts: we will examine slavery, the Jim Crow era, and the contemporary moment to understand how the U.S. government, often in partnership with the private sector, has exploited African Americans. This course will also challenge us to evaluate varying reparation models, debates regarding its feasibility, and grapple with what true liberation looks like for Black people today.

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, HUM EN: H

Typical periods offered: Fall

AFAS 2157 Racism, Reform & Rebellion: The Ferguson Uprising & the Rise of Black Lives Matter

On August 9, 2014, Michael Brown, an 18-year-old African-American teenager, was murdered in the Canfield Green Apartment complex by Officer Darren Wilson, a member of the Saint Louis County Police. Brown's murder and the subsequent disrespect of his lifeless body would punctuate years of frustration among local, Black St. Louisians who continued to suffer abuse at the hands of law enforcement. As they collectively mourned, Black people in the region decried the persistent racism, and called for reforms. Beginning in Ferguson and expanding to all sectors of the greater Saint Louis area, the protest would eventually spread across the country, coalescing into what would eventually be referred to as the Movement for Black Lives or #BlackLivesMatter. Eventually, this social movement, hashtag and broader discourse would profoundly shape American discourses about racism, inequality, and social justice. At the height of its popularity #BlackLivesMatter would challenge state governance, universities, corporations, electoral politics, commerce and many other aspects of American life. This course will explore the ways that Saint Louis, as a city and region, came to occupy the center stage of American history at the outset of the 21st Century.

Credit 3 units. A&S IQ: HUM, SC BU: BA, HUM EN: H

Typical periods offered: Spring

AFAS 2160 Free the Land: Black Lives and Environmental (In)justice

Black history is inextricable from the study and discussion of environmental racism and environmental justice in the United States. Environmental racism is defined as any policy, practice or directive that differentially affects or disadvantages individuals, groups or communities based on race. This course expands and illuminates this definition through examinations of space and spacemaking where Black and indigenous people reside-from Africa to the Caribbean and United States. We will interrogate instances of environmental injustice as expressed through toxic waste, land theft, conservation colonialism, and the slow violence of biological extermination and social erasure. We will also examine environmental justice as a social movement in which local communities, activists, online networks, and at times government actors resist environmental injustice to create cleaner, more sustainable environments for all. Throughout the semester, we will read scholarly texts, engage primary sources, analyze popular and independent media, and study testimony and self-published materials from Black activists across the globe.

Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S

Typical periods offered: Fall

AFAS 2230 The African Diaspora: Black Internationalism Across Time and Space

This course is an introduction to the history of the African diaspora. It will engage the following questions: what constitutes a diaspora and what is the African diaspora in particular? Where is it? What were the conditions that led to the dispersal of Africans throughout the world? How have Africans in the diaspora constructed cultural and political identities across time and space? What were the circumstances that led to the dispersal of Africans? When the dispersal resulted from conditions of inequality, as was the case when the transatlantic slave trade led to the forced migration of Africans to the 'new world,' what were the legacies of that inequality? How has the African presence transformed the societies in question? Though the course will focus on readings from the United States, the Caribbean and South America, students will also be exposed to the African diaspora as a series of dispersals, with a view to placing the African diaspora in the 'new world' within the historic context of a longer history of African dispersal.

Credit 3 units. A&S IQ: HUM Arch: HUM BU: HUM, IS EN: H

AFAS 2232 Gender and Sexuality in the African Diaspora

This course is an interdisciplinary examination of gender and sexuality in the Africa Diaspora. We will study the complexities of gender and sexual experiences, practices, identities, and community formations within select cultural contexts. Through lectures, and discussion and creative activities, films, and reading materials, both fiction and nonfiction, we will examine how genders and sexualities are constructed, experienced, and lived in various socio/cultural geographies throughout the Black world.

AFAS 2996 Quantitative Methods

This course provides students with a basic foundation of quantitative methods and its role in evidence-based decision making in the fields of public health, criminal justice, education, and environmental justice. The course covers statistical principles that govern the analysis of data in social sciences. Included in this course are exploratory data analysis, probability theory, confidence interval testing, hypotheses testing, power and sample size determination, and multivariable methods.

Credit 3 units.

AFAS 2998 Independent Work

Independent work must be approved by the faculty sponsor, the academic coordinator, and the department chair.

Credit 3 units.

Typical periods offered: Fall, Spring

AFAS 2999 Internship in African & African American Studies

Students receive credit for a faculty-sponsored and approved internship with a community partner. Preference will be given to AFAS community partners. The internship is intended to give students the opportunity to obtain professional experience and apply AFAS concepts in project with a community partner in their area of interest. Students must have a faculty advisor, and a site or project supervisor at the community partner. Registration requires completion of the Learning Agreement, which must be filled out and signed by their faculty sponsor, the AFAS Director of Community Engagement, and their site supervisor prior to beginning internship work. Students should agree on a set of deliverables with the faculty sponsor, for instance, bi-weekly journals with an end-of-the-semester short reflection paper. Students are encouraged to use their internship experience for their future capstone or senior honors thesis. Students may not receive credit for work done for pay but are encouraged to obtain written evaluations about such work for the student's academic adviser and career placement file. May be taken for 1-3 credit hours, depending on the number of internship hours.

Credit 3 units.

Typical periods offered: Spring

AFAS 3000 Directed Research in African & African American Studies

Students works on research activities, a project, or specialized training in Black Studies under the supervision or direction of an AFAS professor outside of a classroom for an approved learning experience. Approval of an instructor and the chair of the department is required. This designation should constitute rigor and knowledge gained consistent with other 300-level courses in the Department. May be taken for 1-3 credit hours, depending on the number of hours committed per week.

Credit 3 units.

Typical periods offered: Spring

AFAS 3003 From Shaft to Django: The History of Blaxploitation Film

Hollywood was in steep decline in the late 1960's. On the brink of collapse, the film industry was rescued by an unprecedent boom in films that featured Black casts and targeted Black audiences. Narratives of slick-talking hustlers and afro-sporting femme fetales intent on sticking it to the man, these would come to be known as Blaxploitation films. This class will historically contextualize and critically examine the Blaxploitation phenomenon of the 1970's. We will explore what led to the emergence of Blaxploitation, the peaks of its popularity, the controversies that surrounded it, its rapid demise, and its lasting influence. Blaxploitation was a brief, bombastic and highly polarizing era in the history of American film. Heralded by some as a revolution in representations of Black empowerment and by others as pandering to longstanding racial stereotypes. Indeed, it's influence on Black culture stretches beyond the 1970's and into cultural realms beyond the silver screen. While this is primarily a film course emphasizing close readings of canonical Blaxploitation cinema, we also will explore: Blaxploitation soundtracks (i.e., Curtis Mayfield and Isaac Hayes), Black Pulp Fiction novels that inspired the films (i.e., Ernest Tidyman and Sam Greenlee), the aesthetics of Blaxploitation promotion via the Black Film Promotional Material Collection located in the Julian Edison

Department of Special Collections, and finally we will consider how Blaxploitation aesthetics influenced subsequent cultural movements like the 1990's renaissance in Black film, Hip-Hop and contemporary satire.

Typical periods offered: Fall

AFAS 3006 Feminist Fire!: Radical Black Women in the 20th Century
Black women have been at the forefront of the Black radical tradition since its inception. Often marginalized in both the scholarship and the popular memory, there exists a long unbroken chain of women who have organized around the principles of anti-sexism, anti-racism, and anti-capitalism. Frequently critical of heterosexist projects as well, these women have been the primary force driving the segment of the Black radical tradition that is commonly referred to as Black Feminism. Remaining cognizant of the fact that Black Feminist thought has also flourished as an academic enterprise -- complete with its own theoretical interventions (e.g., standpoint theory, intersectionality, dissemblance) and competing scholarly agendas -- this course will think through the project of Black Feminism as a social movement driven by activism and vigorous political action for social change. Focusing on grassroots efforts at organizing, movement building, consciousness raising, policy reform, and political mobilization, this course will center Black Feminists who explicitly embraced a critical posture toward capitalism as an untenable social order. We will prioritize the lives and thoughts of 20th-century women like Claudia Jones, Queen Mother Audley Moore, Frances Beal, Barbara Smith, Audre Lorde, and Angela Davis as wellas organizations like the Combahee River Collective, the Chicago's Black Women's Committee, and the Third World Women's Alliance. At its core, this course aims to bring the social movement history back into the discourse surrounding Black Feminism.

AFAS 3009 The Politics of Kanye West: Performances of a Wild Genius
As a hip-hop artist Kanye West has had unprecedented impact on the sonic force of music, fashion, politics, and videography. Coupling his controversial moments, with his corpus of musical texts with special focus on sonic production, this course illuminates Mr. West as a case studey for interrogating the interplay between fame, gender, sexuality, and race. Mostly, we explore how racialized ways of doing iconography, complex ways of seeing, creates a distorted or reductive frame through which we see the black and famous. Nonetheless, the course oscillates with entertaining these nuances, while being entertained by the decade-long catalogue of music and visual imagery. Together, we extract the Politics of Mr. West in his music and life, while also illuminating the importance of a politics of genius-making in the larger arc of black pop culture tradition.

AFAS 3014 Black Womens Rhetorics: From Healthcare to Hip Hop
The course will permit an understanding of Black Feminism through the interdisciplinary exploration of Black feminist writings, practices, and expressions. The course will draw from literature, history, linguistics, sociology, political science, and other disciplines in order to critically examine key issues, assumptions, and debates from the perspective of Black women. We will trace the sociohistoric origins of Black Feminist Thought, ultimately attempting to understand contemporary iterations of Black Feminism within popular culture and throughout the African Diaspora. Essentially, this course asks: what kinds of cultural bonds have been created through Black women having a shared racialized and gendered experience? How has Black Feminism been a form of resistance, a kind of technological agency, and a kind of political identity? Furthermore, how have Black women historically articulated their realities to the larger public in an effort to persuade their audience(s) to listen to and value who they are and what they say in the midst of racist, dehumanizing, oppressive structures and institutions?

AFAS 3016 African American Politics
Credit 3 units.

AFAS 3035 The Sociology of African-American Politics
While this course includes the insights of political science, history, anthropology, law, and cultural studies, it is based in sociology. If political science can be said to focus on theories of governance and the mechanics of governmental administration, political sociology can be said to focus on the underlying social forces making civic and political thought and action possible, the consequences of political thought and action, the impact of informal civic and political worlds on the state, and power dynamics between and within groups. In this course, we will consider each of these topics across seven sections.

AFAS 3040 A History of African-American Theater
A survey of African American theatre from post-Civil War coon shows and reviews to movements for a national black theatre, such as Krigwa, Lafayette and Lincoln, and the Black Arts Movement. Early black theatre and minstrels; black theatre movement and other ethnic theatre movements in America. Critical readings of such plays as Amiri Baraka's Dutchman, Lorraine Hansberry's A Raisin in the Sun, Langston Hughes and Zora Neale Hurston's Mulebone. Also works by August Wilson, Ed Bullins, Charles Fuller, Georgia Douglas Johnson.

AFAS 3050 Coming of Age: Coming to Consciousness in Black American Literature, Film, and Music
In this course, we will study the phenomenon of GWB: growing-up while black. To ground this semester-long study, we will explore such questions as the following: To what extent are childhood and adolescence shaped by race? How has the movement from childhood to adulthood been similar and different for black Americans across moments in history? What are the rites of passage in coming of age, and how do the particularities of race, gender, sexuality, and region, among other factors, impact these touchstones of life? Utilizing literature and film as primary texts, we will analyze how the format and methods of our texts construct or disrupt ideas of childhood, adulthood, maturity, consciousness, failure, and success.

AFAS 3062 Islam, Culture and Society in West Africa
This course will explore the introduction of Islam into West Africa beginning in the 10th Century and explore its expansion and development in the region, placing emphasis on the 19th century to present day. It will focus on the development of West African Muslim cultural, social, religious, and political life, to understand not only how the religion affected societies, but also how West African local societies

shaped Islam. The course also aims to introduce students to a critical understanding of Islamic writing in West Africa. It will also examine the organization of Muslim Sufi orders in West Africa through time and space. The course is organized around a series of lectures, readings, as well as print and visual media. For AFAS majors, this course counts as Area Requirement 4.

AFAS 3070 Topics On Africa: African Urban Futures
Nearly fifty percent of Africa's population now lives in urban areas. By 2050 this number is expected to triple to 1.23 billion or what will then be sixty percent of the continent's total population. This urban growth is happening alongside rapid economic expansion, technological innovations, and-in some cities-political insurrection. Many of these developments are taking place in peripheral urban areas that lack formal planning, basic infrastructure, and security. Yet, as many theorists point out, the very lack of cohesive planning and stable infrastructure in urban Africa has produced flexible spaces where novel forms of dwelling, work, and leisure are possible. Many residents, often by necessity, rearrange their built environments to make the city function beyond the limits of its original design. In the process, urban dwellers produce new built spaces, aesthetics, and economic practices, calling into question assumptions about what a city is and how it works. What are the implications of Africa's urban revolution for both the people who inhabit these cities and the world at large? How will Africa's urban future shape what some theorists are calling the African century? What can contemporary cities across the continent tell us about the future of urban life everywhere? In this seminar, we will explore these questions by surveying a variety of case studies and topics from across the African continent. The purpose in focusing on Africa in general is not to homogenize an incredibly diverse continent, but to make connections across a variety of different contexts in order to explore conceptual debates and assemble a theoretical tool-kit that is useful for grappling with themes that are simultaneously abstract and concrete. For AFAS majors, this course counts as Area Requirement 4.

AFAS 3080 Imaging Blackness: Race and Visual Culture in Africa and the African Diasporas
This course examines the relationship between race, nation, and visual culture by interrogating the ways in which citizenship in Western nations is racially defined. Through the semester, we will focus specifically on South Africa and African diaspora communities in the U.S., Britain, Canada, Germany, and the Caribbean. People from Africa and the African diaspora have historically been excluded from the national imaginary and have sought other forms of belonging that challenge the limitations of the nation-state. First, this course examines the role of visual culture in reifying the relationship between race and nation. Collectively through readings, film screenings, and by engaging with other visual arts practices (photography and fine art), we will interrogate the following questions: What is the relationship between early cinema and photography and how have these visual technologies contributed to contemporary understandings of race, particularly blackness and Africanness? What is the relationship between early cinema, race, and nation? How has cinema been used by black communities to signal the emergence of modern black life? How does Africa figure in the African diasporic imaginary through visual art? After establishing the long history of the intimate relationship between race, nation, and visual culture we will then interrogate the manner in which artist of the African diaspora and South Africa have employed the visual technologies of cinema and photography to contest dominant representations (stereotypes) of blackness. We will engage with the manner in which these artists have and continue to challenge, critique, and offer new ways to think through the relationship between race, nation, and visual culture. Throughout the course we will examine how other vectors of power like class, gender, and sexuality are central to formations of race and nation. By engaging with contemporary visual artists of South African and the African diaspora we will examine how cultural production, for example, can and does serve as one means through which people imagine their lives, often resisting and revising forms of oppression to create alternative community and cultural formations.

AFAS 3100 Terror, Fratricide, and Empire in Kenya: The Mau Mau War in Historical Perspective
On 6 June 2013, the Foreign Secretary William Hague expressed his sincere regret that the Kenyan colonial authorities had subjected Kenyans to “torture” and announced that the British government would pay twenty million pounds in compensation to more than five thousand surviving victims. Most people in twenty-first century Kenya now recall the “Mau Mau Emergency” as a anti-imperial war of national liberation. Members of the Kenya Land Freedom Army (“Mau Mau” has no meaning in any Kenyan language) were the avowed enemies of the colonial government and European settlers. Yet Mau Mau can also be seen as a civil war fought within the Gikuyu community between members of the Land Freedom Army and “Loyalists” who had a different vision of post-independence Kenya. This course, which has no prerequisites and assumes no prior knowledge, is an introduction to the basic methodologies of African history through the close examination of the origins, manifestations and recollections of the Mau Mau war. Drawing extensively on primary sources, the class is appropriate for students interested in African studies, the British Empire, the imperial era in Africa, agrarian studies, collective identity, guerrilla warfare and counter-insurgency, psychology as a punitive and disciplinary tool, mass detention, decolonization, nation-building and historical memory.
Credit 3 units. A&S IQ: HUM, SSC, SC BU: HUM
Typical periods offered: Spring

AFAS 3101 Give Up the Mic: Black Feminism in the United States
It is a mistaken, but widely held assumption that Black feminism in the United States emerged from the second wave women's movement of the 1960s. This course offers a different view: the black feminist movement has a long history with roots in the slavery era. This course will chart the historical evolution of black feminist theory and praxis from the 19th century to the present through reading texts from a variety of black feminists including abolitionists, anti-lynching advocates, clubwomen, blues artists, unionists, communists, civil rights and black power movement activists, poets, leaders of formal feminist organizations, and hip hop feminists. We will examine essays and books that articulate the complexity of black American women's demand for social, economic and political equality, as well as the desire for a vision of liberation based on historical and ongoing struggles against race and gender oppression. We will identify the central concerns of black feminist thought, salient theoretical models such as the intersection of race, gender, sexuality and class, and how the movement changed over time.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

AFAS 3111 African American Images in Film

The course surveys the evolution of African American images in film, which began with the first major feature length silent film, Birth of a Nation (circa 1915), which celebrated the Ku Klux Klan and contained racist depictions of African Americans. The first talking film, Al Jolson's The Jazz Singer contained the (in)famous song, Mammie, which was sung by Mr. Jolson in Black Face, a carry-over from White performers who darkened their faces with burned cork during minstrel and vaudeville live performances. Those early films were produced and directed by European Americans who tended to portray African Americans through negative sterotypical depictions. Gradually, with the passage of time, technology, and the emergence of the Civil Rights Movement, a combination of European and African American film makers began to provide a broader array of Black portrayals that included a spectrum of negative to positive depictions of Black people. We will include an examination of Washington University's Eyes on the Prize archives.

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, HUM EN: H

AFAS 3113 Culture, Politics, and Society in Francophone Africa

France and Africa have a long historical relationship, dating back to the early Euro-Mediterranean empires, the first explorers, long-distance traders, Christian missionaries, colonialists, and today's French West and North African communities. In this course, we delve into this long process of interaction between France and its colonies of Africa. During the first half of the semester, we explore these historical relationships and examine the scientific constructs of race in the 19th and early 20th century. We touch on themes that defined the colonial encounter, including the development of the Four Communes in Senegal, the Negritude movement, and French Islamic policies in Africa. The curriculum for this course includes articles, films, and monographs, to explore these themes and includes writers and social activists living in France and the African diaspora. The second half of the course examines Francophone Africa after independence. Here the course explores the political and cultural (inter) dependence between France and its Francophone African partners. In addition, we examine the challenges of many African states to respond to their citizen's needs, as well as France's changing immigration policies in the 1980s, followed by the devaluation of the West and Central African Franc (CFA).

Typical periods offered: Fall, Spring

AFAS 3116 Black Home Spaces in the U.S.

What does it mean to be at home? How do home and nation intersect? What are some of the ways African Americans have cultivated home spaces, and within what societal conditions? Using these questions and drawing from literature, geography, black feminism, and film, we will explore home space as a force and factor in shaping black identities in the U.S. As microcosms of cities and the nation, home spaces are structured by the social, economic, political, and historical landscape of a society. As places of individual and communal living and dwelling, home spaces shape and are shaped by people. To study home is necessarily to study nation, family and affective ties, gender, and built space. In the United States, slavery, Jim Crow, redlining, restrictive covenants, and gentrification have targeted and disproportionately affected black lives, communities, and home spaces. In the face of this dehumanization, devaluation, and discrimination, black people have found ways to claim, make, and obtain spaces and senses of home, whether fleeting or permanent, conceptual or concrete. Modes of homemaking serve as a lens through which to ascertain the challenges, triumphs, and banalities of black life in the U.S. throughout history.

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, HUM EN: H

AFAS 3120 African Immigration to the United States of America

The United States of America has historically been known as a nation of immigrants. However, current rhetoric has brought this notion into question. This country has consistently been a magnet for millions of people from all over the world, and this course seeks broadly to understand recent African immigration. In Black studies, most attention has been paid to the forced migration of the enslaved during the Atlantic Slave trade. Studying 20th and 21st African immigration is key to truly understanding the Black experience in America. According to data from the U.S. Census Bureau, 2.1 million Africans live in America as of 2015. The majority of these migrants are from Sub-Saharan Anglophone Africa (Nigeria, Ghana, Kenya, South Africa), but they are also from war-torn countries such as Ethiopia, Eritrea, and Somalia. The primary focus of this course will be on contemporary African labor immigrants, including skilled professionals, children who arrived in the United States for family reunification, refugees, and winners of the Diversity Visa lottery who are now permanent residents. The migratory flux also includes people who were forced to leave their birth countries for political reasons as well as genocide. Through the class, we will examine the push and pull factors of immigration. The second part of the course explores the lived experience of Africans in America, whether they are well educated as compared with other migrant communities or whether they are laborers. We will study the role of remittances, language barriers, paths to naturalization, and job opportunities once Africans reach American soil. Increasingly, repatriation (both voluntarily and forced), xenophobia and Islamophobia are challenges that rock African immigrant communities. Today, many Africans live between two countries: Africa and America. This transnationalism allows them to navigate different lives, stories, identities, and cultures. Several activities are organized in the African local community. There is a large group of Ghanaians, Kenyans, Egyptians, Senegalese, Nigerians, Ethiopians, and Somalians in St. Louis. We will invite these individuals to the class as guest speakers so that students can fully understand their multiple lives in the St. Louis metropolitan area.

AFAS 3140 Urban Inequality: Racism, Segregation, & Ghettoization in the American City

The academic study of urban inequality proceeds from the understanding that: 1) cities are deeply unequal, especially when considered in terms of race and class; 2) rather than being random or natural, urban inequality is the product of human ideas, policies, and practices; and 3) urban inequality has substantial and enduring impacts on city life and life chances, especially for racial minorities and the poor. Echoing these general themes, this course closely examines the causes, development, and consequences of urban inequality in the U.S. context. In order to explore U.S. urban inequality most clearly, the course focuses on the African-American urban experience and what has variously been called the black belt, the inner city, and, most importantly, the ghetto. The scope is still national, though, with analyses of New York, Philadelphia, Baltimore, D.C., Detroit, Chicago,

New Orleans, Oakland, and St. Louis, among other cities. The course primarily draws from sociology and history but also includes insights from anthropology, political science, criminology, and law, among other disciplines.
Credit 3 units. A&S IQ: SSC Art: CPSC EN: S

AFAS 3160 African Civilization to 1800
Beginning with an introduction to the methodological and theoretical approaches to African history, this course surveys African civilization and culture from the Neolithic age until 1800 AD. Topics include African geography and environmental history, migration and cross-cultural exchange, the development of Swahili culture, the western Sudanese states, the trans-Atlantic slave trade, and the historical roots of apartheid. For AFAS majors, this course counts as Area Requirement 4.

AFAS 3161 African-American Politics
This course examines the historical and contemporary efforts by African Americans to gain full inclusion as citizens in the U.S. political system. The course focuses on topics such as the politics of the civil rights movement; African American political participation; and the tension between racial group politics and class politics.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

AFAS 3170 Research Materials for African and African American Studies
The goal of this course is to help students develop effective information handling skills for conducting library research in the area of African and African American Studies. Class assignments and projects focus on identifying and evaluating primary and secondary resources using basic library resources, online catalogs from various institutions, journal article databases, and Internet resources. The format of the class will consist of lecture/discussion, demonstrations, and hands-on practice in Olin Library.
Credit 3 units. EN: H

AFAS 3201 Race, Education & Inequality: From Segregation to Reform
In this course, we will examine how racial inequality shapes America's schools and its impact on the educational experiences of Black youth. We will engage the history of the American education system and highlight the ongoing efforts of Black Americans to achieve educational equity in the United States. Later in the course, we will consider more recent developments in education policy and discuss the implications of these reforms for Black youth of diverse identities.
Credit 3 units. A&S IQ: SSC, SC

AFAS 3235 The Art of Black Healing: Justice, Repair & Radical Restoration
From the Transatlantic slave trade to chattel slavery and, then, institutionalized racism, Black people have long been subjected to some of the most horrific forms of violence and suffering at the hands of colonization, white supremacy and anti-Black racism. Yet, despite the tremendous pain endured, we continue to generate systems of healing and repair that allow us to reclaim our power and reestablish healthy relationships to ourselves and our communities. In this course, students will engage the spiritual, political, and physical frameworks of healing that Black people deploy as a response to harm and oppression. This course engages the tradition of Black healing and will prioritize the literal application of various healing practices in our time of study by collectively experimenting with new ways of learning,thinking, theorizing, creating, doing and being.

Typical periods offered: Spring

AFAS 3240 Topics in Architectural History: African Architecture and Urbanism
This architectural history course examines the built and social environments of select great African cities from 200 BCE to the 21st century. Our case studies will include, among others, Alexandria, Timbuktu, Zimbabwe, and Johannesburg. In addition to considering the varieties of urban expression on the continent itself, we will also look at the impact of the African presence upon cities in the diaspora. Can we identify African contributions to architectural or artistic forms in North America, the Arabian penninsula, or Asia?
Credit 3 units. Art: HUM BU: IS

AFAS 3242 Introduction to African-American Psychology
This course provides an introduction to the experiences of African Americans from a psychological perspective. Throughout the course, we will consider a range of theoretical and methodological approaches that scholars have developed to conceptualize the thoughts, styles, and behaviors of African Americans. The course begins with an overview of these theories, methodologies, and frameworks. The second part of the course is devoted to exploring psychological research around pertinent topics in the field such as racism and discrimination, gender, achievement and schooling, kinship and family, racial identity, religion and spirituality, and mental health. Finally, we conclude the course with discussions of current topics, controversies, and recent advances in African American psychology. Prereq: Intro to Africana Studies.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

AFAS 3254 African Americans and Children's Literature
This course explores two distinct themes: how African descended people have been depicted in American and British children's literature and how African Americans have established a tradition in writing for children and young adults. It will also examine two related questions: How has African American childhood been constructed in children's literature and how have African American writers constructed childhood in children's literature? We will look at such classic white writers for children like Helen Bannerman, Annie Fellows Johnston, and Mark Twain as well as efforts by blacks like the Brownies Book, published by the NAACP, and children's works by black writers including Langston Hughes, Ann Petry, Shirley Graham Du Bois, Arna Bontemps, Virginia Hamilton, Walter Dean Myers, Mildred Taylor, Floyd and Patrick McKissack, Julius Lester, Rosa Guy, Sharon Bell Mathis, bell hooks, and others. For AFAS majors, this course counts as Area Requirement 1.

AFAS 3260 Zambaje: Afroindigenous Relations in Latin America
What does it mean to be Black and Indigenous in Latin America? What are the relations between Indigenous and Afro-descendant populations? How are the two marginalized groups constructed in relation to each other? This course takes a broad approach to relationships between Indigenous and Afro-descendant populations in Latin America. It begins in the colonial moment, exploring the tensions and solidarities between the two groups of people. It explores Afro-Indigenous populations and their position in the colonial and nationalist moments. It then examines questions of identity, recognition, sovereignty, conflict, and erasure into the present. Some key concepts we will unpack include mixture and separation; competitions and solidarities; slavery and freedom; ethnicity and race; and collective rights.

Typical periods offered: Spring

AFAS 3270 For Freedom's Sake: The Civil Rights Movement in America
This course provides an introduction to the period of struggle in American history known as the Civil Rights Movement. Our primary task is to survey the major historical figures, organizations, locations, strategies and ideas that coalesce to make the history of the movement. The course broadly covers the years of the Black Freedom Struggle between 1945 and 1971, with a sharper focus on the pivotal years of 1954-1965. By placing the movement within a broader context, the course seeks to identify the historical developments and social realities that made the movement necessary and possible. The class also looks at the years following the movement, and the general transition from Civil Rights to Black Power.

Typical periods offered: Fall

AFAS 3280 Masculinity and 20th-Century African-American Literature
This seminar considers how literature, from the Great Migration through our contemporary moment, represents and complicates myths of Blackness as a repository of masculine virility and patriarchal incapacity. Through close readings of canonical African-American literature by the likes of Richard Wright, James Baldwin, Amiri Baraka, and John Edgar Wideman, this course will critically (re)define the keywords blackness and masculinity and consider the terms and implications of their interrelatedness. Working from the foundational claim that masculinity is never an established fact but rather socially constructed upon a fickle node of ceaseless anxiety and brash assertion, literature will serve as a critical site to pursue the following inquires: How does Blackness impact broader meanings of American masculinity? Further, how does Blackness both threaten and fortify masculinity? Finally, how does centering the relationship between Blackness and masculinity assist in thinking through themes of gender, race and sexuality more broadly?
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

AFAS 3282 Sexuality in Africa
An examination of various themes of African sexuality, including courtship, marriage, circumcision, STDs and AIDS, polygamy, homosexuality, child marriages, and the status of women. Course materials include ethnographic and historical material, African novels and films, and U.S. mass media productions. Using sexuality as a window of analysis, students are exposed to a broad range of social science perspectives such as functionalist, historical, feminist, social constructionist, Marxist, and postmodern.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA

AFAS 3290 James Baldwin: Life, Letters & Legacy
In his 1972 essay No Name in the Street, James Baldwin recounts that he could never in good conscience just write, because he had never been just a writer. Indeed, Baldwin saw himself as a public witness to the situation of black people, compelled to speak truth to power in whatever form he deemed necessary. Baldwin -- as Black, gay, man, American, author, activist, and so much more -- has served as an essential figure in theorizing alterities of the presumed rigidity of these very concepts. In this respect, this course will center Baldwin the thinker as much as Baldwin the author. We will examine his classic novels and essays as well as his work across many less-examined domains: theatre, sermon, dialogue, film, and short story. Moreover, while committing ourselves to close reading methods, we will situate Baldwin's works within the sociohistorical context and consider how he shaped and was shaped by events, beginning with the Civil Rights Era through our precarious contemporary moment in which he remains -- often tragically -- a timely voice.

Typical periods offered: Fall, Summer

AFAS 3304 Race and Global Health Inequities: Social determinants and Intersectionality
Race, Health, and Inequality: Frameworks and Global Histories from Tuskegee to COVID introduces students to an interdisciplinary approach to examine how the intersection of race/ethnicity, gender, class, and other forms of inequalities shape both 1) the outcomes and distribution of health and wellness (broadly defined), and 2) how communities and individuals interact with, understand, and navigate health-related systems. While the focus of the course is on racial/ethnic inequalities in health and health outcomes, particularly among people of African descent globally, the course also highlights how race and health intersect with other axes of diversity, identities, and social determinants such as sex and gender, poverty, disability, language and literacy. Emphasis is placed on people of African descent, residing in United States and elsewhere, but the course will emphasize how lessons learned here can be extended to other ethnic/racial minorities and around the world. Students will critically interrogate structural, historical, environmental, and political factors that contribute to African Americans having some of the worst health outcomes in the United States. The course moves students beyond locating poor health outcomes at the individual level or lack of knowledge (as a purely “behavioral” approach would suggest). Rather, the class readings and discussions explore how inequalities in health outcomes and access to health resources are the result of historically produced structures and contexts that inform people’s behaviors, limit their access to healthcare, or guide their health beliefs. If poor health is the product of structural determinants, then intervention strategies and policies must move beyond individual-level messages and practices, and instead address the underlying factors that facilitate people’s vulnerability and shape their health-related behaviors and outcomes. The course is designed to equip students with research and analytic skills from social sciences and history in critically examining the production of health inequities as they relate to intersecting issues of race/ethnicity and other axes of diversity and inequalities.

AFAS 3310 Sabotage and Anarchy: The Study of Power, Mourning, and Resistance in Black Girlhood
In this course, we will inquire, rupture, and cultivate an interdisciplinary understanding of Black girlhood in the context of the United States. We will theoretically build a grammar around how the coming-of-age experience of Black girls, starting in the 19th century, is central to how structural violence, exclusion, and neglect shape the lives of Black children. We will study age as a social construct within institutions of care, schooling, and incarceration. We will also consider the different creative mediums of knowledge production to elucidate themes of girlhood in poetry, nonfiction, social science, and creative memoir.

AFAS 3311 Playing Through Black History: The Ethics of Public History Pedagogy Games
Is it possible to meaningfully learn about Black history through games? Historical events have long been translated into games that can be played, but what are the ethics of developing and playing games that portray African American History? How can history-based games help people learn about the history of Black experience and how that past manifest in the present? What does experiential learning through games offer that traditional formats do not? The Black experience is underrepresented in game design history, but is gamifying Black history problematic? What do representation and embodiment mean in gamifying Black history, both in terms of the characters or events the game depicts as well as the racial identities of the people creating and playing the games? In what context might these intersections between history and the imagination build empathy, be triggering, or become voyeuristic? Do history-based games that combine historical people and settings with fictional components distort history, or enable players to engage with a non-linear, non-teleological past? Must historically-based games adhere to historical realism so as not to mislead, or can games which present alternatives to how the past played out become lessons in historical contingency, or be a form of resistance or satire which critique or challenge conceptions of the past or offers subversive or liberatory alternatives? Should games always be "fun'", or can they convey a serious message that fosters reflections and dialogue? Is it appropriate to create games about serious subjects? Can games appropriately hold seriousness and humor, joy, or playfulness in tension to communicate a larger message? This course teaches methods and theory of public history (ways in which non-historians encounter and engage with the past in their everyday lives) by exploring these questions through the examinations of tabletop board games and card games, role-playing games, computer and video games, virtual reality, and chose your own adventure literature, analyzing how game medium, format, design, mechanics, and setting of play shaper their appropriateness, efficacy, and reception. Students will explore the ethics and impact of representing African American History in games by playing games when appropriate, as well as through more distances examination of Black history gamification through critical reviews of games and discussion of games and scholarly literature about gamifying Black history. Students will apply their learning over the course of the semester in a semester-long project in which students will either propose a Black history game that demonstrates principles learned during the semester, or write a position paper in which the make argument about the appropriateness of portraying Black history through games.

AFAS 3320 Visualizing Blackness: Histories of the African Diaspora Through Film
The African Diaspora and more importantly variations of blackness, black bodies, and black culture have long captured the imagination of audiences across the globe. Taking a cue from exciting trends in popular culture, this course bridges the world of history, film, and culture to explore where and how historical themes specific to African descended peoples are generated on screen (film and television). Fusing the film world with digital media (ie. online series and webisodes) this class will allow students to critically engage diasporic narratives of blackness that emerge in popular and independent films not only from the United States but other important locales including Australia, Brazil, Britain, and Canada. Moving across time and space, class discussions will center an array of fascinating yet critical themes including racial/ethnic stereotyping, gender, violence, sexuality, spirituality/conjuring, and education.

AFAS 3330 Beats, Rhymes & Life: A Cultural History of Hip-Hop

Once thought of as a fleeting local fad set against the backdrop of New York's decaying 1970s landscape, hip-hop has since grown into a global phenomenon. After strong-arming a place at the center of American popular culture, hip-hop quickly found an international resonance that allowed it to be adapted and (re)mixed around the world. This course offers a cultural history of hip-hop music in America. It begins in hip-hop's earliest days, when a small number of local DJs borrowed from transnational music technologies to provide the soundscape for park jams in the South Bronx. It then traces the subsequent emergence of graffiti artists, breakers and b-boys, and the eventual rise of the MC as the central iconic figure of the music. Taking students on a trip through music, the course will scrutinize lyrics, interrogate the art of beat-making, and highlight important cultural turns in history. We will examine the contours of key representative careers, canonical albums, and pivotal debates, and we will unpack the histories of key institutions, including important nightclubs, sound studios, record labels, and radio stations. In addition, we will also discuss hip-hop's influence on fashion, sports and other sectors of the global economy. Over the course of the semester, students will engage with a wide array of traditional and multimedia sources, including articles, books, interviews, magazines, music (individual songs and full albums), films, music videos, lyrics, and photography. By the end of the course, students will walk away with a working knowledge of the shifting sound, vocabulary and aesthetics of hip-hop music as it has developed across America.

AFAS 3361 Slavery, Race, and Revolution in the Atlantic World

Credit 3 units.

AFAS 3375 Maroons and Marronage

What did it mean to free oneself from enslavement in different parts of the Americas? What constitutes success? How do agency, resistance, and complicity emerge in the transition from unfreedom to freedom? What are the legacies of such actions in the contemporary moment? By focusing on flight from enslavement, we will trace the contours of colonization in the Americas and discuss how maroons challenged the naturalness of the colonial order and shaped larger geopolitical relations among colonial powers. First, we will take a nuanced approach to broad themes such as freedom, independence, and resistance as we examine case studies from Latin America, the Caribbean, and North America. We will then explore how these narratives of freedom and resistance have been used in the present day for a variety of purposes from commemoration to tourism to activism. By following the lives and afterlives of maroons in the Americas, this course asks us to critically engage with the often ignored co-authors of the hemisphere's past, present, and future.

AFAS 3380 (Re)writing Slavery

This special topics course will consider black-authored texts ranging from the 18th to the 21st century to examine the ways slavery has been discussed in American literature and culture. We will pay attention to the role of slavery in creating the African diaspora, the contribution of slave narratives to the Abolitionist movement, and how the structures of American slavery did not disappear after the Civil War. We will look at the ways Civil Rights-era and contemporary African American writers such as Margaret Walker, Toni Morrison, and Charles Johnson have appropriated the slave narrative to engage and critique present day concerns. Their works will be read against nineteenth century slave narratives by ex-slaves such as Frederick Douglass and Harriet Jacobs. In addition to the texts, students will be asked to consider how slavery and its aftereffects have been portrayed in film and other forms of media.

AFAS 3390 Senegal: History, Politics and Culture

This course will study the history of Senegal in the modern period, beginning withthe formation by French traders and Lebou/Wolof women of the Four Communes. It will then explore Senegal's unique position as the founding place of two major Islamic brotherhoods and the legacy of French assimilation polity. As the course moves into the contemporary period, it will give some attention to the Senegalese Diaspora, particularly in large urban centers such as New York, Detroit, Paris, and Milan. It will explore themes of caste, colonialism, assimilation and identity, negritude, Islam, gender relations, the 1960's arts movement, and the cultural life of Dakar, a major center of Francophone African culture. There will be an emphasis on the relationship between Islam and politics in contemporary society. This course is designed for students participating in the Dakar Summer Program in French and African Studies.

AFAS 3400 Youth, Generation, and Age in Africa

It is estimated that children and youth constitute more than 60 percent of the population in Africa. In a context of economic decline associated with neoliberal policies of structural adjustment, many of these young people will face extreme difficulty in finding work, supporting families, and taking on the social responsibilities of adults. In recent years, disaffected African youth have been increasingly blamed for political and social instability. This course examines the condition of youth in contemporary Africa. The course begins with classic anthropological texts on generation, youth, and the life cycle in Africa. Readings will address the implications of colonialism, education, wage labor, and urbanization for relations between generations. The second half of the course will examine recent research concerning the position of African youth in a context of economic and cultural globalization.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H

AFAS 3410 Mapping the World of Black Criminality

Ideas concerning the evolution of violence, crime, and criminal behavior have been framed around many different groups. Yet, what does a typical criminal look like? How does race - more specifically blackness - alter these conversations, inscribing greater fears about criminal behaviors? This course taps into this reality examining the varied ways people of African descent have been and continue to be particularly imagined as a distinctly criminal population. Taking a dual approach, students will consider the historical roots of the policing of black bodies alongside the social history of black crime while also foregrounding where and how black females fit into these critical conversations of crime and vice. Employing a panoramic approach, students will examine historical narratives, movies and documentaries,

literature, popular culture through poetry and contemporary music, as well as the prison industrial complex system. The prerequisite for the course is L90 3880(Terror and Violence in the Black Atlantic) and/or permission from the instructor, which will be determined based on a student's past experience in courses that explore factors of race and identity. For AFAS majors, this course counts as Area Requirement 2.

AFAS 3440 Modern Black Women Writers
This course examines modern black women's writing including works by Zora Neale Hurston, Paule Marshall, Gwendolyn Brooks, Nella Larsen, Toni Morrison and Adrienne Kennedy.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

AFAS 3451 Topics in African-American Literature:
In this seminar-for we are fortunate to be an elite group this term--we will focus on the first century of African American prose writers. In genre terms that means we will largely, but not exclusively, read autobiographies and novels. Phillis Wheatley, Frederick Douglass, and Harriet Jacobs are now familiar names in U.S. literature surveys, but others are not yet household names, and in fact may never be. We will survey a core group of texts, available at the WUSTL bookstore, but also supplement our readings with materials placed on BlackBoard, via online databases (e.g., materials accessible digitally from the Schomburg Division of the New York Public Library). For AFAS majors, this course counts as Area Requirement 1.

Typical periods offered: Fall

AFAS 3460 African American Literature: African American Writers Since the Harlem Renaissance
African American literature in the 20th and 21st centuries grew from a renaissance in Harlem into a world-shaping institution. Public enemies and Nobel prize winners; card-carrying Communists, rock-ribbed Republicans, and Black Power nationalists; Broadway playwrights, Book-of-the-Month Club novelists, and a duly elected U.S. president are among the authors we will study with special attention to the intimate link between black writing and black music. Aiming at chronological and stylistic breadth, the syllabus will begin with poet Alice Dunbar Nelson (born 1875) and end with novelist Colson Whitehead (born 1969), with an array of better-known names--W. E. B. Du Bois, Langston Hughes, Claude McKay, Nella Larsen, Zora Neale Hurston, Richard Wright, Ann Petry, Ralph Ellison, James Baldwin, Gwendolyn Brooks, Amiri Baraka, Alice Walker, and Toni Morrison--coming in between. Assignments will consist of two papers, one presentation, and one exam. Prereqs: none, but related classes such as E Lit 2151 and E Lit 2152 and/or AFAS 255 are suggested. Satisfies the Twentieth Century requirement in English, and/or one 300-level elective requirement in AFAS.

Typical periods offered: Fall

AFAS 3503 Barack Obama and the Idea of an African-American Presidency
We will start the course reading some scholarly selections about the history and administrative structure of the presidency. We will then look at four instances of African Americans running for president: comedian and activist Dick Gregory in 1968, Congresswoman Shirley Chisholm in 1972, and civil rights activist Jesse Jackson in 1984 and 1988. Of course, a number of black people have run for the presidency as third-party candidates: Frederick Douglass, James Ford, Lenora Fulani, Cynthia McKinney, Angela Davis, and Eldridge Cleaver, among others. In addition, some have sought the Republican Party's nomination as conservatives, such as Alan Keyes, Herman Cain, and Ben Carson. Some of these individuals will be briefly discussed, but time will not permit us to study them. We are fortunate that Dick Gregory and Shirley Chisholm wrote firsthand accounts of their campaigns. We will then move on to the heart of the course: an examination of United States Senator from Illinois Barack Obama's successful campaign for presidency as the first black nominee of a major party. We will consider his career before he became president, and we will examine certain aspects of his presidency itself. It is hoped that this course will offer students a new understanding of the American presidency and some exposure to how black people have thought about this office as a cultural symbol and a realization of power.

Typical periods offered: Fall

AFAS 3540 Seminar in African Studies: Women in Africa
This seminar examines the history of women and gender in Africa. Students examine the themes of slavery, economic participation, prophetic movements, and circumcision as they dialogue with changes affecting Africa such as growth of trade, religious conversion, colonialism, market economy, the fight for independence, and creating national cultures.
Credit 3 units. Arch: HUM Art: SSC BU: IS

AFAS 3542 The Quest for Racial Reconciliation
This course is based within African and African American studies, and it explores the quest for racial reconciliation, with emphasis equally divided between the United States and racial strife in other parts of the world. Although racial considerations are inherent to central themes within this course, we explore various sources of linguistic, cultural, social, political, racial, and ethnic foundations of strife at different points in history, and in different regions of the world. Particular attention will be devoted to nonpartisan strategies to advance racial harmony within the United States, and other regions of the world that are of personal interest to students.
Credit 3 units. A&S IQ: HUM, SC Art: HUM BU: BA, HUM EN: H

AFAS 3550 Undoing Empire: Introduction to Postcolonial Writing and Art
This course introduces students to the histories and politics of postcolonial writing and art. By tracing the genealogies of writing and art produced in the aftermath of colonialism, this course will explore how writers, artists, and scholars working from the context of formerly colonized nations have responded to the legacies of racial, cultural, and economic oppression. Students will look at novels, poems, art, and theater produced by those working from Africa, the Caribbean, and other formerly colonized nations in order to chart the complex networks of political solidarity these works enable. Writers like Franz Fanon, Aimé Césaire, and Gayatri Spivak will be read alongside literary and artistic pieces by writers such as Chinua Achebe, Tsitsi Dangarembga, Jamaica Kincaid, Derek Walcott, Safiya Sinclair, Arundhati Roy and artists such as Zanele Muholi, Santu Mofokeng, Tessa Mars, William Kentridge, and others. Topics such as racial memory, postcolonial identity, radical aesthetics, and Afro-futurism will be explored.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM, IS EN: H

AFAS 3591 Topics in African American History: Black Nationalism in the 19th Century
Black Nationalism in the 19th Century. This course introduction provides an overview of the genesis of African Americaness, historiography, and other underpinnings of such traditions. It will investigate how nation and community were defined in the 19th century, when and by whom; regional variations; gender perspective; religions influences; and Pan-Africanism.

Credit 3 units. Art: HUM BU: BA

AFAS 3600 Beyond Sea, Sunshine and Soca: A History of the Caribbean

This course examines major themes in the history of the Caribbean from the fifteenth to the twentieth century. The first half of the course will focus on the fifteenth to the nineteenth century, exploring issues such as indigenous societies, European encounter and conquest, plantation slavery, the resistance of enslaved Africans and emancipation. The remainder of the course focuses on aspects of the cultural, economic, political and social experiences of Caribbean peoples during the twentieth century. Major areas of inquiry include the labor rebellions of the 1930s, decolonization, diasporic alliances, Black Power, identity construction and the politics of tourism. While the English-speaking Caribbean constitutes the main focus, references will be made to other areas such as Cuba and Haiti.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H

AFAS 3601 Beyond Sea, Sunshine and Soca: A History of the Caribbean

This course examines major themes in the history of the Caribbean from the fifteenth to the twentieth century. The first half of the course will focus on the fifteenth to the nineteenth century, exploring issues such as indigenous societies, European encounter and conquest, plantation slavery, the resistance of enslaved Africans and emancipation. The remainder of the course focuses on aspects of the cultural, economic, political and social experiences of Caribbean peoples during the twentieth century. Major areas of inquiry include the labor rebellions of the 1930s, decolonization, diasporic alliances, Black Power, identity construction and the politics of tourism. While the English-speaking Caribbean constitutes the main focus, references will be made to other areas such as Cuba and Haiti. Additionally, the Caribbean will be considered in a multilayered way with a view to investigating the local (actors within national boundaries), the regional (historical events that have rendered the region a unit of analysis) and the global (larger globalizing forces such as capitalism, colonialism, migration and slavery that have made the Caribbean central to world history).

AFAS 3644 Look Here, Karen: The Politics of Black Digital Resistance to White Femininity

In this course, we will explore the ways in which Black online publics use resistance strategies, such as mimetic imagery and racial humor, to call attention to white femininity and its deployment of the police against African Americans. We will trace the relationship between the police state and white femininity through the historical lens of 'innocence' and protection of the U.S. nation as well as the similarities and differences of Black online publics' responses in relation to past resistance strategies. What does it mean to be a 'typical' Karen in Internet culture? What are the aesthetic boundaries of Karens? And, what do digital platforms afford to Black users who make Karens visible? While paying attention to race, gender and class, this course offers students the skills to be able to collect and analyze online data, such as 'Karen' memes, in order to make critical arguments and observations that are grounded in historical accuracy.

AFAS 3651 Black Women Writers

When someone says, black woman writer, you may well think of Nobel Prize winner Toni Morrison. But not long ago, to be a black woman writer meant to be considered an aberration. When Thomas Jefferson wrote that Phillis Wheatley's poems were beneath the dignity of criticism, he could hardly have imagined entire Modern Language Association sessions built around her verse, but such is now the case. In this class we will survey the range of Anglophone African American women authors. Writers likely to be covered include Phillis Wheatley, Harriet Wilson, Nella Larsen, Lorraine Hansberry, Octavia Butler, and Rita Dove, among others. Be prepared to read, explore, discuss, and debate the specific impact of race and gender on American literature.

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: HUM EN: H

Typical periods offered: Fall

AFAS 3655 Black Conservatives and Their Discontent: African Americans and Conservatism in America

In this course, we will examine the attraction of some African Americans to the ideas and aims of conservatism: limited government, individual freedom, the objectivity of merit, religious tradition, self-reliance, and a free market economy. On the matter of race, African Americans who identify as conservatives tend to be strongly opposed to affirmative action, to distrust race-based public policy solutions and government intervention in race issues generally, to opposed to reparations for slavery, and to believe in character-building and values such as thrift and hard work as important virtues for Blacks to cultivate. Their hostility toward liberalism and leftist ideology is not quite the same as some religious-based Black conservatives, such as the racially militant Nation of Islam and the several black Pentecostal sects, who strenuously believe that white liberalism and white leftist thought are expressions of white decadence. However, their beliefs are not far removed from this. In this way, Black conservatives aBre seen in a harshly antagonistic way by the national lack political establishment, which is largely liberal, and by black intellectuals and scholars, who are, for the most part, leftist-leaning. The critics of Black conservatism cannot understand how some Black people can be attracted to ideas that are rooted in racist assumptions, that are justifications for white domination, and that have been used to defend the white-dominated status quo and a white, Eurocentric value system. Race must be used as a weapon for liberation from white thralldom. What does a Black person have to conserve, and why would they want to identify with an ideology that has been used to oppress them? Black liberals and leftists call Black conservatives Uncle Toms and Sellouts. Black conservatives return the antagonism in full measure, arguing that white liberals and leftists use the victimology of Blacks as a cudgel to beat whites with whom they politically disagree in order to effect the social change they desire and that they treat Blacks essentially as injured children who need to be either indulged, romanticized, excused, aided, or pitied. Racial identity is nothing more than a mere weapon of resentment. Black conservatives feel that Black liberals and leftists play into the hands of white liberals and leftists by making race an overdetermining factor in the lives of Black people. They also argue that the public policy solutions of Black liberals and leftists have not worked and that they in fact mostly benefit the Black middle class. They call civil rights leaders and Black liberal and leftist intellectuals race hustlers and race charlatans. The conflict here is not simply or solely political; it is also deeply psychological and a question of identity. What does being Black mean, and what is it prohibited from meaning? We will look closely at many of the major works of significant Black conservatives to understand the nature of their arguments and their claims to legitimacy. How do Black people see conservatism? What do they hope conservatism will do for the Black community? Have they made much of an inroad among Blacks? Is it true, as some conservatives have claimed, that Blacks have a natural affinity for certain conservative ideas? For AFAS majors, this course counts as Area Requirement 2.

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, HUM EN: H

Typical periods offered: Fall, Spring

AFAS 3751 Resting in Power: Black Cemeteries and Unearthing Narratives of the Past

This course leverages the recent enactment of the African American Burial Grounds Preservation Act in December 2022 as a gateway to exploring the profound historical significance of Black cemeteries across the United States. Students will investigate the development and preservation of Black cemeteries. They will trace historical shifts in Black cemeteries-including the legacy of slavery, Reconstruction, Jim Crow laws, and the Civil Rights Movement and the present. General course themes include cemeteries as reflections of African American life, death, and resistance in the face of systemic racism and segregation. Through case studies of prominent Black cemeteries both in St. Louis and nationally, students will explore how these sites have served as places of mourning, celebration, and community organization, as well as how they have been impacted by urban development, neglect, and efforts at preservation. Course readings will expose students to how scholars use the stories of individuals and communities buried in these cemeteries, highlighting the ways in which Black cemeteries provide a counter-narrative to mainstream historical accounts and offering insights into the lived experiences, spiritual practices, and cultural expressions of African Americans across centuries. Students will also engage with contemporary discussions on the preservation and restoration of these cemeteries, understanding their significance not only as historical sites but as ongoing symbols of cultural identity and heritage. While St. Louis is the focal point and setting for the class, this course will equip students with tools for understanding cemeteries as not only places of death and mourning but also of Black commemoration and memory-making.

AFAS 3752 Topics in Women's History: African-American Women

An analysis of how African American women have defined their roles in American life and within the black community: attaining literacy, the push for suffrage, anti-slavery and colonization efforts, class stratification and the Cult of Domesticity, the Civil War and reconstruction, migration and the impact of urbanization, religious attitudes, political activism and elective office, sexuality and the myth of the Black Matriarch. Prerequisites: at least 1 course in American history, women's history or African American history and permission of the instructor.
Credit 3 units. A&S IQ: HUM BU: BA, HUM

AFAS 3800 Black Cinema: An Introduction

This course introduces students to the films and filmmaking practices from West Africa, South Africa, and Black Britain. Central to the pedagogical goals of this class is to introduce students to the diverse societies, cultures, and perspective of people from Africa and the diaspora through cinema. Students will immerse themselves in the types of social critiques the films engage in as they tackle topics such as gender politics, race, polygamy, migration, corruption, human rights, homosexuality, economic crisis, apartheid, and Westernization. Through critical analysis of films, academic readings, and participating in the annual African Film Festival hosted at Washington University this course will fulfill the requirements set out above. Even though four weeks of the course focuses on Black British Cinema and the social, political, and economic condition of black British citizens, students will engage with the complexities of the African diaspora experience, particularly in relationship to migration, diaspora, race relations, and gender and sexuality. Given that the course as a whole focuses on filmmaking practices, aesthetics and the politics of African and African diasporic cinemas, students will definitely be exposed to a totally different world experience and the diversity of people, cultures, and aesthetics in Africa and the diaspora. Student in this class will also be required to actively participate in the annual African Film Festival hosted by Washington University and will have the unique opportunity to interact with visiting filmmakers. Required screening Thursday at 5pm. Required screening Thursdays at 5pm.

AFAS 3880 Terror and Violence in the Black Atlantic

From the period of bondage through the 21st century, terror and racialized violence have consistently been used as a form of social control. This course is constructed to explore the historical foundations of extreme threats of violence inflicted among populations of African descent. The fabric of American culture has given birth to its own unique brand of terrorism, of which this class spends considerable time interrogating. Yet, in recognizing that these practices are commonly found in other parts of the Black Atlantic, students will be encouraged to take a comparative view to better tease out the wider strands of violence operative in places like England, the Caribbean, and Latin America Within this course, we will explore the varied ways in which music, films, newspapers, and historical narratives shed light on these often life altering stories of the past. Some of the themes touched upon include: the use of punishment/exploitation during the era of slavery; lynching; sexual violence; race riots; police brutality; motherhood; black power; and community activism.

AFAS 4007 Research Methods in African & African-American Studies

What is research? How does one go about conducting research? How have scholars conducted research on the experiences of people of Africa and the African Diaspora? As a field/discipline that has been interdisciplinary from its inception, African and African-American Studies has always utilized a variety of research methods to study and understand the experiences of people of Africa and the African Diaspora. This course is designed to introduce students to the various methods of conducting research in the field/discipline. It also explores the ways that power, race, and ethnicity have shaped the construction of knowledge as it relates to African descendants. Organized specifically for AFAS majors, the course is designed to provide students with the basic tools to conduct independent research, while reflecting on African and African-American Studies as a unique area of inquiry. Students enrolled in this course are required to have already completed AFAS 255 (Introduction to Africana Studies) as a prerequisite.

AFAS 4009 Slavery and Public History
Public history, or applied history, encompasses the many and diverse ways in which history is put to work in the world and applied to real-world issues. This course teaches public history practice with particular emphasis on engaging in the public history of slavery through research and interpretation on the regional histories of enslavement within St. Louis and at Washington University. Students will learn by engaging critical scholarship on public history, debates about how public history is practiced, and learning core tenets of public history interpretation, museum best practices, oral history, preservation, and material culture and their particular application to public history interpreting slavery. This includes grappling with the politics of memory and heritage that shape, limit, and empower public history practice on slavery, and how white supremacy has shaped what histories we absorb in the public.

AFAS 4010 Who's Afraid of Black Marxism? The crises of capitalism and futures of solidarity
It was the right book at the right time. In 2020, during the uprisings triggered by the murder of George Floyd and the COVID pandemic, UNC Press released the third edition of Cederic Robinson's Black Marxism. From its title to its content, this once obscure text gave name to many debates among activists and scholars who were grappling with the relationship between anti-Black violence, state revanchism, and market-driven racism. Today, the provocations in Robinson's work — the thinkers and activists who influenced it and those it influenced — offer insight into the interconnected crises of climate, politics, and capitalism while showing how the impact of these crises are unequally distributed across race, class, gender, and geographies. What is the relationship between race, labor, and the accumulation of capital? By what processes do the relational and chemical toxicity of environmental injustices get unequally distributed? Is capitalism inherently and always racial? This course offers a critical introduction to the origins, methods, and debates among the international cohorts of scholars and activists who bring Global Black Studies and Marxism together. We will read scholars and activists who incorporate and challenge key Marxian ideas in struggles for self-determination, emancipation, and abolition. And we will learn together how these debates speak to the most pressing issues today. We will interrogate debates around racial capitalism, intersectionality, The Black International, and heterodox Black Marxism from 20th-century Black Power and anti-colonial movements to 21st-century prison abolition and the climate crisis.

AFAS 4018 Approaches, Debates and Practices in Black Studies
What is research? How does one go about conducting research? How have scholars conducted research on the experiences of people of Africa and the African Diaspora? As a field that has been interdisciplinary from its inception, African and African-American Studies has always utilized a variety of research methods to study and understand the experiences of people of Africa and the African Diaspora. This course is designed to introduce students to the various methods of conducting research in the field. It also explores the ways that power, race, and ethnicity have shaped the construction of knowledge as it relates to African descendants. Organized specifically for AFAS majors, the course is designed to provide students with the basic tools to conduct independent research, while reflecting on African and African-American Studies as a unique area of inquiry. Students enrolled in this course are required to have already completed AFAS 255 (Introduction to Africana Studies) as a prerequisite.

AFAS 4030 Sexual Health and the City: A Studiolab Course Course On the Politics of Reproduction
This StudioLab course creates an engaged space for students to learn about and develop projects with a community agency around the topic of the politics of reproduction. The politics of reproduction refers to the intersection between politics, gender, race, and reproduction. As a StudioLab course, student teams will partner with a St. Louis reproductive and sexual health agency to explore how agencies, communities, and individuals have been affected, adjusted, and reimagine strategies to allow men and women to pursue their reproductive agency and desires. Students will use an interdisciplinary approach to understand historical, medical, legal, racialized, and sociocultural issues surrounding reproductive choice, regulation of choice, abortion, pregnancy, sex education, new reproductive technologies, and reproductive justice movements. We consider the state's regulation of biological and social reproduction wherein increasing governance of private life, intimacy, and sexuality suggests the blurring of boundaries between public and private interests. Students will also examine the complex relationship between men's and women's life goals and constraints, on the one hand, and politics and public health management of sexual and reproductive health, on the other. In collaboration with their community partner, students will develop a project that addresses an identified need of the organization and the community it serves. Course readings will draw from the fields of history, legal studies, public health, feminist studies, Black Studies, policy, and anthropology.

AFAS 4040 Gender, Sexuality, and Change in Africa
This course considers histories and social constructions of gender and sexuality in sub-Saharan Africa during the colonial and contemporary periods. We will examine gender and sexuality both as sets of identities and practices and as part of wider questions of work, domesticity, social control, resistance, and meaning. Course materials include ethnographic and historical materials and African novels and films. PREREQUISITE: Graduate students or undergraduates with previous AFAS or upper level anthropology course.
Credit 3 units. A&S IQ: SSC, SC, WI Art: SSC EN: S
Typical periods offered: Spring

AFAS 4041 Beginning Graduate-Level Swahili
A beginning language course for graduate students emphasizing acquisition of reading, writing, and conversational skills in Swahili language. Through video and other multimedia presentations, students are also introduced to the culture of Swahili-speaking communities living in over a dozen African countries.
Credit 3 units. A&S IQ: LCD, LS EN: H

AFAS 4042 Beginning Graduate-Level Swahili II
Second semester graduate level Swahili language course emphasizing conversational competence and knowledge of Swahili-speaking cultures of East Africa. Introduction to elementary level Kenyan and Tanzanian Swahili texts, grade school readers, newspapers, and government educational material. PREREQUISITE, AFAS 4041.
Credit 3 units. A&S IQ: LCD, LS EN: H

AFAS 4043 Intermediate Graduate-Level Swahili III
Enhanced acquisition of language fundamentals acquired in first year Graduate Level Swahili through performance, reading, and writing. Students gain skills performing role-plays such as asking for directions, booking a bus ticket, ordering food in a restaurant, etc. Students read more authentic Swahili texts including plays, short stories, newspapers, and poems. Prereq: AFAS 4041, 4042 or permission of instructor.
Credit 3 units. A&S IQ: LCD, LS EN: H

AFAS 4044 Intermediate Graduate Level Swahili IV
Fourth semester Swahili language course emphasizes the development of the ability to discuss a wide range of cultural and literary topics. These topics are introduced by reading intermediate-level, authentic texts in the language. Grammar will be reviewed through these texts. PREREQUISITE, Swahili 4041, 4042, 4043 or permission of instructor.
Credit 3 units. A&S IQ: LCD, LS EN: H

AFAS 4070 Power and Hierarchy in Pre-Colonial Africa
Africa in the pre-colonial period was the birthplace of numerous early civilizations. This course will draw from classic and contemporary approaches to the evolution of social complexity to explore how and why such societies emerged. Focusing on the period prior to the 19th century, participants will examine the nature of such societies and common factors leading to their evolution. Attention will also be directed towards understanding variability in African complex societies, as well as factors inhibiting the development of stable political hierarchies in some regions. Examples will be drawn from ethnographic, historical and archaeological sources where relevant. A previous introductory course in Anthropology, African Studies, or African History is recommended.
Credit 3 units. A&S IQ: SSC EN: S

AFAS 4090 Topics in African History: Power and Rebellion in 20th-Century Africa
What is violence? Are some forms of violence more acceptable than others? How have Africans from different constituencies thought about the role of violence in colonial and postcolonial societies? How has violence been used to establish power or to dismantle it? This course examines the politics of violence in 20th-century Africa. Pulling examples from across the African continent, it will engage the preceding questions through topics such as colonial state violence, the Italian invasion of Ethiopia, African soldiers in colonial East Africa, the Mau Mau of Kenya, the assassination of Patrice Lumumba, armed struggle in Southern Africa, and the Tanzania-Uganda war. Students must have taken Introduction to Africana Studies and/or a course on Africa. For AFAS majors, this course counts as Area Requirement 4.

AFAS 4104 Black Decolonial Thought: Conceptualizing Epistemic Violence From Frantz Fanon to Achille Mbembe
It is a truism that colonization has deeply impacted African societies, but we should also acknowledge the multiple ways of thinking and doing that are deployed on the continent. One of the goals of this course is to depart from the dominant epistemology of European and North American scholarship. We will consider African societies and cultures in the diversity of their practices, beliefs, worldviews, and experiences, by using an Afro-oriented canon of knowledge production. If decolonization is the end of political domination of a territory by European empires, the decolonial turn involves a way of thinking about the self, society, and cultures on their own terms (or their ipseity), instead of being always viewed through Eurocentric lenses of reflection and theory imposed by colonization. We will study prominent Black authors who fed the stream of decolonial thought.

AFAS 4110 The Black South Atlantic
Since the transatlantic slave trade and the establishment of European colonial empires, Latin America and the African continent have remained culturally and geopolitically enmeshed. This course will therefore serve as an interdisciplinary expansion southward of the 'Black Atlantic,' a term made popular by black studies scholar Paul Gilroy. Our focus on the South Atlantic will be to reorient the debate toward black intellectual, cultural, and activist exchange between Africa and Latin America across history, politics, and cultural production.

Typical periods offered: Spring

AFAS 4120 Topics in Afro-American Literature: Sisters and Brothers of the Spirit
This upper level course in eighteenth- and nineteenth-century African-American spiritual autobiography explores the race, class, and gendered perspectives from which early black spiritual autobiographers wrote. We will examine the significant differences and similarities between nineteenth-century spiritual autobiographers and their eighteen-century predecessors. Authors covered will include: James Albert Gronniosaw, John Marrant, Olaudah Equiano, Jarena Lee, Zilpha Elaw, Julia A. Foote, and Maria Stewart. Prereqs: Junior or Seniors or permission of instructor. 3 units.
Credit 3 units. Art: HUM

AFAS 4121 Rainbow Radicalisms!: Ethnic Nationalism(s), the 1960s and the Politics of the New Left
The Black Panther Party remains one of the most iconic groups of the 1960s and 1970s. Perhaps one of the most understudied aspects of the Panther's legacy is their radical influence upon other American racial and ethnic groups, including Asian Americans, Mexican Americans, Puerto Ricans and American Indians, among others. This seminar will consider the emergence of ethnic and racial nationalism among these various groups, as a result of their contact and relationship(s) with the Black Panther Party. Considering the politics of groups like the Red Guard, the Brown Berets, the Young Lords and the American Indian Movement, this course will chart the rise and fall of rainbow radicalism as a general offspring of the Black Power Movement and part and parcel of what is commonly referred to as the New Left. It will also consider these groups in relation to the State by probing the dynamic push and pull between repression and democracy. Ultimately, this course will grant insight into the contemporary racial domain and current political landscape of America as we discuss how these groups helped to shape modern identity formations, discourses on multiculturalism and definitions of minority, diversity, and equality.

AFAS 4140 The Age of Integration: African American Life and Culture
We will examine African American life and culture from June 1950 (the start of the Korean War) to May 1954 when the Brown decision to desegregate public schools was announced. We will look at some of the major writers to emerge at this time including Baldwin, Ellison, and Brooks, as well as revisit a writer who had huge success earlier, Richard Wright. We will examine African American life and culture against the background of the Cold War (the Korean War introduced the principle of integrated American armed services and it was our first anti-communist

war) and against the background of popular culture (a new wave of black athletes were emerging including Hank Aaron, Willie Mays, and others who followed Jackie Robinson to the majors, as well as Floyd Patterson and Sonny Liston). We will look briefly at the career of Miles Davis. UNDERGRADUATE STUDENTS ONLY.
Credit 3 units. A&S IQ: HUM Arch: HUM BU: HUM

AFAS 4150 Islam, Transnationalism and the African Diaspora
This course is designed for students who are interested in religion among African immigrants and African diaspora communities living mostly, but not exclusively, in Europe and North America - especially during waves of migration to the Americas. We begin in the days of the transatlantic slave trade, where we will examine how interactions, bricolage, and influences of Christianity, Judaism, African indigenous religions, and Islam have impacted the African Diaspora living in the Americas. We will equally examine how Islam served as a means of resistance to slavery and provided a spiritual connection with the motherland.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM BU: HUM EN: H

AFAS 4160 Engineering Authority: Design, Architecture, and Power in Africa
Do water meters have politics? Can architects manufacture consent for political repression or engage in activism? What happens when designed systems fail? Design is everywhere. It is in the water you drink; it is in the built material and digital spaces you hang out in; and it is in the chair you are sitting in. And yet, perhaps because of its ubiquity, design receives very little attention from scholars in the humanities and even less from African studies. In this course, we will examine a number of case studies, from minor architectures and ruins in Monrovia to hydraulic engineering in Johannesburg and iconic architecture in Casablanca to DIY market spaces in Nairobi and insurgent public space-making in Kinshasa. We will explore the ways that designers, architects, and technocrats engineer authority and how (sometimes) urban residents take it apart. One potential definition (among many other potential definitions) of design could be the following: the practices that humans employ to arrange, engineer, plan and fashion their material, digital, and social environments. But designs are also artifacts -- master plans, prototypes, and brands -- that occupy social lives independent of their assigned functions. Design is often about aspirations for a better world and finding technological and aesthetic solutions to social problems. Yet the products of design -- from zoning codes and service delivery networks to iconic built structures -- seem to always invite failures, disruptions, hackings, and ruination. A central argument in this course is that understanding design is also key to understanding power, inequality, and insurgency in Africa. We will draw our texts and case studies from places that are normally left off the map of design studies -- African cities and towns -- and explore the applicability of these theories to St. Louis.

AFAS 4180 Ebony & Ivory Towers: Black Experiences With the American University
Black people in America have historically held a deep reverence for education. Whether formal or informal, they have understood education to be brimming with great power, promise and possibilities. These beliefs have not only caused them to establish an array of educational institutions, but they also lay at the very core of what some scholars have referred to as the Black educational tradition. At the same time, the inequalities of America have often caused Black people to develop a deeply fraught relationship with educational institutions; they are often denied access, marginalized or exploited once inside, or subject to the will of what at times can feel like incredibly influential yet distant silos occupying prime space in a given community. This course explores the many ways Black people have engaged with the American university/college. Its starts by interrogating the intertwined histories of the institution of American slavery and the establishment of American higher education institutions. It then looks at the establishment of historically Black colleges and universities just before, but mostly after, the Civil War. Within this early period, the course will introduce students to American discourses about race (particularly Black and white identities), education, and aptitude. It then shifts to the 1920s and 1960s: two historic moments when Black students (and Black people, more generally) sought to rethink the meaning and mission of the American university. Keeping Black experiences at the center, the course will then delve into more contemporary questions confronting the American university, including issues of institutional diversity, student debt, (in)visible labor, the racial economy of collegiate sports, university-community relations, and the business of higher education.

AFAS 4210 Topics in African American Literature: Stars of the Canon
The recent passing of the Nobel Prize winning Toni Morrison offers an opportunity to celebrate her work along with that of others that have similarly, if not quite as monumentally, left an impact on the literary universe. This class will offer a deep dive into a quartet of Black authors whose literary achievements build on and out from one another. Whether Morrison or Audre Lorde, Ernest Gaines or Colson Whitehead, these four writers have shaped and will continue to shape U.S. writing in the century ahead. Prerequisite: the ability and willingness to put in long hours of reading weekly, as up to twelve complete texts may be assigned; written assignments will probably include at least one short and one seminar-length essay. Familiarity with African American history and upper division courses in literature is strongly suggested although not required.

Typical periods offered: Spring

AFAS 4213 Sufism and Islamic Brotherhoods in Africa
Muslim societies are prevalent in Africa-from the Horn, the North, the East to the West, with smaller conclaves in Central and South Africa. Islam has played an influential role in these diverse societies, particularly through its Sufi form. Even though Sufism originated in the Arabian Peninsula, it has fit well with African beliefs and cultures. This course aims to explore Sufi beliefs, values, and practices in Africa. It intends to reconsider the academic constructions of African Islam by exploring education, intellectual life, economics, gender roles, social inequalities, and politics. The goal is to show that Africa is a dynamic part of the Muslim world and not a peripheral one, as it is most often portrayed by the international media or historically, through travelers and colonial accounts. African Muslim brotherhoods have served as political mediators between countries and people (i.e. the role of the Tijaniyya in the diplomatic rivalry between Morocco and Algeria, or its role in reconciliation of clanic rivalries in Sudan). In addition, the course will pay attention to hierarchy in particular tariqa. Finally, the course will examine how African Sufi orders have shaped their teachings to fit transnational demands over the 20th and 21st century. We will explore these issues through readings, current media, lectures and special guest speakers.

Typical periods offered: Fall

AFAS 4236 Blackness in Brazil
Brazil is the country with the largest population of people of African descent outside of the African continent. However, with its history of race mixture under colonialism and slavery, many have imagined Brazil as a racial paradise such that race minimally influences one's social, political, or economic quality of life. The main focus of this course will be to understand from an interdisciplinary approach, first, the historical and sociocultural conditions of the African diaspora in Brazil. Second, we will focus on how national ideologies of racial mixture employ a rhetoric of inclusion that incorporates selective aspects of black culture into Brazilian national identity while excluding black people from the protections and pleasures of full citizenship. Beginning with the experiences of enslaved Africans, we will engage how Afro-Brazilians have developed ideas and spaces of freedom and belonging through social movements, religion, the arts, and resistance well into the black consciousness movements of the late twentieth and twenty-first centuries. In the course, we will collaboratively read, view, and listen to a variety of primary and secondary sources in order to analyze and write about blackness and the lives of black people in Brazil across history, intersecting, most predominantly, with the social structures of gender, sexuality, class, and religion.
Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM BU: BA, HUM, IS EN: H

AFAS 4270 What is Africanfuturism? 21st Century African Speculative Fiction
This course examines the genealogies, aesthetics, and politics of Africanfuturism, a sub-genre of speculative fiction and African literature. While the term Africanfuturism is recent, coined by Nnedi Okorafor in 2019, there is nothing new about speculative fiction from Africa. Africanfuturism is the aesthetic practice of producing worlds created by Africans that center (rather than marginalize) Africa and Africans; where Africans are represented as the historical agents who produce their own futures (rather than historical subjects assigned to a traditional past); and where technology, science, and philosophy are recognized as indigenous to Africa (rather than imported).

Typical periods offered: Spring

AFAS 4280 Black Geographies: Space, Place and Ecologies of Power
From the gardens of enslaved women in 19th century Louisiana to 21st century racial justice marches in St. Louis, this advanced seminar will explore the emerging field of Black Geographies. We will explore questions such as: How have Black communities been both enclosed and liberated by spatial arrangements of earth, sea, and sky? How do Black Geographies challenge and re-imagine conventions of social and cultural geography? What interventions are cutting-edge interdisciplinary scholars making, and what methods are they using to articulate original research? We will also spend a significant portion of class critically engaging with Missouri Cartographies -how historians, sociologists, and designers have depicted Black resistance and unveiled dark stories within and beyond the boundaries of our city. Suggested for undergraduate students who have taken at least one AFAS course. Graduate students may enroll with instructor permission.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, HUM EN: H
Typical periods offered: Spring

AFAS 4290 Advanced African History Seminar
This seminar allows students who have completed basic African history course work to explore advanced topics in the field. Selected topics include: African geography and environmental history, the classical kingdoms of the Sahel, the development of Swahili culture, the trans-Atlantic slave trade, the historical roots of Apartheid, the intellectual and material culture of colonialism, African resistance and adaptation to social change during the colonial era, decolonization, and roots of some of the major problems facing modern Africa.

Typical periods offered: Fall

AFAS 4320 Advanced Seminar: A Long Road to Uhuru and Nation: The Social History of Modern Kenya
This seminar challenges the popular western view that the African continent is a single place and that Africans are homogenous or inherently tribal. Focusing on the lived experiences of imperial rule, the struggle for independence, and the process of nation building, it explores the development of an African country. The seminar focuses

on how common men, women, and adolescents wrestled with the problem of turning a colony into the modern Kenyan nation. Admission to the seminar requires permission of the instructor and at least one previous upper level course in African history.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM BU: HUM EN: H

AFAS 4340 Seminar in Black Social Sciences
This seminar applies a deep reading to social science texts that examine the construction and experiences of black people in the United States from the point of view of black scholars. Readings include theoretical and empirical work. The seminar focuses on the influence of the disciplines of psychology, sociology, and anthropology on the policy and social practices that characterize dominant North American institutions. Advanced class level strongly advised.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S

AFAS 4350 Theorizing Blackness: A Genealogy of Radical Thought in the Black World
What are the discursive histories and futures of blackness? Taking as its point of departure this question, this advanced-level course sets out to investigate the genealogies of black critical studies and their theoretical implications on how we talk about race, gender, nationality, and political resistance. We will explore such topics as the formation of racism and blackness, the cartographies of black resistance, Afropessimism, and the critiques of historical constructions of blackness as an analytic of history. Our interlocutors include such central figures to black studies as Sylvia Wynter, Frantz Fanon, Lewis Gordon, Saidiya Hartman et al, but also more recent scholarship that aims to further complicate our study of blackness - Zakiyyah Jackson, Kevin Quashie, and others.
Credit 3 units. A&S IQ: HUM, SC BU: HUM
Typical periods offered: Spring

AFAS 4402 Intersectionality
This course explores and engages the intellectual and political genealogies of intersectionality, a theory, analytic, framework, metaphor, and approach primarily employed by Black feminists and other feminists of color. We will examine intersectionality as a theoretical framework with attendant analytics, as well as the socio/political projects out of which it emerges and influences. In so doing, the scholarly materials in this course, primarily, examine the ways in which structures and categories of race, class, gender, sexuality, and disability create and maintain intersecting forms and experiences of difference that underpin overlapping social inequalities in U.S. society and abroad. Some of the other intersecting forms of social difference we will explore include, ethnicity, nation/migration, class, ability/disability, and indigeneity, reproduction, and HIV/disease status. Our approach to examining these categories/vectors of power will include feminisms of color, critical race theory/studies, queer theory/studies, queer of color critique, transgender theory/studies, and critical geography, all of which have shaped and been shaped by intersectionality.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

AFAS 4433 Whos Afraid of Post-Blackness?: The Spectrum & Specter of Blackness in Post-Racial America
In 2001, Thelma Golden, the Director and chief curator of the Studio Museum in Harlem, boldly claimed that a new generation of African Diasporic artists had officially heralded a new day in post-black art. Six years later a young presidential candidate, born from a White mother from Kansas and a Kenyan father, motivated a Black writer for Time magazine to ask, Is Obama Black enough? Since 2001, and in the wake of America's first Black president, both public and scholarly discourse on Blackness has virtually exploded. New terms and ideas about the end of Blackness-as conservative Debra Dickerson put it-seem to enter the popular and scholarly lexicon everyday. It is now quite common to hear the phrases disintegration, post-racial, biracial, post-Blackness, and even the end of Black politics. This course will explore this expanding discourse and attempt to pinpoint what scholars, pundits and cultural critics mean when they employ these terms. It will also unpack the socio-historical context that has given birth to these terms, asking why now? Has the social and political landscape of America changed so much that we are indeed living in a post-racial society? Or does the specter of Blackness still loom large, haunting American politics, popular culture, sexuality, media discourse, punitive measures, political economy and our understanding of Africa in African-American and African diaspora? Through the use of fictional texts, history, cultural essays and films this course will explore the intra-racial spectrum that characterizes Black America, while paying particular attention to issues of class, sexuality, ethnicity, ancestry, diaspora formation and global migration
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

AFAS 4465 Black Life and the Law
This course examines the intersection of U.S. law and Black life, exploring how legal frameworks and systems have shaped, and been shaped by, the experiences of Black people and communities historically as well as in the contemporary context. Through a combination of historical analysis, theoretical inquiry, and legal case studies, students will investigate the role of law in reinforcing, challenging, and complicating racial inequalities and injustices. Understanding the intersection of law and Black life is increasingly vital in today's socio-political climate. This course highlights the urgent need to examine how Black life is shaped and constrained by legal frameworks and policies that not only reinforce systemic racism but that give rise to Black resistance, social movements, and political strategies. It provides historical context to understand how systemic racism's legacy affects Black communities today, empowers students to advocate for equitable reforms, and fosters informed citizenship by enhancing understanding of legal processes. It also explores the intersectionality of law with various aspects of identity, sharpens critical thinking skills, and encourages dialogue and collaboration across communities. This course is taught by law students under the supervision of School of Law faculty, Adrienne Davis.
Credit 3 units. A&S IQ: HUM, SC BU: HUM
Typical periods offered: Spring

AFAS 4482 Topics in American Politics
With a decided emphasis on field work, this seminar addresses questions like: How did urban African American politicos operate in the era before there were black elected officials? How did they make their demands heard? Did methods vary between cities? Did a city's formal structure make a difference in the political socialization of emerging African American urban political elites? Prerequisites: Junior standing, 3 upper-level Political Science courses and some upper level of AFAS courses and permission of instructor.

Typical periods offered: Spring

AFAS 4511 Race, Ethnicity, and Culture: Critical Qualitative Understandings of Urban Education

This course examines educational institutions as spaces where children are asked to comply to the norms, expectations, and values of the culture of power. We will study how forces -- such as de facto segregation, the disproportionate hyper-disciplining of students, punitive school climates, and the devaluing of certain forms of cultural and social capital -- can contribute to cycles of social reproduction among the marginalized. To address such challenges, this course introduces sociocultural theories and critical qualitative inquiry methods as mechanisms by which urban educational institutions can be positively transformed. Specifically, restorative practices, cogenerative dialogues, and participatory/co-researcher models are explored as methods that honor the voices of marginalized stakeholders and lead to catalytic, transformational impact. Leaving this course, students will have an understanding of the inequitable terrain of urban education institutions as well as a repertoire of theories and methods to assist with the conducting of critically grounded, culturally responsive, humane, and transformative research. In addition to lectures, readings, discussions, films, and actual classroom footage, students will conduct a school experience project to practice using the theories and methods introduced in this course.

AFAS 4601 Historical Racial Violence: Legacies & Reckonings

There is growing awareness of the legacies of historical racial violence in the United States and a related increase in reckoning efforts. Area histories of enslavement, lynching, and other racial terror and dispossession relate to inequality, conflict, and violence in the same places today. These 'haunting legacies' include heart disease and other health disparity, homicide rates, white supremacist mobilization, and corporal punishment in schools. Meanwhile, many communities and institutions are moving to acknowledge and address legacies of historical racial violence in various ways. This course combines seminar-style readings and writing on legacies of racial violence with a practicum component, where individual students or groups of students will conceptualize and develop interventions intended to clarify and disrupt legacies of racial violence, facilitating contemporary reckoning. The practicum will explore and support a broad range of interventive efforts, including public policy measures, original research projects, archival development, commemorative efforts, and a related array of mediums, including visual art, design, film, digital projects, and other creative approaches.

Typical periods offered: Fall, Spring

AFAS 4602 Topics in Afro-American Studies: Afro-American Poetry From 1920 to the Present

Themes and major figures associated with the shaping of the modern literary imagination as it relates to Afro-American poets from the 1920s to the present. Prerequisites: AFAS 208B and 209B.

Credit 3 units. Arch: HUM Art: HUM

Typical periods offered: Spring

AFAS 4609 Prevention of Youth Violence Among African American Youth

This course explores youth violence development, major trends, protective and risk factors, violence as a public health problem, and models/programs for prevention of violence among African American youth. The course includes discussions of youth bullying, gangs, and delinquency as related to adolescent development issues. A framework for community action family involvement, and school intervention strategies will be explored.

AFAS 4610 Advanced Swahili

This course aims at helping students gain skills in reading and appreciating selected readings in Swahili literature. Although the course will primarily focus on plays, novels, poetry, students will also be introduced to Swahili songs, comic books, and other forms of popular literature in an attempt to understand the growth and development of contemporary Swahili literature. Prereqs: Permission of instructor and successful completion of AFAS 103D, 104D, 203D, 204D or equivalent experience.

AFAS 4711 Mourning in Haitian Literature

The Centre National de Ressources Textuelles et Lexicales defines a reposoir as an altar adorned with flowers and ornate foliage erected during a funeral procession onto which a priest places the holy sacrament in a moment of rest. In Haitian Creole, arepozwa can refer to a person who provides safe harbor; it can refer to an archive or a repository; it can also designate a resting place where the remains of a person and the memories associated with them lie in repose. In this course, we will examine how Haitian literature - memoirs, novels, poetry, and theater - acts as a repozwa in all of its valences and how it can assist those left behind in the process of mourning. Taught in French.

Credit 3 units.

AFAS 4755 Queering Sexual Cultures in Africa and the Diaspora

This course examines gender and sexuality in contemporary Africa and the diaspora. We will focus specifically on queerness as a category of analysis and will examine queer identities, practices, communities, and cultures in Africa and the African diaspora. In recent years, many African countries have adopted harsh anti-homosexuality laws and much of the political and popular discourse frames expressions of same-sex desire as un-African.'' However, there is a long history of non-normative sexualities in Africa, challenging the manner in which the continent is constructed as heterosexual by both local and global forces. Similarly, black communities across the African diaspora have relied on the regulation of gender and sexuality to demarcate the boundaries of blackness, and have traditionally sought belongingness to the nation through compulsory heterosexuality. Many scholars, artists, and activists in the African diaspora continue to critique parochial definitions of Africanness and Blackness that rely on the exclusion of queer subjects. By drawing on historical, theoretical, and visual texts, we will examine the debates concerning sexuality, citizenship, and human rights on the African continent and the diaspora as well as their

relationship to global issues around sexual citizenship and human rights. By focusing on the lived experiences of LGBTQ subjects in the African diaspora, we will interrogate the contested relationship between sexuality and politics. This reading intensive, interdisciplinary course will familiarize students with the debates and issues of Queer African Studies, Black Queer Studies, and Black and African Feminist Thought.

AFAS 4890 Catholicism and Slavery
This course explores the role of Catholicism in the global history of slavery. Beginning with an assessment of how early Church theologians interpreted slavery in the Bible, the course will then grapple with how the Church justified taking a leading role in ending serfdom in Europe but endorsed the Atlantic slave trade, becoming one of its most invested participants. We will compare regional contexts of Catholicism & examining global continuities and regional particularities regarding the questions: What did it mean to be enslaved by the Catholic Church? How did enslavers and the enslaved approach Catholicism, as both institution and religious practice, in a context of unfreedom and oppression? In what ways did enslaved people resist Catholic enslavement, drawing upon or rejecting the teachings of Catholicism in their resistance?

African & African American Studies Major

Program Requirements

- **Total Units Required:** 31
- **Grade Requirement:** The minimum grade required for coursework to count toward the major is a C- or better.

Required Courses (7 Credits)

Code	Title	Units
AFAS 1002	Foundations in African & African-American Studies	1
AFAS 2550	Introduction to Africana Studies	3
AFAS 4997	Senior Seminar	3
Total Units		**7**

Elective Courses (24 Credits)

Students must complete 24 elective credits. Of these elective credits, the following are required:

- 21 credits must be at the 3000 level or above; of these 21 credits, at least 6 credits must be at the 4000 level.
- Only 3 credits at the 1000 or 2000 level can count toward the 24 elective credits.
- No more than 3 credits of independent study can count toward the major; this includes internships, research assistantships, undergraduate teaching assistant positions, and directed research.

Students must take at least one course from each of the four focus areas around which the major is organized:

1. Language, Aesthetics, and Expressive Cultures
2. Social and Historical Formations
3. Gender, Sexuality, and the Body
4. Engaging Africa and non-U.S. Diaspora Currents

Language Requirement (3 Credits)

Students must also take at least one semester (3 credits) of a foreign language. Wolof and Swahili are strongly encouraged, but other languages will be considered if taken in consultation with the director of undergraduate studies.

AFAS Focus Areas Course List

Code	Title	Units
Language, Aesthetics, and Expressive Cultures		
AFAS 1107	First Year Seminar: Self & Identity in African American Literature	3
AFAS 1108	Introduction to African Literature	3
AFAS 1240	Beats, Rhymes & Life: A Cultural History of Hip-Hop	3
AFAS 2045	Writer as Witness: Mourning and Memory in the African Novel	3
AFAS 2090	African Studies: Mapping Urban Languages and Resistance in Africa	3
AFAS 2153	Afro-Latin America on Camera	3

AFAS 2450	Bones, Burials and Black Worlds: Mortuary Archaeology and Critical Heritage Studies of African and African American Funerary Practices	3
AFAS 3003	From Shaft to Django: The History of Blaxploitation Film	3

Additional Information

Co-Curricular Opportunities for Majors

AFAS regularly sponsors lectures and events such as keynote speakers, panels, field trips, plays, the Annual African Film Festival, and exhibits that focus on contemporary or perennial topics of interest in all areas of the Black experience. Guest lecturers and artists often visit classes and interact directly with students. These department-sponsored events are designed to foster a vibrant social and intellectual community within the program and to give our students a sense of identity and of what it means to be part of the African & African American Studies community.

Study Abroad and Transfer Credit

Students may apply a maximum of 6 credits to their major that are earned through study abroad and/or transfer credits.

Senior Honors

If a student maintains an overall grade point average of at least 3.65 and a major GPA of 3.50 by the second semester of their junior year, they may be eligible to complete a Latin honors thesis with a core faculty member in the program in African & African American Studies and typically two readers. Completed application forms for Latin honors should be submitted to the honors program director as early as possible, preferably before June 1 of the junior year and no later than August 1.

African & African American Studies Minor

Program Requirements

- **Total Units Required:** 19
- **Minimum Grade Requirement:** The minimum grade required for coursework to count toward the minor is a C- or higher. Students may apply a maximum of 6 credits to their minor that are earned through study abroad and/or transfer credits.

Required Courses

Students must complete the following 4 units:

Code	Title	Units
AFAS 1002	Foundations in African & African-American Studies	1
AFAS 2550	Introduction to Africana Studies	3
Total Units		**4**

Elective Courses

Students select 15 units at the 3000 level or above, chosen in consultation with the advisor.

Additional Information

Co-Curricular Opportunities for Minors

The program regularly sponsors lectures and events such as plays, film festivals, exhibits, field trips, panels, and speakers that focus on contemporary or perennial topics of interest in all areas of the Black experience. In many cases, guest lecturers and artists visit classes and interact directly with students. These program-sponsored events are designed to foster a vibrant social and intellectual community within the program and to give our students a sense of identity and of what it means to be part of the African and African-American Studies community. We encourage our minors to participate in these activities to complement their classroom experiences.

American Culture Studies

Teaching and research in the American Culture Studies program fosters an interdisciplinary approach to the study of United States history, material culture, social life, literature, politics, arts, and popular culture in local, national, hemispheric, and global contexts. In keeping with the broader direction of American Studies, we prioritize a hemispheric approach that explores US relations with Latin America, Canada, and indigenous nations. We prioritize experiential and site-based learning, and offer special opportunities to work in and with St. Louis communities and organizations. Students in AMCS are constantly encouraged to shape their study around questions that matter to them: questions about critical ethnic and indigenous studies, environmental and racial justice, media and politics, education and equity, and many more. Our students have gone on to careers in law, public health, journalism, business, medicine, and creative arts.

We offer one major (American Culture Studies) and two minors (American Culture Studies and Asian American Studies) in our undergraduate program. We also have a dynamic community of graduate certificate students drawn from departments across the humanities and social sciences. We host events — including our Americanist Dinner Forum series — and collaborate with colleagues across campus to generate lively, interdisciplinary dialogue. Come join us!

AMCS 1101 Ampersand: American Stories: Place, Power, and Imagination

If an American landscape could tell a story, what would it say? American Stories is an interdisciplinary approach to reading landscapes from the nineteenth century to today, uncovering untold stories of American places and the people, politics, and power that shaped them. The first semester of this Ampersand program introduces ways of seeing and interpreting American histories and cultures, as revealed in the built environment and stories of our cities. We will travel through time and place, touching down in Boston, Charleston, New York, Chicago, Los Angeles, and more. The course encourages students to read landscapes as multilayered records of past and present social relations, and to speculate for themselves about cultural meanings. It also introduces students to the social, economic, and political forces that have profoundly shaped the American urban landscape.This class is for first-year non-transfer students only.

Typical periods offered: Fall

AMCS 1102 Ampersand: American Stories: St. Louis, Power, and the Making of an American City

A scholar of St. Louis history once claimed, "St. Louis will seem to have been located in entirely different parts of the country throughout its history." In many ways, it's a city that defies easy characterization. It's been a place of great possibility and promise, and of hopelessness and betrayal-and very often all of these things at once. This course will explore the history of St. Louis as a place of many places, reading the city's neighborhoods from the nineteenth century to today. Tracing a legacy of neighborhood fragmentation, students will investigate St. Louis as a city of strong, tight knit communities and grassroots organizations with a rich sense of place, but also as a city of fragmentation and barriers. Discovering what makes St. Louis a uniquely American city, the course will take interdisciplinary approaches to reading compelling primary source documents and will forge connections between St. Louis and other American cities of the past and St. Louis in the present. Students will also take several off-campus trips and engage with local guest speakers from artists to public historians to archivists.

Typical periods offered: Spring

AMCS 2003 Doctors and Terrorists: The Fictions of South Asian America

South Asians have always played an integral role in the culture, history and politics of the United States. However, for complex reasons, their presence has either been concealed, or dismissed through dangerous stereotypes, or just as inaccurately, excessively celebrated for proving the generosity of American liberalism and multiculturalism. Racially misrecognized, this large and heterogeneous group has nonetheless shaped American categories of race, sexuality, and citizenship in intriguing and powerful ways. South Asian Americans have reached to fiction, music and popular culture to craft deeply intimate and original assessments of mainstream desires. In doing so they have sought to resist the dictates of whiteness, to question US imperialism, to garner acceptance and mobility, to build solidarity with other US minorities. In this course we learn about the complex history and cultural productions of South Asians in America. How did South Asia become a category of identification, and who benefitted from that designation? What role have South Asians played in the economic, cultural and global ascendancy of the United States? How do South Asians connect with, and control, their countries of origin? Why do discourses of sex and intimacy rise to the surface in this history, and what is the significance of story-telling in building the archive and questioning the fiction of South Asian America? Course enrollment is limited to first-year and sophomore students.

AMCS 2062 Visualizing the American City

Mound City. Gateway to the West. A city of neighborhoods. One of the most segregated places in America. A sports town with the best fans in the world. The heart of the Silicon Prairie. Flyover country. St. Louis has been called all of these things and many more over the past 200 years. Like all cities, its evolving identity has been shaped by stories, ideas, place memories, and local branding efforts that are deeply rooted in the visual imagination -- those pictures of the mind that define a distinct sense of place. Such pictures are at once personal and shared. And some -- like aerial photos of the Arch -- become definitive elements of the visual imaginary and are reproduced endlessly, from art galleries to tourist maps to baseball caps. This introductory course explores the visual culture of the American city, seeking to understand its powerful political and social significance at key moments in urban history. We will engage the rich archives of urban life, culture, and economic development associated with Chicago, New York, St. Louis, Detroit, and other cities, working with maps, engravings, photographs, travel guides, souvenirs, billboards, posters, and many other visual technologies, including digital representations and experimental formats. In so doing, we will attend to various historical phenomena, from world's fairs and urban renewal projects to catastrophic violence and slum clearance to gentrification and social reform -- and their visual representations -- that have shaped these cities' public lives and identities and contributed to broader urban imaginaries that are still powerfully present today. Students will develop their analysis and writing skills through short artifact readings.

AMCS 2290 Introduction to AMCS: #americanculturestudies: Exploring the Field!
What does it mean to do American culture studies? This course teaches students how to critically analyze U.S. culture and society and introduces them to the history, methodologies, frameworks, and key questions that have shaped and continue to inform this interdisciplinary field. American culture studies is a broad and vast discipline that defies simple summary; it asks probing questions to uplift marginalized voices and experiences as part of an expansive definition of American identity. This course exposes students to practices that constitute American culture studies rather than demarcate a terrain for what it is: historically crossing disciplinary boundaries (arts, humanities, social sciences) and engaging diverse texts (film, literature, historical documents, popular culture, performance, material culture, etc.) American culture studies resists strict definition! In this course students study how knowledge and understandings about society and culture are produced and learn approaches to analyzing, curating and interpreting cultural objects and theorizing cultural phenomena. We examine the concept and idea of America in local, regional, national, and international contexts and continuums; we explore the lived experiences of diverse American communities within and across cultural and literal borders. Through a case study approach, the course engages questions related to the construction of ethnic and racial identities in the U.S.; visual, material, and digital cultures; social thought and social issues; mass media and popular culture; gender and sexuality; citizenship and nationhood; art, literature, and performance; and American imperialism.

Typical periods offered: Fall, Spring

AMCS 2585 Sports & Society
Commercialized spectator sports are a hugely influential part of American culture, politics, and economics. However, the story of how they got that way is too often assumed to be straightforward and self-evident. In this course, we will complicate such assumptions by examining the complex cultural web of American sports history and exploring the people, power structures, and social contexts in which our athletic games have developed, from the Civil War to the present. We will pay particular attention to matters of gender and race in traversing these histories, and students will be asked to consider the ramifications of sociocultural development in sports for American culture at large (and vice versa). Among the topics in sport that we will consider in detail are amateurism, commercialization, masculinity, mass mediation, and violence. We will analyze particular athletes of significance from the last 150 years, including Jack Johnson, Althea Gibson, Muhammad Ali, Serena Williams, Michael Jordan, and others. At the same time, we will examine the forms of media that shape our narratives and understandings of the competitions we consume. In addition, we will consider transnational competitions like the Olympics, which bring American conflicts over race and gender into a global context. No prior sports knowledge is necessary to enroll in the class. Students put themselves on the waitlist and will be enrolled manually by the registrar. Five seats are reserved for each class year for a total of 20 students. This course is affiliated with Sports & Society: Culture, Power, and Identity, an American Culture Studies program initiative focused on the intersections of athletics, identity, and social power.

AMCS 2655 The Cultural Lives of Things: An Introduction to American Material Culture
American culture is so often defined by its obsessive attachment to material things - the iPhones, coffee cups, favorite t-shirts and Harley-Davidson motorcycles that fill our everyday lives. This course will explore our contradictory relationship to such objects - the possessions that serve practical functions and give us a sense of identity, meaning and power, but just as often come to possess or control us. How do things take hold of us? What gives them potency, value, and cultural significance? What psychological, social, economic and political purposes do they serve? Do Americans have a distinct relationship (or a dysfunctional attachment) to their possessions? In answering such questions, we will consider objects of all kinds, from the mundane and utilitarian to the strange, rare and often-fetishized. We will explore their histories, their participation in regimes of commodification and power, their everyday and symbolic functions - in short, the twists and turns of their rich cultural lives. The course will introduce different strategies for interpreting objects as cultural evidence, drawing upon work in anthropology, art history, sociology, literature and museum studies, as well as theorists (Marx, Freud, Baudrillard, and others) who have influenced modern conceptions of material life. Students should also look forward to some in-the-field analysis of different historic, museum, and personal objects around St. Louis (field trips!).

AMCS 2660 Topics in Sequential Art: Understanding Comics: Introduction to Sequential Artistry
Comics are a medium of their own-words and pictures, but more than that. Comics rely on the reader decoding and connecting a multilayered series of relationships. But even more than that, comics are a visual language. As Neil Cohn says, Just as words in sequence are used in spoken language, sequences of images can create a visual language. In this course, you will learn to read that language, and to see how it operates and can be used across visual media and visual culture as a medium of visual communication, particularly our multimodal digital culture. Understanding comics can work as a base for interrogating how other forms of visual culture use sequence to create meaning, including through visual rhetoric. This course covers how to read comics, how sequential artistry creates meaning in comics, and how comics are constructed via a range of artistic, commercial, industrial, and cultural conversations between creators, producers, and audiences. The course offers (but does not require) opportunities to create expository sequential artistry-to write paper in comics form. Texts include works like Scott McCloud's Understanding Comics, Watchmen, Asterios Polyp, When I Am King, and visual journalism such as Welcome to the New World.

AMCS 2701 Topics in AMCS: A Year in Review
What was 2020? This course examines a year that will be remembered alongside 2001, 1968, 1945, 1929, 1865, 1800, and 1776 as one of the most consequential in American history and culture. We willconsider how the COVID-19 global pandemic, the bitterly contested 2020 Presidential election, and a summer of renewed protest for social justice reverberated through spheres of American arts, culture,

education, energy, health care, labor, religion, sports, the university, technology and more. A series of guest experts from Washington University and around the country will provide instruction via lecture once per week, with students sharing their own experiences and analysis in discussion sections during the other weekly course meeting. The course is open to all, but it is geared toward first-year students and sophomores. It fulfills the Intro course requirement in the AMCS major. This is a variable topics course for courses best suited to the reviewing pf a significant year in American Culture Studies. Topics vary by semester, so please see the current course listing.

AMCS 2802 Imagining the World to Come: Internet Cultures, Politics, & Cat Videos
The American internet we experience today emerges from a long history of technological innovation that reaches back to the post-Civil War era, featuring the dramas and crises of world wars, secret communications, spy agencies, cold war anxieties, counter cultural forces, and lots of copper cable. While this history is important for situating the internet within the politics of the 20th century, it tells only part of the story. For the rest, we must interrogate the cultures of the internet, from the utopian evangelists who claimed cyberspace as the principal refuge of individual liberty, to social media, to hackers, to ransomware, to mis- and dis-information networks. As both 'place' and communication service, our internet has proven to be overwhelmingly full with content, surprisingly fragile *and* robust, and the cause of civilizational decline. As we explore signature moments of the internet's development, we'll carefully study the phenomenon as a cultural site of politics, economics, fun, identity, and security (or lack thereof). To do so, we'll use a few disciplinary practices, including cultural studies, tech studies, media studies, and communication studies. Within this multidisciplinary frame, we'll investigate how people imagine and understand what the internet was and is and map how politics and capitalism shape a thing without boundaries or borders.

Typical periods offered: Summer

AMCS 2803 The American City
The American city has multiple forms: as a place to live and work, as a measure of economic vitality, as an architectural creation, as a political setting for both the promise and peril of democracy, and as a mythic backdrop for fictive struggles of identity formation and personal liberation. This course will begin a student's exploration of American culture and politics, with St. Louis serving as field laboratory for investigations that will also present the lives of New York, Chicago, New Orleans, Philadelphia and other cities. American cities carry material evidence of the economic and political reasons that they exist, the transportation networks that shape them, the street plans that give them form, the governments that provide the public good, the people who call them home, the role of public transportation systems, the geography of racial segregation, and the histories of immigrant communities. At the same time, the role of the American city has changed significantly in the 21st century when most Americans now live in suburbs surrounding older cities. Throughout the semester, this course will analyze the material and social culture of American cities through a series of lectures, films and field trips.

Typical periods offered: Summer

AMCS 2804 American Cultures: Investigating America
How does one study American culture? This course teaches students how to critically analyze U.S. culture and society and introduces them to the history, methodologies, frameworks, and key questions that have shaped and continue to inform this interdisciplinary field. In this course, we ask probing questions to uplift marginalized voices and experiences as part of an expansive definition of American identity. In this course students study how knowledge and understandings about society and culture are produced and learn approaches to analyzing, curating and interpreting cultural objects and theorizing cultural phenomena. We examine the concept and idea of America in local, regional, national, and international contexts and continuums; we explore the lived experiences of diverse American communities within and across cultural and literal borders. This course is offered in tandem with L98 238S American Cultures: Investigating St. Louis by offering both a national and a local lens with which to view American culture, and students are strongly encouraged to enroll in both courses. Through a case study approach, the course engages questions related to the construction of ethnic and racial identities in the U.S.; race and class; social thought and social issues; mass media and popular culture; landscape, borders, and belonging; citizenship and nationhood; language as culture; and American exceptionalism.

AMCS 2900 Directed Research in AMCS
Introduces first-years and sophomores to research by engaging them in ongoing faculty research projects within the department. Under the direction of a faculty mentor, students take part in tasks that contribute to the mentor's research. Through this hands-on experience, students learn about the research process and build foundational research skills that can benefit their future academic experience and development. Faculty mentors provide regular guidance, training, and feedback to support students' understanding and growth. Students are registered by the department after approval from the faculty member leading the research project. The course may be taken for 1-3 credit hours based on the weekly hours required. Credit/No Credit only
Credit 3 units.

AMCS 3026 Home, Bittersweet Home: Histories of Housing and Homeownership in America Since 1850
The idea of owning one's own home has been central to realizations of the American dream or the good life. By 1931, Herbert Hoover called the idea a sentiment deep in the heart of our race and of American life. While the dream continues, the reality of homeownership has been elusive or fraught with struggle and sacrifice for many Americans. If home ownership is such a central part of American identity, why have so many generations of Americans struggled to achieve it? In this course, students explore the histories of different versions of home and homeownership by touching down in different locations at pivotal moments in order to investigate the varied meanings of housing and homeownership in the context of a particular place and time in American history. Using a case-study approach, the course travels across time and space to explore diverse forms of housing, including the big house and slave house in the south under slavery, the immigrant tenement in New York City, the company town in south Chicago, the Midwest homestead, the planned postwar suburban neighborhood, high rise public housing and gated communities. This format exposes students to the important role of federal and local policies as well as themes of housing including homes as private and domestic realms; housing as a commodity and the largest form of American debt; housing as an icon and encoder of social status; housing as exclusionary and inclusionary; housing as racial or socio-economic discrimination; the suburbs and their discontents; and the recent housing crisis.

AMCS 3046 Sports & Society: Contemporary Issues in American Sports
Athletes like Colin Kaepernick, Ally Raisman, LeBron James, and Megan Rapinoe leave no doubt: sporting spaces are powerful platforms for political and social activism. In this era of division and social unrest, sports cannot be stuck to. But what to make of the various messages these athletes espouse, and how can we understand the intersectional influence of sporting cultures on American politics, economics, and culture? In this class students will examine major contemporary issues in American sports by examining scholarship, fan behavior, and narratives provided by athletes themselves. Among the topics students will consider are: racism and sexism in coaching, LGBTQ and Trans athlete identity, amateurism and athletic labor, mascots, traumatic brain injuries, and social media.

AMCS 3053 HOT Takes: Cultural Criticism in the Digital Age
The twenty-first century has seen a new and exciting wave of cultural criticism, and along with it a new wave of public intellectuals. Ta-Nehisi Coates, Roxane Gay, Jia Tolentino, Anne Helen Petersen, Jo Livingstone, Hanif Abdurraqib-at their best, writers like these aspire to the sort of indispensability on political, social, and artistic matters that their forebears like Susan Sontag, Norman Mailer, and James Baldwin had at midcentury. But these voices are unique because they emerged through and alongside a specifically online critical sphere, a space betwixt and between the comments section and the little magazine. This is the space of viral tweets and threads, hot takes and think-pieces. It's a space of potentially greater democratization and diversity even as it is an opportunity for bigots and trolls. These writers are beholden to their networks, but those networks are far wider, more idiosyncratic and inclusive and incendiary-more unstable-than anything buttressing the vaunted public intellectuals of the past. This course examines the cultural critics of the contemporary moment in context of the critical space they opened and now occupy. We'll begin with a quick history of the public intellectual from the eighteenth century to the present before we log on. The rise and fall of Gawker, Grantland, and The Awl; The New Republic's controversial digital pivot; the feminist communities of The Hairpin and The Toast; the conservative intellectual dark web; the message boards of the early 2000s; the emergence of semi-academic sites like the Los Angeles Review of Books; the blogs and tumblrs and livejournals that nurtured the talents and provocateurs that we now find indispensable or unavoidable. We will dissect their style, understand their theory and practice, engage with their subjects, and investigate the way their writing has intersected with and propelled social media movements like Black Lives Matter, #MeToo, and #OscarsSoWhite. And we will consider the way these critics have influenced the way scholars and students approach the texts and topics we always have.

AMCS 3060 Current Affairs and Critical Issues in American Culture
What's in your newsfeed? Media outlets drive critical conversations and public discourse, and in this course students have the chance to keep up and weigh in. Students read the news and examine current affairs as they unfold week by week, critically analyzing and exploring modes of understanding, historicizing, and contextualizing contemporary issues in American society. The course introduces students to theoretical and conceptual frameworks for this engagement and asks questions such as the following: How are these issues related to the past? How have Americans experienced this issue before, and how is the contemporary context different? We will follow trends in pop culture, technology, politics, and society. Students learn to layer current issues with historical documents, the commentary of public intellectuals and cultural critics, and political, economic, and social policies. The course stresses research analysis, group process, critical thinking, multidisciplinary inquiry, and professional writing and speaking skills.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, ETH, HUM EN: H
Typical periods offered: Fall

AMCS 3086 Living in a Material World
In the months after 9/11, President Bush urged Americans to buy cars and take vacations to show their patriotism and unity and also to send a message to terrorists that our way of life could not be stolen. Such calls to consume have often been made in times of crisis, and consumption has long been something of a national pastime (some would say a national pathology!). But frugality, simple living, and ethical consumerism have also at times been declared American values, and they are now just as likely to be advanced by celebrities, entrepreneurs, or corporations as by political activists. This multidisciplinary course explores our complex and evolving relationship to materialism and materiality, focusing on moments in U.S. history when consumption has been especially consoling or haunting or when it has been aligned with ideas of the public good or social and political change. Along the way, we will study material goods that have been declared symbols of American values (e.g., soap, Tupperware, Harley-Davidson motorcycles, #MAGA hats); influential advertising campaigns and models of good and bad consumer behavior (e.g., shoplifting, hoarding, good housekeeping, thrifting); and anti-materialist positions, from Thoreau's Walden to the Occupy Movement to today's off-the-grid cooperative-living communities. Students will write short analytical response papers, conduct a study of their own consumer practices, and do a final project on a recent ethical consumption campaign in historical perspective. This course counts as Multidisciplinary for AMCS students and as Visual Culture for Sam Fox students.

AMCS 3192 Surveillance & the City
In 2014, the urban street artist Banksy painted a mural of three government agents flanking a public telephone booth, each using spy gadgets to listen, record, and transmit a copy of the conversation had within. His work reflects the emergent concerns of citizen surveillance in Western democracies and the techno-logics of 21st-century political reality, where persistent monitoring, invisible identification, and data collection are features of both government control and data-driven capitalism. The rise in technological sophistication in both the capture and assessment of data makes adoption at scale by city governments affordable and relatively noncontroversial. But as the surveillance of bodies, habits, associations, and identities becomes more naturalized in the governing and policing institutions of urban areas, legal safeguards lag behind, concepts like privacy and security become fuzzier, and existing inequalities of race and class become hardcoded in the techno-systems supposedly designed as neutral tools. This fieldwork class will explore St. Louis as a landscape of the

always observed, from community-level realities to online experiences. Readings and class discussions will be complemented by field trips to sites in the St. Louis region to interrogate the practice of observation in situ among different zip codes and communities where the blanketing presence of surveillance practices and surveillance technology warps a relationship to place; amplifies racial, cultural, and class inequalities and disenfranchisements; consolidates social and political control; and replaces human accountability with the veneer of the objective and rational machine.

AMCS 3202 Civic Scholars Program Semester One: Self Awareness, Civic Life, and Citizenship
This is the first semester, foundation course for students in the Civic Scholars Program of the Gephardt Institute for Civic and Community Engagement. This course provides students with a context for examining civic engagement and developing civic leadership skills. Through lectures, guest speakers, readings, excursions, and class discussion, students 1) explore the history and current status of civic engagement; and 2) prepare for the implementation of a civic project the summer between their junior and senior years. Students meet in a structured class to discuss concepts, engage in critical reflection, and develop leadership skills. In addition, students will critically reflect on course content to enrich their learning. This is a two-credit course. Prerequisite: Acceptance into the Civic Scholars Program. Civic Scholars courses do not count towards the AMCS Major and Minor.

AMCS 3207 Civic Scholars: D.C. Imerrsion
This 1-credit hour pass/fail spring course supports Civic Fellows as they apply their learning from the first semester of the program to the federal context. In the fall, Fellows learn about a range of different civic engagement strategies, such as voting, submitting public comments, lobbying, grassroots organizing, legal advocacy, and more. We discuss the history of the different strategies, particularly in the context of US democracy, as well as case studies in the St. Louis region. The D.C. immersion trip allows us to understand how local and state policy processes and efforts for social change are connected intrinsically to the federal government and federal politics. The intensive four-day trip includes visits to the Capitol, meeting with elected officials as well as their staffers, learning from community members and organizers, and visiting different sites of historical and current social change efforts. Students are asked to complicate their understanding of the U.S. federal government, eschewing simplified narratives in favor of the complex network of opportunities and challenges afforded by the U.S. democratic system. Satisfactory completion of this course is a required component of the Civic Fellows Program. The course takes place on the Tuesday to Friday of the week prior to the start of the Spring semester.
Credit 1 unit.

AMCS 3270 Comics, Graphic Novels, and Sequential Art
This course traces the evolution of comics in the America from the comic cuts of the newspapers, through the development of the daily and Sunday strips, into the comic book format, and the emergence of literary graphic novels. While not a uniquely American medium, comics have a specifically American context that intersects with issues of race, class, gender, nationalism, popular culture, consumerism, and American identity. Comics have repeatedly been a site of struggle in American culture; examining these struggles illuminates the way Americans have constructed and expressed their view of themselves. The way comics have developed as a medium and art form in this country has specific characteristics that can be studied profitably through the lens of American Culture Studies.

Typical periods offered: Spring

AMCS 3272 The Superhero in American Culture
The superhero is an American cultural figure that enjoys great metaphoric resonance in contemporary America and about contemporary America, much as the Western did during the Cold War. But this metaphoric resonance has existed since the genre came into being with Superman in 1938 as part of the nation's response to modernity, and predates the creation of the genre through the hero figures that contributed tropes to the superhero genre. Through a cultural historical and transmedia approach, this course examines the superhero and the superhero genre as a myth medium and contested site for portraying and shaping ideas about American identity, masculinity, modernism, race, class, gender, and humanity. The prehistory of the superhero is examined in 19th and early 20th century frontier stories, science fiction, and pulp fiction. The definition of the superhero and the genre's evolution in comics, film, television, and fan-produced works are examined, with a focus on how the genre has served and mediated the conflicting needs of creators and audiences.

Typical periods offered: Spring

AMCS 3304 The Politics of Black Criminality and Popular Protest
This course will explore the meanings and perceptions of Black criminality in modern American culture. It will consider issues of rioting and racial violence; movements ranging from hip-hop to Black power; the crucial matter of police brutality; and cultural associations between criminality and Black masculinity. Our work will be informed by an awareness of the historical interactions between African Americans and legal and other systems of authority: in particular, the ambiguous boundaries of legality under slavery, post-emancipation convict leasing, Jim Crow laws, Black gangs, and the functions of illegal acts in the lives of Black citizens. The course will give special attention to the ways that popular thought, imagination, and culture -- and particularly Black thought and culture -- have addressed crime. How does criminality connect to popular forms of protest, resistance, and discussions about inequality and identity?
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, HUM
Typical periods offered: Spring

AMCS 3507 Legal Conflict in Modern American Society
Thousands of lawsuits are filed daily in the state and federal courts of the United States. The disputes underlying those lawsuits are as messy and complex as the human, commercial, cultural and political dynamics that trigger them, and the legal processes for resolving those disputes are expensive, time-consuming and, for most citizens, seemingly impenetrable. At the same time law and legal conflict permeate public discourse in the United States to a degree that is unique in the world, even among the community of long-established democracies. The overarching objective of the course is to prepare our undergraduate students to participate constructively in that discourse by providing them with a conceptual framework for understanding both the conduct and resolution of legal conflict by American legal institutions, and the evolution of - - and values underlying - - the substantive law American courts apply to those conflicts. This is, at core, a course in the kind of legal or litigation literacy that should be expected of the graduates of first-tier American universities. Some of the legal controversies that will be used to help develop that literacy include those surrounding the permissible use of lethal force in self-defense, the constitutionality of affirmative action in university admissions, contracts that are unconscionably one-sided, sexual harassment in the workplace, the duty of landlords to prevent criminal assaults on their tenants, groundwater pollution alleged to cause pediatric cancers, and warrantless searches of cellphone locator data by police.

Typical periods offered: Fall, Spring

AMCS 3528 The Black Athlete in American Literature: Frederick Douglass to Lebron James
The black athlete is a central figure in American entertainment, and has been since Frederick Douglass decried Christmastime slave games in his Narrative. This course will examine literary depictions of black athletes-in novels, memoirs, essays, and poems-in order to better understand the cultural significance of sportsmen and women in the African American struggle for equality, from abolitionism to the Black Lives Matter movement. Students will read works by Douglass, Ralph Ellison, Maya Angelou, and John Edgar Wideman, among others, and examine the lives and athletic pursuits of prominent athletes such as Jackie Robinson, Muhammad Ali, Wilma Rudolph, Michael Jordan, and LeBron James. Popular perceptions of gender and sexuality, in addition to race and racism, will factor into readings, especially as students incorporate secondary sources into their own research.

AMCS 3595 American Culture: Methods & Visions
Required course for AMCS Majors. See semester listing for current topics. As a Writing Intensive course, 375A serves as an occasion for AMCS students to think about matters of argument and presentation, and to develop ideas and models for future research. This course is intended for students at the Junior Level or Higher; it fulfills the multidisciplinary (MD) requirement for AMCS Minors and the Methods Seminar requirements for AMCS Majors.
Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

AMCS 3596 From Vision to Praxis: The Capstone Project Incubator
This course is intended for AMCS juniors following the completion of L98 375A Methods & Visions. After sustained attention on methodological practices in 375A, students will shift focus in 375B toward the fundamentals of developing a senior-year project. Emphasis will be on process and skill enhancement, with areas of concentration including drafting project ideas; identifying animating research questions; enhancing scope and focus; exploring mediums of expression; creating a developmental bibliography; and planning for summer research. Learning modes will include lecture, reading and discussion, and peer workgroups. Assignments will develop formal and informal writing, drafting and rewriting, and scholarly reading. The final product will be two-fold: (1) a polished prospectus outlining project focus, research area, initial scholarship summary, and rationale for medium; and (2) a summer planning document outlining reading and writing goals in preparation for the capstone workshop senior year.

Course is used for transcribing 3000 level AMCS electives
Credit 3 units. EN: H
Typical periods offered: Fall, Spring, Summer

AMCS 3996 Local Archives: Directed Study in St. Louis
Directed study with an AMCS-affiliated faculty. All proposals for study must be submitted for review and approved by the AMCS advisor. See the AMCS Academic Coordinator for more information. By permission of instructor.
Credit 3 units.
Typical periods offered: Fall, Spring

AMCS 4016 Advanced Research in American Culture Studies
Directed study with an AMCS-affiliated faculty. All proposals for study must be submitted for review and approved by the AMCS advisor. See the AMCS website for the appropriate form. By permission of instructor.
Credit 3 units.
Typical periods offered: Fall

AMCS 4019 What Could Go Wrong: Historical Perspectives on Design and Technology in Society
What could go wrong? Apps crash. Databases are breached. Robots run amok. While technological failures are familiar headaches (or nightmares) for engineers and consumers alike, their social origins and effects can be harder to see. In this seminar, we analyze how technological artifacts have worked — or not — in a cultural context.

How have the accidents of production processes, politics of bias and accessibility, and institutional ecosystems shaped the everyday use and social power of technology in specific historical moments and spaces? Learning from historical case studies and methods of historical research and social analysis, students will engage major issues in contemporary design and technology through in-class discussions, field trips, regular writing exercises, and research projects.

Typical periods offered: Fall

AMCS 4150 Senior Seminar On the Presidency: The Trump Administration
This course uses the run-up to the presidential election as a point of departure for considering the current presidency. This is a research seminar that will begin with a series of common readings, after which students will constitute themselves into research teams that will explore the current state of the presidency in broad cultural perspective. 2020 Iteration: In Spring 2020, the course will focus on the election and presidency of Donald Trump as experienced by Washington University in particular and St. Louis in general.

Typical periods offered: Spring

AMCS 4200 AMCS Capstone Workshop I
This workshop is required for AMCS majors completing an independent capstone project, whether by means of a 3-credit capstone project, a Latin Honors (6-credit) thesis, or a two-semester (6-credit) non-honors project. In all three cases, the capstone project is intended to serve as the culmination of the major--an opportunity to build on previous work and to engage with the broader field of American Culture Studies while developing a multidisciplinary framework suited to the goals of the project. The workshop is intended to foster intellectual community and provide support during the research and writing process. Students share aspects of their work in large- and small-group settings; discuss methods, models, and challenges of cultural studies; participate in several peer-review workshops; and develop insights and skills directly relevant to their capstone work. Barring circumstances which prevent it, the 3-credit capstone should be completed by the end of the fall semester. Students pursuing a 6-credit project (either a Latin Honors thesis or non-honors project) will continue their work into the following semester by enrolling in L98 4XX. Enrollment by permission of Program pending approval of project proposal, which will be submitted in the Spring of Junior Year. Students seeking to earn Latin Honors in AMCS must meet the University cumulative GPA minimum (3.65) and have permission of their thesis advisor.
Credit 3 units.
Typical periods offered: Fall

AMCS 4203 Civic Scholars Program Semester Four: Civic Engagement Across the Lifespan
This is the fourth semester course for students in the Civic Scholars Program of the Gephardt Institute for Civic and Community Engagement. This culminating course provides students with the opportunity to integrate the Civic Scholars experience, explore civic engagement opportunities post-college, and discuss ethics adn civic engagement. Through group discussions, readings, lectures, and guest speakers, students 1) understand civic engagement over the life course; 2) discuss ethics and civic engagement; and 3) develop a one-, five-, ten-, and twenty-year civic vision. This one-credit course meets weekly for one hour during the spring semester. Students are expected to take an active role in their learning through sharing their experiences, engaging with reading material, and participating in reflection exercises. Prerequisite: L98 3202, L98 3203 and L98 4202
Credit 1 unit. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

AMCS 4204 AMCS Portfolio Workshop: Academic Citizenship
How can students develop a stronger sense of academic identity and purpose? How can research translate into opportunities beyond the classroom, from service to politics? In this workshop AMCS Majors explore these questions while receiving support at a crucial milestone, the Senior Capstone. Through reflection and writing students develop a stronger intellectual identity, and consider how their research prepares them to participate in conversations and activities that transcend scholarship. This participation is a kind of academic citizenship with students leveraging their learning to engage intellectual, social, and political life in and beyond campus. Students do this primarily through consideration of their capstone research, happening concurrently in the AMCS Capstone Workshop or in an approved seminar. While encouraging Majors to consider the intersection of their academic and personal goals, the workshop supports research (e.g., guest faculty discuss methodology), gives structure to activities already required for the Major (e.g., the capstone abstract), and builds community (e.g., peer-led discussions). The workshop also provides time and space for students to curate their AMCS portfolio. The Fall Workshop is part of a workshop series designed to help AMCS Majors develop their portfolio and provide additional training and support at particular milestones in the major. The portfolio and accompanying workshops is a response to students' feedback. Graduating seniors said they would have liked more structured time to reflect on their work in the major; they would have liked to document their progress in the program more fully; and they wanted more opportunities to strengthen their class cohort. The Fall Workshop will provide all of those things, while centering students' attention on their growth as scholars and engaged citizens.
Credit 1 unit.
Typical periods offered: Fall

AMCS 4205 AMCS Portfolio Workshop: Connections and Explorations
Where have your studies in American Culture taken you? In this one-credit workshop AMCS Majors work with mentors and peers to reflect on their journey through the major, prepare for the public presentation of their capstone research in early April, and prepare for life after college. The course gives AMCS Majors space and time to think more deeply about what they have achieved academically and where their intellectual and personal priorities intersect. We hope it helps AMCS students to discover connections among what they have done and learned in the program and clarifies post-college goals and pursuits. Some of the workshop activities are required for the major (e.g., the capstone presentation). The course provides structure, support, and academic credit for doing them. The workshop is a response to students' feedback: Graduating seniors tell us they would have liked more structured time to reflect on their work in the major; they would have liked to document their progress and growth in the program more fully; and they wanted more opportunities to strengthen their class cohort. The Senior Workshop will foster all of these things, while centering students' attention on the connections among their academic, personal, and career interests.
Credit 1 unit.
Typical periods offered: Spring

AMCS 4206 AMCS Capstone Workshop II
This course is required for students planning to complete the Latin Honors thesis or a 6-credit non-honors project through American Culture Studies. It builds on work done in L98 400A: AMCS Capstone Workshop I, and involves periodic workshops and conferences with the instructor and project advisor(s) during the final stages of thesis preparation. Prerequisite: Satisfactory standing as a candidate for a two-semester capstone, including successful completion of L98 400A

Capstone Workshop I and permission of project advisor. Latin Honors eligible students must meet the University GPA minimum. Course will meet every other week, time/date to be determined based on participants' schedules.
Credit 3 units.
Typical periods offered: Spring

AMCS 4208 Civic Scholars Program Semester Three: Application and Integration of Civic Projects and Values
This is the third semester course for students in the Civic Scholars Program of the Gephardt Institute for Civic and Community Engagement. This one-credit seminar style course provides students with the opportunity to evaluate their civic projects and explore implications of their work. Through group discussions, readings, lectures, and guest speakers, students 1) connect their civic engagement project to local, national, and international contexts; 2) understand interdependence of social issues, public policy, and culture; and 3) explore sustainability and social change. The class meets weekly for one hour during the fall semester. Students are expected to take an active role in their learning through sharing their experiences, engaging with reading material, and participating in reflection exercises. Students are required to continue their coursework through the spring of their senior year, in the Civic Scholars Program, Semester Four: Civic Engagement across a Lifespan. Prerequisite: L98 3202 and L98 3203
Credit 1 unit. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall

AMCS 4371 Music and Performance: Pleasure and Politics in Popular Music
Christopher Small has asserted that music is not a thing but an activity--something that people DO. Starting from this premise, this course explores popular music in performance and introduces students to the flourishing scholarship at the intersection of performance studies, sound studies, and popular music studies. We will attend to sound, music, listening, and voice-and we will consider these elements of performance in combination with costume, choreography, stage design, and audience participation and interaction. Exploring the choices of performers and the expectations of audience members in settings from gospel churches to Radio City Music Hall, this course moves through a wide variety of musical genres, including cabaret, blues, opera, musical theater, and rock. We will consider the pleasure and politics embraced by everyday people and activists who have used music in protest movements from the labor movement to Black Lives Matter. We also attend performances around St. Louis, guided by the interests of the class. Upper-level undergraduates and graduate students (enrolled under a 500-number) with an interest in music, theater, dance, cultural history, American studies, and African American studies are especially welcome.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

AMCS 4505 AMCS Harvey Scholar Seminar
In this course, AMCS Harvey Scholars examine critical issues in American studies while receiving support and structure for their Harvey projects. Students discuss seminal texts and explore creative, literary and artistic productions and representations of American diversities and social contrasts. Class activities integrate academic journals, media, visual artifacts, and other texts that support students' specific projects while deepening their competencies in the field of American cultural studies. Participation includes attending the monthly AMCS Americanist Forum, which brings together faculty, postdoctoral fellows, graduate students and undergraduates. This course is part of the AMCS Harvey Scholar Fall-Spring seminar sequence, which is designed to support the intellectual and community life of AMCS undergraduates. Permission of the program is required for participation. Students place themselves on the waitlist and will be manually enrolled.
Credit 2 units. A&S IQ: SSC EN: H
Typical periods offered: Fall

AMCS 4506 AMCS Harvey Scholar Seminar
In this course AMCS Undergraduate Harvey Scholars examine critical issues in American Studies while receiving support and structure for their Harvey projects. Students discuss seminal texts and explore creative, literary and artistic productions and representations of American diversities and social contrasts. Class activities integrate academic journals, media, visual artifacts, and other texts that support students' specific projects while deepening their competencies in the field of American cultural studies. Participation includes attending the monthly AMCS Americanist Forum, which brings together faculty, postdoctoral fellows, graduate students and undergraduates. The AMCS program director leads the seminar with support and involvement from faculty and staff. This course is part of the AMCS Harvey Scholar Fall-Spring seminar sequence designed to support the intellectual and community life of AMCS undergraduates. Prerequisite: Permission of program. Students place themselves on the course waitlist and then will be manually enrolled.
Credit 2 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

AMCS 4800 On Location: Exploring America
Every summer, AMCS travels to a new location to explore fundamental questions of national identity and meaning through the study of the interdependent relationship between culture and place. By visiting landmarks, historic sites, museums, memorials etc.-- sites best understood through direct engagement with consideration of their rich material, historical, political, and social meanings-students become in-the-field observers and learn from local experts and faculty. Past On Location destinations have included: California, Hawaii, New York City, Washington D.C., the Industrial Southwest, and American Indian landmarks. For more information and description of past travel sites, please visit http://amcs.wustl.edu/courses/on_location.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Summer

AMCS 4996 Elective: 4000-Level
Course is used for transcribing AMCS 4000- level electives
Credit 3 units. EN: H
Typical periods offered: Fall, Spring, Summer

AMCS 4998 Directed Study in American Culture Studies
Students in this course perform directed study with AMCS-affiliated faculty. All proposals for study must be submitted for review and approved by the AMCS adviser. See the AMCS website for the appropriate form. Prerequisite: Permission of instructor.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

American Culture Studies Major

Program Requirements

- **Total Units Required:** 32, at least 24 of which must be at the 3000 level or higher
- **Grade Requirement:** C- or higher

Visit our Course Listings webpage for a complete list of courses, by semester, that count toward the AMCS major. For more information about the major — including past examples of projects, leadership opportunities, and an FAQ — please visit our AMCS undergraduate webpage.

Requirements

- **Introductory course** (3 credits), as designated by American Culture Studies. Options for this requirement have recently included AMCS 2200 Topics in AMCS: Race and American Popular Music, AMCS 2071 "Reading" Culture: The Visible and Invisible: Introduction to American Visual Cultures Studies, and AMCS 2290 Introduction to AMCS: #americanculturestudies: Exploring the Field! Visit our Course Listings webpage for the full listing by semester.
- **Subject focus area coursework** (9 credits): Three courses in a single subject focus area, two of which must be at the upper level.
- **Methods focus area coursework** (9 credits): Three courses in a single methods focus area, two of which must be at the upper level.
- **Fieldwork** (3 credits): Enrollment in an approved fieldwork course. Options include AMCS 4800: On Location: Exploring America; AMCS 3781: Culture and Identity: The Race for Criticism: African American Culture and Its Critics; and AMCS 3719: Fashioning America: A Cultural History of Fashion, Shopping, and Advertising.
- **AMCS 3595: Methods and Visions** (3 credits): Students must have junior standing to enroll in this writing-intensive methods seminar, which is offered each fall semester.
- **Senior capstone project** (3 credits): This multidisciplinary project is a culmination of the coursework in the major; a student can also earn 6 credits if the project is an honors thesis. Capstone projects are proposed at the end of the junior year and completed during the senior year. The capstone requirement is fulfilled through one of the following three scenarios:
  - A **one-semester independent research project** pursued with guidance from an advisor;
  - A **two-semester honors thesis** (for those eligible for honors work); or
  - A **one-semester project completed** in the context of an approved 4000- or 5000-level seminar.

Students pursuing the one-semester independent project or the honors thesis participate in the AMCS Capstone Seminar (AMCS 4200), a preparatory workshop-style course that provides support and structure for the capstone. Students choosing the seminar-based capstone carry out their project with guidance from the faculty instructor, and support from their AMCS major advisor. In all cases, students present their capstone to the AMCS community in a research colloquium at the end of the spring semester.

- **Two 1-credit workshops** — AMCS 4204 and AMCS 4205 — taken during the fall and spring of the senior year, respectively.
- **At least two multidisciplinary courses**, taken as part of the above major requirements and designated by AMCS. AMCS 3595 and courses that count toward the fieldwork requirement may not also count toward the multidisciplinary requirement. Students are encouraged to take multidisciplinary courses that connect to the subjects or issues in their focus area. Visit the AMCS Courses webpage for a complete list of general and multidisciplinary courses that count toward the AMCS major.

Additional Information

Established Focus Areas

- **Subject Focus**
  - Race & Ethnicity
  - Gender & Sexuality
  - Ability & the Body
  - Place, Space, & the Environment
  - Popular Culture
  - Citizenship, Nationhood, & Identity
- **Methods Focus**
  - Archives & Texts
  - Audio, Visual, & Material Studies
  - Journalism & Ethnography
  - Law, Politics, & Policy Studies
  - Digital Methods

AMCS gives majors considerable freedom in defining their course of study, allowing them to learn how cultural study is done in multiple fields and periods even as they define focus areas in ways that suit their specific interests. Pairing the AMCS major with a second major in a complementary discipline is an especially enriching model of cultural study, and AMCS works closely with students to ensure that double-majoring works well.

Study Abroad

- Students may receive a maximum of 6 credits from a single semester of study abroad for the AMCS major only.

Transfer Credit

- Students may receive a maximum of 12 transfer credits from other universities toward the AMCS major (which includes Study Abroad credits).

Majors intending to study abroad should consult with the AMCS study abroad advisor well in advance to plan a course of study and discuss its impact on their work in the major (including their fieldwork and capstone projects). For further information, please refer to the Frequently Asked Questions on our undergraduate page or review the AMCS approved programs on the Study Abroad webpage (by searching for "American Culture Studies" as the "Program Name" in the WUSTL Global Opportunities database, which can be accessed from the Planning for Study Abroad page).

Special Opportunity: Lynne Cooper Harvey Undergraduate Scholars

Harvey Undergraduate Scholars are vital members of the AMCS community, serving as intellectual leaders and modeling innovative multidisciplinary research. They are asked to share their knowledge with the community in a variety of ways during their time as scholars, including through involvement in a project or initiative that brings them into collaboration with others in the AMCS community. These projects should contribute substantially to the scholars' learning and allow them to actively engage with and bolster all members of the AMCS community. Please visit the Harvey Undergraduate Scholars page for more information.

Senior Honors

Writing an AMCS honors thesis is one way to fulfill the capstone project requirement. It allows students to complete an extended study of a cultural topic with the input of faculty from more than one discipline, and it provides both a support system and an audience of peers for that study. For more information about the honors thesis and capstone project process, including important dates and criteria, please visit our Senior Honors Thesis page.

American Culture Studies Minor

Program Requirements

- **Total Units Required:** 15 units, at least 9 of which must be at the 3000 level or higher
- **Grade Requirement:** All courses counting toward the AMCS minor must be taken for a letter grade, and students must receive a grade of C– or higher.

Requirements

- **Introductory course** (3 credits), as designated by American Culture Studies. Options for this requirement have recently included AMCS 2200: Race and American Popular Music, AMCS 2071: The Visible and Invisible: Introduction to American Visual Cultures Studies, and AMCS 2290: Introduction to AMCS: #americanculturestudies: Exploring the Field! Visit the AMCS Courses webpage for the full listing by semester.
- **Distribution coursework** (9 credits): At least three courses on American subjects (two of which must be at the 3000 level or higher), either in a single established Focus Area (refer to the list of established foci below) *or* in three distinct disciplines outside the student's major.
- **One additional AMCS course** (3 credits).
- At least **two multidisciplinary courses**, taken as part of the above minor requirements and designated by AMCS. Minors who opt to do a focus are encouraged to take at least one multidisciplinary course that connects to the subjects or issues in the chosen focus area. AMCS 3595: American Culture: Methods & Visions (a junior-level seminar) is also encouraged and may count as a multidisciplinary course. Visit the AMCS Courses webpage for a complete list of general and multidisciplinary courses that count toward the AMCS minor.

Only one of the courses taken to complete the minor requirements may be in the same academic unit as the student's major(s).

Established Focus Areas

The following list reflects areas of longstanding student interest. Minors are welcome to propose new foci or to tailor an established one to suit their interests. AMCS currently has 11 established focus areas:

Subject Foci

1. Race & Ethnicity
2. Gender & Sexuality
3. Ability & the Body
4. Place, Space, & the Environment
5. Popular Culture
6. Citizenship, Nationhood, & Identity

Methods Foci

1. Archives & Texts
2. Audio, Visual, & Material Studies
3. Journalism & Ethnography
4. Law, Politics, & Policy Studies
5. Digital Methods

Additional Information

- Courses vary by semester and all minors must meet with their AMCS minor advisor to determine which courses meet the requirements. See the requirements listed on this page with examples of courses for each requirement area.
- All advanced units must be unique to the American Culture Studies minor (i.e., not counted toward any other major or minor).
- Students cannot go abroad through the AMCS minor; however, students can transfer up to 6 total credits from other universities or Study Abroad through another program on campus.

Visit our undergraduate AMCS webpage for more information about the minor requirements and focus areas as well as other resources and announcements for AMCS students.

Asian American Studies Minor

Program Requirements

- **Total Units Required:** 18, at least 12 of which must be at the 3000 level or above

Required Courses

- 3 credits of Introductory coursework
- 3 credits of Asian American Focus coursework
- 6 credits of Multiethnic and Transnational coursework
- 6 credits of Context coursework

Introductory Courses

Students must complete one course that counts as an introduction to Asian American Studies (3 credits, any level). Course offerings vary every semester, but examples include the following:

Code	Title	Units
AMCS 2071	"Reading" Culture: The Visible and Invisible: Introduction to American Visual Culture	3
AMCS 2700	Topics in Asian American Studies: Introduction to Asian American & Pacific Islander Studies	3
GLOBAL 1104	First Year Seminar: Chinatown: Migration, Identity and Space	3
HISTORY 1145	Freedom, Citizenship and the Making of American Life	3

Asian American Focus Courses

Students must complete one course that counts as an Asian American Focus (3 credits, any level). Course offerings vary every semester, but examples include the following:

Code	Title	Units
AMCS 2003	Doctors and Terrorists: The Fictions of South Asian America	3
GLOBAL 3512	"Model Minority": The Asian American Experience	3
WGSS 3083	Topics in Asian American Literature: Gender and Sexuality in American Asian Lit	3

Multiethnic and Transnational Courses

Students must complete two courses (6 total credits, any level) that count in each section listed below. Course offerings vary every semester, but examples include the following:

1. Asian Americans in a Multiethnic/Multiracial Perspective

Code	Title	Units
AMCS 3708	The Real and Fake: Identity, Conflicts, and Racial Formation in Asian American Literatures	3
GLOBAL 4036	Children of Immigrants: Identity and Acculturation	3

2. Global Asia and Asian Diasporas in a Transnational Perspective

Code	Title	Units
AMCS 3716	Topics in American Culture Studies: Is Colonialism Over? Global Power and Resistance	3
ARTARCH 1109	FYS: Collecting Art/Excluding People: The Contradictions of Chinese Art in U.S. Museums	3
COMPLITTHT 4492	Writing from the Periphery: The Question of Chineseness	3
HISTORY 1124	First-Year Seminar: The Meaning of Pakistan: History, Culture, Art	3
WGSS 3740	Imperialism and Sexuality: India, South Asia and the World: Writing-Intensive Seminar	3

Context Courses

Students must complete two courses (6 total credits, any level) that count in each section listed below. Course offerings vary every semester, but examples include the following:

1. Immigration, Race, and Ethnicity

Code	Title	Units
EDUC 4260	Neighborhoods, Schools and Social Inequality	3
POLSCI 3080	Race and Ethnicity in American Politics	3
SOC 2010	The Roots of Ferguson: Understanding Racial Inequality in the Contemporary U.S.	3
SOC 2040	Social Inequality in America	3

2. Asian Studies

Code	Title	Units
ARTARCH 1510	Introduction to Asian Art	3
ARTARCH 4265	The Forbidden City	3
CHINA 3500	U.S.-China Relations from 1949 to the Present	3
FILM 3270	Anime and Manga	3
JAPAN 3330	The Modern Voice in Japanese Literature	3
KOREA 3550	Topics in Korean Literature and Culture: Buddhist Culture of Korea	3
WGSS 2101	Sophomore Seminar: Globalization and Its Discontents	3

Additional Information

- Courses vary by semester and all minors must meet with their AAS minor advisor to determine which courses meet the requirements. See the requirements listed on this page with examples of courses for each requirement area.
- All advanced units must be unique to the Asian American Studies minor (i.e., not counted toward any other major or minor).
- All courses counting toward the Asian American Studies minor must be taken for a letter grade, and students must receive a grade of C- or higher.
- Students may use a study abroad course on any subject in Asian Studies to fulfill the Asian Studies category requirement. Such courses must be approved by the study abroad advisor for the Asian American Studies minor.
- Students may receive a maximum of 3 transfer credits from other universities toward the AAS minor (this includes Study Abroad credits).

Anthropology

Anthropology offers the opportunity to study human existence in the present and the past and to explore how and why humans vary in their behaviors, cultures, and biology. Students choose to study anthropology because they want to understand some of the most intriguing and troubling issues faced by modern society: the origin and meaning of ethnic and gender differences; the role of institutions in social, political, and economic life; learned vs. innate behavior; the similarities and differences among human societies; and the meaning of religion, community, and family.

The Department of Anthropology offers courses in three subdisciplines of anthropology: archaeology, biological anthropology, and sociocultural anthropology.

The faculty in the anthropology department are active in research around the world and bring a diversity of experiences to their teaching.

- Archaeology faculty study the origins of food production, human responses to environmental change, early social complexity, and urbanism on five continents (Asia, Africa, Europe, North America, South America) over the past 15,000 years. Methods include geoarchaeology, bioarchaeology, GIS, paleobotany, stable isotopic analysis, and zooarchaeology.
- Biological anthropology faculty focus on the evolution of humans; on the normal biological variation of living human populations; and on the ecology, behavior, and evolution of nonhuman primates.
- Sociocultural faculty conduct research on issues globally and domestically pertaining to political and economic structures and ideologies, development and globalization, institutions, medicine, psychology and healthcare, disability, the body and embodiment, gender and sexuality, the construction of knowledge, aging and dying, humanitarian interventions and migration, the natural environment and food. Methods include qualitative and ethnographic work, experimental methods, and cultural and historical demography.

Courses

ANTHRO 1010 First Year Seminar: Topics in Anthropology
Topics vary by semester.
Credit 3 units. BU: BA
Typical periods offered: Fall

ANTHRO 1020 Ethnicity, Culture, and Politics: The Case of Tibet
Geographic and political isolation, awe-inspiring landscape, and an esoteric religion have contributed to Tibet's image as a place of mystery. In the 1950s, Tibet made a dramatic entrance in the modern world when China reasserted a long-standing claim of dominion. Thousands of Tibetans were led by the Dalai Lama to exile in India and Nepal. Political chaos followed, with Tibetan exiles and the Chinese state making counter-claims in a global propaganda war. This course will use the case-study of Tibet to provide students with a perspective on historical and current inter-ethnic conflicts Students will consider the ways in which rafe and ethnicity are not politically neutral concepts, but can be used to justify completely different political arguments and actions. The course will be of interest to students who plan to take additional work in political science or anthropology, or who have an interest in concepts of ethnic identity or in the history, politics, and religions of Central Asia.
Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH EN: S
Typical periods offered: Fall

ANTHRO 1055 Hurricane Katrina: A Case Study in Disaster and American Society

This course examines the historical, societal, cultural, enviornmental, and political issues raised by the Hurricane Katrina disaster. Through exploration of scholarship from multiple disciplines, the course seeks to understand the complex issues of the disaster itself, as well as ongoing relief and rebuilding in the affected area.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

Typical periods offered: Fall

ANTHRO 1070 Medicine East and West: Comparing Healthcare in the U.S. And China

This course provides a foundational introduction to comparative health studies by examining the health care systems of the United States and China. Using the tools and interpretive frameworks of the field of medical anthropology, students in this course will be exposed to a broad range of topics dealing with health and healthcare in Eastern and Western contexts. These include the study of medical pluralism, meaning of illness, health care financing, preventive care, political-economic perspectives, and sociobehavioral perspectives on health and wellness. Students taking this class will be better prepared to understand and address on-going health care concerns affecting U.S. and Chinese society.

ANTHRO 1100 In the Amazon: Indigenous Peoples and the Politics of Nature

As it turns out, James Cameron's Avatar is not so far from the truth. The Amazon region of South America has long been home to indigenous peoples and civilizations, but has been radically transformed by several hundred years of European colonization, the rise of nation-states and armies, and the ongoing extraction of natural resources for the global market. The battle over the meaning and use of nature and peoples' relations to it have been central throughout this history and are so today. Now environmentalists, national governments, global corporations, and indigenous social movements are engaged in a struggle over the future of the Amazon. We will explore these relationships between indigenous peoples and others in light of this history. We will study and compare indigenous and Euro-American views of nature. We will consider how indigenous peoples, environmentalists, and other peoples confront global efforts to gain access to natural resources. We will ask how global flows like oil, cocaine, guns, and carbon credits connect our lives to theirs. We will explore how 'modern' ideas about race and nature have linked indigenous peoples to processes as varied as the enslavement of African peoples and modern plans for development. What might the Amazon and its peoples and politics teach us about ourselves and the future of our shared global environment? Open to January Program Students only.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: ETH, IS EN: S

ANTHRO 1101 First-Year Seminar: Past Tense, Future Imperfect: The Rise & Fall of Societies & Global Civilization

The past history of humanity is littered with the stories of societies whose peoples experienced prosperity and fluorescence followed by decline and catastrophe. In the present, an age of information and rapid change, public intellectuals offer broad and detailed visions of what took place in the past, what is happening now, and what the trends suggest for the future. This course looks at the efforts of two prominent public intellectuals, economist Lester Brown and geographer Jared Diamond. In this course we look at Brown's work in its latest incarnation, Plan B 4.0. We discuss this in light of current events. We then look at Jared Diamond's book Collapse, How Societies Choose to Fail or Succeed and critical response to that book by experts. I include a personal perspective as an archaeologist working with the ancient Maya civilization. The Maya are famous for the ninth century AD collapse of their Classic civilization. The readings provide the basis for discussion of the challenges we face in understanding the life histories of societies and discerning what we can conclude about the future from their experiences. This course is available to first year non-transfer students only.

Typical periods offered: Spring

ANTHRO 1102 First-Year Seminar: Anthropological Perspectives on Covid-19

This class explores the evolving relationships between humans, animals, and the novel coronavirus that causes COVID-19. In examining COVID-19 and other zoonotic outbreaks, this course emphasizes that a complex mix of ecological, political, economic, and social factors shape infectious disease emergence and epidemiology. Drawing on popular media, medico-scientific scholarship, and ethnographic case studies, we will explore topics including zoonotic jumping and bioinsecurity, environmental degradation and animal agriculture, unequal burdens of risk and disease, politics and public health policy debates, and the lived experience of front-line healthcare, illness, and quarantine. In so doing, we consider the role anthropological research and perspectives might play in understanding and ameliorating global health problems in diverse contexts around the world.

Credit 3 units. A&S IQ: LCD, SSC BU: BA, IS EN: S

Typical periods offered: Fall

ANTHRO 1103 Global Population Issues

The objective of this course is to provide students with a broad overview of global population growth and its sociocultural, political, and economic ramifications. Prerequisite: This course is open to January Scholars Program Students only.

Credit 3 units. A&S IQ: SSC Art: SSC BU: IS EN: S

Typical periods offered: Fall

ANTHRO 1104 FYS: The Ritual Landscape of Cahokia: Perspectives on the Politics of Religion & Chiefly Power

The purpose of this class is to engage and challenge freshman students in an open discussion about the prehistoric Mississippian community of Cahokia. The focus of this course is two-fold. The first is to study the way in which the archaeological evidence has been interpreted. The second is to examine other perspectives on Cahokia, especially from the Native American descendants who consecrated this landscape nearly a millennium ago. An underlying tenet of this seminar in understanding Cahokia can also be achieved through the traditions and literature of Native Americans. In the end we want to understand the basis for Cahokia's organization as a prehistoric Native American community, and the role that ritual and religion played in the rather dramatic and dynamic history of this community and the surrounding region.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

Typical periods offered: Spring

ANTHRO 1105 First-Year Seminar: 20,000 Years On Turtle Island: A Deep History of North America

The twin premises of this course are that humans are the subject of history and that history should begin at the beginning. American history courses normally begin with the colonization of the New World by Europeans beginning in the 15th century, sometimes with a cursory chapter dedicated to the 20,000 years of history that came before. This course will invert this structure and place what we normally think of as American history in the context of a much longer story by drawing on sources from many disciplines, including archaeology, ethnography, ecology, geology, linguistics, and oral history. We will

focus on contested events or issues, where our sources tell different stories, and we will consider what is at stake for defenders of different narratives. Throughout the course, we will ask how the lack of written records limits our understanding of North American history, but we will also consider how other sources of evidence about the past can be used to include populations and themes normally underrepresented by textual histories. The goals of this course are as follows: (1) to put recent American history in its proper context; (2) to show how historical narratives are constructed and contested; and (3) to give students tools other than written records with which to construct history. Course is for first-year, non-transfer students only.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, IS EN: S
Typical periods offered: Fall

ANTHRO 1106 First Year Seminar: Our Cultures in 3D
Today's digital technologies provide rapidly evolving ways to interact with people, material culture, social landscapes, architecture, and the environment. Virtual reality and 3-D modeling from both terrestrial and drone-based remote sensing, photogrammetry, LiDAR and other applications provide us with unprecedented tools to reconstruct, test, and experience these many aspects of culture and the environment. In some cases,virtual tools also allow us to experience places far away and learn about cultures which are different from our own. In this course we will learn the basics of 3-D modeling and virtual reconstruction, and explore a range of ways 3D modeling is used in Anthropological and environmental applications. In this class you will learn how cutting-edge technologies are used in a variety of sectors related to Anthropology and Archaeology, such as heritage management, environmental assessment, digital museum exhibits, and more. Methodologically you will be given the opportunity - through your own project - to explore how to acquire data using tools such as terrestrial and drone-based photography, how to produce 3-D models with the latest software tools, and how to package these assets for productive and ethical dissemination. In the end, you will work with a teammate to produce 3D models related to a project of your choice, and your learning will be focused via the development of your project. This course is available to first year non-transfer students only.
Credit 3 units. A&S IQ: LCD, SSC EN: S
Typical periods offered: Spring

ANTHRO 1141 Ampersand: Medicine and Society
This course provides the basic foundation in medical anthropology and cultural anthropology for students enrolled in the Medicine and Society Program. The purpose of the course is to introduce students to the central themes and theoretical approaches employed by medical anthropologists to study health and illness in cross-cultural perspective. Topical areas include analyses of disease, illness and sickness at micro and macro levels; impact of personal and interpersonal factors on health; health effects of social, political, and economic factors; relationship of anthropology to biological and social science approaches; ecology of health and development; and cross-cultural health studies of language, gender, and race/ethnicity. Note: Content for this course overlaps with and replaces Anth 160 for students enrolled in the Medicine and Society Program. Open only to students enrolled in the Medicine and Society Program.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall

ANTHRO 1142 Ampersand: Medicine and Society
This course is the required second-semester sequence of the introduction to medical anthropology and cultural anthropology for students enrolled in the Medicine and Society program. The course builds upon material introduced in Anthro 141, and it provides greater ethnographic context for the cross-cultural study of health and illness. Topical areas include analyses of disease, illness and sickness at micro and macro levels; the impact of personal and interpersonal factors on health; the health effects of social, political, and economic factors; the relationship of anthropology to biological and social sciences approaches; the ecology of health and development; and cross-cultural health studies of language, gender, and race/ethnicity.
Credit 3 units. A&S IQ: LCD, SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Spring

ANTHRO 1400 Proseminar
This course is designed to introduce the student to current issues in anthropology and to research being carried out by faculty. Topics vary each year. Each departmental member addresses issues in their particular specialty. The course is required of all majors; it may also be taken before declaring the major, and it may be taken by non-majors.
Credit 1 unit. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall

ANTHRO 1510 Introduction to Human Evolution
A survey of the fossil evidence for human evolution. The course includes discussion of the genetics of human variation and evolution, the study of living non-human primates, and the fossil record and its interpretation. An evolutionary perspective is used in an attempt to understand modern humans from the naturalistic point of view.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall, Summer

ANTHRO 1520 Introduction to Cultural Anthropology
This course introduces the basic concepts, theories, and methods of Cultural Anthropology - an academic discipline that studies the diversity of human cultures and societies. The purpose is to provide a broad perspective on the types of research that anthropologists undertake, and to engage in a critical dialogue on how the work of anthropologists contributes to understanding the human condition. Introduction to Cultural Anthropology is a portal into more advanced anthropology courses.
Credit 3 units. A&S IQ: LCD, SSC, SC Art: SSC BU: BA EN: S UColl: CD
Typical periods offered: Fall, Spring, Summer

ANTHRO 1530 Introduction to Archaeology
Archaeology plays a critical and unique role in understanding the human past. Through study of the methods and theories of archaeology, and a survey of important firsts in the human past, this course introduces students to the way archaeologists use material culture to reconstruct and understand human behavior. Chronologically ordered case studies from around the globe are used to look at social, ecological, and cultural issues facing humans from the earliest times to the present. Students gain practice reconstructing the past through hands-on participation in two 1-hour labs focusing on lithics and animal bones. By the end of the course, students are expected to be able to think critically about how the past is presented, and why, and the importance of the past as it relates to the present and future.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring, Summer

ANTHRO 1811 First-Year Opportunity: Research and Conservation in Zoos and Botanical Gardens
An introduction to the world of zoos and botanical gardens. Students will learn of the diverse and cutting-edge ways in which scientists and conservationists study the world's biological diversity and work to conserve it. Taking advantage of two world-class institutions a short distance from the Danforth campus, the class will meet every week at an off-campus site (primarily the Saint Louis Zoo and Missouri Botanical Garden, but also several other institutions) to hear lectures from leading authorities at these institutions, as well touring facilities

to see first-hand how research is conducted and how these institutions work to preserve endangered species. Students will write three short papers; each paper will be based upon a class lecture and its associated readings.
Credit 2 units.
Typical periods offered: Fall

ANTHRO 1995 Anthropology Cousework Completed Abroad
Credit 12 units.
Typical periods offered: Fall, Spring

ANTHRO 1996 Anthropology Elective: 100-Level
External transfer credit
Credit 3 units. EN: S
Typical periods offered: Fall, Spring

ANTHRO 2004 Anthropology and the Modern World
What cultural anthropologists are learning about major issues of our time: cultures facing destruction, communal societies, sex roles, poverty, political repression in the Third World--sharpening the study of our own culture.
Credit 3 units. A&S IQ: LCD, SSC BU: BA, ETH
Typical periods offered: Fall

ANTHRO 2005 Anthropology of America
Introduction to anthropological studies of Americans. Topics include tracing roots of the national culture, comparing methods for researching our diversity, analyzing ethnographies of ethnic subcultures, and reviewing ways to explain divergent cultural forces in the United States.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA
Typical periods offered: Fall

ANTHRO 2009 World Archaeology
If we carefully peer beneath the earth's surface, we will discover a hidden world that is being rediscovered by archaeologists. A considerable amount of excitement is generated by the discovery of lost civilizations and societies. Archaeologists from every corner of the earth come to Washington University to share their experiences as they use the most sophisticated technology to rediscover those forgotten and sometimes embarrassing aspects of our human past.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H
Typical periods offered: Fall

ANTHRO 2015 Films, Human Evolution, and Cultures
Anthropological perspectives on human biology and cultural diversity through classic and modern films. Topics include evolution and human variation, culture and world views, and social critique. Prerequisite: Enrollment limited to freshmen and sophomores, or permission of instructor.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, ETH
Typical periods offered: Fall

ANTHRO 2020 Archaeological Fantasies and Hoaxes
American popular culture is saturated with pseudoscientific and fictionalized accounts of archaeological discoveries and interpretations. How can students of the past distinguish between fraud, fantasy, hype, and valid archaeological research? What potential merit do films, TV-oriented documentaries, and historical fiction offer? What role has racism played in attempts to deny indigenous peoples credit for their past achievements? This course looks at the popular culture of archaeology, providing tolls for critical evaluation as well as lifetime enjoyment of the field as it is frequently sold to both the informed and the unwary public. Anthropology majors and non-majors are all welcome as are sophomores and motivated first-year students who have not yet declared majors.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall

ANTHRO 2151 Language, Culture, and Society
This course explores the relationships between linguistic practice and other social and cultural processes. Among the topics to be discussed are language and social identity, language and thought, language and gender, multilingualism and language shift as well as the connections between language and the identity of ethnically or nationally defined communities. The course format will alternate between classic theoretical readings and ethnographic case studies on the interplay between linguistic practice and ideology as well as cultural and social processes.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

ANTHRO 2196 Practical Applications in Anthropology
Earn credit for an approved internship in Anthropology.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

ANTHRO 2600 Topics in Health and Community
A survey of current topics in community health and medicine, with an emphasis upon social science approaches to issues affecting medicine and medical care in contemporary U.S. society. Issues include ethical debates in health care delivery, social stratification and health, access to health services, and factors affecting community wellness at local, national, and global levels. Presented as a weekly series of topical presentations by community health experts from the St. Louis area. Required for students enrolled in the Medicine and Society Program, and also open to other interested students.
Credit 1 unit. EN: S
Typical periods offered: Fall

ANTHRO 2654 Healthcare Challenges in Modern China
As the most populous country in the world, China has many challenges regarding medicine, health and healthcare delivery. In this course several major healthcare challenges facing China will be explored. Students will have the opportunity to learn not just from published research and class discussion but also from the perspectives of those who spend their lives studying the social, political, and cultural dynamics of these issues as well as those who devote their careers to the practice of healthcare in China. Must be enrolled in the study abroad program at Fudan University in Shanghai, China.
Credit 1 unit. A&S IQ: SSC Art: SSC BU: IS EN: S
Typical periods offered: Fall

ANTHRO 2900 Independent Study
Designed to give undergraduates research experience in the various subdisciplines of Anthropology. May be taken more than once for credit. Prerequisite: consent of the faculty member under whom the research will be done.
Credit 3 units.
Typical periods offered: Fall, Spring

ANTHRO 2996 Anthropology Elective: 200-Level
External transfer credit
Credit 3 units. EN: S
Typical periods offered: Fall, Spring

ANTHRO 3000 Internships in Anthropology
Anthropology majors may acquire professional experience outside the classroom by participating in a faculty-sponsored internship. Before work begins, the student and faculty sponsor must agree on a final written project, which is then approved by the Anthropology Academic Coordinator. Students will be evaluated by the faculty sponsor on the basis of the written project and input from the internship supervisor. Course may only be taken one time. Prerequisite: 9 hours of anthropology and permission of department.
Credit 3 units.
Typical periods offered: Fall, Spring

ANTHRO 3020 Anthropology of India
An introduction to the societies and cultures of India through its social margins. Our approach will leverage scholarship from many fields, highlighting the strengths and limitations of singular-discipline analyses and universalized histories. Ethnographic narratives will be woven into historical accounts of major cultural shifts. Students will learn to evaluate and apply multi-vocal perspectives on larger global issues that have transformed India since the end of colonization, including demographic, economic, social, cultural, political, and religious change. Topics will include population and life expectancy, civil society, social-moral relationships, caste and communalism, youth and consumerism, the new urban middle class, environment and health, tourism, public and religious cultures, social activism, politics and law
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS EN: S
Typical periods offered: Fall, Spring

ANTHRO 3022 Peoples and Cultures of the Middle East
This course will introduce the cultural diversity and unity of the peoples of the Middle East. The emphasis is on historical and ethnological relationships, social and political structure, religious pluralism and contemporary youth issues. We will explore the lived experiences of the peoples in the modern nation-states of Egypt, Lebanon, Syria, Jordan, Israel, the Palestinian Territories, Turkey, Saudi Arabia and the countries of the Arabian Peninsula, Iraq, and Iran. We will access this material through short stories, poetry, biographies, essays, videos, blogs, and political and anthropological reports.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS
Typical periods offered: Fall, Spring

ANTHRO 3030 Greater Central Asia in Crisis
This course will focus on contemporary issues in the ex-Soviet republics of Central Asia and Iran, Afghanistan, and Pakistan, but it will also include extensive reading on the social history of the region, in order to enable understanding of the social dynamics at work.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, IS
Typical periods offered: Fall, Spring

ANTHRO 3038 Anthropology of Refugees, Asylum, and Forced Migration
What does it mean to be a refugee? Where do refugees reside, and from where do they originate? How are they distinguished, legally and in the public imagination, from other migrants? What challenges do they face? This course will address these questions and many more, giving students a detailed and nuanced understanding of asylum and international protection in the contemporary world. After a brief overview of the history of refugee status and asylum, the course will focus on modern-day populations of refugees and asylum seekers and the primary challenges they face. Topics to be covered include: refugee camps, refugee resettlement, asylum seekers, Palestinian refugees, women refugees, LGBTQIA+ refugees, climate refugees, mental health, refugee integration and adaptation, and public response to refugees. Additionally, we will discuss different career paths for working with refugees and asylum seekers, and we will welcome several guest speakers with experience in this field, including a psychologist, a documentary filmmaker, a journalist, and a social worker. Students will have the opportunity to complete a migrant interview project, in which they will interview a friend, family member, or other close acquaintance who is a migrant with the guidance of the instructor, culminating in a final paper. Alternatively, they may choose to complete a traditional term paper. Class materials will include articles and book chapters from the fields of anthropology, history, psychology, and political science as well as newspaper articles, documentary films, and short videos. This course will be useful for students hoping to work in migration, humanitarian aid, or global health in the future. Prerequisites: None. Introduction to Cultural Anthropology is recommended, but not required. The course can be successfully completed without having taken other anthropology courses. Please consult the instructor if you have any concerns.
Credit 3 units. A&S IQ: LCD, SSC BU: BA, IS EN: S
Typical periods offered: Fall

ANTHRO 3045 Africa: Peoples and Cultures
An anthropological survey of Africa from the classic ethnographies to contemporary studies of development. Emphasis on the numerous social and economic changes African peoples have experienced from pre-colonial times to the present.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS
Typical periods offered: Spring

ANTHRO 3051 Anthropology of Tibet and the Himalayas
This course is an anthropological and historical examination of Tibetan societies inhabiting the Tibetan Plateau and the highlands of Nepal. In addition to providing basic ethnographic descriptions of Tibetan societies, the course will explore the changing nature of relations between Tibet and China, and between Tibet and the West. Guiding concepts include adaptation (both social and ecological), the politics of ethnicity and identity, and processes of culture change.
Credit 3 units. A&S IQ: SSC Art: SSC BU: IS EN: S

ANTHRO 3053 Nomadic Strategies and Extreme Ecologies
This course will explore the archaeology and anthropology of nomadic pastoral societies in light of their ecological, political, and cultural strategies and adaptation to extreme environments (deserts, mountains, the Arctic). The aim of this course is to understand both the early development of pastoral ways of life and how nomads have had an essential role in the formation and transfer of culture, language, and power from prehistoric time to the current era.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, IS EN: S
Typical periods offered: Fall

ANTHRO 3055 Contemporary Chinese Culture and Society
This course provides an introduction to emerging trends in Chinese culture and society. We will explore processes of change and continuity in the People's Republic, examining the complexity of social issues and the dynamics of cultural unity and diversity. While we will focus on the post-Mao reform era (1978 to the present), we will consider how contemporary developments draw upon the legacies of the Maoist revolution as well as the pre-socialist past. The course provides an overview of anthropological approaches to the study of contemporary China, introducing students to key concepts, theories, and frameworks integral to the analysis of Chinese culture and society. Readings, lectures, and discussions will highlight not only macro-level processes

of social change and continuity but also the everyday experiences of individuals involved in these processes. We will pay particular attention to issues of family life, institutional culture, migration, religion, ethnicity, gender, consumption, and globalization.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS EN: S
Typical periods offered: Fall

ANTHRO 3056 Material Culture in Modern China
In this course, we will explore change and continuity from late imperial to postsocialist China through an analysis of everyday material culture. Drawing upon material objects, historical texts, ethnographic studies, and films, we will investigate values, beliefs and attitudes towards the material world in modern Chinese life. Readings, lectures, and discussions will focus on how political, ethnic, regional, religious, and gender identities have been constructed and shaped by the use and production of material artifacts ranging from household goods and tomb objects to built forms and bodily dispositions. Case studies include foot-binding, opium use, fashion, tea culture, fast food consumption, sports and nation building, contemporary art markets, the privatization of housing, and worker discipline in transnational factories.
Credit 3 units. A&S IQ: HUM, LCD, SSC Art: SSC BU: BA, HUM, IS EN: S

ANTHRO 3059 New Departures in the Study of Culture, Health, and Medical Practices in Contemporary China
Drawing upon an interdisciplinary approach, this course addresses several major themes with a focus on the dynamics of China's unprecedented healthcare transformations. Topical issues covered will include: Biocultural Contexts of Disease; the Challenge of Aging in a Gray China; Health Inequalities and Social Stratification; and Values and the Medical Humanities in Public Health.**Students are encouraged to conduct ethnographic field research in a variety of settings including: community health centers, drug stores, city and district hospitals, clinics, public parks, clubs, temples and shrines, tea houses, cafes, restaurants, and school playgrounds and other places of interest. MUST BE ENROLLED IN THE STUDY ABROAD PROGRAM AT FUDAN UNIVERSITY IN SHANGHAI, CHINA.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, IS EN: S
Typical periods offered: Fall

ANTHRO 3069 Anthropology of the Life Cycle
Cultural variations in life's sequences: stages and passages, individualizing, maturing, aging, attachment, loss. The richness of culture via individual lives.
Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH
Typical periods offered: Spring

ANTHRO 3070 Human Variation
A survey of human biological diversity, considering its adaptive and taxonomic significance from the perspective of origins and distribution of traits and adaptation. Prerequisite: Anthro 150A or introductory biology.
Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI
Typical periods offered: Fall

ANTHRO 3092 Indigenous Peoples and Movements in Latin America
This course focuses on the contemporary lives and political struggles of Indigenous Peoples in Latin America, with specific focus on Ecuador, Peru, and Bolivia. Through course lectures, ethnographic texts, and four in-depth case studies, we explore how the politics of Indigeneity articulate with political and economic processes including (neo)colonialism, global capitalism, state transformation and social movement struggle. Themes include: demands for territory and autonomy; environmentalism and natural resource exploitation; gender and economic inequality; race, racism and political violence; language and education; and the complexities of building multicultural or plurinational democracies.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS
Typical periods offered: Fall, Spring

ANTHRO 3093 Anthropology of Modern Latin America
A survey of current issues in the anthropological study of culture, politics, and change across contemporary Latin American and the Caribbean. Topics include machismo and feminismo, the drug war, race and mestizaje, yuppies and revolutionaries, ethnic movements, pop culture, violence, multinational business, and the cultural politics of U.S.-Latin American relations. Attention will be given to the ways that anthropology is used to understand complex cultural and social processes in a region thoroughly shaped by globalization.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS EN: S
Typical periods offered: Fall, Spring

ANTHRO 3095 The Incas and Their Ancestors: The Archaeology of the Ancient Andes
From the hyper-arid desert of the Pacific Coast to the high-mountain plateaus of the Andes more than 12,000 feet above sea level to the lush forested Amazonian lowlands, Western South America presents one of the most diverse natural and cultural environments in the world and one of the few places where social complexity first developed. Beginning with the earliest human occupations in the region more than 12,000 years ago, this course examines how domestication, urbanization, the rise of early states, and major technological inventions changed life in the Andes from small village societies to the largest territorial polity of the Americas - the Inca Empire. Students will become familiar with the major debates in the field of Andean archaeology. Together, we will examine archaeological evidence (architecture, art, ceramics, metals, textiles, plant and animal remains, etc.) from context of everyday life (households, food production, craft production) to the rituals and ceremonies (offerings, tombs) that took place in domestic and public spaces. We will also touch on the role of Andean archaeology in the context of national politics and heritage sustainability.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS EN: S
Typical periods offered: Fall

ANTHRO 3096 Sama-Peru Archaeological Field School
This course will take place 06/15/2019-07/20/2019 Monday-Saturday 7AM-5PM. This archaeological fieldschool is designed to train students in archaeological research methods. Instruction takes place at the site of Los Batanes, a first-millennium A.D. coastal colony of highland populations in Sama, Tacna, southern Peru. Through daily field and lab research students will acquire knowledge of excavation and survey methods in the field and be trained on conservation and analysis of human remains, ceramics, lithics, textiles, plant and faunal remains. Lectures about current archaeological topics by established and young scholars in the field will provide students with knowledge about the prehistory of the Andes and current advances in the field of archaeology. Excursions to nearby archaeological sites and nature research illustrate the natural and cultural diversity of the Andean coast and highlands. As active members of an ongoing archaeological research project, students are required to keep notes, fill out forms, complete technical drawings, etc. Performance in the class is assessed based on participation in the field and lab, record keeping, and an oral final exam at the end of the course.
Credit 6 units. A&S IQ: SSC BU: IS EN: S
Typical periods offered: Summer

ANTHRO 3098 The Forest and the Factory: Culture, Environment, and History in the Amazon Basin

The Amazon basin encompasses large portions of nine different South American nations - Brazil, Bolivia, Peru, Ecuador, Colombia, Venezuela, Guyana, Suriname, and French Guiana - which together comprise one of the most important centers of cultural, linguistic, and ecological diversity in the world. However, portrayals of the Amazon as either a pristine natural landscape or repository of cultural otherness all too often obscure the basin's centrality as a site of conflict, labor struggle, and social change. From pre-colonial mound-building to 19th century rubber extraction and modern-day environmentalism, rural and urban Amazonians have altered the course of global events through their engagements with their natural and social environment. This seminar surveys Indigenous, colonial, and post-colonial perspectives on the Amazon basin to center its residents as key actors on the world stage. It attempts to provide participants with an introduction to the historical materialist method of inquiry, as well as the utility of a regional perspective towards understanding the drivers of contemporary social and environmental change. During this course, we will engage critically with ethnographic and scholarly texts as a means of understanding the history and social organization of a key global region and its peoples.

Credit 3 units. A&S IQ: HUM, LCD BU: HUM EN: H

Typical periods offered: Fall, Spring

ANTHRO 3100 Defense Against the Dark Arts: An Anthropological Approach to the Study of Religion and Health

This class is a comparative survey of religion, magic, and witchcraft as they are related to concepts of the body, health, healing and death across cultures. As such, students in this class will be expected to simultaneously learn details from particular magical and healing traditions studied in class, as well as to relate these details to theories about within the discipline of Anthropology (medical, cultural, psychological) and the field of Religious Studies. Special themes addressed in the class are the reasonableness of belief in magic, religion and religious practice as magical, the body and definitions of health, healing, and illness and disease as symbolically, culturally, even magically constructed and experienced.

ANTHRO 3101 Topics in Anthropology

Discuss different topics in Anthropology

Credit 3 units. A&S IQ: SSC Art: SSC BU: IS EN: S

Typical periods offered: Fall, Spring

ANTHRO 3102 Topics in Anthropology: Sustainability in Extractive Communities

This course offers an in-depth exploration of the meaning and practice of sustainability in extractive communities, with a particular focus on understanding the anthropological perspective on; (1) the complexity and shifting concepts of sustainability and (2) the social ties of extraction, all of which significantly influence sustainability practices in extractive communities. Our discussions will focus on extractive communities - the people living in frontline and surrounding towns where mineral resources are extracted. These communities' environmental, economic, and social well-being is inextricably linked to mineral extraction and utilization, despite the adverse effects of such exploitative endeavors. By thoroughly examining elements of identity, power, and the unspoken promises of extraction, students will gain a nuanced understanding of the challenges and opportunities involved in extractive communities' pursuit of sustainability.

Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH EN: S

Typical periods offered: Fall, Spring

ANTHRO 3103 Topics in Anthropology: Film and Anthropology

Cinema is inherently anthropological. Its subject matter almost always focuses on some aspect of the human condition- inner struggles, collective triumphs, social dramas. Even those with nonhuman subjects are still themselves human products, indices of cultural and social meaning. As this revolutionary art form turns (more or less) 100, this class will reflect on the multifaceted relationship between cinema and anthropology. Course materials will include several narrative and documentary films, as well as a wide set of scholarly readings on visual anthropology, the depiction of anthropology in film, and how to view films as texts. There are no prerequisites, but the course is heavily reading- and discussion-based.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS EN: S

Typical periods offered: Fall, Spring

ANTHRO 3105 Topics in Anthopology: Anthropology of Drugs

The two meanings of the English word 'drug' capture our ambivalent relationship with certain compounds- are they anti-social, addictive, and recreational? Or tightly regulated, life-saving medical technologies? In this course, we will consider and complicate this distinction as we take a broad look at the significance of a handful of chemicals to human society. Reading from a range of ethnographies, literary works, philosophical texts, and historical articles, students will learn to articulate the complex role drugs play in everyday life, business, governance, and popular culture. Topics will include antidepressants, statins, psychedelics and cannabis, alcohol, opiates and other analgesics, antibiotics, and stimulants.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, IS EN: S

Typical periods offered: Fall, Spring

ANTHRO 3110 The Anthropology of Magic

Mankind has long attempted to master magic: action(s) intended to invoke and influence suprasensible forces. Many of us still practice magic today, knowingly or unknowingly. Cultural anthropologists and ethnologists provide accounts about the histories of magicians into the present, but ancient material evidence of magic is also supplied to archaeologists. This course draws from these kinds of sources to appreciate the roles magic plays in past and present cultures. Guided by Anthony Aveni's textbook Behind the Crystal Ball, this course highlights how magic inspired innovative concepts and practices, including those that propel modern science today. Using globally diverse case studies, this course provides a conceptual framework for understanding the social roles of magic at different scales and expose magic in political, religious, and scientific contexts. What cultural values arepreserved by magical practices? In what ways doesmagic fulfill societal needs? What legacies doesmagic leave for our benefit or deficit today? Following a midterm covering essential concepts, students will pursue independent projects that examine the material and ethnohistorical evidence for magic in specific cultural contexts. Fulfilling these requirements, students will learn how to analytically approach othered (or exoticized) behaviors as attempts to better understand the social and physical world.

Credit 3 units. A&S IQ: LCD, SSC BU: BA

Typical periods offered: Spring

ANTHRO 3122 From Country to Heavy Metal: Ancient Civilizations of the Old World

This course will explore the archaeology of Europe, the Near East, and Central Asia from approximately 10,000 years ago to classical times (ending before Ancient Greece). This prehistoric epoch saw major developments among various civilizations of the Old World, such as the introduction of agriculture, animal domestication, the growth of cities, and technological developments such as pottery, metallurgy, and horse-riding. A major focus will be the trajectory of cultural innovations of regional populations through time, and the complexity of their social, political, and ritual practices. We will also investigate

the variation in human adaptive strategies to various environmental and social contexts, from hunter/gatherers to early Neolithic farmers, to the interactions between nomadic populations and larger scale, urban societies in the Bronze and Iron Ages.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS EN: S

Typical periods offered: Fall, Spring

ANTHRO 3125 Before Columbus: Indigenous Histories of North America Before 1492

An archaeological perspective on the deep histories of Indigenous peoples in North America. From the initial colonization of the continent 13,000 years ago to European contact in the 16th Century, we illuminate the ancestral peoples and places of contemporary Indigenous Tribes and Nations.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA EN: S

Typical periods offered: Fall

ANTHRO 3129 The Pandemic: Science and Society

The COVID-19 Pandemic has severely impacted life on Earth, and in the USA, in particular. New information is released daily to a public that is often unable to interpret the meaning or significance. How are individuals, groups, businesses, and/or governments interpreting this information? What impact does it all have on our lives? This course will be an immersion into the many intersecting aspects of life in a pandemic. The first section of the course will focus on the virus and illness itself: the scientific classification, possible treatments and vaccines, testing, safety measures, at-risk groups and health outcomes for different groups, and understanding the numbers. This section will incorporate lessons on how to interpret and evaluate scientific information, how the information gets communicated to the public, and how it gets incorporated into policy. The second section will start to integrate connections to society at large, including health disparities, understanding how environmental destruction and agricultural systems are related to disease outbreaks, global connections, racism and COVID-19, and variation in effectiveness of dealing with the virus in different countries. The final section will cover how the pandemic intersects with different aspect of our lives from finance to law, mental health, education, domestic violence, the arts, and on and on. You will hear experts in these areas talk to us about how COVID-19 has changed virtually every aspect of life as we know, how we can mitigate these effects, and what the future looks like. Throughout the course, you will have the opportunity to hone your skills at communicating the information you learn in the class with the public. Note: This course is a Fall Intersession course and it will be included on your FL2020 schedule. No additional tuition will be charged assuming you are enrolled full time. These units will be included in the 21 unit maximum allowed by regular semester tuition.For this intersession course the last day to add the course: 8/19/20; the last day to drop without a W: 8/21/20; last day to withdraw from course: 8/31/20; the last day to change grade option: 9/4/20. Students may add or drop the course themselves through WebSTAC through 8/17. After this date students should request that the change be made manually in the College of Arts & Sciences (mkaltwasser@wustl.edu).

Credit 2 units. A&S IQ: SSC Art: SSC BU: IS, SCI EN: S

Typical periods offered: Fall

ANTHRO 3134 The AIDS Epidemic: Inequalities, Ethnography, and Ethics

In the year 2000, HIV became the world's leading infectious cause of adult death, and in the next ten years, AIDS will kill more people than all wars of the twentieth century combined. As the global epidemic rages on, our greatest enemy in combating HIV/AIDS is not knowledge or resources, but global inequalities and the conceptual frameworks with which we understand health, human interaction, and sexuality. This course emphasizes the ethnographic approach for cultural analysis of responses to HIV/AIDS. Students will explore the relationship between local communities and wider historical and economic processes, and theoretical approaches to disease, the body, ethnicity/race, gender, sexuality, risk, addiction, power, and culture. Other topics covered include the cultural construction of AIDS and risk, government responses to HIV/AIDS, origin and transmission debates, ethics and responsibilities, drug testing and marketing, the making of the AIDS industry and risk categories, prevention and education strategies, interaction between bio-medicine and alternative healing systems, and medical advances and hopes.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, ETH EN: S

Typical periods offered: Fall

ANTHRO 3136 The Second Wave of the Pandemic: Science and Society

The COVID-19 pandemic has severely impacted life around the world and particularly in the United States. New information is released daily to a public that is often unable to interpret its meaning or significance. How are individuals, groups, businesses, and/or governments interpreting this information? What impact does it all have on our lives? This course will be an immersion into the many intersecting aspects of life in a pandemic. Early in the course, we will review safety information and some basics about the virus, including information covered in Anthro 3135 The Pandemic: Science and Society. Please note that students do not need to take Anthro 3135 to enroll in this course. At the same time, students who did take Anthro 3135 are encouraged to enroll, as we will cover new information and different topics. Students will hear experts in these areas talk to us about how COVID-19 has changed virtually every aspect of life as we know it, how we can mitigate these effects, and what the future looks like. Throughout the course, students will have the opportunity to hone their skills at communicating the information they learn in the class by discussing with each other and sharing with the public.

Typical periods offered: Spring

ANTHRO 3139 Diseases At the Human-Wildlife Interface

Emerging infectious diseases (EIDs) threaten humans and endangered species. EID outbreaks in humans are increasing in frequency and are often the result of zoonotic transmission, particularly as we continue to modify the landscape and closely interact with wildlife. This course will explore the recent trend in increasing rates of EIDs, the factors associated with zoonotic disease transmission, the particular types of pathogens and species of animals of most concern for future outbreaks, and ways we can try to predict the next pandemic. We will discuss the human-wildlife interface, participatory methods for advancing work in disease prevention, the science of emerging infectious diseases, and the societal impacts of such diseases.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

ANTHRO 3149 Caring for Country: Hunter Gatherer Ecologies

What makes humans special? Is it our use of tools? Language? Culture? Humanity has been defined on the basis of its uniquely well-developed capacities for using technology, language, and culturally encoded knowledge and belief systems. In this course, we will explore a new hypothesis of human exceptionalism: a fundamental tendency to cultivate and care for lands. Our genius for reshaping ecosystems and incorporating other species into our societies is intimately linked to our technological and communicative skills. We have used these skills to migrate into and reshape every Earthly environment. We will explore the ethnographies, oral and written histories, and archaeologies, of so-called hunter-gatherers around the world, learning about the ways they shaped and tended their homelands using ecological knowledge systems. In this era of human induced environmental change - from global warming, to mass extinction, to genetic engineering - it is critically important that we look to our species' true ecological history for the wisdom that will help us meet these challenges.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, ETH, IS EN: S
Typical periods offered: Fall

ANTHRO 3150 Securing Food: (Pre)historic Perspectives, Present Challenges, and the Future of Human Subsistence
For the first time in decades, the number of people suffering from hunger worldwide is on the rise. In 2017, the Food and Agriculture Organization of the United Nations warned that mounting pressures on natural resources and climate change have put global food security in jeopardy, calling for necessary transformative change in agriculture and food systems. Securing access to food resources has always been critical to the survival of our species. From hunting and gathering to the factory farm, past and present human societies have employed a diverse spectrum of strategies to keep themselves fed. Some have provided sustenance for millennia, proving their resilience and adapting to climatic and social challenges. Others have emerged more recently, rapidly transforming and interconnecting food systems in unprecedented ways. However, all are the result of long-term and deep-time trajectories shaped by environmental, economic, social, cultural, and political opportunities and needs. Today, we face the legacy of these trajectories in our present struggle to attain and maintain food security for our species. How might an understanding of this legacy and of the context, origins, and effects of food systems in our deep and more recent past inform our understanding and action in the present?
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

ANTHRO 3151 Evolution of the Human Diet
Many researchers and health enthusiasts believe that the abandonment of our Paleolithic diet and lifestyle with the onset of agriculture some 10,000 years ago has lead to a rapid decline in health and perpetuated countless diseases of civilization. While diet fads come and go, it seems this new enthusiasm for Paleo diets is here to stay. But what is a Paleo diet anyway? Through a comparative evolutionary and anthropological approach we will examine the diets of extinct hominins, our extant primate relatives, ethnohistoric and contemporary foraging peoples, and even our own dietary habits. We will strive to answer key questions about diets in prehistory and their implications for living people today: How do we know what our ancestors ate? How have dietary hypotheses been used to explain processes in human evolution? How bad is agriculture for global health? What role did certain foods play in shaping our modern physiology? Are we maladapted to our contemporary diets? What does it mean to eat Paleo? A mix of discussion and lecture will encourage students to develop their own interests in human evolutionary nutrition.

Typical periods offered: Fall

ANTHRO 3152 Archaeology of Ancient Egypt
This course will cover major topics in the archaeology of ancient Egypt, incorporating the latest debates and archaeological discoveries. The course will emphasize Egyptian material culture, including settlements, landscapes, cities, tombs, pyramids, and temples, in order to model the wider cultural and social development over the past five millennia as well as the place of Egypt, globally. Students will learn to critically approach and assess Egyptian material culture in order to understand the social, historical, and geographical context of ancient Egypt - one of the most intriguing cultures in human history.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: ETH, IS EN: S
Typical periods offered: Fall

ANTHRO 3157 Politics and Religion in Contemporary Society
Religions are on the move. Globalization has meant that larger numbers of people are finding new places to live, and in the process, setting up churches, mosques, temples, or other ways to worship in new cities and town. Muslims move to Europe and North America; new Protestant and Catholic churches appear throughout Africa and South America; Chinese communities blossom everywhere. As they do, so they raise new questions: How do global migrations lead to adaptations of religious traditions? How do states manage new degrees of religious diversity, and in some cases, new levels of religious demands? How do transnational religious structures fit with national politics? We will explore these issues by looking outward from our base in Paris. France has the highest percentage of Muslims of any country in Western Europe or North America. It has fast-growing arrays of evangelical churches and Buddhist temples; and it is a nation of both Catholic heritage and secularist politics. How do all these ideas and people mix? We will visit some of Paris' religious institutions and learn from both religious figures and French scholars. We will also study religion and politics in a comparative way, focusing on the issues mentioned above, and looking at case studies from Africa, Asia, and the Americas.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM, IS EN: H
Typical periods offered: Summer

ANTHRO 3160 Religion, Ritual, and Worldview
A survey of ideas and practices in both tribal and world religions with emphasis on key rituals, symbols and the place of religion in the modern world.
Credit 3 units. A&S IQ: HUM, SSC Art: SSC BU: BA, ETH, HUM EN: S
Typical periods offered: Summer

ANTHRO 3162 Anthropology of Europe
This course examines the anthropology of European cultures, from folklore and village studies to the present concern with the European Union. We will consider early ethnographies of rural European villages, the formation and influence of ideas about Europe and Eastern Europe, and contemporary European issues including ethnic conflict, immigration, religion, nationalism, relationships between regions, and relationships between center and periphery in individual nation states and in Europe as a whole.
Credit 3 units. A&S IQ: SSC Art: SSC BU: IS EN: S

ANTHRO 3163 Archaeology of China: Food and People
China is a country with a large population, diverse landscapes, and unique food. This course will explore the origins of Chinese food in the context of the formation of Chinese societies. During the last two decades, the archaeology of China has become a fast moving subject with advances in methods, theories and changes of key perceptions. In this context, the beginning and spread of food production in China has become one of the key questions in current archaeology. We will focus on the process of domestication of plants and animals in various regions of China during the Holocene. We will explore how those processes relate to other sectors of the Old World, such as those of South and Southwest Asia. This course will pursue answers to the following questions: Why the Chinese ways of living and eating are different from those in the West? How production and consumption in China were shaped by food globalization in prehistory?
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS EN: S
Typical periods offered: Fall, Spring

ANTHRO 3165 Experimental Archaeology
Experiments are an extremely important part of the scientific process. Although archaeology is often treated as an historical science, the nature of the material record does provide an opportunity to use experimentation as an important way of interpreting what we excavate. The class will be working with the most tangible materials recovered

from archaeological contexts, that is stone and pottery. After reviewing the history of experimentation in archaeological investigations we will turn to the material record. This will be followed in our initial weeks of setting up the experiments and how they will be used to compare with available data sets derived from archaeological contexts. As part of the class we will take several field trips to areas where materials exist in a natural setting. Each class member will select a specific material for the focus of their experiments. In the end students will produce several experiments using different materials, document their experiments in written reports, and finally present their results to the class for discussion and evaluation.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Spring

ANTHRO 3170 Culture and Health
This course will explore culture and health, with a focus on global health. Assigned readings explore cross-cultural perspectives on health, healing, and the body, as well as important concepts in medical anthropology. Through class discussions and close examination of ethnographies of health and illness, students will develop an understanding of how cultural and political-economic forces articulate with the emerging field of global health.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA
Typical periods offered: Fall, Spring, Summer

ANTHRO 3175 Anthropology of Design: Artifacts, Expertise, and Insurgency
In this course we will explore the deep-seated politics and cultures of design. We will examine a number of case studies from hydraulic engineering in South Africa, gambling programs in Las Vegas, to DIY punk style in Indonesia. In the process we will explore the ways that design offers insight into other domains of social life such as addiction, inequality, statecraft, and urban citizenship.
Credit 3 units. A&S IQ: SSC Arch: GAMUD, GAUI Art: CPSC, SSC BU: BA, IS EN: S
Typical periods offered: Spring

ANTHRO 3180 Domestication: The Evolution of Our Multispecies Family
This course explores the evolution of the plants, animals, and microbes in human-mediated ecosystems. We call these evolutionary relationships domestication and they are at the heart of humanity's successful adaptation to nearly every ecosystem on Earth. From our millennia-deep friendship with gregarious wolves, to corn's continental conquests, to 'the industrial microbiome,' this course will ask how other species have evolved in response to human societies, and how societies have been shaped by these relationships. We will primarily draw on concepts and data from anthropology and evolutionary biology to understand the process of domestication.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

ANTHRO 3181 Humans and Animals
This course uses anthropological and evolutionary data to tell the story of how changing human-animal relations influenced humans over the long term. In this course we explore the history of western conceptual divisions between humans and animals, which contrast with more fluid boundaries in other regions. Subsequent lectures focus on hunting and symbolic relations with wild animals through time, relying on ancient animal bones, ancient art and texts. Current and future human-animal relationships will also be discussed. The goal of this course is to provide an overview of ways that animals have influenced human life in the 21st century. Changing environments and animal behavior form the backdrop to cultural discussions.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

ANTHRO 3182 Ancient Africa: Social Mosaics and Environmental Challenges
This class introduces students to the basics of the archaeological record of humans in Africa from 3.6 M.Y. to 1000 years ago. The first third of the course focuses on early humans, the origins of meat eating, expansion of diet and cuisine, technical and cultural responses to changing environments. The second section of the course emphasizes African rock art, socio-economic variability among hunter-gatherers, the origins of African pastoralism, mobile responses to climate change and African contributions to world food supply including domestication of sorghum, also coffee. The last third of the course is devoted to the complex urban societies of ancient Africa, Egypt, Axum, Great Zimbabwe, and Jenne Jeno. Course format is lecture and discussion. There are two mid-terms and students are expected to participate in interactive stone tool use, rock art creation, and discussion of ethnographic and archaeological data on pastoral decision-making in times of drought and war and of issues surrounding the purchase of African antiquities and conservation of cultural heritage.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS EN: S
Typical periods offered: Spring

ANTHRO 3184 The East African Coast From the 1st Century CE to 1800ce
This course is designed to provide students a broad and critical understanding of the history and archaeology of the East African coast and its global interconnections. Beginning with an introduction to the methodological and theoretical approaches of African history and archaeology, the course surveys archaeological and historical research focusing on the East coast of Africa (Somalia, Kenya, Tanzania, Mozambique, and offshore Islands). Temporally, this course will range from the Early Iron age to 1800 CE. Topics include geography and environmental history, periodization, foodways, urbanism, craftsmanship, architecture, cross-cultural exchange and materiality, belief systems and current conservation and heritage preservation efforts. This course combines lectures and class discussions for a critical use of contemporary sources, oral histories, and archaeological discoveries.
Credit 3 units. A&S IQ: LCD, SSC Arch: HUM Art: HUM BU: IS EN: S
Typical periods offered: Spring

ANTHRO 3190 Myth and Society
Notions of virtue and sublimity, origins and significance, history and eschatology as they are enshrined in narrative, didactic instruction, and other means of representing collective interests; their influence on society and social movements.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall, Spring

ANTHRO 3201 Gender, Culture, and Madness
This course will explore the relationships among gender constructs, cultural values, and definitions of mental health and illness. Understandings of the proper roles, sensibilities, emotions, and dispositions of women and men are often culturally and morally loaded as indicators of the proper selves permitted in a given context. Across cultures, then, gender often becomes an expressive idiom for the relative health of the self. Gender identities or presentations that run counter to these conventions are frequently identified as disordered and in need of fixing. In this course, we will take up these issues through three fundamental themes: the social and cultural (re)production of gendered bodies and dispositions; the normalization of these

productions and the subsequent location of madness in divergent or dissonant experiences of embodiment; and the situation of discourses of madness within debates of resistance and conformity, selfhood and agency.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA, ETH EN: S
Typical periods offered: Fall, Spring

ANTHRO 3202 Anthropological Perspectives on Women's Health
The principle goal of this course is to explore the health issues/risks women face around the world. In order to achieve this goal, we will take a life cycle approach beginning with the birth of female babies through adolescence, adulthood, and finally through the aging process. Our perspective will be biocultural, defined as the synergistic interaction between biology and culture. By comparing a diversity of health experiences across cultures, we can carefully examine the ways in which culture constructs perceptions of health and effective delivery of health care. Students will finish the term with a clearer understanding of the biology of life cycle changes, how health inequalities are generated and perpetuated, and how to make more informed decisions about their own health choices. Prerequisite: Anthro 160 or permission of instructor.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

ANTHRO 3203 Advanced Seminar in Medicine and Society: Patients, Politics and Policy
This course is designed to build on foundations provided in the First-Year Medicine and Society Seminar. It will interrogate current health-related issues, including gender, sexuality, politics, policy, and economics. We will also explore how these and many other issues, demographics, and so on impact current health- and healing-related decisions and policies. We will read about and unpack contemporary issues in health care (insurance, big pharma, gender and sexuality, race) and have local experts visit to talk about their practical experience with and in health care. Students will be expected to engage with ethnographic, medical, economic, political and sociological material as well as current journalism to interrogate the topic. Prerequisites: Anthro 141 and Anthro 142.
Credit 3 units. A&S IQ: SSC BU: BA EN: S
Typical periods offered: Fall

ANTHRO 3205 Peoples and Cultures of Native North America
Broad survey of Native American societies north of Mexico between the time of European contact and the present from an anthropological perspective. Social and political organization, subsistence, gender roles, religion, impacts of European and white American expansion, and efforts of Indian and Inuit people to preserve and adapt their traditions under control by dominant outside governments. Emphasis on comprehending the diversity of native North American societies, understanding factors causing change since initial European contact, recognizing biases in popular and scholarly thinking, and discussing critical issues facing Native American communities today. Prerequisite: Anth 160B or sophomore standing.
Credit 3 units. A&S IQ: SSC Art: SSC
Typical periods offered: Fall, Spring

ANTHRO 3206 Global Gender Issues
This course compares the life experiences of women and men in societies throughout the world. We discuss the evidence regarding the universal subordination of women, and examine explanations that propose to situate women's and men's personality attributes, roles and responsibilities in the biological or cultural domains. In general, through readings, films and lectures, the class will provide a cross-cultural perspective on ideas regarding gender and how gendered meanings, practices, performances serve as structuring principles in society.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, IS EN: S
Typical periods offered: Fall, Spring

ANTHRO 3210 Ancient Mound Builders of the Mississippi Valley
Study of the peoples in North America who built mounds and other earthen structures beginning more than 4000 years ago; why they erected earthworks; what the structures were used for; how they varied through time and across space; and what significance they had to members of society.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA
Typical periods offered: Fall, Spring

ANTHRO 3215 Food, Culture, and Power
What should I eat today? This seemingly simple question transects the fields of health, environmental studies, economics, history, anthropology, religion, and many others. The foods we eat, the way we get them, the way we produce them, and the way in which we eat them speak volumes about our beliefs, our technology, our understanding of how the world works, and our ability to function within it. That is, food is an excellent way to explore culture. No actions are more deserving of critical attention than those that we do regularly, without much critical thought, and most of eat at least two or three times a day. In this class we'll explore how this food came to be here, why we like it, and what that says about us. This class will be reading and discussion heavy, with a midterm paper based on the readings and a final paper based on a topic of the students' choosing.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

ANTHRO 3218 Food, Nation, Place: The Social Life of Food in Italy and Beyond
Using Italy as a case study, we will explore topics such as the social history of food and the influence of cuisine on the development of national identity. Although the primary focus of this course is on the anthropology of food culture in Italy, we will incorporate perspectives from a range of different academic disciplines and geographic locations to explore larger theoretical questions about identity, politics of place, nationalism, and globalization.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, IS EN: S
Typical periods offered: Spring

ANTHRO 3219 Race, Class and the City, Ethnographic Perspectives
Credit 0 units.
Typical periods offered: Fall, Spring

ANTHRO 3220 Anthropology of Slavery
This course provides an examination of slavery as an institution in several areas of the world. Topics include internal slavery, the organization of the slave trade, the experience of slave women, the role of slave labor in colonial economies, slave resistance and rebellion, the construction of slave communities, and the status of emancipated slaves. Regions of focus include the Americas, Africa, and the Indian Ocean.
Credit 3 units. A&S IQ: SSC Art: SSC
Typical periods offered: Fall, Spring

ANTHRO 3227 Placemaking St. Louis
Where is home? How do you know where you're from? Our points of origin (cultural, linguistic, geographic) often shape our life trajectories by telling us who we are and where we belong. The embodied ways we move through the world and our experiential relationships to particular places (in both the built and natural environments) also influence our sense of shared history and community. At the same time, the asymmetrical acceleration of travel and communication technologies has produced a globalized world that invites us to redefine the scale and scope of our neighborhoods. With the potential to be everywhere and nowhere at the same time, how do we maintain a sense of place? Anthropologists ask how and why certain places come to hold strong and lasting meaning to people. Together, we will study localization and placemaking practices through close ethnographic readings and with site visits to marked places, non-places, and contested spaces throughout the St. Louis area. This course explores the creativity and politics of place to ask, anew, what it means to be human in the early 21st century.
Credit 3 units. A&S IQ: SSC Arch: HUM Art: CPSC, HUM BU: BA
Typical periods offered: Spring

ANTHRO 3230 Primate Societies
This 3-unit course introduces students to the exciting world of primate societies. The course will draw upon concepts from animal behavior, ecology, evolution and anthropology to introduce students to non-human primates and their societies, providing the tools required to comprehend how we think about the evolution of complex human societies. The course will provide an overview of the primate lineage, ecology, social systems and organization, and dispersal and mating systems, so that students can critically evaluate how we define different societies, compare across different primates and environments, and consider what facilitates more complex societies. This is an opportunity for students to explore interdisciplinary perspectives to understand what differentiates primates from other animals and what makes human society unique. After completing the course, students will be able to identify and distinguish characteristics of primates, describe and generalize different social structures seen throughout the primate lineage, and distinguish what makes humans unique compared to other primates. The course will be a combination of lecture-based instruction and small group activities.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Spring

ANTHRO 3235 The Biological Basis of Human Behavior
Infidelity, marriage customs, inner city violence, infanticide, intelligence...Are the behavioral patterns we see genetically fixed and racially variable? What is the evolutionary and biological basis of human behavior? This course offers a critical evaluation of these from an anthropological perspective.
Credit 3 units. A&S IQ: LCD, NSM Art: NSM BU: BA
Typical periods offered: Fall, Spring

ANTHRO 3240 Human Growth and Development
This course focuses on the life-history of humans from birth to death. Through a series of lectures we will consider how humans grow and change both biologically and psychologically over the course of our lives. Topics will include: human growth curves, sex-differences, adolescence and puberty, nutrition, environment, growth disorders, death, and the evolution of human growth.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall

ANTHRO 3245 Primate Functional Morphology
Students will explore principles of biomechanics, adaptation and evolution to understand how behavioral variation among living primates is reflected in their anatomy. Emphasis will be placed on skeletal and dental morphology as it relates to primate locomotion, foraging and dietary adaptations. Prerequisite: Anthro 150A
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

ANTHRO 3250 Paleoanthropology
The prehistoric Pliocene and Pleistocene evidence for human emergence and evolution. The emphasis will be on the human fossil record and its interpretation in functional and behavioral terms. This will be placed in the context of the Paleolithic archaeological record and issues regarding the biological relationships between various human groups. Prerequisite: Anthropology 150 or equivalent.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Spring

ANTHRO 3255 Urban Anthropology
This course examines the many ways that people around the world make urban life meaningful. We will focus on the intersections among anthropology, urban studies, social theory and human geography to explore the theoretical, social, and methodological approaches to understanding the culture(s) created in cities. Drawing on ethnographic case studies from cities around the world, we will explore issues pertaining to race and ethnicity, gender, youth, poverty, diversity and super-diversity, gentrification, urbanization, and illusions and realities of modernity
Credit 3 units. A&S IQ: SSC, SC BU: BA EN: S
Typical periods offered: Fall, Spring

ANTHRO 3261 Inequality, Hierarchy and Difference: Reading The Dawn of Everything in Context
In October 2021, anthropologist David Graeber and archaeologist David Wengrow published The Dawn of Everything: A New History of Humanity, arguably one of the most consequential pieces of anthropological scholarship of recent years. The book quickly shot to the top of best-seller lists and generated a wide-ranging discussion in newspapers, magazines, and journals that do not typically pay attention to recent publications in the field of anthropology. Graeber and Wengrow were able to attract such a broad audience due to the book's central argument, which uses anthropological, archaeological, and historical evidence to critique current popular views on the so-called progress of western civilization and the Hobbesian and Rousseauian theories of the origin of the social contract, as well as to propose a new genealogy for Enlightenment thinking on the origins of inequality. In this course, we will read The Dawn of Everything as our central text, alongside the sources it draws upon and the responses to the book. Collectively, we will work together to remedy one of the major lacunae in the public discourse around the book, i.e., a lack of an archaeological response. Indeed, the critical reception of the book has largely focused on only the first third of the book. The course therefore will involve a practical component, in which we as a class write an archaeological critique of the book and work to publish it in a suitable magazine, journal, or newspaper. Students can expect to gain from this class not only knowledge, but also key scholarly skills and hands-on experience.

Typical periods offered: Spring

ANTHRO 3263 Bioprospecting
What do the opium poppy, the white willow tree, the spoiled sweet clover, the Madagascar periwinkle, and the fungus Penicillium have in common? Each of these species contains biochemicals that have been tapped to advance medicine. Biodiversity prospecting (bioprospecting) is often understood as the systematic search for biochemical and genetic information in nature in order to develop commercially valuable products for pharmaceutical, agricultural, cosmetic, and other applications. Contemporary medical innovation depends on bioprospecting to remain cutting edge, but what are the human and ecological costs of this rapidly changing industry? This course explores the social, political, and environmental impacts and ethical implications of the global search for new biological resources. We will study the role of indigenous knowledge, the problem of biopiracy, the politics of intellectual rights, and patenting culture in our quest to understand what is at stake in the regulation, reform, and growth of this problematic indicator of public health, biotechnology, and historical and modern medicine in the global economy.

Typical periods offered: Fall

ANTHRO 3264 Anthropological Perspectives on Complementary and Alternative Medicine
Complementary and alternative medicine (CAM) refers to health and healing practices that fall outside the realm of conventional Western medicine. CAM encompasses a wide range of modalities including homeopathy, traditional Chinese medicine, Ayurveda, energy healing, and more. Many of these practices are not clearly compatible with biomedical explanatory models for health and sickness; they are often viewed with skepticism by mainstream medical practitioners. Though the popular media often depicts many CAM practices components of a wellness culture that is associated with the wealthy and privileged, many CAM practitioners do not fit this stereotype and primarily work with the poor, people of color, and other minoritized groups. In this class, we will focus on CAM in the Global North with a primary focus on the United States. We will critically assess characterizations of CAM as pseudoscience and explore the epistemological, ethical, and legal tensions between mainstream and non-mainstream medical practices. We will pay particular attention to how these tensions intersect with race, class, and gender. The aim of this class is not to make a value judgement about the validity of CAM, but rather to understand the perspective of those who use CAM in a context that emphasizes Western biomedicine.

Typical periods offered: Spring

ANTHRO 3266 Social Determinants of Health and Migration
The social determinants of health refer to the conditions where people live and work that shape health risks and outcomes. This class will examine how categories, such as refugee or undocumented immigrant, may predispose individuals to live and work in unstable and harmful environments. Our course will examine the following questions: How do restrictive immigration policies and policing shape access to primary care? How does documentation status intersect with other experiences of marginalization and other forms of social identification, such as gender and race, to produce unique health risks and outcomes? In this course, we will explore how people who migrate-due to force or of their own volition, and in a documented or undocumented manner-may encounter obstacles due to differences in language spoken, insurance coverage, and documentation status, when seeking out primary and mental health services, as well as healthcare for chronic illnesses. We will draw on ethnographic research, public health reports, long form journalism, podcasts, and documentaries developed in a variety of geographic settings, including the United States, Germany, Israel, Malawi, and Bangladesh.
Credit 3 units. A&S IQ: LCD, SSC BU: BA, ETH EN: H
Typical periods offered: Fall, Spring

ANTHRO 3270 Geoarchaeology
Geoarchaeology involves the application of analytical techniques, concepts, and field methods from the earth sciences to help solve archaeological problems. Issues explored in this course include human and environmental processes involved in archaeological site formation, the sedimentary context of archaeological remains, soils and sediments relevant to archaeology, the relationship between past settlement and landscape evolution, paleoclimatic reconstruction, human impacts on the environment, geological sourcing of artifact proveniences, and remote sensing of the physical environment. Several field trips to local archaeological/geological sites provide an opportunity to understand how geoarchaeology is applied to specific research problems.

ANTHRO 3271 Becoming Human: Archaeology of Human Origins
Humanity, before the advent of agriculture and cities, evolved a series of behaviors that enabled them to survive as hunter-gatherers in diverse environments with complex cultural systems. These behaviors included hunting, control of fire, shelters and clothing, elaborate tools of diverse materials, burials, jewelry, and representational art. These characteristics emerged over more than 2 millions years of the Pleistocene across several species of humans, to coalesce into what we would recognize as modern human foragers 30,000 years ago. This course traces that emergence of what it means to be human, through the Paleolithic archeological record in its context of past environments and past human forms.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 3272 Becoming Human: A Biocultural Exploration of the Human Experience
Humanity, before the advent of agriculture and industrialization, evolved a wide range of behavioral adaptations and patterns that enabled them to survive as hunter-gatherers in diverse environments with complex cultural systems. Using a broad evolutionary framework, this course will explore these behaviors (e.g., hunting, control of fire, toolmaking, representational art, altruism, gender roles, language, religion) to examine what it means to be human through a biocultural lens. We will take a comparative approach to address these topics by examining our earliest ancestors (both nonhuman primates and early hominins) as well as modern human societies to better understand how we got where we are today.

ANTHRO 3275 Introduction to GIS for Anthropologists
Use of GIS is rapidly becoming standard practice in anthropological research. This course will introduce students to the basic theories and techniques of GIS. Topics will include the application of GIS in archaeologial survey and ethnographic research, as well as marketing, transportation, demographics, and urban and regional planning. This course will enable students to become familiar not only with GIS software such as ArcGIS, but also the methodologies and tools used to collect and analyze spatial data. Students will gain expertise engaging with data situated across a number spatial scales, from households, communities and cities to landscapes, nation-states, and global phenomena. Students will need to work on their own laptops, but no software purchases are necessary.

Typical periods offered: Fall, Spring

ANTHRO 3280 Anthropology of Infectious Diseases
This course explores the evolving relationship between humans and non-human microbiota. Beginning with the modern era, we will study infectious diseases and the critical contexts (e.g., ecological, political, social, cultural) in which they occur. Case studies will include antibiotic-resistant superbugs, H1N1 influenza, SARS coronavirus, HIV/AIDS, and global cholera epidemics. Through the study of global infectious disease outbreaks and threats, we will address larger anthropological questions about knowledge, the power of metaphor, the role of institutions, and the health of populations.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

ANTHRO 3283 Introduction to Global Health
This course provides a general introduction to the field of public health. It examines the philosophy, history, organization, functions, activities, and results of public health research and practice. Case studies include infectious and chronic diseases, mental health, maternal and reproductive health, food safety and nutrition, environmental health, and global public health. Students are encouraged to look at health issues from a systemic and population level perspective, and to think critically about health systems and problems, especially health disparities and health care delivery to diverse populations. No background in anthropology or public health is required.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, IS EN: S
Typical periods offered: Fall, Spring

ANTHRO 3284 Public Health Research and Practice
In-depth exploration of current theory and methods involved in public health research and practical applications. Emphasis on fundamentals of epidemiology, which forms the scientific rationale for public health assessment, assurance, and policy development. Survey of current public health practice and research areas including biological foundations of public health, social and behavioral interventions, maternal-child health, and environmental health. Relationships among public health, medicine, nursing, social work, and related disciplines.

Typical periods offered: Spring

ANTHRO 3285 Warriors, Merchants, Monks, and Courtesans: Ancient Narratives of Globalization in Google Earth
This introductory seminar-style course examines the history of globalization through the narrative accounts of those who lived along some of the great trade routes of the Old World. Through a combination of in-class discussion and hands-on tutorials and projects in Google Earth, we will examine how day-to-day local interactions and the experiences of individuals contributed to broader cultural exchanges and the shaping of ancient cosmopolitan centers. We will use a bottom-up approach to understand the process of globalization, and why it is not only a phenomenon of the modern world. This course will cover a large geographic and temporal span, but it is not about memorizing lists of dates and places or putting dots on a map - it is about learning how to interpret multiple strands of knowledge and put them together into a cohesive narrative of history. The course will cover four broad anthropological themes related to Old World history and globalization in conjunction with weekly lessons in Google Earth; there are no prerequisites for either. The knowledge and skills gained in the course will lead to a final independent research project consisting of a short paper and an interactive digital map that can be shared online through the Google Earth community.

Typical periods offered: Spring

ANTHRO 3290 Peoples and Cultures in South Asia
An introduction to contemporary societies and cultures of the South Asian sub-continent including India, Pakistan, Bangladesh, Sri Lanka, and Nepal. Topics include religion and ritual, work, family organization, concepts of person, caste and gender, the cultural impact of colonialism, and political/religious conflict. The course will examine ethnographic and historical writings on these topics for two purposes: to gain basic knowledge about the peoples of the area and to consider the impact of anthropological theory on that knowledge.
Credit 3 units. A&S IQ: SSC Art: SSC BU: IS
Typical periods offered: Spring, Summer

ANTHRO 3293 Religion and Society
We will take a broad and practice-oriented view of 'religion', including uttering spells, sacrificing to a god, healing through spirit possession, as well as praying and reciting scripture. We will consider religious practices in small-scale societies as well as those characteristic of forms of Judaism, Islam, Christianity, and other broadly-based religions. We give special attention to the ways religions shape politics, law, war, as well as everyday life in modern societies.
Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH EN: S
Typical periods offered: Fall, Spring

ANTHRO 3294 Anthropology of Religions in St. Louis
This course is an introduction to religions in America with a focus on urban U.S. and Saint Louis ethnic experiences during the twentieth century and into the present. This course will combine methods of history of religions to understand background and context with anthropology of religion to discern contemporary social dynamics. The everyday life, rituals, and imagination of religious peoples, communities, and movements will be examined with attention to political aesthetics. Students will be introduced to observant participation in order to comprehend religious events and to describe a particular religious community of cross-cultural interest. The course will involve students doing observation/participation in a religious tradition or ethnicity outside of their own.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Summer

ANTHRO 3304 Bones to Behavior: Undergraduate Research in the Lab and At the Zoo
We will undertake zooarchaeological study of equid skeletons in the zooarchaeology laboratory at Washington University, and in collaboration with the St. Louis Zoo, participate in a behavioral study of the courtship and breeding behavior of the ancestor of the domestic donkey, the African wild ass. The research questions that we focus on are how the biology and behavior of the African wild ass influenced the domestication of the donkey by prehistoric African herders or ancient Egyptians and how the behavior of the African wild ass continues to affect prospects for conservation of this highly endangered animal. During the first half of the semester, we will meet once a week for 2.5 hours in the zooarchaeology laboratory on Mondays from 9 - 11:30 a.m. After spring break, or earlier if weather is above 40F, we will no longer meet in the lab, and each student willspend 9-11 a.m. on two mornings of their choice per week at the St. Louis Zoo conducting observations of the wild ass. Students may choose two days that fit their schedule. Saturdays or Sundays are included as a possible choice of days. Permission of instructor is required.
Credit 3 units. A&S IQ: NSM Art: NSM BU: BA
Typical periods offered: Fall, Spring

ANTHRO 3305 Bones to Behavior II
In this class, students will undertake zooarchaeological research on skeletal material in the zooarchaeology laboratory at Washington University and/or preparation of animal skeletons for comparative study and in collaboration with the St. Louis Zoo participate in behavioral studies of the ancestor of the donkey - the African wild ass. Collections housed in the zooarchaeological laboratory for study include ancient food-remains from African sites. These collections bear on questions regarding cultural and climate change in the Horn of Africa 12,000-2,000 years ago and include animals ranging from African antelopes to domestic camels. During the first half of the semester students will meet once a week for 2.5 hours in the zooarchaeological laboratory. Once the weather is above 40F after Spring Break, we will meet 9-11 twice a week, Mondays and Wednesday/Friday in the laboratory or at the zoo. Location will depend on projects selected for study. Permission of instructor is required. May be repeated for credit.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 3309 Anthropological Perspectives on Care
This course aims to provide an introductory survey of topics and approaches to the anthropology of care. It does so by drawing on a range of ethnographic, theoretical, and cross-disciplinary materials. This will allow us to think through and engage with care in its myriad forms, its presence and absence, its bureaucratization and management, its relation to kinship, relatedness, labor, and government. In the first part of the course, we will explore theories of care as moral practice with a feminist lens. In the second part, we will engage this lens with ethnographic materials about care in diverse settings that also shed light on the political, economic, and lived realities of care. These ethnographic and sociological works include explorations of the circulation of care in moral economies and its monetization as paid labor, the politics and antipolitics of healthcare in institutional settings, and the role of care in kinship, household formations, and life course regimes across cultures.
Credit 3 units. A&S IQ: LCD, SSC EN: S
Typical periods offered: Fall, Spring

ANTHRO 3310 Health, Healing and Ethics: Introduction to Medical Anthropology
A cross-cultural exploration of cultures and social organizations of medical systems, the global exportation of biomedicine, and ethical dilemmas associated with medical technologies and global disparities in health.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: ETH EN: S
Typical periods offered: Fall, Spring, Summer

ANTHRO 3311 The Anthropology of Compassion
The Anthropology of Compassion will explore the nature and meaning of compassion, the neurophysical circuitry that underlies it, the evolutionary forces which have produced it, and its ongoing importance in human life and culture. The course will draw upon a wide variety of materials and disciplines to explore these questions, including ethology and primatology, neuroscience and social psychology, philosophy, world religions and ethnography.
Credit 3 units.
Typical periods offered: Fall

ANTHRO 3313 Women and Islam
This course is an anthropological study of the position of women in the contemporary Muslim world, with examples drawn primarily from the Middle East but also from Asia, Africa, Europe, and the United States. Students will examine ethnographic, historical, and literary works, including those written by Muslim women. Topics having a major impact on the construction of gender include Islamic belief and ritual, modest dress (veiling), notions of marriage and the family, modernization, nationalism and the nation-state, politics and protest, legal reform, formal education, work, and Westernization. The course includes a visit to a St. Louis mosque, discussions with Muslim women, and films.
Credit 3 units. A&S IQ: LCD, SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Spring

ANTHRO 3315 Medical Anthropology
The comparative study of non-Western medical systems, including the definitions of health and disease, the kinds of treatment, and the varieties of practitioners in other cultures (e.g., Navaho, India, China).
Credit 3 units. A&S IQ: SSC Art: SSC BU: IS
Typical periods offered: Fall

Typical periods offered: Fall

ANTHRO 3320 Disability Anthropology
Disability is everywhere: across cultures, it is present in our enviornments, in our media, and in our personal and familial lives. This discussion-based course recognizes disability not as a biomedical impairment but as an intersectional, constructed category of difference. Disability anthropology, which seeks to understand embodied experiences of disability through ethnography and sociocultural models of disability, is a recently emergent field. Following an introduction to disability activism, theory, and representation, our class will analyze examples of disability anthropology, including autoethnography, ethnographic film, and performance ethnography. As we collectively contribute to an accessible classroom, students will develop a final project that examines a physical space, policy, or other resource at WashU that could be made more accessible. Students will present their projects to the WashU community
Credit 3 units. A&S IQ: SSC, SC
Typical periods offered: Spring

ANTHRO 3321 Culture, Food, and Nutrition
Cultural aspects of food uses-transformations from field to palate-producing, marketing, preparing, eating; regional, ethnic, national preferences.
Credit 3 units. A&S IQ: SSC Art: SSC
Typical periods offered: Spring

ANTHRO 3322 Brave New Crops
This course introduces students to the major issues surrounding the development and use in genetically modified (GM) crops. Its focus is international, but with particular focus on the developing world. A variety of experts, available locally or through the internet, will contribute perspectives. The course also includes field trips. For further information, see artsci.wustl.edu/~anthro/courses/3322.
Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH
Typical periods offered: Spring

ANTHRO 3326 Modern Third World
Most understandings of the Third World are embedded in a discourse that promotes development and/or tries to explain why the Third World is so poor. This seminar aims to circumvent this view. After an introduction to development and development theory, the course explores how landscapes and livelihoods interact with modernization,

globalization, and the agrarian transition. Case study examples and topics to be discussed include household livelihoods, income strategies, informal housing, off-farm labor, cultural landscapes, and environmental transformations.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S

ANTHRO 3331 Anthropology of Clothing and Fashion
This course takes clothing as a starting point for examining broad themes in anthropology, including gender and sexuality, race and the body, history and colonialism. We look at the ritual significance of clothing and other practices of bodily adornment in traditional societies and the role of style in constituting contemporary social movements and identity categories. We investigate the globalization of the apparel industry, from production and circulation to marketing and branding, in order to understand the relationship between citizenship and consumption, labor and power in the global economy. The course encourages students to reflect on their relationship to the wider society and economy as producers and consumers of material culture through the lens of clothing and fashion.
Credit 3 units. A&S IQ: SSC Art: CPSC, SSC BU: BA EN: S
Typical periods offered: Fall

ANTHRO 3332 For Love or Money: Economies, Affects, and Practices of Care
This course looks at the intersections of economies, affects, and practices in shaping understandings of - and possibilities for - relationships of care. We will look at anthropological theories of care and cross-cultural ethnographies of caring practice to challenge notions of care as a self-evident good. An attention to care raises questions about who has access to care, who should provide care, and who is worthy of care, as well as the institutional structures that shape possibilities for relationships of care between people, as well as non-human others
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

ANTHRO 3351 The Ancient Maya: Archaeology and History
This course focuses on the ancient Maya civilization because there are many exciting new breakthroughs in the study of the Maya. The Olmec civilization and the civilization of Teotihuacan in the Valley of Mexico will be considered as they related to the rise and development of the Maya civilization. The ancient Maya were the only Pre-Columbian civilization to leave us a written record that we can use to understand their politics, religion, and history. This course is about Maya ancient history and Maya glyphic texts, combined with the images of Maya life from their many forms of art. The combination of glyphic texts, art, and archaeology now can provide a uniquely detailed reconstruction of ancient history in a New World civilization.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS EN: S
Typical periods offered: Fall

ANTHRO 3354 Ancient Mesoamerica
Mesoamerica encompasses the Pre-Columbian complex societies of Mexico and upper Central America, including Guatemala, Belize, and parts of Honduras and El Salvador. It was an agrarian world of great and enduring cities, far-flung trade networks, transcendent religions, kingdoms and empires. This survey lecture course begins with the pioneering hunters and gatherers, reviews the establishment of farming communities and the first Olmec Formative states, the flowering of highland Mexican Classic Period Teotihuacan and other great cities like Tajin in Veracruz, the dynasties of the lowland Maya and summarizes with the Aztec Empire and the period of the Spanish Conquest. The course touches on the many and diverse other cultures that contributed to this vibrant world.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS EN: S
Typical periods offered: Spring

ANTHRO 3355 Politics, Religion, and Art in Antiquity: Representations in Paris
This course gives students an opportunity to really know encyclopedic museums, to know what motivated patrons commissioning art and artists creating it, the relationship of art to religion, cosmology, and craftwork, and why governments sponsor such public symbols of the state. The Louvre and the other major encyclopedic museums of Paris are themselves works of art, and they reflect the ways that states use architecture to express their ideals of legitimate power through the command of knowledge and aesthetics. The course further introduces students to the ethical issues surrounding the display of objects as aesthetic commodities, with only brief reference to their history, provenience and provenance in small print labels and notes.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM, IS EN: H
Typical periods offered: Summer

ANTHRO 3361 The American Melting Pot: Migration in the United States
How is migration controlled, monitored, regulated, perceived, and experienced in the American melting pot? How does the United States' history of immigration play into the politics surrounding migration today? What is the influence of migration policies on the everyday lives of migrants residing within the U.S.? What particular opportunities and challenges are presented by being a migrant in the U.S.? Who is migrating to the U.S., and why? This course will provide a comprehensive overview of migration in the U.S., providing students with valuable knowledge not only about the laws and policies that govern migration but also about the lived experiences of migrants. Specifically, we will discuss the history of migration in the U.S., immigration law, the migration policies of recent administrations, the U.S.-Mexico border, border surveillance, health, mental health, public perception of migrants, refugees, asylum seekers, undocumented migrants, sanctuary cities, politics and migration, and Latin American migrants. We will welcome guest speakers working in the field of migration throughout the semester, and students will have the opportunity to ask them about their work as well as their opinions on migration policy in the U.S. Class materials will include articles and book chapters from the fields of anthropology, political science, history, public health, sociology, and psychology as well as short videos, documentary films, and newspaper articles. Additionally, we will incorporate discussions on current events surrounding migration in the U.S. by following weekly news coverage on this topic. This course will be useful for students hoping to work with migrants in a variety of settings as well as for those hoping to pursue policy, research, or political careers related to this topic.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Spring

ANTHRO 3373 Law and Culture
We live in an age when social policy is increasingly displaced into the realm of law, when justice and equality are matters of courtroom debate rather than public discussion. Legal language has become a key resource in all kinds of struggles over livelihood and ways of life. In this course, we study the cultural dimensions of law and law's changing relationship to state power, the global economy, social movements, and everyday life. We approach law as a system of rules, obligations, and procedures, but also a cultural practice, moral regime, and disciplinary technique. How are relationships between legal, political, and economic realms structured and with what consequences? How does law provide tools for both social struggle and social control? What does anthropology contribute to research on these issues? In exploring these questions, we combine readings from classical legal anthropology with recent ethnographic work from around the globe.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: ETH EN: S

Typical periods offered: Fall, Spring

ANTHRO 3383 Cognition and Culture
This course examines the influence of evolved cognitive dispositions (the way natural selection engineered the human mind) on the transmission of cultural knowledge. Dispositions present from early childhood make certain kinds of cultural knowledge particularly easy to acquire, and therefore, culturally stable. We also consider the evidence for differences in cognitive processes triggered by different social environments. Emphasis is on empirical studies and experimental methods in the study of cultural similarity and differences. Prerequisite: Psych 100B, Anthro 160B or permission of instructor.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall

ANTHRO 3384 Language in Society
The study of language in its sociocultural context. Issues: gender and class differences in speech, power and language ideology, language choice and contact, poetics and myth, the ethnography of speech forms.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA
Typical periods offered: Spring

ANTHRO 3385 Internet, Politics and Society
This course examines how the internet is transforming the way people around the world participate in politics. We will look at specific controversies in online politics such as the Wikileaks scandal, Iran's Twitter revolution, social media in the Arab uprisings, and the Great Firewall of China, as well as investigate broader questions of how people obtain knowledge, communicate, and mobilize in the digital age. Students will think critically about the internet as a communicative medium and analyze how it is employed in different cultural contexts. Topics to be covered include: national and transnational political movements; state secrets and political transparency; dictatorship and revolution; media and censorship; activism and mobilization; memory and knowledge; and digital personhood. Students will write brief responses to weekly readings and complete an original research project on digital politics.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 3386 Language, Culture and Society
Although this is an introductory course, students who have taken Linguistics 170D, namely, Introduction to Linguistics, will benefit from knowledge of phonology, morphology, syntax and semantics. The primary content of this course explores the relationship between linguistic practice and other social and cultural processes. Anthropological linguistics, including alternative approaches to fieldwork and data collection are introduced, along with various studies of language usage in social and cultural contexts that consider language and thought, language and identity, language and gender, as well as multilingualism and other forms of language contact. The ethnography of speaking and communication are central to this course, as is conversation analyses, which will introduce a combination of qualitative and quantitative linguistic research methods.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall

ANTHRO 3391 Economies as Cultural Systems
Many contemporary approaches to economics downplay or bracket the importance of culture in the workings of economic systems. In this class we will focus on approaches to distribution and exchange in which culture and social institutions figure prominently, if not pre-eminently. We will sample a diverse array of economies, from gift exchange to the ceremonial destruction of wealth, from Melanesia to Wall Street, in order to evaluate some of the assumptions that undergird market capitalism. These assumptions include the perception of market actors exclusively as calculative, maximizing individuals. Topics to be covered include the Industrial Revolution; utilitarianism; economic anthropology; the formal vs. substantivist debates; ethnography of finance, and Marxist sociology.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: ETH EN: S
Typical periods offered: Fall, Spring

ANTHRO 3392 Culture Goes Online: Introduction to Digital Anthropology
How do online phenomena like QAnon and cancel culture become salient cultural forces in real life? Can new apps, intelligent algorithms, and cryptocurrencies solve longstanding social and economic problems? What happens to the data produced by smart homes and appliances? Did memes decide the 2016 presidential election? Has the pace of technological development outstripped our collective ability to make sense of digital technologies and the social worlds they bring into being? Over the past three decades, digital technologies have become powerfully present in social and political life. They offer dazzling possibilities: connecting people and communities across distance and time, expanding our abilities to perceive the world and record our experiences, and producing and processing astonishingly huge quantities of data. They also raise important questions about privacy, ethics, and governance. Proponents of digital technologies celebrate them as great equalizers that create more opportunities for democratic engagement, while critics express concern that they open the door for new forms of inequality and exploitation. This course will examine these and other problems through an anthropological lens, asking how we can think analytically about culture and politics in the digital age. We'll engage with scholarship, journalism, and artistic productions, from the first digital ethnographies to recent, interdisciplinary and methodologically innovative multimedia works. Topics will include social media, the political uses (and abuses) of digital technology, big data and digital surveillance, digital technology and sustainability, and internet infrastructure, access, and inequality.
Credit 3 units. A&S IQ: LCD, SSC Arch: HUM Art: HUM EN: S
Typical periods offered: Spring

ANTHRO 3395 Archaeological Excavation
Training in field techniques during actual excavation of a prehistoric site and introduction to laboratory analysis of the materials recovered. Prerequisites: Anth 190BP, 310CQ, 312C, and 314BQ, or permission of instructor. May be repeated for credit.
Credit 9 units. A&S IQ: SSC Art: SSC
Typical periods offered: Fall, Spring, Summer

ANTHRO 3422 American Indian Art and Iconography
An introduction to the arts among a broad range of native peoples who inhabited North, Middle, and South America. Course begins with basic concepts of art and anthropology. Emphasis is on the iconography found in various art styles, particularly the prehistoric rock carvings and paintings left by Native Americans throughout the New World. Oral traditions and myths found in the ethnographic record provide fascinating associations and interpretations.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring, Summer

ANTHRO 3423 Health and Wellness in the Community: A Service Learning Seminar
This 4-credit course is designed to be an interactive course whereby students will volunteer with a local/community-based health or health affiliated organization under the supervision of an anthropology faculty member and explore the anthropological theories and methods of

analyzing applied service and research. Students will be expected be in class with the instructor twice a week for 1.5 hours each time AND volunteer a minimum of 4-5 hours each week at an approved social service organization, which must be confirmed during first 2 weeks of the semester. In class readings and assignments will be topical and relevant to current events, local issues, and the relationships among community and health. Students must have taken L48 141 AND L48 142.
Credit 4 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall

ANTHRO 3433 Conflict and Post-Conflict Societies in Africa
During the political elections in Kenya in 2007, massive civil unrest and violence erupted. It lasted for several months and was largely framed in terms of ethnic groups and borders. Indeed, many conflicts around the continent of Africa are regularly spoken of in terms of ethnicity, and sometimes religion. While these issues are obviously part of contemporary conflicts, these situations are clearly more complex. It is the goal of this course to look at and unpack contemporary and recent conflicts around the continent to gain a more comprehensive understanding of the processes leading to large-scale conflict, to crisis management in these circumstances, and to the small and large-scale processes of peace-building and community rebuilding efforts. In this course, we will look at case studies around the continent (including Angola, Rwanda, Liberia, Mozambique, Sierra Leone, Somalia, Eritrea, South Africa, and Sudan among others) using anthropological and social scientific tools of analysis.

ANTHRO 3461 Native Americans At Westward Expansion
Issues precipitated by Euro-American contact, colonization, and expansion between 1492 and 1810 across Eastern North America, the Plains, and the Rocky Mountains. Impacts of exploration and settlement and responses by native peoples: epidemics; population loss; breakdown of Southeastern chiefdoms; resistance; relocation; and shifts in economic strategies. Perspectives and policies of Native Americans as well as Europeans and non-Indian Americans, including Lewis and Clark.

Typical periods offered: Fall

ANTHRO 3462 Contested Histories and Landscapes: Western and Indigenous Perceptions of Time and Place
How we conceive of time and place influences the stories we tell about the past, how we form identities in the present, and how we plan for the future in the face of environmental threats like global climate change. The archaeological study of North American Indigenous history has been dominated by Western philosophical thought that takes for granted a particular view of the world, and of being, espoused by the likes of Socrates, Hobbes, Descartes, and Rousseau. Indigenous scholars have critiqued these biases and asked that we recognize ways of perceiving the world that are often fundamentally different than the Euro-American frame of reference.Using archaeological case studies in addition to reading Native American philosophers and intellectuals, we will explore how different ways of understanding the world, and your place in it, influence how we explain the past. We will also consider how these differences play out today regarding issues such as environmental justice, land treaties, tribal sovereignty, and climate change.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA, ETH EN: S
Typical periods offered: Fall

ANTHRO 3472 Global Energy and the American Dream
This lecture course explores the historical, cultural, and political relationship between America and global energy, focusing on oil, coal, natural gas, biofuels, and alternatives. Through case studies at home and abroad, we examine how cultural, environmental, economic, and geopolitical processes are entangled with changing patterns of energy-related resource extraction, production, distribution, and use. America's changing position as global consumer and dreamer is linked to increasingly violent contests over energy abroad while our fuel-dependent dreams of boundless (oil) power give way to uncertainties and new possibilities of nation, nature, and the future. Assuming that technology and markets alone will not save us, what might a culturally, politically, and socially-minded inquiry contribute to understanding the past and future of global energy and the American dream?

Typical periods offered: Fall

ANTHRO 3476 Archaeologies of Graffiti From Antiquity to the Present
The modern story of graffiti-revolving around social, economic, and political contexts such as bathroom stalls, subways and alleys steeped with urine and trash, decrepit buildings and train cars situated in less reputable areas of cities and towns-lead people to associate it with antisocial behaviors, dissent, and the vandalism of public and private property. However, some people consider graffiti as a legitimate form of art, communication, and a somewhat anonymous expression of current social climates. The disparity between these two perspectives has provided a great deal to study for social scientists. However, a consideration of graffiti's simple definition-words or drawings etched or painted on some surface in a public place-lead us to recognize that feats of graffiti originate way before the inner-city movements of the 1970s. In this class we will draw upon a range of studies from archaeology, anthropology, sociology, art, and history to broadly explore the creation and meaning of graffiti from antiquity to the present. Our goal is to learn how to examine the form, function, and context of graffiti across cultures and through time, with regard to the circumstances of its creation. In doing so, we aspire to better understand what lies behind the human urge to leave a mark. PREREQUISTE: Introduction to Archaeology.

Typical periods offered: Fall

ANTHRO 3481 Writing (Material) Culture
How do we use things to tell stories? How do the things we use shape who we are? The field of material culture studies approaches these questions by examining the role of objects in social life: their importance as material representations of culture and also as agents in its production and reproduction. In this course, we will explore ways to write about material culture, asking how those of us interested in culture (whether as anthropologists, educators, designers, journalists, curators or poets) can most effectively represent and analyze the social role of things through writing. Throughout the semester, students will read different genres of thing-based storytelling: social theory, fiction, archaeological site reports, ethnographies, museum catalogs, and long-form journalism. We will discuss how the authors of these works use things to describe and analyze the relationship between materials and ideas, reality and metaphor, positivism and multivocality, spatiality and temporality, and the politics of curation, commodity chains, ownership, and heritage. Each student will write short pieces in different genres and review the work of peers, and this will culminate in a final portfolio demonstrating the student's ability to practice and assess effective writing about material culture.
Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH EN: S
Typical periods offered: Fall

ANTHRO 3521 Anthropology of Human Rights
This course draws on anthropological scholarship to examine doctrines, practices, and institutions associated with international human rights law. Topics to be covered include: (1) colonialism and the history of international human rights low; (2) the complex theoretical issues raised by attempts to define and apply human rights concepts in different cultural contexts; (3) the role of governments, NGOs, and other international institutions in promoting human rights and humanitarianism; (4) key human rights issues such as freedom of religion, cultural rights, women's rights, and economic rights in different cultural contexts.

Typical periods offered: Spring

ANTHRO 3533 Love, Courtship, and Marriage in Africa: The Anthropologies of Intimacy and Conjugality
This course is an exploration of past and present anthropological inquiry into love, courtship and marriage across the African continent. The course will explore key questions revolving around making connections between love and political economies, kinship, gender, health, labor migration, colonialism and the law, among other key topics.
Credit 3 units. A&S IQ: LCD, SSC, SC EN: S
Typical periods offered: Fall

ANTHRO 3544 Anthropology of Change: Practicing Applied and Public Anthropology
In this course, students will learn how to use anthropology and ethnographic methods as tools for provoking change. The legitimacy of this fifth-field of anthropology has been in contention amongst anthropologists throughout generations. But in the contemporary era of neoliberalism and big-data, social scientists are increasingly examining their ethical duty to their informants-specifically, concerns about maintaining neutrality versus leveraging ethnographic data to improve lives or to make a profit. We will begin with the history of this ethical debate and move into contemporary issues in anthropology for social change and in business anthropology. Topics will include multidisciplinary teamwork, practitioner capacity building, community action programming, policy development and ethical design. This course is designed for upper-level anthropology students but will be particularly useful for those considering combining anthropology as a double-major or minor in a range of applied fields (business, engineering, social work, law, health and medicine). It will prepare students for the practical use of anthropology in consulting firms, research institutes, corporations, NGOs, and federal, state, and local government agencies.
Credit 3 units. A&S IQ: SSC Art: CPSC, SSC BU: ETH EN: S
Typical periods offered: Spring

ANTHRO 3556 What Makes a Meal: Anthropological Explorations of Food Production, Consumption, and Performance
In this course, we explore what we eat, how we eat it, and why we eat it through an anthroplogical lense. Food is important in many ways. It is a key component is our daily lives and habits. Exploring foodways through an anthropological lens allows us to understand the construction of boundaries and expressions. Food is not just nutrition, it is also taste, memory, politics, ritual, communication, and power. Food has the ability to change the very nature of our genetics. Food is comfort and home while simultaneously is novel and uncomfortable. It heals and it destroys. Through the semester, we will learn how anthropologists study food and foodways, highlighting the socio-cultural, linguistic, biological, and archaeological frameworks. We will learn how different communities interact with food and how foodways can shape and be shaped by the societies we live in, especially the power of food in shaping our modern world systems.
Credit 3 units. A&S IQ: SSC, SC Art: SSC
Typical periods offered: Spring

ANTHRO 3581 Principles of Human Anatomy and Development
This is a course in human anatomy and development for students interested in biological anthropology, biology, and/or medicine. The lecture material will include evolutionary, functional, and clinical approaches to understanding anatomy. Lecture topics emphasize organizational and developmental principles of the organ systems of the human body. Exams will test visual identification of structures and clinical application of concepts discussed in class. Lectures will make extensive use of visual materials, including photographs of anatomical dissections, x-rays, CTs, and MRIs. All lecture materials will be made available to you online.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Summer

ANTHRO 3582 Anthropology of the Human Face
A survey of the human face, including both an evolutionary perspective on why our faces changed to look the way they do today and a theoretical perspective on how we create and maintain self-image through body modification. Comparative and cross-cultural approaches are used to understand modern human craniofacial and cultural diversity. The course includes discussions of how perceptions of biological variation inform social interactions and of how sociocultural norms pattern body modification, both presently and historically. Most importantly, students will learn how information obtained with archaeological, sociocultural, and biological methods is integrated to address anthropological questions.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

ANTHRO 3602 Environmental Inequality: Toxicity, Health, and Justice
How are the problems of environmental stress, pollution, and degradation unevenly borne? Adopting cross-cultural, biosocial, intersectional, and posthumanist approaches, this course explores how exposures to environmental toxicities and dangers result in and exacerbate health harms, social disparities, and structural violences. A range of historical and contemporary case studies will include plagues, weather, fire, water, waste, minerals, air, etc. Students will not only gain an understanding of these problems and burdens, but also explore the transformative potential in intertwining environmental justice, critical global health, and social justice movements to seek solutions to these vital issues.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, ETH, IS EN: S
Typical periods offered: Spring

ANTHRO 3607 From Hazard to Catastrophe: Case Studies in Environmental Disasters
From earthquakes, volcanoes, landslides, tornadoes, hurricanes, flooding, drought, to climate change all areas in the United States are at risk from at least one hazardous earth process. In the class we will study the social aspects of environmental management, policy, and disaster response that cause environmental hazards to become catastrophes. Each week we will cover a different natural hazard and use case studies from archaeological and historical sources to evaluate which aspects of management and response discourage or encourage the hazard to become a catastrophe.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

ANTHRO 3608 Caribbean Island Vulnerabilities: Puerto Rico
Tropical and subtropical islands have long been imagined as a tourist's paradise, replete with the pleasures of sun, surf, sand, and sex. At the same time, long histories of colonization, exploitation, resource extraction, and slavery have produced a very different reality for many residents of islands located in and around the Caribbean Sea. More recently, communities in the Caribbean region have been subject to extreme weather events that bring the current politics of climate change into conversation with centuries-old problems related to economic isolation, infrastructure, human poverty, and ecological vulnerability. This course explores the nature of island disasters, both sudden and slow, by examining ethnographically the global histories that today inform Caribbeanness and the politics of everyday island life. We will further analyze the impact of media coverage on North American understandings of the Caribbean through a close examination of Puerto Rico.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, IS
Typical periods offered: Spring

ANTHRO 3610 Culture and Environment
An introduction to the ecology of human culture, especially how traditional cultural ecosystems are organized and how they change with population density. Topics include foragers, extensive and intensive farming, industrial agriculture, the ecology of conflict, and problems in sustainability.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: ETH EN: S
Typical periods offered: Fall, Summer

ANTHRO 3612 Population and Society
This review of population processes and their social ramifications begins with an introduction to the basic terminology, concepts, and methods of population studies, followed by a survey of human population trends through history. The course then investigates biological and social dimensions of marriage and childbearing, critically examines family planning policies, deals with the social impacts of epidemics and population ageing, and looks at connections between population movements and sociocultural changes. The overall objective of the course is to understand how population processes are not just biological in nature, but are closely related to social, cultural, political, and economic factors.
Credit 3 units. A&S IQ: LCD, SSC, SC Art: SSC BU: IS EN: S
Typical periods offered: Spring

ANTHRO 3613 Follow the Thing: Global Commodities & Environment
Who picked your strawberries? Is your produce still local if the hands that harvested it traveled thousands of miles to do the job? This course re-examines the root causes of the global and local environmental problems we read about every day, with an emphasis on historical and contemporary drivers of human migration. Topics include the production and consumption of natural resources, the politics of migration and agriculture, and the cross-border commodification of human labor and the environment. Anthropology is historically associated with the study of remote societies and exotic places often imagined as having little everyday connection with the rest of the world. This course will challenge students to reconsider the meanings of global and local by introducing new social scientific approaches to studying the key problems that have connected (and disconnected) diverse human populations throughout the late 20th and early 21st centuries: growing disparities in material wealth, natural resource depletion, energy overconsumption, inequitable access to care, and beyond.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall

ANTHRO 3615 Environmental Anthropology
This course will provide students with a working knowledge of how the study of humans across space and time has fundamentally impacted the way we understand the idea of nature, the environment and what it means to be human. The course will ground students in both historical and cutting-edge anthropological theories with units on subsistence, transformative nature, imagining wilds in the Anthropocene and pluralizing environmentalisms.
Credit 3 units. A&S IQ: SSC Art: CPSC, SSC BU: BA EN: S
Typical periods offered: Spring

ANTHRO 3616 Ecofeminism: Environmental Social Movements and Anthropology
This course provides a survey of environmental social movements around the world and over time, in the process challenging commonly held perceptions about environmentalism and environmental movements. Specifically, it demonstrates that environmental social movements are often as much or more about people, identity and human rights than they are about protecting the environment. In addition to juxtaposing dominant traditions of American environmentalism with environmental movements in other parts of the world, the course focuses in on new and emerging social movements that are often transnational in scope but local in scale. These new movements offer holistic reinterpretations of human-environment relationships, identities and political and economic organization in their attempts to transcend socio-environmental inequalities. Throughout, the course draws on social scientists' (especially anthropologists') descriptive interpretations and critical theoretical analyses of various environmental social movements and the differences that constitute them.
Credit 3 units. A&S IQ: SSC, SC Art: CPSC, SSC BU: BA EN: S
Typical periods offered: Fall

ANTHRO 3617 Past and Present Cultural Environments
Human societies are situated within and interact with their ecological and environmental systems. Even social relationships within and between groups imply spatial relationships and geographic orientation, advantages, influence, and limitations. Beyond subsistence, environment and the natural world play an integral role in how humans pattern the landscape, structure society, develop their world view, and, in turn, alter and adapt the world in which they live. This course introduces students to anthropological conceptions of human-environmental relationships, past and present. Topics include environmental and landscape archaeology; historical, political, and human behavioral ecology; world view and conceptualizations of nature; human adaptation, resilience theory, and niche construction; anthropological case studies; the intersections of humans, animals, and the environment; and end with environmental politics.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

ANTHRO 3618 Urban Ecological Anthropology
Anthropology's long history of studying human-environment interactions makes it well-suited to examine the complexities of urban environmental issues. Through ethnographies and other readings, this class introduces students to the ways social structures, power and knowledge contour people's experiences and understandings of nature in an urban environment. Of particular interest are environmental justice issues involving pollution and disasters; the creation of community gardens and other public space; cars and bicycles; and conservation or commercial uses of natural resources nestled in or on the edge of cities. Class discussion includes environmental issues in the St. Louis metropolitan area. No background in anthropology or environmental studies is required.
Credit 3 units. A&S IQ: LCD, SSC Art: CPSC, SSC BU: BA EN: S

Typical periods offered: Fall

ANTHRO 3619 Dimensions of Waste

Waste is not apolitical. Its conception, creation and management are deeply cultural practices. Students will learn how local stories integrate to larger, cutting-edge research on waste, gleaned from direct, in-person contact with leading waste scholars. Students will have direct contact with renowned experts visiting for the 2017-2018 Mellon Foundation Sawyer Seminar on Wastelands. Course content will draw from core texts in environmental anthropology and ecocritical theory. We will learn to analyze contemporary perspectives on waste by reading scholarly and activist texts (publications, author visits, blog posts, etc.) as not only disseminators of facts, but also as cultural artifacts of specific epistemologies of waste. Students' final project will be to produce a Mini-Documentary or Podcast using their own original fieldwork interviews to demonstrate the flows of waste in the local St. Louis community.

Credit 3 units. A&S IQ: SSC Art: CPSC, SSC BU: BA EN: S

Typical periods offered: Spring

ANTHRO 3620 Anthropological Perspectives on the Fetus

Where do we come from? How do we get here? When does life begin? Is the fetus a person, or something else? How could we decide? This course will integrate biological, medical, philosophical, and cross-cultural perspectives to examine how various societies (including our own) understand the nature of the human fetus. The course will examine basic human embryology, beliefs about conception and fetal development, ideas about the moral status of the fetus, controversies surrounding pre-natal care and ante-natal diagnostic testing (including sex-selection and genetic screening tests), current controversies about fetal medicine and surgery, and the problem of abortion in cross-cultural perspective.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA EN: S

Typical periods offered: Spring

ANTHRO 3621 Anthropology of Human Birth

This course will examine the interaction between human biology and culture in relation to childbirth. Emphasis will be placed on understanding the cultural challenges posed by the physiology of human reproduction, the ways various cultures have attempted to meet those challenges, and the resultant consequences that this has had for women's lives. The course will draw on material from human anatomy and embryology, paleoanthropology, clinical obstetrics, public health, social anthropology, the history of medicine, and contemporary bioethics.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: ETH EN: S

Typical periods offered: Fall, Spring

ANTHRO 3624 With Woman: Birth Assistants in Cross-Cultural Context

This course examines the historical, cultural, and evolutionary development vis-a-vis the role specialization of assistants at birth. Beginning with the discourse in physical anthropological research and theory justifying helpers as necessary in human birth due to the obstetrical dilemma, we explore the development of the various tasks such helpers have taken on. Cross-cultural case histories covering the range and scope of practice of traditional birth attendants, midwives, nurses, physicians, and kin are used to illustrate the wide variety of birth practices and ritual related to assistants at birth. Modes of professionalization are examined, including a discussion of the gendered nature of the position. Finally, sociocultural, political, and economic structural constraints legitimizing some assistants and stigmatizing others are scrutinized in order to promote a critical analysis and understanding of the essential and dynamic roles these health care practitioners play in human reproduction. Prerequisite: Freshman seminar in Medicine and Society (Anthro 141)

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

Typical periods offered: Spring

ANTHRO 3625 The Female Life-Cycle in Cross-Cultural Perspective

This course will examine the biology of the female reproductive cycle -- menarche, menstruation, and the menopause -- and its cultural interpretation around the world. Topics covered will include the embryology of human sexual differentiation, the biology of the menstrual cycle and how it influences or is influenced by various disease states, contraception, infertility, cultural taboos and beliefs about menstruation and menopause, etc. The course will utilize materials drawn from human biology, clinical gynecology, ethnography, social anthropology, and the history of medicine and will examine the interplay between female reproductive biology and culture around the world.

Credit 3 units. A&S IQ: LCD, NSM Art: NSM BU: SCI

Typical periods offered: Spring

ANTHRO 3626 Adventures in Nosology: The Nature and Meaning of Disease

What is a disease and how do you diagnose one? What are medicines and how, when, and for what purpose should they be used? These questions reflect universal human concerns, but the answers given to these questions have varied enormously in different times and places. The course will consider the nature of health, illness, disease and its treatment, beginning with a detailed examination of the traditional ethnomedical system of the Hausa people of northern Nigeria. Using this West African medical system as a baseline for comparison, the course will then explore the nature of nosology (the classification of diseases) and the underlying logic of different therapeutic systems in different times and cultures, including our own. The course will draw on ethnography, the history of medicine, bioethics, and human biology to understand how these questions are asked and answered in different societies, times and places.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: SCI EN: S

Typical periods offered: Fall, Spring

ANTHRO 3628 The Anthropology of Health Disparities

This course approaches the subjects of race, ethnicity, gender, sexuality and class-related health disparity epidemiologically and anthropologically. Students in this course will explore these cultural categories both as factors that contribute to systematic differences in health status and outcomes and as dynamic frameworks through which those systematic differences can be examined and understood. The grounding assumptions of this course are 1) that race, ethnicity, gender, sexuality and class are cultural constructs employed by humans in an effort to account for observed physical, dispositional and behavioral group-level diversity; 2) that disparity, and particularly health disparity, is meaningfully associated with diversity but is not caused by it; and 3) that because humans are the product of two dynamic, complex systems (biology and culture), health disparities are most usefully engaged as conditions of process and interconnectedness.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

Typical periods offered: Spring

ANTHRO 3656 Behavioral Ecology of the Great Apes

The goal of this course is to introduce students to the behavioral ecology and observational study of non-human great apes. Lectures and readings will provide an overview of the evolution, distribution, feeding ecology, social systems, behavior, conservation, and well-being of great apes. The comparative nature of course material will

gradually increase throughout the semester and students will be asked to synthesize this material on exams. Additionally, students will complete a course-based independent research project on a topic of their choosing at the Saint Louis Zoo, via live video webcams, or by using great ape video archives. Students' grades will be based on participation during in-class activities, midterm syntheses of comparative great ape behavioral ecology, and the production of an original research poster.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

Typical periods offered: Spring

ANTHRO 3660 Primate Ecology, Biology, and Behavior

This course will provide a comprehensive overview of the order Primates by investigating behavioral adaptations, life history characteristics, physiology, ecology, geographic distribution, social structure, taxonomy, and evolution. The course will cover all of the primate groups: apes, monkeys, tarsiers, and strepsirhines (e.g., lemurs). The importance of primate ecology, biology, and behavior to the discipline of anthropology -- particularly how social and environmental factors may have shaped human evolution -- will be discussed. This course will take an evolutionary approach and include the discussion of natural selection and other forces of evolution. Intended for students who have already taken Anthro 150A and recommended for students who wish to take the more advanced 400-level courses on primates. Prerequisite: Anthro 150A or permission of instructor.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Fall, Spring

ANTHRO 3661 Primate Biology

This course takes a multi-faceted introductory approach to the primates, the closest relatives of human beings, by investigating anatomy, growth and development, reproduction, behavioral adaptations, ecology, geographic distribution, taxonomy and evolution. Emphasis will be placed not only on the apes and monkeys, but also on the lesser-known lemurs, lorises, bushbabies, tarsiers, and many others. The importance of primate biology to the discipline of anthropology will be discussed. Intended for students who have already taken Anthro 150A, and recommended for students who wish to take the more advanced 400-level courses on primates. Prerequisite: Anthro 150A or permission of instructor.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Fall, Spring

ANTHRO 3662 Writing for Primate Conservation Biology

This class will focus on the ecological diversity of primates and how these and other traits are related to their present day abundance and distribution. In addition, the biological, abiotic and anthropogenic factors related to extinction risk will be examined. It will also review the endangered species of primates, case histories of conservation programs, and management practices in Asia, Africa, South America, and Madagascar. Prerequisites: Anthro 150 or Bio 2970, or permission of instructor.

Credit 3 units. A&S IQ: NSM, WI Art: NSM BU: SCI

Typical periods offered: Fall, Spring

ANTHRO 3665 Observing Animal Behavior At the St. Louis Zoo

This course is an introduction to methods for the collection of behavioral data in studies of animal behavior. Students will be trained in the design of research projects and the analysis and interpretation of behavioral data. Students will learn how different methods are used to answer specific questions in animal behavior research. Research will be conducted at the St. Louis Zoo.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Summer

ANTHRO 3666 Comparative Primate Socioecology

This course focuses on the interface between the behavior and ecology of non-human primates and its applications to primate conservation. We will examine how the basic principles of animal ecology can help us understand primate behavior. We will look at a wide range of primates from a comparative perspective as we explore primate habitats, diets, life histories and communities, social relationships, and much more. Because most primate species are threatened, endangered, or even facing extinction, we will also focus on how various aspects of ecology are used in the conservation of primates. We will draw heavily on field studies and particular research projects of primates and emphasize their behavior in natural environmental and social settings. The objectives of the course are: 1) to gain an understanding of principles of animal behavior by using primates as a model, 2) to understand variation in behavior and how ecology influences this variation in living primates, 3) to use the comparative approach to better understand why primate societies differ, 4) To understand how we address and answer questions about primate behavior through field research

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

Typical periods offered: Spring

ANTHRO 3668 Primate Social Behavior

Anthropologists have various tools to aid them in investigating the evolution of human behavior and human social systems, one of the most primary and basic of which is the study of nonhuman primates. The goal of this course is to provide an overview of nonhuman primate behavior and social systems, including aspects of primate biology, evolutionary theory, and socioecological theory. May not be counted toward the requirements for the major or minor in Psychology.

Credit 3 units. A&S IQ: SSC EN: S

Typical periods offered: Spring

ANTHRO 3691 Kill Assessment: An Investigation Into Death, Genocide, and Other Forms of Violence

Is violence best understood as a set of random acts marginal to society, or do societies need violence to make culture systematic and hierarchy functional? This course is not about the psychology of individual pathology; rather, we will think about violence as a potential category of culture. We will address two major issues throughout this course. First, we will discuss different types of violence: physical/material violence and symbolic violence. Second, we will become familiar with ways that social groups turn violence into an aesthetic object and an artistic project. To accomplish our task, we will take both an ethnographic and theoretical approach so that we may better ground our understanding of violence in various people's everyday experiences while at the same time developing a broader, more complete idea of what violence entails. Specific readings include the following topics: U.S. and Brazilian hip-hop; Puerto Rican reggaeton; video games; contemporary Latin American plastic arts; U.S. hate crimes; rape and other form of domestic violence; violence workers in Latin America; genocides in Rwanda, Guatemala, and Armenia; drug lords in Rio de Janeiro, Los Angeles, and Mogadishu, Somalia; and the legality of lethal injections for capital punishment in the United States.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA EN: S

Typical periods offered: Fall, Spring

ANTHRO 3692 Blood Feuds and Battlefields: The Archaeology of Warfare and Conflict

In this course we will explore the origins, causes and consequences of warfare in human societies. Our overall aim will be to gain a broad understanding of the range of variation in which warfare and human societies have influenced one another. The bulk of human history falls outside the scope of written records making archaeology a critical means of understanding our past. Through an examination of diverse

case studies students will gain an understanding of the various forms of violence and warfare carried out among and between human populations-from small-scale blood feuds among foraging and early agricultural societies to the large-scale warfare and territorial expansion undertaken by states and empires. Particular attention will be paid to the role of warfare in social and cultural change. We will also explore common themes in the archaeology of warfare including sacrifice and ritual violence, gender, and the depiction and commemoration of warfare in art, iconography and monumental architecture. Finally, we will consider how perceptions of past conflicts affect us in the present-day by examining the role that they continue to play in the present. Throughout the course we will remain respectful and mindful of our ethical responsibilities to descendant communities and the contemporary context for studying violence in the human past.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

ANTHRO 3693 Anthropology of Death, Mourning, and Burial
This course offers anthropological analysis of death, mourning and burial. It draws on data and theoretical explanations from different sub-disciplines of anthropology (archaeology, cultural anthropology, and physical anthropology). In addition to theoretical conceptualization of mortuary practices, specific case studies will be used to address a wide range of topics. The course covers cross-cultural comparison of burial among hunter-gatherers, pastoralists and complex societies. Mortuary practices will also be conceptualized based on religion and secularity, social organization and biological approaches (eg. paleodiet, paleodemography, disease). Ethical and legal issues of using human remains worldwide will also be addressed. This course will help train and stimulate academic enquiry into ancient and modern societal treatment of death around the globe. The time covered in this course ranges from the Lower Palaeolithic to the contemporary world.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S
Typical periods offered: Fall

ANTHRO 3697 Culture and Aging
This course provides an anthropological perspective on cultural and societal responses to the worldwide increase in numbers and proportions of longer-living adults. It also examines the experience and meaning of growing older within various cultural contexts. We will consider the impact of culture on a number of aging-related areas including: the demography of global aging; conceptualizations of the life course; processes of human development as reflected in life histories of persons from diverse cultures; definitions of successful aging; biological anthropology and aging; family and intergenerational relationships; health beliefs and perceptions of health and frailty; health care systems; perceptions and treatment of late life cognitive decline; gender differences; gerotechnology; globalization and aging; and end-of-life issues. Prerequisite: Two cultural anthropology courses; one anthropology course and one aging-related course; or instructor's written permission.
Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH EN: S
Typical periods offered: Fall

ANTHRO 3701 The Works and Ideas of Great Anthropologists
A survey of major theories and paradigms in anthropology; emphasis is on approaches taken by sociocultural anthropologists in analyzing and explaining features of societies and cultures, including evolutionary theories, comparative methods, interpretive approaches and ecological accounts. Required of all majors. Students considering a junior year abroad should enroll sophomore year.
Credit 3 units. A&S IQ: LCD, SSC BU: BA
Typical periods offered: Fall, Spring

ANTHRO 3740 Social Landscapes in Global View
From the beginning of the human campaign, societies have socialized the spaces and places where they live. This socialization comes in many forms, including the generation of sacred natural places (e.g., Mt. Fuji) to the construction of planned urban settings where culture is writ large in overt and subtle contexts. Over the past two decades or so, anthropologists, archaeologists, and geographers have developed a wide body of research concerning these socially constructed and perceived settings -- commonly known as landscapes. This course takes a tour through time and across the globe to trace the formation of diverse social landscapes, starting in prehistoric times and ending in modern times. We will cover various urban landscapes, rural landscapes, nomadic landscapes (and others) and the intersection of the natural environment, the built environments, and the symbolism that weaves them together. Chronologically, we will range from 3000 BCE to 2009 CE and we will cover all the continents. This course will also trace the intellectual history of the study of landscape as a social phenomenon, and will investigate the current methods used to recover and describe social landscapes around the world and through time. Join in situating your own social map alongside the most famous and the most obscure landscapes of the world and trace the global currents of your social landscape!
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, IS EN: S UColl: CD
Typical periods offered: Fall

ANTHRO 3774 Archaeology and History of Central Asia
This summer program entails 4 weeks of field-based archaeological research in the Dzhungar Mountains of Kazakhstan, including field trips to regional archaeological sites and excursions to explore the regional biology and geography. The course content is structured through practicum training as part of archaeological excavations at a 5000 year old pastoralist campsite located in a high mountain landscape. In addition to learning about the history and culture of the region, students will be trained in a variety of archaeological methods by rotating through various on-site scientific stations, including archaeological photography, paleoethnobotany, faunal analysis, rock-art analysis, mapping and landscape survey, GIS, and much more! The course program also includes a series of pre-departure sessions to provide cultural, linguistic, historical, and logistical preparation.
Credit 6 units. A&S IQ: SSC EN: S
Typical periods offered: Summer

ANTHRO 3775 Ancient Eurasia and the New Silk Roads
This course will explore the rise of civilization in the broad region of Eurasia, spanning from the eastern edges of Europe to the western edges of China. The focus of the course is the unique trajectory of civilization that is made evident in the region of Central Eurasia from roughly 6000 BC to the historical era (ca. AD 250). In addition to this ancient focus, the course aims to relate many of the most historically durable characteristics of the region to contemporary developments of the past two or three centuries. Fundamentally, this course asks us to reconceptualize the notion of civilization from the perspective of societies whose dominant forms of organization defied typical classifications such as states or empires and, instead, shaped a wholly different social order over the past 5000 years or more. This class provides a well-rounded experience of the geography, social organization, and social interconnections of one of the most essential and pivotal regions in world history and contemporary political discourse.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS EN: S
Typical periods offered: Fall

ANTHRO 3793 Mississippi River Basin: Past, Present, and Future
Interdisciplinary study of the past, present, and future of the Mississippi River Basin. Using lectures, guest presentations, and field trips, the course provides a broad overview of the important natural, historical, social, cultural, and environmental issues surrounding the Mississippi River and its tributaries. We encourage an understanding and appreciation of the river from a holistic perspective. An emphasis in the course is on experiential learning, or out-of classroom field trips, where students have the opportunity to see, firsthand, important issues related to the Mississippi River, its environment, culture, and the historic changes wrought upon the River, and their effects. The class meets once a week; classes will include some combination of lecture, presentations by guest speakers, or field trips. During Spring break we will take a field trip down the Mississippi River to the Gulf of Mexico (students will be charged an extra fee for this field trip).
Credit 4 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 3796 Meltdown: The Archaeology of Climate Change
This course examines the temporal, geographical, and environmental aspects of past climate changes, and by using specific examples, explores how climate changes may have affected the evolution of human culture and the course of human history. Archaeological and documentary examples from the Americas, Africa, Asia, Europe, and the Near East will be used to explore if or how significant events in human history have been influenced by changes in climate.
Credit 3 units. A&S IQ: SSC Art: SSC BU: IS EN: S
Typical periods offered: Fall

ANTHRO 3797 Anthropology and Climate Change: Past, Present, and Future
This course provides an overview for interplay between humanity and global climate change that encompasses three-field anthropological subjects. Course material includes the role of climate change in shaping human evolution, human solutions to climatic challenges through time, the impact of human activities on the climate, and modern socio-cultural examinations of how climate change is affecting the lives of people around the world.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

ANTHRO 3833 Performance and Healing: The Politics of Health Representation
The purpose of this course is to bridge the disciplines of medical anthropology, global public health, and medical humanities through deep consideration of how variegated knowledge about health, healing, and illness is produced and performed in a variety of public forums. Students will explore the ways in which knowledge is produced about particular global health topics through representation in text, image, sound, film/television, and live performance art. Using interdisciplinary theory and methods, this course answers the following questions: why are these representation modalities important, and how do we analyze them in practice? Drawing on the fields of medical anthropology, media studies, global public health, and performance studies, this course elucidates the relationships between knowledge production, representation, discourse, health, and power through three case studies. Case study topics include: HIV/AIDS, Heroin Injection Use, and Domestic and Sexual Violence. Although the course provides an interdisciplinary perspective for understanding and analyzing different ways of representing illness and healing, it is also deeply grounded within the political-economy of health framework of critical medical anthropology. The following topics will be central to our analyses in this class: gender, sexuality, the body, class, ethnicity, and language.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

ANTHRO 3842 Anthropology of America -- Intermediate I
Anthropological studies of American cultures and subcultures, examined at an intermediate level. Most attention to ethnographies of ethnic and national origin subcultures, to uses of ethnicity, to ways of coping with mainstream American culture. Read one book and write one book analysis each week. Thursday lectures, Tuesday discussions. Section enrollment on Tuesdays required. Prerequisite: Anthro 160B.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA
Typical periods offered: Fall

ANTHRO 3844 Cultures in Contact: The Anthropology of Travel, Trade, and Transformation
This course looks at past and present interactions of people with the idea that people meet, greet, listen, process, and react to one another as part of larger networks and processes that bring worlds together. Cultural contact is not just about warfare, not just about the Olympics, not just about McDonalds; cultural contact involves people in time, space, and history where political motives, racism, religious conviction, personal gain, and curiosity all play part. This seeking of new knowledge has led us to cross seas and borders throughout prehistory. What motivates people to explore? And what happens when they do?
Credit 3 units. A&S IQ: LCD, SSC EN: S
Typical periods offered: Summer

ANTHRO 3860 Sports, Health, and Society
Sports is a lens onto social issues of health, fitness, and the body. Case studies in this course deal with injury and abuse, the role of medicine and pharmaceuticals, corporations and mass media, gendered aggression, doping scandals, disabled athletes, trans athletes, and video games, among other topics. A wide range of sports will be covered, including basketball, American football, college athletics, sumo wrestling, martial arts, ordinary activities like running and exercise, and mass spectacles such as the Olympics. By adopting cross-cultural and intersectional approaches, this course will consider how race, gender, and other social contrasts shape ableisms, body norms, violences, and hard-driving business interests in sports and society.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall

ANTHRO 3862 Biocultural Perspectives on Children
As childhood is both a biological phenomenon and a social construct, this course examines childhood both across cultures and from biosocial perspectives. Lectures and readings will use case materials from around the globe. We will start by examining basic Darwinian concepts and explore childhood in a variety of cultural settings. The course will be broken down into four major areas of interest: human evolution, sociology/social anthropology, biological anthropology, and developmental psychology. The goal is to form a biosocial and cross-cultural understanding of children. We will place strong emphasis on how childhood, a uniquely human life stage, varies from culture to culture, and on issues relating to physical and social development of children. Examples will come from both the north and the south, as well as from other species.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, IS EN: S
Typical periods offered: Spring

ANTHRO 3870 Science and Society
Encounters with science are ubiquitous in daily life. We read papers hailing scientists' most recent achievements. We adjust our lifestyles to their findings, and we sometimes even allow them to change our beliefs about the world. As students, we learn about the scientific method, run labs, and memorize facts and equations. This course

invites students to estrange themselves from these familiar scenes by challenging some assumptions about what science is and how it works. In the course, we launch from the premise that science is itself a cultural activity, permeated by social norms and values. Surveying a rich, cross-disciplinary literature, the course thus aims to unpack the deep imbrications between science, society, technology, economy, and politics from the perspective of the field of science and technology studies.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

Typical periods offered: Fall, Spring

ANTHRO 3871 Darwinian Medicine

This course explores the fundamental relationship of evolutionary theory to the art and science of medicine, broadly defined. By considering human health and disease from an evolutionary perspective, modern medicine is gaining new insights into why diseases occur, and how the human body is adapted to respond to them. Readings and lectures emphasize the impact of evolutionary causes rather than proximate causes of disease. This course will introduce evolutionary perspectives on aspects of disease, while considering other aspects of common diseases including social, political, and cultural aspects of human health and illness. Students will gain a deeper appreciation about human health, and acquire information that may also help to make critical health care decisions. Prerequisites: Anthro 150 and Anthro 160, or permission of instructor.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

Typical periods offered: Fall

ANTHRO 3872 Anthropology of Health and Healing

This course uses an anthropological perspective to examine global health and illness by focusing on systems, substances and techniques of healing. The student is presented with information from a variety of cultures designed to introduce basic principles and methods used in the discipline of medical anthropology. Concepts fundamental to the study of health and disease in cross-cultural contexts are explored via case histories that facilitate a holistic and comparative understanding of the rich diversity of human experience. The relationship between biology and culture is emphasized, along with the manner in which politics, economics, and social structure influence the choices people make in their efforts to diagnose, treat, and cure illness and disease and to promote health.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

Typical periods offered: Fall

ANTHRO 3873 Human Energetics and Physiology

A survey of human physiology, with a focus on energetics. Introductory lectures will focus on the importance of energetics in biology and evolution. We then explore basic human physiology, including growth and development, neurophysiology, respiration, digestion, locomotion, and reproduction, investigating both how these processes work, and how they fit into the evolved human strategy for growth, survival, and reproduction. Prerequisite: Anthro 150A or permission of instructor.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Fall, Spring

ANTHRO 3874 International Public Health

This course explores current topics in international public health using a case-study-based approach, emphasizing public health issues affecting low-and middle-income countries; introduction to the tools and methods of international public health research and programs; in-depth examination and critique of the roles of local and national governments, international agencies, and third-party donors in international public health work; and the contributions of anthropology to the international public health agenda.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

Typical periods offered: Spring

ANTHRO 3875 Pharmaceutical Personhood

This course examines sociocultural dimensions of pharmaceutical production and consumption in the contemporary world. Pharmaceuticals have brought remarkable promises. Their consumption also reflects various social inequalities and substantial transformations in human experience that demand critical attention. We examine the history and global reach of the pharmaceutical industry, the content of pharmaceutical advertising, and pharmaceutical use in the treatment of various kinds of illness, including common mental disorders, post-traumatic experience, chronic illness, eating disorders, and lifestyle disorders. Case studies are drawn from diverse societies. We also explore various angles of public criticism about the pharmaceutical industry. No background in anthropology is required.

Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH EN: S

Typical periods offered: Fall

ANTHRO 3876 Darwin and Doctors: Evolutionary Medicine and Health

Back pain, diabetes, obesity, colds, even morning sickness. These are all common human health problems. But have you ever wondered why we have these and other health conditions? In this class, we will investigate this question - and others - specifically using evolutionary theory to inform current understandings of contemporary health problems.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Fall

ANTHRO 3880 Multispecies Worlds: Animals, Global Health, and Environment

Amid escalating global environmental and health crises that impact all forms of life, this course critically considers the diverse relationships of humans with other forms of life and varied ecological systems. Although anthropology has long studied humans' use of and impact on environments, anthropologists have begun to increase their focus on human-animal cohabitations, engagements, and shared cultures and worlds. This seminar looks at how diverse contemporary contexts -- such as zoos, farms, forests, and laboratories -- involve fascinating human-animal relationships and contentious implications for ethics, health, and ecology. In investigating how animals are central to scientific knowledge production, debates about animal welfare, environmental sustainability issues, companionship and pets, entertainment and sports, and zoonic disease, we will explore the possibility for more richly understanding the world by fully appreciating species diversity and interconnectivity.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

Typical periods offered: Spring

ANTHRO 3881 Disability and Culture

This course will examine how anthropological theory and methods contribute to the understanding of disability and adaptation to chronic health conditions. Areas to be covered will include: belief and ethnomedical systems, social construction of illness and disability, ethnicity and health care, cultural influences on everyday competence, decision-making and symptom management, family caregiving, cultural influences on patterns of help-seeking, stigma and coping with chronic illness, and the disability rights movement.

Credit 3 units. A&S IQ: SSC Art: SSC

Typical periods offered: Spring

ANTHRO 3882 Psychological Anthropology
The objective of this course is to introduce students to the central topics and methods of psychological anthroplogy. Psychological anthropology is concerned with the interplay of psychology and culture on both the individual and group levels. We will look cross-culturally at such topics as child and adolescent development, religious experience, illness and healing, self and identity, gender and sexuality, reasoning and symbolism, and psychopathology. This class draws upon a range of sources, including ethnographies, psychoanalytic theory, contemporary critical theory, and cross-cultural materials.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

ANTHRO 3884 Regulating Reproduction: Morality, Politics and (In)justice
This course centers on the burgeoning corpus of anthropological scholarship on reproduction, with special attention to the regulation of reproductive behaviors and population management in cross-cultural perspective. Anthropologists and feminist scholars have shown how reproduction-which links individual bodies to the body politic-is a privileged site for processes of governance. Scholars have also shown how seemingly personal reproductive choices made in the micro units of families, are always bound up with broader, if obscured, economic, national, and political projects. In this course, we will cover how diverse entities, including the state, the Church, NGO's and feminist groups, seek to manage reproductive behaviors and politics across the world. We will discuss population control campaigns (such as China's notorious one-child policy) and pronatalist population policies (like those seen in Israel) in order to underscore how the management of fertility becomes a crucial site for nationalist and state-building projects. In this course we examine processes of reproductive governance around topics including pregnancy and birth, family planning, abortion, and adoption. We also examine how the global proliferation of Assisted Reproductive Technologies (such as in vitro, sonogram, abortifacient pills, amniocentesis) intersects with efforts to govern reproduction. Crucially, we take class and race as key axes through which reproduction is experienced and stratified in diverse contexts. At the end of this course students should have a solid grasp of key topics and themes in the anthropology of reproductive governance, as well as more in-depth knowledge of a particular controversial reproductive issue that they choose to focus on for their final research paper.
Credit 3 units. A&S IQ: SSC, SC EN: S
Typical periods offered: Fall

ANTHRO 3885 Global Mental Health
What does global mental health mean for different actors and stakeholders? This course will examine the history, interventions, and critiques of global mental health. We will explore how diagnosis, distress, and treatment are experienced in different cultural and geographic contexts. Moreover, we will consider how biomedical psychiatry complements and conflicts with other forms of healing expertise. We will also consider mental health disparities, and critically reflect on the successes and challenges of global mental health interventions. This course will draw on materials from different disciplines, including anthropology, public health, psychiatry, social work, long form journalism, and guest speakers to examine topics in global mental health, such gender and sexuality, migration and displacement, environmental determinants and climate change, and global crises like COVID-19. Our course materials will draw on research carried out in a variety of locations, including the United States, India, Iran, Italy, Botswana, Brazil, and Thailand.
Credit 3 units. A&S IQ: LCD, SSC BU: BA, IS EN: S
Typical periods offered: Fall, Spring, Summer

ANTHRO 3886 The Anthropology of Mental Health
The psyche-what goes on in your head and others'- is an ineffable part of the human experience. It produces the most profound feelings of pain and pleasure and includes everything from memory and trauma to desire and fantasy. But it also responds to things in the real world: racism, poverty, social inequality, and ecological catastrophe. It informs our behavior, and it is informed by the material conditions around us. When things go wrong in the psyche, we now call them mental illnesses. But it's not always clear whether their causes are internal and 'organic' or 'socially constructed' by external factors and labels. Often, both forces are at play. In this exploratory course we will work to develop a new language for understanding the psyche as it operates in the 21st century. We will read widely and generously from sources on the history and culture of mental health and mental illness, as well as ethnographies of its related institutions. Our goal is to bring together both anthropological theory and applied ethical insights from the legitimate scientific discoveries of psychology, psychiatry, and psychoanalysis.
Credit 3 units.
Typical periods offered: Fall, Spring

ANTHRO 3887 American Indians and American Empire
This course critically explores the past and present struggles of Native Americans against white settler colonialism. We trace connections between U.S. domestic policy and imperialist ideologies, politics, and violent war from the United States to the Philippines to Latin America and the Middle East. By reading work by Native American and non-Native scholars, writers, and activists, we will consider how issues of race, class, gender and sexuality, violence, policing and militarism, nature, education, language, and sovereignty are intertwined with coloniality, forms of anti-colonial resistance, and the making of decolonized futures. Readings will be interdisciplinary, drawing on anthropology, history, politics, and literature. Students will develop research projects through case studies of their choosing.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, IS EN: S
Typical periods offered: Fall, Spring

ANTHRO 3888 The Anthropology of Development
This course begins with the major development theories from the end of WWII to the present. A critical review of these theories reveals that the relationship between the rhetoric and practice of development is tenuous at best. Development practice is too often driven by relationships, attitudes, and motives that are seldom addressed in the discourse of international development. A second major theme will be the role of anthropologists in the development project, and anthropological critiques of development. Special emphasis will be placed upon contemporary approaches, especially ideas of participation and empowerment and the institution of NGOs (Non-Government Organizations). Prerequisite: L48-160BQ or permission of instructor.
Credit 3 units. A&S IQ: SSC Art: SSC
Typical periods offered: Spring

ANTHRO 3889 Rich Nations and Poor Nations
Course begins with an examination of equality in small scale societies and proceeds to a study of the causes underlying the current wealth gap between the developed world and underdeveloped Third World. Last half of course focuses on the wealth gap within poor nations and examines problems of urban and rural development. Prerequisite: Anthro 160BQ or permission of instructor.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, IS
Typical periods offered: Fall, Spring

ANTHRO 3900 Intermediate Directed Research
This course level is typically taken by juniors or seniors during their first semester in the lab, or by advanced freshmen and sophomores. The expectations of a 300-level directed research project will be greater than those of a 200 level directed research. Student participation in research activities should include higher-level participation, including completing literature reviews, running complex assays, or similar work. The student is expected to be proficient in the appropriate research techniques of a lab, familiar with relevant literatures surrounding the project, and capable of working with minimal supervision. There should be some form of final evaluation or project, but an independent research project is not necessary. May be taken for 1-3 credit hours, 1-2 recommended. Students must enroll in a specific section with a faculty member and receive approval from the department.
Credit 3 units.
Typical periods offered: Fall, Spring

ANTHRO 3916 Archaeology Field School At Kampsville
Requires permission of Department by application prior to May 15. Work will be done during the summer months at Kampsville, Illinois. Variable credit of 3-9 units.
Credit 9 units.
Typical periods offered: Summer

ANTHRO 3990 Undergraduate Teaching Assistant
Open to advanced undergraduates only. Usual duties of teaching assistant in laboratory or other selected courses. Prerequisite: Permission of instructor.
Credit 3 units.
Typical periods offered: Fall, Spring

ANTHRO 3992 Archaeology Field School in China
Requires permission of department by application prior to April 15. Involves work in China during the months of June and July. Variable credit 3 - 6 units.
Credit 6 units. A&S IQ: SSC Art: SSC
Typical periods offered: Summer

ANTHRO 3993 Introduction to Archaeological Field Techniques
This session will run from June 11, 2018-June 29, 2018. Introduction to archaeological fieldwork. Includes a variety of techniques employed by archaeologists, the underlying purpose of excavations, and the manner in which they are used to explore past societies. Field mapping and testing an archaeolgocial site near Cahokia Mounds links this project to ongoing excavations with other institutions and relates it to the Redefining Cahokia project.
Credit 3 units. A&S IQ: HUM, SSC Art: SSC BU: HUM EN: S
Typical periods offered: Summer

ANTHRO 3994 An Introduction to Archaeological Site Survey
The study and interpretation of the archaeological record begins in most instances with an archaeological survey. The purpose of this course is to provide students with an introductory level, hands-on experience to archaeological survey as practiced in eastern North America. This involves an introduction in the field to the various methods employed in the identification and mapping of archaeological sites. Students will spend Saturdays in the field mapping and recording archaeological sites including the mapping of monumental earthworks such as those at the prehistoric site of Cahokia or nearby mound centers.
Credit 3 units. A&S IQ: HUM, SSC Art: SSC BU: HUM EN: S
Typical periods offered: Fall, Spring, Summer

ANTHRO 3995 Anthropology Coursework Completed Abroad
Study Abroad
Credit 12 units.
Typical periods offered: Fall, Spring

ANTHRO 3996 Anthropology Elective: 300-Level
External transfer credit
Credit 3 units. EN: S
Typical periods offered: Fall, Spring, Summer

ANTHRO 3997 Anthropology Environment Study Abroad Coursework
Study Abroad
Credit 0 units.
Typical periods offered: Fall, Spring

ANTHRO 3998 Anthropology Global Health Study Abroad Coursework
Global Studies Study Abroa
Credit 0 units.
Typical periods offered: Fall, Spring

ANTHRO 3999 Class Mentor
Classroom instructional assistance through mentoring activities assigned by instructor. Limited to advanced undergraduates only. Permission of instructor required. Class mentors will contribute to the intellectual development and/or pedagogical design. This is a more rigorous commitment that requires the production of additional course material or responsibilities compared to L48 Anthro 399; Undergraduate Teaching Assistant. Prerequisite: Permission of instructor.
Credit 3 units.
Typical periods offered: Fall, Spring

ANTHRO 4005 The Evolutionary and Health Impacts of Human Parasite Infection
Are parasites old friends or enemies we have been combatting for as long as humans have been around? Throughout our evolutionary history, humans have constantly interactedwith parasites and other organisms that make their homes in our bodies. How did these relationships evolve and how does variation in social and economic factors alter human infection risk? Why do some parasite infections cause severe illness while other are often unnoticed? How might an evolutionary understanding of human-parasite relationships help us improve health outcomes? This class will explore these questions and more as we investigate how parasites have affected human evolution and health. Pre-requisites: L48 307A or equivalent highly recommended.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

ANTHRO 4010 Evolution of Non-Human Primates
Discussion and analysis of primate evolution with emphasis on comparative and functional anatomy and primate paleontology. Prerequisite: permission of instructor.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

ANTHRO 4011 Popular Culture and Consumption in Modern China
This writing-intensive seminar explores transformations in popular culture and everyday life in Chinese society since 1949 through an analytical focus on political economy and material culture. Drawing upon ethnographic texts, films, and material artifacts, we will investigate how the forces of state control and global capitalism converge to shape consumer desires and everyday habits in contemporary China. Case studies include eating habits, fashion standards, housing trends, entertainment, sports, and counterfeit goods. Prerequisite: previous course in China studies (anthropology, economics, history, literature, philosophy, or political science) required. Enrollment by instructor approval only.
Credit 3 units. A&S IQ: LCD, SSC, WI Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4015 Guided Readings in Global Health: Life in Crisis
This asynchronous reading course explores anthropological insights on global health crises, applying them to the current COVID-19 pandemic. The class will cover theoretical questions of crisis, states of emergency, and anticipation and preparedness, as well as survey recent ethnographies of biosecurity, epidemics (including ebola), and global humanitarianism. The online course will include: reading electronic resources, following prerecorded content overviews, Canvas posts, and peer-to-peer online engagement.
Credit 1.5 units. A&S IQ: SSC
Typical periods offered: Spring

ANTHRO 4016 Guided Readings in Medical Anthropology
Weekly readings and discussions on the anthropological perspectives of biomedicine culminating in a comparative essay at the end of the semester.
Credit 1.5 units.
Typical periods offered: Spring

ANTHRO 4017 Guided Readings in Environmental Anthropology: Placemaking St. Louis
This course explores how our cultural, historical, intellectual, and affective relationships with St. Louis create a sense of place (who we are, which communities we join, and where we belong). We will also study how urban and suburban landscapes influence others' experiences of natural and built environments. Assigned ethnographic texts explore the problem (and promise) of local placemaking amidst national and global problems such as economic segregation, environmental racism, and rapid technological and industrial change. Writing projects will inform and enrich our analysis of recent direct political action in and around St. Louis as we seek to understand and interpret the city anew.
Credit 1.5 units. A&S IQ: SSC
Typical periods offered: Spring

ANTHRO 4022 Transnational Reproductive Health Issues: Meanings, Technologies, Practices
This course covers recent scholarship on gender and reproductive health, including such issues as reproduction and the disciplinary power of the state, contested reproductive relations within families and communities, and the implications of global flows of biotechnology, population, and information for reproductive strategies at the local level. We will also explore how transnational migration and globalization have shaped reproductive health, the diverse meanings associated with reproductive processes, and decisions concerning reproduction. Reproduction will serve as a focus to illuminate the cultural politics of gender, power, and sexuality.
Credit 3 units. A&S IQ: LCD, SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Spring

ANTHRO 4030 Archaeology and Early Ethnography of the Southwest
This course integrates archaeological, historical, and early ethnographic dimensions of American Indian societies in the southwestern United States and northwest Mexico, a region famous for its challenging environment, cultural diversity, and the contributions made by its Native inhabitants. Emphasis is placed on the development of sophisticated desert agriculture and on the rise of regionally integrated cultures including Chaco Canyon and Mesa Verde. The impact of Spanish, Mexican, and American colonization are explored. Ethnographies of Tohono O'odham (Papago), Hopi, Zuni, Rio Grande Pueblo, and Navajo societies will be discussed.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S
Typical periods offered: Fall, Spring

ANTHRO 4031 Gender and Labor Politics in East Asia
The course explores anthropological and historical approaches to work and labor through a focus on East Asian women's experiences of labor force participation. We will ask how gender ideologies, kinship patterns, national politics and global economic transformations shape the meaning of work and labor for different groups of women over time by analyzing the linked nexus of factory work, sex work, and service work. We will examine how anthropologists, historians, and sociologists have studied issues of class, resistance, industrialization, and urbanization in the East Asian context. Readings will focus on Japan, China, South Korea, Taiwan, and Hong Kong. Prerequisites: Anthro 160B or permission of instructor.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4033 Culture, Illness, and Healing in Asia
This course examines the place of health, illness, and healing in Asian societies. We will explore how people experience, narrate, and respond to illness and other forms of suffering - including political violence, extreme poverty, and health inequalities. In lectures and discussions we will discuss major changes that medicine and public health are undergoing and how those changes affect the training of practitioners, health care policy, clinical practice and ethics. The course will familiarize students with key concepts and approaches in medical anthropology by considering case studies from a number of social settings including China, India, Indonesia,Japan, Korea, Taiwan, Tibet, Thailand, Vietnam and Asian immigrants in the United States. We will also investigate the sociocultural dimensions of illness and the medicalization of social problems in Asia, examining how gender, ethnicity, socioeconomic status, disability and other forms of social difference affect medical knowledge and disease outcomes. This course is intended for anthropology majors, students considering careers in medicine and public health, and others interested in learning how anthropology can help us understand human suffering and formulate more effective interventions.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4040 Political Anthropology
Political systems of small-scale, peasant, and modernizing societies. Emphasis on social control; decision-making processes; and the social, economic, and ideological sources of political power.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4041 Islam and Politics
Blending history and ethnography, this course covers politics in the Islamic world in historical and contemporary times. Topics include history of Islam, uniformity and diversity in belief and practice (global patterns, local realities), revolution and social change, women and veiling, and the international dimensions of resurgent Islam. Geographical focus extends from Morocco to Indonesia; discussion of other Muslim communities is included (Bosnia, Chechnya, sub-Saharan Africa, U.S.)
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS
Typical periods offered: Fall

ANTHRO 4044 The Politics of Secularism
Secularism is broadly understood as the separation of religion and politics; the West is thought to be secular, the non-West (and especially the Muslim world) decidedly less so. This course asks what exactly secularism is by examining it both as a political doctrine and a practice of government. Some questions we will consider include: What are the conceptual origins of the doctrine of separation of church and state on which most Western liberal democracies are based? What notion of religion is necessary for secular governance? What is the relationship of the secular to particular discourses of citizenship and practices of political rule? What forms of moral and political inclusion and exclusion does secularism enact? To answer these questions, we will consider a series of historical and contemporary case studies, including the effects of colonial rule on religious and political life in South Asia; Jewish emancipation in Germany and France; secularism in France and the United States; and the recent emergence of and responses to Islamic movements in the Middle East and Europe.

ANTHRO 4046 Primate Ecology and Social Structure
Survey of the ecology, individual and social behavior, adaptations, and interactions of the major groups of primates. Emphasis on studies designed to examine the relationships among ecology, morphophysiology, and behavior. Methods used in collecting data on primates in the field. Prerequisite: Anth 150A or one 100-level biology course.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall, Spring

ANTHRO 4053 The Archaeology of Politics and the Politics of Archaeology
How we study, interpret, present, and preserve the past is never isolated from broader concerns in society. In the currently polarized environment, the meaning of history and cultural heritage has taken on an unavoidable salience in political discourse. What is at stake is the ability to set the terms of conversations about national identity, cultural patrimony, illicit antiquities, war, and natural resource extraction, among many others. This course therefore addresses three questions: (1) how do archaeologists study politics in the past, (2) how does archaeological knowledge figure into politics (3) how is the creation of knowledge about the past inflected by present-day politics? To answer these questions, we will engage with a range of exemplary case studies that reveal the breadth and depth of the ways that scholars have examined the political in archaeology. Central themes in this course will concern archaeological methods and theory for studying ancient polities and political action in the past, conflict within and between polities, the use and abuse of archaeological knowledge, archaeology and nationalism, colonialism, the political economy of archaeological fieldwork, labor in and as a subject of archaeological research, archaeology and public policy, as well as archaeology as a form of political action. We will confront numerous challenging topics, with the perspective that archaeology is far from a dusty esoteric pursuit, but rather a terrain of meaningful struggle between experts, funders, stakeholders, descendant communities, state bureaucracies, institutions, and a range of publics. Students will gain an in depth understanding of both how archaeologists have valuable knowledge to contribute to the study of politics as such as well as the political issues facing archaeology in the world today.

Typical periods offered: Spring

ANTHRO 4061 Primate Community Ecology
This class will examine the ecology and evolution of primate communities in Africa, Asia, Madagascar, and the Neotropics. Topics to be discussed include: species coexistence; climatic, evolutionary and anthropogenic effects on community structure; conservation biology; paleoecology and fossils; social behavior; species richness and macroecology; analytical techniques for community, and large-scale ecological data.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

ANTHRO 4081 Evolutionary Human Anatomy
Human anatomy as seen through an evolutionary perspective. The course will discuss the human fossil record concerning major anatomical systems (e.g., evolution of the brain, musculoskeletal system, nervous system, etc.). Prerequisite: Anth 150A, Bio 100A, or permission of instructor.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall, Spring

ANTHRO 4082 Origin of Evolutionary Thought
This course provides and in-depth introduction to classic works in evolutionary biology and evolutionary anthropology. Students will read primary as well as some secondary sources and be expected to discuss those materials each week in class. Students should expect a very heavy reading load, and should plan on reading the assignments throughout the week.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Spring

ANTHRO 4092 Vertical Civilization: Andean Archaeology and Andean Environments, From Monte Verde to the Inkas
Western South America is a land of environmental extremes - a realm where the world's driest desert, second-highest mountain chain, and largest rain forest rub shoulders with one another. Yet within this mosaic of diverse landscapes, human societies developed the hemisphere's earliest innovations in agriculture, monumental architecture, and metallurgy - as well as one of the ancient world's greatest empires, the Inka. This course offers an introduction to Andean prehistory, from the peopling of South America circa 13,000 B.P. to the Spanish Invasion of the 16th Century C.E. Throughout, we seek to understand the challenges that Andean environments presented to human societies and the often unique solutions that Andean peoples developed to deal with risk and to make sense of the world around them. Course lectures and discussions focus on recent research and major debates in Andean prehistory. Although our primary geographic focus follows the spine of the Andes from northern Ecuador to Central Chile (mapping out the maximum extent of Inka hegemony), we will frequently visit the Amazonian lowlands, as well as the southern and northern limits of the continent.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4100 Topics in Anthropology: Humanitarianism
This course offers a critical perspective on the field of humanitarianism-the humanitarian ethos or desire to help those in need as well as the humanitarian norms and practices that guide such interventions. What does it mean to help others, and why (and when) do people choose to do so? When is helping others a moral imperative? Why are some lives saved while others are left to suffer? The course introduces the historical, legal, and political foundations of humanitarian response and investigates into the practices, contexts, and effects of humanitarian intervention. Course content will critically examine humanitarian interventions amid medical, environmental, and conflict contexts and inquire into humanitarian temporalities, spaces, politics, ethics, and care.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

ANTHRO 4102 Latin America and the Rise of the Global South
The rise of the global south - and the reordering of global geopolitics, economics and cultural imaginaries - is characterized by progressive change and intense conflict. Economic growth coincides with the impacts of global warming, the assault on natural resources, the rise of new consumers and the entrenchment of deep inequalities. We also see the emergence of cultural and political formations that range from the horrific to the inspiring. Latin America is a central node of the new global south. Here history takes unpredictable turns in the face of declining U.S. hegemony, the economic growth of Brazil, legacies of militarism and political violence, a feverish attack on nature, resurgent economic nationalism, and defiant anti-globalization movements. Through close reading of contemporary ethnographies of Latin America we explore emergent cultural and political-economic processes in the region, we consider south-south articulations (theoretical, cultural, political-economic) between Latin America, China, Africa, and India, and we reflect on the changing role, meaning, and relationships of the United States in the region.

ANTHRO 4104 Topics in Anthropology:
A course covering topics in one of the three subdisciplines of anthropology
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

ANTHRO 4106 Topics in Anthropology: Biomechanics
Humans, like all organisms, live and evolved in a world that is governed by the rules of physics. Such an engineered world has undoubtedly had a profound impact on the human evolutionary trajectory. Biomechanics is the science of understanding the natural world around us in a mechanistic fashion, and it has become a major pillar in investigating the human form and function. Understanding how humans and our closest relatives behave in and interact with the physical world can lead to novel insights into the evolution of complex traits; such understanding can come from investigating the mechanics of tissues and structures of the human body or understanding the principles of movement and locomotion. Through lectures, discussions, and hands-on experience, this course will explain biomechanical terms and principles to demonstrate how this discipline has contributed to biological anthropology.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Spring

ANTHRO 4107 Topics in Archaeology: Archaeology of the Living World
As anthropologists, archaeologists are familiar with the animate nature of reality as experienced by most people at most times in human history. Guided by such reality, people create material patterns that challenge archaeologists to identify them by attempting to elucidate what the makers might have experienced and intended, not what modern scientists might see through the lens of a clear division between animate and inanimate material. Increasingly, the default position of ignoring this challenge because it is difficult to make convincing arguments regarding the esoteric knowledge generating patterns in an animate world is no longer acceptable, morally or practically. This course explores some of the work archaeologists are undertaking to advance knowledge of past realities experienced by people generating material records we that can study from the perspective of relations between people and things of a mutually constitutive nature.

Typical periods offered: Fall

ANTHRO 4110 Pushing Daisies: The Anthropology of Death and Dying
This course examines the dying process and the ways humans around the world come to terms with their mortality. We will critically analyze controversial issues regarding brain death, suicide, euthanasia, and organ donation. We will survey funerary traditions from a variety of cultures and compare the social, spiritual, and psychological roles that these rituals play for both the living and the dying. We will examine cultural attitudes toward death and how the denial and awareness of human mortality can shape social practices and institutions. Finally, we will consider issues regarding quality of life, the opportunities and challenges of caregiving, and hospice traditions around the world. This course will include readings and films about individuals and groups, both in the United States and around the world, as well as guest speakers (hospice workers, home aides, organ donation facilitators, counselors) who will talk about issues related to end-of-life health and caretaking issues in and around St Louis.
Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH EN: S
Typical periods offered: Spring

ANTHRO 4111 Households and Families in Cross-Cultural Perspective
Examines the social, political and economic implications of various strategies of family and household organization. This course raises questions about the conditions under which members of families and households cooperate with one another and addresses the potential sources of conflict within families and households. Includes discussion of marital relationships,parent-child relationships, adoption and fictive kinship, and relationships among children. Addresses theoretical and methodological debates concerning family and household research.
Credit 3 units. A&S IQ: SSC Art: SSC
Typical periods offered: Fall

ANTHRO 4114 Anthropology and Existentialism
This course examines what it means to be human. Drawing on existentialist philosophy and ethnography, this course is about appreciating the richness, the deep emotional tone, and also the dangers of human experience. Case studies look at profound aspects

of existence, like suffering, healing, mercy, and hope, across diverse cultures. Specific themes covered include the ordinary life, how we perceive the world around us, the feeling of being at home and senses of place, how we experience pain, what makes our bodies powerful or vulnerable, why things really matter, and how communities cope with trauma and violence. This course is especially relevant for students interested in medical anthropology and social dimensions of health and illness. No background in anthropology or philosophy is required.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: ETH EN: S
Typical periods offered: Fall, Spring

ANTHRO 4115 Anthropology of Deviance
This course provides an anthropological perspective on notions of deviance as social, psychological, moral, and medical mechanisms of control and regulation. Students will learn to critically engage and evaluate dominant etiological theories of deviance, local and global contexts of deviance, and social responses to deviance as cultural processes through which communities make (and unmake) meaningful human relationships. Through academic texts, ethnographic accounts, clinical case materials, and first-hand accounts, students will explore multiple dimensions of what it means to be deviant or normal in a given social or cultural context. Sample topics include: historical trajectories of deviance, deviance and criminology, social class and inequality, prison cultures, deviance and resistance, deviant personalities, forensic psychiatry, deviant vs. socially sanctioned violence, and stigma.
Credit 3 units. A&S IQ: SSC, SC Art: SSC EN: S
Typical periods offered: Fall, Spring

ANTHRO 4116 Anthropology and Experiment
In recent years, many cultural anthropologists have described their work as experimental. On the surface, the notion of experimentation leads something of a double life. On the one hand, in its ideal form, it stands for rigidly held methodological tenets aimed at answering questions in rigorous ways. This kind of experimentations is the hallmark of scientific inquiry. On the other hand, experimentation implies something of open-endedness, of tentative and flexible exploration. Through an examination of works on experiments, as well as purportedly experimental ethnographies, we will pursue the question: What is an experimental mode of inquiry in cultural anthropology, and how does it square with the two idealized meanings of experimentation? We will examine the links and resonances between different notions of what experiments do, what they describe in terms of both form and method, how they begin and end, how they are assessed as successes or failures, and what sort of knowledge they produce. This course involves reading across cultural anthropology, science studies and the philosophy of science to better understand different approaches to experiments across domains of research and writing. Can we learn something about what anthropologists do in experimental works from the wealth of thoughtful scholarship on experiments in other fields? Is there something common to experimentation in cultural anthropology and experimentation elsewhere in the social sciences and beyond?
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4117 Nature/Culture
What do we mean by nature or by designating something as natural? How do we distinguish nature from culture and where does such a distinction break down, become political or controversial? Is the distinction between nature and culture itself universal, or does it emerge from a particular history and reflect particular preconceptions and understandings? And how do new technologies reconfigure this distinction? In this course, we will explore such questions, paying special attention to the ways anthropology, as a discipline, has relied on, reinforced, and legitimated this great divide.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall

ANTHRO 4118 The Good Cause: Psychological Anthropology of Moral Crusades
Why do people join moral crusades? These are social movements based on powerful moral institutions, ranging from the abolitionist and suffragette movements to witch hunts, insurgency and ethnic riots. Such movements are extremely diverse, yet their unfolding and the dynamics of recruitment show remarkably common properties. We will examine a series of empirical cases, including recent events, and assess the relevance of models based on individual psychological dynamics, intuitive moral capacities, and human motivation for participation in collective action.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4119 Becoming Clinicians and Healers
A great deal of learning in clinical, caring, and healing professions takes place on the job and through interactions with peers and supervisors. To better understand such subtle and hidden forms of learning, we will examine how clinicians- and healers-in-training experience processes of embodiment and the training of the senses in therapeutic encounters. Pairing theoretical scholarship on apprenticeship, tacit knowledge, and the perfection of one's craft, with rich ethnographic research on training in surgery, psychotherapy, and shamanism, this course will explore the subtle and subjective experiences of learning to become a future therapeutic practitioner.
Credit 3 units. A&S IQ: LCD, SSC BU: BA
Typical periods offered: Spring, Summer

ANTHRO 4121 Language and Power
Language is implicated in the constitution and exercise of social power in a multitude of ways. Researchers have often distinguished between a micro-level of social interaction and the macro-level of larger political formations in order to understand the relationship between language and social power. However, our goal is to focus on the dialectical interplay between the two levels of analysis by looking at topics such as honorification as encoded in language, the role of language in resistance and hegemony, as well as ritual and authority. Further, the class will address the formation of collective identities and the legitimization of political projects such as state-formation on the basis of language.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4122 Language and Gender
Within an overall approach to cultural analysis stressing the mediation of sociocultural phenomena through language, we focus on the particular case of gender. The class will provide an overview of scholarship on language and gender, following the question of how culturally and socially varying constructs of gender are both constituted and expressed in language use. We will also examine how studies of language and power, politics, and stratification can inform our understanding of gender and will also address methodological issues in the field.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall

ANTHRO 4123 Argumentation Through Ethnography
Ethnography is the traditional mainstay of anthropological academic writing. Through ethnography, anthropologists do more than simply describe a culture or a group of people; rather, they organize and present their field materials in particular ways in order to make

intellectual, theoretical, and sometimes even political arguments. This seminar will explore the different ways anthropologists have used ethnography to make intellectual claims and frame theoretical or practical arguments. The aim of the course is to help students develop critical reading skills for engaging ethnographic materials as well as to explore the ways in which ethnography, when done well, can be a persuasive and engaging means of academic argumentation. This course is intended as a sequel to Anthro 472. Prerequisite: Anthro 472 or permission of instructor.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

Typical periods offered: Fall

ANTHRO 4124 Language and Politics

Language is a constitutive part of political processes. While many agree that language is used to symbolize or express political action, the main focus of this course is on how linguistic practice and ideology contributes to the creation of political stances, events, and spheres. Topics addressed include political rhetoric and ritual, the emergence of public spheres, discrimination, as well as ethnic conflict, nationalism and colonialism.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

Typical periods offered: Fall, Spring

ANTHRO 4125 Language, Ethnicity, and Nationalism

This course will explore the possible relationships between language, ethnicity, and nationalism, using theoretical readings and a consideration of particular examples. We will first discuss the relationship between language and ethnicity in the development of national languages and cultures, considering the role of factors such as colonialism, language standardization and print media, religious languages, and ideologies of national boundaries. Further topics will include the situations of ethnic and linguistic minorities in nation-states, ethnolinguistic separatist movements, pidgins and creoles, and the spread of world languages. Prerequisite: Anthro 2151 or permission of instructor.

Credit 3 units. Art: SSC

Typical periods offered: Spring

ANTHRO 4126 Endangered Languages and Linguistic Diversity

Although about 6000 languages are spoken in the world today, one estimate predicts that 90% of the world's languages will disappear in the next century. How could this happen, and what are people doing about i? This course will utilize theoretical readings and examples of particular African, American, Asian, and European languages to explore the theoretical issues of languages shift and ethnolinguistic revitalization movements. In the first half of the course, we will explore processes of language shift: how and why languages die, how discourses of language death and endangerment impact languages and speakers, and the structural effects of language obsolescence. In the second half of the course, we will explore the various reasons why groups wish to preserve languages, the potential benefits of language revitalization, and the factors in successful and unsuccessful language revitalization movements, including language policy, education, media, religion, literacy and standardization, economic development, and ethnic prejudice and discrimination.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

Typical periods offered: Fall

ANTHRO 4127 Language and Medical Expertise

Language plays a constitutive role in the creation and communication of medical expertise in all cultures, as well as across cultures. The goal of this course is to introduce students to the discourse-centered approach to medicine found in sociolinguistics and linguistic anthropology. How is medical authority negotiated in interactions between doctors/healers and patients? How do authoritative narratives and discourses structure cultural understandings of disease, health, wellbeing, and the body? What role does language and its use play in legitimizing certain forms of medicine while delegimizing others, especially in medically-plural societies? Does Western medicine differ from non-Western medicine with respect to the way it is created and communicated? How do ideologies of language and communication shape the way medical representations circulate in society, including across socio-cultural boundaries, as in acts of translation? How are new institutional forms of communication, like mass media and the internet, reshaping medical expertise around the world? We will begin the course with the role of narrative in the construction of medical knowledge and perception, then move to the micro-analyses of authoritative language in the patient-doctor medical encounter, and end the course by turning to the macro-analysis of medical institutions, exploring them in relation to the kinds of expert texts they produce and circulate. The course will draw on theoretical readings and ethnographic research conducted in many places in order to develop a cross-cultural understanding of the issues.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

Typical periods offered: Spring

ANTHRO 4128 Conspiracies, Cults, and Moral Panics: The Affective Politics of Fear

This course takes an anthropological look at conspiracy theories, cults, and moral panics as manifestations of cultural distress and modes of everyday knowledge and practice. The thread that connects these phenomena is that they are constituted as counterhegemonic pathways to truths that the majority of people cannot (or refuse to) see. As such, they serve as provocative lenses on changing understandings of such issues as the relationship between the individual and the modern state, the contours of civil liberties and responsibilities, and the nature and purpose of human existence. Throughout the semesterwe will explore the evolution and social impact of conspiracies, cults, and moral panics, and examine the historical, cultural, political, and religious dynamics that inform all three using a variety of critical methods. Among other lines of inquiry, we will ask: What is the cultural and psychological work of these phenomena? And what do they suggest about our own experiences-especially of freedom, the exercise of power, and what counts as knowledge?

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

Typical periods offered: Fall, Spring

ANTHRO 4134 The AIDS Epidemic: Inequalities, Ethnography, and Ethics

In the year 2000, HIV became the world's leading infectious cause of adult death. In the next 10 years, AIDS killed more people than all wars of the 20th century combined. As the global epidemic rages on, our greatest enemy in combating HIV/AIDS is not knowledge or resources but rather global inequalities and the conceptual frameworks with which we understand health, human interaction, and sexuality. This course emphasizes the ethnographic approach for the cultural analysis of responses to HIV/AIDS. Students will explore the relationships among local communities, wider historical and economic processes, and theoretical approaches to disease, the body, ethnicity/race, gender, sexuality, risk, addiction, power, and culture. Other topics covered include the cultural construction of AIDS and risk, government responses to HIV/AIDS, origin and transmission debates, ethics and responsibilities, drug testing and marketing, the making of the AIDS industry and risk categories, prevention and education strategies, interactions between biomedicine and alternative healing systems, and medical advances and hopes.

Credit 3 units. A&S IQ: LCD, SSC, SC Art: SSC BU: IS EN: S

Typical periods offered: Fall

ANTHRO 4135 Tobacco: History, Culture, Science, and Policy
Tobacco is the most important public health and medical problem of our time, the leading cause of cancer and other chronic diseases. This course examines tobacco's important role in shaping the modern world and global health over the course of the last five centuries, from indigenous uses of tobacco to plantation slavery to the cigarette boom to the politics of health and smoking in the 21st century. Through in-depth historical and anthropological case studies, tobacco provides a window onto trends in government and law, medicine and public health, business and economics, society and culture, including changing social meanings of gender, race, class, sexuality, advertising, consumerism, risk, responsibility, and health in the United States and worldwide. This course also introduces students to public health approaches to noncommunicable disease prevention, environmental health, and healthy lifestyle promotion. No background in anthropology or public health is required.
Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH EN: S
Typical periods offered: Fall, Spring

ANTHRO 4172 American Indian Sovereignty
The concept of sovereignty is what distinguisher American Indians from all other socalled minority groups in the U.S. American indian definitions of sovereignty include a spiritual, political and ethinic basis. Through three contemporary case studies, we will study the ways in which American Indian activism stresses each of these three perspectives. The dominant non-Native definition is bsed on the ligal relationships established by non-Native governments. This perspective will be examined through an overview of policies enacted by non-Indians to legislate various aspects of Indian existence, from the Papal Bull of 1493 to the Native American Graves Protection and Repatriation Act of 1990. We will also study the responses and reactions of American Indians to those policies. The course will conclude with a discussion of the role of American Indian sovereignty today.
Credit 3 units. A&S IQ: SSC Art: SSC
Typical periods offered: Fall

ANTHRO 4180 On Location: Portland Beyond Portlandia: Creative Cities and the New Economy
Every summer, AMCS travels to a new location to explore fundamental questions of national identity and meaning through the study of the interdependent relationship between culture and place. By visiting landmarks, historic sites, museums, memorials etc.-- sites best understood through direct engagement with consideration of their rich material, historical, political, and social meanings-students become in-the-field observers and learn from local experts and faculty. Past On Location destinations have included: California, Hawaii, New York City, Washington D.C., the Industrial Southwest, and American Indian landmarks. For more information and description of past travel sites, please visit http://amcs.wustl.edu/courses/on_location.
Credit 3 units.
Typical periods offered: Summer

ANTHRO 4181 Comparative Methods in Physical Anthropology
Intensive study of theoretical concepts and statistical methods in research using comparative methods. Major emphasis on scaling (allometry) and phylogenetically independent comparisons and their application to questions of mammalian variation in life history, metabolism, brain size, and dentition. Prerequisite: one semester of statistics, 6 units of physical anthropology or biology, or permission of instructor.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

ANTHRO 4183 History and Methods in Systematics
Historical review of phylogenetic systematics focusing on different approaches to species identification, classification, and phylogenetic inference. We will examine the influence of such competing approaches not only historically, but also on current controversies including character independence and weighting, tree construction, resolution and statistics, consensus techniques, and the uses of phylogenies. Prerequisite: Anthro 150A
Credit 3 units. Art: SSC
Typical periods offered: Fall, Spring

ANTHRO 4190 Primate Behavior
Discussion and analysis of recent research on the social behavior of nonhuman primates. Data from both field and laboratory study. Prerequisite: Anth 406, or permission of instructor.
Credit 3 units. A&S IQ: NSM Art: NSM BU: BA
Typical periods offered: Fall

ANTHRO 4191 Primate Cognition
This course will investigate historical and current views regarding the cognitive capacities of non-human primates, and the extent to which these abilities are shared with humans. Topics for this class will include: social cognition, problem-solving, tool use, culture, communication, theory of mind, deception, self-recognition, imitation, and numerical cognition. The classes will involve discussion and critical evaluation of theory and methods in this challenging and exciting area of primate cognitive research.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

ANTHRO 4192 Comparative Juvenile Behavior
What makes young animals different from adult animals? Throughout this lecture and seminar based course, we will explore the behaviors of young animals and consider what makes juveniles unique, and how behaviors specific to this time period may contribute in the transition to adulthood. Topics will include: play behavior, teasing, rank and dominance, sex-differences, affiliative bonds, adult encounters, and the evolution of the juvenile period.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

ANTHRO 4193 Primate Biogeography
This course focuses on the geographic distribution of living and fossil primates. The first half of the semester will provide an overview of biogeographic theory and methods, including island biogeography theory, geographical ecology, paleogeography, paleoclimatology, cladistic biogeography, and phylogeography. The second half of the semester will apply this knowledge to critically examine the biogeography of primates in the context of their behavior, ecology, morphology, genetics, evolutionary history, and extinction.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

ANTHRO 4194 Primate Ecoimmunology
The ability of an organism to defend itself against infection by viruses, bacteria, and parasites is critical to organismal survival and fitness. The response of the host immune system is vital in this defense, and like any phenotype, we observe variation in immune function between individuals, populations, and species. The field of ecoimmunology seeks to characterize and explain how the environment of the organism contributes to this observed variability in the host immune response. In this class, we will examine the evolution and function of the primate immune system, primarily in non-human primates, within the context of the extensive social and ecological variability in the primate order.

We will take a broad and integrative approach, synthesizing material from diverse fields including immunology, ecology, physiology, behavior, and genetics. Prerequisites: Anthropology 150A or Biology 112

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Spring

ANTHRO 4195 Advanced Primate Laboratory Methods

This course provides students with firsthand experience in conducting laboratory work in primatology. This includes laboratory safety, preparing samples, running assays, and analyzing results. Students will learn best practices and the process of validating techniques. In addition to hands-on lab work, students will read peer-reviewed publications that present data generated from the types of techniques we will cover in class. Background reading on of all the methods used and learning about the field techniques used to collect the samples will also be required. Students in this course are expected to have sufficient prior experience in a laboratory setting and to already understand the basics of lab work, such as proper pipetting techniques and laboratory safety practices. With these basic skills already obtained, students will be able to focus on more interesting topics, such as hormonal, microbial, and genetic analysis of samples from wild primates. Students will need to make time to conduct laboratory work outside of class time. Each student will coordinate these times with the instructor.

Credit 3 units. A&S IQ: NSM BU: SCI

Typical periods offered: Fall

ANTHRO 4196 Ethnobotany: Plants and Cultures

Recovery and identification of ancient plant remains, evolution of major crop plants, patterns in cultural and cultigen geography. Prerequisite: Anth 190BP or an introductory course in botany, or permission of instructor.

Credit 3 units.

Typical periods offered: Fall, Spring

ANTHRO 4202 Anthropological Genetics

This course will examine the principles of evolutionary genetics as applied to complex characters such as morphology, behavior, life history, and disease. Mathematical models of quantitative inheritance and evolution will be discussed. Special topics include kin selection, sexual dimorphism and conservation genetics. Prerequisite: Anthro 150A or introductory biology.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Spring

ANTHRO 4211 Ethnobotany

Interrelationships between plants and people, especially in past societies. Recovery and analysis of plant remains from archaeological sites; interpreting subsistence and vegetation changes; medicinal, ritual, and technological uses of plants; plant domestication and agricultural intensification. Modern efforts to understand and preserve threatened traditional ethnobotanical practices. Prerequisite: Anth 190BP or an introductory botany course, or permission of instructor.

Credit 3 units. A&S IQ: SSC, WI Art: SSC EN: S

Typical periods offered: Fall, Spring

ANTHRO 4212 Advanced Methods in Paleoethnobotany

Advanced analytical techniques for the study of archaeological plant remains. Tools and methods for micromorphological recognition, including electron microscopy. Photomicroscopy at low magnification, management, tabulation, and reporting of data. Prerequisite: Anth 4211, or permission of instructor.

Credit 3 units. A&S IQ: SSC Art: SSC

Typical periods offered: Fall, Spring

ANTHRO 4213 Plants and American People: Past and Present

This interdisciplinary course examines the relationship between plants and the American people. Topics include the natural diversity of plants used by Native Americans for food, fiber, and medicine; the significance of plants in the 'Columbian Exchange' for the history of the U.S. and the economies of the Old World; Native American and Euro-American farming practices; modern agri-business including transgenic crops; and the modern conservation movement in the U.S. Several optional Saturday field trips are planned. Prerequisite: Junior standing or above.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC

Typical periods offered: Spring

ANTHRO 4214 The Archaeology of Food and Drink

Studies of past human diets have moved beyond analyses of animal bones and seeds to encompass new theoretical goals and innovative analytical techniques. In this seminar-style course, students will explore methods of understanding food-related social interactions such as evidence including residues, ancient DNA, isotopes, and trace elements, along with more traditional artifacts and archaeobotanical and zooarchaeological remains. By examining case studies from around the world, we evaluate the current state of research attempting to integrate the biological and cultural aspects of eating and drinking.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

Typical periods offered: Spring

ANTHRO 4215 Anthropology of Food

The rising interest in food research crosscuts various academic disciplines. This seminar focuses on aspects of food of particular interest in anthropology. The first 2/3 of the course is reading intensive and discussion-intensive. Each student will write short review/response papers for major readings. For the final third, we will still be reading and discussing, but the reading load will be lighter (and we will have a field trip) as students devote more time to their research paper. The research paper will be a major effort on a topic discussed with and approved by the professor. In most cases it will have to deal with cultural and historical aspects of a food, set of foods, form of consumption or aspect of food production. Papers will be critiqued, assigned a provisional grade, revised and resubmitted.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

Typical periods offered: Fall, Spring

ANTHRO 4221 Biological Basis of Human Behavior

Infidelity, marriage customs, inner city violence, infanticide, intelligence...Are the behavioral patterns we see genetically fixed and racially variable? What is the evolutionary and biological basis of human behavior? This course offers a critical evaluation of these from an anthropological perspective.

Credit 3 units. A&S IQ: LCD, NSM Art: NSM BU: BA

Typical periods offered: Fall, Spring

ANTHRO 4222 Human Nature in Minds and Cultures

What is unique about humans? And what is universal among human beings? Is human nature the product of a specific genome, or is it shaped by human cultures? Does it make sense to think of nature as the opposite of nurture? We will consider aspects of human nature in domains such as family and gender, political coalitions, religious extremism, ethnic identity and morality, from the viewpoints of cultural anthropology, philosophy, evolutionary biology and psychology.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

Typical periods offered: Spring

ANTHRO 4240 The Plundered Past: Archaeology's Challenges in the Modern World

The public imagination thrills at the fantastic adventures of Indiana Jones and Laura Croft, Tomb Raider; but the reality of modern archaeology is more complex, ethically challenging and interesting than a simple treasure hunt. In the U.S. and Canada, our science museums and museums of anthropology still display artifacts that are regarded as sacred and culturally definitive by Indian nations, although such holdings are now subject to negotiation and repatriation. Art museums in Europe and the U.S. are still stocked with looted ancient masterpieces that are revered as vital heritage by the nations from which they were stolen. We display looted art alongside a much smaller number of legitimately excavated artifacts of masterpiece quality, so it is no surprise that our popular images of archaeologists as avid and undiscerning collectors raise little concern. But modern archaeologists are not extractors of art or even of scientific information, from places as passive and inert as the museums' objects ultimately occupy. Archaeologists work with living people inhabiting societies and states that care deeply about their pasts and the relics of it. They are active agents engaged with many other people in the production of knowledge about the past. In our rapidly shrinking world, educated sensitivity to the many ancient cultural legacies that shape the values of modern global society is more than a moral imperative; it is a basic form of collaboration in the common project of survival. Archaeologists are ethically charged to advance that project through education about the complex contemporary arena of artifacts, sites, and information they occupy.

Typical periods offered: Spring

ANTHRO 4242 Social Movements

How do people change the world? They organize. Social movements mobilize to change (or defend) cultural meanings and political and economic relations. This course examines movements ranging from jihadists to anti-abortionists to inner-city activists to transnational environmentalists. We compare movement origins, strategies, and effects. We ask how power and meaning are intertwined in political action and in people's understandings of themselves, how violence and other tactics work as meaningful political instruments, and why social movements are challenging formal politics around the world today. Anthropological approaches to global disjunctures between democracy and violence are at the core of our course.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: ETH

Typical periods offered: Fall, Spring

ANTHRO 4243 Terrorism and The Clash of Civilizations

This course is about conflicts in which violent means are deployed and moralistic terms are invoked so as to give legitimacy to such means. The code words in the title are bracketed in order to emphasize they are used in public discourses rhetorically, for political effect. When particular social situations are disputed, each side deploys moralistic claims so as to clothe their actions and viewpoint with an aura of legitimacy and to enlist popular support. But when issues are contested, similar terms can be used by opposing sides with simlar but contrary intents: one person's terrorist is another person's freedom fighter; and note that certain radical Islamist groups specifically embrace Huntington's notion of the clash of civilizations (formulated for western audiences) as grounds for their anti-western posture. Rhetorical formulae such as these are promoted or scorned, embraced or renounced, for essentially strategic reasons. In this course, we examine some notorious situations of conflict in order to identify the particular ways that disputing sides have deployed violence and moralistic forms in their own interest -- as when popular movements arise and clash with state power (e.g., the Tianamen Square incident in China) or when coalitions with radical social agendas take form and brutalize neighbors (as in Yugoslavia in the 19902; Rwanda in 1994) or when widely supported public movements develop seemingly without coordination (the 2006 demonstrations against the King of Nepal), or when movements animated by a shared ambition to establish a non-statal political entity (such as Al Qaeda for the re-institution of the caliphate) form across state boundaries with little coordinated leadership. Our emphasis will fall on the ways that human collectivities deploy cultural forms -- linguistic and rhetorical, artistic and representational -- to give particular readings to social issues and to clothe activities (often brutal) with an appearance of legitimacy.

Typical periods offered: Fall, Spring

ANTHRO 4250 Aging in Cross-Cultural Perspective

Population aging, driven by increasing longevity and decreasing fertility, is a worldwide demographic transformation that is changing societies and social relationships at all levels, from family household interactions to national debates on policies and expenditures. This course, run in a seminar format, investigates global aging through the lenses of demography and cultural anthropology. The objectives are for students to gain an empirical understanding of current population trends and an appreciation for how the aging process differs cross-culturally. The first part of the course introduces basic concepts and theories from social gerontology, demography, and anthropology that focus on aging and provide a toolkit for investigating the phenomenon from interdisciplinary perspectives. The second part introduces students to data sets and analysis techniques that are key to documenting population aging at local, national, and global levels. The third part is devoted to reading and discussing ethnographies of aging from China, India, and elsewhere. Course assessment is based on data analysis exercises and written assignments.

Credit 3 units. A&S IQ: LCD, SSC, SC Arch: HUM Art: HUM EN: S

Typical periods offered: Spring

ANTHRO 4253 Researching Fertility, Mortality, and Migration

Students will undertake research projects centering on the most fundamental demographic processes -- fertility, mortality, and migration. The first section covers basic demographic methodology so that students understand how population data is generated and demographic statistics analyzed. Course readings will then include seminal theoretical insights by anthropologists on demographic processes. Meanwhile, students will work toward the completion of a term paper in which they are expected to undertake some original research on a topic of their choice (e.g., new reproductive technologies; cross-cultural adoption; ethnicity and migration). Each assignment in this course will be a component of the final term paper. Prerequisite: L48-3612 (Population and Society) or permission of instructor.

Credit 3 units. A&S IQ: LCD, SSC, WI Art: SSC EN: S

Typical periods offered: Fall, Spring

ANTHRO 4254 The Anthropology of Maternal Death

No other commonly-recorded health indicator shows such great disparities between rich and poor nations as does maternal mortality. Over 500,000 women die each year around the world from complications of pregnancy and childbirth, but 99% of these deaths occur in impoverished, non-industrialized countries. This course will examine the reasons for this stunning discrepancy, looking at the biological, social, political, and economic factors involved in maternal death. The course will be conducted as a seminar based on detailed readings of relevant journal articles, group discussion, case studies, and class presentations. Prerequisite: Anthro 3621.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

Typical periods offered: Spring

ANTHRO 4261 Systems of Inequality
This course examines systems of inequality in a variety of world regions, including the United States, and includes analysis of their causes and effects. Economic class, gender, ethnicity and race are among the types of social stratification discussed. The course will focus on theories of stratification along with case studies, including those focusing on social capital, individual rationality, biological determinism, social construction, cultural capital and social reproduction, and economic globalization. The course will be designed to maximize student participation. This course is not open to students who have taken Anthro 3261, Inequality, Hierarchy and Difference.
Credit 3 units. A&S IQ: SSC Art: SSC BU: IS

ANTHRO 4262 Racialization, Engendering, and Articulation: Theories of Identity Formation
This course is an opportunity for upper level undergraduate and graduate students to explore theoretical and ethnographic texts, which focus on the social categories of race, class and gender. The purpose of this course is to interrogate our understanding of the MEANING of such human variables across time and space. As the course title implies, we will approach race, gender, and class as processes, and this requires that we focus on their historical and cultural peculiarities. This course asks students to move conceptually from the era of European colonialism and the invention of the modern conception of race to the U.S. Civil War period to the ascension of negritude as well as contemporary times. In a complementary fashion, to assert that, in fact, race, gender, and class do matter, requires students to investigate the diversity and complexity in various places, such as Brazil, Argentina, Martinique, South Africa, and the U.S.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall

ANTHRO 4264 The Myth of Race
This course describes the history of the myth of race and racism from the Spanish Inquisition to modern times. Since race is not a biological term but a cultural term, it is important for students to understand the origins and connections of ideas of race and racism from its beginnings in western thought to its current usage. The historical and literature connections can be seen though out the writings and behavior of the Spanish Inquisition, to the Renaissance, though colonization and slavery, to the reconstruction, to the late nineteenth century, to the early twentieth century, to modern times. In fact, the early history of anthropology can be traced through racist history.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4270 Social and Cultural Change
Analysis of political, economic, and social transformations among societies in the developing and developed world. Examples are drawn from many societies throughout the globe.
Credit 3 units. A&S IQ: LCD, SSC, SC BU: IS EN: S
Typical periods offered: Fall, Spring

ANTHRO 4279 Topics in Anthropology
From streets to wifi signals, electricity grids to pipes, infrastructures surround us and shape the society we inhabit. Whether it's brushing your teeth, checking your e-mail, or taking the bus, you use infrastructures regularly. Yet people pay little attention to them-until they break down. From the inconvenience of your bus being late to the emergency of deadly power outages or floods, infrastructures are vital. This seminar is an anthropological study of infrastructure's role in governance, livelihood, sociality, & cultural meaning in urban life. By looking at different forms of and experiences with infrastructure around the world, we will discuss varying understandings of infrastructure, theorize what it does, and analyze its politics. We begin by drawing from anthropology, political theory, and science & technology studies to think about what studying infrastructure entails; thereafter, the course centers on anthropological engagements with infrastructure in the Global South to rethink what infrastructure is and does. Throughout, weekly writing exercises will hone observational, methodological, and writing skills while pushing students to think about infrastructure and daily life in new ways through experiences on campus and in St. Louis.
Credit 3 units.
Typical periods offered: Fall, Spring

ANTHRO 4280 Tourism & Sustainability
This course offers an introduction to the political, cultural, and environmental effects of global tourism (with an emphasis on problematic travel trends, such as ecotourism) and sustainable development discourse. Topics include the history of tourism, tourism studies, critiques of authenticity and aesthetics, virtualism, political economy, island studies, political ecology, and critical social theory. Each student prepares a research paper or podcast on a tourism case study. Readings offer anthropological perspectives on the history of tourism; cultures of consumption; problems of authenticity and aesthetics; political economy and ecology; and the challenge of achieving sustainable tourism development across diverse natural environments. We will explore tourism as both a cause and effect of globalization (and localization movements) by tracking the consumer habits of emerging tourist markets while also considering ethnographic readings of ecotourism and the role that nostalgia plays in influencing domestic and international travel patterns. We will further consider tourism as the production and consumption of tradition, and we will tackle ethically problematic tourist sites.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, ETH, IS EN: S
Typical periods offered: Fall

ANTHRO 4281 Ecological Anthropology
The focus is on aspects of human culture and its interaction with the environment. This course will consider contemporary anthropological approaches to understanding the relationship between humans and their environment. These approaches will blend theory and analysis with socio-political awareness and policy implications. Among the key topics that this course will address include climate change and adaptation, political ecology, ecological economics, environmental sustainability, conservation, and indigenous environmental knowledge, with globalization at the center of all the discussions.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Spring

ANTHRO 4282 Political Ecology
An exploration of how the interactions between culture and environment are mediated by local, national, and global politics. Topics include overpopulation, agricultural intensification, Green Revolution, biotechnology, corporate agriculture, green movements, and organic farming. Each student prepares an in-depth research paper that may be presented to the class. Prerequisites: Graduate standing, Anth 361, or permission of instructor.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall

ANTHRO 4284 Intentional Communities: Utopianism, Cooperation, and Culture Change From Essenes to Ecovillages
This class provides an overview and examination of intentional communities over the last 2,000 years and in various regions of the world. Intentional communities are groups of people who have come together to live cooperatively and communally in pursuit of their visions of a better society. We will examine intentional communities past and present, foreign and domestic through the lenses of both scholarly treatments of intentional communities and accounts written

by intentional community members. We will move chronologically through time, beginning with the earliest intentional communities that scholars have identified and ending with a significant section on contemporary ecovillages and other sustainability-oriented intentional community movements. We will also use various theoretical frameworks to guide our growing understanding of intentional communities. The class is seminar format but will include short lectures, occasional videos and at least one required field trip to an intentional community in or near St. Louis. An additional ethnographic internship credit opportunity involving primary research within intentional communities in or near St. Louis will be available to anthropology majors who take the class, pending final budgetary approval.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Spring

ANTHRO 4285 Environmental Archaeology
This course intends to introduce students to lines of evidence used in the interpretation of past landscapes, to discuss how we can conceptualize changing human ecological relations, and to consider how we can identify the influence that humans have on their environment. Special emphasis is placed on human-animal-plant relations using case studies from around the world. Combining both lecture and seminar sessions, this course aims to ensure that students are aware of several of the basic methods of bioarchaeological and palaeoenvironmental reconstruction as well as the application of these methods to the interpretation of past landscapes and human impacts on them.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4287 Anthropology of Water
This course examines one of the world's largest risks and grandest challenges: water security. By exploring water flows between cultures and landscapes, students will think critically about the challenges faced in different regions and societies of the world which can exacerbate or ameliorate issues of social justice and equity. Topics include cultural notions and values of water, technologies of water purification and conservation, big dam controversies, water as a right or water as a commodity, and how epistemologies of water can drastically impact people and ecosystems. Texts will mainly be anthropological but will also draw from history, political ecology, geography and development economics. These will underscore the importance of multiple contexts (social, religious, economic, political, cultural) to the understanding of the scale and scope of this major problem.
Credit 3 units. A&S IQ: SSC Art: HUM, SSC EN: S
Typical periods offered: Spring

ANTHRO 4288 Being Human: The Food-Energy-Ecosytem-Water Nexus
This course examines a trilogy of resources that are essential to producing human life: food, water and energy. These resources are inextricably linked not only to the most common and necessary of our day-to-day activities, but impact each other in profound ways. Until recently, the study of these resources was fragmented in separate sectors, ultimately leading to lack of institutional coordination, infrastructural lock-in and incomplete modeling systems. These incomplete systems overlook the complex overlaps of natural systems and render sustainability planning more tenuous than it could be. In response, these core resources are being studied together as a nexus to enhance synergies and prevent trade-offs across sectors. However, this nexus further requires astute attention to the all too human questions of resource use, waste and justice. If water, energy and food security are to be simultaneously achieved, social scientists must be at the forefront, contributing holistic research that brings the human back into socio-natural systems.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall

ANTHRO 4289 The Ecological Transition
Ecology viewed as a process of satisfying human needs and wants by technological and social instrumentalities. This course views human behavior as a force in nature and reviews the impact of resource exploitation, from hunting and farming peoples to modern industrial societies and their advanced agriculture, mining and economic development. Social significance of contemporary environmental movements and regulations is also analyzed.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall

ANTHRO 4291 The Biological Basis for Human Behavior
Critical consideration of information bearing on current controversies and ideas concerning antecedents of human behavior, examined from biological and evolutionary perspectives. Lectures present comparative information on the behavior and biology of our closest relatives, the nonhuman primates. Prerequisite: 6 units of biology, psychology, or anthropology.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

ANTHRO 4311 Biocultural Perspectives on Obesity and Nutrition
From pink slime to red wine, causes-and treatments-for obesity are constantly in the headlines. With more than 35% of Americans currently obese, this is a tremendous biological and social issue in the United States. Obesity rates are also increasing globally despite billions of dollars spent on diets and public health interventions. Why is this happening and what can be done to change this? Why are humans fat and prone to obesity? How do we interpret appropriate body size? These are some of the questions we will investigate in this class, specifically looking at the important physiological functions of adipose tissue and how both biological and cultural factors shape our perceptions of body image, health, and the obesity epidemic.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall, Spring

ANTHRO 4312 Environmental Interactions and Human Health
This course examines key issues related to human health through the lens of human lifestyle factors and environmental modification. Students will be asked to move beyond identifying the physical manifestations of poor health to recognizing larger evolutionary, social, and ecological factors that shape disease risk across individuals and communities. Throughout the term, we will explore how interactions between humans and their surroundings (and other organisms) have shaped disease patterns over time. We will also consider how the concepts we discuss relate to contemporary health challenges and how these perspectives can be applied to better address these issues going forward. In this course, human health is viewed as the result of biocultural processes. This course therefore uses an interdisciplinary approach, drawing on the methods, theories, and bodies of knowledge from various scientific disciplines, including evolutionary biology, genetics, parasitology, physiology, ecology, and medicine.
Credit 3 units. A&S IQ: SSC BU: BA EN: S
Typical periods offered: Fall

ANTHRO 4314 Archaeology of St. Louis
The Archaeology of St. Louis offers a comprehensive exploration of the rich history and cultural heritage of St. Louis from an archaeological perspective. We will take a deep dive into the archaeological record of the city and its surroundings, beginning from the earliest human occupation of the land that is now St. Louis all the way up to the

present. We will consult a range of archaeological, historical, and artistic sources to uncover the city's past, extending from the lifeways of St. Louis' original Indigenous inhabitants to its time as the capital of Upper Louisiana, to its role as the administrative center of Westward expansion during early American Republic, to its hey-day as one of the United States' largest and wealthiest industrial cities, before its subsequent decline and renewal. The course will examine archaeological sites, artifacts, maps, and documents that contribute to our understanding of the city's past and how its history resonates in the present. This course is primarily a reading- and discussion-focused course, with occasional lectures, guest speakers, museum visits, and fieldtrips to local archaeological and historical sites. Overall, this course aims to provide students with an appreciation for the rich layers of history, material culture, and heritage in St. Louis and a greater knowledge of its Indigenous, European, and Black cultural histories.
Credit 3 units. A&S IQ: LCD, SSC, SC
Typical periods offered: Spring

ANTHRO 4321 History of Biological Anthropology
The history of biological anthropology is traced from Darwin's time to the present. Factors that influenced major theories and subfields of biological anthropology are discussed along with current directions. Topics will include race, primate and fossil hominin tool use, adaptationism, evolution of the brain, and the human-chimp split, among other issues. Prerequisites: 6 units of coursework in Biological Anthropology or permission of instructor.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall, Spring

ANTHRO 4322 Life at the Extremes: A human biology of adaptation to environmental extremes
The Arctic Circle, Mount Everest, the Sahara Desert, poverty, and obesity, and even space! These are all extremes some humans experience. Using primary literature and media resources, this course will explore how humans biologically, culturally, and technologically manage environmental extremes.
Credit 3 units. A&S IQ: NSM

ANTHRO 4323 Life At the Extremes
The Arctic Circle, Mount Everest, the Sahara Desert, poverty, and obesity, and even space! These are all extremes some humans experience. Using primary literature and media resources, this course will explore how humans biologically, culturally, and technologically manage environmental extremes.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Spring

ANTHRO 4330 Archaeology of the Ancient Near East
Cultural development in greater Mesopotamia. Transformation of Paleolithic hunter-gatherers to village agriculturalists; emergence of the literate civilizations of the Bronze Age. Prerequisite: Anth 190BP or 312C, or permission of instructor.
Credit 3 units. A&S IQ: SSC Art: SSC
Typical periods offered: Spring

ANTHRO 4331 Archaic States: Mesopotamia and Egypt
Cultural development in Ancient Mesopotamia and Egypt, focusing upon the emergence of literate civilizations of the Bronze Age. Transformation of Peleolithic hunter-gatherers to village agriculturalists; emergence of the literate civilizations of the Bronze Age. Prerequisite: Anthro 190B(P), Anthro 312C, or permission of instructor.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM EN: H

ANTHRO 4340 Behavioral Research At the St. Louis Zoo
Students conduct research at the St. Louis Zoo. Training in designing of projects and analysis and interpretation of data. May be repeated for credit. Prerequisite: permission of instructor.
Credit 3 units. A&S IQ: NSM, WI Art: NSM BU: BA
Typical periods offered: Fall, Spring

ANTHRO 4341 Behavioral Research At the Duke University Primate Facility
Students will conduct research at the Duke University Primate Facility. Training in designing of projects and analysis and intepretation of data. A $500 fee will be charged to cover room and board in Durham, NC. Prerequisite: Permission of instructor.
Credit 5 units.
Typical periods offered: Summer

ANTHRO 4362 Local Genders, Global Transformations
This course examines the dynamic relationship between gender and other social, economic, biological, and political processes. The course compares a variety of theoretical frameworks proposed by anthropologists, as well as Foucault, Butler, Carby, Laquer, and Engels. Using ethnographic and historical materials, students will explore how shifts in communities' notions of gender, femininity, and masculinity are connected to larger forces, including shifts in the marketplace, global cultural flows, reproductive and sexual technologies, social movements, racial and ethnic hierarchies, international declarations, and HIV/AIDS and STDs. The course also considers ways in which gender studies and feminism have influenced anthropology. Prerequisite: Anthro 160B, or permission of instructor.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Spring

ANTHRO 4364 European Societies
This course examines the anthropology of European societies, including the present concern with the European Union. We will consider ethnographies of various contemporary European societies and of the European Union iteslf, in relationship to issues including ethnic conflict, immigration, religion, nationalism, and regionalism.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Spring

ANTHRO 4365 Sex, Gender, and Power
This seminar explores various ways anthropologists have conceptualized the intersection of sex, gender, and power in their ethnographies. Key questions revolve around the processes through which biological categories of sex become socially significant, and interact with various regimes of power such as the state, family, religion, medicine, the market, and science in everyday life. We examine how the social processes and regulatory mechanisms associated with gender and sexuality create systems of hierarchy, domination, resistance, meaning, identity, and affection. Course materials are primarily ethnographies, but will be supplemented with articles. The aim of the course is to develop students' critical reading, discussion, and writing skills. Prerequisite: Upper-level Anthro or Women and Gender Studies courses, or permission of instructor.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

ANTHRO 4366 Europe's New Diversities
Since the late 1980s, three major upheavals have transformed European senses of identity. The demise of the Soviet Union has forced citizens of new post-socialist' nations to forge new senses of belonging and new strategies of survival. The rise of a new public presence of Islam and the growth of children of Muslim immigrants to adulthood

have challenged notions that Europe is a secular or post-Christian space. Finally, the heightened authority of European institutions has challenged the nation-state from above, and the granting of new forms of subnational autonomy to regions and peoples has challenged it from below. The new Europe is increasingly constituted by way of regional identifications, transnational movement(s), and umbrella European legal and political organizations; these new realities occasion new rhetorics of secularism, nationalism, and ethnic loyalties. We examine these forms of diversity, movement, and debate by way of new works in anthropology, sociology and political science.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS EN: S
Typical periods offered: Spring

ANTHRO 4367 Culture, Power, Knowledge
We often think of knowledge as universal and objective. But anthropologists have long studied ways in which knowledge varies in different cultural settings. In this course, we will ask: What is knowledge, how does it arise, and what does it do? Is there such a thing as universal validity or is knowledge always tied to specific cultural practices? What happens when knowledge travels and how does knowledge figure in relations of power? We will approach these questions through works in anthropology, philosophy, and science studies.
Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH EN: S
Typical periods offered: Fall

ANTHRO 4390 Economic Anthropology
Production and distribution of economic goods in various societies, comparing theories from economics, sociology, and anthropology. Prerequisite: graduate standing, or Anth 160B and Anth 399BQ.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall, Spring, Summer

ANTHRO 4392 Capitalism and Culture
Capitalism is perhaps the most important historical and social phenomenon in the modern world. In tribal settings and major cities alike its complex impacts are evident. Through rich case studies of how capitalism touches down in diverse cultures, this course provides an introduction to anthropological perspectives on the economy and economic development. Themes covered include the history of capitalism and globalization, the cultural meanings of class and taste, the relationship between capitalism and popular culture, major artistic responses to capitalism, social movements such as environmentalism, and the field of international development. No background in anthropology or economics is required.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4393 The Archaeology of Trade and Exchange
Studies of trade and exchange are fundamental to our past, as cultures in contact result in new imaginings of self, communities, and place in the world. This course engages in archaeological and anthropological discussions about the interconnectedness that results from trade. This seminar concentrates on the discourse of material trade and the mechanisms for exchange, redistribution, dependency, and resistance. It also examines the immaterial exchange of ideas, perceptions, and values that alter concepts of identity, space, and time. Globalization, political economies, and power are also addressed, along with ideas about territory, value, and social and political consequences of trade.
Credit 3 units. A&S IQ: LCD, SSC BU: BA, IS EN: S
Typical periods offered: Spring

ANTHRO 4394 The Connected World: Social Networks in Anthropology
This course will serve two purposes. The first is to introduce students, via a broad interdisciplinary survey, to applications of social network perspectives and methods in the social sciences, especially anthropology. We will accomplish this via case studies each week that are organized by topic. Throughout the course, students will be introduced to network research across all four subdisciplines of anthropology, including the sociocultural, biological (including primatology and medical anthropology), archaeological, and linguistic subfields as well as the emerging fifth subfield of applied anthropology. The second purpose of this course is to expose students to the tools necessary to conduct network research, including collecting relational data, visualizing and analyzing networks, and interpreting the results of network analyses. This exposure will come from weekly demonstrations of relevant software and analyses by the instructor, with each week covering the most popularly employed tools for analyzing social networks.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, IS EN: S
Typical periods offered: Spring

ANTHRO 4423 Advanced Seminar in Medicine and Society: Patients, Politics, Policy
This course is designed to build on foundations provided in the First-Year Medicine and Society Seminar. It will interrogate current health-related issues, including gender, sexuality, politics, policy, and economics, and it will also explore how these and many other issues, demographics, and so on impact current health- and healing-related decisions and policies. We will read about and unpack contemporary issues in health care (insurance, big pharma, gender and sexuality, race) and have local experts visit to talk about their practical experience with and in health care. Students will be expected to engage with ethnographic, medical, economic, political and sociological material as well as current journalism to interrogate the topic. Prerequisites: Anthro L48 141 and Anthro L48 142.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall

ANTHRO 4442 Culture and Romantic Love
This course delves into the emotional domain of intimate relations to explore romantic love from a cross-cultural perspective. It attempts to address the following questions: What is the nature of romantic love? Is romantic love universal? How do specific cultural practices shape intimate relations? Is romantic love the product of modernization? How is romantic love expressed cross-culturally? Are love and money necessarily opposed? How have the romance industries reshaped romantic experiences? How has gender, racial, and ethnic stratification created unequal experiences of intimate relations? Why does love fail? And finally, how is romantic love expressed, experienced, and imagined in the age of transnationalism and new technologies?
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Spring

ANTHRO 4451 Research Methods in Anthropology
As a critical examination of the nature of evidence and explanation within anthropology, this course provides an introduction to a broad range of methods essential for collecting ethnographic data in a systematic manner. Interviewing skills are developed as a basis for using methodologies such as life histories, free listing, pile sorting, rank ordering, social mapping, and decision tree modeling. Issues of qualitative data analysis are discussed in conjunction with software packages designed for organizing ethnographic information. This course is intended for graduate students only. Undergraduates may be enrolled with permission of the instructor.
Credit 3 units. A&S IQ: SSC EN: S

Typical periods offered: Fall

ANTHRO 4452 In the Field: Ethnographic and Qualitative Methods
This course provides an introduction to ethnographic and qualitative research. Ethnography is the study of culture and social organization primarily through participant observation and interviewing. Ethnographic research provides descriptive and interpretative analyses of the routine practices of everyday life. Ethnographic accounts represent different ways people live and make sense of their experiences; they describe the types of social organization (e.g., gender relations, class systems, racial divisions, cultural contexts) that, in part, serve to structure or pattern social behavior. Students conduct a small-scale qualitative research project; in the process, they gain skills in various qualitative research methods. This course is suitable for both undergraduate and graduate students. One purpose of the course is to help students plan for subsequent thesis research, independent study projects, or dissertation research.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall

ANTHRO 4454 Cultures of Science and Technology
This seminar explores questions of theory, method, and ethics in the anthropology of science and technology. How is biomedicine changing what it is to be human? How can technologies and scientific practices be studied ethnographically? How are the politics of difference linked to the production of scientific knowledge? Through close reading of ethnographic texts and fieldwork experience both on-and off-line, we will investigate how scientific practice and technologcal innovation reorganize various aspects of human life on both global and local scales. Topics include the social construction of knowledge, the reproduction of racial categories in genomics, the cultures of cyberspace, the commidification of bodies in medical science, and the ways in which various technoscientific projects reshape natural and political orders in diverse locales.
Credit 3 units. A&S IQ: SSC, WI Art: SSC EN: S
Typical periods offered: Fall, Spring

ANTHRO 4455 Ethnographic Fieldwork: The Politics of Schooling
This is a practice-based course in ethnographic fieldwork. Using a local case study (the cultural politics of schooling), we examine ethnographic fieldwork as an academic instrument and public social action. The course prepares students for independent research in academic or professional fields developing skills in critical thought, thesis and question development, background and internet research, perspective and empathy, social and political-economic analysis, observation, interviewing, oral histories, note-taking, data analysis, cultural interpretation, and writing. Student work will contribute to the ongoing St. Louis Schools' Ethnographic Documentation Project.
Credit 3 units. A&S IQ: SSC Art: CPSC, SSC EN: S
Typical periods offered: Fall, Spring

ANTHRO 4456 Ethnographic Fieldwork: Energy Politics
This is a practice-based course in ethnographic fieldwork that will focus on the politics of fossil fuels and the renewable energy transition in St. Louis and Missouri. We will situate ourselves as anthropologists with an interest in understanding relationships between global warming, the socio-technical arrangements of energy production, circulation, and use in the city and region, public knowledge, health, and social and cultural practices, and the roles and activities of businesses, political institutions, and elected officials. Through case studies we will work to produce critical knowledge aimed at pushing institutions, the city, and the region toward the transition to renewable energy. Our efforts will produce empirical documentation, case studies, and proposals and may include field trips to resource extraction sites and government offices
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Spring

ANTHRO 4457 I'm NOT a Robot: The Contemporary Politics of Man and Machine
Our lives today are full of smart machines that appear to deliberate, make judgements, and interact socially. Yet unlike humans, they are bound to their programming, unable to improvise, feel, or ethically value- what one pioneering computer scientist called the imperialism of instrumental reason. What role does this rigid computer reason play in real-life projects of imperialism, of racial and class domination, and other forms of social inequality? How does it work with or against existing power structures? We will examine a variety of human-computer encounters across military and government, law and policing, science and medicine, and media and entertainment. Course materials will include ethnographies of computer science and robotics, readings about the history and philosophy of computing, as well as news articles and films related to pop culture and current events.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

ANTHRO 4464 Religion, Law, and Pluralism
Comparative study of religious and legal pluralism in U.S., Europe and Asia; how laws define or shape cultural and religious differences; theories of pluralism. Prerequisite: Previous work in social sciences or law, or instructor's permission.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall, Spring

ANTHRO 4466 Religion and Media
Instead of fading away in a process of modernization, religious traditions remain crucially important in the contemporary world. One key reason for this is the convergence of such traditions with modern systems of mass media. Based on an introduction to anthropological approaches to mass media, this class comparatively examines how modern mass media have become part of religious practice in diverse settings. Special attention will be paid to how the intersection of modern mass mediation and religious traditions shape collective identities and political processes.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Spring

ANTHRO 4470 Contemporary Issues in Cultural Anthropology
A familiar topic of the modern age, the threatening prospect of a world-wide catastrophe ahead, has become a large and elaborate discussion of the true nature of the contemporary world. Many works have, using various arguments, pointed to the potential collapse of the world as we know it. This course seeks to identify, as best we can, the empirical dangers to the world as it is but also critically examine the arguments that describe the world condition. Our project requires that we confront a fundamental conceptual issue in the study of the human condition: how to distinguish the reality of the world as it is from the rhetorical devices by which it is conceptually grasped.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4471 Artifact Analysis
Introduction to the analytical methods used on archaeological materials; emphasis on lithics and ceramics. Students apply methods to individual research projects. May be taken with Anth 390. Prerequisite: Anth 190BP, 310CQ, 312C, 314BQ, or 390, or permission of instructor. Three class hours plus laboratory time for individual subject.
Credit 3 units.

Typical periods offered: Fall, Spring

ANTHRO 4480 Anthropology and Creative Writing
Creative writing has much to offer anthropology. This course explores how methods of artistic writing and expression can shape stories and studies of cultural life in the global world. We consider the uses of journalism, fiction, memoir, poetry, and cinema in anthropology's understanding of the richness, the deep emotional tone, and also the dangers of human experience. We look at such issues and themes as the ordinary life and everydayness, coming of age and fitting in, the feeling of being at home and senses of place, narratives of illness and affliction, how people cope with trauma and violence, what makes our bodies powerful or vulnerable, and why things really matter. Although students are actively involved in writing stories, this is not a writing intensive course.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall

ANTHRO 4481 Writing Culture
Different ways of writing about people, culture, and society in past and present times. Readings include anthropological works as well as works of fiction that represent people and the times, places, and circumstances in which they live. Students conduct and write about their own ethnographical observations.
Credit 3 units. A&S IQ: LCD, SSC, WI Art: SSC EN: S
Typical periods offered: Fall, Spring

ANTHRO 4483 Narrating the Self
A major chunk of the data gathered during ethnographic research projects typically consists of stories told by our interlocutors in the field -- our informants. In everyday usage, stories are usually taken to be extended, heavily plotted, and artfully delivered narratives. In this course, we take a broader, more inclusive approach to storytelling that encompasses everything people tell, in many different narrative formats, about themselves and the world they inhabit. Such stories are of immense value to us; through narrative, people give shape to and make sense of their lives and tell us where they position themselves in the moral order. Furthermore, in and through storytelling, people structure, comment on, and assert agency over their lived experiences and, by doing so, construct a self. The subject of much debate in philosophy, psychology, and the social sciences, the notion of the self is still upheld by many, although currently it often emphasizes the fragmented, locally constructed, and culture-specific nature of the self. One of the concerns in this course, therefore, will be to assess the theoretical value of the notion of the self in narrative analysis and in anthropology as a whole. More generally, this course explores the (micro-)politics of storytelling to understand how storytelling works as the interface between the self and society as well as between the subject and social structure. Issues of agency and structure will often take center stage, and we will see that the form and content of narratives, cultural norms and values, and power relations are mutually constitutive.
Credit 3 units. A&S IQ: HUM BU: BA, HUM EN: H
Typical periods offered: Fall

ANTHRO 4492 Anthropology of Nationalism
This class offers an overview of approaches to the study of nationalism from an anthropological perspective. Departing from a discussion of various mainstream theories of nationalism, the course will then critically engage these approaches through confronting them with recent anthropological readings and case studies dealing with this crucial contemporary phenomenon. A main focus will be a reconsideration of the linkages between language and the spread of nationalism.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Spring

ANTHRO 4493 Diasporas and Transnationalism
This class provides an introduction to the study of modern diasporas and the transnational processes in which they are situated from an anthropological perspective. The ethnographic emphasis will be on South Asian diasporas, but the readings will also involve other examples. Topics will include the changing historical conditions and processes responsible for the creation of contemporary diasporas, the issue of identity formation among diasporic populations as well as the question of how diasporic communities challenge as well as contribute to our understanding of culture, nationalism, and globalization.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall

ANTHRO 4500 Economic Development: An Interdisciplinary Approach
This course examines economic development from a multi-disciplinary perspective. Economic historians often ask exactly the same questions concerning economic growth that development experts in anthropology address in the modern world. In a non-technical, jargon-free manner, this course will draw together the insights of diverse disciplines as they bear on questions and controversies surrounding economic growth. Prerequisite: Economics 103 or Anthropology 399
Credit 3 units. A&S IQ: SSC BU: BA
Typical periods offered: Fall

ANTHRO 4502 Decolonizing Anthropology
Through books like Linda Tuhiwai Smith's book Decolonizing Methodology, tribal IRB's, and open letters, Indigenous people and tribal governments make clear how they want scientists to conduct research with their communities. How does anthropology reckon with its past ties with colonialism? How do we responsibly use scholarship from the past while working toward decolonization and anti-racism? This class will compare work by Indigenous people and people of color calling for decolonization and anti-racism, studies done using decolonizing methodologies, and widely read works of anthropology throughout the discipline's history. For example, we will read an excerpt from an anthropology textbook assigned at WashU in 2000 about an Eskimo and compare it to Native Alaskan scholar Heather Gordon's participatory research with Native Alaskans. During the last part of the class, we will learn about the roots of global inequality to highlight the structural conditions.
Credit 3 units. A&S IQ: LCD, SSC EN: S
Typical periods offered: Fall

ANTHRO 4513 Contemporary Issues in the Developing World
The idea of development has powerfully shaped the global scene over the last half century. It invokes a world in which certain areas are understood as models of progress, while others are deemed to have stagnated or fallen behind. How has this geography of uneven distribution and unequal resources come into existence? What are the assumptions that have made it possible? What does it actually mean in practice to be third world, underdeveloped, less developed, or developing? This course will engage these questions from a variety of perspectives, ranging from travel narratives and novels to film and social theory.
Credit 3 units. A&S IQ: LCD, SSC EN: S
Typical periods offered: Spring

ANTHRO 4516 The NGO and Civil Society
This course examines the current global resurgence of interest in civil society, a phenomenon that is widely associated with the fall of the Soviet Union. In this context, civil society is loosely defined as a melange of voluntary associations that provide a buffer between citizen and state. Such associations are popularly known as NGOs (Non-Government Organizations). In international development circles, NGOs are seen as a necessary ingredient to both democracy and economic progress. In this course we will trace the history of civil society (especially its role in colonialism), review the current development and academic debates on civil society, and examine the real life practice of NGOs in the developing world. Prerequisite: L48-399BQ, graduate level standing, or permission of instructor.
Credit 3 units. A&S IQ: SSC Art: SSC
Typical periods offered: Spring

ANTHRO 4517 Anthropology and Development
What is 'development'? Economic progress for all? A slow and gradual 'improvement' in the human condition? Helping people with 'projects'? Westernization? Modernization? The sorting out of bodies that are useful and can be put to work from those less useful bodies that must be contained, imprisoned, or killed? The militarized accumulation of capital? The commodification of labor? The exhaustion of nature? In this advanced seminar we will consider how anthropologists - as writers, analysts, and theorists - have engaged the theories, meanings, practices, and consequences of (sometimes externally directed) economic and political change. We focus on issues of the contemporary moment: oil; urban poverty and inequality (sex work, migration, water, debt, and cash transfer programs); and cultures of militarism. The course is designed to provide a graduate-level introduction to theory and ethnography based on intensive reading, discussion, critique, and writing, with revision. It is open to advanced undergraduates and fulfills writing-intensive (WI) requirements, as well as capstone requirements for some majors.
Credit 3 units. A&S IQ: LCD, SSC, SC, WI Art: SSC BU: ETH EN: S
Typical periods offered: Fall, Spring

ANTHRO 4518 Poststructural and Postcolonial Thought
Poststructural and postcolonial theories have been crucial to contemporary trajectories in the social sciences and literary criticism. This course will examine some of the central themes of poststructural and postcolonial thought, such as representation, power, agency, resistance, subject formation, and cultural translation, and their roles in anthropology and history. We will read key theorists such as Foucault, Gramsci, de Certeau, Said, and Spivak alongside contemporary anthropologists and historians who critically engage these writers.
Credit 3 units. A&S IQ: LCD, SSC EN: S
Typical periods offered: Fall

ANTHRO 4519 The Moral Imagination in Social Practice
Everything humans do is framed by assumptions about what is real, important, enduring, etc., assumptions that are already implicit in the language they use. When they assess situations, establish priorities, interpret social settings, identify the significance of their affairs, or conceive of a meaningful past, they employ such assumptions. Sometimes they do so consciously, but often they make these assumptions unthinkingly, uncritically. In this course, we will read recent works -- journal articles as well as monographs -- on the imaginative worlds of people in various social settings, to consider how these worlds are constituted and how they are reiterated and reinforced in social practice. We will also refer back to the classic works in socio-cultural anthropology to remind ourselves of the various ways of approaching the comparative study of social practices. Prerequisite: Junior standing, two social science courses, or permission of instructor.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall

ANTHRO 4522 Applied Anthropology
This course explores the field of applied anthropology and its approach to understanding human social problems. The focus is on the qualitative and quantitative information applied anthropologists use to study practical human social problems. We will examine the four important factors that influence the practical application of theories and methods to social problems: (1) the specific challenges faced by individuals with particular social identities; (2) the coping strategies developed by local groups and the sustainability of their efforts; (3) the interests and objectives of key actors involved; and (4) the goals, identities, and ethics of researchers. Taking a comparative perspective, the course employs an ethnographic, historical, and geographic approach to understand local problems within global contexts. Students will engage in research projects applying anthropological concepts and methods, thereby scrutinizing the contexts in which information is collected, analyzed, disseminated, and utilized by applied anthropologists.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Spring

ANTHRO 4555 Digital Digging: An Introduction to Archaeological Geophysics
In this class we will be exploring the history, technology, and application of geophysics in archaeology. In doing so, students will be provided with the opportunity to gain hands-on experience collecting, processing, visualizing and interpreting data from a variety of instruments that include ground-penetrating radar (GPR), magnetometry, electromagnetic induction (conductivity), and magnetic susceptibility. Prerequisites: Anthropology 190B
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4561 Ceramic Analysis
Methods, techniques, and models for analyzing archaeological ceramics. Students will learn how ceramic artifacts are used by archaeologists to reconstruct social practices in the past, including economics, politics, religion/ritual, migration, social organization, etc. Students will be trained in both qualitative and quantitative methods of analyzing ceramics and ceramic assemblages. While these methods are applicable to the archaeology of societies across the world, students will specifically conduct hands-on analyses of archaeological collections from the St. Louis/Midwestern U.S. region. Prerequisite: at least one archaeology course, graduate standing, or permission of instructor.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4562 Artifact Analysis: Mississippian Cultures
The purpose of this course is to provide students with an introductory, hands-on experience of the methods employed in the analysis of archaeological materials common to the Mississippian culture. Students will conduct class projects based on collections from Cahokia Mounds and the St. Louis region. Prerequisite: Anthro 314 or equivalent, or graduate standing, or permission of instructor.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S
Typical periods offered: Fall, Spring

ANTHRO 4563 Archaeological Conservation, Curation, and Collections Management: Method and Theory

This course will provide information on archaeological curation and collections management method and theory, and will introduce students to the basic principles of archaeological conservation in the field and lab environments. The multiple processes affecting study and preservation of archaeological remains and associated records will be thoroughly reviewed. Students will become equipped with necessary and practical tools to allocate resources for archaeological conservation in the field and lab, and to provide for and comply with state and federal standards for curation of archaeological resources.

Credit 3 units. A&S IQ: SSC Art: SSC

Typical periods offered: Spring

ANTHRO 4564 Archaeobotanical Analysis

Advanced laboratory and analytical techniques. Prerequisite: Anthro 4211 or permission of instructor.

Credit 3 units. A&S IQ: SSC EN: S

Typical periods offered: Fall

ANTHRO 4565 Biomolecular Archaeology: Are You What You Eat?

A revolution is underway in archaeology. Working at the cutting edge of isotopic and genetic technologies, researchers have been probing the building blocks of ancient proteins, life-DNA, fats and microfossils - to rewrite our understanding of the past. Their discoveries and analyses have helped revise the human genealogical tree and answer such questions as: Are you what you eat? How different are we from the Neanderthals? Who first domesticated plants and animals? What was life like for our ancestors? In this class, we will address those fundamental issues to understanding human nature. Here is science at its most engaging.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

Typical periods offered: Fall

ANTHRO 4571 Monographs in Social and Cultural Anthropology

Focus on the major ethnographical works as they reflect changing issues and contexts. Classic as well as recent ethnographs; seminal theoretical works that shaped the ethnographical tradition. Prerequisite: 3 advanced units in anthropology, or permission of instructor.

Credit 3 units. A&S IQ: SSC

Typical periods offered: Spring

ANTHRO 4580 Craniofacial Biology

Growth, morphology, and function of craniofacial structures in primates. Emphasis on biological background of current research problems concerning variation among living primates and the evolution of primates. Topics include the biomechanics of mastication; relationship between dental histology and life history; and relative effects of size, function, and phylogeny on variation. Prerequisite: Anth 150A and one additional course in physical anthropology.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Spring

ANTHRO 4581 Principles of Human Anatomy and Development

This course will discuss the anatomy of most of the functional systems of the human body. Topics covered will include the peripheral nervous system, respiration, circulation, the skeletal system, the gastro-intestinal tract, the urogenital system, the male and female reproductive systems, locomotion, manipulation, mastication, vocalization, the visual system, the auditory system and the olfactory system. Selected topics in human embryology will also be introduced. The course provides valuable preparation for any student interested in human biology, anthropology, medicine or the health sciences.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Fall, Summer

ANTHRO 4582 Human Life History Theory

Life history theory postulates that organisms must allocate finite time and finite resources between growth, maintenance, and reproductive effort. This balance will necessitate trade-offs in specific traits related to body size and energy allocation between competing functions across the life of the organism. In this class, we will start from this broad theory and look at the specific application of life history theory within anthropology. Humans, in particular, present unique and unusual life history characteristics, which we will discuss in depth.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Spring

ANTHRO 4590 Human Osteology

Analysis of skeletal material recovered in human paleontological and archaeological excavations. The development of bone and major diseases that affect skeletal structure. Prerequisite: permission of instructor.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Fall, Spring

ANTHRO 4591 Human Functional Morphology

A detailed consideration of the functional correlates of muscle-skeletal form in recent and ancient humans and our close primate relatives, as a means for understanding the behaviors responsible for driving the evolution of human anatomy. Emphasis is placed on the structure and development of bones, joints and teeth, the soft tissues which impinge upon individual bones, and the biomechanical demands affecting bone and joint structures.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Fall, Spring

ANTHRO 4592 Geometric Morphometrics

This course focuses on the collection, visualization, analysis and presentation of morphometric data in physical anthropology, emphasizing recently developed techniques for studying size and shape. Explores theoretical and practical aspects of landmark-based techniques such as Procrustes superimposition, Euclidean Distance Matrix Analysis, Finite Element Scaling Analysis, and thin-plate splines; outline techniques such as Fourier Analysis and semi--landmarks; and multivariate statistics with geometric morphometric applications, such as principal coordinates and discriminant analyses. A practical lab component covers the use of available geometric morphometric software for addressing biomechanical and physical anthropolgical questions.

Credit 3 units. A&S IQ: SSC EN: S

Typical periods offered: Spring

ANTHRO 4593 The Living Machine: Biomechanics in Terrestrial Animals

A survey of how animals -- particularly humans and other primates -- interact with their physical world. How do terrestrial animals move, see, breathe, and hear? We will examine the anatomy and mechanics involved in these and other behaviors, and will investigate their evolution. Prerequisite: Anthro 150A or permission of instructor.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Fall

ANTHRO 4594 Experimental Methods in Animal Biomechanics
The first portion of this lab-based course will cover basic concepts in biomechanics and training in the equipment and non-invasive experimental techniques used to investigate locomotion, energetics, and other biomechanics questions in terrestrial animals, including humans. In the second portion, students conduct their own research projects, developing questions and hypotheses, collecting and analyzing data, and using results to test predictions. Prerequisite: Anthro 4593 or permission of instructor.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

ANTHRO 4595 Developmental Plasticity and Human Health
A look at how early life - gestation plus infancy and childhood - contributes to the establishment of long-term physiology, variation, and individual health from an anthropological perspective. The course will include current disease models of developmental origins, combined with evolutionary and adaptive perspectives on developmental plasticity and the construction of human health.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

ANTHRO 4597 The Archaeology of Life and Death
The study of human remains in archaeological contexts offers us a rich perspective on human life and society in the past. Our bodies are shaped by genetics, environmental factors, subsistence, disease, and physical activities over the life course. At the same time, social organization, inequality, and ideologies also shape the human experience; they often become reflected in the built environments of tombs and cemeteries, the grave offerings, and interment styles that surround human remains in archaeological contexts. This course offers an introduction to bioarchaeology and mortuary archaeology as complementary approaches to the study of life in the past. The goal of the course is to understand how activities, norms and beliefs, and environments shaped bodies in life and death, and the different ways in which archaeologists can gain insight into the past through the study of human remains and burials. Course lectures and discussions focus on recent advances in research and ongoing debates in the two fields with examples from prehistory and history around the world, from North and South America, to Europe, Asia and Africa. Although this course will provide a basic overview of human skeletal anatomy, it is strongly recommended that students have taken an introductory course on the subject prior to enrolling in the class.
Credit 3 units. A&S IQ: LCD, SSC EN: S
Typical periods offered: Fall

ANTHRO 4598 Biomarkers: Measuring Population Health, Reproductive, and Social Endocrinology
How do we study contemporary human biology and population level health? How do we investigate individual differences in health within a larger population? In this course, we will specifically address these questions by looking at how anthropologists, nutritionists, and public health workers investigate individual and population level health. This will be done through the study of biomarkers collected from individuals. In this class, we will discuss the theory behind the use of biomarkers, the underlying biology and physiology of the human body reflected in these data, and the methods used in collection and analyses of biomarkers. Finally, we will discuss how biomarkers can be integrated into studies of population and individual level health.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

ANTHRO 4610 Queer Medicine: Theories, Methods, Provocations
This seminar explores the intersections of queer and medical anthropology to consider: How do queer experiences challenge medical authority and its influence on the cultural construction of bodies, productivity, and life itself? What theories and methods might characterize a queer medical anthropology? Attending to historical accounts of queerness in medicine, we will center ethnographic studies of queer lives in medical contexts. We will discuss topics including diverse forms of reproduction and kinship, medical constructions of sex and gender, and interventions in queer healthcare. Drawing from intersectional literature in crip theory and Black studies, we will further examine how disability and race are entangles in queer medical encounters. Students will critically reflect on and propose theories and methods for a queer medical anthropology as they work on final papers, presentations, and zines for an end-of-semester symposium.
Credit 3 units. A&S IQ: SSC, SC
Typical periods offered: Fall, Spring

ANTHRO 4622 Anthropological Demography: Theories, Methods, and Applications
Anthropological Demography is an interdisciplinary endeavor that developed in response to the need to incorporate cultural context into the analysis of population data. The course introduces some fundamental demographic concepts (e.g., vital rates, natural fertility, and demographic transition theory) and provides students with the foundations for demographic literacy through an exploration of basic quantitative methods and means of presentation. The course then deals with an anthropological critique of demographic assumptions, then shifts to a demographic critique on the applicability of anthropological knowledge. The final and most substantial part of the course will be devoted to an intensive reading of seminal works in the field.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Spring

ANTHRO 4623 Art and Science of Inferential Statistics
This course examines the historical roots, the scholarly development, and the current applications of inferential statistics in a research context. The emphasis is on how social and natural variables are distributed, framing testable research questions, and choosing appropriate statistical tests. This course will cover the testing of univariate, bivariate and multivariate hypotheses using parametric, non-parametric, and re-sampling methods. Requires students to undertake statistical analyses of their own on real data sets. Familiarity with descriptive statistics is assumed. Designed for graduate students and advanced undergraduates. Permission of instructor is required for undergraduate enrollment.
Credit 3 units. A&S IQ: SSC, AN Art: NSM EN: S
Typical periods offered: Fall, Spring

ANTHRO 4655 New Advances in Archaeology
Archaeological research is moving at an increasingly rapid pace, with advances in archaeological methods and theory propelling new interpretations and understandings of archaeological findings. This course we will focus on contemporary developments in archaeology, with an emphasis on current trends in theory, method, and discovery. The objectives of the course are to place emerging trends in archaeological research in a historical context, to understand new methods, and to explore how various theoretical approaches influence the conduct of archaeological research around the globe.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4661 Historical Archaeology
This course focuses upon the methods and techniques employed in historical archaeology. We will include method of integration of written records through contextual studies, discussion of specific artifact type identification techniques, and seminar type treatments of other aspects of the field. The class will include some hands-on lab work, working primarily with materials from the first American fort west of the Mississippi (Fort Belle Fontaine) and two Civil War period mansions. Prerequisite: 3 credits of archaeology or permission of instructor.
Credit 3 units. A&S IQ: HUM, LCD, WI Art: HUM BU: HUM
Typical periods offered: Fall, Spring

ANTHRO 4682 Ethnoarchaeology
Ethnoarchaeologists use studies of aspects of the present to strengthen archaeological interpretation. Since archaeologists don't usually study words, we need to understand relations between human actions and the material record. In this class we will explore ethnoarchaeological studies of a wide range of topics from how things are made, to what they mean, or how we might think differently about the past. Student presentations, class reading, and discussion will examine topics that might include whether reindeer herders think of their animals as domestic or wild, how Australian Aboriginal peoples have or have not used dingoes for hunting, the role of feasts in society or how to make and find beer, ceramics, stone tools, beads or smelt iron. Ways that decoration and construction of pots signify ethnic boundaries or what a mother-in-law teaches a new bride have seen famous ethnoarchaeological studies. We can discuss any aspect of archaeology and will pick topics that fit your interests and the questions that you would like to pursue in your papers and presentations. There are no prerequisites for this class.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

ANTHRO 4690 The Work and Ideas of Great Anthropologists
A survey of major theories and paradigms in anthropology; emphasis is on approaches taken by sociocultural anthropologists in analyzing and explaining features of societies and cultures, including evolutionary theories, comparative methods, interpretive approaches and ecological accounts. Required of all majors. Students considering a junior year abroad should enroll sophomore year.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall, Spring

ANTHRO 4710 Issues in Social and Cultural Anthropology
Analysis of major theoretical issues in the comparative study of societies and cultures, emphasizing works in anthropology. Includes discussion of theories of personality, economic change, social structure, history, ideology, and power. Prerequisite: Anth 470 or another course in social theory, or permission of instructor.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Spring

ANTHRO 4740 National Narratives and Collective Memory
This course examines how national narratives shape the ideas of nation-states about themselves and others. It considers cultural, psychological, and political aspects of narratives used to interpret the past and understand the present. In addition to reviewing conceptual foundations from the humanities and social sciences, particular national narratives are considered as case studies.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4751 Cultural Resource Management and Contract Archaeology
Topics covered will include discussing the impact of the new Native American Grave Protection and Repatriation Act regulations, developing a proposal or contract, problems of compliance, and other practical matters of contract archaeology. Class will execute and complete a small CRM archaeological project as 'hands-on' training. Prerequisites: Anthro 314BP or equivalent, or permission of instructor.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall

ANTHRO 4761 The Pleistocene Peopling of Eurasia
The paleolithic archaeology, human paleobiology, and paleoecology of the geographical expansions and adaptations of Eurasian humans through the Pleistocene. Prerequisite: Anthro 150A or 190B.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC
Typical periods offered: Fall, Spring

ANTHRO 4762 The Neandertal Legacy
A detailed consideration of the Middle and Late Pleistocene patterns of human biological evolution relating to the origins and evolution of late archaic humans (including the Neandertals) and the emergence of modern humans. Prerequisite: Anthro 367 or permission of instructor.
Credit 3 units. A&S IQ: NSM, WI Art: NSM
Typical periods offered: Fall, Spring

ANTHRO 4770 African Prehistory
Pathways to food production in Africa: Late hunter-gatherers and early pastoralists, their interactions and intersections with complex societies of the Nile. A survey designed for juniors and seniors in a seminar setting.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall

ANTHRO 4771 Out of the Wild: Domestication and Socioeconomic Diversity in Africa
The reason for the beginnings and spread of food production during the early Holocene in so many parts of the world is one of the most interesting questions in archaeology. It now seems likely that there are many different pathways to domestication. In Africa, there is a record of up to several million years of human existence as hunter-gatherers before some human populations adopted food production. Domestication of plants and animals about 10,000 years ago resulted in fundamental changes in human societies. It provided the basis for the increase in settlement densities, specialization and social stratification, and general decrease in mobility and dietary diversity, characteristic of non-hunter-gatherer societies in the modern world. In this seminar, the class will explore the phenomenon of domestication, and the spread of food production, surveying the evidence for manipulation and domestication of plant and animal species by prehistoric peoples in Africa. We will focus on how and why domestication occurred, and factors that influenced its spread, and interactions between late hunter-gatherers and early pastoralists, and intersections with complex societies of the Nile. We will also look at the contributions of Africa to understanding pathways to food production world wide.
Credit 3 units. A&S IQ: LCD, SSC, WI Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4772 Social Theory and Anthropology
A seminar on social theory and its ethnographic implications. Course combines major works of modern social theory, including Marx, Weber, and Durkheim, with current work by contemporary anthropologists, such as Clifford Geertz, Eric Wolf, Marshall Sahlins, and Fredrik Barth, and ethnographers from related disciplines, such as Pierre Bourdieu and Paul Willis. Prerequisite: Previous anthropology coursework or permission of instructor.
Credit 3 units. A&S IQ: SSC, SC Art: SSC EN: S
Typical periods offered: Fall

ANTHRO 4792 The Many Paths Leading Toward the Creation of the Ancient City
The purpose of this class is to examine the emergence of the Ancient City across the globe. We want to begin with the concepts of urbanism, city, and metropolis. These are words whose derivation are to be found in the classical languages of the Mediterranean. Is there any means to reach an understanding of how other civilizations and societies characterized these special places on the landscape? In the past many scholars have argued that market economies and state level societies are essential to their existence. Such arguments reflect issues of sustainability in terms of the economy and the effective control of large populations through state level institutions. While we want to understand the role of the economy and the level(s) of political integration involved in the process of urbanism, are there other cultural institutions such as religion that play a much larger and more significant role? Do these places reflect the citizens perception of the cosmos?
Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4793 Archaeological Study of Social Complexity
A hallmark of anthropological theory is the idea that human societies evolve toward greater complexity or higher levels of organization through time. Yet accurately defining complexity or organization is such a difficult and frustrating undertaking that many people give up and fall back on an intuitive understanding, similar to Supreme Court Justice Potter Stewart's famous definition of pornography: I know it when I see it. But what exactly does it mean to be socially complex? How does complexity in human societies emerge and how is it perpetuated? How can we infer social complexity from the archaeological record? In this seminar we will examine theoretical and methodological aspects of social complexity as investigated by archaeologists. By means of case studies drawn from around the globe and ranging from the earliest humans to the recent past, we will seek to define, describe, and understand the concept of social complexity and its manifestations in diverse societies at different times.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S
Typical periods offered: Fall, Spring

ANTHRO 4802 Theories and Practice of Landscape Archaeology
The study of landscapes as a particular framework for understanding the archaeological record has become increasingly widespread in the discipline today. Yet the theoretical background for defining landscapes is commonly disconnected with the actual practical application of landscape archaeology. What exactly do we mean by landscape archaeology, what is its utility, and how do contemporary methods of analysis and interpretation change the way we consider archaeology through this conceptual paradigm? This course will explore the theoretical basis and current archaeological approaches to landscape and address its distinction to, and overlap with, other prevalent concepts such as environment, ecology, place, and space. The course will also place focus on concrete methodological and practical approaches that differentiate Landscape Archaeology from other approaches -- as well as illustrate their points of convergence.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall

ANTHRO 4803 Advanced GIS Modeling and Landscape Analysis
The aim of this course is to learn to analyze archaeological data in terms of its spatial layout, geography, ecology, and temporal dynamics, using Geographic Information Systems and associated computer modeling techniques. A focus is placed on the relationship between natural environments, cultural geography, and the mapping of archaeological landscapes, and on the archaeologist's ability to accurately recover, reconstruct, and analyze this relationship in a virtual environment.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

ANTHRO 4810 Zooarchaeology
Archaeologists use ancient objects or material culture to study all of the human past, in its length and diversity. To do this, we have to reconstruct human actions from the things people made and used and the impacts that they had on the environment. Since the 1960's archaeologists have turned in an increasingly systematic way to aspects of the way people relate to material culture in the present, as sources for analogies for interpreting aspects of the past. Ethnographic field studies designed with archaeological problems in mind have become more common, and have contributed substantially to archaeological interpretation. Questions such as how archaeological sites form, and interpretation of changing human diets, human adaptations to challenging environments, how people domesticated plants and animals, the nature of human foodways, gender roles, the spread of food production or ritual and burial practices have all been informed by ethnoarchaeological studies We will look at ethnoarcheological approaches to the interpretation of many different categories of archeological data including: lithics, ceramics, house structures, and rock art and discuss a wide variety of archaeological topics to which ethnoarchaeological approaches have been applied. The areas that we focus on will depend on the topics in which the class is most interested.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall, Spring

ANTHRO 4834 Health, Healing, and Ethics: Comparative Perspectives on Sickness and Society
A cross-cultural exploration of cultures and social organizations of medical systems, the global exportation of biomedicine, and ethical dilemmas associated with medical technologies and global disparities in health.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall

ANTHRO 4881 Medicine and Anthropology
Explores the fundamental relationship of anthropology to the art and science of medicine. Emphasis on impact of anthropology on current modes of biomedical research; alternative systems of health and healing; role of anthropologist in biomedicine and public health; critical medical anthropology; anthropology and epidemiology. Prerequisite: Junior standing.
Credit 3 units. A&S IQ: SSC Art: SSC
Typical periods offered: Fall, Spring

ANTHRO 4882 Anthropology and Public Health
Anthropological approaches to public health practice and research; role of anthropology in public health systems; cross-cultural public health research; community vs. institutional bases of public health advocacy.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: ETH EN: S

Typical periods offered: Fall, Spring

ANTHRO 4883 The Political Economy of Health
This course reviews social science contributions to understanding health as a function of political and economies influences. Considers the ways in which personal health is affected by macrosocial processes. Examines effects of globization, international development and political instability on the health of individuals. Examples drawn from the U.S. and international contexts. Prerequisite: Junior standing or above.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

ANTHRO 4892 Hunter-Gatherer Socioeconomic Variation
This class will explore the nature and extent of variation in hunter-gatherer socio-economic systems as documented in the literature on recent hunter-gatherers, and in the archaeological record of the last 20,000 years. We will discuss Woodburn's concept of delayed return hunter-gatherers, Testart's writing on hunter-gatherer socio-economic organization, and archaeological concepts of simple and complex hunter-gatherers. We will examine case studies of both delayed and immediate return hunter-gatherers from the Americas, Asia, Africa, and Australia, and emphasize understanding underlying reasons for differences between groups, and implications of differences for patterns of cultural change, including the adoption of food production.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S
Typical periods offered: Fall, Spring

ANTHRO 4893 Pastoral Nomads of the Past
The archaeology of nomadic herders or pastoralists of Africa, Asia, and South America is the focus of this seminar. Cattle herders of Africa, horse and camel-based nomads of Asia, and llama herders of the Andes, are famous for their mobility, effective use of arid and mountainous lands, and distinctive and varied social organization and material culture. Nomads are known in many regions for long distance trade, warfare, and as agents of widespread political and religious change. We will examine issues such as the ecological background to mobility, nomads as early food producers, the environmental impact of nomadic societies, nomads and resilience, factors that pattern settlement structure and material culture of nomads, rock art, archaeological recovery, ancient nomadic states, and gender issues in recent pastoral societies.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall

ANTHRO 4898 Seminar: Pathways to Domestication
Survey of the evidence of the domestication of plants and animals, focusing on processes leading to domestication, and on the recognition of pristine features of domestication in the archaeological record. Prerequisite: one 300- or 400-level course in archaeology.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall

ANTHRO 4899 Seminar: Pathways to Domestication
The origins of agriculture led to one of the most important transitions in human history, continuing to fascinate anthropologists and all who depend on farmers for food. We examine evidence for the development and spread of settled and mobile farming systems in diverse regions of the world. We discuss old and new theoretical approaches and apply increasingly sophisticated methods for recovering and interpreting the evidence. Recent research puts us in a better position than ever before to understand the preconditions, processes, and possibly the causes of domestication and the spread of food production. This course is the WI version of L48 489 Seminar: Pathways to Domestication.
Credit 3 units. A&S IQ: SSC, WI EN: S
Typical periods offered: Spring

ANTHRO 4911 Methods in Molecular Anthropology
We will learn techniques used in molecular genetics and their application to studying the evolution and adaptation of human and non-human primates. This course will cover DNA extraction from biological materials (e.g. buccal cells from cheek swabs, potentially also fecal samples from the primates at the zoo), primer design and polymerase chain reaction (PCR) to amplify a region of interest (student lead, with guidance) from isolated DNA. Use of gel electrophoresis to visualize and purify PCR products and sequencing reactions to view nucleic acid structure will also be conducted. Finally, will also have a lecture on introductory bioinformatics. Throughout the course, we will discuss the mechanisms underlying these techniques, why they work and how to trouble-shoot problems. Students will be expected to submit lab reports and to engage in peer review of others' lab reports. Finally we will discuss how molecular methods inform anthropological research. Students will be also expected to take on-line safety training modules through EH&S.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Spring

ANTHRO 4952 Senior Honors Research
Limited to students who have qualified for the Anthropology honors program, and who are conducting research for an honors thesis. Prerequisite: permission of the Anthropology faculty member supervising the honors research, and concurrent filing of notification with the Anthropology senior honors coordinator.
Credit 3 units.
Typical periods offered: Fall

ANTHRO 4960 Senior Honors Research
This course is limited to students who have qualified for the Anthropology honors program and who are conducting research for an honors thesis. Prerequisites: Permission of the Anthropology faculty member supervising the honors research and concurrent filing of notification with the Anthropology senior honors coordinator.
Credit 3 units. A&S IQ: WI
Typical periods offered: Fall

ANTHRO 4961 Senior Honors Thesis
Limited to students who have qualified for the Anthropology honors program, and who are actively engaged in writing a senior honors thesis. Prerequisite: permission of the Anthropology senior honors coordinator.
Credit 3 units.
Typical periods offered: Spring

ANTHRO 4986 Original Research in Environmental Anthropology
In this course, we will focus our ethnographic lens on environmental issues in Saint Louis. Through readings and original research, this advanced course in anthropology closely engages discussion and debates about methods, ethics and representation in qualitative environmental studies. Students will identify and undertake qualitative, ethnographic research regarding a local environmental issue. The central goal of this class is to provide a forum for students to grapple with the practical and ethical considerations of anthropological research. The class will be segmented into the following three units: ethics in research, data gathering and analysis, and continuing conversations
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Spring

ANTHRO 4987 Original Research in Environmental Anthropology
In this course, we will focus our ethnographic lens on environmental issues in Saint Louis. Through readings and original research, this advanced course in anthropology closely engages discussion and debates about methods, ethics and representation in qualitative environmental studies. Students will identify and undertake qualitative, ethnographic research regarding a local environmental issue. The central goal of this class is to provide a forum for students to grapple with the practical and ethical considerations of anthropological research. The class will be segmented into the following three units: ethics in research, data gathering and analysis, and continuing conversations
Credit 3 units. A&S IQ: SSC, WI Art: CPSC, SSC EN: S
Typical periods offered: Spring

ANTHRO 4988 Advanced Directed Anthropological Research I
Designed to give undergraduates research experience in various subdisciplines of Anthropology. May be taken more than once for credit. Prerequisite: Permission of faculty member under whom the research will be done.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall, Spring

ANTHRO 4989 Advanced Directed Anthropological Research II
Limited to those students who have successfully completed L48-490, and have a qualifying continuing research project. Prerequisite: Anthro 490 and permission of the faculty member who will supervise the continuing research project.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall, Spring

ANTHRO 4990 Undergraduate Teaching Assistant
Open to advanced undergraduates only. Usual duties of teaching assistant in laboratory or other selected courses. Prerequisite: permission of instructor.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall, Spring

ANTHRO 4992 Field Methods in Paleoanthropology
This course will be 06/09/24-06/30/24 Monday-Sunday from 7:00AM-8:00PM. Run as a field school, provides a practical, hands-on introduction to the methods of paleoanthropological fieldwork. Instruction will take place at Drimolen Cave, one of the iconic paleoanthropological sites relevant to human evolution in South Africa. The objective of the field school is to give students an introduction to everything they need to know about paleoanthropology in South Africa. This includes practical exposure to excavation and survey methods, nightly lectures on a variety of topics covering paleoanthropology, geology, and archaeology delivered by some of the leading scholars in those disciplines as well as younger researchers in the process of getting their doctoral degrees. Lectures and practical training will be supplemented by four excursions meant to be both educational and entertaining (see below). Students will be expected to keep a daily log of their activities and observations, including details of their excavation records, to be handed in for grading at the end of the season. There will also be three weekly quizzes.
Credit 3 units. A&S IQ: NSM BU: IS
Typical periods offered: Summer

ANTHRO 4995 Anthropology Coursework Completed Abroad
Study Abroad Coursework
Credit 12 units.
Typical periods offered: Fall, Spring

ANTHRO 4996 Anthropology Elective: 400-Level
External transfer credit
Credit 3 units. EN: S
Typical periods offered: Fall, Spring

ANTHRO 4997 Anthropology Environment Study Abroad Coursework
Anthropology Environment Study Abroad Coursework
Credit 0 units.
Typical periods offered: Fall, Spring

ANTHRO 4998 Anthropology Global Health Study Abroad Coursework
Anthropology Global Health Study Abroad Coursework
Credit 0 units.
Typical periods offered: Fall, Spring

ANTHRO 4999 Capstone Experience
The Department of Anthropology offers serveral options for completing a capstone experience, which is recommended by the College of Arts and Sciences. One option is for students in any 400-level course in the department, to secure permission of the instructor to simultaneously enroll in Anthropology 4999. The instructor and student will develop an individualized plan for expanding the normal content of the selected 400-level course into a capstone experience. Prerequisite: junior or senior standing. Enrollment requires permission of the department and the instructor.
Credit 1 unit.
Typical periods offered: Fall, Spring

Anthropology Major

Program Requirements

- **Total Units Required:** 33 units
- **Grade Requirement:** C- or better; Pass/No Pass grades do not count for the major.

Required Courses

Code	Title	Units
ANTHRO 1510	Introduction to Human Evolution	3
ANTHRO 1520	Introduction to Cultural Anthropology	3
ANTHRO 1530	Introduction to Archaeology	3
Total Units		**9**

Elective Courses

Students must complete 24 advanced units (3000 level or higher) of elective courses, of which 9 units must be at the 4000 level.

Courses with anthropological themes and content can be counted toward the Anthropology/GHE major and minor. Examples of such courses include the following:

Code	Title	Units
AFAS 1130	Introduction to Race	3
AFAS 4160	Engineering Authority: Design, Architecture & Power in Africa	3
AMCS 2270	Topics in Native American Culture: Introduction to Native American & Indigenous Studies	3
AMCS 4456	Ethnographic Field Work: Energy Politics	3
ANTHRO 3384	Language in Society	3
ANTHRO 4700	Interdisciplinary Topics: Modeling Cultural Systems	3
ARTARCH 4975	Collecting Cultures	3
ENST 3710	Introduction to GIS	3
GS 3006	Global Health & Language	3
JIMES 4850	Topics in Jewish Studies	3
LATAM 3160	Cultures of Health in Latin America	3
RELPOL 3070	Islam, Gender, Sexuality	3

Students should consult with the program coordinator or Director of Undergraduate Studies to make sure a course offered outside of Anthropology will count toward their major/minor.

Additional Information

- Students should register for any courses listed under Anthropology in the Bulletin to have the credit units count toward the Anthropology major. Courses that are housed in other departments can be counted towards the Anthropology major. **Note:** Advanced courses used to satisfy the requirements of one program cannot also be counted toward another major/minor per Arts & Sciences policy.
- Courses taken Pass/No Pass and courses in which a student earns less than a C- do not fulfill the major requirements.
- A maximum of 12 units of nontraditional courses — including School of Continuing & Professional Studies, study abroad, transfer (non-study abroad), honors, and directed-research courses — may be counted toward the advanced electives in the major. For details, please see below.

School of Continuing & Professional Studies

Anthropology courses taken in person through the School of Continuing & Professional Studies (CAPS) may be counted toward the major or minor. Courses listed as electives for the GHE specialization that are offered in the School of Continuing & Professional Studies may be counted toward the GHE specialization major or minor. A maximum of 6 units of credit from School of Continuing & Professional Studies courses may be counted toward the electives. Required introductory courses taken through the School of Continuing & Professional Studies do not count toward the maximum number. Enrollment in CAPS courses requires approval from the Program Coordinator or Director of Undergraduate Studies.

Study Abroad

The department recognizes and accepts courses from a number of semester and year abroad programs. Specific information about study abroad policies is available on the Anthropology Department website or by consultation with the department study abroad coordinator. Students may petition to count up to 9 units of study abroad elective credit toward the general Anthropology major or up to 6 units of study abroad elective credit toward the GHE specialization of the major. Students should contact the Anthropology study abroad coordinator to discuss the requirements for study abroad credit and to gain approval for the transfer of credit.

Transfer Credit

Students who wish to transfer credits from other institutions (non-study abroad units) for use toward the major in Anthropology must have approval from the Director of Undergraduate Studies. With approval, students may transfer a total of 9 units of credit from other U.S. institutions. Students who completed the Anthropology subject test for the International Baccalaureate with a score of 5 or higher can count the corresponding credit hours toward their general degree credit hours but not toward the Anthropology major/minor or GHE major/minor.

Senior Honors

Anthropology majors in the College of Arts & Sciences who wish to conduct a research project for Latin Honors, who have a minimum grade point average of 3.65, and who have received the approval of a faculty advisor and the department honors coordinator may be enrolled in the honors program. Latin Honors involves both the demonstration of acquired knowledge (based in part on GPA) and a report on an original research project. Two courses, ANTHRO 4960 (fall semester) and ANTHRO 4961 (spring semester), are available to allow students to receive credit for the extra research involved in the honors thesis. Students may count one of these courses toward their 4000-level course requirement for the major.

Research

Many Anthropology courses include research components and final projects. Majors can also take part in research at the beginning, intermediate, or advanced level in any subdiscipline and gain credit through approved directed research with faculty who have ongoing research projects. Research opportunities in anthropology labs include projects in archaeology, paleoethnobotany, geoarchaeology, zooarchaeology, genetic studies, geographic information systems, human ecology, paleoanthropology, stable isotopic analyses, and primate studies. Students may count a maximum of 3 units of directed research credit (ANTHRO 2900, ANTHRO 3900, ANTHRO 4988, ANTHRO 4989) with any individual faculty member toward the major.

Internships

Anthropology majors may gain pre-professional experience by taking part in supervised internships in businesses, cultural institutions, and community agencies. Students must have department approval for an internship and must work with an anthropology faculty sponsor during the fall or spring semester. Internships (ANTHRO 3000) may only be taken for Pass/No Pass credit and do not count toward the major requirements.

Anthropology Major, Global Health and Environment Specialization

Program Requirements

- **Total Units Required:** 33 units

  Anthropology majors may choose an optional specialization within the major called Global Health and Environment (GHE) if the students' interests lie primarily within this area of anthropology. Students enrolled in the GHE specialization must complete the anthropology major required courses and the GHE required and elective courses as outlined below.

- **Grade Requirement:** C- or better; Pass/No Pass grades do not count for the major.

Required Courses

- **Departmental requirements:** 9 units

Code	Title	Units
ANTHRO 1510	Introduction to Human Evolution	3
ANTHRO 1520	Introduction to Cultural Anthropology	3
ANTHRO 1530	Introduction to Archaeology	3
Total Units		**9**

- **Global Health and Environment Specialization requirements:** 6 units

Code	Title	Units
ANTHRO 3610	Culture and Environment	3
ANTHRO 3283	Introduction to Global Health	3
Total Units		**6**

Elective Courses

Students must complete 18 advanced units (3000 level or higher) of elective courses, of which 9 units must be at the 4000 level, chosen from the approved list of GHE electives available on the Department of Anthropology website. GHE electives consist of approved courses listed under the Global Health heading and courses listed under the Environment heading. Students may take no fewer than 6 units from either list, with the remaining 12 units to come from the other list.

Courses with anthropological themes and content can be counted toward the Anthropology/GHE major and minor. Examples of such courses include the following:

Code	Title	Units
AFAS 1130	Introduction to Race	3
AFAS 4160	Engineering Authority: Design, Architecture & Power in Africa	3
AMCS 2270	Topics in Native American Culture: Introduction to Native American & Indigenous Studies	3
AMCS 4456	Ethnographic Field Work: Energy Politics	3
ANTHRO 3384	Language in Society	3
ANTHRO 4700	Interdisciplinary Topics: Modeling Cultural Systems	3
ARTARCH 4975	Collecting Cultures	3
ENST 3710	Introduction to GIS	3
GS 3006	Global Health & Language	3
JIMES 4850	Topics in Jewish Studies	3
LATAM 3160	Cultures of Health in Latin America	3
RELPOL 3070	Islam, Gender, Sexuality	3

Students should consult with the program coordinator or Director of Undergraduate Studies to make sure a course offered outside of Anthropology will count toward their major/minor.

Additional Information

- Students should register for any courses listed under Anthropology in the Bulletin to have the credit units count toward the Anthropology major. Courses that are housed in other departments can be counted towards the Anthropology major. **Note:** Advanced courses used to satisfy the requirements of one program cannot also be counted toward another major/minor per Arts & Sciences policy.
- Courses taken Pass/No Pass and courses in which a student earns less than a C- do not fulfill the major requirements.
- A maximum of 12 units of nontraditional courses — including School of Continuing & Professional Studies, study abroad, transfer (non-study abroad), honors, and directed-research courses — may be counted toward the advanced electives in the major. For details, please see below.

School of Continuing & Professional Studies

Anthropology courses taken in person through the School of Continuing & Professional Studies (CAPS) may be counted toward the major or minor. Courses listed as electives for the GHE specialization that are offered in the School of Continuing & Professional Studies may be counted toward the GHE specialization major or minor. A maximum of 6 units of credit from School of Continuing & Professional Studies courses may be counted toward the electives. Required introductory courses taken through the School of Continuing & Professional Studies do not count toward the maximum number. Enrollment in CAPS courses requires approval from the Program Coordinator or Director of Undergraduate Studies.

Study Abroad

The department recognizes and accepts courses from a number of semester and year abroad programs. Specific information about study abroad policies is available on the Anthropology Department website or by consultation with the department study abroad coordinator. Students may petition to count up to 9 units of study abroad elective credit toward the general Anthropology major or up to 6 units of study abroad elective credit toward the GHE specialization of the major. Students should contact the Anthropology study abroad coordinator to discuss the requirements for study abroad credit and to gain approval for the transfer of credit.

Transfer Credit

Students who wish to transfer credits from other institutions (non-study abroad units) for use toward the major in Anthropology must have approval from the Director of Undergraduate Studies. With approval, students may transfer a total of 9 units of credit from other U.S. institutions. Students who completed the Anthropology subject test for the International Baccalaureate with a score of 5 or higher can count the corresponding credit hours toward their general degree credit hours but not toward the Anthropology major/minor or GHE major/minor.

Senior Honors

Anthropology majors in the College of Arts & Sciences who wish to conduct a research project for Latin Honors, who have a minimum grade point average of 3.65, and who have received the approval of a faculty advisor and the department honors coordinator may be enrolled in the honors program. Latin Honors involves both the demonstration of acquired knowledge (based in part on GPA) and a report on an original research project. Two courses, ANTHRO 4960 (fall semester) and ANTHRO 4961 (spring semester), are available to allow students to receive credit for the extra research involved in the honors thesis. Students may count one of these courses toward their 4000-level course requirement for the major.

Research

Many Anthropology courses include research components and final projects. Majors can also take part in research at the beginning, intermediate, or advanced level in any subdiscipline and gain credit through approved directed research with faculty who have ongoing research projects. Research opportunities in anthropology labs include projects in archaeology, paleoethnobotany, geoarchaeology, zooarchaeology, genetic studies, geographic information systems, human ecology, paleoanthropology, stable isotopic analyses, and primate studies. Students may count a maximum of 3 units of directed research credit (ANTHRO 2900, ANTHRO 3900, ANTHRO 4988, ANTHRO 4989) with any individual faculty member toward the major.

Internships

Anthropology majors may gain pre-professional experience by taking part in supervised internships in businesses, cultural institutions, and community agencies. Students must have department approval for an internship and must work with an anthropology faculty sponsor during the fall or spring semester. Internships (ANTHRO 3000) may only be taken for Pass/No Pass credit and do not count toward the major requirements.

Anthropology Minor

Program Requirements

- **Total Units Required:** 18 units
- **Grade Requirement:** C- or better; Pass/No Pass grades do not count for the minor.

Required Courses

Two of the following three courses must be taken for a total of 6 units, and it is recommended that all three be taken:

Code	Title	Units
ANTHRO 1510	Introduction to Human Evolution	3
ANTHRO 1520	Introduction to Cultural Anthropology	3
ANTHRO 1530	Introduction to Archaeology	3

Elective Courses

Students must complete 12 additional units, at least 9 of which must be at the 3000 level or higher.

Courses with anthropological themes and content can be counted toward the Anthropology/GHE major and minor. Examples of such courses include the following:

Code	Title	Units
AFAS 1130	Introduction to Race	3
AFAS 4160	Engineering Authority: Design, Architecture & Power in Africa	3
AMCS 2270	Topics in Native American Culture: Introduction to Native American & Indigenous Studies	3
AMCS 4456	Ethnographic Field Work: Energy Politics	3
ANTHRO 3384	Language in Society	3
ANTHRO 4700	Interdisciplinary Topics: Modeling Cultural Systems	3
ARTARCH 4975	Collecting Cultures	3
ENST 3710	Introduction to GIS	3
GS 3006	Global Health & Language	3
JIMES 4850	Topics in Jewish Studies	3
LATAM 3160	Cultures of Health in Latin America	3
RELPOL 3070	Islam, Gender, Sexuality	3

Students should consult with the program coordinator or Director of Undergraduate Studies to make sure a course offered outside of Anthropology will count toward their major/minor.

Additional Information

- Students should register for any courses listed under Anthropology in the Bulletin to have the credit units count toward the Anthropology minor. Courses that are housed in other departments can be counted towards the Anthropology minor; however, advanced courses used to satisfy program requirements cannot also be counted toward another major/minor per Arts & Sciences policy.
- Courses taken Pass/No Pass and courses in which a student earns less than a C- do not fulfill the minor requirements.
- A maximum of 3 units of course work taken in the School of Continuing & Professional Studies (CAPS) may be counted toward the minor. Online courses taken through the School of Continuing & Professional Studies do not count toward the minor.
- A maximum of 6 units of nontraditional courses — including School of Continuing & Professional Studies, study abroad, honors, and directed-research courses — may be counted toward the advanced electives in the minor. For details, please see below.

Research

Many anthropology courses include research components and final projects. Minors can also take part in research at the beginning, intermediate, or advanced level in any subdiscipline and gain credit through approved directed research with faculty who have ongoing research projects. Research opportunities in anthropology labs include projects in archaeology, paleoethnobotany, geoarchaeology, zooarchaeology, genetic studies, geographic information systems, human ecology, paleoanthropology, stable isotopic analyses, and primate studies. Students may count a maximum of 3 units of directed research credit (ANTHRO 2900, ANTHRO 3900, ANTHRO 4988, ANTHRO 4989) with any individual faculty member toward the major.

Study Abroad

The department recognizes and accepts courses from a number of semester and year abroad programs. Specific information about study abroad policies is available on the anthropology department website or by consultation with the study abroad coordinator. Students may petition to count up to 6 units of study abroad elective credit toward the general anthropology minor or up to 3 units of study abroad elective credit toward the GHE specialization of the minor. Students should contact the anthropology study abroad coordinator to discuss the requirements for study abroad credit and to gain approval for the transfer of credit.

Transfer Credit

Students who wish to transfer credits from other institutions, including those abroad, must have approval from the Director of Undergraduate Studies.

Internships

Anthropology minors may gain pre-professional experience by taking part in supervised internships in businesses, cultural institutions, and community agencies. Students must have department approval for an internship and must work with an anthropology faculty sponsor during the fall or spring semester. Internships (ANTHRO 3000) may only be taken for Pass/No Pass credit and do not count toward the minor requirements.

Anthropology Minor, Global Health and Environment Specialization

Program Requirements

- **Total Units Required:** 18

  Anthropology minors may choose an optional specialization called Global Health and Environment (GHE) if the student's interests lie primarily within this area of anthropology. Students in the GHE specialization of the anthropology minor must take the departmental, specialization, and elective requirements as outlined below.

- **Grade Requirement:** C- or better; Pass/No Pass grades do not count for the minor.

Required Courses

Departmental Requirements: 3 units

Any 1000-level introductory anthropology course from the following list:

Code	Title	Units
ANTHRO 1510	Introduction to Human Evolution	3
ANTHRO 1520	Introduction to Cultural Anthropology	3
ANTHRO 1530	Introduction to Archaeology	3

Global Health and Environment Specialization Requirements: 6 units

Code	Title	Units
ANTHRO 3610	Culture and Environment	3
ANTHRO 3283	Introduction to Global Health	3
Total Units		**6**

Elective Courses

Students must select 9 units of courses from the approved list of GHE electives available on the Department of Anthropology website. GHE electives consist of approved courses listed under the Global Health heading and courses listed under the Environment heading. Students may take no fewer than 3 units from either list, with the remaining 6 units to come from the other list.

Courses with anthropological themes and content can be counted toward the Anthropology/GHE major and minor. Examples of such courses include the following:

Code	Title	Units
AFAS 1130	Introduction to Race	3
AFAS 4160	Engineering Authority: Design, Architecture & Power in Africa	3
AMCS 2270	Topics in Native American Culture: Introduction to Native American & Indigenous Studies	3
AMCS 4456	Ethnographic Field Work: Energy Politics	3
ANTHRO 3384	Language in Society	3
ANTHRO 4700	Interdisciplinary Topics: Modeling Cultural Systems	3
ARTARCH 4975	Collecting Cultures	3
ENST 3710	Introduction to GIS	3
GS 3006	Global Health & Language	3
JIMES 4850	Topics in Jewish Studies	3
LATAM 3160	Cultures of Health in Latin America	3
RELPOL 3070	Islam, Gender, Sexuality	3

Students should consult with the program coordinator or Director of Undergraduate Studies to make sure a course offered outside of Anthropology will count toward their major/minor.

Additional Information

- Students should register for any courses listed under Anthropology in the Bulletin to have the credit units count toward the Anthropology minor. Courses that are housed in other departments can be counted towards the Anthropology minor; however, advanced courses used to satisfy program requirements cannot also be counted toward another major/minor per Arts & Sciences policy.
- Courses taken Pass/No Pass and courses in which a student earns less than a C- do not fulfill the minor requirements.
- A maximum of 3 units of course work taken in the School of Continuing & Professional Studies (CAPS) may be counted toward the minor. Online courses taken through the School of Continuing & Professional Studies do not count toward the minor.
- A maximum of 6 units of nontraditional courses — including School of Continuing & Professional Studies, study abroad, honors, and directed-research courses — may be counted toward the advanced electives in the minor. For details, please see below.

Research

Many anthropology courses include research components and final projects. Minors can also take part in research at the beginning, intermediate, or advanced level in any subdiscipline and gain credit through approved directed research with faculty who have ongoing research projects. Research opportunities in anthropology labs include projects in archaeology, paleoethnobotany, geoarchaeology, zooarchaeology, genetic studies, geographic information systems, human ecology, paleoanthropology, stable isotopic analyses, and primate studies. Students may count a maximum of 3 units of directed research credit (ANTHRO 2900, ANTHRO 3900, ANTHRO 4988, ANTHRO 4989) with any individual faculty member toward the major.

Study Abroad

The department recognizes and accepts courses from a number of semester and year abroad programs. Specific information about study abroad policies is available on the anthropology department website or by consultation with the study abroad coordinator. Students may petition to count up to 6 units of study abroad elective credit toward the general anthropology minor or up to 3 units of study abroad elective credit toward the GHE specialization of the minor. Students should contact the anthropology study abroad coordinator to discuss the requirements for study abroad credit and to gain approval for the transfer of credit.

Transfer Credit

Students who wish to transfer credits from other institutions, including those abroad, must have approval from the Director of Undergraduate Studies.

Internships

Anthropology minors may gain pre-professional experience by taking part in supervised internships in businesses, cultural institutions, and community agencies. Students must have department approval for an internship and must work with an anthropology faculty sponsor during the fall or spring semester. Internships (ANTHRO 3000) may only be taken for Pass/No Pass credit and do not count toward the minor requirements.

Applied Linguistics

The minor in Applied Linguistics emphasizes language acquisition and language use in foreign and second-language settings. Applied Linguistics is concerned with increasing the understanding of the role of language in human affairs and, thereby, with providing the knowledge necessary for those who are responsible for making language-related decisions, whether the need arises in the health care setting, courtroom, classroom, or laboratory. Students learn to evaluate theory and research in different areas of the field, including second-language studies and sociolinguistics. Required introductory courses provide the necessary foundation for advanced classes. Courses at all levels include the critical analysis of different theories, conceptual models, and research methodologies. Students of Applied Linguistics may engage in international or domestic studies that involve research projects with faculty members from Public Health, Global Studies, Law, Business, Anthropology, Education, and Engineering.

Specifically, the minor in Applied Linguistics at Washington University meets the increasing domestic and international demand for positions that involve linguistically and culturally diverse people in the United States and around the world. The minor is suitable for students who wish to pursue graduate studies or advanced degrees in Public Health, Medicine, Law, Business, Engineering, Applied Linguistics, Global Studies, Psychological & Brain Sciences, Education, and more.

The Applied Linguistics minor is an independent minor administered by Global Studies.

PhD, University of Pennsylvania

Majors

There are no major programs in Applied Linguistics.

Minors

- Applied Linguistics Minor (p. 278)

Courses

APL 3388 Multilingualism in Society
Although this is an introductory course, students who have taken Linguistics 170D "Introduction to Linguistics" will benefit from familiarity with phonology, morphology, syntax and semantics. The primary content of this course explores the relationship between (multilingual) linguistic practices and other social and cultural processes. Anthropological linguistics, including alternative approaches to fieldwork and date collection are introduced, along with various studies of language usage in social and cultural contexts that consider language and thought, language and identity, language and gender, as well as multilingualism and other forms of language contact. The ethnography of speaking and communication are central to this course, as are conversation analyses. We will also consider a combination of qualitative and quantitative linguistic research methods. While this course will have important historical orientations, your own experiences with language usage within the culture (s) you know best will also be great interest. The linguistic evolution of human language usage is at the core of our foci, including ways that technology has influenced "language," "culture," and the "societies" that embraced alternative forms of communicative technology at different stages in history. The creation of writing systems and the invention of the printing press are illustrative. So too is the invention of the telegraph and morse code, as well as the invention and modernization of telephone usage. Other examples abound and will illustrate how human evolution intersects with alternative forms of human communication under different circumstances.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall

APL 3900 Independent Research Study
Prerequisite: permission of the director of the applied linguistics program.
Credit 3 units.
Typical periods offered: Fall, Spring

APL 3995 Applied Linguistics Coursework Completed Abroad
Credit 3 units.
Typical periods offered: Fall, Spring

APL 4023 Second-Language Acquisition and Technology
This seminar for undergraduate and graduate students will transform research and theory about second-language acquisition into practice while focusing on technology-driven applications. The course fosters professional development as participants formulate critical skills for evaluating, creating, and integrating technology into the language classroom and other language learning contexts, including business, engineering, and law. Course formats include readings, discussions, and demonstrations with technologies. The course counts for the minor in applied linguistics, the PhD in applied linguistics, and the graduate certificate in language instruction. This course carries the Social and Behavioral Sciences attribute and can be taken for different majors.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Spring

APL 4111 Linguistics and Language Learning
This course, taught in English, is a foundation for students who will work with linguistically and culturally diverse people in the USA and around the world, whether this work is in the courtroom, hospital, classroom, office and more. The class will help prepare students for the diverse range of twenty-first century occupations that have language and linguistics at their center, including machine learning and translation studies. The class utilizes a survey format and covers both internal and external factors related to language acquisition and language use, such as language and the brain, language aptitude, age, gender, memory, prior knowledge, etc. Theoretical and research dimensions of both linguistics and foreign / second language learning are treated. Corresponding implications of the readings focus on action- on making decisions for language policies and debates around the world that are informed by linguistic and language knowledge. The course is required for the minor in applied linguistics, the PhD in Applied Linguistics, and the graduate certificate in language instruction. This course carries the Social and Behavioral Sciences attribute and can be taken for different majors such as Global Studies and Educational Studies.
Credit 3 units. A&S IQ: SSC BU: BA, ETH EN: S
Typical periods offered: Spring

APL 4692 Reading Across Languages and Cultures: Theory, Research and Practice
The United Nations has declared that literacy is a fundamental human right. This course, which is taught in English, connects to the mission of UNESCO and examines the wide range of theoretical and research issues -- both historical and current -- related to reading and writing across languages and cultures. Literacy acquisition among second-language learners involves a number of variables, including both cognitive and social factors. Topics to be discussed include universal cognitive operations, individual learner differences, text types and literary forms, literacy and social power, and the extent to which reading and writing are interrelated. Students will discuss how to bridge scientific research in the laboratory to practice, and they will be involved in St. Louis community outreach projects with refugees and immigrants at the International Institute, where they will create and implement reading and writing activities driven by theory and empirical investigations. Students will take the theory and research they learn, and they will help meet the local reading and writing needs of a changing population with a variety of backgrounds, values, and educational preparations. The course is required for the minor in applied linguistics, the PhD in applied linguistics, and the graduate certificate in language instruction. This course carries the Social and Behavioral Sciences attribute and can be taken for different majors, such as Global Studies and Educational Studies.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall

APL 4900 Independent Research Study
Prerequisite: permission of the director of the applied linguistics program.
Credit 3 units.
Typical periods offered: Fall, Spring

Applied Linguistics Minor

Program Requirements

- **Total Units Required:** 15
- **Grade Requirement:** All participating students must have a declared primary major. Minors must receive a grade of C+ or higher in all Applied Linguistics courses; all courses taken for Applied Linguistics credit must be taken for a letter grade, including language courses.

Required Courses

Note: These courses are taught in English unless otherwise indicated.

- The following courses:

Code	Title	Units
APL 4111	Linguistics and Language Learning	3
LING 1600	Introduction to Linguistics	3

- One of the following courses focused on language acquisition:

Code	Title	Units
APL 4023	Second Language Acquisition and Technology	3
APL 4692	Reading Across Languages and Cultures: Theory, Research and Practice	3
GLOBAL 3006	Global Health and Language	3
LING 4062	Second-Language Acquisition	3
SPAN 3202	Debating Cultures: How Spanish Works	3
SPAN 3700	Introduction to Hispanic Linguistics	3
SPAN 4110	Spanish Grammar and Syntax	3
SPAN 4670	Grammar and Vocabulary Acquisition	3

- One of the following courses focused on language use:

Code	Title	Units
AFAS 2050	The Linguistic Legacy of the African Slave Trade in Interdisciplinary Perspective	3
AFAS 3385	Emerging Africa: Language, Identity, and Social Change	3
ANTHRO 3386	Language, Culture and Society	3
COMPLITTHT 3203	World-Wide Translation: Language, Culture, Technology	3
GLOBAL 3006	Global Health and Language	3
GLOBAL 3248	Intercultural Communication	3
GLOBAL 4036	Children of Immigrants: Identity and Acculturation	3
LING 2225	Linguistics for Legal Purposes	3
LING 3075	Introduction to Sociolinguistics	3
LING 3185	Linguistic Diversity in the United States	3

Elective Courses

- One of the following:

Code	Title	Units
APL 3900	Independent Research Study	3
APL 4900	Independent Research Study	3
EDUC 3040	Educational Psychology	3
EDUC 4450	History of Education in the United States	3
ELIT 4154	History of the English Language	3
GLOBAL 3512	"Model Minority": The Asian American Experience	3
LING 3050	Phonetics	3
LING 3250	Introduction to Computational Linguistics	3
LING 3450	Introduction to Semantics	3
PSYCH 3150	Introduction to Social Psychology	3
PSYCH 3580	Language Acquisition	3
PSYCH 4302	Cognitive Psychology Applied to Education	3
PSYCH 4330	Psychology of Language	3
PSYCH 4591	The Development of Social Cognition	3
SPAN 4170	Spanish Phonetics, Phonology, and Dialectology	3

Under certain circumstances, students may count a limited number of relevant courses not listed above toward their minor in Applied Linguistics. Such circumstances include study abroad. Students are required to complete both LING 1600 Introduction to Linguistics and APL 4111 Linguistics and Language Learning prior to applying for study abroad. Select study abroad programs are approved for the Applied Linguistics minor. A specific plan of study must be worked out in advance with the advisor in the Applied Linguistics program.

Art History and Archaeology

Art history provides the opportunity to explore the fine arts, architecture, and visual culture as well as the social, aesthetic, and personal values that helped to shape these disciplines.

Students are introduced to the study of art history and archaeology through general introductory courses that focus on American, Asian, and European art as well as world archaeology. In more advanced courses, students enjoy studying original works of art owned by Washington University's Mildred Lane Kemper Art Museum, the Saint Louis Art Museum, the Pulitzer Arts Foundation, and local private collectors. Students are also invited on annual field trips organized by the faculty to visit cities with major museum collections.

A variety of career paths are available to majors in art history and archaeology. Many graduates earn advanced degrees in both related and unrelated fields and work in museums or academia or for art publishers, commercial art galleries, auction houses, nonprofit organizations, and other arts-related organizations.

Majors

- Art History and Archaeology Major (p. 313)

Minors

- Art History and Archaeology Minor (p. 315)

Courses

ARTARCH 1061 First Year Seminar: Pleasure and Pain: European Fashion as (Art) History
In the words of Louis XIV, fashion is the mirror of history. This first-year seminar will explore what fashion in (art) history can tell us about gender, sexuality, class, race, and revolution. Incorporating a global perspective (although concentrating primarily on the West), further themes to be considered include the textile trade, commerce and empire, identity politics and nation-building. From the chopine to the corset, the pannier to the Pompadour pump, we will incorporate surviving examples of material culture as we explore the art and history of European fashion from the 15th to the 19th century. Course is for first-year, non-transfer students only.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 1100 First-Year Seminar: The Trojan War in Myth, Art, and Reality
The Trojan War was one of the most significant events in the history of the world. It was also, almost certainly, fictional. The goal of this class will be to examine the wide-ranging and varied evidence for the story of the Trojan War and its long-lasting cultural influence, from antiquity to the present day. Ultimately, we will seek to understand how every reflection on the Trojan War as a past event - whether poetic, artistic, or archaeological - has also been a reflection of a contemporary society - Iron Age Greece, Imperial Rome, Modern Europe - and an attempt to situate that society within a global history. In doing so, the class will also address questions of pressing contemporary relevance: including how civilizations form and collapse, how fact and fiction are intertwined in the construction of civic and ethnic identities, and how certain kinds of evidence may be alternately privileged or suppressed in the creation of historical narratives. Prerequisites: none
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Fall

ARTARCH 1101 First-Year Seminar: Topics in Art History: Islamic Art
Credit 3 units.

ARTARCH 1102 First-Year Seminar: van Gogh and the Avant Garde
This first-year seminar focuses on the art and career of Vincent Van Gogh and his relationship to artists of the 1880s in France. We explore his art in connection with the movements of Immpressionism, Japonism and Symbolism. We examine the avant-garde world of Paris as well as Van Gogh's relationship to such figures as Gauguin, Bernard, and Toulouse-Lautrec. The larger current of fin-de-siecle nostalgia for the countryside informs our study of Van Gogh's work in the south of France. Van Gogh's life and the critical reception of his art offer an excellent opportunity to study how the legends of modern art are formed. Visits to the Saint Louis Art Museum will complement our study. Readings include the artist's letters, critical studies, and biographies of Van Gogh and key figures in his circle. There are no prerequisites for this course, but completion of L01 113 or co-enrollment in L01 215 is recommended.
Credit 3 units. Arch: HUM Art: AH

ARTARCH 1103 First Year Seminar: Public Art/Art and Its Publics in St. Louis
The course will consider the history and functions of public art, with special attention to public art in St. Louis. Part of our investigation will be to inquire into the conditions that seem to be necessary for visual art to be considered public. So we'll consider not only the obvious forms of public art in urban sculpture and murals, but also less traditional intersections of art and public in such sites as video and the internet. We'll also examine the operations of institutions--national and local arts agencies, international exhibitions, non-profit centers and the like--that foster a public engagement with contemporary art. After studying aspects of the history of public art, we'll proceed to selected case studies today, many of them in St. Louis, including projects for Arts in Transit (the Metrolink), the Regional Arts Commission, Grand Center, and Missouri SOS (Save Outdoor Sculpture). This will lead us, finally, to theorize the function of public art in a variety of contemporary forms.

Local field trips to study important public art; visiting speakers from arts agencies; student projects proposing a work of public art in St. Louis, which will acquaint students with procedures in arts administration. 3 units.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 1104 First-Year Seminar: Whose Art is IT Anyway?: St. Louis Art Museums and Their Audiences
Art museums in the United States today face a daunting set of challenges: budget shortfalls, a lack of diversity with regard to both staff and collections, and maintaining visibility in an inundated, ever-changing virtual world. These struggles are undoubtedly unique to an era defined by COVID-19 and Black Lives Matter, but at their core they are long-standing debates about audience, accessibility, and function. What is a museum's mission? To preserve art or serve the community? Which communities does the museum serve? What is the museum's relationship to power and nationhood? What are the politics and ethics of collecting objects of art, culture, and nature? How is a museum's mission reflected in its architecture? This first-year seminar offers an opportunity to consider such issues within the context of art museums across St. Louis. Through weekly discussions and in-person visits, students will become acquainted with foundational texts in museum theory and history, then apply those ideas to local art institutions. Although art museums are our particular focus, the ideas and issues are relevant to a variety of collecting institutions, from history to the biological sciences. This course is therefore useful to any student interested in art history and museums, as well as those seeking a better understanding of the St. Louis region.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 1105 First-Year Seminar: What's New? Contemporary Art in St. Louis and Beyond
This course will introduce a broad range of practices within the field of contemporary art (i.e., art of the last two to three decades), paying particular attention to museum collections and exhibitions in St. Louis at the Kemper Art Museum, the Saint Louis Art Museum, the Contemporary Art Museum, the Pulitzer Foundation for the Arts, and the Museum of Contemporary Religious Art. Works in both new and traditional media will be discussed and will range from photography and sculpture to installation, performance, film, and mixed media. Readings will include artist statements, theoretical texts, art criticism, and art historical essays. Students with little or no background in art history are encouraged to register. Class meetings will be complemented by local field trips and visits to the studios of local artists.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Spring

ARTARCH 1106 First-Year Seminar: Art in the Golden Age of Venice
The art and architecture of Venice are inextricably linked to the city's distinct socio-political structure, cultural past and geography. This freshman seminar will consider the arts in Renaissance Venice within the city's unique context. Exploring the influence of the Myth of Venice, we will examine the styles of painting, sculpture and architecture that were specific to Venice - and very different from contemporaneous developments in Rome or Florence. We will also study the unique physical characteristics of Venice, its economy and society, its political and religious life and cultural culture. We'll also learn about its food and music while we study the magnificent works of its most celebrated artists, Titian, Tintoretto and Veronese, to name a few. The course will address issues such as the family workshop, the introduction of oil paint, the role of Antiquity in a city without ancient ruins, domesticity and the ceiling painting. From the private patronage of its confraternities, or scuole, to public programs sponsored by the Great Council, the course will examine the reflections of the ideal state in the art and architecture of the Serenissima, the most serene Republic. Course is for first-year, non-transfer students only.
Credit 3 units. A&S IQ: HUM, LCD Art: AH BU: HUM, IS EN: H
Typical periods offered: Fall

ARTARCH 1107 First-Year Seminar: Spectacle! Popular Entertainment in Ancient Greece and Rome
The grand spectacles of the Greco-Roman world still resonate today as some of the most familiar and celebrated images of antiquity, including Athenian tragedy, the Olympic Games, chariot-racing, and gladiatorial combat, among many other forms of visually arresting rituals staged before public audiences. In this seminar students will analyze a range of paintings, mosaics, sculpture, coins, graffiti and other media depicting these spectacular performances, as well as their specific archaeological and cultural contexts, in order to reach a better understanding of how each society defined themselves through such complex and ephemeral phenomena. Drawing on recent work in history, media studies, and political theory, we will also explore together scholarly debates about the function of spectacles in each society, from moral instruction or expressions of communal identity to social control or negotiations for power. By the end of the semester students will be equipped to compare the highly artificial and theatrical aesthetics characteristic of Julio-Claudian Rome with spectacular modes of expression in our own age of mass production and global telecommunications, including modern protest movements and blockbuster films such as Ben-Hur and Gladiator.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Fall

ARTARCH 1108 First-Year Seminar: Body Images in the Ancient Americas
In this seminar, students will examine how the human body was understood, manipulated, and represented in a variety of ancient American cultures, including the Olmec, Maya, Aztec, Moche, and Inka. Through analysis of various arts (e.g., stone sculpture, ceramics, murals, metalwork, textiles, architecture) and archaeological evidence, we will explore the physical body as locus for culturally specific ideals, political ideologies, and the maintenance of social order. Discussion and scholarly readings will cover topics including facial piercing, cranial modification, bloodletting, costume, gender, and disease. Assignments and class meetings will incorporate multisensory, digital, and active learning methods in recognition of the diverse ways that individuals and ancient cultures accumulated knowledge. The course includes an in-depth research project of an object of the student's choice on view at the Saint Louis Art Museum.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: BA, HUM EN: H
Typical periods offered: Fall

ARTARCH 1109 FYS: Collecting Art/Excluding People: The Contradictions of Chinese Art in U.S. Museums
Tomb raiders, curators, archaeologists, politicians, dealers, and collectors all contributed to the arrival of Chinese art in the United States since the late nineteenth century. But at the same time as Chinese objects arrived in great quantities, Chinese people were actively excluded from the U.S. In this course we consider the contradiction between U.S. enthusiasm for collecting Chinese art and negative U.S. responses to Chinese immigrants, from the 1882 Chinese Exclusion Act to contemporary anti-Asian racism. Through the lens of

museums, private collections, and public exhibitions, we study what the movement of Chinese art into the United States says about changes in U.S.-China relations from the nineteenth century through today. No prerequisite: enrollment limited to first-year students.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: BA, HUM EN: H
Typical periods offered: Spring

ARTARCH 1110 First Year Seminar: Creating the Universe: Ritual and Science in Buddhist Art
Art in Buddhist cultures is frequently created to express well-known ideologies and fill specific, prescribed ritual and religious functions. This class will examine the science behind the creation of such artworks as a kind of ritual technology, which both determines their forms and makes them effective tools for the spread and practice of Buddhism. The course will focus on a few major conceptual areas behind Buddhist art and ritual, especially topics of cosmology and biology, including the Buddhist model of the cosmos, the cycles of life and death of various types of beings, and the construction of sacred space. By the end of the course, students will have developed an ability not just to see, but to interpret artworks in a specific cultural context, thereby gaining tools to understand a variety of other cultures and their artistic forms. The course will involve works of art from the past 2000 years of history in regions of South Asia including northern India, Nepal, and Tibet.
Credit 3 units. A&S IQ: HUM, LCD Art: AH BU: BA, HUM EN: H

ARTARCH 1111 First Year Seminar: Beijing and the Forbidden City
The Forbidden City has been the heart of Beijing for nearly six hundred years, and continues to influence both China and its capital today. Through art, architecture, and urban design, this seminar examines the intertwined relationship of the palace and its surrounding city: their origins and constructions, the coded symbolisms of their plans, their most influential characters, their modern identities as the backdrops to major political events, and their roles in contemporary art and the Olympics. This discussion-based seminar also aims to help students develop their skills in writing and critical analysis as a foundation for future classes. No previous experience with Art History or Asian Studies required. Course is for first-year students only.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH BU: HUM, IS EN: H
Typical periods offered: Fall

ARTARCH 1112 Freshman Seminar: Understanding Oceanic Art
The Pacific Ocean covers one third of the earth's surface and is home to hundreds of different island groups and cultures. The diversity of geographies and peoples has resulted in a remarkable diversity of cultural traditions, languages, art forms and material culture. This array of cultures and material culture may initially prove bewildering and challenging to in order to understand what we are looking at. However, through closer examination of objects, materials, and themes embodied in Oceanic art, we can identify points of entry to allow us understand the indigenous significance of the works in increased detail and, in doing so, can find points of comparison with ideas, themes, and art styles that may be more familiar. The course will commence with investigation into what we are looking at, what materials are used and what does the iconography represent. We will then consider particular themes, including carving traditions, body ornamentation/ modification, animal iconography, trade and exchange of objects, warfare, funerary/ mortuary displays, manifestations of power and religious/ritual objects. The course will end with a look at the vibrant and engaging contemporary arts of the Pacific Islands, looking at how history and issues such as climate change and rising sea levels influence Pacific artists. No prerequisites.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH BU: HUM, IS EN: H

ARTARCH 1113 Imagining the Pacific: From Captain Cook to Disney's Moana
This freshman seminar will use a variety of materials to consider the ways in which Pacific Islanders and their culture have been viewed, construed, and (mis)understood by Westerners since the eighteenth century. Using objects, photographs, paintings and drawings, film, songs and dance, we will explore the ways in which artists and explorers responded to Oceanic culture while learning about the rich and diverse cultures of Pacific peoples. This is a two-way analysis, however, as we will further consider the ways in which Pacific Islanders have responded to Western enforced social change, their collecting of Pacific material culture, and documentation of their culture, both historically and in contemporary society. As such, we will examine and explore a variety of media to facilitate our considerations of Western and Pacific views of each other. The Oceanic collection of The Saint Louis Art Museum will help ground our understandings of Pacific art and culture, supported by Oceanic related works in the archives and other museum departments. Works by artists including Henri Matisse, Paul Gauguin, Emile Nolde, Pablo Picasso, and John la Farge will be examined to understand the influence of Pacific art in the early twentieth century. Films will include Whale Rider and Mutiny on the Bounty.
Credit 3 units. A&S IQ: HUM, LCD Art: AH BU: BA, HUM EN: H

ARTARCH 1114 Freshman Seminar: The American Landscape in Painting and Practice
The art of landscape, including painting, gardening, and contemporary land art, has been particularly bound up with issues of national identity in the United States. For this reason, there has been a rich body of writing about the landscape that provides the source material for this course. By analyzing major examples by artists like Thomas Cole, Frederick Law Olmsted, and Nancy Holt and the works of landscape writers like Nathaniel Parker Willis, Susan Fenimore Cooper, and William Cronon, participants in this freshman seminar will learn to analyze not only texts and images but also the messages that the physical landscapes around us convey. Regular use of museum collections and the eloquent built landscapes of St. Louis will provide a chance to apply these skills beyond the classroom's walls. No prerequisites.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 1115 First-Year Seminar: American Monuments: Memory, Identity, and Ideology
This seminar examines public monuments in the United States through the lenses of collective memory, identity, and ideology. It surveys an evolving tradition from Americans' early and short-lived reluctance to fund public monuments -- John Quincy Adams famously declared that democracy has no monuments -- up to the recent controversies over Confederate monuments. The course defines monument broadly to encompass a range of commemorative forms, including traditional structures like statues, arches, and obelisks; utilitarian living memorials like parks and libraries; and countermonuments that challenge core premises of the monument, such as its fixed meaning and permanence. Readings and class discussions will explore how these projects have shaped Americans' cultural beliefs and social relations as well as how they failed to achieve consensus or to reconcile the diverse and competing points of view of varied groups and individuals. We will interrogate the impact of monuments on the nation's historically disempowered communities, including those of African Americans, Native Americans, women, immigrants, and the poor. We will also consider more inclusive modern memorials and evaluate strategies for grappling with outmoded monuments in changing times. This course is for first-year, non-transfer students only.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 1116 Topics in African-American Art. From Revolution to Renaissance
Selected Topics. Varies from semester to semester
Credit 0 units.

ARTARCH 1171 First Year Seminar: Beethoven and van Gogh: Myths of Creativity, Genius and Madness
This course draws into dialogue the creative ambitions, artistic production, critical reception and the historical construction of personae and oeuvres of two exceptionally productive and iconic artists who worked in different media: Ludwig von Beethoven (1770-1827) in music and Vincent van Gogh (1853-1890) in painting. We will introduce students to methods of musical and art historical analysis, and then build on those skills to examine the historical contexts within which these artists worked, as well as the ways in which their reputations were established. This course will also consider how Beethoven and Van Gogh became exemplars of creativity and genius for later audiences and artists, leading us to explore fundamental and provocative questions in the humanities. Course is for first-year, non-transfer students only.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 1505 Colloquium: How to Work With Art
This course offers an introduction to the many different ways we interact with art in our daily lives, and explores a spectrum of ways in which we all work with art, whether as a student on campus or as a career. Learn to articulate an argument based on visual evidence, with case studies drawn from around the world and across millennia. Issues examined will include public art and monument removal, looting and repatriation, Nazi-era provenance, conservation and curatorial practices, legal issues, art investment, and more. Very light course preparation such as short videos, blog posts, podcasts, and newspaper articles provided the basis for weekly discussion. Biweekly guest speakers will offer professional insights from different fields in conversation with students. This discussed-based class is aimed at students who want to learn more about how to look at and think about art in the twenty-first century globalized world, and learn how to apply those skills to diverse careers including business, law, medicine, academia, museums, and more. Prerequisite: none.
Credit 1 unit. Art: AH
Typical periods offered: Spring

ARTARCH 1510 Introduction to Asian Art
Beginning with the birth of the Buddha and continuing through the present, this course introduces the most influential art and architecture from all across Asia. Each class covers both historic and modern works to emphasize the continuing dialogue between past and present in Asian art today. Classroom lectures; smaller, bi-weekly discussion sections. NO PRE-REQUISITE.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H UColl: CD
Typical periods offered: Spring, Summer

ARTARCH 1515 History of Western Art, Architecture & Design
This course presents a history of the visual arts -- including architecture, sculpture, painting, and design -- from the ancient world to the present, with emphasis on the relationship of art to society and to political and cultural events. Classroom lectures and smaller, biweekly discussion sections.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM, IS EN: H
Typical periods offered: Fall, Summer

ARTARCH 1516 Introduction to Illuminated Manuscripts
Illuminated manuscripts are some of the most complex, intriguing, and beautiful works of art to survive from the medieval period. Not only were they often hugely expensive and highly prized by their owners, but they are also some of the most illuminating (pun intended) documents regarding artist production, patronage, devotion, and transmission of knowledge in the period we roughly define as the Middle Ages. The goal of this course is to investigate the history of illuminated manuscript production between the years 800 and 1500. However, this course intentionally takes a non-chronological approach to the study of these objects, to more comprehensively explore connections across time, geography, technical practices, and patronage circles. It similarly aims to look broadly across Christian, Jewish, and Islamic traditions. This course will investigate this material through engagement with primary sources, workshops on the physical aspects of making manuscripts, visits to Special Collections and the Saint Louis Art Museum's Print Study Room. The overarching goal is to foster strong critical reading and thinking skills, while also developing specialized knowledge in the field of manuscript studies. No prerequisite. Note: this course is for first-year non-transfer students only
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Spring

ARTARCH 1520 From Hercules to Harry Potter: Picturing Heroes in Ancient Greece, Rome, and Beyond
Societal celebration of influential people, mythical or real, raises them above others in public esteem and endows them with a high degree of fame, honor, and symbolic significance. Such heroic figures are often elevated and admired not only for their individual accomplishments, but also for the moral and ethical values and virtues that they embody as examples to others. Yet, the functions of heroes (and anti-heroes) may be controversial and their meanings contested. An exploration of the role of images and other forms of visual culture in the conception of heroism, and by extension virtue (character traits that are in some deep or fundamental way connected with being a morally good or admirable person), will present the opportunity to examine, among others, the following questions: What is the role of the visual arts in establishing and sustaining heroic status through which societies define and articulate their values? How do images shape an understanding of heroic significance? What are some of the religious and political uses of heroic images? What is the relationship between the historical person (if there is one) and the imaginative construction of the hero, or put another way, the relationship between history and memory? How do images of heroes shape the narratives of communal identity of which they are a part? Together we will first explore objects and texts from ancient Greece and Rome that address these questions from a variety of thematic and methodological perspectives. We will then examine the survival and transformation of ancient conceptions of the hero in representations of America's founding fathers, American frontiersmen, comic book superheroes, and the characters of the Harry Potter Series.
Credit 3 units. A&S IQ: HUM, LCD Art: AH BU: HUM EN: H

ARTARCH 1525 Majors' Colloquium
This one-credit course provides students the chance to explore opportunities available to majors in the history of art and archaeology both during their time at Washington University and post-graduation. It was developed in response to the suggestion of past graduating seniors, who requested more formal guidance in professional development. Topics to be discussed will include, among others: securing internship and fieldwork experience; preparing for an honors thesis; applying to graduate school in art history and archaeology; preparing for careers in museum, gallery, and academic fields; and transferring the undergraduate degree to graduate programs in business, law, and medicine. Guest speakers from the University and from the St. Louis community will attend various sessions to

provide current professional perspective on relevant topics. PREREQ: A declared major in the Art History and Archaeology. Other students with a strong interest in Art History and Archaeology will be admitted at the discretion of the instructor.
Credit 1 unit. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 1545 Mythologies of Modern Art: Fact, Fiction and Film
The history of art -- and its translation into other media -- has celebrated the cutting-edge, the experimental, and the controversial, especially in its examination of modern artists and their work. This course introduces students to the life and work of modern artists Paul Gauguin, Vincent van Gogh, Paul Cézanne, Henri Matisse, and Pablo Picasso. From this introduction, students will then interrogate the representation of these artists' lives and works in multiple media, including fiction literature and film. This course includes visits to the Saint Louis Art Museum and required film screenings. Students will work to collaboratively transform their research into a dramatization of two artists' lives and works as part of their final project.

ARTARCH 2010 French Language Colloquium: French Art and Politics in the Belle Epoque
This one-credit course is an optional supplement to the seminar French Art and Politics in the Belle Epoque (L01 485 and L22 4510), taught in English in Spring 2011 by Professors Elizabeth Childs (Art History and Archaeology) and Steven Hause (History). This class, open only to those students also taking the seminar, will be taught entirely in French, with discussion centering around primary documents chosen to co-ordinate with the seminar's weekly topics, such as nationalism, imperialism, women's right, the history of the avant-garde in Paris, café culture in Montmartre, etc. Students may have varying skill levels in French, so assigned readings will vary in length and difficulty. At least half of class time will be devoted to discussion of subjects from the seminar, and another portion dedicated to language study, such as vocabulary. Prerequisite: at least one semester of college French or permission of the instructor.
Credit 1 unit. A&S IQ: HUM Art: AH BU: HUM EN: H

ARTARCH 2015 American Art and Material Culture of the Gilded Age
This sophomore seminar explores American art and material culture from the aftermath of the Civil War to the dawn of the 20th century. Readings and classroom discussions consider the interplay between artworks and complex cultural and historical developments of the period, including the rise of international travel and trade, rapid industrialization and urbanization, mass consumerism, growing income inequality, immigration, the crisis of faith, the closing of the West, and the changing status of women and African Americans. Key artists to be considered include James McNeill Whistler, John Singer Sargent, William Merritt Chase, Thomas Eakins, Mary Cassatt, and Henry Ossawa Tanner. We will end the semester with a sustained consideration of the work of Winslow Homer, in which major concerns of the Gilded Age -- about truth and falsehood, the boundaries of citizenship, and the power of art -- converge.

Typical periods offered: Spring

ARTARCH 2020 Introduction to Modern Art, Architecture and Design
This course provides an introduction to major developments in modern art, architecture and design in Europe, the Americas, and across the globe, from the mid-19th century to the present. Focus will be on the history and theories of modernism and its international legacies as well as the relationship of the visual arts, architecture and visual culture more generally to the social, cultural and political contexts of the modern era. Although the precise topics covered may vary from one instructor to another, foundational movements and trends to be discussed will typically include the Beaux-Arts style, the Arts and Crafts Movement, Impressionism, Symbolism, Art Nouveau, Cubism, Dada, Surrealism, Purism, Art Deco, the Bauhaus, the International Style, Abstract Expressionism, Pop Art, Minimalism and Post-Modernism. Cross-currents in various media will be emphasized as we seek to understand the origins and complexity of modern visual forms in relation to political and cultural history and to critical theory. Students will engage a wide range of readings in historical sources; theories composed by artists, architects and designers; critical responses to the arts; and secondary critical literature. Classroom lectures; smaller biweekly discussion sections.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH BU: HUM EN: H
Typical periods offered: Spring, Summer

ARTARCH 2030 Matisse and Picasso
Matisse and Picasso will be considered individually as well as in relation to such artistic movements as Cubism, Fauvism, and Surrealism. This course examines their work in all media (painting, sculpture, decorative arts, theater, and printmaking) and explores their response to the political environment of modern France, including the two World Wars. The course is timed to coincide with a major exhibition at the Saint Louis Art Museum in the spring of 1999, which will include key works by Picasso and Matisse. Weekly class meetings plus several required visits to the exhibit and to special lectures at the Saint Louis Art Museum. Class size limited to 10. Prerequisites: L01 113, Intro to Western Art; or L01 215, Intro to Modern Art; or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM

ARTARCH 2031 Innovation, Motion, and Assemblage: The Art, Architectural, and Landscape History of West and Central Africa
Across millennia, the peoples of West and Central Africa developed, curated, and innovated the conceptual and material worlds they inhabited through a multitude of creative and inventive practices. From the creation and use of masks, to the building and maintenance of grand palaces, to the construction of entire monumental landscapes, these groups explored and made sense of life, reality, and being within a wider cosmos, via inventive engagement across multiple material and intangible media, and through exploration of various aesthetic, spiritual, and social philosophies mediated by the production of art, architecture, and landscape. As people worked with clays, metals, stone, textiles, ivories, and other materials, they navigated social realities such as political hierarchy and gender divisions, connected with religious notions such as the continued role of ancestors and deities in daily life, and shaped, explored, and represented their very notions of being. Especially prevalent across many of the arts of these regions were evolving notions of motion, change, innovation, and assemblage that underpinned artistic and architectural engagement. Art, architecture, and landscape manifested and reified these concepts and philosophies in a number of ways, regularly designed to be used and conceived of in motion (e.g., masks and masquerade costumes), centering individual and group innovation and improvisation in their composition (e.g., in distinctive styles of figurative arts), and often combining and interacting with other parts to form larger assemblages or composites that were seen to act upon the world in new ways (e.g., shrines and sacred grove sites)
Credit 3 units. A&S IQ: HUM BU: HUM

Typical periods offered: Fall

ARTARCH 2035 Myths and Monuments of Antiquity
An introduction to the ancient world (circa 3500 B.C. to A.D. 400) based on masterpieces of art and architecture from Mesopotamia, Egypt, Greece, and the Roman Empire. The monuments are accompanied by a selection of myths and documents representing the cultural life of these ancient societies and constituting their legacy to our modern world.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

ARTARCH 2040 Cities and Towns of the Ancient World
This course is an introduction to ancient urbanism in the Mediterranean region, the Near East, and the Indus Valley. The chronological span is wide, ranging from the Neolithic era to the Late Roman/Early Byzantine period. The archaeological evidence of some of the earliest known cities will be presented and discussed, with the aim of understanding the formation process of urban centers and how these shaped and influenced their sociopolitical, economic, and cultural life. Broad issues that will be considered in class concern the origin of urban life and its different manifestations; the relationship between the natural landscape and the built environment and how the former affected the development of the latter; and the ways in which ancient civilizations constructed and used space in order to shape social relations. The course will also highlight the available evidence of monuments and artworks in context as integral parts of the urban landscape of ancient cities and towns. When available, ancient documentary sources will be introduced in order to present a more comprehensive picture of those urban centers and of the communities that created and inhabited them. The readings assigned for each session (and discussed in class) will also provide a broad sample of primary and secondary sources, the latter consisting of relevant scholarship on the topic of ancient urbanism.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Spring

ARTARCH 2045 Gothic Art: Patronage, Piety, and Power
In the twelfth century, a new style of art and architecture flourished in Europe. Known since the sixteenth century as the Gothic, this aesthetic pervaded visual culture from towering architecture to stained glass, monumental sculpture, panel paintings, and jewelry. Primarily focusing on art made in Northern Europe, this course explores the making of images in the period 1200 to 1500 and how issues of patronage, devotion, political power, and collaboration were part of this process. In addition to serving as a foundation in the history of medieval art, this course also functions as an introduction to art-historical method. Attention will be paid to the cultivation of visual analysis skills and academic writing, as well as the synthesis of course themes through the final Virtual Exhibition project. Prerequisites: none
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Fall, Spring

ARTARCH 2050 African Art: From Traditional to the Contemporary
This course is designed to engage the broad diversity of art in Africa and African artistic consciousness and aesthetics from early rock paintings of the San Art Movement to the present. However, the organizing principle is not a time-bound system of development in the Western sense, but instead hinges on an engagement of particular aesthetic trajectories that embody specific cultural concerns. The goals of the course are to expand students' understanding of African Art in the context of African history and cultural values; to introduce students to non-western concepts of time, metaphysics and the notion of art itself; to explore the notion of the Classical in a non-western context; to relate artistic movements in Africa to movements in other parts of the world; and to gain a comprehensive understanding of artistic production in conversation with historic cycles and events. No prerequisites.
Credit 3 units. A&S IQ: HUM, LCD Art: AH BU: HUM, IS EN: H

ARTARCH 2055 Introduction to the Arts of Oceania
Covering one third of the earth's surface, the Pacific Ocean is home to hundreds of different island groups and cultures. The diversity of these islands and their peoples has resulted in an astounding array of cultural traditions, languages, art forms and material culture. This lecture course offers an introduction to the arts of Oceania, which includes Polynesia, Melanesia, Micronesia and Australia. We will consider the initial settlement of the Pacific followed by the Western discovery of these islands. Art forms and cultural practices from Polynesia and Micronesia will be considered, followed by Melanesia, and finally Australia. Each section will survey artistic and cultural practices of the material culture of island groups. Thematic considerations will include carving traditions, body ornamentation/wrapping, animal iconography, trade and exchange of objects, warfare, funerary/ mortuary displays, manifestations of power and religious/ritual objects and displays.

UColl: CD

ARTARCH 2060 Women, Art and Culture: Early Modern to Contemporary
In this lecture and discussion course, we will analyze the broad theme of women in the arts-as architects, artists, designers and patrons-in order to expand our ideas of what art can be and who can make it. Setting the stage with medieval craftswomen, we will begin in earnest with female artists during the Renaissance and Baroque periods, when the idea of the male artist-genius emerged. As we survey periods leading up to the contemporary art of the present, we will examine a wide range of creative production by diverse women. Artists include: Artemisia Gentileschi, Judith Leyster, Elisabeth Vigée-Lebrun, Rosa Bonheur, Mary Cassatt, Paul Modersohn-Becker, Georgia O'Keeffe, Frida Kahlo, Faith Ringgold, Lorna Simpson, Cindy Sherman and Shirin Neshat. Of particular interest will be how women have responded to and reinvented stereotypical images of women in art and in the media.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 2065 Picturing Race
This course offers an introduction to the cultural roots of cultural roots of modern Western conceptions of race and of racism. It traces a history of visual constructions of race and ethnicity in Europe and America- by way of paintings, sculpture, prints, caricature, photography, public art, maps, and other forms of visual depiction of racial difference. Together we analyze visual representations of race and racial difference from their origins in the classical Mediterranean world to the present. How have images of racial difference been produced, circulated, and understood in different historical periods and according to western notions of beauty and the ideal? How does visualization relate to concepts and practices and politics? Readings, discussion, and visual and critical analyses are formulated to consider how visual cultures of race have been shaped by the histories of colonization, enslavement, nation-building, and immigration. From the fine arts to popular imagery and public monuments, we aim to trace how the visual construction of race has translated human difference into hierarchies of power. Prerequisites: none

ARTARCH 2070 Latinx Art
What is Latinx art? This seemingly simple question holds a number of complicated, contradictory answers. Latinx art is art created by (and often for) Latinx communities in the United States, but who determines the scope of representation? Is Jean-Michel Basquiat, the famed Haitian-Puerto Rican-American of 1980s NYC, a Latino artist? How about the Cuban-born Ana Mendieta, who lived and worked primarily in the United States? This course will consider who gets counted as Latinx in the art world and why. Topics covered include the Chicano/ a movement in the 1970s, the Border Art movement in the 1980s and 1990s, the rise of multiculturalist rhetoric in the United States, and the contemporary global art market and its relationship to the category Latinx. We will also consider issues of gender, sexuality and race, as they pertain to Latinx artists. This is an introductory course, and requires no prior knowledge of Art History or Latinx Studies. Prerequisites: none
Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: AH, HUM BU: ETH, HUM, IS EN: H

ARTARCH 2071 Nationalism(s): Nation-Building and Art in Europe and the United States during the Nineteenth Century
This course explores the development and visual expression of nationalist sentiment in the United States, Britain, France, and Germany during the Long Nineteenth Century (1789- 1914). Students will analyze key artworks from each nation to understand the role of the arts in shaping and reflecting nationalism during this period.
Credit 3 units. A&S IQ: HUM, SC BU: HUM
Typical periods offered: Fall

ARTARCH 2396 The Orient: Europe and Islamic Art From 1851 to Today
In the 19th century, the expansion of British and French colonial rule in North Africa, the Middle East, and India facilitated a variety of cultural exchanges, including the movement of Islamic carpets, textiles, manuscripts, ceramics, metalwork, and other artforms to European collections. These collections, both public and private, presented a new repertoire of forms, motifs, and techniques that dramatically transformed cultural production in the west. Taking the Great Exhibition of 1851 in London as its starting point, this course explores the relationships between Islamic art, European modernism, and the artistic currents that traverse the globe today by examining the ways in which Islamic art has been circulated, acquired, understood, appreciated, utilized, and imitated in the west. As a result, students will gain a better understanding of the particular relationship between modern cultural production, museology, and colonialism, and obtain a good overall grasp of the artistic phenomena associated with the interaction between Islam and the West from the Modern Era to the present day. Prerequisite

ARTARCH 2900 Directed Research in Art History and Archaeology
Introduces first-years and sophomores to research by engaging them in ongoing faculty research projects within the department. Under the direction of a faculty mentor, students take part in tasks that contribute to the mentor's research. Through this hands-on experience, students learn about the research process and build foundational research skills that can benefit their future academic experience and development. Faculty mentors provide regular guidance, training, and feedback to support students' understanding and growth. Students are registered by the department after approval from the faculty member leading the research project. The course may be taken for 1-3 credit hours based on the weekly hours required. Credit/No Credit only
Credit 3 units.

ARTARCH 2990 Internship in the Art Community
Prerequisite, a major or minor in Art History; permission of the undergraduate advisor requested in advance; and a letter from the sponsoring institution stating the nature of the internship. Variable credit, 1-3 units.
Credit 3 units.

ARTARCH 3015 Survey of Roman Art
Ben Hur? I Claudius? Caligula? You know their stories, now learn about the art of their times! This lecture class will focus on the course of Roman art from the period of the Roman Kings (8th C. B.C.) through the Republican Period to the reign of Constantine (4th C. A.D.). We will look at developments in sculpture, wall painting, mosaics and architecture and how they relate to the culture and dynamic politics of this period. Along with the arts of the capital, Rome, we will examine a few of the provincial imperial cities to see how local tastes transform Roman style. Special class themes will include the Image of Republican Rome and Romans, the arts under Augustus, Life and Death of Pompeii, The Rise of the Empire, Games, The Fall of the Empire, and Constantine's Hope.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM, IS

ARTARCH 3025 Art of the Italian Renaissance Courts
This course examines the art and architecture of the Italian Renaissance courts during the fifteenth and sixteenth centuries. Concentrating primarily on the dynastic centers of Milan, Mantua, Ferrara, and Urbino, the course explores the ways in which Renaissance art operated in the service of the court as a powerful tool of statecraft. We will consider the union of art and politics by examining the patronage of the secular princes, while also analyzing how the visual identity of the state intersected with presentations of gender and religious

difference in the Italian Renaissance city-states. The course will provide new insights into famous masterworks by artists such as Leonardo da Vinci and Andrea Mantegna and place their work within a larger discourse that incorporates less well-know local art by painters including Garofalo and Dosso Dossi. This course is grounded in a close engagement with primary sources-both visual and textual, evoking through such documents the multiple contexts in which art and power were produced, received, and experienced. To this end, we will study in-depth the art and architecture executed in the Italian courts through lectures and through readings such as Cole's small survey book and selected articles and essays exploring Italian court art from a variety of different methodological perspectives. In addition, we will study the monument's relationship to contemporary writings, particularly Alberti's writings on the art of building: Castiglione's description of the customs, tastes, and culture of Renaissance court life in the Book of the Courtier; and Vasari's Lives of the Artists.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM, IS

ARTARCH 3030 Pilgrimage and Renaissance Art
Tourism of today has its antecedents in the medieval and Renaissance practice of pilgrimage. Not usually associated with the Renaissance, pilgrimage was nevertheless an entrenched component of Renaissance life. It stimulated the development of art, particularly with relationship to the churches, which profited considerably, along with their respective towns and cities. This course will look at the practice of pilgrimage as a major catalyst in the development of Renaissance art. Covering works at St. Peter's in Rome, San Francesco in Assisi, il Santo in Padua, and the Basilica of Loreto, for example, we will go on our modern day pilgrimage to see and experience the major monuments and art works of such artists as Giotto, Donatello, and Michelangelo. We will also visit the Saint Louis Art Museum.
Credit 3 units. Art: AH

ARTARCH 3031 Northern Renaissance Art
A survey of the major artistic developments in Northern Europe, c. 1400-1575. The course looks at the production of painting, sculpture, printmaking, drawing, manuscript illumination and architecture in social, political, and religious contexts. The major artists to be covered include Jan van Eyck, Rogier van der Weyden, Albrecht Durer, Hans Holbein, Hieronymus Bosch, and Pieter Bruegel the Elder.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM, IS EN: H

ARTARCH 3050 Art Restoration: Issues and Techniques
Focues on the history, concepts, and methods of art restoration and conservation. Focuses on construction techniques and the applied science of modern restoration. Emphasis on importance of photographic documentation and restoration reports. Discussion of ethics. Includes visits to museums and restoration workshops. Final paper related to piece of art chosen during a museum or workshop visit, using acquired knowledge and insight. 3 units. This course is part of the Art History Program in Florence and is taken in Florence, Italy.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM EN: H

ARTARCH 3055 Special Topics in Printmaking: History and Practice of Printmaking
This course focuses on the history and creation of prints. We will examine the specificities of the medium, historically and in the present, that contribute to its particular meaning, and that render it distinct from other forms of visual culture. Ideas of expression, interpretation, and ideological investment are seen on the continuum that ranges from the highly personal relationship of a print to its maker, to the commodification of the print within popular culture. Weekly lectures on the history of prints will complement the studio sessions, as will field trips to studios of St. Louis artists, and visits to local museums. We will look at prints in their historical role as reproductions in a pre-photographic age, as representations of shared religious and social values, and as vehicles of social or political critique. Artists to be discussed include, among others, Durer, Rembrandt, Daumier, Degas, Gauguin, Kirchner, Kollwitz, Warhol, Spero, Rauschenberg, Gonzales-Torres and Kiki Smith. All students will make prints, and all will write critical and historical analyses. Prerequisite: L01 112 or L01 113. Credit 3 units.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM EN: H

ARTARCH 3060 Studies in Medieval Art
Following its emergence in Paris during the mid-twelfth century, the Gothic style revolutionized church architecture, transforming ecclesiastical art and design throughout Europe. This course examines Gothic buildings from diverse perspectives in order to understand their achievements in engineering and aesthetics, their relationship to social and intellectual developments in medieval society, and their impact on subsequent eras of art. The Gothic cathedral is explored as a site of social union and division; as a space which aimed to mirror the divine realm of Heaven; as a frame to support political and religious ideologies; and as the realization of technological advancements in geometry, design, and construction. We trace the spread of the Gothic style from thirteenth-century France, through England, Germany, Bohemia, Italy, and the Levant. Gothic revivals in nineteenth- to twentieth-century Europe and the United States are also addressed, with special attention paid to the tradition of Collegiate Gothic architecture on the campus of Washington University.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 3066 Art & Archaeology of Cleopatra's Egypt
This course is an introduction to the art and archaeology of Egypt from its conquest by Alexander the Great (332 BCE) to the early fourth century CE. It will examine the rich and multi-faceted history and artistic legacy of Egypt under the Ptolemies and their last queen Cleopatra, followed by the Roman conquest under Emperor Augustus up to the flourishing of Egyptian Christianity. Students will become familiar with a wide range of ancient sources, including documentary and literary texts, coins, architecture, paintings and sculpture. Prerequisites: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215), or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Fall

ARTARCH 3075 Pompeii: Cultural Mosaic of the Ancient Mediterranean
This course will provide an in-depth survey of artistic, architectural, and archaeological material from the ancient town of Pompeii, a river port of middling size and importance in southern Italy with remains that were remarkably well preserved by the ash and pumice stones of Mt. Vesuvius during the eruption of 79 CE. Starting with an overview of its development -- an Oscan settlement under Greek and Etruscan influence that expanded after the conquest of the Samnite and then Roman armies -- students will explore all aspects of urban life through Pompeii's uniquely rich archaeological record, with a particular focus on the social, cultural, and ethnic diversity that can be difficult to detect and appreciate even in the much larger, wealthier, and more cosmopolitan capitals of the Roman Empire. Over the course of the semester, students will learn various methods for applying different types of material evidence (including wall paintings, sculpture, architecture, furniture, and graffiti) to a series of scholarly questions about key points of conflict and tension within society, such as local attitudes toward foreign cultures, resistance to imperialism, the marginalization of women and slaves, opportunities for social mobility, and religious censorship. By the end of the course, a dynamic and colorful mosaic of Pompeii will have emerged, far removed from the image of a static Roman town supposedly frozen in time. Prerequisite: L01 113 or permission of instructor.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Spring

ARTARCH 3080 Archaeology of Roman Slavery
Slavery was a fundamental part of the ancient Roman world. In this course, we will survey various ways in which the institution of slavery played a critical role in shaping Roman society. Through an exploration of social, economic, legal, and cultural aspects of Roman slavery, we will pose questions of what it means to be a slave society, how the ubiquity of forced labor impacted the lives of ancient Romans, and the extent to which we can recover the experiences and subjectivities of enslaved people. Throughout the course, we will confront the interpretive problems posed by biased and/or scarce evidence and by assumptions we may carry as the inheritors of modern slaveries. A recurring theme we will explore is the extent to which evidence of slavery and the material traces of enslaved people's lives are visible in the archaeological record. At the end of the term, we will contextualize Roman slavery by comparing it with modern examples and by considering the legacy of ancient slavery in modern visual culture and representations of enslaved people. Prerequisites: Any 100- or 200-level course in art history or archaeology; or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Spring

ARTARCH 3091 African Art in Context: Patronage, Globalisms, and Inventiveness
This course offers an introduction to principal visual arts from Africa, pre-historic to contemporary. It explores traditions-based and contemporary arts made by African artists from across the continent in conjunction with their various contexts of creation, use, understanding, and social history. Theoretical perspectives on the collection, appropriation, and exhibition of African arts in Europe and North America will be examined. Coursework will be complemented by visits as a group or independent assignments at the Saint Louis Museum, the Pulitzer Arts Foundation, and possibly a local private collection.

UColl: CD

ARTARCH 3100 Greek Art and Archaeology
A survey of the artistic achievements and material culture of the Greeks in the first millenium BCE (Iron Age through the Hellenistic period). Development of architecture, sculpture, and painting, as well as minor arts and utilitarian objects, with emphasis on the insights they offer into Greek society and interactions with the wider Mediterranean world.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Spring

ARTARCH 3105 Greek and Roman Painting
This course provides a survey of the major achievements of ancient Greek and Roman painting, broadly understood and encompassing wall painting, panel painting, painted pottery, and mosaic. We will study monuments ranging over a millennium in time and located throughout the ancient Mediterranean. Particular attention will be paid to the social, political, and religious aspects of ancient Greco-Roman painting and to questions of innovation in artistic practice. Special emphasis will be placed on students' cultivation of the tools of art-historical analysis and of the presentation of that analysis in written form. Prerequisite: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215) or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, CPSC, FAAM, HUM BU: HUM, IS EN: H
Typical periods offered: Fall

ARTARCH 3120 From Parthenon to Pantheon: The Archtitecture of Ancient Greece and Rome
Classical architecture, defined as the architecture of the cultures of ancient Greece and Rome, forms a major part of the foundation of western architecture. Consistently updated, responded to, rejected, revived, dismissed, and revived again, classical architecture has been a touchstone for architects for over two and a half millennia. This course examines the invention of classical forms in Greece and their subsequent development and spread throughout the Mediterranean region by the cultures of Greece and Rome. We will study form, function, style, and construction techniques, and we will see how these characteristics interact and influence one another over the course of time. We will see how different cities and cultures appropriated and interpreted canonical forms to create distinct regional styles. In the Roman period, we will see how emperors used architecture as a form of communication and propaganda to interact with their subjects. At the end of the class, we will briefly chart the course of classical architecture in later periods, to see how it has been accepted and rejected at different times. Prerequisites: L01 112, L01 113, L01 211, or L01 215, or permission of instructor.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM EN: H

ARTARCH 3135 Introduction to Modern Art
This course will examine major developments in European and American art from the mid-nineteenth century through 1945. The focus will be on both the aesthetics of modernism and its evolving cultural and political context. Topics will include Realism, Impressionism, Post-Impressionism, Symbolism, Fauvism, Expressionism, Cubism, Futurism, Suprematism, the Stieglitz Circle, Dada, the Harlem Renaissance, Social Realism, Surrealism, and the Bauhaus.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM, IS

ARTARCH 3145 Arts of China, India, and Japan
Surveying the arts of China, India and Japan from prehistory to present, this course focuses especially on early modern, modern, and contemporary art. Emphasizing painting, sculpture, architecture, and print culture, the course will also explore the tea ceremony, fashion, calligraphy, garden design, and ceramics.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM, IS EN: H

ARTARCH 3150 The Arts in Japanese Society
A contextual investigation of the arts of Japan, focusing on issues of patronage and social function. This class deliberately discards imported Eurocentric concepts of fine art, great artist, style, masterpiece, and influence as well as Japanese constructions of uniqueness. Topics will range from the 3rd to the 20th centuries, and will focus on the following environments: tombs, cities, palaces, shrines, temples, residences, castles, teahouses, brothels, shops, museums and exhibitions. No prerequisite.
Credit 3 units. A&S IQ: HUM, LCD Art: AH BU: HUM, IS

ARTARCH 3155 Japanese Art
Surveying the arts of Japan from prehistory to present, this course focuses especially on early modern, modern, and contemporary art. Emphasizing painting, sculpture, architecture, and print culture, the course will also explore the tea ceremony, fashion, calligraphy, garden design, and ceramics. Major course themes include collectors and collecting, relationships between artists and patrons, the role of political and military culture or art, contact with China, artistic responses to the West, and the effects of gender and social status on art.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH BU: HUM, IS EN: H

ARTARCH 3160 Early Chinese Art: From Human Sacrifice to the Silk Road

How does ancient and medieval Chinese art inspire contemporary artists? This course examines Chinese art, architecture, and material culture from the prehistoric period through the end of the medieval Tang dynasty to demonstrate how the past continues to affect contemporary Chinese art and the art of its future. Topics covered include Neolithic ceramics and jades, the early bronzecasting tradition, the Terracotta Army and its predecessors, early brush arts and Buddhist sites, and the varied exotica of the Silk Road. Each class teaches early and contemporary works side by side to demonstrate how artists today continue to look to the past as they create the art of the future. Prerequisite: One course in Art History at the 100 or 200 level or permission of instructor.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H

Typical periods offered: Fall

ARTARCH 3165 The Archaeology of Ancient China

This course will examine the development of Chinese civilization from its beginnings in the many regional village-level societies that developed around the country early in the Neolithic period to the emergence of politically unified states in the Bronze Age. The archaeological evidence for this transition, inluding the evidence for regional interaction and conflict, technologicall innovation, urbanization, ceremony and ritual will be examined. Various theoreticval perspectives will also be introduced to give students a framework for interpreting this evidence. NO PRE-REQUISITES FOR THIS COURSE, AND STUDENTS FROM ALL BACKGROUNDS ARE WELCOMED FOR THE DIVERSITY OF PERSPECTIVES THEY WILL BE ABLE TO PROVIDE. READINGS USED FOR THIS CLASS WILL BE IN ENGLISH, AND WILL CONSIST OF MATERIALS FROM A VARIETY OF DICIPLINES (PRIMARILY ARCHAEOLOGY, ANTHROPOLOGY, ART HISTORY AND HISTORY).

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM, IS

ARTARCH 3170 Art of the Islamic World

This course surveys the art and architecture of societies in which Muslims were dominant or in which they formed significant minorities from the seventh through the 20th centuries. It examines the form and function of architecture and works of art as well as the social, historical, and cultural contexts; patterns of use; and evolving meanings attributed to art by the users. The course follows a chronological order, and selected visual materials are treated along chosen themes. Themes include the creation of a distinctive visual culture in the emerging Islamic polity; the development of urban institutions; key architectural types such as the mosque, madrasa, caravanserai, palace, and mausoleum; art objects and the art of the illustrated book; cultural interconnections along trade and pilgrimage routes; and Westernization and modernization in art and architecture.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H UColl: CD

Typical periods offered: Fall, Spring

ARTARCH 3180 Classical to Contemporary Chinese Art

Surveying Chinese art and architecture from the 10th century through today, this course examines classical and imperial works as the foundation for modern and contemporary art. By engaging with the theoretical issues in art history, we will also pay particular attention to questions of gender, social identity, cultural politics, and government control of art.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH BU: HUM, IS EN: H

ARTARCH 3181 Modern & Contemporary Chinese Art

This course will explore the ways in which Chinese artists of the 19th, 20th, and 21st centuries have defined modernity and tradition against the complex background of China's history. By examining art works in different media along with other documentary materials, we will also engage with theoretical issues in art history, such as modernity, cultural politics, and government control of art.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H

Typical periods offered: Spring

ARTARCH 3185 Buddhas, Gods, Emperors, and Conquerors: Indian Painting From the 6th Century to Present

This course aims to provide students with considerable knowledge about specific paintings and artistic trends in South Asia, as well as basic knowledge of South Asian religion and history. The course engages in critical analyses of the painting traditions of a range of sacred (Buddhist, Jain, Hindu, Islamic) and secular (courtly and popular) South Asian cultures from the sixth century AD to present. The course utilizes paintings to investigate the cultures that produced them, paying special attention to the religious, historical, political, and philosophical contexts in which they were created.

Credit 3 units. A&S IQ: HUM, LCD Art: AH BU: HUM, IS EN: H

ARTARCH 3190 Lofty Mountains: Painting of the Sung

An introduction to Sung-period painting (ca. 950-1300) of all formats and subjects. Indoctrination in methods for authenticating and attributing that body of painting (traditional and modern connoisseurship), and an immersion in the literature of Sung painting (translated texts and modern-day scholarly writings). Prerequisite, Art-Arch 111E or permission of instructor.

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 3200 Chinese Painting, Then and Now

Tracing the unbroken history of Chinese painting from the 1st through 21st centuries, we explore the full evolution of its traditions and innovations through representative works, artists, genres, and critical issues. From its ancient origins to its current practice, we will cover topics such as classical landscapes by scholar painters, the effects of Western contact on modern painting, the contemporary iconography of power and dissent, and theoretical issues such as authenticity, gender, and global art history. Prerequisites: Intro to Asian Art (L01 111) or one course in East Asian Studies recommended.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H

ARTARCH 3205 Origins of Chinese Civilization

The emergence of the first proto-historic states, ca. 2000-1000 BCE, in modern-day China. Focus on the Shang culture and on its most well-known archaeological site, the ruins of Yin near Anyang. Topics include: oracle-bone divination, the royal cult, human sacrifice, and ritual bronzes and jades. Prerequisite: Art-Arch 111E(Q) or permission of instructor.

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 3210 The Archaeology of Death

An archaeological investigation of the material culture of death in ancient China from the Warring States era through the two Han dynasties (ca. 500 B.C. to 200 C.E.). Concepts of the soul, death, and the afterlife; social and ritual norms governing the treatment of the dead; specialized industries that served the dead. PREREQUISITE: ART-ARCH 111EQ.

Credit 3 units. A&S IQ: HUM Art: AH BU: BA, HUM

ARTARCH 3215 Buddhist Art in Asia: Interactions in Faith and Form

This course emphasizes Chinese Buddhist art and its transmission to and interaction with the visual traditions of India, Central Asian, China, Korea, Japan, Tibet and Southeast Asia. We trace the development of Buddhist art from its origins in India to other parts of Asia by analyzing the transregional and transcultural dissemination of religious ideas and forms. A focus on Buddhist architecture, paintings, sculptures and objects allows us to rethink traditional notions of the religious, cultural and artistic basis of changes in Buddhist art across Asia. Readings and discussions will cover Buddhist grottos, monasteries, sculpture, mural, scrolls, and wood-block printed books, as well as scriptural sources (all readings will be in English). The development of specific iconographies and issues of patronage will also be discussed, based on dynastic, geographic, and media-based divisions. Prereqs: Introduction to Asian Art or one course in East Asian Studies recommended.

Credit 3 units. A&S IQ: HUM, LCD Art: AH BU: HUM, IS EN: H

ARTARCH 3220 Buddhist Art in China

The relationship between Buddhism and the arts (architecture, sculpture, painting and ritual implements) from the introduction of the Dharma until late imperial times. Topics include: early image making, imperial patronage, pure land cults (Amitabha, Maitreya), the cult of relics, esotericism (Mandala), popular devotional cults (Avalokitesvara, Ksitigarbha, Arhats), and Himalayan Buddhism in the Yuan, Ming and Qing periods. Prerequisite, Art-Arch 111EQ or permission of instructor.

Credit 3 units. A&S IQ: HUM Art: AH BU: ETH, HUM

ARTARCH 3225 Visualizing Buddhism: Art, Religion and Philosophy

One of the most powerful ways that a religion can realize its central beliefs and practices is through art and material culture. Rather than focusing on the historical development of Buddhist artwork itself, this course will be organized around conceptual themes concerning the evolution of key philosophies and rituals. By the end of the course, students will have a good understanding of the basic religious ideas and history of Himalayan Buddhism, much as they might gain from a standard introductory course on religion. However, students in this class will also understand the inestimable role of art and material culture in Himalayan Buddhism, as well as the ways in which artworks can express philosophical ideas, epitomize esoteric practices, aid in the transmission/propagation of religion, and in short be one of the most meaningful ways to explore and understand another culture. The course will involve works of art from the past 2000 years of history in regions of South Asia including northern India, Nepal, and Tibet.

Credit 3 units. A&S IQ: HUM, LCD Art: AH BU: ETH, HUM EN: H

ARTARCH 3230 Peking and the Forbidden City

The life history of China's imperial capital from the 13th-century Khanbaliq visited by Marco Polo to the Peking of the last emperor, Pu Yi. Topics include Chinese city planning and symbolism, timber-frame architecture, ceremonial and mortuary sites, domestic architecture and gardens. Readings in primary sources. Prerequisite: permission of instructor.

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM, IS

ARTARCH 3235 The Floating World of Japanese Prints

The relationship between Japanese printmaking and popular culture from 1600 to 1900. Woodblock and copperplate printmaking techniques, key masters, kabuki drama, pleasure quarters, fiction, travel, modernization will be explored. Prerequisite: L01 111, Intro to Asian Art, or background in printmaking or Japanese culture.

Credit 3 units. A&S IQ: HUM, LCD Art: AH BU: HUM EN: H

Typical periods offered: Spring

ARTARCH 3245 Japanese Painting and Prints

The history of Japanese painting from the 11th to the 19th centuries with special emphasis on the artistic problems of the formats of Japanese painting (picture scrolls, hanging scrolls, folding screens, and sliding doors); the relationship between painting and literature; the role and status of artist and patron within Japanese society; and Japan's relationship with the outside world, especially China. Prerequisite: Art-Arch 111EQ.

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 3250 Romanesque and Gothic Art: The Rebirth of Architecture

The 11th 12th centuries witnessed the creation of stone architecture and sculpture in western Europe on a scale not seen since the Roman Empire. This course will track the development of monumental art from ca. 1050 to 1400. Important issues to be discussed include invention in structures and techniques, the development of stained glass windows, the role of patronage, form as carrier of meaning, art and ideology. Prerequisite, Permission of department.

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 3265 Medieval Icons: Painting Before the Renaissance

Portable painting is commonly perceived as an art form of the Renaissance, when artists to an unprecedented degree utilized the surface of canvas or wood panels to create virtual windows onto the world. But Renaissance painting developed in large part from medieval icons, which functioned as objects of religious devotion and veneration. This course traces the evolution of Christian portable paintings from their origins in the late antique and Byzantine worlds to the earliest decades of the European Renaissance. Special attention is paid to the impact of eastern icons on western devotional images in the twelfth to thirteenth centuries. We will be concerned with the function of paintings as much as their aesthetics, examining how the emphasis on their cultic versus artistic value shifted for the medieval to Renaissance periods. Cross-cultural interaction in the Mediterranean world is of particular importance to our discussion, with historical phenomena like the Crusades and the proselytizing efforts of European Mendicant Orders receiving special attention.

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM EN: H

ARTARCH 3270 History of Ancient Architecture

A survey of architectural history in ancient Greece and Italy. Selected groups of monuments illustrate the development of religious and secular buildings during the Minoan-Mycenaean, classical, Hellenistic, and Roman periods. Prerequisite: Art-Arch 112 or 113, or permission of the department.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM

ARTARCH 3275 Courts of the Medieval World

Medieval kings, caliphs, and courtiers often buttressed their power through cultural production. By sponsoring the creation of regalia, the construction of palaces, and the illumination of manuscripts these patrons shaped the way audiences perceived them. In this class we will compare the varied courts from the seventh to the fourteenth centuries in places such as Córdoba, Paris, Constantinople, Damascus, and Jerusalem. A primary focus will be on the ways that objects, ideas, and styles spread across Europe and the Mediterranean via these influential court cultures. Prerequisites: Intro to Western Art (L01 113) or permission of instructor.

Credit 3 units. A&S IQ: HUM BU: HUM, IS EN: H

ARTARCH 3280 Pilgrimage and the Medieval City
In this course we will explore one of the primary ways people traversed Europe and beyond: pilgrimage: Specifically, this course will explore the material culture of pilgrimage in the context of the urban environment, considering the role of art in guiding, encouraging, and visualizing pilgrimage to and through some of the important religious centers in the medieval Christian world. We will begin in Jerusalem and move outwards to Constantinople as a gateway to holy sites across the Byzantine Empire. We will then move to Paris and London to explore the different ways that pilgrimage could be undertaken, both physically and in the mind's eye. Finally, we will move to the conceptual, considering how the Heavenly Jerusalem was manifested in art and architecture across the medieval world. This course will investigate this subject through engagement with primary sources, object-focused study, and visits to the Saint Louis Art Museum. The overarching goal is to foster strong critical reading and thinking skills, while also developing specialized knowledge in the history of medieval art. Emphasis will lie in critical interpretation and analysis, in engaging in rigorous class discussion, and in writing coherently at a high academic level. Prerequisite: any 100- or 200-level course in art history
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Spring

ARTARCH 3285 Byzantine Icons in Byzantine Life
The contemporary eye commonly sees the Byzantine icon as a static and unreal image of foreboding religiosity. But Byzantines saw their icons as full of life and believed these objects provided access to the divine figures pictured there within. Produced before the modern phenomenon of the display object, Byzantine icons were touched, kissed, held, and even eaten, all in an effort to gain assistance from the holy persons they represented. This course introduces the history of Byzantine icons, addressing their function in religious and secular life of the private and the public realms. It focuses on the anthropology of the icon, examining ways in which these objects were used in personal and public rituals and how these works of art reflected shifts in Byzantine religious doctrine and social ideology. Beginning with the emergence of icons in the first centuries of Christianity, we follow their zenith in popularity through pilgrimage and monastic cults of the sixth and seventh centuries. We then consider the period of Iconoclasm (720s-840s), and its effects on the production, alteration, and function of images in Byzantium. The post-Iconoclastic reintroduction of religious imagery is examined with particular attention to the role of miraculous icons in the promotion of imperial and civic authority and the function of monumental and portable images in the middle Byzantine liturgy. Tracing the trajectory of Byzantine icons into the late Byzantine and modern eras, we address parallels and differences in the use and ideology of images in Byzantium and western medieval Europe; the contribution of Byzantine icons and image theory to the development of Renaissance art; and the possible impact of the Byzantine icon on modern artists, including the Impressionists, the Bloomsbury Group, and Andy Warhol.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM EN: H

ARTARCH 3290 The Art and Architecture of Ancient Mesoamerica: Objects of Ritual, Places of Power
This course will examine the artistic and architectural achievements of the civilizations of ancient Mesoamerica, a cultural region that covers most of modern-day Mexico, Guatemala, Belize, and Honduras. From the emergence of complex societies during the second millennium BC through the rise of the spectacular cities of the Maya and ending with the violent fall of the Aztec Empire in the 16th century AD, rulers of ancient Mesoamerica relied on a consistent set of themes, images, and media to proclaim their religious and political authority. This course will explore how artists, farmers, priests, elites, kings, and other community members created a vast array of images and objects that expressed cultural ideals, political and religious narratives, and distinct ethnic and civic identities. Prerequisites: L01 113; A46 200; L48 335; or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 3292 Art & Archaeology of Ancient Mesoamerica
This course surveys the arts and archaeology of Mesoamerica (present-day Mexico, Guatemala, Belize, and parts of Central America) from 1500 BCE to 1521 CE. Beginning with early advanced civilizations and ending with the Spanish conquest, we will examine the material culture of selected cultures as our point of entry into the understanding of ancient social, political, and religious life. Visual analysis of sculpture, painting, ceramics, architecture, and other art forms will be supplemented by archaeological evidence, Colonial documents, theory of religions, epigraphy, and the natural sciences. We will also critically read contemporary scholarship in order to address class themes of ideology, regional interaction, sacred landscape, writing, and materiality. Prerequisites: L01 113 or L01 215
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H UColl: CD

ARTARCH 3305 The Art of Mexico: From Aztec to Contemporary
This survey course draws from selected examples of art and architecture to tell the changing story of Mexico. Beginning with the Aztec and ending with contemporary works, this course chronologically traces artistic manifestations of beliefs, politics, and placemaking. Through movements, revolutionary moments, individuals, and trends, the course creates a portrait of Mexico that is multicultural, dynamic, and creative. Course themes include international relationships, diversity, identity, and politics. Prerequisites: L01 113, Intro to Western Art; L01 215, Intro to Modern Art; L45 165; or permission of instructor.
Credit 3 units. A&S IQ: HUM, LCD Art: AH BU: HUM, IS EN: H
Typical periods offered: Fall

ARTARCH 3310 Dutch 17th Century Painting
This course surveys the major developments in history, portrait, landscape, still-life and genre painting in the Northern Netherlands in the seventeenth century. A variety of interpretive strategies and methods of inquiry will be employed. The major artists to be discussed include Frans Hals, Rembrandt, and Vermeer.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM, IS

ARTARCH 3316 Renaissance Architecture
The modern concept of the architect as creator and genius began with Filippo Brunelleschi, the great innovator of fifteenth-century Florentine art. The course explores the spread of architecture and architectural theory as it begins in the hands of the innovator and is expressed and changed by other men of genius such as Leon Battista Alberti, Donato Bramante, Michelangelo Buonarroti and Andrea Palladio.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM

ARTARCH 3325 Art of the Early Italian Renaissance
This course is a survey of Italian Renaissance art, from its origins to the end of the 15th century. It includes an examination of artists such as Giotto, Masaccio, Donatello, Botticelli, and Leonardo da Vinci. Prerequisite: L01 113.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Spring

ARTARCH 3335 Rome in the Renaissance
Renaissance Rome, called by many the Caput Mundi or capital of the world, was the cultural capitol of Europe. It was a tumultuous, vibrant city characterized by ancient structures, medieval foundations and new artistic and architectural projects that were bigger and more luxurious than anywhere else in Europe. These new structures and masterpieces were incorporated into, and built on top of, the extant classical and medieval city. We will take a journey through the Renaissance city, using Andrea Palladio's two guidebooks of Rome, written in the 1550s. Maps, guides and artists' renderings of the city will contribute to the journey. We will discuss chapels, churches, palaces, monuments and piazzas as we encounter them. In addition to works of art and architecture, we will encounter legends (ranging from feasible to preposterous) and popular traditions associated with specific sites. Prerequisites: L01 113, Intro to Western Art; L01 215, Intro to Modern Art; or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM, IS EN: H

ARTARCH 3336 High Renaissance Art
A general survey focusing on such outstanding figures of the period as Leonardo da Vinci, Michelangelo, and Raphael. Prerequisites: Intro to Western Art (L01 113) or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 3350 Art and Court Society in the 17th Century: Italy, France, Spain
This course examines the artistic production of the major courts of Southern Europe during the Baroque. Painting, sculpture, architecture, and urbanism, as well as courtly and musical spectacle, are considered. While works by Bernini, Borromini, Reni, Cortona, Velasquez, Rubens, Poussin, Le Brun, Le Vau, and Mansart are studied in depth, the major objective is to situate the artist in the political and social networks of court society. Of central importance are the patronage and cultural policies of Urban VIII and his Cardinals, Philip IV of Spain, and Richelieu, Mazarin, and Colbert under Louis XIII and XIV. The course also engages larger issues of social anthropology of court culture, the role of art in the construction and ligitimization of power, and the fundamental relationship of artd and ideology.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 3360 High Renaissance Art
A general survey focusing on such outstanding figures of the period as Botticelli, Leonardo da Vinci, Michelangelo, Bellini, Giorgione, Titian. 3 units
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 3364 Global Renaissance
This course provides an overview of transcultural encounters within and beyond Europe circa 1450 to 1650. During this period, visual forms and artistic practices linked places in disparate corners of the world, such as Venice and Istanbul, Mexico City and Florence, Manila and Acapulco, Amsterdam and Agra. Focusing on cities as cosmopolitan centers of artistic production, the course will consider the mercantile networks, imperial strategies, and artistic technologies that heightened the mobility of art, as well as the local manifestations and native traditions that continually reshaped it. Students will gain a deeper understanding of the diversity of art and architecture during this period of increased cultural exchange, cultivate tools of art-historical analysis, and hone skills in presenting such analysis in written form. Prerequisites: One course in Art History or permission of instructor
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Fall

ARTARCH 3370 Renaissance Bodies: Art, Magic, Science
Against the notion of ideal classical form commonly associated with Early Modern art, this course pursues the complex and often contradictory conception of Renaissance bodies at the intersection of aesthetic ideal, empirical study, and superstition. Topics include anatomical illustration, pornographic prints, bodily metaphors for the artist, and the corporeal representation of sin, holiness, and savagery. Prereqs: L01 112, L01 113, L01 211, or L01 215, or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 3371 In Sickness and In Health: The Renaissance Body
From birth to death (and beyond), the Renaissance body both required and inspired a wide variety of art and material culture. This course will explore the Art of the Renaissance Body, primarily in Italy, from c. 1300-1600. We will consider the objects associated with life's most important moments, including birth, childhood, pregnancy, aging, dying, and the afterlife, as well as the necessary material culture associated with grooming, illness, plague, and general body care. We will also examine artists' response to growing interest in the body, beginning with Masaccio and Pollaiuolo and continuing through Leonardo and Michelangelo. In addition, we will study the rise of scientific, anatomical literature and the competing visions of anatomical modeling. We will therefore dissect both the physical reality of the Renaissance Body as well as its impression on artists and scientists over the course of the fourteenth through sixteenth centuries.
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Fall, Spring

ARTARCH 3380 Pleasure and Pain: European Fashion as (Art) History
In the words of Louis XIV, Fashion is the mirror of history. It reflects political, social and economic changes, rather than mere whimsy. This course will survey the history of dress in early modern Europe, using art and material culture to explore the relationship between society and style. Beginning with the Renaissance, we will explore what fashion in (art) history can tell us about gender, sexuality, class, race, and revolution. To incorporate a global perspective (although concentrating primarily on the West), further themes to be considered include the textile trade, commerce and empire, identity politics, and nation-building. From the chopine to the corset, the pannier to the Pompadour pump, we will incorporate surviving examples as we explore the art and history of European fashion from the 15th to the early 19th century. This course is open to students who have previously taken or are currently enrolled in Intro to Western Art. Prerequisite: One course in Art History at the 100 or 200 level.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: BA, HUM, IS EN: H
Typical periods offered: Fall, Spring

ARTARCH 3385 19th-Century Art and Visual Culture
This course introduces students to 19th-century art and visual culture. The story of the long 19th century (1789-1914) has tended to be taught as a series of -isms: Neoclassicism, Romanticism, Realism and Naturalism, Impressionism, and Symbolism, ending in fauvism. This course studies canonical artists and artworks in tandem with counter- or alter-histories of art to paint a more nuanced picture of the approximately 100 years (1814-1914) under exploration. This course questions how current stories of 19th-century art have been produced and codified. It highlights the continued relevance of 19th-century art and visual culture to contemporary artists working today. Prerequisite: L01 113 or L01 215 or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H

ARTARCH 3390 19th Century Art: Classicism & Romanticism
This course will trace developments in the visual arts and culture of Western Europe from 1789 to 1905, with emphasis on painting, sculpture, photography, and the graphic arts. Particular attention will be given to the evolving figure of the artist as a critic of society. Other topics will include history painting and its discontents; changing markets for art; exoticism, orientalism, and world's fairs; the development of lithography, wood engraving, and photography; and art as satire. We will also visit the Saint Louis Art Museum
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 3395 The Origins of Modernism: European Art 1800-1900
The development of key modernist concepts in European art from neo-classicism to symbolism. The discussion of specific artistic trends will be framed by an examination of the changing social milieu, including the growing importance of the urban experience, art education and art market.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 3400 Baroque Art
This course is a survey of the development of painting and sculpture in 17th-century Europe. Emphasis is on the works of Caravaggio, Bernini, Poussin, Rubens, Rembrandt, and Velazquez. Prerequisite: L01 113 or permission of department.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 3405 Italian Baroque Art
A survey of baroque art in Italy, from its origins in the middle of the sixteenth century until its late phase at the end of the seventeenth century. The course will examine some of the factors the led to the baroque in the intellectual and theological debates surrounding the Protestant and Catholic Reformations and the stylistic initiatives that began in the workshops of Michelangelo and Raphael, with special attention to the role of Federico Barocci, introducing new research for an upcoming exhibition on that artist. The course looks at how these and other factors fostered a style of spatial dynamism, expressive coloration, viewer involvement, and psychological subtlety. Topics to be discussed include the renewed interest in the early Christian church, the role of women artists, workshop practice, artists' materials, the role of patronage, and some of the theoretical debates that governed the creation and reception of the visual arts in seventeenth-century Italy. Artists include Caravaggio, Artemisia Gentileschi, Annibale Carracci, Guido Reni, Guercino, Bernini, and Pietro da Cortona. Prereqs: Intro to Western Art (L01 112) or Intro to Modern Art (L01 211) or permission of instructor.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM, IS EN: H

ARTARCH 3406 Baroque Art: Materiality and Experience
The materiality of art is evident-and central to how art looks, how it means, and how it endures. This course is intended as an introduction to the materiality of objects and works of art made during the Baroque era (c. 1550-1700) and to concepts for understanding and interpreting them. Works in a variety of materials-ivory, wax, woods, feathers, shells and mother-of-pearl, oil paint, lacquer, metal, fresco, stone, porcelain and earthenware-populate a series of case studies drawn from European, Mesoamerican, and East Asian workshops. In addition to learning about what goes into making these works, students will trace the geographies of materials, and the ways in which materials, format, and durability all affect the viewer's experience. Students will read, analyze, and discuss current research on the makings of art, on theories of the materiality of art, and problems in art conservation-and will participate in close examination of works in local museums and special collections. This course will introduce students to some of the central topics in early modern art history as it is practiced by scholars/historians *and* by archaeologists, museum curators, archivists, and conservators. Students will be introduced to a wide data set of objects and art works, and will learn how to analyze, articulate, discuss, and research aspects of their materiality. Rather than focusing on memorization, this course encourages using concepts from a set of assigned readings to reflect on the objects we discuss together. Students will work in small groups and as a class to advance their own vocabulary for and understanding of early modern materiality and experience. Prerequisites: L01 113, L01 215, or permission of instructor
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Spring

ARTARCH 3407 The Baroque: Art in an Age of Crisis
The late 16th century was a time of crisis and conflict, and change echoed across Europe and its empires. Religious reform, scientific discovery, and political upheaval shook the foundations of early modern society. Yet from this turbulent time, an era of extraordinary artistic achievement emerged, defined by a dynamic new visual language. This course will examine how the Baroque became a global language, from its early beginnings in Rome to Spain, France, Flanders and the Dutch Republic, even extending beyond the borders of Europe to Asia and the Americas. In addition to studying leading artists such as Caravaggio, Bernini, Rubens, Vermeer and Velázquez, important themes to be considered will include space and spectacle in urban planning; the mundane and profane in still life and genre; collections and curios; the church triumphant; and the portrait. Prerequisite: Intro to Western Art (L01 113).
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Spring

ARTARCH 3428 Mirrors of Nature, Dreams of Art: Northern Renaissance Art
This course surveys the visual culture of the Netherlands and Germany from approximately 1400 to 1550: from Burgundian court culture around the time of Jan van Eyck to the fantastic works of Hieronymous Bosch to the international renown of imperial artist Albrecht Durer and later Flemish urban culture as represented by Pieter Brueghel the Elder. Works in a variety of media will be presented in light of broader consideration of the role of art within devotional practice and the Reformation, courtly culture and the cultivation of artistic imagination, and the rise of print and popular culture. We will consider the power of images to mediate religous experience; the representation of folly and death; the social position of the artist; and the relevance of naturalism. We will also survey the predominant interpretive models that have been developed to analyze the significance of these works. Prerequisite: One course in Art History at the 100 or 200 level.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H
Typical periods offered: Fall

ARTARCH 3430 Global Baroque: Art and World-Making
Europe and along Eurasian contact routes between 1500 and 1700 is a primary focus. The course will open with an examination of the significance of the early modern category of the exotic and the role of the exotic or foreign in shaping artistic and collecting practices during a period that tends to be studied with Europe at the center of the world. Throughout the semester, we will explore different modalities of otherness, and the political stakes of representations of self and other within the context of early modern empire- and nation-building. We will analyze paintings, prints, drawings, sculptural objects, naturalia, featherwork, ceramics, porcelain, and textiles alongside primary sources, early modern history and art history, cultural and material history, the history of science, and maritime and diplomatic history. The course attends to the atrocities of slavery in the early modern world and trace the relationship of enslavement to procuring and appreciation of exotic materials. Lectures will incorporate contemporary art (installations, photography, collage, and

painting) that actively engages the modern era. The course involves close study of works of art in local collections, and will include visits to the Saint Louis Art Museum, where students will be introduced to the extraordinary holdings, in particular the Phoebe Dent Weil and Mark S. Weil collection of early modern prints, drawings, and sculpture. Prerequisites: One 100- or 200-level course in Art History; or permission of the instructor

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H

Typical periods offered: Fall

ARTARCH 3435 The American West: The Image in History

Examines representations of the American West and of the frontier encounter between Euro- and Native American cultures, from the early nineteenth to the early twentieth centuries. We will consider travel accounts, fiction painting, ledger drawings, photography, and film in order to analyze the ways in which historical circumstances have shaped artistic and literary representations. At the same time, we will look at how images and texts have shaped formative myths about the West that in turn leave their impact on history.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH BU: HUM

ARTARCH 3445 Music and the Visual Arts

From fifteenth-century Flanders to present-day St. Louis, music has had a rich and varied relationship with the visual arts. This course will proceed topically instead of attempting to survey the range of issues under discussion chronologically. Among other issues, we will discuss representations of music making, composers who painted and who sought to represent paintings in their music, portraits of composers, musical iconography in still lifes, written music as visual art, synaesthesia, and recent video art with musical subjects. While assigned readings focus on European and American contexts, students will have the opportunity to do independent work on these topics in other parts of the world. No previous musical experience is assumed or required. Pre-requisites: Intro to Western Art, Architecture and Design; or Introduction to Modern Art, Architecture, and Design; or, any 300-level Art History course.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 3452 American Art to 1900

This course is a survey of the broad social, cultural, and nationalist themes in the visual arts from European contact with the New World to 1900. Topics include the encounter of New World cultures with European colonizers and the ongoing relationship between America and Europe; the changing image of the artist; and the role of art in the formation of national identity. Prerequisite: L01 113 or permission of instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

Typical periods offered: Fall

ARTARCH 3455 Art and Culture in America's Gilded Age

This course covers developments in American culture from the end of the Civil War to the turn of the century, including the novels, buildings, images, and public and private spaces of this transitional period. The Gilded Age was a time of new class formation, of unparalleled social diversity, and of new urban forms. The connections between art, literature, and social experience will be addressed. Representative figures include Henry James, Henry Adams, Louis Sullivan, Stanford White, Thomas Eakins, and Louis Tiffany.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: BA, HUM

ARTARCH 3465 American Art to 1970

From the beginnings of modernism in the visual arts of the United States, around 1900, to Abstract Expressionism and the Beat aesthetic. Focus on the cultural reception and spread of modernism, native currents of modernist expression, from organicism to machine imagery, the mural movement and the art of the WPA, the creation of a usable past, abstraction and figuration, regionalism and internationalism, photography and advertising.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H

Typical periods offered: Fall

ARTARCH 3470 American Modernisms, 1900-1940

American modernism: what is it? What is the nature of its encounter with mass culture? What happened to modernism as it migrated from its high European origins to its middlebrow version in America between the turn of the century and the eve of World War II? What was the rhetoric of modernism in everyday life - its impact on design, photography, advertising? In addition to the fine arts, we'll look at popular media, film, and photography. Lecture/discussion. PREREQUISITE: L01 112, L01 113, L01 211, or L01 215, or permission of instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

Typical periods offered: Spring

ARTARCH 3472 Bodymorph: Fantasy Worlds of American Visual Culture, Animation, and Product Design

This lecture and discussion-based course engages students in media beyond the fine arts, which shaped in fundamental ways how ordinary Americans experienced life during decades of dynamic change and modernization over the first half of the 20th century. We consider cartooning and animation, film, advertising, product design, department stores and the visual strategies of consumer culture, jazz aesthetics, the skyscraper city, and more. We set these new forms within broad changes in the rhythms of everyday life driven by industrialization and new technologies, as well as how filmmakers, animators, and artists both expressed these new realities, as well as how they turned in response to the handmade, the primitive, and the embodied. We look at the uneasy exchanges between high art and mass media; and at the open borders between surrealism, advertising, and art. Prerequisites: Any introductory or 300-level course in Art History or American Culture Studies, History, or literature

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H

Typical periods offered: Spring

ARTARCH 3490 American Architecture and Modernism in St. Louis

exploration of modernism in American architecture in general and St. Louis architecture in particular. Students will be introduced to archival and historical resources for the study of architecture in St. Louis. Each student will be asked to research and interpret a specific modern building in St. Louis. Emphasis will be placed on the work of William Bernoudy, a follower of Frank Lloyd Wright.

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 3500 The Modernist Project: Art in Europe and the United States, 1905-1980

This course surveys major tendencies in painting and sculpture, from Fauvism in France and Expressionism in Germany to the beginnings of Postmodernism in photo-based work in the United States. About two thirds of the course will treat European art, and about one third will treat American art. Photography, architecture, and work in other forms will be considered selectively when pertinent to the individual class topics. Within the lecture topics, emphasis is on avant-garde innovation; the tension in modernist art between idealism and critique; reaction by artists to current events; the relationship between art and linguistics, philosophy, literature, economics, and science; the role

of geopolitics in art production; the intersections of art and society; the role of mass culture; issues of race and gender in the production and reception of art; and the challenge to the concept of authorship and creativity posed by Postmodernism at the end of this period. Prerequisite: One course in Art History at the 100 or 200 level.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 3505 Photography in America
This course will consider the practice and use of photography in America, from its invention up to the present, and it will offer various ways of thinking about the medium and its relation to society and culture. Students will come to understand the ways photographic practices shape public perceptions of national identity, ethnicity and gender, nature, democratic selves, and a host of other concerns. We will discuss famous practitioners such as Matthew Brady, Jacob Riis, Lewis Hine, Walker Evans, and Robert Frank. We consider not only the social and public uses of the medium (through such episodes as the New Deal/FSA and photojournalism) but also the private explorations of fine art photographers and the everyday practices of the snapshot. Prerequisite: One course in Art History at the 100 or 200 level.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 3510 Global Contemporary Photography
This course explores contemporary photographic traditions from around the world. We begin by grappling with a few of the theoretical issues that lie at the heart of the medium's power, such as the aura of a photograph and its potential evidentiary value. We examine how photography emerged as distinct from other artistic forms such as painting and was deployed in unique ways across the globe to assert power, counter claims of hegemony, and express identity. The scope of the class is not limited to high-art photography, but also explores the family photography and vernacular traditions, focusing on a range of genres including portraiture, narrative, and performance. Finally, we end by exploring how contemporary photographers have stretched the potential of the medium by experimenting with digital technology and non-traditional modes of display. Prerequisites: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215), or permission of instructor.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H

ARTARCH 3520 Rococo to Revolution: Art in Eighteenth-Century Europe
The Long Eighteenth Century serves as a bridge between two fundamentally different times. The Europe of 1700 was dominated by absolutism and the ancien régime. The Europe of 1800 was in an age of revolution. This course will explore the dramatic shift in artistic representation and individual self-conception that occurred throughout the century to usher in our modern age. Important topics to be considered include: the rise of the Academy; the Enlightenment and the Encyclopédie; the Grand Tour; Art and Science; and the French Revolution. Focusing on the development of artistic trends, the course will address transformations in painting, sculpture and architecture throughout Europe.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Fall

ARTARCH 3540 Art in the Age of Revolution: 1789-1848
This course covers European painting, sculpture, and printmaking from the French Revolution to the mid-19th century. French, English, German, and Spanish artists are discussed in a social and aesthetic context, with a focus on links between art and ideology in times of political turmoil. The styles of Classicism and Romanticism, the rise of history painting, and the development of Realism in both landscape and genre painting are also addressed. Prerequisite: L01 113 or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM

ARTARCH 3550 The Art Museum: History, Theory, and Design
This course will study the conceptual basis of the institution of the art museum in the United States and Europe, including its history, theoretical foundations, design, and cultural function. We will begin with the origins of the modern museum in the 18th century and earlier; trace the development in the 19th century of the earliest national art museums in the United States and Europe; consider the opportunities and problems of museums of modern and contemporary art in the 20th century; address the question of appropriate architectural strategies for art museums of the past and the present; and consider a variety of developments in the art museum today. Prerequisite: Introduction to Modern Art (L01 211), Architectural History II (A46 2284/4284), or permission of instructor. Students in the College of Architecture may register for this course under the assigned College of Architecture course number.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 3553 Party Like It's 1499: Court Culture and Spectacle in the Italian Renaissance
TBD
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM
Typical periods offered: Spring

ARTARCH 3555 The Art Museum From the Louvre (Paris) to the Louvre Abu Dhabi
This course explores the cultural politics of modern and contemporary art museums in the nexus of London-Paris-New York from the late 18th century to today. It analyzes important works of art collected, displayed, and studied in the museum context as well as the politics, philosophies, and people who shaped the history of modern and contemporary art via museums and exhibitions. Students will interrogate institutions and spaces that condition the experience and reception of modern and contemporary art. Prerequisites: L01 113, L01 215, or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H

ARTARCH 3560 Modern Art in Fin-De-Siecle Europe, 1880-1907
This course examines artistic production at the turn of the century in France, Belgium, England, and Scandinavia. Beginning with the reevaluation of impressionism and naturalism in France, we examine Neo-Impressionism (Seurat and Signac) and Symbolism (Moreau, Van Gogh, Gauguin, the Nabis, Rodin, and Munch), as well as later careers of Impressionists (Cassatt, Monet, Degas, and Renoir). We will consider cross-national currents of Symbolism in Belgium and Scandanavia; the Aesthetic Movement in Britain; the rise of expressionist painting in French art (particularly with the Fauvism of Matisse and Derain), and the juncture of modernist primitivism and abstraction in early Cubism (Picasso). Prerequisite: L01 113 or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM
Typical periods offered: Fall, Spring

ARTARCH 3565 Painting Place: France as a Center of Artistic Modernism, 1850-1915
How did Paris become a center and source of avant-garde painting in the mid-to-late nineteenth century? What was the relationship between the dynamic urban space of the city and the development of modernist painting? How did the French countryside offer an even wider range of subjects and inspire new directions for modern painters

of the period? This course offers an historical introduction to French painting of the late nineteenth and early twentieth centuries, exploring the careers, paintings and cultural milieu of canonical figures including Courbet, Millet, Monet, Van Gogh, Gauguin, Seurat, Cézanne, Bonnard, Matisse, Picasso and Léger. It also discusses the historical, social, economic and cultural factors behind the rise of major avant-garde artistic movements, including Realism, Impressionism, Symbolism, Fauvism, Cubism, and Fauvism. Assignments will take advantage of the museums in Paris and in the south of France to offer students the opportunity to engage directly with original works of art. Field trips will include the Musée d'Orsay, the Matisse Chapel in Vence, the Maeght Foundation, and the Léger Museum, as well as optional meetings at the Centre Pompidou and the Museé de l'Orangerie in Paris, and the Museé National Marc Chagall and the Matisse Museum in Nice. We will use a small book on modern art, supplemented by primary source readings in French by artists and critics.
Credit 1 unit. A&S IQ: HUM BU: HUM EN: H

ARTARCH 3570 The Mediterranean and French Modernism
This course will survey the development of the Mediterranean region as an important site of modernist artistic practice. Among the artists to be considered are Pierre-Auguste Renoir, Henri Matisse, Pablo Picasso, Marc Chagall and Yves Klein. Excursions to museums and other artistic sites.
Credit 1 unit. A&S IQ: HUM Arch: HUM Art: AH BU: HUM, IS EN: H

ARTARCH 3585 The Modern and Contemporary Art Market, 1863 - Present
The modern and contemporary art market is a strange and irrational entity, seemingly ungoverned by traditional economic laws of supply and demand. In 2019, Rabbit, a sculpture by Jeff Koons, sold for $91.1 million at auction, setting a record for the most expensive artwork by a living artist ever sold. A few months later, at the Art Basel Miami Beach art fair, Maurizio Cattelan's Comedian, an installation artwork featuring a fresh banana duct-taped to a wall, sold for $120,000. More than just a source for headlines, today's art market is also a growing art historical subfield, one that offers crucial insight into artistic production, shifts in the sociopolitical landscape, and even the practice of art history itself. This course offers a historical overview of the modern and contemporary art market, from 1863 to the present. In this thematic survey, students will chart the art market's development by examining key concepts, personalities, and events, including the 1863 Paris Salon des Refusés, the Galerie Durand-Ruel and Impressionism, the avant-garde myth, Nazi-era art crime, the 1997 Sensation exhibition, and international biennials. Students will also become acquainted with basic art market research methods and resources. Prerequisites: Any 100- or 200-level course in art history; L01 215, Intro to Modern Art, recommended; or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Spring

ARTARCH 3590 Rejecting Reason: Dada and Surrealism in Europe and the United States
In this multimedia interdisciplinary course, we will consider the history, theory, and practice of Dada and Surrealism, from its Symbolist and Expressionist roots at the end of the 19th century and the beginning of the 20th century through its late expressions in the beat culture and pop art of the 1950s and 1960s. Dada's emergence in Zürich and New York in the midst of World War I set the tone for its stress on irrationality as an oppositional strategy. Surrealist research into the domain of the unconscious continued this extreme challenge to dominant culture but in a revolutionary spirit that proposed new possibilities for personal and collective liberation. The international character of the movements -- with substantial cross-transmission between Europe and the United States -- will be emphasized. Prerequisites: L01 113, Intro to Western Art; L01 215, Intro to Modern Art; or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

ARTARCH 3595 Cubism and Its Global Legacies
During the early 20th century, Cubism marked a radical break in the European representation of three-dimensional space in painting through a bold reconsideration of atmospheric and linear perspective. Early Cubists such as Pablo Picasso achieved this formal breakthrough in part through studying African and Oceanic art. Between the summer of 1908 -- when Braque and Picasso developed the style collaboratively in France -- and the advent of WWI in the summer of 1914, Cubism became the most influential style in the international art world. This course examines the development of Cubism in France, and it analyzes how artists throughout Europe and the world adapted Cubism for their own purposes. Of particular interest will be how artists from outside Europe and the United States have responded to Cubism's appropriation of non-Western art. Class format is lecture and discussion. Prerequisites: L01 113, L01 215, or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 3600 Chance and Modern Art
This course considers chance as a major compositional principle in modern art. Focus will be placed on the diverse ways in which artists throughout the twentieth century have championed the creative possibilities of accident and randomness in the creation of works of art as an attack on reason and logic and as a counterpoint to officially sanctioned aesthetic tastes. By deflating concerns of style, skill, and personal expression, the implementation of chance processes facilitated a liberating exploration of unorthodox methodologies for making art. Moving chronologically through the twentieth century, we will follow the history and development of these practices while also examining the diverse social, cultural, and theoretical contexts informing them. Prereqs: Intro to Western Art (L01 112) or Intro to Modern Art (L01 211) or permission of instructor.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM EN: H

ARTARCH 3602 Italian Renaissance and Baroque Architecture
This course will survey the development of architecture in Italy from 1400 to 1700. From long-established medieval models, we will explore the reintroduction and reinterpretation of Antiquity from the late 14th century onward. The course will then explore how these foundational Renaissance ideals evolved to become Mannerism and found their ultimate expression in Bernini's Baroque. Following a chronological progression, the course will address the structures and theories of the period through its leading architects: Brunelleschi, Alberti, Michelangelo, Palladio, and Bernini, among others. The course will explore a wide range of architectural types, from the centralized church to private palaces and villas. Further themes to be considered will include the development of the architect as a professional, regional styles and their relationship with antiquity, patterns of patronage, and the interior. Prerequisite: L01 113.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Spring

ARTARCH 3605 Cubism and 20th-Century Art
This course examines the development of Cubism from its origins in 1906 to the decline of modernism after 1945. Cubism's pictorial language revolutionized the practice of art making in the early twentieth century, encouraging artists to interrogate the nature of signification (how form produces meaning). Topics to be considered include Cubism's innovations in painting, collage, papiers collés, and sculpture, as well as its formation and reception by writers, critics, and artists such as Braque, Picasso, Duchamp, Gris, Léger, Le Corbusier, Ozenfant, and the Salon Cubists. This class explores the various ways in which artistic production intersects with popular culture and the rise of consumerism, major events in world history, and changing notions

of identity in the twentieth century. Readings are drawn from primary sources such as artists' manifestos, poetry, literature, and philosophy (which we will read in English translation). Visits to the Mildred Lane Kemper Art Museum and the St. Louis Art Museum complement our study. Prerequisite: Introduction to Western Art, L01 112, Introduction to Modern Art L01 211, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM EN: H

ARTARCH 3610 Contemporary Art
This course is a survey of global contemporary art from 1970 to the present. Topics include happenings, minimalism, body art, and neo-expressionism as well as their placement in their social and political contexts. Prerequisite: One course in Art History at the 100 or 200 level.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Fall

ARTARCH 3613 Women of the Renaissance: Artists, Patrons, and Subjects
This course will examine the varied roles of women in the production of Renaissance art: as makers of art; as commissioners, collectors, and patrons of art; and as subjects of the artistic gaze. In conjunction with the courts of Europe, we will also address women in the arts through a global lens. Using a variety of primary sources, including painting, sculpture, print material, textiles, and archival documents, we will explore both the historical spaces women occupied as well as contemporary scholarship situating women within the history of art. In the process, students will gain a deeper understanding of women's agency in Renaissance art, cultivate tools of art-historical analysis, and hone skills in presenting such analysis in written form.
Credit 3 units. A&S IQ: HUM, SC BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 3615 Art and Criticism Since 1945
An examination of artistic and critical production in the U.S. and Europe from the end of World War II to the present. Artistic developments such as abstract expressionism, minimalism, pop, and conceptualism will be studied within their social and political context. Lectures and readings will address the historical and theoretical construction of modernism with special attention to issues of identity formation and institutional practices. Prerequisite, Art-Arch 211 or permission of instructor. :
Credit 3 units. A&S IQ: HUM Art: AH BU: BA, HUM

ARTARCH 3627 By Sea and Sand: Modern Art in the Mediterranean
This course surveys the representation of Mediterranean spaces and cultures in the visual arts from the late eighteenth to the mid-twentieth century during which time transformations across economies, governance, society, and technology took place alongside the expansion and subsequent deterioration of French and British colonial rule in the Middle East and North Africa. In this course, the modern Mediterranean will be viewed from multiple vantage points along its shores and through a range of media, including popular culture, visual culture, material culture, and fine art. In addition to obtaining a strong grasp of the artistic phenomena associated with the Mediterranean during the modern era, students will come to understand the region as a place possessing a remarkably diverse and polymorphous identity, and as a place of fracture, confrontation, mutual incomprehension, innovation, and exchange.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Spring

ARTARCH 3637 Modern Sculpture: Canova to Koons
This course will survey sculpture in Europe and the United States from about 1800 to the present, with an emphasis on the period from 1890 to 1980. A rapid traverse of Neoclassicism, Realism, and the rage for statuary during the later 19th century will take us to the work of Rodin and to a more systematic exploration of developments in the sculpture of the 20th century. Particular emphasis will also be placed upon the work of Brancusi, Picasso, Matisse, Duchamp, Giacometti, Oppenheim, David Smith, Serra, Morris, Judd, Hesse, and Bourgeois. An important theme running through the course as a whole -- from an age of nationalism and manufacturing to our own time of networks and information -- is the changing definition of sculpture itself within its social and political context. We will also explore various new artistic practices (e.g., video, performance, installations, body art) and interrogate their relationship to sculptural tradition and innovation. Prerequisite: L01 113, L01 215, or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H
Typical periods offered: Fall, Spring

ARTARCH 3645 Gender in Contemporary Art
We will study artists from 1960 to the present whose work thematizes gender, including Carl Andre, Robert Morris, Cindy Sherman, Lorna Simpson, and Mona Hotoum, and discuss how their work raises questions about representation of the body, spectatorship, and notions of identity. This course is intended to help students develop and refine their writing, and will require at least three papers. As we write and revise, we will consider how gender theory has encouraged art historians to rethink writing and research methods: the topics we choose, the structure of our arguments, our relation to our subjects, and the audience we address. PREREQUISITES: AT LEAST ONE ART HISTORY COURSE AT THE 300 LEVEL OR PERMISSION OF INSTRUCTOR.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 3656 New Media, New Technologies
In the summer of 2013, Random International's Rain Room was installed at the Museum of Modern Art in New York. Lines to experience the sensation of being rained on without getting wet ranged up to seven hours at times. This merging of new technology with the gallery space proved irresistible, but it also raises questions as to the uses of technology in contemporary art and whether or not this could be much more than a gimmick. As one Yelp reviewer put it, The Rain Room is definitely an experience. Let's be honest... I'm mostly upset that I didn't get a cool, new Facebook profile pic out of it. This course will consider technological developments in modern and contemporary art -- including photography, video and new media, and digital and Internet art -- as well as forays into new technology that blur the lines between art and science. Prerequisite: L01 113, L01 215, or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 3657 The Baroque: Art in the Age of Crisis
The late 16th century was a time of crisis and conflict, and change echoed across Europe and its empires. Religious reform, scientific discovery, and political upheaval shook the foundations of early modern society. Yet from this turbulent time, an era of extraordinary artistic achievement emerged, defined by a dynamic new visual language. This course will examine how "the Baroque" became a global language, from its early beginnings in Rome to Spain, France, Flanders and the Dutch Republic, even extending beyond the borders of Europe to Asia and the Americas. In addition to studying leading artists such as Caravaggio, Bernini, Rubens, Vermeer and Velázquez, important themes to be considered will include space and spectacle in urban planning; the mundane and profane in still life and genre; collections and curios; the church triumphant; and the portrait. Prerequisite: Intro to Western Art (L01 113).

Credit 3 units.

ARTARCH 3665 Art and Activism
This course will examine political and social activism in art and visual culture, focusing on the role that visual representation has played in social movements and how artists/activists have employed visual media to challenge and resist dominant visual representations and political formations. We explore key theoretical developments in activist discourse as well as the role of art practices and aesthetic commitments in these developments. This course seeks to represent the development of the relation of art and activism in its broadest intellectual and cultural context within the 20th century and to encourage an appreciation of the complex array of disciplinary perspectives that are implicated in this development. Prerequisite: L01 113, L01 215, or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, CPSC, HUM BU: HUM EN: H
Typical periods offered: Spring

ARTARCH 3670 Writing About Art
This colloquium will engage the possibilities and pitfalls involved in writing about art, including the difficulty of translating visual responses into verbal or written media and distinguishing between history, theory and criticism. Readings will investigate a broad range of methodologies employed by art historians, including connoisseurship;iconology, semiotics; patronage studies; and gender, class and race politics. Students will compose a sequence of short papers that will be closely scrutinized in an effort to improve writing skills. The assignments will cover different genres of art writing, such as the visual analysis, the museum label, the catalogue entry, and the comparative essay, all bearing in mind the respective appropriate audience(s). PREREQUISITES: OPEN TO JUNIOR AND SENIOR UNDERGRADUATES ONLY, OR BY PERMISSION OF INSTRUCTOR.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 3675 Colloquim in Art History
Designed to introduce art history majors to the field of art history and to the faculty and their research. Required for all majors; should be taken as soon as possible after declaring the major. Recommended to art history minors. Meets every other week.
Credit 1 unit. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 3684 Picturing Race in the Early Modern World
Many social and cultural roots of modern Western European and American conceptions of race and ethnicity lie in the early modern era, when enslavement came integrally to be linked with Blackness and ideas-and representations-of power relied on a hierarchical politics of racialization and othering. Throughout the early modern era, in Renaissance and Baroque visual art, iterations of racialized identity took hold, in ways and by means this seminar will explore in depth. Through close analysis of paintings, sculptures, architectural and urban design, and the graphic arts, and with frequent reference to chronicles, literature, and legal language of the time, we will trace visual representations of racialized difference throughout the early modern (European) world and to the present. How did early modern European images participate in and help to form a visual culture of race? This seminar will explore fifteenth-, sixteenth- and seventeenth-century European representations of racialized others by artists Albrecht Dürer, Hans Burgkmair, Hieronymus Bosch, Peter Paul Rubens, Rembrandt van Rijn, and others. We will also consider ethnographic imagery, maps, and other forms of representation-as well as responses by contemporary (20th- and 21st-century) artists to the conventions of race-crafting laid down in the early modern era. Geographically, the materials we study issue from western Europe and focus on encounters with Western Africa, but the seminar considers European engagement in the American colonies, Melanesia/Indonesia, the Atlantic and Brazil-and with the Islamic world. Prerequisites: One 100-level Art History course or permission of the instructor
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Spring

ARTARCH 3700 Art Since 1945: Europe and the United States
This course begins with the shift from Paris to New York City as the center of avant-garde art and examines the cultural politics of abstract expressionism and other movements in the context of the Cold War. The critical language of High Modernism and developments in abstract art such as Color Field painting and Minimalism will follow. These will be contrasted with ideas of popular culture as the basis of artistic expression in the work of such artists as Rauschenberg and Warhol. We will discuss collaborative installations and performance art as the expression of identity politics among feminist and minority artists in the 1960s and 1970s. The idea of postmodern art and culture, the resurgent European voice of the Neo-Expressionists of the 1980s, and critical issues of art and commerce will bring us to a discussion of the Bad Boys of Britain and others working in the avant-garde in the 1990s.
Credit 3 units. A&S IQ: HUM Art: AH BU: BA, HUM

ARTARCH 3740 Introduction to African Art and Visual Culture
This course provides an introduction to African cultures through analysis of arts and other forms of symbolic communication. It evaluates African material production in relation to the history and diversity of the continent and also in relation to perceptions and representation of Africa born out of its encounter with European cultures both in antiquity and in the late 15th century. Its premise is that the arts in Africa constitute sophisticated structures of symbolic communication whose meanings are not exhausted by an appeal to aesthetics defined in terms of European notions of Beauty and Ugliness. Rather, it views African arts as visual languages with elements of encoding and decoding that must be learned in order to aid our comprehension of different forms of African visual culture. To engage this process, we will evaluate how African art contributes to the constitution of society and analyze specific manifestations of art in different African societies.
Credit 3 units.

ARTARCH 3741 From Ancient Tichitt to Zimbabwe: The Archaeology and Arts of the Urban Past in Africa
TBD
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM

ARTARCH 3961 Art & Ecology
This course provides an overview of the twentieth-century history and contemporary debates concerning art and ecology. It begins with the nuclear age in the postwar United States and the Pacific, on through the techno-utopian hippie modernist, Land Art, and early ecological movements of the 1960s. We situate contemporary eco art within this longer historical context, as well as climate science and politics. This course takes a case study approach, with one key artwork each class period, around which we will build context and trace relevant connections. Students will be responsible for identifying key artworks and articulating their significance on the exams. We will also locate eco art discourse within our St. Louis context, undertaking a site-specific project during the course of the semester. Undergraduate Prerequisites: one introductory Art History course or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

ARTARCH 3996 Art History and Archaeology Elective: 300-Level
This course is for transfer credits.

Credit 3 units. EN: H

ARTARCH 3999 Independent Study
This course permits students to pursue upper-level research and reading programs with individual faculty at the 300-level.
Credit 6 units.
Typical periods offered: Spring

ARTARCH 4006 Topics in Art History and Archaeology
Prereqs: L01 113, L01 215; one 300-level course in Art History preferred; or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H
Typical periods offered: Fall, Spring

ARTARCH 4011 The Decorative Aesthetic in Modernism, 1860-1960
In the criticism of modern art, decoration and decorative have often been used as pejorative terms, designating art that has no intellectual basis but is merely pleasing, intended to fill space and delight the eye. However, in the late 19th century, these terms carried important cultural value and opened the door to significant experiments in abstraction. Moreover, the decoration of a public space or surface may have political implications. This course will investigate decoration and theories of the decorative in modern art in Europe and the United States, with special attention paid to the evolution of ideas of modernism in both two-dimensional and three-dimensional environments. We will also consider some of the political meanings that may be borne by both public mural painting and domestic decoration as well as easel painting that aspires to conditions of the decorative. Key figures include Puvis de Chavannes, Morris, the Nabis, Van de Velde, Monet, Matisse, the Mexican muralists, Pollock, and Shapiro. Prerequisites: L01 215; any 300-level course in Art History; or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Spring

ARTARCH 4013 The Digital Art Historian
Within the digital humanities, it has often been asserted that art history lags behind other disciplines when it comes to technology adoption. But in fact, art historians are among the earliest adopters of technologically mediated academic practices, though the breadth of methodologies utilized within the digital humanities are not always suitable to or capable of fully accommodating the added layer of visual culture intrinsic to art history. While this course will explore all of the significant facets of the digital humanities and how they can be adapted to art history, it also more broadly aims to create technologically astute and nimble students and future professionals capable of learning to learn technologies as they emerge; determining when and how a technology may be useful in research, scholarship, instruction, and other professional work; assessing both data and the tools that represent it with a critical mind; and understanding how to effectively apply technology in a broad range of academic and professional contexts.
Credit 1 unit. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Spring

ARTARCH 4020 Landscape(s)
The very moment artists in Europe and the United States focused much attention on rendering some aspect of nature as landscape, the notion of art as an autonomous venture entered the aesthetic discourse. Central to landscape art that with the advent of Romanticism surpassed other genres in art such as history painting was a distinctly modernist sensibility for nature, as much informed by notions of individualism and subjectivity as by conunter-Enlightenment stances against rationality. This seminar will engage with changing notions of artistic representations of landscape(s) from the early nineteenth century to the very present. We will explore artists ranging from Gericault, Friedrich, Turner, Cole, Kandinsky, Pollock, Rothko to contemporaries such as Eliasson, Paik, Cardiff, Lockhart and Pfeiffer. Throughout the semester we will also discuss landscape theories by such diverse writers and theorists as Goethe, Schiller, Marx, Simmel, Burke, and Flusser. Prerequisite: Intro to Modern Art, a 300-level course in Art History or Aesthetics, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM EN: H

ARTARCH 4025 Theories of Modern Art and Architecture
This course will present theories of art and architecture from the 19th to the 21st centuries in their historical contexts through a set of in-depth investigations of selected topics. Some knowledge of history and theory is integral to contemporary understandings of the disciplines of art, art history, and architecture. To foster a historical understanding of theories of modern art and architecture, we will discuss a selection of key texts, divided into three sections: theoretical sources of modern art and architectural history in the 19th century; theories of modernism, from the formalist to the Marxist; and postmodern critiques of modernism, in such areas as feminist theory and poststructuralism. Class visits to Sullivan and Adler's Wainwright Building (1890-91), Saarinen's Arch at the Jefferson National Expansion Memorial (completed 1964), Ando's Pulitzer Foundation for the Arts (2001), and Maki's Kemper Museum of Art (2006) will be integral to the work of the course. Prerequisite: Either L01 113 or L01 215 plus any 300-level course in art history, or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 4030 Lithic Analysis
This seminar will provide graduate and undergraduate archaeologists and other interested students with an introduction to various aspects of lithic analysis. Stone tools and lithic debitage found at prehistoric settlement and activity sites can provide insights into the lives of past peoples that are both complementary and contrastive to findings from other material remains, and are thus a major area of archaeological interest. Topics to be covered will include a historical review of the various developments in lithic analysis, hands-on application of analytical techniques using flaked stone tools, ground stone tools, and lithic debitage, lithic illustration, and flaked and ground stone tool replication. Prerequisites: Introduction to Archaeology.
Credit 3 units. A&S IQ: SSC Art: AH EN: S

ARTARCH 4035 Connoisseurship & Museum Procedures
The course deals with the theory of connoisseurship, an approach to the study of the history of art based on examination and direct knowledge of works of art. Readings emphasize various approaches to connoisseurship. Students experience the practice side of connoisseurship doing research and writing papers about specific works of art in the collections of the Washington University Gallery of Art and St. Louis Art Museum. PREREQUISITE: PERMISSION OF THE INSTRUCTOR.
Credit 3 units. Art: AH

ARTARCH 4040 Orazio and Artemisia Gentileschi
The works of Orazio Gentileschi and his daughter Artemisia, two of the most fascinating painters of the early Baroque period, will be featured in a major exhibition at the St. Louis Art Museum. This course will spend the first month of the semester in the exhibition itself, closely examining the paintings on view. We will continue with recent scholarly inquiries about this rare case when an artist trained his daughter to be a professional painter. The topics of study will include the beginnings of their work together in Rome and the disparate paths that carried them throughout Europe. The career of Artemisia, including new information about her rape trial and interpretations about its effect on her art, plays a central role in the course.

Credit 3 units. Art: AH

ARTARCH 4050 Beyond Painting: Innovation in Prints and Sculpture in Early Modern Europe

Prints and sculpture are frequently overlooked in the study of early modern European art, yet the issues they raise are critical to our understanding of the period. Both categories, too often seen as secondary to painting, entail frequently complex technical and intellectual innovations that were fundamental to their time. This course will focus on these two important media in order to offer a fuller and richer picture of how artists of the Renaissance and baroque periods reinterpreted and expanded their visual vocabularies in response to, and in participation with, changing technologies and ideologies. Beyond Painting is based on direct interaction with works of art with the aim of facilitating enhanced looking and evaluation skills essential to the study of art history. Held at the Saint Louis Art Museum, each session will focus on the Museum's collection as well as the objects in the exhibition Learning to See: Renaissance and Baroque Masterworks from the Phoebe Dent Weil and Mark S. Weil Collection. Prerequisites: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215); one 300-level course in Art History preferred; or permission of instructor.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM EN: H

ARTARCH 4070 Gender in Contemporary Art

We will study artists from 1960 to the present whose work thematizes gender, including Carl Andre, Robert Morris, Cindy Sherman, Lorna Simpson, and Mona Hatoum, and discuss how their work raises questions about representation of the body, spectatorship, and notions of identity. This course is intended to help students develop and refine their writing, and will require at least three papers. As we write and revise, we will consider how gender theory has encouraged art historians to rethink writing and research methods: the topics we choose, the structure of our arguments, our relation to our subjects, and the audience we address. PREREQUISITES: AT LEAST ONE ART HISTORY COURSE AT THE 300 LEVEL OR PERMISSION OF INSTRUCTOR.

Credit 3 units. A&S IQ: HUM Art: AH BU: BA, HUM EN: H

ARTARCH 4080 African Art: A User's Guide

This seminar offers an introduction to the methodologies of African art history, exploring a range of approaches to objects from an examination of their original contexts; accessed through oral and archival sources; to their lives in a Western context, including collecting histories and market valuation over time. It considers new means of knowing African objects through methods such as CT scanning and algorithm-based databases and poses the question: of what value is this corpus outside of art history or African studies? Through course meetings and projects, students will be introduced to various research methodologies, including the production of oral history records for the St. Louis Art Museum, provenance research, and valuation. The course will culminate in a final paper and presentation based on an object in SLAM's African collection. Prerequisites: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215); one 300-level course in Art History preferred; or permission of instructor.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 4085 Power, Authority and Spirituality in Oceanic Art

Focusing on the material culture of Pacific, this seminar considers the similarities and differences in political and spiritual power and authority throughout Polynesia, Melanesia and Micronesia. The seminar examines how material forms embodied the immaterial divine and spiritual power associated with gods and ancestors and will consider how objects understood to contain these powers were used in local contexts and with neighboring communities and Westerners. Included in the discussions will be objects (both ritual and utilitarian), body modification and decoration/ornamentation, dress, architecture, religion/ritual, warfare and exchange. We will consider what the materials used in these categories tell us about local concepts of ancestral or divine power, about indigenous understandings of the local environment and its importance, and also how objects were understood as mediators of the relationships between humans and ancestors or divine beings. Prerequisites: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215); one 300-level course in Art History preferred; or permission of instructor.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 4090 Art and Science in Renaissance Italy

This course is concerned with the sophisticated dialogue between art and science, between image making and scientific enquiry during the Italian Renaissance, a period when technology, science and art were closely interconnected. In fact our modern distinction between science and art did not exist, and for the most part they were allied in both theory and practice. We will examine the artistic and scientific activity of a range of Renaissance figures including Brunelleschi, Alberti, Leonardo da Vinci and Piero della Francesca, Antonio Santucci, Egnazio Danti, Stefano Buonsignori, Miniato Pitti, Andrea Vesalius and Galileo. We will also explore the role of the Medici and the papacy as patrons of both art and science, and the history of the construction and display of scientific instruments during the Renaissance. THIS CLASS IS ONLY OFFERED IN FLORENCE, ITALY ONLY AS PART OF THE SEMESTER STUDY ABROAD PROGRAM!!!!

Credit 3 units. Art: AH

ARTARCH 4110 Feminist Art & Theory 1970 to Present

How have feminist artists and theorists challenged the conventions of art history? This course begins with the feminist art world activism that arose in the 1970s in the context of the women's liberation movement. During this time, feminist artists sought to establish new forms of art education, venues for exhibiton, and creative working methods to provide alternatives to traditional art world institutions (which were often seen as ill-suited or unreceptive). We will examine how current artists, building on this recent history, continue to develop feminist aesthetics and politics in a variety of contemporary practices, including installation art, body art, performance art, and video. We will read texts by Griselda Pollock, Linda Nochlin, Lucy Lippard, Carolee Schneemann, Helene Cixous, Laura Mulvey, Lisa Tickner, Judith Butler, Adrian Piper, and Helen Moelsworth, among others, and discuss the relationship between feminist theory and artistic creativity. Prerequisites: 300 level class in art history or 300 level class in gender studies or permission of the instructor.

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM EN: H

ARTARCH 4115 Minoan and Mycenaean Archaeology

A study of the Minoan civilization and late Bronze Age Greece. Relations of the two civilizations to each other and to the Near East. Examination of archaeological evidence and its varied interpretations by scholars in relation to solving chronological and historical problems. Prerequisite: Art-Arch 331, or permission of instructor.

Credit 3 units. Art: AH

ARTARCH 4120 Contemporary Art in Exhibition: Museums and Beyond

How does the collection and display of artwork create meanings beyond the individual art object? During the 20th century, enormous shifts occurred in exhibition design as artwork projected from the walls of the museum, moved outdoors to the space of the street, and eventually went online. We will study an array of twentieth-century exhibition practices and sites in their social and historical contexts, including the temporary exhibition, the white cube, museum installations, and websites. During the seminar, we will examine how issues such as patronage, avant-gardism, nationalism, and identity

politics have progressively brought museums and other exhibition spaces into question. Prereqs: Intro to Western Art (L01 112) or Intro to Modern Art (L01 211); one 300-level course in Art History preferred; or permission of instructor.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 4125 American Impressionism
With a focus on American artists traveling abroad and American expatriate artists, 1880-1920; a special emphasis of the seminar will be the works of John Singer Sargeant, featured in a major exhibit at the St. Louis Art Museum at the same time. Prerequisite: permission of instructor.
Credit 3 units. Art: AH

ARTARCH 4140 Rome in Egypt: The Archaeology of an Oasis City
This seminar will focus on the results of the archaeological fieldwork carried out at Trimithis / Amheida, a Graeco-Roman city in Egypt's Western Desert. It will investigate the available documentary and archaeological evidence, including a wealthy house with paintings inspired by Classical themes, a public bath built in the Roman tradition, a rhetorical schoolroom, pyramid-shaped Roman tombs, remains of a temple, and one of the earliest churches discovered in Egypt so far. We will explore how this evidence compares with that from neighboring sites in Egypt's Western Desert as well as in the Nile Valley. The goal is to develop an appreciation and understanding of Romano-Egyptian architecture, Classical and late antique art in Egypt, and Egypt's religious, social, and cultural history. Students will also have the opportunity to familiarize themselves with notions of archaeological methods and practice, as adopted in the context of an Egyptian excavation project. Prerequisites: One course at the 100- or 200-level in Art History, Classics, or Archaeology recommended
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Fall, Spring

ARTARCH 4155 The Invention of the Image: From Classical Art History to Modern Visual Studies
The scholarly field of Image or Visual Studies has developed in response to the widespread proliferation of images, both still and moving, in contemporary life. It distinguishes itself from traditional art history by examining visual representations of all types, not only works of high art, and by concentrating on the role those representations play in the formation of culture. Though most of the scholarship produced in this field focuses on the modern world, it depends upon ideas first developed in Mediterranean antiquity. This course has two primary goals. We will conduct an historical examination of practices and theories of image making from Near Eastern antiquity to modernity. In so doing, we will also carry out an historiographical survey of the major works in Image/Visual Studies, thereby gaining an appreciation for the wide range of methods of inquiry employed in this important field of research. Prerequisites: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215); one 300-level course in Art History preferred; or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Spring

ARTARCH 4160 Art and Death in Ancient Rome
Perhaps more than any other phenomenon, death spurred the creation of art in the ancient Roman world. The practice of materially commemorating the deceased -- of perpetuating the memory of the dead through the creation of funerary monuments designed to appeal to both intimate familial relations and the public at large -- stretched across Roman social boundaries and endured for many centuries. But death also frequently provided the subject matter of art even outside the confines of the funerary realm. The goal of this course will be to explore the complex relationship between art and death in the Roman world. It will range from early Rome to the end of the empire and the changes brought about by widespread conversion to Christianity. In conjunction with historical readings, the course will also engage with theoretical texts in the anthropology and philosophy of death. Prerequisites: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215); one 300-level course in Art History preferred; or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H
Typical periods offered: Spring

ARTARCH 4165 Topics in Northern Renaissance Art
Consult Course Section Listings for current topic.
Credit 3 units. Art: AH

ARTARCH 4170 Ancient Coins
The seminar is designed to research the rich world of Greek and Roman coinage by using the university's own resource, the J.M. Wulfing collection of coins. Emphasis on coin typology, works of art or buildings illustrated on our coins, and the history of coinage. We will be using actual coins in the gallery. Due to the delicate nature of the material, the course is by PERMISSION OF THE INSTRUCTOR ONLY.
Credit 3 units. Art: AH

ARTARCH 4175 Sacred Spaces of Islam
This course traces the development of Islamic sacred space during the seventh to the nineteenth century through case studies of specific cultural groups and their architectural traditions from Spain to India. Readings address both the historical contexts in which buildings were produced as well as the rituals and beliefs that gave them meaning. Special attention is paid to the shifting uses and significances of Islamic holy buildings over time. Critical readings from architectural theory provide students with a basic foundation in the methods and concepts that have shaped scholarly discourse on sacred space in the modern era.
Credit 3 units. A&S IQ: HUM, LCD Art: AH BU: HUM EN: H

ARTARCH 4180 Greek Vase Painting
This seminar will examine vase painting from the geometric period (ca. 800 BC) to the end of the red-figure style (ca. 350 BC), but the majority of class time will be spent looking at Attic vase-painting of the sixth and fifth centuries BC. The iconography of Greek vases, particularly Attic black-figure and red-figure, provides an extraordinary view into the culture and beliefs of contemporary society. Some vases are clearly made as grave offerings, others as votive offerings at sanctuaries, and still others for use at home. The focus of this seminar will be the relationship of a vase's images to the context of its use. How much does the intended use and audience for the vase determine the images on it? These important questions have not received much attention by scholars, and class papers may possibly result in publications. Enthusiastic class participation required. Occasional responsibility for presentation of weekly readings. Class paper and presentation.
Credit 3 units. Art: AH

ARTARCH 4185 Avant-Garde Art
Derived from the military vanguard, the term avant-garde is used within discourses pertaining to art since the mid-19th century. In the 20th century, theorists such as Renato Poggioli, Matei Calinescu and in particular Peter Bürger have characterized the avant-garde as artistic movements that strive for a connection between art and life with the ultimate goal to effect societal and political changes through aesthetic practices. Avant-garde categories include the critique of the institution of art (i.e. its independent status), and its institutions (i.e. museums and galleries), the use of everyday non-art materials (i.e. newspapers or cheap and mass-produced materials), the questioning of the uniqueness of the artwork, the obliteration of a coherent aesthetic

experience through montaged, collaged and fragmented images, and the expansion of traditional art forms (painting and sculpture) into forms that embrace non-art and everyday realms (i.e. montages, objects, and installations). This seminar will explore these themes by reading texts by avant-garde artists and discussing avant-garde art works. We will consider movements such as Cubism, Futurism, and Dadaism in the early 20th century, Pop Art, Minimalism, and Conceptual art in the latter twentieth as well as contemporary art practices that like the earlier avant-gardes expand art into the everyday. Artists such as Pablo Picasso, Umberto Boccioni, Kazimir Malevich, Robert Rauschenberg, Sol LeWitt, Joseph Beuys, Sigmar Polke and Isa Genzken played important roles in shaping such avant-garde ideas. UNDERGRADUATES WITH PERMISSION OF INSTRUCTOR.

ARTARCH 4190 The Parthenon
A study of the architectural design, aesthetic principles, engineering and construction of the greatest Greek building. Its architecture will be considered in conjunction with its immense sculptural program that revolutionized European art. We will penetrate deeply into the background of this remarkable work of art and try to understand it by placing it in its proper context and comparing it with other similar efforts in Classical Greece. Prerequisite, junior or senior standing or permission of instructor.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 4195 Greek Sculpture
The development of Greek sculpture from its earliest beginnings (circa 800 B.C.) through the time of Alexander. Early influences from Egypt and the Near East. Sculpture's relation to changing artistic concepts and the changing character of Greek society. Prerequisite: Art-Arch 331, permission of instructor required.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 4200 Greek and Roman Pottery
Pottery is the most commonly found artifact on virtually all Classical sites. It therefore serves as an essential tool for the dating and interpretation of monuments and features in excavation. It also offers evidence for trade, diet, life style, and many other aspects of ancient life. The course will examine the typology and chronology of the major pottery types produced from the 6th century BCE to the 4th century CE, as well as the ways in which pottery has been used to throw light on the culture and society of the ancient Greeks and Romans. Prerequisite: permission of instructor.
Credit 3 units. Art: AH

ARTARCH 4205 Ancient Greek Sculpture in Context
Sculpture counts among one of the greatest artistic achievements of ancient Greece, and one that has had the greatest impact on the art of later periods. This course will focus on original works of art of the Archaic and Classical periods (600-300 BCE), placing emphasis on how study of their contexts - the places in which they were produced, displayed, and found - contributes to our understanding of their place in the ancient world. Background material, to be covered at the beginning of the semester, will include the origins of monumental Greek sculpture at the beginning of the Archaic period (late 7th-early 6th c. BCE), and the stylistic development of the Archaic and Classical periods. We will then proceed to discussion of various types of sculpture (architectural, cult statue, votive, commemorative, funerary) and how these works functioned within the context of the Panhellenic sanctuary, the city sanctuary, the secular center of the city, and the necropolis. In a different view of context, we will also consider sculpture recovered from ancient shipwrecks, looted art on its way to the ancient Roman art market. Prereqs: L01 331 or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 4210 Pictorial Illusion in the Ancient Mediterranean
Among the many accomplishments in the history of Greco-Roman art, ancient writers especially valued the development of pictorial illusion. Pictorial illusion refers to the techniques of reproducing or approximating aspects of the visual perception of the material world on a two-dimensional surface. These include foreshortening, the application of highlights, and the indication of multiple points of depth in space relative to the picture plane. The purpose of the course is to explore the material, stylistic, and technical history of illusionistic painting practices in the ancient Mediterranean world from Classical Greece to Late Antique Rome and to seek to understand the cultural and social significance of those practices. In addition to examining specific historical questions in the development of ancient painting, the course will investigate trans-historical connections between vision, visuality, and methods of representation. Prerequisites: Either L01 113 or L01 215, or permission of instructor. One 300-level course in Art History preferred.
Credit 3 units. A&S IQ: HUM Art: AH, HUM BU: HUM EN: H

ARTARCH 4214 Rome: The First 2,000 Years
Weaving together the ancient and the early modern, this course offers students an overview of the history, topography, art, and architecture of the city of Rome. Rome has been continuously inhabited for more than three millennia, and its urban fabric both reveals and conceals a unique history of occupation, destruction, reconstruction, revival, and excavation. The course will move between the ancient and Renaissance periods of Roman history, and will examine the city's most important and lasting contributions to the history of art and architecture. It will center especially around a week-long trip to Rome over Spring Break, during which students will present on-site research reports. The trip, and the course as a whole, will be limited to fourteen students. Flights, lodging, ground transportation and two meals will be paid for by the Department's West Bay View Travel Seminar endowment. Travel plans are subject to change due to changing pandemic restrictions. The course is limited to graduate students, majors, and possibly minors in the Department of Art History & Archaeology, and admission is contingent on an interview with the faculty shortly after registration.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH BU: HUM, IS EN: H
Typical periods offered: Spring

ARTARCH 4216 Greek Art in Rome: Discourse, Dedication, and Reflection
Throughout the modern period, Ancient Greek art has been perceived as a genuinely original and creative tradition in which both individual artists and regional schools made some of the most significant advances in the long development of European art. Roman art, by contrast, has been seen as derivative and secondary; Johann Joachim Winckelmann, the founder of modern art history, classified it among the style of the imitators. However, this traditional dichotomy rests in large part on the Romans' own reactions to their encounters with the arts of Greece. Through the analysis of textual sources, architecture, statuary, and painting, this course will investigate the status and influence of Greek art in the city of Rome from the third-century BCE until the late Imperial period, and it will seek to understand how Roman responses to and uses of Greek art have come to shape the modern perception of both traditions. Prerequisites: L01 113 or L01 215, or permission of instructor. One 300-level course in Art History preferred.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, CPSC, HUM BU: HUM EN: H

ARTARCH 4220 East Asia in the Age of Tang
An archaeological investigation of the visual and material culture of modern-day China, Korea, and Japan in the 7th and 8th centuries. Subjects include city planning and architecture, Buddhist arts, secular painting, and ceramics and metalwork. Themes include imperial patronage, exoticism, popular culture, and images of women. Prerequisite: permission of instructor.
Credit 3 units. Art: AH

ARTARCH 4225 Constructing Chinese Art History
How to construct a history of the visual arts and material culture of pre-modern China remains an unresolved problem. This seminar first examines the efforts of non-Chinese sinologists and art historians over the last century, and the conceptual and interpretive dilemmas they have negotiated. The second part of the course examines Watson's Art of China (Yale, 1995), Clunas' Chinese Art (Oxford, 1997), and Thorp and Vinograd's Chinese Art and Culture (Abrams and Prentice-Hall, forthcoming) as contemporary solutions to this problem. Prerequisite, permission of instructor.
Credit 3 units. Art: AH

ARTARCH 4265 The Forbidden City
Home to 24 emperors of the Ming and Qing dynasties (1368-1911), the Forbidden City today occupies the heart of Beijing and comprises the largest ensembles of premodern architecture in China. This seminar examines the origins of the palace; its construction in the early Ming; the coded symbolisms of its plan and decoration; the rituals of court; and the lives of its denizens, from emperors (including Pu Yi, the last emperor) to concubines and from Jesuit missionaries to eunuchs. The course also considers the 20th-century identity of the site as a public museum and a backdrop to major political events, as well as its role in the urban design and contemporary art of 21st-century Beijing. Prerequisites: L01 113 or L01 215, or permission of instructor. One 300-level course in Art History preferred.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Fall, Spring

ARTARCH 4270 Sung Painting
Major themes and subjects in Chinese painting from about 1000-1300. Emphasis on the nature and institutions of imperial patronage and collecting; catalogues, histories and criticism of the period; issues of connoisseurship and establishing a corpus. Prerequisite: permission of instructor.
Credit 3 units. Art: AH

ARTARCH 4275 The Caves of the Thousand Buddhas
Since the turn of the century, the Caves of the Thousand Buddhas at Tun-huang (Dunhuang) have become well known as the pre-eminent repository of the visual culture of medieval Chinese Buddhism. The seminar explores this cave-chapel site, its murals and sculptures, as well as the portable painted scrolls and manuscripts recovered from a cache and carried away as loot by European adventurers. Prerequisite: any 300-level course in Asian art or permission of instructor.
Credit 3 units. Art: AH

ARTARCH 4290 The Art of Japanese Picture Scrolls
Japanese narrative hand scrolls of the 12th through the 14th centuries. The artistic challenges of the horizontal format, relationship between text and picture, and the patrons and audience of such works. Prerequisite, graduate standing and advanced Japanese language skills.
Credit 3 units. Art: AH

ARTARCH 4296 Japanese Prints: Courtesans, Actors and Travelers
Woodblock prints of the 18th and 19th centuries and their relationship to literature and popular culture. Topics include the life of the pleasure quarters, sexuality and the erotic, parody, kabuki theater, and the representation of women. Prerequisite: 3 units in Japanese painting, or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Spring

ARTARCH 4300 The Three Emperors: Redefining Chinese Art in the Golden Age
Ruling imperial China during its last Golden Age, the Qing emperors Kangxi, Yongzheng, and Qianlong patronized the arts during an unprecedented period of prosperity and international exchange. Many of the works they commissioned are now icons of Chinese culture, but in their time these three Manchus redefined Chinese art with ideas and styles from Baroque Europe, Tibet, Mongolia, and even Islamic Central Asia. This seminar focuses on the ethnically and culturally diverse art, architecture, and material culture patronized by these three emperors to examine how they and their multi-ethnic empire changed the definition of Chinese art during the long eighteenth century. Prerequisites: Intro to Asian Art (L01 111); or one 300-level course in Asian Art History, History or Literature; or permission of instructor.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 4305 Collecting and Connoisseurship in China and Japan
An investigation of the role of collecting and connoisseurship in the creation and perpetuation of what we know as East Asian art History. Issues to be explored include: evaluation and taste; cataloguing; psychology of collecting; fakes and forgeries; politics of imperial collecting; and exchange and marketing of art.
Credit 3 units. Art: AH

ARTARCH 4320 East, Meet West: Asia Encounters Europe
This seminar, which is grounded in cross-cultural aesthetics, examines East Asian visual responses to European art and science from the 16th through 19th centuries.The same Western ideas and works that were first introduced by Jesuit missionaries, that were continued by merchants, and that culminated with colonial enterprises left very different impressions on China and Japan. An introduction to cross-cultural aesthetics from both Western and East Asian perspectives lays the theoretical foundation to engage these works of art before the course proceeds thematically through time to cover painting, cartography, woodblock prints, ceramics, and photography within transregional and transcultural contexts. One upper-level course in Art History is recommended but not required before taking this course.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 4330 Porcelain and Lacquer Abroad: Europe Encounters Asia
From 1500 to 1800, Europeans primarily used exported porcelains and lacquers to engage with China and Japan, which were neither under colonial control, nor easily accessible by travel. Collected first in kunstkammers by rulers and nobles as emblems of power, these initially rare, exotic luxuries retained their prestige even as they became more widely available and explicitly gendered. Combining deep object studies with collectors' case studies from across Europe, this course examines how early modern Europeans used porcelains and lacquers to satisfy their curiosity about and material desire for China and Japan. In addition to practical training in essential primary sources such as

inventories, it will also introduce theories of luxury and consumption, gift exchange, cross-cultural interaction, material culture, and the global movement of objects. Prerequisites: L01 111 preferred; one art history course or permission of instructor

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H

Typical periods offered: Fall

ARTARCH 4335 Pilgrimage and Art in the Middle Ages

Pilgrimage has existed as a phenomenon in many societies through the ages. This course examines Christian pilgrimage as a major unifying force during the Middle Ages, affecting king, cleric, and peasant alike. Our focus will be on the monuments-especially those in the Holy Land, Rome, and Santiago de Conpostela-that were the pilgrims' destinations. Prerequisite, Permission of department.

Credit 3 units. Art: AH

ARTARCH 4345 Vermeer

This course examines the life and work of one of the most admired--and traditionally enigmatic--artists of the seventeenth century. Vermeer's extant oeuvre of 35 paintings will be studied in light of recent developments in the study of his technique, iconography, and artistic and social milieu. Permission of instructor required.

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM EN: H

ARTARCH 4360 Caricature: The Culture and Politics of Satire

This course examines the golden age of caricature. Beginning with the prints of William Hogarth, we will look at the caricatural traditions in France and England from the late 18th century through the early 20th century. Special emphasis will be placed on visual satire as a vehicle for social and political critique; on theories of humor (particularly Baudelaire and Bakhtin); and on the development of a mass market for this imagery. Other figures to be discussed include Rowlandson, Cruikshank, Daumier, Gavarni, Philipon, and Gil. We will take advantage of a major collection of French caricature in the Mildred Lane Kemper Art Museum at Washington University as well as collections available for study in Olin Library and at the Saint Louis Art Museum. Prerequisites: L01 113, L01 215, or a 300-level course in modern European history or literature; or permission of instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 4361 Lasting Impressions: Early Modern Print Culture

The advent of movable type (the Gutenberg press) in western Europe heralded a new era, and this enabled the dissemination of information in text and image that was fundamental to the Renaissance and early modern culture in all sorts of ways, not least artistic. Alongside the use of the printing press for public ends, the early modern era witnessed some of the most remarkable artistic achievements in relief (woodblock) and intaglio (copper plate) printmaking. This seminar will study a series of charged moments in the production and consumption of printed artefacts, attending to the aesthetic, material, and epistemological significance of printed images between roughly 1480 and 1650. We will focus on the printed works of artists Lucas van Leyden, Albrecht Dürer, Marcantonio Raimondi, Hercules Segers, and Rembrandt as well as the role of printed images in the sciences. A variety of media and techniques-from early stipple engravings to chiaroscuro woodcuts and from Naturselbstdruck to sugar-lift-populate the course, as do theories of impression and the role of prints in transcultural, early modern global encounters. Students in this seminar will be directly involved in research towards an exhibition at the St. Louis Art Museum co-curated by Dr. Swan and Dr. Elizabeth Wyckoff, Curator at SLAM, slated for spring 2024. Class meetings will take place in the Study Room at the museum, where students will have ongoing access to works in the collection and discussions with museum professionals. Prerequisites: One 300-level art history course *and* permission of the instructor

Credit 3 units. A&S IQ: HUM Art: AH, HUM BU: HUM EN: H

Typical periods offered: Fall

ARTARCH 4365 Leonardo Da Vinci

Leonardo da Vinci is universally recognized to be one of the greatest artists of all time. But who was Leonardo? Artist or scientist? Master, magus or myth? This seminar explores the reality and fiction of a fascinating, yet enigmatic genius, as well as placing this unique individual in the contexts of Renaissance Italy and the modern imagination.

Typical periods offered: Fall, Spring

ARTARCH 4381 Venice

A seminar focusing on the art of Venice, in particular on Bellini, Giorgione, and Titian. Special attention to the international reputations of these three artists and to problems of patronage, connoisseurship, and interpretation. PREREQUISITE: ART-ARCH 361 or 362, OR PERMISSION OF THE INSTRUCTOR.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H

Typical periods offered: Fall, Spring

ARTARCH 4384 Cross-Cultural Exchange in Renaissance Art

The study of cross-cultural artistic exchange in Renaissance art has long been impeded by persistent notions of exoticism and influence, both of which presume the superiority of one culture over another. We will problematize this hegemonic model and pursue instead the intersection of competing aesthetic, political, and religious ideals in the encounters between Renaissance Europe, the Americas, Africa, and the Muslim world at large. Topics include visual representations of race, physiognomy, and human civilization. Admission to this seminar, which has a required field trip sponsored by the Department over the weekend before the semester starts, is granted only through an application made directly to Professor Bass. Please sign up on the wait list, and contact her if you are interested in the course.

Credit 3 units. A&S IQ: LCD Art: AH EN: H

ARTARCH 4385 Caravaggio: Master and Murderer

Michelangelo Merisi (Michael Angelo Merigi or Amerighi) da Caravaggio (29 September 1571 - 18 July 1610) was one of the most important and influential painters of the Seventeenth Century, in Italy and throughout Europe. He was active in Rome, Naples, Malta, and Sicily between ~1592 and 1610. But who was Caravaggio? What do we really know about his tempestuous life, and how it factors in the art he created? Caravaggio was a powerful, brilliant, brutish, and hugely influential artist; a belligerent personality, brawler, and murderer. He was a man of contradictions: a devout Christian and bi-sexual sodomite; a Knight of Malta and a fugitive from the law. This seminar explores the reality and fiction of this fascinating and influential genius, and places him in his historical, social and artistic contexts -- from Baroque Italy to the modern imagination. Prerequisites: L01 113; one 300-level course in Art History; and permission of instructor.

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM, IS EN: H

Typical periods offered: Spring

ARTARCH 4408 Worldly Goods: Early Modern Art, Trade, Knowledge, Possession

The history of the early modern era has in recent decades been reconceived and rewritten as a history of things and goods. Global trade vectors in particular have shaped new histories of the Renaissance and Baroque eras. Material goods -- many of them newly available on a global scale -- shaped aesthetics, scientific investigation, political relations, identity formation, and devotional practices. This seminar studies the circulation of worldly goods between approximately 1500 and 1700, charting encounters around the globe by studying objects and persons in circulation. In orientation, the seminar is European, with a focus on the Dutch Republic in the world. Through secondary source readings and encounters with primary source materials, students will gain an understanding of how early modern objects relate to a newly global economy and horizon. Works of art, luxury trade goods, and pirated treasures are the principal sorts of worldly goods under consideration. We will consider the movement of individuals and the slave trade in the context of early modern colonialism as well as how the biographies of objects involve shifts in status and value over geographical space and time. Prerequisites: L01 113 and one 300-level course in Art History or permission of instructor.

ARTARCH 4415 Michelangelo the Architect

When, why, and how did the great Renaissance sculptor, painter, and poet Michelangelo Buonarroti become and architect? This seminar will survey Michelangelo's built and unbuilt architecture, his methods and extant drawings, and the process and influence of his creations.

Credit 3 units. Art: AH

ARTARCH 4420 Rembrandt van Rijn

This seminar explores the connections between the life and work of Rembrandt. The biography of the artist will serve as a foundation to explore the breadth of Rembrandt's activity as a painter, printmaker and draftsman. Special attention will be paid to original works in St. Louis collections. PREREQUISITE: PERMISSION OF INSTRUCTOR.

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

ARTARCH 4425 Rembrandt as a Printmaker

Rembrandt's etchings will be explored, with an emphasis on original materials in St. Louis and other collections, with a possible exhibition as the outcome. Prerequisite: Permission of instructor.

Credit 3 units. Art: AH

ARTARCH 4426 Picturing Race in the Early Modern World

Many social and cultural roots of modern Western European and American conceptions of race and ethnicity lie in the early modern era, when enslavement came integrally to be linked with Blackness and conceptions-and representations-of power relied on a hierarchical politics of racialization and othering. Throughout the early modern era, in Renaissance and Baroque visual art, iterations of racialized identity took hold, in ways and by means this seminar will explore in depth. Through close analysis of paintings, sculptures, architectural and urban design, and the graphic arts, and with frequent reference to chronicles, literature, and legal language of the time, we will trace visual representations of racialized difference throughout the early modern (European) world and to the present. How did early modern European images participate in and help to form a visual culture of race? This seminar will explore fifteenth-, sixteenth- and seventeenth-century European representations of racialized others by artists Albrecht Dürer, Hans Burgkmair, Hieronymus Bosch, Peter Paul Rubens, Rembrandt van Rijn, and others. We will also consider ethnographic imagery, maps, and other forms of representation-as well as responses by contemporary (20th- and 21st-century) artists to the conventions of race-crafting laid down in the early modern era. Geographically, the materials we study issue from western Europe and focus on encounters with Western Africa, but the seminar considers European engagement in the American colonies, Melanesia/Indonesia, the Atlantic and Brazil- and with the Islamic world. Prerequisites: One 300-level course in Art History or permission of the instructor

Typical periods offered: Spring

ARTARCH 4430 Early Modern Art, Science, Collecting

Encyclopedic or microcosmic early modern collections also known as Wunderkammers or Cabinets of Curiosities brought together all manner of artifact and natural object, and offered an arena for aesthetic contemplation and natural historical or scientific investigation alike. A space of knowledge-production and a highly socialized domain as well, the early modern collection responded to and activated the senses; some called the sorts of objects assembled in Wunderkammers-rhinoceros horns, ivory lathework carving, resins and gems, instruments, feather work, paintings, and carved coconuts and shells set in elaborate filigree-sensualities. This seminar examines early modern collections in Spain and Portugal, at Hapsburg and Medici courts, and in Dutch and Flemish cities. Intended as both an introduction to the ways in which the practices of art and science depended on and informed one another in the early modern period in Europe, this seminar will also offer students the opportunity to engage with and make interventions in an ongoing scholarly discussion about art, science, wonder, and the social order of objects in early modern Europe. Prerequisites: One 100- or 200-level course, and one 300-level course in Art History; or permission of instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H

Typical periods offered: Fall

ARTARCH 4440 Gian Lorenzo Bernini: The Sculptor of the Roman Baroque

An examination of Bernini's development of Baroque sculpture in relationship to the art of Michelangelo and Giambologna as well as to religious and secular patronage in seventeenth-century Rome. Students will be required to write research papers and give oral reports on assigned topics. Prerequisite, permission of instructor.

Credit 3 units. Art: AH

ARTARCH 4445 Hydrogen Jukebox: American Art and Culture, 1945-1960

The rise and 'triumph' of Abstract Expressionism has long dominated the story of American art following World War II. This new seminar will put Abstract Expressionism into context with parallel developments in the arts, photography, and film. Among the topics we will consider: the conversation between émigré artists and American culture during and after the war; the emergence of a 'noir' aesthetic in film and literature; the early work of Jasper Johns and Robert Rauschenberg and the so-called 'aesthetic of indifference' in relation to Ab. Ex.; artistic collaborations at Black Mountain College; New York school photography and photojournalism; and the cultural impact of the A bomb. PREREQUISITES: A 300-LEVEL COURSE ON 20TH CENTURY ART, PHOTOGRAPHY, OR HISTORY, OR PERMISSION OF THE INSTRUCTOR.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H

Typical periods offered: Fall, Spring

ARTARCH 4450 Art and Culture in Fin-De-Siecle America
The particular climate of the fin-de-siècle and its expression in art, architecture, and letters. Concurrent development in Vienna, Paris, and London as basis for comparison. Themes include new theories of mind and perception, the fate of rationalism, the crisis in bourgeois values, and redefinitions of gender. Prerequisite: permission of instructor.
Credit 3 units. Art: AH

ARTARCH 4455 Topics in American Art
What makes American art so different? So appealing? With a national identity forged by violent revolt against European colonialism, Americans have long considered their art as separate from a grand, though debased, European tradition. In this seminar, we will discuss particular moments of tension between the "high" and "low" in American art from the early republic to the 1970s, including the work of Thomas Eakins, Winslow Homeer, Jackson Pollock, and Andy Warhol. Considering the subject in this way leads to a paradox: American artists often craved the approval or institutional acceptance that comes with high culture, yet sought the "low" as a way of signifying an entrepreneurial, individual, rugged, or rustic "American" spirit. We will pay particular attention to moments when the intersection sof art and popular culture articulate borader social and political debates in American society.
Credit 3 units. Art: AH

ARTARCH 4465 Transamerica: The United States and Mexico Between the Wars
Many areas of 20th-century U.S. culture between World Wars I and II were inspired by postrevolutionary Mexico. The Mexican Revolution (1910-1917) profoundly reoriented modern Mexico, introducing new cultural and aesthetic forms and historical themes over subsequent decades. Mexican artists contributed to a new national consciousness drawing on indigenous Mexico and on the new politics of workers and peasants, which were given monumental expression in mural painting. The bidirectional exchange between U.S. and Mexican artists was of great importance for the cultural revitalization of the New Deal and after in the United States. Among artists, writers, anthropologists, and tourists, the vogue for things Mexican was fed by many sources, including increasing travel, diplomatic exchange, and a yearning for alternatives to U.S. modernity. This seminar will support travel to Mexico City, funded by the Department of Art History and Archaeology. Students in this course must be graduate students or undergraduate majors or minors in Art History and Archaeology or Latin American Studies. Recommended prerequisite courses include one 300- or 400-level course in 20th-century U.S. art or history or one relevant course in the Latin American Studies program.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H

ARTARCH 4466 Cahokia to Contemporary: Native American Arts, Past(s) and Future
The arts of Native American communities demand a primary place in both American and global art histories. The historic depth, variety of cultural expression, and circumstances of the collection, exhibition and interpretation of native arts continue to demand our careful and critical attention. We are well situated in St Louis to consider both the indigenous artistic cultures of our own region, and to observe the vitality of native modern and contemporary art practice. Key concerns include the artists' relationship to space and place, their presentation of identities, politicized and activist dimensions of their practices, their negotiation of issues of race and gender, and their conscious relationships to both historic traditions and to contemporary culture. Through the study of local collections and special exhibitions on view in 2023, we will examine a significant range of works-from the Mississippian cultures exemplified by the nearby sites of Cahokia and Sugar Loaf Mound, to the collection of historic materials we will study at the Kemper Art Museum, to the modern and postmodern works on view locally by such artists as Fritz Scholder, Edgar Heap of Birds, Juane Quick-to-See Smith, Faye HeavyShield, Wendy Red Star, Rose Simpson, and others. Class field trips to Cahokia, to the CounterPublic Triennial in St. Louis, and on a spring weekend to Washington DC to visit the National Museum of the American Indian are funded by a generous grant from the Mark S. Weil and Joan M. Hall Endowment for Art History & Archaeology. Prerequisites: One 300-level course in Art History or permission of instructor
Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Spring

ARTARCH 4470 The City in American Arts and Popular Culture
From the mid-nineteenth century forward, artists, writers, sociologists, and cultural critics have identified the city as the primary site of a vast array of historical changes associated with modernization. This course will explore the range of cultural responses to the new 20th century city up to World War II. The American city was seen as both an incubator of difference, and of mass conformity and manipulation; a dynamic space in which to form fluid networks that catalyzed new forms of creativity, and a place of strangers and social alienation. We will trace the history of these polarized responses in the 20th century arts and literature of the city, looking at the vibrant popular culture of film, vaudeville, and cross-dressing; new aesthetic forms such as collage and expressionism; and new urban subjects. Prereqs: 300-level course in American 20th c. Cultural History, American Art, Literature, or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM, SSC BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 4475 Native and Cosmopolitan Modernisms: American and European Art Between the Two World Wars
This seminar focuses on two contrasting currents within American and European modernism between the two world wars: native and cosmopolitan. Alternating between the United States and France, the content of this course begins in the years before World War I and concludes with the rise of virulent forms of cultural nationalism during the late 1930s. We consider the subjects, personalities, aesthetic strategies, and political and social investments associated with these alternative modernisms, which are linked to a search for roots on the one hand and to a desire for forms of spatial and social mobility on the other. By comparing the homegrown and expatriate experiences, we will consider divergent attitudes toward identity, gender, nation, time, and nature, analyzing these two fundamental responses to modernity in relation to one another. Prerequisites: L01 113 or L01 215, or permission of instructor. One 300-level course in Art History preferred.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM, IS EN: H
Typical periods offered: Fall, Spring

ARTARCH 4480 Gender in 19th-Century Art
An examination of the representation of gender, i.e. the construction of male and female identities through images, and the role of gender in artistic practice. Readings and class discussion will focus on American, French, and English art. Prerequisite: Survey of modern art; any 300-level course in 19th-century American/European art or culture; or permission of instructor.
Credit 3 units. Art: AH

ARTARCH 4485 The Age of Gatsby: American Art and Culture From World War I to the Great Crash

Mass consumption and the expansion of mass culture; mechanization; and the birth of a new visual culture that turned on animation, advertising, photography, and film. Taking our cues from the cultural contradictions and historical tensions embedded in F. Scott Fitzgerald's great novel of 1925, and the 2013 film inspired by it, this seminar will trace what many at the time called the Rediscovery of America and its tribulations. American artists, writers, and cultural theorists embraced the possibilities and pitfalls of American modernity, the nation's mythic promise and its historical dilemmas in the face of growing commercialization and standardization. This seminar is a interdisciplinary look at the art, visual culture, music, literature, and cultural essays of the 1920s through the lens of nation, race, region, and cultural identit(ies). Prerequisite: 300-level 20th-century American art, history, or literature course, or permission of instructor.

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM EN: H

Typical periods offered: Spring

ARTARCH 4486 The Arts of Cultural Democracy: America in the 1930s

What does democratic access to the arts look like? Over the past decade the question of distributive justice has taken on new urgency in our nation. This seminar will look at an earlier period in the nation's history--the 1930s, from the stock market crash of 1929 to the beginning of World War II--when the ideal of cultural democracy was put into practice on a variety of fronts, from dance to the fine arts to public murals and the collecting and inventorying of the nation's material and cultural legacies. We will also consider the possibilities and limits of political art, the impact of John Dewey on future generations of artists and culture-makers; the relationship between leftist politics and modernism; regionalism and internationalism; debates over the nature of documentary photography, and efforts to create a 'useable past.' Prerequisite: one 300-level course in European or American twentieth-century art, literature, or cultural history; or permission of the instructor.

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: AH, HUM BU: HUM EN: H

Typical periods offered: Fall

ARTARCH 4497 Art, Vision, and Science in China

After China and Europe began sustained contact, the introduction of Western science, math, and technology often affected Chinese art more than anything else. New optical devices and ways of visually understanding the world produced a range of positive and negative responses. Often expressed in art, these works demonstrate how new ideas affected Chinese conceptions of vision, looking, cognition, and visuality. Covering the seventeenth through mid-twentieth centuries, this course discovers how Chinese art became entwined with vision and modern science, covering prints, paintings, objects, and photographs across medicine, astronomy, cartography, optics, and mathematics. Prerequisite: L01-111, one course in Art History or Asian Studies, or permission of instructor.

Credit 3 units. A&S IQ: HUM, LCD Art: AH BU: HUM

ARTARCH 4500 Modern Architecture in St. Louis

This seminar is intended to develop understanding of the history of modern architecture in the St. Louis area from circa 1900 to the present, using readings, class discussions, site visits, and lectures. Now again a topic of interest after an era of neglect, what is broadly termed modernism in architecture was extensively deployed in the St. Louis area in the mid-twentieth century, before it became a source of controversy in the late 1960s. The course will begin with a brief overview of the architectural history of St. Louis to 1930, when much of its historic architectural urban fabric was built, and will then focus on various architects and projects in the metropolitan area in the period between 1930 and 1970. Students will be expected to research a local building, project, or architectural direction in depth, and make presentations about the topic over the course of the term. Other class requirements include regular attendance (including tours, which are an essential part of the class), class participation in discussions that demonstrate awareness of the required reading, and writing reading summaries. There will also be a short paper at the beginning of the semester, an essay exam, and a 15-page final research paper. For this paper you will be expected to document, critically analyze, draw conclusions, and present these buildings or sites to the class in a twenty-minute presentation. This course is for graduate students or advanced undergraduates who have had some preparation in either the history of modern art or the history of modern architecture. Prerequisite: A 300-level art history course, or the permission of the instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 4505 Art and Culture in 1920s America

This interdisciplinary seminar examines the relationship between art and 1920s culture in the United States, including how artists and critics thought about the nature of our cultural heritage (both its rich possibilities and its limitations); the potential of technology and urbanization as well as the threats they pose to older cultural values; the nature of a multicultural society and the contributions of minority traditions to the evolution of American culture; the lure of the Southwest; early criticism of popular media; and the conversation between popular culture and high art. Prerequisite: L01 113 or permission of instructor.

Credit 3 units. Art: AH

ARTARCH 4507 Exhibition Seminar: Documenting Sculpture in Photography and Beyond

In this seminar, students will curate an exhibition in Olin Library that explores how photographs and other reproductive images shape histories of art. No technology is neutral, and even a photograph that claims to document a sculpture alters our perception of it, determining where we stand and what we see. By mediating our access to a given object, a photograph gives rise to particular narratives about it. In this course, students will examine critical approaches to the role of photographs and other forms of art documentation. They will work firsthand with a wide range of primary source materials at Washington University, including 19th-century photographic works in the Russell Sturgis Photograph Collection as well as early modern engravings, plaster casts, and digitally fabricated 3D prints, all of which reproduce ancient and Renaissance sculpture. Students will also gain practical experience in exhibition design and production: both creative and editorial processes will be foregrounded, from selecting works for display and writing wall texts to participating in installation. The exhibition will open in May 2020. Prerequisites: Introduction to Western Art (L01 113), one 300-level course in Art History preferred, or permission of instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H

ARTARCH 4510 History of Photography

Topics on American and European photography before 1960, with an emphasis on photography as document and? or evidence, both in its Fine Arts element and as a historical/cultural record.

Credit 3 units. Art: AH

ARTARCH 4520 Topics in Modern Art

The sources, styles, influences, and content of the art of such artists as Gauguin and Cézanne examined in the context of contemporary movements in art and literature. Prerequisite: art history major, or permission of instructor.

Credit 3 units. Art: AH

ARTARCH 4525 Constructing the Canons of Modern Art: 1860-1960
From textbooks to museums to private collections, we experience histories of modern art though selections that present narratives of which art matters the most -- to artists, to critics, to the general public, and, supposedly, to history as a whole. How have established canons come to be, who are they for, and how do they resist or engage revision over time? This course examines narratives of modernism and its relationship to rhetorics of criticism, the power of the art market, sensationalized biographies, the practices of collectors and museums, nationalistic interests, and histories of exclusion. Who rises to the top in significance? In what ways have women artists, artists of color, and LGBTQ artists been included or excluded? Key art critics and art historians include Fry, Barr, Pollock, Nochlin and Saslow. Artists may include but are not limited to Manet, Monet, Morisot, Cassatt, Van Gogh, Gauguin, Cézanne, Bell, Modersohn-Becker, Claudel, Tanner, Sickert, Valadon, Duchamp, Cahun, Picasso, Beckmann and Krasner. Students will research comparative case studies and create their own alternative timelines of modern art from 1870-1950. Prerequisites: L01 215, Intro to Modern Art; and one 300-level Art History course.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, CPSC, HUM BU: HUM, IS EN: H
Typical periods offered: Spring

ARTARCH 4530 Art and Culture in Fin-De-Siecle Europe
This course presents an examination of painting, photography, and the decorative arts in France during the period between the two World's Fairs of 1889 and 1900. Artistic movements include Symbolism (Van Gogh, Gauguin, and Redon), later Impressionism (Monet and Morisot), Neo-Impressionism (Seurat and Signac), and Art Nouveau. Thematics include urban leisure and cafe culture, the agrarian ideal, the promises and threats of science and technology, the lure of the primitive, and the impact of nationalism and feminism on the arts. Prerequisites: L01 215 and any 300-level course in 19th-century art, literature, or history; or permission of instructor.
Credit 3 units. Art: AH

ARTARCH 4535 Paris ca. 1900: Art, Leisure and Spectacle
Paris at the turn of the 20th century was a vibrant international center for the development of the visual arts, including painting, photography, film, and the graphic arts, particularly in the exploding domains of posters and illustrated journals. In this seminar, we study the period from 1880 to 1910, and we examine how diverse modes of urban visuality were at the heart of the development of French modern art. The place of graphic arts in promoting popular entertainments (e.g., ballet, opera, café concerts) is considered. Another focus is the powerful role of Parisian satirical journals and caricature in debating matters of class, race, and national identity. We examine diverse modes of displaying and selling the visual arts, particularly in the spheres of World's Fairs, annual salons, and in the avant-garde spaces of gallery and café exhibitions. Artists of central concern include Lautrec, Cheret, Mucha, Degas, Pissarro, the Nabis, Vallotton, and early filmmakers such as the Lumière brothers and Méliès. Prerequisite: L01 215 or permission of instructor. One 300-level course in modern art history or a course in modern French history or literature is preferred. French language reading skills are not required.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 4540 Matisse and Modernisms
Certain artists generate enormous interest during their lifetimes and long after. Over time, the work of such artists is subjected to a variety of interpretive approaches in light of changing trends in art criticism and art history; the influence of contemporary art; the ebb and flow of interest in different aspects of the artist's production; changes in the political landscape; and the changing sense of how the artist's work intersects with contemporary cultural developments. This set of intersecting concerns is especially fluid in the modern period, when there is no single dominant idea of the role of art in society. The variety of interpretive strategies developed from and applied to the work of Henri Matisse demands a critical reading of the extensive literature on the artist as well as an understanding of the variety of modernisms through which to assess his artistic project. Students will gain a thorough familiarity with the work of one of the most influential artists of the 20th century, and they will engage aspects of the historiography of 20th-century art through a survey of developments in the Matisse literature. Prerequisites: L01 113 or L01 215, or permission of instructor. One 300-level course in Art History preferred.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 4545 The Century of Picasso
The art of Pablo Picasso (1881-1973) spanned three-quarters of the 20th century, and posthumous critical response to his work shows no sign of abating. Picasso was a leading figure in the European primitivist trends at the beginning of the last century, and with Georges Braque, he developed the aesthetic system of Cubism, which rewrote the rulebook of artistic representation. Although he was not an activist, his art routinely engaged momentous political events. Toward the end of his career, he strove to shape his legacy through artistic dialogues with artists of the past by appropriating their styles or subjects, and making them his own. Such eclectic activity, coupled with his creativity and prolific output, has ensured his place among the most influential artists of his century. Prerequisites: one 300-level course in modern art or permission of instructor; junior, senior or graduate standing.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 4550 Romanticism to Realism: French Art 1830-1871
This course traces the flourishing of romanticism and the emergence of various forms of Realism in nineteenth-century French modernism, opening with the Revolution of 1830. Artistic tendencies ranging from the official and the academic to emergent romantic and avant-garde alternatives are addressed, as well as the unresolved social and aesthetic tensions that support the demand for an art that addresses modern times. The political idealism and the rhetoric of Republicanism in the Second Republic (1848 to 1852) intertwine with the emergence of a critical modernism that seeks truth in form, in materiality, and in political philosophy. Under the authoritarian regime of the Second Empire (1852-1870), the mandates of realism and idealism continue to vie in a period that sees both the flourishing of the academic system and the art dealer system, and the emergence of a critical avant-garde. The course closes with the emergence of Impressionism and the crisis of the Franco-Prussian war. Artists to be discussed include Delacroix, Ingres, Millet, Daumier, Courbet, Corot, Manet, Bonheur, Bayre, Clesinger, and the early careers of Bazille, Degas, Monet, Renoir, Pissarro, Degas, Morisot and Cassatt. Pre-requisites: limited to graduate students in Art History); advanced undergrads only with permission of instructor. Some prior knowledge of French modernism required; some facility with French language useful but not required.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 4555 Gauguin in Polynesia: The Late Career
This seminar focuses on the late career of Paul Gauguin, in Tahiti and the Marquesas. This course examines closely the colonial context of fin-de-siecle French Polynesia, Gauguin's reponse to indigenous culture, his ongoing interests in European currents of theosophy and anarchism, the development of his primitivist style in response to the French avant-garde, and Gauguin's legacy to modern art and culture in the early twentieth century. Readings will range from primary texts (literature and journals read by the artist, his letters, his satirical articles and caricatures produced for a Tahitian newspaper, his treatises on religion), to post-colonial theory and recent critiques of primitivism. French reading skills are useful, but not required for the course. We

will visit the St. Louis Art Museum to view both the Oceanic collection, and prints and paintings by Gauguin. PRE-REQUISITE: AT LEAST ONE UPPER-LEVEL COURSE IN MODERN ART HISTORY, OR PERMISSION OF THE INSTRUCTOR.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 4560 Contemporary Art in France
This course will cover artistic styles and movements from 1945 to the present, including art informel, art brut, new realism, the Situationist International, and new wave film. Artworks will be studied in the context of cultural debates, on topics such as post-WW II reconstruction, decolonization, consumerism, the '68 revolution, the influence of the mass media, and changing conceptions of national, ethnic, and gender identity. Reading knowledge of French is helpful. PREREQUISITE: PERMISSION OF INSTRUCTOR.
Credit 3 units. Art: AH

ARTARCH 4565 French Art and Politics in the Belle Epoque
This interdisciplinary seminar addresses the rich intersection of politics, fine arts and visual culture in modern France from the Franco-Prussian War (1870) to the First World War (1914). We will study the political trends, historical events, and cultural conditions of the era, and their direct influence on the production and reception of a wide range of visual arts, ranging from official paintings and monuments to popular culture such as tourist and documentary photography, commercial posters and political caricature. We also examine the question of what it meant in the Belle Epoque to be an avant-garde artist, and how such artists expressed political sentiment in their work. Prerequisites: permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 4570 van Gogh: Creativity, Mythology, and Commodity
Among the most famous artists of the canon of European modern art is Vincent van Gogh, known for his expressive paintings, his famous letters that chart his tumultuous career, and a short creative life marked by intense work, passionate interests in the modern art and literature of his time, and the challenges of a mental illness. This seminar will examine his art and literature in three sections: the first devoted to studying the art itself throughout his short career; the second devoted to the mythologies surrounding his art and its relationship to such notions as genius and madness; and the third looking at how his art has become a popular commodity, reproduced internationally by methods varying from precise painted replicas to commercially popular goods marked with his most famous paintings. The history and theory of modern commodity culture on a global scale and its intersection with a burgeoning art market for postimpressionist art will be explored in this final section. Prerequisites: L01 113 or L01 215 and one advanced course in art history, or permission of the instructor
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 4575 Gauguin Then and Now: Art, Myth, and Controversy
This course is an examination of the art and career of Paul Gauguin (1848-1903) and the artistic, social, and political milieu of colonialism in which he worked in France, Polynesia, and the Caribbean. Topics include avant-garde Impressionist and Symbolist cultures, the power of the art market/dealer system, the artist's writings (in translation), French colonial culture and pervasive myths of island paradise, and the pressing critiques offered today by postcolonial and feminist theory. The final third of the course will focus on the varied global reception of his work in the 20th and 21st centuries as well as controversies surrounding his art, writings, and legacies, particularly among contemporary Pacific Islander artists and artists of color. We will consult local museum collections as possible and perhaps take a class trip to Chicago to see essential collections. Prerequisite: L01 215 or any 300-level course in art history, or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 4580 Exoticism and Orientalism in 19th-Century Art
An examination of the traditions of exoticism and orientalism in European painting and photography from approximately 1800 to 1900. Readings will include artists' writings, travel journals, literature, theory of colonialism and exoticism. Sample topics to be discussed include: Delacroix, Ingres, Gerome, and the Orient; Flaubert and Maxime du Camp in Egypt; Gauguin and La Farge in Polynesia. PREREQUISITE: ANY 300-LEVEL COURSE IN ART HISTORY OR PERMISSION OF INSTRUCTOR.
Credit 3 units. Art: AH

ARTARCH 4585 The Photographic Muse: The Modern Artist and the Camera
An examination of the interplay of photography with painting and sculpture in European art from 1850 to the First World War, with an emphasis on the fin-de-siecle. Readings address the history of the medium; the critical debates (starting with Baudelaire) over photography as a tool of science or of art; the rise of ethnographic photography; the Symbolist ambivalence toward technology; and the development of Pictorialism at the turn of the century. Artists to be studied include Nadar, Moreau, Degas, Rodin, Steichen, Gauguin, Munch, the Nabis, Brancusi and Picasso. Prerequisite, graduate standing.
Credit 3 units. Art: AH

ARTARCH 4590 Exoticism and Primitivism in Modern Art
An interdisciplinary investigation of the development of exoticism and primitivism in European and American Art from the Enlightenment to the Second World War. Topics include exoticist representations of non-western cultures; the links between colonialism and orientalism; the intersection of discourses on race and gender with exoticism; and the anti-modernist impulse of modernist primitivism. Sample artists and authors include Delacroix, Flaubert, Gauguin, LaFarge, Segalen, Picasso, and Matisse. PREREQUISITE: ANY 300 LEVEL COURSE IN ART HISTORY, PERMISSION OF THE INSTRUCTOR.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H
Typical periods offered: Spring

ARTARCH 4605 The Impressionist Landscape: Style, Place and Global Legacies 1870-1920
We will consider Impressionism as a dominant style of the Parisian art world, first undertaken as an extension of Barbizon naturalism, but soon expanded into an avant-garde style that objectified sensation and emotion in the name of truth in representation. We will examine the place of individual perception, the physiology of sight, and theories of the natural in the development of the Impressionist landscape, through the consideration of style, genre, artistic theory, and these artists' investment in particular sites. Furthermore, the social, commercial and critical networks that supported the movement will be analyzed. Particular attention will be given to Monet, and a special exhibition of his water lily paintings on view at the St Louis Art Museum. Other key artists include Degas, Morisot, Renoir, and Cassatt. We will also discuss the relationship of the Impressionist landscape to the development of modernist abstraction, and the aesthetic and nationalist motivations for its appropriation across the globe. Prerequisite: Introduction to Western Art; Introduction to Modern Art, or permission of instructor.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 4610 Impressionism and the Nation in France and Beyond: Painting and Photography 1860-1920

We will consider Impressionism as a dominant style of the Parisian art world, first undertaken as an extension of Barbizon naturalism, but expanded into an avant-garde style that objectified sensation and emotion in the name of truth in representation. Our central question will be the relationship of individual perception, the physiology of sight, and theories of the natural in relation to the importance of place-both region and nation -- in the political imagination of the era. We also address the relationship of the Impressionist landscape to the development of modernist abstraction, and the aesthetic and nationalist motivations of its adaptation as a modernist style around the globe. Prerequisite: senior major in art history, or graduate student standing and permission of instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 4635 Critical Studies in Portraiture, Ancient to Contemporary

To study portraiture is to confront the complexity of human identity. The central theoretical question of this course is how identity can be expressed in a portrait. Following the consideration of theories of portraiture, identity, and artistic representation, we will treat specific historical and cultural instances of portrait-making, from ancient Greece to the present. Non-Western cultural examples will broaden the scope beyond the conventional conceptions of portraiture. We will conclude by trying to understand the continuing allure of the portrait today as digital media challenge our conventional ideas of visuality and perhaps even the urgency of portraiture in the post-human age. Prerequisites: L01 113 or L01 215; or permission of instructor. One 300-level course in art history preferred.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

Typical periods offered: Fall, Spring

ARTARCH 4674 Revisiting the Dutch Golden Age: Amsterdam as and at the Center of the Early Modern World

Recent museum and scholarly initiatives have offered innovative, corrective approaches to the study of the seventeenth century in The Netherlands-an era commonly known as "the Dutch Golden Age." Within the last decade, numerous museums and special exhibitions have questioned the historical accuracy and political sensitivity of the term; some museum curators have refused to use it any longer, and many scholars have deliberated on its significance, structuring their arguments about the time through other terms. At the heart of conceptions of the "Golden Age" is the city of Amsterdam, which increased in girth, population, and celebrity between 1600 and 1700. Dutch maritime prowess and trading ventures around the globe resulted in the exponential growth of the urban fabric of Dutch cities and their fame, and Amsterdam was first among equals. Amsterdam was not just the wealthiest, most powerful city in the Dutch Republic, but was praised as the center of the world (omphalos mundi) and celebrated in monuments; and the visual arts were practiced and celebrated widely. But the flow of currency and luxury goods was not the only structuring dynamic: the Dutch involvement in the transatlantic slave trade and the gap between rich and poor, powerful and disenfranchised in the burgeoning metropolis are also hallmarks of the time and place. Studying contemporary scholarly and curatorial approaches to a past that has been by turns glorified and disavowed, this seminar will enable students to engage directly with changing conceptions of the history of this time and place-by reading current historical accounts and editorial interventions and meeting with proponents of various views of the subject (e.g., scholars who have opined that doing away with the "Golden Age" model amounts to throwing the baby out with the bathwater vs. scholars and artists who engage with and propose new lenses for assessing the history of Amsterdam and the Dutch Republic in the context of considerations on political violence and enslavement in particular). The seminar will travel to Amsterdam during spring break 2025, for onsite visits with people, places, and works of art, providing students with the unique opportunity to engage directly with the makings and makers of art history. Prerequisites: Permission of the instructor. Students should have taken at least one seminar in AHA or a closely related field; priority will be given to AHA majors.

Typical periods offered: Spring

ARTARCH 4725 From the Death of the Author to the Birth of Youtube: Identity in Contemporary Art

What constitutes an artist today, when anyone can upload his or her musings to the entire world? Is the question even relevant? This course will introduce students to the construction of artistic identity in contemporary art. Students will consider major themes governing the production of contemporary art. We will cover such topics as the death of the author and the end of art, identity politics and authenticity, and the effects of new media on the construction of artistic persona. This course assumes a basic familiarity with the methods of art history, as well as general knowledge of art history before 1960. Prerequisites: Introduction to Western Art or Introduction to Modern Art and one 300-level course in art history, or permission of the instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H

Typical periods offered: Spring

ARTARCH 4726 Globalization and Contemporary Art

What does globalization mean for contemporary art? And what do we even mean when we use the term? This upper-level seminar course considers recent art (1985-present) in the context of theories of development, postcolonialism, and globalization. We will focus on the tensions between the global and the local, as well what it means for an artist to be national or international. We will also consider the impact of neoliberal economic policies on art production and the art market, as well as role museums play in this international context. Finally, we will consider the Internet and social networks as globalizing influences that affect the production and distribution of contemporary art. Prerequisites: Introduction to Western Art or Introduction to Modern Art and one 300-level course in art history, or permission of the instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H

Typical periods offered: Fall

ARTARCH 4735 1968 and Its Legacy

The events of 1968 -- including the May riots in Paris, the Tucuman Arde exhibition in Argentina, the Tlatelolco Massacre in Mexico City, and the Prague Spring (and Russian winter) in the Czech Republic, just to name a few -- ushered in a new political and social imperative for artists. This course will start with 1968 and trace its legacy to the social and cultural movements of the 1980s, 1990s, and early 2000s. We will seek to understand the historical underpinnings of contemporary activist art and determine the roles of socially motivated art in the current political and intellectual climate. Prerequisites: L01 113; L01 215; or permission of instructor. One 300-level course in Art History preferred.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, CPSC, HUM BU: HUM EN: H

Typical periods offered: Fall

ARTARCH 4740 The Persona of the Artist: Contemporary Visual Artists and Their Writings

An art movement is located as much in the writing that surrounds it as in the body of objects that apparently comprise it. In the art world today, it is generally accepted that artists are also artist-writers. This course explores this phenomenon by examining the writings

of late twentieth- and early twenty-first-century visual artists. In addition to studying social and political contexts, we will analyze the various modes of writing that artists employ, look for specific points of intersection between their art and writing, consider the circumstances and venues of the writings' publication, study how the writings figure into the contemporary reception of the artists' visual practices, and evaluate art historians' uses of artists' writings. In exploring a range of case studies, we will contemplate the motivations and critical function of writing versus or in combination with art-making as well as the role that the practice of writing plays in forming the identity of the contemporary artist-subject. Prerequisites: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215); one 300-level course in Art History preferred; or permission of instructor.

ARTARCH 4746 California Dreamin': Los Angeles Culture and the Making of the 20th Century
California Dreamin' delves into the many cultures of Los Angeles, a dynamic global city with its cultural origins in the early 20th century. Over its decades of development and transformation we will explore continuities and new directions. The region has always been an encounter zone: between indigenous cultures, colonizers from Mexico, Pacific rim, and Anglo settlers. How has this cultural richness taken different shapes over the course of the 20th century? LA offers an especially cogent site for understanding how a city with a very specific if layered urban identity has been constituted by and through representation. Over the semester we traverse a range of cultural texts--the arts and architecture, film, literature, and urbanism--where the image of the city has been shaped. The course asks how Los Angeles culture at various points struggled to find new articulations and avenues into the future, against the weight of its own defining histories. A week-long trip to Los Angeles -supported through our dedicated travel fund in AHA-will give students an opportunity to see firsthand how the presentday city and its many sectors find expression in the arts and visual culture, or give evidence of different realities. Prerequisite: Minor or major status in AHA; Any course in 20th c. American arts, literature, or film. Or permission by instructor
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Spring

ARTARCH 4750 Picturing the Anthropocene: Landscape, Land Art, and Eco Art
Without a doubt, questions concerning environmental crisis and the habitability of our planet are among the most pressing of our time. This course will cover the history of 19th-century landscape and its legacy today, the 1960s Land Art movement and its relationship to modern environmentalism, and the nuances of contemporary eco art. In addition, we will go in depth into some of the most prolific media within eco-art, including photography and film, and we will explore the contemporary debates specific to these fields. There will be a required field trip to the Western U.S. desert (UT, NV) to visit key sites of land art prior to the start of classes (4-5 days, approximately the third week of August). Possible visits may include Spiral Jetty, Sun Tunnels, Double Negative, Las Vegas Piece and the Center for Land Use Interpretation. The trip will be limited to eight students. Flights, lodging, ground transportation and some meals for graduate students and majors in the Department of Art History and Archaeology will be paid for by the West Bay View Travel Seminar endowment. Travel plans are subject to change due to changing pandemic restrictions. The course is limited to graduate students, majors, and possibly minors in art history and archaeology. Prerequisites: L01 113, Intro to Western Art; plus one 300-level Art History course.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 4755 The Hudson River School: Landscape and Ideology
The American landscape painters who have gained recognition and broad public appeal as members of The Hudson River School have been received since their time in a triumphalist discourse of cultural nationalism. This seminar seeks to break down the provincialism that has characterized accounts of this loose and problematic grouping of artists by reading the most thoughtful scholarship on their work and placing their productions in international context. With focused attention to the work of individual artists like Thomas Cole, Frederic Church, and Robert Duncanson, to their dialogues with the broader Americas and Europe, and to their receptions up to the present day, participants will each develop a substantial, independent research project that adds to our understanding of this still inadequately understood moment in the history of art. In the process, the course will equip students with comfort with a wide range of scholarship in the nascent field of Landscape Studies that will be of value in approaching other regions and periods. This course is open both to graduate students and advanced undergraduates, with distinct reading and writing expectations for each category. Prerequisites: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215); one 300-level course in Art History preferred; or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 4765 Collecting Cultures: Taste, Passion and the Making of Art Histories
This seminar examines the theory and the cultural history of the collecting of art objects and artifacts from a range of cultures and periods, and it considers how and why both individuals and institutions create collections. What social and psychological factors drive this passion? What are the various cultural, political, and aesthetic priorities that have driven this practice historically? How is cultural patrimony defined, and how do law, the art market, and cross-cultural ethics impact the placement, study, and display of a culture's material heritage? We will build the seminar around the history of collecting in America, with a focus on Midwestern examples and particularly important case studies in St Louis. We will consider, for example, the significant local collections built by Joseph and Emily Rauh Pulitzer (modern art) and Morton May (modern and Oceanic art), as well as the histories of both modern European and non-Western collections now owned by St. Louis-area museums. This course will be complemented by various local field trips, including to the Saint Louis Art Museum, the Pulitzer Arts Foundation, the Mildred Lane Kemper Art Museum, and Cahokia Mounds State Historic Site. Prerequisites: L01 113; L01 215; or permission of instructor. One 300-level course in Art History preferred.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 4780 Public Art: History, Practice, Theory
The course will consider the history and functions of public art, with special attention to public art in St. Louis. We will survey not only the obvious forms of public art in urban sculpture and mural painting but also less traditional intersections of art and public in such sites as the internet. We will also examine the operations of institutions -- national and local arts agencies, international exhibitions, nonprofit centers and the like -- that foster a public engagement with contemporary art. Finally, we will consider new priorities and projects in public art, especially socially oriented and environmentally sustainable initiatives. Prerequisites: L01 113, Intro to Western Art; or L01 215, Intro to Modern Art; one 300-level course in Art History preferred; or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH BU: HUM EN: H

ARTARCH 4906 Greenberg Curatorial Study
The Arthur Greenberg program offers undergraduate students the experience of curating an exhibition. A small team of two or three is selected through a competitive application process the year before enrollment in the course. Under the supervision of a faculty mentor in

the Art History & Archaeology Department and a curator in the Mildred Lane Kemper Art Museum, students plan and curate an exhibition for the museum's Teaching Gallery. They also research and write a short brochure, prepare educational materials, and offer related programs for the exhibition, which usually opens in April. The fall 3-unit course fulfills a departmental capstone requirement for the major; 1 unit of additional course work is completed in the spring.
Credit 4 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

ARTARCH 4907 Beyond Limits: Transgression, Controversy, and Censorship in Modern Art
This course will examine some of the public controversies that surrounded the development of modern art over the last 150 years to probe the question of the social and political functions of transgressive art. After reviewing key theories of the avant-garde, we analyze both the persona of the modern artist (e.g., Van Gogh, Picasso, Pollock) and the place of women artists in the revolutions of modernism (e.g., Cassatt, Hoch, Kahlo). A key issue to address is how modernism tests limits by asking what is (and is not) art (e.g., Duchamp, Brancusi). Some of the most controversial exhibitions in this time frame, from the Salon des Refuses in 1863 to Mirroring Evil in 2002, highlight the challenges raised by modern artists' treatment of the body. Controversies over public funding of contemporary art, debates waged over public art in St. Louis, and the recent episodes of iconoclasm with respect to Confederate monuments and memorials will close the course. Prerequisites: L01 215 and any 300-level course in Art History or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, CPSC, HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

ARTARCH 4913 Queer: Arts, History, Theory
The term "queer" has come into greater circulation over the past two decades, but it has a longer history. Over the course of the 20th century, queer networks have enacted distinct new gendered, interpersonal, communal, and expressive forms, in both private and public arenas. As a te1m that resists alignment with specific identity categories, queer has the potential to unsettle not only the borders of identity but the grounds on which such identities are secured. The 'queering' of the humanities has extended beyond studies of sexuality and gender, and productively undermined the essentialisms that still linger in our understanding of human potential. Queer is also a lens through which to explore the cultural, social, and political processes of "normalization." Using this lens the seminar offers a space to question and map the imprisoning impact of normativity on our collective possibilities. We'll examine its impact on how Art history and other fields have been constructed as a discipline. The seminar toggles between histories of 20th century queer networks, and essays that theorize their artistic, social, and political impact, from redefining boundaries between public and private to strategies of subversion; the impact of "queer" on the politics of identity and political recognition; and queer performance culture across the 20th century. This seminar is open to all students, regardless of discipline, to explore together and learn from one another.
Credit 3 units. A&S IQ: HUM, SC BU: HUM
Typical periods offered: Fall

ARTARCH 4926 Contemporary Art of the U.S.-Mexico Border and Beyond
The question of the materiality of borders has attained new urgency with the resurgence of nationalist and anti-globalist movements. Calls for a big, beautiful wall on the U.S.-Mexico border are but one striking example of this phenomenon. A wall, a fence, a line, or a zone may focus attention on a narrow space, but it does so at the expense of broader narratives of structural inequality, the lingering violence of colonialism, and the rapid scale of climate change. The simplicity of a barrier is a particularly damaging fiction, one that avoids examinations of the larger forces that divide us. This upper-level and graduate seminar will delve into the history of border art as a category -- whether public art, sculpture, installation, new media, or performance -- using the U.S.-Mexico border as an extended in-depth case study. Analysis will not be limited to this region, as the course encourages a comparative approach that places disparate regions into dialogue with each other. In addition, we will also consider the issue of divides and borders locally, within the St. Louis area and its suburbs. Prerequisites: Intro to Western Art or Intro to Modern Art, plus one 300-level course in Art History.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, CPSC, HUM BU: HUM, IS EN: H
Typical periods offered: Spring

ARTARCH 4977 Mapping Art, Race, & Community in The US-Mexico Borderlands
This upper-level undergraduate seminar will delve into the history of border art as a category, whether in terms of public art, sculpture, installation, new media, or performance, using the U.S.-Mexico border as an extended in-depth case study. Students will collaborate to add to an ongoing mapping project of community engaged art on the border and create multimedia materials to augment or interpret the data as they see fit. As such, this course builds Digital Humanities practices and methodologies throughout the semester. Students in the course will also work to map race and population data along with their chosen artworks. In doing so, the course challenges students to think beyond U.S.-centric concepts of race and ethnicity and explore how the third space of the border shapes artistic practices and approaches to community. Prerequisites: One introductory Art History course or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

ARTARCH 4996 Art History and Archaeology Elective: 400-Level
Course is for transcribing ARTARCH 4000-level electives
Credit 3 units. EN: H
Typical periods offered: Fall, Spring, Summer

ARTARCH 4997 Independent Study and Research
This course is for independent study.
Credit 3 units.
Typical periods offered: Fall, Spring

ARTARCH 4998 Honors Art History and Archaeology
A major research paper acceptable to the department. Prerequisite: permission of the department. Max. 6 units.
Credit 3 units. EN: H
Typical periods offered: Fall, Spring

Art History and Archaeology Major

Program Requirements

- **Total Units Required:** 30 (33 for those students undertaking Senior Honors)
- **Grade Requirement:** Courses for the major may not be taken with the Pass/No Pass credit option. Students must earn a grade of C– or better in all courses for them to apply toward major requirements.

The Department of Art History & Archaeology welcomes students who wish to pursue a major in Art History & Archaeology. Students who declare the major must satisfy the requirements listed below to qualify for graduation.

Required Courses

Code	Title	Units
Introductory courses		6
Upper-level courses		21
Art History course at the 2000 level or above		3

Introductory Courses

All majors must take two courses from a menu of introductory courses at the 1000 and 2000 levels. These courses are recommended foundations for upper-level lecture courses and seminars. The courses may be taken at any time and in any order. First-Year Seminars and Sophomore Seminars can be counted among these two introductory courses.* No specific course is mandatory for students in Arts & Sciences.**

- ARTARCH 1515*** and ARTARCH 2020 will be offered every fall and spring, respectively.
- ARTARCH 1510, ARTARCH 2035, or ARTARCH 2040 will be offered at least once every other year.
- This list will be augmented by a rotation of 1000-level First-Year Seminars and 2000-level Sophomore Seminars as well as other 2000-level courses with broad regional, temporal, or topical coverage.*

* Students will be allowed to count only one First-Year Seminar or one Sophomore Seminar toward this requirement.

** ARTARCH 1515 and ARTARCH 2020 are mandatory only for students in the Sam Fox School.

*** A score of 4 or 5 on the AP Art History exam may be substituted for ARTARCH 1515. To receive this college credit, the score must appear on the student's Washington University student record, and the student must also earn at least a B in a related upper-division departmental course.

Major Credit Units

All majors must take at least 24 additional Art History & Archaeology units:

- Students must complete at least 21 units of upper-level (3000-level and above) Art History and Archaeology coursework. At least two of these courses must be at the 4000 level and taken with different faculty members.
- 3 of the 24 units may be at the 2000 level or above. Non-Sam Fox students may instead substitute one studio art course at any level of 3 or more credits (taken at Washington University or at another institution with prior permission). The studio course option, which can be taken Pass/No Pass at Washington University, is meant to encourage a student's exploration and understanding of the practice of making art. We strongly encourage students to take studio art courses above and beyond all requirements for the art history major.
- Any course taken outside the university, including study abroad courses, must receive preliminary approval from the study abroad advisor, as appropriate. Only two courses (6 credits) can be transferred into the major.
- No internship credit may be applied to the major (internship credits do count toward graduation, however).
- Courses for the major may not be taken with the Pass/No Pass credit option (with the exception of the one studio art course).

Distribution and Credit

Majors must take at least one upper-level course in three of the following seven broad areas:

- Ancient and Medieval (AM)
- Renaissance and Baroque (RB)
- Modern European and American (MEA)
- Non-Western (NW)
- Architecture (A)
- Archaeology (ARC)
- Cross-Cultural Exchange (CCE)

All 2000-level lecture courses may count toward distribution requirements.

Capstone Experience

Seminars are considered the capstone experience for majors in Art History & Archaeology. Seminars are listed as 4000-level courses. They consist of small enrollments, and they focus on discussion and research projects. Majors must take two seminars that are home-based in the Department of Art History & Archaeology. (Cross-listed courses based in other departments or schools, even if they are listed as 4000-level courses, may count toward the major but will not count as seminars for this purpose). Lecture courses at the 3000 level usually serve as prerequisites for seminars. The two required seminars should be taken with different faculty members, although the courses may both be

in the same distribution area. Seminars are usually taken during the senior year, but they may also be taken during the junior year if the student has the preparation appropriate for the course. We recommend that only one seminar be taken at a time. **Note:** Neither ARTARCH 4998 Honors Art History nor ARTARCH 4013 The Digital Art Historian fulfill the seminar requirement. ARTARCH 4977 Independent Study and Research only fulfills the seminar requirement if taken as part of the Greenberg Undergraduate Curatorial Fellowship.

Languages and Fine Arts

Students contemplating graduate study in Art History & Archaeology are urged to complete significant coursework in foreign languages. There is no specific language requirement for the undergraduate major; however, we encourage minors in foreign languages or double majors in foreign languages and Art History & Archaeology.

Additional Information

Internships

Internships in the curatorial and education departments of local museums, arts organizations, and commercial galleries are available to undergraduate Art History & Archaeology majors. Students may enroll in up to 6 credit units of a voluntary or paid internship. Such internships provide invaluable experience and may help lead to employment opportunities after graduation. These internship credits are Pass/No Pass and cannot be counted toward the major, but they do count toward general graduation credits. Students seeking academic credit should make arrangements with the department before the internship begins. Students may pursue up to 6 units of internship credit working in the arts community. Please review the Guidelines for Art History & Archaeology Majors Considering Internships (PDF) for further details.

Study Abroad

Students interested in a study abroad program should consult with both the departmental study abroad advisor and Overseas Programs as early as possible. Summer, semester, and year-long programs are all possible. Majors are expected to take their two capstone seminars on campus, usually during the senior year. On occasion, a seminar of exceptional rigor — such as those at Utrecht University, in particular — may be proposed as a substitute. However, the credit will only be granted once the course is complete and the syllabus and research paper(s) have been reviewed and approved by the study abroad advisor (and perhaps by relevant faculty). Students are advised that they should not assume that any seminar course taken while on study abroad will count toward this requirement when planning their course program. Students are further reminded that at least 15 credits of their major coursework must be completed in residence at Washington University and that the final 30 units of their BA degree must be earned on campus as well.

Distinction in the Interdisciplinary Study of Art History and Archaeology

For students completing double majors in Arts & Sciences (e.g., Art History and German), it is now possible to be advised by a committee comprised of a faculty mentor within Art History and a second mentor from the department or program in which the student is carrying the second major. The student will then be granted Departmental Distinction in the Interdisciplinary Study of Art History and Archaeology (or High or Highest Distinction). This title will be included as a prize on the commencement program, and it will appear on the student's transcript.

Latin Honors

Exceptional students may be considered for Latin Honors in the major. Honors in Art History & Archaeology will be awarded to seniors who have completed the major with a grade point average of 3.65 or better in advanced (3000- and 4000-level) courses in the major; who have achieved at least a 3.65 overall cumulative GPA; and who have satisfactorily completed the honors thesis outlined in the Guidelines for Latin Honors in Art History & Archaeology. Interested students should begin discussing topics with potential faculty advisors before the end of their junior year. Latin Honors are assigned by the College of Arts & Sciences and not by the department. For details, please consult the Undergraduate Honors Guidelines on the departmental website.

The Senior Honors Thesis is conducted over the course of the academic year under the supervision of a faculty member and entails the completion of two independent courses. In the fall, the student enrolls in ARTARCH 4998. With the permission of the student's thesis advisor, the student will complete the thesis in the spring, enrolling again in ARTARCH 4998. Only one semester of ARTARCH 4998 (3 units) counts toward the 24 upper-level credit requirements, and it does not fulfill either of the two capstone seminar courses. The second semester of ARTARCH 4998 is taken as an additional course beyond the usual major requirements; students writing the Honors Thesis complete a total of 33 credits for the major rather than the typical 30 credits. Students planning to write a Senior Honors Thesis should make every effort to complete one 4000-level seminar course by the end of their junior year.

Departmental Prizes

- Art History and Archaeology Award for Excellence in Mentorship
- Mark S. Weil Prize for Distinction in Art History and Museum Practice
- Murphy Family Prize for an Outstanding Essay in Art History and Archaeology
- Murphy Family Prize for an Outstanding Thesis in Art History and Archaeology
- Princeton University Book Prize for Distinction in Art History and Museum Practice

Art History and Archaeology Minor

Program Requirements

- **Total Units Required:** 18
- **Grade Requirement:** These courses may not be taken with the Pass/No Pass grading option. Students must earn a grade of C– or better in all courses.

The Department of Art History & Archaeology welcomes students who wish to pursue a minor in Art History & Archaeology. Students who choose the minor must complete two courses at the introductory level and four courses at the advanced level.

Required Courses

Code	Title	Units
Introductory courses		6
Upper-level courses		12

Introductory Courses

All minors must take two courses from a menu of Introductory Courses at the 1000 and 2000 levels. These courses are recommended foundations for upper-level lecture courses and seminars. The courses may be taken at any time and in any order. First-Year Seminars and Sophomore Seminars can be counted among these two introductory courses.* No specific course is mandatory for students in Arts & Sciences.**

- ARTARCH 1515*** and ARTARCH 2020 will be offered every fall and spring, respectively.
- ARTARCH 1510, ARTARCH 2035, or ARTARCH 2040 will be offered at least once every other year.
- This list will be augmented by a rotation of 1000-level First-Year Seminars and 2000-level Sophomore Seminars (currently in development) as well as other 2000-level courses with broad regional, temporal, or topical coverage.*

* Students will be allowed to count only one First-Year Seminar or one Sophomore Seminar toward this requirement.

** ARTARCH 1515 and ARTARCH 2020 are mandatory only for students in the Sam Fox School.

*** A score of 4 or 5 on the AP Art History exam may be substituted for ARTARCH 1515. To receive this college credit, the score must appear on the student's Washington University student record, and the student must also earn at least a B in a related upper-division departmental course.

Upper-Level Courses

Minors must take at least four upper-level (3000- or 4000-level) Art History & Archaeology courses (12 credits); 2000-level courses may not substitute for upper-level courses and so do not count toward distribution requirements. At least one upper-level course must be taken in two of the following seven broad areas:

- Ancient and Medieval (AM)
- Renaissance and Baroque (RB)
- Modern European and American (MEA)
- Non-Western (NW)
- Architecture (A)
- Archaeology (ARC)
- Cross-Cultural Exchange (CCE)

Additional Information

- Students may opt to take a seminar at the 4000 level, but it should build upon a 3000-level course in a related field. Alternatively, students should complete the proper prerequisites or have the permission of the instructor. In cases of over-enrollment in seminars, priority will be given to majors over minors, including majors who have been waitlisted.
- Courses in other departments (including courses in the Sam Fox School) do not count toward the minor unless they are cross-listed as Art History & Archaeology courses at the 3000 level or above.
- At least two of the 3000-level courses must be completed in residence at Washington University.
- Any course taken outside the university, including study abroad courses, must receive preliminary approval from the study abroad advisor or as appropriate. Only one course (3 credits) may be transferred from approved study abroad programs.
- No internship credit may be applied to the minor. (Internship credits do count toward graduation, however.)

Biology

Biology is an exciting, diverse field that ranges from the molecular biology of individual cells to interactions among entire populations of organisms. Members of the biology faculty are recognized internationally for their research, and they bring a variety of strengths and teaching styles into the classroom. The major program in biology provides a thorough education in the history of scientific discovery in biology, the logical and statistical procedures used to formulate and test biological hypotheses, and the technical skills needed to conduct contemporary biological research.

The biology major program emphasizes the hierarchical nature of biological complexity and the major structures and functions that emerge at the molecular, cellular, organismal, populational and ecosystem levels. Each student masters at least one dimension of contemporary research in sufficient detail to describe the major hypotheses currently being tested and to demonstrate techniques used to test those hypotheses. Mastery of this material is evident in a student's ability to critique published data, to identify ambiguities and uncertainties in the conclusions drawn from those data, and to evaluate the societal importance of the research. Biology majors are prepared to make creative contributions to biology.

The biology major program provides a wide range of research opportunities. Because more than 400 faculty members conduct research in biology and biomedical sciences at Washington University, it is easy to find a project that suits a student's main interests. Many students complete their research projects at the Washington University School of Medicine, one of the top-ranked medical schools in the country. Summer research fellowship programs are available, funded by sources including the Howard Hughes Medical Institute, the Children's Discovery Institute, the National Science Foundation, and the Washington University Office of Undergraduate Research. Detailed information about finding a research mentor is available online.

- Biology Minor (p. 351)

Courses

BIOL 1000 An Introduction to Biology
A one-semester introduction to the principles of biology, designed for students with little or no formal background in the biological sciences. Focus on basic principles of cell biology, genetics, evolution, and ecology. Current public concerns such as AIDS, cancer, and genetic engineering considered in light of these principles. Not intended for students expecting to major in biology or planning to enter health fields. A student may not receive credit for both Bio 100A and 303A.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall, Spring, Summer

BIOL 1010 Principles of Zoology
Introduction to the major principles of zoology with examples drawn from the diversity of the animal kingdom. Topics include principles of Darwinian evolution, systematics, cellular organization, chromosomal theory of inheritance, and molecular genetics. This course is open to students in the Freshman Summer Academic Program only.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Summer

BIOL 1020 Biology of the Brain
Course Has moved to L41 120 This course is for students who wish to learn about the biology of the nervous system, and the scientific process of understanding how it works. Biology of the Brain will include lecture, discussion, and analysis of cutting edge research, so active participation will be important. We will discuss the gross anatomy and cellular composition of the brain. We will analyze how the brain develops, changes with experience to create memories, and recovers from injury. Along the way, we will discuss nervous system dysfunction a range of contexts such as Addiction, Alzheimer's disease, and Parkinson's disease. This course counts as a Natural Science and Mathematics (NSM) distribution requirement.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Summer

BIOL 1103 Topics in Biology: Cancer
Credit 3 units. A&S IQ: NSM
Typical periods offered: Summer

BIOL 1112 First-Year Seminar: Introduction to Problem-Based Learning in Biology
In this course, students take responsibility for their own active, inquiry-based learning on biological problems. Instructors will guide small groups of 8-10 students in researching issues of biological importance using primary literature as their principal resource. Learning to read and interpret research articles from scientific literature is emphasized. Topics covered in this class have included: neurological disorders, infectious diseases, CRISPR, cancer, and stem cell therapy among others. Students should have a strong background in general biology. They will be challenged to use critical and creative thinking in both independent and group work. Enrollment limited. Intended for but not limited to prospective biology majors. Prerequisite: high school biology, preferably an Honors or AP class. Course is for first-year, non-transfer students only.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall, Summer

BIOL 1122 First Year Seminar: Introduction to Critical Thinking
Official description: This course is for first-year, non-transfer students only. This course uses thought-provoking questions in biology to develop analytical skills, at the same time understanding what level of content is needed to address such questions. Each class will involve discussion of the questions as well as lecture material as background. It will thus provide an early exposure and springboard into the translation of biology content to problem-solving. The skills learned will be applicable to future challenges The course focuses on molecular biology and processes central to all organisms on earth. The last component of the course will focus on microbiological research, gaining knowledge of the research enterprise to generate new knowledge and the primary literature (published manuscripts). Prerequisite: Limited to 10 students. Freshman with an interest in

biology career (e.g. graduate or health professions). The course is also designed to help students prepare for Biology 2960, which is offered each spring semester. Intended for students without strong AP Biology preparation, which is helpful for success in Biology 2960. Credit 3 units.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

BIOL 1123 Special Topics in Biology: Plant-Microbe Interactions
This is a research-based laboratory course offered by Dr. Barbara Kunkel in the Biology Department. The small class size and laboratory setting of the course is intended to foster development of student-professor mentoring relationships. Time commitment (weekly): 2 hours in lab, 1 hour of discussion (1 unit, P/F). Class size: 4 students Prerequisite: Permission of Instructor Research Question. Microbial organisms play very important roles in the lives of plants and animals. For example, in nature as well as in agricultural settings, the communities of microorganisms that grow near or on plants influence the growth and overall health of these plants. These plant-associated microbial communities are highly complex, and are comprised of thousands of different species, including bacteria and fungi. However, neither the role of individual microbial species within the larger microbial community, nor how such a community is beneficial to plants, is well understood. Each year the students in Bio1771 explore a different topic related to interactions between plants and their associated microbes. During the 2020/2021 academic year our research will focus on virulence mechanisms used by the plant pathogen Pseudomonas syringae to promote disease in plants. Recent research in the Kunkel lab has revealed that the plant hormone auxin promotes disease development in interactions between P. syringae strain PtoDC3000 and one of its host, Arabidopsis thaliana, a weedy plant in the mustard family. Auxin acts through at least two different mechanisms to promote disease, including 1) suppressing defense responses in the plant and 2) regulating gene expression in the pathogen. We will investigate this second activity by screening for and characterizing PtoDC3000 mutants that do not properly respond to auxin. Students will spend two hours per week in lab carrying out bacteriological and molecular biology experiments. Over the course of the semester, students will be exposed to a variety of fundamental topics in biology, including: bacteriology, plant growth and development, pathogenic plant-microbe interactions, and key concepts in genetics, molecular biology and biochemistry. The students will also meet with Dr. Kunkel for one hour per week to discuss a variety of topics chosen to explore: i) basic concepts in chemistry, biochemistry and molecular biology, ii) learning and study strategies, and iii) other topics related to thriving at WUSTL.
Credit 1 unit.
Typical periods offered: Spring

BIOL 1171 First-Year Opportunity: Neuroscience Futures 1: How Do We Learn About the Brain?
In this seminar course for first-year students, students learn about how neurobiologists conduct and communicate research. We focus our discussion on primary research papers written by neurobiologists. Discussion then focuses on the formulation of scientific questions, evaluation of evidence, and interpreting data within the context of a broader field. Course is for first-year, non-transfer students only. Must be taken Credit/No Credit.
Credit 1 unit. A&S IQ: NSM Art: NSM
Typical periods offered: Fall, Spring

BIOL 1210 Ampersand: The Science of Biotechnology
Biotechnology is truly interdisciplinary, incorporating a myriad of pieces from biology, chemistry, engineering, physics, computer sciences, management, public policy, and law that apply the scientific process to societal challenges. This course introduces topics for science and engineering majors with an interest in biotech, and it teaches scientific concepts to business students considering careers in biotech management and entrepreneurship. Students whoi complete Biol 2010 understand key science concepts, how discoveries lead to applications addressing global challenges, how to effectively use a variety of resources to explore connections between science and biotech business, how to synthesize information from different fields, and how to exhibit strong teamwork skills and communicate information in written and oral forms. This course also provides a gateway for students interested in the two-year Biotech Explorers Program (BEP). The first two weeks of the course introduce students to the history of biotechnology, the BEP, and the use of case studies. The remainder of the course uses a series of four three-week units that combine lecture material, in-class group assignments, and readings to introduce the science and scope of biotechnology. For each unit, student teams also develop short case studies of St. Louis biotech companies and present their findings to the class. A series of site visits introduce students to the vibrant St. Louis biotech community. This course is for students in the Biotech Explorers Program only.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

BIOL 1211 Ampersand: Biotechnology Entrepreneurs Seminar
Although the biotech industry is science-based, the risks of product and technology development, legal issues, and market pressures make the landscape full of uncertainty. Lectures and textbooks fall short of delivering true insight about the process and challenges of bringing ideas to real-world products. This second semester freshman seminar course is designed to develop an appreciation of how biotech companies achieve their goals by engaging students through interactions with experienced executives and entrepreneurs, whose shared knowledge and stories add depth and context to the learning process. This 1 credit seminar course introduces students to the basics of innovation and entrepreneurship as a framework for marketable discoveries, builds an appreciation of how biotech companies start, obtain funding, and navigate intellectual property, provides an overview of career options in biotech, and insight on the hiring process. Pre-requiste: Students need to have completed Bio2010: The Science of Biotechnology for enrollment in this course and be currently enrolled in Bio2960: Principles of Biology I. Limited to 20 students.
Credit 1 unit.
Typical periods offered: Spring

BIOL 1212 uSTAR Seminar
This seminar course is designed for students who are part of the uSTAR Program at Washington University. The course will provide a formal setting to guide this population into becoming successful researchers in the academic community, with an additional goal of increasing their PhD pursuits. Students in the course will be exposed to scholarly discussions through student-selected journal readings. The course will discuss the different approaches taken to scientific inquiry and the dissemination of knowledge, in addition to the topic of integrity in research and important ethical issues that impact scientific investigation. Students will be exposed to topics relating not only to their area of study but to that of their peers as well. Student presentations on both scholarly journal readings and their own research will enable them to develop the ability to effectively communicate research to a broad audience. From this course, the uSTAR students will develop the skills to read, understand and critically evaluate publications, and they will build a broad understanding of research in multiple fields within the natural sciences. Students will also come away with a greater understanding of the ethical issues that face the scientific community on a daily basis.
Credit 1 unit.
Typical periods offered: Fall, Spring

BIOL 1213 Research Seminar for Vagelos Fellows
The course will orient Fellows to the specific research environment of their labs and provide them tools to succeed. It will feature short seminars from world-renowned DBBS faculty and DBBS alums. Speakers will emphasize both their science and their career route into academic research, including challenges. This will expose students to multiple paths into and academic careers associated with biosciences graduate training. Diverse speakers will emphasize the desirability and attainability of research training and careers. This course will also include information on the research enterprise, mentorship expectations, rigorous experimental design, quantitative thinking, techniques, rigorous analysis, posing a scientific question, and communication skills. 2.0 units
Credit 2 units. A&S IQ: NSM
Typical periods offered: Spring

BIOL 1260 First-Year Seminar: The Secret Lives of Plants
This course is designed to familiarize undergraduate students with the fascinating lives of plants, their evolution, their remarkable structural and morphological diversity, how they grow, and how they have been modified to feed the planet. Topics include: how plants can survive with just water, minerals and light, how they transport water astonishing distances, their unusual sex lives, why they make seeds, how they can grow nearly forever, how plants survive extreme environments without running to hide, why they synthesize caffeine, nicotine, THC and opiates, how they defend themselves from pathogens without an immune system, how they sense their environment without dedicated sensory organs, how plants have been modified by humans to provide food, fiber and fuel, and how genetically modified (GMO) crops are made and their implications to the environment and society. Overall goals are to enhance an understanding and appreciation of the plant kingdom, to help young scientists understand the primary scientific literature, and as a starting point for possible careers in plant biology. Class includes field trips to the Missouri Botanical Gardens and a local plant biotech company/institute. Where appropriate, the class will also emphasize key differences between plants and animals. This course is primarily for first-year students interested in majoring in biology, with a possible emphasis on plants. This course is also for those that want to know more about where their food comes from, how these amazing creatures survive and flourish, and how GMO crops are engineered. Upper-level students with an interest in food and sustainable agriculture but not necessarily focusing on plants will also be welcome. Course will be lecture/discussion/hands-on format for 2 of the 3 hours per week. Students will present 20-minute papers discussing topics relevant to their interests for the remaining 1 hour (two students per class). Prerequisites: Students must have taken both biology and chemistry in high school and at least one at the AP or IP levels; or have taken Bio 2960 or Chem 111/112. This course can be taken by both first-year and upper-level undergraduates with a preference given to first-year students.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

BIOL 1442 Ampersand: The Biology of Cancer Part I
Cancer is the second-leading cause of death worldwide. In spite of focused research efforts, cancer still poses a unique biomedical puzzle as it is now recognized that cancer is not a single disease, but rather a collection of many disorders with underlying mechanistic complexities that can affect most tissues in the human body. This interactive 1st-semester course provides an introductory overview of the biology of human cancers. We touch upon background topics in DNA structure and replication, gene regulation and transcription, protein synthesis, mutations and DNA repair, but the primary focus is on the genetic and molecular changes that normal cells undergo during transformation into malignant tumors. Part I highlights the first three (of eight) central characteristics of cancer (known as the hallmarks of cancer) - sustained proliferation, evasion of growth suppression, and replicative immortality. The course is a mix of lectures, student-led discussions/presentations, and activities. Lectures provide an overview of each topic, while activities and discussions of cutting-edge oncology topics in the news and primary literature familiarize students with current trends in cancer research as well as enhance reading and critical analysis skills. Students choose a specific topic/theme within the cancer paradigm for further study and near the end of the semester prepare a presentation to the class on the implications for cancer survivorship. Midterm Exams, which attendance is required, will be administered on Wednesday, October 19, 6:30 - 8:30 pm & Wednesday, November 16, 6:30 - 8:30 pm. Prerequisite: High school biology and chemistry, while completing AP or Honors biology is highly recommended. Enrollment is limited to 20 students and restricted to first-year students in the Hallmarks of Cancer & Patient Care program.
Credit 4 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

BIOL 1443 Ampersand: The Biology of Cancer Part II
Cancer is poised to overtake heart disease as the number one cause of death in the United States and represents a significant burden to the U.S. health system. As such, a deeper understanding of the underlying biology of human cancers and their treatment modalities will be important for those pursuing a future in the health sciences. In this interactive 2nd-semester course, we continue our exploration of the "hallmarks of cancer," emphasizing the dysfunction of essential biological processes like cell proliferation, programmed cell death, energy metabolism, and immune surveillance. Classical diagnosis and treatment methods are compared with newer strategies, such as targeted and immune therapies. Finally, the growing role of personalized medicine and "omics" technologies in tumor classification, patient prognosis, and therapy are discussed. The course is a mix of lectures, student-led discussions/presentations, and activities. Lectures provide an overview of each topic, while activities and discussions of cutting-edge oncology topics in the news and primary literature familiarize students with current trends in cancer research/treatment as well as enhance reading and critical analysis skills. Students choose a specific type of cancer for further study and near the end of the semester prepare a presentation to the class on its molecular and cellular etiology, epidemiology, pathology, diagnosis, and current/future treatment options.
Credit 4 units. A&S IQ: NSM
Typical periods offered: Fall, Spring

BIOL 1444 Ampersand: The Language of Cancer
Cancer as a disease has touched countless people in every country and every lifestyle. Cancer is not one single disease; rather, it is a collective scourge of many underlying disorders. Over the years, biomedical research has led to a fuller understanding of cancer etiology and spawned new diagnostic and treatment strategies to better manage and treat this condition. More recently, the launch of the Precision Medicine Initiative by the National Cancer Institute has led to unprecedented insights into the cellular signaling pathways that drive the development and progression of cancer. Furthermore, the current onset of omics technology and high-throughput biological readouts has opened the possibility of precisely identifying molecular changes and affected metabolic pathways in individual cancers, paving the way for precision medicine and patient care. In this second semester, we will build upon our foundational understanding of cancer and explore recent and groundbreaking advances in cancer research and therapies. The course is driven largely by student-led presentations and discussions with a mix of faculty lectures and guest seminars. Students work in teams and take responsibility for their own active, inquiry-based learning by examining various cancer topics using primary literature as the principle resource. Learning to read, interpret, and assemble a presentation from scientific literature and biomedical research is emphasized. Student teams choose a hypothesis-driven topic of interest in the field of oncology for further study and, near the

end of the semester. prepare a written report and oral presentation to the class outlining its background, central hypothesis-driven question(s), experimental rationale/strategy, research data, scientific conclusion, and future direction. Prerequisite: BIOL 144. Enrollment is limited to students in the Hallmarks of Cancer & Patient Care program. Limited to 20 students.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Fall, Spring

BIOL 1499 First-Year Opportunity: Molecular Biology of Genetic Disease

This course is for first-year, non-transfer students only. Students gain a fluency in biological language, methods, and reasoning as applied to human health. We study the molecular, cellular, and physiological perspectives for each health-related topic, and examine data and methods that support this knowledge. We emphasize problem-solving and reasoning as it applies to understanding biological processes. The content and problem-solving work are designed to help students prepare for Biology 2960, which is offered each spring semester. Intended for students without strong AP Biology preparation, which is helpful for success in Biology 2960

Credit 2 units. A&S IQ: NSM Art: NSM

Typical periods offered: Fall

BIOL 1530 Special Topics in Biology: Plant-Microbe Interactions

This is a research-based laboratory course offered by Dr. Barbara Kunkel in the Biology Department. The small class size and laboratory setting of the course is intended to foster development of student-professor mentoring relationships. Time commitment (weekly): 2 hours in lab, 1 hour of discussion (1 unit, P/F). Class size: 4 students Prerequisite: Permission of Instructor Research Question. Microbial organisms play very important roles in the lives of plants and animals. For example, in nature as well as in agricultural settings, the communities of microorganisms that grow near or on plants influence the growth and overall health of these plants. These plant-associated microbial communities are highly complex, and are comprised of thousands of different species, including bacteria and fungi. However, neither the role of individual microbial species within the larger microbial community, nor how such a community is beneficial to plants, is well understood. Each year the students in Bio1771 explore a different topic related to interactions between plants and their associated microbes. During the 2020/2021 academic year our research will focus on virulence mechanisms used by the plant pathogen Pseudomonas syringae to promote disease in plants. Recent research in the Kunkel lab has revealed that the plant hormone auxin promotes disease development in interactions between P. syringae strain PtoDC3000 and one of its host, Arabidopsis thaliana, a weedy plant in the mustard family. Auxin acts through at least two different mechanisms to promote disease, including 1) suppressing defense responses in the plant and 2) regulating gene expression in the pathogen. We will investigate this second activity by screening for and characterizing PtoDC3000 mutants that do not properly respond to auxin. Students will spend two hours per week in lab carrying out bacteriological and molecular biology experiments. Over the course of the semester, students will be exposed to a variety of fundamental topics in biology, including: bacteriology, plant growth and development, pathogenic plant-microbe interactions, and key concepts in genetics, molecular biology and biochemistry. The students will also meet with Dr. Kunkel for one hour per week to discuss a variety of topics chosen to explore: i) basic concepts in chemistry, biochemistry and molecular biology, ii) learning and study strategies, and iii) other topics related to thriving at WUSTL.

Credit 1 unit. Art: NSM

Typical periods offered: Fall

BIOL 1531 Biology in the News

Students explore a number of biology topics that are frequently discussed in the media. We begin with an investigation into how to evaluate scientific claims reported in written (e.g., news articles, blogs, social media posts), visual (e.g., YouTube videos, Instagram posts) and audio media (e.g., podcasts). We then explore the topics of genetic modification, GMOs, cloning, and direct-to-consumer home DNA testing kits. Finally, we investigate medical topics, including cancer, vaccines and antibiotic resistance. We emphasize critical thinking and reasoning as it applies to the acceptance or rejection of scientific claims presented in popular media formats. This course is intended for students not majoring in biology and who would like to learn more about scientific topics portrayed in the media as controversial and under debate.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Spring

BIOL 1770 First-Year Opportunity: The Biology of Dog Breeds

This freshman seminar uses the topic of dog behavior and genetics to teach fundamental scientific tools and to engage students in contributing to the building of an online public resource that summarizes the scientific literature on breeds. Our first task is learning to read and dissect primary scientific literature. We parse out the difference between scientific questions, hypotheses, and predictions through a guided case-study exercise. We then apply the experience to outlining primary research articles, identifying the key components of the author's arguments and summarizing the results and implications. The second half of the semester is spent searching the scientific literature, sorting information into the new dog breed resource, and presenting results to peers around the seminar table. Course is for first-year, non-transfer students only.

Credit 2 units. A&S IQ: NSM Art: NSM

Typical periods offered: Fall, Spring

BIOL 1812 First-Year Opportunity: Introduction to Cutting-Edge Research in Biology

A lecture course intended for first-year students that focuses on the practice and culture of biological research. Active researchers describe the biological context of their research, the specific questions they have formulated, the means by which they pursue the answers, and their data and conclusions. The focus is on process: how biologists pursue their profession, what goes on in a research setting. Additional topics of clinical and contemporary interest are often included. Students are expected to attend all lectures. Enrollment is restricted to first-year, non-transfer students.. Must be taken Credit/No Credit.

Credit 1 unit. A&S IQ: NSM Art: NSM

Typical periods offered: Fall

BIOL 1910 Ampersand: Phage Hunters

A research-based laboratory class for first years. Students join a national experiment organized by HHMI, with the goal of isolating and characterizing bacteriophage viruses found in the soil in the St. Louis area. Laboratory work includes isolation and purification of your own phage, DNA isolation and restriction mapping, and EM characterization of your phage. Several WU phage are selected for genome sequencing over winter break, and are annotated in the spring in Bio 192, Phage Bioinformatics. Students who successfully isolate and annotate a phage may become co-authors on a scientific paper. Prereqs: High school courses in biology and chemistry, at least one at the AP or International Baccalaureate level; permission of the instructor. One hour lecture, one hour discussion, and 3 hrs lab per week. Course is for first-year students in the Phage Hunters Program only.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Fall

BIOL 1920 Ampersand: Phage Bioinformatics
A research-based laboratory class for freshmen. Students join a national experiment organized by HHMI, with the goal of genomic characterization of a local phage. Laboratory work focuses on learning computer-based tools for genome analysis followed by annotation and comparative analysis of the genome of a phage (bacterial virus) that was isolated fall semester at WU and sequenced over winter break. Prerequisites: High school courses in biology, chemistry, and physics, at least one at the AP or International Baccalaureate level; permission of the instructor. Limited to 40 students; preference given to those completing Bio 191, Phage Hunters. One hour lecture, one hour discussion, and 3 hrs lab per week.
Credit 3 units. Art: NSM BU: SCI
Typical periods offered: Spring

BIOL 1995 Biology Coursework Completed Abroad
This course is for study abroad credits.
Credit 12 units.
Typical periods offered: Fall, Spring, Summer

BIOL 1996 Elective: 100-Level
This course is for elective or transfer credits.
Credit 3 units.
Typical periods offered: Fall, Spring

BIOL 2111 Nutrition
This introductory course examines nutrition as an interdisciplinary science. Topics include the chemistry, function, and metabolism of nutrients; regulations of food intake; food habits; digestion and absorption of nutrients; methods of determining the nutrient content of foods and nutrient requirements for humans and animals; comparative nutrition; problems of human malnutrition; relation of nutrition to disease; toxic materials in foodstuffs; economic, nutritional, and social problems involved in feeding the world population; and future possibilities for meeting nutritional needs of the world's population.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall, Spring

BIOL 2150 Introduction to Environmental Biology
Introduction to Environmental Biology is designed to teach important principles of environmental biology and general science literacy skills. We cover the foundational biological principles and contemporary issues within four main topics: human population growth, transfer of energy and carbon in the ecosystem, biodiversity, and food production. We focus on the biological principles involved as we examine these topics in the context of some contentious and confusing issues related to environmental biology in everyday life. The science literacy skills that you master in this course will help you address the issues you face in your everyday life regarding scientific and pseudoscientific claims about the environment and society and will form the foundation for your development as a critical consumer of science information in the media. This course is required for all environmental biology majors and environmental studies minors. We recommend you take this course in your first- or second-year if possible. If your interests align and your schedule allows, we recommend co-enrolling in ENST 215: Introduction to Environmental Humanities.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

BIOL 2196 Practical Applications
Credit for an internship in Biology.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

BIOL 2342 Wilderness First Aid
The National Outdoor Leadership School (NOLS) has developed a comprehensive curriculum to instruct individuals in backcountry first aid. This curriculum will be the main content taught in the course. After successfully completing this detailed 18 hour NOLS Wilderness First Aid course, students will be required to write-up a full assessment and treatment plan (5-7 page minimum) for one of the wilderness casualties described in Peter Stark's Last Breath. Students will meet for a half-day seminar during which each will present their case, assessment, underlying physiology, and treatment plan to the group. They will receive feedback from one another, and from the instructor, about their assessment, explanation of the relevant physiology, and action of their proposed intervention.
Credit 1 unit. A&S IQ: NSM
Typical periods offered: Spring

BIOL 2440 Ampersand: The Oncology Healthcare Team
It's news no one wants to hear: You have cancer. A cancer diagnosis can be overwhelming. The physical and emotional effects that come with this disease and its treatment can be significant. People often need the experience and skills of several different medical specialists to navigate and treat cancer. The various medical professionals involved in cancer care make up the oncology healthcare team. In this third-semester course, we will partner with Siteman Cancer Center and its affiliates to explore the multitude of professions that constitute the oncology healthcare team. In bi-weekly rotations, students will be introduced to various aspects of cancer-patient care and treatment through members of the oncology healthcare team, including oncologists, pathologists, surgeons, clinical geneticists, nurses, psychologists, and public health professionals. The course is a mix of guest lectures, discussions, site visits, activities, and shadowing healthcare professionals. Students will reflect on their experiences in weekly journal entries and must submit a final reflection paper that is due at the end of the semester, synthesizing semester experiences with core competencies for individuals desiring to enter a health profession. Prerequisites: Biol 144 and Biol 1441. Enrollment is limited to students in the Hallmarks of Cancer & Patient Care program.
Credit 4 units. A&S IQ: NSM
Typical periods offered: Spring

BIOL 2444 The Language of Cancer
Words matter. This is especially true for the patients (and their families) who hear the diagnosis "cancer," but also so for the physicians who treat these patients, and for the academic researchers who are seeking better treatments. We will begin by considering Illness as Metaphor, the influential 1978 work in which Susan Sontag claims that metaphorical language distorts our understanding of cancer and other illnesses. We will move on to consider both the diction and syntax used with cancer in a sampling of academic papers, creative works, and long-form personal writings. Students will write both analytical and reflective pieces responding to those materials. They will also learn to read, interpret, and assemble presentations from biomedical research. Three presentations over the course of the semester will allow students to develop the skills in oral communication essential to careers in health care.
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Fall

BIOL 2501 Introduction to Biological Reasoning
Students will work to develop a fluency in biological language, methods, and reasoning as applied to human health. We will study the molecular, cellular, and physiological perspectives for each health-related topic. We will zoom in to study processes at the molecular level, swing back out again to examine processes at the cell or physiological level, and examine data and methods that support this knowledge.

We will emphasize problem-solving and reasoning as they apply to understanding biological processes. This course is for first-year students only. It does not count for credit toward the biology major. Permission of instructor(s) required. Medium-sized class.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Spring

BIOL 2650 Summer Experiences in Life Sciences
Earn credit for clinical research and other non-classroom learning in the life sciences during the summer. The variety of activities arranged by the student with their WashU faculty mentor have included but are not limited to: participation in clinical research or applied ecological research and report on it; shadow a physician on rounds or in clinic; prepare a paper on an organ system or disease; participate in science outreach teaching, etc. Participants must meet regularly with the faculty mentor or designee and commit to at least 140 hours over two semesters. An application is required each semester which includes a work plan, that must approved prior to registration. A semester Summary Report is due after one semester and a Final Summary Report after two semesters. Bio 265 does not count toward the Biology major/minor. Credit: 1.5 units per semester, contingent upon completion of two semesters. For more information and to access the application, please go to: https://sites.wustl.edu/bio265/. Students are registered by the Biology department after faculty mentor and course master approval is granted. Summer Application Deadline - First Friday of June. Credit/No Credit only.
Credit 1.5 units.
Typical periods offered: Fall

BIOL 2651 MedPrep I-The Lecture Series
MedPrep I (Bio 2651) is a unique lecture series taught by a physician, former medical school course master and member of the Committee on Admissions for the School of Medicine. Through a weekly 2-hour lecture, this course gives students accurate, honest, and detailed information regarding every step of the application and admissions process to medical school, the entire educational process including medical school and residency training and pros and cons of life of a physician. MedPrep I is particularly useful for first-year students and sophomores in that it reviews the common pitfalls encountered by unsuccessful applicants to medical school and outlines the steps to take in each year of college to be a successful applicant when the time comes. There is no outside course work and no exams. Attendance at all classes is required. There is a $10 course fee used for guest speakers stipends, guest speaker travel to St. Louis, AV needs and other course-related items. For more information, please see the MedPrep website: medprep.wustl.edu
Credit 1 unit.
Typical periods offered: Fall, Spring

BIOL 2661 Experience in the Life Sciences
Earn credit for non-classroom learning in the life sciences in a variety of activities arranged by the student: accompany a WU Faculty physician on rounds and prepare a paper on an organ system or disease, participate in a clinical or applied ecological study and report on it, participate in science outreach teaching, etc. Participants must meet regularly with a supervisor and commit at least 140 hours over two semesters. A work plan is approved prior to registration. A progress report is due after one semester and a final paper after two semesters. Does not count toward the major. Credit: 1.5 units per semester, contingent upon completion of two semesters. For more information on registration, please see: https://sites.wustl.edu/bio265/. Students are registered by the department after approval is granted. Credit/No Credit only. Course Master: Dr. Joan Downey
Credit 1.5 units.
Typical periods offered: Fall, Spring

BIOL 2900 Directed Research in Biology
Introduces first-years and sophomores to research by engaging them in ongoing faculty research projects within the department. Under the direction of a faculty mentor, students take part in tasks that contribute to the mentor's research. Through this hands-on experience, students learn about the research process and build foundational research skills that can benefit their future academic experience and development. Faculty mentors provide regular guidance, training, and feedback to support students' understanding and growth. Students are registered by the department after approval from the faculty member leading the research project. The course may be taken for 1-3 credit hours based on the weekly hours required. Credit/No Credit only
Credit 3 units.

BIOL 2901 Introduction to Research
An introduction to laboratory and field research in biology for first and second year students. Students work under the supervision of a mentor in a setting of established, ongoing research. Prerequisite: less than 60 units completed, permission of mentor and the department. For on-line enrollment instructions see: https://pages.wustl.edu/Bio_200-500_independent_research/register Students are registered by the department after approval is granted. Registration may not appear in Webstac until mid-semester. Pass/No Pass Only. Course may not be taken for a letter grade.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall, Spring

BIOL 2902 Introduction to Research in Neuroscience
This course provides an introduction to research in neuroscience under the supervision of a faculty mentor. Students work under the supervision of a mentor in a setting of established, ongoing research. Prerequisite: less than 60 units completed and permission of the mentor and the department. For online enrollment instructions, visit https://sites.wustl.edu/bio200500independentresearch/. Students are registered by the department after approval is granted. Registration may not appear in WebSTAC until mid-semester. Pass/No Pass Only. Course may not be taken for a letter grade.
Credit 3 units.
Typical periods offered: Fall, Spring

BIOL 2903 Summer Introduction to Research
Summer research under the supervision of a faculty mentor. Prerequisites: first-year or sophomore standing and permission of mentor and the department. Credit to be determined in each case, usually 3 units/summer; may be repeated for credit in different summers. Credits are received in the fall semester following the summer research. The application deadline and registration information can be found on the Bio 200/500 course website: https://pages.wustl.edu/Bio_200-500_independent_research. Pass/No Pass Only. Course may not be taken for a letter grade. 1-3 units
Credit 3 units. A&S IQ: NSM
Typical periods offered: Fall

BIOL 2904 Summer Introduction to Research in Neuroscience
Summer research in neuroscience under the supervision of a faculty mentor. Prerequisites: first-year or sophomore standing and permission of the mentor and the department. Credit to be determined in each case, usually 3 units/summer. Course may be repeated for credit in different summers. Credits are received in the fall semester following the summer research. The application deadline and registration information can be found on the Biol 200/500 course website: https://sites.wustl.edu/bio200500independentresearch. Pass/No Pass Only. Course may not be taken for a letter grade.
Credit 3 units.

Typical periods offered: Fall

BIOL 2959 MedPrep III - Emergency Care Technician

MedPrep III (Bio 2659) is a new shadowing course that will take place on the inpatient wards of Barnes- Jewish Hospital, the main teaching hospital of the Washington University School of Medicine. For four hours every other week, students shadow physicians on a specialty service and will remain with that service for the duration of the semester. Students will have the opportunity to rank order their preference of specialty but will be assigned based on availability. No guarantees can be made to place a student in their most preferred specialty. In order to participate, students must have one morning a week that they are completely free between 6 am-12 pm. In addition to shadowing, there is a required class session every Wednesday from 6:30-7:30 pm. Because of the orientation material presented, excused absences will not be granted for the first two sessions for any reason whatsoever, including illness or emergency. There is no outside course work and no exams. A $25 course fee as well as HIPAA training and TB testing are required. For more information and to register for this course, please see the MedPrep website at pages.wustl.edu/medprep. Registration is done through the MedPrep website, NOT through WebSTAC. Successful completion of MedPrep I (Bio 2651) and sophomore standing or above are required to take Bio 2659. This course is only offered during the Fall and Spring semesters.

Credit 1 unit.

Typical periods offered: Spring

BIOL 2960 Principles of Biology I

An introduction to biological molecules and biochemical strategies employed by the three domains of life. The flow of genetic information within cells is discussed in the context of cellular structure, organization, and function. Investigation and manipulation of genetic information by molecular genetic technologies, such as recombinant DNA, forms the final phase of the course. Labs reinforce concepts from lectures and explore common laboratory techniques and computer-based resources. Prerequisites: Chem 111 and Chem 112 (concurrently).

Credit 4 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Spring, Summer

BIOL 2963 Biology Team Learning for Bio 2960 (BTL)

Bio 2960, Principles of Biology 1, focuses on critical thinking, analysis and problem solving for biology topics. Many students have not approached biology this way in highschool courses. Participation in BTL is designed to help students learn and practice the course material using concept building and critical thinking. Group work on problem solving is emphasized. In-person instruction. Prerequisites: Concurrent enrollment in Bio 2960.1 CR P/F

Credit 1 unit.

Typical periods offered: Spring

BIOL 2964 MedPrep II - The Shadowing Experience: Emergency Medicine

MedPrep II offers students a real world, behind-the-scenes experience of a life in medicine. For three hours every other week, students shadow physicians in the Charles F. Knight Emergency and Trauma Center of Barnes-Jewish Hospital, the main teaching hospital of the Washington University School of Medicine. In addition to the shadowing, there is a required class session every Monday from 5:30-6:20 pm. Because of the orientation material presented, excused absences will not be granted for the first session (special orientation that is 1.5--2 hours) for any reason whatsoever, including illness or emergency. There is no outside course work and no exams. A $25 course fee for MedPrep shirt and other course related items (e.g. AV items and other course-related items) as well as HIPAA training and PPD testing are required. For more information and to register for this course, please see the MedPrep website at medprep.wustl.edu. Registration is done through the website, NOT through Workday. Please do not submit override requests in Workday. You will be manually enrolled after you complete the requirements.

Credit 1 unit.

Typical periods offered: Fall, Spring

BIOL 2965 Pediatric Emergency Medicine Research Associates Program: Experiences in Life Sciences

The Pediatric Emergency Medicine Research Associates Program (PEMRAP) offers undergraduate pre-medical students an opportunity to participate in clinical, patient-oriented research projects in a hospital setting. Students have the opportunity to work in the St. Louis Children's Hospital Emergency Department, a nationally recognized pediatric emergency medicine and trauma care facility. A number of research projects are currently underway in various areas of pediatric emergency medicine. Research Associates are expected to work two 4-hour shifts per week in the St. Louis Children's Hospital Emergency Department and to attend a weekly 2-hour lecture on Tuesdays from 1:30-3:30pm in Conference Room 10A of the Northwest Tower Building (across from Children's Hospital). Lectures are given by Emergency Department faculty members. This program offers students the unique opportunity to be a vital part of the ED research team. In addition, the RA's experience in the ED may help him/her determine if medicine is truly the career path he/she wishes to choose. Registration is done through this website: http://pediatrics.wustl.edu/pemrap. May not be taken concurrently with Bio 2654: MEDPREP II.

Credit 3 units.

Typical periods offered: Fall, Spring

BIOL 2966 Introduction to Health Professions: Audiology, Occupational Therapy, Pharmacy, and Physical Therapy

This course provides students interested in health professions with an overview of occupational therapy, physical therapy, audiology, and pharmacy. Students gain a better understanding of the scope of practice, markets, and skills required to succeed in these professions. Students learn about graduate and professional education options and how to build a competitive application for these programs. Finally, students participate in self-directed learning experiences (which may include in-person or virtual shadowing, attending professional presentations, meeting with health care professionals or graduate students, or sitting in on graduate-level classes) and culminate their study with an inter-professional education session with a panel of faculty from the different health professions. Students finish the course with a better understanding of whether a career in health professions is right for them.

Credit 1 unit.

Typical periods offered: Spring

BIOL 2967 Collaborative Phage Bioinformatics

A research-based laboratory for those enrolled in Bio 2960, this class provides an opportunity to join a research team with the goal of genomic characterization of a locally isolated phage (a virus that infects a bacterial host). Similar to Bio 192, but using a condensed format and a larger team to tackle each phage. Lab work focuses on learning computer-based tools for genome analysis, followed by careful annotation of several genes from your phage and in-depth investigation of one gene. Requires concurrent enrollment in Bio 2960 Principles of Biology I; not open to students enrolled in Bio 192. One 2-hr pre-class online review/preparation session, nine 2-hr laboratory sessions, and a final poster presentation. (Lab does not meet in weeks with a scheduled Bio 2960 midterm.) May be taken for a letter grade or Credit/No Credit.

Credit 1 unit. A&S IQ: NSM Art: NSM

Typical periods offered: Spring

BIOL 2968 Pediatric Emergency Medicine Research Associates Program - Experiences in Life Sciences (PEMRAP II)

PEMRAP II is a continuation of Bio 2652, Pediatric Emergency Medicine Research Associates Program - Experiences in Life Sciences. Returning PEMRAP Research Associates (RAs) actively participate in new and ongoing research projects in various areas of pediatric emergency medicine. RAs assist during the active period of patient enrollment through screening of ED patients for study eligibility, reading information about the studies to the patients, collecting data regarding patient history and certain physical examination findings, and generally facilitating the study enrollment process. PEMRAP Returning RAs are vital members of the Emergency Department research team in the St. Louis Children's Hospital Emergency Department. Returning RAs assist in training and mentoring incoming PEMRAP students (BIO 2652) in ED protocol, work approximately one 4-hour shift per week in the ED, record shift activities and hours worked on a daily Shift Log form, and participate in the physician shadowing program (as offered). Returning RAs are responsible to meet hospital non-appointee requirements and stay current with new study protocols by attending or viewing new study presentations for PEMRAP students. These lectures are given by Pediatric Department faculty members introducing the basics of the clinical research process, specific studies, as well as pediatric illness. The RA position carries with it important responsibility requiring maturity, initiative, diligence and excellent interpersonal skills. There is no outside course work and no exams. Full participation is required. 45 shift hours = 1 credit Students may repeat this course for a maximum of 6 credits. Course may not be taken concurrently with Bio 2651, 2652, or 2654.

Credit 2 units.

Typical periods offered: Fall, Spring

BIOL 2969 Biomolecules in the Third Dimension

A computer-based laboratory for students enrolled in Bio 2960. This class gives students the opportunity to to learn biology in a new way. Students are exposed to experimental data and software visualization tools currently used in cutting edge research. Each week, biomolecules presented in Bio 2960 lecture will downloaded, viewed and manipulated in 3D using the molecular viewer PyMOL. Students will be able to study molecular interactions in greater depth than is possible in lecture. Ultimately, the laboratory is designed to help students develop their visuospatial thinking skills and to gain a deeper understanding of the macromolecules discussed in lecture. The class is highly recommended to students who identify themselves as visual/interactive learners. Topics include: protein and nucleic acid structure, signal transduction, energy transfer, replication, transcription and translation. Requires concurrent enrollment in Bio 2960 Principles of Biology I. Lab does not meet in weeks with a biology exam. Class taken for Credit/No Credit. Credit 1 unit. C. Smith, K. Hafer

Credit 1 unit. A&S IQ: NSM Art: NSM

Typical periods offered: Spring

BIOL 2970 Principles of Biology II

A broad overview of genetics, including Mendelian assortment, linkage, chromosomal aberrations, variations in chromosome number, mutation, developmental genetics, quantitative genetics, population genetics, mechanisms of evolution, and phylogenetics. Three lecture/problem solving sections and one laboratory period per week. Does not fulfill the laboratory requirement of the biology major. This course must be taken for a grade to count towards the Biology major.

Credit 4 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Fall, Summer

BIOL 2995 Biology Coursework Completed Abroad

This course is for study abroad credits.

Credit 12 units.

Typical periods offered: Fall, Spring, Summer

BIOL 2996 Elective: 200-Level

This course is for elective or transfer credits.

Credit 3 units.

Typical periods offered: Fall, Spring

BIOL 3010 Biotechnology Project

: This second year Biotech Explorers Pathway (BEP) course introduces students to the process used to generate project ideas, write proposals, and evaluate concepts, with peer evaluation applied at all steps of the process. Students completing Bio3010 will gain experience in science proposal writing with peer review, public speaking, team building, and leadership training. The first four weeks of the course will focus on individual pre-proposal brainstorming, writing, and pitching, while the remainder of the course will be dedicated to the development of full proposals by teams of students. This 3-credit project development course complements introductory courses by making connections between fields and building teams of students with experience in the process that nurtures ideas to products. Pre-requisites: Students need to have completed Bio2010: The Science of Biotechnology and Bio2020: Biotech Entreprenuers Seminar for enrollment in this course. Credit only. 3.0 units. Writing Intensive. Limited to 20 students.

Credit 3 units. A&S IQ: NSM, WI Art: NSM BU: SCI

Typical periods offered: Fall

BIOL 3030 Human Biology

How did Elvis, Socrates, and Babe Ruth die? How did David Letterman and Dick Cheney survive? In this course we work towards understanding the biology behind human health and disease. We examine cases from the news, literature and history. We work like detectives to understand how and why the characters were affected, and healed or died. This course is designed for students who do not plan to major in science and no prior science background is expected. Prerequisite: Sophomore standing or permission of instructor. A student may not receive credit for both Bio 303A and Bio 100A, 2960, 2970, or UCollege B320, B3201, B321, B3211.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Spring

BIOL 3041 Plant Biology and Genetic Engineering

A 4 credit lecture course that provides an introduction to plant development, genetics, physiology and biochemistry with emphasis on processes that can be manipulated or better understood through genetic engineering. The course is divided into 3 sections. The first section of the course discusses basic plant biology, development and genetics. The second part of the course emphasizes gene structure, expression, and cloning as well as methods for introducing foreign DNA into plant cells and regenerating fertile plants in tissue culture. During the third part of the course we will discuss a variety of examples of genetically engineered traits, including: herbicide resistance; fruit ripening; pathogen and/or insect resistance; the use of plants for production of industrial and pharmaceutical compounds. Friday discussion sections focus on critical reading of the primary literature related to the material covered in lecture. Prerequisites: Bio 2960 and Bio 2970.

Credit 4 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Spring

BIOL 3057 Physiological Control Systems

Systems physiology with emphasis on human physiology. Must be taken for a letter grade.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Spring

BIOL 3058 Physiological Control Systems
Systems physiology with emphasis on human physiology. Prereqs: Bio 2960 and Chem 112A.
Credit 2 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

BIOL 3100 R Workshop in Biology
Biologists in all areas increasingly find that they have the need and opportunity to work with large data sets. The goal of this 1-credit course is to provide students with an opportunity to gain skills in data analysis and presentation using R, a free software environment for statistical computing and graphics (http://www.r-project.org). Topics include an introduction to basic programming in R, data types and manipulation, graphics, hypothesis testing and statistics, and applications to various fields of biology ranging from ecology to genomics. The course consists of ten, two-hour workshops that include a brief introduction to key concepts in R and applications in biology, followed by interactive, hands-on tutorials. Prerequisites: concurrent or prior course in statistics (Math 2200 or Math 3200) or permission of instructor.
Credit 1 unit.
Typical periods offered: Fall

BIOL 3110 Vertebrate Structure Laboratory
A lecture/laboratory course designed to provide an integrative framework for how vertebrate form and function evolved. Weekly lectures emphasize development and the relationship between the structural and functional design of organ systems, the importance of these relationships in maintaining homeostasis while providing opportunity for adaptation, and examples of how vertebrate organ systems communicate to accomplish functional and physiological integration. 1.5 hr lecture and 5 hrs lab each week. Prereq: Bio 2970.
Credit 4 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

BIOL 3151 Endocrinology
An overview of mammalian endocrine systems with an emphasis on human physiology and development. The interplay between systemic, local cell, and tissue interactions as well as the cell and molecular events associated with hormone action discussed. Examples of endocrine evolution and pathological conditions related to endocrine imbalances also included. Prerequisite: Bio 2970.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Spring

BIOL 3172 Biology for Climate Change Solutions
Human-induced climate change poses a pressing and pervasive threat to both human populations and to the biological world. The challenges of climate change are manifest and well known, increasing temperatures, greater variability of weather, sea level rise, leading to a host of consequences. Adapting to and mitigating climate change are essential activities for confronting the threats of climate change. The biological sciences offer great potential for addressing these threats. This course focus on efforts in biological research to adapt and to mitigate climate change. Topics will range across the biological sciences from microbial engineering and biotechnology to zoonotic diseases and one health, to ecosystem function and conservation of biodiversity. The course consists of lectures, discussion of assigned readings, and class projects. Class projects focus on science topics that addresses new approaches to climate adaptation and mitigation and constitute both of a written paper and class presentation. The goals of this class are: (1) to develop an understanding of basic climate science and the biological aspects of climate change, (2) to develop knowledge of the biological efforts towards adaption and mitigation for climate solutions. The class is open to both non-science and science majors. The course does not count for the biology major. 3 units credit. Class cannot be taken pass fail. Small class. Not for biology major credit
Credit 3 units. A&S IQ: NSM
Typical periods offered: Fall

BIOL 3182 History of the Life Sciences in the 20th Century
This course explores the vast changes that the life sciences underwent between 1890 and 2000, from a largely descriptive and qualitative, to a highly experimental and quantitative science. Topics include the rejection of Haeckelian morphology, the rise of experimental embryology, the rediscovery of Mendel and development of the Mendelian-chromosome theory, the new ecology of the Chicago school, the introduction of feedback and control systems in physiology, the synthesis of Mendelism and Darwinism, the rise of biochemistry and molecular biology, and the genomic revolution. In each topic, biological ideas are placed in their historical and social contexts. Prerequisites: At least a high school or preferably, college-level introductory course in biology and/or permission of the instructor.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

BIOL 3183 A History of Genetics in the 20th Century
After a brief survey of pre-twentieth-century theories of heredity, this course examines the work of Gregor Mendel and its rediscovery in 1900, and its expansion as an interfield theory in combination with the chromosome theory, pioneered beginning in 1910 by T.H. Morgan at Columbia and R.A. Emerson at Cornell, and led to the expansion of classical genetics up to World War II. The beginnings of biochemical and molecular genetics in the 1920s and 1930s developed rapidly after the war with the double-helix theory of DNA and the rise of molecular genetics. The course ends with examination of the Human Genome Project (Initiative) and the ramifications of genetic biotechnology. Throughout, emphasis is placed not only on the technical and theoretical developments comprising genetics as an epistemic field, but also on the economic, social, political and philosophical interconnections between genetics and society. Agriculture, medicine and the ideology of social control (including such movements as eugenics and Nazi race hygiene) both influenced, and were influenced by genetics, and played an integral part in the construction of the science itself. Readings are drawn from the primary and secondary literature. There is a mid-term, final and periodic student reports. Prereq: Bio 2960 and Bio 2970.
Credit 3 units. A&S IQ: NSM, WI Art: NSM
Typical periods offered: Spring

BIOL 3220 Woody Plants of Missouri
Washington University's Danforth Campus is home to more than 4000 trees and is now a registered arboretum. This urban forest ecosystem has been carefully curated and managed to provide habitat diversity, shade, rainwater mitigation, and aesthetic beauty. In this course, students will study the biology of woody plants in the classroom and in our arboretum. Specifically, students will learn woody plant systematics, physiology, and ecology as well as applied and hands-on techniques. Students will learn to collect forestry data and to identify trees by leaf, bud, bark, fruit and crown. They will learn to plant, propagate, and care for trees and other woody plants. They will also contribute to the ongoing research in our arboretum and to the education of their peers and campus visitors by adding new trees to the arboretum collection and by monitoring the campus trees as they learn to collect data on growth and phenology. Students who successfully complete this course will be eligible to join the Danforth Arboretum Loraxes for the remainder of their time at Washington University.

Loraxes will be arboretum ambassadors and will be called upon from time to time to lead tours of the arboretum for prospective students, science outreach, or members of the campus community. Prerequisite: Biol 2960. (Biology Major Area C)
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall, Spring

BIOL 3221 Research and Public Education in the Arboretum
Washington University's Danforth Campus is home to more than 4000 trees and is now a registered level II arboretum. This urban forest ecosystem has been carefully curated and managed to provide habitat diversity, shade, rainwater mitigation, as well as aesthetic beauty. The arboretum is also an institutional structure to support education, research and public service. This course combines theory and hands-on practice. In this course you will: Learn about the history and philosophy of public natural history museums, botanical gardens, arboreta, and zoos Learn about arboreta and public gardens around the world Learn field techniques for monitoring the growth and assessing the health of trees o Apply those techniques by contributing to the bio-monitoring and tracking of the trees in the Danforth Campus Arboretum Learn about the pedagogy of public education in museums, zoos and arboreta o Apply the pedagogic practices to development of public education campaigns in the Danforth Campus Arboretum o Apply those practices by serving as an outreach ambassador and leading tours through the Danforth Campus Arboretum Prerequisite: Biology 3220
Credit 3 units. A&S IQ: NSM
Typical periods offered: Spring

BIOL 3240 Human Genetics
Broad coverage of the role of genetics in medicine, with a focus on the application of genomic technologies to the understanding of human disease. Areas covered include the identification of human disease genes, modern cytogenetics, risk assessment in pedigrees, biochemical genetics, imprinting, mitochondrial genetics, gene therapy, complex inheritance, assisted reproduction, prenatal diagnosis, immunity, cancer, and pharmacogenetics. The profound ethical and legal considerations raised by modern genetic technologies are also discussed. (Biology Major Area A)
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

BIOL 3280 Principles in Human Physiology
This course is designed to provide students with an understanding of the function, regulation, and integration of the major organ systems of the body. Course content includes neural and hormonal homeostatic mechanisms, and study of the circulatory, respiratory, digestive, urinary, musculoskeletal, nervous, endocrine, immune and reproductive organ systems. Mechanisms of exercise physiology are integrated throughout the course. Prerequisites: Bio 3058, or equivalent.
Credit 4 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Spring

BIOL 3340 Cell Biology
Eukaryotic cell structure and function viewed from the perspective of modern cell biology. Lectures cover such topics as membrane transport, endocytosis, secretion, intracellular trafficking, signal transduction, extracellular matrix, cytoskeleton, motility, cell cycle, and the cellular basis of disease. (Biology Major Area A)
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Spring

BIOL 3371 Eukaryotic Genomes
An advanced exploration of the structure and function of DNA within the eukaryotic nucleus. Lecture and discussion cover topics of chromatin and chromosome structure, control of gene transcription, RNA processing, and DNA replication and repair. The relevance of these topics to the genetic basis of human disease is discussed. Throughout, the experimental data that shape our current understanding are emphasized. Course grades based on exams, problem sets and short papers. Lecture 3 hours per week plus required discussion section meeting every other week. Prerequisites: Bio 2970, Chem 261 (may be taken concurrently). Offered every other fall in even numbered years.
Credit 4 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

BIOL 3411 Principles of the Nervous System
This course will provide a broad introduction to neuroscience, starting at the level of cellular and molecular neuroscience, and ultimately ending at systems and theoretical neuroscience, with emphasis on the organization of the mammalian central nervous system. Topics will include neuronal structure, the action potential, information transmission between neurons, sensory/motor systems, emotion, memory, disease, drugs, behavior, and network dynamics. A fundamental goal of this course is to provide students with the ability to approach complex problems using the scientific method and to understand the limits of knowledge. This course will also expose students to some of the neuroscience community at WashU. Bio 2960, Bio 2970 recommended, Bio 3058 recommended or Psych 3401 and permission of instructor. (Biology Major Area B)
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

BIOL 3421 Introduction to Neuroethology
The neural mechanisms of animal behavior from an evolutionary and ecological perspective. Topics include: contributions of model systems to understanding fundamental properties of nervous system structure and function; electrical signals of sensory cells, neurons, and muscle; neural processing of sensory input; neural control of behavioral output; anatomy and physiology of sensory and motor systems; learning and memory; evolution of neural circuits.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Spring

BIOL 3422 Genes, Brains, and Behavior
Genetic studies of physiological systems underlying animal behavior, including the genetic basis for normal and abnormal behaviors in animals and humans. Topics include: history of behavioral genetics; the ongoing debate about nature vs. nurture; contributions of genetic model systems including the nematode Caenorhabditis elegans, the fruit fly Drosophila melanogaster, zebrafish, the mouse Mus musculus, and other animal models; molecular mechanisms underlying the evolution of behavioral phenotypes; the emerging role of epigenetics in regulating nervous-system functions and behavior; the use of genetic and genomic analyses in studies of human behavior and psychiatric disorders. Prereq: Bio 2970
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

BIOL 3423 Behavioral Genetics Laboratory
This course introduces students to fundamental concepts of how genes govern behavior by using the model system Drosophila melanogaster. Students learn modern and classic laboratory techniques, including fly crossing, genetic screens, behavioral assays, microscopy, and electrophysiology. Specifically, we use the GAL4/UAS system to assess the role of microRNAs in a variety of fly behaviors. A primary goal of the course is to develop real-world research skills by having students

design, propose, and execute a set of novel research questions. Statistical analysis and interpretation of student data are emphasized. To build a solid conceptual background, lectures are given once per week, and students read, analyze, and discuss primary research articles. Understanding is assessed through journal club reports and presentations, research reports, and a final presentation of experimental results. This course is designed for upper-level students who have taken Biol 2960 and Biol 2970.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Spring

BIOL 3424 Great Discoveries in Neuroscience

A discussion-based course for advanced undergraduates in neuroscience that focuses on discoveries with major impacts on our understandings of how brains function. Readings include:Gordon Shepherd'sbook Creating Modern Neuroscience: The Revolutionary 1950s;papers in neuroscience of Nobel Laureates, Kavli Neuroscience Prize winners, and Brain Prize winners;and papers of great discoveries with the potential to inspire future revolutions in the field. Attendance at class meetings is required. Weekly written assignments include descriptions of course readings and summaries of discussions at class meetings. Course must be taken for a letter grade. Counts toward the Advanced Biology Elective requirement of the Biology: Neuroscience major.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Spring

BIOL 3430 Plants, Environment and Civilization

Human life, health, and civilization depend on plants. This course introduces basic plant biology, the role of plants in natural ecosystems, and the various uses of plants in both traditional cultures and in developed countries. Topics include the medicinal uses of plants, domestication of plants for agriculture, biotechnology and plant conservation. Does not count toward upper-division credits required for the major.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Fall

BIOL 3470 Darwin and Evolutionary Controversies

Focus is on controversies in evolutionary biology from Darwin's day to the present. Most of the controversies concern scientific issues such as Kelvin's estimate of age of the earth, Jenkin's argument against blending inheritance, neutral variations, effects of isolation on the role of selection, mass extinction and nemesis, but some address social issues such as evolutionary ethics and scientific creationism. Emphasis in the readings is on primary sources, including Darwin's Origin of Species. Writing Intensive. (Biology Major Area C)

Credit 3 units. A&S IQ: NSM, WI Art: NSM BU: SCI

Typical periods offered: Fall

BIOL 3481 Parasitology

This course introduces students to the fundamentals of parasitism. Throughout the semester, students not only learn about parasite biology (examples: parasite life cycles, host immune responses, parasite evasion mechanisms), but also how parasites make a broader impact (examples: co-evolution of hosts and parasites, parasites as indicators of environmental health, the challenge of parasite control). Topics include, but are not limited to, parasite diversity and classification, life cycles, host evasion mechanisms, pathology, disease, control, types of hosts and their immune responses, and the impact that parasites have on ecology and conservation biology. 3.0 Credit Hours. Prerequisites: Principles of Biology I (Biol 2960) and II (Biol 2970) (Biology Major Area A)

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Fall

BIOL 3490 Microbiology

This four credit lecture course focuses on the molecular biology of bacteria, archaea, and viruses. Topics include: the bacterial cell cycle, gene regulation, stress response, cell-cell communication, viral and bacterial pathogenesis, microbial ecology, and metabolic diversity. Friday tutorials stress analysis of the primary literature with an emphasis on current research related to material covered in lecture. Prerequisites: Biology 2960, and 2970, or permission of instructor.

Credit 4 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Spring

BIOL 3491 Microbiology Laboratory

After introducing students to the basics of bacterial growth and maintenance, this laboratory class employs microscopy, genetics, cell biology, and genomics to explore various aspects of bacterial physiology, structure, and identification. Students will present finding throughout the semester in both written and oral format. Roughly one hour lecture and five hours of laboratory per week. Fulfills the upper - level laboratory requirement for the Biology major.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Fall, Spring, Summer

BIOL 3492 Laboratory Experiments With Eukaryotic Microbes

This research-intensive course provides an introduction to diverse molecular and cell biology techniques used in model experimental organisms to explore fundamental biological questions. Experiments are performed using selected fungi and protozoans commonly used in major research efforts. Emphasis is placed on choosing the appropriate organism for the question posed using the most current technologies. Each semester, one cellular process is studied in detail and original research is carried out. Prerequisites: Bio 2960 and 2970 and permission of instructor-- contact early to ensure enrollment. One hour of lecture and six hours of laboratory a week. Fulfills the upper-level laboratory requirement for the Biology major. Enrollment limited to 12.

Credit 3 units. A&S IQ: NSM, WI Art: NSM BU: SCI

Typical periods offered: Spring

BIOL 3493 Bacterial Bioprospecting and Biotechnology

Many bacteria are essential in food industry (fermentation of meats, cheeses, and beverages), agriculture (crop protection against weeds, pathogenic bacteria, and fungi), biotechnology (producing fine chemicals, cofactors, amino acids, and industrial enzymes) and the pharmaceutical industry (producing clinical antibiotics, anticancer, antiviral, veterinary, and immunomodulatory drugs). This laboratory course examines how basic biological understanding can lead to discovery of bacterial products, enzymes and activities useful to humankind. We combine core concepts from biochemistry, bacterial genetics, bioinformatics, chemistry and enzymology to study bacteria from the genus Streptomyces and close relatives. Lines of inquiry include environmental isolations, molecular toolbox and host development, plus bioinformatic and laboratory-based analyses of secreted proteins and antibiotics. Prerequisites: Bio 2960 and 2970. One hour of lecture and six hours of laboratory per week. This course fulfills the laboratory requirement for the Biology major. Enrollment limited to 16. Credit 3 units. J. Blodgett

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Fall, Spring

BIOL 3494 Microbes and the Environment

From the origins of life to global biogeochemical cycling. An examination of microbes (archaea, bacteria, fungi, yeasts, protist and viruses) in the vast array of environments in which they occur, from wetlands and lake sediments, aquifers and deep crustal settings, to polar ice and desert surfaces. Emphasis on the roles that microbes

play in biogeochemical cycles, redox processes, contaminant mobility, biodegradation, and ecosystem productivity. The emphasis will be placed on case studies and students will be expected to participate in-class discussions. Prerequisites: Bio 2970: Principles of Biology II (students with only Bio 2960 can contact the instructor for permission to take the course), Chem 106: Introductory General Chemistry II or Chem 112: General Chemistry II, graduate standing, or permission of Dr. Bose. Chem 252:Organic Chemistry II strongly recommended.
Credit 4 units. A&S IQ: NSM
Typical periods offered: Fall

BIOL 3501 Evolution
A general survey of evolutionary biology, covering both micro- and macroevolution. Topics include natural selection, genetic drift, gene flow, sexual selection, kin selection, pathogen evolution, speciation, phylogenetics, molecular evolution and evolutionary-developmental biology. Weekly discussion sections focus on analysis of recent studies related to lecture topics. Prerequisite: Bio 2970. (Biology Major Area C)
Credit 4 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

BIOL 3700 Animal Behavior
This course examines animal behavior from an evolutionary perspective and explores the relationships between animal behavior, ecology, and evolution. Topics include foraging behavior, mating systems, sexual selection, predator-prey relationships, cooperation and altruism, competition and parental care. A student may not receive credit for more than one of the courses Biol 370, Biol 372 and Biol 472. Prerequisite: Biol 2970 or permission of instructor. (Biology Major Area C)
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

BIOL 3730 Laboratory On the Evolution of Animal Behavior (Writing Intensive)
This course explores the costs, benefits and constraints that drive the evolution of animal behavior. It is divided into four modules that cover a range of common empirical and numerical tools in modern evolutionary biology (no prior experience in any of the following topics is necessary): (1) a brief overview of basic statistics and a tutorial in R; (2) an experimental lab on agonistic behavior in crickets; (3) a computer simulation lab on the evolution of animal communication; and (4) a phylogenetic comparative analysis lab exploring the topic of sexual selection. Laboratory modules are hands-on and student driven. They begin with an overview of relevant literature and a discussion of key questions that have been addressed experimentally in that field. Students are then encouraged (and guided) to apply these concepts to the design, execution, and analysis of individual and/or collaborative research projects. In the process, they learn how to apply some of the latest numerical and/or empirical research tools in evolutionary biology. A majority of class time is devoted to active learning through the collection and analysis of data (each lab module lasts four weeks). The course also includes weekly presentations by the instructor and class discussions on topics that help place the students' work into the broader context of evolutionary theory. Prerequisites: Biol 2970 and Psych 100B or permission of instructor. This course is Writing Intensive.
Credit 3 units. A&S IQ: NSM, WI Art: NSM BU: SCI
Typical periods offered: Fall

BIOL 3810 Introduction to Ecology
This course explores the central theories and principles in ecology and evolution, and the use of these principles to study and predict human-induced environmental changes. It emphasizes understanding species interactions and population dynamics in biological communities, and the relationships between communities and their environment. It regularly touches on applications of these principles such as ecological responses to global climate change, consequences of habitat fragmentation, disease ecology, and conservation medicine. Principles of experimental design, quantitative data analysis and interpretation, and mathematical models are critical to the field of ecology and are also emphasized throughout the course. Class meetings will include lectures, class activities, computer simulation labs, and smaller group discussions to familiarize students with peer-reviewed journals, scientific writing, and current issues in ecology. Assignments include regular homework reading, occasional problem sets, participation in tutorials/discussions, and a small term-paper.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall, Spring

BIOL 3900 Science for Agriculture and Environmental Policy
Government policies at the local, state, and national levels determine and regulate activities that range from local farmers markets to U.S. membership in the Paris Climate Agreement. Science can and should play a critical role in developing policy. This course focuses on the biological science behind policies for climate change and agricultural practice as well as the role of various organizations in providing science for policy. Now is a particularly interesting time for science-based policy with the election of a new U.S. President and the elevation of the President's science advisor to Cabinet level. This course is divided into three parts. First, we review how policy is developed and how various agencies and actors affect policy. The next section looks at biological topics that have policy implications. These case studies are presented by expert speakers who have had experience in various science-related roles in the federal government, foundations, professional associations, advisory organizations, and scientific publications. Finally, students conduct individual research projects on a science topic that affects current legislative efforts, either state or national. Students investigate the basic science of their chosen topic and how this could affect proposed legislation. As part of the research project, students give a class presentation, lead a class discussion, and write a term paper on the foundational biological science. The goals of this course are as follows: (1) to develop an understanding of how science is used to develop policy by examining case studies presented by experts; and (2) to critique a proposed science-based policy either at the state or federal level.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

BIOL 3990 Undergraduate Teaching
Exceptional undergraduates serve as teaching assistants for laboratory and/or discussion sections in departmental courses. Normally 2 or 3 units are given a semester, subject to the approval of the instructor and the department. Credit may not be counted toward fulfilling the biology major; application form in Department of Biology office. Prerequisite: permission of instructor. Credit /No Credit only.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Fall

BIOL 3991 Undergraduate Teaching
Exceptional undergraduates serve as teaching assistants for laboratory and/or discussion sections in departmental courses. Normally 2 or 3 units are given per semester, subject to the approval of the instructor and the department. Credit may not be counted toward fulfilling the biology major; application form in Department of Biology Student Affairs office. Prerequisite: permission of instructor. Credit /No Credit only.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

BIOL 3995 Biology Coursework Completed Abroad
This course is for study abroad credits.
Credit 12 units.
Typical periods offered: Fall, Spring, Summer

BIOL 3996 Elective: 300-Level
This course is for elective or transfer credits.
Credit 3 units.
Typical periods offered: Fall, Spring

BIOL 4000 Introduction to Biochemistry
This course provides a basic understanding of the molecular structure of biomolecules, the metabolic processes by which these molecules are synthesized and degraded, and the energy produced to support cellular processes. It includes a study of enzyme kinetics and metabolic control mechanisms. Prerequisite: Chem 261 (either with lab or lecture only is acceptable) or permission of instructor. Priority given to students enrolled in the Post-Baccalaureate Premedical program.
Credit 3 units. A&S IQ: NSM BU: SCI
Typical periods offered: Fall, Spring

BIOL 4005 Advances in Cellular & Molecular Biology
will examine some of the fundamental principles of cellular processes at the molecular level. Among the major topics covered are nucleic acid chemistry, gene structure and organization in prokaryotes and eukaryotes, gene expression, and recombinant DNA and transgenic/knockout (including conditional knockout) mouse technology. The topic of the CRISPR/Cas system used for gene editing is also be included. In addition, the idea of genes and genomes will be discussed with an introduction to functional and comparative genomics. In particular, emphasis in the second half of the semester will be on the various modes of regulation of gene expression and protein synthesis, and some of the various methodologies utilized to address these topics. In addition, the concepts of siRNA, miRNA, and the phenomenon of RNA-interference will be covered with the topic of micro-RNA and disease, and the importance of these small non-coding RNA molecules, highlighted by presentation of material from the scientific literature. Also included will be a major publication showing how RNA interference can be used as a tool to unlock the secrets of human embryonic stem cells. A number of commonly used molecular biology and biochemical lab techniques will also be covered, in addition to more recent tools such as RNA seq that can be used to address global changes in transcriptional profiles. Course prerequisites: At least one 100/200 level class in Biology and one 100/200 level class in Chemistry or Biochemistry. This course does not count toward the undergraduate biology major. MA in Biology students should register for the IDENT L41 5005. Undergrads and PBPM students should register for 4005.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

BIOL 4025 Current Approaches in Plant and Microbial Research
This course is designed to introduce graduate students and upper-division undergraduates to contemporary approaches and paradigms in plant and microbial biology. The course will include lectures, in-class discussions of primary literature and hands-on exploration of computational genomic and phylogenetic tools. Evaluations will include short papers, quizzes, and oral presentations. Over the semester, each student will work on conceptualizing and writing a short NIH-format research proposal. Particular emphasis will be given to the articulation of specific aims and the design of experiments to test these aims, using the approaches taught in class. Students will provide feedback to their classmates on their oral presentations and on their specific aims in a review panel. Fundamentals of Biology II: Genetics (Bio 2970) or permission of the instructor.
Credit 4 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

BIOL 4026 How Plants Work: Physiology, Growth, and Metabolism
This course introduces students to the fundamentals of how plants grow, metabolize and respond to their environment. Topics to be covered include the conversion of light energy into chemical energy through photosynthesis and carbon fixation, nitrogen assimilation, water and mineral uptake and transport, source-sink relationships and long-distance transport of carbon and nitrogen, cell growth and expansion, hormone physiology and physiological responses to a changing environment. Prerequisite: Bio 2960 and Bio 2970, or permission of instructors. (Biology Major Area B)
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

BIOL 4027 Viruses and the Diseases They Cause
The goal of this course is to discuss different families of viruses that are important human pathogens. For each of these families of viruses we will discuss the following three aspects as it relates to their clinical significance.

1. The diseases that they cause. The clinical manifestations, the geographic extent of these infections, the consequences of these infections on the populations affected by the virus being discussed.
2. Mechanisms they use to evade host defense mechanisms. Each of these families of viruses have a unique set of factors that they produce that enable them to evade host responses. We will discuss these factors and how they specifically target our responses to the infections they cause.
3. Current therapies used to treat these viral infections. This would include both drug therapies, immunizations and even environmental aspects that predispose a particular geographic region to infection by a specific class of viruses.

Each class will involve both lecture and discussion of relevant publications that are associated with the topic being discussed that class. There will be two exams, a mid-term and a final that will not be cumulative. Note: This course does not count toward the undergraduate Biology major. It is intended for PBPM students.
Credit 3 units.
Typical periods offered: Fall

BIOL 4030 Biological Clocks
Biological clocks are the endogenous oscillators that coordinate physiological and behavioral rhythms in nearly all organisms. This course examines how these rhythms are generated and regulated. The material includes molecular, cellular and systems physiology and the relevance of biological timing to ecology and health in everything from protozoans to plants to people.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

BIOL 4040 Laboratory of Neurophysiology
Neurophysiology is the study of living neurons. Students record electrical activity of cells to learn principles of the nervous system including sensory transduction and coding, intercellular communication and motor control. The course meets for 9 hours each week. Students may leave the lab for up to 2 hours. Prereq: Bio 3411 or Psych 4411 AND PERMISSION of Student Coordinator, Erin Gerrity. Bio 3411 may be taken concurrently.
Credit 4 units. A&S IQ: NSM, WI Art: NSM
Typical periods offered: Fall

BIOL 4060 Introduction to Biochemistry
This course provides the student with the basics of biomolecules and their structures, bioenergetics, mechanisms, kinetics, and major metabolic processes. The course assumes students have a strong foundational background in biology, general and organic chemistry.
Credit 3 units.
Typical periods offered: Fall

BIOL 4071 Developmental Biology
An introduction to the molecular and cell biology of animal development. The course is divided into three broad sections, which cover 1) an introduction to the major cell-cell signaling systems used during development and their study in model organisms, 2) molecular studies of early vertebrate development, and 3) the biology of stem cells. The focus is on molecular approaches applied to important model systems, but framed in classical concepts. Prereqs.: Principles of Biology II (Biol 2970); Cell Biology (Biol 334) and/or a course in biochemistry recommended. Small Class. Credit 3 units.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

BIOL 4072 Regenerative and Stem Cell Biology
Regeneration is a very complex, post-embryonic developmental phenomenon, where organisms replace lost body parts and organs upon injury. However, we still know very little about why some animals are so successful at regenerating whole bodies and organs, while other animals (like humans) have limited or no capacity to do so. This course covers regeneration and stem cell biology across different levels of biological organization (e.g. cell, organ, limb regeneration.) and across the animal phylogeny. Students learn about mechanisms of regeneration at the cellular and molecular level, and how these mechanisms vary among organisms. In addition to the general principles of stem cells and regenerative biology, the course will be a good introduction to animal diversity and evolutionary developmental biology (evo-devo). Students will read and discuss primary literature, and write up their own experimental design to test hypotheses. Prerequisites: Bio 2970 (Principles of Biology 2 - Genetics) (Biology Major Area B)
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

BIOL 4105 Topics in Anthropology: Biomechanics
Humans, like all organisms, live and evolved in a world that is governed by the rules of physics. Such an engineered world has undoubtedly had a profound impact on the human evolutionary trajectory. Biomechanics is the science of understanding the natural world around us in a mechanistic fashion, and it has become a major pillar in investigating the human form and function. Understanding how humans and our closest relatives behave in and interact with a physical world can lead to novel insights into the evolution of complex traits, whether it involves investigating the mechanics of tissues and structures of the human body or understanding the principles of movement and locomotion. Through lectures, discussions and hands-on experiences, this course will explain biomechanical terms and principles to demonstrate how this discipline has contributed to biological anthropology.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Spring

BIOL 4114 Neuroplasticity: Wiring and Rewiring of the Brain
Neuroplasticity: Wiring and Rewiring of the Brain' discusses the brain's remarkable ability to change, reorganize, and grow its neural networks. Our brains are constantly evolving; new and relevant connections are strengthened while irrelevant ones are eliminated. This phenomenon is known as neuroplasticity. This course examines how the brain reshapes itself at molecular, neural, and systemic levels. It explores both endogenous (internal) and exogenous (external) factors involved in this process, highlighting the significant contributions of this emerging field of neuroscience. Students learn how to rewire the brain more effectively to enhance its plasticity, which can improve cognitive capacity, enhance learning, prevent memory loss, and promote overall brain health. Understanding of this fascinating area of neuroscience is being applied in various fields, including mental wellbeing and behavioral health, neuroprotection against age-related declines, artificial intelligence, and medicine. Students also explore how the systematic reinforcement of sensory environments, healthy sensory inputs, and brain exercises can boost brain capacity by creating new circuits. Conversely, toxic living conditions and unhealthy lifestyles can negatively impact brain function. Additionally, recent research findings, journal articles, and publications in this emerging area of neuroscience will be reviewed.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Fall

BIOL 4139 Global Environmental Change and Thermal Ecology
We are living in an unprecedented period in which global habitats are experiencing massive changes at an alarming rate. Turnover of forest, grassland, and wetland into human-dominated landscapes reduces the availability of habitat to support species. Furthermore, the near unabated release of greenhouse gases is transforming Earth's climate; the world is getting warmer, and patterns of rainfall are shifting. The principles of thermal ecology -- that is, the relationship between temperature and biological processes at different levels of organization -- provides a framework for understanding how organisms respond to fluctuating temperatures. This course focuses on the thermal challenges organisms face in a warmer world. Topics include evidence of anthropogenic climate change; quantifying the thermal environment; how temperature influences physiological processes and in turn variation in life history traits; population dynamics; and the role of phenotypic plasticity. The course format includes lectures, discussions, and the application of simulations and models to forecast species response to altered environments. Prerequisite: Biol 381.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Fall

BIOL 4181 Population Genetics
An introduction to the basic principles of population and ecological genetics. Mechanisms of microevolutionary processes; integrated ecological and genetic approach to study the adaptive nature of the evolutionary process. Prerequisite: Bio 2970.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall, Spring

BIOL 4182 Macroevolution
An advanced introduction to the study of macroevolutionary patterns and processes with emphasis on the systematic methodology employed. Topics: theories of classification, phylogenetic reconstruction, testing of historical hypotheses, hierarchy theory, adaptation, extinction, speciation, developmental mechanisms of organismal evolution, biogeography.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

BIOL 4183 Molecular Evolution
A rigorous introduction to the study of evolution at the molecular level. Topics include the origin, amount, distribution and significance of molecular genetic variation within species, and use of molecular data in systematics and in testing macroevolutionary hypotheses. Prerequisite: Bio 2970, or permission of instructor.

Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall, Spring

BIOL 4191 Biology Field Course in Ecology
This course includes filed coursework in Biology.
Credit 3 units.
Typical periods offered: Summer

BIOL 4193 Experimental Ecology Laboratory
The goal of this course is to provide skills in the design, interpretation, and written presentation of ecological and evolutionary experiments, with emphasis on sampling methodology, hypothesis testing, and data analysis. A key objective of this course is to familiarize students with the importance of statistics and experimental design as unified tool, rather than two separate processes. We will practice how to abstract theories, hypotheses, predictions, mathematically, how to contrast them with data, and interpret the results. The course does not seek to be exhaustive of all experimental designs or statistical techniques, nor intensive in any given one. Rather, its focus is on providing the tools and concepts for the critical evaluation, choice, interpretation and further independent learning of the experimental and statistical tools needed for research. Practical analysis of data will be taught in program R, but no prior knowledge is required. During the course, students will plan and execute their own ecological studies, within the limitations of the current pandemic. This is a writing intensive course and grades are based on written assignments, including final projects, and in-class participation. This course fulfills the upper-level laboratory requirement for the Biology major. Prereq: Permission of instructor and at least one of the following: Bio Bio 3501, Bio 372, Bio 381, Bio 419, or Bio 472. Enrollment is limited to 10 students. Credit 4 units.
Credit 4 units. A&S IQ: NSM, WI Art: NSM
Typical periods offered: Fall, Spring

BIOL 4195 Disease Ecology
Disease ecology is an interdisciplinary field that bridges concepts from fields including population ecology, community ecology, landscape ecology, and evolutionary biology. This course provides an introduction to the study of infectious diseases with an emphasis on theoretical, experimental, and quantitative approaches. The course will integrate studies of infectious diseases from across disciplines including human epidemiology, veterinary medicine, wildlife epidemiology, plant pathology, parasitology, and ecology. Principles of Biology II (Bio 2970) required, Introduction to Ecology (Bio 381) recommended, or permission of instructor.
Credit 4 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Spring

BIOL 4197 Community Ecology
Community ecology is an interdisciplinary field that bridges concepts in biodiversity science, biogeography, evolution and conservation. This course provides an introduction to the study of pattern and process in ecological communities with an emphasis on theoretical, statistical and experimental approaches. Topics include: ecological and evolutionary processes that create and maintain patterns of biodiversity; biodiversity and ecosystem function; island biogeography, metacommunity dynamics, niche and neutral theory; species interactions (competition, predation, food webs), species coexistence and environmental change. The class format includes lectures, discussions, and computer labs focused on analysis, modeling and presentation of ecological data using the statistical program R. Prereq: Bio 2970 required, Bio 381 recommended, or permission of instructor. (Biology Major Area C)
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

BIOL 4220 Practical Bioinformatics
From medicine to genomics to ecology, all fields of biology are now generating large and complex datasets that can only be analyzed using computational approaches. This course introduces computational techniques and perspectives to biologists that are new to computational thinking. Students will learn how to design research workflows, decompose complex problems into simpler solvable units, and apply scientific computing principles to research. In addition, students will practice foundational computing skills, such as using the UNIX operating system on research clusters, writing custom analysis programs with shell scripts and with Python, and summarizing and visualizing analysis output. The laboratory exercises build on one another, culminating in the construction of a bioinformatics pipeline that can process and analyze molecular data. Students will apply their newly learned computational skills and use their pipeline to analyze virus sequence evolution and explore evolutionary models. Prerequisites: Biol 2970; Math 132 (Calculus II); Math 223 (Calculus III) or Math 2200 (Elementary Probability); CSE 131 (Computer Science I; suggested course); permission of instructor. Credit/no credit.
Credit 4 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

BIOL 4240 Immunology
Basic molecular and cellular aspects of the vertebrate immune system with emphasis upon the interrelationships of non-specific and specific host defense against disease, the nature of immunological specificity and its underlying molecular biology. Includes complement systems, immunochemistry, the nature of cellular activation and effector generation, immunodeficiency, tolerance, tissue transplantation, hypersensitivity, immune regulation and specific diseases illustrative of the successes and failures of the immune system. Case studies will be presented by the students on an array of immune system disease. Prerequisites: Bio 2970 and Chem 262. Interested Juniors in their second semester are particularly encouraged to register for this course.
Credit 4 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall, Spring

BIOL 4242 Virology
Viruses are all around us and play key roles in health, evolution, ecology, agriculture, and can even completely disrupt societies. In this course, we explore the wide array of viruses, the basics of their structure, the infection cycle, their role in human health, and how we can adapt viruses for uses in research, agriculture, and biotechnology. Emphasis is on animal viruses, specifically medically relevant viruses, including HIV and SARS-CoV-2, and recent advances in virology. While primarily a lecture-based course, students present on a relevant virus and read primary literature. Prerequisite(s): Either BIOL349 (Fundamentals of Microbiology) or BIOL334 (Cell Biology).
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

BIOL 4243 Immunology Laboratory
The Immunology Laboratory will introduce students to a variety of common, broadly useful immunological techniques and then allow each student to employ most of the learned techniques in addressing a current research question. Experiments will employ mouse cells in vitro and will emphasize quantitative analysis of the data. Prereq: Bio 424 and permission of instructor.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall, Spring

BIOL 4244 Advances in Immunology
The goal of this course is to provide students with an overview of the mammalian immune system.

1. We will begin with a general overview of the immune system.
2. We will then discuss the specific cells and factors that constitute the immune system.
3. We will describe how the immune system detects and defends us against attack by pathogenic microbes.
4. We will describe how foreign tissues are recognized, rejected and what therapies for preventing that from taking place.
5. We will discuss aberrant immune responses that would result in under-responsiveness or over-responsiveness.
6. We will finally cover how the immune system responds to malignant tumor growth and how those cancers evade detection and destruction as well as what therapies are available to aid the immune system to attack the cancer.

The class will run for 2 hours and 50 minutes and consist of a 75 to 120 minute lecture that is followed by student presented discussions of relevant publications to that topic being discussed that lecture. This will be for those students who select that option for their individual responsibility (see below). In the event that there are no student presentations scheduled for a particular class period, the instructor will present an article associated with that lectures topic. Note: this course does not count toward the undergraduate Biology major, it is intended for PBPM students.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Fall

BIOL 4270 Problem Based Learning in Biomedical Sciences
Groups of 5-8 students are presented with medical case studies that are then researched and discussed under faculty guidance. Students take major responsibility for their own learning within their team. Prerequisite: Bio 2970; some experience in molecular biology. A biology or science background is required. Same content as discontinued course Bio 427, but not Writing Intensive. Not available to students who have credit for Bio 427.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Spring

BIOL 4271 The Science of Cats
This capstone-style course will give students the opportunity to apply what they've learned in topics as diverse as speciation, molecular evolution, community ecology and animal behavior to investigate and analyze questions concerning the biology of a species near and dear to the hearts of many, Felis catus, the domestic cat. Over the last several decades, scientists have studied cats in the same way they have studied lizards, birds, flies and many other species. This cat research allows questions of broad scientific interest to be addressed using cutting-edge methods, including (but not limited to): what is a species? How do new species arise? How do we determine when, where and from what species the cat evolved? How do we determine if a trait (e.g., response to catnip) evolved as an adaptation driven by natural selection? How do we determine the impact of an invasive species on local ecosystems? How does domestication occur and is the cat actually domesticated? Is the behavior of domestic cats a legacy of their evolutionary past or does it represent adaptation to living with humans? What role, if any, can genetic engineering play in decreasing feral cat populations and developing new breeds of cats with desirable traits.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Spring

BIOL 4290 Cellular Transformations
Cellular Transformations is a course developed for students interested in using emerging technologies and cross-disciplinary approaches in design production and implementation. This course allows each student to develop abstract thinking and learn modern design and fabrication processes including digital media and 3D technologies. In this course, students learn the basic principles underlying biological architecture, with a particular emphasis on structures and processes responsible for complex architectures within cells. Students then use biological design principles as inspiration for their individual projects. Through digital modeling and scanning of biological structures, each student will develop a transformation process that analyzes the performative aspects of a new emerging design. These designs will be modeled through CADCAM (laser cutting) and Rapid Prototyping (3D Printing) for physical outputs. Prerequisites: Bio 2970 or Bio 334, 3 units.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

BIOL 4310 Biology of Aging
This course provides concepts and examples of the biology of aging. We discuss current literature with emphasis on theoretical causes of aging and the practical implications of these theories. Major topics include the biochemical processes of aging, cell cycle senescence, age-related organ dysfunction, interventions to alter the aging process, and medical illnesses associated with aging (e.g., Alzheimer's disease, the dementias). We also study animal and human models for extending longevity, and current approaches for dealing with the aging process are included. Prerequisites: Biol 2960 and Biol 2970 or equivalent; Chem 105 and Chem 106 or equivalent are recommended.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

BIOL 4342 Research Explorations in Genomics
A collaborative laboratory investigation of a problem in comparative genomics, utilizing a variety of bioinformatics tools to manage and investigate large data sets (currently including genomic sequences, gene predictions, sequence conservation, gene expression). In spring '18 the research problem involves improving the sequence of a region of the Drosophila eugracilis genome, and working with one of these sequences to examine patterns of genome organization, gene structure and gene regulation. Prerequisites: Bio 297A, Chemistry 111/112, 151/152. While Bio 3371 or Bio 437, and some familiarity with computers would be advantageous, this is NOT required. Fulfills the upper-level laboratory requirement for the Biology major.
Credit 4 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

BIOL 4343 Research Explorations in Genomics (Writing-Intensive)
Content equivalent to Bio 4342. Students electing the writing option are required to revise each of three papers (on finishing of their fosmid; gene finding in a human/chip comparison; and annotating their fosmid) at least once.
Credit 4 units. A&S IQ: NSM, WI Art: NSM
Typical periods offered: Spring

BIOL 4345 Epigenetics
Introductory course in epigenetics - the layer of chemical information that sits on top of the genome - that switch genes 'on' or 'off'. Will introduce how the epigenome, in collaboration with the genome, controls versatile biological processes and cell fates. Will also cover the latest advances of how humans can control their own epigenetic destiny by lifestyle, diet, and other environmental factors. Learning Objectives: Recognize and summarize the difference between genetics and epigenetics, Apply the basic knowledge of epigenetic mechanism and illustrate how their misregulations cause abnormal development

and diseases, Critically review and discuss epigenetic literature, Design epigenetic experiments and interpret the results of those experiments, Graduate student specific: Demonstrate the ability to clearly communicate epigenetic research in both oral and written formats. Prerequisite: (Biology Major Area A)
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

BIOL 4346 Next-Gen Genetics: Merging Genetics With Genomic Insights
Forward genetics is a research approach that starts with identifying phenotypic variation (an observable trait or characteristic) and then works towards discovering the genetic basis responsible for that variation. In the dynamic era of genomics, the field of forward genetics offers a powerful approach to uncovering the genetic basis of phenotypic variation across a wide array of organisms. Next-Gen Genetics is a cutting-edge upper-level laboratory course that bridges traditional genetic analysis with modern genomic techniques. The course emphasizes the universality and applicability of forward genetics methods in various research systems including animals, plants, and microbes. In this course we will use plants as a model system to explore forward genetic approaches. Through a blend of engaging lectures, interactive bioinformatics labs, and hands-on greenhouse and wet lab sessions, students will journey from the fundamentals of genetic variation and trait inheritance to the forefront of genomic technology. Using next-generation sequencing (NGS) together with bioinformatics tools, participants will experience the thrill of discovery by identifying new trait loci associated with phenotypic traits in a novel research project. This course is an invitation to explore the genetic complexities of living organisms in the genomic age. Whether you're aiming to revolutionize plant breeding, uncover the genetic underpinnings of disease in humans, or explore the vast diversity of microbial life, Next-Gen Genetics offers the tools and insights to propel your scientific journey. By the end of this course, students will have designed and carried out an experiment, phenotyped a segregating population of tomato plants, extracted DNA and sent it to be sequenced. Students will then analyze genomic sequences and perform their own Bulk Segregant Analysis experiment to identify genetic loci associated with chosen phenotypes.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

BIOL 4370 Laboratory On DNA Manipulation
This course provides investigation-driven research on experimental manipulation of DNA and RNA molecules. This includes the construction, isolation and analysis of plasmids, RNA, PCR products and DNA sequencing. Molecular cloning (genetic engineering), gene knockouts (mutants), RNA isolation, RT-PCR, and microarray projects are performed. Prerequisite: Bio 2960 and Bio 2970. One hour of lecture and six hours of laboratory each week. This course fulfills the upper-level laboratory requirement for the Biology major. Enrollment is limited to 12. A laboratory fee is required for students who are not full-time Washington University undergraduates.
Credit 4 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall, Spring

BIOL 4381 Cell-Based Tissue Engineering and Regenerative Medicine
This course focuses on how new directions in cellular, molecular and developmental biology are interfacing with advances in biomaterials tissue engineering, innovative devices, and advanced technologies (such as 3D printing and CRISPR) to replace, restore, and/or correct genetic, acquired, or damaged tissues and organs. Coverage includes the rapidly expanding use of types of stem cells and their preparation alone or in concert with biomaterial scaffolds, nanomaterials, and growth factors. Tissue engineered therapies for cancer, diabetes, autoimmune disorders and other conditions are reviewed. Examples of tissue engineering approaches for regeneration of nerves, cardiovascular, kidney, cartilage, bone, ligament, tendons, and skin are discussed in some detail. Regulatory issues, ethical guidelines, and commercial perspectives will be woven into our discussions. Prerequisites: Biol 2970, Biol 3058, Biol 334. (Biology Major Area B)
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

BIOL 4438 Principles of Virology
The goal of this course is to provide students with an overview of the biology of viruses. We will emphasize the nature of viruses on a molecular level. In so doing we will: 1.We will discuss how viruses gain access to cells, replicate themselves, and then leave the cell to infect new cells. 2.We will also describe differences and similarities that the different categories of viruses have. 3.We will discuss how viruses participate in host-virus interaction with emphasis on what immune responses are generated and how viruses attempt to avoid those responses. 4.We will also specifically discuss both HIV and tumorigenic viruses. 5.Finally we will discuss vaccination and drug therapies that have been developed to defeat viruses. Each class will involve both lecture and discussion of relevant publications to that topic. There will be two exams, a mid-term and a final exam. Keep in mind that the course is designed so that each class, to one degree or another, builds on the previous material and so it is important to fully understand what we have already covered. This course does not count toward the undergraduate biology major. MA in Biology students should register for the IDENT 5438. Undergrads and PBPM students should register for 4438.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Spring

BIOL 4479 Fundamentals of Parasitology
This course covers a variety of clinically relevant parasitic organisms and their importance to human disease. During this course we will: 1.The Semester is divided into two halves. a.The first half will discuss clinically relevant worm parasites. b.The second half will discuss protozoan parasites that cause multiple types of diseases. 2.For each of the parasitic classes discussed we will present general characteristics of the parasite as follows: a.The lifecycle of the particular parasite. b.The clinical disease profile. c.Interactions of parasites with the host immune response both in terms of mechanisms whereby the host resists infections by these organisms and also how these parasites circumvent the host's ability to eliminate them. d.Because so much of the clinical importance of parasites has to do with this interaction, we will also cover general aspects of the workings of the immune system. There will be an emphasis on the nature of the host-parasite interaction on a molecular level. e.Finally we will discuss what available therapies are available and what potential therapies are being developed. 3.These lectures will include discussions of recent literature concerning parasites and their interactions with the host. This class does not count toward the undergraduate biology major. MA in Biology students should register for the IDENT 5479. Undergrads and PBPM students should register for 4479.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

BIOL 4490 Microbial Physiology and Biochemstry
This course covers the physiology and biochemistry of prokaryotes. The emergence of new and drug-resistant infectious diseases has required scientists to understand in depth how bacteria grow and survive. With recent research showing that microbes thrive in diverse habitats ranging from the antarctic to volcanos to our own stomachs (with pH of 2), a natural question is how? In this course, basic tenets on cell structure and growth are discussed as well as the diversity of metabolic pathways that allow the prokaryotes to inhabit the extreme limits of

our environment on earth and in humans. No textbook is required but primary literature and reviews will be used on selected, important topics in the field. Students will learn how to read, review and write scientific papers, reports, and grant proposals. One hour per week TBA will be a required flex time meeting with instructor. Prereq: Bio 349 or a 400 - level Biochemistry course (grade B or better) or graduate student standing. 4 credit hours. WI

Credit 4 units. A&S IQ: NSM

Typical periods offered: Spring

BIOL 4492 Infectious Diseases: History, Pathology, and Prevention

Leveraging the primary research literature, this course examines the history and pathology of infectious disease, the development of antibiotics and vaccines, the rise of antibiotic resistance, and the emergence and reemergence of diseases including Zika virus, Malaria, and Tuberculosis. In addition to gaining insights into the underlying causes and treatment of infectious disease, students will hone their ability to identify important biological questions, develop testable hypotheses, design experiments tailored to particular questions, and evaluate results. Through a series of written and oral assignments, students develop the skills to communicate about science effectively to both the research community and the general public. Prerequisites: One semester of Biology 500: Independent Research or equivalent is REQUIRED. Preference will be given to students who have completed Biology 349, Fundamentals of Microbiology. Area A. 3.0 units. Writing Intensive. P. Levin.

Credit 3 units. A&S IQ: NSM, WI Art: NSM BU: SCI

Typical periods offered: Fall

BIOL 4510 General Biochemistry

A study of structure-function relationships as applied to carbohydrates, proteins, and lipids; intermediary metabolism of principal cellular components; and general aspects of regulation. Prereqs: Biol 2970 and Chem 262 and permission of department. Recommended for students who have achieved grades of B or better in the prerequisites. Students may not receive credit for both Biol 4801 and Biol 451.

Credit 4 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Fall, Summer

BIOL 4519 Protein Function in Model Cellular Systems

The goal of this 3-credit laboratory course is to train students in the scientific method. Throughout this course, they will study a protein involved in a cellular process. Students, working in small groups, will use bioinformatics to identify this protein in a number of species, then use this information to hypothesize which residues of the protein are important for its function. Over the course of the semester, students will test their hypotheses in two model systems for studying cellular function - the unicellular eukaryote Saccharomyces cerevisiae and the multicellular eukaryote Physcomitrella patens. The weekly lecture will give students the background necessary to understand and perform their experiments, including information on a variety of bioinformatics tools, phylogeny, protein structure, molecular techniques, cell biology, and microscopy. In addition, students will use primary literature to understand the role their assigned protein plays in their cellular process. Prereq: Bio 2960 and Bio 2970.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Fall

BIOL 4522 Laboratory in Protein Analysis, Proteomics, and Protein Structure

In this laboratory course, students learn principles and methods of protein quantitation, protein purification, assessment of purity using SDS-polyacrylamide gel electrophoresis, separation of complex protein mixtures by two-dimensional gel electrophoresis, definition of units of enzymatic activity, and identification of proteins using antibodies and/or mass spectrometry. The final part of the course introduces students to concepts of structural biology including protein crystallization, x-ray crystallography and computer modeling of protein structures. Fulfills the upper-level laboratory requirement for the Biology major. Prerequisites: Chem 252 and either Bio 451 or Bio 4501/Chem 456. Permission of instructor required. Limit: 8 students. Eight hours of laboratory/lecture per week.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Spring

BIOL 4523 Molecular Methods in Enzyme Analysis

Understanding enzyme structure and function is essential for many important drug-design projects. This course focuses on common methods used to investigate enzyme active sites to elucidate binding interactions between small molecules and enzymes. Students use three-dimensional protein viewing software to design and model modifications to an enzyme active site, and they then perform those modifications using recombinant DNA technology and site-directed mutagenesis. This course also introduces other commonly used methods to assay active-site metals, characterize inhibitors, overexpress and purify proteins, and use ultraviolet spectroscopy to analyze enzyme activity. This is an investigative course in which students complete collaborative research projects in small groups. It fulfills the upper-level laboratory requirement for the generic biology major and the biochemistry track; intended for students who have no other courses that fulfill these requirements. Prerequisite: Biol 2970. Limit 12 students.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Fall

BIOL 4525 Structural Bioinformatics of Proteins (Writing Intensive)

In this investigative laboratory course, students will be given high-quality, experimentally determined, three-dimensional structural coordinates and will use cutting-edge bioinformatics tools and methods to evaluate and analyze these datasets. Some topics include: structural validation, protein-structure prediction, domain and motif recognition, secondary structure prediction, protein-protein and protein-ligand interactions, protein and structure-based sequence alignments, inferring protein function from structure, electrostatic interactions, and threading and homology modeling. Upon completing their analyses, students will be responsible for writing a manuscript that will be submitted to a scientific journal for publication. Prerequisites: Bio 2960 and Chem 262. Fulfills upper-level laboratory requirement for the biology major.

Credit 4 units. A&S IQ: NSM, WI Art: NSM BU: SCI

Typical periods offered: Fall, Spring

BIOL 4584 Essentials of Biomedical Writing and Presenting

This course will provide the most fundamental techniques for effectively reviewing, writing and presenting scientific information. The goal of this course is to help students understand scientific communication better. They will become familiar with the structure of scientific papers, grants and presentations and will learn to critically evaluate each form of communication. Students will learn the characteristics of outstanding scientific writing and presenting, including academic style, coherence, clear data presentation and word choice through classroom exercises and mock presentations. Classes will consist of a lecture followed by a classroom exercise. Students will be graded on classroom exercises and writing assignments. This class does not count toward the undergraduate biology major. MA in Biology students should register for the IDENT 5584. Undergrads and PBPM students should register for 4584.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Spring

BIOL 4715 Basic Cancer Biology
More than two thirds of all people know someone who has cancer. This course provides students with a more extensive understanding of what cancer is and how it affects the human body. We will discuss the history of cancer research, the many different types of human cancers, and basic chemotherapeutics. The topics will be presented in a basic scientific nature, with an emphasis on gaining a broad understanding of the subjects. Prerequisite: Biol 2960 or equivalent. Not available to students who have credit for Biol 144 or Biol 1440.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

BIOL 4716 Advanced Cancer Biology
This advanced course provides students with a more in-depth understanding of the molecular mechanisms of cancer. We will discuss tumor suppressors, oncogenes, signaling pathways, animal models in cancer, and novel targeted cancer therapies being developed by biotechnology and pharmaceutical companies. Prerequisite: Biol 144, Biol 1440 or Biol 4715.
Credit 3 units. A&S IQ: NSM BU: SCI
Typical periods offered: Spring

BIOL 4720 Behavioral Ecology
This course examines animal behavior from an evolutionary perspective and explores the relationships between animal behavior, ecology, and evolution. Topics include mating systems, sexual selection, parental care, kin selection, and cooperation. There is a strong active - learning component. Prerequisite: Bio 2970 or permission of instructor.
Credit 4 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall, Spring

BIOL 4722 The Biology of Membranes
Biomembrane composition and structure determine its function. This class examines membrane components, their organization into general cell membrane structures/domains, and functions. You will appreciate the various roles membrane lipids play in constructing membranes and in signal transduction. Cholesterol is an important membrane lipid that is linked to biomembranes structurally and functionally. Misregulation of transport or trafficking of lipids, including cholesterol, contributes to many human diseases. You will learn historical background and recent advances in membrane biology, following the path taken by cholesterol and other lipids. You will also learn how to critically evaluate primary research and literature reviews on membrane biology.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Fall

BIOL 4834 Bioenergy
A broad overview of the flow of energy, captured from sunlight during photosynthesis, in biological systems, and current approaches to utilize the metabolic potentials of microbes and plants to produce biofuels and other valuable chemical products. An overall emphasis is placed on the use of large-scale genomic, transcriptomic and metabolomic datasets in biochemistry. The topics covered include photosynthesis, central metabolism, structure and degradation of plant lignocellulose, and microbial production of liquid alcohol, biodiesel, hydrogen & other advanced fuels. Course meets during the second half of the spring semester. Prereqs: Biol 4810 or permission of instructor.
Credit 2 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

BIOL 4933 Molecular Biology On the Cutting Edge
Recent biomedical discoveries have been greatly advanced through the development of innovative, state-of-the-art techniques. For example, Nuclear Magnetic Resonance (NMR) has proved to be an invaluable tool in both efforts to determine the atomic structure of proteins and small molecules as well as in clinical settings, as MRI to identify tumors that would otherwise go unnoticed. This course will introduce students to a variety of cutting-edge laboratory techniques, and discuss the impact of these techniques on biology and medicine. Students will have the unique opportunity to learn from graduate students employing these approaches in their doctoral studies. Topics to be covered include: high-throughput sequencing of genetic disorders, x-ray crystallography, and single molecule force spectroscopy by AFM. Weekly classes will consist of a 30-45 minute presentation on a particular technique, followed by 60-minute discussion of the assigned readings.
Credit 2 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

BIOL 4934 Neuroscience Futures 2
Students in this course engage with the neuroscience community both at WUSTL and beyond by attending, summarizing, and discussing neuroscience seminars on campus throughout the semester. Specifically, students are expected to attend three neuroscience seminars over the course of the semester, and submit summaries of each seminar. Students meet twice during the semester, in week 5 and week 11, for guided discussion of the science in the seminars they attended. Additionally, students in this seminar attend two combined classes with Neuroscience Futures 1 during the first and last weeks of the semester. In both meetings, students have an opportunity to give brief presentations on their own research. The last class combines short student presentations with a keynote address from an invited speaker from within or outside the WUSTL neuroscience community.
Credit 1 unit.
Typical periods offered: Fall, Spring

BIOL 4935 Research Perspectives
Critical reading, writing, statistics, and effective communication are all part of research and are the focus of this course, with topics changing each semester but always including a poster presentation and weekly writing. Enrollment is by permission only from Joan Strassmann.
2 credits. Credit. Joan Strassmann, David Queller, and selected postdoctoral fellows
Credit 2 units. A&S IQ: NSM
Typical periods offered: Fall, Spring

BIOL 4936 Seminars in Ecology and Evolution
What: At least once a week there are seminars from researchers in ecology or evolution. These seminars are given by local people and by visitors. This semester there are also a number of presentations by job candidates. The point of these seminars is to learn about exciting research. What questions are they asking? What are they discovering? What new scientific stories can we hear about ecology or evolution? What makes up these fields anyway? The seminars are often followed by receptions which are a chance to get to know each other better and to ask questions. This course invites undergraduates to listen to these presentations and write about them. After all, this is a major part of the ideas climate at Wash U. It would be a great idea to get in the habit of going to seminars, with this course, or without. In addition to attending seminars, we will meet three times during the semester, early on and a couple of times later. When: Most seminars are 4:00 on Thursdays, though some are on other days. The three meetings will be arranged at a time that works for the students in the course. Small class. No final.
Credit 1.0 units
Credit 1 unit.
Typical periods offered: Fall, Spring

BIOL 4938 Journal Club On Current Topics in Microbiology and Infectious Disease
We read, analyze, and discuss recent primary literature drawn from the field of microbiology. These papers represent the seven broad Topics of microbiology, as defined by the American Society for Microbiology (https://asm.org/): -Antimicrobial Agents & Resistance -Applied & Environmental Microbiology -Clinical & Public Health Microbiology -Clinical Infections & Vaccines -Ecology, Evolution, & Biodiversity -Host-Microbe Biology -Molecular Biology & Physiology Each week we discuss a single primary research paper, with special emphasis placed on analyzing and interpreting data and figures. Some assignments include supplementary videos or readings to provide the background knowledge required to understand a particular paper. To ensure that students have sufficient prior exposure to microbiological concepts, Biology 349: Foundations of Microbiology is a prerequisite for this course. At the conclusion of the semester, students should have achieved the following objectives: 1. Gain insight into the breadth of research performed within the field of microbiology. 2. Develop skills required to comprehend and to analyze primary research literature.
Credit 1 unit.
Typical periods offered: Fall

BIOL 4940 Seminar in Advanced Biology
In special cases, credit may be given for individual study. Topics of study and credit must be arranged with a faculty sponsor and approved by the Department.
Credit 4 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall, Spring

BIOL 4990 Undergraduate Teaching
Exceptional undergraduates serve as teaching assistants for laboratory and/or discussion sections in departmental courses. Normally 2 or 3 units are given per semester, subject to the approval of the instructor and the department. Credit may not be counted toward fulfilling the biology major; application form in Department of Biology Student Affairs office. Prerequisite: permission of instructor. Credit /No Credit only.
Credit 3 units.
Typical periods offered: Fall

BIOL 4991 Undergraduate Teaching
Exceptional undergraduates serve as teaching assistants for laboratory and/or discussion sections in departmental courses. Normally 2 or 3 units are given per semester, subject to the approval of the instructor and the department. Credit may not be counted toward fulfilling the biology major; application form in Department of Biology Student Affairs office. Prerequisite: permission of instructor. Credit /No Credit only.
Credit 3 units.
Typical periods offered: Spring

BIOL 4995 Biology Coursework Completed Abroad
This course is for study abroad credits.
Credit 12 units.
Typical periods offered: Fall, Spring, Summer

BIOL 4996 Elective: 400-Level
This course is for elective or transfer credits.
Credit 3 units.
Typical periods offered: Fall, Spring

Biology Major

Program Requirements

- **Total Units Required:** 58
- **Grade Requirement:** All courses to be counted toward a major in biology must be taken for a letter grade if a letter grade is offered. A grade of C- or better must be earned in all of these courses.

Required Courses

Code	Title	Units
BIOL 2960	Principles of Biology I	4
BIOL 2970	Principles of Biology II	4
CHEM 1601 Principles of General Chemistry I **or** CHEM 1701 General Chemistry I		3
CHEM 1602 Principles of General Chemistry II **or** CHEM 1702 General Chemistry II		3
CHEM 1751	General Chemistry Laboratory I	2
CHEM 1752	General Chemistry Laboratory II	2
CHEM 2561	Organic Chemistry I With Lab	4
CHEM 2562	Organic Chemistry II With Lab	4
PHYSICS 1740 Physics I **or** PHYSICS 1760 Focused Physics I		3
PHYSICS 1741	Physics I Lab	1
PHYSICS 1742 Physics II **or** PHYSICS 1762 Focused Physics II		3
PHYSICS 1743	Physics II Lab	1
MATH 1510	Calculus II	3
MATH 2130 Calculus III **or** MATH 3020 Elementary to Intermediate Statistics and Data Analysis **or** SDS 2020 Elementary Probability and Statistics		3
Total Units		**40**

Students may substitute CHEM 4010 Physical Chemistry for CHEM 2562 Organic Chemistry II With Lab. Students who plan to take physical chemistry must take MATH 2130 Calculus III. SDS 2020 (required for the tracks in ecology and evolution and in genomics and computational biology) and MATH 2130 Calculus III are valuable, particularly for students interested in research. Students who have taken MATH 2130 may take SDS 3020 rather than SDS 2020 for a more advanced treatment of statistics.

At least 18 units in advanced biology courses (numbered 3000 or above) are required. These 18 units may not include the following: BIOL 3030, BIOL 3430, BIOL 3990, BIOL 3991, BIOL 3900, BIOL 4990, or BIOL 4991; courses in the School of Continuing & Professional Studies; or more than 3 units of history-of-science courses. The following courses originating in other departments do count towards the 18 units of advance biology major credit despite external origins: PHYSICS 3354, PHYSICS 3324, ANTHRO 4581, CHEM 4810, CHEM 4820, and CHEM 4833. Up to 6 units of independent research (BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954) may be counted toward the 18 advanced biology units, and up to 3 units of BIOL 49XX seminar courses may be counted toward the 18 advanced biology units.

Majors are required to take at least one course from each of the following three areas:

Area A: Cellular and Molecular Biology

Code	Title	Units
BIOL 3240	Human Genetics	3
BIOL 3340	Cell Biology	3
BIOL 3371	Eukaryotic Genomes	4
BIOL 3481	Parasitology	3
BIOL 3490	Microbiology	4
BIOL 4240	Immunology	3
BIOL 4242	Virology	3
BIOL 4345	Epigenetics	3
BIOL 4492	Infections Diseaases: History, Pathology, and Prevention	3
BIOL 4510	General Biochemistry	4
CHEM 4810	General Biochemistry I	3
CHEM 4820	General Biochemistry II	3

Area B: Organismal Biology

Code	Title	Units
ANTHRO 4581	Principles of Human Anatomy and Development	3
BIOL 3057	Physiological Control Systems	3
BIOL 3151	Endocrinology	3
BIOL 3280	Principles in Human Physiology	4
BIOL 3411	Principles of the Nervous System	3
BIOL 3421	Introduction to Neuroethology	3
BIOL 3422	Genes, Brains, and Behavior	3
BIOL 3424	Great Discoveries in Neuroscience	3
BIOL 4026	How Plants Work: Physiology, Growth, and Metabolism	3
BIOL 4030	Biological Clocks	3
BIOL 4071	Developmental Biology	3
BIOL 4072	Regenerative and Stem Cell Biology	3
BIOL 4381	Cell-Based Tissue Engineering and Regenerative Medicine	3

Area C: Evolution, Ecology and Population Biology

Code	Title	Units
BIOL 3220	Woody Plants of Missouri	3
BIOL 3221	Research and Public Education in the Arboretum	3
BIOL 3470	Darwin and Evolutionary Controversies*	3
BIOL 3494	Microbes and the Environment	4
BIOL 3501	Evolution	4
BIOL 3700	Animal Behavior	3
BIOL 3810	Introduction to Ecology	3
BIOL 4181	Population Genetics (and Microevolution)	3
BIOL 4182	Macroevolution	3
BIOL 4183	Molecular Evolution	3
BIOL 4195	Disease Ecology	4
BIOL 4197	Community Ecology	3
BIOL 4720	Behavioral Ecology	4

* These courses also satisfy the Arts & Sciences writing-intensive requirement.

Majors also must take an advanced laboratory course from the following list:

Code	Title	Units
BIOL 3110	Vertebrate Structure Laboratory	4
BIOL 3423	Behavioral Genetics Laboratory	3
BIOL 3491	Microbiology Laboratory	3
BIOL 3492	Laboratory Experiments with Eukaryotic Microbes*	3
BIOL 3493	Bacterial Bioprospecting and Biotechnology	3
BIOL 4040	Laboratory of Neurophysiology*	4
BIOL 4193	Experimental Ecology Laboratory*	4
BIOL 4220	Practical Bioinformatics	4
BIOL 4342	Research Explorations in Genomics	4
BIOL 4343	Research Explorations in Genomics*	4
BIOL 4346	Next-Gen Genetics: Merging Genetics With Genomic Insights	3
BIOL 4522	Laboratory in Protein Analysis, Proteomics, and Protein Structure	3
BIOL 4523	Molecular Methods in Enzyme Analysis	4
BIOL 4525	Structural Bioinformatics of Proteins*	4
CHEM 4851	Biological Chemistry Laboratory	
PHYSICS 3324	Biophysics Laboratory	3

* These courses also satisfy the Arts & Sciences writing-intensive requirement.

In special cases, students may earn credit for graduate courses offered by the Division of Biology & Biomedical Sciences.

Additional Information

Research

Research opportunities are available during the student's first and second years through BIOL 2901, BIOL 2902, BIOL 2903, or BIOL 2904; such opportunities are available during the third and fourth years through BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954. A research emphasis in the major requires at least 6 credits (two semesters) of independent research (BIOL 4950, BIOL 4951, BIOL

4952, BIOL 4953, or BIOL 4954) and an approved senior thesis on this research, which is presented at the undergraduate symposium. The research emphasis is acknowledged on the degree as a research milestone.

Senior Honors

Biology majors are encouraged to work for senior honors, which require a 3.30 grade point average in biology, a 3.30 GPA in nonbiological sciences (mathematics, chemistry and physics courses), and a 3.65 overall GPA at the time of graduation. Also required are 6 units of BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954 research and an approved thesis from this work, equivalent to the research emphasis described in the preceding paragraph. Students interested in senior honors should begin BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954 no later than the spring of their junior year.

The Department of Biology awards the Marian Smith Spector Prize to an undergraduate who has an excellent academic record and who submits an outstanding honors thesis; it also awards the Ralph S. Quatrano Prize to the student whose thesis shows the greatest evidence of creativity in design, research methodology and/or broader scientific implications. The Harrison D. Stalker Prize is awarded to a graduating senior whose college career is distinguished by scholarship, service and breadth of interest.

Biology Major, Ecology and Evolution Specialization

Program Requirements

- **Total Units Required:** 58
- **Grade Requirement:** All courses to be counted toward a major in biology must be taken for a letter grade if a letter grade is offered. A grade of C- or better must be earned in all of these courses.

Required Courses

Code	Title	Units
BIOL 2960	Principles of Biology I	4
BIOL 2970	Principles of Biology II	4
CHEM 1601 Principles of General Chemistry I **or** CHEM 1701 General Chemistry I		3
CHEM 1602 Principles of General Chemistry II **or** CHEM 1702 General Chemistry II		3
CHEM 1751	General Chemistry Laboratory I	2
CHEM 1752	General Chemistry Laboratory II	2
CHEM 2561	Organic Chemistry I With Lab	4
CHEM 2562	Organic Chemistry II With Lab	4
PHYSICS 1740 Physics I **or** PHYSICS 1760 Focused Physics I		3
PHYSICS 1741	Physics I Lab	1
PHYSICS 1742 Physics II **or** PHYSICS 1762 Focused Physics II		3
PHYSICS 1743	Physics II Lab	1
MATH 1510	Calculus II	3
MATH 2130 Calculus III **or** MATH 3020 Elementary to Intermediate Statistics and Data Analysis **or** SDS 2020 Elementary Probability and Statistics		3
Total Units		**40**

Students may substitute CHEM 4010 Physical Chemistry for CHEM 2562 Organic Chemistry II With Lab. Students who plan to take physical chemistry must take MATH 2130 Calculus III. SDS 2020 (required for the tracks in ecology and evolution and in genomics and computational biology) and MATH 2130 Calculus III are valuable, particularly for students interested in research. Students who have taken MATH 2130 may take SDS 3020 rather than SDS 2020 for a more advanced treatment of statistics.

At least 18 units in advanced biology courses (numbered 3000 or above) are required. These 18 units may not include the following: BIOL 3030, BIOL 3430, BIOL 3990, BIOL 3991, BIOL 3900, BIOL 4990, or BIOL 4991; courses in the School of Continuing & Professional Studies; or more than 3 units of history-of-science courses. The following courses originating in other departments do count towards the 18 units of advance biology major credit despite external origins: PHYSICS 3354, PHYSICS 3324, ANTHRO 4581, CHEM 4810, CHEM 4820, and CHEM 4833. Up to 6 units of independent research (BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954) may be counted toward the 18 advanced biology units, and up to 3 units of BIOL 49XX seminar courses may be counted toward the 18 advanced biology units.

Majors are required to take at least one course from each of the following three areas:

Area A: Cellular and Molecular Biology

Code	Title	Units
BIOL 3240	Human Genetics	3
BIOL 3340	Cell Biology	3
BIOL 3371	Eukaryotic Genomes	4
BIOL 3481	Parasitology	3
BIOL 3490	Microbiology	4
BIOL 4240	Immunology	3
BIOL 4242	Virology	3
BIOL 4345	Epigenetics	3
BIOL 4492	Infections Diseaases: History, Pathology, and Prevention	3
BIOL 4510	General Biochemistry	4
CHEM 4810	General Biochemistry I	3
CHEM 4820	General Biochemistry II	3

Area B: Organismal Biology

Code	Title	Units
ANTHRO 4581	Principles of Human Anatomy and Development	3
BIOL 3057	Physiological Control Systems	3
BIOL 3151	Endocrinology	3
BIOL 3280	Principles in Human Physiology	4
BIOL 3411	Principles of the Nervous System	3
BIOL 3421	Introduction to Neuroethology	3
BIOL 3422	Genes, Brains, and Behavior	3
BIOL 3424	Great Discoveries in Neuroscience	3
BIOL 4026	How Plants Work: Physiology, Growth, and Metabolism	3
BIOL 4030	Biological Clocks	3
BIOL 4071	Developmental Biology	3
BIOL 4072	Regenerative and Stem Cell Biology	3
BIOL 4381	Cell-Based Tissue Engineering and Regenerative Medicine	3

Area C: Evolution, Ecology and Population Biology

Code	Title	Units
BIOL 3220	Woody Plants of Missouri	3
BIOL 3221	Research and Public Education in the Arboretum	3
BIOL 3470	Darwin and Evolutionary Controversies*	3
BIOL 3494	Microbes and the Environment	4
BIOL 3501	Evolution	4
BIOL 3700	Animal Behavior	3
BIOL 3810	Introduction to Ecology	3
BIOL 4181	Population Genetics (and Microevolution)	3
BIOL 4182	Macroevolution	3
BIOL 4183	Molecular Evolution	3
BIOL 4195	Disease Ecology	4
BIOL 4197	Community Ecology	3
BIOL 4720	Behavioral Ecology	4

* These courses also satisfy the Arts & Sciences writing-intensive requirement.

Majors also must take an advanced laboratory course from the following list:

Code	Title	Units
BIOL 3110	Vertebrate Structure Laboratory	4
BIOL 3423	Behavioral Genetics Laboratory	3
BIOL 3491	Microbiology Laboratory	3
BIOL 3492	Laboratory Experiments with Eukaryotic Microbes*	3
BIOL 3493	Bacterial Bioprospecting and Biotechnology	3
BIOL 4040	Laboratory of Neurophysiology*	4
BIOL 4193	Experimental Ecology Laboratory*	4
BIOL 4220	Practical Bioinformatics	4
BIOL 4342	Research Explorations in Genomics	4
BIOL 4343	Research Explorations in Genomics*	4
BIOL 4346	Next-Gen Genetics: Merging Genetics With Genomic Insights	3
BIOL 4522	Laboratory in Protein Analysis, Proteomics, and Protein Structure	3
BIOL 4523	Molecular Methods in Enzyme Analysis	4
BIOL 4525	Structural Bioinformatics of Proteins*	4
CHEM 4851	Biological Chemistry Laboratory	
PHYSICS 3324	Biophysics Laboratory	3

* These courses also satisfy the Arts & Sciences writing-intensive requirement.

In special cases, students may earn credit for graduate courses offered by the Division of Biology & Biomedical Sciences.

Specialization Requirements

- **Total units required (including the biology major requirements):** 65

Additional requirements include SDS 2200 or SDS 3200. Students whose main interest is ecology must take at least two ecology electives and one evolution elective; students whose main interest is evolution must take at least two evolution electives and one ecology elective (evolution electives: BIOL 3501, BIOL 4181, BIOL 4182, and BIOL 4183; ecology electives: BIOL 3700, BIOL 3810, BIOL 4197, BIOL 4195, and BIOL 4720). Also required are one elective in analytical methodology (CSE 1301 or SDS 2200) and one elective in Earth, environmental, and planetary sciences (EEPS 2010, EEPS 2020, or EEPS 3230). The course used to fulfill the advanced laboratory requirement for the major must be BIOL 4193, BIOL 4342, or BIOL 4343.

Additional Information

Research

Research opportunities are available during the student's first and second years through BIOL 2901, BIOL 2902, BIOL 2903, or BIOL 2904; such opportunities are available during the third and fourth years through BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954. A research emphasis in the major requires at least 6 credits (two semesters) of independent research (BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954) and an approved senior thesis on this research, which is presented at the undergraduate symposium. The research emphasis is acknowledged on the degree as a research milestone.

Senior Honors

Biology majors are encouraged to work for senior honors, which require a 3.30 grade point average in biology, a 3.30 GPA in nonbiological sciences (mathematics, chemistry and physics courses), and a 3.65 overall GPA at the time of graduation. Also required are 6 units of BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954 research and an approved thesis from this work, equivalent to the research emphasis described in the preceding paragraph. Students interested in senior honors should begin BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954 no later than the spring of their junior year.

The Department of Biology awards the Marian Smith Spector Prize to an undergraduate who has an excellent academic record and who submits an outstanding honors thesis; it also awards the Ralph S. Quatrano Prize to the student whose thesis shows the greatest evidence of creativity in design, research methodology and/or broader scientific implications. The Harrison D. Stalker Prize is awarded to a graduating senior whose college career is distinguished by scholarship, service and breadth of interest.

Biology Major, Genomics and Computational Biology Specialization

Program Requirements

- **Total Units Required:** 58
- **Grade Requirement:** All courses to be counted toward a major in biology must be taken for a letter grade if a letter grade is offered. A grade of C- or better must be earned in all of these courses.

Required Courses

Code	Title	Units
BIOL 2960	Principles of Biology I	4
BIOL 2970	Principles of Biology II	4
CHEM 1601 Principles of General Chemistry I **or** CHEM 1701 General Chemistry I		3
CHEM 1602 Principles of General Chemistry II **or** CHEM 1702 General Chemistry II		3
CHEM 1751	General Chemistry Laboratory I	2
CHEM 1752	General Chemistry Laboratory II	2
CHEM 2561	Organic Chemistry I With Lab	4
CHEM 2562	Organic Chemistry II With Lab	4
PHYSICS 1740 Physics I **or** PHYSICS 1760 Focused Physics I		3
PHYSICS 1741	Physics I Lab	1
PHYSICS 1742 Physics II **or** PHYSICS 1762 Focused Physics II		3
PHYSICS 1743	Physics II Lab	1
MATH 1510	Calculus II	3
MATH 2130 Calculus III **or** MATH 3020 Elementary to Intermediate Statistics and Data Analysis **or** SDS 2020 Elementary Probability and Statistics		3
Total Units		**40**

Students may substitute CHEM 4010 Physical Chemistry for CHEM 2562 Organic Chemistry II With Lab. Students who plan to take physical chemistry must take MATH 2130 Calculus III. SDS 2020 (required for the tracks in ecology and evolution and in genomics and computational biology) and MATH 2130 Calculus III are valuable, particularly for students interested in research. Students who have taken MATH 2130 may take SDS 3020 rather than SDS 2020 for a more advanced treatment of statistics.

At least 18 units in advanced biology courses (numbered 3000 or above) are required. These 18 units may not include the following: BIOL 3030, BIOL 3430, BIOL 3990, BIOL 3991, BIOL 3900, BIOL 4990, or BIOL 4991; courses in the School of Continuing & Professional Studies; or more than 3 units of history-of-science courses. The following courses originating in other departments do count towards the 18 units of advance biology major credit despite external origins: PHYSICS 3354, PHYSICS 3324, ANTHRO 4581, CHEM 4810, CHEM 4820, and CHEM 4833. Up to 6 units of independent research (BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954) may be counted toward the 18 advanced biology units, and up to 3 units of BIOL 49XX seminar courses may be counted toward the 18 advanced biology units.

Majors are required to take at least one course from each of the following three areas:

Area A: Cellular and Molecular Biology

Code	Title	Units
BIOL 3240	Human Genetics	3
BIOL 3340	Cell Biology	3
BIOL 3371	Eukaryotic Genomes	4
BIOL 3481	Parasitology	3
BIOL 3490	Microbiology	4
BIOL 4240	Immunology	3
BIOL 4242	Virology	3
BIOL 4345	Epigenetics	3
BIOL 4492	Infections Diseaases: History, Pathology, and Prevention	3
BIOL 4510	General Biochemistry	4
CHEM 4810	General Biochemistry I	3
CHEM 4820	General Biochemistry II	3

Area B: Organismal Biology

Code	Title	Units
ANTHRO 4581	Principles of Human Anatomy and Development	3
BIOL 3057	Physiological Control Systems	3
BIOL 3151	Endocrinology	3

BIOL 3280	Principles in Human Physiology	4
BIOL 3411	Principles of the Nervous System	3
BIOL 3421	Introduction to Neuroethology	3

BIOL 3424	Great Discoveries in Neuroscience	3
BIOL 4026	How Plants Work: Physiology, Growth, and Metabolism	3
BIOL 4030	Biological Clocks	3
BIOL 4071	Developmental Biology	3
BIOL 4072	Regenerative and Stem Cell Biology	3
BIOL 4381	Cell-Based Tissue Engineering and Regenerative Medicine	3

Area C: Evolution, Ecology and Population Biology

Code	Title	Units
BIOL 3220	Woody Plants of Missouri	3
BIOL 3221	Research and Public Education in the Arboretum	3
BIOL 3470	Darwin and Evolutionary Controversies*	3
BIOL 3494	Microbes and the Environment	4
BIOL 3501	Evolution	4
BIOL 3700	Animal Behavior	3
BIOL 3810	Introduction to Ecology	3
BIOL 4181	Population Genetics (and Microevolution)	3
BIOL 4182	Macroevolution	3
BIOL 4183	Molecular Evolution	3
BIOL 4195	Disease Ecology	4
BIOL 4197	Community Ecology	3
BIOL 4720	Behavioral Ecology	4

* These courses also satisfy the Arts & Sciences writing-intensive requirement.

Majors also must take an advanced laboratory course from the following list:

Code	Title	Units
BIOL 3110	Vertebrate Structure Laboratory	4
BIOL 3423	Behavioral Genetics Laboratory	3
BIOL 3491	Microbiology Laboratory	3
BIOL 3492	Laboratory Experiments with Eukaryotic Microbes*	3
BIOL 3493	Bacterial Bioprospecting and Biotechnology	3
BIOL 4040	Laboratory of Neurophysiology*	4
BIOL 4193	Experimental Ecology Laboratory*	4
BIOL 4220	Practical Bioinformatics	4
BIOL 4342	Research Explorations in Genomics	4
BIOL 4343	Research Explorations in Genomics*	4
BIOL 4346	Next-Gen Genetics: Merging Genetics With Genomic Insights	3
BIOL 4522	Laboratory in Protein Analysis, Proteomics, and Protein Structure	3
BIOL 4523	Molecular Methods in Enzyme Analysis	4
BIOL 4525	Structural Bioinformatics of Proteins*	4
CHEM 4851	Biological Chemistry Laboratory	
PHYSICS 3324	Biophysics Laboratory	3

* These courses also satisfy the Arts & Sciences writing-intensive requirement.

In special cases, students may earn credit for graduate courses offered by the Division of Biology & Biomedical Sciences.

Specialization Requirements

- **Total units required (including the biology major requirements):** 64

Additional requirements include an advanced genomics/computational biology elective (BIOL 3240, BIOL 4183, BIOL 4344, BIOL 5480, or BIOL 5488); statistics (SDS 2200 or SDS 3200); and two outside electives (CSE 1301 and CSE 2407). CSE 2400 is strongly recommended as well. The course used to fulfill the advanced laboratory requirement for the major must be BIOL 3492, BIOL 3493, BIOL 4220, BIOL 4342, BIOL 4343, BIOL 4346, BIOL 4522, or BIOL 4525. Biology courses recommended for students in this track include BIOL 3340, BIOL 3422, BIOL 3490, BIOL 4030, BIOL 4181, BIOL 4183, and BIOL 4510. Recommended mathematics electives include MATH 2500 and MATH 3300.

Additional Information

Research

Research opportunities are available during the student's first and second years through BIOL 2901, BIOL 2902, BIOL 2903, or BIOL 2904; such opportunities are available during the third and fourth years through BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954. A research emphasis in the major requires at least 6 credits (two semesters) of independent research (BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954) and an approved senior thesis on this research, which is presented at the undergraduate symposium. The research emphasis is acknowledged on the degree as a research milestone.

Senior Honors

Biology majors are encouraged to work for senior honors, which require a 3.30 grade point average in biology, a 3.30 GPA in nonbiological sciences (mathematics, chemistry and physics courses), and a 3.65 overall GPA at the time of graduation. Also required are 6 units of BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954 research and an

approved thesis from this work, equivalent to the research emphasis described in the preceding paragraph. Students interested in senior honors should begin BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954 no later than the spring of their junior year.

The Department of Biology awards the Marian Smith Spector Prize to an undergraduate who has an excellent academic record and who submits an outstanding honors thesis; it also awards the Ralph S. Quatrano Prize to the student whose thesis shows the greatest evidence of creativity in design, research methodology and/or broader scientific implications. The Harrison D. Stalker Prize is awarded to a graduating senior whose college career is distinguished by scholarship, service and breadth of interest.

BIOL 4522	Laboratory in Protein Analysis, Proteomics, and Protein Structure	3
BIOL 4523	Molecular Methods in Enzyme Analysis	4
BIOL 4525	Structural Bioinformatics of Proteins*	4
CHEM 4851	Biological Chemistry Laboratory	
PHYSICS 3324	Biophysics Laboratory	3

* These courses also satisfy the Arts & Sciences writing-intensive requirement.

In special cases, students may earn credit for graduate courses offered by the Division of Biology & Biomedical Sciences.

Specialization Requirements

- **Total units required (including the biology major requirements):** 68

Additional requirements include BIOL 3490, which should be taken during the spring of the sophomore year, and either BIOL 4510 or the pair of courses CHEM 4810 and BIOL 4820. The advanced laboratory course used to fulfill major requirements must be one of the following: BIOL 3491, BIOL 3492, or BIOL 3493. At least one of the following must be taken as an advanced microbiology elective: BIOL 3481, BIOL 3494, BIOL 4242, BIOL 4492, or BIOL 5426. At least one of the following must be taken as an allied elective: the pair of courses BIOL1910 and BIOL1920, BIOL 4240, CHEM 4830, or EEPS 3230. Students should select one course each from biology major areas B and C. BIOL 3501 is highly recommended as the course used to fulfill biology major area C. The total number of upper-level credits earned in major-track biology courses and allied electives must be at least 24 (6 units in addition to the 18 units required for the biology major).

Additional Information

Research

Research opportunities are available during the student's first and second years through BIOL 2901, BIOL 2902, BIOL 2903, or BIOL 2904; such opportunities are available during the third and fourth years through BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954. A research emphasis in the major requires at least 6 credits (two semesters) of independent research (BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954) and an approved senior thesis on this research, which is presented at the undergraduate symposium. The research emphasis is acknowledged on the degree as a research milestone.

Senior Honors

Biology majors are encouraged to work for senior honors, which require a 3.30 grade point average in biology, a 3.30 GPA in nonbiological sciences (mathematics, chemistry and physics courses), and a 3.65 overall GPA at the time of graduation. Also required are 6 units of BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954 research and an

approved thesis from this work, equivalent to the research emphasis described in the preceding paragraph. Students interested in senior honors should begin BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954 no later than the spring of their junior year.

The Department of Biology awards the Marian Smith Spector Prize to an undergraduate who has an excellent academic record and who submits an outstanding honors thesis; it also awards the Ralph S. Quatrano Prize to the student whose thesis shows the greatest evidence of creativity in design, research methodology and/or broader scientific implications. The Harrison D. Stalker Prize is awarded to a graduating senior whose college career is distinguished by scholarship, service and breadth of interest.

PHYSICS 1743	Physics II Lab	1
MATH 1510	Calculus II	3
MATH 2130 Calculus III **or** MATH 3020 Elementary to Intermediate Statistics and Data Analysis **or** SDS 2020 Elementary Probability and Statistics		3
Total Units		**40**

Students may substitute CHEM 4010 Physical Chemistry for CHEM 2562 Organic Chemistry II With Lab. Students who plan to take physical chemistry must take MATH 2130 Calculus III. SDS 2020 (required for the tracks in ecology and evolution and in genomics and computational biology) and MATH 2130 Calculus III are valuable, particularly for students interested in research. Students who have taken MATH 2130 may take SDS 3020 rather than SDS 2020 for a more advanced treatment of statistics.

At least 18 units in advanced biology courses (numbered 3000 or above) are required. These 18 units may not include the following: BIOL 3030, BIOL 3430, BIOL 3990, BIOL 3991, BIOL 3900, BIOL 4990, or BIOL 4991; courses in the School of Continuing & Professional Studies; or more than 3 units of history-of-science courses. The following courses originating in other departments do count towards the 18 units of advance biology major credit despite external origins: PHYSICS 3354, PHYSICS 3324, ANTHRO 4581, CHEM 4810, CHEM 4820, and CHEM 4833. Up to 6 units of independent research (BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954) may be counted toward the 18 advanced biology units, and up to 3 units of BIOL 49XX seminar courses may be counted toward the 18 advanced biology units.

Majors are required to take at least one course from each of the following three areas:

Area A: Cellular and Molecular Biology

Code	Title	Units
BIOL 3240	Human Genetics	3
BIOL 3340	Cell Biology	3
BIOL 3371	Eukaryotic Genomes	4
BIOL 3481	Parasitology	3
BIOL 3490	Microbiology	4
BIOL 4240	Immunology	3
BIOL 4242	Virology	3
BIOL 4345	Epigenetics	3
BIOL 4492	Infections Diseaases: History, Pathology, and Prevention	3
BIOL 4510	General Biochemistry	4
CHEM 4810	General Biochemistry I	3
CHEM 4820	General Biochemistry II	3

Area B: Organismal Biology

Code	Title	Units
ANTHRO 4581	Principles of Human Anatomy and Development	3
BIOL 3057	Physiological Control Systems	3
BIOL 3151	Endocrinology	3
BIOL 3280	Principles in Human Physiology	4
BIOL 3411	Principles of the Nervous System	3
BIOL 3421	Introduction to Neuroethology	3
BIOL 3422	Genes, Brains, and Behavior	3
BIOL 3424	Great Discoveries in Neuroscience	3

BIOL 4026	How Plants Work: Physiology, Growth, and Metabolism	3
BIOL 4030	Biological Clocks	3
BIOL 4071	Developmental Biology	3
BIOL 4072	Regenerative and Stem Cell Biology	3
BIOL 4381	Cell-Based Tissue Engineering and Regenerative Medicine	3

Area C: Evolution, Ecology and Population Biology

Code	Title	Units
BIOL 3220	Woody Plants of Missouri	3
BIOL 3221	Research and Public Education in the Arboretum	3
BIOL 3470	Darwin and Evolutionary Controversies*	3
BIOL 3494	Microbes and the Environment	4
BIOL 3501	Evolution	4
BIOL 3700	Animal Behavior	3
BIOL 3810	Introduction to Ecology	3
BIOL 4181	Population Genetics (and Microevolution)	3
BIOL 4182	Macroevolution	3
BIOL 4183	Molecular Evolution	3
BIOL 4195	Disease Ecology	4
BIOL 4197	Community Ecology	3
BIOL 4720	Behavioral Ecology	4

* These courses also satisfy the Arts & Sciences writing-intensive requirement.

Majors also must take an advanced laboratory course from the following list:

Code	Title	Units
BIOL 3110	Vertebrate Structure Laboratory	4
BIOL 3423	Behavioral Genetics Laboratory	3
BIOL 3491	Microbiology Laboratory	3
BIOL 3492	Laboratory Experiments with Eukaryotic Microbes*	3
BIOL 3493	Bacterial Bioprospecting and Biotechnology	3
BIOL 4040	Laboratory of Neurophysiology*	4
BIOL 4193	Experimental Ecology Laboratory*	4
BIOL 4220	Practical Bioinformatics	4
BIOL 4342	Research Explorations in Genomics	4
BIOL 4343	Research Explorations in Genomics*	4
BIOL 4346	Next-Gen Genetics: Merging Genetics With Genomic Insights	3
BIOL 4522	Laboratory in Protein Analysis, Proteomics, and Protein Structure	3
BIOL 4523	Molecular Methods in Enzyme Analysis	4
BIOL 4525	Structural Bioinformatics of Proteins*	4
CHEM 4851	Biological Chemistry Laboratory	
PHYSICS 3324	Biophysics Laboratory	3

* These courses also satisfy the Arts & Sciences writing-intensive requirement.

In special cases, students may earn credit for graduate courses offered by the Division of Biology & Biomedical Sciences.

Specialization Requirements

- **Total units required (including the biology major requirements):** 58

Additional requirements include both CHEM 4810 and CHEM 4820 as well as either BIOL 3340 or BIOL 3490. The advanced laboratory course used to fulfill major requirements must be one of the following: BIOL 3423, BIOL 3491, BIOL 3492, BIOL 3493, BIOL 4342/BIOL 4343, BIOL 4346, BIOL 4522, BIOL 4523, BIOL 4525, or CHEM 4851. Additional biology courses recommended for students in this track include BIOL 4023, BIOL 4071, BIOL 4183, BIOL 4344, BIOL 4833, and BIOL 5312.

Additional Information

Research

Research opportunities are available during the student's first and second years through BIOL 2901, BIOL 2902, BIOL 2903, or BIOL 2904; such opportunities are available during the third and fourth years through BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954. A research emphasis in the major requires at least 6 credits (two semesters) of independent research (BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954) and an approved senior thesis on this research, which is presented at the undergraduate symposium. The research emphasis is acknowledged on the degree as a research milestone.

Senior Honors

Biology majors are encouraged to work for senior honors, which require a 3.30 grade point average in biology, a 3.30 GPA in nonbiological sciences (mathematics, chemistry and physics courses), and a 3.65 overall GPA at the time of graduation. Also required are 6 units of BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954 research and an approved thesis from this work, equivalent to the research emphasis described in the preceding paragraph. Students interested in senior honors should begin BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954 no later than the spring of their junior year.

The Department of Biology awards the Marian Smith Spector Prize to an undergraduate who has an excellent academic record and who submits an outstanding honors thesis; it also awards the Ralph S. Quatrano Prize to the student whose thesis shows the greatest evidence

of creativity in design, research methodology and/or broader scientific implications. The Harrison D. Stalker Prize is awarded to a graduating senior whose college career is distinguished by scholarship, service and breadth of interest.

Biology Major, Neuroscience Specialization

Program Requirements

- **Total Units Required:** 58
- **Grade Requirement:** All courses to be counted toward a major in biology must be taken for a letter grade if a letter grade is offered. A grade of C- or better must be earned in all of these courses.

Required Courses

Code	Title	Units
BIOL 2960	Principles of Biology I	4
BIOL 2970	Principles of Biology II	4
CHEM 1601 Principles of General Chemistry I **or** CHEM 1701 General Chemistry I		3
CHEM 1602 Principles of General Chemistry II **or** CHEM 1702 General Chemistry II		3
CHEM 1751	General Chemistry Laboratory I	2
CHEM 1752	General Chemistry Laboratory II	2
CHEM 2561	Organic Chemistry I With Lab	4
CHEM 2562	Organic Chemistry II With Lab	4
PHYSICS 1740 Physics I **or** PHYSICS 1760 Focused Physics I		3
PHYSICS 1741	Physics I Lab	1
PHYSICS 1742 Physics II **or** PHYSICS 1762 Focused Physics II		3
PHYSICS 1743	Physics II Lab	1
MATH 1510	Calculus II	3
MATH 2130 Calculus III **or** MATH 3020 Elementary to Intermediate Statistics and Data Analysis **or** SDS 2020 Elementary Probability and Statistics		3
Total Units		**40**

Students may substitute CHEM 4010 Physical Chemistry for CHEM 2562 Organic Chemistry II With Lab. Students who plan to take physical chemistry must take MATH 2130 Calculus III. SDS 2020 (required for the tracks in ecology and evolution and in genomics and computational biology) and MATH 2130 Calculus III are valuable, particularly for students interested in research. Students who have taken MATH 2130 may take SDS 3020 rather than SDS 2020 for a more advanced treatment of statistics.

At least 18 units in advanced biology courses (numbered 3000 or above) are required. These 18 units may not include the following: BIOL 3030, BIOL 3430, BIOL 3990, BIOL 3991, BIOL 3900, BIOL 4990, or BIOL 4991; courses in the School of Continuing & Professional Studies; or more than 3 units of history-of-science courses. The following courses originating in other departments do count towards the 18 units of advance biology major credit despite external origins: PHYSICS 3354, PHYSICS 3324, ANTHRO 4581, CHEM 4810, CHEM 4820, and CHEM 4833. Up to 6 units of independent research (BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954) may be counted toward the 18 advanced biology units, and up to 3 units of BIOL 49XX seminar courses may be counted toward the 18 advanced biology units.

Majors are required to take at least one course from each of the following three areas:

Area A: Cellular and Molecular Biology

Code	Title	Units
BIOL 3240	Human Genetics	3
BIOL 3340	Cell Biology	3
BIOL 3371	Eukaryotic Genomes	4
BIOL 3481	Parasitology	3
BIOL 3490	Microbiology	4
BIOL 4240	Immunology	3
BIOL 4242	Virology	3
BIOL 4345	Epigenetics	3
BIOL 4492	Infections Diseaases: History, Pathology, and Prevention	3
BIOL 4510	General Biochemistry	4
CHEM 4810	General Biochemistry I	3
CHEM 4820	General Biochemistry II	3

Area B: Organismal Biology

Code	Title	Units
ANTHRO 4581	Principles of Human Anatomy and Development	3
BIOL 3057	Physiological Control Systems	3
BIOL 3151	Endocrinology	3
BIOL 3280	Principles in Human Physiology	4
BIOL 3411	Principles of the Nervous System	3
BIOL 3421	Introduction to Neuroethology	3
BIOL 3422	Genes, Brains, and Behavior	3
BIOL 3424	Great Discoveries in Neuroscience	3
BIOL 4026	How Plants Work: Physiology, Growth, and Metabolism	3
BIOL 4030	Biological Clocks	3
BIOL 4071	Developmental Biology	3
BIOL 4072	Regenerative and Stem Cell Biology	3
BIOL 4381	Cell-Based Tissue Engineering and Regenerative Medicine	3

Area C: Evolution, Ecology and Population Biology

Code	Title	Units
BIOL 3220	Woody Plants of Missouri	3
BIOL 3221	Research and Public Education in the Arboretum	3
BIOL 3470	Darwin and Evolutionary Controversies*	3
BIOL 3494	Microbes and the Environment	4
BIOL 3501	Evolution	4
BIOL 3700	Animal Behavior	3
BIOL 3810	Introduction to Ecology	3
BIOL 4181	Population Genetics (and Microevolution)	3
BIOL 4182	Macroevolution	3
BIOL 4183	Molecular Evolution	3
BIOL 4195	Disease Ecology	4
BIOL 4197	Community Ecology	3
BIOL 4720	Behavioral Ecology	4

* These courses also satisfy the Arts & Sciences writing-intensive requirement.

Majors also must take an advanced laboratory course from the following list:

Code	Title	Units
BIOL 3110	Vertebrate Structure Laboratory	4
BIOL 3423	Behavioral Genetics Laboratory	3
BIOL 3491	Microbiology Laboratory	3
BIOL 3492	Laboratory Experiments with Eukaryotic Microbes*	3
BIOL 3493	Bacterial Bioprospecting and Biotechnology	3
BIOL 4040	Laboratory of Neurophysiology*	4
BIOL 4193	Experimental Ecology Laboratory*	4
BIOL 4220	Practical Bioinformatics	4
BIOL 4342	Research Explorations in Genomics	4
BIOL 4343	Research Explorations in Genomics*	4
BIOL 4346	Next-Gen Genetics: Merging Genetics With Genomic Insights	3
BIOL 4522	Laboratory in Protein Analysis, Proteomics, and Protein Structure	3
BIOL 4523	Molecular Methods in Enzyme Analysis	4
BIOL 4525	Structural Bioinformatics of Proteins*	4
CHEM 4851	Biological Chemistry Laboratory	
PHYSICS 3324	Biophysics Laboratory	3

* These courses also satisfy the Arts & Sciences writing-intensive requirement.

In special cases, students may earn credit for graduate courses offered by the Division of Biology & Biomedical Sciences.

Specialization Requirements

- **Total Units Required (including the biology major requirements):** 60

Biology major requirements must be met with the following courses: BIOL 3057, area A (BIOL 3340, BIOL 4510, CHEM 4810, or CHEM 4820), area B (BIOL 3411), and any course in area C. Students must then choose one of the following laboratory pathways: (1) Laboratory Pathway 1: one of the following courses: BIOL 3423, PHYSICS 3324, or BIOL 4040; or (2) Laboratory Pathway 2: any other upper-level biology laboratory course on the list of approved laboratory courses for the biology major plus 6 credits of BIOL 4954 and/or BIOL 4953 (Independent Research in Neuroscience). (Note: students selecting Laboratory Pathway 2 will need to carefully plan how to fulfill the advanced lab requirement as many advanced lab courses prioritize enrollment for students in related specializations, just as enrollment in BIOL 4040 is largely reserved for those in the neuroscience specialization. Students must select at least one biology elective (BIOL 3110, BIOL 3151, BIOL 3280, BIOL 3421, BIOL 3422, BIOL 3424, BIOL 4030, BIOL 4345, or ANTHRO 4581) and one outside elective either in physics (PHYSICS 3350, PHYSICS 3355, or PHYSICS 3324) or psychology (PSYCH 3300, PSYCH 3600, or PSYCH 3604). SDS 2200 or SDS 3200 is recommended. Optional seminar courses in neuroscience include BIOL 1171 and BIOL 4934. PHYSICS 3324 may count either as the advanced laboratory requirement or the outside elective course but not for both requirements.

Additional Information

Research

Research opportunities are available during the student's first and second years through BIOL 2901, BIOL 2902, BIOL 2903, or BIOL 2904; such opportunities are available during the third and fourth years through BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954. A research emphasis in the major requires at least 6 credits (two semesters) of independent research (BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954) and an approved senior thesis on this research, which is presented at the undergraduate symposium. The research emphasis is acknowledged on the degree as a research milestone.

Senior Honors

Biology majors are encouraged to work for senior honors, which require a 3.30 grade point average in biology, a 3.30 GPA in nonbiological sciences (mathematics, chemistry and physics courses), and a 3.65 overall GPA at the time of graduation. Also required are 6 units of BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954 research and an approved thesis from this work, equivalent to the research emphasis described in the preceding paragraph. Students interested in senior honors should begin BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954 no later than the spring of their junior year.

The Department of Biology awards the Marian Smith Spector Prize to an undergraduate who has an excellent academic record and who submits an outstanding honors thesis; it also awards the Ralph S. Quatrano Prize to the student whose thesis shows the greatest evidence of creativity in design, research methodology and/or broader scientific implications. The Harrison D. Stalker Prize is awarded to a graduating senior whose college career is distinguished by scholarship, service and breadth of interest.

Environmental Biology Major

Program Requirements

- **Total Units Required:** 58-65

Students interested in Environmental Biology typically take BIOL 2150 Introduction to Environmental Biology during fall of the first year of study, although it may be taken later.

Required Courses

Code	Title	Units
EEPS 2010	Earth and the Environment	3-4
or EEPS 2020	Introduction to Earth, Environmental & Planetary Science	
or EEPS 2190	Energy and the Environment	
or ENST 2220	One Health: Linking the Health of Humnas, Animals, and the Environment	
BIOL 2150	Introduction to Environmental Biology	3
BIOL 2960	Principles of Biology I	4
BIOL 2970	Principles of Biology II	4
BIOL 3810	Introduction to Ecology	3
CHEM 1601	Principles of General Chemistry I	3
or CHEM 1701	General Chemistry I	
CHEM 1751	General Chemistry Laboratory I	2
CHEM 1602	Principles of General Chemistry II	3
or CHEM 1702	General Chemistry II	
CHEM 1752	General Chemistry Laboratory II	2
MATH 1510	Calculus I	3
MATH 1520	Calculus II	3
PHYSICS 1740	Physics I	3
or PHYSICS 1760	Focused Physics I	
PHYSICS 1741	Physics I Laboratory	1
Total Units		**37-38**

One of the following Chemistry courses:

Code	Title	Units
CHEM 2561	Organic Chemistry I	4
EECE 2010	Introduction to Environmental Engineering	3
EEPS 3230	Biogeochemistry	3
EEPS 4414	Introduction to Geochemistry	3
EECE 5050	Aquatic Chemistry	3
EECE 5120	Environmental Organic Chemistry	3

One of the following courses in Statistics or GIS:

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
SDS 2020	Elementary Probability and Statistics	3
SDS 3020	Elementary to Intermediate Statistics and Data Analysis	3
ENST 3710	Applications in GIS	3

One upper-level Biology lab course:

Any course that fulfills the advanced laboratory requirement of the Biology major is acceptable; we recommend BIOL 4193 Experimental Ecology Lab (4 credits, writing intensive).

One Biol 3000+ courses in Areas A or B in Biology:

Code	Title	Units
ANTHR 4581	Principles of Human Anatomy and Development	3
BIOL 3057	Physiological Control Systems	3
BIOL 3151	Endocrinology	3
BIOL 3240	Human Genetics	3
BIOL 3280	Principles in Human Physiology	3
BIOL 3340	Cell Biology	3
BIOL 3411	Principles of the Nervous System	3
BIOL 3421	Introduction to Neuroethology	3
BIOL 3422	Genes, Brains, and Behavior	3
BIOL 3424	Great Discoveries in Neuroscience	3
BIOL 3481	Parasitology	3
BIOL 3490	Fundamentals of Microbiology	4
BIOL 4026	How Plants Work	3
BIOL 4030	Biological Clocks	3
BIOL 4071	Developmental Biology	3
BIOL 4072	Regenerative and Stem-Cell Biology	3
BIOL 4073	Human Reproductive Physiology	3
BIOL 4240	Immunology	4
BIOL 4242	Virology	3
BIOL 4345	Epigenetics	3

BIOL 4381	Cell-Based Tissue Engineering and Regenerative Medicine	3
BIOL 4510	General Biochemistry	
CHEM 4810	General Biochemistry I	3
CHEM 4820	General Biochemistry II	3

One of the following Biol 3000+ courses (Area C in Biology):

Code	Title	Units
BIOL 3220	Woody Plants of Missouri	3
BIOL 3221	Research and Public Education in the Arboretum	3
BIOL 3470	Darwin and Evolutionary Controversies*	3
BIOL 3494	Microbes and the Environment	4
BIOL 3501	Evolution	4
BIOL 3700	Animal Behavior	3
BIOL 4181	Population Genetics and Microevolution	3
BIOL 4182	Macroevolution	3
BIOL 4183	Molecular Evolution	3
BIOL 4195	Disease Ecology	4
BIOL 4197	Community Ecology	3
BIOL 4720	Behavioral Ecology	4

* These courses also satisfy the Arts & Sciences writing-intensive requirement.

One additional Biol 3000+ major-track course (may include Biology Undergraduate Independent Research (BIOL 2901, 4950, etc.):

Please refer to the Biology Course Listings (p. 318) in this *Bulletin*.

One of the following EEPS or ENST 3000+ courses:

Code	Title	Units
EEPS 3173	Soil Science	3
EEPS 3230	Biogeochemistry	3
EEPS 3410	Introduction to Geochemistry	3
EEPS 3420	Environmental Systems	3
EEPS 3530	Earth Forces	3
EEPS 3853	Earth History	3
EEPS 3863	Earth's Climate System	3
EEPS 4094	Surface Processes	3
EEPS 4284	Hydrology	3
EEPS 4424	Aqueous Geochemistry	3
EEPS 4434	Methods in Biogeochemistry	3
EEPS 4864	Paleoclimatology	3
ENST 3600	Field Methods for Environmental Science	3
ENST 3620	Applied Conservation Biology	3

Additional Information

Research

Research opportunities are available during the student's first and second years through BIOL 2901, BIOL 2902, BIOL 2903, or BIOL 2904; such opportunities are available during the third and fourth years through BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954. A research emphasis in the major requires at least 6 credits (two semesters) of independent research (BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954) and an approved senior thesis on this research, which is presented at the undergraduate symposium. The research emphasis is acknowledged on the degree as a research milestone.

Senior Honors

Biology majors are encouraged to work for senior honors, which require a 3.30 grade point average in biology, a 3.30 GPA in nonbiological sciences (mathematics, chemistry and physics courses), and a 3.65 overall GPA at the time of graduation. Also required are 6 units of BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954 research and an approved thesis from this work, equivalent to the research emphasis described in the preceding paragraph. Students interested in senior honors should begin BIOL 4950, BIOL 4951, BIOL 4952, BIOL 4953, or BIOL 4954 no later than the spring of their junior year.

The Department of Biology awards the Marian Smith Spector Prize to an undergraduate who has an excellent academic record and who submits an outstanding honors thesis; it also awards the Ralph S. Quatrano Prize to the student whose thesis shows the greatest evidence of creativity in design, research methodology and/or broader scientific implications. The Harrison D. Stalker Prize is awarded to a graduating senior whose college career is distinguished by scholarship, service and breadth of interest.

Bioinformatics Minor

Program Requirements

- **Total Units Required:** 23-24 units

Mindful of the emerging opportunities at the interface of biology and computer science, the Department of Biology and the Department of Computer Science & Engineering have fashioned the minor in bioinformatics.

Core Courses

Code	Title	Units
ESE 3260	Probability and Statistics for Engineering	3
BIOL 2960	Principles of Biology I	4
BIOL 2970	Principles of Biology II	4
CSE 1301	Introduction to Computer Science	3
CSE 2407	Data Structures and Algorithms	3
or SDS 2020	Elementary Probability and Statistics	
or SDS 3020	Elementary to Intermediate Statistics and Data Analysis	
or MATH 3211	Statistics for Data Science	
or DAT 1200	Managerial Statistics I **and** DAT 1201: Managerial Statistics II	
Total Units		**17**

Advanced Biology Elective

Choose one of the following:

Code	Title	Units
BIOL 3492	Laboratory Experiments with Eukaryotic Microbes*	3
BIOL 3493	Bacterial Bioprospecting and Biotechnology	3
BIOL 4181	Population Genetics	3
BIOL 4220	Practical Bioinformatics	4
BIOL 4342	Research Explorations in Genomics	4
BIOL 4343	Research Explorations in Genomics*	4
BIOL 4370	DNA Manipulations Lab	3
BIOL 4525	Structural Bioinformatics of Proteins*	4

* These courses also satisfy the Arts & Sciences writing-intensive requirement.

Computer Science & Engineering Elective

Choose one of the following:

Code	Title	Units
CSE 5104	Data Mining	3
CSE 5804	Algorithms for Biosequence Comparison	3
CSE 5807	Algorithms for Computational Biology	3

Additional Information

It is anticipated that, for certain students, some portion of the introductory sequence will overlap with the courses required for the major and that these courses will be applicable to both the major and the minor. Upper-level courses used to fulfill the minor requirements may not be used to fulfill the requirements of another major or minor in Arts & Sciences.

Arts & Sciences students should declare the minor within Arts & Sciences. They will be assigned an advisor in Biology. Per Arts & Sciences policy, students with a major in the Department of Biology are not eligible to declare this minor. Per Arts & Sciences policy, Arts & Sciences students must complete 9 units of upper-level course work toward the minor.

McKelvey, Olin, and Sam Fox students should declare the minor within the McKelvey School of Engineering. They will be assigned an advisor in Computer Science & Engineering.

A minimum grade of C- is required for all courses to count toward the minor. Students may apply no more than one course taken outside of Washington University toward the minor requirements. Courses earned through Washington University–approved study abroad programs are considered to be resident units and may count toward this minor where applicable with no limit.

Biology Minor

Program Requirements

- **Total Units Required:** 32 (18 units of biology and 14 units of chemistry)
- **Grade Requirement:** A grade of C- or better must be earned in all of these courses

Required Courses

Code	Title	Units
BIOL 2960	Principles of Biology I	4
BIOL 2970	Principles of Biology II	4
CHEM 1701	General Chemistry I	3
or CHEM 1601	Principles of General Chemistry I	
CHEM 1702	General Chemistry II	3
or CHEM 1602	Principles of General Chemistry II	
CHEM 1751	General Chemistry Laboratory I	2
CHEM 1752	General Chemistry Laboratory II	2
CHEM 2561	Organic Chemistry I With Lab	4
Total Units		**22**

Elective Courses

The minor requires 10 advanced units in biology selected from the following:

Code	Title	Units
ANTHRO 4581	Principles of Human Anatomy and Development	3
BIOL 3010	Biotechnology Project	3
BIOL 3041	Plant Biology & Genetic Engineering	4

BIOL 3057	Physiological Control Systems	3
BIOL 3100	R Workshop in Biology	1
BIOL 3110	Vertebrate Structures Lab	4
BIOL 3151	Endocrinology	3
BIOL 3183	A History of Genetics in the 20th Century	3
BIOL 3220	Woody Plants of Missouri	3
BIOL 3221	Research and Public Education in the Arboretum	3
BIOL 3240	Human Genetics	3
BIOL 3280	Principles in Human Physiology	4
BIOL 3340	Cell Biology	3
BIOL 3411	Principles of the Nervous System	3
BIOL 3421	Introduction to Neuroethology	3
BIOL 3422	Genes, Brains, and Behavior	3
BIOL 3423	Behavioral Genetics Lab	3
BIOL 3424	Great Discoveries in Neuroscience	3
BIOL 3470	Darwin and Evolutionary Controversies	3
BIOL 3481	Parasitology	3
BIOL 3490	Microbiology	4
BIOL 3491	Microbiology Lab	3
BIOL 3492	Laboratory on Eukaryotic Microbes	3
BIOL 3493	Bacterial Bioprospecting and Biotechnology	3
BIOL 3494	Microbes and the Environment	4

CHEM 4820	General Biochemistry II	3
CHEM 4833	Protein Biochemistry	3
PHYSICS 3324	Biophysics Laboratory	3
PHYSICS 3354	Physics of Living Systems	3

Additional Information

All courses used for the biology minor must be taken for a letter grade. A grade of C- or better must be earned in all of these courses. A student may not receive credit for both BIOL 3700 and BIOL 4720 or for both BIOL 4342 and BIOL 4343.

Chemistry

For students interested in discovering insights into nature, exploring new ways to meet the needs of our technological society, and learning new methods for creating novel compounds and useful materials, chemistry is an excellent major to pursue.

Chemistry is a multifaceted science that extends into biology, medicine, physics, mathematics, business, and commerce. Studying chemistry provides students with the opportunity to explore the structure and constitution of the microworlds of atoms and molecules, the chemical and physical transformations that occur there, and the principles that govern these changes.

Our program provides a strong foundation in the core areas of chemistry: organic, physical, inorganic, nuclear, and theoretical. Special emphases in the department include such emerging interdisciplinary fields as organometallic, bioorganic, biophysical, macromolecular, polymer, environmental, and materials chemistry. The department has close research ties with the departments of Physics;

Earth, Environmental, and Planetary Sciences; Biology; Biomedical Engineering; Energy, Environmental & Chemical Engineering; and Mechanical Engineering & Materials Science. It also works closely with various departments at the Washington University School of Medicine.

Undergraduate majors in chemistry study with renowned scientists who are teacher-scholars dedicated to the students' learning experiences. The department is small and has world-class instruments and facilities, which allow students to receive individualized instruction and to participate in cutting-edge science. Each student works closely with a faculty member to design and carry out an original research project. Students may participate in interdisciplinary research at the School of Medicine or the McKelvey School of Engineering. Research internships at local companies can also be arranged.

A variety of creative and productive careers are available to graduates with a degree in chemistry. Graduates may pursue a career in chemistry or in such related professions as biochemistry, medicine, and chemical engineering. Most students continue on to graduate or medical school, and some students go on to business or law school. Positions in government, industry, and education are also feasible career paths.

Faculty

Chair

Jennifer Heemstra
Charles Allen Thomas Professor
PhD, University of Illinois, Urbana-Champaign

Director of Graduate Studies

Timothy Wencewicz
Associate Professor
PhD, University of Notre Dame

Director of Undergraduate Studies

Richard Mabbs
Associate Professor
PhD, University of Nottingham (UK)

Department Faculty

Thomas Bakupog
Lecturer
PhD, University of Wyoming, Laramie

Jonathan Barnes
Associate Professor
PhD, Northwestern University

Cory Berkland
Joint Professor of Biomedical Engineering and Chemistry
PhD, University of Illinois

Vladimir B. Birman
Associate Professor
PhD, University of Chicago

John R. Bleeke
Professor
PhD, Cornell University

William Buhro
George E. Pake Professor of Chemistry and Emeritus Department Chair
PhD, University of California, Los Angeles

Rong Chen
Senior Lecturer
PhD, University of Southern California

Maria de la Cruz
Senior Lecturer
PhD, University of Missouri, Saint Louis

Megan Daschbach
Teaching Professor
PhD, Washington University

Joseph Fournier
Assistant Professor
PhD, Yale University

Michael L. Gross
Professor
PhD, University of Minnesota

Richard W. Gross
Joint Professor of Medicine and Developmental Biology and Chemistry
PhD, Washington University

Julie Hamdi
Senior Lecturer
PhD, University of California, Los Angeles

Sophia E. Hayes
Professor
PhD, University of California, Santa Barbara

John Heemstra
Senior Lecturer
PhD, University of Illinois, Urbana-Champaign

J. Dewey Holten
Professor Emeritus
PhD, University of Washington

Alfred Holtzer
Professor Emeritus
PhD, Harvard University

Alfred Hortmann
Professor Emeritus
PhD

Meredith Jackrel
Associate Professor
PhD, Yale University

Chenfeng Ke
Associate Professor
PhD, Nankai University (China)

Richard A. Loomis
Professor
PhD, University of Pennsylvania

Jia Luo
Senior Lecturer
PhD, Washington University

Bryn Lutes
Senior Lecturer
PhD, Washington University

Kevin D. Moeller
Professor
PhD, University of California, Santa Barbara

Yusuke Okuno
Assistant Professor
PhD, University of Wisconsin at Madison

Gary J. Patti
Michael and Tana Powell Professor of Chemistry
PhD, Washington University

Jay Ponder
Professor
PhD, Harvard University

Kelly Powderly
Assistant Professor
PhD, Princeton University

Courtney Reichhardt
Assistant Professor

Minors

- Chemistry Minor (p. 365)

Courses

CHEM 1020 Topics in General Chemistry
This course is designed to help students successfully transition from high school AP chemistry to the college level. It provides a general introduction to topics that entering freshmen typically find among the most difficult to master in a first-semester general chemistry course, including the nature and structure of the atom, quantum chemistry, and the nature of bonding. Students gain familiarity with the way in which a rigorous college chemistry course is taught and receive a realistic exposure to the nature of quizzes and exams. Problem sets, selected readings, and group problem-solving strengthen skills and facilitate learning. Prerequisites: two years of high school mathematics (including some familiarity with calculus nomenclature), one year each of high school chemistry and physics.
Credit 3 units. A&S IQ: NSM BU: SCI
Typical periods offered: Summer

CHEM 1030 Advanced Placement Chemistry I
The course permits the award of academic credit for advanced placement scores of 4 or 5.
Credit 3 units.

CHEM 1040 Advanced Placement Chemistry II
The course permits the award of academic credit for advanced placement score of 5.
Credit 3 units.

CHEM 1101 First-Year Opportunity: Why is Chemistry Called The Central Science?
In this course, we seek to answer that question by showing how chemistry is a thread that runs through many disciplines, including biology, physics, astronomy, geology, medicine and environmental science. We will learn about the many types of chemistry-oriented research that are conducted at WashU, along with presentations by several chemists who have gone on to use their chemistry degree in industry or in other adjacent fields. This is a terrific way to gain exposure about how to prepare your own academic pathway through many diverse fields, through using chemistry as a platform. In this

first year opportunity seminar style course, we rely on active dialogue in the classroom, through questions and discussion. You can expect to learn about science communication tools and gain some practice with translating difficult science concepts to a broader audience. This will include short written assignments, but also can include graphical depictions of information and data (tools that may be understood well for science outreach or for professional uses of social media.)
Credit 1 unit. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

CHEM 1102 Chemistry for Concerned Citizens: Topics in Energy, the Environment, and More
This course is designed to provide an overview of chemistry as it relates to problems in environmental science, energy, and related topics. It is constructed such that all students, irrespective of their major area of study, can learn about chemistry in these contexts. The course is intended to be highly interdisciplinary; therefore, it will cover subjects including chemistry, physics, engineering, geology, biology, environmental policy, and others.
Credit 3 units. A&S IQ: NSM, AN Art: NSM

CHEM 1103 First-Year Opportunity: Chemistry and Energy
This seminar is intended for first-year undergraduates to learn about the role that chemistry can play in addressing one of the greatest challenges we face: climate change. Chemistry has played a vital role in providing the energy needs of society, and advances in chemistry can help to develop abundant and economically viable energy technologies that do not have adverse consequences on the environment. Chemistry has long been central to the use of fossil fuel, and there remain opportunities to improve the efficiency of fossil energy resources, thereby contributing to lower carbon dioxide emission per unit of energy generated. Chemistry is critical to the development of renewable energy resources, especially solar energy for the generation of electricity and fuels. Material covered will include the challenges associated with meeting the world's increasing energy needs while reducing the emission of carbon dioxide. This class will cover the role of chemistry in energy technologies, including the storage of energy.
Credit 1 unit.
Typical periods offered: Fall

CHEM 1600 Topics in General Chemistry
This course is designed to help students successfully transition from high school AP chemistry to the college level. It provides a general introduction to topics that entering freshmen typically find among the most difficult to master in a first-semester general chemistry course, including the nature and structure of the atom, quantum chemistry, and the nature of bonding. Students gain familiarity with the way in which a rigorous college chemistry course is taught and receive a realistic exposure to the nature of quizzes and exams. Problem sets, selected readings, and group problem-solving strengthen skills and facilitate learning. Prerequisites: one year of high school chemistry, 2 years of highschool algebra.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

CHEM 1601 Principles of General Chemistry I
This course traces the development of chemistry from early atomic theory to modern descriptions of structure, bonding, and intermolecular interactions. Over the course of the semester, the students learn how macroscopic observations of stoichiometry, chemical reactions, the properties of elements and compounds, and chemical periodicity developed into the microscopic understanding of molecular structure and bonding. The semester begins with fundamentals related to stoichiometry, chemical reactions, solution chemistry, and gas properties, with an emphasis on quantitative problem solving. The octet rule, Lewis structures, and valence-shell-electron-pair repulsion (VSEPR) theory are then introduced as early efforts to describe the stability and structures of molecules. The localized electron model (LEM) and molecular-orbital theory (MOT) are next described as modern descriptions of chemical bonding. The course concludes with intermolecular forces such as hydrogen bonding and van der Waals interactions. This course will be a serious introductory series that requires and develops algebraic-computation and problem-solving skills.
Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI
Typical periods offered: Fall, Summer

CHEM 1602 Principles of General Chemistry II
This course covers chemical equilibrium, thermodynamics, and kinetics at a fundamental level, with an emphasis on in-class problem solving. Gas-phase reactions, heterogeneous (multi-phase) reactions, acid-base reactions, and solubility equilibria are introduced first. Chemical thermodynamics is then taught in its relation to chemical equilibrium. The course finishes with chemical kinetics and rate laws. The content is similar to that of Chem 1702, but advanced applications are omitted.
Credit 3 units. A&S IQ: NSM, AN BU: SCI
Typical periods offered: Spring, Summer

CHEM 1611 Peer-Led Team-Learning: Principles of General Chemistry I
This is an elective one-credit course that can only be taken concurrently with L07 Chem 105 Introductory General Chemistry I. The purpose of the course is to encourage students to work in small groups, supervised by a trained peer leader, on problems from the course that are designed to require a collaborative effort and to enhance understanding. PLTL sessions guide students to become conscious of the problem-solving process and to rigorously evaluate and revise those processes in light of the reasonableness of their results rather than an answer key. In this course, student groups facilitated by a peer leader meet weekly and work together on a problem set building on topics covered in the parent course, with the aim of developing problem-solving, critical-thinking, and collaboration skills. Sign-ups for PLTL begin in Week 1 of the semester, with meetings beginning on the weekend of Week 2. Students must attend at least nine sessions during the semester to earn credit; those who do not reach the attendance threshold will be dropped from the course, and the course will be removed from their transcript. To receive credit for PLTL, a student must remain enrolled in the parent course. Please note the following exceptions to the enrollment and drop policy: (1) Students will not be able to enroll in PLTL if doing so would bring them above 21 credit units, but they will still be able to participate. (2) Students who wish to participate in PLTL but want to opt-out of receiving credit should contact their course's program manager. (3) If dropping PLTL would bring a student below 12 credit units, the drop will be entered as a withdrawal instead.
Credit 1 unit.
Typical periods offered: Fall

CHEM 1612 Peer-Led Team-Learning: Introductory General Chemistry II
This is an elective 1-credit course that can only be taken concurrently with Chem 106 Introductory General Chemistry II. The purpose of the course is to encourage students to work in small groups, supervised by a trained peer leader, on problems from the course that are designed to require a collaborative effort and to enhance understanding. Peer-led team learning sessions guide students to become conscious of the problem-solving process and to rigorously evaluate and revise that process in light of the reasonableness of their results rather than an answer key. In this course, student groups facilitated by a peer leader meet weekly and work together on a problem set building on topics covered in the parent course, with the aim of developing problem-solving, critical-thinking, and collaboration skills. (3) If dropping PLTL would bring a student below 12 credit units, the drop will be entered as a withdrawal instead.

Credit 1 unit.

Typical periods offered: Spring

CHEM 1701 General Chemistry I

Systematic treatment of fundamental chemical and physical principles and their applications to the properties and transformations of materials, including the concept of energy and its uses, atomic and molecular structure, periodic classification of the elements, chemical bonding, gas laws, and laws of chemical combination. Pre-requisite: AP Chemistry, or two years of high-school chemistry, or one school of high school chemistry and one year of high school physics. Students can also enroll by permission of the instructors.

Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI

Typical periods offered: Fall

CHEM 1702 General Chemistry II

An introduction to the principles of chemical equilibrium and chemical change. Topics include chemical equilibria, acid/base chemistry, and other ionic equilibria, electrochemistry, elementary chemical thermodynamics and kinetics. Three lecture hours and a problem-solving subsection.

Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI

Typical periods offered: Spring

CHEM 1711 Peer-Led Team-Learning: General Chemistry I

This is an elective one-credit course that can only be taken concurrently with L07 Chem 111A General Chemistry I. The purpose of the course is to encourage students to work in small groups, supervised by a trained peer leader, on problems from the course that are designed to require a collaborative effort and to enhance understanding. PLTL sessions guide students to become conscious of the problem-solving process and to rigorously evaluate and revise those processes in light of the reasonableness of their results rather than an answer key. In this course, student groups facilitated by a peer leader meet weekly and work together on a problem set building on topics covered in the parent course, with the aim of developing problem-solving, critical-thinking, and collaboration skills.
