In this course, we will learn to engage with classical music through critical listening and historical investigation. This course is not a historical survey. Rather, we will explore rich case studies that build our critical and interpretive skills, and that use classical music to illuminate broader questions in the humanities. Our readings will expose us to a variety of writing styles and perspectives, including historical figures, present-day critics, and musicological scholars. We will also attend at least one on- or off-campus performance and reflect on how it connects to our course. This course does not require any prior musical experience, knowledge of classical music specifically, or the ability to read music.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

MUSIC 1040 Musics of the World
This course provides an introduction to the field of ethnomusicology as well as a survey of selected musics from around the world. We will investigate not only musical sound itself but how music interacts with other cultural domains, such as religion/cosmology, politics, economics, and social structure. The course will use case studies from regions around world (such as Indonesia, India, the Middle East, Sub-Saharan Africa, and Latin America) to illustrate the conceptual problems and methodologies raised by the cross-cultural study of music, as well as acquaint you with the rich variety of music around the globe.

MUSIC 1050 Popular Music in American Culture
American popular music from 1800s to the present, with emphasis on technology, social and political contexts, and popular music as a realm of interracial encounter. Musics covered include early jazz, classic blues, swing, classic pop, rock and roll, soul, disco, hip hop and the changing relationship between popular music, film, and television.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

MUSIC 1060 Beethoven in His Time and Ours
Ludwig van Beethoven not only composed some of the most significant works of Western classical music -- he continues to make his mark as the prototypical troubled genius, symbol for a wide range of political causes, subject of numerous films, and classical music's main representative in American pop culture. We will begin with an exploration of Beethoven's life, music, and historical context and continue by tracing how, after his death, Beethoven became a cultural hero whose image took on a life of its own. Throughout, we will unravel the interaction of music, culture, and mythmaking. No previous musical experience required.

MUSIC 1070 Mozart: Comedy, Science, Politics, Music
Wolfgang Amadeus Mozart is one of the most recognized composers of classical music and has come to symbolize beauty, genius, and technical perfection. In this course, we'll peer behind this beauty and discover that Mozart speaks to some of our most complex present-day concerns. Mozart's music reflects the world of the Enlightenment, as well as challenges to its beliefs about reason and human nature. He also created musical comedies that make provocative, strikingly contemporary statements about power, gender, privilege, and sexuality. And, he delighted in musical engineering challenges and thought carefully about how we perceive music. Our focus works will range from symphonies and piano music to musical theatre. We'll also explore Mozart's afterlife: how his music has figured in film and popular culture. This course is open to all - no previous musical experience is required.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 1080 Teamwork in Science and Music
Teamwork is required for accomplishment in most fields where goals cannot be realized by single contributors. Biographers and human nature tend to anoint individuals as being responsible for most great achievements, but in reality, most individuals who are given credit for accomplishments represent large teams. In this course, we will explore how science and music particularly give rise to narratives of individual achievement that are on further analysis more accurately described as team efforts. The role of race and gender in these dynamics will be explored.
Credit 1 unit.

MUSIC 1110 Brass Lessons: Pre-Registration
All students-both new and returning-must enroll if in this course if you are planning to take lessons on a brass instrument this semester. Once registered for this course, new students must sign up for a placement appointment through the department's website (https://music.wustl.edu/lesson-placement-days) to be considered for lessons. After the audition, you will be transferred to the appropriate course and section number once your lessons begin. Enrollment in this pre-registration course and auditioning, does not guarantee a spot in an instructor's studio as there are a limited number of lesson spots. Half-hour lessons are 1 unit and hour-long lessons are 2 units. You may also enroll in 0 credits. Students will be charged the Applied Music Fee according to our Lesson Fee and Rebates Policy (https://music.wustl.edu/rebates-fees-refund-policy), if applicable. All students not placed in a studio will be dropped from this course after the ArtSci Add/Drop deadline.
Credit 2 units.
Typical periods offered: Fall, Spring

MUSIC 1111 Percussion Lessons: Pre-Registration
All students-both new and returning-must enroll if in this course if you are planning to take percussion lessons this semester. MUSIC 1126 First-Year Seminar: You Never Heard Such Sounds in Your Life: American Avant-Garde Music
This first-year seminar introduces students to the fascinating history of avant-garde music making in the United States. A series of case studies will address a number of important avant-garde musicians and schools of thought spanning the early twentieth century to the present. In exploring avant-garde music, students will encounter new ways of thinking about art's place in the world and broaden their notions of music itself. No previous training in music is required. Course is for first-year, non-transfer students only.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

MUSIC 1127 First-Year Seminar: Sound On
What does 21st-century life sound like? The aim of this course is to interrogate, denaturalize, and critique familiar experiences and technologies of contemporary listening: from earbuds and mobile devices to streaming services and social media to the ambient music of capitalism and the (mediated) persistence of live performance. Readings in musicology, sound studies, and media theory will be examined alongside students' contemporary lived musical experience. Musical and sonic exercises in close, situated listening as well as examinations of distracted, ubiquitous listening will form some of the primary materials of the course. Analyses of both readings and activities will result in the production of a collaborative weekly digital newsletter as well as culminating projects by individual students. This course is for first-year, non-transfer students only.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

MUSIC 1130 History of Jazz
History of jazz to the present, including its African elements.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 1165 First-Year Seminar: On Broadway - Musicals, Race, Place
The Broadway theatres are closed, but pressure to make these stages more racially and ethnically diverse when they re-open is strong. This course looks at the history of the Broadway theatres and the ways this coveted theatrical real estate in midtown Manhattan has played host to white and non-white performers in the signature American theatrical genre: the musical. Using digital and archival research tools, including an abundance of maps, our study stretches from the creation of the Theatre District at the turn of the 20th century to the present. We will examine groundbreaking and all-too-typical shows -- from Show Boat to Hamilton -- and look closely for how systemic racism has played out on Broadway stages for Broadway's mostly white audience. We will produce original research and explore digital humanities methods related to questions of racial inequality in commercial popular culture. This course is for first-year, non-transfer students only.
Credit 3 units. A&S IQ: HUM, SC BU: BA, HUM EN: H
Typical periods offered: Fall

MUSIC 1180 Fundamentals of Music
This course provides a broad overview of music fundamentals designed to enhance the student's experience of music as well as provide a foundation for further study in music theory. Students become acquainted with the basic vocabulary and building blocks of music: intervals, rhythms, scales, triads, chords and harmony.
Credit 2 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 1190 Study in Guitar
Students taking guitar off roster/not for credit.
Credit 0 units.
Typical periods offered: Fall, Spring

MUSIC 1200 Exploring Music
This course will cover music and disability on stage and screen.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

MUSIC 1226 Race, Realism, and Representation From Madama Butterfly to Hamilton
In the Euro-American tradition, operas and musicals have long normalized the portrayal of (usually white) performers as characters of other races. Only in recent decades has the work of activists, performers, and scholars, pushed the cultural conversation to critique these practices as racist, exoticist, and culturally appropriative. On the live stage and on screen, music theater in recent years have paid careful attention to racially sensitive casting as a matter of restorative justice. We intuitively understand today that it is disrespectful for performers to portray themselves as characters of color outside their cultural background, but how has this relatively new idea come to be? How have performers of color engaged with this body of work over the past century? How have imagined narratives about the experiences of marginalized peoples affected the lives of the groups of people being depicted? Who has the cultural authority (or authenticity) to tell stories about others, and how has that authority been constructed and construed across different places and times? This course introduces students to the fraught and complex history of music theater in which performers portray racialized roles outside of their own identities. The syllabus pays particular attention to histories of music-theatrical yellowface as a racialized practice that - unlike brownface and blackface which have become taboo - continues to appear on performing arts stages today. Understanding the historical context in which these works arose and became popular, as well as analyzing the musical and dramatic techniques they utilized, can give us insight into their enduring legacy through to the present day. We will also complicate the easy rejection of this tradition by paying close attention to the history of people of color who, for the past hundred years, participated in, contributed to, and even loved, this body of work.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM, VC BU: HUM EN: H

MUSIC 1230 Women and Music: From Bingen to Beyonce
An examination of women in music from the twelfth-century nun Hildegard of Bingen to Beyonce. The course will consider significant women composers and performers, as well as music-making within women's institutions. Ability to read music not required.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

MUSIC 1240 Classical Theory I
This course is the first semester of a yearlong sequence about harmony and voice leading in tonal music. We will cover a number of topics, including scales, intervals, triads, seventh chords, harmonic function, and phrase structure. Ability to read musical notation is desirable. Students who register for Music 121C are required to register for one of the subsections.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

MUSIC 1241 Classical Theory II
This course is the second semester of a yearlong sequence about harmony and voice leading in tonal music. We will cover a number of topics, including sequences, tonicization, modulation, chromaticism, and the relationships between phrases and larger musical forms. Students are required to register for one of the subsections.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 1260 Jazz Theory I
Introduction to the jazz music language as a preparation for the study of improvisation. The course of study consists of basic music theory including music-reading skills and notation, scales, intervals, and triads. An introduction to extended tertian chords as derived from the twenty-one modes of the major, melodic and harmonic minor scales forms the basis of the jazz harmonic language. The study of chord progression and chord substitution, song form, and the blues prepares the student for a detailed study of the modern jazz language. Students who register for Music 121J are required to register for one of the subsections.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

MUSIC 1261 Jazz Theory II
A study of the harmonic, rhythmic, and improvisational practices from the Bebop period of the late 1940s to the jazz music of the present day. Discussions include intermediate to advanced chord substitution, quartal and bitonal harmony, modal improvisation, pentatonic scales, and polyrhythmic drumming, concentrating on the major improvisors of the 1950s-1970s. Students are required to register for one of the subsections.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 1270 Musicianship I
Basic ear trainng, sight singing, and dictation skills. Three hours a week. Prerequisite: Music 104E.
Credit 1 unit.
Typical periods offered: Fall

MUSIC 1280 Keyboard Skills I
An introduction to basic techniques of keyboard harmony using intervals, scales, and root position chords. Transposition and sight-reading skills developed. Prerequisite: permission of instructor for nonmajors. One and one-half class hours a week.
Credit 1 unit.
Typical periods offered: Fall

MUSIC 1281 Keyboard Skills II
An introduction to basic techniques of keyboard harmony using intervals, scales, and root position chords. Transposition and sight-reading skills developed. Prerequisite: permission of instructor for nonmajors. One and one-half class hours a week.
Credit 1 unit.

Typical periods offered: Spring

MUSIC 1309 Composition Workshop
An introductory course in contemporary music composition, with a 30-minute private lesson and weekly master class.
Credit 2 units.
Typical periods offered: Fall

MUSIC 1310 Composition Workshop
An introductory course in contemporary music composition, with a 30-minute private lesson and weekly master class.
Credit 2 units.
Typical periods offered: Spring

MUSIC 1320 Digital Audio and Multitracking: An Introduction to Electronic Music
An exploration of the foundational techniques of electronic music through hands-on, project-based learning. Our primary goal will be to learn to be creative in the recording studio. To that end, we will build proficiency in audio manipulations, recording and production techniques, sampling, MIDI sequencing, and signal processing. We'll learn to use a variety of technical tools, chief among them the digital audio workstation (DAW), the microphone, and Wash U's unique collection of analog synthesizers. Along the way, we'll train our ears to recognize subtle qualities of recorded sound, and we'll learn to compose with audio as an expressive medium. All genres and musical backgrounds welcome.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

MUSIC 1721 Guitar Class I
Intended for students with little to no formal musical training. An introduction to guitar fundamentals through the study of note reading, scales/arpeggios, technique, chord playing, and repertoire from diverse music styles, while integrating basic music theory and listening to historical guitar recordings. Students may self-enroll or be placed by audition. Students will have access to rent an acoustic guitar for the semester or bring their own. Note: If a class does not have 3 students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the fee will be prorated accordingly.
Credit 1 unit.
Typical periods offered: Fall, Spring

MUSIC 1722 Guitar Class II
A continuation of the topics and techniques introduced in Guitar I: Guitar fundamentals through the study of note reading, scales/arpeggios, technique, chord playing, and repertoire from diverse music styles, while integrating basic music theory and listening to historical guitar recordings. Prerequisite: Guitar I or permission of the instructor. Students will have access to rent an acoustic guitar for the semester or bring their own. Note: If a class does not have 3 students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the fee will be prorated accordingly.
Credit 1 unit.
Typical periods offered: Spring

MUSIC 1724 Introduction to Tabla: The Exploration of Indian Rhythm, Oral Tradition, and Improvisation
Tabla - Indian drums - are North India's prominent percussion instrument. Students will learn the foundations of playing tabla. Course goals include learning about the oral tradition associated with tabla, gaining knowledge about the historical and performance practices of the Benares Gharana, understanding Indian rhythmic time cycles, building a foundational approach to improvisation, and delving into the vast musical genre of North Indian classical music. There are no prerequisites for taking the course, and all students are welcome regardless of school or major.
Credit 1 unit.
Typical periods offered: Fall, Spring

MUSIC 1725 Voice Class: Fundamentals of Singing Technique
An introduction to the fundamentals of singing through group exercises, solo repertoire performance, and exploration of the physiology and acoustics of the human voice. Specific vocal techniques are taught in a group format as a healthy foundation for solo performance in both classical and non-classical singing styles. This course requires classroom instruction but also incorporates practice and lab time such that the course only qualifies as 1 unit of credit.
Credit 1 unit.
Typical periods offered: Fall

MUSIC 1742 Piano Class
Intended for students with little to no formal musical training. An introduction to keyboard fundamentals through the study of note reading, intervals, technique, and repertoire. Students may self-enroll or be placed by audition.There is a $150 lab fee for the course. Note: If a class does not have 3 students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the fee will be prorated accordingly.
Credit 1 unit.
Typical periods offered: Fall, Spring

MUSIC 1743 Piano Class II
Continuation of L27 159. Note: If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the fee will be prorated accordingly. Prerequisite L27-159 or permission of instructor.

MUSIC 2801 Symphony Orchestra
Performance and reading of works for orchestra. May be repeated for credit. Two and one half class hours a week including sectionals. Admission by audition. Please see the department's website for audition dates.
Credit 1 unit.
Typical periods offered: Fall, Spring

MUSIC 2803 Wind Ensemble
Study and performance of works for wind ensemble. May be repeated for credit. 2.5 class hours per week, including sectionals. Admission by audition. To sign up for an audition, visit https://music.wustl.edu/lessons#
Credit 1 unit.
Typical periods offered: Fall, Spring

MUSIC 2805 Jazz Band
Study of the literature of big band jazz. Concerts presented each semester. May be repeated for credit. Prerequisite: admission by audition. Two and one-half rehearsal hours a week.
Credit 1 unit.
Typical periods offered: Fall, Spring

MUSIC 2807 Concert Choir
Concert Choir takes an academic and artistic approach to the study and performance of choral literature from a variety of historic and modern sources. May be repeated for credit. Please see the department's website for audition dates.
Credit 1 unit.
Typical periods offered: Fall, Spring

MUSIC 2809 Chamber Choir
Study and performance of advanced repertoire for small vocal ensemble from Renaissance to the present. May be repeated for credit. Prereq: audition and consent of instructor.
Credit 1 unit.
Typical periods offered: Fall, Spring

MUSIC 2822 Small Chamber Ensembles
Students interested in performance of chamber music are organized into various ensembles and assigned a coach. A public chamber music concert is given once each semester. May be repeated for credit. Prerequisite: audition and permission of the instructor. Students will be charged the Applied Music Fee according to our Lesson Fee and Rebates Policy (https://music.wustl.edu/rebates-fees-refund-policy), if applicable.
Credit 1 unit.
Typical periods offered: Fall, Spring

MUSIC 2824 Jazz Combo
Students interested in performance of jazz combos are organized into various ensembles and assigned a coach. A public jazz combo concert is given once each semester. May be repeated for credit. Prerequisite: audition and permission of the instructor. Students will be charged the Applied Music Fee according to our Lesson Fee and Rebates Policy (https://music.wustl.edu/rebates-fees-refund-policy), if applicable.
Credit 1 unit.
Typical periods offered: Fall, Spring

MUSIC 2993 Directed Internship
Students receive credit for a faculty-directed and approved internship, usually with a music professional or musical organization. The primary objective of the internship is to obtain professional experience outside the classroom. Students obtain a Learning Agreement from the Career Center and have it signed by the Career Center, the faculty sponsor, and the site supervisor, if appropriate. A final written project is to be agreed upon before work begins and will be evaluated by the faculty sponsor at the end of the internship. Credit should correspond to actual time spent in work activities; e.g., 8-10 hours per week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours. Refer to ** section/faculty list at start of this departmental entry for faculty selections in this course.
Credit 3 units.
Typical periods offered: Fall, Spring

MUSIC 2994 Performance Project
Students may contract with a faculty supervisor for credit for work on musical performance projects or research on musical performance. Contracts must be signed by the student, the faculty supervisor, and the department chair before the student's work on the project commences. Refer to ** section/faculty list at start of this departmental entry for faculty selections in this course.
Credit 3 units.
Typical periods offered: Fall, Spring

MUSIC 2996 Music Elective: 100-Level
Sophomore elective in Music.
Credit 3 units. EN: H

MUSIC 2998 Independent Study
Supervised independent study in areas in which there are no current course offerings. Student must submit to the department chair on outline of the work to be covered, the number of credit hours requested for the work, and the name of the instructor who will be asked to supervise the work. Class hours variable, depending on credit.
Credit 3 units.
Typical periods offered: Spring

MUSIC 2999 Independent Study
Supervised independent study in areas in which there are no current course offerings. Student must submit to the department chair an outline of the work to be covered, the number of credit hours requested for the work, and the name of the instructor who will be asked to supervise the work. Class hours variable, depending on credit.
Credit 3 units.
Typical periods offered: Fall, Spring

MUSIC 3010 Music History I: Music in Europe From the Earliest Notation to 1700
A study of music history and literature from the Middle Ages to 1700. Composers treated include Machaut, Dufay, Josquin, Palestrina, Monteverdi, Vivaldi, Handel, and Bach. Prereq: Music 121 or permission of the instructor.
Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 3014 Ethnomusicology
This course provides an introduction to the field of ethnomusicology, defined broadly as the study of music in-or as-culture or the study of people making music. We will explore the varied ethnographic, anthropological, historical, and music-analytical approaches that ethnomusicologists have employed to explain the vital role of music-making in diverse human societies. We will seek to understand the social significance of a variety of musical practices, drawing on ethnomusicological scholarship to address music's performance, circulation, and reception. Case studies from around the world will demonstrate the multiple ways that sound shapes-and is shaped by-issues of cultural practice and representation, ideologies of authenticity, intersectional identities, cultural memory, ideas and structures of tradition, colonialism and post-colonialism, transnationalism and globalization. Our case studies will introduce students to a number of important musical genres and traditions, including (in the order in which they appear in the class): Mbira (Zimbabwe), Andean Kena music (Peru), Jazz (U.S.), Samba (Brazil), Gamelan (Java), Funk (U.S.), Egyptian musics, Ottoman-Turkish classical music, Karnatic Music (South India), Gisaeng music (Korea), Ngoma (South Africa), Agbekor (Ghana), Hip Hop (U.S.), and Noise (Japan).

Typical periods offered: Spring

MUSIC 3015 American Popular Music and Media
This course considers the history of American popular music as delivered by successive mass media platforms in the industrial and post-industrial eras: from mass-produced sheet music in the mid nineteenth century to digital music and video on the internet. Historical contextualization and in depth analysis of musical scores and various kinds of audio recordings and audiovisual texts will be at the center of the course. Topics to be considered include: the history of sound recording technologies and formats; the role of electronic mass media structures (radio, film, television, the internet); urbanization, national commercial music centers (New York, Hollywood, Nashville), and the importance of regional sounds in a national context; the formation and transformation of select genres (rock, country, various black musics); legal frameworks relating to music as a commodity (copyright, sampling); the impact of visual media on music dissemination, performance, and meanings; and how recorded media of all kinds have transformed the act of listening. Issues of race, gender, sexuality, personal, and national identity will be considered across the course.

Typical periods offered: Spring

MUSIC 3017 Music History III: Classical Music in Flux, 1850 to the Present
A study of music history and literature from 1850 to the present. Composers treated include Mahler, Debussy, Stravinsky, Schoenberg, Bartok, Copland, Shostakovich, Cage, Reich, and Gubaidulina. Prerequisites: L27 3012 or L27 122C.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 3021 Music of the African Diaspora
This course explores musical cross-fertilization between the African continent and South America, the Caribbean, and Europe. Beginning with traditional musics from selected regions of the African continent, the course examines the cultural and musical implications of transnational musical flows on peoples of the African diaspora and their multicultural audiences.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H
Typical periods offered: Fall

MUSIC 3025 Art House Movie Music: 1945-2000
This course surveys non-US films that played in US art house cinemas between 1945 and 2000, with special attention to the role of music and the reactions of US critics. The films hail from Italy, France, Britain, Spain, Sweden, the PRC, Hong Kong, and Japan. Many canonical films, directors, and composers from this era of intense cinephilia are included. Among the directors are Bergman, Truffaut, Godard, Varda, Fellini, Bertolucci, Kurosawa, Yimou, Wong Kar-wai, Almódovar, and Greenaway. Screenings will be held in St. Louis' very own art house cinema: the Hi-Pointe Theatre, located near campus and convenient to the South Campus Shuttle. A $30 pass will provide access to all screenings for the semester. The course strives to understand the aesthetic (especially musical) qualities of these "foreign" films as experienced in the American context, both at the past moment of their US cinema premieres (when these movies were signal cultural events) and in our own streaming present (when each movie becomes just another item some algorithm might think you might like).
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Fall, Spring

MUSIC 3034 Roots of Lofi Hip Hop: Amateur Music Making, Recording Technology, and Globalization
Lofi hip hop is a style of music made by amateur beatmakers that mixes Japanese and African American aesthetics. It relies on anime visuals, scratchy jazz samples, and repetitive drum loops. It serves primarily as background music. This course is about the sounds and popularity of lofi hip hop in the twenty-first century. But to understand this genre, students will also focus on the genre's roots. We learn about French composers' early attempts to create background music at the turn of the twentieth century. We learn about American teenagers who took over their suburban garages to create an energetic style of rock and roll during the 1960s. We learn about how anthropologists during the 1930s thought that low fidelity recordings of blues and country musicians was evidence of their musical authenticity. And we will learn about how jazz harmonies and samples influenced the music of groups like A Tribe Called Quest and De La Soul. Lofi gives us a jumping off point for exploring a wide range of genres and histories. The final assignment will be a collaborative effort. As a class, students will make and publish a podcast about lofi hip hop and its antecedents. This podcast will feature original lofi hip hop made by the class. The original music will also serve as background music to a study-session event organized by the class towards the end of the semester.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 3035 Music and Queer Performance
This course examines how music serves as a delightful site for performing, negotiating, and living queerness. Some questions we will ask include: How does queer musical performance inhabit the full gamut between conformity and subversion, irony and sincerity, or camp and authenticity? How do performers use or resist tropes of belonging, passing, and coming out to constitute queer performance? How do singers manipulate the sound of their voice, the gendered associations carried by that sound, and the assumptions about the body which produces it? Are queer musical acts a mode of performance or a way of being, and who decides? We will analyze a range of examples from the past and from contemporary popular culture: soft masculinities, cowboy and country personas, cross-dressing in music theater, lip-syncing drag queens and kings, high-femme divas, and performers of androgynous, cyborg, and post-human aesthetics. The parameters for what counts as queer performance are capacious, and students will have plenty of opportunities to contribute their own examples and case studies to the course.

Typical periods offered: Spring

MUSIC 3036 The Voice, Gender, & Sexuality in Music & Media
Voices are central to our lives, but overflow with oft-unexamined meanings. How do we parse the connection between a voice and a body? How do ideas about what constitutes good singing change over time? What does our interpretation of a voice reveal about us as listeners? This course investigates the deep connections of gender and sexuality to the voice from European music history to contemporary century American culture. Rather than taking a chronological approach, we will investigate similar phenomena from disparate places and times. For instance, we will study castrati and the BeeGees in the same week, considering how men who sing higher than we think they should unlocks a host of historically contingent desires and anxieties. Student from any discipline are welcome in this course; musical knowledge will be built and not assumed. Although we will focus on the voice in music, we will also consider adjacent media that particularly center the voice, specifically film and ASMR. Note: Although we will focus on gender and sexuality, it is impossible to properly handle gender and sexuality without considering how other identity factors (race, class, ability, etc.) influence our perception of voice, gender, and sexuality. I welcome your input on adding these factors to our discussions as much as possible.
Credit 3 units. A&S IQ: HUM BU: HUM

MUSIC 3041 Music of the Caribbean
Wanna get away? This and other tourism slogans depend on a popular conception of regions such as the Caribbean as distant and desirable, simple places out of sync with the modern world. This course critiques constructions of the Caribbean through engaging ethnomusicological literature representing the diversity of the region. It is a topical appraisal of Caribbean music, emphasizing history and memory, tourism, and cultural influence. The chosen readings are not meant to represent the entire region; rather, they are intended to prompt ideas and questions about regional discourses.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 3070 Jazz in American Culture
This course will address the role of jazz within the context of twentieth-century African American and American cultural history, with particular emphasis on the ways in which jazz has shaped, and has been shaped by, ideas about race, gender, economics, and politics. We will make use of recordings and primary sources from the 1910s to the present in order to address the relationship between jazz performances and critical and historical thinking about jazz. This course in not a survey, and students should already be familiar with basic jazz history.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 3110 Music of the 1960's
The music of the 1960s played a significant and widely noted role in an era of global political and social upheaval. This course surveys a broad range of music produced during the decade, spanning the world but with emphasis on Anglo-American popular music. While a music course traditionally deals with a single genre such as world music, classical, or jazz, this course will analyze several genres together to show how each influenced the others and how all were informed by broader social and cultural concerns. The course thus will both familiarize students with diverse musical traditions and introduce them to a new way of thinking about music and culture. Topics to be discussed include the transnational music industry; the contested concept of folk and traditional music; music and political protest; music and migration; and music's relation to ethnic and class identity.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

MUSIC 3150 The Science of Singing
Introductory look at the physiology and acoustics of singing. Topics we will study include how the voice works in general and the different ways individual singers use their voices; how understanding this science can improve one's singing; how to maintain vocal health; how the voice changes across the lifespan; and psychological aspects of performing. The ability to read music is not required for this course.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall, Spring

MUSIC 3160 Music, Sound, and the Body
How do musicians use their bodies when creating music? How do audiences, listeners, and dancers feel music in their bodies and contribute to making sound? This course explores embodied perspectives on making, sensing, and moving to music and sound. Examining theories of the body and the senses as they relate to sound practices, the course draws on scholarship from ethnomusicology, anthropology, sound, dance and performance studies, music cognition and other fields. Case studies include EDM, reggae, and salsa dance; Afro-Brazilian and Buddhist religious practices; and music healing and therapy. Because centering the body means considering lived experience along intersecting axes of difference, course readings and discussions will focus on issues of race, ethnicity, gender, sexuality, and (dis)ability. Students will develop their own ethnographic project, and they will be asked to participate in music-movement workshops throughout the course. However, neither previous dance experience nor normative bodily ability are required.
Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

MUSIC 3190 Jazz Improvisation I
An introduction to improvising music in the jazz tradition, including diatonic and chromatic harmony, extended chords, modes, and jazz scales. Exercises in basic aspects of the blues and in the styles of be-bop and modern jazz. PREREQ: Music 121J or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

MUSIC 3291 Music Theory IV: Topics in Music Theory
A synthesis of the knowledge gained in Theory I-III as it applies to the detailed analysis of 18th and 19th and selected 20th-century works (Bach through Bartok). PREREQ: Music 221C.A synthesis of the knowledge gained in Theory I-III as it applies to the detailed analysis of 18th and 19th and selected 20th-century works (Bach through Bartok).
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 3300 Music Cognition
An introduction to modern research on music perception and cognition. The course covers four main topics: the perception of key, the psychoacoustics of dissonance, the relationship between attention and musical meter, and the process by which melodies establish, fulfill, and deny expectations. Students read and discuss research from both cognitive science and music theory, in addition to completing several projects.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall, Spring

MUSIC 3310 Computational Models of Music Theory and Cognition
We will study computational models that simulate the perception of several aspects of music: phase structure, meter, melody, key, harmony, counterpoint, and texture. In addition to reading about and discussing these models, students will work with them directly by running them on their own. We will also spend some class time on perceptual experiments related to the models we study. Although the course will focus on models of perception, emphasis will be placed on ones that are also pertinent to music theory, and these connections will be discussed.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 3320 Advanced Musicianship
Individualized instruction in advanced ear training, sight singing, and dictation skills. Prerequisite: Music 2241
Credit 3 units.
Typical periods offered: Fall, Spring

MUSIC 3340 Compositional Craft in Film Scores and Musical Theatre
This course examines compositional techniques and aesthetics in two forms of popular music: film/television scores and musical theatre. Popular songs and other musical works associated with film, television, and musicals are analyzed from multiple perspectives, giving students insight into the sonic, visual, and dramatic techniques employed by major composers. Students engage with the material in rigorous yet practical ways, from analytical projects to deep-listening exercises. This approach emphasizes sonic experience and situated musicianship as the primary means of accessing complex concepts from music theory.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 3350 Music Arranging for the Multi-Genre Artist
This course examines the practice of music arranging for numerous applications including ensembles in jazz, rock, pop, a cappella, classical music, new music, and new media. Students analyze musical scores for small and large groups and compose arrangements in a variety of genres. Also learned are instrumentation, vocal ranges, basic orchestration, idiomatic instrumental techniques, chord voicings, and textures, all in the contexts of specific styles and genres. Overall, the course provides an introduction to industry-standard techniques of music arranging.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

MUSIC 3360 The Art of Popular Song: From Folk and Musical Theatre to Rock and Contemporary A Capella
This course explores the art of songwriting through the lens of American popular music. Students examine landmark songs from multiple eras and create their own original songs in a variety of styles from the precursors of American music to folk, rock, pop, rhythm and blues, Broadway, and a cappella. The course materials include applied popular music theory while examining the musical languages of each genre. Through composing and arranging, listening and analysis, students gain insight into the sonic structure and cultural significance of popular music. The course also responds to students' individual interests and performance backgrounds, offering opportunities to write music for vocal ensembles, singer-songwriter formats, bands and electronic media. Traditional composition and contemporary production practices are examined in detail as students learn to critically listen and find their personal musical styles.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

MUSIC 3370 Towards a New Music
Towards a New Music addresses the numerous possibilities for emerging music, including future musics in a reimagined world of the nature of music itself. In our study, music is situated as part of a web of metapatterns that explain the structure and nature of musical

materials, the actions in composition and improvisation, and musical phenomena. Students are placed on a listener's journey of discovery to find the nature of music through philosophy, cognitive science, mathematics, biology, architecture and the structure of sound itself. Music theory topics both simple and advanced are discussed in ways appropriate for the novice as well as the advanced student. The course functions as a music theory and music literature study through the lens of the humanities. The course embraces both culture and nature, seeking out the grand-scale patterns that help explain the qualities of our musical endeavor. The course begins with the archetypal patterns of space, both structural/formal and relational, and then turns to the concepts that infuse the workings of time: a virtual sonic reality of space and time and the mind of music, revealed in thought-provoking and new contexts.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

MUSIC 3400 Instrumentation and Orchestration
A study of the principles of instrumentation and orchestration. In-class assignments will aid in the understanding of the capabilities and limitations of the orchestral instruments. Analysis of orchestral scores will provide insight into efficient and creative use of the orchestra. Prerequisite: Music 121C or permission of the instructor.
Credit 3 units. A&S IQ: HUM BU: HUM

MUSIC 3430 Advanced Composition Workshop I
A more advanced course in contemporary music composition, with a 50-minute private lesson and weekly master class. Prerequisite: Music 230 or permission of instructor.
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Fall

MUSIC 3431 Advanced Composition Workshop
A more advanced course in contemporary music composition, with a 50-minute private lesson and weekly master class.
Credit 3 units.
Typical periods offered: Spring

MUSIC 3550 Interactivity and DSP: Laptop Music
This course is a project-based exploration of interactive laptop music using the Max/MSP programming environment. (Laptop not required; we have class desktops that will work too.) It will cover the composition of interactive computer music as well as the theory and application of MIDI, synthesis, and digital signal processing. We will learn through weekly programming exercises, readings and tutorials, and engagement with scores, recordings, and software. For Midterm and Final Projects, students will design digital instruments and compose interactive pieces for the class to play as an ad hoc laptop ensemble. Both pieces will be planned in advance and workshopped in class throughout the semester. By permission of instructor.

MUSIC 4001 Elementary Technique of Electronic Music: Synth Lab
Individual and small group instruction in classical procedures and relevant electronic technology.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 4002 Advanced Techniques in Electronic Music: Studio Songwriting
How does the act of recording and manipulating sound change the way we write songs? How can the tones and moods of a recording interact with notes and rhythms and words? We'll look for answers through experiments in composition, collaboration, and critical listening. Topics will include beatmaking, sound collage, vocal manipulations, sampling, and virtual spaces. Formal training is not required, though we will engage (and learn) basic music theory concepts. PREREQ: permission of instructor.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

MUSIC 4008 Music in the Romantic Era: Aesthetics and Ideologies
This course explores pivotal developments in 19th-century thinking about music's cultural and aesthetic significance -- developments that reverberate well beyond that historical period. Rather than surveying repertoire, we will emphasize in-depth exploration of selected issues and music, reading important contemporary writings and grappling with challenging musical works. Our topics will include discourses about musical interiority, the post-Beethovenian symphony, the Lied tradition, performance aesthetics and the creative agency of the performer, intersections of music and literature, and canon formation and its consequences. Our topics will include, to cite but a few examples, discourses about musical interiority, the post-Beethovenian symphony, the Lied tradition, performance aesthetics and the creative agency of the performer, intersections of music and literature, and canon formation and its consequences.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

MUSIC 4141 Analysis II
Continuation of Music 423, concentrating on approaches to larger and more complex works of classically tonal music, including 18th-century symphonies and string quartets, late works by Beethoven, chamber music and symphonies of Brahms and symphonies of Mahler. Prerequisite: Mus 423 or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 4162 Divas, Monsters, Material Girls: Women in Music Videos
The stark black and white of Madonna's Vogue and the pinks and sparkles of Material Girl. The lavish cinematic spectacle of Lady Gaga's Telephone and the thinkpiece-launching intertextuality of Ariana Grande's thank u next. The explosive surprise releases of Beyoncé's BEYONCÉ and Lemonade visual albums. Since MTV's advent in 1981, hit music videos have made a number of pop songs inextricable from the iconic imagery of their videos; ubiquitous digital devices and the rise of YouTube have only increased pop music's audiovisuality. Looking at and listening to female pop icons raises fraught questions of agency, representation, race, sexuality/sexualization, bodies, commodification, and capital. In this course, students will gain a vocabulary for talking about both the audio and visual parameters of music videos, and they will use this vocabulary to engage with critical frameworks for examining meaning, circulation, and reception in contemporary music videos. Assignments across the course will allow students to experiment with a range of writing and media genres, from critical close readings, micro-reception histories, mock (or real) thinkpieces, podcast episodes, and video essays.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: CPSC, HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 4190 Selected Areas for Special Study I
Over the past several years, many disciplinary calls to examine the imperial legacies of musicological knowledge production have coalesced under the banner of Global Music History: to decenter Euro-American frameworks of nation-bounded historiography, and renew attention upon more-than-Eurocentric music and sound practices that comprise, connect, and constitute the globe. This seminar introduces the many facets of what this "global turn" can mean for scholars of Music Studies working in Euro-American academia. How does thinking globally differ from regional, comparative, networked, transnational, or cross-boundary modes of inquiry? What can we learn from the aspirations and failures of totalizing projects from our discipline's intellectual past, such as eighteenth-century universal histories of music and nineteenth-century comparative musicology? How do we democratize the material wealth, visibility, and perceived prestige of Euro-American channels of knowledge production for the benefit of scholars of the Global South, without becoming gatekeepers of institutional power? What is (or ought to be) the standard for "decolonization" on Global Music History's horizon? Ultimately, the course aims to demonstrate how "the global turn" is not simply an

inclusionary call for the study of musics traditionally outside the realm of Musicology, but that thinking at the global register could be a new conceptual lens of relevance to any existing research project in music and sound.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H

Typical periods offered: Fall, Spring

MUSIC 4311 Black Experimental Music
Founded on the South Side of Chicago in 1965, the Association for the Advancement of Creative Musicians (AACM) united dozens of African American artists who were interested in experimental approaches to composition and improvisation. Their creative work, often described as black experimental music, would transform black-identified musical styles like jazz as well as white-identified styles of experimental concert music from which African Americans were often excluded-until the AACM intervened. In this course, we will investigate the Association's history by reading and discussing a wide range of texts about the organization, including books and articles written by AACM members themselves. We will also examine a number of important recordings and musical scores created by AACM artists, including Muhal Richard Abrams, Fred Anderson, Anthony Braxton, Joseph Jarman, George Lewis, Nicole Mitchell, Roscoe Mitchell, and Wadada Leo Smith.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

MUSIC 4560 Soundtrack Studies: Music Voices, Noise
This course considers the interaction of film, sound, and music from the silent era to the present by screening representative films from around the world and exploring current directions in scholarship from the disciplines of film studies and musicology. Topics to be discussed include: historical and critical understandings of the sound track, major film sound theorists (such as Michel Chion), technological shifts (such as synchronized sound, Dolby, and digital surround sound), the uses of Richard Wagner (both his music and his ideas), the relationship between a film genre (noir) and sound and music and the relationship between a musical genre (opera) and film, and the juxtaposition of popular and classical, Western and non-Western musical styles in art cinema. Films to be screened include Meek's Cutoff, Blow Out, Days of Heaven, Sous le toits de Paris, Love Me Tonight, Casablanca, Alien, Apocalypse Now, La cérémonie, Le Cercle rouge, The Pillow Book, The Scent of Green Papaya, and The Bourne Ultimatum. The course is in seminar format. Readings from recent scholarly work on film sound and music will inform class discussions of the films to be screened. Close analysis of how music, sound, and image interact in film making and the film experience lies at the heart of the course. The ability to read music is not required. A primary goal of the course will be the development of specific listening skills that are useful when working in this area. Targeted writing assignments will ask students to write about film sound and music from a variety of critical and historical perspectives. Pre-requisites: graduate status or completion of The History of the Film Score (FMS 360 / AMCS 360 / MUS 328) and permission of the instructor. REQUIRED SCREENING:
Credit 3 units. A&S IQ: HUM BU: HUM EN: H

MUSIC 4701 Jazz Guitar
Individual Applied Music -Jazz Guitar
Credit 2 units.
Typical periods offered: Fall, Spring

MUSIC 4702 Jazz Piano
Individual Applied Music -Jazz Piano
Credit 2 units.
Typical periods offered: Fall, Spring

MUSIC 4703 Jazz Strings
Individual Applied Music -Jazz Strings.
Credit 2 units.
Typical periods offered: Fall, Spring

MUSIC 4704 Jazz Voice
Individual Applied Music -Jazz Voice
Credit 2 units.
Typical periods offered: Fall, Spring

MUSIC 4705 Jazz Winds and Percussion
Individual Applied Music -Jazz Winds and Percussion
Credit 2 units.
Typical periods offered: Fall, Spring

MUSIC 4750 Guitar
Individual Applied Music -Guitar
Credit 2 units.
Typical periods offered: Fall, Spring

MUSIC 4751 Organ
Credit 2 units.
Typical periods offered: Fall, Spring

MUSIC 4752 Piano
Individual Applied Music -Piano
Credit 3 units.
Typical periods offered: Fall, Spring

MUSIC 4753 Strings
Individual Applied Music -Strings.
Credit 2 units.
Typical periods offered: Fall, Spring

MUSIC 4754 Voice
Voice.
Credit 2 units.
Typical periods offered: Fall, Spring

MUSIC 4755 Winds and Percussion
Winds and Percussion
Credit 2 units.
Typical periods offered: Fall, Spring

MUSIC 4971 Senior Capstone: Musicology or Analysis
Supervised research in music history or analysis culminating in a major paper. Required of Bachelor of Music students whose program focuses on music history or analysis. Prerequisite: senior standing.
Credit 3 units.
Typical periods offered: Fall, Spring

MUSIC 4972 Senior Capstone: Performance, Composition, or Theory
Supervised work in performance, composition or theory culminating in some combination of a paper, composition, and/or performance. Required of Bachelor of Music students whose program focuses on performance, composition or theory. Prerequisite: senior standing.
Credit 3 units.
Typical periods offered: Fall, Spring

MUSIC 4973 Senior Honors Capstone: Musicology or Analysis
Prerequisite: senior standing, a grade point average of 3.0 or higher and permission of the faculty supervisor, director of undergraduate studies, and the chair of the department.
Credit 3 units. EN: H
Typical periods offered: Fall, Spring

MUSIC 4974 Honors Capstone: Performance, Composition, or Theory
Prerequisite: senior standing, a grade point average of 3.0 or higher and permission of the faculty supervisor, the director of undergraduate studies, and the chair of the department.
Credit 3 units. EN: H
Typical periods offered: Fall, Spring

MUSIC 4996 Music Elective: 400-Level
Senior elective in Music.
Credit 3 units. EN: H

MUSIC 4999 Independent Study
This course is for independent study in Music.
Credit 3 units.
Typical periods offered: Fall, Spring

Music Major (BA)

Program Requirements

- **Total Units Required:** 45
- **Grade Requirement:** C– or better; Pass/No Pass grades do not count for the major.

Required Courses

Code	Title	Units
MUSIC 1240 Classical Theory I & MUSIC 1241 Classical Theory II **or** MUSIC 1260 Jazz Theory I & MUSIC 1261 Jazz Theory II		6
MUSIC 1270	Musicianship I	1
MUSIC 1290	Musicianship II	1
MUSIC 2070	Classical Theory III	3
MUSIC 3014	Ethnomusicology	3
MUSIC 3015	American Popular Music & Media	3
MUSIC 3016	Topics in Music History & Culture	3
MUSIC 3019	The Invention of Classical Music	3
MUSIC 3291	Music Theory IV: Topics in Music Theory	3
Two semesters of keyboard skills; course placement determined by piano faculty		2
Performance courses: private lessons, small ensembles, and/or large ensembles		4
Also required:		
MUSIC 4971 Senior Project: Musicology or Analysis **or** MUSIC 4972 Senior Capstone: Performance, Composition, or Theory **or** MUSIC 4973 Senior Honors Capstone: Musicology or Analysis **or** MUSIC 4974 Honors Project: Performance, Composition, or Theory		
or an approved 4000-level MUSIC course		
Total Units		**32**

Elective Courses

Students must complete 10 units of elective courses in Music, of which 3 units must be at the 3000 level or above.

Additional Information

- Courses taken Pass/No Pass and courses in which a student earns less than a C- do not fulfill the major requirements.
- A maximum of 6 credits earned via study abroad and/or transfer are allowed upon department approval.
- Music majors may take advantage of music-focused study abroad programs in Italy, Ireland, France, South Africa, or other countries upon request and approval. To learn more about these opportunities, please visit the Overseas Programs page of the Arts & Sciences website.

Becoming a Music Major

Students who plan to declare a major in music should consult with the department as early as possible. Students interested in pursuing a Music major should begin the appropriate course sequences in music theory, music history, keyboard skills, and musicianship. All Music majors must complete a senior capstone, which could take the form of a thesis, recital, lecture-demonstration, composition portfolio, or 4000-level course.

Senior Honors

Music majors are encouraged to work toward Latin Honors. To qualify, students must have a minimum cumulative GPA of 3.65 at the end of the sixth semester, complete all core Music requirements by the end of the junior year, and satisfactorily complete a senior honors capstone project, including an oral examination with a faculty committee. Project proposals are due at the end of the junior year.

Music Major (BMus)

Program Requirements

- **Total Units Required:** 51-79
- **Grade Requirement:** C- or better; Pass/No Pass grades do not count for the major.

Declaration of this major must be approved by the department before the end of a student's sophomore year. In addition to the required courses, majors must complete a minimum of 12 to 30 units in advanced courses, depending on the area of concentration. Students may earn the BMus degree with concentration in performance, composition, music theory, or music history and culture, or they may pursue a general program that combines two or more of these areas.

Each concentration requires a major senior capstone, such as a thesis, recital, lecture-demonstration, or composition portfolio. All majors must also pass a keyboard proficiency examination.

Required Courses

Code	Title	Units
MUSIC 1240 Classical Theory I & MUSIC 1241 Classical Theory II **or** MUSIC 1260 Jazz Theory I & MUSIC 1261 Jazz Theory II		6
MUSIC 2070	Classical Theory III	3
MUSIC 3291	Music Theory IV: Topics in Music Theory	3
MUSIC 1270	Musicianship I	1
MUSIC 1290	Musicianship II	1
MUSIC 3014	Ethnomusicology	3
MUSIC 3015	American Popular Music & Media	3
MUSIC 3016	Topics in Music History & Culture	3
MUSIC 3019	The Invention of Classical Music	3
MUSIC 4141	Analysis II	3
1 unit of keyboard skills per semester as necessary to complete MUSIC 2081		1-4
MUSIC 4971 Senior Project: Musicology or Analysis **or** MUSIC 4972 Senior Capstone: Performance, Composition, or Theory **or** MUSIC 4973 Senior Honors Capstone: Musicology or Analysis **or** MUSIC 4974 Honors Project: Performance, Composition, or Theory		3

Lesson and Ensemble Requirements

In addition to the courses listed above, BMus students must also register for music lessons (1-2 units) and at least one ensemble (1 unit) every semester once the major has been declared (no later than the second semester of their sophomore year). **Note:** Students with a performance emphasis must take at least 2 units of music lessons per semester; all other students must take at least 1 unit per semester.

Elective Courses

Each of the five BMus concentrations includes additional requirements, as follows:

Performance Emphasis

Code	Title	Units
MUSIC 4390	Diction I (vocal performance majors only)	3
4000-level music theory elective	All Music Theory courses at the 4000 level or higher except MUSIC 4141 Analysis II	3
Junior half-recital		0
Total Units		**3-6**

Theory Emphasis

Code	Title	Units
MUSIC 4001 Elementary Techniques in Electronic Music & MUSIC 4002 Advanced Techniques of Electronic Music **or** Composition Lessons		6
4000-level electives	All Music Theory courses at the 4000 level or higher except MUSIC 4141 Analysis II	12
Total Units		**18**

Composition Emphasis

Code	Title	Units
MUSIC 4001	Elementary Techniques in Electronic Music	3
MUSIC 4002	Advanced Techniques in Electronic Music	3
Upper-level music composition (MUSIC 4108, MUSIC 4109; repeatable)		12
4000-level music theory electives	All Music Theory courses at the 4000 level or higher except MUSIC 4001 Elementary Techniques in Electronic Music, MUSIC 4002 Advanced Techniques in Electronic Music, MUSIC 4108 Composition, MUSIC 4109 Composition, and MUSIC 4141 Analysis II	6
Total Units		**24**

History and Culture Emphasis

Code	Title	Units
Upper-level music history electives (other than MUSIC 3014, MUSIC 3015, MUSIC 3016, and MUSIC 3019)		12
4000-level music theory electives	All Music Theory courses at the 4000 level or higher except MUSIC 4141 Analysis II	6
Total Units		**18**

General Emphasis

Code	Title	Units
Upper-level music history electives (other than MUSIC 3014, MUSIC 3015, MUSIC 3016, and MUSIC 3019)		3
4000-level music theory electives	All Music Theory courses at the 4000 level or higher except MUSIC 4141 Analysis II	6
Elective units	All MUSIC courses except MUSIC 1240 Classical Theory I, MUSIC 1241 Classical Theory II, MUSIC 1260 Jazz Theory I, MUSIC 1261 Jazz Theory II, MUSIC 1270 Musicianship I, MUSIC 1290 Musicianship II, MUSIC 2070 Classical Theory III, MUSIC 3014 Ethnomusicology, MUSIC 3015 American Popular Music & Media, MUSIC 3019 The Invention of Classical Music, MUSIC 3291 Music Theory IV: Topics in Music Theory, MUSIC 4141 Analysis II, MUSIC 4971 Senior Project: Musicology or Analysis, MUSIC 4972 Senior Capstone: Performance, Composition, or Theory, MUSIC 4973 Senior Honors Capstone: Musicology or Analysis, and MUSIC 4974 Honors Project: Performance, Composition, or Theory	9
Total Units		**18**

Additional Information

- Courses taken Pass/No Pass and courses in which a student earns less than a C- do not fulfill the major requirements.
- A maximum of 6 credits earned via study abroad and/or transfer are allowed upon department approval.
- Music majors may take advantage of music-focused study abroad programs in Italy, Ireland, France, South Africa, or other countries upon request and approval. To learn more about these opportunities, please visit the Overseas Programs page of the Arts & Sciences website.

MUSIC 4971 Senior Project: Musicology or Analysis **or** MUSIC 4972 Senior Capstone: Performance, Composition, or Theory **or** MUSIC 4973 Senior Honors Capstone: Musicology or Analysis **or** MUSIC 4974 Honors Project: Performance, Composition, or Theory		3

Lesson and Ensemble Requirements

In addition to the courses listed above, BMus students must also register for music lessons (1-2 units) and at least one ensemble (1 unit) every semester once the major has been declared (no later than the second semester of their sophomore year). **Note:** Students with a performance emphasis must take at least 2 units of music lessons per semester; all other students must take at least 1 unit per semester.

Elective Courses

Code	Title	Units
MUSIC 4001 Elementary Techniques of Electronic Music & MUSIC 4002 Advanced Techniques of Electronic Music **or** Composition Lessons		6
4000-level electives	All Music Theory courses at the 4000 level or higher except MUSIC 4141 Analysis II	12
Total Units		**18**

Additional Information

- Courses taken Pass/No Pass and courses in which a student earns less than a C- do not fulfill the major requirements.
- A maximum of 6 credits earned via study abroad and/or transfer are allowed upon department approval.
- Music majors may take advantage of music-focused study abroad programs in Italy, Ireland, France, South Africa, or other countries upon request and approval. To learn more about these opportunities, please visit the Overseas Programs page of the Arts & Sciences website.

Becoming a Music Major

Students who plan to declare a major in music should consult with the department as early as possible. Students interested in pursuing a Music major should begin the appropriate course sequences in music theory, music history, keyboard skills, and musicianship. All Music majors must complete a senior capstone, which could take the form of a thesis, recital, lecture-demonstration, composition portfolio, or 4000-level course.

Senior Honors

Music majors are encouraged to work toward Latin Honors. To qualify, students must have a minimum cumulative GPA of 3.65 at the end of the sixth semester, complete all core Music requirements by the end of the junior year, and satisfactorily complete a senior honors capstone project, including an oral examination with a faculty committee. Project proposals are due at the end of the junior year.

Jazz Studies Minor

Program Requirements

- **Total Units Required:** 18
- **Grade Requirement:** C– or better; Pass/No Pass grades do not count for the major.

Required Courses

Code	Title	Units
MUSIC 1130	History of Jazz	3
MUSIC 1260	Jazz Theory I	3
MUSIC 1261	Jazz Theory II	3
MUSIC 3070	Jazz in American Culture	3
MUSIC 3190	Improv I	3
One of the following courses:		
MUSIC 3015 Popular Music and Media **or** MUSIC 3021 Music of the African Diaspora **or** MUSIC 3340 Compositional Craft in Film Scores and Musical Theater **or** MUSIC 3350 Music Arranging for the Multi-Genre Artist **or** MUSIC 3360 The Art of Popular Song **or** upper-level applied jazz lessons		3
Total Units		**18**

Additional Information

- Other upper-level credits in music or kindred studies (e.g., African and African-American Studies) may be approved at the discretion of the department chair.
- A grade of C– or better is required for courses to count toward the Jazz Studies minor.
- Up to 6 credits earned via study abroad and/or transfer are allowed upon department approval.

Music – General Studies Minor

Program Requirements

- **Total Units Required:** 18
- **Grade Requirement:** C- or better; Pass/No Pass grades do not count for the major.

Required Courses

Code	Title	Units
MUSIC 1240 Classical Theory I & MUSIC 1241 Classical Theory II **or** MUSIC 1260 Jazz Theory I & MUSIC 1261 Jazz Theory II		6
One of the following courses:		
MUSIC 3014 Ethnomusicology **or** MUSIC 3015 American Popular Music and Media **or** MUSIC 3016 Topics in Music History & Culture **or** MUSIC 3019 The Invention of Classical Music		3
Total Units		**9**

Elective Courses

Students must complete 9 units of elective courses in music, of which 6 units must be at the 3000 level or above.

Additional Information

- A grade of C- or better is required for courses to count toward the music minor.
- Up to 6 credits earned via study abroad and/or transfer are allowed upon department approval.
- Students whose interests are not served by these requirements may apply to the department chair with an alternative proposal.

Performing Arts

Performing Arts at Washington University is comprised of dance (p. 736) and drama (p. 736).

Dance

Students may select dance as a major through the Performing Arts Department. This course of study combines intensive studio work in the technique and theory of modern dance, ballet, and composition with seminars that examine dance as a global phenomenon containing forms that reflect culturally specific historical, aesthetic, and ethnological features. The program also includes a broad range of courses, such as stagecraft, music resources, improvisation, anatomy for dancers, pedagogy, dance therapy, musical theater dance, world dance forms, jazz, hip hop, and West African. Alternatively, students may choose to minor in dance.

The senior capstone experience is framed in consultation with Performing Arts faculty. In April, prior to registration for the fall semester, dance majors discuss the capstone requirement with their advisors. The dance capstone requirement can be satisfied by a senior honors thesis or a senior dance project. The format may range from a research paper or a written analysis of the student's dance development to a project emphasizing movement expression (e.g., the creation of a video résumé, a performance, or a choreographic project). In all cases, dance capstones have a written component.

Those who study dance at Washington University learn from faculty members who have both professional experience and academic degrees. Students also have the opportunity to study with guest artists-in-residence who teach master classes and set choreography.

Students may audition for the Washington University Dance Theatre, which holds annual auditions for students. Selected students will appear in faculty- and guest artist-choreographed concerts in Edison Theatre. Dance students particularly interested in performance may audition for the student repertory company, Washington University Dance Collective (WUDC). WUDC rehearses throughout the year and performs on campus as well as in venues in the St. Louis area. Students may also participate in departmental drama productions as well as student-directed work in choreography and theater. Further, each year, students have the opportunity to attend the regional American College Dance Conference to adjudicate work, perform, and take master classes.

Dance students may pursue study abroad at the University of Auckland, New Zealand; University of Ghana, Legon; and Roehampton University, London. With approval from the Dance program, courses at these institutions may fulfill dance major and minor requirements. Courses in other disciplines taught at these institutions may also be accepted by Washington University.

Drama

The drama major combines rigorous training in theater and performance studies (world theater history, performance theory, and dramatic criticism) with theater production, including courses in playwriting, acting, directing, devising, design (i.e., set, costume, lighting, and sound), and experimental digital performance.

In this program, students can take a wide variety of courses covering the history of world theater in comparative relation. Ranging from the ritual practices that emerged into the dramas of Ancient Greece to the post-dramatic explorations of habituated movements we make in everyday life, performance is studied as a corporeal practice and material expression of cultural meanings. By understanding performance as both an artistic practice and a sociological phenomenon, students learn to think critically about the complex ways that cultures make meanings in the forms and practices of embodied movement.

In small, individualized classes, professionally and academically trained faculty lead students in practice and discussion, helping them make connections between the study of theater as a liberal art and the application of skills in production. In acting, the department offers four courses that cover scene and character study, acting styles, and solo performance work. Additional courses in movement, voice/speech, and musical theater augment the performance course curriculum. A two-course directing sequence issues into a public showing of student-directed work, and some students have chosen to direct a fully designed production as their capstone or senior honors thesis. Recent graduates of the acting and directing sequence have been placed in prestigious MFA programs, in internships and jobs in regional American theaters, and in various professional schools and graduate programs. Our nationally recognized program in design and technical theater offers students a varied selection of costume, scene, lighting, and sound design courses. Our design faculty regularly facilitates opportunities for design and technical theater students to shadow them in professional design jobs and/or to intern within companies. A highly successful playwriting program, enriched by the annual A.E. Hotchner Playwriting Competition and workshops run by leading American dramaturgs, has produced playwrights whose work is now being performed in nationally recognized venues as well as in film and television.

Since 1991, the Performing Arts Department and the Globe Education Program have collaborated in the teaching of Shakespeare's plays. In either a two-semester first-year seminar or a four-week intensive summer program, students can explore the textual meanings, historical contexts, and cultural significance of Shakespeare's plays both as literature and in performance. Working with Performing Arts faculty as well as Globe personnel, students learn to bring Shakespeare's plays to life in master classes that teach them how to voice Shakespeare's poetry, realize his characters, and perform stage combat. Both course options offer students a summer study abroad opportunity to visit Shakespeare's birthplace in Stratford-upon-Avon and the reconstructed Globe Theater in London, culminating in their own performance on the Globe stage.

- Drama (p. 745)

Dance

DANCE 1010 Introduction to Dance as a Contemporary Art Form
Introduction to dance as a creative art form. Through practical work in the studio, students gain an understanding of the human body as an instrument of expression and of motion as the medium of dance. Technique, analysis and creative work. Not open to majors. May be repeated once for credit.
Credit 2 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DANCE 1600 Ampersand: The Body: What Moves US and Other Perspectives on Movement
This course introduces students to the complex neural processes that allow the coordination and integration of thought, action, and perception. We will explore fundamental concepts of motor control including how our central nervous system integrates information to allow us to maintain posture and balance, to coordinate our limbs to external rhythms, and to move our bodies efficiently and expressively through space and time. We will explore theoretical frameworks of motor learning as they pertain to movement. We will delve into the neuromechanisms underlying common tools that skilled movers use to improve motor performance and how they induce neuroplasticity in brain structure and function. Students will gain broad understanding of neurophysiological investigative techniques that allow us to glimpse the complex neural processes that allow the coordination and integration of thought, action, and perception. Prerequisite: first semester of Ampersand The Mind-Body Connection
Credit 3 units. A&S IQ: SSC Art: SSC
Typical periods offered: Spring

DANCE 1996 Dance Elective: 100-Level
Course is used for transcribing 1000-level DANCE elective units
Credit 3 units. EN: H
Typical periods offered: Fall, Spring, Summer

DANCE 2000 Tutorial
Supplementary work at the low intermediate level in ballet and modern dance at times to be determined. Prerequisites: sophomore standing and permission of the Director of Undergraduate Dance Studies. Credit to be determined in each case.
Credit 6 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DANCE 2010 Theory and Technique of Modern Dance I
Fundamental theory and techniques of American modern dance. Studio work investigating the expressive potential of human movement and developing individual rhythmic and kinesthetic awareness, coordination, and breadth of movement vocabulary. Related reading and video expand on theory embodied in the class work and give an historical overview of modern dance in the U.S. Attendance at two to three performances required. Prerequisite: some previous dance training or permission of instructor.
Credit 2 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 2011 Theory and Technique of Modern Dance II
A course for students familiar with the basic concepts and technique of modern dance. Emphasis on expanding individual movement versatility with increasing difficulty of choreographic phrase materials. Related readings and videos, some focused on American postmodern dance. Attendance at 2-3 performances required. Prerequisites: Dance 201 or permission of the instructor.
Credit 2 units. A&S IQ: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 2020 Composition I
Finding personal movement and transforming it into dance. Through a series of class projects the formal elements of composition are introduced. Prerequisites: Dance 201 or permission of the instructor. Concurrent registration in a technique class required.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 2021 Composition and Technique
Introduction to dance composition supported by two modern or ballet technique classes each week at the level appropriate to the individual student. Work on composition assignments outside of class will be expected. Prerequisite: Dance 201E or permission of instructor.
Credit 4 units. A&S IQ: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 2030 Improvisation I
This course will explore the process and art form of creative, expressive, spontaneous dancemaking. Students learn to simultaneously move and respond in the moment, developing skills of communication, observation, performance, and composition in the language of movement. Open to dancers of all levels. Light reading; in class and out of class projects.
Credit 1 unit. Art: HUM
Typical periods offered: Fall, Spring

DANCE 2040 Beginning-Intermediate Hip Hop: Culture and Movement
What is Hip Hop? Is it simply dance and music? Is it something more? This course will be an introduction to Hip Hop dance and its impact on society. Students will explore various foundations of Hip Hop movement through warmup, footwork, body isolations, groove patterns and textures, across-the-floor exercises, choreographic studies, and classroom discussions. Students will then demonstrate their understanding of these foundations through supplemental readings, viewings, and written response papers, students will also gain greater depth and breadth of knowledge about the history and culture of the form.
Credit 2 units.
Typical periods offered: Fall

DANCE 2050 Afro-Modern Dance (Dunham Technique)
This course introduces students to Katherine Dunham's dance technique, which combines ballet, modern, and Afro-Caribbean dance. Dunham Technique is one of the most important foundations for jazz dance and also shares characteristics with West African Dance and several modern dance techniques. Some lectures and occasional short readings will supplement this studio-based course so that students can learn more about Katherine Dunham (1909-2006), one of the great pioneers of dance in America. The class is open to all levels, although at least one semester of previous dance experience is required. Repeatable one time for credit in subsequent semester.
Credit 2 units.
Typical periods offered: Spring

DANCE 2060 Fundamentals of Jazz Dance
This course introduces the basic principles and vocabulary of traditional jazz dance as influenced by American social dances and its relationship to the rise in popularity of jazz music. Both are unique to America and are rooted in African-American and European-American culture.
Credit 2 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 2210 Fundamentals of Classical Ballet
Designed for dancers with no previous training or knowledge of the development of ballet in America, a systematic introduction to the ballet technique, including traditional terminology, and introductory readings on American Ballet Theatre as a repository for classical and modern ballet repertoire of both American and European choreographers. Attention to basic anatomical concerns and body alignment as well as to the classical movement vocabulary. Prerequisite: none.
Credit 2 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 2211 Fundamentals of Classical Ballet
Designed for dancers with no previous training or knowledge of the development of ballet in America, a systematic introduction to the ballet technique, including traditional terminology, and introductory readings on New York City Ballet as a repository for the choreography of George Balanchine. Attention to basic anatomical concerns and body alignment as well as to the classical movement vocabulary.
Credit 2 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 2900 Directed Research in Dance
Introduces first-years and sophomores to research by engaging them in ongoing faculty research projects within the department. Under the direction of a faculty mentor, students take part in tasks that contribute to the mentor's research. Through this hands-on experience, students learn about the research process and build foundational research skills that can benefit their future academic experience and development. Faculty mentors provide regular guidance, training, and feedback to support students' understanding and growth. Students are registered by the department after approval from the faculty member leading the research project. The course may be taken for 1-3 credit hours based on the weekly hours required. Credit/No Credit only
Credit 3 units.
Typical periods offered: Spring

DANCE 2901 Dance Theater Production
Experience in technical production. Required stage work includes 2 studio dance productions supervised by faculty. Prerequisite: Dance 212E.
Credit 1 unit. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DANCE 2910 Internship
Students may receive up to 3 units of credit for an approved internship with an organization where the primary objective is to obtain professional experience outside the classroom. Students must file a Learning Agreement with the Career Center, a faculty sponsor and the site supervisor. This must be approved by all three constituencies before proceeding. A final written project is to be agreed upon between the student and faculty sponsor before work begins, and will be evaluated by the faculty sponsor at the end of the internship.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DANCE 2996 Dance Elective: 200-Level
This course is used fir transcribing 2000-level DANCE elective units
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

DANCE 3009 Composition and Technique II
Continuing work in dance composition supported by two technique classes each week at the level appropriate to the individual student. Work on composition assignments outside of class is expected. Prereq: Dance 201, Dance 203, or permission of instructor.
Credit 4 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 3010 Theory and Technique of Modern Dance III
Technique and related concepts for the intermediate-level student. Greater emphasis on the ability to accurately replicate or individually interpret choreographic material. Related reading and video assignments on contemporary dance developments and attendance

at two to three performances required. Variable content; may be repeated for credit in a subsequent semester. Prerequisites: Dance 202 or recommendation of the student's previous WU instructor or permission of the course instructor.
Credit 2 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 3011 Theory and Technique of Modern Dance III
Prerequisite: permission of the instructor.
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Spring

DANCE 3020 Composition II
A workshop for students with experience in choreography. Study of approaches to dance composition with related improvisation problems. Work outside of studio hours expected. Prerequisites: Dance 203 and permission of the instructor; concurrent registration in a technique course required.
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 3022 Theory and Technique of Modern Dance IV
Continuation of Dance 301. Variable content; may be repeated for credit in a subsequent semester. Prerequisites: Dance 301 or recommendation of the student's previous WU instructor or permission of the course instructor.
Credit 2 units. A&S IQ: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 3030 Dance Improvisation II
Continuation of Dance 213. Prerequisite: Dance 213 or permission of instructor. Concurrent registration in a dance technique course at the 300 level or higher is required. May be repeated once for credit.
Credit 1 unit. A&S IQ: HUM BU: HUM
Typical periods offered: Fall, Spring

DANCE 3032 Dance Improvisation: Spontaneous Composition & Performance Techniques
Dance improvisation is a cumulative, integrative practice, applying every skill the performer can bring to the spontaneous present in which creative process and performance is simultaneously one and the same. In this course, students learn and create processes for improvising dance/performance art, with an aim toward developing integrated skill in: dance technique, intuitive movement invention, partnered dancing, collaborative process, performance presence/expressivity, and compositional form. Applications include improvising compositions for theatrical stage, site-specific venues and for camera-based artistic mediums. Meets requirement for dance major. Prerequisite: students must be qualified at 300 level in any genre of dance technique, or obtain special permission of instructor. This course is optimal for students who have previously taken Dance Composition (L29 203/208/303/309), and/or Contact Improvisation (U31 212), though they are not prerequisites. May be repeated once for credit.
Credit 2 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 3040 Dance Composition Projects
Choreography juried by dance faculty or supervised choreography on themes assigned by the instructor or formulated by the student and approved by the instructor. Prerequisite: minimum of 1 semester course work in composition or permission of the instructor.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 3041 Accompaniment Techniques for Dance
A wide variety of percussion instruments and techniques are studied to determine what makes effective dance accompaniment. The course includes: examples and discussion of dance musics from western and non-western cultures; basic notation of rhythm and form; demonstrations of musical styles and discussion of social contexts. Students will have opportunities to assist in accompanying modern dance classes. Minimum of 2-3 hours a week of individual practice and/or listening to recordings expected.
Credit 2 units. A&S IQ: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 3042 Music Resources for Dance
Analysis of western (Europe, America) world (Africa, India, Indonesia) and global popular musics. Emphasis on rhythm/form, style/genre, instrumentation, and function/context. Basic music theory: notation, time signatures, subdivisions and polyrhythms. Major composers for dance (Lully, Tchaikovsky, Debussy, Ravel, Stravinsky, Cage, etc.) Introduction to percussion techniques for dance accompaniment using hand drums, drumset and hand-held instruments. Introduction to basic studio techniques including microphones, recording and editing equipment, and the use of synthesizer and drum machines. Prerequisites: For dance students at the intermediate or advanced level.
Credit 2 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 3060 Jazz Dance II
Intermediate to high intermediate work in jazz dance technique, including choreographic phrases emphasizing stylistic clarity and more complex rhythmic structure. Variable content; may be repeated once for credit in a subsequent semester. Preference given to students registering for the first time. Prerequisite: Dance 297 or permission of instructor.
Credit 2 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 3070 Modern Dance and the African-American Legacy
This course examines the works of several African-American choreographers and their contributions to the field of modern dance in America. These works are considered modern dance classics and some depict important historical events. Through the medium of dance aided by discussions, video and class reading assignments, the choreographers' works are analyzed for form, content and social relevance. Studio work includes technique to support learning the repertory. Prerequisite: one to two years training in modern, jazz or ballet
Credit 2 units. A&S IQ: HUM, SC Arch: HUM Art: CPSC, HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 3090 Histories of Theatrical and Concert Dance
This course is a survey of dance on the stage. It examines the interrelated histories of ballet, modern, jazz, hip hop, and musical theatre dance, and it discusses how these forms have converged in today's contemporary dance scene. It offers an overview of key artistic movements, both mainstream and avant-garde, while examining selected dances through a combination of formal analysis and a consideration of the social and political contexts that contributed to their meaning. Students will learn how to analyze dance using a variety of sources, such as visual art, photographs, film, and written texts. The

classroom format will emphasize discussion. Throughout the course, we will interrogate the categories of theatrical dance and concert dance, seeing how the definitions have changed over time to include or exclude certain types of dancing.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 3120 West African Music and Dance in Context
A West African dance course specifically focused on the Ivorian dance traditions of the Baule, Bete Dan, Lobi, Makinke, and Senufo peoples. The course addresses the relationship between music and dance as well as their social and cultural significance. Study of myths, art, costumes and masks as they relate to various dances and music is also included. A studio course with related reading material.
Credit 2 units. A&S IQ: HUM Arch: HUM Art: CPSC, HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 3130 Movement and Meaning: Dance in a Global Context
This course introduces students to various approaches to studying dance in a humanities context. We will explore how people create meaning through dance and how dance, in turn, influences social norms, political institutions, aesthetic ideals and cultural practices. As we compare dance forms across the globe, we will also examine issues of race, gender, sexuality, and ethnicity, analyzing how dance literally embodies identity. At the same time, we will discover how contemporary unequal power hierarchies bear on our designation of some dance forms as Western and others as world or ethnic. Tensions around assessment of authenticity/creativity, adaptation/appropriation, agency/resistance, and cultural hierarchies shift with social and political hegemony and with the individual's position as insider or outsider (a position that can shift depending on context). Throughout the semester, the usual process of the course will be discussion of assigned reading and viewing and analyzing together dance videos shown in class. A few dance workshops will be included (for which no previous dance training is necessary). Required work includes short papers and a final project.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: CPSC, HUM BU: HUM, IS EN: H
Typical periods offered: Fall

DANCE 3170 The Neuroscience of Movement: You Think, So You Can Dance?
Although humans have expressed themselves through movement throughout time, only recently have neurophysiological investigative techniques allowed us to glimpse the complex neural processes that allow the coordination and integration of thought, action, and perception. This course introduces students to the nascent yet growing field of dance neuroscience. In part one of this course, we explore fundamental concepts of motor control, including how our central nervous system integrates information to allow us to maintain posture and balance, to coordinate our limbs to external rhythms, and to move our bodies gracefully and expressively through space and time. In part two, we explore theoretical frameworks of motor learning as they pertain to movement. We delve into the neuromechanisms underlying common tools that dancers and athletes use to improve motor performance and how dance training induces neuroplasticity in brain structure and function. In part three, we explore the neural underpinnings of aesthetic appreciation while watching dance, including the action observation network and affective responses to art. Required work includes short assignments, a final project and presentation on a topic of your choice related to the course focus, and a few movement workshops (for which dance training is not required). Prerequisite: introductory course in dance, biology, or neuroscience, or permission from the instructor.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Spring

DANCE 3171 Research Methodology in Human Movement Science
This course provides training in conducting human movement science research. Students will learn to critically analyze scientific literature, identify gaps in the literature, and develop their own research studies to fill them. Principles of scientific investigation and creative problem-solving are emphasized. One group project and one solo project will be accomplished throughout the semester.
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Fall, Spring

DANCE 3220 Intermediate Pointe Technique
This course is designed for dancers with a basic foundation and understanding of pointe technique. The focus of the course is the strengthening of the overall presentation of the pointe technique while additionally developing the performance quality of the dancer. Variable content: may be repeated for credit in a subsequent semester. Co-requisite registration in Dance 3221, 416 or 4291, and permission of the instructor.
Credit 1 unit. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 3222 Rethinking Ballet in the 21st Century: Decolonizing Narratives and Embracing Diversity
This course embarks on a transformative exploration into the heart of ballet, reimagining its narratives for the 21st century. This course challenges the traditional fabric of ballet, examining and dismantling elements steeped in the racial and gendered logics of 17th-19th century Western Europe. Grounded in the principles of inclusivity, the course encourages students to be architects of change, reshaping ballet stories to reflect the rich tapestry of voices that define our global and contemporary world. In a dance landscape evolving towards equality, we delve into the significance of new voices in ballet and the crucial role representation plays. The course serves as a call to action, inspiring students to rethink, redefine, and reconstruct ballet narratives. Through theoretical discourse, practical application, and dynamic discussions, participants engage in a powerful journey to decolonize ballet and champion diversity, equality, and the vital importance of representation. This course is centered on seminar-style discussions based upon assigned readings and viewings. Movement workshops will be held every two to three weeks to test ideas through embodied investigation.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 3230 Ballet as Ethnic Dance and Classical Art
This course examines the origins and major developments in ballet theory, technique, and production practice, emphasizing their relationship to concepts of ethnicity and classicism. Issues to be considered include: the influence of classic Greco-Roman theatre on the themes, aesthetic ideals, and theorization of ballet; analysis of ethnic content not only in thematic material but in ballet movement vocabulary and training process; the conscious reformulation in the U.S. of European ballet as an equally American art form; the expansion of Euroamerican classical ballet in the work of Balanchine and Tudor; the appropriation of ballet by non-Western countries (such as China and Japan) and its impact on native dance genres; typical construction of the ballet dancer's body and movement, including gender definition, in relationship to a specific ethnic community context. Seminar format with lectures, discussion, and video materials. Three 5-7 page papers and final. No prerequisites.
Credit 3 units. A&S IQ: HUM, WI BU: HUM
Typical periods offered: Fall

DANCE 3270 Experiential Anatomy and Kinesiology
This combined lecture and movement laboratory course explores anatomical, physiological, and kinesiological aspects of human movement. We will cover skeletal and muscular anatomy, muscle physiology, skeletal alignment, and biomechanical force production. Principles of postural control, body conditioning, and injury prevention will be learned through interactive exercises and will be applied to dance and other forms of exercise. Students will leave with an enhanced understanding of movement efficiency and the ability to adjust movement patterns for better health and performance throughout their lives.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Spring

DANCE 3310 Classical Ballet: Intermediate I
A course designed for those with a solid foundation in the fundamentals of ballet technique. Related reading and video assignments; attendance at 1-2 ballet performances. Variable content; may be repeated in a subsequent semester. Prerequisite: Permission of the instructor and B+ or better in Dance 221 and 222.
Credit 2 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 3311 Classical Ballet: Intermediate II
Special emphasis on the development of adagio, allegro, and turn sequences. Variable content; may be repeated in a subsequent semester. Prerequsite: Permission of instructor and B+ or better in Dance 221 and 222.
Credit 2 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 3996 Dance Elective: 300-Level
This course is used for transcribing 3000-level DANCE elective units.
Credit 3 units. EN: H
Typical periods offered: Fall, Spring, Summer

DANCE 4010 Theory and Technique of Modern Dance V
The course emphasis is on versatility in movement vocabulary and on more complex and intensive technical work with discussion of theory inherent in the studio work, related readings, and projects. Variable content: may be repeated for credit in a subsequent semester. Prerequisite: Dance 302 with recommendation of the student's previous 302 instructor or permission of the 401 instructors.
Credit 2 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 4011 Theory and Techniques of Modern Dance IV
Emphasis on more complex and intensive technical work. Prerequisite: permission of the instructor.
Credit 3 units.
Typical periods offered: Fall

DANCE 4022 Theory and Technique of Modern Dance VI
This course is a continuation of Dance 401 with emphasis on more complex and intensive technical work. Variable content; may be repeated for credit in a subsequent semester. Prerequisite: Dance 401 with recommendation of the student's previous 401 instructor or permission of the 4021 instructors.
Credit 2 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 4032 Introduction to Screendance Composition and Performance
Introductory studio workshop in screendance composition and digital performance. For students with experience in choreography or improvisation, Screendance Composition explores the intersection of dance and digital media. Students will learn basic camera and videography skills to create screendance projects and learn about this emerging dance genre that combines the artistry of dance with the visual art capabilities that cameras offer. Methods for improvisation and site-specific performance will also be explored. Group critiques by faculty and students contribute analysis and facilitate dialogue regarding both process and artwork. Prerequisites L29 203, or L29 3110 or permission of instructor.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 4040 Intermediate/Advanced Hip Hop
Over the past fifty years, Hip Hop has transformed not only the professional dance landscape, but also global popular culture. This movement-based studio course expands upon the fundamentals of Hip Hop dance to develop more intermediate and advanced-level technique. Students will develop an understanding of hip hop movement aesthetics and approaches through warmup, across-the-floor exercises, phrase work, choreographic studies, and class discussions. Through supplemental readings, viewings, and written response papers, students will also gain greater depth and breadth of knowledge about the history and culture of the form. Prerequisites: Beginner-Intermediate Hip Hop or equivalent prior experience, with permission from the instructor.
Credit 2 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 4042 Topics in Dance Techniques
Explores a variety of special interest topics in dance techniques. Consult the course listings for the semester topic.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 4060 Jazz III
Jazz III is primarily a studio course based on traditional jazz with strong elements of ballet technique, hip hop, Broadway, and street jazz. The main focus of the class will be on increased technical proficiency and development as an expressive performer. The studio work will introduce exercises and movement phrases that challenge the dancer's skill level, and encourage a personal exploration that further enhances the dancer's individual expression and style. Studio work will be supported by individual research on the field of jazz dance. Variable content: may be repeated once for credit. Prereq: High-Intermediate training in jazz dance technique and permission of the instructor.
Credit 2 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 4062 Variations in the Ballet
Introduces classical choreography within various ballets. Prerequisites: Dance 321 or 4281 with some pointe training, and permission of instructor.
Credit 1 unit. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DANCE 4070 Modern Dance and the African American Legacy II
This course will focus on works by 2-3 renowned African-American choreographers. The selected choreographers are chosen for their contributions to the field of American modern dance based primarily on their explorations regarding the process and dynamics of building

community--the sense of community as experienced through the lens of African-American cultural values and aesthetics and as it pertains to the creative process. Therefore, the course focuses on viewing the body as a site for the exchange of ideas concerning humanity. Students will investigate these choreographers through learning excerpts of their choreography and choreographing personal responses, as well as through related readings, videos, and independent research.
Credit 2 units. A&S IQ: HUM, SC Arch: HUM Art: CPSC, HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 4100 Pointe Technique
Designed for dancers with a basic foundation in pointe work. Variable content; may be repeated for credit in a subsequent semester. Prerequisite: concurrent registration in Dance 321 or 4281 and B+ or better in 221, 222, 321, 322 and/or permission of instructor.
Credit 1 unit. A&S IQ: HUM BU: HUM
Typical periods offered: Fall

DANCE 4110 Performing the Political in American Dance
This course is an exploration of the politics of performance and the performance of politics through the lens of American dance in the 20th and 21st centuries. Through readings, screenings, and discussions, we will examine the ways in which American dance developed against and alongside political movements in the United States, particularly ones concerning nationalism, race, gender, and human rights. We will also investigate how the lens of dance and choreography offers an expansive means to conceptualize political questions of citizenship and social protest, broadening our understanding of embodied performance. Guided by several key philosophical texts, this course will focus on the concepts necessary for examining the convergence of performance and politics (e.g., representation, ritual, spectacle, body, mimesis, propaganda) while also paying special attention to the politics of funding and censorship that has governed the creation and presentation of dance in the United States. No dance experience is necessary.
Credit 3 units. A&S IQ: HUM, LCD, SC, WI Arch: HUM Art: CPSC, HUM BU: BA, HUM EN: H
Typical periods offered: Fall, Spring

DANCE 4120 Classical Ballet III
Designed for dancers with a solid foundation in beginning and intermediate ballet technique. Related reading, research paper/ discussion, video assignments; attendance at 1-2 ballet performnces. Variable content; may be repeated for credit in a subsequent semester. Prerequisite: permission of instructor and B+ or better in Dance 3221 and 415 or 416.
Credit 2 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DANCE 4121 Classical Ballet IV
A course designed for dancers with a solid foundation in beginning and intermediate ballet technique. Variable content; may be repeated for credit in a subsequent semester. Prerequisite: permission of instructor, and B+ or better in 3221 and 415 or 416.
Credit 2 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 4130 Dance Pedagogy
In this course students will learn methods of instruction, assessment and how to develop dance curriculum for K-12. Students will design classes based on national standards, grade level expectations and sound dance principles. In the studio they will teach each other sample lessons that they have developed. This class will cover dance competencies required by DESE for beginning teachers of dance. We will pay attention to current trends in arts education. Our discussion will include the diversity of student populations and how to prepare and respond. We will discuss the role of the arts in education and the dance teacher's role as classroom instructor, arts integration instructor, diplomat and arts advocate. Credit may be applied toward the education major and potentially toward state certification. Prerequisite: minimum of two semesters of upper level coursework in dance technique. Prerequisite: minimum of two semesters of upper level coursework in dance technique.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 4140 Performing Gender and Sexuality in America
This course examines how the performance of gender and sexuality has shaped the social, cultural, and political history of the United States from the early nineteenth century to the present. While performance happens in everyday life, we will primarily focus on how the stage has been a potent space to debate issues about gender and sexuality. This course will put forth the argument that the stage has historically not only reflected broader social concerns, but also actively helped to shape those social dynamics. After an introduction to foundational ideas, we will start the semester with minstrelsy, signaling that the performance of gender and sexuality in America is deeply intertwined with race, class, and national belonging. Reading and viewing assignments bring together feminist theory, queer theory, American social history, and performance texts to build robust seminar discussions.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: CPSC, HUM BU: BA, HUM EN: H
Typical periods offered: Spring

DANCE 4150 Presence in Performance: Alexander Technique and Mindful Movement for Performing Artists
This course provides group and individual instruction in principles and methods from Alexander Technique and other somatic arts for training mindful, embodied presence in performance. Mindful movement techniques are widely used by professional dancers, actors, and musicians to enhance performance skill and to address/prevent injury and chronic pain. Through a workshop process of guided learning, students gain awareness of subtle inefficiencies in coordination and balance that cause pain and limit ability. Students gain ability to self-assess and adjust problematic movement patterns to improve freedom and expression. Alexander Technique works at fundamental levels of movement coordination, and its methods are applicable to all performing art genres. Training is tailored to each individual student's needs, skills and goals. This course involves experiential learning supported with related readings, discussion, personal research projects and presentations. Prerequisites: Graduate standing; also open to undergraduate students studying at the 400 level in their discipline with permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 4240 Pointe Technique
Designed for dancers with a basic foundation in pointe work. Concurrent registration in Dance 322 or 4291 and permission of instructor. Repeatable one time for credit in subsequent semester.
Credit 1 unit. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 4300 Contemporary Ballet
For intermediate and advanced dancers, this course presents a dynamic fusion of classical ballet technique and the expressive, innovative elements of contemporary dance. We will build upon the foundational ballet principles rooted in an art form dating back to the seventeenth century, during the reign of Louis XIV in France. While ballet traditionally prides itself on classicism, the past forty years have seen the emergence of the genre known as contemporary ballet. This genre pushes the classical ballet vocabulary into new thematic and aesthetic territories, placing emphasis on abstraction, complex rhythms, and movement invention. Many of today's leading dance companies focus is on contemporary ballet, making this course a valuable preparation for entering the evolving world of dance. The course places a strong emphasis on practical, embodied work in the studio to foster the development of technical skills, musicality, and artistry.
Credit 2 units.
Typical periods offered: Fall

DANCE 4310 High Intermediate Ballet I
A course designed as preparation for the advanced level. Emphasis on vocabulary review and individual technique assessment, including placement, movement quality and musicality. Related readings and video assignments; attendance at and critical analysis of 1-2 ballet performances. Variable content; may be repeated in a subsequent semester. Prerequisite: B+ or better in 221, 222, 321, 322 and/or permission of instructor.
Credit 2 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 4311 High Intermediate Ballet II
A course designed for the high intermediate dancer in preparation for 4281/429. Emphasis on placement, movement quality and musicality. Related readings and projects supplement the classical vocabulary. Prereq: B+ or better in 221, 222, 321, 322 and/or permission of instructor.
Credit 2 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 4446 The Japanese Theater
An investigation, using English materials, of the major developments and forms of the Japanese theater, from Noh and its antecedents to the rise of a modern drama. In this course we are less concerned with the performative aspects of theatrical arts (though these will be introduced via videos) than with the ways in which dramatic texts influenced and borrowed from the literary tradition. Readings from major theatrical texts, secondary studies on Japanese theater, and literary sources. Prerequisite: junior standing or permission of instructor.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

DANCE 4500 The Line of Least Resistance: Embodying Postmodern Dance
This studio course explores concepts of Postmodern dance from the 1960s up to the present day. Course readings and viewings will be explored through a physical, embodied approach. To accompany our viewings, we will learn seminal works by Postmodern choreographers (for instance, Set Reset by Trisha Brown), explore improvisational methodologies, and develop our own choreographic projects in our own voices. Historical and theoretical readings will include topics such as Judson Dance Theatre, African-American dance, European Tanztheater, and beyond. Course concepts will be presented mostly chronologically and be explored through varied lenses including historical and cultural context, artistic and social upheavals, cultural hybridity, and performance and aesthetic theory. Prerequisites: Modern technique III or higher, or permission of instructor. Students interested in taking this course should sign up for waitlist. Enrollment will be determined by instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 4900 Dance Production Projects
Students may receive credit for work on special dance related production projects conceived by students and supervised by faculty. Contracts must be signed by the student, faculty supervisor, and the coordinator of Dance 400 before work on the project commences. Students should register for this course after work is completed. Prerequisite: permission of the dance faculty. Credit to be determined in each case.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DANCE 4910 Dance Repertory
Concert dance performance practicum. Under the direction of faculty, guest or graduate student choreogaphers, students rehearse and prepare for performance in a repertory dance concert or the MFA thesis production. Enrollment by audition. Prerequisite: Permission of the faculty director of an appropriate production. Concurrent registration in a technique class is required. May be repeated once for credit.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DANCE 4911 Dance Repertory
Concert dance performance practicum. Under the direction of faculty, guest or graduate student choreogaphers, students rehearse and prepare for performance in a repertory dance concert or the MFA thesis production. Enrollment by audition. Prerequisite: Permission of the faculty director of an appropriate production. Concurrent registration in a technique class is required. May be repeated once for credit.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

DANCE 4920 Senior Project
Specialized project in a selected area in dance. The student will work individually under the supervision of a faculty member. Submission of student proposal prior to registration. Final self-evaluation essay required. Prerequisite: permission of the Coordinator of the Dance Division.
Credit 3 units.
Typical periods offered: Fall, Spring

DANCE 4921 Composition III
The exploration of choreographic problems for small and large ensembles. Prerequisite: senior standing or permission of instructor. Previous or concurrent registration in Dance 401 or 4021 recommended.
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Spring

DANCE 4922 Composition IV
The exploration of choreographic problems in small and large ensembles. Prerequisite: completion of Dance 303, senior standing or permission of instructor. Previous or concurrent registration in Dance 401 or 4021 recommended.
Credit 3 units.
Typical periods offered: Spring

DANCE 4930 Study for Honors
An honors thesis or performance and thesis project designed by the student, and supervised and assessed by a faculty committee. Prerequisites: senior standing, grade point of 3.65, and 3.65 in dance classes, and permission of the coordinator of the dance division.
Credit 6 units.
Typical periods offered: Fall, Spring

DANCE 4940 Independent Work
Prerequisite: senior standing and permission of the director of undergraduate dance studies.
Credit 10 units.
Typical periods offered: Fall, Spring

DANCE 4996 Dance Elective: 400-Level
This course is used for transcribing 4000-level DANCE electives units.
Credit 3 units. EN: H
Typical periods offered: Fall, Spring, Summer

Drama

DRAMA 1101 First-Year Seminar: What is Art?
Great works of literature, theatre, film, painting, music and dance provide us with new, intriguing-and often surprising!-ways of understanding reality. In this Freshman Seminar, we examine a variety of works in various media, paying close attention to works which have significantly altered or challenged the way we view and interpret reality. In an intimate, seminar setting, we analyze and discuss individual works of art from the Greeks to the present day. The course incorporates attendance at live performances (both on-campus and off), along with Master Classes by artists from the Performing Arts Department. Examining works both classical and the avant-garde, What is Art? forces us to understand and question how art complicates, enriches, disturbs and asks questions-both about ourselves and our world.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 1102 First-Year Seminar: Race and Performance
What does it mean to act Black? What about acting Jewish? This course looks at performances of racial and ethnic identity, mostly in the United States and mostly in the 20th century. We will examine novels (e.g., Nella Larsen's Passing), plays (e.g., Anna Deavere Smith's Fires in the Mirror), and performances of everyday life (e.g., Cowboys and Indians) to investigate the performance of race in public. Once we begin to explore the social and cultural performance of race, will it all turn out to be only an act?
Credit 3 units. A&S IQ: HUM BU: BA, HUM EN: H
Typical periods offered: Spring

DRAMA 1103 First Year Seminar Ideation: Idea Generation
Ideation exists at all phases of a creative process: brainstorming, idea generation, innovation, prototyping, development, and actualization. But Ideation is less like a line and more like a loop from observing to reflecting to making - and back again. It is a rarely-understood, but essential part of any creative or design process. Through collaboration and conversations with classmates, readings on the topic, and group exercises, Ideation is a course that will strive to define and de-mystify what we mean by 'creativity', help students identify their creative strengths and weaknesses, encourage artistic experimentation of new ideas, establish methods of design thinking and make it clear that collaboration amongst varied backgrounds and disciplines is the key to coming up with creative solutions for complex problems. Successful companies like IDEO led by visionaries in the form of Tim Brown and David Kelley have pioneered the notion of Design Thinking: 'Design thinking' is defined as the ability to combine empathy for the context of a problem, creativity in the generation of insights and solutions, and rationality to analyze and fit solutions to the context.This course will encourage students to explore their collaborative talents in new ways that they will find apply to virtually any discipline and career path: from A to Z.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

DRAMA 1104 Topics in Drama: FYS: Shakespeare: The Godly and the Grotesque
While Shakespeare is celebrated for his realistic depictions of characters, events, and emotions, his work is filled with other-worldly elements, including sorcery, oracles, myths, and grotesque creatures. This course will explore Shakespeare's use of the fantastic, the unnatural, and the monstrous. Reading a wide selection of comedy, tragedy, and history, we will consider Shakespeare's often contradictory attitude to the supernatural: on one hand, a source of evil, villainy, and perversion, and, on the other, a symbol of the divine and a means of surpassing the humanly possible. We will look at how Shakespeare used monstrous imagery to reflect upon his own work and the nature of theatre itself, paying special attention to how the performance practices of his time impacted his portrayal of the fantastic. At the same time, we will supplement our readings by watching more contemporary performances of Shakespeare's works in order to consider the impact that innovations in theatrical technologies and practices has had on the depiction of the supernatural in these plays. Finally, we will consider how Shakespeare used the unnatural to probe the gender, politics, race, disability, and globalization of his own time and in so doing, we will discover how is work continues to impact our own engagement with these issues-and indeed, our conception of monstrosity itself. Plays and productions studied will include Macbeth, A Midsummer Night's Dream, Julius Caesar, The Tempest, Richard III, The Winter's Tale, and Othello. Students with no prior knowledge of Shakespeare are welcome to enroll.
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Fall

DRAMA 1191 Ampersand: Shakespeare's Globe: All the World's a Stage
Why-more than 400 years later-do we continue to read the works of William Shakespeare? Why do we continue to stage his plays, identify with his characters, and communicate our thoughts in his language? Why do his poems and plays retain their vibrancy and immediacy, even today? This course invites students to answer these questions by inhabiting Shakespeare's language from the inside and out-breathing in the words of his characters with creative and careful study, while moving out to fully engage the text in performance. Reading plays, watching films, listening to monologues, voicing dialogue, physically enacting fight scenes, and even navigating plots with joysticks, students will develop deep appreciation for the writer who is the original GOAT-the greatest of all time. In this two-semester course, we will read and study Shakespeare's plays in their historical context, learning about the original practices used in performance at both the Elizabethan and Jacobean court theatres as well as the public theatres on the South Bank of the Thames. We will also consider them as adaptable playscripts that have been rewritten over the past 400 years, reinterpreted at different times by different actors in different cultures the world over. Students will contribute to this performance repertoire with their own 21st-century interpretations, striding the stage of the reconstructed Globe Theatre in a capstone experience that concludes the course with a summer trip to London. If all the world's a stage, come be a player in it!

This course is used for transcribing 1000-level DRAMMA elective units
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

DRAMA 2051 The Art of Storytelling
As one of the oldest forms of human communication, storytelling is part of both mundane interactions and carefully crafted events. Many of us tell stories regularly in informal settings (e.g., when we tell a friend about an encounter we had in the cafeteria) as well as in professional settings (e.g., class or work presentations). But what, exactly, are the elements of a well-told story? How do we identify powerful storytellers? These questions ground this course, where we will explore stories as forms through which to present oneself and explain an event to others. We will study storytelling from two perspectives. First, we will look at stories through rhetorical analysis: we will focus on various examples of storytelling across different genres (ranging from cultural myths, fables, spoken word, speeches, hip-hop, R&B, and rock lyrics) to understand stories as an artistic practice, a teaching method, an identity shaper, and a conductor of history. Second, we will consider stories through embodied practice: we will perform and present stories in chosen genres to gain firsthand experience in the conventions and forms of the embodiments that complete the act of telling well-crafted stories. At the end of this course, students will have gained theoretical knowledge about storytelling as an art form as well as the practical skills needed to become confident storytellers.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: CPSC, HUM BU: HUM EN: H
Typical periods offered: Fall

DRAMA 2100 Introduction to Theater Production
An introductory study of the major elements involved with mounting a theatrical production. Utilizing guest speakers in both theater arts and theater studies, the course addresses such topics as scenic, costume, lighting and sound design; production management and procedures; and the history and culture of theatrical space and design. Students are required to serve on a crew for one departmental production which is a significant weekend & evening time commitment for 1-2 weeks, depending on the assigned production.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 2101 Introduction to Costume Construction
This course is a hands-on introduction to the sewing and costume-related skills most useful for creating costumes for theatre productions.
Credit 3 units. Arch: HUM Art: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 2102 Portfolio Review
This course is intended to be a one hour credit to meet every Friday for two contact hours. While the main focus of this course will be to dedicate time to learning and preparing a solid professional portfolio, resume and web page, this class will also train the students how to interact and conduct themselves through the interview process. We will review numerous resumes from industry professionals, develop our own, develop both physical and digital portfolios consisting of students' academic and professional work, and culminate in building a strong and evocative web page. Upon completion, the student will have a solid understanding of the theater job market and be ready to face the world.
Credit 1 unit. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 2200 Fundamentals of Acting
This course offers an opportunity to investigate the nature of the theater by way of performance. Students study a variety of theatrical texts in the most direct and experiential way: by acting in them. The course is designed for those who want to understand the interpretive work of the actor. Students are introduced to the practical work of building a character for the stage, and they also gain an understanding of how dramatic texts work both on the page and on the stage. Textual analysis, movement work and vocal production skills are developed using monologues, scene work and exercises. These skills should also provide significant benefits outside of the confines of the class itself, in the professional and personal lives of the students taking this course. No previous training or experience necessary.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 2201 Public Speaking: Embodied Communication
The ability to speak well and to communicate effectively in the public forum is an essential skill for all students. This course aims to offer a comprehensive and wide ranging approach to developing the skills of the contemporary speaker. While acknowledging and utilizing traditional approaches to public speaking, this course will expand its reach to include applicable techniques from the world of the Performing Arts -- especially theatre and dance. The course does not intend to train the student as a dancer or actor, but it maintains that the successful speaker would do well to harness some of the transferable skill sets from these disciplines. The speaker, like the performer, must stand before an audience with an objective to communicate something well. Both should be dedicated advocates for the message. They share the common ground of requiring a strong voice for a sure delivery of the material, and an expressive physicality willing to fully embody and serve the message.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring, Summer

DRAMA 2202 Improvisation
This course introduces students to the fundamentals of improvisation. Students are provided with the tools and techniques to develop their artistic voice, both individually and within an ensemble, through various theater games, exercises, and techniques. Students will build self confidence, develop creativity, hone presentation skills, and learn collaborative practices for working with others. Students will understand the applied benefits of improvisation toward their professional and personal lives.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Summer

DRAMA 2203 Black Theater Workshop
The Black Theater Workshop is a performance-oriented course with an emphasis on literature by African American playwrights and writers. The course work consists of seeing productions, reading plays, developing monologues and scene work, and doing short performances. Students will also explore the black experience through acting, directing, and playwriting, all to culminate in a final performance that is required and in lieu of a final exam.
Credit 3 units. A&S IQ: HUM, SC BU: HUM EN: H
Typical periods offered: Spring

DRAMA 2204 The American Musical Theater Songbook
From its birth in vaudeville and musical reviews to current future classics such as Hamilton, American musical theater has produced a voluminous catalogue of material referred to herein as the American Musical Theater Songbook. Part survey and part performance, this course will focus on the composers, lyricists, performers and subject matter that have been instrumental in defining musical theater and its role in describing a continually evolving human psychology and sociology. The performance aspect of the course will develop students' existing vocal skills and knowledge of style. As both singing and non-singing students are welcome to participate in the course, adjustments for non-singing students will be accommodated so that they may participate fully in the class. The format of the course will be a seminar of student-generated presentations, discussions, and workshop performances. A sampling of shows from which repertoire will be sourced includes the following: early song-and-dance shows (Girl Crazy, Anything Goes, Kiss Me Kate); Rodgers and Hammerstein (Oklahoma!, Carousel, South Pacific); Stephen Sondheim (Gypsy, Sweeney Todd, Sunday in the Park With George); modern era (West Side Story, A Chorus Line, Cabaret, Hair, Pippin); and contemporary (In the Heights, Caroline, or Change, Kinky Boots, Dear Evan Hansen, Hamilton). This course serves as a prerequisite for L15 372.

Typical periods offered: Fall

DRAMA 2300 Theater Culture Studies I: Antiquity to Renaissance
This course is a survey of ancient, medieval and Renaissance theater and performance: in both the West and in the East, as it both reflects and shapes culture. Coverage will include the following areas: ancient Greece, ancient Rome, classical Sanskrit theater, Yuan China, medieval Japan, medieval Europe, Renaissance Italy, and Renaissance England. Both scripted theater and performance practices will be examined through the lenses of dramatic literature, theater history, performance studies, and dramatic theory. A continual emphasis will be on marginal and underrepresented figures, as we will attempt to excavate forgotten histories from the theatrical past.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM, IS EN: H
Typical periods offered: Fall, Spring

DRAMA 2301 Theater Culture Studies II: From Renaissance to Romanticism
This course provides a survey of theater history from the early seventeenth through mid-nineteenth centuries, covering plays, theories of drama and acting, and the material conditions of theatre production. We will explore events in Asia, the Americas and Europe with particular attention to the Baroque era, Sentimentalism, and Romanticism. The central objectives of the course are 1) to teach students to analyze plays in complex and creative ways, and 2) to cultivate understanding of the ways theater and performance practices reflect the philosophical ideas, aesthetic values, and socio-political realities of their historical context--even as these practices sustained and challenged such ideas, values, and realities.

Typical periods offered: Spring

DRAMA 2302 Contemporary Comedy: Stand-Up, Sketch and Improv
The U.S. is in the midst of a second comedy boom. The first boom, during the 1980s, turned stand-up comedy into a major force in American entertainment, creating stars like Jerry Seinfeld, Eddie Murphy, and Ellen DeGeneres. The second, defined in part by new social media, podcasting, and on-line video, is remaking the way comedians find their voices and their audiences. But even as young comedians chart new paths through a dynamic media landscape, live performance is still the heart of the modern comedy universe. This class is a detailed survey of the contemporary American comedy scene. Pioneering artists from Vaudeville through the 1970s are introduced, the stand-up boom of the 1980s is presented as a formative force in the comedy business, alt-comedy is discussed as a stylistic watershed. Select modern theories of comedy are read and discussed (though we studiously avoid explaining jokes). Short units on Improv and Sketch comedy round out the syllabus. Assignments include practical exercises in performing comedy onstage, and students can choose to perform a short original stand-up set for their final assignment.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 2303 First-Year Seminar: Shakespeare: The Godly and Grotesque
While Shakespeare is celebrated for his realistic depictions of characters, events, and emotions, his work is filled with other-worldly elements, including sorcery, oracles, myths, and grotesque creatures. This course will explore Shakespeare's use of the fantastic, the unnatural, and the monstrous. Reading a wide selection of comedy, tragedy, and history, we will consider Shakespeare's often contradictory attitude to the supernatural: on one hand, a source of evil, villainy, and perversion, and, on the other, a symbol of the divine and a means of surpassing the humanly possible. We will look at how Shakespeare used monstrous imagery to reflect upon his own work and the nature of theatre itself, paying special attention to how the performance practices of his time impacted his portrayal of the fantastic. At the same time, we will supplement our readings by watching more contemporary performances of Shakespeare's works in order to consider the impact that innovations in theatrical technologies and practices has had on the depiction of the supernatural in these plays. Finally, we will consider how Shakespeare used the unnatural to probe the gender, politics, race, disability, and globalization of his own time and in so doing, we will discover how is work continues to impact our own engagement with these issues-and indeed, our conception of monstrosity itself. Plays and productions studied will include Macbeth, A Midsummer Night's Dream, Julius Caesar, The Tempest, Richard III, The Winter's Tale, and Othello. Students with no prior knowledge of Shakespeare are welcome to enroll.
Credit 3 units.
Typical periods offered: Fall, Spring

DRAMA 2304 Introduction to Theater & Performance Studies
Why is storytelling so important for understanding our world? Why do we act out our stories, and why does the ancient art of dramatic storytelling continue to capture our imaginations, even and especially now in a world of computer animation? This course begins with such questions to frame our understanding of dramatic form, the theatrical vocabulary we use to bring it to life on stage, and the implications it holds for our ability to understand ordinary performances in everyday life. Structurally, the course is organized into three units — script analysis, dramaturgical translation, and performance studies — each of which models a foundational skill set for understanding how meaning is made in performance. Topically, it incorporates a mainstage production in the PAD season to provide students with an experiential learning opportunity to engage live art and artists and to develop their powers of aesthetic appreciation and critical discernment.
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Spring

DRAMA 2305 Shakespeare: Page to Stage to Screen and Everything in Between
Over 400 years after his death, Shakespeare's plays continue to rank among the most widely read and performed works in the English language. It is perhaps for this reason that Shakespeare's work has continued to shape subsequent theatrical and film productions. This course will examine the recent adaptations of Shakespeare's work that have originated on the Broadway stage and in Hollywood movie studios. We will look at the many alterations that were made to Shakespeare's original plays from shifted settings to changes to the characters' ages and vocations to the addition of music to modernized dialogue. We will consider how these modern adaptations link the early modern period with our own by examining how these theatrical and film productions build upon the plays' engagements with love and family as well as the social issues of race, gender, and social class. We will also draw a connection between these adaptations and Shakespeare's own creative practice of crafting his plays by revising earlier source materials. Most importantly, we think about how these adaptations simultaneously make Shakespeare's plays more accessible and current for a contemporary audience while also serving to certify the timelessness of these stories.

DRAMA 2306 It's Broadway Baby! The Magic and Making of the Musical
Music has always played a prominent role in the theatre, from the harps and flutes that accompanied the earliest ancient Greek dramas to the operas that proliferated throughout the 18th and 19th centuries to the Rockettes who still perform at Radio City today. But the most popular combination of music and drama continues to be the Broadway musical. In this course, we will look at some of the most popular musicals of the 20th and 21st centuries. We will watch stage and film versions of these musicals, focusing on how their deployment of song, scenery, dialogue, and dance coalesce to create a cohesive narrative, convey sociopolitical commentary, and evoke an emotional response. We will also look at the literary and historical sources of these musicals to help us understand the process by which their composers adapted them for performance. At the same time, we will consider how musicals have evolved both to include a greater diversity of race and gender identities and to engage with new cultural and media contexts. Finally, we will discover together why the musical — so often our first encounter with live performance — continues to capture our imaginations and inspire a lifelong love of the theatre. This course will focus on developing the following Literacies for Life and Career: applied problem solving; communication dexterity; creative and innovative practices; critical and interpretative skills; historical, social, and contextual understanding; integrative thinking; and systematic inquiry.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 2402 Acting I: Fundamentals of Acting
This course offers an opportunity to investigate the nature of the theater by way of performance. Students study a variety of theatrical texts in the most direct and experiential way, by acting in them. The course is designed for those who want to understand the interpretive work of the actor. Students are introduced to the practical work of building a character for the stage, and they also gain an understanding of how dramatic texts work both on the page and on the stage. Textual analysis, movement work, and vocal production skills are developed using monologues, scene work and exercises. These skills should also provide significant benefits outside the confines of the class itself, in the professional and personal lives of the students taking this class.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 2900 Theater Projects
Independent study. Students may contract with a faculty supervisor for credit for their work on theatrical productions or research. Contracts must be signed by the student, the faculty supervisor, and the coordinator of Drama 200 before the student's work on the project commences. Credit and grade option to be determined in each case.
Credit 3 units.
Typical periods offered: Fall, Spring

DRAMA 2996 Drama Elective: 200-Level
This course is used for transcribing 2000-level DRAMA elective units
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

DRAMA 3018 Theater Space in Historical Practice
This course examines select theatre spaces from across the globe and from a long span of human history, from caves used in the upper paleolithic era to contemporary digitally-supported sensory experiences. We will treat theatre space as a socially generated phenomenon produced in many cultures that dynamically links performers and audiences. Theatre space will be used as a gathering concept through which many facets of performance culture can be examined, including architecture, scenography, script, and the physical features of embodied communication. Beyond this, theatre space also illuminates myriad aspects of the cultural practice of theatre, including social difference (especially gender and class), economic activity, and political representation. Distinct theories of historical space will be introduced and examples of historical theatre space will include Ancient Greece, Edo Japan, Neo-Classical France, Golden Age Spain, Classical India, and twentieth-century Environmental Scenography. The core of the reading for this course will be representative or exemplary playscripts that help open up interpretive approaches to historical theatre and performance space. This course fulfills the Studies in Historical Practice requirement for Drama majors and minors.
Credit 3 units. A&S IQ: HUM Art: VC BU: HUM
Typical periods offered: Fall

DRAMA 3019 Politics and Performance in Historical Practice
What is political theater? Is it a media stunt, designed to score points with supporters? Is it a form of protest of the status quo? Approached from another direction, we might ask: what theater is notpolitical? This course offers students to think about the role that performance (both on stage and in the streets) has played in the assertion of state power, the constitution of a body politic, the shoring up of consent, the expression of dissent, and as an embodied imagining of another world that might be possible. This course fulfills the Studies in Historical Practice requirement for Drama majors and minors.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 3020 Body Language: Acting, Rhetorical Gesture, and Dance in Historical Perspective
Why do actors in silent films seem to gesticulate so wildly? Who could have ever thought that was realistic? Would time-travelers from the future think actors in our day appear just as ridiculous? If you've ever thought that thought, then you've stumbled onto the fact that-despite its claims to represent the reality of its audience's experiences with the verisimilitude of the actor's body in the here and now-acting is a historical practice. Moreover, it is a culturally-variable practice, with claims to represent the real that are both symbolic and mimetic, and usually both at once. In this course, we will trace the history of acting in five thematic units: rhetorical gestures; representing the collective; festive formations; signs, codes, and animated hieroglyphs; and approaching the real. From the ancient Greeks to digital avatars, we will study how bodies in motion create meanings for their audiences in different cultures and across time. Through kinesthetic, emotional, psychological, and visceral appeals, actors not only represent their audiences as they think they are, but also offer to transform them into whom they think they could be. This course fulfills the historical practice requirement in the Drama major/minor.
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Fall, Spring

DRAMA 3021 Social Identity and Dramatic Character in Historical Practice
This course examines the roles that dramatic characters play within the worlds of the play and performance culture they inhabit. In some cases, we can speak of metaphorical masks presented to the world; in others, the theater may use actual masks. We begin with classical antiquity, examining the differentiation of physical masks and characters in both tragedy and comedy (we will note that the word person comes from the Latin word persona, the word for mask in ancient Roman comedy). We then consider the complex system of types in classical Indian and later Kathakali dance-drama: types that each had specific emotions associated with them. Chinese musical theater of the fourteenth century, with strong ties to a rapidly growing urban environment, had its own distinct types. Following this unit we consider the masked characters of Italian Renaissance comedy (the commedia dell'arte) and its uncanny parallels to the nearby Karogöz, Turkish shadow puppet theater. We next move to the theater of Shakespeare, considering the boy actor and gender fluidity in Twelfth Night. Then we consider the realist playwright Ibsen, in view of the social roles performed by the play's characters. In Cloud Nine, Carol Churchill gives us insights into the performance of gender in modern life. A unit on modern and contemporary African drama examines the performance (or erasure) of political identity in crisis, as we read Athol Fugard's Sizwe Bansi is Dead and also the play Woza Albert! (Mtwa, Ngema, Simon). The course concludes with two African-American plays, August Wilson's Fences and Lynn Nottage's Sweat. This course fulfills the Studies in Historical Practice requirement for Drama majors and minors.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DRAMA 3022 Blood and Magic: Special Effects in Historical Practice
Should Sarah Kane's Cleansed have realistic or symbolic blood? Does The Tempest's Ariel have to fly? This course integrates textual analysis with production to consider depictions of violence and magic in performance across centuries. By examining contemporary and historical staging conventions as well as creating their own scenework, students will consider how violence and magic are cultural constructions and explore how on-stage depictions of these cultural constructions can impact interpretations of the source text. Students will read key plays from antiquity to today and write dramaturgical analyses across multiple assignments. Additionally, in a structure based on director Anne Bogart's legendary Collaboration course at Columbia University's School of the Arts, students will experiment with practice as a way of knowing, as they work in small companies to create, stage, and review short, critically engaged adaptations of each play, every two weeks. Students will also join a Special Interest Group (SIG) based on rotating course themes, which may include Adaptation, Immersivity, Interactivity/Participation, Stage Technology, and Historical Context. This course fulfills the Studies in Historical Practice requirement for Drama majors and minors.
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Fall, Spring

DRAMA 3100 Production Practicum
Practicum experience in technical theater. Positions such as stage manager, publicist, assistant designer for costumes, sceneryor lighting, or crew head of props, sound and makeup design are available.
Credit 2 units.
Typical periods offered: Fall, Spring

DRAMA 3101 Digital Media for the Stage
Entertainment technology continues to evolve and push boundaries by taking our imagination and turning it into a version of reality. Digital Media will attempt to explore some of the tools used to bridge the two worlds of thought and sight. We will learn how to think creatively about imagery and how to paint that onto a stage through a different type of light: digital. Using QLab and Green Hippo -- two of the most widely used media control systems in the world -- we will learn how to deliver thought-provoking illusions of light and texture on the stage.
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

DRAMA 3102 Stage Management
A practical approach to the study of theater stage management focusing on organizational and communication skills. Workshops, lectures and discussion, guest speakers and field trips covering the pre-production, rehearsal and performance periods, labor relations/ performing arts unioins, career opportunities and supporting the vision of the artistic team. Prerequisites: Drama 212E and Drama 240E.
Credit 3 units.
Typical periods offered: Fall, Spring

DRAMA 3103 Makeup for the Stage
A hands-on introduction to the makeup techniques most commonly used for theater productions, including basic corrective, age, changing the shape of the face, and special effects, as well as the designing process. Students will apply makeup to their own faces and are required to purchase the makeup kit specified by the instructor.
Credit 2 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 3104 Costume Rendering and Design
Costume Rendering and Design is an introduction to the skills required for designing costumes for theater productions. Class topics will include duties and responsibilities of costume designers for theatre, elements and principles of design, research methods, drawing the human figure and clothing, various color media, text analysis and creating costume-related paperwork for plays, communicating character with costume renderings, and the time management required to complete designs in a deadline-based industry.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 3105 Stage Lighting
This course will place an emphasis in the aesthetic practice of lighting design through the understanding of technology as it relates to time and space. Early on the student will learn how to properly use and apply designer's tools and then through reading, research and experimentation explore the limitless boundaries of color and texture. This will culminate in a stage design in collaboration with directing or dance class. Upon completion of the course, the student will be able to speak eloquently on design theory and be able to move on to further design study in Advanced Lighting Design: L15 410.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 3106 Scenic Design
An introduction to the process of scenic design, as it relates to aesthetics, dramatic literature, collaboration and production. Projects involve design conceptualization, documentation, graphics and realization.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 3107 History of Western Costume
Of particular interest to fashion, history, anthropology, and performing arts majors, this course is an exploration into the clothing worn by predominantly Western cultures from Ancient Greece through the 1890s. Lectures incorporating images of extant garments, sculpture, art, and photographs will inspire discussion regarding the influences on fashion evolution and the cyclical nature of fashion. Assessment is by exam, the first of which is on the fourth class meeting, so this is not a recommended course to shop. Please note that this class is a prerequisite for History of Western Costume in the 20th Century, which is offered in spring semester.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM, VC BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 3108 History of Western Costume in the 20th Century
History of Western Costume in the 20th Century is a continuation of the themes explored in Drama 396 (History of Western Costume from Ancient Greece Through the 19th Century). Ideally, students will have already taken Drama 396 before enrolling in this course. This is a fast-moving, lecture-style course that examines objects of human apparel from 1900 through the present and analyzes the causes of fashion evolution throughout the 20th century. Students will explore the influence and aesthetics of major designers, and they will observe and discuss the ways in which contemporary interpretations of the past are modified to comply with contemporary modes and expectations. Assessment is through exams and evaluation of a presentation to the class.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM, VC BU: HUM EN: H
Typical periods offered: Spring

DRAMA 3110 Business of Entertainment
This unique opportunity will bring in a number of leading industry professionals to educate the young emerging artist on how the business of entertainment works from top to bottom. Students will be given raw access to professionals to engage in conversation on how our guests entered and excelled (or failed) within the industry, how the student may have similar success in today's situations and how they might best prepare. Topics will include personal management (time, finances, self-promotion), auditioning and interviews, tax awareness, contract negotiations, salary ranges, resumes, and where and how to land a job. The course will culminate in the completion of a model for the budget, season planning, marketing, and strategy of running a performance organization.
Credit 2 units.
Typical periods offered: Fall

DRAMA 3200 Intermediate Acting: Scene and Character Study
This course expands and develops the work begun in Fundamentals of Acting. The focus is on developing systematic strategies for challenging theatrical texts. Emphasis will be placed on integrating the use of the voice and body as well as the development of character via actions in scene study projects. We will focus on investing fully in the imaginary/ given circumstances of the plays we encounter. In addition, students will augment their study of character through audition preparation and monologue techniques. Research and analysis are featured, and students are asked to demonstrate their proficiency in written assignments. Prerequisite: Drama 240E/2401.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 3201 Voice-Speech Laboratory
Fundamentals of speech for the stage focusing on breath support, resonance, articulation, and speech as an expression of an individual's needs. The course includes an introduction to stage dialects. Preference given to majors.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 3202 Topics in Stage Movement
Exploration of a variety of theatrical and movement concepts with emphasis on process rather than product. Concentrates on developing the expressive flexibility of the body and linking the imaginative impulse with physical movement. Preliminary work in relaxation and efficient self-use. Prerequisite: Drama 240E, or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 3203 Advanced American Musical Theater
This course will focus on developing the acting, singing and dancing techniques required for performing in musical theater. The student will develop group pieces and will participate in scenes that explore character within a musical threater context. The class will culminate in a workshop performance. Prerequisite: Drama 221 and permission of instructor, by audition. Repeatable 1 time for credit.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 3204 Fundamentals of Directing
Directing is the most liberal arts of the creative theatre-making areas, drawing analytical, critical thinking, communication, design and actor coaching skills. This course will explore fundamental lessons in some of those areas, including text analysis from a directorial perspective, stage composition, auditions/casting, actor communication, time management and team leadership skills. Major course components will include one extensive script analysis paper and the direction of a scene from a contemporary play. The latter will require outside-of-class rehearsal time. Prerequisites: Drama 212E, Drama 240E/2401, junior or senior standing. Preference given to drama majors. For junior/senior status or grad students only.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DRAMA 3205 Acting for the Camera
This course offers an introduction to the world of on-camera acting, performance skills for media-based work, and industry-related career opportunities. Students will learn the techniques, skills and vocabulary required for actors when performing for the camera and pursuing a profession in front of the camera. The course is designed for students to practice and examine the craft of on-camera performance and, will examine the business of being a film, television, commercial or video actor. Exercises will be designed to gain relaxation and comfortability in front of the camera and will then extend to performance opportunities using commercial, industrial/corporate, television and feature film scripts. Students will also be given insight into the casting process and current industry standards for performers. Actors with live stage experience and training will focus on adapting their craft to the lens, building on the textual analysis, movement, voice and character work education provided by the Performing Arts Department's acting curriculum. Those students with no acting experience will be introduced to the fundamentals of acting in tandem with the pursuit of disciplined, truthful, believable work while in front of a live audience or a camera. All classes will take place in the Harvey Media Center to utilize a professional setting and equipment.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 3207 Shakespeare Globe Program: Acting
This Acting Shakespeare course is paired with Drama 3472 as part of a four-week summer intensive program held at the Shakespeare's Globe Education Centre in London. This course, as well as the companion Text and History course (Drama 3472), is taught by a Washington University faculty member, and the program also heavily draws on British theater professionals and educators from Globe Education, who teach a set of short courses on movement, voice, textual analysis, historical context, monologue performance, and stage combat. Frequent access to the Globe stage allows actors to work in a spatial configuration very similar to that once used by Shakespeare's company itself. The course culminates with performances of scenes and monologues on the Globe stage. Application process must initiate through the Performing Arts Department office.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Summer

DRAMA 3227 Devising, Adaptation, Docudrama
This course explores three ways of theatre-making that have revolutionized the contemporary stage: devising (a collaborative process emphasizing physical techniques to realize ideas), adaptation (the transposition of a narrative from one mode to another), and docudrama (the self-conscious staging of history through the assemblage of documentary records). Beginning with a focus on the current postdramatic theatre and the pre-histories of these contemporary practices, we will engage current scholarship on each form, learning the how and why from contemporary practitioners, while considering the rhetorical structure of each form in relation to the social meanings they generate for their audiences. Divided into 3 units, the course will combine the study of each method with hands-on practice, and will conclude with a showcase featuring an original performance created by the student collective. A theme (variable by semester) will unite the three sections of the course, helping students see how a single topic can be illuminated in different ways through these three methods of creating performance.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 3300 Theater Culture Studies III: Melodrama to Modernism
The third in the department's three-course history sequence, TCS III surveys the dramatic literature and cultural history of the modern theater. Beginning with Romanticism's self-conscious break with the past, we'll study the rise of bourgeois melodrama with its intensely emotional rendering of character and spectacular effects. We'll consider how those effects were made possible by advances in industrial stage technology which reproduced the everyday world with unprecedented verisimilitude, and how playwrights responded to those technologies by calling for the theatre to become either a total work of art--plunging its spectators into a mythical realm--or a petri dish--analyzing the struggles of the modern individual within his or her modern milieu. Exploring a range of aesthetic modes--including Realism, Naturalism, Symbolism, Expressionism, the Epic Theatre, and the Theatre of the Absurd--we will read classic plays by modern playwrights to consider how the modern theatre helped its audiences understand as well as adapt to the rapidly changing conditions of the modern world.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

DRAMA 3304 Contemporary American Theater
This course is a focused investigation of the aesthetic, political, and urban landscapes of the contemporary American theatre. We will read published and unpublished plays, familiarize ourselves with the country's most important companies, festivals, and institutions, and discuss issues facing the American theatre now. We will explore the role of the arts in urban planning and development, and address the relationship between higher education and arts institutions, paying particular attention to ideas of community engagement and social justice work undertaken by both. Artists to be studied may include Tony Kushner, Suzan-Lori Parks, Caryl Churchill, Branden Jacobs-Jenkins, Lynn Nottage, Young Jean Lee, and Lin-Manuel Miranda. This course will include a mandatory class trip at the end of March to the Humana Festival of New American Plays in Louisville, Kentucky. Students will prepare for this trip by reading the works of featured playwrights and establishing a research project that will be carried out on-site. Findings from the research project will be presented upon the return to St. Louis. Admission to the course is by instructor permission only; an application form will be sent to all registered students at the conclusion of the registration period. In consultation with and with the permission of the instructor, this course may fulfill the Fieldwork requirement for American Culture Studies majors.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: CPSC, HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 3305 Immersive Story Studio
What possibilities and pitfalls do immersive practices create for live storytelling? How do the affordances of a digital tool amplify or suppress aspects of a source story? What new insights into familiar stories can we generate with radical adaptation? To engage these questions, this studio seminar blends humanistic scholarship with critical making, theatrical practice, and interdisciplinary, team-based agile development processes. Each two-week sprint engages a different immersive, theatricalized context, asking students to envision how the tools utilized therein might illuminate latent aspects of familiar stories. Topics include spatial computing/AR/VR/ XR, immersive theatre, theme parks, and cultural institutions/ museums. Additionally, this course utilizes critical making as an epistemology, wherein the site of knowledge creation is the process of devising an object, tool, performance, or installation in conversation with a discipline's critical apparatus. Accordingly, course-long projects will find students selecting and using immersive tools-digital, analog, or both-to radically adapt a familiar story, broadly construed. Importantly, while technological skills are welcome, they are not required. Students are encouraged to envision gloriously and scope effectively as they design a hypothetical or prototyped research project and complementary critical engagement. This course may be repeated for credit for students who wish to design and execute a more robust project.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 3306 Writing for and About the Theater
In this course, students will learn to write for and about the theater, exploring different forms of dramaturgical and scholarly research as well as journalistic and academic writing. To build skills in both critical analysis and synthesis, students will learn how the key elements of the playwright's text (e.g., language, character, plot, setting) work to create meaning within the work of dramatic literature and how theatre-makers use the various languages of the stage (e.g., costume/scenic/ lighting design, music, acting) to give expression to an overarching interpretation of the play. Because research is essential to this course, students will learn how to access a variety of library resources by working closely with our subject librarians. By the end of the semester, students will have assembled a portfolio consisting of both journalistic and academic performance reviews, a dossier of dramaturgical research, and a research-based scholarly paper.
Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 3307 Shakespeare and Early Modern Performance
Paired with Drama 347, this course uses the resources of London and the Globe Theatre as departure points for a rich examination of Shakespearean performance in its historical and cultural context. We pay close attention to the dramatic text: meter, style, metaphorical language, dramatic composition, rhetoric, genre, etc. We consider such topics as Shakespeare's playing spaces, the actor-audience relationship in the Globe Theatre, acting, movement, original rehearsal practices, the boy actor, costumes, sound, music, props, and the culture of the Bankside (bear-baiting, taverns, violence, prostitution, etc.)
Credit 3 units.
Typical periods offered: Fall, Spring

DRAMA 3308 Shakespeare and Early Modern Performance
Paired with Drama 347, Shakespeare Globe Program: Acting, this course uses the resources of London and the Globe Theatre as departure points for an examination of Shakespearean performance in its historical and cultural context. We pay close attention to the dramatic text: meter, style, metaphorical language, dramatic composition, rhetoric, genre, etc. We consider such topics as Shakespeare's playing spaces, the actor-audience relationship in the Globe Theatre, acting, movement, original rehearsal practices, the boy actor, costumes, sound, music, props, and the culture of the Bankside (bear-baiting, taverns, violence, prostitution, etc.)
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 3309 Performance and Culture
The field of Performance Studies looks carefully at the production and transmission of knowledge from a range of vantage points. This includes the written word, but it also pays special attention to embodied practice, to the built environment, and to digital spaces. In this course we will focus on performance as a form of cultural expression and as a site of cultural exchange across a variety of contexts-from staged productions to acts of everyday life. We will use performance theory to analyze sports events as ritual performances and as platforms for social change. We will think about how monuments perform, how they not only construct often contentious stories about the past but also create opportunities for dialogue. We will privilege the body as a site and method of performance to think in intersectional ways about race, gender, sexuality, citizenship, and religion. As an interdisciplinary and practice-oriented course, we will reflect critically and imaginatively on the work of anthropologists, scholars of race and ethnicity, visual artists, and performance theorists.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 3311 Revision and Revival: Stages of Change in Theatrical Performance
The very nature of live theater means that no two performances of the same show will ever be truly identical. But while some alterations are incidental, others represent a deliberate modification of the dramatic work. This course will examine the many types of revision that are deployed as part of theatrical practice. Using works from several genres, media, cultures, and time periods as case studies, we will gain new insights into the creative process by charting the amendments made not only during the various stages of the play's initial production--its composition, its rehearsals, its workshops, and its early performances-but also the more significant modifications adopted by subsequent adaptations and revivals. We will discuss plays that are rewritten in order to reflect new historical contexts and audience sensibilities, paying special attention to revisions that engage with emergent social and political realities. We will also emphasize the repossession

that occurs as new productions seek to include a greater diversity of racial and gender identities. We will also consider the revisions enabled by technological innovations as well as those necessitated by translation in global productions. Most important, as a writing intensive course, students will reenact the very process that we are studying by performing acts of revision on their own work.
Credit 3 units. A&S IQ: HUM, WI BU: HUM

DRAMA 3312 Jewish American Theater and Performance
This course explores Jewish identity through theatre and performance in the 20th and 21st century United States. We begin with an historical overview of Jewish history and Jewish identities in the U.S., including the very question, What does Jewishness mean? Is it ethnicity, race, or religion? Identity or culture? Belief or practice? Essence or performance? From there, we'll focus on Jewish American theatre artists, from playwrights who wrote with and against a certain middle-class life in the mid-20th century, to contemporary performers and playwrights who navigate the complexity of identity in a range of genres and tones.
Credit 3 units. A&S IQ: HUM, SC BU: HUM
Typical periods offered: Fall, Spring

DRAMA 3320 Topics in American Culture Studies:
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

DRAMA 3410 Acting II
Fundamental scene study using texts with emphasis on integration of voice and body and the playing of actions. Students are encouraged to precede this course with Drama 207C. Prerequisite: Drama 240E. Preference given to majors.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 3413 Acting III
Emphasis on characterization while working with a diversity of playwriting styles. Prerequisites: Drama 341, either Drama 207C or 208C, and permission of instructor.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DRAMA 3830 Puppetry: Design & Performance
Write, design, build, and perform Bunraku style inspired puppetry (three puppeteers on one puppet, performers are seen by the audience). This class covers a brief history of puppetry in culture. Main focus is to design and build characters based on stories and myths. Students will showcase the work with a devised end of semester performance, using the puppets built in the class.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

DRAMA 3870 In Living Color: Performing the Black '90s
From Cross Colours overalls to oversized sweatshirts and boom boxes, the 1990s was loud, colorful, and in your face. But along with the fun of house parties and the growing prominence of hip-hop, Black people in the United States also contended with heightened criminalization and poverty codified through the War on Drugs, welfare reform, police brutality, and divestment from public education. In the midst of insurgency, creativity, and the quiet that undergirded both, we will study the various cultural productions of Black performers and consumers as they navigated the social and political landscapes of the 1990s. Focusing primarily on urban centers, we will study major works growing out of hip-hop, R&B, comedy, television shows, films, and popular literature that attends to the regional differences throughout the nation. In this course, we will use theories from performance and cultural studies to understand the specificities of Blackness, gender, sexuality, religion, and geography in the 1990s.

Typical periods offered: Spring

DRAMA 3880 Asian and Asian Diaspora Theatre
It is often falsely assumed that Asian and Asian American theatre is a theatre for specific ethnic communities. However, its significance in the US and in broader world theatre scenes has reverberated with audiences of diverse backgrounds, leading to a production of vibrant artistic and scholarly discussions on its power in shaping cultures and politics in America and in other global regions. This course engages with these very discussions, centering on understanding the complexity of contemporary Asian and Asian American theatre by situating them in the context of Asian diasporas. Key inquiries include the following questions: What causes the circulation of peoples from Asia and people of Asian descents from their home countries to another country?; how do experiences of war, international marriage, adoption, political oppression, refugee, and marginalization in new countries impact the psyche of diasporic subjects?; the notion of Asia as Other has been integral to the formation of the US national identity from the country's inception, but what exactly is Asia, and what is the role of theatre in challenging the relentless othering of Asians?; and finally, how might the framework of Asian diasporic theatre and performance help us move beyond the bifurcation between Asian Studies and Asian American Studies? In exploring these questions, we will engage in analyzing plays, production videos, interviews with artists, and scholarly writing, learning from artists who examine lives and histories of Asian descents (Chinese, Filipino, Hmong, Japanese, Korean, Vietnamese, and Taiwanese among others), as well as from thinkers that have been foundational to the development of Asian and Asian American theatre and performance studies. By the end of the semester, students will have read plays, documentaries, musicals, and interdisciplinary arts from the contemporary Asian and Asian diaspora theatre and be able to engage in an informed debate on the role of Asian and Asian American theatre in shaping contemporary cultures in the US and in other parts of the world. All readings are in English or in English translation and are available on Canvas.
Credit 3 units. A&S IQ: HUM, LCD, SC BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 3900 Internship
Students may receive up to 3 units of credit for an approved internship with an organization where the primary objective is to obtain professional experience outside the classroom. Students must file a Learning Agreement with the Career Center, a faculty sponsor and the site supervisor. This must be approved by all three constituencies before proceeding. A final written project is to be agreed upon between the student and faculty sponsor before work begins, and will be evaluated by the faculty sponsor at the end of the internship.
Credit 3 units.
Typical periods offered: Fall, Spring

DRAMA 3996 Drama Elective: 300-Level
This course is used for transcribing 3000-level DRAMA elective units.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

DRAMA 4100 Advanced Stage Lighting
This course is an advanced, continuation of Drama 310 Stage Lighting. Emphasis is placed on cultivating design aesthetics and a further exploration of controlling light in a laboratory and live setting. Students will dive deeper into color theory, light plot development, and ultimately into advanced lighting console programming. The course objectives will cover a wide range of production styles and performance venues within a series of challenging design projects. Prerequisite: L15 310 or permission of instructor.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DRAMA 4101 Retina Burn: Concert Lighting Technology
Lighting Technology will be an extremely hands on approach to learning how the top industry designers create major shows and concerts with the most state-of-the-art equpiment. We will spend a considerable amount of time learning how to use and program robotic/moving lights, LED fixtures and video integration for use in drama, dance, musical and concert settings. The student will gain intensive training in the use and programming of the ETC Express, ETC Ion and GrandMA 2 Light consoles with a full range of Vari*Lite robotic fixtures. In addition the student will also receive training in Isadora, a very powerful video design program. Due to the amount of programming time required outside of class, this will be a four (4) credit lab course. Prereqs: Drama 212 and Drama 310.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 4102 Advanced Scenic Design
Advanced projects in scenic design including drafting, rendering, model building, and conception. Prerequisite: Drama 311M, or permission of instructor.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 4141 Topics in Embodied Communication
This course is about listening. We will begin by mediated and unmediated listening with the human auditory system and continue into an exploration of multi-modal listening, focusing on vibration and on somatic attention. We will work in the studio, which will include a music studio, a dance studio, and the environment. Our investigation will include the study of sensing in more-than-human organisms as well as theoretical perspectives from sound studies, critical improvisation and history of science. The course will encourage the perspective that the practice of listening is a political act of tending to the invisible, the non-normative, and the incomplete.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 4200 Acting Styles: Realism to Nonrealism
This course builds on skills in character development and scene study, beginning with psychological realism and then shifting into various forms of nonrealism. Through written analysis and performance, students apply acting techniques that address a variety of playwriting styles. Prerequisites: Drama 240E/2401 and Drama 341/3411. The semester begins with a deepening understanding of psychological realism through the exploration of Anton Chekhov's plays. Focus then shifts to nonrealism with Harold Pinter. The second half of the semester is solidly rooted in nonrealism. Students hone their skills by exploring two more scenes from classical and/or contemporary texts. Additionally, in the final scene, students are encouraged to explore applicable considerations of gender-identity, race, and ethnicity in play and character selection. Prerequisites: Drama 2401 Fundamentals of Acting, Drama 3411 Intermediate Acting This course is open exclusively to seniors and graduate students
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

DRAMA 4201 Advanced Acting
Are you a senior or graduate student about to enter the marketplace? Are you considering a career in theater-making, particularly in acting? This course is poised on the border of a university environment and the real world. In a very full 14 week curriculum, we will explore the generous set of performance-based theatrical skills you have amassed over your education. The projects are designed to synthesize the student's theatrical training and experience through solo performance work. Students will be encouraged to develop and articulate their own aesthetic convictions through an examination of the creative process, the development of original solo material, the exploration of the theater profession within the current American and international theatrical climate, the development of new audition pieces, small group presentations and an analysis of plays and other reading assignments. The course closes with a public showcase of the original material written and developed over the semester. While the course's performance work is explored through an actor's lens, the class is open to all advanced drama students who meet the prerequisites. Prereq: L15 2401 and L15 3411. This course is open only to seniors and graduate students.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 4202 Theater for Social Change
Drawing upon the principles and teachings of Brazilian director Augusto Boal, students will explore ways of effecting positive social change in a theatrical context. Students will study the aesthetic of Boal's Theatre of the Oppressed and learn various games and exercises designed to mine issues of social (in)justice. Using Boal's techniques of image and forum theatre, students will then create and perform plays focused on these issues. This public performance will be an interactive event offered for and with the university community. No prior performance training or experience is required for this course.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: CPSC, HUM BU: HUM EN: H
Typical periods offered: Fall

DRAMA 4203 Advanced Theater for Social Change
This course is a continuation of exploration begun in Drama 4081, Theater for Social Change: a prerequisite for this advanced course. Students will expand from exploring their own experience with oppression to facilitating that exploration with others. Students will be introduced to the Joker system, developed by Brazilian director Augusto Boal. The Joker is the director of a forum theater event. He leads both the exploration and play-making phases of the process. In preparation for stepping into this role, students will read Paulo Freire's Pedagogy of the Oppressed which will give them a foundation in the power and efficacy of collaborative educational techniques. In addition, students will read Theatre for Living, Canadian director David Diamond's book detailing his application of Boalian techniques in a less overtly oppressive society. Students will begin their practical exploration by first working with one another, learning how to lead exercises and games, followed by an exploration of play making and the facilitation of an interactive forum theater event. The course will culminate in an outside project in which each student is placed with a St. Louis area school or social organization. The student will apply skills he has acquired throughout the semester by serving as the Joker of the workshop. In this role, the student will lead the entirety of the workshop process with a selected group exploring ways of effecting positive social change in a theatrical context. He will facilitate exercises with the group that mine a chosen area of oppression with which the group is grappling. The student will guide play-making with the group

that highlights this area of oppression. The resulting plays will then be presented to the larger school or organization community. This culminating event will be an interactive forum theater presentation that the student will lead as Joker.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: CPSC, HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 4204 Directing II
Further study in the fundamentals of directing. Emphasis on the director's work with actors, designers, and a realized metaphorical concept. Prerequisites: Drama 343 and permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 4300 Staging Atrocity: Theater of the Holocaust
Responding to the Holocaust has challenged artists working in every medium. Nowhere are these challenges more extreme than in the theater, where the intimacy of the space, the close proximity of live actors and audience, and the subject matter itself may serve to intensify its effect. We will read a careful selection of modern and contemporary dramas and explore the range of responses. Underneath each weekly topic reverberate the nagging question of whether one can -- or should -- make art from the Holocaust, as well as a serious exploration of the uses and effectiveness of theater to communicate on this subject. We look at the ways in which the Holocaust has been used as a subject to raise moral dilemmas, examine the limits of humanity, elicit doubt or faith, and provide political commentary. We will also discuss the ways in which playwrights have stretched the limits of the theater to meet the challenge of staging the Holocaust. Topics considered include the nationalization and personalization of the Holocaust, the role of the second generation, issues of audience, and the use of experimental forms and obscenity. The plays on the syllabus are from North America, Israel and Europe. All readings are in English (original or translation).
Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 4301 The Modernist Revolution in the Arts
What is/was Modernism? How did this worldwide phenomenon impact the arts in every genre and medium from the turn of the Twentieth Century to the present? Do we still live in the age of Modernism, or should we consider ours a new, Post-Modern age? This course will examine these and other questions as they relate to the theatre, prose, poetry, and the visual arts. Our investigation will focus on most of the major literary and artistic movements, including Naturalism, Impressionism, Symbolism, Surrealism, and Expressionism. We will examine literary manifestoes which help to illuminate the periods under discussion, as well as look at individual works themselves. Central to our approach in the course will be an interdisciplinary perspective. Among the luminaries whose work will be considered are Ibsen, Strindberg, Chekhov, Hemingway, Dali, Picasso, Stravinsky, Artaud, Kafka, and Beckett.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

DRAMA 4302 American Drama
Topics in American Drama.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 4303 Performance Theory
This course introduces students to contemporary theories of performance, with performance understood as both metaphor and event. From a multi-disciplinary perspective, students will consider how cultures produce meanings-and, indeed, perform those meanings-to create and/or disrupt their own social coherence. Theories likely to be studied include: J. L. Austin's speech-act theory and its engagement by John Searle and Jacques Derrida; Victor Turner's analysis of ritual as social process and Richard Schechner's use of it to transform theater studies into performance studies; Erving Goffman's sociology of the self and its relation to a post-structuralist model of subjectivity; Michael Fried's screed against minimalist art and its relation to Happenings, Body Art, Fluxus, and other mid- to late-20th century examples of performance art; and Judith Butler's influential revision of Austin's performative in her theory of queer performativity.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 4304 Race, Memory, and Performance
This course takes as its starting point the vexing questions of history, memory, and identity that activists, scholars, artists, and others have posed in recent years. What is to be done with the commemorative landscape of monuments and memorials? How do we account for the silences and erasures in archival records? How should histories of racial violence be commemorated? These are questions that have been taken up in many arenas of civic life, including public art, living history tourism, museum studies, and urban planning. They have also been taken up by theater artists and performance artists who use their bodies, narrative, historical fact and, sometimes, fiction to bear witness to the past and to imagine new futures. In this course, we will examine the role of theater and performance in constituting-and challenging-the historically contingent meanings of race; we will also explore how performance of history shapes national narratives. Artists to be explored might include Branden Jacobs-Jenkins, Mary Kathryn Nagle, Dread Scott, Quiara Alegria Hudes, Simone Leigh, and Heidi Schreck. Artistic and/or performance experience is not required. Students will have the opportunity to propose their own commemorative projects; together we will explore whether and how performances of the past can do a certain kind of reparative work necessary for a more equitable future.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM, VC BU: BA, ETH, HUM EN: H
Typical periods offered: Fall

DRAMA 4306 Seminar in Dramatic Theory
This course is an in-depth exploration of core works of dramatic theory from the ancient world to the present, and it will introduce texts that enunciate what theater is, has been, and should be. We will study authors' expressions of theater's role in society, their articulations of and responses to anti-theatrical prejudice, and their negotiations of the contradiction of putting the real on stage. Other significant themes include accounting for the aesthetic pleasures of drama and theater; theater as a means of educating the citizen; and the relationship between dramatic form and social and political revolution. Moving chronologically, we begin with foundational documents of the ancient world, including Aristotle's Poetics, Bharata's Natyasastra, and Horace's Ars Poetica. The course then progresses through the Middle Ages, the Neoclassical and Romantic eras, and the explosion of fin de siecle avant-gardes. We will also read key texts from beyond the European tradition, including works of dramatic theory written in medieval Japan (Zeami), postcolonial Nigeria (Soyinka), and the millennial, multicultural United States (Parks). Along these same lines, we will also be attuned to transnational exchange and influence, particularly as it appears in the 20th-century theories of Bertolt Brecht, Antonin Artaud,

and Konstantin Stanislavsky. Although the course will be focused on efforts to describe and prescribe theories of drama, dramatic genre, and theatrical pleasure, it will also position play scripts alongside the theoretical treatises that guide or are guided by them.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

DRAMA 4307 Topics in Shakespearean Production
This course will examine Shakespeare's comedies in performance. Combining scene work and production history, students will gain access to the world of the comedies from both a hands-on, theoretical and historical perspective. Prerequisites: Drama 395C or permission of instructor.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H

DRAMA 4308 Shakespeare and Early Modern Performance
Study Abroad/Study Away
Credit 3 units.
Typical periods offered: Spring

DRAMA 4311 Borders and Boundaries
International borders affect you every day. In the United States and elsewhere, they play a role in determining whether you are a birthright citizen or an unauthorized migrant. They showcase a nation's ability or inability to guarantee your wellbeing. They factor into immigration, asylum, and national security debates. Those who live near an international border often deal with a particular set of issues. Living in an either/or environment can impel border residents to strategically recognize or deny cultural forms-to be hyper patriotic, for example, to speak one language at home and another at school, or to understand gender, sexuality, race and ethnicity in site-specific ways. This course will draw from the work of performance theorists, playwrights, anthropologists, historians, and geographers to write critically about and devise artistic work that opens up foundational theories, debates, and genealogies in the study of borders and boundaries. This course will use North America as its primary reference point, but it will also draw our attention to border and boundary dynamics elsewhere to think about global challenges such as forced migration and climate change.
Credit 3 units. A&S IQ: HUM, SC BU: HUM EN: H
Typical periods offered: Fall

DRAMA 4400 Dramaturgical Workshop
A laboratory course that investigates dramaturgy from four vantage points: New Play Dramaturgy, Institutional Dramaturgy, Dramaturgy of Classics, and Dramaturgical Approaches to Nontraditional and Devised Theater. This is a hands-on course where student dramaturgs will not only pursue the study of dramaturgy, but will work actively and collaboratively with playwrights, actors and each other.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM
Typical periods offered: Spring

DRAMA 4453 Senior Drama Capstone
This course, which is required for seniors completing the drama major, is team-taught by one PAD faculty member in Theater Arts and one in Theater and Performance Studies. In order to remain responsive to each senior class as well as the particular expertise of the faculty pair, the course is built on a flexible curricular model. Components will include an exploration of contemporary theatre literature and theatre-making, individual and ensemble-based activities, research and critical writing projects. A culminating project that synthesizes the semester's study will be part of the course.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

DRAMA 4506 Playwright's Workshop
This course will offer an organized independent study for advanced students in playwriting. The class will be structured by the participants. Prereqs: Playwriting (L15 227), Advanced Playwriting (L15 473) and permission of instructor.
Credit 3 units.
Typical periods offered: Spring

DRAMA 4693 Shakespeare and Performance
How were Shakespeare's plays performed in their own day--in the Globe theater, with boy actors, and with very short rehearsal times? How, for the actor, did performance work on the outdoor stage, with the Globe's wide and deep acting platform and its intimate relationship to the audience? How might one stage Shakespeare today in an outdoor environment without lighting and with minimal sets, and with the capacity to move easily from one outdoor venue to another? From what social types in Renaissance England-such as merchants, prostitutes, aristocrats, constables, beggars, and princes-did Shakespeare draw? How can evolving ideas about race, gender, and sexuality inform the way we perform Shakespeare today? Addressing these questions and others, the course weaves together performance and literary, critical, and historical study. Topics include blank verse, performing Shakespeare's prose, playing with figures of speech, working the Globe stage, engaging an outdoor audience, acting from a written part rather than an entire script, performing types, exploring Shakespeare's sources as performance alternatives, making Shakespeare new- and more. Students will rehearse and perform sonnets, scenes, and monologues based on social figures from Shakespeare's England. The course assumes a willingness to perform but not specialized acting training.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

DRAMA 4730 Advanced Playwriting
This course explores the tendencies and relationship between each individual student writer and the page. Exercises dispel any lingering doctrine that presupposes a certain style of writing. A large part of the class centers around collaborations. The writers write scenes as a final project for an acting class, and also work with two professional actors in an extended writing project that culminates in a script-in-hand presentation. The informal moments between collaborations look at the process beyond the first draft -- i.e., the playground of language, non-verbal options, and the maintaining of the work through rewrites, readings, workshops, and productions. Prerequisite: Introduction to Playwrighting, Drama 227.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

DRAMA 4750 Film as Art
To teach students about impact of images and language of film. Recent and classical motion pictrues will be viewed, discussed and analyzed. Directorial tecniques, the auteur theory, film genres, lighting, montage, kinetics, camera movement and placement, music and sound effects, styles of acting and mise en scene will be examined. Prerequisite, Drama 241 or permission of instructor.
Credit 3 units.
Typical periods offered: Fall

DRAMA 4900 Independent Work
Students may contract with a faculty supervisor for credit for their work on theatrical productions or research. Contracts must be signed by the student and the coordinator of Drama 500 before the student's work on the project commences. Credit and grade option to be determined in each case. In order to enroll for this course, students must complete a contract and submit it to the Performing Arts Department office.
Credit 6 units.
Typical periods offered: Fall, Spring

DRAMA 4901 Senior Project
Specialized study in a selected area in drama. Required of all drama majors not taking Drama 499. Prerequisite: 15 units of advanced work in drama at the 300 or 400 level.
Credit 3 units.
Typical periods offered: Fall, Spring

DRAMA 4902 Study for Honors
Prerequisite: Senior standing, a cumulative and a major GPA of 3.5 and permission of the Chair of the Performing Arts Department.
Credit 6 units.
Typical periods offered: Fall, Spring

DRAMA 4910 Acting
Independent study. In order to enroll for this course, students must complete a contract and submit it to the Performing Arts Department office.
Credit 3 units.
Typical periods offered: Fall, Spring

DRAMA 4920 Directing
Independent study. In order to enroll for this course, students must complete a contract and submit it to the Performing Arts Department office.
Credit 3 units.
Typical periods offered: Fall, Spring

DRAMA 4930 Technical Theater
Independent study. In order to enroll for this course, students must complete a contract and submit it to the Performing Arts Department office.
Credit 3 units.
Typical periods offered: Fall, Spring

DRAMA 4931 Advanced Practicum in Technical Theater
Independent Study. Intensive practical experience in scenic design building and painting; lighting design and installation; costume design, coordination, and construction; makeup; and audio production. Prerequisites: Drama 212E, credits on at least two productions, and permission of staff.
Credit 3 units.
Typical periods offered: Fall, Spring

DRAMA 4940 Voice, Speech
Independent study.
Credit 3 units.
Typical periods offered: Fall, Spring

DRAMA 4950 Literature, Theory, Criticism
Independent study. In order to enroll for this course, students must complete a contract and submit it to the Performing Arts Department office.
Credit 3 units.
Typical periods offered: Fall, Spring

DRAMA 4980 Special Topics in Playwriting: Art and Activism
Taught by guest teaching artist, Regina Taylor, playwright, director, stage/screen actor, this course will focus on how art can effect change through personal expression. The monumental cultural shift that is in motion throughout the world will be explored through the specific lens of each student's life. Students will write short pieces and one-act plays that will explore where they are at this moment in time. Works in the class may be added to Regina Taylor's black album mixtape. No playwriting experience necessary. Course open only to juniors, seniors and graduate students.
Credit 3 units.
Typical periods offered: Spring

DRAMA 4996 Drama Elective: 400-Level
This course is used for transcribing 4000-level DRAMA elective units.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

Dance Major

Program Requirements

- **Total Units Required:** 34-35 units, with a minimum of 20 units at the 3000 level or above
- **Grade Requirement:** Students must earn a grade of C- or better in all required and elective dance courses in order for them to apply toward major requirements.

Required Courses

Dance courses at Washington University integrate practice with the study of the historical, cultural, scientific, and aesthetic dimensions of dance. Although coursework is required in all aspects of the dance major, students may individually choose to tailor their study to emphasize any one of the four areas — Embodied Practice, Creative Process, History/Theory, or Movement Science/Somatics — through the capstone and through electives.

Creative Process: 8-9 units

Code	Title	Units
Required:		
DANCE 2020	Composition I	3
DRAMA 2100	Introduction to Theatre Production	3
Plus 2-3 units chosen from the following:		
DANCE 3020	Composition II	3
DANCE 3031	Dance Improvisation: Spontaneous Composition & Performance Techniques	2

DANCE 3041	Accompaniment Techniques for Dance	2
DANCE 3042	Music Resources for Dance	2
DANCE 4032	Introduction to Screendance Composition and Performance	3

Embodied Practice: 8 units

Students must complete work in at least two dance genres, and at least 6 units must be at the 3000 level or above.

Code	Title	Units
Ballet		
DANCE 2210	Fundamentals of Classical Ballet	2
DANCE 2211	Fundamentals of Classical Ballet	2
DANCE 3310	Classical Ballet: Intermediate I	2

Modern		
DANCE 2010	Theory and Technique of Modern Dance I	2
DANCE 2011	Theory and Technique of Modern Dance II	2
DANCE 2050	Afro-Modern Dance (Dunham Technique)	2
DANCE 3010	Theory and Technique of Modern Dance III	2
DANCE 3022	Theory and Technique of Modern Dance IV	2
DANCE 4010	Theory and Technique of Modern Dance V	2
DANCE 4022	Theory and Technique of Modern Dance VI	2
Jazz		
DANCE 2060	Fundamentals of Jazz Dance	2
DANCE 3060	Jazz Dance II	2
DANCE 4060	Jazz III	2
Hip Hop		
DANCE 2040	Beginning-Intermediate Hip Hop: Culture and Movement	2
DANCE 4040	Intermediate/Advanced Hip Hop	2
West African		
DANCE 3120	West African Music and Dance in Context	2
Other		
DANCE 4042	Topics in Dance Techniques and Somatic Practices: Alexander Technique for the Dancer	3

History/Theory: 6 units

Students must choose two courses from the following list:

Code	Title	Units
DANCE 3222	Rethinking Ballet in the 21st Century: Decolonizing Narratives and Embracing Diversity	3
DANCE 4110	Performing the Political in American Dance	3
DANCE 4130	Dance Pedagogy	3
DANCE 4140	Performing Gender and Sexuality in America	3
DANCE 3090	Histories of Theatrical and Concert Dance	3
DANCE 3130	Movement and Meaning: Dance in a Global Context	3
DANCE 3033	Music, Sound, and the Body	3

Movement Science/Somatics: 3 units

Options for this requirement include the following:

Code	Title	Units
DANCE 3170	The Neuroscience of Movement: You Think, So You Can Dance?	3
DANCE 3270	Experiential Anatomy and Kinesiology	3
DANCE 4150	Presence in Performance: Alexander Technique and Mindful Movement for Performing Artists	3

Elective Courses

Students must complete 6 units of elective courses. They may choose any DANCE courses at the 2000 level or above in any of the categories (Embodied Practice, Creative Process, Movement Science/Somatics, or History/Theory). Students may also take in-person somatic studies courses, at the 2000-level or above, in the School of Continuing & Professional Studies (per Arts & Sciences policy, online courses may not be applied to an Arts & Sciences degree). Students may also select from the following drama courses.

Code	Title	Units
DRAMA 3102	Stage Management	3
DRAMA 3105	Stage Lighting	3
DRAMA 3104	Costume Rendering and Design	3
DRAMA 3103	Makeup for the Stage	3
DRAMA 3107	History of Western Costume	3

Capstone

The 3-unit capstone is an opportunity for students to integrate what they have learned in the dance major throughout their time at Washington University. It is also an opportunity to train in a particular field of study (performance, choreography, movement science/somatics, or history/theory) in depth. Overall, it is a culminating experience for the major. There are four primary options for the capstone, which must be completed during the student's senior year:

1. DANCE 4930 Study for Honors: an honors thesis
2. DANCE 4920 Senior Project
3. DANCE 4910 Dance Repertory **or** DANCE 4911 Dance Repertory: a significant role in a performance in WUDT, WUDC, or the MFA Concert, with a post-production analytical essay evaluated by the Artistic Director. The essay examines how the performance represents a culmination of the student's growth and experience in the dance major. In addition, it incorporates background research on the aesthetic influences of the choreography and offers dramaturgical reflections on the performance (i.e. how well it communicated its messages to audiences).
4. An additional course at the 3000-level or above, not already taken as a requirement or as an elective one of the following categories that the student designates as a Capstone: Creative Process, Movement Science/Somatics, or History/Theory. The intention to use that course to fulfill the capstone requirement will be made prior to the first day of class in consultation with the instructor. For a Creative Process course, the student devises a final creative project above and beyond the requirements for the regular course, culminating in a live performance and a critical response. For either a Movement Science/Somatics or History/Theory course, the student takes on a significant final research project beyond the required assignments for the course, culminating in a 15+-page research paper and public presentation.

Additional Information

Study Abroad

Washington University students can pursue dance studies abroad during the academic year at the University of Auckland, New Zealand; the University of Ghana, Legon; and Roehampton University, London. With approval from the dance program, courses at these institutions may fulfill dance major and minor requirements. Courses in other disciplines taught at these institutions may also be accepted by Washington University.

A maximum of 12 credits earned outside of Arts & Sciences at Washington University (e.g., through transfer credit or study abroad) may be applied to the dance major, with permission from the Dance Overseas Programs Advisor.

Drama Major

Program Requirements

- **Total Units Required:** 36 (12 courses)
- **Grade Requirement:** Students must earn a grade of C- or better in all required and elective drama courses in order for them to apply toward major requirements.

Required Courses

Foundations Courses (9 Units):

Code	Title	Units
DRAMA 2100	Introduction to Theater Production	3
DRAMA 2200	Fundamentals of Acting	3
or DRAMA 2202	Improvisation	
or DRAMA 1191 Ampersand: Shakespear's Globe: All the World's a Stage **and** DRAMA 1192 Shakespeare's Globe		
DRAMA 2304	Introduction to Theater and Performance Studies	3

Applications Courses (6 Units):

Two courses chosen from the following three options:

Code	Title	Units
DRAMA 3104	Costume Rendering and Design	3
or DRAMA 3105	Stage Lighting	
or DRAMA 3106	Scenic Design	
or DRAMA 3400	Introduction to Playwriting	
DRAMA 3204	Fundamentals of Directing	3
DRAMA 3309	Performance and Culture	3

If one of the above options is taken as part of a pathway, the other two applications must be completed to fulfill this requirement.

Historical Practice Courses (6 Units):

Two courses chosen from the following list:

Code	Title	Units
DRAMA 3012	Theater Space in Historical Practice	3
DRAMA 3013	Politics and Performance in Historical Practice	3
DRAMA 3014	Body Language: Acting, Rhetorical Gesture, and Dance in Historical Perspective	3
DRAMA 3015	Social Identity and Dramatic Character in Historical Practice	3
DRAMA 3016	Blood and Magic: Special Effects in Historical Practice	3

One Course in a Non-Western or Under-Represented U.S. Minority Cultural Tradition (3 Units)

Code	Title	Units
AFAS 3040	A History of African American Theater	3
CHINA 4670	The Chinese Theater	3
DRAMA 2203	Black Theater Workshop	3
DRAMA 3880	Asian and Asian Diaspora Theatre	3
JAPAN 4460	The Japanese Theater	3

Additional courses may fulfill this requirement. Please consult course listings each semester.

Elective Courses

Drama majors choose four electives (12 units) from one of eight pathways below: Drama General, Acting, Directing, Costume Design, Lighting Design, Scenic Design, Playwriting, or Theatre, Performance & Society.

Drama General

Code	Title	Units
3000-level or above DRAMA elective		3
3000-level or above DRAMA elective		3
4000-level DRAMA elective		3
4000-level DRAMA elective		3

These courses may not count toward other Drama major requirements.

Acting

Code	Title	Units
DRAMA 3200	Intermediate Acting	3
DRAMA 3203	Advanced Musical Theater	3
or DRAMA 3205	Acting for the Camera	
or DRAMA 4202	Theater for Social Change	
or DRAMA 4910	Independent Study in Acting (leading role)	
DRAMA 4200	Acting Styles: Realism to Non-realism	3
DRAMA 4201	Advanced Acting	3

Directing

Code	Title	Units
DRAMA 3204	Fundamentals of Directing	3
DRAMA 3100	Production Practicum (1 credit–technical crew **or** 1 credit–design assist)	1
DRAMA 4920	Practicum in Assistant Directing	2
or DRAMA 3102	Practicum in Stage Management	
DRAMA 4400	Dramaturgy	3
or DRAMA 3200	Intermediate Acting	
DRAMA 4204	Directing II	3

Costume Design

Code	Title	Units
DRAMA 3104	Costume Rendering and Design	3
DRAMA 3109	Introduction to Costume Construction	3
DRAMA 3100	Production Practicum (1 credit–technical crew or 1 credit-design assist)	1
DRAMA 3107	History of Western Costume	3
or DRAMA 4930	Independent Study in Technical Theater	
DRAMA 4931	Advanced Practicum in Technical Theater (2 credit–design)	2

Lighting Design

Code	Title	Units
DRAMA 3105	Stage Lighting	3
DRAMA 3100	Production Practicum (1 credit–technical crew **or** 1 credit–design assist)	1
DRAMA 4931	Advanced Practicum in Technical Theater (2 credit–design)	2
DRAMA 3101	Digital Media for the Stage	3
or DRAMA 3305	Immersive Story Studio	
or DRAMA 4930	Independent Study in Technical Theater	
DRAMA 4100	Advanced Stage Lighting	3
or DRAMA 4101	(Concert) Lighting Technology	

Scenic Design

Code	Title	Units
DRAMA 3106	Scenic Design	3
DRAMA 4102	Advanced Scenic Design	3
DRAMA 3100	Production Practicum (1 credit–technical crew **or** 1 credit–design assist)	1
DRAMA 4931	Advanced Practicum in Technical Theater (2 credit–design)	2
DRAMA 3305	Immersive Story Studio	3
or DRAMA 4930	Independent Study in Technical Theater	

Playwriting

Code	Title	Units
DRAMA 3400	Introduction to Playwriting	3
DRAMA 3301	Devising, Adaptation, Docudrama	3
or DRAMA 3500	Introduction to Screenwriting	
or DRAMA 3304	Contemporary American Theater	
DRAMA 4400	Dramaturgy	3
or DRAMA 4306	Dramatic Theory	
DRAMA 4401	Advanced Playwriting	3

Theatre, Performance & Society*

Code	Title	Units
DRAMA 3309	Performance and Culture	3
3000-level or above course in Theater History**		3
3000-level or above course in Research Methodology**		3
4000-level course in Dramatic or Performance Theory**		3

* At least two courses in the Theatre, Performance & Society pathway must be taken at the 4000 level.

** Please consult course listings each semester for this designation.

Additional Information

A maximum of 3 credits earned outside of Arts & Sciences at Washington University (e.g., through transfer credit or study abroad) may be applied to the drama major, with permission of the Director of Undergraduate Studies in Drama.

Dance Minor

Program Requirements

- **Total Units Required:** 17 units
- **Grade Requirement:** Students must earn a grade of C- or better in all required and elective dance courses in order for them to apply toward minor requirements.

Required Courses

Embodied Practice Courses: 9 units

At least 6 of these units must be at the 3000 level or above. Students must select from the following list:

Code	Title	Units
Ballet		
DANCE 2210	Fundamentals of Classical Ballet	2
DANCE 2211	Fundamentals of Classical Ballet	2
DANCE 3310	Classical Ballet: Intermediate I	2
DANCE 3311	Classical Ballet: Intermediate II	2
DANCE 3220	Intermediate Pointe Technique	1
DANCE 4310	High Intermediate Ballet I	2
DANCE 4311	High Intermediate Ballet II	2
DANCE 4120	Classical Ballet III	2
DANCE 4121	Classical Ballet IV	2
Modern		
DANCE 1010	Introduction to Dance As a Contemporary Art form	2
DANCE 2010	Theory and Technique of Modern Dance I	2
DANCE 2011	Theory and Technique of Modern Dance II	2
DANCE 2050	Afro-Modern Dance (Dunham Technique)	2
DANCE 3010	Theory and Technique of Modern Dance III	2
DANCE 3022	Theory and Technique of Modern Dance IV	2
DANCE 3031	Dance Improvisation: Spontaneous Composition & Performance Techniques	2
DANCE 3070	Modern Dance and the African-American Legacy	2
DANCE 4010	Theory and Technique of Modern Dance V	2
DANCE 4022	Theory and Technique of Modern Dance VI	2
DANCE 4070	Modern Dance and the African American Legacy II	2
Jazz		
DANCE 2060	Fundamentals of Jazz Dance	2
DANCE 3060	Jazz Dance II	2
DANCE 4060	Jazz III	2
West African		
DANCE 3120	West African Music and Dance in Context	2

Composition Course: 3 units

Code	Title	Units
DANCE 2020	Composition I	3

History/Theory Course: 3 units

Students must select from the following list:

Code	Title	Units
DANCE 3090	Histories of Theatrical and Concert Dance	3
DANCE 3130	Movement and Meaning: Dance in a Global Context	3
DANCE 3230	Ballet As Ethnic Dance and Classical Art	3
DANCE 3170	The Neuroscience of Movement: You Think, So You Can Dance?	3
DANCE 4110	Performing the Political in American Dance	3
DANCE 4130	Dance Pedagogy	3
DANCE 4140	Performing Gender and Sexuality in America	3

Elective Course

Students must complete 2 units of an elective course. Any additional history/theory course or embodied practice course at the 3000 level or above may be used to fulfill this requirement.

Additional Information

- A maximum of 3 credits earned outside of Arts & Sciences at Washington University (e.g., through transfer credit or study abroad) may be applied to the dance minor, with permission from the Dance Overseas Programs Advisor.

Phone:	314-935-5858
Email:	pad@wustl.edu

Drama Minor

Program Requirements

- **Total Units Required:** 15
- **Grade Requirement:** Students must earn a grade of C- or better in all required and elective drama courses in order for them to apply toward minor requirements.

Required Courses

- Students must complete the following required foundation courses (9 units):

Code	Title	Units
DRAMA 2200	Fundamentals of Acting **or** DRAMA 2202 Improvisation **or** DRAMA 1191 **and** 1192 Shakespeare's Globe	3
DRAMA 2100	Introduction to Theater Production	3
DRAMA 2304	Introduction to Theater & Performance Studies	3

Elective Courses

Students must also complete at least 6 credit units at the DRAMA 3000 level or above.

Additional Information

A maximum of 3 credits earned outside of Arts & Sciences at Washington University (e.g., through transfer credit or study abroad) may be applied to the drama minor, with permission of the Director of Undergraduate Studies in Drama.

Philosophy

Philosophy tackles central questions in human life, such as the following: *What counts as human knowledge? How should I live? What is truth? How is the mind related to the body? What is a just society?* These difficult but fundamental questions are rigorously explored in philosophy and worked through by drawing on the historical tradition and utilizing careful reasoning. Because philosophers have shaped many of the central ideas on which Western civilization is based, the study of philosophy plays a vital role in a well-rounded liberal arts education.

Philosophy courses at Washington University provide opportunities to gain deeper knowledge of the history of philosophy, from the work of the ancient philosophers Plato and Aristotle through key thinkers such as Descartes and Kant to the present. Students can study the interface between philosophy and other disciplines (e.g., psychology; environmental studies; women, gender, and sexuality studies; law; political science). They can also examine the methods of inquiry and the underlying conceptual frameworks of scientific work itself. Courses in logic equip students to think and argue clearly and rigorously while courses in analytic philosophy allow for the exploration of fundamental questions about knowledge and metaphysics. The department offers a variety of courses in ethics where students can consider different theoretical approaches to current political, social, medical, and environmental problems.

Majors

- Philosophy Major (p. 770)
- Philosophy Major, Law and Policy Specialization (p. 772)
- Philosophy Major, Philosophy of Science Specialization (p. 773)
- Philosophy Major, Philosophy Research Specialization (p. 774)

Minors

- Philosophy Minor (p. 776)
- Philosophy of Science Minor (p. 777)

Courses

PHIL 1000 Logic and Critical Analysis
Introduction to the elementary tools of logic required for constructing and critically evaluating arguments and the claims they support. Topics include: the nature of an argument; argument structure; how arguments can fail both in structure and in content; formal and informal fallacies; propositional logic and predicate calculus; and critical analysis of rhetorical strategies for presenting arguments. Students will be encouraged to develop critical reasoning skills that can be widely applied.
Credit 3 units. A&S IQ: NSM, AN Art: NSM
Typical periods offered: Fall, Summer

PHIL 1010 Introduction to Scientific Reasoning
This course analyzes scientists' reasoning strategies. Case studies from the history of astronomy, epidemiology, molecular biology, and neuroscience, provide a basis for understanding of the character of scientific theories and the means by which they are evaluated. Special attention will be given to the construction and evaluation of statistical and causal hypotheses, including experimental design, and to the use of scientific knowledge in public policy decision-making. Students will acquire basic skills in critical thinking and scientific reasoning and an introductory understanding of issues in the philosophy of science.
Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI
Typical periods offered: Fall, Spring

PHIL 1030 Problems in Philosophy
Introduction to philosophical methods and concepts through an investigation of major issues in Western philosophy such as: what counts as knowledge; truth and belief; the existence of God; the mind-body problem; materialism and idealism; moral theory and concepts of justice. A range of historical and contemporary views on these issues will be considered. The aim of the course is to prepare students to think and write about philosophical problems on their own.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring

PHIL 1040 Great Philosophers
In this course we focus on some of the most important texts in the history of Western philosophy in order to discuss a wide range of central philosophical problems. We typically consider, for example, the existence of God, the justification of claims to knowledge, and the requirements of a good human life, including the demands of morality.

Among the philosophers most likely to be studied are Plato, Aristotle, Descartes, Hume, Kant, Marx, Nietzsche, and Wittgenstein. Our goal is not just to appreciate the genius of some great philosophers but also to grapple with the current philosophical problems they have bequeathed to us.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring, Summer

PHIL 1050 Introduction to Philosophy of Religion
There is a fundamental tension between Western philosophical thought, which emphasizes the import and efficacy of reasoned argument, and religious traditions, which stress the primacy of faith over reason. This conflict is the focus of this course. Topics to be considered include: the existence of God; atheism and agnosticism; the immortality of the soul; freedom of the will; the possibility of miracles; and, more generally, the nature of religious knowledge and the significance of religious diversity.
Credit 3 units. BU: ETH
Typical periods offered: Fall, Spring

PHIL 1060 Present Moral Problems
An investigation of a range of contemporary moral issues and controversies that draws on philosophical ethics and culturewide moral considerations. Topics may include: racism, world hunger, war and terrorism, the distribution of income and wealth, gender discrimination, pornography, lesbian and gay rights, abortion, euthanasia, and capital punishment. The aim of the course is to present diverse points of view regarding these topics and to provide conceptual and theoretical tools that enable the student to make headway in thinking carefully and critically about the issues.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring

PHIL 1996 Philosophy Elective: 1000-Level
This course is for transcribing 1000-level PHIL elective units
Credit 3 units. EN: H
Typical periods offered: Fall, Spring, Summer

PHIL 2010 Introduction to Philosophy of Cognitive Science
This course will introduce key philosophical issues raised by the advent of cognitive scientific studies of mind. Topics may include: mental imagery, concepts, rationality, consciousness and emotion, language and thought, machine intelligence, robotics, free will.
Credit 3 units.
Typical periods offered: Fall, Spring

PHIL 2020 Intro to Metaphysics & Epistemology
Introduction to the study of the nature of reality (metaphysics) and the scope and limits of human knowledge (epistemology). Some of the most pressing problems traditionally encountered in these two areas are introduced and subjected to critical scrutiny via the tools of contemporary analytical philosophy.
Credit 3 units.
Typical periods offered: Fall, Spring

PHIL 2040 Philosophy of Sex and Love
This course allows students to learn more about the philosophy of sex and love.
Credit 3 units.
Typical periods offered: Fall, Spring

PHIL 2060 Biomedical Ethics
A critical examination, in the light of contemporary moral disagreements and traditional ethical theories, of some of the moral issues arising out of medical practice and experimentation in our society. Issues that might be discussed include euthanasia, genetic engineering, organ transplants, medical malpractice, the allocation of medical resources, and the rights of the patient.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring, Summer

PHIL 2070 Business Ethics
Study of the nature and justification of economic systems, business organizations, and business practices. Focus on contemporary business and the ideology it embodies. Discussion of moral problems arising in business includes both the analysis of structural factors that cause them and the evaluation of courses of action that might resolve them.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring

PHIL 2080 Introduction to Environmental Ethics
A general survey of current issues in environmental ethics, focusing on problems such as the obligation to future generations, protection of endangered species, animal rights, problems of energy and pollution, wilderness, global justice, and business obligations. Students will also learn some ethical and political theory.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring

PHIL 2090 Introduction to Aesthetics
Study of characteristic problems in aesthetics and the philosophy of art, e.g., the nature of aesthetic entities, of aesthetic experience, and of individual differences in the various arts. Primary emphasis on solutions various theories offer to these problems.
Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

PHIL 2120 Philosophy of Film
This course allows students to learn more about the philosophy of film.
Credit 3 units.
Typical periods offered: Fall, Spring

PHIL 2201 Disagreement, Extremism, and Polarization
Americans are increasingly skeptical about the future of their democracy and about our ability to pursue equality and social justice within the existing political system, and many people identify irresolvable disagreement, political extremism, and partisan polarization as causes of the current crisis in American democracy. In this course, we will study disagreement, extremism, and polarization using insights and methods from philosophy, political science, and empirical psychology, with the aim of understanding these phenomena and the social and political challenges they pose. Our questions will include whether it is possible for reasonable people to disagree, whether democratic deliberation requires a background of agreement or shared facts, how our moral psychology shapes our political beliefs, whether prejudice and bias can be eliminated from political thinking, and whether there are some political positions that are so extreme they should not be taken seriously. There are no prerequisites for this course and no background in philosophy, political science, or psychology will be assumed
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

PHIL 2202 Social Identity and Democratic Deliberation
Democracy is committed to citizens' status as political equals, including our right to have equal say in determining our joint political future. In a democracy, our voices are equal. At least in theory. As it turns out, many core deliberative practices, including argument and testimony, are distorted by individuals' social identities. In this class, we will proceed according to the following questions: How should argument and testimony work in a democracy? How does social identity, including gender, race and class, impact us as political agents within a deliberative context? More specifically, how does our social identity effect our practices of knowledge acquisition, maintenance, and transmission? We will study theories of democratic deliberation, standpoint theories in epistemology, theories of epistemic injustice, and conclude by considering several ameliorative theories.
Credit 3 units. A&S IQ: HUM, SC BU: HUM
Typical periods offered: Fall, Spring

PHIL 2900 Internship in Philosophy
Students receive credit for a faculty-directed and approved internship. Registration requires completion of the Learning Agreement which the student obtains from the Career Center and which must be filled out and signed by the Career Center, the site supervisor, and the faculty sponsor prior to beginning internship work. Credit should correspond to actual time spent in work activities, e.g., 8-10 hours a week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours.
Credit 3 units.
Typical periods offered: Fall, Spring

PHIL 2996 Philosophy Elective - 2000 Level
This course is for transcribing 2000-level PHIL elective units
Credit 3 units. EN: H
Typical periods offered: Fall, Spring, Summer

PHIL 3000 Philosophy of Medicine
Philosophy of Medicine is an investigation into what doctors know and how they know it. This course will investigate the following questions: What is disease? What is health? How do we classify disease? What counts as good evidence and good evidential reasoning in medicine? Is medicine a science? If so, what makes it distinctive as a science? What kinds of evidential roles do case studies play in medicine? How should we measure and compare outcomes in clinical trials and in systematic reviews? What is the appropriate relationship between medicine and the basic sciences or between medicine and the public health sciences (e.g., epidemiology, biostatistics, economics, behavioral science)? What role, if any, should private industry (e.g., the pharmaceutical industry, the health insurance industry) play in shaping the practice of medicine? How should we define and measure effectiveness in medicine? Do values inform decision making about health policy, and, if so, how? The overall goal of the course is to develop a reasoned, reflective approach to research and practice in medicine through the critical analysis of texts and case studies in the history of medicine. Students do not need a background in philosophy to take this course. This course is intended to be of special interest to pre-health professionals and to philosophy and science majors. For graduate students in philosophy, this course satisfies the seminar requirement. Extra assignments will be provided to satisfy graduate course work; students should consult the instructor for details.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring

PHIL 3020 Philosophy of Language
A survey of major philosophical problems concerning meaning, reference, and truth as they have been addressed within the analytic tradition. Readings that represent diverse positions on these focal issues will be selected from the work of leading philosophers in the field, for example: Frege, Russell, Wittgenstein, Davidson, Quine, Kripke, and Putnam. Students are encouraged to engage critically the ideas and arguments presented, and to develop and defend their own views on the core topics. Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor. Priority given to majors in Philosophy & PNP.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

PHIL 3030 Metaphysics and Epistemology
An introduction to the philosophical study of the nature of reality (metaphysics) and of human knowledge (epistemology) that relies on techniques of contemporary analytic philosophy. Metaphysical issues may include: the problem of universals, the nature of necessity, and the mind-body problem. Epistemological issues may include: correspondence and coherence theories of truth, the quest for certainty, and the nature of skepticism. Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM
Typical periods offered: Fall, Spring

PHIL 3091 Theory of Knowledge
An introduction to epistemology, which is concerned with questions about knowledge, belief, evidence, and intellectual conduct and character. This course focuses on selected issues in epistemology with the aim of providing a survey of contemporary work. Possible topics include the nature of knowledge and justification, probability, epistemic norms of assertion and action, philosophical skepticism, the value of knowledge, disagreement, intellectual virtue, and epistemic injustice. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in Philosophy & PNP.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

PHIL 3100 Philosophy of Mind
An introduction to philosophical' analyses of the nature of mind, especially those developed by contemporary philosophers. The focus will be on questions such as the following: What is a mind? How does it relate to a person's brain? How does it relate to a person's body and the external world? Can a mind exist in a very different kind of body (e.g., a computer or a robot)? Does thinking require a language-like code? If so, can non-linguistic species think? What is it to have a mental image or to experience pain? Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor. Priority given to majors in Philosophy & PNP.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

PHIL 3110 Mind and Morals
This course explores a number of issues at the intersection of ethics and cognitive science. Possible topics include: Are we rational? Do we know our own thoughts and motivations? Can one believe that one ought to do something without being motivated to do it? Do emotions impair or enhance our ability to reason? How do moral beliefs develop through childhood? Are traits such as intelligence and character unchangeable, and what implications follow if they are (or are not)? Does retaining my identity over time require having the same mind, and, if so, am I the same person now as I was as a child? Are non-human animals worthy of moral consideration? If brain activity is determined by causal laws, can we have free will? Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor. Priority given to majors in Philosophy & PNP.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring

PHIL 3130 Philosophy of Science
Pivotal concepts common to empirical sciences are examined and clarified. These include: explanation, confirmation, prediction, systematization, empirical significance, and the relationship of all these concepts to the structure of scientific theory. Examples may be drawn from both contemporary and historical science, including the social, biological, and physical sciences. Students with a background in science are particularly encouraged to consider this course. Priority given to majors in Philosophy & PNP.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

PHIL 3150 Philosophy of Religion
This course focuses on debates concerning the existence of God as well as on special issues that arise within religion generally and also on some that arise within specific religious traditions. Topics include: the rationality of religious belief, the problem of evil, the coherence of theism, and the freedom-foreknowledge problem.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring

PHIL 3160 Classical Ethical Theories
Intensive readings of great works in the history of ethics, especially by Plato, Aristotle, Hume, Kant, and Mill. Topics may include: the sources of moral knowledge, the nature of practical moral judgment, the moral role of emotion and desire, weakness of will, moral autonomy, and the universality of moral norms. Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall

PHIL 3170 Feminist Philosophy
This course allows students to learn more about feminist philosophy.
Credit 3 units.
Typical periods offered: Fall, Spring

PHIL 3190 Philosophy of the Arts
An examination both of general issues that apply to all types of art and of issues specific to particular art forms. For example, what is art? What are the central artistic values: beauty, truth, emotional expressiveness, representational power, or something else? Does art have a moral or political function? How can we account for the history of art and for different artistic styles? In regard to selected forms, there are important questions concerning how pictures represent, whether music and dance are forms of 'language', and the nature of literary interpretation. Some consideration is given to the relation of psychology and theories of the mind to art. Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor. Priority given to majors in Philosophy & PNP.
Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Spring

PHIL 3200 Social and Political Philosophy
Study of certain fundamental issues concerning government, society, and culture. For example: what are the nature and limits of legitimate political authority? Are ordinary human beings capable of governing themselves justly? Do citizens have a duty to obey the state? If so, to what extent, if at all, is that duty grounded in consent or contract? Should the state limit or regulate the personal relationships of citizens, such as marriage, family, and sexuality? How should social institutions rectify a history of political or social injustice against oppressed groups? Readings from historical and contemporary sources. Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor. Priority given to majors in Philosophy & PNP.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall

PHIL 3210 Problems of Moral, Legal, and Social Ethics
This course allows students to learn more about problems related to more, legal, and social ethics.
Credit 3 units.
Typical periods offered: Fall, Spring

PHIL 3220 Issues in Applied Ethics:
Advanced study of a selected topic in applied ethics. Abstract ethical theories and methods are brought to bear on the moral problems that arise in an area of social and professional practice such as medicine, business, law, journalism, engineering, or scientific and humanistic research. Possible topics include: reproductive healthcare and policy, the just distribution of medical resources, the social responsibilities of corporations, accountability in the media and public office, and the ethics of research on or affecting human subjects. Prerequisites: one course at the 100 or 200-level in applied ethics; or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall

PHIL 3230 Philosophy of Law
This course will first focus on the philosophical foundations of law, examining both the relationship between law and rules, as well as the types of legal reasoning. Second, the course will focus on philosophical issues that arise in the key substantive areas of law: contracts, torts, property, criminal law, and constitutional law, as well in specialized areas such as family and employment law. The course will end with a brief discussion of several problems in legal ethics. Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor. Priority given to majors in Philosophy & PNP.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring

PHIL 3240 Ancient Philosophy
An examination of the high-water marks of philosophy in ancient Greece and Rome, focusing primarily on Plato and Aristotle. A wide range of philosophical problems will be discussed, including the nature of the good life, the justification of knowledge, and the ultimate nature of mind and world. Attention will be paid to how these problems unfolded in their historical context and to how the ancient treatments of them compare to contemporary efforts. Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall

PHIL 3250 Introduction to Metaphysics
This course is an introduction to central debates of contemporary analytic metaphysics. Metaphysics is concerned with the nature of the most general kinds of things and the relationship between these things. We will discuss the nature of and relationship between properties, material objects, persons, time, space, and modality. Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor. Priority given to majors in Philosophy & PNP.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

PHIL 3260 Descartes to Hume
An examination of major philosophical systems and problems in Modern Philosophy as presented in the original writings of the 17th and 18th centuries. Topics may include rationalism and empiricism, idealism, materialism, and skepticism, with readings selected from the continental rationalists, Descartes, Spinoza, and Leibniz, and from the British empiricists, Locke, Berkeley, and Hume. Central problems include the mind-body problem, representationalism, and transcendentalism. Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor. Priority given to majors in Philosophy & PNP.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

PHIL 3290 Kant and 19th-Century Philosophy
Examination of Kant and nineteenth-century philosophy. We will discuss Kant's Copernican Turn in metaphysics and epistemology, as well as his moral philosophy, and we will study works of selected nineteenth-century philosophers such as those of Hegel, Marx, Mill, and Nietzsche. Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor. Priority given to majors in Philosophy & PNP.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring

PHIL 3300 Conceptual Foundations of Modern Science
Where does modern science come from? This course examines the winding paths by which the dominant scientific world-views of the 20th century became established. We will discuss a variety of broad themes: scientific method or methods, revolutionary science, the relationship between science and society, and the aims of science. This course is not intended to be a comprehensive survey of the history of science. Instead, we will focus upon a few key figures - Galileo, Newton, Darwin, - and we will read both primary and secondary literature on their significance to these broad themes. Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor. Priority given to majors in Philosophy & PNP.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

PHIL 3310 Philosophy of Emotions
Emotions like fear, joy, disgust, sadness, and love are central to how we engage with each other and understand the world around us. But what can we say about what emotions are, how they function, and when they are valuable? This course will draw on research in philosophy as well as the social and cognitive sciences. The aim will be to develop a rich combination of conceptual, empirical, and phenomenological resources and bring them to bear on central questions about the nature and significance of emotions.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, HUM EN: H
Typical periods offered: Fall, Spring

PHIL 3320 Art and the Mind-Brain
In recent years, there has been a growing interest in the bearing of cognitive science on the perception and understanding of art. This interest has roots in tradition: historically, art, aesthetics, and vision science have often been linked. But the growth of knowledge in cognitive science has opened up new opportunities for understanding art and addressing philosophical questions. The converse is also true. The production, perception, and understanding of art are human capacities that can shed light on the workings of the mind and brain. This course considers questions such as: What is art? How do pictures represent? Does art express emotion? Why does art have a history? Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor. Priority given to majors in Philosophy & PNP.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

PHIL 3330 Contemporary Continental Philosophy
An examination of central texts of 20th-century philosophical thought in France and Germany. The work of Hegel and Heidegger will be considered, as well as that of thinkers they have influenced such as Adorno, Gadamer, and Habermas (in Germany), and Sartre, Foucault, Derrida, and Irigaray (in France). These philosophers reject any idea of pure knowledge and experience, and have reconceptualized human existence and understanding as fundamentally historicized, embodied, and linguistic. A focal question that this raises is, what does this reconceptualization mean for ideals of humanism? Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor.
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Fall, Spring

PHIL 3340 Existentialism
The philosophical systems of selected philosophers such as Kierkegaard, Nietzsche, and Sartre are examined to determine their historical origins, their ontological and epistemological ramifications, and their relationships to contemporary philosophy. Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

PHIL 3370 Pragmatism
The focus of this course is the classical pragmatist movement, a cluster of then highly controversial ideas developed from the 1870s through the 1940s by Peirce, James, Dewey, Meade and C. I. Lewis. Widely regarded as the distinctively American contribution to the history of philosophy, it has been profoundly influential in shaping much subsequent American philosophical theory, especially the work of recent and contemporary analytically oriented philosophers. We'll concentrate on classical pragmatism in the writings of its early proponents, but pay some attention also to the prominence of pragmatistic elements in the thought of Carnap, Quine, Davidson, Rorty, Putnam, and Goodman.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall, Spring

PHIL 3380 Early 20th-Century Philosophy
The philosophy of the early 20th century represents a watershed in the history of Western philosophy, as the point when analytic and Continental approaches went their separate ways (despite common roots in Kantian philosophy) and also as the point when philosophy of language and philosophy of science emerged as central fields of philosophy. Against the background of the work of Frege, Husserl, and the neo-Kantians, this course will examine the exchanges among the philosophers of this period (including Russell, Wittgenstein, Moore, and the Vienna Circle), which set much of the analytic agenda for the rest of the century on such topics as meaning, reference, the unity of science, and the fact-value distinction. Prerequisites: one course in philosophy at the 100 and 200 level, or permission of the instructor.
Credit 3 units.
Typical periods offered: Fall, Spring

PHIL 3390 Philosophical Writing
This seminar will have a different topic of central philosophical importance each semester. Significant attention will also be devoted to conceiving, researching, writing, revising, critiquing, and presenting philosophical essays. Limited to 15 students. Priority will be given to philosophy majors and minors who have not yet completed their Writing Intensive requirement.
Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

PHIL 3970 Undergraduate Independent Study
Students will be able to receive credit for undergraduate independent study.
Credit 6 units.
Typical periods offered: Fall, Spring

PHIL 3990 Philosophy Capstone Course
This course will focus either on classic writings from the past century or on contemporary writings that address a major philosophical concern, such as The Meaning of Life or The Concept of Self. In either case, the course will draw together a variety of philosophical specializations. Must be taken by all philosophy majors who are not writing an honors project. Work for the course will typically consist of one written project, one oral presentation, and one commentary on another student's oral presentation. Prerequisite: Senior standing, major in philosophy, preference given to those majors not pursuing Honors.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall Half A, Spring

PHIL 3996 Philosophy Elective
Credit 0 units. EN: H

PHIL 4064 Topics in the Philosophy of Language
Focus on the work of a single philosopher of language such as Carnap, Chomsky, Foucault, or Kripke, or on a central topic such as the theory of reference, the theory of meaning, or the problem of cross-cultural translation. Prerequisite: one course in epistemology, philosophy of language, or analytic philosophy, or permission of instructor.
Credit 3 units.
Typical periods offered: Fall

PHIL 4065 Advanced Philosophy of Language
An advanced-level treatment of basic topics in the philosophy of language as this discipline is understood in the analytic tradition. The main positions and the problems they pose will be surveyed; focal themes include meaning, reference, and truth. The aim of the course is to help students develop effective expository techniques and to provide them with the necessary conceptual resources to analyze and criticize different theoretical views. Prerequisites: one course in Philosophy at the 300-level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM EN: H

PHIL 4100 Formal Methods for Philosophy
This course is an advanced course exploring formal methods in both logic and confirmation theory. It begins with an introduction to metatheory, which is explored in more depth in the 403-404 sequence on Mathematical Logic, addressing the basic metatheory for logic in addition to alternatives to standard first-order logic. The second part of the course focuses on modal and other intensional logics. The final part of the course focuses on non-monotonic logics, focusing especially on Bayesian confirmation theory and decision theory. Prerequisite: 6 units of philosophy or permission of the instructor.
Credit 3 units. A&S IQ: NSM, AN Art: NSM
Typical periods offered: Fall, Spring

PHIL 4120 Advanced Epistemology
Competing theories of knowledge and belief justification will be considered. Careful attention will be given to selected problems such as skepticism, certainty, foundations, coherence, perception, induction. Prerequisites: one course in Philosophy at the 300-level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

PHIL 4130 Advanced Metaphysics
Through readings from both classical and contemporary sources, a single traditional metaphysical concern will be made the subject of careful and detailed analytic attention. Possible topics include such concepts as substance, category, cause, identity, reality, and possibility, and such positions as metaphysical realism, idealism, materialism, relativism, and irrealism. Prerequisites: one course in Philosophy at the 300-level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

PHIL 4180 Topics in Advanced Philosophy of Science:
This course will vary in topics related to Philosophy of Science from semester to semester. Prerequisites: one course in Philosophy at the 300-level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

PHIL 4200 Philosophy of Neuroscience
This course focuses on the historical roots of neuroscience as well as its contemporary developments. Topics include: (1) the nature of explanatory strategies in neuroscience; (2) the relation between neuroscience research and higher-level disciplines such as psychology; and (3) the epistemology of the investigatory tools of neuroscience. Prerequisites: one previous course in Philosophy at the 300-level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM

PHIL 4230 Topics in Ethics
Selected advanced topics in ethics. Prerequisite: 6 units of philosophy, or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

PHIL 4240 Metaethics
Ethics asks questions about right and wrong, good and bad, virtue and vice. Metaethics asks questions about ethics, including questions about whether we have any reason to do the right thing or to be virtuous, questions about whether it is possible to know the answer to ethical questions, and questions about what we mean by such ethical terms as right and wrong or good and bad. Influential metaethical views include relativism (on which ethical judgments are only true or false relative to an individual or culture) and moral skepticism (on which ethical knowledge is impossible). This course will introduce metaethics through an examination of selected texts and questions. Prerequisites: One previous course in philosophy at the 300 level, graduate standing, or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

PHIL 4250 Normative Ethical Theory
An exploration of the three major normative ethical theories debated by philosophers in the last hundred years: Kantian ethics, utilitarianism, and virtue theory. Authors covered in the course may include: Henry Sidgwick, R. M. Hare, R. B. Brandt, John Rawls, Bernard Williams, Philippa Foot, Thomas Nagel, Christine Korsgaard, Michael Slote, and Barbara Herman. Prerequisites: one course in Philosophy at the 300-level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

PHIL 4280 Topics in the Philosophy of Feminism
This course addresses selected advanced topics in feminist philosophy.
Credit 3 units.
Typical periods offered: Spring

PHIL 4311 Aesthetics
A careful consideration of selected issues regarding the experience of visual art, architecture, music, or literature, as well as of the power or beauty of nature, people, and artifacts. For example, is there a special form of aesthetic experience or aesthetic attitude? In what do aesthetic power and beauty consist? Are they different in art and nature? Do the artists' intentions matter? Some central concerns are: how do visual art and literary texts have 'meaning', what role do the viewer's or reader's interpretations play, and how might recent work in cognitive science and social theory shed light on these issues? Prerequisites: one course in Philosophy at the 300-level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

PHIL 4321 Advanced Social and Political Philosophy
A selective investigation of one or two advanced topics in the philosophical understanding of society, government, and culture. Readings may include both historical and contemporary materials. Possible topics include: liberalism, socialism, communitarianism, citizenship, nationalism, cosmopolitanism, social contract theory, anarchism, and the rights of cultural minorities. Prerequisites: one course in Philosophy at the 300-level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

PHIL 4340 Plato
An examination of some of Plato's most important dialogues, typically including the Gorgias, Phaedo, and Republic, with the aim of grasping the development of Plato's most influential thoughts in ethics and in metaphysics and epistemology. In order to provide both historical understanding and philosophical evaluation, attention will be paid to the context and structure of the dialogues and to the best of recent secondary literature. Prerequisites: one course in Philosophy at the 300-level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

PHIL 4350 Aristotle
This course offers a maximally full and detailed introduction to the works of Aristotle. His logic, natural philosophy, psychology, metaphysics, ethics, and political philosophy will be discussed, and stress will be laid on the interpretive problems facing contemporary philosophers seeking to understand Aristotle's achievement. Prerequisites: one course in Philosophy at the 300-level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

PHIL 4360 Hellenistic Philosophy
The Hellenistic Age, traditionally dated from the death of Alexander and his (Macedonian) Empire at 323 BCE to the birth of Augustus' (Roman) Empire in 31 BCE, gave the West three of its most innovative and influential schools of philosophy: Epicureanism, Skepticism, and Stoicism. This course investigates the central features of their thought. Special attention is paid to the still-relevant debates between the Stoics and Skeptics about the possibility of knowledge, to the disagreements among all three schools about the issues of freedom, responsibility, and determinism, and to their ethical theories. Prerequisites: one course in Philosophy at the 300-level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H
Typical periods offered: Spring

PHIL 4370 Continental Rationalism
A rationalist is a philosopher for whom at least one certain truth is inborn or comes from reason rather than from empirical or sensory experience. The major systemic writings of Descartes, Spinoza, and Leibniz will be examined with a focus on the question: does the epistemology determine the ontology of these philosophical systems, or vice versa? The lines of development connecting these philosophers will be traced, and such enduring problems as the relation of mind to body will be examined. Prerequisites: one course in Philosophy at the 300-level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM
Typical periods offered: Fall, Spring

PHIL 4380 17th & 18th Century British Philosophy
17th and 18th century British philosophy introduced a profound shift in how philosophers and scientists understood themselves, the natural world, society, politics, and culture. The new, Newtonian science altered their sense of the place of humans in the natural world and the scope of what could be studied scientifically. Social, political, and economic changes motived new conceptions of human nature, culture, and society. And because Britain was an Empire, the theories developed in the 17th and 18th centuries on this island remain embedded in the way many people and cultures understand themselves and the natural world to this day. Prerequisites: one course in Philosophy at the 300-level, graduate standing, or permission of the instructor.
Credit 0 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

PHIL 4420 Kant's Critique of Pure Reason
An in-depth investigation of Kant's Critique of Pure Reason, one of the most important books in the history of Western philosophy. Some supplementary readings from other philosophers will be used to situate Kant's work in a systematic and historical context, to present some 'Kantian' positions in current philosophy, and to bring in some important contrasting views and criticisms. Prerequisites: one course in Philosophy at the 300-level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

PHIL 4430 Kant's Moral Theory
An in-depth examination of Kant's practical philosophy: his moral and political theory. Readings include the Critique of Practical Reason, parts of the Metaphysics of Morals, Perpetual Peace, and other writings. Supplementary readings will be used to situate Kant's work in its systematic and historical context, to provide orientation in the world

of Kant scholarship, and to introduce important contrasting views and criticisms. We will also discuss recent reformulations of Kantian themes in the works of contemporary philosophers. Prerequisites: one course in Philosophy at the 300-level, graduate standing, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

PHIL 4460 Topics in the History of Philosophy
Study of individual philosophers or themes from the ancient, medieval, and/or modern periods. Examples: Spinoza, St. Thomas Aquinas, neo-Platonism, universals in ancient and medieval thought, ancient and modern theories of space and time. Prerequisite: 6 units in philosophy, or permission of instructor.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

PHIL 4490 History of Analytic Philosophy
This course will begin with the reaction of G.E. Moore to the dominant idealism of the 19th century, together with the advances in formal approaches launched by Gottlob Frege and Bertrand Russell. It will engage in the rise of ordinary language philosophy through the later work of Ludwig Wittgenstein, as well as the important influence of the Vienna Circle and the rise and fall of Logical Positivism/Empiricism, culminating in the resurgence of metaphysics with the work of Saul Kripke. The course will close with a look at philosophy that is still in the analytic tradition after analytic philosophy itself had been abandoned. Prerequisites: One previous course in philosophy at the 300 level, graduate standing, or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

PHIL 4500 Topics in Analytic Philosophy
Focus on the work of a single contemporary analytic philosopher such as Davidson, Putnam, or Strawson, or a central problem area such as epistemological relativism or the problem of the identity of physical objects. Prerequisite: one course in epistemology, philosophy of language, or analytic philosophy, or permission of instructor.
Credit 3 units.
Typical periods offered: Fall, Spring

PHIL 4996 Philosophy Elective
Credit 0 units. EN: H

PHIL 4997 Undergraduate Independent Study
Prerequisite: Permission of the department. Credit variable, max 6 units.
Credit 6 units.
Typical periods offered: Fall, Spring, Summer

PHIL 4998 Study for Honors
Prerequisites: senior standing, a 3.5 minimum grade point average overall, a 3.5 minimum grade point average in philosophy courses, and the permission of the department. Applications and further information are available in the Department of Philosophy. See further: artsci.wustl.edu/~philos/undergrad/honors.html
Credit 3 units.
Typical periods offered: Fall, Spring

Philosophy Major

Program Requirements

- **Total Units Required:** 27 units
  - At least 15 units must be at the 3000 level
  - At least 6 units must be at the 4000 level
    - No more than 3 units of credit in PHIL 4998 or PHIL 5000 Independent Work can be counted toward the 6 units of 4000-level coursework.
- **Grade Requirement:** C- or above; Pass/No Pass grades do not count toward major requirements

Majors are encouraged to take more than the minimum number of courses, especially if they are considering graduate work in philosophy. Majors who are planning to do graduate work in philosophy should attain reading proficiency in German, Greek, Latin, or French.

Required Courses

Core Area Requirements

Majors must complete at least one course in each of the three core areas:

1. Contemporary Language, Epistemology, Mind & Metaphysics
2. Historical Philosophy
3. Value Theory

A course cannot count towards more than one core area. The courses that will satisfy each core area are listed below.

Contemporary Language, Epistemology, Mind, & Metaphysics (3 units):

Code	Title	Units
PHIL 3000	Philosophy of Medicine	3
PHIL 3020	Philosophy of Language	3
PHIL 3091	Theory of Knowledge	3
PHIL 3100	Philosophy of Mind	3
PHIL 3110	Mind and Morals	3
PHIL 3130	Philosophy of Science	3
PHIL 3140	Philosophy of Biology	3
PHIL 3150	Philosophy of Religion	3
PHIL 3250	Introduction to Metaphysics	3
PHIL 3310	Philosophy of Emotions	3
PHIL 3320	Art and the Mind-Brain	3

Historical Philosophy (3 units):

Code	Title	Units
CLASSICS 3800	Ancient Greek and Roman Medicine	3
PHIL 3240	Ancient Philosophy	3
PHIL 3260	Descartes to Hume	3
PHIL 3290	Kant and 19th-Century Philosophy	3
PHIL 3300	Conceptual Foundations of Modern Science	3
PHIL 3340	Existentialism	3

Value Theory (3 units):

Code	Title	Units
PHIL 3110	Mind and Morals	3
PHIL 3160	Classical Ethical Theories	3
PHIL 3170	Feminist Philosophy	3
PHIL 3190	Philosophy of the Arts	3
PHIL 3200	Social and Political Philosophy	3
PHIL 3220	Issues in Applied Ethics	3
PHIL 3230	Philosophy of Law	3
PHIL 3310	Philosophy of Emotions	3
PHIL 3320	Art and the Mind-Brain	3

The Writing Intensive Seminar

Majors are encouraged to fulfill their writing intensive requirement by taking PHIL 3390 Philosophical Writing. *A philosophy major who does not take the Philosophy Writing Intensive Seminar must take a fourth core course from any of the three core areas.* Students typically take Philosophical Writing during their junior year.

The course is offered *every fall* and is limited to 15 students. However, registration priority is given to philosophy majors and minors who have not yet completed their writing intensive requirements. Significant attention is devoted to conceiving, researching, writing, revising, critiquing and presenting philosophical essays.

Capstone Requirement

All philosophy majors are required to complete a capstone experience either by writing an honors thesis (PHIL 4998) or by taking PHIL 3990 Philosophy Capstone.

Capstone Course

Please note that the capstone course is offered only *in the spring semester.* Students will need to plan their class schedules accordingly. Only philosophy majors with senior standing may take this course, and preference is given to students not pursuing Honors. The course will draw together a variety of different philosophical areas.

Senior Honors Thesis

The Honors Thesis is a two-semester course PHIL 4998 taken during a student's senior year. Students will apply in the spring of their junior year. To qualify, students must meet the following:

- Must have a minimum philosophy major GPA of 3.5
- Must have a minimum GPA of at least 3.5 in 3000- and 4000-level philosophy courses
- Must have a minimum overall GPA of 3.65

Students must have the agreement of a faculty member to serve as their thesis advisor. For important additional information regarding Senior Honors, please visit the Department's Undergraduate Honors webpage.

Additional Information

- The Department of Philosophy does not typically count summer courses toward the major.
- No course can count toward more than one requirement.

Study Abroad

The Department has special study abroad arrangements with University College, London; King's College, London; Trinity College, Dublin (Ireland); Sussex University (U.K.); Utrecht University (the Netherlands); and the University of Auckland (New Zealand). Information about study abroad and specific overseas programs is available on the Department of Philosophy's Study Abroad Page. Philosophy majors interested in studying abroad are strongly encouraged to meet with Philosophy's Director of Undergraduate Studies (DUS) prior to going abroad.

Please note that the Department of Philosophy does not typically count study abroad courses as 4000-level courses towards the major. Majors will be expected to satisfy their core area requirements with courses taken at Washington University.

No more than 6 units can be transferred from other institutions and/or study abroad programs.

Specializations

The Department of Philosophy offers the following specializations. For more information about them, please visit the Department of Philosophy website.

- Philosophy Research Specialization
- Law and Policy Specialization
- Philosophy of Science Specialization

Phone:	314-935-6670
Email:	philosophy@wustl.edu
Website:	http://philosophy.artsci.wustl.edu

Philosophy Major, Law and Policy Specialization

Program Requirements

- **Total Units Required:** 27 units
  - At least 21 units at the 3000 level or above (including core courses)
  - At least 6 of the 21 units must be at the 4000 level
- **Grade Requirement:** C- or above; Pass/No Pass grades do not count toward the major requirements

This specialization is especially recommended for students who intend to pursue a career in law or public policy. The specialization involves taking certain specific courses for the major (and possibly a few extra courses) that will provide the student with additional preparation and a competitive edge when applying to law school, postgraduate programs in public policy, and related jobs.

Requirements

Core Area Requirement

Majors must complete at least one course in each of the three Core Areas:

1. Contemporary Language, Epistemology, Mind & Metaphysics
2. Historical Philosophy
3. Value Theory

A course cannot count towards more than one Core Area requirement. The courses that will satisfy each Core Area are listed below.

Contemporary Language, Epistemology, Mind & Metaphysics (3 units):

Code	Title	Units
PHIL 3000	Philosophy of Medicine	3
PHIL 3020	Philosophy of Language	3
PHIL 3091	Theory of Knowledge	3
PHIL 3100	Philosophy of Mind	3
PHIL 3110	Mind and Morals	3
PHIL 3130	Philosophy of Science	3
PHIL 3140	Philosophy of Biology	3
PHIL 3150	Philosophy of Religion	3
PHIL 3250	Introduction to Metaphysics	3
PHIL 3310	Philosophy of Emotions	3
PHIL 3320	Art and the Mind-Brain	3

Historical Philosophy (3 units):

Code	Title	Units
CLASSICS 3800	Ancient Greek and Roman Medicine	3
PHIL 3240	Ancient Philosophy	3
PHIL 3260	Descartes to Hume	3
PHIL 3290	Kant and 19th-Century Philosophy	3
PHIL 3300	Conceptual Foundations of Modern Science	3
PHIL 3340	Existentialism	3

Value Theory (3 Units):

Code	Title	Units
PHIL 3110	Mind and Morals	3
PHIL 3160	Classical Ethical Theories	3
PHIL 3170	Feminist Philosophy	3
PHIL 3190	Philosophy of the Arts	3
PHIL 3220	Issues in Applied Ethics	
PHIL 3310	Philosophy of Emotions	3
PHIL 3320	Art and the Mind-Brain	3

Law and Policy Specialization

To complete the specialization in Law and Policy, Majors must complete both of the two courses listed below.

Code	Title	Units
PHIL 3200	Social and Political Philosophy	3
PHIL 3230	Philosophy of Law	3
Total Units		**6**

The Writing-Intensive Seminar

Majors are encouraged to fulfill their writing-intensive requirement by taking PHIL 3390 Philosophical Writing. *A Philosophy major who does not take the Philosophy writing-intensive seminar must take a fourth core course from any of the three core areas.* Students typically take Philosophical Writing during their junior year.

The course is offered *every fall* and is limited to 15 students. However, registration priority is given to Philosophy majors and minors who have not yet completed their writing-intensive requirements. Significant attention is devoted to conceiving, researching, writing, revising, critiquing and presenting philosophical essays.

Capstone Requirement

All philosophy majors are required to complete a capstone experience either by writing an honors thesis PHIL 4998 or by taking PHIL 3990 Philosophy Capstone Course.

Capstone Course

Please note that the capstone course is offered *only* in the spring semester. Students will need to plan their class schedules accordingly if they decide not to write an honors thesis. Only Philosophy majors with senior standing may take this course, and preference is given to students not pursuing Honors. The course will draw together a variety of different philosophical areas.

Senior Honors Thesis

The Honors Thesis is a two-semester course PHIL 4998 taken during a student's senior year. Students will apply in the spring of their junior year. To qualify, students must meet the following:

- Must have a minimum Philosophy major GPA of 3.5
- Must have a minimum GPA of 3.5 in Philosophy 3000- and 4000-level courses
- Must have a minimum overall GPA of 3.65

Students must have the agreement of a faculty member to serve as their thesis advisor. For important additional information regarding Senior Honors, please visit the Department of Philosophy's Undergraduate Honors webpage.

Phone:	314-935-6670
Email:	philosophy@wustl.edu
Website:	http://philosophy.artsci.wustl.edu

Philosophy Major, Philosophy of Science Specialization

Program Requirements

- **Total Units Required:** 27 units
  - At least 15 units at the 3000 level or above (including core courses)
  - At least 6 units must be at the 4000 level
    - No more than 3 units of credit in PHIL 5000 Independent Work can be counted toward the 6 units of 4000-level coursework.
- **Grade Requirement:** C- or above; Pass/No Pass grades do not count toward the major requirements

The Philosophy of Science specialization is only available as a second major in combination with work in one or more of the sciences. It is intended for those students with a scientific background who have an interest in pursuing philosophical issues relating to the natural and physical sciences.

Requirements

Logic Introductory Requirement

Majors much complete both of the two introductory courses listed below.

Code	Title	Units
PHIL 1000	Logic and Critical Analysis	3
PHIL 1010	Introduction to Scientific Reasoning	3
Total Units		**6**

Core Requirements

Majors must complete at least one course in each of the two core areas:

1. Contemporary Language, Epistemology, Mind & Metaphysics
2. Historical Philosophy

A course cannot count toward more than one requirement. The courses that will satisfy each core area are listed below.

Contemporary Language, Epistemology, Mind & Metaphysics (3 units):

Code	Title	Units
PHIL 3000	Philosophy of Medicine	3
PHIL 3020	Philosophy of Language	3
PHIL 3091	Theory of Knowledge	3
PHIL 3100	Philosophy of Mind	3
PHIL 3110	Mind and Morals	3
PHIL 3140	Philosophy of Biology	3
PHIL 3150	Philosophy of Religion	3
PHIL 3250	Introduction to Metaphysics	3
PHIL 3320	Art and the Mind-Brain	3

Historical Philosophy (3 units):

Code	Title	Units
CLASSICS 3800	Ancient Greek and Roman Medicine	3
PHIL 3240	Ancient Philosophy	3
PHIL 3260	Descartes to Hume	3
PHIL 3290	Kant and 19th-Century Philosophy	3
PHIL 3300	Conceptual Foundations of Modern Science	3
PHIL 3340	Existentialism	3

Philosophy of Science Specialization

Students must take Philosophy of Science to complete the specialization.

Code	Title	Units
PHIL 3130	Philosophy of Science	3
Total Units		**3**

The Writing Intensive Seminar

Majors are encouraged to fulfill their writing intensive requirement by taking PHIL 3390 Philosophical Writing. *A philosophy major who does not take a Philosophy Writing Intensive seminar must take a fourth core course from any of the three core areas.* Students typically take Philosophical Writing during their junior year.

The course is offered *every fall* and is limited to 15 students. However, registration priority is given to philosophy majors and minors who have not yet completed their writing intensive requirements. Significant attention is devoted to conceiving, researching, writing, revising, critiquing and presenting philosophical essays. Prerequisite of the course is having completed one course in philosophy.

Upper-Level Requirement

Majors are required to have at least 6 units of 4000-level courses. The list of courses that will satisfy the requirement are listed below.

Code	Title	Units
PHIL 4100	Formal Methods for Philosophy	3
PHIL 4120	Advanced Epistemology	3
PHIL 4130	Advanced Metaphysics	3
PHIL 4180	Topics in Advanced Philosophy of Science	3
PHIL 4230	Topics in Ethics	3
PHIL 4240	Metaethics	3
PHIL 4250	Normative Ethical Theory	3
PHIL 4280	Topics in Philosophy of Feminism	3
PHIL 4311	Aesthetics	3
PHIL 4321	Advanced Social and Political Philosophy	3
PHIL 4340	Plato	3
PHIL 4350	Hellenistic Philosophy	3
PHIL 4370	Continental Rationalism	3
PHIL 4380	17th & 18th Century British Philosophy	3
PHIL 4420	Kant's Critique of Pure Reason	3
PHIL 4460	Topics in the History of Philosophy	3
PHIL 4490	History of Analytic Philosophy	3
PHIL 4500	Topics in Analytic Philosophy	3

Capstone Requirement

All Philosophy of Science majors are required to complete a capstone experience by taking PHIL 3990 Philosophy Capstone Course.

Please note that the capstone course is *only* offered in the spring semester. Students will need to plan their class schedules accordingly. Only philosophy majors with senior standing may take this course, and preference is given to students not pursuing Honors. The course will draw together a variety of different philosophical areas.

Philosophy Major, Philosophy Research Specialization

Program Requirements

- **Total Units Required:** 33 units
  - At least 24 units must be at the 3000 level, which includes core courses
  - At least 6 units must be at the 4000 level
    - No more than 3 units of credit in PHIL 4998 or PHIL 5000 Independent Work can be counted toward the 6 units of 4000-level coursework.
- **Grade Requirement:** C- or above; Pass/No Pass grades cannot count toward the major.

The Philosophy Research Specialization is especially recommended for students who plan to pursue graduate studies and an advanced degree in philosophy, which is a must for anyone interested in a career as a university or college philosophy teacher. It will give the student a broad background in philosophy, which is a competitive advantage when applying to graduate programs in the field.

Requirements

Introduction Requirement

Majors must complete the philosophy introductory course listed below.

Code	Title	Units
PHIL 1000	Logic and Critical Analysis	3
Total Units		**3**

Core Area Requirements

Majors must complete at least two courses (6 units) in each of the three core areas:

1. Contemporary Language, Epistemology, Mind & Metaphysics
2. Historical Philosophy
3. Value Theory

No course can count toward more than one core area requirement. The courses that will satisfy each core area are listed below.

Contemporary Language, Epistemology, Mind & Metaphysics (6 units):

Code	Title	Units
PHIL 3000	Philosophy of Medicine	3
PHIL 3020	Philosphy of Language	3
PHIL 3091	Theory of Knowledge	3
PHIL 3100	Philosophy of Mind	3
PHIL 3110	Mind and Morals	3
PHIL 3130	Philosophy of Science	3
PHIL 3140	Philosophy of Biology	3
PHIL 3150	Philosophy of Religion	3
PHIL 3250	Introduction to Metaphysics	3
PHIL 3320	Art and the Mind-Brain	3

Historical Philosophy (6 units):

Code	Title	Units
CLASSICS 3800	Ancient Greek and Roman Medicine	3
PHIL 3240	Ancient Philosophy	3
PHIL 3260	Descartes to Hume	3
PHIL 3290	Kant and 19th-Century Philosophy	3
PHIL 3300	Conceptual Foundation of Modern Science	3
PHIL 3340	Existentialism	3

Value Theory (6 units):

Code	Title	Units
PHIL 3110	Mind and Morals	3
PHIL 3160	Classical Ethical Theories	3
PHIL 3170	Feminist Philosophy	3
PHIL 3190	Philosophy of the Arts	3
PHIL 3200	Social and Political Philosophy	3
PHIL 3220	Issues in Applied Ethics	3
PHIL 3230	Philosophy of Law	3
PHIL 3310	Philosophy of Emotions	3
PHIL 3320	Art and the Mind-Brain	3
PHIL 4240	Metaethics	3
PHIL 4250	Normative Ethical Theory	3

Upper-Level Requirements

Majors are required to have at least 6 units of 4000-level courses. The list of courses that will satisfy the requirement are listed below.

Code	Title	Units
PHIL 4100	Formal Methods for Philosophy	3
PHIL 4120	Advanced Epistemology	3
PHIL 4130	Advanced Metaphysics	3
PHIL 4180	Topics in Advanced Philosophy of Science	3
PHIL 4230	Topics in Ethics	3
PHIL 4240	Metaethics	3
PHIL 4250	Normative Ethical Theory	3
PHIL 4280	Topics in Philosophy of Feminism	3
PHIL 4311	Aesthetics	3
PHIL 4321	Advanced Social and Political Philosophy	3
PHIL 4340	Plato	3
PHIL 4350	Hellenistic Philosophy	3
PHIL 4370	Continental Rationalism	3
PHIL 4380	17th & 18th Century British Philosophy	3
PHIL 4420	Kant's Critique of Pure Reason	3
PHIL 4460	Topics in the History of Philosophy	3
PHIL 4490	History of Analytic Philosophy	3
PHIL 4500	Topics in Analytic Philosophy	3

The Writing Intensive Seminar

Majors are encouraged to fulfill their writing intensive requirement by taking PHIL 3390 Philosophical Writing. *A Philosophy major who does not take a Philosophy writing intensive seminar must take a fourth core course from any of the three core areas.* Students typically take Philosophical Writing during their junior year.

The course is offered *every fall* and is limited to 15 students. However, registration priority is given to Philosophy majors and minors who have not yet completed their writing intensive requirements. Significant attention is devoted to conceiving, researching, writing, revising, critiquing and presenting philosophical essays. Prerequisite of the course is having completed one course in philosophy.

Capstone Experience

All Philosophy majors are required to complete a capstone experience either by writing an honors thesis PHIL 4998 or by taking PHIL 3990 Philosophy Capstone Course.

Capstone Course

Please note that the capstone course is *only* offered in the spring semester. Students will need to plan their class schedules accordingly. Only Philosophy majors with senior standing may take this course, and preference is given to students not pursuing Honors. The course will draw together a variety of different philosophical areas.

Senior Honors Thesis

The Honors Thesis is a two-semester course PHIL 4998 taken during a student's senior year. Students will apply in the spring of their junior year. To qualify, students must meet the following:

- Must have a minimum philosophy major GPA of 3.5
- Must have a minimum GPA of at 3.5 in 3000 and 4000-level philosophy courses
- Must have a minimum overall GPA of 3.65

Students must have the agreement of a faculty member to serve as their thesis advisor. For important additional information regarding Senior Honors, please visit the Department of Philosophy's Undergraduate Honors webpage.

Additional Information

- No course can count toward more than one requirement.
- The department does not typically count summer courses toward the major.

Study Abroad

The department has special study abroad arrangements with University College, London; King's College, London; Trinity College, Dublin (Ireland); Sussex University (U.K.); Utrecht University (the Netherlands); and the University of Auckland (New Zealand). Information about study abroad and specific overseas programs is available on the Department of Philosophy's Study Abroad page. Philosophy majors interested in studying abroad are strongly encouraged to meet with Philosophy's Director of Undergraduate Studies prior to going abroad.

The Department of Philosophy does not typically count study abroad courses toward 4000-level courses. Majors will be expected to satisfy their core distribution requirements with courses taken at Washington University.

Philosophy Minor

Program Requirements

- **Total units required:** 18 units
  - 9 units must be at the 3000 level
  - 3 units must be at the 4000 level
- **Grade Requirement:** C- or better; Pass/No Pass grades do not count toward the minor requirements

Required Courses

Philosophy minors are required to complete 3 units from each of the following core areas:

1. Contemporary Language, Epistemology, Mind & Metaphysics Philosophy
2. Historical Philosophy
3. Value Theory

The courses that satisfy each core area are listed below. A course cannot count towards more than one core area requirement, and the courses must be taken at Washington University.

Contemporary Language, Epistemology, Mind & Metaphysics Philosophy (3 Units)

Code	Title	Units
PHIL 3000	Philosophy of Medicine	3
PHIL 3020	Philosophy of Language	3
PHIL 3091	Theory of Knowledge	3
PHIL 3100	Philosophy of Mind	3
PHIL 3110	Mind and Morals	3
PHIL 3130	Philosophy of Science	3
PHIL 3140	Philosophy of Biology	3
PHIL 3150	Philosophy of Religion	3
PHIL 3250	Introduction to Metaphysics	3
PHIL 3310	Philosophy of Emotions	3
PHIL 3320	Art and the Mind-Brain	3

Historical Philosophy (3 Units)

Code	Title	Units
CLASSICS 3800	Ancient Greek and Roman Medicine	3
PHIL 3240	Ancient Philosophy	3
PHIL 3260	Descartes to Hume	3
PHIL 3290	Kant and 19th-Century Philosophy	3
PHIL 3300	Conceptual Foundations of Modern Science	3
PHIL 3340	Existentialism	3

Value Theory (3 Units)

Code	Title	Units
PHIL 3110	Mind and Morals	3
PHIL 3160	Classical Ethical Theories	3
PHIL 3170	Feminist Philosophy	3
PHIL 3190	Philosophy of the Arts	3
PHIL 3200	Social and Political Philosophy	3
PHIL 3220	Issues in Applied Ethics	3
PHIL 3230	Philosophy of Law	3
PHIL 3310	Philosophy of Emotions	3
PHIL 3320	Art and the Mind-Brain	3

Elective Courses

Philosophy minors must complete 9 units of elective Philosophy courses.

Additional Information

- Minors are encouraged to take the writing-intensive course PHIL 3390.
- Please note that the summer courses do not count toward the Philosophy minor.
- Please note that Study Abroad courses will not count toward the 4000-level course requirement.

Phone: 314-935-6670
Email: philosophy@wustl.edu
Website: http://philosophy.artsci.wustl.edu

Philosophy of Science Minor

Program Requirements

- **Total Units Required:** 18 units
  - 12 units must be taken at the 3000 level or higher
  - 3 units must be taken at the 4000 level
- **Grade Requirement:** C- or better; Pass/No Pass grades do not count toward the minor requirements.

Required Courses

Philosophy of Science Specialization

Students must take the courses listed below to complete the philosophy of science specialization.

Code	Title	Units
PHIL 1000	Logic and Critical Analysis	3
PHIL 1010	Introduction to Scientific Reasoning	3
PHIL 3130	Philosophy of Science	3
Total Units		**9**

Core Requirements

Students must also complete 3 units from each of the following two core areas:

1. Contemporary Language, Epistemology, Mind & Metaphysics
2. History of Philosophy

The courses that will satisfy each core area are listed below. Courses cannot count toward more than one core area requirement.

Contemporary Language, Epistemology, Mind & Metaphysics (3 units)

Code	Title	Units
PHIL 3000	Philosophy of Medicine	3
PHIL 3020	Philosophy of Language	3
PHIL 3091	Theory of Knowledge	3
PHIL 3100	Philosophy of Mind	3
PHIL 3110	Mind and Morals	3
PHIL 3140	Philosophy of Biology	3
PHIL 3150	Philosophy of Religion	3
PHIL 3250	Introduction to Metaphysics	3
PHIL 3310	Philosophy of Emotions	3
PHIL 3320	Art and the Mind-Brain	3

History of Philosophy (3 Units)

Code	Title	Units
CLASSICS 3800	Ancient Greek and Roman Medicine	3
PHIL 3240	Ancient Philosophy	3
PHIL 3260	Descartes to Hume	3
PHIL 3290	Kant and 19th-Century Philosophy	3
PHIL 3300	Conceptional Foundations of Modern Science	3
PHIL 3340	Existentialism	3

Upper-Level Courses

Students must take 3 units of 4000-level philosophy courses.

Code	Title	Units
PHIL 4100	Formal Methods for Philosophy	3
PHIL 4120	Advanced Epistemology	3
PHIL 4130	Advanced Metaphysics	3
PHIL 4180	Topics in Advanced Philosophy of Science	3
PHIL 4230	Topics in Ethics	3
PHIL 4240	Metaethics	3
PHIL 4250	Normative Ethical Theory	3
PHIL 4280	Topics in Philosophy Feminism	3
PHIL 4311	Aesthetics	3
PHIL 4321	Advanced Social and Political Philosophy	3
PHIL 4340	Plato	3
PHIL 4350	Hellenistic Philosophy	3
PHIL 4370	Continental Rationalism	3
PHIL 4380	17th & 18th Century British Philosophy	3
PHIL 4420	Kant's Critique of Pure Reason	3
PHIL 4460	Topics in the History of Philosophy	3
PHIL 4490	History of Analytic Philosophy	3
PHIL 4500	Topics in Analytic Philosophy	3

Philosophy-Neuroscience-Psychology

Philosophy-Neuroscience-Psychology (PNP) is an interdisciplinary program that provides an opportunity to examine the mind from multiple perspectives. Students who choose to major in PNP will learn to bring some of the newest findings in science to bear on some of the oldest questions in philosophy; they will also see new questions emerge and learn to pursue those questions as well. They will consider questions like the following: Is the mind–brain a single entity, or does having a mind involve something over and above the activity of a brain? What assumptions are made by cognitive psychologists when they divide mental activity into separate processes and use response times or other measures of task performance to describe those processes? What assumptions are made by neuroscientists when they use imaging techniques to determine where in the brain a cognitive process is carried out? What are we to make of Chomsky's claim that language is an innate mental organ designed to generate an infinite number of sentences? PNP majors will seek answers to such questions in courses offered by PNP and PNP's affiliated departments.

- Philosophy-Neuroscience-Psychology Major, Language Cognition and Culture Concentration (p. 783)

Minors

- Philosophy-Neuroscience-Psychology Minor (p. 785)

Courses

PNP 1200 Ampersand: Intro to the Study of the Mind-Brain: Psychological, Biological, & Philosophical Perspectives

A consideration of three primary areas of research in cognitive science: attention, memory, and language. These topics are used to illustrate the techniques by which mental abilities are investigated and explained in psychology and neuroscience: the focus, in particular, is on the use of reaction time studies, brain imaging, and cell recordings to isolate the basic components that make up complex functions. In addition to the central concepts and theories in each area, the course will address philosophical implications of this research concerning how the mind and brain are related, how the mind-brain encodes or represents information, and the nature of consciousness. And there will be an emphasis on applying these findings to important problems, such as Alzheimer's disease and deficits due to brain damage. The class is taught by three members of the faculty from different disciplines and combines a whole-group lecture with small discussion classes. The goal is to give students a good understanding of the interdisciplinary nature of cognitive science and to help them develop the ability to think and write critically about scientific research into the mind-brain. Prerequisite: admission to the Hewlett Program in the Study of the Mind-Brain. This course is for first-year (non-transfer) students only. Students who are not first-year students will be unenrolled from this course.

Credit 3 units. A&S IQ: NSM Art: NSM BU: BA

Typical periods offered: Fall

PNP 1201 Ampersand: Intro to the Study of the Mind Brain II

In this course, participants in the Mind, Brain and Behavior Program (formerly known as Hewlett Mind-Brain program) will continue their exploration of cognitive science. We will explore different frameworks for thinking about how the different branches of cognitive science relate to each other. The course will contain an introduction to relevant topics in the philosophy of science and the philosophy of mind.

Credit 3 units.

Typical periods offered: Spring

PNP 1500 Ampersand: The Mind: What Makes US and Other Perspectives on Consciousness

This course explores how consciousness is created in the brain and body. This course will integrate biological, psychological, and philosophical perspectives to investigate the nature of the mind. Utilizing an experiential approach, we will study how perception-action links give rise to consciousness and shape our subjective understanding of the world. Concepts will include sensory-motor integration, spatial and temporal awareness, sense of self and sense of agency. Students will gain a broad understanding of both historical milestones in the development of enactivism and current experimental techniques enabling research into perception, embodiment, presence, virtual and augmented reality, and the neural correlates of consciousness. This course is for first-year, non-transfer students only.

Credit 3 units. A&S IQ: SSC

Typical periods offered: Fall

PNP 1996 Philosophy-Neuroscience-Psychology Elective

Credit 0 units.

PNP 2000 Introduction Cognitive Science

We will seek to understand the mind-brain by integrating findings from several of the cognitive sciences, including philosophy, psychology, neuroscience, linguistics, anthropology, and artificial intelligence. This course will consider multiple perspectives on such topics as mental imagery, concepts, rationality, consciousness, emotion, language, thought, memory, attention, and machine intelligence. Prerequisite: completion of at least one of the following courses: Psych 100B, Phil 120F, Phil 125C, Biol 296A, MBB 120A or Ling 170D.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

Typical periods offered: Fall, Spring

PNP 2010 Inquiry in the Cognitive Sciences

Understanding the mind-brain involves orchestrating a variety of conceptual tools and modes of inquiry from the cognitive sciences. This course offers a hands-on introduction to a variety of research tactics used in the behavioral and biological sciences and emphasizes the advantages of combining them. For example, neuroimaging can enhance the interpretation of experiments by cognitive psychologists, and modeling can be used to simulate and understand the effects of brain lesions. Prerequisite: completion of at least one of the following courses: Psych 100B, Phil 120F, Phil 125C, Biol 296A, MBB 120 or Ling 170D.

Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI

Typical periods offered: Fall, Spring

PNP 2900 Research in the Mind, Brain, and Behavior

An introduction to research for students in the Mind, Brain and Behavior program (formerly known as Hewlett Program). Students work under the supervision of a mentor. Prerequisite: admission to the Mind, Brain and Behavior program, completion of MBB/PNP 122, and permission of the mentor.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

Typical periods offered: Spring

PNP 2996 Philosophy-Neuroscience-Psychology Elective

This course is for transfer credit.

Credit 0 units.

Typical periods offered: Fall, Spring

PNP 3500 PNP Reading Class

Each time this course is offered a book will be selected that does an exemplary job of bringing together insights and results from multiple disciplines in targeting an important topic. We will read and discuss the book and possibly a small amount of supplementary reading. A short presentation and paper will be required. Prerequisite: PNP Major standing

Credit 2 units. A&S IQ: SSC EN: S

Typical periods offered: Fall, Spring

PNP 3996 Philosophy-Neuroscience-Psychology Elective

This course is for transfer credits.

Credit 0 units.

Typical periods offered: Fall, Spring

PNP 4020 The Physiology and Biophysics of Consciousness

This course will explore the questions surrounding the search to understand the biophysical substrate of consciousness. Some areas to be explored: 1. Can consciousness be addressed like any other biological property in the sense that it has evolved by natural selection and that some elements of it are present in simple model systems, such as the fruit fly? Can insight be gained studying simple model systems? 2. Where in the brain is consciousness? What is the pattern of neurological events that occurs during consciousness? Is brain activity generating consciousness localized or distributed? Does it involve interacting brain regions? Does brain activity generating consciousness migrate to different brain regions? 3. How does the dynamic core hypothesis of Edelman relate to these questions? What can functional brain imaging add to these questions? Are Gamma waves involved in higher mental activity, and do they promote synchronized firing of neurons from different brain areas? How does this relate to the binding problem? 4. How does the brain's ability to function as a computer

relate to consciousness? In many respects the brain functions as a computer using electrical signals called Action Potentials. Action potentials in neuronal networks function in an analogous was as DC electrical impulses function in computer circuits. What is the output of computation in an electrical device? What are the theoretical limitations regarding what computation can achieve and ask whether electrical activity in the brain also has a fundamentally different purpose in addition to computation. 5. Is our knowledge of the physical world too primitive and incomplete to understand consciousness? The brain is an electronic device and consciousness clearly depends on its electrical activity. Yet, electrical forces are poorly understood, both in the context of classical physics and quantum physics. Will understanding consciousness have to wait for a unified theory that more accurately describes electrical forces? Prerequisites: Bio3411 or equivalent. College level physics, Some knowledge of computers.
Credit 2 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall, Spring

PNP 4380 Cognition and Computation
This course introduces students to some of the key frameworks for thinking about the mind in computational terms. We will be looking at some basic topics in the theory of computation, in addition to considering philosophical issues raised by computational models of cognitive processes. This course is required for graduate students in the PNP Ph.D. program. Prerequisites: At least two 400-level PNP courses crosslisted in Philosophy.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall, Spring

PNP 4500 PNP Seminar
Subject varies per semester. Not always offered as writing intensive, refer to individual semester listing. Prerequisite: A 300 level Philosophy course (Phil/PNP 315 is recommended); and PNP Major standing or approval of Instructor.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall, Spring

PNP 4510 PNP Seminar
Subject varies each semester. Prerequisites: One 300-level philosophy course (Phil 315 or PNP 315 is recommended) as well as PNP major standing or approval of instructor.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall, Spring

PNP 4520 PNP Seminar: Writing-Intensive
Subject varies per semester. Fulfills Writing Intensive (WI) requirement. Prerequisite: A 300 level Philosophy course (Phil/PNP 315 is recommended); and PNP Major standing or approval of Instructor.
Credit 3 units. A&S IQ: SSC, WI EN: S
Typical periods offered: Fall, Spring

PNP 4996 Philosophy-Neuroscience-Psychology Elective
This course is for transfer credit.
Credit 0 units.
Typical periods offered: Fall, Spring

PNP 4997 Independent Work
Prerequisite: Must be a PNP major/minor; minimum of last semester Junior standing and written permission; Please see the website for details: http://pnp.artsci.wustl.edu/node/478 Credit variable; max 6 units. A maximum of 3 units may be applied toward upper division credits required for the major. Contact the department for further details.
Credit 6 units.
Typical periods offered: Fall, Spring

PNP 4998 Study for Honors
Prerequisite: Senior standing, a grade point average of 3.50 overall, and permission of the department.
Credit 3 units. EN: S
Typical periods offered: Fall, Spring

Philosophy-Neuroscience-Psychology Major, Cognitive Neuroscience Concentration

Program Requirements

- **Total Units Required:**
  - Primary majors: 29-32 units
  - Secondary majors: 24-26 units
- **Grade Requirement:** C- or above; Pass/No Pass grades do not count toward the major requirements

Prerequisites

Several courses that are either required for this major or can satisfy requirements for it have prerequisites, which are not included in the major's list of requirements or counted in the its total units required. Students are strongly encouraged to review the course description of all courses they need or would like to take to confirm what prerequisites are needed, and plan accordingly to fulfill them.

The most commonly needed prerequisites are listed below, but it is not comprehensive.

Code	Title	Units
BIOL 2160	Principles of Biology I	3
PHIL 1000	Logic and Critical Analysis	3
PSYCH 1000	Introduction to Psychology	3
PSYCH 3401	Biological Psychology	3

Required Courses

Introductory Requirements

Students must choose one of the following two introductory sequences:

1. Philosophy-Neuroscience-Psychology Sequence (PNP)
2. Mind, Brain, Behavior Sequence (MBB)

Philosophy-Neuroscience-Psychology Sequence

Code	Title	Units
PNP 2000	Introduction to Cognitive Science	3
PNP 2010 Inquiry in the Cognitive Sciences **or** PSYCH 3010 Experimental Psychology		3-4
Total Units		**6-7**

Mind, Brain, Behavior Sequence

Code	Title	Units
PNP 1200	Introduction to the Study of the Mind-Brain	3
PNP 1201 Introduction to the Study of the Mind-Brain II **or** PNP 2000 Introduction to Cognitive Science		3
Total Units		**6**

Core Area Requirements

Majors must complete at least 6 units at the 3000 level or above for the two following core areas:

1. Philosophy
2. Psychological & Brain Sciences

Philosophy Core Area (6 units)

Students must complete one of the following courses:

Code	Title	Units
PHIL 3020 Philosophy of Language **or** PHIL 3100 Philosophy of Mind		3
Total Units		**3**

Students may choose a course from the following list to satisfy the remaining course.

Code	Title	Units
MUSIC 3300	Music Cognition	3
PHIL 3000	Philosophy of Medicine	3
PHIL 3020	Philosophy of Language	3
PHIL 3091	Theory of Knowledge	3
PHIL 3100	Philosophy of Mind	3
PHIL 3110	Mind and Morals	3
PHIL 3130	Philosophy of Science	3
PHIL 3140	Philosophy of Biology	3
PHIL 3190	Philosophy of Arts	3
PHIL 3250	Introduction to Metaphysics	3
PHIL 3260	Descartes to Hume	3
PHIL 3300	Conceptual Foundations of Modern Science	3
PHIL 3310	Philosophy of Emotions	3
PHIL 3320	Art and the Mind-Brain	3
PHIL 3390	Philosophical Writing	3
PHIL 4120	Advanced Epistemology	3
PHIL 4130	Advanced Metaphysics	3
PHIL 4180	Topics in Advanced Philosophy of Science	3
PNP 4380	Coginition and Computation	3
PNP 4500	PNP Seminar	3
PNP 4510	PNP Seminar	3

Psychological & Brain Sciences

Students must complete one of the following courses*:

Code	Title	Units
PSYCH 3600 Cognitive Psychology **or** PSYCH 4330 Psychology of Language		3
Total Units		**3**

* If the student has completed FYP 1380 with a grade of B- or higher, they will not need to take either of the above courses.

Students may choose a course from the following list to satisfy the remaining course.

Code	Title	Units
ANTHRO 3235	The Biological Basis of Human Behavior	3
PNP 4500	PNP Seminar	3
PSYCH 3000	Introduction to Psychological Statistics	3
PSYCH 3010	Experimental Psychology	3
PSYCH 3096	Psychological Dynamics of Empathy	3
PSYCH 3150	Introductionto Social Psychology	3
PSYCH 3210	Developmental Psychology	3
PSYCH 3260	Introduction to the Psychology of Aging	3
PYSCH 3300	Sensation and Perception	3
PSYCH 3401	Biological Psychology	3
PSYCH 3450	Genes, Environment, and Human Behavior	3
PSYCH 3530	Psychology of Personality	3
PSYCH 3540	Psychopathology and Mental Health	3
PSYCH 3570	Introduction to Clinical Psychology	3
PSYCH 3580	Language Acquisition	3
PSYCH 3600	Cognitive Psychology	3
PSYCH 3800	Human Learning and Memory	3
PSYCH 4182	Perception, Thought, and Action	3
PSYCH 4330	Psychology of Language	3
PSYCH 4631	Introduction to Computational Cognitive Science	3
PSYCH 4651	History of Modern Systems of Psychology	3

Cognitive Neuroscience Specialization

Students must take the following two courses to complete the specialization.

Code	Title	Units
BIOL 3411	Principles of the Nervous System	3
PSYCH 3604	Cognitive Neuroscience	3
Total Units		**6**

Capstone Requirement

The capstone is required for primary majors, and recommended for secondary majors. Students that meet the criteria may choose to apply to complete an honors thesis project for their capstone.

Capstone Experience

Students can choose one of the following options to fulfill the 5 units needed for their capstone experience. Students who would like to do the independent study will need to complete the application steps on PNP's Independent Study webpage.

PNP Seminar

Code	Title	Units
PNP 4500 PNP Seminar **or** PNP 4510 PNP Seminar		3
PNP 3500	PNP Reading Class	2
Total Units		**5**

Independent Study

Code	Title	Units
PNP 3500	PNP Reading Class	2
PNP 4997	Independent Work	3
Total Units		**5**

Senior Honors Thesis

The Honors Thesis is a two-semester course PNP 4998 Study for Honors (6 units) taken during the student's Senior year. Students who wish to pursue the honors thesis will need to meet the criteria listed on PNP's Honors webpage and submit an application the semester preceding the one they plan to take PNP 4998.

Students will be enrolled in PNP 4998 if their application is approved by the Honors Coordinator and they meet the criteria. Please visit the Honors webpage for more information.

Additional Information

- A course cannot count towards more than one major requirement.
- Up to 6 units can be transferred from other institutions and/or study abroad

Study Abroad

The PNP program offers several different study abroad opportunities for students. For details, please visit PNP's Study Abroad page and contact the PNP Study Abroad Advisor with any questions.

PNP 1201	Introduction to the Study of the Mind-Brain II	3
Total Units		**6**

Core Area Requirements

Students must complete at least 6 units at the 3000 level or above for the two following core areas:

1. Philosophy
2. Psychological & Brain Sciences

Philosophy

Students must complete one of the following courses:

Code	Title	Units
PHIL 3020 Philosophy of Language **or** PHIL 3100 Philosophy of Mind		3
Total Units		**3**

The remaining course will be satisfied by any course from the following list:

Code	Title	Units
MUSIC 3300	Music Cognition	3
PHIL 3000	Philosophy of Medicine	3
PHIL 3020	Philosophy of Language	3
PHIL 3091	Theory of Knowledge	3
PHIL 3100	Philosophy of Mind	3
PHIL 3110	Mind and Morals	3
PHIL 3130	Philosophy of Science	3
PHIL 3140	Philosophy of Biology	3
PHIL 3190	Philosophy of the Arts	3
PHIL 3250	Introduction to Metaphysics	3
PHIL 3260	Descartes to Hume	3
PHIL 3300	Conceptual Foundations of Modern Science	3
PHIL 3310	Philosophy of Emotions	3
PHIL 3320	Art and the Mind-Brain	3
PHIL 3390	Philosophical Writing	3
PHIL 4065	Advanced Philosophy of Language	3
PHIL 4120	Advanced Epistemology	3
PHIL 4130	Advanced Metaphysics	3
PHIL 4180	Topics in Advanced Philosophy of Science	3
PNP 4380	Cognition and Computation	3
PNP 4500	PNP Seminar	3
PNP 4510	PNP Seminar	3

Psychological & Brain Sciences

Students make complete one of the following two courses*:

Code	Title	Units
PSYCH 3600 Cognitive Psychology **or** PSYCH 4330 Psychology of Language		3
Total Units		**3**

* If the student has completed FYP 1380 with a grade of B- or higher, they will not need to take either of the above courses.

Students must choose a course from the following list:

Code	Title	Units
ANTHRO 3235	The Biological Basis of Human Behavior	3
PNP 4500	PNP Seminar	3
PSYCH 3000	Introduction to Psychological Statistics	3
PSYCH 3010	Experimental Psychology	3
PSYCH 3096	Psychological Dynamics of Empathy	3
PSYCH 3150	Introduction to Social Psycholgy	3
PSYCH 3210	Developmental Psychology	3
PSYCH 3260	Introduction to the Psychology of Aging	3
PSYCH 3300	Sensation and Perception	3
PSYCH 3401	Biological Psychology	3
PSYCH 3450	Genes, Environment, and Human Behavior	3
PSYCH 3530	Psychology of Personality	3
PSYCH 3540	Psychopathology and Mental Health	3
PSYCH 3570	Introduction to Clinical Psycholgy	3
PSYCH 3580	Language Acquisition	3
PSYCH 3600	Cognitive Psychology	3
PSYCH 3610	Psychology of Learning	3
PSYCH 3800	Human Learning and Memory	3
PSYCH 4182	Perception, Thought, and Action	3
PSYCH 4330	Psychology of Language	3
PSYCH 4631	Introduction to Computational Cognitive Science	3
PSYCH 4651	History and Modern Systems of Psychology	3

Language, Cognition, and Culture Specialization

Students must complete at least two courses at the 3000 level or above from the list below to complete the Language, Cognition, and Culture Specialization.

Code	Title	Units
ANTHRO 3235	The Biological Basis of Human Behavior	3
ANTHRO 3383	Cognition and Culture	3
ANTHRO 3386	Language, Culture and Society	3
ANTHRO 3660	Primate Ecology, Biology, and Behavior	3
ANTHRO 3661	Primate Biology	3
ANTHRO 4046	Primate Ecology and Social Structure	3
ANTHRO 4191	Primate Cognition	3
APL 4111	Linguistics and Language Learning	3
DRAMA 4141	Topics in Embodied Communication	3
LING 3050	Phonetics	3
LING 3075	Introduction to Sociolinguistics	3
LING 3150	Syntactic Analysis	3
LING 3185	Linguistic Diversity in the United States	3
LING 3250	Intro to Computational Linguistics	3
LING 3350	Phonological Analysis	3
LING 3550	Historical and Comparative Linguistics	3
LING 3450	Introduction to Semantics	3
LING 3525	Linguistics Seminar	3
LING 4062	Second Language Acquisition	3
PHIL 3020	Philosophy of Language	3
PHIL 4065	Advanced Philosophy of Language	3
PSYCH 3580	Language Acquisition	3
PSYCH 4099	Human Evolutionary Psychology	3
PSYCH 4330	Psychology of Language	3
PSYCH 4631	Intro to Computational COG Modeling	3
SPAN 3202	Debating Cultures: How Spanish Works	3
SPAN 3700	Intro to Hispanic Linguistics	3
SPAN 4160	Intro to Hispanics and Linguistics	3
SPAN 4670	Grammar and Vocabulary Acquisition	3

Capstone Requirement

The capstone is required for primary majors, and recommended for secondary majors. Students that meet the criteria may choose to apply to complete an honors thesis project for their capstone.

Capstone Experience

Students can choose one of the following options to fulfill the 5 units needed for their capstone experience. Students who would like to do the independent study option will need to complete the application steps on PNP's Independent Study webpage.

PNP Seminar

Code	Title	Units
PNP 4500 PNP Seminar **or** PNP 4510 PNP Seminar		3
PNP 3500	PNP Reading Class	2
Total Units		**5**

Independent Study

Code	Title	Units
PNP 3500	PNP Reading Class	2
PNP 4997	Independent Study	3
Total Units		**5**

Senior Honors Thesis

The Honors Thesis is a two-semester course PNP 4998 Study for Honors (6 units) taken during the student's Senior year. Students who wish to pursue the honors thesis will need to meet the criteria listed on PNP's Honors webpage, and submit an application the semester preceding the one they plan to take PNP 4998.

Students will be enrolled in PNP 4998 if their application is approved by the Honors Coordinator and they meet the criteria. Please visit the Honors webpage for more information.

Additional Information

- A course cannot count towards more than one major requirement.
- Up to 6 units can be transferred from other institutions and/or study abroad

Study Abroad

The PNP program offers several different study abroad opportunities for students. For details, please visit PNP's Study Abroad page and contact the PNP Study Abroad Advisor with any questions.

Philosophy-Neuroscience-Psychology Minor

Program Requirements

- **Total Units Required:** 15 units; 9 of the 15 units must be at the 3000 level or above
- **Grade Requirement:** C- or above; Pass/No Pass grades do not count toward the minor requirements

Prerequisites

Several courses that are either required for this minor or can satisfy requirements for it have prerequisites, which are not included in the minor's list of requirements or counted in the its total units required. Students are strongly encouraged to review the course description of all courses they need or would like to take to confirm what prerequisites are needed, and plan accordingly to fulfill them.

The most commonly needed prerequisites are listed below, but it is not comprehensive.

Code	Title	Units
BIOL 2160	Principles of Biology I	3
PHIL 1000	Logic and Critical Analysis	3
PSYCH 1000	Introduction to Psychology	3
PSYCH 3401	Biological Psychology	3

Required Courses

Introductory Requirement

Students must complete at least 6 units of introductory courses. Students may choose one of the following two sequences:

1. Philosophy-Neuroscience-Psychology Sequence (PNP)
2. Mind, Brian, Behavior Sequence (MBB)

PNP Sequence

Code	Title	Units
PNP 2000	Introduction to Cognitive Science	3
PNP 2010	Inquiry in the Cognitive Sciences	3-4
or PSYCH 3010	Experimental Psychology	
Total Units		**6-7**

Mind, Brain, Behavior Sequence

Code	Title	Units
PNP 1200	Amp: Intro to Study of the Mind-Brian	3
PNP 1201	Amp: Intro to Study of the Mind-Brain II	3
Total Units		**6**

Philosophy Requirement

Students must complete 3 units of Philosophy courses from the list below.

Code	Title	Units
PHIL 3020	Philosophy of Language	3
or PHIL 3100	Philosophy of Mind	
Total Units		**3**

Neuroscience Requirement

Students must complete 3 units of Neuroscience courses listed below.

Code	Title	Units
BIOL 3411	Principles of the Nervous System	3
or PSYCH 3604	Cognitive Neuroscience	
Total Units		**3**

Psychology Requirement

Students must complete 3 units of Psychology courses listed below.

Code	Title	Units
PSYCH 3600	Cognitive Psychology	3
or PSYCH 4330	Psychology of Language	
Total Units		**3**

Additional Information

- A course cannot count toward more than one minor requirement.
- Up to 6 units can be transferred from other institutions and/or study abroad.

Physics

Physics is the discipline that deals with the most fundamental aspects of our universe, such as the properties of atoms, nuclei, and elementary particles; the nature of the forces between them; and the collective behavior of atoms in solids, liquids, and gases. It deals with the entire universe, from its birth to its ultimate fate. At the same time, physics provides the tools that help us to understand extremely complex everyday things, like the behavior of sand piles, the strength of materials, or processes in the brain. Physics seeks to discover and understand the mathematical rules that govern the behavior of things. Its early successes in comprehending motion, thermodynamics, electricity and magnetism provided a foundation upon which other physical sciences have grown.

For students planning a career in science and technology or intending to pursue graduate studies in physics, astronomy, Earth sciences, environmental sciences, medical physics, meteorology, or oceanography, a major in physics provides a solid foundation. The program is sufficiently flexible to allow students to combine a physics major with a second major in chemistry, mathematics, or engineering;

with pre-medical studies; or with other disciplines in the humanities and social sciences. In addition to the fundamentals of physics, the program is designed to give students a broad range of skills in laboratory techniques, critical thinking, computer use, and teamwork, which will serve them well in their chosen careers. In consultation with a faculty advisor, students may design a program of study to meet individual goals and interests. Physics majors are strongly encouraged to participate in physics research projects directed by faculty members.

Introductory Physics: The PHYSICS 1740–PHYSICS 1742 and PHYSICS 1741–PHYSICS 1743 sequence is a calculus-based introduction to physics intended for adequately prepared students interested in majoring in science or engineering or undertaking pre-medical studies. PHYSICS 1740 fulfills the requirements for the Sam Fox School. The sequence uses interactive, active-learning techniques. MATH 1510 is a corequisite, although previous or concurrent enrollment in MATH 1520 is strongly recommended.

Focused Physics: The PHYSICS 1760–PHYSICS 1762 sequence is an advanced calculus-based introduction to physics for students with previous or concurrent enrollment in MATH 1520. This sequence is particularly addressed to students considering a physics- or mathematics-heavy science or engineering major.

The department also offers several other courses of general interest to the nonscience student. In most cases, these courses have no prerequisites.

Research Professor
PhD, Stanford University
High energy astrophysics, compact objects

Zohar Nussinov
Professor
PhD, University of California, Los Angeles
Theoretical condensed matter physics

Michael C. Ogilvie
Professor Emeriti
PhD, Brown University
Theoretical particle physics

Maria Piarulli
Associate Professor
PhD, Old Dominion University
Theoretical nuclear physics

Olga Pravdivtseva
Research Associate Professor
PhD, Vernadsky Institute, Russian Academy of Sciences
Cosmochemistry, early solar system chronology

Karthik Ramanathan
Assistant Professor
PhD, University of Chicago
Astroparticle Physics

Sheng Ran
Assistant Professor
PhD, Iowa State University
Condensed matter and quantum materials

Brian Rauch
Research Associate Professor
PhD, Washington University
Cosmic ray astrophysics, neutrinos, gamma rays

James S. Schilling
Professor Emeriti
PhD, University of Wisconsin-Madison

Lee G. Sobotka
Joint Professor
PhD, University of California, Berkeley
(Chemistry)
Experimental nuclear physics

Stuart A. Solin
Professor Emeriti
PhD, Purdue University

Wai Mo Suen
Professor Emeriti
PhD, California Institute of Technology

Mikhail Tikhonov
Associate Professor
PhD, Princeton University
Microbiome, microbial ecology, and evolution

Xi Wang
Assistant Professor
PhD, Florida State University
Quantum Information and materials

Ralf Wessel
Professor
PhD, University of Cambridge
Biophysics

Clifford Will
Professor Emeriti
PhD, California Institute of Technology

Li Yang
Albert Gordon Hill Professor in Physics
PhD, Georgia Institute of Technology
Condensed matter theory and computational materials physics

Yajie Yuan
Assistant Professor
PhD, Stanford University
Theoretical high-energy astrophysics

Chuanwei Zhang
Professor
PhD, University of Texas at Austin
Quantum Information

Chong Zu
Assistant Professor
PhD, Tsinghua University
Atomic, molecular and optical physics; condensed matter; and quantum information

Majors

- Astrophysics Major (p. 796)
- Physics Major (p. 798)
- Physics Major, Biophysics Specialization (p. 799)

Minors

- Astrophysics and Astroparticle Physics Minor (p. 801)
- Biomedical Physics Minor (p. 802)
- Physics Minor (p. 803)

Courses

PHYSICS 1013 Basic Physics I
Credit 3 units.

PHYSICS 1014 Basic Physics II
Credit 3 units.

PHYSICS 1030 Principles and Practice of Physics
We will study and describe the motion of material objects, their symmetries and interactions, and the link with conservation/dissipation of certain quantities. While the concepts will be developed by focusing on concrete physical phenomena, the goal of the course is to provide a full appreciation of the logical structure underlying mechanics.
Credit 3 units. A&S IQ: NSM BU: SCI
Typical periods offered: Summer

PHYSICS 1100 First-Year Seminar: All About Black Holes
Black holes are the Universe's most extreme objects: they are so massive and compact that gravity bends space and time into a knot. The signature property of a black hole is that your can get in, but not out. In this first-year seminar, we discuss what is currently known about black holes, starting from Einstein's theories about space, time, and gravity, through the first observational evidence for black holes, to the latest images of the shadows cast by black holes taken with the largest telescopes on earth. This class is designed to bend your mind when figuring out why clocks run slower when approaching the edge of a black hole, what could be at the center of a black hole or even at the other side. At the same time, we will discuss the inner workings of the most advanced telescopes that astronomers have developed to study black holes, and the strategies astronomers employ to develop ever more sensitive instruments. Also expect a fair bit of astronomy in this class, when we discuss how black holes form, when and how they grow, and which roles they play in cosmic eco-systems such as the Milky Way Galaxy. This first-year seminar adopts a flipped class/socratic discussion structure. The students are asked to read a wide variety of texts, including texts from the current literature, and to present and to discuss some of the material in class. The class assumes no background in math; at the same time, we will discuss some of the math that brings Einstein's theories of space and time to life.
Credit 3 units. A&S IQ: NSM, AN Art: NSM
Typical periods offered: Fall

PHYSICS 1105 Hidden Figures in Physics
This seminar explores the lives and contributions of underrepresented physicists throughout history, highlighting their groundbreaking scientific achievements, the societal barriers they faced, and the basic physics concepts underpinning their work. Students will learn about foundational physics principles through the lens of these scientists' discoveries and personal stories while also examining the importance of diversity in STEM. The course includes interactive discussions, group activities, and reading assignments. Activities not completed in class will be assigned as homework. The course involves activities specifically focused on numerical literacy, where students work with datasets, analyze trends, and create visual representations. These activities ensure that students not only engage with the narratives of historical figures but also develop practical skills in applied numeracy to explore and present data-driven insights. The final project involves creating and presenting a poster on a physicist not covered in the course. This project serves at challenging students to conduct independent research, analyze the numerical or scientific context of the physicist's contributions, and connect their work to broader societal or historical themes.

Typical periods offered: Fall

PHYSICS 1210 Ampersand: Gateway Expeditions Into Exoplanets
Discovery and characterization of planets beyond our Solar System have transformed our view of the cosmos and our home planet, Earth. These alien worlds, referred to as exoplanets, are opportune cosmic laboratories for improving our understanding of the formation of planets and the origin of life. Many of these worlds are highly dissimilar to those in our Solar System, requiring significant paradigm shifts in modeling the physical processes that govern them. In line with this rigorous exploration, exoplanet research has recently become a significant branch of astrophysics. Gateway Expeditions into Exoplanets is a new introductory, non-calculus course that provides an introduction to exoplanets, covering their formation and evolution, diverse properties, and potential to support life. The course includes assignments and a class project featuring data analysis and modeling in exoplanet research, a student-led tournament between exoplanets called ExoCup, occasional Socratic discussions in an inverted classroom setting, and a trip to Yerkes Observatory to witness the history of developments in astronomy leading to the exoplanet revolution. The course will function as the first part of a new Ampersand Program, Gateway Expeditions into Exoplanets and Black Holes.
Credit 3 units. A&S IQ: NSM, AN
Typical periods offered: Fall

PHYSICS 1211 Ampersand: Gateway Expeditions Into Exoplanets II
Discovery and characterization of planets beyond our Solar System have transformed our view of the cosmos and our home planet, Earth. These alien worlds, referred to as exoplanets, are opportune cosmic laboratories for improving our understanding of the formation of planets and the origin of life. Many of these worlds are highly dissimilar to those in our Solar System, requiring significant paradigm shifts in modeling the physical processes that govern them. In line with this rigorous exploration, exoplanet research has recently become a significant branch of astrophysics. Gateway Expeditions into Exoplanets is a new introductory, non-calculus course that provides an introduction to exoplanets, covering their formation and evolution, diverse properties, and potential to support life. PHYSICS 1410 Peer Led Team Learning: Physics I
A 1-credit course that can only be taken concurrently with Physics 191. The purpose of the course is to encourage students to work in small groups, supervised by a mentor, on problems from the course that will enhance understanding. Students will enroll in PLTL through an online application, but have the option of signing up to take it for credit. They can drop the course at any time without penalty. Grading is Pass/Fail based on participation; a student must miss no more than two sessions to pass the course. In this course, student groups facilitated by a peer leader meet weekly and work together on a problem set building on topics covered in the parent course, with the aim of developing problem-solving, critical-thinking, and collaboration skills. Sign-ups for PLTL begin in Week 1 of the semester, with meetings beginning on the weekend of Week 2. Students must attend at least eight sessions during the semester to earn credit; those who do not reach the attendance threshold will be dropped from the course, and the course will be removed from their transcript. To receive credit for PLTL, a student must remain enrolled in the parent course. Please note the following exceptions to the enrollment and drop policy: (1) Students will not be able to enroll in PLTL if doing so would bring them above 21 credit units, but they will still be able to participate. (2) Students who wish to participate in PLTL but want to opt-out of receiving credit should contact their course's program manager. (3) If dropping PLTL would bring a student below 12 credit units, the drop will be entered as a withdrawal instead.
Credit 1 unit.
Typical periods offered: Fall

PHYSICS 1412 Peer Led Team Learning: Physics II
A one-credit course that can only be taken concurrently with Physics 192. The purpose of the course is to encourage students to work in small groups, supervised by a mentor, on problems from the course that will enhance understanding. Students will enroll in PLTL through an online application, but have the option of signing up to take it for credit. They can drop the course at any time without penalty. Grading is Pass/Fail based on participation; a student must miss no more than two sessions to pass the course. In this course, student groups facilitated by a peer leader meet weekly and work together on a problem set building on topics covered in the parent course, with the aim of developing problem-solving, critical-thinking, and collaboration skills. Sign-ups for PLTL begin in Week 1 of the semester, with meetings beginning on the weekend of Week 2. Students must attend at least eight sessions during the semester to earn credit; those who do not reach the attendance threshold will be dropped from the course, and the course will be removed from their transcript. To receive credit for PLTL, a student must remain enrolled in the parent course. Please note the following exceptions to the enrollment and drop policy: (1) Students will not be able to enroll in PLTL if doing so would bring them above 21 credit units, but they will still be able to participate. (2) Students who wish to participate in PLTL but want to opt-out of receiving credit should contact their course's program manager. (3) If dropping PLTL would bring a student below 12 credit units, the drop will be entered as a withdrawal instead.
Credit 1 unit.
Typical periods offered: Spring

PHYSICS 1625 Solar System Astronomy
Designed for the nonscience major, this course deals with the planets, their moons and rings, comets, meteorites and interplanetary dust particles. In order to understand both classical astronomy and the results obtained from modern telescopes and the space program, basic

scientific ideas (including optics and the laws of motion) are reviewed first. There will also some discussion of astronomical history to show how we have arrived at our present ideas of the structure and evolution of the solar system.
Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI
Typical periods offered: Fall

PHYSICS 1626 Stars, Galaxies, and Cosmology
Intended as a general survey for the nonscience major. Topics include the structure and evolution of stars, such as red giants, white dwarfs, neutron stars, pulsars, and black holes; galaxies and quasars, cosmology and the big bang theory.
Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI
Typical periods offered: Spring

PHYSICS 1630 Introduction to Mathematical and Computational Methods in Physics
This is a learning by doing course whose objective is for the students to learn practical methods for solving physics problems using mathematical and computational tools. The course gives an introduction to applied mathematics and basic computational tools and techniques used in contemporary scientific fields of research. The format of the course is highly interactive. Each course unit will be devoted to a specific activity, including a lecture from the instructor, working groups on solving analytical problems, and working groups on coding with Python.
Credit 3 units. A&S IQ: NSM, AN Art: NSM
Typical periods offered: Fall, Spring

PHYSICS 1673 Physics of Sustainable Energy
Introduction to the physics of climate change and sustainable energy. This course is intended for students with little previous exposure to science or math. We will learn about the value of rough estimates and simple calculations. We will apply this approach to energy and power; atoms and heat; the history and basic modeling of earth's climate; energy sources including fossil fuels, nuclear, and renewables.
Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI
Typical periods offered: Fall

PHYSICS 1680 Focused Physics II
Physics 194 is the second part of a two-semester calculus-based introduction to physics, with a co-requisite of Calculus III (Math 233 or its equivalent). The course is an advanced first-year course in electricity and magnetism, taught at a more sophisticated level than Physics 192. The approach is that of an upper-division physics course, with more emphasis on the underlying formal structure, rather than breadth of topics. The main goal is to provide an in-depth coverage of electromagnetism, DC and AC circuits using complex variables, and optics. The course is particularly addressed to students considering a physics or mathematics heavy science/engineering majors. Taking Physics 194 as a first-year student is compatible with on-time completion of all pre-health requirements.
Credit 4 units. A&S IQ: NSM, AN BU: SCI
Typical periods offered: Spring

PHYSICS 1740 Physics I
The first course in a two-semester, calculus-based introduction to the concepts, laws, and structure of physics. Topics include kinematics, Newton's laws, energy, linear momentum, angular momentum, the conservation laws, gravitational force, fluids, harmonic motion, wave motion and interference, sound, and special relativity. Small-group problem-solving exercises and active class participation are integral parts of the course. This course has evening exams, at which attendance is required. Previous or concurrent enrollment in Calculus I is required for this course, although previous or concurrent enrollment in Calculus II strongly recommended. Taking Introductory Physics as a first-year student is compatible with on-time completion of all pre-health requirements.
Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI
Typical periods offered: Fall, Summer

PHYSICS 1741 Physics I Laboratory
Laboratory experience is an integral component of Introductory Physics. It is designed to provide a hands-on opportunity to explore concepts introduced in the lecture course and to develop careful measurement and documentation skills. Students may not take the lab without previous or concurrent enrollment in Physics I lecture.
Credit 1 unit.
Typical periods offered: Fall, Summer

PHYSICS 1742 Physics II
The second part of a two-semester, calculus-based introduction to concepts, laws, and structure of physics. Topics include electromagnetic forces and fields, direct current circuits, capacitance and inductance, electromagnetic radiation, light, physical optics, interference and diffraction, early quantum theory, and nuclear physics. Small-group problem-solving exercises and active class participation are integral parts of the course. This course has evening exams, at which attendance is required. Concurrent enrollment in Calculus II is required for this course, although previous completion of Calculus II is very strongly recommended. Taking Introductory Physics as a first-year student is compatible with on-time completion of all pre-health requirements.
Credit 3 units. A&S IQ: NSM, AN BU: SCI
Typical periods offered: Spring, Summer

PHYSICS 1743 Physics II Laboratory
Laboratory experience is an integral component of Introductory Physics. It is designed to provide a hands-on opportunity to explore concepts introduced in the lecture course and to develop careful measurement and documentation skills. Students may not take the lab without previous or concurrent enrollment in Physics II lecture.
Credit 1 unit.
Typical periods offered: Spring, Summer

PHYSICS 1760 Focused Physics I
The first course in a two-semester calculus-based introduction to physics. The course is an advanced first-year course in classical mechanics, taught at a more sophisticated level than Physics 1740 Physics I. The approach is that of an upper-division physics course, with more emphasis on underlying formal structure rather than breadth of topics. The main goal is to provide in-depth coverage of the physical laws that govern the motion of objects, forces, and forms of energy in mechanical systems as well as an introduction to special relativity. The course is particularly addressed to students considering a physics- or mathematics-heavy science or engineering major. Taking Introductory Physics as a first-year student is compatible with on-time completion of all pre-health requirements.
Credit 4 units. A&S IQ: NSM, AN Art: NSM BU: SCI
Typical periods offered: Fall

PHYSICS 1941 Selected Topics in Physics I
Topics of special interest (e.g., superconductivity, quasicrystals, neural networks, chaos, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars, or individual study or research. Students hoping to arrange such a course must prepare

a proposal and secure consent to undertake direction of the course from a faculty member and apply for approval using the Physics independent study web form https://physics.wustl.edu/independent-study
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

PHYSICS 1942 Selected Topics in Physics I
Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars, or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member andapply for approval using the Physics independent study web form https://physics.wustl.edu/independent-study
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Spring

PHYSICS 1980 Physics II
Continuation of Physics 197. An advanced, calculus-based introduction to central concepts in physics for students who desire to major in physics or another physical science, or who have a special interest in physics. The course is structured around three themes that are treated in depth: electricity and magnetism, quantum physics, and statistical and thermal physics. A daily regimen of homework and reading as well as active class participation are integral parts of the course. Prerequisites: Physics 197 and Calculus II. Students who have not taken Physics 197 may not register for Physics 198. Concurrent registration in a Physics 198 lab section is required. Credit may not be obtained for both Physics 118 and Physics 198.
Credit 4 units. A&S IQ: NSM, AN Art: NSM BU: SCI

PHYSICS 2010 Energy and Climate
This course will explain the physical principles underlying our energy systems and climate change, at a level suitable for an informed citizen who wishes to understand the natural world and the issues of the day.
Credit 3 units.
Typical periods offered: Fall

PHYSICS 2160 Introduction to Relativity: The Special Theory
Introduction to the special and general theories of relativity. Einstein's postulates of the principle of relativity and the constancy of the speed of light. Simple kinematics and dynamics: simultaneity, time dilation, space-time diagrams, twin and other paradoxes, E = mc^2, laws of motion. Elements of general relativity; curved spacetime, experimental tests, black holes, gravitational waves.
Credit 1 unit. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Spring

PHYSICS 2170 Introduction to Quantum Physics
Introduction to the special and general theories of relativity. Einstein's postulates of the principle of relativity and the constancy of the speed of light. Simple kinematics and dynamics: simultaneity, time dilation, space-time diagrams, twin and other paradoxes, E = mc^2, laws of motion. Elements of general relativity; curved spacetime, experimental tests, black holes, gravitational waves.
Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI
Typical periods offered: Fall

PHYSICS 2330 Introduction to Astrophysics I: From Stars to Black Holes
First course of a two-semester calculus-based introduction to astronomy and astrophysics. Topics include interaction of radiation and matter, properties of stars, stellar atmospheres, stellar interiors, formation and evolution of stars, supernovae, neutron stars, white dwarfs, and black holes.
Credit 3 units. A&S IQ: NSM, AN
Typical periods offered: Fall

PHYSICS 2941 Selected Topics in Physics II
Topics of special interest (e.g., superconductivity, quasicrystals, neural networks, chaos, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars, or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure consent to undertake direction of the course from a faculty member and apply for approval using the Physics independent study web form https://physics.wustl.edu/independent-study
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

PHYSICS 2942 Selected Topics in Physics II
Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars, or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and apply for approval using the Physics independent study web form https://physics.wustl.edu/independent-study
Credit 3 units. A&S IQ: NSM Art: NSM BU: IS
Typical periods offered: Spring

PHYSICS 3068 Introduction to Quantum Information
A general introduction to the field of quantum information: physics of information processing, quantum logic, quantum algorithms, physical hardware for quantum computation, quantum communications, quantum error corrections, quantum sensing
Credit 3 units. A&S IQ: NSM, AN Art: NSM
Typical periods offered: Spring

PHYSICS 3180 Introduction to Quantum Physics II
Application of elementary quantum principles to atomic and molecular physics, solid-state physics, and nuclear and particle physics. Prerequisite: Physics 217.
Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI
Typical periods offered: Spring

PHYSICS 3190 Quantum Theory of Matter
Students will learn how to apply quantum mechanics principles to atomic and molecular physics, solid-state physics, nuclear physics, and particle physics. A portion of the course will also be devoted to introducing Dirac notation and discussing its applications to simple systems.
Credit 3 units. A&S IQ: NSM, AN
Typical periods offered: Spring

PHYSICS 3321 Electronics Laboratory
Elements of linear and nonlinear circuits, amplifiers, feedback, with applications in experimental physics. Prerequisite: Phys 192 or Phys 194 or Phys 198 or Phys 206 or permission of instructor. Two three-hour laboratories and two one-hour lectures a week.

Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI
Typical periods offered: Fall

PHYSICS 3322 Physical Measurement Laboratory
A variety of classical and modern experiments in physics, including five experiments in nuclear radiation. Use of computers in experiment control, data acquisition, and data analysis. Development of skills in writing lab notebooks and formal reports and giving short oral presentations on experiments. Two laboratory periods each week. Prerequisite: Physics 217 or permission of instructor; junior or senior level standing
Credit 3 units. A&S IQ: NSM, AN, WI Art: NSM BU: SCI
Typical periods offered: Fall, Spring

PHYSICS 3323 Optics and Wave Physics Laboratory
Introduction to optics and to treatment of experimental data. Experiments and lectures on refraction, interference, diffraction, polarization, and coherence properties of waves with emphasis on light. Data analysis using statistical methods. Prerequisite: Physics 117A-118A or Physics 197-198.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall, Spring

PHYSICS 3324 Biophysics Laboratory
This laboratory course consists of table-top experiments in biological physics that are designed to introduce the student to concepts, methods, and biological model systems in biophysics. Most experiments combine experimentation with computer simulations. The list of available experiments includes electrophysiology, human bioelectricity, optical tweezers, ultrasonic imaging, mass spectrometer, and viscosity measurements.Prior completion of Prerequisite: Physics 191 - 192 or Phys 193 - 194 or Physics 197-198 or Phys 205 - 206 or permission of instructor.
Credit 3 units. A&S IQ: NSM, AN Art: NSM
Typical periods offered: Fall

PHYSICS 3330 Planets and Life in the Universe
In this course, we will explore the history, methods, outcomes, and broad impacts of exoplanet research and how these are connected to our search for life beyond planet Earth. Following an engaging contextual introduction at the beginning of the lectures, topics will be presented with an accessible mathematical treatment (e.g., geometrical derivations of the two-body transit problem). Prerequisite: Physics 191 and 192 or Physics 193 and 194.
Credit 3 units. A&S IQ: NSM, AN Art: NSM
Typical periods offered: Fall

PHYSICS 3331 Introduction to Astrophysics
This course covers the physics needed for higher level astrophysics courses, and is a requirement for those courses. Furthermore, it gives a first introduction to several topics in modern astrophysics, including stars (stellar structure and evolution), compact objects (neutron stars and black holes), galaxies (galactic structure), and cosmology. The course should be taken by everybody interested in astrophysics. Prerequisite: Physics 191 and 192 or Physics 193 and 194 or Physics 197 and 198 or permission of instructor.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall, Spring

PHYSICS 3332 Introduction to Astrophysics II: Planets, Galaxies, and the Universe
Second course of a two-semester calculus-based introduction to astronomy and astrophysics. Astrophysics is the study of the planets, the Sun and other stars, the Milky Way Galaxy and the other galaxies, the interstellar medium and intergalactic medium, and the Universe itself. This study is aided by our knowledge of the laws of Physics discovered by experiments carried out in laboratories, and astronomical observations have often revealed new fundamental laws of Physics. This course will begin by covering the motions of the Sun and the Moon as we see them across the sky, the structure of the Solar System, and the search for exoplanets orbiting other stars. Then we will jump discussing the Milky Way galaxy, active galaxies with growing supermassive black holes, quasars, and how galaxies assemble in clusters of galaxies that form the cosmic web. Finally, we will describe our current knowledge of the matter, radiation, and energy content of the Universe as well as its birth, evolution, and fate. In class, we will also discuss fascinating topics, like the telescopes that enable us to study the universe using radio waves, X-ray and gamma-ray photons, gravitational waves, and neutrinos. The purpose of the course is to kindle your interest in Astrophysics and Cosmology and to prepare you for their more detailed study in upper-level courses.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Spring

PHYSICS 3350 Physics of the Brain
Concepts and techniques of physics are applied to study the functioning of neurons and neuronal circuits in the brain. Neurons and neural systems are modeled at two levels: (i) at the physical level, in terms of the electrical and chemical signals that are generated and transmitted and (ii) at the information-processing level, in terms of the computational tasks performed. Specific topics include: neuronal electrophysiology, neural codes, neural plasticity, sensory processing, neural network architectures and learning algorithms, and neural networks as dynamical and statistical systems. Course grade is based primarily on an individualized term project. Prerequisite: Phys 191-192 or Phys 193-194 or Phys 197-198 or Phys 205-206, or permission of the instructor.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall, Spring

PHYSICS 3354 Physics of Living Systems
One of the grand challenges in contemporary biophysics is placing our understanding of cellular systems on a firm quantitative footing. How does the collective activity of molecules enable the cell to sense its environment, make decisions, grow and develop? This course, aimed at physical and life science students, will serve as an introduction to the physical principles and mathematical techniques underlying the analysis of systems and synthetic biology. Topics will include modeling gene and signaling networks, the regulation of intracellular structures, and pattern formation in development. Students in this course can expect to learn both analytical and computer simulation approaches to fundamental problems in biology, biophysics, and biotechnology. Graduate students will explore the subject in more depth.
Credit 3 units. A&S IQ: NSM BU: SCI
Typical periods offered: Fall, Spring

PHYSICS 3355 Physics of Vision
How do the eyes capture an image and convert it to neural messages that ultimately result in visual experience? This lecture and demonstration course will cover the physics of how we see. The course is addressed to physics, premedical, and life-sciences students with an interest in biophysics. Topics include physical properties of light, evolution of the eyes, image formation in the eye, image sampling with an array of photoreceptors, transducing light into electrical signals, color coding, retinal organization, computing with

nerve cells, compressing the 3-D world into optic nerve signals, inferring the 3-D world from optic nerve signals, biomechanics of eye movement, engineered vision in machines. The functional impact of biophysical mechanisms for visual experience will be illustrated with psychophysical demonstrations.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

PHYSICS 3440 Energy and Environmental Physics
This intermediate-level course applies basic physics principles to this increasingly important area. It is designed for all science and engineering majors with an interest in energy and environmental issues. Topics to be covered include population trends, fossil fuel use, renewable energy sources, energy storage strategies and climate change. Particular emphasis will be given to the use of the fundamental laws of physics, such as energy conservation, as well as more general concepts such as local and global stability, chaotic behavior, probability and risk. The aim of the course is the development of analytical skills and familiarity with important concepts, in order to enable an independent and informed view of environmental problems and possible solutions.
Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI
Typical periods offered: Fall

PHYSICS 3941 Selected Topics in Physics III
Topics of special interest (e.g., superconductivity, quasicrystals, neural networks, chaos, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars, or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure consent to undertake direction of the course from a faculty member and apply for approval using the Physics independent study web form https://physics.wustl.edu/independent-study
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

PHYSICS 3942 Selected Topics in Physics III
Topics of special interest (e.g., holography, relativity, nuclear power, computer application in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars, or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and apply for approval using the Physics independent study web form https://physics.wustl.edu/independent-study
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Spring

PHYSICS 3995 Physics Coursework Completed Abroad
Course is used to transcribe study abroad elective physics units on transcripts
Credit 12 units.
Typical periods offered: Fall, Spring, Summer

PHYSICS 4011 Mechanics
Motion of a point particle, rotational motion, oscillation, gravitation and central forces, Lagrangian and Hamiltonian formulation.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

PHYSICS 4021 Electricity and Magnetism
Starting from Coulomb's law, the Biot-Savart law, and Faraday's law, the electrical and magnetic fields are defined and applied. Maxwell's equations are derived and their consequences, such as electromagnetic waves and relativity, are explored.
Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI
Typical periods offered: Fall

PHYSICS 4022 Electricity and Magnetism II
The second course in a two part series covering the classical theory of electricity and magnetism leading to the derivation and application of Maxwell's equation. Topics in electrodynamics including Faraday's law, the displacement current and Maxwell's equations in vacuum and in matter are covered. Electromagnetic waves and radiation, special relativity and relativistic electrodynamics will also be discussed.
Credit 3 units. A&S IQ: NSM, AN Art: NSM
Typical periods offered: Spring

PHYSICS 4027 Introduction to Computational Physics
What does it mean to solve a research problem using a computer? What is the difference between someone ran a simulation and an interesting research result? And what skills does it take? Familiarity with a programming language is, of course, essential, but that is only the beginning. This course will focus on the methodology of computational research, touching also on topics in numerical analysis, statistics and visualization. The format will combine lectures and hands-on experience, with emphasis on research-style small-group projects.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall, Spring

PHYSICS 4063 Statistical Mechanics and Thermodynamics
Basic methods of classical and quantum statistical mechanics, thermodynamics, and transport theory.
Credit 3 units. A&S IQ: NSM, AN Art: NSM
Typical periods offered: Fall

PHYSICS 4071 Quantum Mechanics
Origins of quantum theory, wave packets and uncertainty relations, Schroedinger's equation in one dimension, step potentials and harmonic oscillators, eigenfunctions and eigenvalues, Schroedinger's equation in three dimensions, the hydrogen atom, symmetry, spin and the periodic table, approximation methods for time independent problems, quantum statistics
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

PHYSICS 4072 Solid State Physics
Crystal structures, binding energies, thermal properties, dielectrics, magnetism, free electron theory of metals, band theory, semiconductors, defects in solids.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

PHYSICS 4074 Introduction to Particle Physics
Introduction to the standard model of particle physics, including symmetries, conservation laws, the weak interaction, the strong interaction, quark confinement, and some more exotic ideas such as grand unified theories.
Credit 3 units. A&S IQ: NSM, AN Art: NSM
Typical periods offered: Spring

PHYSICS 4077 Physics of Finite and Infinite Nuclear Systems
Quantum mechanics of finite and infinite systems of protons and neutrons. Interaction between nucleons. Independent-particle model of nuclei and shell structure. Contrast with atomic shell model. Isospin symmetry. Information from weakly and strongly interacting probes of nuclei. Nuclear decay properties and some historical context. Many-particle description of nuclear systems. Single-particle versus collective phenomena. Properties of excited states. Bulk properties of nuclei. Nuclear and neutron matter. Role of different energy scales in determining nuclear properties: influence of long-range, short-range, and medium-induced interactions. Pairing correlations in nuclear systems. Relevance of nuclear phenomena and experiments for astrophysics and particle physics.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Spring

PHYSICS 4080 Artificial Intelligence and Machine Learning Methods With Applications to Physics
The course will introduce key ideas of AI and machine learning from a statistical physics perspective. Essentials of statistical distributions, kernel methods, neural networks, large language models, diffusion models, and many other tools will be presented from this physics based approach. Students will apply these techniques to problems in physics. Apart from the very first assignments, nearly all homework problems will assume the use of Python. If you do not know Python, there will be an additional very brief introduction to Python that the instructor will give in addition to the course lectures.
Credit 3 units. A&S IQ: NSM, AN
Typical periods offered: Fall

PHYSICS 4081 Critical Analysis of Scientific Data
Data science is most commonly associated with topics in computer science. However, efficient algorithms, specific software packages, neural nets, and so on are only tools, and they are easily misused. In a research setting, working with data is primarily an exercise in critical thinking. The purpose of this interactive, hands-on course is to learn from mistakes by making them in a safe environment. After covering/reviewing probability theory, Bayesian inference, elements of information theory, and random matrix theory, the course will focus on case studies of real-world biological data, such as quantitative imaging data, next generation sequencing (metagenomics), and neural recordings. These modules will involve the critical reading of research papers and working through puzzle-based assignments. The primary modules will be supplemented by shorter presentations on topics chosen by students. Fair warning: This is explicitly not a course on big data or machine learning, although students may choose to explore some of these topics in their presentations (required for credit). Experience with MATLAB or Python strongly encouraged or will need to be acquired during the course. Open to undergraduates with prior programming experience and a quantitative background. Experience with data or statistics not required. Course mimics a research environment, and undergraduates considering an academic research track are especially encouraged.
Credit 3 units. Art: NSM BU: SCI
Typical periods offered: Fall, Spring

PHYSICS 4082 Research Seminar
Designed to introduce students to current developments in physics and to research carried out by faculty. Topics vary each year. Each member of the department addresses their particular specialty. Interested undergraduates may take this seminar in their junior or senior year. Must be taken pass/fail.
Credit 1 unit. A&S IQ: NSM Art: NSM

PHYSICS 4500 Physics of the Brain
Contents are the same as Phys 350. Also intended for graduate students. Includes a more sophisticated term project than Phys 350. Concepts and techniques of physics are applied to study the functioning of neurons and neuronal circuits in the brain. Neurons and neural systems are modeled at two levels: (i) at the physical level, in terms of the electrical and chemical signals that are generated and transmitted and (ii) at the information-processing level, in terms of the computational tasks performed. Specific topics include: neuronal electrophysiology, neural codes, neural plasticity, sensory processing, neural network architectures and learning algorithms, and neural networks as dynamical and statistical systems. Course grade is based primarily on an individualized term project.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall, Spring

PHYSICS 4520 Advanced Laboratory II
Applications of analog and digital electronics and microprocessor techniques, followed by projects in modern physics with concurrent lectures on methods of experimental physics. Prerequisite: Phys 322 or permission of instructor. Two laboratories a week.
Credit 3 units. A&S IQ: NSM, WI Art: NSM
Typical periods offered: Spring

PHYSICS 4540 Physics of Living Systems
Contents are the same as Phys 354. Graduate students will explore the subject in more depth.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Fall, Spring

PHYSICS 4550 Physics of Vision
Contents are the same as Phys 355. Also intended for graduate students. Includes a more sophisticated term project than Phys 355. How do the eyes capture an image and convert it to neural messages that ultimately result in visual experience? This lecture and demonstration course will cover the physics of how we see. The course is addressed to physics, premedical, and life-sciences students with an interest in biophysics. Topics include physical properties of light, evolution of the eyes, image formation in the eye, image sampling with an array of photoreceptors, transducing light into electrical signals, color coding, retinal organization, computing with nerve cells, compressing the 3-D world into optic nerve signals, inferring the 3-D world from optic nerve signals, biomechanics of eye movement, engineered vision in machines. The functional impact of biophysical mechanisms for visual experience will be illustrated with psychophysical demonstrations.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

PHYSICS 4553 Topics in Theoretical Biophysics
Application of a range of physical models to biological systems. Topics include protein folding, self-assembling molecular systems, and mechanical properties of biological materials. Background material will be provided, but some exposure to statistical mechanics or thermodynamics is necessary. Prerequisite: experience with ordinary differential equations (as in Mathematics 217).
Credit 3 units. A&S IQ: NSM BU: SCI
Typical periods offered: Spring

PHYSICS 4646 Galactic Astrophysics
In these lectures, the focus is on the dynamics and statistical mechanics of a collection of stars, which is treated as a collisionless system. The course begins with a discussion of potential theory and proceeds to discuss the density and phase distributions of stars in star clusters and

galaxies, thus leading to an understanding of the equilibria and stability of these systems. Topics such as Chandrasekhar's dynamical friction, galaxy formation and dark matter will constitute the final topics of discussion.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

PHYSICS 4660 X-Ray & Gamma-Ray Astrophysics
Observers started to use X-ray and gamma-rays in the sixties and seventies to explore the cosmos with high-energy photons. The sky looks dramatically different at these energies with bright flares from mass accreting black holes and gamma-ray bursts and large diffuse emission from supernova remnants and cosmic rays interacting with galactic matter and magnetic fields dominating the emission. This course gives a comprehensive overview of the underlying physics and observable phenomenology. Topics that will be covered include the history of X-ray and gamma-ray astronomy, high- energy radiation processes, particle heating and acceleration, accretion physics, blast waves and shocks, black holes, neutron stars, supernova remnants, gamma-ray bursts, and galaxy clusters. Prerequisite L31 312.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Fall

PHYSICS 4676 Astrophysics
This Astrophysics course focuses on cosmic rays.Victor Hess discovered in 1912 that ionizing radiation impinges on the top of Earth's atmosphere. Even though physicists have been studying cosmic rays (the ionizing radiation) for more than 100 years now with a fantastic repertoire of experimental and theoretical tools, cosmic rays never stop to surprise us and cosmic ray physicists are still pushing the frontier of cosmic exploration in many ways. This course gives an introduction into this exciting topic covering historical and recent cosmic ray measurements at all energies, particle and antiparticle observations, and neutrino observations. The presently favored models of cosmic ray acceleration and transport are discussed in detail, and some topics of current interest are highlighted (including the production of particles and antiparticles by dark matter). The course also covers radio astronomy and highlights the clues about the origin of the cosmic rays that can be obtained from radio observations. Prerequisite Physics 312 or permission of instructor.
Credit 3 units. A&S IQ: NSM Art: NSM

PHYSICS 4678 From Black Holes to the Big Bang
An introduction to general relativity. The goal will be to illustrate important features of general relativity without the full-blown mathematics of Einstein's equations by restricting attention to spherically symmetric spacetimes. Topics will include: principle of equivalence; curved spacetime; spherical stars and black holes; the Big Bang model, observational cosmology. Prereq: Physics 411 or permission of instructor.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

PHYSICS 4941 Selected Topics in Physics IV
Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars, or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and apply for approval using the Physics independent study web form https://physics.wustl.edu/independent-study
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

PHYSICS 4942 Selected Topics in Physics IV
Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars, or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and apply for approval using the Physics independent study web form https://physics.wustl.edu/independent-study
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring, Summer

PHYSICS 4995 Physics Coursework Completed Abroad
Course is used to transcribe elective Physics study aboard units.
Credit 0 units.
Typical periods offered: Fall, Spring

PHYSICS 4998 Honors Program
Prerequisites: junior standing, an average grade of B or better, and apply for approval using the Physics independent study web form https://physics.wustl.edu/independent-study. Program and credit to be determined; maximum 6 units.
Credit 3 units.
Typical periods offered: Fall, Spring

Astrophysics Major

Program Requirements

- **Total Units Required:** 52-59
- **Grade Requirement:** Students must complete all coursework for the Astrophysics major with a grade of at least a C-.

Required Introductory Courses

Majors in Astrophysics are required to complete a series of introductory courses.

Students may take either:

Code	Title	Units
PHYSICS 1740	Physics I	3
PHYSICS 1741	Physics I Laboratory	1
PHYSICS 1742	Physics II	3
PHYSICS 1743	Physics II Laboratory	1
Total Units		**8**

or (recommended for majors):

Code	Title	Units
PHYSICS 1741	Physics I Laboratory	1
PHYSICS 1743	Physics II Laboratory	1
PHYSICS 1760	Focused Physics I	4
PHYSICS 1762	Focused Physics II	4
Total Units		**10**

Required Courses

In addition, majors in Astrophysics are required to complete the following courses:

Code	Title	Units
PHYSICS 2170	Introduction to Quantum Physics	3
PHYSICS 3322	Physical Measurement Laboratory	3
PHYSICS 3331	Introduction to Astrophysics	3
PHYSICS 4011	Mechanics	3
PHYSICS 4021	Electricity and Magnetism	3
Total Units		**15**

One additional laboratory course must be chosen from the following:

Code	Title	Units
CHEM 4035	Nuclear and Radiochemistry Lab	3
PHYSICS 3321	Electronics Laboratory	3
PHYSICS 3323	Optics and Wave Physics	3
PHYSICS 4027	Introduction to Computational	3

Required Advanced Courses

In addition to the above requirements, students who are earning the Astrophysics major are required to complete three advanced electives (3000 level and above). Students who declare an Astrophysics major *and* who complete both PHYSICS 1625 Stars, Galaxies and Cosmology and PHYSICS 1626 Solar System Astronomy will be required to complete two advanced electives (3000 level and above). They will choose courses from the following list. Students must receive letter grades for these advanced courses.

Code	Title	Units
PHYSICS 3330	Planets and Life in the Universe	3
PHYSICS 4646	Galactic Astrophysics	3
PHYSICS 4656	Stellar Astrophysics	3
PHYSICS 4660	X-ray & Gamma-ray Astrophysics	3
PHYSICS 4676	Astrophysics	3
PHYSICS 4678	From Black Holes to Big Bang	3
PHYSICS 4680	Astrostatistcis	3

They must also complete one additional course from the preceding list of seven courses or one from the following list of courses:

Code	Title	Units
EEPS 3530	Earth Forces	4
EEPS 4075	Remote Sensing	3
MEMS 3410	Fluid Mechanics	3
PHYSICS 4022	Electricity and Magnetism II	3
PHYSICS 4027	Introduction to Computational Physics	3
PHYSICS 4074	Introduction to Particle Physics	3
PHYSICS 4077	Physics of Finite and Infinite	3
PHYSICS 5470	Intro to Elemantary Particle Physics	3
PHYSICS 5580	Relativistic Astrophysics	3

Required Math Courses

Code	Title	Units
MATH 1510	Calculus I	3
MATH 1520	Calculus II	3
MATH 2130	Calculus III	3
MATH 2500	Differential Equations	3
Total Units		**12**

Students who have completed MATH 2801 Honors Mathematics I and MATH 2802 Honors Mathematics II will have fulfilled the requirement for MATH 1510 Calculus I, MATH 1520 Calculus II, and MATH 2130 Calculus III.

Science-Breadth Requirement

Majors must select one of the following courses to satisfy the science-breadth requirement:

Code	Title	Units
CHEM 1601	Principles of General Chemistry I	3
CHEM 1602	Principles of General Chemistry II	3
CHEM 1701	General Chemistry I	3
CHEM 1702	General Chemistry II	3
CHEM 1751	General Chemistry Laboratory I	3
CHEM 1752	General Chemistry Laboratory II	3
CHEM 4010	Physical Chemistry I	3
CHEM 4020	Physical Chemistry II	3
CHEM 4079	Instrumental Methods: Physical Chemistry	3
CSE 1301	Introduction to Computer Science	3
CSE 1302	Introductory to Computer Engineering	3
CSE 2407	Data Structures and Algorithms	3
EEPS 2021	Introduction to Earth, Environmental, and Planetary Science	3

Students who receive Advanced Placement credit or the equivalent of advanced placement credit (indicated with the use of CHEM 1030 Advanced Placement Chemistry I and/or CHEM 1040 Advanced Placement Chemistry II by the Chemistry department) may use those credits toward the science-breadth requirement.

Additional Information

Senior Honors

Students are encouraged to work toward Latin honors (i.e., cum laude, magna cum laude, and summa cum laude). To qualify, students must meet the academic requirements of the College and successfully complete a suitable project under the supervision of a faculty

member in the department. The project, whether experimental or theoretical, should demonstrate the student's capacity for independent work. Honors candidates must apply to the Undergraduate Studies Committee no later than the the first day of classes of their senior year. The application should include a description of the proposed project, co-signed by the supervising professor. A written report of the completed work must be submitted to the committee by a March deadline. By enrolling in PHYSICS 4998 Honors Program, students may earn up to 6 units of credit for the honors project.

The Physics department also offers Physics majors the possibility to earn departmental distinctions. These distinctions require the same grade point average cutoffs as Latin honors but are calculated exclusively from the grades in Physics courses (i.e., all courses with the prefix PHYSICS). Three levels of distinction are offered: 1) highest distinction; 2) high distinction; and 3) distinction. The highest and high distinctions require at least one semester of undergraduate research and a senior thesis describing the results; these distinctions are limited to the top 15% (highest distinction) and the top 15% to 50% (high distinction) of the physics majors in their senior year as ranked by their GPA in Physics courses. Students who meet the GPA cutoff but who do not undertake undergraduate research and a senior thesis may only receive the third level of distinction.

Transfer Credit and Study Abroad

Students may transfer up to 9 credits of advanced coursework (3000+ level) to satisfy major requirements by taking comparable physics courses at another institution. Prior approval by the department is needed. Online or other distance learning courses are not eligible for transfer credit.

Website: http://physics.wustl.edu

Physics Major

Program Requirements

- **Total Units Required:** 42-44
- **Grade Requirement:** Students must complete all course work for the Physics major with a grade of at least a C-.

Required Introductory Courses

Majors in Physics are required to complete a series of introductory courses. They may take either:

Code	Title	Units
PHYSICS 1740	Physics I	3
PHYSICS 1741	Physics I Laboratory	1
PHYSICS 1742	Physics II	3
PHYSICS 1743	Physics II Laboratory	1
Total Units		**8**

or (recommended for majors):

Code	Title	Units
PHYSICS 1741	Physics Laboratory I	1
PHYSICS 1743	Physics II Laboratory	1
PHYSICS 1760	Focused Physics I	4
PHYSICS 1762	Focused Physics II	4
Total Units		**10**

Required Courses

In addition, **majors in Physics are required to complete the following courses:**

Code	Title	Units
PHYSICS 2170	Introduction to Quantum Physics	3
PHYSICS 3331	Physical Measurement Laboratory	3
PHYSICS 4011	Mechanics	3
PHYSICS 4021	Electricity and Magnetism	3
Total Units		**12**

They must also complete **one additional upper-level laboratory course**, chosen from the following:

Code	Title	Units
CHEM 4035	Nuclear and Radiochemistry Lab	3
PHYSICS 3321	Electronics Laboratory	3
PHYSICS 3323	Optics and Wave Physics Laboratory	3
PHYSICS 3324	Biophysics Laboratory	3
PHYSICS 4027	Introduction to Computational Physics	3

Upper-level courses: Majors are required to complete a minimum of 21 units of advanced courses (3000 level or higher) in Physics, excluding PHYSICS 3941, PHYSICS 3942, PHYSICS 4941, PHYSICS 4942, PHYSICS 4998, and PHYSICS 5000. These 21 units may include courses listed above and may also include *one* upper-level engineering course chosen from the following:

Code	Title	Units
ESE 3510	Signals and Systems	3
ESE 4280	Digital Signal Processing	3
ESE 4290	Basic Principles of Quantum Optics and Quantum Information	3
ESE 4360	Semiconductor Devices	3
ESE 4380	Applied Optics	3
ESE 4410	Control Systems	3
ESE 5310	Nano and Micro Phontonics	3
ESE 5320	Introduction to Nao-Photonic Devices	3
ESE 5820	Fundamentals and Applications of Modern Optical Imaging	3
MEMS 3410	Fluid Mechanics	3

Students must receive letter grades for these advanced courses, and the course must be completed with a grade of at least a C-.

Math courses required for the physics major:

Code	Title	Units
MATH 1510	Calculus I	3
MATH 1520	Calculus II	3
MATH 2130	Calculus III	3
MATH 2500	Differential Equations	3
Total Units		**12**

Students who have completed MATH 2801 Honors Mathematics I and MATH 2802 Honors Mathematic II will have fulfilled the requirement for MATH 1510 Calculus I, MATH 1520 Calculus II, and MATH 2130 Calculus III.

Math courses recommended for the physics major:

- MATH 3008 Mathematics for the Physical Sciences or MATH 3180 Engineering Mathematics A (We recommend that this course precede PHYSICS 4021 Electricity and Magnetism.)
- MATH 3300 Matrix Algebra (We recommend that this course precede PHYSICS 4074 Introduction to Particle Physics.)
- PHYSICS 5010 Theoretical Physics and PHYSICS 5020 Methods of Theoretical Physics II are also recommended.

Science-breadth requirement: Majors must select three of the following courses to satisfy the science-breadth requirement. One of the three courses must be CHEM 1030 Advanced Placement Chemistry I, CHEM 1040 Advanced Placement Chemistry II, CHEM 1601 Principles of General Chemistry I, CHEM 1602 Principles of General Chemistry II, CHEM 1701 General Chemistry I, CHEM 1702 General Chemistry II, CHEM 4010 Physical Chemistry I, or CHEM 4020 Physical Chemistry II.

Code	Title	Units
BIOL 2960	Principle of Biology I	4
BIOL 2970	Principles of Biology II	4
CHEM 1030	Advanced Placement Chemistry I	3
CHEM 1040	Advanced Placement Chemistry II	3
CHEM 1601	Principles of General Chemistry I	3
CHEM 1602	Principles of General Chemistry II	3
CHEM 1701	General Chemistry I	3
CHEM 1702	General Chemistry II	3
CHEM 1751	General Chemistry Laboratory I	2
CHEM 1752	General Chemistry Laboratory II	2
CHEM 4010	Physical Chemistry I	3
CHEM 4020	Physical Chemistry II	3
CHEM 4079	Instrumental Methods: Physical Chemistry	3
CSE 1301	Introduction to Computer Science	3
CSE 1302	Introductory to Computer Engineering	3
CSE 2407	Data Structures and Algorithms	3
EEPS 2021	Introduction to Earth, Environmental, and Planetary Science	3

Students who have received credit for CHEM 1030 Advanced Placement Chemistry I and CHEM 1040 Advanced Placement Chemistry II can use them toward the science-breadth requirement.

Additional Information

Senior Honors

Students are encouraged to work toward Latin honors (i.e., cum laude, magna cum laude, and summa cum laude). To qualify, students must meet the academic requirements of the College and successfully complete a suitable project under the supervision of a faculty member in the department. The project, whether experimental or theoretical, should demonstrate the student's capacity for independent work. Honors candidates must apply to the Undergraduate Studies Committee no later than the the first day of classes of their senior year. The application should include a description of the proposed project, co-signed by the supervising professor. A written report of the completed work must be submitted to the committee by a March deadline. By enrolling in PHYSICS 4998 Honors Program, students may earn up to 6 units of credit for the honors project.

The Physics department also offers Physics majors the possibility to earn departmental distinctions. These distinctions require the same grade point average cutoffs as Latin honors but are calculated exclusively from the grades in Physics courses (i.e., all courses with the prefix PHYSICS). Three levels of distinction are offered: 1) highest distinction; 2) high distinction; and 3) distinction. The highest and high distinctions require at least one semester of undergraduate research and a senior thesis describing the results; these distinctions are limited to the top 15% (highest distinction) and the top 15% to 50% (high distinction) of the physics majors in their senior year as ranked by their GPA in Physics courses. Students who meet the GPA cutoff but who do not undertake undergraduate research and a senior thesis may only receive the third level of distinction.

Transfer Credit and Study Abroad

Students may transfer up to 9 credits of advanced coursework (3000+ level) to satisfy major requirements by taking comparable physics courses at another institution. Prior approval by the department is needed. Online or other distance learning courses are not eligible for transfer credit.

Physics Major, Biophysics Specialization

Program Requirements

- **Total Units Required:** 46-48
- **Grade Requirement:** Students must complete all coursework for the Physics Major, Biophysics Specialization with a grade of at least a C-.

Required Introductory Courses

Majors in Physics are required to complete a series of introductory courses. They may take either:

Code	Title	Units
PHYSICS 1740	Physics I	3
PHYSICS 1741	Physics I Laboratory	1
PHYSICS 1742	Physics II	3
PHYSICS 1743	Physics II Laboratory	1
Total Units		**8**

or (recommended for majors):

Code	Title	Units
PHYSICS 1741	Physics I Laboratory	1
PHYSICS 1743	Physics II Laboratory	1
PHYSICS 1760	Focused Physics I	4
PHYSICS 1762	Focused Physics II	4
Total Units		**10**

Required Courses

Majors in Physics are required to complete the following courses:

Code	Title	Units
PHYSICS 2170	Introduction to Quantum Physics	3
PHYSICS 3331	Physical Measurement Laboratory	3
PHYSICS 4011	Mechanics	3
PHYSICS 4021	Electricity and Magnetism	3
Total Units		**12**

They must also complete **one additional upper-level laboratory course,** chosen from the following:

Code	Title	Units
CHEM 4035	Nuclear and Radiochemistry Lab	3
PHYSICS 3321	Electronics Laboratory	3
PHYSICS 3323	Optics and Wave Physics Laboratory	3
PHYSICS 3324	Biophysics Laboratory	3
PHYSICS 4027	Introduction to Computational Physics	3

Upper-level courses: Majors are required to complete a minimum of 21 units of advanced courses (3000 level or higher) in Physics, excluding PHYSICS 3941, PHYSICS 3942, PHYSICS 4941, PHYSICS 4942, PHYSICS 4998, and PHYSICS 5000. These 21 units may include courses listed above and may also include *one* upper level engineering class chosen from the following:

Code	Title	Units
ESE 3510	Signals and Systems	3
ESE 4290	Basic Principles of Quantum Optics and Quantum Information	3
ESE 4360	Semiconductor Devices	3
ESE 4380	Applied Optics	3
ESE 4410	Control Systems	3
ESE 4820	Digital Processing	3
ESE 5310	Nano and Micro Photonics	3
ESE 5320	Introduction to Nano-Photonic Devices	3
ESE 5820	Fundamentals and Applications of Moder Optical Imaging	3
MEMS 3410	Fluid Mechanics	3

Students must receive letter grades for these advanced courses, and the course must be completed with a grade of at least a C-.

Math courses required for the physics major:

Code	Title	Units
MATH 1510	Calculus I	3
MATH 1520	Calculus II	3
MATH 2130	Calculus III	3
MATH 2500	Differential Equations	3
Total Units		**12**

Students who have completed MATH 2801 Honors Mathematics I and MATH 2802 Honors Mathematics II will have fulfilled the requirement for MATH 1510 Calculus I, MATH 1520 Calculus II, and MATH 2130 Calculus III.

Math courses recommended for the physics major:

- MATH 3008 Mathematics for the Physical Sciences or ESE 3180 Engineering Mathematics (We recommend that this course precede PHYS 4021 Electricity and Magnetism.)
- MATH 3300 Matric Algebra (We recommend that this course precede PHYSICS 4074 Introduction to Particle Physics.)
- PHYSICS 5010 Theoretical Physics and PHYSICS 5020 Methods of Theoretical Physics II are also recommended.

Science-breadth requirement: Majors must select three of the following courses to satisfy the science-breadth requirement. One of the three courses must be CHEM 1030 Advanced Placement Chemistry I, CHEM 1040 Advanced Placement Chemistry II, CHEM 1601 Principles of General Chemistry I, CHEM 1602 Principles of General Chemistry II, CHEM 1701 General Chemistry I, CHEM 1702 General Chemistry II, CHEM 4010 Physical Chemistry I, or CHEM 4020 Physical Chemistry II.

Code	Title	Units
BIOL 2960	Principles of Biology I	4
BIOL 2970	Principles of Biology II	4
CHEM 1030	Advanced Placement Chemistry I	3
CHEM 1040	Advanced Placement Chemistry II	3
CHEM 1601	Principles of Chemistry I	3
CHEM 1602	Principles of General Chemistry II	3
CHEM 1701	General Chemistry I	3
CHEM 1702	General Chemistry II	3
CHEM 1751	General Chemistry Laboratory I	2
CHEM 1752	General Chemistry Laboratory II	2

CHEM 4010	Physical Chemistry I	3
CHEM 4020	Physical Chemistry II	3
CHEM 4079	Instrumental Methods:Physical Chemistry	3
CSE 1301	Introduction to Computer Science	3
CSE 1302	Introductory to Computer Engineering	3
CSE 2407	Data Structures and Algorithms	3
EEPS 2021	Introduction to Earth, Environmental, and Planetary Science	3

Students who have received credit for CHEM 1030 Advanced Placement Chemistry I and CHEM 1040 Advanced Placement Chemistry II can use them toward the science-breadth requirement.

Requirements for the Biophysics Specialization

Physics majors may concentrate in the subfield of biophysics by taking the following courses (as part of their distribution requirements):

Physics requirement:

Code	Title	Units
PHYSICS 4063	Statistical Mechanics and Thermodynamics	3

One of the following:

Code	Title	Units
PHYSICS 3350	Physics of the Brain	3
PHYSICS 3355	Physics of Vision	3

One of the following:

Code	Title	Units
PHYSICS 3354	Physics of Living Systems	3
PHYSICS 4081	Critical Analysis of Scientific Data	3
PHYSICS 4553	Topics in Theortical Biophysics	3
PHYSICS 5090	Nonlinear Dynamic	3
PHYSICS 5630	Topics in Theoretical Biophysics	

Biology requirements:

Code	Title	Units
BIOL 2960	Principles of Biology I	4
BIOL 2970	Principles of Biology II	4
Total Units		**8**

Note: Students who want to have the biophysics track displayed on their transcript must inform the Department of Physics at least one semester before their graduation date. Contact the Director of Undergraduate Studies (dus@physics.wustl.edu) with any questions.

Additional Information

Senior Honors

Students are encouraged to work toward Latin honors (i.e., cum laude, magna cum laude, and summa cum laude). To qualify, students must meet the academic requirements of the College and successfully complete a suitable project under the supervision of a faculty member in the department. The project, whether experimental or theoretical, should demonstrate the student's capacity for independent work. Honors candidates must apply to the Undergraduate Studies Committee no later than the the first day of classes of their senior year. The application should include a description of the proposed project, co-signed by the supervising professor. A written report of the completed work must be submitted to the committee by a March deadline. By enrolling in PHYSICS 4998 Honors Program, students may earn up to 6 units of credit for the honors project.

The Physics department also offers Physics majors the possibility to earn departmental distinctions. These distinctions require the same grade point average cutoffs as Latin honors but are calculated exclusively from the grades in Physics courses (i.e., all courses with the prefix PHYSICS). Three levels of distinction are offered: 1) highest distinction; 2) high distinction; and 3) distinction. The highest and high distinctions require at least one semester of undergraduate research and a senior thesis describing the results; these distinctions are limited to the top 15% (highest distinction) and the top 15% to 50% (high distinction) of the physics majors in their senior year as ranked by their GPA in Physics courses. Students who meet the GPA cutoff but who do not undertake undergraduate research and a senior thesis may only receive the third level of distinction.

Transfer Credit and Study Abroad

Students may transfer up to 9 credits of advanced coursework (3000+ level) to satisfy major requirements by taking comparable physics courses at another institution. Prior approval by the department is needed. Online or other distance learning courses are not eligible for transfer credit.

Website: http://physics.wustl.edu

Astrophysics and Astroparticle Physics Minor

Program Requirements

- **Total Units Required:** 20-22
- **Grade Requirement:** Students must complete all coursework for the Astrophysics minor with a grade of at least a C-.

Required Courses

Required Introductory Courses

Minors in Astrophysics and Astroparticle Physics are required to complete a series of introductory courses.

Students may take either:

Code	Title	Units
PHYSICS 1740	Physics I	3
PHYSICS 1741	Physics I Laboratory	1
PHYSICS 1742	Physics II	3
PHYSICS 1743	Physics II Laboratory	1
Total Units		**8**

or:

Code	Title	Units
PHYSICS 1760	Focused Physics I	4
PHYSICS 1741	Physics I Laboratory	1
PHYSICS 1762	Focused Physics II	4
PHYSICS 1743	Physics II Laboratory	1
Total Units		**10**

Other Required Courses

In addition, minors in Astrophysics and Astroparticle Physics are required to complete the following courses:

Code	Title	Units
PHYSICS 3331	Introduction to Astrophysics	3
PHYSICS 3332	Introduction to Astrophysics II: Planets, Galaxies and the Universe	3
Total Units		**6**

Minors must also take two of the following eight courses:

Code	Title	Units
PHYSICS 2170	Introduction to Quantum Physics	3
PHYSICS 3190	Quantum Theory of Matter	3
PHYSICS 3330	Planets and Life in the Universe	3
PHYSICS 4074	Introduction to Particle Physics	3
PHYSICS 4460	X-Ray & Gamma-Ray Astrophysics	3
PHYSICS 4646	Galactic Astrophysics	3
PHYSICS 4676	Astrophysics	3
PHYSICS 4678	From Black Holes to Big Bang	3

Website: http://physics.wustl.edu

Biomedical Physics Minor

Program Requirements

- **Total Units Required:** 17-19
- **Grade Requirement:** Students must complete all coursework for the Biomedical Physics minor with a grade of at least a C-.

This minor is for students interested in the discussion and application of methods and techniques from physics to topics in the areas of biology and medicine. The program may be of interest to the pre-medicine student or the research-oriented science major.

Required courses: Minors in Biomedical Physics are required to complete a series of introductory courses.

They may take either:

Code	Title	Units
PHYSICS 1740	Physics I	3
PHYSICS 1741	Physics I Laboratory	1
PHYSICS 1742	Physics II	3
PHYSICS 1743	Physics II Laboratory	1
Total Units		**8**

or:

Code	Title	Units
PHYSICS 1760	Focused Physics I	4
PHYSICS 1741	Physics I Laboratory	1
PHYSICS 1762	Focused Physics II	4
PHYSICS 1743	Physics II Laboratory	1
Total Units		**10**

Elective courses: Minors must take two of the following five courses:

Code	Title	Units
PHYSICS 3350	Physics of the Brain	3
PHYSICS 3354	Physics of Living Systems	3
PHYSICS 3355	Physics of Vision	3
PHYSICS 4081	Critical Analysis of Scientific Data	3
PHYSICS 4553	Topics in Theoretical Biophysics	3

They must also take one of the following four laboratory courses:

Code	Title	Units
PHYSICS 3321	Electronics Laboratory	3
PHYSICS 3322	Physical Measurement Laboratory	3
PHYSICS 3323	Optics and Wave Physics Laboratory	3
PHYSICS 3324	Biophysics Laboratory	3

Website: http://physics.wustl.edu

Physics Minor

Program Requirements

- **Total Units Required:** 17-19
- **Grade Requirement:** Students must complete all coursework for the Physics minor with a grade of at least a C-.

Required Introductory Courses

Minors in Physics are required to complete a series of introductory courses. They may take either:

Code	Title	Units
PHYSICS 1740	Physics I	3
PHYSICS 1741	Physics I Laboratory	1
PHYSICS 1742	Physics II	3
PHYSICS 1743	Physics II Laboratory	1
Total Units		**8**

or:

Code	Title	Units
PHYSICS 1741	Physics I Laboratory	1
PHYSICS 1743	Physics II Laboratory	1
PHYSICS 1760	Focused Physics I	4
PHYSICS 1762	Focused Physics II	4
Total Units		**10**

Required Courses

Minors in Physics are required to complete the following courses:

Code	Title	Units
PHYSICS 2170	Introduction to Quantum Physics	3
PHYSICS 3180 Introduction to Quantum Physics II **or** PHYSICS 3190 Quantum Theory of Matter		3
Total Units		**6**

Elective Courses

Minors must take at least one additional course at the 3000 level or above (with the exception of PHYSICS 3941, PHYSICS 3942, PHYSICS 4941, PHYSICS 4942, PHYSICS 4998, and PHYSICS 5000) with a grade of C- or better.

Website: http://physics.wustl.edu

Political Science

The Department of Political Science offers undergraduates the opportunity to study all aspects of politics using cutting-edge technical and theoretical tools. Our courses are animated by long-standing problems related to the use of power, its rightful exercise by governments and individual actors, and the institutions that affect how that power is exercised. Reflecting the breadth of the discipline, we offer a range of classes, including courses on elections and electoral politics; international political economy; justice and the state; and comparative analyses of political institutions across states.

A major in political science thus exposes students to the primary themes of the discipline: American politics, comparative politics, international politics, judicial politics, political methodology, and political theory. A major in political science can prepare students well for professional training and advanced study in law, business, education, journalism, policy analysis, political science, public administration, social work, and urban planning. Political science graduates enter careers in business; federal, state, and local government; the media; and nonprofit organizations.

Because political science is a broad discipline, students often choose to combine the major with such related fields as African and African-American studies; American culture studies; anthropology; economics; environmental policy; history; international studies; Jewish, Islamic, and Middle Eastern studies; Latin American studies; philosophy; psychology; and women, gender, and sexuality studies.

- Political Science Major, Political Theory Specialization (p. 825)

Minors

- Political Science Minor (p. 826)

Courses

POLSCI 1000 American Politics
In a polarized era of American politics, it is critical to have a working knowledge of the American political process and the analytical skills with which tointerpret contemporary events. This course is designed to accomplish these dual objectives. In the first few weeks of the semester, we will explore boththe key principles of social scientific thinking and trace the evolution of the fundamental characteristics of American government. We will use thisfoundation throughout the remainder of the semester to assess the contemporary challenges to American institutions and the context in which they, andthe general public, make decisions. At the end of the semester, students should be able to understand and critically engage with information about American politics, as well as actively engage with the American political system (should they choose to do so).
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S UColl: PSA
Typical periods offered: Fall, Spring, Summer

POLSCI 1100 Introduction to Comparative Politics
One of the primary goals of a course in comparative politics is to familiarize students with a broad array of political systems. The approach taken in this course can best be characterized as the active acquisition and use of a set of tools for looking at the political world. In other words, instead of putting emphasis on what textbook writers think political scientist know, in this course the emphasis is on how we know what we know and on building knowledge. This approach equips students with a set of tools to use long after the course is over. These comparative tools are focused on historical, recent, and current events, and students are provided the opportunity to delve more deeply into a study of the parts of the world most they find most interesting.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, IS EN: S UColl: PSC
Typical periods offered: Spring

POLSCI 1200 International Politics
This is an introductory survey course. Its goal is to familiarize students with the basic concepts of International Relations (IR) as a subfield of political science and to introduce them to important issues, such as cooperation and conflict, independence, in the era of globalization, human rights and human development, and the environment.
Credit 3 units. A&S IQ: SSC Art: SSC BU: IS EN: S
Typical periods offered: Fall, Summer

POLSCI 1300 Introduction to Political Theory
This course offers an undergraduate level introduction to the field of political theory. We will focus on three major themes-social justice, power and freedom, and democracy-reading some canonical texts, such as Bentham's Introduction to the Principles of Morals and Legislation and Marx's Capital, but emphasizing contemporary works, such as those of John Rawls, Michael Walzer, Michel Foucault, and Robert Dahl.
Credit 3 units. A&S IQ: SSC Art: FAAM, SSC BU: BA EN: S
Typical periods offered: Fall, Spring

POLSCI 2000 Introduction to Environmental Policy
This course provides an introduction to and overview of environmental policy. Subjects covered include the policy process, the behavior of interest groups and political parties, and the actions of policymakers like Congress and the President. We will also examine issues such as pollution control, climate change, and biodiversity.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

POLSCI 2099 Civic Action Lab: Running for Political Office
The course will focus on skills related to the democratic expression of political rights and responsibilities. The course will balance background knowledge of the issues with application. Students will explore how to use coalition building and advocacy skills to relate to personal issues to public issues. Students will research a current Missouri bill, create a strategic plan for its passage or failure, and prepare to give testimony on such bill in a mock House of Representatives committee hearing. Students will also learn about ethical dilemmas in policy and politics and create a plan for turning their passions into policy.
Credit 1 unit. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall, Spring

POLSCI 2102 Introduction to Migration Policy and Politics
Migration is a phenomenon in which people, individually or in groups, move from one territory to another. In this course, we will trace the process of migration and discuss the impact of migration on sending and host societies as well as on the migrants themselves. What drives people to migrate from their home communities? What challenges do they face along migration routes? As humans move, languages, ideas, and ways of life diffuse across territories. This diffusion can be integrated into host societies, or it can become a source of tension within the society. What political, social, and economic conditions facilitate this integration or tension? In this course, we will begin to answer these questions through the lens of two primary systems: 1. Central and North America, and 2. the Middle East, North Africa, and Europe. As we study the process of migration, you will work towards a research paper that critically analyzes the migration process using a case of your choice.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall, Spring

POLSCI 2123 Sophomore Seminar in Ethnic Violence
This course introduces students to the principal concepts, questions and answers in the study of ethnic conflict. The goal of the course is to build foundational knowledge on the study of ethnic politics and ethnic conflict. The course begins by addressing why, how and when ethnicity matters. We will study different theories of ethnically-based indentification and mobilization. We will then move on to examine different types of ethnic conflict, ranging from ethnic violence in civil war to ethnic riots. In addition, we will study consequences of and alternative solutions to ethnic conflict. This course counts towards the undergraduate Comparative Politics subfield.
Credit 3 units. A&S IQ: SSC Art: SSC
Typical periods offered: Fall

POLSCI 2196 Practical Applications in Political Science
Credit for internships in Political Science.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

POLSCI 2281 Civic Action Lab: Skills That Turn Passion Into Policy
The course will focus on skills related to the democratic expression of political rights and responsibilities. The course will balance background knowledge of the issues with application. Students will explore how to use coalition building and advocacy skills to relate personal issues to public issues. Students will research a current Missouri bill, create a strategic plan for its passage or failure, and prepare to give testimony on such bill in a mock House of Representatives committee hearing. Students will also learn about ethical dilemmas in policy and politics and create a plan for turning their passions into policy.
Credit 2 units.
Typical periods offered: Spring

POLSCI 2400 Data Science for Politics
We are on the doorstep of a new era of social science. Never before have political scientists had access to so much data about the attitudes and actions of individuals, institutions, and nations. Data on everything from the votes of members of the U.S. Senate in 1855 to terrorist attacks from around the globe are only a few clicks away. This class is designed to make you an active participant in this new data-rich world. The goal is to introduce you to the methods and practices by which you can use this data to answer questions that are important to us as political scientists and citizens. How many citizens currently approve of the president, and how do we know? What policies are most effective at reducing poverty? Which campaign ads are most effective at persuading voters? Can we affect the behavior of our Facebook friends just by sharing our opinions?
Credit 3 units. A&S IQ: SSC, AN Art: SSC BU: BA EN: S
Typical periods offered: Fall, Summer

POLSCI 2490 Reproducible Data Skills for Political Scientists
Reproducibility and open scientific practices are increasingly required of scientists and researchers. Training on how to apply these practices in data analysis has not kept up with demand. During this course, students will develop skills to meet this demand. This course uses a practical approach based on iterative application assignments that provide students with practical experience with real data problems.
Credit 3 units. A&S IQ: SSC, AN Art: SSC EN: S
Typical periods offered: Spring

POLSCI 2511 Juvenile Justice in the Black Experience
Credit 3 units.

POLSCI 2900 Directed Research in Political Science
Introduces first-years and sophomores to research by engaging them in ongoing faculty research projects within the department. Under the direction of a faculty mentor, students take part in tasks that contribute to the mentor's research. Through this hands-on experience, students learn about the research process and build foundational research skills that can benefit their future academic experience and development. Faculty mentors provide regular guidance, training, and feedback to support students' understanding and growth. Students are registered by the department after approval from the faculty member leading the research project. The course may be taken for 1-3 credit hours based on the weekly hours required. Credit/No Credit only
Credit 3 units.
Typical periods offered: Spring

POLSCI 2999 Internship in Political Science
Please see department for more information.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

POLSCI 3005 Fast Fashion and the Environment
Students will leave this term with a greater understanding of not just this phenomenon, but the policies that created and now maintain it. Students will have an opportunity to identify and evaluate fast fashion brand performance relative to their envrionmental obligations. They will also have an opportunity to de- sign an international treaty mechanism to address the increased waste and harmful environmental consequences of the industry. Note: This course counts toward the undergraduate XXX subfield.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall

POLSCI 3008 The Stories That Win
We all know them. From fairy tales to bestsellers, legends of oral tradition to trend-setting points in the U.S. and global literary marketplace, they are the stories that win. These stories are rooted in a collective literary imagination that binds individual and community hopes + struggles. They are novels, or memoirs of political coming of age, tales of creative sparks that have led to iconic global brands and products, or narrative analyses that become collective origin stories. They speak to the relationship between expectations of justice and our varied political identities; they provide communal reference points during marked moments in history. These stories win by transcending the limits of time or through the entanglements of commercial success. This semester we delve into political memoirs; origin stories of athletes, iconic products, and CEOs; community narrative histories; fairy tales; and myths of national beginnings. We want to understand how power and the uses of history are central to making certain stories, especially origin stories, the ones public figures deploy to represent their identity, the stories we as a nation tell about ourselves over and over, and the ones that become our collective points of reference-that is, the stories that win. And we want to know why other stories-and the people they're about-are so often left out of our collective imagination.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

POLSCI 3009 Politics in Bureaucracies
Focuses on politics and political conflicts involving bureaucratic organizations, primarily but not exclusively those of the federal government. Attention given to the characteristics of bureaucratic organizations and their members; their relations with one another as well as with other participants in policy making also considered. Major activities within bureaucracies--planning, program development, organizing, budgeting, and service delivery--discussed with a view to clarifying their political implications and consequences; problems associated with controlling and changing bureaucracies.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall

POLSCI 3014 Gender, Politics, and Policy in the United States
This course surveys central topics in the study of gender and politics, covering such issues as women's participation in political parties and social movements, women as voters and candidates in political elections, feminism and the state, and gender and international politics. It will draw on examples from various world regions and time periods to analyze similarities and differences across cases around the globe.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

POLSCI 3015 Computational Modeling in the Social Sciences
This course will introduce students to the theory and practice of computational modeling in social science. Computational modeling allows us to explore topics - including complexity, emergence, and dynamics - that are difficult to study using traditional analytic methods. This course will cover the theoretical foundations behind computational modeling in addition to offering an introduction to the design and programming of such models.
Credit 3 units. A&S IQ: SSC EN: S

POLSCI 3016 African American Politics
Race has been a central issue in United States politics since the country's founding. From debates about the South's \peculiar institution to the Civil Rights Movement to contemporary discussions about a post-racial America, political discourse in the United States has often revolved around issues of race. In this course, we will examine the major political issues, struggles, and ideologies of African Americans in order to better understand U.S. Politics. Topics will include early and contemporary African American political thought, racism and segregation, inequality, the politics of the Civil Rights Movement, African American participation in electoral politics, and other contemporary issues. By the end of this course, students should be able to: examine current events related to race through the lens of political science concepts; understand the historical causes of ongoing conflicts and debates related to race in the United States; understand the arguments made by Black political thinkers; read and apply political science literature to major questions in the field of race. This course counts towards the undergraduate American Politics subfield.
Credit 3 units. A&S IQ: SSC, SC Art: SSC EN: S
Typical periods offered: Fall, Spring

POLSCI 3025 Topics in American Politics: The Supreme Court
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA
Typical periods offered: Fall

POLSCI 3027 Civil Rights
Introduction to the development and application of constitutional civil rights. Substantial emphasis on Supreme Court cases interpreting the Fourteenth Amendment's Equal Protection clause. Specific topics include discrimination, remedial action, and voting rights. The focus is primarily on classifications based on race and gender, but we will also examine age, disability, and sexual orientation.
Credit 3 units. A&S IQ: SSC, SC BU: BA EN: S
Typical periods offered: Fall, Spring

POLSCI 3029 Constitutional Law
Introduction to constitutional law and practice in the United States. Emphasis on the role of the U.S. Supreme Court as an interpreter of the Constitution.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring, Summer

POLSCI 3043 Topics in International Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC Art: SSC BU: IS EN: S
Typical periods offered: Spring

POLSCI 3048 The Politics of Privacy in the Digital Age
This course explores the changing nature of privacy in contemporary society.
Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH EN: S UColl: PSA, PSC
Typical periods offered: Spring

POLSCI 3074 United Nations Institutions and Processes
How do countries and non-state actors cooperate on issues that transcend international borders? What are the unique opportunities and challenges to addressing global issues in international organizations, especially the United Nations (UN)? In this course, we will examine the historical foundations of the UN, the structure of the UN, and the nature of representation in the United Nations. We will analyze the conditions under which the UN is likely to succeed or fail at addressing a range of security, economic and social, and human rights issues. To facilitate this analysis, we will examine historical and contemporary UN work to address climate change, conflict, humanitarian assistance, and human rights. This class is part of a Model

United Nations program at Washington University in St.Louis, which will travel to the National Model United Nations conference in New York in the spring. It is the first course in a two-course series. Students must complete both the fall and the spring course to be eligible for the New York conference team.

Credit 3 units. A&S IQ: SSC

Typical periods offered: Fall

POLSCI 3075 International Organizational Research

Credit 3 units. A&S IQ: SSC Art: SSC

Typical periods offered: Spring

POLSCI 3076 Politics and Policymaking in the American States

The American federal system is often overlooked in discussions about politics in the United States; however, state governments unquestionably touch the lives of Americans everyday. As such, an education in American politics is not complete without serious examination of state governments and their political institutions. This course illuminates the importance of the Ameican states in US politics and policymaking by critically examining topics such as : intergovernmental relations, the historical evolution of American federalism, the organization and processes associated with state legislative, executive, and judicial branches, state elections, political parties, interest groups and specific state policy areas such as - budgeting, welfare, education, and the environment. Prerequisites: Political Science L32 101B.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

Typical periods offered: Spring

POLSCI 3080 Race and Ethnicity in American Politics

This seminar will discuss the continuing importance of race and ethnicity in American politics and the politics of racial minority groups in America. It will examine the disadvantage minorites have in the American political structure including problems with political participation. It will examine how the structure and functions of the brances of government and its bureaucracy affect the aspirations of minorities. The roll of pressure groups on political structure will be discussed. Additional discussion will focus on urban politics and tensions.

Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S

Typical periods offered: Fall

POLSCI 3081 Gender and American Politics

This course examines the ways in which issues pertaining to gender are salient in U.S. politics. The course is divided into four parts. First, we will examine theoretical approaches to the study of gender and politics, including the use of gender as an analytical category, and the relationship between gender, race, ethnicity and power. Second, we will study gender-based social movements, including the suffrage and woman's rights movements, women's participation in the civil rights movement, the contemporary feminist and anti-feminist movements, the gay rights/queer movement and the women's peace movement. Third, we will examine the role of gender in the electoral arena, in terms of how it affects voting, running for office and being in office. Finally, we will examine contemporary debates about public policy issues, including the integration of women and gays in the military, sexual harassment, pornography and equal rights.

Credit 3 units. A&S IQ: SSC BU: BA, ETH

POLSCI 3095 Civil War and Peace

This course examines the causes and consequences of intra-state conflict, as well as the potential solutions to it, drawing on examples from countries throughout the world, including Bosnia-Herzegovina, India, Iraq, Russia, Rwanda, Spain, et cetera. We will consider many potential causes of intra-state violence, including ethnic and religious identities, economic and security concerns, elite manipulation, and international diffusion. In order to understand the challenges countries face recovering from violence, we will subsequently examine different ways in which conflicts are conducted, as well as their consequences, including economic underdevelopment, rape, child soldiers, and disease. Finally, using what we have learned about the causes and consequences of conflict, we will analyze the utility of different tools for managing intra-state conflict, including, but not limited to, minority representation, consociationalism, decentralization and partition.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, IS EN: S

Typical periods offered: Spring

POLSCI 3096 Politics of the European Union

This course is designed to introduce undergraduates at the junior and senior level to the history and politics of the European Union (EU) and European integration. In the first part of the course, students will learn about the interplay of theory and practice in the history of European integration. In the second part, they will study the institutions and decision-making processes with reference to the theoretical concepts developed earlier in the course. From there, we will examine some of the key EU policies and their implementation during the third part of the course. In the final two sections of the course, we will look at constitutional politics and some of the more recent policies and developments. This course counts towards the undergraduate Comparative Politics subfield.

Credit 3 units. A&S IQ: LCD, SSC BU: IS EN: S

Typical periods offered: Fall, Spring

POLSCI 3097 Topics in American Politics

The rapid spread of urbanization has profound consequences for environmental quality--some positive, some negative. As the world economy continues to integrate across traditional political boundaries, such growth in urban areas is likely to continue. This course explores the causes and consequences of urbanization on environmental health and how local environmental conditions may facilitate the growth of modern mega-cities. Among the topics addressed are the effects of demographic changes on rural communities as younger generations seek better economic opportunity in far away cities; the benefits to environmental quality from an expanding middle class; and the robustness of traditional institutions to changing political-economic demands.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

Typical periods offered: Fall, Summer

POLSCI 3103 Topics

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

Typical periods offered: Fall, Spring, Summer

POLSCI 3104 Political Psychology

Political psychology is a rapidly growing field of research located at the intersection of psychology and political science. Broadly, political psychology helps us understand how individuals think and feel about politics, and how these psychological factors shape political behavior. This course is designed to examine the major areas of research on how psychological factors explain important political phenomena, such as political participation, vote choice, polarization, partisanship, media consumption, political knowledge, political communication, and policy preferences. This course will also equip students with skills in information literacy that will improve their ability to conduct research, interrogate information sources, and evaluate biases in information processing that shape political decision-making

Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

POLSCI 3110 Money in Politics
Money and politics are inextricably linked. Politicians need money to finance campaigns and can use their position to enrich themselves or land a cushy job after their time in office. Voters, in turn, can be influenced by expensive campaigns or/and hand out gifts. Even, interest groups trying to influence politics lie at the heart of democracies all around the world. Understanding what are politicians' incentives, how voters respond and why groups can influence politicians, elections and policy is critical to our understanding of political representation. In this course, we will look at political science research on money and politics in different countries worldwide. Note: This course counts towards the undergraduate Comparative Politics subfield.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Spring

POLSCI 3160 Business and Politics
This course explores the relationship between business and politics. Specifically, through lectures, readings and class discussion students examine the relevance of different political regimes, institutions and policies for small business and industry organization. In addition to domestic business, the class studies the relevance of political factors for foreign investment. Through historical and contemporary cases, the student will leave class with an understanding of the policy debates, as well as substantial comparative knowledge about particular economic policies, and the process of business organization in different countries. This course counts towards the undergraduate International Relations subfield.
Credit 3 units. BU: BA EN: S
Typical periods offered: Fall

POLSCI 3161 Gender and Politics in Global Perspective
This course surveys central topics in the study of gender and politics, covering such issues as women's participation in political parties and social movements, women as voters and candidates in political elections, feminism and the state, and gender and international politics. It will draw on examples from various world regions and time periods to analyze similarities and differences across cases around the globe.
Credit 3 units. A&S IQ: SSC Art: SSC
Typical periods offered: Spring

POLSCI 3172 Sports, Policy, and Politics
The students participating in this class should expect to learn the ways in which sport and politics intersect; how sport is both the cause, and result, of political processes; how society's attachment to teams is linked to our identities, both social and political; how sport defines us physically, reflects class, and reproduces shared history. This is primarily a political science course, and no prior knowledge of sport in general, or any sport in particular, is necessary.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

POLSCI 3173 International Political Economy
Analysis of the interplay of economics and politics in the world arena, focused primarily on the political basis of economic policies in both advanced and less developed societies. Treating differing perspectives on the international economy, production, trade and finance, and international economic relations. Prerequisite: junior standing, or permission of instructor.
Credit 3 units. A&S IQ: SSC BU: IS
Typical periods offered: Spring

POLSCI 3177 International Organizations
The students participating in this class will have an opportunity to answer some of the most pressing questions about governance in the international system today. Why did the U.K. leave the European Union and what does it mean for the remaining members? Is there a chance for international governance to address the climate crisis? How does NGO advocacy affect the behavior of nations? The class will resemble a graduate level seminar; we will spend most of the class period in discussion of the weekly readings. Students will have an opportunity to independently study an issue or organization of their choosing, thus gaining a measure of expertise in an area of personal interest.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall

POLSCI 3189 Topics in Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

POLSCI 3193 Politics of Migration in the European Union
As the European Union has expanded both in membership and policy scope, so too have its physical borders and political constructions of membership. Migration patterns - both within the European Union and from outside of it - are closely connected to this deepening integration and changing patterns of multi-level governance. In this course, we will trace the process of migration and discuss the impact of migration on sending and host societies as well as on the migrants themselves. What drives people to migrate from their home communities? What challenges do they face along migration routes? As humans move, languages, ideas, and ways of life diffuse across territories. This diffusion can be integrated into host societies, or it can become a source of tension within the society. What political, social, and economic conditions facilitate this integration or tension? After discussing general frameworks and theories from the scholarship of migration, we will focus our inquiries on specific cases from within and near the European Union.
Credit 3 units. A&S IQ: SSC, SC Art: SSC

POLSCI 3199 Teaching Practicum in Political Science
This course is an opportunity for students to assist in course instruction, tutoring, and preparation of problems, readings, and exam materials with permission and under supervision of instructor. Class hours to be arranged. Prerequisite: permission of instructor. Must be enrolled through department. See department for approval form.
Credit 3 units.
Typical periods offered: Fall, Spring

POLSCI 3215 Public Opinion and American Democracy
This course is about the salience of public opinion and its influence on American Politics. Topics to be covered include many of the theories developed to explain how public opinion is formed, if and why it changes, and the relationship between public opinion and the political behavior of citizens and elites. Therefore, the course will describe and analyze many of the factors that influence the formation, structure and variation in public opinion: information processing, education, core values, racial attitudes, political orientation (ideology and party identification), political elites, social groups, the media and religion. Additional topics include presidential approval, congressional approval, and the relationship between public opinion and public policy. The course will also train students in several concepts of statistical analysis (assuming no prior knowledge) so that students can use these tools as part of their own research projects. Prerequisites: Previous coursework in American politics or communications.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

POLSCI 3224 Introduction to Chinese Politics
China's rise on the global stage stands as one of the most significant geopolitical developments of the 21st century. What are the implications of China's growing influence for the rest of the world? How did a once relatively poor nation transform into one of prosperity and stability? And will China's political system maintain its resilience over time? This course seeks to explore these questions, offering a comprehensive introduction to Chinese politics. Key topics include elite politics, censorship, protest, technology, trade, the military, diplomacy, and foreign policy. To better understand China's economic and political ascent, we will begin with a chronological exploration of its history, from the Imperial era to the present day. We will then investigate the resilience of China's authori tarian system and the factors behind its stability. Finally, we will assess the global impact of China's rise. No prior knowledge of China or the Chinese language is required.
Credit 3 units. A&S IQ: LCD, SSC
Typical periods offered: Fall

POLSCI 3242 Topics in Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

POLSCI 3279 The American Presidency
Consideration of part played by the president in American politics and public policy. The powers of the president; the staffing and organization of the executive office; the relations of the president with Congress, the bureaucracy, and other participants in American politics; presidential elections. Recommended: Pol Sci 101B.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Summer

POLSCI 3283 Latin-American Politics
This course is an introduction to the politics in Latin America, focusing on the trend toward the establishment of democracy. We examine the impact of political culture, economic development, and the legacy of authoritarian regimes on contemporary politics. The course also reviews many of the most pressing challenges confronting governments Latin American governments: the role of the military in politics, the reform of political institutions, threats from radical guerrillas and drug traffickers, debt and economic restructuring, and relations with the United States. Country studies focus on Argentina, Brazil, Chile, Peru, Mexico, and Nicaragua. Prerequisites: 100-level introductory course in Political Science or its equivalent in History or IAS.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS EN: S
Typical periods offered: Fall

POLSCI 3285 Political Economy of Democracy
In the last few years a number of important books have appeared that combine elements of economics reasoning and political science, in an effort to understand the wide variation in economic development in the world. This course will deal with the logic apparatus underpinning these books. In addition, the course will introduce the student to the theoretical apparatus that can be used to examine democratic institutions in the developed world, and the success or otherwise of moves to democratization in the less developed world.
Credit 3 units. A&S IQ: SSC EN: S

POLSCI 3286 Topics in Public Policy:
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC BU: IS

POLSCI 3288 Topics in International Political Economy:
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC Art: SSC BU: IS
Typical periods offered: Fall

POLSCI 3289 Courts and Civil Liberties
This course focuses on constitutional law principles in the Bill of Rights, and examines how Supreme Court decisions influence these principles in everyday life. We explore how the courts, and particularly the Supreme Court, have interpreted these rights in light of changing times and emerging issues. Topics include the First Amendment; free exercise of religion and the establishment clause; freedom of speech, assembly and association; freedom of the press; the Fourth Amendment and the rights of those accused and convicted of crimes; the right to privacy, including reproductive freedom and the right to die; equal protection and civil rights, including race, gender, sexual orientation; immigrants' rights and voting rights; and civil liberties after September 11. Recommended for the Liberal Arts and Business (LAB) Certificate.
Credit 3 units. A&S IQ: HUM, SSC Art: SSC BU: BA, ETH, HUM

POLSCI 3300 Terrorism and Counterterrorism
What is terrorism, when is it used, and how can we stop it? This course will tackle these challenging questions, examining both the use of terrorism in political conflict and the ways in which states have responded to these threats. Crucially, we will engage in critical discussions about the definition of terrorism - is one person's terrorist really another person's freedom fighter, as the saying goes? We will also explore the strategic logic of terrorism - why do individuals choose to engage in this practice and why it is an effective or ineffective tactic of political violence? Importantly, we will also examine the psychology of terrorism, investigating how the mass public and state leaders react to and cope with terrorist violence. Specific examples of potential topics include: the use of terrorism in anti-colonial and separatist movements, the history of terrorism in the United States from the Ku Klux Klan to jihadism, the post 9/11 War on Terror, and the resurgence of white nationalist terrorism around the world. By the end of this course, students should have a clear understanding of what terrorism is, why groups choose this strategy, how citizens and political leaders respond to this violence, and the implications this has for countering terrorism and extremism around the globe today.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

POLSCI 3313 Theories of Social Justice
This course overviews the leading contemporary conceptions of social justice, including utilitarian, liberal, libertarian, communitarian, and deliberative-democratic theories, and their implications for the design of political, economic, and social institutions. In addition, this course will examine special topics such as justice between generations, global justice, and the rights of resistance or disobedience.

Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall

POLSCI 3320 Topics in Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC BU: BA EN: S
Typical periods offered: Spring, Summer

POLSCI 3326 Topics in Politics: Legal and Political
This course is designed to be a readings and discussion course in Supreme Court decisions. The focus is on extensive coverage of the court's decisions in particular subject areas and their relationship to political and social factors and to public policies. The purpose of the course is to expose students in the social sciences to the decisions of the U.S. Supreme Court as indicators of political and sociological phenomena. PREREQUISITE: PERMISSION OF INSTRUCTOR ONLY.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

POLSCI 3328 Energy Politics
This course considers the major issues in these increasingly important areas of public policy. We will discuss the importance of political processes and actors on such phenomenon as pollution, global warming and wilderness protection. This course emphasizes the American experience but also considers international implications. Two lectures and one section meeting each week.
Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH EN: S
Typical periods offered: Fall

POLSCI 3342 Topics in Politics: Free Speech On Campus
Credit 1 unit.
Typical periods offered: Spring

POLSCI 3391 History of Political Thought I: Justice, Virtue, and the Soul
This course offers a critical introduction to the main issues and debates in western political theory, including but not limited to the topics of justice, legitimacy, equality, democracy, liberty, sovereignty, and the role of history in the political and social world. This course is designed to be the first in a three-semester sequence on the history of political thought, and students are encouraged, but not required, to take the courses in chronological sequence. The first semester begins with ancient Greek political thought, and follows its development up to the early 16th century.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA EN: S UColl: ML
Typical periods offered: Fall, Spring

POLSCI 3392 History of Political Thought II: Legitimacy, Equality, and the Social Contract
Government is often justified as legitimate on the grounds that it is based on the consent of the governed. In History of Political Thought II, Legitimacy, Equality, and the Social Contract, we examine the origins of this view, focusing our attention on canonical works in the social contract tradition, by Thomas Hobbes (1588-1679), John Locke (1632-1704), Jean-Jacques Rousseau (1712-1778), David Hume (1711-1776), and Immanuel Kant (1724-1804). This course is the second in a three-semester sequence on the history of political thought. Students are encouraged but not required to take all three courses. Prerequisite: One previous course in political theory or political philosophy.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall

POLSCI 3399 Political Violence
This course studies the ways non-state groups use violence in pursuit of political goals. During the semester we will engage with contemporary research on political violence, including civil war, ethnic conflict, terrorism and communal riots. The goal of the course is to introduce students to major questions related to the study of political violence. What explains the onset of violence? Why do individuals choose to join violent movements? Is non-violent protest more effective than the use of violent tactics? During the semester, we will read a large volume of within-country and cross-national quantitative research on political violence and also examine several cases in detail, including ethnic riots in India, Rwandan genocide, and Kurdish conflict in Turkey.
Credit 3 units. A&S IQ: SSC Art: SSC
Typical periods offered: Fall

POLSCI 3405 Topics in Political Thought:
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC BU: ETH

POLSCI 3410 Topics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC Art: CPSC, SSC BU: BA
Typical periods offered: Fall, Spring

POLSCI 3413 Surveillance Capitalism
Capitalism in the 21st century has been shaped by the ability and incentive to collect and monetize data on human behavior. Digital technology has led to the creation of networks of surveillance mechanisms that have reshaped the economic, political, and social spheres. In this class we will compare contemporary capitalism with 19th and 20th century forms of capitalism and we will analyze how the incentives to collect and analyze data have reshaped individual and community relationships with markets, governments, and each other.
Credit 3 units.

POLSCI 3443 Defendant's Rights
This course explores the operations of the American criminal justice system. Substantial emphasis on the constitutional rights accorded to the criminally accused. Readings consist primarily, but not exclusively, of Supreme Court cases. This course counts towards the undergraduate American Politics subfield.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, ETH EN: S
Typical periods offered: Fall, Spring

POLSCI 3450 The Legislative Process
Structure and behavioral patterns of American legislative bodies. Primary emphasis on the U.S. Congress, with attention to state legislatures for comparative purposes. Representation, internal patterns of influence, and policy-making processes. Prerequisite: junior standing.
Credit 3 units. A&S IQ: SSC BU: BA EN: S
Typical periods offered: Fall

POLSCI 3470 Representation and Political Accountability
Political representation deals with the correspondence between citizen preferences and public policies. This course examines the critical role elections play in linking the two. Topics to be covered include the influence of interest groups, the media, and political parties on elections and policymaking. We will also explore how variation in the electoral rules, such as the rules governing campaign finance and methods of conducting party primaries, influence electoral politics. Finally, we will examine how separation of powers potentially attenuates the electoral connection between voters and electied officials.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

POLSCI 3490 Survey Design and Analysis
Survey research is an important method that political scientists often use to understand people in the world around us. By asking a standardized set of questions to a random sample of respondents, we can make inferences regarding the opinions and behavior of the larger population from which it was drawn. Surveys also offer numerous opportunities for experimental research, allowing scholars to make confident causal claims about the determinants of public opinion and behavior. In recent years, the advent of Internet-based surveying and online recruitment of respondents has democratized survey research, allowing many researchers and scholars with limited resources to design and conduct their own surveys from scratch. Surveys are also increasingly conducted around the world, outside of the context of advanced democracies where this method originated. Yet these developments have introduced new challenges in terms of ensuring that inferences drawn from survey research are valid. Topics include sampling, survey modes, questionnaire design, survey experiments, pre-analysis plans, ethics and the Institutional Review Board, and analyzing survey data. Prerequisites: L32 263, L32 363 or equivalent or with instructor permission.
Credit 3 units. A&S IQ: SSC, AN Art: SSC EN: S
Typical periods offered: Fall, Spring

POLSCI 3511 The Politics of The US Supreme Court
The principal purpose of this course is to provide students with a systematic understanding of the U.S. Supreme Court. After discussing the social scientific study of the Court, we will examine theoretical issues regarding judicial process and politics. This course, unlike the constitutional law classes, does not focus on legal doctrine; rather, it examines political aspects of the Supreme Court, with an emphasis on the social scientific literature on law and politics. We will seek to understand phenomena such as the following: (1) Why does the Court change law? (2) Under what circumstances does the Court overrule precedent? (3) Do elected politicians (such as members of congress) influence how the Court decides cases (4) How does bargaining among the Justices influence the development of legal doctrine? One of the themes in this course is how we can understand the judiciary in terms of a political game. That is, we will examine how the various participants in the judiciary attempt to achieve their goals within the constraints of the institution and its surrounding environment. Additionally, students will write a major research paper in which they will explain a specific set of judicial behaviors or events. The paper requires each student to undertake original research (i.e., the gathering of original evidence) in an effort to test their explanation. This course counts towards the undergraduate American Politics subfield.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall

POLSCI 3512 The Supreme Court, Law, and Public Policy
Learning how courts interpret policy has become an important component of the policymaker's toolkit. This course aims to introduce policy-oriented students to how Constitutional interpretation touches upon pressing policy questions. Students will engage with what courts expect to see from policymakers, while also learning how to read cases from a lawyer's perspective. Topics covered include federalism, LGBT rights, race and ethnicity, criminal justice issues, voting rights, and political questions and official immunity. Texts will include cases decided by the Supreme Court (including cases from recent terms), and also contemporary scholarship on judicial politics and decision making. Although our focus will be on the Supreme Court, the pedagogical emphasis will be on what policy makers can expect from the courts in terms of federal and state policy implementation. Our goal is that by the end of this course you will be able to: 1. Understand when federal courts will and will not intervene, particularly with regard to key policy and political issues 2. Think critically and assess the ability of courts to be used as instruments of social change 3. Understand what oversight, if any, the courts exercise over federal policy making, including by administrative agencies The course content is divided into four broad units, all of which are essential for understanding the courts' role in the promotion and interpretation of national policy. These are (1) federal courts, their nature, and their limited powers, (2) the courts' role in social movements and as protectors of individual rights and liberties, (3) political questions and immunity, and (4) the complicated relationship between courts and administrative agencies. Note: This course counts toward the undergraduate American Politics subfield.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall

POLSCI 3548 Authoritarian Politics
This class gives an overview of the politics of authoritarian regimes. We begin with concepts, defining authoritarian regimes and learn what distinguishes them from democracies. We also look at different kinds of autocratic regimes such as “personalistic regimes,” military dictatorships, or one-party regimes. Operating from the vantage point that dictators wish to remain in power, we scrutinize two different kinds of threats to authoritarian survival: elite-led coup d’états and popular revolutions/protests. Subsequently, we study how dictators can counter these threats, looking at institutions (power-sharing institutions such as legislatures and information-related institutions such as elections), repression, cooptation, and information manipulation (propaganda and censorship). We conclude with a discussion of the phenomenon of democratic backsliding and the prospects for an authoritarian turn in America.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall, Spring

POLSCI 3565 Understanding Political Protest and Violence
Collective action in the political sphere ranges from nonviolent demonstrations to violent conflict. We will study a range of cases of political protest, from historical to contemporary, using theories and evidence from political science and other disciplines, to identify individual motivations, political contexts, and patterns across time and space. We will analyze a handful of cases in depth, using previously collected data that ranges from interviews to social media accounts and applying techniques suitable to non-quantitative data.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Spring

POLSCI 3581 Media and Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests
Credit 3 units. A&S IQ: SSC BU: BA EN: S

POLSCI 3613 Legislative Politics
This course is an introduction to the politics of the U.S. Congress and the federal lawmaking process. We will focus on the behavior of individual legislators and the role that they play in crafting federal legislation in policy areas such as healthcare, civil rights and the environment. In general we examine questions such as: Why do legislators behave as they do? Whose interests are being represented?
Credit 3 units. A&S IQ: SSC BU: BA EN: S

POLSCI 3620 Game Theory and Strategies of Conflict
How and why do states and other non-state actors bargain, cooperate, and fight? This class will explore the strategic interactions at the heart of international relations, with a focus on interstate and intrastate conflict. We will use models, primarily game theoretic models, to examine how actors make decisions when confronting friends or foes, under constraints, and in environments filled with uncertainty. This class will introduce one way of thinking about conflict in international relations, which emphasizes constructing logical (often mathematical) frameworks to answer questions like: Why do wars start and end? How do states behave in conflict? When and how does coercion work? This course counts towards the undergraduate Political Methodology OR International Politics subfield.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Spring

POLSCI 3621 Politics and the Theory of Games
This course is intended to cover through analytical discussion and illustrations the basic concepts and major achievements of Game Theory in different sub-fields of research in the social sciences today. We will discuss examples of the usefulness of cooperative and non-cooperative game theory to the study of human behavior in general and political science and political economy in particular.
Credit 3 units. A&S IQ: AN Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

POLSCI 3630 Quantitative Political Methodology
This is an introduction to research methodology and quantitative analysis for social scientists. Students will be introduced to the logic of social scientific inquiry, and to the basic statistical tools used to study politics. Students will learn and apply the following to answer substantive questions: measurement, descriptive analysis, correlation, graphical analysis, hypothesis testing, confidence intervals, analysis of variance, and regression analysis. Major components of the course include learning how to collect, manage, and analyze data using computer software, and how to effectively communicate to others results from statistical analyses. Students will work collaboratively on research projects where they pose their own questions, design a study, collect and analyze the data, and present their findings in a research paper.
Credit 3 units. A&S IQ: SSC, AN Art: SSC EN: S
Typical periods offered: Fall, Spring

POLSCI 3690 Politics of International Trade
In this course we will study the relationship between international trade and domestic politics. We will cover the basic models of international trade, the distributional consequences of international trade, the relationship between trade and economic development, an analysis of the trade protectionism (causes and consequences) and an analysis of international organizations related to international trade (special focus on the World Trade Organization). Prerequisites: L32 103B.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS EN: S
Typical periods offered: Spring

POLSCI 3692 The Politics of Public Policy
Students will learn how politics determines policy. The course will first briefly introduce students to cost-benefit analysis and then will discuss how political ideas, interests, and institutions often move policy outcomes away from those based on cost-benefit analysis.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall, Spring

POLSCI 3720 Topics in International Politics
This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Credit 3 units. A&S IQ: SSC BU: IS EN: S
Typical periods offered: Fall

POLSCI 3722 International Politics, Trust and Public Health
Trust in government shapes a range of important political and social behaviors. In general, low trust in government reduces individuals' willingness to engage and comply with its institutions and policies. Consequently, low levels of trust in government hinder the state's ability to effectively lead during crises, as citizens with a wary view of the state are unlikely to comply with state directives that have direct impact on their personal lives. The COVID-19 pandemic highlighted the potentially devastating consequences of low levels of trust in government, as individuals around the globe with lower levels of trust were less likely to follow government public health recommendations meant to slow infections and deaths. Furthermore, the adverse consequences of trust deficits extend well beyond the recent COVID-19 pandemic to perceptions of health services more generally. This course analyzes the links between trust and public health outcomes, paying special attention to the different sources of low trust. For example, low trust in government can stem from perceptions of recent performance, and thus be amenable to public relations campaigns to improve citizens' perceptions. This view is consistent with the approach of international organizations such as the Organization for Economic Cooperation and Development (OECD) and the United Nations (UN), who have focused on short-term programs to promote public trust in government as a means to achieve widespread vaccination. Alternatively, trust may result from the lingering effects of influential and traumatic historical events, such as armed conflicts or systematic repression against a particular group or geographic area. Indeed, prominent research in political science and economics indicates that trust in government has enduring geographic variation and is, at least in part, a product of deeply historical factors We explore how the sources of low trust among different groups of citizens influences possible policy solutions to improving levels of trust and, consequently, key public health outcomes. We also explore factors other than trust that influence individuals' adherence to public health recommendations.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall

POLSCI 3760 Globalization, Urbanization, and the Environment
Urbanization was a dominant trend in the twentieth century and globalization only acted to accelerate it. The consequence has been a multitude of ecological and social challenges that policy makers and citizens continue to confront. The students participating in this course should expect to learn about these challenges, their relationship to our present environmental emergency, and the potential policy solutions being debated. Students will have an opportunity to propose and defend their own solutions to these challenges.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

POLSCI 3763 Topics in Comparative Politics
Urbanization was a dominant trend in the twentieth century and globalization only acted to accelerate it. The consequence has been a multitude of ecological and social challenges that policy makers and citizens continue to confront. The students participating in this course should expect to learn about these challenges, their relationship to our present environmental emergency, and the potential policy solutions being debated. Students will have an opportunity to propose and defend their own solutions to these challenges

This course is used to award credit for the Substantive Distribution requirement for the Environmental Policy major.
Credit 3 units.

POLSCI 3793 Study Abroad in Environmental Policy: Social Science Distribution
This course is used to award credit for the Social Science Distribution requirement for the Environmental Policy major.
Credit 3 units.

POLSCI 3890 Power, Justice, and the City
This course examines normative theoretical questions of power and justice through the lens of the contemporary city, with a particular focus on American urban life. It explores urban political economic problems, questions of racial hierarchy and racial injustice in the modern metropolis, and the normative and practical dilemmas posed by privatism in cities and their suburbs.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

POLSCI 3930 History of Political Thought III: Liberty, Democracy, and Revolution
How, if at all, should the political institutions of the modern state express and secure the liberty and equality of citizens? What is the political significance of private property? Is world history to be understood as progress towards one best form of government - capitalist democracy, perhaps, or communism? What forces drive history? We shall address these and other timeless political questions through close reading and rigorous analysis of classic texts in the history of Western political thought. Authors to be studied will include Kant, Hegel, Marx, Tocqueville, John Stuart Mill, and Nietzsche. Prerequisite: one previous course in political theory or political philosophy. The course is designed to be the third in a three-semester sequence on the history of political thought, and students are encouraged but not required to take the courses in chronological sequence.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

POLSCI 4027 Experiments in Politics
This will be a lab-style seminar in which we will design, field, and analyze an experimental study on political attitudes or political behavior. Our ultimate goal will be to publish a scholarly article in a peer-reviewed journal in political science. PREREQUISITE: L32 363 Quantitative Political Methodology or L32 263 Data Science for Politics (can be taken concurrently)
Credit 3 units. BU: BA
Typical periods offered: Spring

POLSCI 4043 Public Policy Analysis, Assessment and Practical Wisdom
This course provides an introduction to the study, professional practice, ex-ante and ex-post assessment of public policy and the professional practice of public analysis. We will rely heavily on David L. Weimer and Aidan R. Vining's text, Policy Analysis: Concepts and Practice. This course covers a series of critical concepts in the understanding of practicing, analyzing and assessing public policy.

Typical periods offered: Spring

POLSCI 4046 Forced Displacement and the Politics of Seeking Refuge
In the last decade, the number of people who are forcibly displaced has more than doubled, and today the United Nations High Commissioner for Refugees estimates that 108.4 million people are forcibly displaced. Among this group, people face distinct legal, social, economic, and political challenges according to their status as refugees, asylum seekers, internally displaced persons, and others who do not fit these categories. In this course, we will examine the political conditions that forcibly displace people across and within countries including persecution, conflict, and environmental disasters exacerbated by climate change as well as their experiences of seeking refuge. How do international, state, local, and non-governmental institutions cooperate to manage the needs of forcibly displaced persons? In what ways do political pressures create opportunities for and barriers to effective policies to address refugee issues? How do these structural challenges affect forcibly displaced persons, and what strategies do advocates use to improve the human rights of these populations? Throughout the course, we will bear in mind the interconnectedness of macro-level policy-making and micro-level issues that affect the daily lives of individual humans experiencing forced displacement.
Credit 3 units. A&S IQ: SSC, SC Art: SSC EN: S
Typical periods offered: Spring

POLSCI 4056 Political Representation
In this class we will study the concept of representation. Historically, how has representation been conceived? Conceptually, what should count as political representation, and must it always be democratic? As a normative problem what should representatives do? And how should

institutions be designed to foster these normative ends? Readings will provide a broad overview of the subject, and address enduring questions including problems of minority representation, voting rights, and redistricting. Prerequisites: Political Science L32 106 or L32 107.
Credit 3 units. A&S IQ: SSC BU: ETH EN: S

POLSCI 4065 Senior Seminar: Religion, Politics, and Community
Religion is a powerful social, economic, and political force across the globe. Its formal authorities and informal influences have changed over time and across space and traditions. Yet even where regular religious practice has become less common, religion remains a means of constructing communities, be it a diaspora, a unique nation within a state, or state-wide national identity or nationalism. Religion intersects with race, gender, and other important social identities, and it overlaps with organized political power from the grassroots to the government. Human relationships with the divine have influenced everyday norms and values, have marked key moments in our life cycle, and have provided material and social psychological resources for communities. In this course, we will examine the political relationships between religion and community from a variety of social scientific perspectives. As a core part of this inquiry, you will conduct an original research paper on a topic of your choice relating to religion, politics, and community. We will work through each step of the scientific method over the course of the semester-using religion and community as a lens and set of thematic examples-and hold guided workshops to facilitate your research process. Prereq: L32 263 OR L32 363 OR department approved equivalent
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall

POLSCI 4082 Voting Rights
This course will study legal concepts of voting rights and election law that impact the ability of citizens to access and participate in the democratic process. It will include the opportunity for students to directly engage in observing, monitoring, or advancing the right to vote during the 2008 elections. Election law changes rapidly and is the subject of legal and political dispute in a number of areas that will affect the franchise during the 2008 elections. This course will examine federal constitutional and statutory law governing the right of suffrage and assess current controversies in these areas. While there is no specific right to vote explicitly stated in the U.S. Constitution, over time, it has been amended or interpreted to protect the right of franchise from being abridged based on race, gender, property ownership, age and other qualifications. Legislative enactments have also established rights with respect to voting. Each extension of voting rights has been a product of and resulted in social and political change. This course will examine the interplay of law and politics in the right to vote. The course will begin with the study of constitutional foundations, statutory protections and case law. We will then apply these principles to current issues in voting rights, including voter registration, voter identification, provisional ballots, voting machines, access for people with disabilities, felony disenfranchisement, voter suppression and voter fraud. Students will apply this knowledge to voting rights during the 2008 elections through hands-on involvement in voter education, monitoring or advocacy. The course will conclude with an assessment of the current issues in light of observations made by students during the 2008 elections, with an eye toward the advancement of election law and full enfranchisement in the future. The course involves the study of fundamental Supreme Court cases, interactive discussion of contemporary debates, and review of current litigation and legislative proposals. The course will be supplemented by occasional guest visits by election officials, lawyers, legislators, voting rights advocates or others.
Credit 3 units. A&S IQ: SSC BU: BA EN: S
Typical periods offered: Fall

POLSCI 4103 Fascism and the Far Right in Europe
Across Europe and beyond, parties on the far right have become a substantial force in contemporary politics. Some analysts have raised questions about these parties' ties to fascism, as characterized regimes such as Mussolini's Italy, Franco's Spain, and Hitler's Germany. How do today's far right actors compare to those of the past, and what can we learn from the comparison of the present moment to history? In this class, we will study both the extreme and radical right in Europe over time through the lens of three cases: Italy, Spain, and Germany. We will analyze both the conditions for popular support (demand) and political opportunity structures (supply) that allow(ed) far right actors to gain and maintain authority. We will also assess the strategies of these actors through themes of race and migration, security and foreign policy, gender, and religion. As we develop this discussion, you will conduct further research into a single topic that interests you, in the course cases or another case of your choice. Since an essential element of far right politics is the rejection of either the liberal elements of democracy (e.g. minority rights) or the principles of democracy entirely (including the electoral process), you will present your research through a creative medium aimed at a public audience, with the goal of promoting civic engagement. Prereqs: Intro to Comparative Politics OR Intro to International Politics
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall

POLSCI 4115 Immigration, Identity, and the Internet
This class exmines a critical issue in contemporary societies: How do changes in technology affect the process of immigration and how immigrant identity is shaped?
Credit 3 units. A&S IQ: LCD, SSC, SC, WI Art: SSC EN: S
Typical periods offered: Fall

POLSCI 4160 Contemporary Issues in Latin America
How do the institutional designs of contemporary democratic governments help us understand the nature and quality of representation? We will concentrate on variations in the powers granted presidents by constitutions as well as the institutional determinants of whether executives are likely to find support for their policies in the legislature. In addition, we will explore how incentives established by electoral laws influence the priorities of members of congress. Given all these variations in democratic institutional design, can voters go to the polls with the confidence that politicians will implement the economic policies for which their parties have long stood or which they promised in their campaigns?
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS

POLSCI 4218 Gender and the Future of Work
Work is a central category of human experience, a meaning-making and identify-forming activity, and a site of struggle. It is also both shaped by, and helps constitute the meaning of, gender. This course asks the following questions: How has work been theorized in the history of political thought, and how ought we conceptualize work today? How does the gendering of work naturalize certain forms of labor, such as domestic work, mothering, and gestation? How might individuals resist these processes, thus remaking the meaning of work? And finally, what do we want the future of work to be? This course is divided into four parts, which track these four questions. First, we will read canonical works in political theory that frame the debate on work. Then, in part two we will move beyond gender-free conceptions of work, looking at kinds of work that have been quintessentially defined as “women’s work,” including domestic work, sex work, and gestational labor. Third, we will turn to the politics of resistance and the refusal of work, focusing on feminist refusals. Here, we look at social movements

and moments in feminist history that challenge the naturalization of gendered labor, including the Wages for Housework movement and the Women's Strike. Finally, we will conclude with a unit on the future of work that once again centers work's gendered dimensions.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall

POLSCI 4228 Topics in Comparative Politics: Politics and Identity
In this course, we will examine the relationship between politics and identity and the consequences for political stability and cohesion as a result of those relationships. We will consider different cases and explanations for the United States and, in comparative perspective, for how identity works with respect to gender, race, ethnicity, class and sexual orientation in the pursuit of political or social goals. How do these different identities impact social and political conflict, local and national cohesiveness, and political participation?
Credit 3 units. A&S IQ: SSC, WI Art: SSC EN: S
Typical periods offered: Fall, Spring

POLSCI 4250 Comparative Political Parties
An introduction to theories and concepts used in the analysis of political parties in democratic regimes, with emphasis on the classic literature covering West European advanced industrial democracies and the more recent scholarship on Latin American party systems. The course illuminates the complex aims consequences, and characteristics of modern party politics.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

POLSCI 4253 Trust and Public Health
Trust and public health are inextricably linked. State actors are key participants in public and population health, organizing, among other things, mandates and guidelines that target health behaviors and encourage the uptake of health promotion and prevention policies, as well as screening, evaluation, and management of health conditions. Effective implementation of these efforts is conditional on the public's belief that public health institutions and actors are trustworthy. This course focuses on understanding the principles and levels of trust as they relate to public health functions. The course features faculty studying trust and public health as part of the cluster supported by the Incubator for Transdisciplinary Futures. Students will not only engage with issues, policies, and data related to trust and public health but will also develop competency in research proposal development. Student learning will be assessed through participation, data exploration activities, policy briefs, and research proposals.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall, Spring

POLSCI 4262 Topics in American Politics:
Credit 3 units. A&S IQ: SSC EN: S

POLSCI 4271 Topics in Politics:
Topics will vary each semester.
Credit 3 units. BU: BA
Typical periods offered: Fall

POLSCI 4306 Global Justice
This course examines contemporary debates and controversies regarding global justice. Seminar discussions will be arranged around significant issues in the current literature. for example: What (if anything) do we owe to the distantly needy? Do we have special obligations to our compatriots? Do political borders have normative significance? And so on. This course will be of interest not only to political theorists, but also students in other fields interested in social justice or international relations generally.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S
Typical periods offered: Spring

POLSCI 4442 The Supreme Court and Public Opinion
The Supreme Court is the least representative branch of the federal government and also the most insulated from public opinion. Even so, it enjoys the highest levels of public approval, with public support that far outpaces support for Congress or the Presidency. This course will explore this tension and will investigate why and how the public opinion influences the Court and vice versa. Throughout, we will interrogate the basic presumption that the Court is, and ought to be, insulated from the public. We will also engage these questions through the vantage point of key Supreme Court caselaw involving civil rights and reproductive freedoms.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Spring

POLSCI 4465 Black Life and the Law
Credit 3 units. A&S IQ: HUM, SC BU: BA, HUM

POLSCI 4546 The Politics of Law and Order
This is an undergraduate seminar about the politics of law and order. In it, we will explore how law and order emerge in a society, by whom these goods are provided, the consequences of different systems of law and order, and the interaction between these systems and the actors who operate within them.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall

POLSCI 4553 Comparative Political Economy
This seminar will introduce the student to aspects of social choice theory, applied to themes to do with the economic origins of democracy, democratization and the stability of social orders. We shall read and discuss a number of recent books: Acemoglu and Robinson on Economic Origins; North, Weingast and Wallis on Violence and Social Order; Przeworski on Democracy and Development; Ferguson on Money; Collier on Wars Guns and Votes. If time permits I also hope to discuss recent work by Stern on the Economics of Climate Change. Students will be expected to work on two short research paper, either empirically or theoretically based, and make a presentation of their work near the end of the semester.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S

POLSCI 4652 Democracy and Inequality in an Age of Globalization
This is a course on comparative political economy that explores whether open, liberal democratic societies can provide relative economic equality while at the same time guaranteeing untrammeled flows of goods and services across borders. The course is based on close reading of recent research in economics and political science.
Credit 3 units. A&S IQ: SSC Art: SSC
Typical periods offered: Fall

POLSCI 4714 Political Economy of Inequality and Redistribution
While in office, politicians face decisions about how to allocate goods and services. When do office holders use these provisions to boost their electoral prospects? How does this strategy diverge with different electoral rules? Why can electoral incentives affect the provision of certain goods and services but not others? How widespread is this behavior? Does it confer electoral advantages to the party in office? These are some of the questions that we will address in this course, as we will discuss the political and institutional factors that influence goods and services provision.
Credit 3 units. A&S IQ: SSC

Typical periods offered: Fall

POLSCI 4756 Psychology of War
Why does war occur? Why does it last so long? What are its long-term effects on the people that lived through them? This course is designed to shed light on these questions, examining the interaction of psychological and strategic processes in international war and conflict. We will critically examine how psychological factors such as emotions, identity, cognition, and motivation impact (and are impacted by) political violence. We will examine these processes in the context of crisis diplomacy, national security policy, war, post-conflict reconstruction, and more. Specific examples of potential topics include: the global War on Terror, ongoing intractable conflicts such as the Israeli-Palestinian conflict, diplomatic standoffs between the US and adversaries such as North Korea and Russia, and refugee and migration crises around the globe. By the end of this course, students should have a clear understanding of how political conflict both affects and is affected by human psychology, and the implications this has for addressing a host of political problems and challenges.
Credit 3 units. A&S IQ: SSC, WI Art: SSC EN: S
Typical periods offered: Fall, Spring

POLSCI 4900 Senior Thesis Research
Intensive research. To be conducted under the supervision and guidance of a faculty sponsor of the thesis.
Credit 3 units.
Typical periods offered: Fall, Spring

POLSCI 4905 Research Design and Methods
This course provides an introduction to qualitative and quantitative research methods in political science. Topics address issues related to theory building as well as theory testing. Technical issues related to these methods are not the focus of this course, as are theoretical issues regarding the advantages and disadvantages of the different approaches. Ultimately, the goal of this course is twofold: (1) to instruct students to critically analyze scholarly articles with particular attention to research design, and (2) to guide students in how to design an original research project. Both the reading assignments, including methodological and applied readings, and the written assignments are directed toward these goals.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall, Spring

POLSCI 4912 Directed Readings
This is a course of readings in political science taken under the direction of an instructor in the department.
Credit 3 units.
Typical periods offered: Fall, Spring

POLSCI 4913 Directed Research
Research activities or project in political science done under the direction of an instructor in the department.
Credit 3 units.
Typical periods offered: Fall, Spring

POLSCI 4996 Political Science Elective Credit
Credit 0 units. EN: H, S

Environmental Policy Major

Program Requirements

- **Total Units Required:** 39 units with a C or better; 18-27 of the total units must be at the 3000 or 4000 level

Required Courses

- 18 units from required foundation courses
  - **Intro to Political Science:** POLSCI 1000 American Politics; POLSCI 1100 Introduction to Comparative Politics; POLSCI 1200 International Politics; or POLSCI 1300 Introduction to Political Theory (**Note:** Students scoring a 4 or 5 on AP US Government and Politics or AP Comparative Government and Politics may place out of the introductory requirement and replace it with a 3000- or 4000-level Political Science course in the subfield related to the AP course.)
  - **Intro to Environmental Policy:** POLSCI 2000 Introduction to Environmental Policy
  - **Natural Science on Enviro:** BIOL 2950 Introduction to Environmental Biology or L41 381 Intro to Ecology or L19 202 Intro to Earth & Planetary Science
  - **Research Methods:** POLSCI 2400 Data Science for Politics or POLSCI 3630 Quantitative Political Methodology
  - **Policy Analysis:** POLSCI 4043 Public Policy Analysis, Assessment, and Practical Wisdom or POLSCI 3692 The Politics of Public Policy
  - **Normative:** POLSCI 3313 Theories of Social Justice or POLSCI 4070 Global Justice

Elective Courses

- 15 units of 3000- or 4000-level electives with an environmental focus (from a preapproved list or by petition in advance), 6 units of which must be in Political Science or cross-listed with Political Science

Capstone

- 6 units of capstone experiences; any combination of the following:
  - Internship (credits following Political Science rules)
  - Experiential Learning Course
  - Directed Research Project/Independent Study
  - Honors Thesis (following Political Science rules)

Additional Information

Senior Thesis

The department encourages students to pursue independent research by working toward a senior thesis. Students admitted to this program work closely with a faculty advisor for a full calendar year, beginning at the end of their junior year. Students writing a senior thesis receive 6 units of credit for two semesters of work by enrolling in POLSCI 4900 Senior Thesis Research. This credit counts toward the capstone requirement. Although there is no grade point average requirement for writing a senior thesis, an application is required. For more information, contact the department office. All majors may apply.

To qualify to write a senior thesis, students must do the following:

- Complete the methodology course requirement by the fall of their junior year (all majors are strongly urged to complete this requirement during their sophomore year).
- Complete POLSCI 4905 Research Design and Methods prior to their senior year.
- Apply during their junior year for admission into the program.

Limitations

No more than 6 units from the following may count toward the major: study abroad, summer school, the School of Continuing & Professional Studies, or transfer credit.

No more than 6 units from the following may count toward the major: internship, directed reading, directed research, or teaching practicum.

Email:	polisci@wustl.edu
Website:	http://polisci.wustl.edu

Political Science Major

Program Requirements

- **Total Units Required:** 30
- **Grade Requirement:** C or better

Students who major in Political Science are required to complete 30 graded units (10 courses) in Political Science with a C or better, distributed as follows:

Required Courses

Substantive Introductory Courses

6 graded units must come from two 1000-level introductory courses. (**Note:** Students scoring a 4 or 5 on the AP US Government and Politics exam and/or the AP Comparative Government and Politics exam may place out of the associated introductory course and replace it with a 3000- or 4000-level course in a related subfield.)

Methodology Course

3 graded units must come from either POLSCI 2400 Data Science for Politics or POLSCI 3630 Quantitative Political Methodology. All majors are urged to complete this requirement during their sophomore year. (**Note:** Some statistics courses offered in other departments will allow students to opt out of this class, but those credits will not count toward their Political Science major. See the department website for more information.)

Elective Courses

Distribution Requirement

Students must complete at least one 3-unit course at the 2000, 3000, or 4000 level in three of the following subfields: American politics, comparative politics, international politics, political methodology, or political theory.

Upper-Level Requirement

18 graded units must come from any six 3000- or 4000-level courses, including at least one 4000-level capstone course (see below).

Other Courses

A student's remaining graded units may be earned by any Political Science course or independent study. However, credits given for writing a senior thesis (detailed in the Senior Thesis section below) do not count toward the major. In addition, a student may complete an internship for Political Science credit.

Capstone

All majors must complete at least one 4000-level, home-based course in Political Science as a capstone experience. Students writing a senior thesis satisfy this requirement by completing POLSCI 4905 Research Design and Methods.

Limitations

No more than 6 units from the following may count toward the major: internship, directed reading, directed research, or teaching practicum.

No more than 6 units from the following may count toward the major: study abroad, summer school, the School of Continuing & Professional Studies, or transfer credit.

Washington University in St. Louis

Additional Information

Specializations

Political science majors may specialize in a subfield of political science by taking (as part of their distribution requirement) three courses with the same subfield distribution in any one of the five subfields (American politics, comparative politics, international politics, political methodology, or political theory). Students may earn specializations in up to two subfields. The successful completion of a subfield specialization will be listed on the student's transcript.

Senior Thesis

The department encourages students to pursue independent research by working toward a senior thesis. Students admitted to this program work closely with a faculty advisor for a full calendar year, beginning at the end of their junior year. Students writing a senior thesis receive 6 units of credit for two semesters of work by enrolling in POLSCI 4900 Senior Thesis Research. However, this credit does not count toward the completion of the political science major. Although there is no grade point average requirement for writing a senior thesis, an application is required. For more information, contact the department office. All majors may apply.

To qualify to write a senior thesis, students must do the following:

- Complete the methodology course requirement by the fall of their junior year (all majors are strongly urged to complete this requirement during their sophomore year).
- Complete POLSCI 4905 Research Design and Methods prior to their senior year.
- Complete a subfield specialization (detailed in the Specializations section above) by the end of the fall of their senior year in the subfield appropriate for their senior thesis. At least two thirds of the specialization must be completed by the end of their junior year.
- Apply during their junior year for admission into the program.

Senior Honors

There are two tracks for graduating with Latin Honors: honors by thesis and honors by coursework. For either track, students must complete POLSCI 4905 during their junior year.

To graduate with Latin Honors by thesis, students must also successfully complete a senior thesis project and meet a GPA requirement set by the College of Arts & Sciences.

To graduate with Latin Honors by coursework, students must also complete an additional 9 credits that are at the 3000 level or higher (for a total of 39 credits in the major), write a paper that is 10 pages or longer in a course (that is not POLSCI 4905) at the 4000 or 5000 level, and meet a GPA requirement set by the College of Arts & Sciences.

Political Science Major, Comparative Politics Specialization

Program Requirements

- **Total Units Required:** 30
- **Grade Requirement:** C or better

Students who major in Political Science are required to complete 30 graded units (10 courses) in Political Science with a C or better, distributed as follows:

Required Courses

Substantive Introductory Courses

6 graded units must come from two 1000-level introductory courses. (**Note:** Students scoring a 4 or 5 on the AP US Government and Politics exam and/or the AP Comparative Government and Politics exam may place out of the associated introductory course and replace it with a 3000- or 4000-level course in a related subfield.)

Methodology Course

3 graded units must come from either POLSCI 2400 Data Science for Politics or POLSCI 3630 Quantitative Political Methodology. All majors are urged to complete this requirement during their sophomore year. (**Note:** Some statistics courses offered in other departments will allow students to opt out of this class, but those credits will not count toward their Political Science major. See the department website for more information.)

Elective Courses

Distribution Requirement

Students must complete at least one 3-unit course at the 2000, 3000, or 4000 level in three of the following subfields: American politics, comparative politics, international politics, political methodology, or political theory.

Upper-Level Requirement

18 graded units must come from any six 3000- or 4000-level courses, including at least one 4000-level capstone course (see below).

Other Courses

A student's remaining graded units may be earned by any Political Science course or independent study. However, credits given for writing a senior thesis (detailed in the Senior Thesis section below) do not count toward the major. In addition, a student may complete an internship for Political Science credit.

Capstone

All majors must complete at least one 4000-level, home-based course in Political Science as a capstone experience. Students writing a senior thesis satisfy this requirement by completing POLSCI 4905 Research Design and Methods.

Limitations

No more than 6 units from the following may count toward the major: internship, directed reading, directed research, or teaching practicum.

No more than 6 units from the following may count toward the major: study abroad, summer school, the School of Continuing & Professional Studies, or transfer credit.

Requirements for the Comparative Politics Specialization

Students may specialize in Comparative Politics by completing three courses within the Comparative Politics subfield. Consult the department or review course details in Workday to learn about subfield designations.

Code	Title	Units
POLSCI 3014	Gender and Politics	3
POLSCI 3048	Politics of Privacy in the Digital Age	3
POLSCI 3095	Civil War and Peace / The Scientific Study of War	3
POLSCI 3096	Politics of the European Union	3
POLSCI 3161	Gender and Politics	3
POLSCI 3177	International Organizations	3
POLSCI 3189	Topics in Politics: Political Economy of Immigration	3
POLSCI 3242	Topics in Politics: Politics of Economic Development	3
POLSCI 3270	African Politics	3
POLSCI 3283	Latin American Politics	3
POLSCI 3285	Political Economy of Democracy	3
POLSCI 3288	Topics in International Political Economy: Political Economy of Inequality and Redistribution	3
POLSCI 3320	Topics in Politics: Campaigns, Corruption, and Cash	3
POLSCI 3720	Topics in International Politics: Ethnic Conflict: Causes and Remedies	3
POLSCI 3763	Topics in Comparative Politics	3
POLSCI 3784	Terrorism and Political Violence	3
POLSCI 4115	Immigration, Identity, and the Internet (WI)	3

POLSCI 4160	Contemporary Issues in Latin America OR Presidents, Legislators, and Economic Policy in Latin America	3
POLSCI 4250	Comparative Political Parties	3
POLSCI 4453	Comparative Political Economy	3

Additional Information

Specializations

Political science majors may specialize in a subfield of political science by taking (as part of their distribution requirement) three courses with the same subfield distribution in any one of the five subfields (American politics, comparative politics, international politics, political methodology, or political theory). Students may earn specializations in up to two subfields. The successful completion of a subfield specialization will be listed on the student's transcript.

Senior Thesis

The department encourages students to pursue independent research by working toward a senior thesis. Students admitted to this program work closely with a faculty advisor for a full calendar year, beginning at the end of their junior year. Students writing a senior thesis receive 6 units of credit for two semesters of work by enrolling in POLSCI 4900 Senior Thesis Research. However, this credit does not count toward the completion of the political science major. Although there is no grade point average requirement for writing a senior thesis, an application is required. For more information, contact the department office. All majors may apply.

To qualify to write a senior thesis, students must do the following:

- Complete the methodology course requirement by the fall of their junior year (all majors are strongly urged to complete this requirement during their sophomore year).
- Complete POLSCI 4905 Research Design and Methods prior to their senior year.
- Complete a subfield specialization (detailed in the Specializations section above) by the end of the fall of their senior year in the subfield appropriate for their senior thesis. At least two thirds of the specialization must be completed by the end of their junior year.
- Apply during their junior year for admission into the program.

Senior Honors

There are two tracks for graduating with Latin Honors: honors by thesis and honors by coursework. For either track, students must complete POLSCI 4905 during their junior year.

To graduate with Latin Honors by thesis, students must also successfully complete a senior thesis project and meet a GPA requirement set by the College of Arts & Sciences.

To graduate with Latin Honors by coursework, students must also complete an additional 9 credits that are at the 3000 level or higher (for a total of 39 credits in the major), write a paper that is 10 pages or longer in a course (that is not POLSCI 4905) at the 4000 or 5000 level, and meet a GPA requirement set by the College of Arts & Sciences.

Political Science Major, International Politics Specialization

Program Requirements

- **Total Units Required:** 30
- **Grade Requirement:** C or better

Students who major in Political Science are required to complete 30 graded units (10 courses) in Political Science with a C or better, distributed as follows:

Required Courses

Substantive Introductory Courses

6 graded units must come from two 1000-level introductory courses. (**Note:** Students scoring a 4 or 5 on the AP US Government and Politics exam and/or the AP Comparative Government and Politics exam may place out of the associated introductory course and replace it with a 3000- or 4000-level course in a related subfield.)

Methodology Course

3 graded units must come from either POLSCI 2400 Data Science for Politics or POLSCI 3630 Quantitative Political Methodology. All majors are urged to complete this requirement during their sophomore year. (**Note:** Some statistics courses offered in other departments will allow students to opt out of this class, but those credits will not count toward their Political Science major. See the department website for more information.)

Elective Courses

Distribution Requirement

Students must complete at least one 3-unit course at the 2000, 3000, or 4000 level in three of the following subfields: American politics, comparative politics, international politics, political methodology, or political theory.

Upper-Level Requirement

18 graded units must come from any six 3000- or 4000-level courses, including at least one 4000-level capstone course (see below).

Other Courses

A student's remaining graded units may be earned by any Political Science course or independent study. However, credits given for writing a senior thesis (detailed in the Senior Thesis section below) do not count toward the major. In addition, a student may complete an internship for Political Science credit.

Capstone

All majors must complete at least one 4000-level, home-based course in Political Science as a capstone experience. Students writing a senior thesis satisfy this requirement by completing POLSCI 4905 Research Design and Methods.

Limitations

No more than 6 units from the following may count toward the major: internship, directed reading, directed research, or teaching practicum.

No more than 6 units from the following may count toward the major: study abroad, summer school, the School of Continuing & Professional Studies, or transfer credit.

Requirements for the International Politics Specialization

Students may specialize in International Politics by completing three courses within the International Politics subfield. Consult the department or review course details in Workday to learn about subfield designations.

Code	Title	Units
POLSCI 3043	Topics in International Politics: East Asian Economic Miracles	3
POLSCI 3043	Topics in International Politics: U.S. Law and Foreign Relations	3
POLSCI 3095	Civil War and Peace / The Scientific Study of War	3
POLSCI 3096	Politics of the European Union	3
POLSCI 3173	International Political Economy	3
POLSCI 3177	International Organization	3
POLSCI 3189	Topics in Politics: International Environmental Politics	3
POLSCI 3189	Topics in Politics: Political Economy of Immigration	3
POLSCI 3242	Topics in Politics: Politics, Risk, and Banking Crises	3
POLSCI 3286	Topics in Public Policy: Politics of International Trade	3
POLSCI 3288	Topics in International Political Economy: Integration in the Americas	3
POLSCI 3288	Topics in International Political Economy: Political Economy of Inequality and Redistribution	3
POLSCI 3320	Topics in Politics: Terrorism & Counterterrorism	3
POLSCI 3242	Topics in Politics: International Organizations	3
POLSCI 3720	Global Political Economy	3
POLSCI 3720	Topics in International Politics: Ethnic Conflict: Causes and Remedies	3
POLSCI 3720	Topics in International Politics: Politics of International Finance	3
POLSCI 3784	Terrorism and Political Violence	3

Psychological & Brain Sciences

The field of Psychology encompasses a large and diverse area of study that is empirical, theoretical, and practical. As the science concerned with the study of behavior, psychology includes such areas as: biological bases of behavior; brain-behavior interactions; learning; memory; cognition; motivation; sensation and perception; the study of social interactions, persuasion, and attitudes; aging and development; personality; clinical, abnormal, and health psychology; and leisure and work experiences. These areas may appear quite distinct from one another, but the study of one provides important implications and insights for the understanding of the others. As an example, knowledge of brain-behavior interactions, sensory processes, and learning processes all are involved in identifying, understanding, and treating certain psychopathologies. A major aspect of all the sub-disciplines is their emphasis on research and the development and expansion of knowledge concerning behavior.

An undergraduate education in psychology cannot hope to cover all aspects and areas of the discipline in a substantive way. At the very least, however, it should provide specific tools that allow the student of psychological thought to appraise knowledgeably the logic and evidence that underlie the ongoing evolution of psychological science. This is provided by either the major in Psychological & Brain Sciences or the major in Psychological & Brain Sciences: Cognitive Neuroscience.

Completion of either of the two Psychological & Brain Sciences majors, that is Psychological & Brain Sciences, or Psychological & Brain Sciences: Cognitive Neuroscience, should provide students with the content of psychology, including breadth and depth. It also should provide students with the tools needed to evaluate critically psychological information, independent of specific content. The student needs to learn how to gather data, conduct literature reviews, and write proficiently and scientifically. Our curriculum aims to accomplish these goals. We strive to ensure that our students understand the importance and become critical evaluators of empirical psychological research.

Psychology is a multi-purpose, valuable discipline in which to major. It has relevance for those considering careers in law, medicine, the health professions, education, and business. In addition, it provides important skills and knowledge for those who may not be planning additional schooling.

The Department of Psychological & Brain Sciences at Washington University has particular strengths in the following areas:

- Aging
- Behavioral economics
- Human development
- Diversity science
- Cognitive neuroscience
- Emotion
- Judgment and decision-making
- Learning and operant conditioning
- Neuropsychology
- Personality and individual differences
- Adult psychopathology
- Sensory processes in vision and audition
- Social theories of self and social processes
- Human emotion

There are also many opportunities for undergraduates in this department:

- Research involvement with faculty members
- Supervised internships with community service agencies
- Practicum in Applied Behavior Analysis: Autism Spectrum Disorder
- Study abroad
- Specializations within the majors
- Senior honors
- Membership in Psi Chi, the national honor society in psychology

Courses

PSYCH 1000 Introduction to Psychology
A survey and analysis of concepts, theory, and research covering the areas of biological psychology, human development, learning, memory, social psychology, and mental disorders and their treatment. This is a general survey course designed to introduce students to the diversity of topics, research methods, and theories that comprise the study of mind and behavior. Psych 100B is required of all majors and is a prerequisite to all upper-level courses in Psychological & Brain Sciences. Open to first-year students and above. NOTE: For first-year students with AP/IB exemption, and first- and second-year students enrolled in Psych 100B who are interested in exploring a few areas of Psychology within a seminar format, see Psych 102, First-Year Opportunity: Contemporary Issues in Psychology.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring, Summer

PSYCH 1100 First-Year Opportunity: Contemporary Issues in Psychology
This seminar enables students to explore several of the ideas and issues in contemporary psychology. Each week a different issue is discussed, and students familiarize themselves with critical aspects of the issue and discuss and critically evaluate the pros and cons of each side. Open to First-Year students who are concurrently enrolled in or who have completed (or are exempt from) Psych 100B/1000. Also open to Sophomores who are concurrently enrolled in Psych 100B/1000. Sections are limited to 15 students
Credit 1 unit. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall, Spring

PSYCH 1101 First-Year Opportunity: Psychology of Young Adulthood
This course will cover selected topics relevant to the developmental, social, personal, and cognitive issues confronting young adults during their college years. Material will be drawn mainly from the field of psychology, and the emphasis will be on the scientific basis of concepts and on empirically supported strategies for growth and development. The knowledge gained may contribute to academic success, personal development, and a more rewarding social and academic experience over the course of college and beyond. This one-unit course is only open to first-year students. Credit/No Credit only.
Credit 1 unit.
Typical periods offered: Fall

PSYCH 1160 First-Year Opportunity: Research in Psychology
Weekly one-hour presentations by the Psychological & Brain Sciences Department faculty. Each week a member of the faculty will present a lecture in an area of interest. The seminar will introduce students to research areas and issues of current interest. The seminar is highly recommended for those individuals with an interest in Psychology. Open to First-Years and Sophomores only. Credit/No Credit option only.
Credit 1 unit. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

PSYCH 1170 First-Year Opportunity: Mindfulness Science & Practice
Mindfulness is a term that is becoming increasingly used in popular culture to refer to a set of skills associated with increased attentional focus, successful stress-management, and improved health, sleep, and emotional well-being. This course will expose students to the various facets of mindfulness from both an applied and scientific perspective, by teaching mindfulness skills through a set of easy-to-learn practices and exercises, and by surveying of empirical research regarding mindfulness effects on cognition, emotion, brain function, and health. The goal of the seminar will be to provide practical skills that can contribute to personal development, emotional well-being, and academic success, while also developing critical thinking skills in learning how to read and evaluate primary scientific literature on mindfulness. Open to freshman only.
Credit 1 unit.
Typical periods offered: Spring

PSYCH 1600 The Science of Effective Study Strategies
You have now spent at least 12 years in school, studying for exams and/or tests (for most of you, that's most of your lifetime). What can current research tell us about how well we study, whether we make efficient study decisions, and whether our study strategies are effective? This course offers an overview of current research from cognitive and educational psychology on effective study strategies. Throughout this course, students will be encouraged to develop their understanding of scientific research and evaluate evidence supporting study strategies. PREREQ: Open only to freshmen and sophomores. Credit/no credit only.
Credit 1 unit. A&S IQ: SSC EN: S
Typical periods offered: Fall, Spring

PSYCH 1995 Psychology Coursework Completed Abroad
This course is for study abroad credits.
Credit 1-12 units.
Typical periods offered: Fall, Spring

PSYCH 1996 Psychological & Brain Sciences Elective - 100 Level
This course is for elective or transfer credits.
Credit 0.5-12 units. EN: H, S
Typical periods offered: Fall, Spring, Summer

PSYCH 2190 The Infant Mind: Sophomore Seminar
What goes on inside the mind of an infant? In this course we will explore a variety of hot topics concerning how babies experience the world around them. We will cover topics such as temperament (Do babies get mad?), language and communication (How do infants learn words and what if a baby is exposed to more than one language?), the effects of poverty on the developing brain (Does it matter?), social categories and relationships (Do babies notice differences across people?), and

morality (Do babies have a sense of justice?). We will also discuss how to put child development research into practice, for example, by considering research relevant to policies concerning vaccination, early childhood education, and whether screen time is okay for babies. Students will have ample opportunity to interact with children at a local childcare center, where they can experience first-hand the research they are learning about in class. If you are curious about the developing mind, human nature, or considering a career in a field that involves children (e.g., education, medicine, public policy) this course is for you. PREREQ: Sophomore standing, and is open to students from all majors. Enrollment is restricted to 20 sophomores or permission of instructor.
Credit 3 units. A&S IQ: SSC BU: BA EN: S
Typical periods offered: Spring

PSYCH 2196 Practical Applications in Psychology and Brain Science
Credit for internships in Psychological and Brain Sciences
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

PSYCH 2210 First-Year Seminar: Introduction to Memory Studies
This course focuses on memory not only as an individual phenomenon but also how our memories for historical events can be determined by the groups to which we belong (collective memory). We will survey such topics as experimental methods and findings in the study of individual memory; questions of accuracy and vividness of memory; false and illusory memories; eyewitness memory reports that are used in trials; methods to greatly enhance learning and memory; and people with extraordinary memories; . We then transition to the study of collective memory, or how our memories and identities are shaped by the groups to which we belong. The topics will include transmission of memories and identity through narratives; shared historical memories; battles over how the past is to be remembered; and revision of the memories of the past to meet concerns of the present. We also consider how memory is used in political arguments. Enrollment is restricted to first-year students..
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

PSYCH 2610 Applying the Science of Learning
This course is intended to cover the science of human learning, with special focus on areas, theory, and research that have potential to improve how students learn. Thus, the course will provide selective coverage of theoretical and empirical work in the science of learning that can inform and improve student learning. The applicability of these themes to the students in this course will be explicitly developed through students' explicit translation of the experimental findings from the literature to their own learning challenges. The course will be organized around three major integrated goals. First, the relevant basic theory and findings in select topics in the science of learning will be covered. Second, the implications of this work for improving learning outcomes in authentic educational contexts will be considered. Third, together we will develop concrete techniques and examples of how the principles that emerge can be adopted to significantly enhance outcomes of lifelong learning challenges. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

PSYCH 2900 Directed Research in Psychological & Brain Sciences
Introduces first-years and sophomores to research by engaging them in ongoing faculty research projects within the department. Under the direction of a faculty mentor, students take part in tasks that contribute to the mentor's research. Through this hands-on experience, students learn about the research process and build foundational research skills that can benefit their future academic experience and development. Faculty mentors provide regular guidance, training, and feedback to support students' understanding and growth. Students are registered by the department after approval from the faculty member leading the research project. The course may be taken for 1-3 credit hours based on the weekly hours required. Credit/No Credit only
Credit 3 units.

PSYCH 2901 Internship in Psychology
An opportunity to gain practical, applied experience in a non-academic, community service agency. For description of prerequisites, course goals, agency selection, registration policies, and course requirements, obtain a copy of Internships in Psychology available in room 207B in Somers Family Hall or on the P&BS website: http://psychweb.wustl.edu/undergraduate. This course can be taken only once, open to junior and senior P&BS majors only. Credit/No Credit only. Permission of Instructor Required.
Credit 3 units.
Typical periods offered: Fall, Spring

PSYCH 2902 Practicum: Peer Crisis Intervention Training
See department for details. Credit cannot be counted toward fulfulling the requirements for the major or minor in P&BS. Credit/No Credit only. Enrollment by Department Only.
Credit 2 units.
Typical periods offered: Fall, Spring

PSYCH 2910 Practicum in Applied Behavior Analysis: Autism Spectrum Disorder
An opportunity to be trained in applied behavior analytic techniques and to work with a child with autism spectrum disorder. Training and supervision will be arranged and coordinated by the family of the child and/or their consultant/agency. Students must complete the minimum number of hours of training and therapy, and attend regular therapy meetings. In addition, there is a required seminar for discussion of assigned readings and presentations on autism and therapy. Completion of a paper in the second semester also is required. For further information and petition form, pick up the Practicum brochure from the Department. Credit/No Credit only. Enrollment through the practicum coordinator only.
Credit 0.5-3 units.
Typical periods offered: Fall, Spring

PSYCH 2993 Study Abroad Seminar
Required of students in the approved Psychology Study Abroad Program. Enrollment by Study Abroad Office only. Credit/No Credit only.
Credit 1 unit. A&S IQ: SSC EN: S
Typical periods offered: Fall, Spring

PSYCH 2994 Study Abroad: Experiences in Psychology
PREREQ: Enrollment in an approved Psychology Study-Abroad program and prior permission of the Director of Undergraduate Studies. Credit to be arranged. CR/NCR only. Credit variable, max 3 units.
Credit 3 units.
Typical periods offered: Spring

PSYCH 2995 Psychological & Brain Sciences Coursework Completed Abroad
This course is for study abroad credits.
Credit 1-12 units.
Typical periods offered: Fall, Spring

PSYCH 2996 Psychological and Brain Sciences Elective - 200 Level
This course is for elective or transfer credits.
Credit 0.5-12 units. EN: H, S
Typical periods offered: Fall, Spring, Summer

PSYCH 3000 Introduction to Psychological Statistics
Descriptive statistics including correlation and regression. Inferential statistics including nonparametric and parametric tests of significance through two-way analysis of variance. Course emphasizes underlying logic and is not primarily mathematical, though knowledge of elementary algebra is essential. Psych 300 is required of all P&BS majors. PREREQ: Psych 100B.
Credit 3 units. A&S IQ: NSM, AN Art: NSM
Typical periods offered: Fall, Spring

PSYCH 3010 Experimental Psychology
This course provides training in the logic and techniques of psychological research so as to provide students with experience in the design of psychology experiments and interpretation of results. Topics include experimental design and control, library research, quantitative treatment of data, graphical presentation of results, and clarity of scientific writing. Lectures focus on general principles of experimentation, whereas the laboratory sections provide an introduction to a range of psychological phenomena through hands-on experience in experimentation. Each student also completes an independent research project. Declared P&BS majors will have priority. Limited to 15 students per section. PREREQ: Psych 100B and 300.
Credit 4 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall, Spring, Summer

PSYCH 3011 Experimental Psychology
Psych 3011 is limited to students who have not taken Psych 300 and want to enroll in Psych 300 and Experimental Psychology concurrently. Therefore, students who enroll in Psych 3011 must also register for Psychology 300. Psych 3011 fulfills the Psychology 301 requirement for the major. Topics in the two courses (i.e., Psych 300 and Psych 3011) will be coordinated in order to integrate the concepts from Statistics with those from Experimental Psychology. Experimental Psychology provides training in the logic and techniques of psychological research so as to provide students with experience in the design of psychology experiments and interpretation of results. Topics include experimental design and control, library research, quantitative treatment of data, graphical presentation of results, and clarity of scientific writing. Lectures focus on general principles of experimentation while the laboratory component provides an introduction to a range of psychological phenomena through hands-on experience in experimentation. Each student also completes an independent research project of his or her own design under supervision of a faculty member. Enrollment limited to 15 students. Declared P&BS majors will have priority. PREREQ: Psych 100B and concurrent enrollment in Psy 300.
Credit 4 units. A&S IQ: NSM Art: NSM BU: BA, SCI
Typical periods offered: Fall, Spring

PSYCH 3050 Health Psychology
Review and discussion of psychobiological approaches to health, as well as psychological aspects of physical illness. Topics: stress and coping, psychosocial factors in the etiology and progression of chronic illness, and psychological sequelae of chronic illness. There will be an emphasis on research methodology and results. PREREQ: Psych 100B.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

PSYCH 3095 Prejudice, Stereotyping, & Discrimination
This course will trace prejudice, stereotyping, and discrimination from its ordinary origins in social cognition to its most extreme consequences in war and genocide. Topics include prejudice, the causes of stereotyping and discrimination, the development of prejudice in children, subtle and overt prejudice and stereotyping, group conflict, the role of social norms, the experience of being a target of discrimination, and interventions to reduce prejudice and discrimination. Areas covered include racism, sexism, ageism, homophobia, ableism, colorism, and religious discrimination. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Spring

PSYCH 3096 Psychological Dynamics of Empathy
In this course, we will explore the antecedents and consequences of empathic motivation, defined broadly. Along the way, we consider answers to several interesting questions: Why are some people generally more empathic than others? Are there cultural differences in levels of this trait? To what extent is empathy an emotional or cognitive phenomenon? We will also consider the conditions under which empathy is associated with prosocial outcomes (e.g., reducing racial prejudice) but with recognition that empathy has a darker side, one that can ironically exacerbate people's preexisting biases. The approach to empathy will be highly interdisciplinary as we consider research and theory within several fields within psychology (e.g., social, personality, cognitive) as well as areas that draw from other scholarly disciplines (e.g. social neuroscience, social anthropology). Prerequisite: Psych 100B/1000.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

PSYCH 3150 Introduction to Social Psychology
An introduction to the scientific study of social influence. Topics include person perception, social cognition, attitudes, conformity, group behavior, aggression, altruism, prejudice and psychology's interface with law, health, and climate change. PREREQ: Psych 100B/1000
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

PSYCH 3175 Applied Statistical Analysis With R
This course is designed to introduce R as both a means of applied statistical analysis as well as a window into data organization and programming. The goal of the course is to teach the tools needed to take a raw dataset and not only perform a statistical test in R, but alsoto learn how to arrangethe dataset to perform a variety of tests, to choose the appropriate test, and to visualize the results. Students will gain practical knowledge of how to use statistics in research. Please note that this is an introductory course and knowledge of R prior to enrollment is not expected.PREREQ: Psych 300
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

PSYCH 3195 Abnormal Child Psychology
This course will familiarize students with current perspectives on the nature, causes, assessment, treatment, and prevention of child psychiatric disorders and related family dysfunction. Theoretical perspectives and research findings will be discussed pertaining to anxiety, depression, conduct disorder, attention-deficit/hyperactivity disorder, autism, learning impairments, and parent-child conflict. PREREQ: Psych 100B
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

PSYCH 3210 Developmental Psychology
This course concentrates on the cognitive and social development of the person from conception to adoldscence. Topics covered include: infant perception, attachment, cognitive development from Piagetian and information processing perspectives, aggression and biological bases of behavior. PREREQ: Psych 100B.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring, Summer

PSYCH 3250 Psychology of Adolescence
This course concentrates on brain, cognitive, and social development during adolescence. This period of development is marked by transition and change. Special topics will include the vulnerability of the adolescent brain and the development of sexual orientation. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

PSYCH 3260 Introduction to the Psychology of Aging
Study of the processes of aging in the individual in terms of their behavioral effects. Age changes in biological functions, sensation, perception, intelligence, learning, memory, and creativity studied to understand the capacities and potentials of the mature and older person. PREREQ: Psych 100B.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

PSYCH 3300 Sensation and Perception
What's involved in seeing and hearing? This course will cover perception from the physical stimuli (light and sound) that impinge upon the sensory receptors through the higher-level percepts that the stimuli generate. Demonstrations and illusions will be used as we learn about the anatomy and physiology of the sensory systems and study the brain mechanisms that are involved in vision and audition. Prerequisite: Psych 100B/1000.
Credit 3 units. A&S IQ: NSM Art: NSM BU: BA, SCI
Typical periods offered: Fall, Spring, Summer

PSYCH 3384 Cognition and Culture
This course examines the influence of evolved cognitive dispositions (the way natural selection engineered the human mind) on the transmission of cultural knowledge. Dispositions present from early childhood make certain kinds of cultural knowledge particularly easy to acquire, and therefore, culturally stable. We also consider the evidence for differences in cognitive processes triggered by different social environments. Emphasis is on empirical studies and experimental methods in the study of cultural similarity and differences. Prerequisite: Psych 100B, Anthro 160B or permission of instructor.
Credit 3 units.

PSYCH 3401 Biological Psychology
An introduction to biological mechanisms underlying behavior. Topics will include the physiology of nerve cells, anatomy of the nervous system, control of sensory and motor activity, arousal and sleep, motivation and higher mental processes. PREREQ: PSYCH 100B
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall, Spring, Summer

PSYCH 3450 Genes, Environment, and Human Behavior
This class will examine how genetic influences impact various dimensions of human behavior, ranging from traits (e.g. personality) to psychiatric disorders. Topics to be covered include methods used to study genetic influence, how genetic predispositions interact with the environment, and ethical implications. Modern methods for gene-identification, such as genomewide association studies, polygenic risk scores and epigenetic experiments will be examined in detail. Emphasis will be placed on understanding core concepts (e.g. what is identity-by-descent) as well as application (e.g. calculate heritability, interpretation of results from published studies). PREREQ: Psych 100B. 3 units. Same as L64 PNP 3451.
Credit 3 units. A&S IQ: SSC Art: SSC BU: SCI EN: S
Typical periods offered: Fall

PSYCH 3460 Living, Dying, and Death: A Biopsychosocial Approach to Understanding the End of Life
Although in some ways death is the pinnacle of our life, a culmination of all that we've lived, we often don't treat it that way. Instead, we ignore it, actively avoid it, consider it a taboo even to talk about it. Yet planning for the end of life can lead to a better death experience, for us and for the people we leave behind. This course explores some of the reasons why death has been a difficult topic for people to approach and how that may be changing. Through a variety of discussions, projects, guest speakers, and field trips, this course addresses dying and deathfrom biological, psychological, social, and spiritualperspectives. Topics include historical and cross-cultural attitudes, psychological facets of coping with death at different points in the lifespan, the process of dying and definitions of death, healthcare professionals and treatment approaches for the dying, assisted death and other ethical/legal issues, grief and bereavement, mass tragedy and public death, and theoretical and empiricalapproaches to studying dying and death. PREREQ: Psych 100B
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

PSYCH 3501 Psychotherapy: Introduction to Practice and Research
This is an introductory course in psychotherapy: The treatment of psychological problems through the application of interventions grounded in psychological theory and focusing on behavior or mental processes. Students will become familiar with the more popular schools of psychotherapy, including their historical context, characteristic techniques, theoretical underpinnings, and current research support. Students will also gain an appreciation of the problems and solutions in researching psychotherapy, as well as emerging variations on psychotherapy procedures.
Credit 3 units. A&S IQ: SSC BU: BA EN: S
Typical periods offered: Spring

PSYCH 3530 Psychology of Personality
What is personality, and how can we scientifically study it? How did we become who we are today? Is personality fixed, or can we change? How does personality shape our everyday experiences and consequential life outcomes? Do we know ourselves and others? This course will address such questions by providing a rigorous contemporary overview of the field of personality psychology that will help students better understand themselves and others. Students should expect to be challenged and be prepared to work hard and attend class.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

PSYCH 3540 Psychopathology and Mental Health
This is an introductory course in psychopathology or the scientific study of mental health disorders. The course will include definitions, theories, and classification of Psychpathological behavior. Content will focus on symptoms, classification, prevalence, etiology, and treatment of mental health disorders, including mood, anxiety, eating, schizophrenia spectrum, substance use, and personality disorders. PREREQ: Psych 100B.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA
Typical periods offered: Fall, Spring, Summer

PSYCH 3570 Introduction to Clinical Psychology
A survey of clinical psychology. Emphasis is placed on historical and recent developments in the field (e.g., managed care), as well as the consideration of the roles, functions, and techniques of clinical psychologists including psychological testing and psychotherapy. Prerequisite: Psych 100B and either Psych 353 or Psych 354.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall

PSYCH 3580 Language Acquisition
This course examines the development of language skills in children, asking how children so rapidly learn their first language. Topics include; biological bases of language development; development of phonology, syntax, and morphology; language development in atypical populations; childhood bilingualism; and development of written language skills. Prerequisite: Psych 100B and Ling 170D.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall

PSYCH 3581 Language Acquisition
This course examines the development of language skills in children, asking how children so rapidly learn their first language. Topics include: biological bases of language development; development of phonology, syntax, and morphology; language development in atypical populations; childhood bilingualism; and development of written language skills. PREREQ: Psych 100B and Ling 170D and junior or senior standing. Writing intensive.
Credit 3 units. A&S IQ: SSC, WI EN: S

PSYCH 3600 Cognitive Psychology
Introduction to the study of thought processing from an information-processing approach. Emphasis will be placed on theoretical models that are grounded in empirical support. Topics include pattern recognition, attention, memory, reasoning, language processes, decision making, and problem solving. PREREQ: Psych 100B.
Credit 3 units. A&S IQ: NSM Art: NSM BU: BA
Typical periods offered: Fall, Spring

PSYCH 3604 Cognitive Neuroscience
A general introduction to the underlying principles and mechanisms of brain function that give rise to complex human cognitive behavior. Emphasis will be placed on how emerging methods and approaches from both neuroscience and cognitive psychology have been integrated to yield new insights into the organization and structure of higher mental processes. Topics include perception, attention, memory, language, and executive control. Prerequisite: Psych 100B/1000.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall, Spring

PSYCH 3610 Psychology of Learning
The experimental analysis of behavior is presented with examination of Operant and Pavlovian conditioning, aversive control, theories of reinforcement, choice behavior, behavioral economics, etc. Theoretical and experimental approaches to the study of behavior as developed in the laboratory are emphasized. Consideration is given to applications from the laboratory to everyday behavior. PREREQ: Psych 100B. Enrollment limited to 30.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI
Typical periods offered: Fall

PSYCH 3611 Psychology of Learning: Laboratory
This laboratory course is a supplement to The Psychology of Learning (Psy 361) class. Students will gain first-hand experience, via a virtual rat, of principles and procedures related to the acquisition and maintenance of behavior. Weekly lab meetings introduce Pavlovian and Operant principles that are then implemented as laboratory exercises with the virtual rat. 1 unit. Concurrent enrollment in Psy 361 required.
Credit 1 unit. A&S IQ: NSM
Typical periods offered: Fall

PSYCH 3645 Understanding Emotions
Emotions both shape and are shaped by our subjective experiences, physiology, behaviors, cognitions, social interactions, and health. Their complexity and significance make the study of emotions particularly exciting and challenging. This course offers an overview of theory and research on emotions with content stretching across psychological disciplines, including personality, social, clinical, developmental, and neuropsychology. Course content will include definitions of emotions, physiological changes associated with emotions, and individual differences in emotional experience. The course will also examine how culture, cognitions, and relationships affect and are affected by emotions and how emotion is related to physical and mental health. PREREQ: Psych 100B.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall

PSYCH 3670 Positive Psychology: The Science of Happiness
Historically, the field of psychology has placed a lot of attention on what's wrong with people and what we can do to treat disorders of the mind. More recently, the field has broadened its scope to give more attention to what's right with people and what we can do to optimize our potential for psychological health. This course focuses on this latter development by examining scientific research relevant to the pursuit of happiness and well-being. Topics include the nature and measurement of happiness, the biological basis of positive emotions, an overview of positive trait theories, self-esteem, gratitude, mindset, the mind-body connection, physical activity, emotional intelligence, resilience, prosocial behavior, decision-making, willpower, mindfulness meditation, and the characteristics of successful relationships. PREREQ: Psych 100B.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

PSYCH 3800 Human Learning and Memory
A survey of issues related to the encoding, storage and retrieval of information in humans. Topics include memory improvement strategies, people with extraordinary memories, memory illusions and distortions, among other topics. Limited to 25 students. Prerequisite: Psych 100B/1000.
Credit 3 units. A&S IQ: NSM Art: NSM BU: BA
Typical periods offered: Spring

PSYCH 3860 Psychology of Black Women
This course is designed to provide a critical analysis of the distinctive experiences of Black women through a psychological lens. We will explore topics relating to Black women's experiences in home, school, and community contexts, such as identity development, socialization experiences, and misogynoir. The class will also consider how Black women draw on individual strengths and cultural assets to support their personal wellbeing. This course will heavily center the narratives of Black women, and focus on mixed methods and qualitative research approaches. We will draw upon interdisciplinary frameworks (e.g., intersectionality, Black feminist thought, and liberation psychology) to help us understand Black women's experiences. PREREQ: L33 Psych 100B

Credit 3 units. A&S IQ: SSC, SC Art: SSC EN: S
Typical periods offered: Fall, Spring

PSYCH 3866 Community Psychology
Community psychology goes beyond an individual focus and integrates social, cultural, economic, political, environmental, and international influences to promote positive change, health, and empowerment at individual and systemic levels. In this course, we will focus on identifying the root causes of various social problems and become familiar with community-defined priorities for addressing them. We will discuss how to use psychology as a scientific foundation to better understand social determinants of health and wellness, and discuss best practices on how to build collaborative relationships with community members, groups, and organizations to solve social problems.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall, Spring

PSYCH 3885 The Mental Health Crisis in Higher Education
During the last decade, college campuses have seen unprecedented increases in the proportion of students suffering from mental health problems. Many institutions have responded by increasing the number of mental health counselors available in student health centers, making the accommodations at disability resource centers more robust, and providing safe spaces for students to process incidents and events that have triggered them. Are such interventions improving the well-being of today's students, or might they actually be further encumbering students' psychological health? This discussion-based course will explore arguments made on all sides of this provocative debate and examine research on the nature of today's college students and what resources and services most contribute to their psychological health and well-being. Enrollment is limited to 15 students. Prerequisite: at least 6 units of advanced home-based psychology courses.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall

PSYCH 3890 Advanced Psychological Statistics: The General Linear Model and Beyond
The General(ized) Linear Model (GLM) refers to a common family of statistical techniques popular in the social sciences such as ANOVA, regression, and logistic regression. The primary goal of this course is for students to understand the basics and nuances of the GLM. We will also explore and introduce students to extensions of the GLM common in psychology and neuroscience research. These frameworks include multilevel modeling, generalized linear models, Bayesian analyses, machine learning, etc. Students will analyze data using each of these methods using R statistical software, therefore improving their advanced computing skills. By the end of the course, students will understand the general framework used in most statistical tests employed by psychological and neuroscientific researchers. Students will not be expected to know every detail of every test, but will instead have a conceptual understanding of these tools and practice in deploying these tools. PREREQ: L33 Psych 300, Mth 2200, Mth 3200, or DAT 120 and Fluency or proficiencey with R statistical software (e.g., Psych 4175).
Credit 3 units. A&S IQ: NSM, AN Art: NSM
Typical periods offered: Spring

PSYCH 3902 Practicum: Advanced Peer Crisis Intervention
See department for details. Credit cannot be counted toward fulfulling the requirements for the major or minor in P&BS. Credit/No Credit only. Enrollment by Department Only.
Credit 3 units.
Typical periods offered: Fall, Spring

PSYCH 3995 Psychology Coursework Completed Abroad
This course is for study abroad credits.
Credit 0.5-15 units.

PSYCH 3996 Psychological & Brain Sciences Elective
This course is for elective or transfer credits.
Credit 0.5-12 units. EN: H, S
Typical periods offered: Fall, Spring, Summer

PSYCH 3999 Independent Study in Psychological and Brain Sciences
PREREQ: Psych 100B and permission of a member of the faculty of the department (or other approved supervisor) who agrees to supervise the student's work. Credit to be arranged. A maximum of 6 units may be applied toward the major. The electronic Petition for Supervision of Independent Study form is available at the URL, http://eyes.wustl.edu/psych333. Students will be enrolled only after their form is approved by the faculty supervisor and forwarded to the Undergraduate Coordinator. Credit/ No Credit only.
Credit 0.5-6 units.
Typical periods offered: Fall, Spring, Summer

PSYCH 4048 Neuropsychology of Dementia
The primary goal of this course is to acquaint students with the basic features of common dementia subtypes, such as Alzheimer's disease, frontotemporal dementias, vascular dementia, Lewy body disease, Huntington's disease and Parkinson's disease. The course will cover the clinical manifestations (cognitive and behavioral symptoms, course, prognosis), neuroanatomical signatures, pathophysiology, intervention and treatment, and current research directions. Students will gain a detailed understanding of the major dementia subtypes as manifestations of underlying brain pathology and anatomical patterns of brain damage. Upon completion of the course, the student should be able to (1) identify and distinguish the most common dementia subtypes based on knowledge of clinical presentation and disease mechanisms; (2) understand how underlying brain changes may be linked to specific clinical manifestations; (3) understand how therapeutic strategies are linked to pathophysiology; (4) engage in scholarly discussion about the topics; and (5) read and critique empirical research papers. Prerequisite: Psych 326 and either Biol 3411, Psych 344, or Psych 3401.
Credit 3 units. A&S IQ: NSM Art: NSM BU: BA
Typical periods offered: Fall, Spring

PSYCH 4075 Advanced Research Methods & Design
This course is an advanced foray into research design and methods used in psychological science. This course is project-based, writing intensive, and will be supplemented heavily with readings and discussions of topics of broad importance to psychological research (e.g., reliability, validity, signal detection theory, philosophy of science). These readings will enhance your abilities to think critically about psychological research design and methods, as both a consumer and creator of psychological research. During the course of the semester you will complete two original research projects (e.g., an observation study and an experimental study). Together with your classmates you will devise research questions, design studies to test your research questions, collect data, and statistically analyze your results. Individually, you will write-up, and then revise, each research project in an APA-style paper. The writing requirements for this course build on the skills you acquired in Experimental Psychology and will further your abilities to communicate scientific ideas more skillfully, clearly, and accurately. Prerequisite: L33 Psych 301 or 3011
Credit 3 units. A&S IQ: NSM, WI Art: NSM BU: BA

Typical periods offered: Spring

PSYCH 4081 Topics in Psycholinguistics
Language is one of the most important things that people learn, and children are able to speak in complex sentences before they can tie their shoes. How do children master this seemingly impossible task? In this course, we will cover theories and research on these issues. We will focus on language development in children who are learning English as their first language, with special consideration given to vocabulary development. We will also consider other populations, including bilingual children and children with language difficulties. Prerequisite: Psych 100B, completion of a course in developmental psychology, linguistics, and/or speech and hearing sciences. Junior or senior standing.
Credit 3 units. A&S IQ: SSC EN: S

PSYCH 4085 Seminar: Human Memory
A seminar that explores the primary literature on the scientific study of human memory. Topics include retrieval processes, forgetting, distortions of memory, and individual differences in memory. Prerequisites: Cognitive Psychology (L33, 360), Human Learning and Memory (L33, 380), or permission of instructor.
Credit 3 units. A&S IQ: SSC EN: S

PSYCH 4099 Human Evolutionary Psychology
How did evolution by natural selection shape the way human beings think and behave? Does evolution explain human cooperation and friendship, human morality, reproductive decisions and social interactions? What sex differences in cognition or behavior are caused by evolution? This course introduces the concepts and findings of evolutionary psychology, mostly through reading of primary sources--articles from psychology and biology journals--and discussion and presentation of empirical cases. PREREQ: At least 6 units of upper-level, home-based Psychology coursework, OR Anthro 3383.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall

PSYCH 4130 Contemporary Topics in Social Psychology
Consideration of selected contemporary topics in social psychology. Participation in a research project of appropriate scope. Prerequisite: Psych 315.
Credit 3 units. A&S IQ: SSC Art: SSC
Typical periods offered: Fall

PSYCH 4175 Applied Statistical Analysis With R
This course is designed to introduce R as both a means of applied statistical analysis as well as a window into data organization and programming. The goal of the course is to teach the tools needed to take a raw dataset and not only perform a statistical test in R, but alsoto learn how to arrangethe dataset to perform a variety of tests, to choose the appropriate test, and to visualize the results. Students will gain practical knowledge of how to use statistics in research. Please note that this is an introductory course and knowledge of R prior to enrollment is not expected.PREREQ: Psych 300; OR graduate standing by permission.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall, Spring

PSYCH 4182 Perception, Thought, and Action
This course focuses on current topics in visual perception, visual attention, and the control of action. Readings consist of recent journal articles. Class meetings emphasize presentation and discussion of the material in the readings. Limited to 15 students. PREREQ: Psych 100B/1000 and one of the following: Psych 301/3010, Psych 330/3300, Psych 3401, Psych 344/3440, Psych 360/3600, Psych 361/3610, Psych 3604, Psych 380/3800, Psych 433/4330, or Psych 4604.
Credit 3 units. A&S IQ: NSM Art: NSM BU: BA
Typical periods offered: Fall

PSYCH 4227 The Psychology of Close Relationships
This course will examine close relationships from a scientific perspective. The course will focus on intimate relationships but will also touch on friendships and family relationships. The objective of this course is to introduce you to the scientific perspective of close relationships. You will learn how research psychologists apply the scientific method of data collection and analysis to investigate how people experience and think about relationships. We will explore questions such as: Why are people attracted to some people but not others? How do relationships develop over time? How does each person's personality influence the trajectory of a relationship? How do external factors (e.g., social norms, stress, life events) influence relationships? How do gender and sexual orientation influence people's experiences in romantic relationships? PREREQ: Psych 100B and Psych 301
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Spring

PSYCH 4255 Special Topics in Clinical Psychology
An introduction to what clinical psychologists do, why they do it, and where they do it. Reviews the history and development of clinical practice with special attention to psychological assessment, psychotherapy, theoretical orientations, settings in which psychologists practice, and ethical issues. Written assignments in this writing-intensive course include a research paper, a case study, and a formal analysis of an ethical problem in clinical psychology. Prereq: Psych 354. Not open to students who have taken Psych 450 OR Psych 357.
Credit 3 units. A&S IQ: SSC

PSYCH 4270 Social Gerontology
This course provides an introduction to aging and growing old, from an interdisciplinary perspective. Specific attention is paid to demographics, physical health and illness, mental health, interpersonal relations, work issues, living arrangements, ethics, and death and dying. PREREQ: Junior or Senior standing and completion of 6 advanced units in Psychology.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall, Spring

PSYCH 4301 Contemporary Topics in Cognitive Development
Cognitive Developmental topics to be covered will include: Piagetian abilities (e.g., conservation, formal reasoning), basic cognitive abilities (e.g., processing speed), executive functions (e.g., working memory), and other current topics (e.g., processing facial stimuli). Prerequisite: Psych 321 or 360.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Spring

PSYCH 4302 Cognitive Psychology Applied to Education
This course is intended to cover topics in the cognitive psychology of human memory, conceptual learning, and comprehension with special focus on areas, theory, and research that have potential application to education. Thus, the course will provide selective coverage of

theoretical and empirical work in cognitive psychology that provides potential to inform and improve educational practice. The applicability of these themes will be explicitly developed and evaluated through the primary research literature using educationally oriented experimental paradigms. The course is expected to be of interest and benefit to education majors and to psychology majors interested in cognitive psychology and its applications. PREREQ: Junior/Senior status, 9 units in Psychology and Psych 100B OR Junior/Senior status, 9 units in Education and Psych 100B.
Credit 3 units. A&S IQ: SSC EN: S

PSYCH 4305 Psychological Science: Fact and Fiction
Skeptical analysis of psychological science as practiced and popularized in the media. Analysis of discrepancies between media and scientific claims regarding areas such as repressed memory, brain imaging, heritability, and psychotherapy. Additional examination of scientific career demands such as peer review, journal publication, and research funding. These topics are interwoven with a review of common errors in reasoning particularly with respect to probabilistic reasoning and the public misperception of the practice and principles of scientific psychology. PREREQ: Psych 100B, Junior or Senior standing,and completion of 6 units of advanced home-based psychology.
Credit 3 units. A&S IQ: SSC, WI Arch: HUM Art: SSC EN: S
Typical periods offered: Spring

PSYCH 4330 Psychology of Language
This course surveys current research and theory in psycholinguistics, covering the biological bases, cognitive bases, and learning of language. We consider studies of normal children and adults, the performance of individuals with various types of language disorders, and computer simulations of language processes. Topics range from the perception and production of speech sounds to the managment of conversations. Each student will carry out an original research project on some aspect of psycholinguistics. Prereq: Ling 170D and Psych 100B
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

PSYCH 4351 Reading and Reading Development
This seminar surveys current research on reading and spelling skills and their development. Students will read and discuss journal articles that examine the cognitive and linguistic processes involved in reading, reading disorders, and educational issues. Prerequisite: Permission of instructor and previous course work in experimental psychology or psychology of language.
Credit 3 units. A&S IQ: SSC EN: S

PSYCH 4352 Reading and Reading Development WI
This writing intensive seminar surveys current research on reading and spelling skills and their development. Students will read and discuss articles and chapters that examine the cognitive and linguistic processes involved in reading, reading disorders, and educational issues. PREREQ: Psych 100B and Ling 170D and junior or senior standing.
Credit 3 units. A&S IQ: SSC, WI EN: S

PSYCH 4355 Personality Development Across the Life Span
This seminar examines how individual differences develop over the lifespan. Or, in other words, how we become who we are. The scope of the class covers a multitude of individual differences constructs (e.g., happiness, intelligence, goals), but a particular focus will be on personality traits. Questions that will be examined include: How early in the lifespan does one's personality emerge? How much do parents matter in shaping who you become? Does your personality change across the lifespan? Readings will cover theories of development at different life stages and empirical research from childhood to older adulthood. PREREQ: Psych 100B and Psych 353
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

PSYCH 4367 Seminar in Positive Psychology
This course focuses on scientific research relevant to the pursuit of happiness and well-being. Topics include the nature and measurement of happiness, the biological basis of positive emotions, an overview of positive trait theories, self-esteem, gratitude, mindset, the mind-body connection, physical activity, emotional intelligence, resilience, prosocial behavior, decision-making, willpower, mindfulness meditation, and the characteristics of successful relationships. As an advanced seminar on these topics, students will parlay their course of study into real-world proposals that universities could use to address the mental health crisis. PREREQS: Intro Psych 100B, and at least 6 units of either upper-level home based psychology coursework OR upper-level coursework from other departments related to well-being.
Credit 3 units. A&S IQ: SSC Art: SSC
Typical periods offered: Fall, Spring

PSYCH 4411 Topics in Cognitive Neuroscience
How the brain organizes behavior, emphasizing higher functions such as perception, language, and attention. Course aims at integration of information from neuro-biological approaches (e.g., single-unit recording, lesion-behavior experiments) and information-processing approaches (e.g., cognitive psychological models, connectionist models). Prerequisite: Psych 3401 or Psych 360 or Psych 3604.
Credit 3 units. A&S IQ: NSM Art: NSM

PSYCH 4413 Advanced Cognitive Neuroscience (Writing Intensive)
This course presents an intensive, case-study based approach to the underlying principles and mechanisms of brain function that give rise to complex human cognitive behavior. Emphasis will be placed on understanding and evaluating cutting-edge neuroscience research that has yielded new insights into the organization and structure of higher mental processes. Students will develop critical thinking and writing skills via a strong class participation component and a writing-intensive format. Topics include perception, attention, memory, language, emotion, and executive control. Writing Intensive. Declared psychology majors will be given priority over others to enroll. Prerequisite: Psych 3401, Psych 344/Biol 3411, or Psych 3604.
Credit 3 units. A&S IQ: NSM, WI Art: NSM
Typical periods offered: Fall

PSYCH 4414 Advanced Cognitive Neuroscience
An intensive, case-study based approach to the underlying principles and mechanisms of brain function that give rise to complex human cognitive behavior. Emphasis will be placed on understanding and evaluating cutting-edge neuroscience research that has yielded new insights into the organization and structure of higher mental processes. Students will develop critical thinking via a strong class participation component. Topics include perception, attention, memory, language, emotion, and executive control. Declared Psychology majors will be given priority over others to enroll. PREREQ: Psych 100B/1000, and either Psych 3401 or Psy 344/Bio 3411 or Psych 3604.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

PSYCH 4418 Computational Modeling in Cognitive Neuroscience
Introduces the ideas and methods used in simulating cognitive and perceptual processes using computational models. The focus will be on neural network mechanisms,which provide a bridge between behavioral and biological levels of analysis. The first half of the course will introduce the basic computational and biological properties of individual neurons and neuronal networks, and the learning mechanisms which organize these networks. The second half of the course will examine how these computational mechanisms can be used to explore a range of cognitive phenomena, including perception, attention, memory, language and higher-level cognition (i.e., executive control). Prerequisite: Cognitive Neuroscience (Psych 3604) or Permission of Instructor.
Credit 3 units. A&S IQ: NSM Art: NSM

PSYCH 4444 Neuropsychology of Dementia (Writing Intensive)
The primary goal of this course is to acquaint students with the basic features of common dementia subtypes, such as Alzheimer disease, frontotemporal dementias, vascular dementia, Lewy Body disease, and Parkinson disease. The course will cover the clinical manifestations (cognitive and behavioral symptoms, course, prognosis), neuroanatomical signatures, pathophysiology, intervention and treatment as well as current research directions. Students will gain a detailed understanding of the major dementia subtypes as manifestations of underlying brain pathology and anatomical patterns of brain damage. Upon completion of the course, the student should be able to a) identify and distinguish the most common dementia subtypes based on knowledge of clinical presentation and disease mechanisms; b) understand how underlying brain changes may be linked to clinical manifestations; c) understand how therapeutic strategies are linked to pathophysiology; d) engage in scholarly discussion about the topics; e) think and write critically about empirical research papers. PREREQ: Psych 100B, Psych 326, and EITHER Bio 3411 OR Psych 3401.
Credit 3 units. A&S IQ: NSM, WI
Typical periods offered: Fall, Spring

PSYCH 4450 Functional Neuroimaging Methods
In this course, you will learn neuroimaging methods in the context of accurate, reproducible, and open science. There is no substitute for wrestling with data yourself, and so this is a hands-on course. Students will need to bring a laptop on which to install Matlab and conduct analyses. Some background in neuroimaging or programming will be helpful but is not required. Topics covered include experimental design, accounting for artifacts, single-subject models, and group models. By the end of the course, students will have used a computer script to analyze an fMRI dataset and have a good understanding of preprocessing and statistical analyses in fMRI. Limited to 24 students. Prerequisite: Psych 3604, Psych 4413, or graduate standing.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall

PSYCH 4495 Attitude Change and Persuasion
Overview of theory and research in the field of attitudes. Topics will include: attitude formation and activation, the attitude-behavior relationship, meqsuring attitudes, social influence, attitude change, and persuation techniques. Prereq: Psych 315. Enrollment limited to 25.
Credit 3 units. A&S IQ: SSC

PSYCH 4512 Neurobiology of Learning & Memory
The brain is the most complex object in the known universe, and among its most incredible attributesis its ability to acquire and store vast amounts of information to guide behavior. Over a lifetime, our experiences shape our brains and our behavior, ultimately making each of us unique. What information is encoded by the brain? How is it stored? How is it retrieved? How does this occur at different spatial and temporal scales? Does stored information change over time?How do learning and memory change across the lifespan, and with neurological disorders?Can you trust your memories?
Credit 3 units. A&S IQ: NSM BU: BA
Typical periods offered: Spring

PSYCH 4541 Personality and Psychopathology
This course is an advanced seminar in the study of personality disorders. It will cover a range of conceptual and methodological issues involved in scientific efforts to understand ways in which pathological personality features disrupt people's lives. Students will learn about the similarities and distinctions between normal and pathological features of personality as well as the role that personality may play with regard to the causes and treatment of other kinds of mental disorder. A laboratory component of the class will focus on the development of practical skills in conducting research interviews designed to elicit information about personality and social adjustment. PREREQ: Psych 354, and junior or senior standing.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Fall, Spring

PSYCH 4555 Emotion Regulation
The purpose of this course is to provide an introduction to the field of emotion regulation. We will discuss theoretical and empirical work on emotion regulation from various areas of psychology, including social, personality, developmental, clinical, and neuroscience. Example topics include definitional issues, goals and strategies, personal and interpersonal consequences, sociocultural influences, life-span development, health and psychopathology. PREREQ: Psych 301.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

PSYCH 4557 Biopsychosocial Aspects of Eating Disorders and Obesity
This seminar examines the epidemiology, etiology, prevention, and treatment of body image, eating disorders, and obesity. An emphasis will be placed on understanding the characteristic symptoms of excessive dieting, body image disturbance, and binge eating, not only as formal psychiatric syndromes, but as a representation of disregulatory processes reflecting social-cultural, psychological, and biological disturbances. Students will also learn about the clinical characteristics, medical sequelae, and physical aspects of eating disorders and obesity. PREREQ: Psych 100B and junior or senior standing, plus 6 units of advanced home-based psychology courses.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

PSYCH 4591 The Development of Social Cognition
From birth we are surrounded by other social beings, making children's ability to navigate the social world a foundational capacity. This course will explore how children navigate the social world. We will discuss topics such as infants' concept of agency, intentions, children's learning from and about others, trust and skepticism, social groups and intergroup cognition, relationships, and morality. We may also explore what happens when the human ability to reason about the mind and understand behavior breaks down (ASD). PREREQ: Psych 100B and one of the following: Psych 315 or 321 or 360. Open to advanced undergraduate students.
Credit 3 units. A&S IQ: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

PSYCH 4592 Development of Social Cognition (Writing Intensive)
This course explores current hot topicsin social cognitive development. We will study this in children by examining the development of social groups/categories and identity in children, with a focus on language, race, and ethnicity. We will also explore the emergence and development of bias and prejudice and approaches to reducing its development in children. We will explore these issues in the context of innate knowledge and the effects of the environment on children's development. Each week we will cover a topic by reading one book chapter and two journal articles. Class time will be devoted to active discussion of these readings, with lecture and class activities as needed, to complement the readings and set the stage for discussion. This is a writing intensive course, so a second goal is to improve student writing. There will be several writing assignments that will receive extensive feedback from the instructor, and then students will write an improved final version. Students will also give class presentations: one that directly addresses writing and another on a research topic of their choice that is relevant to social cognitive development. Prerequisites: Psych 100B and either Psych 315, Psych 321, or Psych 360.
Credit 3 units. A&S IQ: SSC, WI Art: SSC EN: S
Typical periods offered: Fall, Spring

PSYCH 4594 Psychology of the Good Life
What is the good life, and how can people achieve it? This discussion-based seminar class explores two aspects of the "good life": (1) "good" for oneself (living a personally fulfilled life), and (2) "good" for others (living an ethical life, being a good person). We will consider how psychological science can be used to conceptualize, uncover the causes of, and promote well-being for oneself and for others. There will be a particular focus on the ways in which these two aspects of the good life are in alignment or in conflict with each other. Classes will focus on critically evaluating research and integrating and connecting the weekly readings to students' personal research interests and lives, primarily through student-led discussions.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

PSYCH 4610 Seminar in Selected Topics in Learning & Memory: Cognitive Illusions
This course will consider illusions of perceiving, attending, remembering and, more broadly, thinking. The reading will be concentrated on three books - Blink, The Invisible Gorilla, and Thinking Fast and Slow - as well as selected journal articles. We will consider how processes that lead us astray in some situations are the same ones that aid us in other situations, which is why these processes exist. Students will write essays and a term paper on one illusion or class of illusions. Prerequisites: Psych 100B and either Psych 360 or Psych 380.
Credit 3 units. BU: BA
Typical periods offered: Spring

PSYCH 4612 False Memory
It is well-accepted that our visual systems can sometimes lead us astray, leading to visual illusions. It can be harder to realize how readily our memories can also lead us astray, resulting in illusory memories or false memories. This course will focus on the many ways in which false memories are exhibited and what we can learn from them about memory more generally. Topics will range from eyewitness memory and flashbulb memories to more everyday conversational false memories. We will also learn about how imagination and remembering interact. Many false memory controversies exist, and we will explore some of them. Finally, we will consider how false memories might be considered an adaptive feature of a flexible cognitive system, which usually serves us well but, in the right circumstances, can also lead us astray. PREREQ: Psych 100B and EITHER Psych 221, OR Psych 360, OR Psych 380.
Credit 3 units. A&S IQ: SSC BU: BA EN: S
Typical periods offered: Spring

PSYCH 4615 The Science of Paying Attention
What processes underlie humans' ability to pay attention? This course will introduce students to theories of attention and cognitive control. Students will develop an understanding of empirical approaches to studying the control of attention, and examine factors that facilitate and impair humans' ability to pay attention. A final section will examine attention and cognitive control challenges that accompany aging and select psychological disorders such as ADHD, and applications of attention and cognitive control research to the classroom, driving, and other contexts. PREREQ: Psych 100B and Psych 301.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S

PSYCH 4620 Psychology of Memory and Cognition
This course will explore the core readings that have shaped the way scientists tackle fundamental aspects of memory and cognition. These include cognitive methods, pattern recognition, attention, working memory, episodic memory, semantic memory, language acquisition and comprehension, decision making, problem solving, and expertise. Each week we will explore at least three classic readings on a given topic along with some more recent papers. The goal is to expose students to this foundational literature, and develop a better understanding of the zeitgeist that set the stage for these papers to change how researchers tackled specific problems. PREREQ: Psych 360 or Psych 380.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S

PSYCH 4631 Introduction to Computational Cognitive Science
How does the mind work? Over the last few decades, cognitive psychologists have become increasingly interested in using computational models. These models are designed to describe cognitive processes and the behavior that is produced by them. This computational approach has several advantages. Computational theories of cognition are more specific than verbal theories. Therefore, they do not only afford precisely quantifying certain aspects of cognition, but they also make it possible to simulate cognitive processes. This course provides an introduction to several leading computational methods for understanding cognition, including model fitting and comparison, reinforcement learning, neural networks and Bayesian modeling. These methods will be applied to a wide range of cognitive phenomena, such as short-term memory, reinforcement learning, decision making, cognitive control, concept learning and visual perception. Prerequisites: Psych 100B and Psych 301/3011.
Credit 3 units. A&S IQ: NSM Art: NSM BU: BA
Typical periods offered: Spring

PSYCH 4651 History and Modern Systems of Psychology
An introduction to the history of psychology. This course begins with a brief consideration of forces leading to the development of psychology in the mid-1800s. It then examines the birth of modern psychology in Germany and the schools of psychology that emerged early in the 20th century. Newer orientations and ideas are considered in the final segment of the course. We also consider the impact of psychology on American public life during the 20th century. Prerequisite: Psych 100B, junior or senior standing, and 6 units of advanced home-based psychology courses.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

PSYCH 4746 Biological Pathways to Psychopathology: From Genes and the Environment to Brain and Behavior

How do subtle disturbances in brain circuits lead to abnormal behavior and psychopathology? This course provides students with a working knowledge of our rapidly evolving understanding of brain circuits that create order in our social, emotional and cognitive worlds, and how disorder within these circuits leads to a broad range of psychopathology including depression, anxiety, phobias, PTSD, OCD, addiction, schizophrenia, psychopathy and violence.

Credit 3 units. A&S IQ: NSM Art: SSC

Typical periods offered: Spring

PSYCH 4765 Inside the Disordered Brain: Biological Bases of the Major Mental Disorders

How do subtle disturbances in brain circuits lead to abnormal behavior and psychopathology? This course provides students with a working knowledge of our rapidly evolving understanding of brain circuits that create order in our social, emotional and cognitive worlds, and how disorder within these circuits leads to a broad range of psychopathology including depression, anxiety, phobias, PTSD, OCD, addiction, schizophrenia, psychopathy and violence. PREREQ: Psych 100B and one of the following: Biological Psychology (Psych 3401), Abnormal Psych (Psych 354), or a basic Biology/Neuroscience course.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Spring

PSYCH 4880 The Cognitive Neuroscience of Film

To understand complex events in real life depends on perception, action, and memory. To understand movies, people probably depend on similar psychological and neural mechanisms. This seminar will use results from psychology and neuroscience to try to better understand the experience of a movie viewer, and will use theory and practice to explore psychological hypotheses about perception. PREREQ: Psych 360, or 3604, or 4604, or Graduate standing in Psychology.

Credit 3 units. A&S IQ: NSM

Typical periods offered: Spring

PSYCH 4940 Behavioral Psychology Readings Group

This weekly journal-style readings course provides the opportunity to read and discuss seminal as well as current writings on the conceptual aspects of behavioral psychology and relevant research. Points of contact among behaviorism, cognitivism, and neuroscience and the natural lines of fracture will be examined. Prerequisites: Psych 100B and one of the following: Psych 361, Psych 360, or a Philosophy course.

Credit 1 unit. A&S IQ: SSC Art: SSC EN: S

Typical periods offered: Spring

PSYCH 4970 Independent Study (Capstone)

In addition to the approved research, an APA-style research paper must be satisfactorily completed to obtain credit. Petition for Supervision of P&BS 444A forms are available from Shelley Kohlman (skohlman@wustl.edu), Somers Family Hall,room 207B. Students will be enrolled only after they have completed both the Petition for Supervision of P&BS 444A, and returned them to the Shelley Kohlman in Somers Family Hall, room 207B. Open only to P&BS majors, and by facuulty research supervisor and departmental approval.

Credit 3 units.

Typical periods offered: Fall, Spring

PSYCH 4971 Undergraduate Teaching

Limited opportunities for outstanding undergraduates to serve as teaching assistants for selected departmental courses. PREREQ: P&BS major only, junior/senior standing and permission of Psych advisor, course instructor and departmental approval. Credit cannot be counted toward fulfulling the requirements for the major or minor in P&BS. Credit/No Credit only. Enrollment by Department Only.

Credit 2 units.

Typical periods offered: Fall, Spring

PSYCH 4980 Study for Honors

Acceptance into the Honors Program is based on superior performance as evidenced by the student's record in undergraduate course work and the written agreement (Petition for Permission to Enroll) of a member of the faculty of the Department (or other approved supervisor) to supervise an Honors project. The student must complete 6 units of Honors work (3 units of Psych 498 and 3 units of Psych 499), submit an acceptable written thesis, and be recommended by the Department. Recommendation for an Honors degree will be based on the evaluation of the written thesis and the student's overall performance as an undergraduate. Students in the Honors Program meet regularly in the Honors Seminar to discuss their research and become acquainted with the work of the other students. Psych 498 is a writing intensive course. Permission of Instructor is required for this course. All students must meet with Dr. Sommers prior to registering. Prerequisite: Psych 301 or 3011.

Credit 3 units. A&S IQ: SSC, WI EN: S

Typical periods offered: Fall

PSYCH 4990 Study for Honors

Acceptance into the Honors program is based on superior performance as evidenced by the student's record in undergraduate course work and the written agreement (Petition for Permission to Enroll) of a member of the faculty of the Department (or other approved supervisor) to supervise an Honors project, as well as the Honors Coordinator, Dr. Mitch Sommers. The student must complete 6 units of Honors work (3 units of Psych 498 and 3 units of Psych 499), submit an acceptable written thesis, and be recommended by the department. Recommendation for an Honors degree will be based on the evaluation of the written thesis and the student's overall performance as an undergraduate. All students must meet with Dr. Sommers prior to registering. Students in the Honors Program will meet regularly in the Honors Seminar to discuss their research and become acquainted with the work of the other students. PREREQ: Psych 498

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

Typical periods offered: Spring

PSYCH 4991 Independent Study for the Major in P&BS: Cognitive Neuroscience (Capstone)

PREREQ: PREREQ: Experimental Psychology 301 or 3011, and acceptance into the P&BS: Cognitive Neuroscience major. Permission of a member of the faculty of the department (or other approved research supervisor) who agrees to supervise the student's work. In addition to the approved research in the area of cognitive neuroscience, an APA-style research paper must be satisfactorily completed to obtain credit. Petition for Supervision of P&BS 444B is available in Somers Family Hall, room 207B. Students will be enrolled only after they have completed the petition and returned it to the Undergraduate Coordinator in Psychology 207B. Open only to P&BS:CN major, by prior faculty research supervisor and departmental approval only.

Credit 3 units. EN: S

Typical periods offered: Fall, Spring

PSYCH 4992 Independent Study for a Specialization in Psychological and Brain Sciences (Capstone)
PREREQ: Experimental Psychology 301 or 3011, and acceptance into a Specialization in Psychological and Brain Sciences. Written permission (Petition for Supervision of P&BS 444C) of a member of the faculty of the department (or other approved research supervisor) who agrees to supervise the student's work is also required. In addition to the approved research for the concentration, an APA-style research paper must be satisfactorily completed to obtain credit. Petition for Supervision of P&BS 444C are available in Somers Family Hall, room 207B. Students will be enrolled only after they have completed both the Petition for a Concentration in P&BS and the Petition for Supervision of P&BS 444C, and returned them to the Undergraduate Coordinator in 207B. Open only to P&BS majors and with prior faulty research supervisor and departmental approval.
Credit 3 units.
Typical periods offered: Fall, Spring

PSYCH 4995 Psychological & Brain Sciences Coursework Completed Abroad
This course is for study abroad credits.
Credit 0.5-12 units.
Typical periods offered: Fall, Spring

PSYCH 4996 Psychological & Brain Sciences Elective
This course is for transfer credits.
Credit 0.5-12 units. EN: H, S
Typical periods offered: Fall, Spring, Summer

Psychological & Brain Sciences Major

Psychological & Brain Sciences Major Program Requirements

- **Total Units Required:** 43-46 units (34 units [at least 25 of which must be at the 3000 level or above] for the major requirements, plus 9-12 units for a specialization; adding a specialization to the base major is not required)
- **Grade Requirement:** For a course to count toward the major; a grade of C– or better must be achieved.

Required Courses

- PSYCH 1000 Introduction to Psychology is a prerequisite for all upper-level courses (3000 level and above). Exemption from Psych 1000 Introduction to Psychology is possible in the following circumstances:
  - Completion of an equivalent course transferred from another institution, if approved by the Director of Undergraduate Studies.
  - An AP Psychology test score of 5, an IB score of 6 or 7, or a British A-Level grade of A.
- PSYCH 3000 Introduction to Psychological Statistics
  - SDS 2020 Elementary Probability and Statistics, SDS 3020 Elementary to Intermediate Probability and Statistics, or DAT 1200 Managerial Statistics I may substitute for PSYCH 3000 Introduction to Psychological Statistics but earn no units of credit toward the major. No AP math course can substitute for PSYCH 3000 Introduction to Psychological Statistics.
- PSYCH 3010 Experimental Psychology or PSYCH 3011 Experimental Psychology (version taken concurrently with PSYCH 3000)

For cases in which an exemption is granted (e.g., PSYCH 1000, Psych 3000), no credits are earned toward the major, so exempt courses must be made up with additional Psychology & Brain Sciences (P&BS) content electives (approved by the major advisor).

Core Requirements

Students must complete at least one course from each of the following five categories:*

Social/Personality:

Code	Title	Units
PSYCH 3050	Health Psychology	3
PSYCH 3150	Introduction to Social Psychology	3
PSYCH 3530	Psychology of Personality	3
PSYCH 3096	Psychological Dynamics of Empathy	3
PSYCH 4099	Evolutionary Human Psychology	3

Mental Health/Affective:

Code	Title	Units
PSYCH 3501	Psychotherapy: Introduction to Practice and Research	3
PSYCH 3540	Psychopathology and Mental Health	3
PSYCH 3645	Understanding Emotions	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3
PSYCH 4367	Seminar in Positive Psychology	3

Biological/Neurological Bases of Behavior:

Code	Title	Units
PSYCH 3300	Sensation and Perception	3
PSYCH 3401	Introduction to Biological Psychology	3
PSYCH 3450	Genes, Environment and Human Behavior	3
PSYCH 3604	Cognitive Neuroscience	3
PSYCH 4182	Perception, Thought and Action	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3

Behavior and Cognition:

Code	Title	Units
PSYCH 3580	Language Acquisition	3
PSYCH 3600	Cognitive Psychology	3
PSYCH 3610	Psychology of Learning	3
PSYCH 3800	Human Learning and Memory	3
PSYCH 4099	Human Evolutionary Psychology	3
PSYCH 4330	Psychology of Language	3

Lifespan Development:

Code	Title	Units
PSYCH 2190	Infant Mind: Sophomore Seminar (this course can fulfill the Lifespan Development Core, but the credit counts in the "6 units Rule")	3
PSYCH 3210	Developmental Psychology	3
PSYCH 3250	Psychology of Adolescence	3
PSYCH 3260	Introduction to the Psychology of Aging	3
PSYCH 3580	Language Acquisition	3
PSYCH 4270	Social Gerontology	3

* If a course falls into more than one category, it can be used to fulfill only one of those categories (i.e., no double-counting).

Elective Courses

Students must complete an additional 9 units of P&BS coursework. Additional elective courses will be required to make up for PSYCH 1000 and PSYCH 3000 exemptions.

6-Units Rule

No more than 6 units from the following course types may be used to satisfy the minimum requirements for the P&BS major:

- 1000-/2000-level courses (other than PSYCH 1000 Introduction to Psychology)
- PSYCH 3999 Independent Study
- PSYCH 4992 Independent Study for a Specialization
- PSYCH 4980 and PSYCH 4990 Honors Program in Psychology
- Approved School of Continuing & Professional Studies (CAPS) psychology courses
- Approved psychology study abroad courses from a non-psychology study abroad program
- Approved psychology courses from other departments (e.g., EDUC 3040 Educational Psychology, MUSIC 3300 Music Cognition, PACS 2340 Introduction to Speech and Hearing, BEYOND 1003 When I'm Sixty-Four: Preparing Ourselves and Society for a Good Long Life, BIOL 3411 Principles of the Nervous System)
- Approved transfer credits (students transferring from another college should refer to the Transfer Credit section below)

Additional Information

Transfer Credit

If accepted by the College of Arts & Sciences, transfer credits will be evaluated by the Director of Undergraduate Studies in the P&BS department for their applicability toward either major in P&BS.

Senior Honors Program in Psychological & Brain Sciences

The primary goal of the honors program in P&BS is to provide students who have achieved a superior academic record with the opportunity to conduct a comprehensive empirical investigation under the direction of a faculty member.

To be admitted into the honors program, students must meet the following requirements:

- Have overall and P&BS grade point averages of at least 3.65
- Complete both PSYCH 3000 Introduction to Psychological Statistics and PSYCH 3010 Experimental Psychology (or PSYCH 3011)
- Have an approved honors research advisor

Website:	https://psych.wustl.edu/undergraduate-program

Psychological & Brain Sciences: Cognitive Neuroscience Major

Program Requirements

- **Total Units Required:** 45-49 units (36-37 units plus prerequisites for the major requirements, plus 9-12 units for a specialization; adding a specialization to the base major is not required)
- **Grade Requirement:** For a course to count toward the major, a grade of C– or better must be achieved.

How does the brain think? Cognitive neuroscience refers to how mental functions are linked to the operation of the brain and nervous system. The goal of cognitive neuroscience is to provide an understanding of psychological processes such as attention, memory, thinking, and emotion in terms of physical principles and biological components. At the same time, cognitive neuroscience aims to provide an understanding of the psychological constraints on how the brain functions, computes, and generates behavior. Students who pursue the undergraduate major in Psychological & Brain Sciences: Cognitive Neuroscience (PB&S:CN) will gain a strong foundation in how to study the brain and mind at various levels of analysis, including cellular

biology, brain systems, cognitive and affective function, and neural computation. In addition, they will gain an appreciation of the relation between healthy cognitive and brain function and its breakdown in various disease states and disorders. The PB&S:CN major provides excellent preparation for a career in health and medical professions, scientific research, computer fields, education, and law.

Prerequisites

Students must complete the following courses outside of Psychological & Brain Sciences:

Code	Title	Units
BIOL 2160	Principles of Biology I	3
MATH 1520	Calculus II	3
Total Units		**6**

Note: Each of these prerequisites has its own prerequisites: MATH 1520 requires MATH 1510; for BIOL 2160, taking CHEM 1701 and CHEM 1702 (concurrently) is strongly recommended. These courses are Biology and pre-med prerequisites as well, and they are typically completed during a student's first year. They may alternatively be satisfied through AP credit or any other mechanism approved by the respective department or the College. These prerequisites do not earn credit toward the P&BS:CN major, but they must be completed with a passing grade (C– or above) by the end of the student's third year to remain in good standing for the major.

Required Courses

Code	Title	Units
PSYCH 1000	Introduction to Psychology	3
PSYCH 3000	Introduction to Psychological Statistics	3
PSYCH 3010 Experimental Psychology **or** PSYCH 3011 Experimental Psychology		4
PSYCH 3401 Biological Psychology **or** BIOL 3411 Principles of the Nervous System		3
PSYCH 3600	Cognitive Psychology	3
PSYCH 3604	Cognitive Neuroscience	3
Total Units		**19**

Note: The first three requirements (i.e., PSYCH 1000 Introduction to Psychology, PSYCH 3000 Introduction to Psychological Statistics, and PSYCH 3010/PSYCH 3011 Experimental Psychology [the version taken concurrently with PSYCH 3000]) are the same as those for the regular P&BS major.

PSYCH 1000 Introduction to Psychology is a prerequisite for all upper-level courses (3000 level and above). Exemption from PSYCH 1000 Introduction to Psychology is possible in the following circumstances:

- Completion of an equivalent course transferred from another institution, if approved by the director of undergraduate studies.
- An AP psychology test score of 5, an IB score of 6 or 7, or a British A-Level grade of A.

PSYCH 3000 Introduction to Psychological Statistics:

- SDS 2020 Elementary Probability and Statistics, SDS 3020 Elementary to Intermediate Probability and Statistics, or DAT 1200 Managerial Statistics I may substitute for PSYCH 3000 Introduction to Psychological Statistics but earn no units of credit toward the major. No AP math course can substitute for PSYCH 3000 Introduction to Psychological Statistics.

For cases in which an exemption is granted (e.g., PSYCH 1000, PSYCH 3000), no credits are earned toward the major, so exempt courses must be made up with additional P&BS content electives approved by the major advisor.

Additional Cognitive and Biological Distributions

Students must complete two courses — one each from the Distribution A and B lists:

*Distribution A eligible courses:**

Code	Title	Units
PSYCH 3175	Applied Statistical Analysis with R	3
PSYCH 3210	Developmental Psychology	3
PSYCH 3300	Sensation and Perception	3
PSYCH 3580	Language Acquisition	3
PSYCH 3610	Psychology of Learning	3
PSYCH 3800	Human Learning and Memory	3
PSYCH 3980	Advanced Psychological Statistics: The General Linear Model and Beyond	3
PSYCH 4099	Human Evolutionary Psychology	3
PSYCH 4182	Perception, Thought and Action	3
PSYCH 4330	Psych of Language	3

*Distribution B eligible courses:**

Code	Title	Units
BIOL 3057	Physiological Control Systems	3
BIOL 3151	Endocrinology	3
BIOL 3280	Principles in Human Physiology	3
BIOL 3421	Neuroethology	3
BIOL 3422	Genes, Brains and Behavior	3
DANCE 3170	The Neuroscience of Movement: You Think, So You Can Dance?	3
PHYSICS 3350	Physics of the Brain	3
PSYCH 3175	Applied Statistical Analysis with R	3
PSYCH 3450	Genes, Environment and Human Behavavior	3
PSYCH 3890	Advanced Psychological Statistics: The General Linear Model and Beyond	3

Note: PSYCH 3175 Applied Statistical Analysis With R or PSYCH 3890 Advanced Statistics: The GLM can be allowed to fulfill either Distribution A or B; students must complete at least one non-statistics course for the Additional Cognitive and Biological Distributions requirement.

Computation Requirement

Students must complete one of the following courses:*

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
PSYCH 3175	Applied Statistical Analysis with R	3
PSYCH 4631	Computaional Cognitive Science	3
PSYCH 5007	Statistics and Data Analysis in MATLAB	3

With prior approval, another course involving a significant computational/programming component may be substituted.

Capstone/Depth Requirement

Students must complete three of the following courses:*

Capstone/Depth eligible courses:

Code	Title	Units
ANTHRO 4581	Principles of Human Anatomy and Development	3
BIOL 4030	Biological Clocks	3
BIOL 4040	Laboratory of Neurophysiology	3
PHIL 4200	Philosophy of Neuroscience	3
PNP 4020	The Physiology and Biophysics of Consciousness	2
PSYCH 4182	Perception, Thought and Action	3
PSYCH 4414	Advanced Cognitive Neuroscience	3
PSYCH 4512	Neurobiology of Learning and Memory	3
PSYCH 4631	Computational Cognitive Psychology	3
PSYCH 4746	Genes, Brain and Behavior: Pathways to Psychopathology	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3

Additional Capstone/Depth eligible courses:

- PSYCH 3999 (all 3 units must be completed in one semester and in one lab to be considered for approval; taken Credit/No Credit) can be used satisfy up to 3 units of the Capstone/Depth requirement.
- FYP 3901 Ampersand: Research in Mind, Brain Behavior (two consecutive semesters must be completed; 3 units total) can substitute for PSYCH 3999.
- PSYCH 4991 Independent Study for the Major in P&BS: Cognitive Neuroscience (3 units; taken for a letter grade and requiring a final paper) can be used to satisfy up to 6 units of the Capstone/Depth requirement.
- The Honors Program in Psychology (PSYCH 4980 can be used to satisfy up to 3 units total of the Capstone/Depth requirement).

In total, no more than 6 units of the above may be applied toward the Capstone/Depth requirement.

Note: Unless a student explicitly petitions for an exception and is granted written prior approval, only the above Capstone/Depth eligible courses can be counted toward the Capstone/Depth requirement. Contact skohlman@wustl.edu for the petition.

* If a course falls into more than one category, it can be used to fulfill only one of those categories (i.e., no double-counting).

Acceptance Into the Psychological & Brain Sciences: Cognitive Neuroscience Major

Acceptance into the major is contingent upon an application and then approval by the major committee. As part of this application, the student will meet with an appropriate advisor who will carefully review the requirements and oversee the student's progress. A brief, one-page statement from the student about why they feel the cognitive neuroscience major is appropriate for them will be requested as part of the application.

Washington University students will be considered for admission to the P&BS:CN major no sooner than during their third semester (sophomore year). Decisions are based on the student's statement and academic record as well as the interview with the advisor. A minimum GPA of 2.0 is required for admission into the major.

Psychological & Brain Sciences Major, Cognition in Children Specialization

Psychological & Brain Sciences Major Program Requirements

- **Total Units Required:** 43-46 units (34 units [at least 25 of which must be at the 3000 level or above] for the major requirements, plus 9-12 units for a specialization; adding a specialization to the base major is not required)
- **Grade Requirement:** For a course to count toward the major; a grade of C– or better must be achieved.

Required Courses

- PSYCH 1000 Introduction to Psychology is a prerequisite for all upper-level courses (3000 level and above). Exemption from Psych 1000 Introduction to Psychology is possible in the following circumstances:

- Completion of an equivalent course transferred from another institution, if approved by the Director of Undergraduate Studies.
- An AP Psychology test score of 5, an IB score of 6 or 7, or a British A-Level grade of A.

- PSYCH 3000 Introduction to Psychological Statistics
  - SDS 2020 Elementary Probability and Statistics, SDS 3020 Elementary to Intermediate Probability and Statistics, or DAT 1200 Managerial Statistics I may substitute for PSYCH 3000 Introduction to Psychological Statistics but earn no units of credit toward the major. No AP math course can substitute for PSYCH 3000 Introduction to Psychological Statistics.
- PSYCH 3010 Experimental Psychology or PSYCH 3011 Experimental Psychology (version taken concurrently with PSYCH 3000)

For cases in which an exemption is granted (e.g., PSYCH 1000, Psych 3000), no credits are earned toward the major, so exempt courses must be made up with additional Psychology & Brain Sciences (P&BS) content electives (approved by the major advisor).

Core Requirements

Students must complete at least one course from each of the following five categories:*

Social/Personality:

Code	Title	Units
PSYCH 3050	Health Psychology	3
PSYCH 3150	Introduction to Social Psychology	3
PSYCH 3530	Psychology of Personality	3
PSYCH 3096	Psychological Dynamics of Empathy	3
PSYCH 4099	Evolutionary Human Psychology	3

Mental Health/Affective:

Code	Title	Units
PSYCH 3501	Psychotherapy: Introduction to Practice and Research	3
PSYCH 3540	Psychopathology and Mental Health	3
PSYCH 3645	Understanding Emotions	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3
PSYCH 4367	Seminar in Positive Psychology	3

Biological/Neurological Bases of Behavior:

Code	Title	Units
PSYCH 3300	Sensation and Perception	3
PSYCH 3401	Introduction to Biological Psychology	3
PSYCH 3450	Genes, Environment and Human Behavior	3
PSYCH 3604	Cognitive Neuroscience	3
PSYCH 4182	Perception, Thought and Action	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3

Behavior and Cognition:

Code	Title	Units
PSYCH 3580	Language Acquisition	3
PSYCH 3600	Cognitive Psychology	3
PSYCH 3610	Psychology of Learning	3
PSYCH 3800	Human Learning and Memory	3
PSYCH 4099	Human Evolutionary Psychology	3
PSYCH 4330	Psychology of Language	3

Lifespan Development:

Code	Title	Units
PSYCH 2190	Infant Mind: Sophomore Seminar (this course can fulfill the Lifespan Development Core, but the credit counts in the "6 units Rule")	3
PSYCH 3210	Developmental Psychology	3
PSYCH 3250	Psychology of Adolescence	3
PSYCH 3260	Introduction to the Psychology of Aging	3
PSYCH 3580	Language Acquisition	3
PSYCH 4270	Social Gerontology	3

* If a course falls into more than one category, it can be used to fulfill only one of those categories (i.e., no double-counting).

Elective Courses

Students must complete an additional 9 units of P&BS coursework. Additional elective courses will be required to make up for PSYCH 1000 and PSYCH 3000 exemptions.

6-Units Rule

No more than 6 units from the following course types may be used to satisfy the minimum requirements for the P&BS major:

- 1000-/2000-level courses (other than PSYCH 1000 Introduction to Psychology)
- PSYCH 3999 Independent Study
- PSYCH 4992 Independent Study for a Specialization
- PSYCH 4980 and PSYCH 4990 Honors Program in Psychology
- Approved School of Continuing & Professional Studies (CAPS) psychology courses
- Approved psychology study abroad courses from a non-psychology study abroad program

- Approved psychology courses from other departments (e.g., EDUC 3040 Educational Psychology, MUSIC 3300 Music Cognition, PACS 2340 Introduction to Speech and Hearing, BEYOND 1003 When I'm Sixty-Four: Preparing Ourselves and Society for a Good Long Life, BIOL 3411 Principles of the Nervous System)
- Approved transfer credits (students transferring from another college should refer to the Transfer Credit section below)

Cognition in Children Specialization

To augment the major in Psychological & Brain Sciences, the department offers the option of a specialization for students who wish to engage more intensively with a specific area within the discipline.

A specialization may be a valuable experience for students planning on graduate study in psychology or related fields or for those who have a particular interest or want to gain expertise in one of the approved specializations. It may provide a useful preparation for the Honors program in Psychology, or it may serve as a substitute for the Honors experience for those students who may not qualify for Honors.

Completion of a specialization entails 12 units:

- Three courses (9 units), at least one of which must be an advanced, 4000-level course; and
- A semester of research in an appropriate, approved lab consisting of PSYCH 4992 Independent Study for a Specialization, which requires the successful completion of an American Psychological Association (APA)–style research paper or an approved Honors project completed through PSYCH 4980 Honors Program in Psychology. In some cases, a relevant internship or practicum may be an appropriate alternative to research experience. (**Note:** Students may be required to complete a preliminary semester [3 units] of PSYCH 3999 Independent Study, depending on the nature of the project intended for PSYCH 4992; the additional independent research is at the discretion of the research mentor and will not be counted toward the completion of the specialization requirements.)

The 3000-level required course may be used to fulfill no more than one of the core categories or distribution requirements of a Psychological & Brain Sciences major (i.e., one course could double-count for the major and the specialization). None of the units for a specialization can be counted for any other major or minor (i.e., there is no double-counting with another major or minor). For those pursuing the Psychological & Brain Sciences: Cognitive Neuroscience major, the Cognitive Neuroscience Specialization is not an option.

Each specialization has a Psychological & Brain Sciences faculty advisor/coordinator who will meet with interested students to help ensure the successful and appropriate completion of the specialization and who serves as the liaison with the Psychological & Brain Sciences Undergraduate Studies Committee. A student may pursue only one specialization. Completing a specialization, however, is not required to complete the base Psychological & Brain Sciences major.

Students should contact Shelley Kohlman (skohlman@wustl.edu) in Somers Family Hall, Room 207B, to arrange a specialization. Forms are available from Shelley, and completed forms must be returned to her in order for a specialization to be considered officially "in progress."

Recognition of the specialization will appear on the student's academic record under *Milestones* once all requirements have been met.

Requirements for the Cognition in Children Specialization

This specialization allows students to acquire deeper knowledge of cognitive and social-cognitive processes that occur during infancy and early childhood. The courses for this specialization consider child development more generally and then explore in more depth the development of cognitive, conceptual, linguistic, and social abilities.

Advisor/coordinator: Professor Lori Markson

Coursework required:

Code	Title	Units
PSYCH 3210	Developmental Psychology	3

Electives (must include two courses, at least one of which is at the 4000 level):

Code	Title	Units
PSYCH 2190	Infant Mind: Sophomore Seminar	3
PSYCH 3580	Language Acquisition	3
PSYCH 4099	Human Evolutionary Psychology	3
PSYCH 4591	Development of Social Cognition	3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper (i.e., PSYCH 4992 Independent Study for a Specialization or PSYCH 4980 Honors Program in Psychology)

Relevant faculty: Lori Markson, Joan Luby, Susan Perlman, and Natasha Marrus (other potential faculty mentors may be approved upon request depending on relevance of the research experience).

Additional Information

Transfer Credit

If accepted by the College of Arts & Sciences, transfer credits will be evaluated by the Director of Undergraduate Studies in the P&BS department for their applicability toward either major in P&BS.

Senior Honors Program in Psychological & Brain Sciences

The primary goal of the honors program in P&BS is to provide students who have achieved a superior academic record with the opportunity to conduct a comprehensive empirical investigation under the direction of a faculty member.

To be admitted into the honors program, students must meet the following requirements:

- Have overall and P&BS grade point averages of at least 3.65
- Complete both PSYCH 3000 Introduction to Psychological Statistics and PSYCH 3010 Experimental Psychology (or PSYCH 3011)
- Have an approved honors research advisor

Psychological & Brain Sciences Major, Cognitive Neuroscience Specialization

Psychological & Brain Sciences Major Program Requirements

- **Total Units Required:** 43-46 units (34 units [at least 25 of which must be at the 3000 level or above] for the major requirements, plus 9-12 units for a specialization; adding a specialization to the base major is not required)
- **Grade Requirement:** For a course to count toward the major; a grade of C– or better must be achieved.

Required Courses

- PSYCH 1000 Introduction to Psychology is a prerequisite for all upper-level courses (3000 level and above). Exemption from Psych 1000 Introduction to Psychology is possible in the following circumstances:
  - Completion of an equivalent course transferred from another institution, if approved by the Director of Undergraduate Studies.
  - An AP Psychology test score of 5, an IB score of 6 or 7, or a British A-Level grade of A.
- PSYCH 3000 Introduction to Psychological Statistics
  - SDS 2020 Elementary Probability and Statistics, SDS 3020 Elementary to Intermediate Probability and Statistics, or DAT 1200 Managerial Statistics I may substitute for PSYCH 3000 Introduction to Psychological Statistics but earn no units of credit toward the major. No AP math course can substitute for PSYCH 3000 Introduction to Psychological Statistics.
- PSYCH 3010 Experimental Psychology or PSYCH 3011 Experimental Psychology (version taken concurrently with PSYCH 3000)

For cases in which an exemption is granted (e.g., PSYCH 1000, Psych 3000), no credits are earned toward the major, so exempt courses must be made up with additional Psychology & Brain Sciences (P&BS) content electives (approved by the major advisor).

Core Requirements

Students must complete at least one course from each of the following five categories:*

Social/Personality:

Code	Title	Units
PSYCH 3050	Health Psychology	3
PSYCH 3150	Introduction to Social Psychology	3
PSYCH 3530	Psychology of Personality	3
PSYCH 3096	Psychological Dynamics of Empathy	3
PSYCH 4099	Evolutionary Human Psychology	3

Mental Health/Affective:

Code	Title	Units
PSYCH 3501	Psychotherapy: Introduction to Practice and Research	3
PSYCH 3540	Psychopathology and Mental Health	3
PSYCH 3645	Understanding Emotions	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3
PSYCH 4367	Seminar in Positive Psychology	3

Biological/Neurological Bases of Behavior:

Code	Title	Units
PSYCH 3300	Sensation and Perception	3
PSYCH 3401	Introduction to Biological Psychology	3
PSYCH 3450	Genes, Environment and Human Behavior	3
PSYCH 3604	Cognitive Neuroscience	3
PSYCH 4182	Perception, Thought and Action	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3

Behavior and Cognition:

Code	Title	Units
PSYCH 3580	Language Acquisition	3
PSYCH 3600	Cognitive Psychology	3
PSYCH 3610	Psychology of Learning	3
PSYCH 3800	Human Learning and Memory	3
PSYCH 4099	Human Evolutionary Psychology	3
PSYCH 4330	Psychology of Language	3

Lifespan Development:

Code	Title	Units
PSYCH 2190	Infant Mind: Sophomore Seminar (this course can fulfill the Lifespan Development Core, but the credit counts in the "6 units Rule")	3
PSYCH 3210	Developmental Psychology	3
PSYCH 3250	Psychology of Adolescence	3
PSYCH 3260	Introduction to the Psychology of Aging	3
PSYCH 3580	Language Acquisition	3
PSYCH 4270	Social Gerontology	3

* If a course falls into more than one category, it can be used to fulfill only one of those categories (i.e., no double-counting).

Elective Courses

Students must complete an additional 9 units of P&BS coursework. Additional elective courses will be required to make up for PSYCH 1000 and PSYCH 3000 exemptions.

6-Units Rule

No more than 6 units from the following course types may be used to satisfy the minimum requirements for the P&BS major:

- 1000-/2000-level courses (other than PSYCH 1000 Introduction to Psychology)
- PSYCH 3999 Independent Study
- PSYCH 4992 Independent Study for a Specialization
- PSYCH 4980 and PSYCH 4990 Honors Program in Psychology
- Approved School of Continuing & Professional Studies (CAPS) psychology courses
- Approved psychology study abroad courses from a non-psychology study abroad program
- Approved psychology courses from other departments (e.g., EDUC 3040 Educational Psychology, MUSIC 3300 Music Cognition, PACS 2340 Introduction to Speech and Hearing, BEYOND 1003 When I'm Sixty-Four: Preparing Ourselves and Society for a Good Long Life, BIOL 3411 Principles of the Nervous System)
- Approved transfer credits (students transferring from another college should refer to the Transfer Credit section below)

Cognitive Neuroscience Specialization

To augment the major in Psychological & Brain Sciences, the department offers the option of a specialization for students who wish to engage more intensively with a specific area within the discipline.

A specialization may be a valuable experience for students planning on graduate study in psychology or related fields or for those who have a particular interest or want to gain expertise in one of the approved specializations. It may provide a useful preparation for the Honors program in Psychology, or it may serve as a substitute for the Honors experience for those students who may not qualify for Honors.

Completion of a specialization entails 12 units:

- Three courses (9 units), at least one of which must be an advanced, 4000-level course; and
- A semester of research in an appropriate, approved lab consisting of PSYCH 4992 Independent Study for a Specialization, which requires the successful completion of an American Psychological Association (APA)–style research paper or an approved Honors project completed through PSYCH 4980 Honors Program in Psychology. In some cases, a relevant internship or practicum may be an appropriate alternative to research experience. (**Note:** Students may be required to complete a preliminary semester [3 units] of PSYCH 3999 Independent Study, depending on the nature of the project intended for PSYCH 4992; the additional independent research is at the discretion of the research mentor and will not be counted toward the completion of the specialization requirements.)

The 3000-level required course may be used to fulfill no more than one of the core categories or distribution requirements of a Psychological & Brain Sciences major (i.e., one course could double-count for the major and the specialization). None of the units for a specialization can be counted for any other major or minor (i.e., there is no double-counting with another major or minor). For those pursuing the Psychological & Brain Sciences: Cognitive Neuroscience major, the Cognitive Neuroscience Specialization is not an option.

Each specialization has a Psychological & Brain Sciences faculty advisor/coordinator who will meet with interested students to help ensure the successful and appropriate completion of the specialization and who serves as the liaison with the Psychological & Brain Sciences Undergraduate Studies Committee. A student may pursue only one specialization. Completing a specialization, however, is not required to complete the base Psychological & Brain Sciences major.

Students should contact Shelley Kohlman (skohlman@wustl.edu) in Somers Family Hall, Room 207B, to arrange a specialization. Forms are available from Shelley, and completed forms must be returned to her in order for a specialization to be considered officially "in progress."

Recognition of the specialization will appear on the student's academic record under *Milestones* once all requirements have been met.

Requirements for the Cognitive Neuroscience Specialization

This specialization allows students to acquire deeper knowledge of the relationship between the mind and the brain. The courses for the specialization consider the neurobiological basis of psychological function at a more general level and then explore, in greater depth, specialized topics related to how higher cognitive processes (e.g., memory, attention, perception, emotion) emerge from brain function.

Advisor/coordinator: Professor Todd Braver

Coursework required:

Code	Title	Units
PSYCH 3604	Cognitive Neuroscience	3

Electives (must include two courses, at least one of which is at the 4000 level):

Code	Title	Units
PSYCH 3300	Sensation and Perception	3
PSYCH 3401	Introduction to Biological Psychology	3
PSYCH 3450	Genes, Environment and Human Behavior	3
PSYCH 4182	Perception, Thought and Action	3
PSYCH 4412	Advanced Cognitive Neuroscience	3
PSYCH 4631	Introduction to Computational Cognitive Science	3
PSYCH 4746	Biological Pathways to Psychopathology: From Genes and the Environment to Brain and Behavior	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper (i.e., PSYCH 4992 Independent Study for a Specialization or PSYCH 4980 Honors Program in Psychology)

Relevant faculty: Todd Braver, Deanna Barch, Ryan Bogdan, Ian Dobbins, Denise Head, Wouter Kool, Zachariah Reagh, and Jeff Zacks (other potential faculty mentors may be approved)

Additional Information

Transfer Credit

If accepted by the College of Arts & Sciences, transfer credits will be evaluated by the Director of Undergraduate Studies in the P&BS department for their applicability toward either major in P&BS.

Senior Honors Program in Psychological & Brain Sciences

The primary goal of the honors program in P&BS is to provide students who have achieved a superior academic record with the opportunity to conduct a comprehensive empirical investigation under the direction of a faculty member.

To be admitted into the honors program, students must meet the following requirements:

- Have overall and P&BS grade point averages of at least 3.65
- Complete both PSYCH 3000 Introduction to Psychological Statistics and PSYCH 3010 Experimental Psychology (or PSYCH 3011)
- Have an approved honors research advisor

Website:	https://psych.wustl.edu/undergraduate-program

Psychological & Brain Sciences Major, Experimental Psychopathology Specialization

Psychological & Brain Sciences Major Program Requirements

- **Total Units Required:** 43-46 units (34 units [at least 25 of which must be at the 3000 level or above] for the major requirements, plus 9-12 units for a specialization; adding a specialization to the base major is not required)
- **Grade Requirement:** For a course to count toward the major; a grade of C– or better must be achieved.

Required Courses

- PSYCH 1000 Introduction to Psychology is a prerequisite for all upper-level courses (3000 level and above). Exemption from Psych 1000 Introduction to Psychology is possible in the following circumstances:
  - Completion of an equivalent course transferred from another institution, if approved by the Director of Undergraduate Studies.
  - An AP Psychology test score of 5, an IB score of 6 or 7, or a British A-Level grade of A.
- PSYCH 3000 Introduction to Psychological Statistics
  - SDS 2020 Elementary Probability and Statistics, SDS 3020 Elementary to Intermediate Probability and Statistics, or DAT 1200 Managerial Statistics I may substitute for PSYCH 3000 Introduction to Psychological Statistics but earn no units of credit toward the major. No AP math course can substitute for PSYCH 3000 Introduction to Psychological Statistics.
- PSYCH 3010 Experimental Psychology or PSYCH 3011 Experimental Psychology (version taken concurrently with PSYCH 3000)

For cases in which an exemption is granted (e.g., PSYCH 1000, Psych 3000), no credits are earned toward the major, so exempt courses must be made up with additional Psychology & Brain Sciences (P&BS) content electives (approved by the major advisor).

Core Requirements

Students must complete at least one course from each of the following five categories:*

Social/Personality:

Code	Title	Units
PSYCH 3050	Health Psychology	3
PSYCH 3150	Introduction to Social Psychology	3
PSYCH 3530	Psychology of Personality	3
PSYCH 3096	Psychological Dynamics of Empathy	3
PSYCH 4099	Evolutionary Human Psychology	3

Mental Health/Affective:

Code	Title	Units
PSYCH 3501	Psychotherapy: Introduction to Practice and Research	3
PSYCH 3540	Psychopathology and Mental Health	3
PSYCH 3645	Understanding Emotions	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3
PSYCH 4367	Seminar in Positive Psychology	3

Biological/Neurological Bases of Behavior:

Code	Title	Units
PSYCH 3300	Sensation and Perception	3
PSYCH 3401	Introduction to Biological Psychology	3
PSYCH 3450	Genes, Environment and Human Behavior	3
PSYCH 3604	Cognitive Neuroscience	3
PSYCH 4182	Perception, Thought and Action	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3

Behavior and Cognition:

Code	Title	Units
PSYCH 3580	Language Acquisition	3
PSYCH 3600	Cognitive Psychology	3
PSYCH 3610	Psychology of Learning	3
PSYCH 3800	Human Learning and Memory	3
PSYCH 4099	Human Evolutionary Psychology	3
PSYCH 4330	Psychology of Language	3

Lifespan Development:

Code	Title	Units
PSYCH 2190	Infant Mind: Sophomore Seminar (this course can fulfill the Lifespan Development Core, but the credit counts in the "6 units Rule")	3
PSYCH 3210	Developmental Psychology	3
PSYCH 3250	Psychology of Adolescence	3
PSYCH 3260	Introduction to the Psychology of Aging	3
PSYCH 3580	Language Acquisition	3
PSYCH 4270	Social Gerontology	3

* If a course falls into more than one category, it can be used to fulfill only one of those categories (i.e., no double-counting).

Elective Courses

Students must complete an additional 9 units of P&BS coursework. Additional elective courses will be required to make up for PSYCH 1000 and PSYCH 3000 exemptions.

6-Units Rule

No more than 6 units from the following course types may be used to satisfy the minimum requirements for the P&BS major:

- 1000-/2000-level courses (other than PSYCH 1000 Introduction to Psychology)
- PSYCH 3999 Independent Study
- PSYCH 4992 Independent Study for a Specialization
- PSYCH 4980 and PSYCH 4990 Honors Program in Psychology
- Approved School of Continuing & Professional Studies (CAPS) psychology courses
- Approved psychology study abroad courses from a non-psychology study abroad program
- Approved psychology courses from other departments (e.g., EDUC 3040 Educational Psychology, MUSIC 3300 Music Cognition, PACS 2340 Introduction to Speech and Hearing, BEYOND 1003 When I'm Sixty-Four: Preparing Ourselves and Society for a Good Long Life, BIOL 3411 Principles of the Nervous System)
- Approved transfer credits (students transferring from another college should refer to the Transfer Credit section below)

Experimental Psychopathology Specialization

To augment the major in Psychological & Brain Sciences, the department offers the option of a specialization for students who wish to engage more intensively with a specific area within the discipline.

A specialization may be a valuable experience for students planning on graduate study in psychology or related fields or for those who have a particular interest or want to gain expertise in one of the approved specializations. It may provide a useful preparation for the Honors program in Psychology, or it may serve as a substitute for the Honors experience for those students who may not qualify for Honors.

Completion of a specialization entails 12 units:

- Three courses (9 units), at least one of which must be an advanced, 4000-level course; and
- A semester of research in an appropriate, approved lab consisting of PSYCH 4992 Independent Study for a Specialization, which requires the successful completion of an American Psychological Association (APA)–style research paper or an approved Honors project completed through PSYCH 4980 Honors Program in Psychology. In some cases, a relevant internship or practicum may be an appropriate alternative to research experience. (**Note:**

Students may be required to complete a preliminary semester [3 units] of PSYCH 3999 Independent Study, depending on the nature of the project intended for PSYCH 4992; the additional independent research is at the discretion of the research mentor and will not be counted toward the completion of the specialization requirements.)

The 3000-level required course may be used to fulfill no more than one of the core categories or distribution requirements of a Psychological & Brain Sciences major (i.e., one course could double-count for the major and the specialization). None of the units for a specialization can be counted for any other major or minor (i.e., there is no double-counting with another major or minor). For those pursuing the Psychological & Brain Sciences: Cognitive Neuroscience major, the Cognitive Neuroscience Specialization is not an option.

Each specialization has a Psychological & Brain Sciences faculty advisor/coordinator who will meet with interested students to help ensure the successful and appropriate completion of the specialization and who serves as the liaison with the Psychological & Brain Sciences Undergraduate Studies Committee. A student may pursue only one specialization. Completing a specialization, however, is not required to complete the base Psychological & Brain Sciences major.

Students should contact Shelley Kohlman (skohlman@wustl.edu) in Somers Family Hall, Room 207B, to arrange a specialization. Forms are available from Shelley, and completed forms must be returned to her in order for a specialization to be considered officially "in progress."

Recognition of the specialization will appear on the student's academic record under *Milestones* once all requirements have been met.

Requirements for the Experimental Psychopathology Specialization

This specialization allows students to acquire more advanced knowledge of the ways in which psychologists study mental disorders. Current research demonstrates the importance of integrating psychological and biological variables to better understand the classification, etiology, and treatment of a wide variety of mental disorders, including schizophrenia, mood disorders, anxiety disorders, substance use disorders, and eating disorders. Students who pursue this specialization will develop a broad-based appreciation for conceptual and methodological issues that are central to research in psychopathology.

Advisor/coordinator: Professor Deanna Barch

Coursework required:

Code	Title	Units
PSYCH 3540	Psychopathology and Mental Health	3

Electives (must include two courses, at least one of which is at the 4000 level):

Code	Title	Units
PSYCH 3450	Genes, Environment, and Human Behavior	3
PSYCH 4557	Biopsychosocial Aspects of Eating Disorders and Obesity	3
PSYCH 4746	Biological Pathways to Psychopathology: From Genes and the Environment to Brain and Behavior	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper (i.e., PSYCH 4992 Independent Study for a Specialization or PSYCH 4980 Honors Program in Psychology)

Relevant faculty: Deanna Barch, Ryan Bogdan, Josh Jackson, Renee Thompson, and Denise Wilfley (other potential faculty mentors may be approved)

Additional Information

Transfer Credit

If accepted by the College of Arts & Sciences, transfer credits will be evaluated by the Director of Undergraduate Studies in the P&BS department for their applicability toward either major in P&BS.

Senior Honors Program in Psychological & Brain Sciences

Students must complete an additional 9 units of P&BS coursework. Additional elective courses will be required to make up for PSYCH 1000 and PSYCH 3000 exemptions.

6-Units Rule

No more than 6 units from the following course types may be used to satisfy the minimum requirements for the P&BS major:

- 1000-/2000-level courses (other than PSYCH 1000 Introduction to Psychology)
- PSYCH 3999 Independent Study
- PSYCH 4992 Independent Study for a Specialization
- PSYCH 4980 and PSYCH 4990 Honors Program in Psychology
- Approved School of Continuing & Professional Studies (CAPS) psychology courses
- Approved psychology study abroad courses from a non-psychology study abroad program
- Approved psychology courses from other departments (e.g., EDUC 3040 Educational Psychology, MUSIC 3300 Music Cognition, PACS 2340 Introduction to Speech and Hearing, BEYOND 1003 When I'm Sixty-Four: Preparing Ourselves and Society for a Good Long Life, BIOL 3411 Principles of the Nervous System)
- Approved transfer credits (students transferring from another college should refer to the Transfer Credit section below)

Lifespan Development Specialization

To augment the major in Psychological & Brain Sciences, the department offers the option of a specialization for students who wish to engage more intensively with a specific area within the discipline.

A specialization may be a valuable experience for students planning on graduate study in psychology or related fields or for those who have a particular interest or want to gain expertise in one of the approved specializations. It may provide a useful preparation for the Honors program in Psychology, or it may serve as a substitute for the Honors experience for those students who may not qualify for Honors.

Completion of a specialization entails 12 units:

- Three courses (9 units), at least one of which must be an advanced, 4000-level course; and
- A semester of research in an appropriate, approved lab consisting of PSYCH 4992 Independent Study for a Specialization, which requires the successful completion of an American Psychological Association (APA)–style research paper or an approved Honors project completed through PSYCH 4980 Honors Program in Psychology. In some cases, a relevant internship or practicum may be an appropriate alternative to research experience. (**Note:** Students may be required to complete a preliminary semester [3 units] of PSYCH 3999 Independent Study, depending on the nature of the project intended for PSYCH 4992; the additional independent research is at the discretion of the research mentor and will not be counted toward the completion of the specialization requirements.)

The 3000-level required course may be used to fulfill no more than one of the core categories or distribution requirements of a Psychological & Brain Sciences major (i.e., one course could double-count for the major and the specialization). None of the units for a specialization can be counted for any other major or minor (i.e., there is no double-counting with another major or minor). For those pursuing the Psychological & Brain Sciences: Cognitive Neuroscience major, the Cognitive Neuroscience Specialization is not an option.

Each specialization has a Psychological & Brain Sciences faculty advisor/coordinator who will meet with interested students to help ensure the successful and appropriate completion of the specialization and who serves as the liaison with the Psychological & Brain Sciences Undergraduate Studies Committee. A student may pursue only one specialization. Completing a specialization, however, is not required to complete the base Psychological & Brain Sciences major.

Students should contact Shelley Kohlman (skohlman@wustl.edu) in Somers Family Hall, Room 207B, to arrange a specialization. Forms are available from Shelley, and completed forms must be returned to her in order for a specialization to be considered officially "in progress."

Recognition of the specialization will appear on the student's academic record under *Milestones* once all requirements have been met.

Requirements for the Lifespan Development Specialization

Many introductory courses in developmental psychology focus on the changes that occur from birth to adolescence. The specialization in lifespan development provides students with an understanding of the cognitive and physiological changes that occur over the lifespan, with a primary focus on older adulthood. A major goal of the specialization is to provide students with an understanding of the similarities and differences in development at different stages of the lifespan.

Advisor/coordinator: Professor Mitchell Sommers

Coursework required:

Code	Title	Units
PSYCH 3260	Introduction to the Psychology of Aging	3

Electives:

Code	Title	Units
PSYCH 3210	Developmental Psychology	3
PSYCH 4270	Social Gerontology	3
PSYCH 4355	Personality and Development Across the Lifespan	3

Research mentorship or internship experience related to Lifespan Development: Students can complete this aspect of the specialization with either a prior approved research mentorship or an approved internship related to older adults (i.e., PSYCH 2901 Internship in Psychology, PSYCH 4992 Independent Study for a Specialization, or PSYCH 4980 Honors Program in Psychology). Successful completion of a paper is required in all cases.

Relevant faculty for research mentorship: Mitchell Sommers, Brian Carpenter, Sandra Hale, Denise Head, Patrick Hill, Derek Isaacowitz, Josh Jackson, and Lori Markson (other potential faculty mentors may be approved)

Possible internships: Students may complete a prior approved internship related to older adults as well as a paper about the internship experience. Options may include work in an assisted-living facility or another community-based program designed to assist older adults. Other internships are available; consult the Psychological & Brain Sciences department website for information about internship opportunities in psychology.

Additional Information

Transfer Credit

If accepted by the College of Arts & Sciences, transfer credits will be evaluated by the Director of Undergraduate Studies in the P&BS department for their applicability toward either major in P&BS.

Senior Honors Program in Psychological & Brain Sciences

The primary goal of the honors program in P&BS is to provide students who have achieved a superior academic record with the opportunity to conduct a comprehensive empirical investigation under the direction of a faculty member.

To be admitted into the honors program, students must meet the following requirements:

- Have overall and P&BS grade point averages of at least 3.65
- Complete both PSYCH 3000 Introduction to Psychological Statistics and PSYCH 3010 Experimental Psychology (or PSYCH 3011)
- Have an approved honors research advisor

Contact:	Shelley Kohlman
Phone:	314-935-5169
Email:	314-935-5169
Website:	https://psych.wustl.edu/undergraduate-program

Psychological & Brain Sciences Major, Personality and Individual Differences Specialization

Psychological & Brain Sciences Major Program Requirements

- **Total Units Required:** 43-46 units (34 units [at least 25 of which must be at the 3000 level or above] for the major requirements, plus 9-12 units for a specialization; adding a specialization to the base major is not required)
- **Grade Requirement:** For a course to count toward the major; a grade of C– or better must be achieved.

Required Courses

- PSYCH 1000 Introduction to Psychology is a prerequisite for all upper-level courses (3000 level and above). Exemption from Psych 1000 Introduction to Psychology is possible in the following circumstances:
  - Completion of an equivalent course transferred from another institution, if approved by the Director of Undergraduate Studies.
  - An AP Psychology test score of 5, an IB score of 6 or 7, or a British A-Level grade of A.
- PSYCH 3000 Introduction to Psychological Statistics
  - SDS 2020 Elementary Probability and Statistics, SDS 3020 Elementary to Intermediate Probability and Statistics, or DAT 1200 Managerial Statistics I may substitute for PSYCH 3000 Introduction to Psychological Statistics but earn no units of credit toward the major. No AP math course can substitute for PSYCH 3000 Introduction to Psychological Statistics.
- PSYCH 3010 Experimental Psychology or PSYCH 3011 Experimental Psychology (version taken concurrently with PSYCH 3000)

For cases in which an exemption is granted (e.g., PSYCH 1000, Psych 3000), no credits are earned toward the major, so exempt courses must be made up with additional Psychology & Brain Sciences (P&BS) content electives (approved by the major advisor).

Core Requirements

Students must complete at least one course from each of the following five categories:*

Social/Personality:

Code	Title	Units
PSYCH 3050	Health Psychology	3
PSYCH 3150	Introduction to Social Psychology	3
PSYCH 3530	Psychology of Personality	3
PSYCH 3096	Psychological Dynamics of Empathy	3
PSYCH 4099	Evolutionary Human Psychology	3

Mental Health/Affective:

Code	Title	Units
PSYCH 3501	Psychotherapy: Introduction to Practice and Research	3
PSYCH 3540	Psychopathology and Mental Health	3
PSYCH 3645	Understanding Emotions	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3
PSYCH 4367	Seminar in Positive Psychology	3

Biological/Neurological Bases of Behavior:

Code	Title	Units
PSYCH 3300	Sensation and Perception	3
PSYCH 3401	Introduction to Biological Psychology	3
PSYCH 3450	Genes, Environment and Human Behavior	3
PSYCH 3604	Cognitive Neuroscience	3
PSYCH 4182	Perception, Thought and Action	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3

Behavior and Cognition:

Code	Title	Units
PSYCH 3580	Language Acquisition	3
PSYCH 3600	Cognitive Psychology	3
PSYCH 3610	Psychology of Learning	3
PSYCH 3800	Human Learning and Memory	3
PSYCH 4099	Human Evolutionary Psychology	3
PSYCH 4330	Psychology of Language	3

Lifespan Development:

Code	Title	Units
PSYCH 2190	Infant Mind: Sophomore Seminar (this course can fulfill the Lifespan Development Core, but the credit counts in the "6 units Rule")	3
PSYCH 3210	Developmental Psychology	3
PSYCH 3250	Psychology of Adolescence	3
PSYCH 3260	Introduction to the Psychology of Aging	3
PSYCH 3580	Language Acquisition	3
PSYCH 4270	Social Gerontology	3

* If a course falls into more than one category, it can be used to fulfill only one of those categories (i.e., no double-counting).

Elective Courses

Students must complete an additional 9 units of P&BS coursework. Additional elective courses will be required to make up for PSYCH 1000 and PSYCH 3000 exemptions.

6-Units Rule

No more than 6 units from the following course types may be used to satisfy the minimum requirements for the P&BS major:

- 1000-/2000-level courses (other than PSYCH 1000 Introduction to Psychology)
- PSYCH 3999 Independent Study
- PSYCH 4992 Independent Study for a Specialization
- PSYCH 4980 and PSYCH 4990 Honors Program in Psychology
- Approved School of Continuing & Professional Studies (CAPS) psychology courses
- Approved psychology study abroad courses from a non-psychology study abroad program
- Approved psychology courses from other departments (e.g., EDUC 3040 Educational Psychology, MUSIC 3300 Music Cognition, PACS 2340 Introduction to Speech and Hearing, BEYOND 1003 When I'm Sixty-Four: Preparing Ourselves and Society for a Good Long Life, BIOL 3411 Principles of the Nervous System)
- Approved transfer credits (students transferring from another college should refer to the Transfer Credit section below)

Personality and Individual Differences Specialization

To augment the major in Psychological & Brain Sciences, the department offers the option of a specialization for students who wish to engage more intensively with a specific area within the discipline.

A specialization may be a valuable experience for students planning on graduate study in psychology or related fields or for those who have a particular interest or want to gain expertise in one of the approved specializations. It may provide a useful preparation for the Honors program in Psychology, or it may serve as a substitute for the Honors experience for those students who may not qualify for Honors.

Completion of a specialization entails 12 units:

- Three courses (9 units), at least one of which must be an advanced, 4000-level course; and
- A semester of research in an appropriate, approved lab consisting of PSYCH 4992 Independent Study for a Specialization, which requires the successful completion of an American Psychological Association (APA)–style research paper or an approved Honors project completed through PSYCH 4980 Honors Program in Psychology. In some cases, a relevant internship or practicum may be an appropriate alternative to research experience. (**Note:**

Students may be required to complete a preliminary semester [3 units] of PSYCH 3999 Independent Study, depending on the nature of the project intended for PSYCH 4992; the additional independent research is at the discretion of the research mentor and will not be counted toward the completion of the specialization requirements.)

The 3000-level required course may be used to fulfill no more than one of the core categories or distribution requirements of a Psychological & Brain Sciences major (i.e., one course could double-count for the major and the specialization). None of the units for a specialization can be counted for any other major or minor (i.e., there is no double-counting with another major or minor). For those pursuing the Psychological & Brain Sciences: Cognitive Neuroscience major, the Cognitive Neuroscience Specialization is not an option.

Each specialization has a Psychological & Brain Sciences faculty advisor/coordinator who will meet with interested students to help ensure the successful and appropriate completion of the specialization and who serves as the liaison with the Psychological & Brain Sciences Undergraduate Studies Committee. A student may pursue only one specialization. Completing a specialization, however, is not required to complete the base Psychological & Brain Sciences major.

Students should contact Shelley Kohlman (skohlman@wustl.edu) in Somers Family Hall, Room 207B, to arrange a specialization. Forms are available from Shelley, and completed forms must be returned to her in order for a specialization to be considered officially "in progress."

Recognition of the specialization will appear on the student's academic record under *Milestones* once all requirements have been met.

Requirements for the Personality and Individual Differences Specialization

This specialization allows students to acquire deeper knowledge of how and why individuals differ from one another and the ways in which individual (e.g., personality) and group (e.g., gender) differences influence behavior, emotion, experience, identity, and psychopathology. The core course for the specialization (PSYCH 3530 Psychology of Personality) considers personality more generally. The seminars explore, in depth, specific aspects of personality and individual differences, including biological bases of individual differences (i.e., genetics), the interpersonal processes associated with personality and personality judgment, individual differences in self and identity, group differences, and personality pathology.

Advisor/coordinator: Professor Tammy English

Coursework required:

Code	Title	Units
PSYCH 3530	Psychology of Personality	3

Electives (must include two courses, at least one of which is at the 4000 level):

Code	Title	Units
PSYCH 3450	Genes, Environment, and Human Behavior	3
PSYCH 3645	Understanding Emotions	3
PSYCH 4130	Contemporary Topics in Social Psychology (with prior approval only)	3
PSYCH 4355	Personality Development Across the Lifespan	3
PSYCH 4367	Seminar in Positive Psychology	3
PSYCH 4555	Emotion Regulation	3
PSYCH 4593	Psychology of the Good Life	3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper (i.e., PSYCH 4992 Independent Study for a Specialization or PSYCH 4980 Honors Program in Psychology)

Relevant faculty: Tammy English, Patrick Hill, Derek Isaacowitz, Josh Jackson, Jesse Sun, Renee Thompson, and Emily Willroth (other potential faculty mentors may be approved)

Additional Information

Transfer Credit

If accepted by the College of Arts & Sciences, transfer credits will be evaluated by the Director of Undergraduate Studies in the P&BS department for their applicability toward either major in P&BS.

Senior Honors Program in Psychological & Brain Sciences

The primary goal of the honors program in P&BS is to provide students who have achieved a superior academic record with the opportunity to conduct a comprehensive empirical investigation under the direction of a faculty member.

To be admitted into the honors program, students must meet the following requirements:

- Have overall and P&BS grade point averages of at least 3.65
- Complete both PSYCH 3000 Introduction to Psychological Statistics and PSYCH 3010 Experimental Psychology (or PSYCH 3011)
- Have an approved honors research advisor

Contact:	Shelley Kohlman
Phone:	314-935-5169
Email:	skohlman@wustl.edu
Website:	https://psych.wustl.edu/undergraduate-program

Psychological & Brain Sciences: Cognitive Neuroscience Major, Cognition in Children Specialization

Program Requirements

- **Total Units Required:** 45-49 units (36-37 units plus prerequisites for the major requirements, plus 9-12 units for a specialization; adding a specialization to the base major is not required)
- **Grade Requirement:** For a course to count toward the major, a grade of C– or better must be achieved.

How does the brain think? Cognitive neuroscience refers to how mental functions are linked to the operation of the brain and nervous system. The goal of cognitive neuroscience is to provide an understanding of psychological processes such as attention, memory, thinking, and emotion in terms of physical principles and biological components. At the same time, cognitive neuroscience aims to provide an understanding of the psychological constraints on how the brain functions, computes, and generates behavior. Students who pursue the undergraduate major in Psychological & Brain Sciences: Cognitive Neuroscience (PB&S:CN) will gain a strong foundation in how to study the brain and mind at various levels of analysis, including cellular biology, brain systems, cognitive and affective function, and neural computation. In addition, they will gain an appreciation of the relation between healthy cognitive and brain function and its breakdown in various disease states and disorders. The PB&S:CN major provides excellent preparation for a career in health and medical professions, scientific research, computer fields, education, and law.

Prerequisites

Students must complete the following courses outside of Psychological & Brain Sciences:

Code	Title	Units
BIOL 2160	Principles of Biology I	3
MATH 1520	Calculus II	3
Total Units		**6**

Note: Each of these prerequisites has its own prerequisites: MATH 1520 requires MATH 1510; for BIOL 2160, taking CHEM 1701 and CHEM 1702 (concurrently) is strongly recommended. These courses are Biology and pre-med prerequisites as well, and they are typically completed during a student's first year. They may alternatively be satisfied through AP credit or any other mechanism approved by the respective department or the College. These prerequisites do not earn credit toward the P&BS:CN major, but they must be completed with a passing grade (C– or above) by the end of the student's third year to remain in good standing for the major.

Required Courses

Code	Title	Units
PSYCH 1000	Introduction to Psychology	3
PSYCH 3000	Introduction to Psychological Statistics	3
PSYCH 3010 Experimental Psychology **or** PSYCH 3011 Experimental Psychology		4
PSYCH 3401 Biological Psychology **or** BIOL 3411 Principles of the Nervous System		3
PSYCH 3600	Cognitive Psychology	3
PSYCH 3604	Cognitive Neuroscience	3
Total Units		**19**

Note: The first three requirements (i.e., PSYCH 1000 Introduction to Psychology, PSYCH 3000 Introduction to Psychological Statistics, and PSYCH 3010/PSYCH 3011 Experimental Psychology [the version taken concurrently with PSYCH 3000]) are the same as those for the regular P&BS major.

PSYCH 1000 Introduction to Psychology is a prerequisite for all upper-level courses (3000 level and above). Exemption from PSYCH 1000 Introduction to Psychology is possible in the following circumstances:

- Completion of an equivalent course transferred from another institution, if approved by the director of undergraduate studies.
- An AP psychology test score of 5, an IB score of 6 or 7, or a British A-Level grade of A.

PSYCH 3000 Introduction to Psychological Statistics:

- SDS 2020 Elementary Probability and Statistics, SDS 3020 Elementary to Intermediate Probability and Statistics, or DAT 1200 Managerial Statistics I may substitute for PSYCH 3000 Introduction to Psychological Statistics but earn no units of credit toward the major. No AP math course can substitute for PSYCH 3000 Introduction to Psychological Statistics.

For cases in which an exemption is granted (e.g., PSYCH 1000, PSYCH 3000), no credits are earned toward the major, so exempt courses must be made up with additional P&BS content electives approved by the major advisor.

Additional Cognitive and Biological Distributions

Students must complete two courses — one each from the Distribution A and B lists:

*Distribution A eligible courses:**

Code	Title	Units
PSYCH 3175	Applied Statistical Analysis with R	3
PSYCH 3210	Developmental Psychology	3
PSYCH 3300	Sensation and Perception	3
PSYCH 3580	Language Acquisition	3
PSYCH 3610	Psychology of Learning	3
PSYCH 3800	Human Learning and Memory	3
PSYCH 3980	Advanced Psychological Statistics: The General Linear Model and Beyond	3
PSYCH 4099	Human Evolutionary Psychology	3
PSYCH 4182	Perception, Thought and Action	3
PSYCH 4330	Psych of Language	3

*Distribution B eligible courses:**

Code	Title	Units
BIOL 3057	Physiological Control Systems	3
BIOL 3151	Endocrinology	3
BIOL 3280	Principles in Human Physiology	3
BIOL 3421	Neuroethology	3
BIOL 3422	Genes, Brains and Behavior	3
DANCE 3170	The Neuroscience of Movement: You Think, So You Can Dance?	3
PHYSICS 3350	Physics of the Brain	3
PSYCH 3175	Applied Statistical Analysis with R	3
PSYCH 3450	Genes, Environment and Human Behavavior	3
PSYCH 3890	Advanced Psychological Statistics: The General Linear Model and Beyond	3

Note: PSYCH 3175 Applied Statistical Analysis With R or PSYCH 3890 Advanced Statistics: The GLM can be allowed to fulfill either Distribution A or B; students must complete at least one non-statistics course for the Additional Cognitive and Biological Distributions requirement.

Computation Requirement

Students must complete one of the following courses:*

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
PSYCH 3175	Applied Statistical Analysis with R	3
PSYCH 4631	Computaional Cognitive Science	3
PSYCH 5007	Statistics and Data Analysis in MATLAB	3

With prior approval, another course involving a significant computational/programming component may be substituted.

Capstone/Depth Requirement

Students must complete three of the following courses:*

Capstone/Depth eligible courses:

Code	Title	Units
ANTHRO 4581	Principles of Human Anatomy and Development	3
BIOL 4030	Biological Clocks	3
BIOL 4040	Laboratory of Neurophysiology	3
PHIL 4200	Philosophy of Neuroscience	3
PNP 4020	The Physiology and Biophysics of Consciousness	2
PSYCH 4182	Perception, Thought and Action	3
PSYCH 4414	Advanced Cognitive Neuroscience	3
PSYCH 4512	Neurobiology of Learning and Memory	3
PSYCH 4631	Computational Cognitive Psychology	3
PSYCH 4746	Genes, Brain and Behavior: Pathways to Psychopathology	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3

Additional Capstone/Depth eligible courses:

- PSYCH 3999 (all 3 units must be completed in one semester and in one lab to be considered for approval; taken Credit/No Credit) can be used satisfy up to 3 units of the Capstone/Depth requirement.
- FYP 3901 Ampersand: Research in Mind, Brain Behavior (two consecutive semesters must be completed; 3 units total) can substitute for PSYCH 3999.
- PSYCH 4991 Independent Study for the Major in P&BS: Cognitive Neuroscience (3 units; taken for a letter grade and requiring a final paper) can be used to satisfy up to 6 units of the Capstone/Depth requirement.
- The Honors Program in Psychology (PSYCH 4980 can be used to satisfy up to 3 units total of the Capstone/Depth requirement).

In total, no more than 6 units of the above may be applied toward the Capstone/Depth requirement.

Note: Unless a student explicitly petitions for an exception and is granted written prior approval, only the above Capstone/Depth eligible courses can be counted toward the Capstone/Depth requirement. Contact skohlman@wustl.edu for the petition.

* If a course falls into more than one category, it can be used to fulfill only one of those categories (i.e., no double-counting).

Acceptance Into the Psychological & Brain Sciences: Cognitive Neuroscience Major

Acceptance into the major is contingent upon an application and then approval by the major committee. As part of this application, the student will meet with an appropriate advisor who will carefully review the requirements and oversee the student's progress. A brief, one-page statement from the student about why they feel the cognitive neuroscience major is appropriate for them will be requested as part of the application.

Washington University students will be considered for admission to the P&BS:CN major no sooner than during their third semester (sophomore year). Decisions are based on the student's statement and academic record as well as the interview with the advisor. A minimum GPA of 2.0 is required for admission into the major.

Cognition in Children Specialization

To augment the major in Psychological & Brain Sciences, the department offers the option of a specialization for students who wish to engage more intensively with a specific area within the discipline.

A specialization may be a valuable experience for students planning on graduate study in psychology or related fields or for those who have a particular interest or want to gain expertise in one of the approved specializations. It may provide a useful preparation for the Honors program in Psychology, or it may serve as a substitute for the Honors experience for those students who may not qualify for Honors.

Completion of a specialization entails 12 units:

- Three courses (9 units), at least one of which must be an advanced, 4000-level course; and
- A semester of research in an appropriate, approved lab consisting of PSYCH 4992 Independent Study for a Specialization, which requires the successful completion of an American Psychological Association (APA)–style research paper or an approved Honors project completed through PSYCH 4980 Honors Program in Psychology. In some cases, a relevant internship or practicum may be an appropriate alternative to research experience. (**Note:** Students may be required to complete a preliminary semester [3 units] of PSYCH 3999 Independent Study, depending on the nature of the project intended for PSYCH 4992; the additional independent research is at the discretion of the research mentor and will not be counted toward the completion of the specialization requirements.)

The 3000-level required course may be used to fulfill no more than one of the core categories or distribution requirements of a Psychological & Brain Sciences major (i.e., one course could double-count for the major and the specialization). None of the units for a specialization can be counted for any other major or minor (i.e., there is no double-counting with another major or minor). For those pursuing the Psychological & Brain Sciences: Cognitive Neuroscience major, the Cognitive Neuroscience Specialization is not an option.

Each specialization has a Psychological & Brain Sciences faculty advisor/coordinator who will meet with interested students to help ensure the successful and appropriate completion of the specialization and who serves as the liaison with the Psychological & Brain Sciences Undergraduate Studies Committee. A student may pursue only one specialization. Completing a specialization, however, is not required to complete the base Psychological & Brain Sciences major.

Students should contact Shelley Kohlman (skohlman@wustl.edu) in Somers Family Hall, Room 207B, to arrange a specialization. Forms are available from Shelley, and completed forms must be returned to her in order for a specialization to be considered officially "in progress."

Recognition of the specialization will appear on the student's academic record under *Milestones* once all requirements have been met.

Requirements for the Cognition in Children Specialization

This specialization allows students to acquire deeper knowledge of cognitive and social-cognitive processes that occur during infancy and early childhood. The courses for this specialization consider child development more generally and then explore in more depth the development of cognitive, conceptual, linguistic, and social abilities.

Advisor/coordinator: Professor Lori Markson

Coursework required:

Code	Title	Units
PSYCH 3210	Developmental Psychology	3

Electives (must include two courses, at least one of which is at the 4000 level):

Code	Title	Units
PSYCH 2190	Infant Mind: Sophomore Seminar	3
PSYCH 3580	Language Acquisition	3
PSYCH 4099	Human Evolutionary Psychology	3
PSYCH 4591	Development of Social Cognition	3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper (i.e., PSYCH 4992 Independent Study for a Specialization or PSYCH 4980 Honors Program in Psychology)

Relevant faculty: Lori Markson, Susan Perlman, Natasha Marrus, and Joan Luby (other potential faculty mentors may be approved upon request depending on relevance of the research experience)

Additional Information

Transfer Credit

If accepted by the College of Arts & Sciences, transfer credits will be evaluated by the Director of Undergraduate Studies in the P&BS department for their applicability toward either major in P&BS.

Senior Honors Program in Psychological & Brain Sciences

The primary goal of the honors program in P&BS is to provide students who have achieved a superior academic record with the opportunity to conduct a comprehensive empirical investigation under the direction of a faculty member.

To be admitted into the honors program, students must meet the following requirements:

- Have overall and P&BS grade point averages of at least 3.65
- Complete both PSYCH 3000 Introduction to Psychological Statistics and PSYCH 3010 Experimental Psychology (or PSYCH 3011)
- Have an approved honors research advisor

Psychological & Brain Sciences: Cognitive Neuroscience Major, Experimental Psychopathology Specialization

Program Requirements

- **Total Units Required:** 45-49 units (36-37 units plus prerequisites for the major requirements, plus 9-12 units for a specialization; adding a specialization to the base major is not required)
- **Grade Requirement:** For a course to count toward the major, a grade of C– or better must be achieved.

How does the brain think? Cognitive neuroscience refers to how mental functions are linked to the operation of the brain and nervous system. The goal of cognitive neuroscience is to provide an understanding of psychological processes such as attention, memory, thinking, and emotion in terms of physical principles and biological components. At the same time, cognitive neuroscience aims to provide an understanding of the psychological constraints on how the brain functions, computes, and generates behavior. Students who pursue the undergraduate major in Psychological & Brain Sciences: Cognitive Neuroscience (PB&S:CN) will gain a strong foundation in how to study the brain and mind at various levels of analysis, including cellular biology, brain systems, cognitive and affective function, and neural computation. In addition, they will gain an appreciation of the relation between healthy cognitive and brain function and its breakdown in various disease states and disorders. The PB&S:CN major provides excellent preparation for a career in health and medical professions, scientific research, computer fields, education, and law.

Prerequisites

Students must complete the following courses outside of Psychological & Brain Sciences:

Code	Title	Units
BIOL 2160	Principles of Biology I	3
MATH 1520	Calculus II	3
Total Units		**6**

Note: Each of these prerequisites has its own prerequisites: MATH 1520 requires MATH 1510; for BIOL 2160, taking CHEM 1701 and CHEM 1702 (concurrently) is strongly recommended. These courses are Biology and pre-med prerequisites as well, and they are typically completed during a student's first year. They may alternatively be satisfied through AP credit or any other mechanism approved by the respective department or the College. These prerequisites do not earn credit toward the P&BS:CN major, but they must be completed with a passing grade (C– or above) by the end of the student's third year to remain in good standing for the major.

Required Courses

Code	Title	Units
PSYCH 1000	Introduction to Psychology	3
PSYCH 3000	Introduction to Psychological Statistics	3
PSYCH 3010 Experimental Psychology **or** PSYCH 3011 Experimental Psychology		4
PSYCH 3401 Biological Psychology **or** BIOL 3411 Principles of the Nervous System		3
PSYCH 3600	Cognitive Psychology	3
PSYCH 3604	Cognitive Neuroscience	3
Total Units		**19**

Note: The first three requirements (i.e., PSYCH 1000 Introduction to Psychology, PSYCH 3000 Introduction to Psychological Statistics, and PSYCH 3010/PSYCH 3011 Experimental Psychology [the version taken concurrently with PSYCH 3000]) are the same as those for the regular P&BS major.

PSYCH 1000 Introduction to Psychology is a prerequisite for all upper-level courses (3000 level and above). Exemption from PSYCH 1000 Introduction to Psychology is possible in the following circumstances:

- Completion of an equivalent course transferred from another institution, if approved by the director of undergraduate studies.
- An AP psychology test score of 5, an IB score of 6 or 7, or a British A-Level grade of A.

PSYCH 3000 Introduction to Psychological Statistics:

- SDS 2020 Elementary Probability and Statistics, SDS 3020 Elementary to Intermediate Probability and Statistics, or DAT 1200 Managerial Statistics I may substitute for PSYCH 3000 Introduction to Psychological Statistics but earn no units of credit toward the major. No AP math course can substitute for PSYCH 3000 Introduction to Psychological Statistics.

For cases in which an exemption is granted (e.g., PSYCH 1000, PSYCH 3000), no credits are earned toward the major, so exempt courses must be made up with additional P&BS content electives approved by the major advisor.

Additional Cognitive and Biological Distributions

Students must complete two courses — one each from the Distribution A and B lists:

*Distribution A eligible courses:**

Code	Title	Units
PSYCH 3175	Applied Statistical Analysis with R	3
PSYCH 3210	Developmental Psychology	3
PSYCH 3300	Sensation and Perception	3
PSYCH 3580	Language Acquisition	3
PSYCH 3610	Psychology of Learning	3
PSYCH 3800	Human Learning and Memory	3
PSYCH 3980	Advanced Psychological Statistics: The General Linear Model and Beyond	3
PSYCH 4099	Human Evolutionary Psychology	3
PSYCH 4182	Perception, Thought and Action	3
PSYCH 4330	Psych of Language	3

*Distribution B eligible courses:**

Code	Title	Units
BIOL 3057	Physiological Control Systems	3
BIOL 3151	Endocrinology	3
BIOL 3280	Principles in Human Physiology	3
BIOL 3421	Neuroethology	3
BIOL 3422	Genes, Brains and Behavior	3
DANCE 3170	The Neuroscience of Movement: You Think, So You Can Dance?	3
PHYSICS 3350	Physics of the Brain	3
PSYCH 3175	Applied Statistical Analysis with R	3
PSYCH 3450	Genes, Environment and Human Behavavior	3
PSYCH 3890	Advanced Psychological Statistics: The General Linear Model and Beyond	3

Note: PSYCH 3175 Applied Statistical Analysis With R or PSYCH 3890 Advanced Statistics: The GLM can be allowed to fulfill either Distribution A or B; students must complete at least one non-statistics course for the Additional Cognitive and Biological Distributions requirement.

Computation Requirement

Students must complete one of the following courses:*

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
PSYCH 3175	Applied Statistical Analysis with R	3
PSYCH 4631	Computaional Cognitive Science	3
PSYCH 5007	Statistics and Data Analysis in MATLAB	3

With prior approval, another course involving a significant computational/programming component may be substituted.

Capstone/Depth Requirement

Students must complete three of the following courses:*

Capstone/Depth eligible courses:

Code	Title	Units
ANTHRO 4581	Principles of Human Anatomy and Development	3
BIOL 4030	Biological Clocks	3
BIOL 4040	Laboratory of Neurophysiology	3
PHIL 4200	Philosophy of Neuroscience	3
PNP 4020	The Physiology and Biophysics of Consciousness	2
PSYCH 4182	Perception, Thought and Action	3
PSYCH 4414	Advanced Cognitive Neuroscience	3
PSYCH 4512	Neurobiology of Learning and Memory	3
PSYCH 4631	Computational Cognitive Psychology	3
PSYCH 4746	Genes, Brain and Behavior: Pathways to Psychopathology	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3

Additional Capstone/Depth eligible courses:

- PSYCH 3999 (all 3 units must be completed in one semester and in one lab to be considered for approval; taken Credit/No Credit) can be used satisfy up to 3 units of the Capstone/Depth requirement.
- FYP 3901 Ampersand: Research in Mind, Brain Behavior (two consecutive semesters must be completed; 3 units total) can substitute for PSYCH 3999.
- PSYCH 4991 Independent Study for the Major in P&BS: Cognitive Neuroscience (3 units; taken for a letter grade and requiring a final paper) can be used to satisfy up to 6 units of the Capstone/Depth requirement.
- The Honors Program in Psychology (PSYCH 4980 can be used to satisfy up to 3 units total of the Capstone/Depth requirement).

In total, no more than 6 units of the above may be applied toward the Capstone/Depth requirement.

Note: Unless a student explicitly petitions for an exception and is granted written prior approval, only the above Capstone/Depth eligible courses can be counted toward the Capstone/Depth requirement. Contact skohlman@wustl.edu for the petition.

* If a course falls into more than one category, it can be used to fulfill only one of those categories (i.e., no double-counting).

Acceptance Into the Psychological & Brain Sciences: Cognitive Neuroscience Major

Acceptance into the major is contingent upon an application and then approval by the major committee. As part of this application, the student will meet with an appropriate advisor who will carefully review the requirements and oversee the student's progress. A brief, one-page statement from the student about why they feel the cognitive neuroscience major is appropriate for them will be requested as part of the application.

Washington University students will be considered for admission to the P&BS:CN major no sooner than during their third semester (sophomore year). Decisions are based on the student's statement and academic record as well as the interview with the advisor. A minimum GPA of 2.0 is required for admission into the major.

Experimental Psychopathology Specialization

To augment the major in Psychological & Brain Sciences, the department offers the option of a specialization for students who wish to engage more intensively with a specific area within the discipline.

A specialization may be a valuable experience for students planning on graduate study in psychology or related fields or for those who have a particular interest or want to gain expertise in one of the approved specializations. It may provide a useful preparation for the Honors program in Psychology, or it may serve as a substitute for the Honors experience for those students who may not qualify for Honors.

Completion of a specialization entails 12 units:

- Three courses (9 units), at least one of which must be an advanced, 4000-level course; and
- A semester of research in an appropriate, approved lab consisting of PSYCH 4992 Independent Study for a Specialization, which requires the successful completion of an American Psychological Association (APA)–style research paper or an approved Honors project completed through PSYCH 4980 Honors Program in Psychology. In some cases, a relevant internship or practicum may be an appropriate alternative to research experience. (**Note:** Students may be required to complete a preliminary semester [3 units] of PSYCH 3999 Independent Study, depending on the nature of the project intended for PSYCH 4992; the additional independent research is at the discretion of the research mentor and will not be counted toward the completion of the specialization requirements.)

The 3000-level required course may be used to fulfill no more than one of the core categories or distribution requirements of a Psychological & Brain Sciences major (i.e., one course could double-count for the major and the specialization). None of the units for a specialization can be counted for any other major or minor (i.e., there is no double-counting with another major or minor). For those pursuing the Psychological & Brain Sciences: Cognitive Neuroscience major, the Cognitive Neuroscience Specialization is not an option.

Each specialization has a Psychological & Brain Sciences faculty advisor/coordinator who will meet with interested students to help ensure the successful and appropriate completion of the specialization and who serves as the liaison with the Psychological & Brain Sciences Undergraduate Studies Committee. A student may pursue only one specialization. Completing a specialization, however, is not required to complete the base Psychological & Brain Sciences major.

Students should contact Shelley Kohlman (skohlman@wustl.edu) in Somers Family Hall, Room 207B, to arrange a specialization. Forms are available from Shelley, and completed forms must be returned to her in order for a specialization to be considered officially "in progress."

Recognition of the specialization will appear on the student's academic record under *Milestones* once all requirements have been met.

Requirements for the Experimental Psychopathology Specialization

This specialization allows students to acquire more advanced knowledge of the ways in which psychologists study mental disorders. Current research demonstrates the importance of integrating psychological and biological variables to better understand the classification, etiology, and treatment of a wide variety of mental disorders, including schizophrenia, mood disorders, anxiety disorders, substance use disorders, and eating disorders. Students who pursue this specialization will develop a broad-based appreciation for conceptual and methodological issues that are central to research in psychopathology.

Advisor/coordinator: Professor Deanna Barch

Coursework required:

Code	Title	Units
PSYCH 3540	Psychopathology and Mental Health	3

Electives (must include two courses, at least one of which is at the 4000 level):

Code	Title	Units
PSYCH 3450	Genes, Environment, and Human Behavior	3
PSYCH 4557	Biopsychosocial Aspects of Eating Disorders and Obesity	3
PSYCH 4746	Biological Pathways to Psychopathology: From Genes and the Environment to Brain and Behavior	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper (i.e., PSYCH 4992 Independent Study for a Specialization or PSYCH 4980 Honors Program in Psychology)

Relevant faculty: Deanna Barch, Ryan Bogdan, Josh Jackson, Renee Thompson, and Denise Wilfley (other potential faculty mentors may be approved)

Additional Information

Transfer Credit

If accepted by the College of Arts & Sciences, transfer credits will be evaluated by the Director of Undergraduate Studies in the P&BS department for their applicability toward either major in P&BS.

Senior Honors Program in Psychological & Brain Sciences

The primary goal of the honors program in P&BS is to provide students who have achieved a superior academic record with the opportunity to conduct a comprehensive empirical investigation under the direction of a faculty member.

To be admitted into the honors program, students must meet the following requirements:

- Have overall and P&BS grade point averages of at least 3.65
- Complete both PSYCH 3000 Introduction to Psychological Statistics and PSYCH 3010 Experimental Psychology (or PSYCH 3011)
- Have an approved honors research advisor

Psychological & Brain Sciences: Cognitive Neuroscience Major, Lifespan Development Specialization

Program Requirements

- **Total Units Required:** 45-49 units (36-37 units plus prerequisites for the major requirements, plus 9-12 units for a specialization; adding a specialization to the base major is not required)
- **Grade Requirement:** For a course to count toward the major, a grade of C– or better must be achieved.

How does the brain think? Cognitive neuroscience refers to how mental functions are linked to the operation of the brain and nervous system. The goal of cognitive neuroscience is to provide an understanding of psychological processes such as attention, memory, thinking, and emotion in terms of physical principles and biological components. At the same time, cognitive neuroscience aims to provide an understanding of the psychological constraints on how the brain functions, computes, and generates behavior. Students who pursue the undergraduate major in Psychological & Brain Sciences: Cognitive Neuroscience (PB&S:CN) will gain a strong foundation in how to study the brain and mind at various levels of analysis, including cellular biology, brain systems, cognitive and affective function, and neural computation. In addition, they will gain an appreciation of the relation between healthy cognitive and brain function and its breakdown in various disease states and disorders. The PB&S:CN major provides excellent preparation for a career in health and medical professions, scientific research, computer fields, education, and law.

Prerequisites

Students must complete the following courses outside of Psychological & Brain Sciences:

Code	Title	Units
BIOL 2160	Principles of Biology I	3
MATH 1520	Calculus II	3
Total Units		**6**

Note: Each of these prerequisites has its own prerequisites: MATH 1520 requires MATH 1510; for BIOL 2160, taking CHEM 1701 and CHEM 1702 (concurrently) is strongly recommended. These courses are Biology and pre-med prerequisites as well, and they are typically completed during a student's first year. They may alternatively be satisfied through AP credit or any other mechanism approved by the respective department or the College. These prerequisites do not earn credit toward the P&BS:CN major, but they must be completed with a passing grade (C– or above) by the end of the student's third year to remain in good standing for the major.

Required Courses

Code	Title	Units
PSYCH 1000	Introduction to Psychology	3
PSYCH 3000	Introduction to Psychological Statistics	3
PSYCH 3010 Experimental Psychology **or** PSYCH 3011 Experimental Psychology		4
PSYCH 3401 Biological Psychology **or** BIOL 3411 Principles of the Nervous System		3
PSYCH 3600	Cognitive Psychology	3
PSYCH 3604	Cognitive Neuroscience	3
Total Units		**19**

Note: The first three requirements (i.e., PSYCH 1000 Introduction to Psychology, PSYCH 3000 Introduction to Psychological Statistics, and PSYCH 3010/PSYCH 3011 Experimental Psychology [the version taken concurrently with PSYCH 3000]) are the same as those for the regular P&BS major.

PSYCH 1000 Introduction to Psychology is a prerequisite for all upper-level courses (3000 level and above). Exemption from PSYCH 1000 Introduction to Psychology is possible in the following circumstances:

- Completion of an equivalent course transferred from another institution, if approved by the director of undergraduate studies.
- An AP psychology test score of 5, an IB score of 6 or 7, or a British A-Level grade of A.

PSYCH 3000 Introduction to Psychological Statistics:

- SDS 2020 Elementary Probability and Statistics, SDS 3020 Elementary to Intermediate Probability and Statistics, or DAT 1200 Managerial Statistics I may substitute for PSYCH 3000 Introduction to Psychological Statistics but earn no units of credit toward the major. No AP math course can substitute for PSYCH 3000 Introduction to Psychological Statistics.

For cases in which an exemption is granted (e.g., PSYCH 1000, PSYCH 3000), no credits are earned toward the major, so exempt courses must be made up with additional P&BS content electives approved by the major advisor.

Additional Cognitive and Biological Distributions

Students must complete two courses — one each from the Distribution A and B lists:

*Distribution A eligible courses:**

Code	Title	Units
PSYCH 3175	Applied Statistical Analysis with R	3
PSYCH 3210	Developmental Psychology	3
PSYCH 3300	Sensation and Perception	3
PSYCH 3580	Language Acquisition	3
PSYCH 3610	Psychology of Learning	3
PSYCH 3800	Human Learning and Memory	3
PSYCH 3980	Advanced Psychological Statistics: The General Linear Model and Beyond	3
PSYCH 4099	Human Evolutionary Psychology	3
PSYCH 4182	Perception, Thought and Action	3
PSYCH 4330	Psych of Language	3

*Distribution B eligible courses:**

Code	Title	Units
BIOL 3057	Physiological Control Systems	3
BIOL 3151	Endocrinology	3
BIOL 3280	Principles in Human Physiology	3
BIOL 3421	Neuroethology	3
BIOL 3422	Genes, Brains and Behavior	3
DANCE 3170	The Neuroscience of Movement: You Think, So You Can Dance?	3
PHYSICS 3350	Physics of the Brain	3
PSYCH 3175	Applied Statistical Analysis with R	3
PSYCH 3450	Genes, Environment and Human Behavavior	3
PSYCH 3890	Advanced Psychological Statistics: The General Linear Model and Beyond	3

Note: PSYCH 3175 Applied Statistical Analysis With R or PSYCH 3890 Advanced Statistics: The GLM can be allowed to fulfill either Distribution A or B; students must complete at least one non-statistics course for the Additional Cognitive and Biological Distributions requirement.

Computation Requirement

Students must complete one of the following courses:*

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
PSYCH 3175	Applied Statistical Analysis with R	3
PSYCH 4631	Computaional Cognitive Science	3
PSYCH 5007	Statistics and Data Analysis in MATLAB	3

With prior approval, another course involving a significant computational/programming component may be substituted.

Capstone/Depth Requirement

Students must complete three of the following courses:*

Capstone/Depth eligible courses:

Code	Title	Units
ANTHRO 4581	Principles of Human Anatomy and Development	3
BIOL 4030	Biological Clocks	3
BIOL 4040	Laboratory of Neurophysiology	3
PHIL 4200	Philosophy of Neuroscience	3
PNP 4020	The Physiology and Biophysics of Consciousness	2
PSYCH 4182	Perception, Thought and Action	3
PSYCH 4414	Advanced Cognitive Neuroscience	3
PSYCH 4512	Neurobiology of Learning and Memory	3
PSYCH 4631	Computational Cognitive Psychology	3
PSYCH 4746	Genes, Brain and Behavior: Pathways to Psychopathology	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3

Additional Capstone/Depth eligible courses:

- PSYCH 3999 (all 3 units must be completed in one semester and in one lab to be considered for approval; taken Credit/No Credit) can be used satisfy up to 3 units of the Capstone/Depth requirement.
- FYP 3901 Ampersand: Research in Mind, Brain Behavior (two consecutive semesters must be completed; 3 units total) can substitute for PSYCH 3999.
- PSYCH 4991 Independent Study for the Major in P&BS: Cognitive Neuroscience (3 units; taken for a letter grade and requiring a final paper) can be used to satisfy up to 6 units of the Capstone/Depth requirement.
- The Honors Program in Psychology (PSYCH 4980 can be used to satisfy up to 3 units total of the Capstone/Depth requirement).

In total, no more than 6 units of the above may be applied toward the Capstone/Depth requirement.

Note: Unless a student explicitly petitions for an exception and is granted written prior approval, only the above Capstone/Depth eligible courses can be counted toward the Capstone/Depth requirement. Contact skohlman@wustl.edu for the petition.

* If a course falls into more than one category, it can be used to fulfill only one of those categories (i.e., no double-counting).

Acceptance Into the Psychological & Brain Sciences: Cognitive Neuroscience Major

Acceptance into the major is contingent upon an application and then approval by the major committee. As part of this application, the student will meet with an appropriate advisor who will carefully review the requirements and oversee the student's progress. A brief, one-page statement from the student about why they feel the cognitive neuroscience major is appropriate for them will be requested as part of the application.

Washington University students will be considered for admission to the P&BS:CN major no sooner than during their third semester (sophomore year). Decisions are based on the student's statement and academic record as well as the interview with the advisor. A minimum GPA of 2.0 is required for admission into the major.

Lifespan Development Specialization

To augment the major in Psychological & Brain Sciences, the department offers the option of a specialization for students who wish to engage more intensively with a specific area within the discipline.

A specialization may be a valuable experience for students planning on graduate study in psychology or related fields or for those who have a particular interest or want to gain expertise in one of the approved specializations. It may provide a useful preparation for the Honors program in Psychology, or it may serve as a substitute for the Honors experience for those students who may not qualify for Honors.

Completion of a specialization entails 12 units:

- Three courses (9 units), at least one of which must be an advanced, 4000-level course; and
- A semester of research in an appropriate, approved lab consisting of PSYCH 4992 Independent Study for a Specialization, which requires the successful completion of an American Psychological Association (APA)–style research paper or an approved Honors project completed through PSYCH 4980 Honors Program in Psychology. In some cases, a relevant internship or practicum may be an appropriate alternative to research experience. (**Note:** Students may be required to complete a preliminary semester [3 units] of PSYCH 3999 Independent Study, depending on the nature of the project intended for PSYCH 4992; the additional independent research is at the discretion of the research mentor and will not be counted toward the completion of the specialization requirements.)

The 3000-level required course may be used to fulfill no more than one of the core categories or distribution requirements of a Psychological & Brain Sciences major (i.e., one course could double-count for the major and the specialization). None of the units for a specialization can be counted for any other major or minor (i.e., there is no double-counting with another major or minor). For those pursuing the Psychological & Brain Sciences: Cognitive Neuroscience major, the Cognitive Neuroscience Specialization is not an option.

Each specialization has a Psychological & Brain Sciences faculty advisor/coordinator who will meet with interested students to help ensure the successful and appropriate completion of the specialization and who serves as the liaison with the Psychological & Brain Sciences Undergraduate Studies Committee. A student may pursue only one specialization. Completing a specialization, however, is not required to complete the base Psychological & Brain Sciences major.

Students should contact Shelley Kohlman (skohlman@wustl.edu) in Somers Family Hall, Room 207B, to arrange a specialization. Forms are available from Shelley, and completed forms must be returned to her in order for a specialization to be considered officially "in progress."

Recognition of the specialization will appear on the student's academic record under *Milestones* once all requirements have been met.

Requirements for the Lifespan Development Specialization

Many introductory courses in developmental psychology focus on the changes that occur from birth to adolescence. The specialization in lifespan development provides students with an understanding of the cognitive and physiological changes that occur over the lifespan, with a primary focus on older adulthood. A major goal of the specialization is to provide students with an understanding of the similarities and differences in development at different stages of the lifespan.

Advisor/coordinator: Professor Mitchell Sommers

Coursework required:

Code	Title	Units
PSYCH 3260	Introduction to the Psychology of Aging	3

Electives:

Code	Title	Units
PSYCH 3210	Developmental Psychology	3
PSYCH 4270	Social Gerontology	3
PSYCH 4355	Personality and Development Across the Lifespan	3

Research mentorship or internship experience related to Lifespan Development: Students can complete this aspect of the specialization with either a prior approved research mentorship or an approved internship related to older adults (i.e., PSYCH 2901 Internship in Psychology, PSYCH 4992 Independent Study for a Specialization, or PSYCH 4980 Honors Program in Psychology). Successful completion of a paper is required in all cases.

Relevant faculty for research mentorship: Mitchell Sommers, Brian Carpenter, Sandra Hale, Denise Head, Patrick Hill, Derek Isaacowitz, Josh Jackson, and Lori Markson (other potential faculty mentors may be approved)

Possible internships: Prior approved internship related to older adults and successful completion of a paper. Options may include work in an assisted-living facility or another community-based program designed to assist older adults. Other internships are available; consult the P&BS website for internship opportunities in psychology.

Additional Information

Transfer Credit

If accepted by the College of Arts & Sciences, transfer credits will be evaluated by the Director of Undergraduate Studies in the P&BS department for their applicability toward either major in P&BS.

Senior Honors Program in Psychological & Brain Sciences

The primary goal of the honors program in P&BS is to provide students who have achieved a superior academic record with the opportunity to conduct a comprehensive empirical investigation under the direction of a faculty member.

To be admitted into the honors program, students must meet the following requirements:

- Have overall and P&BS grade point averages of at least 3.65
- Complete both PSYCH 3000 Introduction to Psychological Statistics and PSYCH 3010 Experimental Psychology (or PSYCH 3011)
- Have an approved honors research advisor

Website:	https://psych.wustl.edu/undergraduate-program

Psychological & Brain Sciences: Cognitive Neuroscience Major, Personality and Individual Differences Specialization

Program Requirements

- **Total Units Required:** 45-49 units (36-37 units plus prerequisites for the major requirements, plus 9-12 units for a specialization; adding a specialization to the base major is not required)
- **Grade Requirement:** For a course to count toward the major, a grade of C– or better must be achieved.

How does the brain think? Cognitive neuroscience refers to how mental functions are linked to the operation of the brain and nervous system. The goal of cognitive neuroscience is to provide an understanding of psychological processes such as attention, memory, thinking, and emotion in terms of physical principles and biological components. At the same time, cognitive neuroscience aims to provide an understanding of the psychological constraints on how the brain functions, computes, and generates behavior. Students who pursue the undergraduate major in Psychological & Brain Sciences: Cognitive Neuroscience (PB&S:CN) will gain a strong foundation in how to study the brain and mind at various levels of analysis, including cellular biology, brain systems, cognitive and affective function, and neural computation. In addition, they will gain an appreciation of the relation between healthy cognitive and brain function and its breakdown in various disease states and disorders. The PB&S:CN major provides excellent preparation for a career in health and medical professions, scientific research, computer fields, education, and law.

Prerequisites

Students must complete the following courses outside of Psychological & Brain Sciences:

Code	Title	Units
BIOL 2160	Principles of Biology I	3
MATH 1520	Calculus II	3
Total Units		**6**

Note: Each of these prerequisites has its own prerequisites: MATH 1520 requires MATH 1510; for BIOL 2160, taking CHEM 1701 and CHEM 1702 (concurrently) is strongly recommended. These courses are Biology and pre-med prerequisites as well, and they are typically completed during a student's first year. They may alternatively be satisfied through AP credit or any other mechanism approved by the respective department

or the College. These prerequisites do not earn credit toward the P&BS:CN major, but they must be completed with a passing grade (C– or above) by the end of the student's third year to remain in good standing for the major.

Required Courses

Code	Title	Units
PSYCH 1000	Introduction to Psychology	3
PSYCH 3000	Introduction to Psychological Statistics	3
PSYCH 3010 Experimental Psychology **or** PSYCH 3011 Experimental Psychology		4
PSYCH 3401 Biological Psychology **or** BIOL 3411 Principles of the Nervous System		3
PSYCH 3600	Cognitive Psychology	3
PSYCH 3604	Cognitive Neuroscience	3
Total Units		**19**

Note: The first three requirements (i.e., PSYCH 1000 Introduction to Psychology, PSYCH 3000 Introduction to Psychological Statistics, and PSYCH 3010/PSYCH 3011 Experimental Psychology [the version taken concurrently with PSYCH 3000]) are the same as those for the regular P&BS major.

PSYCH 1000 Introduction to Psychology is a prerequisite for all upper-level courses (3000 level and above). Exemption from PSYCH 1000 Introduction to Psychology is possible in the following circumstances:

- Completion of an equivalent course transferred from another institution, if approved by the director of undergraduate studies.
- An AP psychology test score of 5, an IB score of 6 or 7, or a British A-Level grade of A.

PSYCH 3000 Introduction to Psychological Statistics:

- SDS 2020 Elementary Probability and Statistics, SDS 3020 Elementary to Intermediate Probability and Statistics, or DAT 1200 Managerial Statistics I may substitute for PSYCH 3000 Introduction to Psychological Statistics but earn no units of credit toward the major. No AP math course can substitute for PSYCH 3000 Introduction to Psychological Statistics.

For cases in which an exemption is granted (e.g., PSYCH 1000, PSYCH 3000), no credits are earned toward the major, so exempt courses must be made up with additional P&BS content electives approved by the major advisor.

Additional Cognitive and Biological Distributions

Students must complete two courses — one each from the Distribution A and B lists:

*Distribution A eligible courses:**

Code	Title	Units
PSYCH 3175	Applied Statistical Analysis with R	3
PSYCH 3210	Developmental Psychology	3
PSYCH 3300	Sensation and Perception	3
PSYCH 3580	Language Acquisition	3
PSYCH 3610	Psychology of Learning	3
PSYCH 3800	Human Learning and Memory	3
PSYCH 3980	Advanced Psychological Statistics: The General Linear Model and Beyond	3
PSYCH 4099	Human Evolutionary Psychology	3
PSYCH 4182	Perception, Thought and Action	3
PSYCH 4330	Psych of Language	3

*Distribution B eligible courses:**

Code	Title	Units
BIOL 3057	Physiological Control Systems	3
BIOL 3151	Endocrinology	3
BIOL 3280	Principles in Human Physiology	3
BIOL 3421	Neuroethology	3
BIOL 3422	Genes, Brains and Behavior	3
DANCE 3170	The Neuroscience of Movement: You Think, So You Can Dance?	3
PHYSICS 3350	Physics of the Brain	3
PSYCH 3175	Applied Statistical Analysis with R	3
PSYCH 3450	Genes, Environment and Human Behavavior	3
PSYCH 3890	Advanced Psychological Statistics: The General Linear Model and Beyond	3

Note: PSYCH 3175 Applied Statistical Analysis With R or PSYCH 3890 Advanced Statistics: The GLM can be allowed to fulfill either Distribution A or B; students must complete at least one non-statistics course for the Additional Cognitive and Biological Distributions requirement.

Computation Requirement

Students must complete one of the following courses:*

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
PSYCH 3175	Applied Statistical Analysis with R	3
PSYCH 4631	Computaional Cognitive Science	3
PSYCH 5007	Statistics and Data Analysis in MATLAB	3

With prior approval, another course involving a significant computational/programming component may be substituted.

Capstone/Depth Requirement

Students must complete three of the following courses:*

Capstone/Depth eligible courses:

Code	Title	Units
ANTHRO 4581	Principles of Human Anatomy and Development	3
BIOL 4030	Biological Clocks	3
BIOL 4040	Laboratory of Neurophysiology	3
PHIL 4200	Philosophy of Neuroscience	3
PNP 4020	The Physiology and Biophysics of Consciousness	2
PSYCH 4182	Perception, Thought and Action	3
PSYCH 4414	Advanced Cognitive Neuroscience	3
PSYCH 4512	Neurobiology of Learning and Memory	3
PSYCH 4631	Computational Cognitive Psychology	3
PSYCH 4746	Genes, Brain and Behavior: Pathways to Psychopathology	3
PSYCH 4765	Inside the Disordered Brain: Neural Systems of Behavior and Psychopathology	3

Additional Capstone/Depth eligible courses:

- PSYCH 3999 (all 3 units must be completed in one semester and in one lab to be considered for approval; taken Credit/No Credit) can be used satisfy up to 3 units of the Capstone/Depth requirement.
- FYP 3901 Ampersand: Research in Mind, Brain Behavior (two consecutive semesters must be completed; 3 units total) can substitute for PSYCH 3999.
- PSYCH 4991 Independent Study for the Major in P&BS: Cognitive Neuroscience (3 units; taken for a letter grade and requiring a final paper) can be used to satisfy up to 6 units of the Capstone/Depth requirement.
- The Honors Program in Psychology (PSYCH 4980 can be used to satisfy up to 3 units total of the Capstone/Depth requirement).

In total, no more than 6 units of the above may be applied toward the Capstone/Depth requirement.

Note: Unless a student explicitly petitions for an exception and is granted written prior approval, only the above Capstone/Depth eligible courses can be counted toward the Capstone/Depth requirement. Contact skohlman@wustl.edu for the petition.

* If a course falls into more than one category, it can be used to fulfill only one of those categories (i.e., no double-counting).

Acceptance Into the Psychological & Brain Sciences: Cognitive Neuroscience Major

Acceptance into the major is contingent upon an application and then approval by the major committee. As part of this application, the student will meet with an appropriate advisor who will carefully review the requirements and oversee the student's progress. A brief, one-page statement from the student about why they feel the cognitive neuroscience major is appropriate for them will be requested as part of the application.

Washington University students will be considered for admission to the P&BS:CN major no sooner than during their third semester (sophomore year). Decisions are based on the student's statement and academic record as well as the interview with the advisor. A minimum GPA of 2.0 is required for admission into the major.

Personality and Individual Differences Specialization

To augment the major in Psychological & Brain Sciences, the department offers the option of a specialization for students who wish to engage more intensively with a specific area within the discipline.

A specialization may be a valuable experience for students planning on graduate study in psychology or related fields or for those who have a particular interest or want to gain expertise in one of the approved specializations. It may provide a useful preparation for the Honors program in Psychology, or it may serve as a substitute for the Honors experience for those students who may not qualify for Honors.

Completion of a specialization entails 12 units:

- Three courses (9 units), at least one of which must be an advanced, 4000-level course; and
- A semester of research in an appropriate, approved lab consisting of PSYCH 4992 Independent Study for a Specialization, which requires the successful completion of an American Psychological Association (APA)–style research paper or an approved Honors project completed through PSYCH 4980 Honors Program in Psychology. In some cases, a relevant internship or practicum may be an appropriate alternative to research experience. (**Note:** Students may be required to complete a preliminary semester [3 units] of PSYCH 3999 Independent Study, depending on the nature of the project intended for PSYCH 4992; the additional independent research is at the discretion of the research mentor and will not be counted toward the completion of the specialization requirements.)

The 3000-level required course may be used to fulfill no more than one of the core categories or distribution requirements of a Psychological & Brain Sciences major (i.e., one course could double-count for the major and the specialization). None of the units for a specialization can be counted for any other major or minor (i.e., there is no double-counting with another major or minor). For those pursuing the Psychological & Brain Sciences: Cognitive Neuroscience major, the Cognitive Neuroscience Specialization is not an option.

Each specialization has a Psychological & Brain Sciences faculty advisor/coordinator who will meet with interested students to help ensure the successful and appropriate completion of the specialization and who serves as the liaison with the Psychological & Brain Sciences Undergraduate Studies Committee. A student may pursue only one specialization. Completing a specialization, however, is not required to complete the base Psychological & Brain Sciences major.

Students should contact Shelley Kohlman (skohlman@wustl.edu) in Somers Family Hall, Room 207B, to arrange a specialization. Forms are available from Shelley, and completed forms must be returned to her in order for a specialization to be considered officially "in progress."

Recognition of the specialization will appear on the student's academic record under *Milestones* once all requirements have been met.

Requirements for the Personality and Individual Differences Specialization

This specialization allows students to acquire deeper knowledge of how and why individuals differ from one another and the ways in which individual (e.g., personality) and group (e.g., gender) differences influence behavior, emotion, experience, identity, and psychopathology. The core course for the specialization (PSYCH 3530 Psychology of Personality) considers personality more generally. The seminars explore, in depth, specific aspects of personality and individual differences, including biological bases of individual differences (i.e., genetics), the interpersonal processes associated with personality and personality judgment, individual differences in self and identity, group differences, and personality pathology.

Advisor/coordinator: Professor Tammy English

Coursework required:

Code	Title	Units
PSYCH 3530	Psychology of Personality	3

Electives (must include two courses, at least one of which is at the 4000 level):

Code	Title	Units
PSYCH 3450	Genes, Environment, and Human Behavior	3
PSYCH 3645	Understanding Emotions	3
PSYCH 4130	Contemporary Topics in Social Psychology (with prior approval only)	3
PSYCH 4355	Personality Development Across the Lifespan	3
PSYCH 4367	Seminar in Positive Psychology	3
PSYCH 4555	Emotion Regulation	3
PSYCH 4593	Psychology of the Good Life	3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper (i.e., PSYCH 4992 Independent Study for a Specialization or PSYCH 4980 Honors Program in Psychology)

Relevant faculty: Tammy English, Patrick Hill, Derek Isaacowitz, Josh Jackson, Jesse Sun, Renee Thompson, and Emily Willroth (other potential faculty mentors may be approved)

Additional Information

Transfer Credit

If accepted by the College of Arts & Sciences, transfer credits will be evaluated by the Director of Undergraduate Studies in the P&BS department for their applicability toward either major in P&BS.

Senior Honors Program in Psychological & Brain Sciences

The primary goal of the honors program in P&BS is to provide students who have achieved a superior academic record with the opportunity to conduct a comprehensive empirical investigation under the direction of a faculty member.

To be admitted into the honors program, students must meet the following requirements:

- Have overall and P&BS grade point averages of at least 3.65
- Complete both PSYCH 3000 Introduction to Psychological Statistics and PSYCH 3010 Experimental Psychology (or PSYCH 3011)
- Have an approved honors research advisor

Contact:	Shelley Kohlman
Phone:	314-935-5169
Email:	skohlman@wustl.edu
Website:	https://psych.wustl.edu/undergraduate-program

Psychological & Brain Sciences Minor

Program Requirements

- **Total Units Required:** 15 units
- **Grade Requirement:** For a course to count toward the major, a grade of C- or better must be achieved.

For those students who have a broad or general interest in Psychological & Brain Sciences (P&BS), we recommend taking several courses from the five core areas of psychology: Social/Personality; Mental Health/Affective; Biological/Neurological Bases of Behavior; Behavior and Cognition; and Lifespan Development.

For those students who want to focus in a more specific area, courses can reflect the area of interest. For example, a student interested in the helping professions or counseling may wish to select from such courses as PSYCH 3530 Psychology of Personality, PSYCH 3540 Psychopathology and Mental Health, PSYCH 3610 Psychology of Learning, and PSYCH 3210 Developmental Psychology. A student wishing to focus on experimental psychology/neuroscientific bases of behavior may select from such courses as PSYCH 3401 Introduction to Biological Psychology, PSYCH 3610 Psychology of Learning, PSYCH 3300 Sensation and Perception, PSYCH 3600 Cognitive Psychology, and PSYCH 3604 Cognitive Neuroscience and may also consider doing independent study (PSYCH 3999).

Required Course

Code	Title	Units
PSYCH 1000	Introduction to Psychology	3

Elective Courses

Four additional courses (i.e., a minimum of 12 units of additional course work) in P&BS, all of which must be at the 3000 level or above. An additional elective course will be required to make up for the PSYCH 1000 exemption.

Additional Information

Students may receive exemption from the PSYCH 1000 Introduction to Psychology requirement only if they have an AP psychology score of 5, an IB score of 6 or 7, or a British A-Level grade of A. For exemption, no credit will be given; therefore, five applicable courses must be completed.

No more than 3 units of an approved psychology course from other departments (i.e., EDUC 3040 Educational Psychology, MUSIC 3300 Music Cognition, BIOL 3411 Principles of the Nervous System), an approved psychology course taken in the School of Continuing & Professional Studies, an approved psychology course taken at another institution (including transfer from a study abroad program), or an independent study-type course (e.g., PSYCH 3999) may count toward the minor.

Transfer Credit

If accepted by the College of Arts & Sciences, transfer credits will be evaluated by the Director of Undergraduate Studies in the P&BS department for their applicability toward the minor in P&BS. Transfer students must complete at least 9 advanced units of home-based P&BS courses at Washington University.

Public Health & Society

Public health is an essential and expansive field of study, dedicated to practice and research focused on protecting and improving the health and well-being of populations worldwide. Integral to this field is its presence in undergraduate education, where it serves as both a broad academic discipline and a practical guide for addressing health challenges on multiple levels — locally, nationally, and globally. Public health scholarship focuses on the myriad ways in which the health of communities can be protected and improved. This involves a multi-faceted approach that not only incorporates direct health interventions but also advocates for policies, conducts research, and educates the public.

In the undergraduate **Program in Public Health & Society**, students are immersed in a well-integrated, interdisciplinary curriculum that bridges public health with a broad spectrum of foundational and theoretical issues in humanistic, biological, ecological, sociocultural, and historical perspectives on health and society. Core program courses are co-taught by Arts & Sciences faculty alongside Public Health faculty. This approach provides students access to and experience from people working across diverse communities in courses that blend theory and research with relevant practice. By examining these diverse viewpoints, students gain a comprehensive understanding of the factors that influence public health. The curriculum is designed to cultivate critical reading skills, effective communication abilities, and broad-based thinking to navigate the complexities of public health within its varied social contexts, spanning the past, present, and future.

The **Program in Public Health & Society** emphasizes ethical training in public health science, highlighting the social determinants of health. Through this comprehensive and multidimensional education, students are prepared not only to identify and address public health challenges but also to lead initiatives that promote health for all. Graduates of the program are equipped to contribute thoughtfully and effectively to a wide variety of fields, advocating for and implementing solutions that improve the overall health and well-being of populations around the world.

Majors

- Public Health & Society Major (p. 873)

Minors

- Public Health & Society Minor (p. 877)

Courses

PUBHLTHSOC 1000 Foundations in Public Health
This course examines the foundations in public health using an equity and social justice approach emphasizing the interconnectedness of population and individual health. The course will cover the history and impact of public health, including the importance of health equity, social justice, and human rights, as well as the essential role of ethics in public health. The course will expose students to various public health professionals working on inter-professional teams to explore careers in public health, we will invite public health and community health experts from the St. Louis region as well as national and international guest speakers.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall

PUBHLTHSOC 1010 Topics in Public Health & Society
Topics in Public Health & Society, the topics will change each semester.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall

PUBHLTHSOC 1011 Environmental Justice as Public Health
Environmental justice has become a pervasive conversation topic as the effects of climate change become more and more prominent in daily life. Yet environmental justice has a longer history, one that is closely related to the global health developments. In this course, we will explore what environmental justice means, how it functions as a form of public health and health activism more broadly, and why the future of public health so heavily depends on it. Through these questions, students will further learn about how issues of environment and health are deeply intertwined with social, racial, and gendered inequities. As we will explore together, this relationship has led to conflicting political and economic priorities as well as the deliberate placement of environmental hazards next to or within working-class, Black and Brown, and other marginalized communities.
Credit 3 units. A&S IQ: SSC, SC
Typical periods offered: Fall

PUBHLTHSOC 2000 Introduction to Public and Global Health
Welcome to Intro to Public and Global Health, a course designed to provide a comprehensive introduction to the multifaceted dimensions of public health both within the United States and internationally. Throughout this course, students will embark on a journey to understand how health has been defined within the global context, exploring the historical evolution of public and global health disciplines as well as contemporary issues within the field. Delving into the ethical landscape of global health research, programming, and policy, students will articulate human rights issues and examine approaches ensuring ethical interventions. The course will shed light on the intricate interplay of social determinants of health, unraveling their impact on well-being and the emergence of health inequities. By examining both successes and failures in global health interventions, students will gain a nuanced understanding of the challenges inherent in the field. Furthermore, the course will foster a comparative analysis of the organization, structure, and function of diverse healthcare systems across international settings. Finally, with a focus on morbidity and mortality, students will explore major causes, trends, and measures of infectious and chronic disease, as well as some underappreciated and emerging issues, providing a holistic perspective on the critical issues shaping the landscape of public and global health today. We will engage with class topics through a range of mediums, including book chapters, scientific papers, media pieces, podcasts, guest lectures from leaders in the field, and TED talks. It may be a big class, but students will have the opportunity to voice their opinions on key class topics during small, weekly discussion groups. Get ready to be captivated, challenged, and inspired - because global health has never been this thrilling!
Credit 3 units. A&S IQ: SSC, SC
Typical periods offered: Spring

PUBHLTHSOC 2999 Undergraduate Teaching Assistant
Open to advanced undergraduates who have successfully completed the course for which they will request to be an undergraduate teaching assistant. Usual duties of teaching assistant in laboratory or other selected courses (e.g. instructor assistance, office hours, holding review sessions, some grading.) Prerequisite: Permission of instructor.
Credit 3 units.
Typical periods offered: Fall, Spring

PUBHLTHSOC 3000 Public Health Theories, Models, and Frameworks
This course will provide an overview of social and behavioral science and humanistic theories and frameworks that are currently used to: 1) understand health related behaviors; and 2) guide development of interventions and policies designed to promote positive health behavior including those that prevent, reduce or eliminate major public health problems. We will also explore the history of these theories and frameworks and the cultural and artistic approaches to change health and health related behaviors. We will use an ecological framework to examine theories at multiple levels of the culture and social ecology from individual to policy level, focusing on applications that will impact health at the population level.

Credit 3 units. A&S IQ: SSC
Typical periods offered: Spring

PUBHLTHSOC 3010 Topics in Public Health & Society
Topics in Public Health & Society, the topics will change each semester.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall, Spring

PUBHLTHSOC 3100 Research Methods in Understanding Health and Society
Research is the key to building evidence in public health. This course will provide an overview of public health research methods and the sequential research process. Core research concepts to be presented and applied include developing research questions, literature reviews, research ethics, study designs, data collection, quantitative and qualitative research methods understanding research data, and research dissemination.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall, Spring

PUBHLTHSOC 3280 Infectious Disease and Society
This course explores the evolving relationship between humans and non-human microbiota. Beginning with the modern era, we will study infectious diseases and the critical contexts in which they occur (e.g. ecological, political, social, and cultural). Case studies will include antibiotic-resistant "superbugs," H1N1 influenza, SARS coronavirus, HIV/AIDS, and global cholera epidemics. Through the study of global infectious disease outbreaks and threats, we will address larger societal questions about knowledge, the power of metaphor, the role of institutions, and the health of populations.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall

PUBHLTHSOC 4010 Topics in Public Health & Society
Topics in Public Health & Society, the topics will change each semester.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall, Spring

PUBHLTHSOC 4011 Water and Health in the Colonial and Postcolonial World
Water supplies are becoming scarcer globally due to climate change. We use clean water- fresh and salt - in a variety of ways that provide comfort, stability, and health, making it one of the most valuable commodities on Earth. While countries in Global North are beginning to see more frequent and lengthier droughts, those in the Latin America, Africa, and South Asia have long struggled over how to distribute and use their clean water supplies. This class will examine how colonialism and its far-reaching effects have created an environment of scarce water supplies in many areas of the world. Water access is difficult to achieve, but for much of the Global South, the colonial period helped craft the problems we see today. This class will ask what colonial and postcolonial technologies' construction and use teach us about equitable clean water distribution, how social and cultural identities influence water supplies and use, and why water has been such an important element- and commodity- in our world , especially where Europeans settled and marginalized local populations.
Credit 3 units. A&S IQ: SSC, SC, WI
Typical periods offered: Spring

PUBHLTHSOC 4020 Topics in Public Health & Society
Topics Course, varies semester by semster
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall, Spring

Public Health & Society Major

Program Requirements

- **Total Units Required:** 34 units
- **Grade Requirement:** C

Required Courses

Code	Title	Units
PUBHLTHSOC 1000	Foundations in Public Health: Ethics, Policy and Power	3
PUBHLTHSOC 2000	Introduction to Public and Global Health	3
PUBHLTHSOC 3000	Public Health Theories, Models, and Frameworks	3
PUBHLTHSOC 3100	Research Methods in Understanding Health and Society	3

APEX: Advanced Practical Experience in Public Health

Code	Title	Units
PUBHLTHSOC 4000	APEX: Advanced Practical Experience in Public Health Seminar	1
or PUBHLTHSOC 4002	APEX: Advanced Practical Experience in Public Health Study Abroad Seminar	
PUBHLTHSOC 4001	APEX: Advanced Practical Experience in Public Health Internship	3

Elective Courses

Students complete 18 credits of elective courses (6 courses) from the lists below. At least two courses (6 credits) must be from the "Social, Cultural, and Historical Analysis of Health, Illness, and Wellness" category. At least 15 elective credits must be at the advanced (3000/4000) level, and 6 of these credits must be at the 4000 level.

Social, Cultural, and Historical Analysis of Health, Illness, and Wellness (SCH) Electives

Code	Title	Units
AFAS 1175	Confronting the Past: Transformative Justice in STL and Beyond	3
AFAS 3304	Race and Global Health Inequities: Social Determinants and Intersectionality	3

WRITING 3004	Writing and Medicine	3

Additionally, 15 elective credits must be at the advanced level (3000/4000), 6 units of which must be at the 4000 level.

Note: Graduate-level elective courses at the Brown School and School of Public Health have limited seat capacity. Instructor permission is required, and graduate students have priority.

Additional Information

- All courses must be letter-graded and completed with a grade of C or better.
- PUBHLTHSOC 1000, PUBHLTHSOC 2000, and PUBHLTHSOC 3000 have no prerequisites and need not be taken sequentially.
- PUBHLTHSOC 3100 has a prerequisite or corequisite of PUBHLTHSOC 2000.
- PUBHLTHSOC APEX courses may only be taken by PH&S majors, and the following rules apply:
  - Successful completion of PUBHLTHSOC 2000 and PUBHLTHSOC 3000 is required prior to enrolling in PUBHLTHSOC 4000, PUBHLTHSOC 4001, or PUBHLTHSOC 4002.
  - It is strongly recommended that PUBHLTHSOC 3100 be completed prior to enrolling in PUBHLTHSOC 4000, PUBHLTHSOC 4001, or PUBHLTHSOC 4002.
  - PUBHLTHSOC 4000 and PUBHLTHSOC 4001 must be taken concurrently.

- Students choosing to complete an approved study abroad program for the practicum portion of their APEX course will enroll in a supervised research course at the home institution or through SIT or equivalent; 3 credits from that supervised course will be transferred back as the practicum portion of the APEX course and counted as equivalent to PUBHLTHSOC 4001.
- Study abroad students will enroll in the 1-credit seminar portion of the APEX course (PUBHLTHSOC 4002) in the semester following their practicum.

Study Abroad

Two preapproved courses (6 credits) from an approved study abroad program may be counted toward the elective credit requirements for the major (neither course may double-count for APEX).

Transfer Credit

Two approved courses (6 credits) from another institution may be counted as transfer credit toward the elective credit requirements for the major.

Note: Graduate-level elective courses at the Brown School and School of Public Health have limited seat capacity. Instructor permission is required, and graduate students have priority.

Additional Information

At least 6 elective credits must be taken at the 3000 level or above.

Study Abroad

One preapproved course (3 credits) from an approved study abroad program may be counted toward the elective credit requirements for the minor.

Transfer Credit

One approved course (3 credits) from another institution may be counted as transfer credit toward the elective credit requirements for the minor.

Religion and Politics

The John C. Danforth Center on Religion and Politics serves as an open venue for fostering rigorous scholarship and informing broad academic and public communities about the intersections of religion and U.S. politics.

The Center's programs include the following:

- Public lectures, conferences, and symposia relating to issues at the many intersections of religion and U.S. public life
- New courses on American religion and politics that can contribute to an interdisciplinary undergraduate minor in religion and politics for Washington University students
- American Religion, Politics, and Culture Colloquium for scholars and students to discuss cutting-edge research
- *Arc: Religion, Politics, Et Cetera*, is an online journal covering American religion, politics, and culture. It is a project of the John C. Danforth Center on Religion and Politics at Washington University in St. Louis.

The Center offers a minor in religion and politics that provides an opportunity for sustained exploration of the ways in which religion and politics have intersected in American culture, in both historical and contemporary terms. As part of the minor, students may examine any number of issues, including church-state relations, religion's role in shaping gender and sexuality debates, religion and electoral politics, public conflicts over the nexus of religion and science, and religion's entwining with reform movements (from abolition to environmentalism). The Center's interdisciplinary minor attracts students from many disciplines, including natural sciences, social sciences, and humanities; whether pre-med, pre-law, or pursuing futures in education, business, or the arts, they report that their studies are enriched by our curriculum.

Courses

RELPOL 1996 Religion & Politics Elective
This course is used for transcribing 1000-level RELPOL elective units.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

RELPOL 2000 Religion and American Society
This course explores religious life in the United States in the twentieth and twenty-first centuries. Comprehensive coverage of such a diverse landscape is not our goal. Rather, we will focus on some of the basic social categories that organize our society and that make religion a social phenomenon. How do religious belief and practice relate to race, class, or gender? How do we understand the role of religion in relation to region and space? How can we understand the many different stories that Americans tell about their own country as a special-even sacred-place? Major themes include religion and race; nation, land, and migration; religion, class, and money; evangelicalism and the religious right; business, class, and prosperity; religion and gender; religious nationalism; and the enduring challenges of religious multiplicity in the U.S.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring

RELPOL 2010 Religion and Politics in American History
In a famous 2004 article, historian Jon Butler once remarked that US history textbooks and survey courses tend to pay significant attention to religion during the Colonial Era and early Republic, yet after the Civil War religion more often appears as a jack-in-the-box that pops up in historical accounts somewhat randomly and without much elaboration or analysis. To address the gaps in historical understandings that these absences may create, this course will provide a survey of the ways theological ideas and religiously-motivated social movements have shaped US politics and civic life from the Civil War to the present. With a particular emphasis placed on how religion intersects with other social categories such as race, gender, and class, it will examine the complex role that religious beliefs, practices, and identities have played in major political events and debates from the 1860s to today. In doing so, it will also inquire into what it means to study religion as a historical phenomenon, the theoretical and methodological tools that best assist in this work, and the historiographic implications of better attending to religion in historical analyses. No prior coursework in US history or religious studies is required.

Typical periods offered: Spring

RELPOL 2020 Islamophobia & U.S. Politics

The presence of Muslim minorities in the West is increasingly divisive as political leaders appeal to voters' fear of the 'Other' to promote Islamophobic agendas that reshape immigration and asylum policies and redefine Western identity as Christian. Politicians further exploit the rise of extremist groups like ISIS to justify anti-Muslim rhetoric and critique multiculturalism, claiming that Islam and the West are inherently antithetical. In this course we examine the phenomenon of Islamophobia as a form of anti-Muslim racism that parallels hostility towards other religious and racial minorities in the US. We explore how while the post-9/11 context gave way to an increase in incidents of anti-Muslim violence, contemporary manifestations of Islamophobia are deeply rooted in state level anti-black racism from the early twentieth century, as well as in anti-Muslim attitudes that date back to the colonial period. By examining academic literature, political speeches, and news media sources, we situate Islamophobia within its historical context and also analyze how US anxieties about Islam and Muslims are not only gendered and racialized, but also exist across the political spectrum.

Typical periods offered: Fall

RELPOL 2040 Love and Reason

Love often seems dramatically unreasonable, and reason can seem coldly rational in a way that excludes any emotion, passion, or affiliation even akin to love. The supposed opposition between love and reason has been used by Christian and secular thinkers throughout modernity to organize ways of knowing and judging, and to criticize claims of faith, belief, and desire. But are love and reason really so distinct? What does it mean to say so, and why might someone make this claim? Can love be reasoned, and even reasonable? Can reason be aided by love, and even driven by it? How might different answers to these questions affect our understanding of other possibly unreasoned categories like faith, belief, and piety? This course offers an introduction to modern Christian thought and Western philosophy through these questions and themes.

Typical periods offered: Spring

RELPOL 2050 Muslims in the Media and Popular Culture

In the post 9/11 context of the United States, Muslims have been a constant presence in news media, typically cast in a negative light as political others who are backwards, threatening, and inherently prone to violence. This pattern has long been replicated in films in which Muslims serve as static and dehumanized perpetrators of violence and/or as symbols of a backwards and depraved culture, antithetical to U.S. values and interests. In recent years, however, Muslims have become increasingly visible in the entertainment industry as protagonists and producers of their own media, including G. Willow Wilson's Ms. Marvel, Hulu's Ramy, and Netflix's Man Like Mobeen. This course explores a selection of recent media projects created by Muslim writers, actors, musicians, and comedians. We will be pairing films, television shows, music, and comics with scholarship on Islam and religion in the media to analyze Muslim representation and storytelling in contemporary popular culture. We will evaluate these works on their own terms, noting the ways in which gender and racial hierarchies dictate who gets to represent American Muslims while also assessing how these new media both disrupt and further reify Muslims' construction as religious and political outsiders.

RELPOL 2070 Puritans, Native Americans, and Revolutionaries: Empire and Encounter in Early America

This course concerns the history of colonial America from early English settlement and encounters among English and Native Americans to revolution against Great Britain. The making of colonial America involved encounters and exchanges among various people groups-Puritans, Indigenous communities, German Moravians, English liberal thinkers with different ideas about politics-with different political convictions. This course explores those encounters, with a focus especially on Puritan and evangelical missions to Native Americans, southern plantation society and race-based slavery, English notions of religious liberty, and how ideas of political liberty, including rationales for American Independence, conflicted with, criticized, or stood as contradictions to English treatment of Indigenous and African peoples. We will read primary texts that illumine new perspectives on these issues. There is no defining argument or ideological point to the course but, rather, a series of observations of how different social, political, and intellectual variables made for shifting understandings of what religious ideas mattered to public life in America and how those ideas ought to shape civil affairs. As we examine these understandings, we will pay attention especially to Anglo-Indigenous interactions, the rise of a national self-consciousness that invested America with great historical purpose, the development of different responses to racial difference in America, and the disestablishment of religion from national political power (encoded in the First Amendment to the Constitution).

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, HUM EN: H

Typical periods offered: Fall, Spring

RELPOL 2080 African-American Religions

This course is an introduction to African-American religions. This course attends to change wrought in indigenous African religions by enslavement, the adoption of Christianity (and severe critiques of it) by slaves themselves, the building of African-American denominations, the rise of new black religious movements, and the role of religion in contemporary African-American life. At every stage of the course, religion is discussed with reference to key political developments in broader African-American history African diasporic history. The course proceeds in three parts. The course begins with a brief introduction to key themes and problems in the study of African-American religions. For example, is there such thing as a black church, and how does the study of African-American religion differ from the study of other religious groups or traditions? The second part, the bulk of the course, moves chronologically and situates African and African-American religions in their shifting cultural and political contexts from the beginning of the European slave trade to the present. We will discuss African-Americans' practice of several religious traditions: creole African religions, Islam, Protestant and Catholic Christianity, and new religious movements. The final part of the course focuses on several key issues and debates that are informed by the study of African-American religions and that have important connections with contemporary American life.

Typical periods offered: Fall, Spring

RELPOL 2100 The Good Life Between Religion and Politics

What constitutes a life well lived? Where do we turn for the answers to that question? And do we ask it in the plural, "we," or as individuals? This course considers the way religious and political thought has shaped considerations of the classical ethical question of how we should live, and the way that ethics has often served to connect religion and politics in thought and practice. Do we need a religious basis to answer ethical questions, or can we determine how to live without religious sources of authority? On what basis, and with what capacities,

can we imagine new answers to ethical questions-in community or on our own? Taking a philosophical approach through both classic and modern texts, we will consider of a range of answers to the question of how we should live, and a range of strategies for imagining the inquiry. This course satisfies the introductory course requirement for the minor in religion and politics.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM
Typical periods offered: Fall

RELPOL 2110 Religion in the African American Experience: A Historical Survey
This course introduces students to important themes in the history of African American, and thus in American, religious history, among them slavery, emancipation, urbanization, migration, consumer culture, sexuality, politics, and media technologies. Primary attention is given to Afro-Protestantism in North America and the cultural, social, and religious practices and traditions of these black communities. However, students will also be introduced to specific expressions of religious diversity and varying religious traditions and practices in African American communities.
Credit 3 units. A&S IQ: HUM, SC BU: ETH, HUM EN: H
Typical periods offered: Spring

RELPOL 2140 Religions of St. Louis: Communities of Faith and Practical Action Across the Region
The St. Louis region is home to a diverse array of global religious communities. This course directly introduces students to some of that diversity by revolving around fieldtrips to living institutions and meetings with religious leaders across traditions. In any given semester, our visits may include organizations that identify as Catholic, Pentecostal, evangelical, Jewish (Orthodox, Conservative, Reform, or Reconstructionist), Muslim, Hindu, Buddhist, Vedantist, Scientological, progressive Baptist, or secular humanist, among others. We will also visit the International Institute of St. Louis and study the politics of immigration and refugee resettlement that have helped shape the city and its religious as well as political multiplicity. Through our visits and conversation, the variety within each religious community will also become apparent, as we encounter adherents across the political spectrum, embodying different ethnicities, and committed to different degrees of orthodoxy or traditional belief and practice. Students should emerge from the course with a fresh sense of the cultural and religious vitality of the St. Louis metropolitan area, illustrative of the United States as a whole. *All required site visits will take place during the regular class time.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall

RELPOL 2150 Islam in America
This course explores various Muslim discourses and practices in America with a special focus on the intersections of race, gender, and religion. In this course, students will first study the history of Islam and Muslims in America in light of the narratives of enslaved West African Muslims and some of the early narratives of immigrant Muslims. Students will then explore some later historical narratives that represent the impact of religious and racial structures on identity formations, such as the formation of the Nation of Islam, and transnational religious connections in Cold War America. Students will also examine the construction of Muslim identities and institutions in light of some of the US structures and discourses about Islam and Muslims, with regard to the racialization of Muslims, and in connection to the broader Americas. Students will also use popular culture as a site to observe the intersection of race, religion, and gender in Muslim practices.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, ETH, HUM EN: H
Typical periods offered: Fall, Spring

RELPOL 2300 Jews and Jewishness in Black American Thought
The history of what has been called Black-Jewish relations in the United States has a rich and contested history. The stories told about this relationship feature solidarity, controversy, and betrayal. This course will look at this history by attending to the role of Jews and Jewishness in Black thought. How has Jewishness featured in the self-understanding of Black thinkers? Have Jews been regarded as allies or adversaries, role models or competitors? What role have Jewish texts or narrative paradigms played in Black religion and Black politics? What have Black writers made of the Jewish project of national liberation i.e. Zionism? The course will likely include readings from W.E.B. Du Bois, Marcus Garvey, James Baldwin, and Malcolm X among others.
Credit 3 units. A&S IQ: HUM, SC BU: BA, HUM EN: H
Typical periods offered: Fall

RELPOL 2310 Jewish Political Thought
The question of Jewish belonging in the Christian West has played a defining role in the formation of the modern state, and the afterlives of the Jewish question in Europe, America, and Israel continue to have significant influence on how political life is understood and evaluated. This course begins with classical Jewish sources on politics--including the nature of authority, national belonging, and territory--and then moves to a consideration of several crucial modern Jewish thinkers likely including Spinoza, Marx, and Arendt. The course will consistently consider topical contemporary questions about liberal democracy, totalitarianism, nationalism, Zionism, race, and secularism.
Credit 3 units. A&S IQ: HUM BU: BA, HUM EN: H
Typical periods offered: Spring

RELPOL 2320 Perfoming Religion, Ritualizing Gender
What's the difference between a wink and a blink? What the difference between graduation, a sacrament, and the electric slide? We make fine-grained distinctions every day in our own enactment and interpretation of these different kinds of practices. This class will introduce you to key academic approaches to ritual, practice, and performance, and will ask whether these distinctions are important or arbitrary. Ritual studies (based in religious studies) also happens to center around the very same questions that gave birth to gender and queer studies (is gender a performance?), thus a parallel examination of ritual and performance studies necessarily brings religious identity into conversation with broader questions of identity (gender, race, class).
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, HUM EN: H
Typical periods offered: Spring

RELPOL 2330 Religion and Music in American Culture
In this course, students will examine public discourse on popular music as a way of understanding questions of religious identity and community formation. Through case studies ranging from the Pueblo Indian dance controversy of the 1920s to post-9/11 disputes about the Islamic call to prayer, students will consider how debates over what counts as sacred or secular music reveal disputes over notions of religious authority and authenticity in American culture.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, HUM
Typical periods offered: Spring

RELPOL 2340 Religion, Environmentalism, and Politics
This course explores the intersections of anthropology, theology, economic interests, and activism. We will draw on a range of sources including social-scientific theories about religion and ritual, discussions of disenchantment and re-enchantment, and indigenous claims to land. These theoretical frameworks will provide context for discussing contemporary religious responses to ecological disaster, including both environmentalist and anti-environmentalist movements.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: BA, HUM EN: H
Typical periods offered: Spring

RELPOL 2341 American Religion and the Politics of Sincerity
In the United States, most people assume that to be religious one should be sincere. You should really believe what you say you believe; don't fake it. Since the mid-twentieth century, courts have used the sincerity test for religious claimants, evaluating whether they truly believe, not whether their beliefs are true. In the twenty-first century, state legislators have passed laws protecting citizens' sincerely held religious belief. This course explores these issues of religion, sincerity, and authenticity in American politics and culture. It is not a chronological survey but, rather, a topically organized introduction to some key questions and issues. We will pay particular attention to how racial, gender, national, and religious identities intersect to inform American ideas about sincerity, authenticity, and realness. These discussions connect directly to how the law has treated religious believers and the matter of sincerely held religious belief. Finally, we will consider how sincerity might help us think about the problems of deliberative democracy and the public sphere in our supposedly post-truth era.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Spring

RELPOL 2350 Religion, Health, and Wellness in Modern America
Religion, Health, and Wellness in Modern America will examine changing conceptions of health and wellness in America from the late nineteenth-century to the present. With media, artifacts, and literature drawn from the histories of medicine, religion, and capitalism, this class will cover the proliferation of alternative health regimens, the rise of the medical establishment, claims of divine healing, and the impact of market forces on wellness cultures. Course topics include the raced and gendered dynamics of care, socioeconomic status, technological innovation and media, the role of nature, health activism and radical self-care, and New Age spirituality and mental health. Special attention will be paid to how the politics of the body and its regulation intersect with religious and consumer practices in the modern wellness industry
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, HUM EN: H
Typical periods offered: Fall, Spring

RELPOL 2360 What's Opera Doc? Music, Taste, and American Identity
This course introduces students to the different approaches and methodologies within the American Culture Studies field, including those represented by literature, history, sociology, and political science; at the same time, will learn key concepts within the field that will inform their future work. These are presented in a semester-specific topic of focus; please see Course Listings for a description of the current offering. The course is ideal for AMCS majors and minors, but others are welcome. This course fulfills the Introductory Course requirement for AMCS majors and minors.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

RELPOL 2370 Zionism
Zionism is often thought of as a commitment to the principle that the Jewish People, as a distinct people, has a right to self-determination in its own historical land of the biblical Palestine. Yet the history of the term and the set of ideologies show a much more complex understanding. In this course we trace the emergence of a number of different Zionisms that would lead to the creation of the modern state of Israel. And we explore how the political principles at the core of these ideologies have fared in the 65 years since the founding of the modern Jewish state. The course is at its heart applied political theory: a case study of the way that ideas emerge from historical events, take on a life of their own, and then shape real outcomes in the world. The readings will weave together history, philosophy, literature and government.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA EN: S
Typical periods offered: Spring

RELPOL 2420 Religious Dissent and Reform in American Life
This course explores American religious and political history with particular attention to themes of dissent and reform. From Anne Hutchinson's challenges to the Puritan establishment in the Massachusetts Bay Colony, to evangelical abolition movements in the nineteenth century, to arguments for a black Jesus and civil rights in the 1960s, American religion is full of trailblazers that push political boundaries and contest religious orthodoxies. This course attends to themes of gender, race, class, and economic power to contextualize movements and give students tools to understand the arrival of new movements and the cultural and political power of religious ideas. This course pays particular attention to the role of religious dissenters in movements for social and political change, how religious beliefs and practices have been mobilized (often against co-religionists) to protest the economic status quo, empower women, promote civil rights, and end war. We also examine how many of these movements were themselves disrupted or complicated through further dissension and division.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, HUM EN: H
Typical periods offered: Spring

RELPOL 2430 The Politics of Religion, Crime, and Punishment in the United States
This course traces the relationship between religion and the politics of crime and punishment in the United States from the Revolutionary Era to the Trump Administration. We ask how religious movements and religious ideas shaped the establishment of penitentiaries, the structures of modern policing, and the prisoners' rights movement. We also explore how religion shaped the priorities of the FBI, contemporary movements for prison reform, and the contours of American debates about immigration and the War on Terror. The course highlights the unintended consequences of efforts to reform and rehabilitate and emphasizes religion's interconnections to race and citizenship. Students will leave the course with an understanding of how American religious traditions and movements from Quakers and followers of the Social Gospel to the Nation of Islam and evangelical Christianity have continually reshaped the politics of crime punishment in America.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

RELPOL 2520 Catholicism Confronts Modernity: A Global History From the French Revolution to Pope Francis
This course explores how the Catholic Church confronted the challenges of modernity-from liberal democracy and human rights; to capitalism and modern science; to fascism and communism. We will examine also how Catholicism itself has shaped modern politics and culture. The course will draw from the experience of Catholics in different countries (with no pretense of being exhaustive) over the past two centuries. We will begin with the French Revolution

and the first culture wars between Catholics and liberals and end with the ambivalent legacies of Vatican II. We will appreciate how US Catholicism cannot be fully understood without reference to this global context.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

RELPOL 2700 Native American Religions and Politics
This course introduces students to American Indian religions and politics. We will think of American Indian religiosity as tied together with a strong sense of place and a long history of oppression. To do so, we will employ an interdisciplinary approach, reading historical, ethnographic, legal, and literary texts about Native American experiences of contact, conquest, genocide, and struggles for religious freedom and land rights. We will discuss political and legal controversies around a 1920s ceremonial Pueblo dance and the relationship between the Ghost Dance and the Red Power Movement; a US Supreme Court case about the ceremonial use of peyote in the Native American Church and an ethnography of Native American Alcoholics Anonymous. We will watch documentary films about various relationships between White Christian Americans and American Indians and ask how Native American experiences and accounts can help us to better understand (and also to criticize) Western religiosity, history, ecology, and politics.

RELPOL 2996 Religion & Politics Elective
This course is for transfer credits.
Credit 0 units.
Typical periods offered: Fall, Spring

RELPOL 3010 American Religion, Law, and Sexual Politics
Following philosopher Michel Foucault's vital insight that sexuality is a major transfer point in the relations of power, this course will explore the complex ways in which theological ideas and religious movements have shaped legal doctrines relating to sex, gender, and sexuality in the United States from roughly the turn of the twentieth century to the present. It will examine how and why religious groups have mobilized within the legal arena at various points in US history, the devotional commitments that influence their activism, the constitutional claims and counterclaims that have emerged over time as a result of legal contestation, and the lived impact of various judicial decisions. To do so, the course will be structured thematically around three overlapping constitutional domains: (1) equal protection rights for women and sexual minorities, (2) substantive due process commitments to privacy and bodily autonomy, and (3) free speech principles related to sexual self-expression. The impact of religious advocacy on contemporary controversies such as drag show bans, restrictions on reproductive healthcare, religious exemptions to LGBT non-discrimination laws, pornography regulation, gender-affirming care access, and more will all be covered. By applying the theories and methods of critical religious studies, this course also takes questions of American religion and sexual politics as a starting point for introducing undergraduate students to legal studies more generally. Through classroom conversations and course texts, students will become familiar with the structure of the American legal system, different methods of constitutional interpretation, theoretical concerns that shape legal thinking, and critical reading skills that may be used to approach legal texts such as judicial opinions. Students from all academic backgrounds interested in gaining increased literacy in American law are encouraged to enroll-no prior exposure is required.

RELPOL 3020 Christian Thought and Politics in the Modern World
This course introduces students to Christian thought in the modern period and its relation to notions of social justice and political action. It takes these issues chronologically, beginning with the Protestant Reformation and challenges to Catholic monarchies, through Puritanism and revolution, evangelicalism and anti-slavery, nineteenth-century liberalism and social reform, twentieth century issues of the Cold War and civil rights, to twentieth century concerns with race and environmentalism. Throughout the course, we will read texts that relate theological claims (about, for example, the nature of God, Christ, and redemption) to social and political matters. The course will end with attention to Christian belief and contemporary political crises.

RELPOL 3030 Between Malcolm X & Martin Luther King Jr.: Religion & the Politics of Freedom
Malcolm X (El Hajj Malik El Shabazz) and Martin Luther King, Jr. are both icons of the twentieth-century civil rights and black freedom movements. Often characterized as polar opposites—one advocating armed self-defense and the other non-violence against all provocation—they continue to be important religious, political, and intellectual models for how we imagine the past as well as for current issues concerning religion, race, politics and freedom struggles in the United States and globally. This course focuses on their political and spiritual lives. We will examine their personal biographies, speeches, and legacies as a way to better understand how the intersections of religion, race, and politics came to bare upon the freedom struggles of people of color in the US and abroad.

RELPOL 3050 Topics in Religion and Politics
How have Jewish women shaped American politics and culture? How much of our modern world do we owe to what Jewish women have created? And how have these women transformed Judaism itself? This course examines the writings, ideas, and lives of Jewish-American women. From explicitly religious organizations like Hadassah and the National Council of Jewish Women, to more secular Jews who subtly incorporated religion into their style and their ethics, we will consider Jewish-American women in all of their fascinating variety. Students will gain a thorough picture of Jewish-American women's social impact from the ground up. Our reading will extend from colonial community builders like Bilhah Franks, to early feminists like Rosa Sonneschein, to revolutionaries like Emma Goldman and reformers like Lillian Wald; from the philosopher Hannah Arendt to the labor leader Rose Schneiderman and the novelist Ayn Rand; from America's first woman rabbi, Sally Priesand, to modern-day leaders and celebrities like Ruth Bader Ginsberg, Judy Blume, Adrienne Rich, and Dianne Feinstein. Students will have the opportunity to conduct self-directed research as well as to try out creative projects and collaborative reflection. This course will teach students to thoughtfully analyze texts in historical context, to conduct sensitive conversations with generosity and curiosity, and to broaden their pantheon of American cultural giants. As we explore multiple genres, decades, and perspectives, students will build a rich and collaborative understanding of the vibrant Jewish-American women's intellectual tradition.

RELPOL 3060 Virtues, Vices, Values: Regulating Morality in Modern America

This course takes morality and the question of what's right seriously as a lens through which to understand and assess modern American history. Morality is, of course, a devilishly flexible rhetoric, a language invoked to tell people how to act and how to be good, or, conversely, to criticize and to shame. When the state or a community wants its citizens or members to be good, it crafts laws and creates customs to encourage or inhibit behaviors. Yet good is a contested concept, especially in a diverse, multiracial society. Thus this class examines a) how state and non-state actors, including religious leaders, have attempted to regulate the lived experiences of Americans and b) the conflicts that emerge over what, exactly, is correct, or right, or good for individuals, society, and the state. To what degree does calling something moral or immoral articulate or obstruct policy solutions? What do political coalitions oriented around values accomplish? Is it possible to hew to moral frames and remain inclusive and tolerant? Topics may include marriage, abortion, immigration, alcohol, incarceration, disease, money, and medical care.

RELPOL 3070 Islam, Gender, Sexuality

In this course, we examine discourses of gender and sexuality across historical period and geographical region. We analyze encounters with Western imperialism, investigating how gender informs social, political, religious, and family life in Islamic cultures. Our course materials include histories, ethnographies, graphic novels, and films, and we examine how these sources approach the study of Islam, gender, and sexuality through the lens of various topics: from women in the earliest years of Islam in 7th century Arabia to revolutionary Iran and American Muslim women in the 21st century. Throughout the course, we examine how notions of gender and sexuality have changed over time and played various roles in the political and social life of Muslim nations, societies, and communities. By the end of the course, students will be able to critically assess scholarly and non-scholarly (media) discussions of gender in Islam.

RELPOL 3080 Gender and Power in Religious Thought

Gender has often been posed as the fundamental distinction of the human condition, creating the original opportunity for relation across that distinction. In some strands of religious thought, this distinction comes second to the creation of the world distinct from the divine. Religious and secular thinkers have turned to ordinary experiences of interpersonal relations for insight into these purportedly more fundamental relations and the connection between them. This seminar examines the role of interpersonal relationships in recent religious, ethical, and political thought, with particular attention to the way they bring gender and sexual desire more centrally into view. NOTE: Students should have some training in theory or philosophy, and are welcome from any department or discipline. Experience in religious thought (in any religious tradition), ethics, or gender theory will be helpful, but is not required.Anyone interested in taking the course with concerns about their preparation should contact the instructor with a brief description of their interest and related coursework and research.

RELPOL 3090 Mormon History in Global Context

The focus of this seminar is Mormonism, meaning, primarily, the Church of Jesus Christ of Latter-day Saints, which is the largest Mormon body. Mormons in the United States have gone from being one of the most intensely persecuted religious groups in the country's history to the fourth largest religious body in the U.S., with a reputation for patriotism and conservative family values. Because of its vigorous missionary program, the LDS Church now has more members outside the U.S. than inside. This seminar will introduce the basic practices and beliefs, and explore issues regarding economics, race, gender, and sexuality within the faith. These issues include: How did conflicts over Mormonism during the 19th century, especially the conflict over polygamy, help define the limits of religious tolerance in this country? How have LDS teachings about gender and race, or controversies about whether or not Mormons are Christian, positioned and repositioned Mormons within U.S. society? What does the LDS faith look like in other parts of the world, and how does its identification with U.S. prosperity and politics shape its growth in other places?

RELPOL 3105 American Holidays: Civic and Religious Celebrations in American Culture

This seminar examines a variety of religious holidays and civic rituals in American history and culture. Topics include: public conflicts over Christmas, African-American emancipation celebrations, the Fourth of July, Thanksgiving, Roman Catholic street festivals dedicated to the Virgin Mary, modern renderings of Hanukkah, as well as the memorialization of the Union and the Confederacy. Various interpretive approaches are explored, and the intent is to broach a wide range of questions about history and tradition, gender and race, public memory and consumer culture, religion and nationalism, through this topical focus on holidays and holy days.

RELPOL 3110 Pilgrims and Seekers: American Spirituality From Transcendentalism to the Present

This seminar focuses on the formation of spirituality in American culture from the Transcendentalist world of Ralph Waldo Emerson on through more recent expressions of the spiritual-but-not-religious sensibility. How did spirituality come to be seen as something positively distinct from organized religion? What are the main contours of spiritual seeking in American culture, especially among those who claim no specific religious affiliation? The course also explores the social, political, and cultural consequences of this turn to the spiritual over the religious: for example, the consecration of liberal individualism, the relationship of religious exploration to both environmentalism and consumerism, the politics of cultural appropriation, the negotiation of religious pluralism, and the pursuit of the spiritual in art.

RELPOL 3130 Religion and Race in the United States

Race and ethnicity are central to how religious pluralism is worked out in America. How do the categories of race and religion intersect to produce concepts of a normative American identity? In this course, we examine the construct of race across various American congregational communities in order to understand debates on American identity and belonging. We also explore the idea of an American civil religion, and we engage with the boundaries of inclusion and exclusion of particular religious groups within this category based upon racialized criteria.

RELPOL 3140 Religion and the Modern Civil Rights Movement,1954-1968

The modern Civil Rights Movement is a landmark event in the nation's political, civic, cultural, and social history. In many contexts, this movement for and against civil and legal equality took on a religious ethos, with activists, opponents, and observers believing that the net result of the marches, demonstrations, and legislative rulings would redeem and/or destroy The Soul of the Nation. This seminar examines the modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement. The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures, and communities that were indifferent, combative, instrumental, and/or supportive of Civil Rights legislation throughout the mid-twentieth century.

RELPOL 3180 The Abuse Crisis in Modern Christianity

For over a quarter-century, journalists have broken story after story about sexually abusive clergy in the U.S., many of them serial abusers of children and adolescents. While most accounts have focused on Catholic priests, many have also emerged of abusive evangelical and other Protestant ministers. The stories have illuminated how church bureaucrats have consistently protected abusers and subverted the efforts of victims and their families to seek recompense, accountability, and justice. These protections have often succeeded because of churches' political connections to law enforcement and legislators who have helped hide perpetrators and stymie survivors. Together we will analyze this cautionary tale about religion and politics by contextualizing it within the broader history of Christianity in the United States and beyond. Is this a case simply of a few bad apples or of institutional corruption? How has the church's response been shaped by fear of scandal, antipathy toward secularism, and theological teachings on gender and homosexuality? How does sexual abuse fit into the history of the church as a hierarchical institution? What challenges has the crisis posed to people of faith who are committed to the church, and can trust be repaired? Readings include legal case studies, internal church correspondence, victims' statements and criminal justice reports, documentary films and memoirs, and both journalistic and scholarly analysis of the clergy sex abuse crisis in the U.S. church. We will also hear directly from a variety of visting guests. WARNING: Many of our readings contain difficult accounts of abuse as well as the subsequent trauma most victims suffer. If this subject matter is triggering for you and you'd like to speak with me about whether or not to take it, I'll be glad to help you think through it.

RELPOL 3190 Solidarity and Silence: Religious Strategies in the Political Sphere

Although political action is often considered a problem of making oneself heard, religious practices of silence, self-effacement, and withdrawal from certain worldly struggles have guided many significant political and social movements, particularly forms of non-violent resistance. This course considers the role of religious thought and practice in such movements in the twentieth century. The history of these movements presents an apparent paradox: how can political action emerge from the supposedly private realm of religion in the modern era, particularly its most individualistic formations in contemplative and mystical practices? Does the historical role of these practices in the political sphere complicate their portrayal in some scholarship as private, individual, and depoliticizing? With these questions animating our investigations, we will consider the work of authors and activists including Leo Tolstoy, Mahatma Gandhi, Dietrich Bonhoeffer, Martin Luther King, Jr., Simone Weil, and William Barber, as well as the history of movements associated with their work. Toward the end of the semester, we will turn to contemporary movements against economic inequality, intimate violence, racially motivated violence, and discrimination toward transgender persons to discuss the use of religious strategies or religiously-derived strategies in current political and social activism.

RELPOL 3200 Religion and Politics in 20th Century U.S. History

This course provides both a chronological and thematic overview of the history of religion, political culture, and society in twentieth century America. While moving sequentially through key transformations running from the beginning to end of the century, we will also pause each week to examine particular episodes and themes that illuminate substantive and symbolic societal turns. Specifically, this course will encourage us to think more deeply about the ways religious ideas, institutions, and individuals intersect with and weave through broad political developments like populism and progressivism, corporate and labor activism, the rise and decline of New Deal liberalism, war and American empire building, the power shift to the Sunbelt, urban and suburban power struggles, social movements of the Left and the Right, the politics of family, education, and community, civil rights and ethnic identity, conservatism and globalization. The overarching goal of this course is to place religion at the center of political development in the twentieth century, and at the center of our understanding of this recent past. Here religion will not (as is often done by political historians) be cordoned off as an agent of change worthy of consideration only under exceptional circumstances and in rare moments, but rather be considered as a consistent, powerful player that always brings competing passions and interests, drama and controversy to the political realm. This primary agenda will be accompanied by a couple of others. In addition to absorbing the historical facts and figures of religion and politics in the twentieth century (on which students will be tested), students will also be encouraged to encounter and critique different styles of historical writing, from biographies and autobiographies to traditional monographs, articles and essays to editorials. What makes good writing? Good history writing? What are the challenges inherent to writing effective religious and political history? This set of issues will be important for us to consider, because they lead to yet a final set of questions: how does one actually go about researching history? Writing it? In addition to taking time for extensive reading in this subject area, students will also be expected to complete a major term paper based on both primary and secondary sources. Students will begin this project early in the semester and, while in consultation with members of their peer group and me, see it through to its conclusion by the last week of class.

RELPOL 3205 American Non-Christian Churches
This course explores the history and significance of how American law and culture have defined "religion" and "church," which demonstrates the Christian-centric biases in legal definition and administration. This course will analyze the significance of this legal definition by studying various non-Christian churches in America, representing a variety of non-Christian traditions. This course will explore different historic religious traditions (e.g. Buddhist Churches of America, Native American Church, etc.), new religious movements (e.g. Church of Scientology, Church of Satan, Church of Wicca, etc.) and satirical religious (e.g. Church of the Flying Spaghetti Monster, Neo-American Church, etc.) Students will be challenged to consider how state and society define, legislate, and regulate religious minorities in America, as well as minority strategies of religious assimilation, negotiation, and contestation. Students will consider the cultural and legal positioning of various religious organizations in how they present themselves in their institutional legal documentation, religious texts, and social presence. Additionally, students will consider the legal limits of religious legitimatization and liberty by studying significant legal cases that define proper, authentic, and/or sincere religiosity.

RELPOL 3230 Jews and Jewishness in Black American Thought
The history of what has been called Black-Jewish relations in the United States has a rich and contested history. The stories told feature solidarity, controversy, and betrayal. This course will look at that history by attending to the role of Jews and Judaism in Black thought. How has Jewishness featured in the self-understanding of Black writers? Have Jews been regarded as allies or adversaries, role models or competitors? What role have Jewish texts or narrative paradigms played in Black religion? What have Black writers made of the Jewish project of national liberation?

Typical periods offered: Fall

RELPOL 3300 The FBI and Religion
This seminar examines the relationship between the Federal Bureau of Investigation (FBI) and religion (i.e., faith communities, clerics, and religious professionals) as a way to study and understand 20th-century religion and politics. The course will investigate the history of the FBI as well as the various ways in which the FBI and religious groups have interacted. The course will pay particular attention to what the professor calls the four interrelated modes of FBI-religious engagement: counter-intelligence and surveillance, coordination and cooperation, censorship and publicity, and consultation.
Credit 3 units. A&S IQ: HUM BU: BA, ETH, HUM EN: H
Typical periods offered: Fall

RELPOL 3310 Conscience and Religion in American Politics
Conscience is as American as apple pie and baseball, but its meaning and implications are deeply contested in American religion and politics. What is conscience? To what extent is conscience laden with theological -- and, more specifically, Christian -- commitments? What role should conscience, whether religious or ethical, play in political life? By considering what conscience means and what vision of politics it implies, we will reflect on what it means to be American: how religion should relate to politics, how individuals should engage with democratic laws and norms, and how religious and political dissenters might oppose American politics. We will focus on key moments in the history of American religion and politics through the lens of conscience, from the Interwar Period, the perceived threat of communism during the Cold War, the Civil Rights Movement, and the Vietnam War to the culture wars on abortion, marriage equality, LBGTQ rights, and the death penalty. This course draws on interdisciplinary sources from religious studies, political theory, law, and history in 20th- and 21st-century American politics.

Typical periods offered: Fall

RELPOL 3320 Global Circuits: Religion, Race, Empire
This seminar explores how American entanglements of race and religion shape and are part of larger global processes. Over the course of the semester, we will investigate these entanglements through conceptual, historical, and ethnographic questions and insights on the remapping of religious traditions and communal experiences onto imperial terrain. We will examine this through a range of problem spaces including: colonial rule, missions, and racial hierarchies; migration and its relationship to religion; the racialization of religion; diaspora and empire; and persecution and power.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, ETH
Typical periods offered: Spring

RELPOL 3330 God in the Courtroom
The U.S. Constitution holds a promise to secure freedom of religion through its First Amendment. Its two religion clauses declare unconstitutional any prohibition on the free exercise of religion and laws respecting the establishment of religion. The consequence is that, whenever a group demands to be recognized as religious and to be granted the right to exercise its religion, a court, a legislature, or an administrative official must determine whether the religious practice in question is legally religious. This means that law plays a uniquely important role in defining religion in the United States. In this seminar, we will explore the relation between law and religion in America. We will study the religion clauses in the First Amendment to the United States Constitution, the histories of their interpretations by American courts in landmark cases, and the ways that religious studies scholars have understood and critiqued these cases.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Spring

RELPOL 3340 Jesus, Jazz, and Gin: The 1920s and the History of Our Current Times
This course is a historical survey of the dynamic relationship between religion and politics during the 1920s. The 1920s were a tipping point for a great deal of the fundamental issues that shaped the twentieth century in the U.S. This course seeks to investigate how religious activism, evangelism, discourse, practice, and reinvention contributed to and was shaped by such change.

RELPOL 3345 The Politics of Play and Protest: Religion and Sports in America
Play is an essential component of human life. Yet, while the word play evokes leisure and frivolity, it can be serious work. Cultural values, spiritual truths, and social politics arise from play, particularly when they are codified in sports. From raucous games of Chunkey in pre-Columbian North America to Tim Tebow's gameday prayers, sports have long been used as instruments of social cohesion and as a way to connect a people to their gods. This course will examine the close relationship between religion and sport in modern American history and will push students beyond the sports-as-religion paradigm to consider sport as a medium of exchange between the overlapping influences of celebrity, national politics, religion, and the economy. We will cover how sports and religion intersect with topics like

nationalism, gender, race, sexuality, identity formation, commercialism, mass-media, recreation, and labor. Concepts like ritual, collective effervescence, and sacred space will be used to analyze key historical movements and organizations, such as muscular Christianity, the YMCA, Fellowship of Christian Athletes, the Olympics, amateurism and the NCAA, and Black Lives Matter. Key figures for examining sport as a site of piety and protest include Muhammad Ali, Serena Williams, Tim Tebow, Jackie Robinson, Colin Kaepernick, and Abe Saperstein. Throughout the course we will ask: How, where, and when do sports act religiously? What do sports and religion accomplish together that they cannot accomplish alone?

Typical periods offered: Fall

RELPOL 3350 Native American/Euro-American Encounters: Confrontations of Bodies and Beliefs
This course surveys the history and historiography of how Native Americans, Europeans, and Euro-Americans reacted and adapted to one another's presence in North America from the 1600s to the mid-1800s, focusing on themes of religion and gender. We will examine the cultural and social implications of encounters between Native peoples, missionaries and other European and Euro-American Protestants and Catholics. We will pay particular attention to how bodies were a venue for encounter-through sexual contact, through the policing of gendered social and economic behaviors, and through religiously-based understandings of women's and men's duties and functions. We will also study how historians know what they know about these encounters, and what materials enable them to answer their historical questions.

Typical periods offered: Fall

RELPOL 3370 Race, Religion, and Migration in the Pacific
This seminar is an experiment in studying the intersections of religion, race, and migration through the idea of difference. We discuss how particular understandings of religion, race, and migration inform contemporary scholarship and shape national and international legal and governmental practices. Specifically, this course explores how difference-of community, body, and place-produces conditions of possibility. Over the semester, we will investigate various borders of difference, using binaries to guide our analysis. We will examine this through a range of problem spaces including: religion/secularism; race/ethnicity/sect; terrorist/citizen; and refugee/migrant. Ultimately, this course aims to critically unpack the relations of power by which people, places, and ideas are differentially constructed, maintained, and transformed

Typical periods offered: Spring

RELPOL 3380 Slavery, Sovereignty, Security: American Religions and the Problem of Freedom
The goal of this course is to think critically about freedom as an ideology and institution. What does it mean to be free? What are the relationships among individual liberties, national sovereignty, and civil rights? In what ways has freedom been defined in relation to -- and materially depended on -- unfreedom? At the same time, this course will treat American religions in a similar critical fashion: as a historically contingent category that has been forged and inflected within the same context of white Christian settler empire. Religion and freedom have intertwined throughout American history, including in the ideal of religious freedom. Our critical interrogation of freedom should help us think carefully about power, working with but also beyond tropes of domination and resistance.

Typical periods offered: Fall

RELPOL 3400 American Religion, Media, and Technology
American religious communities have often been cast as technological laggards, whether willfully ignorant or generally backwards. Such narratives, fueled by stories about religious leaders condemning cultural trends conceal the ways religions have in fact innovated in the media sphere. Ranging from the time of the earliest printing presses to contemporary social media platforms, this course reframes the question of American religions and media technologies by asking the following questions: How have media technologies shaped religious practice, identity, and belonging? Were religious critiques of mass media valid, particularly around questions of access, constraints, and consumption? And how have religious groups experimented with communications technologies to reimagine their use, message, and audience? These moments of technological encounter reveal how religious communities have not only worked with media technologies, but have driven much of what makes these technologies innovative and modern.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

RELPOL 3405 American Religion,race, and Law
This course explores relationship between Asian Pacific Americans and American legal discourses of religion and race. In addition to examining the lived experience of Asian American religious communities in historical and contemporary perspectives, this course evaluates the racial and religious connotations and consequences of various state, federal, and international policies that directly affect Asian American communities. Students will learn to apply theories of race and religion to American law and political discourse by analyzing the language, historical context, and judicial contestations of key topics, including immigration restriction, citizenship, land laws, segregation, internment, refugee resettlement, and government surveillance. Students will be challenged to consider how state and society define and legislate religious minorities in America, as well as minority strategies of religious assimilation, political negotiation, and legal contestation. As such, students will consider how American definitions of religion and race determine religious legitimacy, legal inclusion, and cultural loyalty.

Typical periods offered: Fall, Spring

RELPOL 4020 American Unbelief From the Enlightenment to the Present
This course examines American secularism, humanism, freethought, and atheism from the Enlightenment forward to the present. Topics to be explored include: the tensions between secular and Christian conceptions of the nation's founding, blasphemy and sacrilege, women's rights, the civil liberties of atheists and nontheists, the relationship between science and religion, the battles over religion in the public schools, nonreligious child-rearing, and the politics of unbelief on both the left and right.
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

RELPOL 4025 Muslims in the Media and Popular Culture
Since the long amorphous War on Terror, Muslims have been a constant presence in Western news media, typically cast in a negative light as political others who are backwards, threatening, and inherently prone to violence. This pattern has long been replicated in films where Muslims are static and dehumanized perpetrators of violence, or as symbols of a backwards and depraved culture, antithetical to liberal values and interests. In recent years however, Muslims have become increasingly visible in the American and British entertainment industries, as protagonists and producers of their own media, including G. Willow Wilson's Ms. Marvel, Hulu's Ramy, and Netflix's Man Like Mobeen. In this seminar, we explore a selection of recent American and British media projects created by Muslim writers, actors, musicians, and comedians. We pair these projects with scholarship on religion in the media and TV studies analyzing Muslim representation and storytelling in contemporary popular culture. We will evaluate these works on their own terms, noting the ways in which gender and racial hierarchies dictate who gets to represent American and British Muslims, while also assessing how these new media both disrupt and further reify Muslims' construction as religious and political outsiders.
Credit 3 units. A&S IQ: HUM, LCD, SC BU: HUM
Typical periods offered: Spring

RELPOL 4030 Christian Nation, Secular Republic
The United States has often been imagined as both a deeply Christian nation and a thoroughly secular republic, and those conjoined framings have created recurrent conflict throughout American history. This seminar is designed to introduce advanced undergraduates and graduate students to current discussions of religion, secularism, and unbelief in American religious and political history. The course also places a complementary emphasis on close readings of crucial primary works, say, about the rise of deistic toleration or the persisting political power of Christianity-in textual particularities. The course takes as its starting point Charles Taylor's monumental account A Secular Age and works from there through various episodes of the Enlightenment and its long aftermath.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

RELPOL 4040 Law, Religion, and Politics
What is the role of religious argument in politics and law? What kinds of arguments are advanced, and how do they differ from one another? Are some of these arguments more acceptable than others in a liberal democracy? This course will explore these questions through the work of legal scholars, theologians, and political theorists. Our topics include the nature of violence and coercion in the law, constraints on public reason, the relationship between religion and government, and the nature of religious practice and tradition.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, ETH, HUM EN: H

RELPOL 4050 Readings in African American Religious History
This course is an introduction to the history and variety of African-American religions in the New World Diaspora. The approach will be chronological, from the earliest years to the New World, to contemporary expressions. We will also explore some of the major historiographical themes that have catalyzed current scholarship, the purpose and effectiveness of black nationalist movements, issues of class and gender, the persistence of African elements of new world religious practice, performance, and popular culture.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

RELPOL 4070 Religion, Politics, and the University
This course explores in depth current issues related to pluralism, difference, and belonging in matters pertaining to religion and other important issues, with a particular focus on how these play out in the university context. The instructors, John Inazu and Eboo Patel, are two of the leading national commentators on these issues. Prerequisite: Students enrolling in this class must submit a brief statement of interest to Professor John Inazu. Details on how and where to submit this statement can be found at http://law.wustl.edu/COURSES/INAZU/seminar1/summaries/.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

RELPOL 4080 Sabbath Politics: Rest and Refusal in Religion and Politics
The Jewish Sabbath arrives every week to disrupt ordinary life with a wholly different way of living, abstaining from some activities in divinely commanded rest. Is this different way of life strictly a break from the ordinary, or also a guide to it-and to how it might require disruption, reformation, and repair? Sabbath traditions have inspired radical political action including movements against debt, income inequality, environmental destruction, and racial injustice. This course will consider the ways that 20th and 21st century American Jews have practiced Shabbat and thought about its significance in political life. Students will read a range of texts including Abraham Joshua Heschel's classic 1951 book The Sabbath, and consider them in relation to movements of contemporary radical politics that have been inspired by Sabbath traditions, including Strike Debt, reparations for the descendants of enslaved people, and agonistic democratic politics.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

RELPOL 4090 Solidarity and Silence: Religious Strategies in the Political Sphere
Although political action is often considered a problem of making oneself heard, religious practices of silence, self-effacement, and withdrawal from certain worldly struggles have guided many significant political and social movements, particularly forms of non-violent resistance. This course considers the role of religious thought and practice in such movements in the twentieth century. The history of these movements presents an apparent paradox: how can political action emerge from the supposedly private realm of religion in the modern era, particularly its most individualistic formations in contemplative and mystical practices? Does the historical role of these practices in the political sphere complicate their portrayal in some scholarship as private, individual, and depoliticizing? With these questions animating our investigations, we will consider the work of authors and activists including Leo Tolstoy, Mahatma Gandhi, Dietrich Bonhoeffer, Martin Luther King, Jr., Simone Weil, and William Barber, as well as the history of movements associated with their work. Toward the end of the semester, we will turn to contemporary movements against economic inequality, intimate violence, racially motivated violence, and discrimination toward transgender persons to discuss the use of religious strategies or religiously-derived strategies in current political and social activism.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

RELPOL 4100 Spiritual But NOT Religious: The Politics of American Spirituality
What does it mean to be spiritual but not religious? What are the social and political consequences of foregrounding spiritual seeking and religious experimentation over the organized religion of churches, synagogues, mosques, and temples? How did this contemporary view of spirituality take shape historically? The seminar focuses on

a series of debates that have arisen over spirituality in American culture: the entwining of religious practices with consumer culture and corporate capitalism, the rise of therapeutic models of meditation and mindfulness, the politics of Euro-American appropriations of Native American and Buddhist religious practices, the implications of embracing religious variety and eclecticism, and the relationship between spiritual seeking and social justice.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

RELPOL 4121 American Religion, Politics, and Culture: Catholicism and Contemporary American Politics
Twenty-five percent of Americans identify as Roman Catholics, making Catholicism the largest Christian church in the country. With the exception of George W. Bush in 2000, no presidential candidate since 1960 has won the White House without winning a majority of Catholic voters. This course will examine the complex role of Roman Catholics in American politics, looking at how Catholics have shaped American history and political life and how American history and politics have shaped Catholicism. Topics will include the nature and influence of the Catholic vote, the role of Catholic social teaching in forming Catholic voters, and the influence that Catholics continue to exercise over public policy and in our national institutions, including the U.S. Supreme Court.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

RELPOL 4122 American Religion, Politics & Culture: Commentary From Alexis De Tocqueville to Contemporary Pundits
This research-oriented seminar involves in-depth historiographical investigation of leading scholarship at the busy intersections of American religion, politics, and culture. The second semester focuses on classic and contemporary commentaries on the American religious and political scene from Alexis de Tocqueville through today's leading pundits. Some sessions will include a visiting scholar engaged in cutting-edge research--a feature that will allow seminar members to work with important scholars from beyond the university. Possible topics include: church-state relations, religion and foreign policy, religion and civil rights, religion and the science wars, the rise of the Religious Right, and the role of religion in national elections. The seminar is taught under the auspices of the John C. Danforth Center on Religion and Politics and is offered two complementary parts (though enrollment in either one of the two is certainly possible). Its ambition is to build up a community of inquirers engaged in the core questions that animate the Danforth Center. PREREQ: Advanced undergraduate or graduate standing in AMCS, History, or Religious Studies or permission of instructor.
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Fall

RELPOL 4125 The First Amendment in an Age of Fracture
This seminar will explore the constitutional and civic dimensions of engaging across difference in a divided and fractured society. Topics will include free speech, the right of association, religious freedom, public forums, online forums, public funding, protests, boycotts, and strikes.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

RELPOL 4160 Love and Friendship in Religious Thought
How do your relationships of love and friendship shape your life? Do they make you a better person? A better citizen? A better neighbor? This seminar examines the way love and friendship have been understood to define or undermine our pursuits of the good life. We will consider the ways different descriptions of love in Western thought—as an ethical ideal, a rational response to value, an unruly force distracting us from the good, and so on—correspond to experiences of love in ordinary life and shape our understanding of how we feel. We will also consider what they reveal about the kinds of problems philosophy and religious thought aim to solve. Readings will include philosophers and theologians such as Plato, Montaigne, C. S. Lewis, Reinhold Niebuhr, Anne Carson, Adriana Cavarero, Martin Luther King, Jr., Harry Frankfurt, Alexander Nehamas, and Byung-Chul Han.
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Fall, Spring

RELPOL 4300 The FBI and Religion
This seminar examines the relationship between the Federal Bureau of Investigation (FBI) and religion (i.e., faith communities, clerics, and religious professionals) as a way to study and understand 20th-century religion and politics. The course will investigate the history of the FBI as well as the various ways in which the FBI and religious groups have interacted. The course will pay particular attention to what the professor calls the four interrelated modes of FBI-religious engagement: counter-intelligence and surveillance, coordination and cooperation, censorship and publicity, and consultation.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

RELPOL 4305 Religion and the State: Global Mission, Global Empire
This course explores the complex intersections among U.S. political power on a global stage, and religious institutions and identities. Readings and discussions are organized around two very broad questions. First: how has this nation's history been shaped by religious others both inside and outside its borders? Second: How have perceptions of those others in turn affected U.S. responses to circumstances of global consequence--including, for example, foreign policy and diplomacy, missionary activity, and economic practices?
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

RELPOL 4310 Monuments, Museums, and Mountains: Religion and the Politics of Place in Modern America
Some of the most intense battles in American culture are fought over hallowed places and public memory. This class will examine various contested sites on the borders of pilgrimage, tourism, religious display, and civic commemoration. Among the topics to be considered are: Confederate monuments and plantation tours, Mount Rushmore and the Black Hills, the Ground Zero Mosque controversy, the Museum of the Bible and evangelical visions for the nation's capital, the public display of the Ten Commandments and the Satanic Temple's monumental interventions, Holy Land pilgrimages, and such alternative religious landscapes as Sedona and Salvation Mountain. Students will also have the opportunity to identify and explore sites of their own choosing as places of religious and political drama within modern American culture. There are no prerequisites for this course, and it is open to both undergraduates and graduate students.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Spring

RELPOL 4996 Love and Reason
This is an elective course covering love and reason.
Credit 3 units.
Typical periods offered: Spring

RELPOL 4999 Independent Study in Religion and Politics
This course is for independent study in Religion and Politics.

Credit 4 units.
Typical periods offered: Fall, Spring

Religion and Politics Minor

Program Requirements

- **Total Units Required:** 15
- **Grade Requirement:** All courses counting toward the Religion and Politics minor must be taken for a letter grade, and students must receive a grade of C– or higher.

Required Course

Students select one course from the following list. This required course should be completed prior to the second semester of the junior year.

Code	Title	Units
BEYOND 1008	Religious Freedom in America	
RELPOL 2000	Religion and American Society	
RELPOL 2010	Religion and Politics in American History	
RELPOL 2100	The Good Life Between Religion and Politics	

Elective Courses

Students complete 12 additional units, 9 of which must be at the 3000 or 4000 level and 9 of which, at any level, must be taught by Center faculty.

Required Activities

Attendance at five events sponsored by the John C. Danforth Center on Religion and Politics (e.g., lectures, colloquia, lunch discussions, film screenings) is required. Students must inform the director of undergraduate studies of the events they attend so that this information can be recorded.

Religious Studies

Religion is a major source of inspiration, meaning, and controversy in human societies. Fast-moving forces of globalization, migration, and technology continue to bring diverse communities into closer proximity, often creating new religious communities in the process. The Religious Studies program at Washington University gives students the opportunity to learn about diverse religions as well as to study past and current events with a critical but open mind.

Religious Studies covers a wide range of subjects. It could include religion and American or international politics, religion and music, unbelief, religion and literature, issues of race or climate change, or scriptural studies. As such, Religious Studies embraces research in all its interdisciplinary complexity. Our courses are taught by faculty from a variety of disciplines, including the Danforth Center on Religion and Politics; Anthropology; Classics; East Asian Languages and Cultures; English; History; Jewish, Islamic, and Middle Eastern Studies; Music; Philosophy; Political Science; and Women, Gender, and Sexuality Studies.

Religious Studies empowers students to understand how religion informs people's thought and behavior. A double major or a minor will also enhance a broad range of studies, from politics and law to business and medicine. If a student is preparing for the advanced academic study of religion, seeking to complement another area of study, or simply feeling the need to acquire a greater knowledge of religions, a major or minor in Religious Studies is excellent preparation for living and working in a pluralistic society and global culture.

Courses

REST 1501 Thinking About Religion
Nearly everyone has had some experience with something they would call religion, from at least a passing familiarity through the media to a lifetime of active participation in religious communities. But what do we actually mean when we use the word? What is a religion? What does it mean to call something a religion, or religious? And what does it mean to study religion, given the slipperiness of the concept itself? This course offers an introduction to the academic study of religion through a consideration of these questions: What is religion, and how can we study it? Do we need an answer to the first question to pursue the second? Why, and toward what ends, might we undertake such study? We will also consider what is at stake in our investigation and inquiry into religion-for the inquirers, for the subjects of inquiry, and for society more broadly-and what kind of lens the study of religion offers us on ourselves, our neighbors, and society, in turn. To these ends, we will discuss major theoretical approaches to the study of religion and significant work on religions and religious phenomena, toward a better understanding of what religion might be and how it might be studied today. No prior knowledge or experience of religion, religions, or anything religious is expected or required. This course is required for Religious Studies majors and minors.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Summer

REST 1800 First-Year Seminar in Religious Studies
This course is for freshman only. The topic varies from semester to semester. Recent topics include Miracles; Sexuality in Early Christianity; and The Self in Chinese Thought.
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Spring

REST 1996 Religious Studies Elective: 100-Level
This course is for elective or transfer credits.
Credit 3 units. EN: H
Typical periods offered: Fall, Spring

REST 2020 Introduction to Religious Traditions I: Judaism, Christianity, and Islam
Judaism, Christianity and Islam are elaborate and dynamic systems of belief and practice. While each of them is a distinct religious tradition, all three share a common cultural background, harbor similar views of the individual, and assume a linear perspective of history. Moreover, the historical trajectories of these three Western monotheisms have been intricately intertwined: Christianity emerged out of Judaism, and Islam took shape largely in a Jewish and Christian context. This course will explore these monotheistic traditions in a comparative perspective with ample attention to questions of historical context and development. Our coverage will be explicitly topical and comparative, and the themes examined will include scripture and interpretive tradition, monotheism, authority, worship and ritual, ethics, material culture as well as religion and political order. Note: This class is open to all interested students and is required for all Religious Studies majors and minors.
Credit 3 units. A&S IQ: HUM, LCD BU: ETH, HUM EN: H
Typical periods offered: Fall

REST 2021 Introduction to Religious Traditions II: Asian Religions
This course is designed to introduce students to the study of religion by exploring the major religious traditions of Asia. Traditions that have taken shape in Asian cultural contexts include the Buddhist, Sikh, Islamic, Hindu, Taoist, Jain, and Confucian traditions. These traditions have shaped and been shaped by the rich traditions of literary and performative culture, ethics, sociality and polity in the regions of Asia. Familiarity with these traditions provides a foundation for understanding the cultures of South and East Asia, from film and literature to contemporary political life. Study of Asian traditions also deepens our understanding of the possibilities of human being and striving, and of the manifold aims and means of religious endeavor. Note: Specific traditions and regions emphasized in this course will vary. This class is open to all interested students and is required for all Religious Studies majors and minors.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM EN: H
Typical periods offered: Spring

REST 2310 Religion and Film in America
This course attends to how religion, religious groups, and religious practices have been historically represented in the American popular culture, specifically, film. This course will consider film as more than simple entertainment. We will examine not only how in the United States film has functioned as a means to establish what counts as religion, but also how and with what results imaginations of religion in film helped and continues to help to socially construct conceptions of gender, race, and ethnicity.
Credit 3 units.
Typical periods offered: Spring

REST 2996 Religious Studies Elective: 200-Level
This course is for elective or transfer credits.
Credit 3 units. EN: H
Typical periods offered: Fall, Spring

REST 3000 Introduction to the Hebrew Bible/Old Testament
The Hebrew Bible is the foundational text of Judaism and Christianity. It is a complex compilation of materials, reflecting great diversity in ideology, literary expression, social and political circumstances, and theology. In this course, we shall read a significant amount of the Bible in English translation. We shall study the various approaches that have been taken by scholars in trying to understand the Bible in its historical context. We shall also study how the Bible was traditionally interpreted by Jews and Christians during the last two thousand years.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring

REST 3066 Orthodoxy and Heresy in Early Christianity
From the time Jesus of Nazareth preached in the rural countryside of Judea, his followers interpreted his words differently and wrote varied accounts of what he said and did. As time passed and as Jesus' movement grew into a world religion -- Christianity -- disagreement among Christians only continued to increase, leading to the need to define and enforce correct beliefs and practices to create a Christian orthodoxy embodied in the now-familiar institutions of creed, canon, and clergy. Yet in the process of creating an orthodoxy, what was

left out? Whose voices were suppressed? Through the careful study of ancient texts that were long-ago deemed heretical and virtually lost until the 20th century, this course examines the wide varieties of Christianity in its nascent years and discusses how the framers of orthodoxy defined themselves against these alternatives.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Spring

REST 3095 Introduction to the New Testament
What can be known -- from an historical perspective -- about the life and teachings of Jesus and his earliest followers? How did Jesus see himself and how did his followers see him? How did the lives, teachings, and deaths of Jesus and his followers come to form the heart of a new movement? If Jesus and the apostles were all Jews, how did Christianity emerge as a distinct religion? This course investigates these questions through a focus on the earliest sources for Jesus and his first followers, including and extending beyond the canonical books of the Christian New Testament. Our approach in this course is historical and literary, rather than theological or confessional: we ask what Jesus, his first followers, and their Jewish and pagan contemporaries did and believed, and we try to catch glimpses of the worlds in which they lived and the cultures which they took for granted.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM
Typical periods offered: Spring

REST 3111 From the Temple to the Talmud: The Emergence of Rabbinic Judaism
This course offers a survey of the historical, literary, social, and conceptual development of Rabbinic Judaism from its emergence in late antiquity to the early Middle Ages. The goal of the course is to study Rabbinic Judaism as a dynamic phenomenon -- as a constantly developing religious system. Among the topics to be explored are: How did Judaism evolve from a sacrificial cult to a text-based religion? How did the Rabbis emerge as a movement after the destruction of the Second Temple and how could they replace the old priestly elite? How did Rabbinic Judaism develop in its two centers of origin, Palestine (the Land of Israel) and Babylonia (Iraq), to become the dominant form of Judaism under the rule of Islam? How did Jewish ritual and liturgy develop under Rabbinic influence? How were the Rabbis organized and was there diversity within the group? What was the Rabbis' view of women, how did they perceive non-Rabbinic Jews and non-Jews? As Rabbinic Literature is used as the main source to answer these questions, the course provides an introduction to the Mishnah, the Palestinian and Babylonian Talmuds, and the Midrash-collections -- a literature that defines the character of Judaism down to our own times. All texts are read in translation.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

REST 3133 Religion and Film in America
This course attends to how religion, religious groups, and religious practices have been historically represented in the American popular culture, specifically, film. This course will consider film as more than simple entertainment. We will examine not only how in the United States film has functioned as a means to establish what counts as religion, but also how and with what results imaginations of religion in film helped and continue to help to construct normative conceptions of gender, race, and ethnicity.
Credit 3 units. A&S IQ: HUM, SC BU: HUM
Typical periods offered: Fall, Spring

REST 3135 Religion and Violence
Is religion intrinsically connected with violence or merely manipulated to justify political positions and incite supporters? How has religion been the motivation and justification behind violent conflict, aggression and persecution? Does religion have a greater power to make war or peace? People have debated these questions for centuries as believers waged war in the name of their god(s). We'll study several critical theories about religion and violence and test them on historical and recent religious conflicts. Our investigation will be organized around five types of violence: 1) martyrdom and redemptive suffering, 2) claims on sacred space, 3) the violence of social stratification and othering, 4) war and 5) apocalyptic and spiritual warfare. Case studies ranging from early Christian martyrs and crusades to attacks on abortion clinics and Tokyo subways will help clarify patterns and types of religious violence.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: FAAM, HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring

REST 3141 The Problem of Evil: The Holocaust and Other Horrors
The question of how God can allow evil to occur to the righteous or innocent people has been a perennial dilemma in religion and philosophy. We study the classic statement of the problem in the biblical book of Job, the ancient Near Eastern literature on which Job is based, and traditional Jewish and Christian interpretation of Job. We study the major approached to the problem of evil in Western philosophical and religious thought.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring

REST 3164 Religion, Race, and Gender in Early Modern Latin America
This seminar explores the history of religion, gender, and race in the context of empire in Latin America, focusing primarily on the colonial period (1492-1821), but including some pre-colonial materials. Through primary documents, secondary scholarship and student-centered discussion, we will consider connections between religious beliefs, gender norms and relations, and the ways race, class, and gender intersected with ideas about religion, empire and power. We will study the clash of religions that occurred during the conquest and its terrible aftermath, the politics of evangelization, and how marginalized subjects such as women, African slaves, and indigenous peoples navigated religious authoritarianism to develop their own spiritual beliefs and expressions.
Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM BU: BA, ETH, HUM, IS EN: H
Typical periods offered: Spring

REST 3170 Sexuality in Early Christianity
What did Jesus of Nazareth and his early followers teach about sexuality in terms of marriage, adultery, divorce, the virtues of procreation and celibacy, same-sex relationships, and erotic desire? How and why did ancient Christians take different stances on these issues, and how do these traditions continue to inform sexual ethics and gender roles today? In this course, we will study these questions by examining key passages from the teachings of Jesus in the Gospels, Paul's letters, writings of early church leaders, martyr propaganda, monastic literature, and apocryphal books deemed heretical. We will also consider the interpretations of contemporary historians of religion informed by recent trends in sexuality and gender theories.
Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM BU: BA, ETH, HUM EN: H
Typical periods offered: Spring

REST 3380 Hindu Reformations
Discussion of a group of movements that seek to reform Hinduism in both a religious and social sense.
Credit 3 units. A&S IQ: HUM BU: HUM
Typical periods offered: Spring

REST 3404 Native American and Afro-Native Religious Traditions
This course introduces students to the ways in which Native American and Afro-Native religious traditions have been conceptualized, negotiated, and interpreted from the seventeenth century until today. Students will learn about sacred stories, deities, philosophies, and ceremonies. The course will also address the impact of Western European settler-colonialism, American slavery, government assimilation policies, racial construction, sexual violence, the Red Power movement, and religious freedom issues on Indigenous and Black peoples within the United States of America.
Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM BU: HUM
Typical periods offered: Spring

REST 3525 Genesis
Genesis, the first book of the Bible, remains among the most important literary, historical, and theological works ever written - at once beautiful, funny, perplexing, and challenging. In this class, we will take a deep dive into Genesis, while also exploring literary, historical, mythological, feminist, postcolonial, and other responses to the text. We will also consider the history of interpretation, with a particular interest in the reception of Genesis in literature and in popular culture.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Spring

REST 3635 Theories and Methods in the Study of Religion
What is religion, and how can we study it? Do we need an answer to the first question to pursue the second? Why, and toward what ends, might we undertake such study? This course considers these questions through the investigation of significant attempts to study religion over the past century, paying particular attention to the methods, motivations, and aims of these works. Is the study of religion an effort to disprove or debunk it, or perhaps to support it? What would each mean? Is it an effort to describe the indescribable, or perhaps to translate complex beliefs and practices into a language in which they can be discussed by others? Why would such a translation be helpful, and to whom? Is the study of religion an investigation of a social phenomenon, an organization of communities, a specific formation of individuals, or perhaps a psychosis or illusion, evidence of the workings of power on our lives and the difficulty of bearing it? What is at stake in defining religion in these ways, and then in undertaking its study?
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Spring

REST 3715 Topics in Religious Studies
The topic for this course varies. Recent topics include: Anime and Animi-A Popular Cultural Approach to Shinto; Religion and Violence; It's the End of the World As We Know It: Apocalypse in the Biblical World; and North American Religious Experience.
Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring

REST 3720 Topics in Religious Studies:
Topics vary by semester.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM, IS EN: H
UColl: CD
Typical periods offered: Fall, Spring

REST 3735 Major Figures in Christian Thought
Critical examination of one or more of the major figures in Christian theology and apologetics (e.g., Jesus, Augustine, Aquinas, Luther, Kierkegaard). Subject matter varies each semester. May be repeated for credit. Prerequisite: a course in biblical literature, or permission of the instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

REST 3745 Topics in Christianity
The topic covered in this course varies. Recent course topics include: The 'Other' Catholic Church: The Lived Experiences of Eastern Orthodoxy and The Apostle Paul: Communities and Controversies.
Credit 3 units. A&S IQ: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring

REST 3844 African and African American Religion and Thought
This course examines the religious philosophies, practices, and experiences of African Americans. It contributes to the academic discipline of religious studies by critically exploring the complex evolution of African American religion. Although the African American Church in the United States, which is commonly viewed as evangelical and decentralized, will be an object of study in this course, it will not be viewed as normative. Students will encounter the social and ideological forces that made some forms of African American religion more visible than others. The primary objective of this course is to familiarize students with the diverse religious experiences, histories, and realities of people of African descent in the Americas. Students will learn that there is no one African American religious experience. This course is historical in its outlook and is reading intensive. The course is open to first year students.
Credit 3 units.
Typical periods offered: Fall

REST 3996 Religious Studies Elective: 300-Level
This course is for elective or transfer credits.
Credit 3 units. EN: H
Typical periods offered: Fall, Spring

REST 4022 Material Religion
This seminar examines contemporary theories and approaches to materiality in the study of religion. Particular attention is given to how scholars envision the relationship between bodies, rituals, religious objects, and the human ability to think, know, and act in the world. By attending to a variety of things -- prints, icons, ritual clothes, food, incense -- and to the history of their use within such traditions as Islam, Buddhism, Candomble, Lucumi, and Christianity, this course seeks to provide students with an opportunity to familiarize themselves with contemporary studies that take seriously the power of material objects to make and sustain religion. This course is simultaneously designed to allow students to practice utilizing material culture as a method in their own research.

Typical periods offered: Spring

REST 4061 Nuns
Nuns -- women vowed to a shared life of poverty, chastity, and obedience in a cloistered community -- were central figures in medieval and early modern religion and society. This course explores life in the convent, with the distinctive culture that developed among communities of women, and the complex relations between the world

of the cloister and the world outside the cloister. We look at how female celibacy served social and political, as well as religious, interests. We read works by nuns: both willing and unwilling; and works about nuns: nuns behaving well, and nuns behaving scandalously badly; nuns embracing their heavenly spouse, and nuns putting on plays; nuns possessed by the devil, and nuns managing their possessions; nuns as enraptured visionaries, and nuns grappling with the mundane realities of life in a cloistered community.
Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM BU: BA, HUM EN: H

REST 4095 Topics in Christianity
Topics in Christianity is a course for advanced undergraduate and graduate students on specific themes in Christianity.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H
Typical periods offered: Fall

REST 4245 The Mystical Tradition in Judaism
What is Jewish mysticism? What is its relationship to the category of religion? Is Jewish mysticism just one form of a general phenomenon common to a variety of religious traditions or is it a specific interpretation of biblical, rabbinic, and other Jewish traditions? Taking the above questions as a starting point, this course aims at a systematic and historically contextualized analysis of a broad range of Jewish texts that are commonly classified as mystical. (All primary texts are read in translation.) At the same time, we explore such overarching themes as: the interplay of esoteric exegesis of the Bible and visionary experiences; the place of traditional Jewish law (halakhah) within mystical thought and practice; the role of gender, sexuality, and the body in Jewish mystical speculation and prayer; the relationship between mysticism and messianism; Ashkenazic and Sephardic traditions and their mutual impact on Jewish mysticism; the absence of women from Jewish mystical movements; esoteric traditions of an elite vs. mysticism as a communal endeavor; and the tension between innovation and (the claim to) tradition in the history of Jewish mysticism.

REST 4340 Topics in Religious Studies
The topic for this course varies.
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM
Typical periods offered: Spring

REST 4801 Senior Seminar in Religious Studies
The topic for this seminar differs every year. Previous topics include Religion and Violence; Governing Religion; Saints and Society; and Religion and the Secular: Struggles over Modernity. The seminar is offered every spring semester and is required of all Religious Studies majors, with the exception of those writing an honors thesis. The class is also open, with the permission of the instructor, to other advanced undergraduates with previous coursework in Religious Studies.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Spring

REST 4990 Independent Work for Senior Honors I
Investigation of a topic, chosen in conjunction with a faculty advisor, on which the student prepares a paper and is examined. Students enroll in L23 498 in the fall semester and L23 499 in the spring semester. Prerequisite: Admission to the Honors Program.
Credit 3 units.
Typical periods offered: Fall

REST 4995 Religious Studies Elective: 400-Level
Fourth Year Religious Studies elective.
Credit 3 units. EN: H
Typical periods offered: Fall, Spring

REST 4997 Independent Work for Senior Honors II
Investigation of a topic, chosen in conjunction with a faculty advisor, on which the student prepares a paper and is examined. Students enroll in L23 498 in the fall semester and L23 499 in the spring semester. Prerequisite: Admission to the Honors Program.
Credit 3 units.
Typical periods offered: Spring

REST 4999 Independent Study
This course is for independent study.
Credit 3 units.
Typical periods offered: Fall, Spring

Religious Studies Major

Program Requirements

- **Total Units Required:** 30; 24 must be at the 3000 level or higher
- **Grade Requirement:** C- or better; Pass/No Pass grades do not count for the major.

Required Courses

Code	Title	Units
REST 1501	Thinking About Religion	3
REST 3635	Theories and Methods in the Study of Religion	3
Total Units		**6**

Senior Capstone Experience

During their senior year, Religious Studies majors are required to take REST 4801 Senior Seminar in Religious Studies (3 units), or in years where the Senior Seminar is not offered, another 4000-level course in Religious Studies for 3 units chosen in consultation with the Program director. Alternatively, students can fulfill the capstone requirement by writing a Senior Honors thesis.

Elective Courses

Majors complete 21 units of electives in Religious Studies courses; 18 units must be at the 3000-level or higher. Electives are generally courses offered in the College of Arts and Sciences, either by the Religious Studies Program directly or by departments that offer courses related to the study of religion (e.g., Anthropology; Classics; Comparative Literature and Thought; East Asian Languages and Cultures; English; History; Jewish, Islamic, and Middle Eastern Studies; Music; Philosophy;

Political Science; Religion and Politics; Women, Gender, and Sexuality Studies). Majors choose electives based on their individual interests in consultation with their major advisor. The elective courses must also fulfill the following requirements:

A. Broad coverage of religious traditions: Majors explore various religions by taking at least one course in four different traditions (e.g., Buddhism, Christianity, Greco-Roman Religions, Hinduism, Islam, Judaism, Native-American Religions).
B. Course concentrations: Majors focus their interests on a single religious tradition or a theme (e.g., ecology, music, politics, sexuality) by creating two series of courses: a three-course series and a two-course series.

Note: An elective course can count toward the fulfillment of both A and B.

Additional Information

Senior Honors

Qualified majors are encouraged to apply for Senior Honors. Applications are available on the Religious Studies website and are due prior to the end of the junior year. Students wishing to pursue this option need to meet the minimum honors requirements stated in this *Bulletin* and to satisfactorily complete REST 4990 Independent Work for Senior Honors I and REST 4997 Independent Work for Senior Honors II during their last two semesters. Full guidelines are available on the Religious Studies website.

Transfer Credit

A maximum of 6 units of coursework completed elsewhere — whether at another college or university or through a Washington University-approved study abroad program — may be applied toward the major. Credit will be awarded only for those courses that have been approved by the Religious Studies program.

Religious Studies Minor

Program Requirements

- **Total Units Required:** 18 units; 12 must be at the 3000 level or higher.
- **Grade Requirement:** C- or better; Pass/No Pass grades do not count for the minor.

Required Courses

Code	Title	Units
REST 1501	Thinking About Religion	3
REST 3635	Theories and Methods in the Study of Religion	3
Total Units		**6**

Elective Courses

Minors complete 12 units of electives in Arts & Sciences Religious Studies courses; 9 units must be at the 3000 level or higher. Electives are generally courses offered in the College of Arts & Sciences, either by the Religious Studies program directly or by departments that offer courses related to the study of Religion (e.g., Anthropology; Classics; Comparative Literature and Thought; East Asian Languages and Cultures; English; History; Jewish, Islamic, and Middle Eastern Studies; Philosophy; Religion and Politics). Minors choose electives based on their individual interests and in consultation with their minor advisor.

Additional Information

Transfer Credit

A maximum of 3 units of coursework completed elsewhere — whether at another college or university or through a Washington University-approved study abroad program — may be applied toward the minor. Credit will be awarded only for those courses that have been approved by the Religious Studies program.

Romance Languages and Literatures

Romance Languages and Literatures offers vibrant programs in French, Italian, Portuguese, and Spanish. Our language courses have long been popular with undergraduates, including those interested in international travel and those who anticipate a global dimension to their future careers. All of our classes focus on culture writ large: we study great texts, and we do so with an eye toward gender roles, traditions, communities, individual freedom, social obligations, and many other topics of critical importance today. We offer concentrations in French, Italian, Spanish, and introductory Portuguese, as well as a composite major in Romance Languages.

Our undergraduate programs in French, Italian, and Spanish include a compelling series of language, literature, culture, and civilization courses that introduce students to the global Hispanic, Francophone, and Italophone communities. The curriculum affords students the opportunity to become fluent in a foreign language, enrich their historical and cultural understanding, and acquaint themselves with influential intellectual, literary, and artistic traditions.

Students also benefit from linguistic and cultural immersion opportunities through our many summer, semester, and year-long study abroad programs. These programs offer unique possibilities to combine foreign language training with other interests, including participating in business internships in Paris; pursuing fieldwork in Cameroon; or studying art history in Italy, literature in Madrid, or Andean culture in Ecuador. These experiences lead to a variety of career paths, including international law, international business, medicine, journalism, and graduate studies in political science, international relations, history, anthropology, art history, comparative literature, French, and film studies. To prepare our students to take full advantage of such opportunities, our faculty provides an innovative range of courses that combine the study of literature with contemporaneous developments in philosophy, science, music, art, and theory.

For undergraduates interested in cross-language study, students may elect to major in Romance Languages and Literatures. This major requires advanced coursework in French, Italian, and Spanish, with one of the three languages as the focus of primary emphasis.

Please visit the Undergraduate Degree Details & Requirements page of the Romance Languages and Literatures website for additional information.

- Italian (p. 913)
- Portuguese (p. 919)
- Spanish (p. 920)

French

FRENCH 1010 French Level 1: Essential French 1
This course immerses students in the French language and Francophone culture from around the world, focusing on rapid acquisition of spoken and written French as well as listening and reading comprehension. Songs, games, skits, videos, chats, and debates provide a rich cultural context for the themes of the course, including identity, self, and family; school and university life; French cafe culture; and travel. Interactive web-based practice at home helps students prepare to apply their knowledge in the classroom. By the end of the semester, students are able to present on real or imaginary journeys in French-speaking countries. While not required, it is strongly recommended that students also enroll in French 1011, a one-credit, pass-fail practice culture class. 3 credits.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Spring

FRENCH 1011 Essential French 1 Workshop
Application of the curriculum presented in French 101D. Pass/Fail only. Grade dependent on attendance and participation. Students must be enrolled concurrently in French 101D.
Credit 1 unit. EN: H
Typical periods offered: Fall, Spring

FRENCH 1020 French Level 2: Essential French 2
This course encourages students to continue their exploration of French and Francophone language and culture through intensive and interactive activities that help solidify their acquisition of oral and written communication skills. Songs, games, skits, videos, chats, and debates provide a rich cultural context for the themes of the course, including living quarters, neighborhoods, and cities; technology and social media; shopping and commerce; French food culture; and nature and the environment. Prerequisite: Fr 101D or equivalent. (Recommended for students with 2-3 years of high school French [7th and 8th grades together count as 1 year]. Director: Ghaderi
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring

FRENCH 1021 Essential French 2 Workshop
Application of the curriculum presented in French 102D. Pass/Fail only. Grade dependent on attendance and participation.
Credit 1 unit. EN: H
Typical periods offered: Fall, Spring

FRENCH 1050 Advanced Elementary French Practice Session
Application of the curriculum presented in French 102D or French 105D. For students with 2-4 years of high school French. Pass/Fail only. Grade dependent on attendance and participation.
Credit 1 unit. A&S IQ: LCD EN: H
Typical periods offered: Fall

FRENCH 1053 Advanced Elementary French Workshop
Working vocabulary for the Institute taught to emphasize real-life situations abroad. Only for students who have completed Fr 102D and 105D in Fall 2003 and who plan to attend the French Summer Language Institute.
Credit 1 unit. A&S IQ: LCD EN: H
Typical periods offered: Fall, Spring

FRENCH 1100 First-Year Seminar
Taught in English. This small-group seminar is devoted to the reading and study of other texts, such as films, paintings, and so on, as well as discussion and writing. Topics vary but have an interdisciplinary focus. Prerequisite: AP in English, French, or History, or permission of instructor. Does not substitute for any other French course.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

FRENCH 1995 French Coursework Completed Abroad
This course is for 1000 level study abroad credit.
Credit 12 units.
Typical periods offered: Fall, Spring

FRENCH 1996 French Elective
This course is for 1000 level transfer credit
Credit 0 units. EN: H
Typical periods offered: Fall, Spring, Summer

FRENCH 2010 French Healthcare
This course provides an introduction to French for Health Professionals as well as a survey of the French public health system. By acquiring a specialized vocabulary, students learn to interpret interactions between doctors and patients in a variety of medical settings. At the same time, they learn about public health policies and their application in the city of Nice. Through extensive discussions with experts in the field of medicine and public health, students will gain authentic expertise in a universal health system considered by the WHO to be one of the best in the world. Taught in French with readings in English. Prereq: approximately three years of high school French or two semesters of college French (the equivalent).
Credit 3 units. A&S IQ: LCD, SSC

FRENCH 2016 Conversation, Culture, Communication 2: French Culture Through French Film
This course enables students to pursue your exploration of French culture through French film. Though not a history of French cinema, it introduces some of France's most celebrated actors and directors. We focus on excerpts that illustrate important life themes, including childhood, coming of age, existential crises, the search for happiness, the need for laughter, the threat of crime and violence, the complexities of love, and attitudes toward death. Students are asked to contrast their expectations of how such themes are to be treated with the way in which the French choose to portray them. Students write film reviews as though they were, alternately, an American or a French critic. As a final project, they write their own screenplay and imagine how it might be filmed in France. By the end of the course, they will have begun to view French culture with a French eye. Prerequisite: French 201D or the equivalent. May be taken before or after Frrench 215.
Credit 3 units. A&S IQ: LCD BU: ETH EN: H

FRENCH 2020 French Level III At the Summer Institute
This Summer Institute course focuses on the major features of French 201D. Students will improve speaking, writing, and reading skills in French by combining study of grammatical forms with exercises designed to mirror many experiences they encounter while in France. The location abroad and contact with French host families and other French people will facilitate the student's learning experience. Students enrolled in this course will also take French 353, and will be prepared to enroll in French 307D upon their return to St. Louis. Open only to students attending the Summer Institute in France. Prereq: French 102D or 105D.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM, IS EN: H
Typical periods offered: Summer

FRENCH 2030 Intermediate French 1
This redesigned, interactive course explores the richness and diversity of the Francophone world and important contemporary issues such as social justice, inequalities, and the influence of media on society. Using an innovative approach based on lived experience, students will strengthen their abilities and accuracy in speech and writing and will considerably expand their vocabulary. Multi-media activities include films, readings, songs, virtual museum tours, and group projects. Prerequisite: Fr 102D or equivalent. (Usually recommended for students with 3 years of high school French [7th and 8th grades together count as 1 year]). 3 credits.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring

FRENCH 2040 Intermediate French 2
In this second semester of the intermediate language sequence, students deepen their knowledge of the Francophone world and refine their oral and written expression, preparing them for the 300 level language, literature, and culture courses. Through discussion of films, radio, television, newspaper articles, and a novel, students broach controversial topics including family values, the business world, art and entertainment, science and technology and the environment. Prerequisite: Fr 203D or equivalent. (Usually recommended for students with approximately 4 years of high school French [7th and 8th grades together count as 1 year]). 3 credits.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring

FRENCH 2140 Medical French
In this introductory course to the Français Professionnel de la Santé track (French for Medical Professionals), students will be exposed to medical terminology and practices as well as to health-related issues in France and the Francophone world (Quebec, Haiti, West and North Africa). Using an interactive approach based on real life situations, students will learn to perform various medical tasks such as writing a prescription, advising a patient, or presenting a humanitarian project to potential donors. Medical vocabulary and pre-professional oral and written expression will be enhanced throughout the course. Students will acquire the necessary tools to perform their tasks, preparing them for further coursework in the FPS track, the Diplôme de français professionnel de la santé, and the France for the Pre-Med study abroad program in Nice. Prereq: Fr 203D or equivalent (this class can replace Fr 204D).
Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

FRENCH 2995 French Course Work Completed Abroad
This course is for 2000 level study abroad credit.
Credit 12 units.
Typical periods offered: Fall, Spring

FRENCH 2996 French Elective
This course is for 2000 level transfer credit.
Credit 0 units.
Typical periods offered: Fall, Spring, Summer

FRENCH 3015 French Culture and Civilization: The New Face of France
We will study the life and culture of France with special emphasis placed on the changes that are slowly but radically transforming French society: the increasing influence of the European Union; the influx of immigrants from Africa and other parts of the world; the growing role of Beurs and other French citizens born of foreign parents; the increasingly dominant position of women; the globalization of French culture, technological progress, etc. We will also concentrate on developing vocabulary and improving written and spoken French. Lectures, discussions, TV newscasts, films and internet. Prereq: Fr 201D (taken prior to Fall 2019) or Fr 204D, or placement by examination.
Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: BA, HUM, IS EN: H
Typical periods offered: Spring

FRENCH 3016 Conversational Fluency
This course, meeting as one of two in the Washington University Summer Program in Dakar, Senegal, will focus on teaching the skills necessary for oral fluency in French. It will draw its content from a teaching collection of short stories from around the French-speaking world (Gaasch, James, ed. Diversité: La nouvelle francophone), as well as from specificially Senegalese texts (Birago Diop, Les Contes d'Amadou Koumba, and newspaper articles as appropriate). Prerequisites: French 201 or equivalent; enrollment in the WU Summer Program in Dakar.
Credit 3 units. A&S IQ: LCD BU: IS EN: H
Typical periods offered: Summer

FRENCH 3070 Cultural Expression
This course enables students to reinforce and refine their French written and oral expression while exploring culturally-rich contexts and addressing socially-relevant questions. Students develop linguistic mastery, expand their vocabulary, and improve their communication skills through themed readings, films, and interactive activities. FRENC 3070 is essential for further study of French language, literature, and culture.
Credit 3 units. A&S IQ: LCD, LS Arch: HUM Art: HUM BU: IS EN: H
Typical periods offered: Fall, Spring

FRENCH 3100 Practical and Commercial French
Students develop their reading and writing proficiency and aural-oral communication in areas such as banking, retailing, and advertising. Extensive use of the Internet keeps students up-to-date about European and international issues in the world of business and economics. May replace Fr 308D for students who attend the IEB/Paris program. Prereq: Fr 307D. Required for participation in the Internship in European Business Program.
Credit 3 units. BU: IS
Typical periods offered: Spring

FRENCH 3111 Culture and Public Health in Contemporary France
Liberty, Equality, Fraternity. How are we to understand these ideals in the context of contemporary France? To what extent do they apply to immigrants, to the underprivileged, to the dependent elderly? How are these traditional French values reflected in public health policy? In order for students to better understand French values and how

they are transposed into public policy, this course examines a certain number of fundamental tenets: the Republic, citizenship, secularity, taking examples from key episodes in French history. It also calls upon health specialists to explore what is being done to improve public health for all, and especially for an aging population which constitutes, in today's France, the most important challenge. Following are some of the themes which will be discussed: the loss of autonomy of the elderly, handicapped people, the attitude in France toward alternative medicine, how the French deal with emergencies, measures of prevention and basic health education. An anthology of texts will be provided to stimulate thought on these difficult problems which concern all of us. Open only to students enrolled in the Nice Pre-Med program.

Credit 3 units. A&S IQ: HUM, LCD BU: HUM, IS EN: H

Typical periods offered: Summer

FRENCH 3193 Healthcare in France: Observational Internship

French 3193 offers students a real-world, behind-the-scenes experience of the French healthcare system. For four hours every weekday morning, students shadow physicians at the CHU Hôpital - Pasteur (centre hospitalier universitaire, university-affiliated teaching hospital) in Nice, France. In addition to the shadowing internship (stage d'observation), there is a required discussion session on Mondays from 1:00pm-2:00pm and students will attend one guest lecture per week given either by a medical professional at the CHU de Nice or another speaker whose work pertains to health cultures in France (generally on Thursdays, time TBD). Daily attendance at the internship, as well as at weekly discussion sessions and guest lectures is mandatory. As part of their work for course credit, students also maintain a daily observation journal and vocabulary notebook to record their reflections and insights gained throughout the duration of the internship and through the series of guest lectures. The course culminates in an oral presentation and written report detailing the benefits and challenges of the internship. Washington University and the Department of Romance Languages & Literatures have partnered with the CHU Hôpital - Pasteur for more than three decades, ensuring that students are placed in an internship aligned with their studies. Prerequisite: French 321/322 In-Perspective or French 308. Offered only in Nice.

Credit 3 units. A&S IQ: HUM, LCD BU: HUM EN: H

Typical periods offered: Summer

FRENCH 3200 Advanced Conversation: The Art of French Cooking

This class explores both historically and experientially the fine arts of French cooking. Students will investigate food culture from various perspectives, including recipes from the chefs of kings, famed literary homages, excerpts from contemporary writers, films, and cooking shows. They will present online food blogs or videos sharing their attempts to master an aspect of the historical, regional, or contemporary food culture we have studied; cooking is optional, but creativity is a plus. Topics to be explored include Terroir; the slow food movements; La table d'hote; the role of the cafe and the market in French and Francophone cooking; and reflections on our own national food cultures. Students will gain the necessary vocabulary and cultural knowledge to be able to converse about cuisine with ease with people from any Francophone country, preferably over a long meal. Prereq: Fr 307D.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

Typical periods offered: Spring

FRENCH 3210 Topics I: in Perspective

Focusing on topics of cultural and social importance, this course will offer students the opportunity to learn about defining moments in the French tradition. The specific topic of the course will vary from semester to semester, and may include works from different disciplines, such as art, film, gender studies, history, literature, music, philosophy, politics, science.

Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: ETH, HUM EN: H

Typical periods offered: Fall, Spring

FRENCH 3220 Topics II

Focusing on topics of cultural and social importance, this course offer students the opportunity to learn about defining moments in the French tradition. The specific topic of the course will vary from semester to semester, and may include works from different disciplines, such as art, film, gender studies, history, literature, music, philosophy, politics, science.Prereq: Fr 307D.

Credit 3 units. A&S IQ: LCD, LS BU: ETH EN: H

Typical periods offered: Fall, Spring

FRENCH 3252 French Out of France: Introduction to Francophone Literatures

An introduction to some of the other literatures in French: the literary traditions and cultural contexts of Francophone countries in North and sub-Saharan Africa and the Caribbean. Vibrant and productive cultures around the world have interacted with the French language and its literature to produce highly diverse texts of their own. We study some of them, focusing on issues like cultural adaptation, colonialism, and civilizing missions, and the responses to them. We also consider the varying meanings of the term Francophone, from conservative to liberal, and think about its implications for the study of French literature as a whole. Finally, we examine the ways in which contemporary mainland France has been irrevocably transformed by the Francophone presence. Works by Kourouma, Césaire, Kateb, and Lopes. Prereq: Fr 307D.

Credit 3 units. BU: IS

Typical periods offered: Spring

FRENCH 3500 Undergraduate Seminar in French Literature and Culture

An exploration of a variety of cultural icons, objects, myths, and traditions that define the French experience throughout the centuries. Topics vary. Prereq: French 308. SECTION 01. LITERATURE, ART, AND HISTORY OF THE FRENCH MIDDLE AGES. In France the Middle Ages is a period of intense artistic and literary creation despite an often brutal history. Feudal struggles, the Hundred Years' War, the Crusades, frequent epidemics, and famines add a tragic cast to daily life. Yet this period witnesses the birth of literature written in French (CHANSONS DE GESTE, courtly romances and poetry, theater), a tradition rich with knights and damsels in distress, stories of love and conquest. Cities are built, as are castles and cathedrals. Botanical gardens are planted. Elaborate wall tapestries and paintings begin to decorate the homes of lords and churches. France discovers the art of the book in the form of illuminated manuscripts. Men and women develop a taste for clothing and jewelry. The course explores this fascinating history by examining celebrated examples of the period's literature and art. It includes a visit to the medieval collection of the St. Louis Art Museum and the film VISITEURS DU SOIR.

Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM

Typical periods offered: Summer

FRENCH 3501 In Depth:

This course will cover special topics in French culture.

Credit 3 units. A&S IQ: LCD BU: IS

Typical periods offered: Fall

FRENCH 3502 Cultural Studies: Literature, Art, and History of the French Middle Ages

An exploration of a variety of cultural icons, objects, myths, and traditions that define the French experience throughout the centuries. Theme Fall, 2002: LITERATURE, ART, AND HISTORY OF THE FRENCH MIDDLE AGES. In France the Middle Ages is a period of intense artistic and literary creation despite an often brutal history. Feudal struggles, the Hundred Years' War, the Crusades, frequent epidemics, and famines add a tragic cast to daily life. Yet this period witnesses the birth of literature written in French (CHANSONS DE GESTE, courtly romances and poetry, theater), a tradition rich with knights and damsels in distress, stories of love and conquest. Cities are built, as are castles and cathedrals. Botanical gardens are planted. Elaborate wall tapestries and paintings begin to decorate the homes of lords and churches. France discovers the art of the book in the form of illuminated manuscripts. Men and women develop a taste for clothing and jewelry. The course will explore this fascinating history by examining celebrated examples of the period's literature and art. It will include a visit to the medieval collection of the St. Louis Art Museum and the film VISITEURS DU SOIR. Prof. de Courcelles's professional commitments in Europe will require her to be absent for several weeks during the semester. During the weeks without scheduled classes students will complete an independent project exploring one aspect of the course. In addition there will be short papers and/or exams. Prereq: Fr 308D or permission of Professor Stone.

Credit 3 units.

Typical periods offered: Fall

FRENCH 3530 Project Plus

This Summer Institute course combines 1) a course that examines French culture as it is represented in the evocative history of French châteaux, the arts, and contemporary lifestyle; 2) the student's project; and 3) the student's experiences as part of the community abroad (excursions, visits, group discussions). In class students gain background for appreciating the primary sites of the Institute: in the Loire Valley, Paris, and Brittany. The classroom experience is discussion-oriented, with small writing assignments and readings. The project is an individual research program that students conduct with a French native on a particular aspect of French culture. In the past students have dealt with serious topics such as the deportation of the Jewish community in Amboise during World War II; with less grave subjects such as the work of a local wine grower or goat cheese producer, and the culinary repetoire of French and American families; and current topics concerning the political situation in Europe and the euro. Following weekly conferences with the teaching staff, students present a formal report on their experiences to an audience comprised of other members of the group and the students' host families. Students at the Institute are expected to speak French in all group settings. Assignments in this course level-appropriate (students enrolled in French 385 will complete longer papers and projects than those enrolled in French 202; expectations for conversations are likewise adjusted accordingly). Required of all students attending the Summer Institute in France.

FRENCH 3600 Thinking-It-Through

Thinking-It-Through courses provide students with long views of contemporary issues. Cross-cultural perspectives from the French and Francophone world, past and present, help us to think creatively about the most pressing problems we face today. The subject -- which is of social, cultural, and/or political interest -- will change each semester. Beginning with a watershed moment in history, students will consider how the topic in question evolved over time by interpreting related forms of cultural representation and expression in order to develop an informed critical perspective on current debates. Prerequisite: French 308.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H

FRENCH 3700 French Social History

Studying L'HISTOIRE DES MENTALITES, this course explores how the concept of sickness, the perception of medicine, the role of the doctor, etc. evolved throughout the centuries. Texts are supplemented by a series of lectures offered by doctors in different specialties. Students complete a project on one area of related research. Open only to students enrolled in the Nice pre-Med Summer Program.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: BA, HUM EN: H

Typical periods offered: Summer

FRENCH 3701 In-Depth: Paris, Capitol of Modernity: A Digital 19th Century

The French assert that the world learned to be modern in 19th-century Paris. Even though this is not entirely true, the Paris we observe today owes a great deal to 19th-century interventions in the city's physical fabric. Our ideas about modernity are informed by the ways in which the French learned to observe and describe the radical changes in their capitol. This course will examine maps, guidebooks, urban descriptions, and fiction to see how Paris changed in the century that brought us urban modernity, including anonymity, city crowds, cycles of boom and bust, hugh-scale public works, energy and anomie. It will also introduce students to some of the tools for digital scholarship and the presentation of academic work to non-academic audiences. Students will collaborate in the creation of a textual database on Paris monuments, and learn to present their research on urban sites via ArcGIS's Story Maps. Prerequisite: French 308 or In-Perspective.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H

Typical periods offered: Fall

FRENCH 3702 In-Depth: Subtexts and Subterfuges

What persuades us that we understand a situation -- that we know the players, their intentions, and the effects of their actions? Do we rely on a parent's, lover's, or leader's moral authority or on our own sense of justice? Are we motivated by the coherence of their proposals or by our own emotional needs? All of the above? How, then, do we sort through layers of argument to detect ulterior motives and censored thoughts? Our class will focus on subtexts: hidden meanings, innuendo, ambiguity, veiled hints, omissions, and outright lies. We will consider how storytelling works to elicit particular responses in personal and commerical ads, travel brochures, cookbooks, political speeches, and street art. Tales of seduction by Perrault (Puss in Boots), Laclos (Dangerous Liaisons [excerpts]), and Proust (Swann in Love [excerpts]) along with Haneke's film of suspense and surveillance (Hidden) will focus our attention on techniques of camouflage and detection. The subtexts in these works will inform our own (thriller?) subplot of contemporary life: a creative project to top off the semester. Prerequisite: French 308.

Typical periods offered: Fall

FRENCH 3703 In-Depth: A Passion for Things
Imagine a collection of prized objects. What motivates a collector to acquire and display them? How do these objects allow us to understand the past as it defines our own heritage and that of others, what we choose to preserve or erase? These questions ground our study of the pleasures of collecting. A passion for things can be empowering, but it can also signal exploitation. What happens when the desire to possess extends to a person--when a person becomes the thing possessed? The passion to possess implies the power to dispossess, to take from others the property, privileges, and promises that were theirs. We will focus on three sites of power in which collections figure prominently: the court of Louis XIV at Versailles; the museums, department stores, and world's fairs of 19th-century Paris; and the world of objects in 20th-century poetry and photographs. The class will examine objects that speak to the relations between men and women; kings and subjects; humans and nature; ideas of freedom and efforts to suppress it. Authors and artists include Perrault, Lafayette, Duras, Baudelaire, Zola, Ponge, Vuillard, Caillebotte, Cartier-Bresson, and others. Prereq: In-Perspective or Fr 308.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H
Typical periods offered: Spring

FRENCH 3705 In-Depth: France and the Muslim World
France today has more Muslim citizens than any other country in Europe, and this fact puts the country's relationship with Muslims, both within and beyond its borders, constantly in the news. Starting with Napoleon's invasion of Egypt, we will examine the wide involvement of France in the affairs of Muslim countries: its presence in Egypt and Lebanon, and most notably its colonization of Morocco, Algeria, and Tunisia, which had an irreversible effect on French culture today. We will also consider the anthropology and cultural productions (literature, film, and art) of French people of Muslim origin. Given the influence of francophone Muslim religious scholars, we can not only speak of France and the Muslim world, but investigate France in the Muslim world. What futures become imaginable, when we see Muslims as an integral part of French culture, and France as part of the global Muslim community? Assignments will include writing for non-academic audiences, and the creation of a StoryMap presentation in ArcGIS. Prereq: In-Perspective or Fr 308.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM EN: H
Typical periods offered: Fall

FRENCH 3720 The Art of Health in Nice
This interdisciplinary course explores Nice and the South of France as inspirational locations for health, healing, and wellness. Recently designated a UNESCO world heritage site as the 'winter resort town of the Riviera,' Nice has long beckoned tourists, artists, writers, and health seekers with its cosmopolitan coastal location and vibrant landscapes. Through the lens of human well-being, we will examine various French and francophone art forms-including the visual, literary, culinary, horticultural, athletic, and therapeutic arts- and their enduring connection to the unique cultural and geographic context of the South of France. Academic excursions (included in program cost) to gardens, markets, museums, and villas will stimulate our senses and bring to life the places discussed in readings, illuminating the dynamic interplay between creativity and health in this captivating region. We will study works by the following artists, thinkers, and writers: Alain, Barthes, Brillat-Savarin, Cézanne, Chagall, Colette, Cousteau, Escoffier, Giono, Grimod de la Reynière, Malle, Matisse, Maupassant, Pagnol, Smollett, Van Gogh, Varda, and Vigo, alongside readings drawn from history,medicine, philosophy, and sociology. Prerequisite: French 321/322 In-Perspective or French 308. Taught only in Nice.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM EN: H
Typical periods offered: Summer

FRENCH 3740 In-Depth: Science Fiction
What we now call science fiction emerged from early tales of voyage and discovery, whose authors envisioned other times, places, customs, and perspectives. It flourished in the fantastic and futurist tales that first arose in France but were popularized in Germany, England, and America. An outgrowth of the scientific and the industrial revolutions, it informed the genres of opera, painting, and the novel before reaching the silver screen. Drawing on theories of the uncanny, we will consider how we determine whether stories are governed by the laws of nature (madness, dreams, coincidence) or the supernatural (ghosts, sylphs, devils). We will then explore when and how the Romantic realms of the gothic gave way to the dystopian worlds of science fiction that inform not only contemporary film but our current perception of reality. Readings by Cyrano de Bergerac, Voltaire, Cazotte, Balzac, Maupassant, Verne, Villiers de l'Isle-Adam, Zola, and Leroux; films by Resnais, Godard, and Jeunet. Prereq: In-Perspective or Fr 308.
Credit 3 units. A&S IQ: HUM, LCD, LS BU: HUM EN: H
Typical periods offered: Spring

FRENCH 3750 In Depth:
Narrative medicine is an approach grounded in the recognition that patients live and communicate their embodied experiences as stories. This approach underscores the need for medical practitioners to cultivate skills of observation, analysis, storytelling, and cultural competency -- skills that are traditionally developed in humanities coursework. In this course, students will hone their competencies in observation, close reading, and written and oral expression in French through readings of medical narratives. Texts will include Jean-Dominique Bauby, Le Scaphandre et le Papillon; Molière, Le Medecin Malgre Lui; Michel de Montaigne, De L'Experience; Marguerite Duras, La Douleur; and excerpts from works by René Descartes, Honoré de Balzac, Émile Zola, Olivia Rosenthal, and Philippe Lançon. Whether considering works of art, patient testimonials, or classic works of literature, we will observe carefully, describe and understand what we see, tell stories, and attend to the details of the stories that others tell. Prerequisite: French 308 or In-Perspective.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

FRENCH 3760 Cinema and Society: Feminist Filmmaking
Did you know that the inventor of narrative fiction film, and perhaps the only female filmmaker from 1896-1906, was a French woman? This course introduces students to French and Francophone cinema through the lens of the feminine. In this herstory of French-language film, we will explore works by female directors as well as representations of women and girls on the silver screen from cinema's silent origins to the empowered voices of the #MeToo era. In tandem, we will engage with key ideas from feminist critics like Simone de Beauvoir and Françoise d'Eaubonne. Class discussions will take an intersectional approach, addressing feminism's connections with the following topics: girlhood and adolescence; race and ethnicity; post-colonial cultures; gendered spaces/places and the environment; LGBTQ + identities; motherhood and domesticity. Our corpus includes classics from the French tradition as well as understudied films, running the spectrum from drama to documentary, to coming-of-age narratives and cult favorites, including works by Chantal Akerman, Yamina Benguigui, Alice Guy, Céline Sciamma, and Agnès Varda, among others. Prereq: In-Perspective or Fr 308.
Credit 3 units. A&S IQ: LCD, LS Art: CPSC BU: IS EN: H
Typical periods offered: Spring

FRENCH 3795 In Depth: Care Work
In this course we will study what it means to care for and about others, both within and beyond medical and institutional environments. Examining French and Francophone literary and cinematic representations of care, popular and scholarly discourses, and the testimonials of care workers, we will explore the question of care across difference: How does the labor of care bring to light (and rely upon) disparities in gender, class, age, and race, especially in colonial, postcolonial, and globalized contexts? What are the implications of feminist theories of a gendered ethics of care? What relations can care work forge between the human and more-thanhuman worlds? How does care work expose the vulnerabilities of patient and caregiver alike? This course is taught entirely in French and counts toward the French for the Health Professions (FPS) track and the minor in Medical Humanities. Prerequisite: one In Perspective course
Credit 3 units. A&S IQ: HUM, LCD, SC BU: HUM

FRENCH 3900 Undergraduate Independent Study
Prereq: Fr 201D and permission of the Director of Undergraduate Study.
Credit 3 units.
Typical periods offered: Fall, Spring

FRENCH 3901 Internship Practicum
Intended for students studying on a Washington University Program or a Washington University approved program abroad, this course combines internship experience with research and a RAPPORT DE STAGE (final report).
Credit 3 units.
Typical periods offered: Spring

FRENCH 3995 French Coursework Completed Abroad
This course is for 3000 level study abroad credits.
Credit 12 units.
Typical periods offered: Fall, Spring, Summer

FRENCH 3996 French Elective
This course is for 3000 level transfer credits.
Credit 0 units. EN: H
Typical periods offered: Fall, Spring, Summer

FRENCH 3999 Independent Study
Prereq: permission of the Director of Undergraduate Study and the instructor, Fr 325C, 326C or equivalent, and competence in oral and written French. Students may not receive more than six units of credit for independent study. Credit variable, maximum 3 units a semester.
Credit 3 units.
Typical periods offered: Fall, Spring

FRENCH 4000 Intensive Translation for Graduate Students I
The first part of a two-semester course sequence in reading and translating French. For graduate students in the humanities, social and natural sciences. Nongraduate students may enroll with permission of the department. Must be followed by Fr 401.
Credit 3 units. A&S IQ: LCD EN: H
Typical periods offered: Summer

FRENCH 4010 Intensive Translation for Graduate Students II
Continuation of Fr 400. For graduate students in the humanities, social and natural sciences. Prereq: Fr 400; credit for Fr 400 is contingent on completion of Fr 401.
Credit 3 units. A&S IQ: LCD EN: H
Typical periods offered: Summer

FRENCH 4050 Special Topics in French Language and Literature
Undergraduate seminar. Topics vary. May be repeated for credit. Prereq: Fr 325C and 326C (or, for students who have completed the Paris Business Program, completion of or concurrent enrollment in either course).
Credit 3 units.
Typical periods offered: Fall, Spring

FRENCH 4110 Intensive Writing in French: Timely Topics
This course enables advanced students to refine and develop their writing skills and to develop specialized vocabularies based upon current issues in the Francophone world chosen in light of their interests (Global Health, International Relations, Anthropology, Political Science, etc.). They will analyze the rhetorical strategies used in contemporary cultural debate and write creative, persuasive, and analytical compositions that prepare them to apply for internships and pursue careers in international medicine, business, law, diplomacy, and the arts. Students will complete a series of short papers, each with required revisions. Meets WI requirement. Prereq: Fr 307D, Fr 308D, or permission of instructor.
Credit 3 units. A&S IQ: LCD, LS, WI EN: H
Typical periods offered: Fall

FRENCH 4131 Advanced French and Translation
This course fosters an in-depth knowledge of the French language and accuracy in its use. It employs a comparative approach (linguistic and cultural) initiating students into the art of translation from English to French and from French to English and sensitizing them to the problem of cultural transfer. Students will acquire practical training, cultivating skills advantageous in the workplace by drawing on a wide variety of documents to develop translation strategies. Genres include fiction, autobiography, journalism, advertising, and correspondence spanning different eras, regions, and registers. This cours satisfies the college's writing intensive requirement. Prereq: In-Perspective or Fr 308.
Credit 3 units. A&S IQ: LCD, LS, WI EN: H
Typical periods offered: Spring

FRENCH 4150 The 19th-Century Novel: From Realism to Naturalism to Huysmans
In this seminar we will read some of the great realist novels of the nineteenth century, by the four masters of the genre: Balzac, Stendhal, Flaubert, Zola. We will also examine Huysmans's A REBOURS, which was written in reaction to the excesses of Realism. We will determine what characterizes the realist novel and how it has evolved from Balzac to Zola. We will consider its theoretical orientation, but we will also focus on the major themes it addresses: the organization of French society throughout the nineteenth century, Paris vs. the province, love, money, ambition, dreams, material success, decadence, etc. Prereq: Fr 325 and 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. 3 units.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

FRENCH 4161 Special Topics in 19th-Century Literature
Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. Art: HUM
Typical periods offered: Fall

FRENCH 4174 Travel in the Renaissance and the Literature of Discovery
Improved modes of transportation under the king Francis I facilitated travel in the Renaissance. Men and women were able to view famous cultural monuments on their continent and explore parts of the world where no one had ventured before, returning home with vivid tales of distant lands and exotic peoples. With the advent of the printing press, such fascinating stories were made available to a wider audience. This course examines this literature of discovery, paying special attention to the multiple genres that flourished at the time (historical narratives, diaries, correspondences, travelogues, elegiac poetry, adventure novels) as well as the historical and cultural contexts of these works. Other questions addressed include national identity and cultural differences, cultural interactions and influences, international relations, the impact of humanism, and the concept of CURIOSITAS. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

FRENCH 4178 Literature of the 16th Century
Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM EN: H
Typical periods offered: Spring

FRENCH 4191 The French Islands: From Code Noir to Conde
The French have been dreaming about the tropics ever since transatlantic trade became possible in the sixteenth century, and literature in French has reflected these dreams ever since. Closer to our own period, writers from the French Caribbean have written themselves into the French canon, winning prestigious literary prizes. This course will link these two phenomena by studying literature from and about the tropics from the 18th century to the present. In our readings, we will attempt to see the ways in which the literature from and about France's island possessions has contributed to the forming of cultural and political relations between France and the islands, but also among the islands and within the Americas. Almost all texts available in English for students not majoring in French; main seminar session taught in English with weekly undergraduate preceptorial in French. Prereq: Fr 325 and Fr 326. One-hour preceptorial for required for undergraduates.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM EN: H
Typical periods offered: Fall

FRENCH 4192 Dark Humor: Francophone Literature From West Africa
In 1960, most of the French colonies in Africa gained independence in a largely peaceful transfer of power. Since then, this development has been viewed alternatively as the triumph of self-determination, and as a hollow act undermined by neo-colonial French ministries, multinational companies, and corrupt governments. Media today commonly adopt a highly pessimistic tone when speaking of these phenomena, but literature from West Africa provides alternative ways of looking at the region, which today includes over 140 million French speakers. Reading authors such as Kourouma, Kane, Tansi, Tchicaya, and Lopes, we will consider the ways that literature enters into dialogue with political discourses represented both as tragedy and as farce. The main seminar (section 01) is taught in English; undergraduates also register for a weekly discussion (section A) conducted in French. Prereq: for undergraduates, Fr 325, 326, Thinking-It-Through, or In-Depth; for graduates not in French, reading knowledge of the language.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H
Typical periods offered: Spring

FRENCH 4200 20th-Century Literature II
Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates.
Credit 3 units.
Typical periods offered: Spring

FRENCH 4201 The Novel in the Feminine (Le Roman au Feminin)
Informed through feminist criticism (Beauvoir, Cixous, Kristeva), this course examines the deconstruction of the novel as a traditional genre by twentieth-century women writers such as Colette, Nathalie Sarraute, Marguerite Duras, Marguerite Yourcenar, Annie Ernaux, and Mariama Bâ. We place special emphasis on the representation of the writing woman in the text itself and on the issue of écriture féminine in its socio-cultural context. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates.
Credit 3 units. Art: HUM
Typical periods offered: Fall

FRENCH 4210 The 20th-Century Novel
In this seminar we examine the evolution of the French novel in the twentieth century. We closely read five great novels, by Proust, Gide, Céline, Robbe-Grillet, and Ernaux. We determine what characterizes the twentieth-century French novel and how it has evolved from Proust to Ernaux. We consider its technical aspects but will also focus on the major themes it addresses: love, art, memory, time, death, and the general problem of the human condition. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H
Typical periods offered: Fall

FRENCH 4211 The Novel of the 1930s: The Human Condition and the Meaning of Life
Most French novelists of the 1930's were no longer satisfied simply to entertain their readers, to bring formal innovations to their writing, to depict society, or to represent human consciousness. Economic transformations, technological advances, and the unspeakable horrors of WWI challenged traditional beliefs. Authors therefore dedicated themselves to examining the human condition and the meaning of life. In this seminar we will read five major novels of the period by Saint-Exupéry, Mauriac, Malraux, Céline, and Sartre. We will determine how each author approaches the fundamental questions of human existence and what, if any, answers he provides. Prereq: Fr 325 and 326 (or, for students who have completed the Paris Business Program, completion of either course). One-hour preceptorial required for undergraduates.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H
Typical periods offered: Fall

FRENCH 4220 French Theater From 1800 to the Present
We study selected plays of Hugo, Musset, Feydeau, Jarry, Claudel, Giraudoux, Anouilh, with particular attention to Romanticism, Symbolism, Existentialism, and absurdist drama. Close attention will be paid to the socio-political, philosophical and aesthetic contexts within which these plays were written, performed and received by the public. Videos of selected scenes will also be shown and serve as points ofdeparture for several classroom discussions, as will various influential critical theories about the nature and structure of modern French theater. Prereq: Fr 325 and 326. One-hour preceptorial required for undergraduates.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM
Typical periods offered: Fall

FRENCH 4221 Topics in French Literature: The Voyage of Self-Discovery
In our modern interconnected society, it is not always easy for young people to define who they really are or to discover and fulfill their potential, but it is encouraged and facilitated through education, travels, social contacts, and even technology. But it was not always so. In earlier times, individuals were often constrained by the prevalent social and moral values of their worlds and had a much harder time discovering their persona or fulfilling their needs and aspirations. This seminar explores the issues of self-discovery, initiation, and self-realization in the modern novel, including Balzac's EUGENIE GRANDET, Stendhal's LE ROUGE ET LE NOIR, Falubert's MADAME BOVARY, Mauriac's THERESE DESQUEYROUX; and Phillippe Grambert's UN SECRET. Prereq: Fr. 308.
Credit 3 units. Arch: HUM Art: HUM BU: IS
Typical periods offered: Fall

FRENCH 4240 19th- and 20th-Century Poetry
Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for required for undergraduates.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM EN: H
Typical periods offered: Spring

FRENCH 4250 19th-Century Poetry
Reading and analysis of poetry of the three major 19th-century schools: romantic, parnassian, symbolist. Emphasis on textual explication. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM
Typical periods offered: Fall

FRENCH 4260 Avant-Garde Poetry of the 20th Century
Study of French avant-garde poetic movement of the early 20th century, with emphasis on Futurism, Cubism, Dadaism, and Surrealism. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. Art: HUM
Typical periods offered: Spring

FRENCH 4270 Literature of the 17th Century I
UNDERGRADUATES ONLY REGISTER FOR THIS SECTION Prereq: Fr 325, 326, Thinking-It-Through, or In-Depth or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM
Typical periods offered: Fall

FRENCH 4271 French Classical Theater
A study of works by Corneille, Molière, and Racine. We consider how the theater contributes to the rise of absolutism in France in the seventeenth century. The depiction of kings and the role of primogeniture; the function of sacrifice; the marginalization of women; the glorification of Ancient Rome; Orientalism; tensions between family and State; and the rise of the bourgeoisie in these plays suggest how the dramas played out on stage mirror the historic spectacle of the court over the course of the century as it develops an increasingly centralized authority culminating in the image of an all-powerful Louis XIV. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM
Typical periods offered: Fall

FRENCH 4280 Literature of the 17th Century II
This seminar examines critical points of intersection in the 17th century. All connections engage texts as well as images. We will explore the expansion of knowledge as reflected in the mapping of bodies (anatomy), cities, and countries; humans in relation to animals; commerce and the rise of the bourgeoisie that challenges the privileges of the aristocracy; the splendors of nature and culture as manifest in the magnificent Versailles gardens, the tulip craze, and landscape painting; the lure of the exotic as part of everyday experience; and links between art and science. These topics will allow us to situate classical France in relation to the periods that precede and that follow it: the Renaissance and the Enlightenment. We will view the French monarchy in relation to both Italy, whose art provided much inspiration, and Holland, where the prosperity of merchants supported an art market that included Vermeer, de Hooch, and other celebrated Golden Age painters, all who are so unlike the artists who flourished under Louis XIV. Works will include Corneille's Horace and Surena; Racine's Berenice and Phedre; Descartes's Discours de la Methode; La Bruyère's Caracteres; Lafayette's Princesse de Cleves; Pascal's Pensees; Graffigny's Lettres d'Une Peruvienne; extracts from the Encyclopedie; art by Le Brun, Poussin, Patel, Bernini, Vermeer and his contemporaries, and Boucher; anatomical drawings by Vesalius; as well as maps and cityscapes. Prerequisites: French 325C and French 326C.One-hour preceptorial required for undergraduates.
Credit 3 units. A&S IQ: LCD Art: HUM EN: H
Typical periods offered: Spring

FRENCH 4281 Order in the Court: Classical Struggles During the Reign of Louis XIV
Beginning with a study of Versailles, we examine the spectacular dimensions of artistic production under Louis XIV, including architecture, visual arts, and landscapes, in addition to literature. The recent historical novel L'ALLEE DU ROI, which details the romance between the king and his mistress and then second wife Mme de Maintenon, and the MEMOIRES of Saint-Simon help to set the stage for us to appreciate the intrigues at court. Situating the king at the head of a hierarchical and orderly court structure, we examine some of the less harmonious elements of court-dominated life offered in representations by Corneille (SURENA), Molière (LES FEMMES SAVANTES), Racine (MITHRIDATE, PHEDRE), La Rochefoucauld, La Bruyère, La Fontaine, Mme de Sévigné, Pascal. We consider the ways in which the court assures its power through primogeniture, the right of the eldest born son to inherit power, as well as through strict codes of etiquette and the generosity of the crown to its loyal and productive followers. We examine how these factors are insufficient to protect the monarchy against the contravening forces of political ambition,

family struggles, the emerging role of women, religious faith, and the devastating effects of war and disease. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates.

Typical periods offered: Fall, Spring

FRENCH 4311 Voices of Dissent: Enlightenment Principle and Social Protest
The eighteenth century saw a rise in overtly moralizing texts, on the one hand, and unapologetically immoralist philosophies on the other. We focus on texts that avoid these extremes, allowing multiple voices to be heard. With the aid of excerpts from Genette, Bakhtine, Todorov, and Barthes, we identify the voices of dissent in several eighteenth-century genres, including satire, the tale, the novella, the philosophical dialogue, theater, autobiography, and the epistolary novel. By reading authors such as Voltaire, Montesquieu, Prévost, Diderot, Cazotte, Rousseau, Beaumarchais, and Charrière, students come to appreciate a third tendency in eighteenth-century texts that is crucial to our understanding of the Enlightenment: the tendency to validate conflicting perspectives. We consider whether a moral can be derived from a text that consistently questions the voice of authority. We analyze the implications of such questioning in the years before the Revolution. Finally, we consider the extent to which the overzealous censorship laws of the period may have obliged authors to couch socially controversial ideas in narrative forms that seem to deny their own assertions. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One hour preceptorial required for undergraduates.
Credit 3 units.
Typical periods offered: Spring

FRENCH 4312 Literature of the 18th-Century I

Typical periods offered: Fall, Spring

FRENCH 4321 Art, Revolution, and Society
This course examines major eighteenth-century aesthetic treatises and literary texts that explore solutions for aesthetic quandaries. Authors include d'Alembert (PREFACE A L'ENCYCLOPEDIE), Rousseau (DISCOURS SUR LES SCIENCES ET LES ARTS, LETTRE A D'ALEMBERT), Diderot (ENTRETIENS SUR Le Fils naturel, LE PARADOXE DU COMEDIEN, LE NEVEU DE RAMEAU), Cazotte (LE DIABLE AMOUREUX), Beaumarchais (LE BARBIER DE SEVILLE, LE MARIAGE DE FIGARO), Staël (DE LA LITTERATURE, CORINNE). These works allow us to study some of the major insights into the aesthetics of music, painting, and the performing arts with an eye to how these aesthetic revolutions expanded the scope and influenced the form of the French language and literary texts. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM EN: H
Typical periods offered: Fall

FRENCH 4331 Women of Letters
We investigate the representation of women in eighteenth-century texts. Why did the novel and epistolary fiction became so closely associated with women as writers, heroines, and readers in the course of the century? Why were women considered exemplary and yet, at the same time, a threat? The eighteenth century saw the last of the salons led by women well-versed in philosophy, literature, art, and politics. It saw the reinforcement of the opposition between the public and the private sphere. Woman was the incarnation of the ideal of liberty and yet excluded from the Rights of man. Rousseau praised women's role as nurturers and peace-makers but cast into doubt their capacity for genius. Literary texts that feature women became a sparring ground for two of the century's major literary trends: SENSIBILITE and LIBERTINAGE, for a woman's sensitivity was thought to contain the seeds of virtue and licentiousness. We investigate philosophical discourses on the senses and emotions and political discourses on republican responsibility. We read these texts in conjunction with the literary works of men and women authors, including Prévost, Marivaux, Graffigny, Riccoboni, Diderot, Rousseau, Charrière, Laclose, Sade, and Staël. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One hour preceptorial required for undergraduates.
Credit 3 units. Art: HUM
Typical periods offered: Fall

FRENCH 4341 Enlightenment Energy: Comedy, Eroticism, and the Grotesque
In this course we will examine works in which the comic, the erotic, and the grotesque--base urges that eighteenth-century audiences deplored yet found entertaining--made inroads into the literature of the time. The Enlightenment was highly suspicious of impulses and intuitions that challenged or escaped the bounds of virtue, sentiment, and reason. French philosophes debated whether genius lay in the supreme mastery or the spontaneous creation of art, whether talent was inborn or could be acquired through practice. Reading texts that span the long eighteenth century, by authors such as Molière, Marivaux, Crébillon fils, Voltaire, Diderot, Restif de la Bretonne, Beaumarchais, Sade, and Hugo, we will investigate how the satirical, the bawdy, and the profane served as the wellspring of Enlightenment inspiration, giving rise to visions of an ideal society. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for required for undergraduates.
Credit 3 units.
Typical periods offered: Fall

FRENCH 4351 Philosophical Fictions
The French Enlightenment witnessed a veritable explosion of short fiction, including philosophical, oriental, moral, and libertine tales bearing such self-conscious titles as A THOUSAND AND ONE FOLLIES and THIS IS NOT A TALE. Though written by the literary elite and not considered children's literature, the genre enjoyed widespread popular appeal and had the power to shape mentalities. Often satirical in tone, these tales served to convey and question contemporary political, philosophical, scientific, religious, and moral trends. They inspired some of the most vivid illustrations of the day and were often circulated as part of the literary underground. We will read works by Crebillon fils, Voltaire, Diderot, Cazotte, Charrière, Sade, and Staël alongside excerpts

from French cultural history on eighteenth-century mentalities, salons, and print culture. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM EN: H
Typical periods offered: Spring

FRENCH 4360 Romanticism
This course studies pre-romantic themes in the works of Madame de Staël and Chateaubriand and of their evolution in the poems of Lamartine, Musset, and Vigny, the theater of Victor Hugo, and the novels of George Sand and Victor Hugo. Emphasis is placed on the emergence of a littérature du moi (literature of the self), the redefinition of the place of the artist in society after la bataille romantique, and the stylistic innovations that lead to modernism. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. Art: HUM
Typical periods offered: Fall

FRENCH 4390 17th-And 18th-Century Theatre
This course will trace the development of French drama from the Classical Age through the Enlightenment. We will read major plays of the seventeenth century by Corneille, Moliere and Racine, as well as plays by Marivaux and Beaumarchais from the eighteenth century. We will also explore the debates surrounding the theatre by writers such as Diderot and Rousseau. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units.
Typical periods offered: Spring

FRENCH 4391 Classicism/A-Classicism
Among the hallmarks of seventeenth-century, French classicism celebrated reason, order, balance, and a power often associated with the great achievements of Ancient Greece and Rome. Reason, however, coexisted with dreams and madness; order encountered threats both political and sexual; disharmony persisted despite longings for justice; and depictions of Antiquity flourished alongside those of the Orient, the exotic other world of the East. The course explores these a-classicisms, or countervailing forces, by studying the challenges that ground the struggles and seductions in dramas by Corneille, Molière, and Racine as well as in the novels of Madame de Lafayette. We read Graffigny's LETTRES D'UNE PERUVIENNE, Prévost's MANON LESCAUT, Laclos's LIAISONS DANGEREUSES to understand classicism retrospectively, through the a-classicism of the eighteenth Century's treatment of identity, alienation, desire, and societal tensions. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for required for undergraduates.
Credit 3 units.
Typical periods offered: Spring

FRENCH 4392 Commemorating the King
The court of Louis XIV at Versailles was remarkable for its grandeur, its consolidation of power, and its celebration of the Sun King. Arguably, all aspects of court life were regulated by the crown and all things produced--whether wars or monuments; art or science; novels or histories--were tributes to the king. All reflected a certain ideology of commemoration, that is, an implicit or explicit validation of the monarch's privilege and prestige, both for his contemporaries and for posterity. We will explore how authors (including Louis XIV, La Bruyère, La Rochefoucauld, Perrault, La Fontaine), artists (Lebrun, Rigaud, Poussin, Félibien), and historiographers/memorialists (Racine, Saint Simon) support the ambitions of the crown through their works. Modern critics Elias, Marin, Burke, and Merlin will guide our research into the activities of the royal family, the ideology of absolutism, and the role of art in affirming the power of Versailles as we continue to memorialize it through surviving texts, monuments, and images. Prereq:Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for required for undergraduates.
Credit 3 units.
Typical periods offered: Spring

FRENCH 4410 From Symbolism to Surrealism
This course presents a survey of major French dramatic works from the late 1800s to the mid-20th century, including both innovative plays and theoretical treatises by celebrated writers such as Maeterlinck, Villiers de l'Isle-Adam, Jarry, Apollinaire, Breton, Vitrac and Artaud. It examines how in running contrary to other important movements of their general time period (e.g., Romanticism, Realism, Naturalism) these works constitute major examples of what will come to be widely known as Modernism. Attention will also be paid to the ways in which these types of plays gave rise to later forms of theater, like those found in Existentialism and the Théâtre de l'Absurde. Prereq: Fr 325 or Fr 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM
Typical periods offered: Spring

FRENCH 4430 Contemporary Francophone Literature
A general survey of Francophone literature. This seminar examines representative texts of Quebec, Acadia, Africa, and West Indies. Authors to include Antonine Maillet, Louis Hémon, Michel Tremblay, Gérard Leblanc, Anne Hébert, Maryse Condé, along with the influential poets of négritude, Senghor and Césaire. This course counts towrds the seminar requirment for the major. Prereq: Thinking-It-Through or In-Depth.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM
Typical periods offered: Spring

FRENCH 4440 Modern Francophone Poetry
The first half of this course consists of close readings of the founders of NEGRITUDE: Césaire, Senghor, and Damas. While the political and historical impact of these poets is discussed in some depth, we analyze their poetry primarily in terms of its aesthetic value and concerns. We study American influences such as jazz and the poetry of the Harlem Renaissance along with French influences. The second half of this course focuses on the contemporary poetic scene in Africa and the Caribbean. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. Art: HUM
Typical periods offered: Spring

FRENCH 4470 The Medieval Literary Arts
How do medieval French writers understand the structures and functions of the human body? What kinds of bodies are considered disabled? Are womanhood, childhood, and old age construed as disabilities? in this course we will read texts of varied genre--farces, saints' lives, fabliaux, poems, romances, journals and chronicles--as we consider how, if at all, disability exists as a social or literary construct in the Middle Ages. Texts include Philippe de Beaumanoir's MANEKINE, Courtebarbe's TROIS AVEUGLES DE COMPIÈGNE, Guillaume de Machaut's VOIR DIT, and the farce LE GARÇON ET L'AVEUGLE; excerpts from Jean de Meun's ROMAN DE LA ROSE, from the OVIDE MORALISÉ and from Christine de Pizan's MUTACION DE FORTUNE; and poems by Rutebeuf, Deschamps, and Molinet, as well as critical and theoretical texts from the emerging discipline of disability studies. Texts will be

available in modern French; no prior study of Old French language is necessary. This course counts towards the seminar requirment for the major. Prereq: Fr 325 or Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

FRENCH 4480 From Arthur to the Grail
Conducted in English. A broad survey of the Arthurian legend: its origins, its elaboration in French, English, and other medieval literatures, and its expression in modern literature (especially English and American) and in the visual arts, film, and music. All readings available in English. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM
Typical periods offered: Spring

FRENCH 4490 Old French
To enable students to read Old French, this course offers a brief presentation of grammatical concepts and forms; close reading, translation, and discussion of selected medieval texts. Knowledge of Latin useful but not essential. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units.
Typical periods offered: Spring

FRENCH 4500 Women and the Medieval French Literary Tradition
The Middle Ages constitute a beginning--a period when new languages and literatures came into being, along with Romanesque book-illumination and stained glass, Gothic cathedrals, Gregorian chant, Troubadour song, crusades for the Holy Land, and quests for the Holy Grail. Medieval French Literature is therefore a new literature, defining itself against antique models and its own rich multilingual, highly visual, and oral culture. This course provides an overview of this diverse and fascinating French literary tradition while focusing on the status of women in the literary production of the Middle Ages. Particular attention is given to women's role in the creation of texts as authors and patrons. We also examine how gender roles are constructed and challenged through the literary representation of female characters. Readings include examples from major genres: Marie de France's LAIS, Chrétien de Troyes's LANCELOT, Rutebeuf's VIE DE SAINTE ELYSABEL, the anonymous AUCASSIN ET NICOLETTE, as well as Fabliaux, poetry of the Trouvères and Trobairitz, excerpts of the ROMAN DE LA ROSE, and works by Christine de Pizan. All readings and discussions are in modern French. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for required for undergraduates.
Credit 3 units. Art: HUM
Typical periods offered: Spring

FRENCH 4510 French Literature of the Middle Ages I
French literature from the beginning to 1250. The course emphasizes CHANSONS DE GESTE, courtly romance and lyric, and early drama. Most works read in modern French. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H
Typical periods offered: Fall

FRENCH 4520 French Literature of the Middle Ages II

Typical periods offered: Fall

FRENCH 4530 History of the French Language
Study of phonetic and morphological evolution of the French language with side glances at historical events that shaped this development. No previous knowledge of Latin necessary. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.
Credit 3 units.
Typical periods offered: Fall

FRENCH 4550 Intersectional Identities in Medieval France
Were medieval French identities intersectional? What cultural evidence is there -- in literature, theatrical performance, the visual arts, and the artifacts of everyday life -- for such identity categories as race, sexuality, or disability? In this course, we will investigate medieval French imaginaries of the racialized, gendered, classed, and abled/disabled body, seeking to do the following: (1) understand the systems of power and privilege that undergirded medieval identities; (2) critique the contemporary perception of medieval Europe as an all-white, male-dominated space; and (3) explore how contemporary critical identity studies can deepen our comprehension of medieval culture and how medieval materials can offer new insights into contemporary identity formations. This course will be taught in English, with a weekly discussion section in French for undergraduates enrolling for French credit. Prerequisite: French 325, French 326, Thinking-It-Through, or In-Depth.
Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM BU: BA, HUM EN: H
Typical periods offered: Fall

FRENCH 4560 Romance Philology
Study of the evolution of the major Romance languages from their common Latin origins. Knowledge of classical Latin not required, but acquaintance with phonetics of at least one Romance language extremely helpful. Conducted in English. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates.
Credit 3 units.
Typical periods offered: Fall

FRENCH 4580 Nature, Landscape, and Travel in the Middle Ages
Through an examination of the concept of nature in the Middle Ages, the course analyzes the importance of the presence or absence of landscapes in medieval literature, including CHANSONS DE GESTE, courtly romances, ROMAN DE LA ROSE, accounts of travel and pilgrimages, poetry, and theater. We examine the movements of medieval men and women from one place to another; their concepts of the relation between the nature and culture; their emotions when confronting nature; the various means they use to describe space and travel; the function of nature and landscapes within individual works. Each text is situated within the general framework of the history of the language and the ltierature of the period. The thematic focus of the course is informed through theological, philosophical, and anthropological perspectives essential to an appreciation of all medieval texts. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates.
Credit 3 units.

Typical periods offered: Fall

FRENCH 4581 Sacrifice and Service: Masculinity and the Medieval French Literary Tradition

The Middle Ages constitute a beginning: a period when new languages and literatures--along with Gothic cathedrals, Troubadour song, Romanesque art, crusades for the Holy Land, and quests for the Holy Grail--come into being. By focusing on the notion of service, we will study how medieval society establishes a hierarchy of power that encompasses religious, feudal, and courtly relationships. Particular attention will be given to the construction and testing of gender roles. What are men and women asked to sacrifice? Whom and what are they supposed to serve? How do the concepts of honor and heroism motivate the service of knights and heroines to their king and God? Texts to include: LA CHANSON DE ROLAND, LA QUETE DU SAINT-GRAAL, LA VIE DE SAINT ALEXIS, LE JEU D'ADAM, Béroul's and Thomas's versions of LE ROMAN DE TRISTAN, Chrétien de Troyes's LE CHEVALIER AU LION OU YVAIN, Rutebeuf's MIRACLE DE THÉOPHILE, and Christine de Pizan's famous poem on Jeanne d'Arc. All readings in modern French. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for required for undergraduates.

Credit 3 units.

Typical periods offered: Spring

FRENCH 4590 Writing North Africa: Francophone Literature of the Maghreb

With statues of colonizers coming down around the world, France reckons with its colonial legacy in North Africa. Ever since their conquest of Algiers in 1830, the French have been fascinated by writing from across the Mediterranean. Beginning with nineteenth-century French travel narratives about Algeria, the colonial era defined ideas of the exotic. As Algeria, Morocco, and Tunisia gained independence from France in the mid-twentieth century, North African authors often wrote their own literature in the language of their former colonizer. These authors and their contemporary descendants continue to create and challenge the ideas of postcolonial francophone literature today. The main seminar sessions are taught in English, with additional required weekly undergraduate discussions (section A) in French. Prerequisites: for undergraduates, French 325 or 326, Thinking-It-Through, or In-Depth; for graduates not in French, reading knowledge of the language.

FRENCH 4680 Topics in French Literature: Disability Studies, Before Disability

How do medieval and Renaissance writers understand the structures and functions of the human body? What kinds of bodies are considered disabled? Are womanhood, childhood, and old age construed as disabilities? In this course we will read texts of varied genre--farces, saints' lives, short comic tales, poems, romances, journals, essays, and chronicles--as we consider how, if at all, disability exists as a social or literary construct in the Middle Ages and Renaissance. We will also read critical and theoretical texts from the discipline of disability studies, interrogating the applicability of this largely modern-focused approach to premodern societies. Course taught in French. Texts will be available in modern French; no prior study of the Middle Ages or of Old French language is necessary. Prerequisites: French 325, 326, Thinking-It-Through, or In-Depth. This course counts towards the French for Medical Professionals track. One-hour preceptorial required for undergraduates.

FRENCH 4711 Mourning in Haitian Culture

The French Centre National de Ressources Textuelles et Lexicales defines a reposoir as an altar adorned with flowers and ornate foliage erected during a funeral procession onto which a priest places the holy sacrament in a moment of rest. In Haiti, repozwa has multiple meanings: it can refer to a person who provides a safe harbor, a mother or a matriarch, an archive or a repository, it can also designate a resting place where the remains of a person and the memories associated with them lie in repose. In this course, we will examine how Haitian literature - memoirs, novels, poetry, and theater - acts as a repozwa in all of its valences and how it can assist those left behind in their process of mourning. This course counts toward the seminar requirement for the major. Prerequisite: Thinking-It-Through or In-Depth. 3 units

Credit 3 units.

Italian

ITAL 1000 Elementary Italian
Taught in Italy at the Italian Summer Language Institute.
Credit 3 units. A&S IQ: HUM, LCD, LS BU: HUM EN: H

ITAL 1010 Elementary Italian in the Everyday World, Level I
This course stresses the rapid acquisition of spoken ability, with attention to the development of reading, writing, and listening skills through contextualized learning and engagement with culturally authentic materials. Designed for students with no prior knowledge of Italian or minimal experience in another Romance language.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring

ITAL 1015 Introductory Italian for Visual Arts
Students learn methods of effective communication, the rapid acquisition of spoken ability, and a working vocabulary for the visual arts: drawing, painting, sculpture, architecture, photography, the museum, etc. Students will also learn beginning reading and writing skills.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring

ITAL 1017 Elementary Italian
This is a beginning language course stressing rapid acquisition of spoken ability with some attention to the development of reading, writing, and listening skills as well. It is designed for students with no prior knowledge of Italian or minimal experience in another Romance language.
Credit 5 units. A&S IQ: HUM, LCD, LS BU: HUM

ITAL 1020 Elementary Italian in the Everyday World, Level II
Continuation of Ital 101D. This sequence stresses effective communication and the rapid acquisition of spoken ability with increased attention to the development of reading, writing, and listening skills. Prerequisite: Ital 101D or placement by examination.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring

ITAL 1030 Elementary Italian 101 and 102
Taught at the Italian Summer Language Institute in Italy and in-house.
Credit 3-6 units. A&S IQ: HUM BU: HUM
Typical periods offered: Fall, Spring

ITAL 1060 Accelerated Elementary Italian in the Everyday World, Level I
This course is designed especially for students with previous language study. It moves at an accelerated pace toward the acquisition of spoken ability, with attention to the development of reading, writing and listening skills through contextualized learning and engagement with culturally authentic materials.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring

ITAL 1070 Accelerated Elementary Italian in the Everyday World II
Continuation of Italian 106D. Designed for students whose previous study of French or Spanish will enable them to grasp the principles and rules of Italian grammar more efficiently. Emphasis on all four language skills: speaking. listening, reading, writing. Prereq: Italian 106D or permission of instructor.
Credit 3 units. A&S IQ: HUM, LCD, LS BU: HUM
Typical periods offered: Summer

ITAL 1100 First-Year Seminar: Italy's Invention of the Modern Museum
This course traces the development in Italy of what we know as the modern museum. Unfolding chronologically from the Renaissance to the current day, the course will examine the origins and rise of art, natural history, science, and national museums across the peninsula from Rome to Venice, Florence to Naples. We will study the establishment of the early public art museums epitomized by the Vatican Museums, the Uffizi Gallery, and the Capitoline Museums. We will examine the impact on national and cultural identity of Fascist propaganda museums instituted under Mussolini's regime, and we will conclude with an examination of extraordinary new museums in Italy, such as the interactive MUSME (Museum of Medicine) in Padua, and the MEIS (National Italian Judaism and Shoah Museum) in Ferrara. Art Curators, and Museum directors will visit our course.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM, IS EN: H
Typical periods offered: Fall, Spring

ITAL 1101 First-Year Seminar: Italian Literary Culture: Identity, Subjectivity, Audience
In this course we'll sample eight centuries of Italian literary culture by reading some of its greatest works. While familiarizing ourselves with key Italian authors (and some outliers); we'll also work to clarify our thinking about three problems: (1) identity (How does each work express an idea of italianness? What other elements of identity, such as gender or religion, are in play? Why do authors sometimes conceal their true identities by using a nom de plume?); (2) subjectivity (How does the author or narrator establish their place in the world?); (3) audience (For whom does the author write? Is the author's audience the same as the narrator's? How do authors make their writings available to others?). Authors studied include Boccaccio, Petrarch, Vasari, Galilei, Collodi, Ginzburg, Ferrante. Three short papers. Class conducted in English with readings in English.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, HUM EN: H
Typical periods offered: Fall, Spring

ITAL 1102 Refracted Light: How Others View Italy
Throughout the centuries Italy has both enjoyed and suffered the fascinated gaze of foreigners, who have written about it, painted it, made music and films about it. Drawing principally on prose writings from the eighteenth to the twentieth centuries, in such varied genres as the short story, the novel, the mystery novel, travel writing, and the memoir, this course will examine the images of Italy that non-Italians project. Beyond learning about Italy, students will consider their own

idea of Italy, examine their own frame of reference and cultural biases, interrogate a variety of stereotypes, and ponder how well one can truly understand a place as an outsider or reader. Authors studied include Stendhal, Dickens, James, Forster and Mann, and James, as well as such contemporary writers as Michael Dibdin and Shirley Hazzard.

ITAL 2010 Intermediate Italian in the Everyday World, Level III
This course aims for students to achieve intermediate proficiency in speaking, listening, reading, and writing. Focus is placed on vocabulary building and increased facility with Italian grammar through interactive exercises and the use of authentic materials, such as readings and videos. Regular compositions and exams as well as a final exam. Prerequisite: Ital 102D or higher.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring

ITAL 2017 Italian Level III
This is our third-semester course, open to students who will have completed Italian 102D and/or 107D before or in Spring 2013. The course offers an extensive review of basic grammar structures as well as a guided introduction to reading, and lessons in contemporary Italian culture.
Credit 5 units. A&S IQ: LCD, LS
Typical periods offered: Summer

ITAL 2150 Conversation/Culture
This course examines Italian culture through a focus on a particular theme or themes. The course consists of units focusing on practical experiences and real-life interactions. As students advance through each unit, they develop collaborative projects such as skits, presentations, multimedia, and artwork.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM
Typical periods offered: Fall, Spring, Summer

ITAL 2700 The Italian Play
Reading, study, and performance of one or more Italian plays. Emphasis on improving pronunciation and diction, with the stage as a classroom and the performance the final examination. Prerequisites: two years of college Italian or equivalent, and permission of instructor. Enrollment limited. Credit/No Credit only.
Credit 3 units.
Typical periods offered: Fall

ITAL 2800 Sex in Italian Culture and Media
From XIXth century hotbed of sexual tourism to XXist century idyllic scenario of Guadagnino'ssteamy romance Call Me by Your Name, Italy has been cast globally as an imaginary site of sexual freedom. Throughout the 20th century, Italy's sexual culture and mores have been shaped more by a climate of discretion, secrecy, and scandals than by overt identity politics. However, between the early 70s and the first Rome Pride in 2000, an Italian movement of sexual activism featuring activists, writers, and artists have impacted globally the ways in which we experience and talk about bodies, desires, and sexual identities nowadays. How do we think, represent, and talk sex in Italian culture? What is queer about Italian culture and how does queer translate into Italian language? This course introduces students to the study of Italian cultural productions on sexuality between discretion and identity politics spanning early sexological work, accounts of homosexuality under Fascism, transessualita Italian-style, sexual manifestos, photographic archives, AIDS fiction, LGBTQI films and YouTube videos, transnational queer comedies, drag king performances, etc. The class is taught in English with no prerequisite necessary. No Final.

ITAL 2900 The Culture of Food in Italy
This interdisciplinary course will provide students with an introduction to Italian culture presented through an exploration of one of Italy's most appreciated aspects around the world: its food. A major focus will be on understanding the extraordinary significance of food in the definition of Italianness and the influence of gastronomy in the creation of national identity. Some of the questions that will guide our exploration will be: how has Italian cuisine changed from antiquity through the Middle Ages and Renaissance, from the political unification in 1861 till today? How do national identity and national cuisine relate? How can food become a tool of political power? How do different products, preparation methods, and consumption patterns, determine the Italian approach towards food that has become renowned (and often misrepresented) all over the world? Students will learn through a combination of lectures, class discussions, presentations, hands-on experiences, and interactions with representatives of the Italian food scene in St. Louis. Texts will include excerpts from literary works (such as Boccaccio's Decameron and Collodi's Pinocchio), academic articles, food magazines and blogs, cookbooks, interviews, and films/documentaries. Students will have the opportunity to increase their vocabulary, review and practice major grammar structures, and improve their conversational and presentational skills in Italian. The course will be taught in Italian. Prereq: Italian 201D

ITAL 3010 Oral Communication I
Designed to offer students an opportunity to practice and refine their conversational skills while expanding their practical vocabulary. Wide variety of topics for discussion; brief oral reports. Regular homework assignments with emphasis on web-based research and learning. Prereq: Italian 201D.
Credit 3 units. A&S IQ: LCD EN: H
Typical periods offered: Fall, Spring

ITAL 3070 Advanced Italian in the Everyday World
The course aims at reinforcing and developing advanced grammar structures and writing abilities through the study of a variety of media centered around the theme of humor. Have you ever laughed . . . in Italian? Materials include literary excerpts, short stories, film, television clips, and songs. Our focus will be on grammar and syntax as the bases to understanding contemporary Italian humor. Essential for further study of Italian language and literature, this course must be taken before or concurrently with Ital 323C and 324C. Prereq: Ital 201D, or permission of instructor.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring

ITAL 3080 Grammar and Composition II
A continuation of Italian 307D, this course features advanced lessons in Italian syntax and vocabulary and an introduction to the analysis of poetry and theatrical texts, with the goal of improving both reading and writing in Italian. The basis of our work will be a series of readings having a common theme, desire requited and unrequited. We will think about what poets desire, how they give verbal expression to it, and how the success or failure of their pursuit informs their writing. Likewise we will look at how playwrights exploit this theme as a plot device. Readings include poetry by Petrarch, Michelangelo, Tasso, and Montale, as well as two comedies. Grammar exams and regular composition assignments; final exam. Essential for further study of Italian language and literature, this course must be taken concurrently with Italian 323C or 324C. Prereq: Ital 307D or permission of instructor.

This course may be taken concurrently with Italian 3070, 3090, 3230, 3240 or 3270.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

ITAL 3221 Topics: The Jewish Experience in Italy
This course will examine the social and political history of the Jews of Italy from the period of Italian unification through the end of the Second World War. We will look through two different prisms: first, the constant of Jews' minority status in a Catholic country at a time when Church doctrine was hostile to them and second, their changing status during significant moments in the brief history of the Italian monarchy. Under the latter rubric we will study the rehabilitation of the Jews under liberal political philosophies, their problematic relationship with Fascism, and finally the arrival of the Holocaust in Italy and efforts to defend Jews against Nazi genocide. We will approach these topics wherever possible through primary texts, including essays, memoirs, and novels. Reading knowledge of Italian is not required. Readings in English; some readings in Italian for Italian majors. Discussion in English. Prerequisite for Italian majors: Italian 307D; no prerequisite for students in other majors. Three five-page papers. PLEASE NOTE: THE L75 5221 CROSS-LISTING COURSE IS FOR GRADUATE STUDENTS ONLY.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM, IS EN: H
Typical periods offered: Fall, Spring

ITAL 3222 Topics: Fascism and Resistance: Past and Present
A multidisciplinary course focusing on a significant aspect of Italian culture. The topic will differ from semester to semester and may draw on art, film, history, gender studies, literature, music, philosophy, politics, science. A multidisciplinary course focusing on a significant aspect of Italian culture. The topic will differ from semester to semester and may draw on art, film, history, gender studies, literature, music, philosophy, politics, science. Did the Fascist ideology end in 1945 or does it persist today? Was Italy mostly a Fascist nation or a stronghold of the anti-Fascist movement? How are World War II, Italy's Fascist past, its anti-Semitism, and civil war being remembered (or forgotten) to this day? In this course, you will try to answer these and other questions by looking at the many aspects of Italian literary culture during the Fascist regime and post-war years. You will read Resistance poetry, Fascist propaganda, novels of the literary Neorealism, Primo Levi's personal narratives, and the writings of female partisans. You will then explore how Italy's complicated past is being dealt with at both the individual and the collective level, and how the tragedy of World War II is being represented and re-imagined in Italian contemporary fiction, films, graphic novels and children literature. You will consider issues such as the relationship between testimony and memory, between history and fiction, and how notions of post-memory, forgiveness, and revenge shape this particular literary production and Italy's national identity. Class discussions and readings in English. Selected readings and assignments in Italian for Italian majors and minors. Course taught in Italian; readings in Italian.
Credit 3 units. BU: IS
Typical periods offered: Fall, Spring

ITAL 3223 Topics: Rome
A multidisciplinary course taught in Italian that focuses on a significant aspect of Italian culture. The topic will differ from semester to semester and may draw on art, film, history, gender studies, literature, music, philosophy, politics, and science. This course will explore a variety of texts in which Rome features as the protagonist. A historic center of

Western civilization and authority, of Christianity, cultural resplendence and degeneration, the city of Rome is a palimpsest of history, myth, and symbolic meaning. We will examine the myriad ways in which the capital city has been conceived across the centuries.
Credit 3 units.
Typical periods offered: Fall, Spring

ITAL 3224 Topics: From Basilisks to Botticelli: The Birth, Development and Politics of Museums in Italy
This course investigates the rise and cultural authority of museums in Italy from the Renaissance to the twentieth century. The course unfolds chronologically, beginning with the distant precursors and etymological roots of the museum in ancient Alexandria and Rome. We trace the origins of the museum in the art collection and patronage that surged during the Renaissance, including the sixteenth- and seventeenth-century Curiosity Cabinet with its fossils, mythical basilisks, gems and weapons and church displays of religious and classical art. We will study the establishment during the Enlightenment in Italy of the first public art museums epitomized by the Vatican Museums, the Uffizi Gallery and the Capitoline Museums. We will conclude by examining the impact on national and cultural identity of Fascist propaganda museums instituted under Mussolini's regime. No prerequisites.

ITAL 3230 Italian Literature 1: Genre and Gender in Italy, 1200-1600
This course traces the evolution of narrative and lyric genres in Italy from the late Middle Ages through the Renaissance, with a particular focus on men as writing subjects and the women they constitute as objects. We will focus on such topics as how male poets formed lyric communities, the conflicting dynamics of love and misogyny, the notions of the real and the ideal in the representation of women. We will also look at how women writers both adapted to and wrote back at the dominant discourses of their time. Authors studied include Dante, Petrarch, Boccaccio, Lorenzo il Magnifico, Lucrezia Tornabuoni, Castiglione, Veronica Franco. Prereq: Ital 201D. Previous or concurrent enrollment in Ital 307D or 308D recommended.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H
Typical periods offered: Fall, Spring

ITAL 3231 Italian Literature I - Writing Intensive Seminar

ITAL 3240 Italian Literature II: The Making of Modern Italy, Texts and Contexts
This course examines key political, social, cultural, and religious aspects of Italian life from Galileo's condemnation in 1633, through the Risorgimento, Fascism, and the birth of the modern Republic, to the increasingly multicultural Italy of today. The overarching theme of this course is the pervading question of Italian identity, or italianita. We will study a variety of male and female, native born and immigrant authors, visual artists and cultural critics.

Typical periods offered: Fall, Spring

ITAL 3241 Italian Literature II - Writing Intensive
Framed by the age old questions of Italian national identity and language, this introductory literature course undertakes a chronological survey of the history of Italian literature from the 1600s to the present day. We will study select works by major authors, including Galileo Galilei's heretical dialogues, the realistic comedies of Carlo Goldoni, poems and essays by the Romantic poet Giacomo Leopardi, the revolutionary dramas of Luigi Pirandello, the Futurist's celebration of speed, war and technology in the visual and literary arts, and the postmodern fiction of Italo Calvino.

Typical periods offered: Fall

ITAL 3270 History of the Italian Language
In this course we'll trace the evolution of Italian from its very earliest written manifestations to its increasing internationalization in the twentieth and twenty-first centuries. We'll study the natural evolution of Italian up until the sixteenth century, its codification as a literary language during the sixteenth century, the debates over the institution of a national language that coincide with the unification of Italy in the nineteenth century, the recovery of dialects as literary languages in the twentieth century, and the more recent incorporation of words and phrases originating outside of Italy. Along the way we'll come to understand the reasons why we study a particular form of Italian in school, and we'll consider the implications of these choices not only for our own learning but for Italian literature and its sense of nationhood.

Typical periods offered: Fall, Spring

ITAL 3300 Italian Food, Italian Culture
This course will provide students with an introduction to Italian culture presented through an exploration of one of Italy's most appreciated aspects: its food. We will examine the relationship between Italian food and Italian culture through readings, films, tasting experiences, and interactions with the local Italian food scene. We will look at food in its social and cultural context through a multi-disciplinary approach - history, anthropology, sociology, and literature. A major focus will be on understanding the extraordinary significance of food in the definition of Italianness from an Italian, as well as from an American perspective. No knowledge of Italian is required: readings and discussions will be in English, but students with prior knowledge of Italian will have multiple opportunities to improve their linguistic skills.
Credit 3 units.
Typical periods offered: Fall, Spring

ITAL 3320 Topics in Film Studies: Italian Cinema
This course studies the influence of film on Italian culture. We will consider the trajectory of Italian film from its origins to the present day. Specific areas of discussion may include: cinema as a revolutionary aesthetic; mass culture versus high art; neorealism; literary adaptation; and cinema as political resistance and vehicle for social justice. The course will also work collaboratively with the Italian Film Fest of Saint Louis in the development of materials, class discussion, and student engagement. Two to three hours of film-viewing plus three class hours a week. Taught in English.

ITAL 3500 Topics: Global Italy: Race, Gender, Migration and Citizenship
Traditionally represented as a land of emigrants and exiles from the south, 21st-century Italy has become the destination of many immigrants and a place of encounter of different cultures and races. In Cara Italia [Dear Italy], a rap hymn by the famous artist Ghali, Italy is both a dear and a contested space of belonging where many children of migrants feel both at home and out of place. Exploring the cultural and historical roots of this feeling, the course asks the following: What does it mean to culturally belong? Why are certain people denied the status of Italian citizens? What does it mean to be Black in Italy? How are interracial younger generations reshaping Italy and Italian-ness? This course is an introduction to cultural productions at the intersection of migration, race, gender, and citizenship in contemporary Italy. In the course, students will critically engage a variety of issues such as the relation between Italian colonialism and recent migration, border politics and civic mobilization, gender struggles and networking, xenophobia and racism, and social protests and activism. Although African migration and Italians of Afro-descent are at the core of the course, students will also explore representations by/of other migrant communities such as the Asian and the Albanian ones. The course will be conducted in English, and screenings will be in the original language with English subtitles.

ITAL 4080 Disease, Madness, and Death Italian Style
Italian literary history teems with representations of illness, insanity, and death. From the ghastly 1348 plague that frames Boccaccio's Decameron to the midday madness of errant Renaissance knights, from 16th-century tales of poisoning and 19th-century Pirandellian madmen to the contemporary scourge of mafia killings, disease, madness and death are dominant facts of reality, points of view, symbols, and cultural characteristics of Italian poetry and prose. This course undertakes a pathology of these tropes in Italian literary history and seeks to understand their meaning for the changing Italian cultural identity across time and the Italian peninsula. We will read primary literary texts and view excerpts from films alongside articles focused on the cultural history of medicine, religion, and criminal justice. Taught in English. No Final.
Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: BA, HUM, IS EN: H
Typical periods offered: Fall, Spring

ITAL 4100 Mamma Mia! Motherhood, Maternity, & the Female Reproductive Body in the Italian Cultural Context
This course explores representations of motherhood, maternity, and the reproductive female body in medical texts and anatomical models, art, literature, government policies, religious doctrine, the criminal courts, and film and media in Italy from the Middle Ages to the present day. As the epicenter of the Catholic Church, an ancient hub of medical science and innovation, the birthplace of Fascism, a European center of feminist separatism, and a modern democratic republic currently led by a rightwing woman prime minister, the first woman to hold the office, Italy has generated among the most influential and contested archetypes of maternity and the maternal body in Western culture. This course takes a micro historical and plurimedial approach. Each week of the semester we will closely examine specific textual and/or visual artifacts-from trial documents to wax anatomical models, paintings to canonization procedures, propaganda films to literary texts-to explore the question of maternity in and across Italian time and space.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM

ITAL 4280 The New Sicilian School
The unification of Italy in the mid-19th century led to the creation of a new Sicilian School, the first since that of the court poets associated with Frederick II in the 13th century. These new Sicilian writers have given us many narrative masterpieces, focusing on common concerns such as the island's identity over two millenia and the impact of Italian nationalism; the rise of bourgeois culture and the decline of indigenous patriarchal structures; the rule of law and the role of the Mafia; and the politics of language. Authors studied include Verga, Pirandello, Vittorini, Brancati, Tomasi di Lampedusa and Sciascia. Course taught in Italian or English.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

ITAL 4300 Divergent Voices: Italian Women Writers
This course engages the fictional and political works of Italian women writers from the seventeenth century to the present day. We will read one of the acclaimed Neapolitan novels of Elena Ferrante, who is considered by many to be the most important Italian fiction writer of her generation. We will examine a cloistered Venetian nun's defiant 1654 indictment of the misogynist society that forced her into the convent. We will confront the reality of a woman writer who in 1901 was

compelled to choose between her child and her literary career. Among other contemporary writers, we will study the humorous and radical feminist one-acts of playwright Franca Rame. Taught in English. No Final.
Credit 3 units. A&S IQ: HUM, LCD, SC BU: HUM EN: H

ITAL 4330 Literature of the Italian Enlightenment
This course aims to explore the spectrum of intellectual and literary discourse of the Italian Enlightenment by examining a wide array of texts and genres. Readings will include selections from Enlightenment and popular periodicals, scientific tracts on human anatomy, women's fashion magazines, the reformed theater of Carlo Goldoni, as well as Arcadian poetry, and literary criticism. We will study the rise and characteristics of coffee culture during this age. We will pay special attention to the woman question, which stood at the center of eighteenth-century Italian intellectual discourse, and which was critical to the contemporary drive to define the enlightened nation-state. The class will be conducted as a workshop in which students and instructor collaborate in the realization of course goals. Readings in Italian or English; discussion in English. Prereq. Ital 323C or Ital 324C.
Credit 3 units. Art: HUM
Typical periods offered: Fall, Spring

ITAL 4370 Caffe, Cadavers, Comedy, and Castrati: Italy in the Age of the Grand Tour
Taught in English. With French libertine philosopher the Marquis de Sade, German novelist Johann Wolfgang von Goethe, Romantic poet Lord Byron, and other illustrious travelers of high birth and good fortune who sought finishing enrichment by making their Grand Tour to Italy from the mid-eighteenth through the early nineteenth centuries, we will explore the richness and variety of Italian life and culture as depicted by both Grand Tourists as well as their Italian interlocutors. Chief among our destinations will be Venice, Bologna, Florence and Rome. Attractions typical of the early modern Tour will circumscribe our journey. Coffee houses first appeared in the eighteenth century and, in ways strikingly similar to their function today, became the real and symbolic centers of social, intellectual and civil exchange. We will explore eighteenth-century coffee culture through comedies and Enlightenment and popular journals that took them as their theme, as well as through a study of the coffee houses themselves, a number of which are still in existence. Theaters, concert halls, gaming houses, literary and scientific academies, galleries, churches, and universities will be part of the standardized itinerary we will follow. During the period, anatomy and physiology attained new legitimacy as crucial scientific disciplines and we will visit both the anatomical theater at the University of Bologna, where the annual Carnival dissection took place, as well as the first museum of anatomy and obstetrics founded in the Bolognese Institute of Sciences in 1742 by Pope Benedict XIV. We will visit archeological excavation sites, in particular Pompeii, first unearthed in 1748. Fashion, an obsessive preoccupation of the day, will also be a point of interest in our travels. Through primary and recently published secondary sources we will also encounter the remarkable authority of Italian women unmatched anywhere else in Europe at the time. Prereq: at least one 300-level literature course. Readings in Italian or English.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

ITAL 4420 Literature and Fascism
The course features a historical approach to Italian literature from 1930-1950. We will focus on life under the fascist dictatorship, wartime partisan resistance, issues of censorship, and literature as propaganda. Course conducted in English; readings in the original or, if necessary, in translation.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

ITAL 4580 Genres in the Renaissance.
Examines how the philological discoveries of Renaissance and Baroque period culture. Readings in Italian or English; discussion in English.
Credit 3 units.
Typical periods offered: Fall, Spring

ITAL 4620 Prose Writers of the Sixteenth Century
In this course, we will read Machiavelli's Prince and Castiglione's Book of the Courtier, among other Renaissance best sellers.. We will study these works for their influence from their own time to today. We will also consult some secondary readings to help us understand the place of each in the political and cultural landscape of Renaissance Italy. Readings in Italian or English; discussion in English.
Credit 3 units.
Typical periods offered: Fall, Spring

ITAL 4730 Machiavelli and Guicciardini
The development of modern political science in 16th-century Italy. We will address questions of both theory and methodology in Machiavelli's and Guicciardini's political visions. We will also pay close attention to the Florentine context of their work, as well as to the influence of historical examples, both classical and contemporary, in the development of their analyses. Finally, we will ask how the examples they set, and the theories they promulgate, can have resonance in addressing political questions in our own age. Readings in Italian or English; discussion in English.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM EN: H

ITAL 4800 Senior Seminar in Italian
Undergraduate seminar; topics vary. Required of all majors.
Credit 3 units. A&S IQ: HUM, LCD BU: HUM
Typical periods offered: Fall, Spring

ITAL 4810 Dante
This course features an in-depth approach to Dante's Inferno, the first, and in many ways the most famous, of the three parts of the Divina Commedia. We'll study the structure of the poem as well as the structure of Dante's Hell, his verse form and use of the vernacular, his notion of sin and punishment and its relation to the theological traditions of which he is an heir. Because so much of the poem is rooted in and extends Dante's autobiography--literary, sentimental, and political--we'll also read two other important texts by him, his early Vita nuova (New Life) and his political treatise, Monarchy. Reading knowledge of Italian helpful but not required. Course conducted in English.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

ITAL 4830 Boccaccio: Decameron
The unrivaled master of late medieval Italian prose, Boccaccio is also a strikingly modern author whose works address such questions as the relationship between literature and history; God and man; storyteller and audience; gender, language, and power; literature and truth. With these and other concerns in mind, we will read his masterpiece, the DECAMERON, a collection of 100 tales set in the Black Plague of 1348. We will then contrast it to his late CORBACCIO, ostensibly a misogynist novel but a text that finally resists such a flattening judgment. Readings in Italian or English; discussion in English. Prerequisite: 3 units of literature.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

ITAL 4850 Ariosto: Orlando Furioso
A close reading of this Renaissance masterpiece with attention to questions of structure and sources, the themes of love and madness, the representation of court life. Readings in Italian or English; discussion in English.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM, IS
Typical periods offered: Fall, Spring

ITAL 4910 Postmodernism
This course explores the complex significance of Italian Postmodernism through an examination of the theoretical arguments and literary works that have shaped the cultural and political debate of the past fifty years. Students will study, among others, the critical theories of open work (Umberto Eco), literature as lie (Manganelli), and weak thought (Gianni Vattimo) that developed from the neo-avant-garde movement of the 1960s. Analysis will focus on the novels of four authors who have had a defining influence on Italian postmodern thought and narrative forms: Carlo Emilio Gadda, Italo Calvino, Luigi Malerba, and Umberto Eco. Course conducted in English; Italian majors read in Italian, others in English translation. Prereq for Italian majors: Ital 307D, or permission of instructor.
Credit 3 units.
Typical periods offered: Fall, Spring

ITAL 4920 The Italian Detective Novel
The detective novel has an unusual and exceptionally brief history in Italy. Only within the past 35 years has an Italian version or, more precisely, subversion of the genre emerged and come to dominate the Italian literary scene. Prominent Italian writers such as Italo Calvino, Umberto Eco, Leonardo Sciascia, and Luigi Malerba have deconstructed the conventions of the detective novel in order to portray the disorder and arbitrary meaning of the postmodern world. This course will explore the history of the anti-detective novel in Italy, and the philosophical and political questions the genre evokes. Readings in Italian and English. Conducted in English.
Credit 3 units. Art: HUM

Portuguese

PORTUG 1020 Elementary Portuguese
Course description TBD
Credit 3 units.
Typical periods offered: Fall, Spring

PORTUG 1500 Portuguese I
Introduction to Portuguese language. The course emphasizes acquisition of communicative ability. It also covers basic grammar points through reading and writing activities. Classes are taught entirely in Portuguese. No prior experience in the language is required.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring

PORTUG 1510 Portuguese II
Introduction to Portuguese language. This second course in the Portuguese program emphasizes acquisition of communicative ability. It also covers basic grammar structures through reading and writing activities. Classes are taught entirely in Portuguese. Prereq: Port 101 or permission of instructor.
Credit 3 units. A&S IQ: HUM, LCD, LS BU: HUM EN: H
Typical periods offered: Fall, Spring

PORTUG 1600 Portuguese for Romance Language Speakers I
Intensive and accelerated course especially designed to take advantage of students' knowledge of Spanish and/or other Romance Languages and to promote a more rapid learning of Portuguese. Classes are taught entirely in Portuguese and stress oral communication, basic use of grammar, reading and writing skills. Proficiency in Spanish or another Romance Language is required. 3 units.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring

PORTUG 1610 Portuguese for Romance Language Speakers II
This course offers a sequence in the learning process initiated in L37 103. It is a fast-paced class designated for students with proficiency in Spanish and/or other Romance Languages, and its objective is improving conversation, writing, and reading skills. Prereq 103 or permission of instructor. 3 units.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring

PORTUG 2000 Reading and Conversation I
The goal of this course is to review and to enhance the content learned at the basic level. Through culturally relevant readings and related conversational activities, students are expected to enrich their vocabulary, gain fluency, and improve both reading comprehension and writing skills. Prereq: two college semesters of Portuguese or permission of instructor.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring

PORTUG 2010 Reading and Conversation II: Intermediate Portuguese
This course is a continuation of Port 215, therefore an intermediate level in the Portuguese section. Its main goal is to improve students' reading proficiency, as well as to provide a class environment in which conversational skills can be practiced and made into a solid foundation. In addition, the class will provide tools to expand vocabulary and promote a cultural understanding of Brazil and other Lusophone countries. Prereq: Port 215 or permission of instructor
Credit 3 units. A&S IQ: LCD EN: H
Typical periods offered: Fall, Spring

PORTUG 3999 Undergraduate Independent Study
Prereq: Permission of the Department.
Credit 3 units.
Typical periods offered: Fall, Spring

Spanish

SPAN 1010 Elementary Spanish 1
Beginning language program stressing acquisition of spoken ability together with attention to the development of reading, writing, and listening skills. In addition to three hours of class, students complete weekly, assessed independent learning activities with multimedia resources. Students must have no prior expirence with Spanish.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring

SPAN 1020 Elementary Spanish 2
Second semester of the beginning language program stressing acquisition of spoken ability together with attention to the development of reading, writing, and listening skills. In addition to three hours of class, students complete weekly, assessed independent learning activities with multimedia resources.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring, Summer

SPAN 1996 Spanish Elective: 100-Level
Credit 3 units. A&S IQ: HUM BU: HUM EN: H

SPAN 2010 Intermediate Spanish I
The first half of a two-semester intermediate level sequence. Reviews basic knowledge and introduces advanced skills in grammar, reading, writing, culture, and vocabulary.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring

SPAN 2020 Intermediate Spanish II
The second half of a two-semester intermediate level sequence. This class continues to review basic knowledge and to introduce advanced skills in grammar, reading, writing, culture, and vocabulary. Prereq: Span201E, or placement by examination.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall, Spring

SPAN 2990 Undergraduate Independent Study
Prereq: Span 201D and permission of the department.
Credit 3 units.
Typical periods offered: Fall, Spring

SPAN 2996 Spanish Elective: 2000-Level
This course is used for transcribing 2000-level SPAN elective units.
Credit 3 units. EN: H
Typical periods offered: Fall, Spring, Summer

SPAN 3020 Cultures and Communication in the Spanish-Speaking World
This course is the first part of a two-semester advanced-level sequence. Through the study of a variety of media (i.e., written, visual, aural, and digital), students will develop linguistic and cultural competence and gain a general understanding of contemporary issues of interest in Spain, Latin America, and the United States. Discussion of a wide array of cultural and linguistic materials will serve as the basis for an exploration of the diversity of the Spanish-speaking world. The course focuses primarily on speaking skills. It is designed to prepare students to proceed to higher-level Spanish courses and to build written and oral proficiency. This course replaces Span 307D and is a prerequisite for several study abroad programs. Prerequisite: Span 202 or placement by examination.
Credit 3 units. A&S IQ: LCD, LS BU: IS EN: H
Typical periods offered: Fall, Spring

SPAN 3021 Language and Culture for Heritage Speakers of Spanish
This course offers an approach to the linguistic and historical study of different cultural productions in various Spanish-speaking communities in the United States and other Spanish-speaking countries. The materials and structure of the course are designed for students whose cultural roots are, to some degree, Latin and who have grown up in Spanish-speaking environments, so course materials focus on autobiography and identity. This course offers students a multidisciplinary way of working at points where linguistic and literary analysis runs parallel to other forms of cultural production and to the historical narrative of Latinx culture in the United States. Prerequisite: placement by examination.
Credit 3 units. A&S IQ: LCD, LS BU: IS EN: H
Typical periods offered: Fall, Spring

SPAN 3030 Cultures and Communication in the Spanish-Speaking World II
This course is the second part of a two-semester advanced-level sequence. Through the study of a variety of media (written, visual, aural, and digital), students will develop linguistic and cultural competence and gain a general understanding of contemporary issues of interest in Spain, Latin America, and the US. Discussion of a wide array of cultural and linguistic materials will serve as the basis for an exploration of the diversity of the Spanish-speaking world. Course content is organized thematically into five units: Youth Cultures, Food Culture, New Indigeneity, Environment, and Public Health. The course focuses primarily on writing skills. It is designed to prepare students to proceed to higher-level Spanish courses and to build written and oral proficiency. Fromm Ayoroa in charge.
Credit 3 units. A&S IQ: LCD, LS BU: IS EN: H
Typical periods offered: Fall, Spring, Summer

SPAN 3110 Hispanic Culture and Civilization I
Study of aspects of the political, social, and cultural life of contemporary Spain and Portugal, and their historical development. Class discussion; readings with compositions. Conducted in Spanish. May be repeated for credit.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: BA, HUM EN: H
Typical periods offered: Summer

SPAN 3122 Advanced Conversation in Spain
Designed to offer students with advanced skills in Spanish an opportunity to refine their ability to discuss a variety of topics. Various media such as films, television, newspapers, and other modes of communication will be used for oral presentations and some writing.
Credit 3 units. A&S IQ: HUM, LS BU: HUM EN: H

Typical periods offered: Summer

SPAN 3130 Chilean Contemporary Culture

This two-week course will provide a panoramic view of Chilean contemporary culture, focusing on the years from 1988 to the present. We will examine the representation of current issues in literature, the arts, and the media, and study topics such as governmental institutions, the constitution of 1980, the economy, the role of the Catholic Church, public policy concerning culture, etc. The course will meet three hours a day, and there will be several guest lecturers. Conducted in Spanish. Requirements: two short papers, short reports in class of the news or a cultural activity students have attended, and participation in class discussions. Course includes an all-day cultural excursion on Saturday (it includes a visit to one of Neruda's houses, a history museum, etc.).

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, HUM EN: H

Typical periods offered: Fall, Spring

SPAN 3154 A View From the Southern Cone: Perspectives on Art, Literature and Culture

This course will deal with current issues of cultural, social, political and literary importance related to the Southern Cone. We shall study selected texts from Argentina, Chile and Uruguay as well as contemporary films and drama productions. This course will seek to determine what specifically can be expressed about national identity, globalization and the environment as these countries face the twenty-first century. Course requirements include four short essays and a final exam. This course is taught in Santiago, Chile, as part of the Washington University Chile Program. May be repeated for credit. Conducted in Spanish.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, HUM EN: H

Typical periods offered: Fall, Spring

SPAN 317 Advanced Spanish Language in Chile/Spain

Continued study of Spanish grammar and syntax at Washington University's program in Chile or Spain. A course designed for non-native speakers of Spanish to refine mastery of difficult uses and structures in all four skills. Prereq: placement by exam or program director.

Credit 4 units.

SPAN 3181 Spanish Culture and Civilization

This course is intended to acquaint students with important aspects of Spanish culture, including history, civilization, society, politics, and the arts, dating from the first invasions of the Peninsula to the present. Students will gain an awareness of the ethnic, cultural, and aesthetic diversity of Spain, as a country of multiple autonomous regions, by working with written texts, other media, and by visits to various locations. The broader aim of the course is to enable students to engage with and to analyze Spanish culture from an intellectually critical perspective and knowledge of its sociohistorical distinctiveness. Requirements include active participation within all classes and excursions, presentations, and various written assignments. This course is taught in Madrid, as part of the Washington University Carlos III Program. Conducted in Spanish.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H

Typical periods offered: Fall, Spring

SPAN 3200 Debating Cultures: Latin(x) America in the Streets

So much of life in Latin America -- and in many Latinx communities across the United States -- happens in public space: in the streets, to be precise. Picture street food vendors in Mexico City, outdoor produce markets lining squares across Lima, Rio de Janeiro's world-famous carnival celebrations, or politicians addressing thousands in Buenos Aires's Plaza de Mayo. Economic transactions, social interactions, political legends and mass political movements, religious processions, festivals and spectacles, and public art all depend on the streets. In this course, we will focus on the incredible diversity of activities that define and give meaning to public life in Latin America and the Latinx diaspora. This course will have a strong, mandatory and graded oral communications component, and it is taught in Spanish. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, LS, SC Arch: HUM Art: HUM BU: HUM, IS EN: H

Typical periods offered: Fall

SPAN 3202 Debating Cultures: How Spanish Works

This course offers an introduction to the study of the Spanish language as a science. It focuses on the main linguistic subsystems: the sound system (phonetics and phonology), the formation and use of words (morphology), and the formation and structure of sentences (syntax). When working with each linguistic subsystem, students are provided with opportunities to reflect on and improve their own abilities in Spanish, such as with regard to how mood (indicative versus subjunctive) and aspect (preterit versus imperfect) work in the Spanish verbal system. Similarities and differences between Spanish and other languages, such as English, are highlighted. The course also provides students with an introduction to the history of Spanish in its evolution from Latin as one of many Romance languages (a diachronic view) and an exploration of various regional varieties of Spanish today (a synchronic view). The goals of the course include understanding linguistics and Hispanic linguistics as cognitive sciences; understanding language acquisition and use as neural processes; disentangling linguistic rules and linguistic variation from pedagogical rules and stigmatization; and applying one's knowledge of linguistics in general and Hispanic linguistics in particular to practical issues and challenges. This course will have a strong, mandatory and graded oral communications component, and it is taught in Spanish. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Typical periods offered: Fall, Spring

SPAN 3203 Debating Cultures: Extraordinary Lives

This course studies Latin America through the lives of its people. We will take biographies as sites where individual dreams and struggles intersect with global, national, and local structures of power and cultural flows. Through various cultural objects and media (film, literature, music, and social media), we will approach the extraordinary yet everyday luchas of Latin Americans in cities and rural areas. We will contextualize each life within the region's political, economic, racial, and gender historicities. The biographies we will discuss may include but are not limited to domestic workers, taxi drivers, street vendors, wrestlers, musicians, folklore dancers, college students, rural teachers, political and ecological activists, influencers, indigneous YouTubers and filmmakers, LGBTQIA+ communities, and transnational immigrants. This course will have a strong, mandatory and graded oral communications component, and it is taught in Spanish.Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Typical periods offered: Fall

SPAN 3204 Debating Cultures: Mediated Politics in Argentina, Chile, and Uruguay

This course explores the intertwined history of media, culture and political struggle in the region known as the Southern Cone, which encompasses Argentina, Chile and Uruguay. We will discuss the role that media have had in shaping the experience of modernity as well as fostering nation formation in these countries. The course will address the political uses of different types of media, covering a wide spectrum of cultural production (literature, music, comic, political cinema, television, internet) and following a long-term chronological approach, from 19th-century print media to recent YouTube production. In doing so, the course engages with questions of technology, identity, memory, gender, indigenous, and working-class cultures, and it draws special attention to the possibilities and limits that grassroots movements found in different types of media. Course materials may include the Argentine comic Mafalda, the Afro-Uruguayan newspaper Nuestra Raza, and Rodolfo Walsh's non-fiction literature, as well as telenovelas and indigenous radio. As part of the course, students will engage in active research on the interplay of media and political struggle in the region. This course will have a strong, mandatory and graded oral communications component, and it is taught in Spanish. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Typical periods offered: Fall

SPAN 3210 Debating Cultures: Representations of Gender Violence in Modern Iberian Literatures and Cultures

The landmark law against gender violence in Spain, which was passed under the Socialist government in 2004, became the rallying point for feminist activists, even as it generated a vigorous backlash from among conservative sectors of Spanish society. More recently, the La Manada gang rape case in Pamplona in July 2016 provoked national outrage, and, together with the #MeToo and the #NiUnaMenos movements in the United States and Latin America, a global feminist movement was mobilized to protest sexual assault, femicide, and all other forms of gender-based violence. We will consider the works of 19th-century through present-day Spanish women writers, jouranlists, and filmmakers, including Emilia Pardo Bazan, Carmen de Burgos, Rosa Montero, Carme Riera, Lucia Etxebarria, Isabel Coixet, Iciar Bollain, and Roser Aguilar, who have spoken out against gender violence in a variety of fora. Their works will serve as points of departure for exploring the social and cultural causes and dynamics of gender-based violence as well as the ways in which Spanish women have responded to this problem in their writings, film, and other forms of representation. Our analysis will be informed by the larger historical framework of the development of feminism in Spain as well as by the recent global movement against gender-based violence. Course assignments will consist of daily readings, film viewings, group oral presentations, quizzes, discussion forum posts, and a final project that is orally based; students are also expected to engage actively in class discussions and in small group work. This course will have a strong, mandatory and graded oral communications component, and it is taught in Spanish. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Typical periods offered: Fall, Spring

SPAN 3211 Debating Cultures: Inclusion & Expulsion, Memory, and Erasure in the Hispanic World

In this course, we will analyze and discuss the ways in which the Hispanic world has lived, regulated and represented its great religious and cultural diversity. As we progress in our understanding of these multifaceted and varied responses, we will examine the two most important ethical choices that the Hispanic peoples of both sides of the Atlantic Ocean have had in front of them at different points in time: (1) the choice between inclusion and exclusion; and (2) the concerted decision to either memorialize or forget history and the consequences of having chosen to exclude or include certain individuals, ideas, religions or cultural aspects of society. The consideration of these two choices -- as they appear represented in laws, texts and images -- will help us acquire the ability to better understand the challenges and dilemmas that the various Hispanic peoples have encountered in the past and the decisions they continue to make in the present moment when confronted with diversity. Each module of this course will be anchored by an official document or policy that rubber stamped the decision to include, exclude, remember, or forget those who were different because of their origins, their religion, their language, their way of living, or their political choices. Examples of these laws or decrees are the Capitulations of Granada, the Edict of Expulsion of 1492, the New Laws of the Indies, the laws of land confiscation of the 19th century, the persecutions and censorship of the dictatorial regimes in both Spain and Latin America, and the recent Spanish law for the recovery of historical memory. Also, each module will begin in the past and end in the present, with an exploration of the contemporary consequences of those laws and policies. These diachronic studies will contribute to inform the analysis of both social issues and cultural artifacts, and they will enrich the class presentations and discussions. This course will have a strong, mandatory and graded oral communications component, and it is taught in Spanish. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Typical periods offered: Fall, Spring

SPAN 3212 Debating Cultures: Latin American Soundscapes

This course explores Latin America through its sound cultures from the beginning of the 20th century to the present. Diving into aural, literary, and scientific archives, we will discuss how sound produces meaning beyond visual and written cultures, articulates experience, and mobilizes political and cultural change. We will study sound, beats, speech, music, and noise through various cultural objects and media (novels, poems, essays, anthropological studies, journalism, films, radio, records, and digital cultures). We will contextualize these objects in the region's political, economic, racial, and gender historicities. We will examine the interplay of national identity, popular culture, aurality, and modernity in a variety of case studies: folklore (national and American folkloric missions), indigenista operas, indigenous radio and shamanism, the Latin American new song movement (the 1960s and 1970s), rock and youth cultures, cumbia, reggaeton, avant-garde and slam poetry, and the noises of Latin American megacities and protests. This course will have a strong, mandatory and graded oral communications component, and it is taught in Spanish. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, LS, SC Arch: HUM Art: HUM BU: HUM, IS EN: H

Typical periods offered: Fall

SPAN 3213 Debating Cultures:Redes/ Networks: Digital Cultures in 21st-Century Spain

This is a discussion-based course that examines from interdisciplinary and collaborative perspectives the new digital cultures emerging in Spain during the first two decades of the 21st century. Shaping and connecting an innovative series of creative, political, artistic, and social redes or networks, the emergence of new digital media has radically changed the cultural forms produced and circulated in Spain today. How do these different digital networks function, in what ways are these redes formed, and to what extent have they changed the material, ideological, and social ramifications of culture in the 21st century? The course explores a wide range of cultural materials specifically connected to particular redes or digital networks emerging in Spain in the last two decades. The materials studied will range from digital literatures--such as poetry (Alex Saum-Pascual), graphic novels (Fernandez Mallo), alternative forms of literary and cultural journalism--to music (Rosalia), visual arts (Varvara & Mar), cinema (Chus Gutierrez, digital shorts from notodofilmfest), as well as the generation of new forms of social activism (such as the #8M feminist movement) and alternative political communities (15-M). We will also examine in particular the role of new media platforms (YouTube, WhatsApp, Facebook) in the contemporary production and circulation of digital culture. Students will have a strong, mandatory and graded oral component. Course taught in Spanish. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, LS BU: BA, HUM

Typical periods offered: Fall

SPAN 3214 Debating Cultures: Migration in the Spanish-Speaking World

In this course we will study how migration shapes and transforms societies, cultural products and practices in the Spanish-speaking world. We will explore questions pertaining to border crossing, displacement, identity, and community in different historical periods and in diverse geographical contexts. We will move chronologically and thematically and also pay close attention to the different ways in which our authors choose to tell their stories. The course is divided into 10 section that correspond to specific places, both real and imagined. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, SC BU: HUM, IS EN: H

Typical periods offered: Spring

SPAN 3215 Debating Cultures:Love, Actually: (Re)imagining Love in Latin American and Latinx Literature

If you are inclined to trust the polls, according to a worldwide survey conducted by Gallup in 2014, Latin Americans are the most emotional people on the planet. In this course we will test this assertion by critically exploring one of the most intense and complex of human emotions: love. We will look at multidimensional and contradictory facets of love-from passion, desire, and happiness to solitude, betrayal and revenge, from family blood ties to bonds of community and patriotism, from motherhood to miscegenation-as they are reimagined in a wide range of 20th and 21st century literary works, performances, films, artwork, music, and popular culture from across Latin American and Latinx diasporic communities. Love as affect and existential experience invariably intersects and becomes interwoven with such important dimensions of the socio-historical framework as ethnicity, class, gender, sexual identity, nationality, exile, and spirituality. In addition to poems, essays and short narratives by authors representing several Latin American countries and their diasporas (Neruda, Mistral, Quiroga, Storni, Benedetti, Garro, Castellanos, Fuentes, Morejón, Poniatowska, Ocampo, Borges, Cortázar, Bobes, Bahr, Vega Serova, Paz Soldán, Obejas, and Meruane, among others), we will examine academic research on the subject of love, blending insights from psychology, sociology, history, anthropology, religion studies, neuroscience, and philosophy. This focus on interdisciplinary approaches will encourage students to seek their own insights grounded in their experiences and areas of expertise and to perceive love as a complex human condition that encompasses a plurality of socio-cultural expressions and unique individual relationships. This course is conducted in Spanish and has a strong, mandatory and graded oral component. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

SPAN 3216 Debating Cultures: Afro-Latin Americans in Film and Television

This course explores the representation and self-representation of Latin Americans of African descent in film and television. We will discuss, among other things, slavery, race, politics of representation, agency, and Afro-Latin American culture, history, and religion. Students will learn to analyze filmic art. The course will have a strong, mandatory and graded oral component.Students will watch two films and have two short readings per week. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, SC BU: BA, HUM

Typical periods offered: Spring

SPAN 3217 Debating Cultures:Unveiling the Secrets of Fantasy, Magic, Mystery in Latin America

In this course we will explore a variety of Spanish American discourses (short fiction, essays, films, artwork) built around the unveiling of secrets, mystery, fantasy, and magic through the art of detection, whereby the reader or a viewer becomes engaged in the process of sleuthing, either alone or alongside the fictional figure of a detective. We will explore the creative and versatile ways in which Spanish American writers and artists make use of existing aesthetic paradigms-such as magical realism, literary gothic, fairy tales, science fiction, surrealism, film noir, and detective fiction, among others-as they adapt them to the diverse political, economic and socio-cultural realities of their countries. In many of these discourses, overarching themes of imagination, dreams, madness, criminality, and metaphysical search become intertwined with gendered sensibilities and heterogeneous perspectives profoundly embedded in socio-political realities. Some of the mysteries and crimes that often elude detection and punishment have to do with corruption and state-sanctioned violence, as it happens in the cases of systemic violence in Colombia, of the plight of the disappeared persons under the dictatorial regimes of the Southern Cone (Argentina, Chile), or the systemic corruption surrounding narcotrafficking. Authors to be studied include Borges, Ocampo, Cardenal, Casey, Quiroga, Valenzuela, Cortázar, Rulfo, Paz Soldán, Téllez, García Márquez, Schweblin, Dávila, Vega Serova, Benítez Rojo, Bahr, and Enríquez, among others. This course is conducted in Spanish and has a strong, mandatory and graded oral component. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Typical periods offered: Fall

SPAN 3218 Debating Cultures: Youth and Counterculture in South America

This course will explore South American cultures from their most provocative and insurgent expressions, lifestyles, and identities. Focusing on the Andes (Peru, Colombia, and Bolivia) and the South Cone (Chile, Argentina and Uruguay) regions, we will study a conjunction of cultural producers that used their rebellious nature as part of their art. How did they represent the youth of their societies? How did they respond to the status quo? How have they used the flows of globalization, media, and revolution? By exploring literature, music, cinema, and performance, we will discuss the sociopolitical impact of these works, which includes poetry performances to punk albums. In addition, we will emphasize the role of the youth as producers and consumers, as opposed to the politics of adults and institutions. By covering the long sixties to the present, this course will discuss the transformation of these movements and subcultures and how they impacted the sociocultural processes of their regions, both nationally and transnationally. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Typical periods offered: Fall, Spring

SPAN 3219 Debating Cultures: Broken Promises and Resilient Bregas: Snapshots of Puerto Rican Culture

The end of WWII and the advent of the Cold War brought heightened global attention to the Caribbean. While Cubans rid themselves of the Batista dictatorship, embraced socialism, and entered the USSR's realm of influence, Puerto Rico's importance for the U.S. as a showcase of capitalist modernization increased exponentially. Bad Bunny and reggaeton, Lin Manuel Miranda, and JLo wouldn't exist without the events and policies set in motion in Puerto Rico in the 1950s and 60s. This course will offer entry points into Puerto Rico's complex and often contradictory culture, with the goal that students develop a critical understanding of the leading social, political, and historical processes that have shaped the island's cultural production over the past 70 years. We will explore topics such as colonialism and neocolonialism, migration and diasporic communities, environmental and social justice, globalization and neoliberalism, and the intersection of race, class, gender, and identity formation. We will study works from island-born and Puerto Rican Diaspora cultural producers. Materials will include short stories and poems, films, podcasts, pop culture and sports icons, comics, performances, and historical essays. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Typical periods offered: Fall, Spring

SPAN 3220 Debating Cultures: How Spanish is Used

This course examines how the Spanish language is used in context with emphasis on variation across linguistic subsystems-the sound system (phonetics and phonology), vocabulary (lexis), sentences (morphosyntax), meaning (semantics), and language in use (pragmatics)-and Spanish applied linguistics. Module 1 includes a concise overview and review of basics about linguistics, Hispanic linguistics, the nature of each linguistic subsystem, the history of the Spanish language, and characteristics of present-day regional varieties of Spanish. Module 2 focuses on semantics and pragmatics, complemented by an exploration of variation in vocabulary throughout the Spanish-speaking world, such as how the English word popcorn may translate as palomitas, canguil, cancha, pochoclo, among various other options, depending on the Spanish-speaking region in question. Module 3 introduces students to sociolinguistics as applied to the Spanish-speaking world, beginning with key concepts such as sociolinguistic variable and concluding with student-led analyses of samples of Spanish day-to-day interactions, emphasizing the legitimacy and value of variation in light of what might be relegated as standard. Module 4 explores a selection of other areas of Spanish applied linguistics, which include teaching Spanish as a second or heritage language and dual immersion programs with Spanish and English in the United States. Students in the course are provided with opportunities to improve their own abilities in Spanish, such as regarding context-appropriate usage, and to apply their knowledge in practical ways to a range of issues and challenges related to the Spanish language today.Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

SPAN 3221 Debating Cultures: Media, Materiality and Cultural Production in Greater Mexico and the U.S.-Mexico

This course is an invitation to explore the complex mediatic landscape of Greater Mexico and the U.S.-Mexico borderlands throughout the nineteenth and twentieth century. What did an early Spanish-language press look like in the United States? What are the connections it holds with the United Farm Workers publications later in the twentieth century? How did these publications interact with other platforms, such as Spanish-language radio? What are the political and cultural implications of hearing or seeing in the present-day militarized border zone? These are just some of the questions that we will collectively attempt to answer as we approach the cultural and artistic practices of the region. The course will deal with print, visual and aural culture, and you will have the chance to explore material such as Spanish-language newspapers, border ballads, radio, performance art, digital art and activism, among many others. We will discuss issues like ethnic identity, language, race, citizenship and gender, as they intersect with cultural production and its mediality. Moreover, you will become familiar with transnational frameworks for the study of culture, critically engaging with the work of border studies exponents such as Gloria Anzaldu'a and Ame'rico Paredes. This overarching approximation of the nineteenth and twentieth centuries is meant to encourage a comprehensive understanding of the cultural processes of the borderlands: its fluctuations, as well as the continuities it maintains with present-day border culture. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

SPAN 3222 Debating Cultures: Poetics of Extinction: Extraction, Violence, and Possible Futures in Latin Americ

The increasing anxiety regarding multiple axes of violence has become a major referent for contemporary literature across Latin America. While there are international discussions and treaties to reduce our carbon footprint on the planet and deliver a livable space for the future generations, the landscape seems to be completely different for countries that depend on the extraction of fossil fuels and other resources to move their economies. This course aims to be a window to some of the ways in which contemporary writers are portraying and criticizing the duality of extraction and violence that leads to extinction, and some of the possible futures they propose while we develop our own possibilities with their help. Here, the idea is that we will see extinction in a broader sense looking at efforts to erase, suppress, and

control in the name of consumerism and individual enrichment. We will explore the relationship between the extraction and usage of natural resources, the harm caused onto human and non-human bodies, and the physical, emotional, and economical violence women and other feminized individuals suffer. Some of the topics we are going to engage with include indigeneity and sovereignty, environmental and social justice, ecofeminism and ecocriticism, neoliberalism, counter-market literary practices, technology, and the overall intersection of gender, class, and race through the intertwined triad of capitalism, coloniality, and patriarchy. Materials will include short stories, poems, music, films, podcasts, performances, and essays. Among the authors to be studied, we include Isabel Zapata, Liliana Colanzi, Verónica Gerber Bicecci, Lorena Cabnal, Yásnaya Aguilar Gil, Verónica Gago, Gabriela Damián Miravete, Julieta Paredes, Daniela L. Guzmán, Cristina Rivera Garza, Gladys Tzul Tzul, and others. This course will have a strong, mandatory, and graded oral communications component and is taught in Spanish.Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

SPAN 3223 Debating Cultures:Art of Recycling: Remix, Appropriation, & Eco-Narratives in Latin America & Spain

Some of the most disruptive and controversial artistic and literary works of the 20th and 21st centuries reuse previous materials and known works. These practices of recycling and appropriation have reopened great theoretical and socioeconomic debates: Is it ethical to create a work of art by recycling parts of other works? In these times of remakes and remixes, what gives originality and value to a work of art today? What are the legal limits of appropriation and intellectual property? In our course, we will discuss these questions by analyzing a varied corpus (music, cinema, literature, photography, and other plastic and visual arts) of contemporary works and authors that are recycling the canon and rewriting the current laws of how art and literature work in the Latin American and Spanish context. At the same time, the importance of the aesthetics of recycling coincides with a historical moment in which the ecological crisis is at the center of public debate. For this reason, we will also analyze how Climate and Weird Fiction in Spanish are creating ecological narratives to denounce, among other topics, the extractivism of the planet's resources and propose new sustainable ways of relating to our environment. This course will have an important practical dimension, so students will have the opportunity to experiment with different forms of artistic intervention. The course will be taught entirely in Spanish, with a strong and graded oral communication component. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

SPAN 3224 Debating Cultures: Race, Migration, and Coloniality in Mediterranean Crossings

Taking as a point of departure the cultural and religious diversity of medieval Iberia, this course takes a postcolonial approach to the study of migrant cultures in contemporary Spain. The course studies migrants both as objects of representation and as producers of culture. From filmmakers to literary writers, thinkers on both sides of the Strait of Gibraltar produce narratives about migration that invite us to reflect upon how immigrant communities are racialized, how religion becomes entangled with far-right politics, and how Spain's colonial legacies shape immigrants' lives. The materials studied include film (Chus Gutiérrez) and literary texts (Najat el Hachmi). As part of the course, students will discuss the interplay of cultural production, history, and politics. Students will be encouraged to think about the relevance, and limits of, prevailing and emerging concepts such as Orientalism (Said), andalucismo (Hirschkind), migration studies, and Mediterranean studies. This course will have a strong writing and oral communication component. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

SPAN 3225 Debating Cultures: Escritoras, Guerrilleras Y Artivistas: Central American Womens Legacy in Art and

Debating Cultures: Escritoras, guerrilleras y artivistas: Central American Women's Legacy in Art and Politics. This course will examine Central American history through the lens of women's struggles and their literary and artistic production. The class will start with readings from Marxist writers like Carmen Lyra and proto-feminists who contributed to the prestigious journal Repertorio Americano. The students will be introduced to Prudencia Ayala, the first Latin American woman presidential candidate and her political platform. They will also learn about women's contributions to revolutionary culture during the twentieth-century civil wars, such as testimonio and participation as war reporters. Finally, we will discuss contemporary artivism forms such as music, performance, visual art, and Central American film. We will investigate the causes and motivations for women's struggles and creative political participation. The course will be taught entirely in Spanish, with a strong and graded oral communication component. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Typical periods offered: Spring

SPAN 3226 Debating Cultures: Gender and Feminism in Contemporary Latin American Fiction

This course will explore the innovative feminist theory and fiction written by Latin American women and feminine-identifying writers in the twenty-first century. We will read and debate a broad range of texts together to think critically about how gender is represented in fiction and to practice doing feminist or gender-focused readings of literary works. During the first part of the class, we will explore major contemporary trends in Latin American feminisms, examining their key themes and differences and using their insights to analyze and critique the ways gender categories are constructed and mobilized in society. We will then transition to reading fiction, using the critical tools we have developed through reading and discussion to analyze the content and form of novels and short narratives. These stories will help us open a dialogue about how gender and feminist concepts are represented in fiction and intersected by dynamics of race, class, sexuality, memory, violence, family, care, and identity. By the end of our course, you will have the skills and conceptual foundation necessary to craft, write, and present your own original analysis of a fictional text through the lens of gender and/or feminism, and to apply these approaches to any literary or artistic work you may encounter outside the classroom. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

SPAN 3227 Debating Cultures: Afrodescendants in Comic Books and Graphic Novels
This course will explore the representation of people of African descent in comic books and graphic novels from Spain and Latin America. These will include comic books about Afro-Latin Americans and black Spaniards as well as comic books and graphic novels by black artists and writers from these regions. Students will learn how to engage academically with these two literary genres while reading and conducting research about the histories and cultures of Afrodescendants in the Iberian world. Topics of discussion will include: race, slavery, representation, and black resistance. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

SPAN 3310 Hispanic Art/Arte Hispano
This course focuses on the most important movements, artistic expressions and its representatives of the art history of Latin America and Spain. From the Pre-Columbian art of the Mayas, Aztecs and Incas, to the syncretism of Post-colonial Latin American art, the Mexican Muralism and the self-reconstruction portraits of Mexican artist Frida Kahlo to the Chicano Art in the U.S.A. From the Medieval paintings of religious Spain, to the criticism of the Spanish nobility by Diego Velazquez, the Spanish Civil War of Guernica by Pablo Picasso, to the Surrealism of Salvador Dalí and Antonio Gaudi. The students will visit the St. Louis and the Kemper Art Museums. Prereq: Span 303 or 308E. In Spanish.

Typical periods offered: Spring

SPAN 3501 Undergraduate Seminar in Spanish Literature and Culture
Taught in Spanish. Topics vary. Can be repeated for credit. This course can be counted as one of the three surveys required to obtain a Spanish major. Prereq: Span 307D; concurrent registration in Span 308E is recommended. SECTION 01. SPANISH-AMERICAN SHORT NOVEL. Study of the twentieth-century short novel in Spanish America. Authors include Bombal, Bioy Casares, Hernández, Castellanos, Fuentes, García Márquez, Ferré, Valenzuela, del Río. SECTION 02.THE SPANISH SHORT STORY DURING THE PAST FIFTY YEARS. An explosion of story-tellers: the rise and fall and rebirth of a genre. This course reviews a half century of short fiction in Spain, emphasizing the works written since 1970. We will focus on the most significant, representative movements in relation to their historical and social contexts. Writers studied include Camilo José Cela, Miguel Delibes, Ignacio Aldecoa, Ana María Matute, Carmen Martín Gaite, Juan Benet, José María Merino, Luis Mateo Díez, Esther Tusquets, Cristina Fernández Cubas, Soledad Puértolas, Javier Marías, Antonio Muñoz Molina and Marina Mayoral. Paper, mid-term and final exams. SECTION 03. EARLY MODERN SPANISH TEXTS: WHOSE GOLDEN AGE DO THEY REPRESENT? This course studies a series of works from sixteenth- and early seventeenth-century Spain canonized by later readers as classics of national Spanish literature, whose original audiences viewed them as comical, even subversive experiments that went beyond the limits of known literary forms to incorporate discourses of material experience, revealing the decadent underside of imperial Spain's so-called Golden Age. Includes the LAZARILLO DE TORMES, FUENTEOVEJUNA, selections from DON QUIJOTE, and other readings. Satisfies the 300-level literature survey requirement for the Spanish major and minor.
Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM

SPAN 3510 Business Spanish
Study of language and structures used in conducting business in the Hispanic world. Actual materials from various businesses--advertising, marketing, real estate, accounting--used. Particular stress on speaking and writing. Prereq: Span 308E, or permission of instructor.
Credit 3 units. A&S IQ: LCD EN: H
Typical periods offered: Fall

SPAN 3530 Medical Spanish
Designed for future medical professionals, this course will provide students with a complete vocabulary and cultural sensitivity necessary for treating Spanish-speaking patients. While the main focus is oral/aural, written exams, varied reading and some research are required. Volunteer work recommended for enrolled students. Advanced students will be given priority.
Credit 3 units. A&S IQ: LCD EN: H
Typical periods offered: Fall, Spring, Summer

SPAN 3550 Spanish for the Social Sciences
This is an advanced Spanish language course designed to develop conversational, writing and listening skills for students in the social sciences. Students will learn and use the language in a content-based format, guided by culturally sensitive readings, discussions and activities. Prereq: Spanish 307D or 302. In Spanish.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
Typical periods offered: Spring

SPAN 3600 Researching Cultures: Film and Dictatorship in Argentina and Chile
In this course, we will explore the methods by which filmmakers from the Southern Cone of Latin America used film to engage, document, and remember the military dictatorships of the 1970s and 1980s.We will look at the development of protest cinema in the area, the use of documentary filmmaking and resistance, navigating censorship, and the use of film as a nation's memory as we study films for which directors and actors risked (and sometimes lost) their lives. We will accompany our study of film with historical readings, reports on human rights abuses, and theories on memory and trauma. This course will have a strong, mandatory and graded written communications component, and it is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts & Sciences students. Prerequisite: Span 303 or Span 308D, and one (or preferably two) of the following: Span 341, Span 342, Span 343, Span 370, Span 380 or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

Typical periods offered: Fall

SPAN 3604 Researching Cultures: Making Latin America Popular
Despacito, futbol, telenovelas: All of these are forms of Latin American popular culture that are increasingly part of our everyday reality here in the United States. All are also inseparable from stories of inequality, ethnic tensions and celebrations, understandings of gender relations, and notions of hope that blend ideas of nation with cultural consumption. While popular culture in Latin America is often considered a contemporary phenomenon linked to the 20th century and the mass production of cultural goods -- film, books, and music -- it has deeper roots. We can trace these back to the 19th century, where people, cultural processes, and phenomena literally began making Latin America popular. This course will survey the emergence and variety of modern popular culture in Latin America, from the 1800s to the present. Readings may include best sellers, gaucho poetry,

stories of urban life and folk heroes, and materials engaging themes from dictatorship to contemporary Latinx experiences. We will learn about the intersections between race, nation, and music; explore the emotional and political power of futbol, along with the intense gender divisions it reveals; and delve into the appeal of telenovelas across socioeconomic divides. Historical and anthropological essays will also guide us throughout the semester. This course will have a strong, mandatory and graded written communications component, and it is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts & Sciences students. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

Typical periods offered: Fall

SPAN 3605 Researching Cultures: Latin American Women Travelers
When we talk about adventurers, explorers, or travelers, we tend to imagine them embodied in a masculine figure. In this course, we will focus on the limits of this idea of travel, analyzing travel as a gendered and racialized experience. Throughout the semester, we will study different types of mobility, travel, and travel literature created by Latin American women from the 19th century to the present, debunking the stereotypes of female immobility and immanence. From the Peruvian rabonas to the Mexican Revolution's soldaderas, from pleasure trips to forced exiles, we will read and examine the writings of Flora Tristan, Clorinda Matto de Turner, Victoria Ocampo, Clarice Lispector, Circe Maia, Cristina Peri Rossi, Samanta Schweblin, Cristina Rivera Garza, and Valeria Luiselli, among others. These different travelogues will serve as the basis for discussing the complexities of gender, race and social class in relation to travel, nation and literature. We will also discuss different theoretical approaches, seeking to deepen and enrich our academic writing in the Spanish language. In this course, students will write two short compositions and a final research composition on the topic of their choice related to the course content. This course will have a strong, mandatory and graded written communications component, and it is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts & Sciences students. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

SPAN 3610 Researching Cultures: The Black Parade: Black Social Movements in Columbia & Peru, 1960s to Present
This course is a conceptual and thematic exploration of Black social movements in Colombia and Peru from the 1960s to present. Learners will explore topics such as Black Consciousness, Black Women's Rights, civil conflicts and drug conflicts, land rights, environmental justice, genocides against Black activists, Black Lives Matter, forced and quasi-voluntary displacements, as well as COVID-19, among others. The course not only highlights the widespread resistance by Blacks against systemic racism and inequality but also movements that celebrate Blackness and the curation of Black representation in countries that have intentionally made Black bodies invisible. Through an interdisciplinary and intersectional approach in an inclusive and co-collaborative environment, learners will analyze, understand, and juxtapose multiple (trans)national movements centering on the dimensions of race, gender, and class in order to productively discuss Afro-Latin American history, culture, and politics. Although this course is focused on writing, research and instructor feedback, learners will have the opportunity to engage bi-weekly with articles, videos, music, children's books, poetry, performances, films, and much more. This course will have a strong, mandatory and graded written communications component, and it is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts & Sciences students. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

Typical periods offered: Fall

SPAN 3611 Researching Cultures: Urban Iberian Cultures -- Barcelona and Madrid
In this course, we will explore the various urban cultures of two paradigmatic cities in the Iberian Peninsula: Barcelona and Madrid. This is a research-focused course that examines from interdisciplinary and collaborative perspectives the urban spaces and cultures that have shaped the life of the dwellers of these two key cities, both across time and with a focus on the contemporary moment. While the founding of the city of Barcelona, the capital of Catalonia, dates back to the Roman empire (i.e., the first century BCE), the city of Madrid, the capital of Spain, was established during the 15th century around a small fortification developed during Al-Andalus, soon becoming the political center of the Spanish Empire during the 16th century. Through an examination of the urban development of both cities across time and the various contemporary urban spaces and cultures of the 21st century, this course will explore the ways in which writers (Jorge Carrion, Belen Gopegui, Julio Llamazares), musicians (Joan Manuel Serrat, Rosalia), visual artists (Pablo Picasso, Cristina Garcia Rodero, Angeles Santos Torroella), filmmakers (Jose Luis Guerin, Isabel Coixet, Chus Gutierrez) and architects (Juan de Villanueva, Antoni Gaudi) have reflected on and explored through their work in both cities. We will also explore the political and social relevance of both cities today as related to their own urban planning and development as well as their political relevance in both Catalonia and Spain as a whole. This course will have a strong, mandatory and graded written communications component, and it is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts & Sciences students. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.
Credit 3 units. A&S IQ: HUM, LCD, WI Arch: HUM Art: HUM BU: ETH, HUM, IS EN: H
Typical periods offered: Fall

SPAN 3612 Researching Cultures: Afterlives, Ghosts, and Haunted Places
In this course, we will examine the historical, cultural and aesthetic implications of how different artists, filmmakers, and writers approach the afterlife in the Spanish-speaking world. We will explore experiences and emotions that can be deeply personal and intimate as well as shared and lived out in public. We will discuss how practices and beliefs vary widely across the Spanish-speaking world and explore how traditions and rituals are invented and how these change over time. While our readings will include a few works from earlier periods, most of the texts stem from the 20th and 21st centuries, allowing us also to examine a number of historical events and their depiction in history and memory. We will discuss the ways in which grief, mourning, and trauma relate to identity and belonging, and we will also pay close attention to coping mechanisms that range from forgetting to humor. The last section of the course will focus on a specific case study of public mourning and remembrance: the Spanish Civil War and its multiple afterlives. This course will have a strong, mandatory and graded written communications component, and it is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts & Sciences students. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

Typical periods offered: Fall

SPAN 3613 Researching Cultures: The Paradoxes of Contemporary Cuba: The Good, the Bad, and the In-Between

In the wake of such momentous events as president Obama's visit to Cuba (March 2016), Fidel Castro's death (November 2017) and the end of Raul Castro's presidency (April 2018), for many Americans the island has advanced from the category of a forbidden and exotic fruit to a full-fledged reality. Now is a good time to ask not only What is next for Cuba? but also What can we learn from Castro's revolutionary experiments? This course explores from interdisciplinary perspectives the paradoxes of Cuban lives on the island and in the diaspora-the good, the bad and the in-between-along with the intertwined histories of the United States and Cuba. Using a combination of literary texts (Carpentier, Cabrera Infante, Ponte, Bobes, Obejas, Morejón, Padura), films (Strawberry and Chocolate, Guantanamera, The Promise, The New Art of Making Ruins), artwork (Mendieta, Bruguera, Garaicoa), political speeches, and unique visual materials compiled by the instructor throughout her many research trips to Cuba, we will look at the island's contemporary reality through the lens of its colonial and postcolonial past. Topics include ethnic and gender identities, the history of slavery and plantation economy, the myths of Che Guevara and Fidel Castro, African-Cuban spirituality, popular music, political oppression and dissent, and the interplay of migration and exile, along with multiple perspectives on everyday life (foreign tourism, food rationing, dual-currency economy, restoration of colonial Course description: Havana, education, and healthcare). Due to the interdisciplinary perspectives inherent to this course, students will have an opportunity to engage their knowledge of and interest in disciplines outside the humanities (including but not limited to: public health, law, political science, urban studies, anthropology) in the exploration of Cuba's past, present, and future. This course will have a strong, mandatory and graded written communications component and is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

Typical periods offered: Fall, Spring

SPAN 3614 Researching Cultures: Iberian Feminisms

This course will examine the development and transformations of feminist thought in the Iberian Peninsula, from the Enlightenment to the present, considering a diverse array of literary and cultural production (narrative fiction, poetry, essay, press accounts, film and visual culture) by women. We will consider not only the challenges faced by women cultural producers, given their social, legal, and historical circumstances, but also the strategies they used to negotiate their participation in the public sphere as writers, intellectuals, social reformers and activists. We will explore, from an intersectional perspective, the unique perspectives these women brought to their work, as they address pressing social, political, and cultural issues pertaining to their place in society, such as citizenship, suffragism, equal rights, divorce, gender violence, personal and political freedom, racial justice, among others. We will consider works of Enlightenment thinkers such as Josefa Amar y Borbón, representing the beginnings of a modern feminist consciousness in Iberia; Romantic writers (Coronado, Gómez de Avellaneda), who, under the impact of liberalism, were key to shaping new models of subjectivity for women; nineteenth-century (proto)feminists and social reformers of the fin-de-siècle (Pardo Bazán, Gimeno de Flaquer, Arenal); early twentieth-century suffragists and freethinkers (Carmen de Burgos, Campoamor, Hildegart); and feminist writers and filmmakers of the post-Franco era (Montero, Riera, Bollaín, Taberna) and women representing the diverse diasporic communities of 21st-century Spain (El Hachmi, Bela-Lobedde, Mbomio Rubio, Quanzhou Wu). Course assignments will consist of short essays, a book report, and a final project. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

SPAN 3615 Researching Cultures: Leisure and Urban Entertainment in Latin America

How do we define leisure or free time? Who can experience it? Can we choose which activities to perform in our free time? By establishing a dynamic dialogue between leisure/free time and other notions such as play, labor, inequality, alienation, and consumption, we will approach Latin America's urban entertainment scene from the end of the nineteenth century to the present. Beginning with the incorporation of the region into the global economic networks, we will trace the trajectory of the concept of leisure/free time to reflect on socio-political issues such as migration, gender, race, and social class. We will examine historical landmarks alongside examples of urban entertainment: from street celebrations, mass media, and soccer games, to social networks and virtual platforms in a pandemic scenario. Even though this course is mainly focused on Argentina and Uruguay, we will also have the opportunity to study cases from other parts of Latin America. This course will have a strong, mandatory and graded written communications component and is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Students who have completed four or more Spanish surveys (including Researching Cultures and the ones mentioned before) may not take this class and must proceed to the 400-level.

SPAN 3616 Researching Cultures: Imagining the Andes

Taking Peru and Bolivia as case studies, this course explores the Andean region's cultures by examining the interactions between global, national, and indigenous cultures. We will study six main topics: indigenous peoples and state-formation; peasant revolutions; internal and transnational migration; memory and political violence; racialization and coloniality; and extractive capitalism and indigenous thinking (Buen Vivir). We will explore these issues while learning about the region's major historical transformation between the 1900s and the present. Course materials include oral histories, myths, literature, film, photography, music, and social media. Authors studied include Jose Maria Arguedas, Claudia Llosa, Yuyachkani, Anibal Quijano, Jorge Sanjines, and Silvia Rivera Cusicanqui. This course fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar. In Spanish.

SPAN 3617 Researching Cultures: Representations of Childhood in the Spanish-Speaking World

This course examines the construct of childhood in the Spanish-speaking world from an interdisciplinary perspective. We will explore the aesthetic, cultural, sociopolitical, and legal implications of a variety of media, about and/or for children. The course is divided into three thematic units. The first will delve into the pedagogical, nation-building and moral projects that underpin the development of children's

literatures in the Hispanic world. The second focuses on children in the midst of crises, where we will turn our attention to issues of child labor, migration, poverty, public health, the environment, as well as economic and political crises that lay bare the inherent vulnerabilities of children. We will also familiarize ourselves with the work of a variety organizations that aim to mitigate child suffering and develop social awareness about the treatment and living conditions of children. The third unit centers around media and the child consumer, where we will explore the effects of social media, the advertising and marketing of food, games and toys, as well as a variety of other issues that affect children's emotional and psychosocial development. Some of the texts and films we will study include Ismaelillo and a selection of La edad de oro by José Martí, Cuentos pintados y morales by Rafael Pombo, Perico trepa por Chile by Alicia Morel, a selection of poems by Rubén Darío, Sólo un pie descalzo by Ana María Matute, Los herederos by Eugenio Polgovsky, Voces inocentes by Luis Mandoki and Entre nos by Gloria La Morte and Paola Mendoza. Additional materials include newspaper articles, podcasts and songs. This course fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar. In Spanish. 3 units.

SPAN 3618 Researching Cultures: Cultural Revolutions in Central America

Central American region has been invisible and stigmatized as the most violent and unequal of the continent. Nevertheless, these seven countries (Guatemala, El Salvador, Honduras, Nicaragua, Costa Rica, Panamá and Belice) have a complicated history of creativity and cultural struggles related to indigenous people, national identity, revolution, Cold War, postwar and peace times, and transnational migration. This course will explore some of these topics through the lenses of cultural revolutions in Guatemala, El Salvador, and Nicaragua, in the context of the Cold War. Attention will be given to the articulation of culture and politics. We will study a wide range of media products and performances, such as rock songs, painting, folkloric music, radio streaming, street theater, testimony genre, literature, and film. In addition, we will discuss the engagement of writers and public intellectuals such as Ernesto Cardenal, Daysi Zamora, Roque Dalton, and Gioconda Belli to the revolutionary process in Latin America and the interplay between political mass mobilization and radical resistance. This course fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar. In Spanish.

SPAN 3619 Researching Cultures: Graphic Latin America

This course examines the visual, affective and linguistic registers that graphic novels, comics and illustrations have used in Latin America to represent popular desire, enjoyment and resistance. We will challenge traditional perceptions of graphic formats as minor literature and we will delve into the relationship between popular consumption and structural changes in Latin American countries. Some of the questions that would lead the units are: Is there a specific storytelling attached to graphic narratives? What are the cognitive and perceptual challenges that graphic texts pose to the readers? What do we mean when we talk about Latin America Graphic Fiction? What does it mean to read massive texts? Can reception have a transformative power in Latin American societies? The genres analyzed include memoirs, political satire, parodies, science fiction and radical zines. This course fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 or 308E, and one (or preferably two) of the following: 341, 342, 343, 370, 380 or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar. In Spanish. 3 units. This course fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

SPAN 3620 Researching Cultures: Politics of Melodrama in Latin America: From Serialized Novels to Telenovelas

This course explores the social and political history of melodrama in Latin America. We will discuss the role that melodrama has had within Latin American media following a long-term chronological approach that begins with nineteenth-century serialized novels (folletín) and ends with recent streaming television. As a language of emotions and familiarity, Latin American melodrama has been a key tool to reflect on the most important social and political issues, from mid-twentieth century populisms to globalization, from modernization to the human rights abuses of the 1970s' dictatorships. Thus, in this course we will delve into the political power of tears and smiles. The course will address the uses of melodrama in print media, radio, cinema, and television, in order to explore how the melodramatic imagination shaped the experience of modernity in the region and allowed Latin American audiences to deal with issues of class inequality, gender roles, sexuality, national identities, and racism. Course materials may include tango albums, 1940's Argentine and Mexican films, Cuban radionovela El derecho de nacer, Manuel Puig's novel El beso de la mujer araña [Kiss of the Spider Woman], as well as telenovelas from Colombia, Mexico, and Argentina. As part of the course, students will engage in active research on the interplay of politics and melodrama in contemporary Latin American media. This course fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar. In Spanish.

Typical periods offered: Fall

SPAN 3621 Researching Cultures: NOT a Piece of Cake: Culinary Crossroads of Latin American Cultures

This course explores from interdisciplinary perspectives the intersectional, transdisciplinary and cross-cultural dimensions of food in the Hispanic cultures of South and Central America, the Caribbean, and their respective (Latinx) diasporas. Using a combination of literary texts, artwork, testimonials, films, and scholarly articles, we will look at food, both as material commodity and metaphor, through the lens of Hispanic America's colonial and postcolonial past. Some topics include ethnic and gender identities, the history of enslavement and plantation economy (sugar, coffee), African-descendant and Indigenous spirituality as it pertains to food rituals, interplay of migration and exile in culinary transformations, along with multiple perspectives on everyday life (hunger, diets and dieting, food rationing, etc.). Due to the interdisciplinary perspectives inherent to this course, students will have an opportunity to engage their knowledge of and interest in disciplines outside the humanities (including but not limited to: sociology, psychology, public health, anthropology, global studies) in the exploration of food/gastronomy/culinary cultures, past, present, and future. This course has a substantial, mandatory and graded written communications component and is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts and Sciences

students. Prereq. Spanish 303 and at least one Debating Cultures (32XX). Students who have taken more than four Spanish Debating/Researching classes are not allowed in this course and must proceed to a Major Seminar (4XX).

Typical periods offered: Fall, Spring

SPAN 3622 Researching Cultures: The Stuff of Legends: Remembering and Recreating the Past in the Hispanic Wor
Researching Cultures: The Stuff of Legends: Remembering and Recreating the Past in the Hispanic World. In this course we will study various versions of some of the most memorable legends that populate the imagination of Hispanic people in both sides of the Atlantic Ocean. We will study these narratives as they have evolved through time, depending on the contexts and media on which they are told, and we will compare their written versions with their transformations into plays, movies, comics and artistic renderings. To inspire our discussions, we will use the support of some key theories both past and present about emotions, and how these can contribute to our ability to memorize and retrieve the stories we love to remember. This course has a substantial, mandatory, and graded written communications component and is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 and at least one Debating Cultures (32XX). Students who have taken more than four Spanish Debating/Researching classes are not allowed in this course and must proceed to a Major Seminar (4XX).

Typical periods offered: Spring

SPAN 3623 Researching Cultures: Decolonial Imaginaries in Latinx Cultures
Latinx-typically defined as the Latin American descendant and migrant populations settled in the US-is a hotly contested category and a fast-growing presence in US cultural and political life. In this course, we will examine cultural productions: literature, film, television, popular music, and more, to interrogate and attempt to understand the contours of Latinx experience. We will consider questions such as: what is the relationship of Latinx identity to language, migration, colonialism, labor, borders, race, ethnicity, and sexuality? How do race, ethnicity, class, gender, sexualities, citizenship, geography, and imperialism work with or push against Latinx identification? We will also consider the role of shared histories of coloniality in Latin America have on the formation of Latinx identity in the United States. Is there a shared decolonial impetus in Latinx cultural forms? Using an interdisciplinary lens, we will analyze how Latinx identities are imagined and produced through culture, and what they offer Latin American and US American cultural traditions as they push against multiple colonial orders. This course is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 and at least one Debating Cultures (32XX). Students who have taken more than four Spanish Debating/Researching classes are not allowed in this course and must proceed to a Major Seminar (4XX).
Credit 3 units. A&S IQ: HUM, LCD, SC, WI Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

SPAN 3624 Researching Cultures: Afro-Central American Literature and Culture
While Afro-Latin Studies have flourished in other regions of Latin America, Afrodescendants and their contributions in Central America have been submerged in a deep mutism. Some countries, such as El Salvador, have gone as far as to officially deny the presence of Afrodescendants in the nation while others characterize Afro-Central Americans as an anomaly or as foreign. Nonetheless, Afro-Central Americans possess a long, rich and complex history within the region which although often denied, is very much present. This course introduces students to the contemporary literature and culture of people of African descent in Central America in their attempts to visibilize themselves, rescue their history and to properly represent their roots and culture. We will analyze how this history and culture is represented in the literature of authors such as Gerardo Maloney from Panama, Xiomara Cacho Caballero from Honduras, Isabel Estrada Colindres from Nicaragua, and Wingston Gonzalez from Guatemala, to name a few. In addition, students will also have the opportunity to engage with music, podcasts, art and films which feature and/or are produced by self-identifying Afro-Central Americans. This course has a substantial, mandatory and graded written communications component and is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 and at least one Debating Cultures (32XX). Students who have taken more than four Spanish Debating/Researching classes are not allowed in this course and must proceed to a Major Seminar (4XX).
Credit 3 units. A&S IQ: HUM, LCD, SC, WI Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

SPAN 3625 Researching Cultures: Cumbia Culture in Latin America
This course explores the social impact of cumbia culture in Latin American lifestyles. Why has this music genre become a staple of Latin American countries? How does this music genre interact with the social, ethnic, and economical issues of the region(s)? By looking at cumbia as a transnational phenomenon, we will study how this genre interacted with different contexts and countries, such as Colombia, Venezuela, Peru, Mexico, Argentina, Chile, and the United States. We will explore the multiple cultural practices related to this culture, including music production, visual imagery, identities, parties, and dance. Our material includes music, album covers, video footage, and films, starting from the sixties to the present. From these productions, students will develop research essays using academic sources and methodologies from the cultural discussions of the classes with the guidance of the instructor. This course will have a strong, mandatory, and graded written communications component and is taught in Spanish. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.
Credit 3 units. A&S IQ: HUM, LCD, WI BU: HUM EN: H
Typical periods offered: Spring

SPAN 3626 Researching Cultures- Curatorial Mexico: Unfolding Heritage Through Curatorial Practice
This course will get us immersed in Mexico's rich cultural heritage through the perspective of curatorial practice as dispersed throughout its myriad museums, heritage sites, and everyday spaces. We will focus on curatorial discourse as a unique form of communication, a genre in itself that is often understated on the role it plays in shaping, shifting, and contesting cultural and social identities. We will analyze how curatorial language inhabits not only writing but visual culture, speech, heritage collections, gallery installations, and even architecture, fashion, and food. We will discuss how the instability of curatorial discourse reveals the instability and contradictions within cultural heritage itself, deceivingly presented constantly as a neutral, unchangeable, and unquestionable entity. The materials and reflections in this course will ponder on cultural heritage as inevitably curated, discern the forms and implications of such mediation, and study curatorial practice and the trade of the curator as a form of agency that should aim to be ethical, inclusive, collaborative, and always challenged and renewed. We will work with a wide variety of materials from the early 20th century to contemporary Mexico that

range from gallery and museum texts to political speeches, mass-media dispatches, literary texts, scholarly research, critical essays, interviews, fiction, magazine articles, manifestos, fashion statements, food menus, and architecture. These will lead us to reflect on how curatorial practice is a dynamic tool for understanding, renewing, preserving, and sometimes defying cultural heritage and what it stands for at different times and for different people. *This course has a substantial, mandatory and graded written communications component and is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Students who have taken more than four Spanish Debating/Researching classes are not allowed in this course and must proceed to a Major Seminar (4XX).
Credit 3 units. A&S IQ: HUM, LCD, WI BU: HUM EN: H
Typical periods offered: Spring

SPAN 3650 Researching Cultures: Cultural Geographies of the Hispanic World
This course provides students with an overview of the cultural history of various regions of the Hispanic World, considering its global, transatlantic, hemispheric, national, and regional formations through print, visual, and sonic media and genres. Taking the multilayered tension between power and resistance as a conceptual framework, the course explores four key cultural geographies: the colonial space, the national space, the migrant space, and the natural space. Each cultural geography maps the oppositional forces that have shaped various regions of the Hispanic World since Western colonial expansion: colonialism and decolonial thinking, melting pot utopias and ethnic communities, revolution and the State, modernity, race, and gender identities, and extractivismo and ecological dissidence. Materials include films, songs, short stories, poetry, comics, and digital culture.This is a writing-intensive course. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.
Credit 3 units. A&S IQ: HUM, LCD, WI BU: HUM EN: H
Typical periods offered: Fall

SPAN 3660 Researching Cultures: Sociolinguistics of the Spanish-Speaking World
This course provides an introduction to the basic concepts in sociolinguistics. Sociolinguistics focuses on the symbolic value of language as an expression of group identity based on region, gender, ethnicity, socioeconomic class, age, or other ways of defining group affiliation. Notions such as speech community, sociolinguistic variable, phonological and syntactic variation, and field methods will be included. The course also surveys other related topics such as language in contact, bilingualism and Spanish in the United States, Spanish as a heritage language, language attitudes and language identity, and language and the law. We will focus on research examining the use of Spanish in Latin America, Spain, and the United States.
Credit 3 units. A&S IQ: HUM, LCD, SC BU: HUM EN: H
Typical periods offered: Fall, Spring

SPAN 3996 Spanish Elective: 3000-Level
This course is used for transcribing 3000 level SPAN elective units.
Credit 3 units. EN: H
Typical periods offered: Fall, Spring, Summer

SPAN 3999 Independent Study
Prereq: permission of instructor.
Credit 3 units.
Typical periods offered: Fall

SPAN 3ABR Spanish Coursework Completed Abroad
Credit 12 units. A&S IQ: HUM BU: HUM EN: H

SPAN 4000 Intensive Translation for Graduate Students I
Designed to help graduate students in the humanities, social and natural sciences fulfill their Ph.D. language requirement, this is the first part of a two-semester course sequence in reading and translating Spanish. Non-graduate students may enroll with permission of the department. Must be followed by Span 401.
Credit 3 units. A&S IQ: LCD EN: H
Typical periods offered: Summer

SPAN 4010 Intensive Translation for Graduate Students II
Designed to help graduate students in the humanities, social and natural sciences fulfill their Ph.D. language requirement, this is the second part of a two-semester course sequence in reading and translating Spanish. Non-graduate students may enroll with permission of the department. Credit for Span 400 is contingent on completion of Span 401.
Credit 3 units. A&S IQ: LCD EN: H
Typical periods offered: Summer

SPAN 4050 Major Seminar
An undergraduate seminar. Topics vary. This is a writing-intensive course, which requires a minimum of 3 papers of approx. 4-5 pp. length, with rewrites; 50% of the grade must come from written work. In Spanish.
Credit 3 units. A&S IQ: HUM, LCD, WI Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

SPAN 4070 Seminar in Spain: Cultural Encounters
The Spanish, Latinos, and non-hispanic North American vis-vis the Other. Designed to study the historical and ideological bases of attitudes and mutual perceptions that inform these three cultures' understanding of each other. Analysis of literary and extra-literary representations of the three identities in question will teach students to think critically about the cultural, religious, and political foundations of intercultural perceptions. Washington University students' experiences living in Spain will provide a context for them to examine their own attitudes about hispanidad, as well as to learn about their own cultures (American, latino) as they are understood from abroad. Study of theoretical concepts of identity, ethnicity, minority, gender, culture, and intercultural communication will enable students to participate in practical discussions based on observation and experience with an objective, critical understanding of how they perceive and are perceived by others. Fulfills 400-level literature course requirement for the Spanish major. Prereq: Span 307D, Span 308E and two 300-level literature surveys or the equivalent in Spanish. Course taught in Madrid, Spain, through the Washington University Madrid Program.
Credit 3 units.

SPAN 4100 Major Seminar
In this course we will try to understand how some of the most famous Spanish short stories ever told have been used more than once not only to entertain their listeners and readers, but to drill certain messages and ideas in their minds. Many of the stories we will study were preserved through oral tradition, long before they were put into writing; others were not so old, but they all have something in common: they were chosen, used and preserved because they were useful and unforgettable. The two most important questions we will try to answer here, with the help of some recent discoveries in the fields of the neurosciences and the study of emotions, are the following: Why were they unforgettable? And how were the characteristics that made them unforgettable used to modify the minds of those who received

them either orally or in written form? To answer these questions, we will analyze a selection of short stories taken from some of the most important collections of the Spanish Middle Ages: DISCIPLINA CLERICALIS, SENDEBAR, CALILA ET DIMNA, CATIGOS E DOCUMENTOS DEL REY DON SANCHO, EL CONDE LUCANOR, the LIBRO DE BUEN AMOR, the LIBRO DE LOS GATOS, and the LIBRO DE LOS EXEMPLOS POR A.B.C.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

SPAN 4110 Spanish Grammar and Syntax
This course presents a detailed study of Spanish syntax. Different theories (including generative theory) as well as the relationship between (morpho) syntax and other linguistic subsystems are considered. Special attention is also given to Spanish/English contrasts of particular interest to language learners and teachers. Prerequisite: Any one Researching Cultures course
Credit 3 units. A&S IQ: LCD EN: H
Typical periods offered: Fall, Spring

SPAN 4160 Introduction to Hispanic Linguistics
An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax), and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional, and social varieties of Spanish and situations of Spanish in contact with other languages. Preceptorial for undergraduates only.
Credit 3 units. A&S IQ: LCD EN: H

SPAN 4170 Spanish Phonetics, Phonology, and Dialectology
This course, conducted in Spanish, explores the linguistic varieties of the 21 Spanish-speaking countries from both a historical and a synchronic perspective. The course begins with a traditional look at Spanish phonetics and phonology, with all students memorizing and utilizing the International Phonetic Alphabet. Course readings and discussions extend beyond the descriptive and include a search for the sources of language variation within the Spanish speaking world. Particular attention is devoted to language contact and bilingualism. Students will read in areas such as history, sociolinguistics, dialectology, and sociology, as well as traditional linguistic studies, in designing their projects concerning phonetics, phonology and dialect diversification.
Credit 3 units. A&S IQ: LCD BU: IS EN: H

SPAN 4670 Grammar and Vocabulary Acquisition
This course examines theoretical and instructional implications of research on grammar and vocabulary acquisition. Topics include making form-meaning connections during language learning; developmental stages; the role of input and input processing; explicit and implicit methods of grammar instruction; pertinent factors in vocabulary acquisition, such a learning context and processing resource allocation; and comparisons of incidental and direct vocabulary instruction techniques. Major theories of language acquisition (e.g., nativism, emergentism) are critically examined in light of the research presented, and research findings are applied to instructional practices.
Credit 3 units. A&S IQ: LCD BU: BA EN: H
Typical periods offered: Fall, Spring

SPAN 4950 Honors
Students who meet the requirements work closely with a member of the faculty on an individual basis on a project of mutual interest. Emphasis on a tutorial on a regular basis. Prereq: permission of Director of Undergraduate Studies. Preregistration not permitted.
Credit 3 units.
Typical periods offered: Spring

French Major

Program Requirements

- **Total Units Required:** 30 (27 for second majors)
- **Grade Requirement:** Students must maintain an average of B– or higher and are expected to maintain a B average or better in all French courses. Courses taken Pass/No Pass do not count toward the major.

Required Courses

Code	Title	Units
FRENCH 3070	Cultural Expression	3
FRENCH 3210 or FRENCH 3220	One "In-Perspective" course	3
FRENCH 3210	Topics I: In Perspective	
FRENCH 3220	Topics II	
FRENCH 3600 or FRENCH 3610	One "Thinking-It-Through" course	3
FRENCH 3600	Thinking it Through	
FRENCH 3610	Thinking It Through II	
FRENCH 3700s-3900s	One "In-Depth" course	3
FRENCH 4XXX	Two 4000-level seminars	6

* Students pursuing the major earn the remainder of their credits by taking our rich 3000- and 4000-level elective offerings in French and Francophone literature, language, culture, and related disciplines in Arts & Sciences. Majors may count one course taken abroad toward the satisfaction of their Thinking-It-Through or In-Depth requirement. Students also may count as elective credit toward the major one 3-credit course that is taught in English by a member of the French faculty, either within or outside the department. This course must be at the 3000 level or above and does not replace any specifically required course.

Senior Capstone

Students with a prime major in French, Italian, or Spanish must fulfill a capstone requirement by either obtaining Latin honors (see details below) or completing an advanced undergraduate seminar (4000 level) in their junior or senior year with a grade of B+ or better.

Additional Information

Both 4000-level courses required for the major must be taken at Washington University. All primary majors must complete a capstone experience by achieving a B+ or better in one of the 4000-level seminars.

For more information about the program and language study in general, Washington University Arts & Sciences has produced a video called "Falling in Love With Another Language and Culture."

Study Abroad

We encourage French majors to participate in a study abroad program. Summer programs are available in Paris, Nice, and Senegal, and semester- and year-long programs are available in Toulouse and Paris. Three credits from the Senegal program, and up to 6 credits from each of the others, can count toward the major. Those interested in studying in other historically French-speaking countries should consult the faculty. **Students should complete an In-Perspective course prior to attending the Nice, Toulouse, or Paris programs**.

Transfer Credits

Students must take 21 of the 30 units required for the major in residence. Courses
not taken at Washington University may count toward the major only with departmental permission.

Writing Intensive (WI) Courses

Students wishing to satisfy the university Writing Intensive requirement within their French major may do so by taking either FRENCH 4110 or FRENCH 4131. These writing intensive courses are not seminars, are not required for the major, and do not replace the major requirements.

Senior Honors

Students who have maintained at least a minimum cumulative grade point average of 3.65 through the end of their Junior year are encouraged to work toward Latin Honors (cum laude, magna cum laude, summa cum laude) in the College of Arts & Sciences, and by maintaining the minimum grade point average through the final semester.

To further achieve Departmental Honors in French, Italian, or Spanish, majors may fulfill requirements of either of two tracks: Honors by Coursework or Honors by Thesis. Recommendations for honors are based on performance and the quality of the thesis or critical essays in addition to the student's cumulative GPA. Honors examining committees will award the student one of three designations: Departmental Honors with High Distinction, Departmental Honors with Distinction, or Departmental Honors.

Phone:	314-935-5175
Email:	rll@wustl.edu
Website:	http://rll.wustl.edu

Italian Major

Program Requirements

- **Total Units Required:** 27 (24 for second majors); of these units, 3 may be taken outside of Italian with the approval of the major advisor.
- **Grade Requirement:** Students must complete courses taken for the major with a grade of B- or higher and are expected to maintain a B average or better in all Italian courses. Courses taken pass/no pass do not count toward the Italian major.

Required Courses

- Students may count one of the following courses as an elective:

Code	Title	Units
ITAL 1100	First Year Seminar: Italy's Invention of the Modern Museum	3
ITAL 1101	First Year Seminar: Italian Literary Culture:Identity, Subjetivity, Audience	3
ITAL1102	Refracted Light: How others View Italy	3
ITAL 2800	Sex in Italian Culture and Media	3
ITAL 2900	The Culture of Food in Italy	3

- Students may count ITAL 2010 , which is a prerequisite for ITAL 3230 and ITAL 3241, toward the major as an elective as well.
- Students are required to complete one of the following courses (3 units):

Code	Title	Units
ITAL 3070	Advances Italian in the Everyday World	3
ITAL 3090	Tansmedia Italian Culture	3

- Students are required to complete one of the following courses (3 units):

Code	Title	Units
ITAL 3230	Italian Literature 1: Genre and Gender in Italy, 1200-1600	3
ITAL 3240	Italian Literature II: The Making of Modern Italy, Text and Contexts	3
ITAL 3270	History of the Italian Language	3

- Students are required to complete two of the following 4000-level seminars (6 units):

Code	Title	Units
ITAL 4080	Disease, Madness, and Death Italian Style	3
ITAL 4100	Mamma Mia! Motherhood, Maternity, and the Female Reproductive Body in the Italian Cultural Contex	3
ITAL 4280	The New Sicilian School	3
ITAL 4320	Divergent Voices: Italian Women Writers	3
ITAL 4370	Caffe, Cadavers, Comedy, and Castrati: Italy in the Age of the Grand Tour	3
ITAL 4560	Romance Philosophy	3
ITAL 4420	Literature and Fascism	3
ITAL 4620	Prose Writers of the Sixteenth Century	3
ITAL 4730	Machiavelli and Guicciardini	3
ITAL 4810	Dante	3
ITAL 4830	Boccaccio: Decameron	3
ITAL 4850	Ariosto: Orlando Furioso	3
ITAL 4910	Postmodernism	3
ITAL 4920	The Italian Detective Novel	3

Additional Information

For more information about the program and language study in general, Washington University Arts & Sciences has produced a video called "Falling in Love With Another Language and Culture."

Study Abroad

Students are strongly encouraged to participate in a study abroad program. We offer a semester abroad program at our affiliate program with Boston University's Centro in Padua and IES Rome Summer Language & Culture Program in Rome. These programs are considered in residence.

Transfer Credits

A minimum of 18 of the 27 units required for the major must be taken in residence. Courses not taken at Washington University may count toward the major only with departmental permission.

Senior Honors

Students are encouraged to work toward Latin honors (cum laude, magna cum laude, and summa cum laude). To qualify for Latin honors in the major by thesis, a student must complete special literary research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. To qualify for Latin honors by course work, a student must enroll in ITAL 4952 Honors (fall of the senior year) and ITAL 4950 Senior Honors (spring of the senior year). Recommendations for honors are based on performance and the quality of the thesis in addition to the student's cumulative grade point average. (Please refer to the departmental guidelines for more information about Latin honors.)

Romance Languages and Literatures Major

Program Requirements

- **Total Units Required:** A minimum of 42 units at the 3000 and 4000 levels, distributed among French, Italian, and Spanish
- **Grade Requirement**: Students will need to take these courses for a grade (not Pass/No Pass) and earn a B- or better, with a B average overall, per departmental requirements of all majors.

Required Courses

Like our other majors, the Romance languages and literatures major requires a writing-intensive course and a capstone experience. Further details are available on the Romance Languages and Literatures website.

- **Language I:** Six courses, all at the 3000 or 4000 level:
  - *If Language I is French:*
    - FRENCH 3070
    - One 3200-level “In Perspective” course
    - One 3700- to 3900-level “In Depth” course
    - Two 4000-level courses
    - One other course from among the 3000- and 4000-level offerings
  - *If Language I is Italian:*
    - ITAL 3070
    - ITAL 3090
    - Two from among ITAL 3230, ITAL 3240;, and ITAL 3270
    - Two 4000-level courses
  - *If Language I is Spanish:*

    - SPAN 3020
    - SPAN 3030
    - Two "Debating Cultures" courses
    - Two 4000-level courses
- **Language II:** Five courses, all at the 3000 or 4000 level:
  - *If Language II is French:*
    - FRENCH 3070
    - One 3200-level "In Perspective" course
    - One 3700- to 3900-level "In Depth" course
    - One 4000-level course
    - One other course from among the 3000- and 4000-level offerings
  - *If Language II is Italian:*
    - ITAL 3070
    - ITAL 3090
    - Two from among ITAL 3230, ITAL 3240, and ITAL 3270
    - One 4000-level course
  - *If Language II is Spanish:*
    - SPAN 3020
    - SPAN 3030
    - Two "Debating Cultures" courses
    - One 4000-level course
- **Language III:** Four courses, all at the 3000 or 4000 level:
  - *If Language III is French:*
    - FRENCH 3070
    - One 3200-level "In Perspective" course
    - One 3700- to 3900-level "In Depth" course
    - One other course from among the 3000- and 4000-level offerings
  - *If Language III is Italian:*
    - ITAL 3070
    - ITAL 3090
    - Two from among ITAL 3230, ITAL 3240, and ITAL 3270
  - *If Language III is Spanish:*
    - SPAN 3020
    - SPAN 3030
    - Two "Debating Cultures" courses
- One writing-intensive course in Spanish, Italian, or French
- A capstone experience, either by completing Latin Honors or by completing a senior undergraduate seminar during the junior or senior year with a grade of B+ or better

We encourage students to think about doing an honors thesis, perhaps combining French and Spanish. The 6 units of SPAN 4950 or FRENCH 4997 would be above and beyond the requirements listed above for each language.

Students need approval from directors of undergraduate studies for Italian, French, and Spanish for this major.

Additional Information

Students who plan to teach or pursue graduate study should consider taking a second foreign language as well as linguistics courses. In all departmental courses for the major, the student must receive a grade of B- or better. Each student's progress toward achieving the objectives of the major will be assessed on a regular basis and by a variety of means. More information is available in the departmental mission statement.

Spanish Honors in Linguistics

To qualify for Spanish Honors in Linguistics in the major by thesis, a student must complete linguistic research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. The honors thesis in linguistics may include scientific experiments conducted in Spanish. The written thesis will include several drafts, all of which will be written in Spanish.

Study Abroad

Students are encouraged to participate in a study abroad program. Programs are available in France, Italy, Spain, and Chile. Up to six units from each approved study abroad program may count toward the major. A minimum of 33 of the 42 units required for the major must be taken in residence. Courses not taken at Washington University may count toward the major only with departmental permission.

Senior Honors

Students who have maintained at least a 3.65 overall cumulative grade point average through the end of the junior year are encouraged to work toward Latin honors (i.e., cum laude, magna cum laude, or summa cum laude). To qualify for Latin honors in the major by thesis, a student must complete special literary research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. To qualify for Latin honors by course work, the student must complete four literature courses at the 4000 level (including two in literature before 1800) and present two critical essays written for those courses to be judged by an honors faculty committee. Recommendations for honors are based on performance, the quality of the thesis or critical essays, and the cumulative GPA.

Website:	http://rll.wustl.edu

Spanish Major

Program Requirements

- **Total Units Required:** A minimum of 30 units at the 3000 level or above, 24 of which must be taken in residence. Courses within Washington University's own study abroad programs in Spain or Chile are considered "in residence."

- **Grade Requirement:** Students must complete all courses with grades of B- or above and maintain a B average or better overall in Spanish. Courses taken Pass/No Pass do not count toward the Spanish major.

Required Courses

The following courses must be included in the 30 units:

Cultures and Communications in the Spanish-Speaking World

- SPAN 3020 Cultures and Communication in the Spanish-Speaking World (Heritage speakers of Spanish must be certified by the director of undergraduate studies and must enroll in SPAN 3021)
- SPAN 3030 Cultures and Communication in the Spanish-Speaking World II

SPAN 3030 is a prerequisite or corequisite for any other 3000-level literature course in Spanish.

Two "Debating Cultures" Courses (6 units)

- Courses designated as SPAN 32xx
- Study abroad options*:

Code	Title	Units
SPAN 3122	Advanced Conversation in Spain	3
SPAN 3154	A View From the Southern Cone	3
SPAN 3341	Literatura Espanola	3
SPAN 3361	Spanish-American Literature II in Chile/ Spain	3
SPAN 3501	Topics in Spanish Literature	3

* One literature course taken in the Chile or Spain semester abroad program offered by Romance Languages and Literatures, designated as an acceptable substitute, may be used as one of the 32xx-level courses.

Two "Researching Cultures" Courses (6 units)

- Courses designated as SPAN 36xx
- Study abroad options*:

Code	Title	Units
SPAN 3110	Hispanic Culture and Civilization I	3
SPAN 3130	Chilean Contemporary Culture	3
SPAN 3181	Spanish Culture and Civilization	3

* 32xx and 36xx designations indicate sequential levels. Once a student takes a course at one level, they may not take a course at the previous level.

Two 4000-Level Seminars (6 units)

Code	Title	Units
SPAN 4050	Major Seminar	3
SPAN 4100	Major Seminar	3

- Other 4000-level courses taught in Spanish, including the following linguistics courses:

Code	Title	Units
SPAN 4110	Spanish Grammar and Syntax	3
SPAN 4170	Spanish Phonology, and Dialectology	3

- The prerequisite for 4000-level courses is the completion of at least one "Researching Cultures" course.
- Study abroad:
  - One 4000-level seminar taken on campus
  - An approved 4000-level course from the Madrid or Chile program (refer to the Study Abroad Opportunities page of the Romance Languages and Literatures website)

Elective Courses

Students must select two elective courses (6 units) from the following list:

Code	Title	Units
SPAN 2020	Intermediate Spanish II	3
SPAN 3530	Medical Spanish	3
SPAN 3550	Spanish for Social Sciences	3
Any other advanced 3000- or 4000-level Spanish (SPAN) class taught by a Romance Languages and Literatures faculty member		

- Only one elective course taught in English may be taken, when available, for the major.
- Study abroad options for electives:
  - SPAN 3122 Advanced Conversation in Spanish
  - Elective credit from semester programs in Santiago or Madrid
  - Elective credit from Petitioned, Organization for Tropical Studies, School for International Training, or Comparative Literature programs (refer to the Study Abroad Opportunities page of the Romance Languages and Literatures website)
  - Spanish courses completed (and approved) as part of study abroad programs other than those offered by Washington University may be used for Spanish elective credit only.
  - All study abroad credit requires authorization from the director of undergraduate studies.

Other Requirements

- Major requirements have been revised as of 2021.
- Under the new requirements, to major in Spanish, students must take a minimum of 30 units, starting with SPAN 2020 Intermediate Spanish II or Spanish 3020 Cultures and Communication in the Spanish-Speaking World; 24 of these units must be taken in residence at Washington University, with Washington University's study abroad programs in Spain or Chile being considered "in residence."
- Transfer students with an advanced level of Spanish and native/heritage speakers need to be certified by the director of undergraduate studies prior to declaring the major.

Recommended for prospective teachers:

1. A second language
2. SPAN 4670, SPAN 4170, and SPAN 4110
3. A semester or year in Spain or Chile

Recommended for prospective graduate students:

1. A second language related to the student's area of interest
2. Advanced work in other literatures, literary criticism and theory, and related coursework in other literature or film programs
3. A year in Spain or Chile
4. Senior honors by thesis or course work (refer to the honors requirements on the Romance Languages and Literatures website): Students who have maintained a minimum cumulative grade point average of at least 3.65 through the end of the junior year are encouraged to work toward Latin honors (i.e., cum laude, magna cum laude, or summa cum laude).

Phone:	314-935-5175
Email:	rll@wustl.edu
Website:	http://rll.wustl.edu

French Minor

Program Requirements

- **Total Units Required:** 18
- **Grade Requirements:** Students must complete courses taken for the minor with a grade of B– or higher and are expected to maintain a B average or better in all French courses. Courses taken Pass/No Pass do not count toward the minor.

Required Courses*

Code	Title	Units
FRENCH 3210 or FRENCH 3220	One "In-Perspective" course	3
FRENCH 3070	Cultural Expressions	3
FRENCH 3700s-3900s	One "In-Depth" course	3

* Students pursuing the minor earn the remainder of their credits by taking our rich 3000- and 4000-level elective offerings in French and Francophone literature, language, culture, and related disciplines in Arts & Sciences. Units earned from study abroad will be transferred as elective credit. Students also may count as elective credit toward the minor one 3-credit course that is taught in English by a member of the French faculty, either within or outside the department. This course must be at the 3000 level or above and does not replace any specifically required course.

Study Abroad

We encourage French minors to participate in a study abroad program. Summer programs are available in Paris, Nice, and Senegal, and semester- and year-long programs are available in Toulouse and Paris. Three credits from the Senegal program, and up to 6 credits from each of the others, can count toward the minor. Those interested in studying in other historically French-speaking countries should consult the faculty. *Students should complete an In-Perspective course prior to attending the Nice, Toulouse, or Paris programs.*

Email:	rll@wustl.edu
Website:	http://rll.wustl.edu

Italian Minor

Program Requirements

Total Units Required: 18

Grade Requirement: Students must complete courses taken for the minor with a grade of B- or higher and are expected to maintain a B average or better in all Italian courses. Courses taken Pass/No Pass do not count toward the Italian minor.

Required Courses

- Students may count only one of the following courses as an elective (3 units):

Code	Title	Units
ITAL 1100	First year Seminar: Italy's Invention of the Modern Museum	3
ITAL 1101	First Year Seminar: Italian Literary Culture:Identity, Subjectivity, Audience	3
ITAL 1102	Refracted Light: How others View Italy	3
ITAL 2800	Sex in Italian Culture and Media	3
ITAL 2900	The Culture of Food in Italy	3

- Students may also count ITAL 2010, which is a prerequisite for ITAL 3230 and ITAL 3240, toward the minor as an elective as well.
- Students are required to complete one of the following courses (3 units):

Code	Title	Units
ITAL 3070	Advanced Italian in the Everyday World	3
ITAL 3090	Transmedia Italian Culture: Advanced Italian and Cultural Reflections	3

- Students are required to complete one of the following courses (3 units):

Code	Title	Units
ITAL 3230	Italian Literature I: Genre and Gender in Italy, 1200-1600	3
ITAL 3240	Italian Lierature II - Writing Intensive	3
ITAL 3270	History of the Italian Language	3

Elective Courses

Code	Title	Units
ITAL 3010	Oral Communication I	3
ITAL 3190	Advanced Conversational Italian	3
ITAL 3220	Advanced Conversation	3
ITAL 3221	Topics: The Jewish Expirence in Italy	3
ITAL 3222	Topics	3
ITAL 3224	Topics: From Basilisks to Botticelli	3
ITAL 3320	Topics in Film Studies: Italian Cinema	3
ITAL 3340	Topics in Italian Cinema	3
ITAL 3500	Topics: Global Italy: Race, Genfer, Migration and Citizenship	3
ITAL 4080	Disease, Madnessm ad Death Italian Style	3
ITAL 4100	Mamma Mia! Motherhood, Maternity, and the Female Reproductive Body in the Italian Cultural Contex	3
ITAL 4280	The New Sicillian School	3
ITAL 43000	Divergent Voices: Italian Women Writers	3
ITAL 4330	Literature of the Italian Enlightenment	3
ITAL 4370	Caffe, Cadavers, Comedy, and Castrati: Italy in the Age of the Grand Tour	3
ITAL 4420	Literature and Fascism	3
ITAL 4730	Machiavelli and Guicciardini	3
ITAL 4810	Dante	3
ITAL 4830	Boccaccio: Decameron	3
ITAL 4850	Ariosto: Orlando Furioso	3
ITAL 4910	Postmodernism	3
ITAL 4920	The Italian Detective Novel	3

Additional Information

Students must complete courses taken for the minor with a grade of B- or higher and are expected to maintain a B average or better in all Italian courses. Courses taken pass/no pass do not count toward the Italian minor.

Students are strongly encouraged to participate in a study abroad program. Please refer to the Italian page on the Romance Languages and Literatures website for more information about Italian study abroad programs.

The Italian minor requires the completion of 18 units, 12 of which must be taken in residence.

Email:	rll@wustl.edu
Website:	http://rll.wustl.edu

Spanish Minor

Program Requirements

- **Total Units Required:** 18
  The Spanish minor requires the completion of 18 units, 12 of which must be taken in residence. Study at Washington University's own programs in Spain or Chile is considered "in residence."
- **Grade Requirement:** Students must complete courses with a grade of B- or better and maintain a B average or better overall in Spanish. Courses taken on a Pass/No Pass basis do not count toward the Spanish minor.

Required Courses

Cultures and Communications in the Spanish-Speaking World (6 units)

- SPAN 3020 Cultures and Communication in the Spanish-Speaking World (Heritage speakers of Spanish must be certified by the Director of Undergraduate Studies and enroll in SPAN 3021.)
- SPAN 3030 Cultures and Communication in the Spanish-Speaking World II

SPAN 3030 is a prerequisite or co-requisite for all 3000-level literature and culture courses in Spanish.

Three "Debating Cultures" and/or "Researching Cultures" Courses (9 units)

One or two "Debating Cultures" courses (3-6 units):

- Courses designated as SPAN 32xx
- Study abroad options:*

Code	Title	Units
SPAN 3122	Advanced Conversation in Spain	3
SPAN 3154	A view from the Southern Cone: Perspectives on Art, Literature and Culture	3
SPAN 3341	Literatura Espanola	3
SPAN 3361	Spanish-American Literature II in Chile/ Spain	3
SPAN 3501	Topics in Spanish Literature	3

* One literature course taken in the Chile or Spain semester abroad program offered by Romance Languages and Literatures, designated as an acceptable substitute, may be used as one of the 32xx-level courses.

One or two "Researching Cultures" courses (3-6 units):

- Courses designated as SPAN 36xx
- Study abroad options:*

Code	Title	Units
SPAN 3110	Hispanic Culture and Civilization I	3
SPAN 3130	Chilean Contemporary Culture	3
SPAN 3181	Spanish Culture and Civilization	3

* 32xx and 36xx designations indicate sequential levels. Once a student takes a course at one level, they may not take a course at the previous level.

One 4000-Level Seminar (3 units)

Code	Title	Units
SPAN 4050	Major Seminar	3
SPAN 4100	Major Seminar	3

- Other 4000-level courses taught in Spanish, including the following linguistics courses:

Code	Title	Units
SPAN 4110	Spanish Grammar and Syntax	3
SPAN 4170	Spanish Phonetics, Phonology, Dialectology	3

- The prerequisite for 4000-level courses is the completion of at least one "Researching Cultures" course.

Russian Language and Literature

Students who want to achieve a high level of proficiency in the Russian language and study Russian literature can pursue a minor in Russian language and literature. The program offers elementary through third-year language courses and a number of courses on 19th- and 20th-century Russian literature (in translation) on a wide variety of topics. Students are strongly encouraged to study abroad.

Russian language and literature is an independent minor administered by Global Studies. Students undertaking this minor are encouraged to consider a major in Eurasian studies (p. 573) (through Global Studies), comparative literature and thought (p. 386), or history (p. 642), all of which can be pursued with a focus on Russia and the former Soviet Union.

Majors

There is no major in Russian language and literature. Students interested in Russian are encouraged to consider a major in Eurasian studies (p. 573), comparative literature and thought (p. 386), or history (p. 642), all of which can be pursued with a focus on Russia and the former Soviet Union.

Minors

- Russian Language and Literature Minor (p. 941)

Courses

RUSS 1501 Elementary Russian I
Interactive multimedia course designed to emphasize spoken language; includes the very latest video materials geared toward situations in contemporary post-Soviet Russian life. Also provides thorough understanding of fundamental grammar and develops reading and writing skills. Five class hours per week, plus an additional hour for conversation, review and testing.
Credit 5 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall

RUSS 1502 Elementary Russian II
Continuation of 101D (Russian 101D or the equivalent is required). Interactive multimedia course designed to emphasize spoken language; includes the very latest video materials geared toward situations in contemporary Russian life. Also provides thorough understanding of fundamental grammar and develops reading and writing skills. Five class hours per week, plus an additional hour for conversation, review, and testing. Prerequisite: Russian 101D.
Credit 5 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Spring

RUSS 1996 Russian Elective
Credit 0 units. EN: H

RUSS 2501 Intermediate Russian I
Designed to solidify students' control of Russian grammar and advance conversational, reading, and writing skills. Includes video materials produced in Russia and conveying an up-to-the-minute picture of contemporary Russian life.
Credit 4 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall

RUSS 2502 Intermediate Russian II
Continuation of 211D, completes comprehensive review of Russian grammar and further advances conversational, reading, writing, and listening skills. Revised textbook with new audio and video materials that convey an up-to-the-minute picture of contemporary Russian life.
Credit 4 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Spring

RUSS 2996 Russian Elective
Credit 0 units. EN: H

RUSS 3320 Russian Theater, Drama and Performance: From Swan Lake to Punk Prayer
This course explores performance in Russia from the wandering minstrels of medieval times to protest art of the present day. Genres include tragedy and comedy (Griboedov, Pushkin Gogol), drama (Ostrovsky, Turgenev, Chekhov), experimental theater (Stanislavsky, Evreinov, Meyerhold), ballet (Imperial, Soviet, Ballets Russes), opera (Tchaikovsky, Mussorgsky, Shostakovich), and performance art (Futurists, Pussy Riot, Pavlensky). We also consider performativity in rituals, public events, and everyday life. Our discussions center on the analysis of short and full-length plays, critical theory, specific productions and performers, and the role that performance has played in shaping Russian culture. All readings are in English translation. No prerequisites.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H
Typical periods offered: Fall, Spring

RUSS 3500 The 19th-Century Russian Novel (WI)
The 19th-cenutury realistic novel elevated Russian literature to world literary significance. In this course we do close readings of three major Russian novels: Nikolai Gogol's Dead Souls, Ivan Turgenev's Fathers and Sons, and Leo Tolstoy's Anna Karenina. While we consider a variety of formal and thematic concerns, special emphasis is placed on the social context and on questions of Russian cultural identity. Readings and discussions are supplemented by critical articles and film. This is a Writing Intensive course: workshops are required. All readings are in English translation. No prerequisites.
Credit 3 units. A&S IQ: HUM, LCD, WI Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall, Spring

RUSS 3501 Third-Year Russian I
Designed to develop students' abilities in the contemporary spoken language. Conversational practice is combined with a review of grammatical concepts. Students also work with newspapers, read literary texts, and write compositions. Prerequisite: Russ 212D or equivalent.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Fall

RUSS 3502 Third-Year Russian II
Designed to develop students' abilities in the contemporary spoken language. Conversational practice is combined with a review of grammatical concepts. Students also work with newspapers, read literary texts, and write compositions. Prerequisite: Russ 322D or equivalent.
Credit 3 units. A&S IQ: LCD, LS EN: H
Typical periods offered: Spring

RUSS 3721 Dostoevsky's Novels (WI)
In this discussion-based course we focus on two of Dostoevsky's major novels: Demons (also translated as The Possessed and Devils) and The Brothers Karamazov. Our close readings of the novels are enriched by literary theory and primary documents providing socio-historical context. All readings are in English translation. No prerequisites.
Credit 3 units. A&S IQ: HUM, LCD, WI BU: HUM, IS EN: H
Typical periods offered: Fall, Spring

RUSS 3995 Russian Coursework Completed Abroad
This course is for study abroad credits.
Credit 12 units.
Typical periods offered: Fall, Spring

RUSS 3996 Russian Elective
Credit 0 units. EN: H

RUSS 4970 Russian Independent Work
Independent study course.
Credit 3 units.
Typical periods offered: Spring

RUSS 4996 Russian Elective
Credit 0 units. EN: H

Russian Language and Literature Minor

Program Requirements

- **Total Units Required:** 20
- **Grade Requirement:** Students must earn at least a B- in language courses in order to continue to the next level. They must also maintain at least a B- average in all courses taken to fulfill the minor requirements. Students who do not meet this requirement may either repeat the course or courses in question or earn at least a B- in an approved equivalent course or courses (either during the summer or in a study abroad program).

Prerequisites

Code	Title	Units
RUSSIAN 1501	Elementary Russian I	5
RUSSIAN 1502	Elementary Russian II	5

Requirements

Code	Title	Units
RUSSIAN 2501	Intermediate Russian I	4
RUSSIAN 2502	Intermediate Russian II	4
RUSSIAN 3501	Third-Year Russian I	3
RUSSIAN 3502	Third-Year Russian II	3
One 3000- or 4000-level course in Russian literature		3
One elective course: either another Russian literature course or a Russian subject course taught in such departments as history or political science		3
Total Units		**20**

Additional Information

- Students can earn up to 6 credits from a semester or summer study abroad program, with the approval of the Russian Language and Literature advisor.
- All advanced units must be unique to the Russian Language and Literature minor (i.e., not counted toward any other major or minor).

Study Abroad

The Russian Language and Literature minor program encourages students to study abroad in Russia and other post-Soviet countries. Washington University offers summer, semester, and year-long study in St. Petersburg, Russia, under the auspices of the Council on International Educational Exchange (CIEE). Students can also petition for an alternative study abroad program by filling out the Washington University Petition Packet. Students may count up to 6 units from study abroad toward the Russian Language and Literature minor: 3 units for a literature or culture course and 3 units for a language course.

Semester options include both language and area studies programs. The summer program is language-focused only, but there are programs available for students at any language level, including beginning.

Financial aid may be available for these programs through both Washington University and the CIEE.

Transfer Credit

Students may be allowed to transfer credit from coursework completed at another college or university. Transfer of credit requires prior approval of the Russian Language and Literature advisor.

Sociology

The Department of Sociology strives to understand the origins and reproduction of social inequality, especially as it relates to issues of pressing public concern. Our particular areas of focus include — but are not limited to — the following: race/ethnicity; gender and the family; the sociology of organizations, work, and the workplace; immigration; political sociology and social movements; and community and urban sociology.

Sociological analysis begins from theoretical perspectives that explain how the structures that organize and govern social systems emerge and change. Our curriculum and research emphasize an understanding of social processes that is well-grounded in empirical data related to how societies actually function. We also seek to engage with social policies and social institutions to better understand the world in which we live and to help guide social change.

Re-established in 2015 after a hiatus of more than two decades, the department offers undergraduate major and minor programs with wide-ranging course offerings every semester. The curriculum provides students with research tools to examine critical social issues and to apply their understanding of sociology to activities outside of the university.

Majors

- Sociology Major (p. 950)

Minors

- Sociology Minor (p. 952)

Courses

SOC 1006 Social Problems and Social Issues
This course explores and analyzes contemporary American social problems and social issues using sociological tools. The sociological perspective provides the overarching framework for analyses of social issues, along with the application of sociological theory and research. Topics may include aging, substance use and abuse, crime, violence, poverty, discrimination, health care, family, globalization, and environmental degradation. This course will be valuable to students pursuing graduate work and careers in sociology, law, medicine and health care, and social services. The content may also prove useful for MCAT, LSAT, and GRE preparations. No prerequisite.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring, Summer

SOC 1100 First-Year Seminar: Beyond the Melting Pot: Life in Immigrant America
This course uses a sociological lens to explore contemporary immigration to the United States. The more than 43 million immigrants living in the United States today come from across the globe. Their reasons for migrating to the United States are complex, as are the laws, policies, and social structures they must navigate before and after their arrival. In the first half of the course, students will get to know Mexican immigrants who split their lives between Brooklyn and their small hometown in Mexico, fourth-generation Chinese Americans who are still asked, Where are you from?, and West Indian immigrants forced to confront a U.S. racial order where they are defined by their Blackness. In the second half of the course, students will learn about Iranian-American youth navigating life in post- 9/11 America and the challenges of becoming a young adult when one learns that they lack any legal

status. Who are these immigrants? Why and how did they come here? How well are they and their children integrating into American society? Readings will be drawn from sociological research that opens windows into the lives of immigrants in America. Students will also conduct their own hands-on research to better understand life in immigrant America. This course is open to first-year students only. No prerequisite.
Credit 3 units. A&S IQ: LCD, SSC, SC BU: BA, IS EN: S
Typical periods offered: Fall, Spring

SOC 1130 Introduction to Race
This course serves as an introduction to the analytic category race. Students will be exposed to major theories concepts, processes, frameworks, and scholars of race. They will develop the skills and language to critically examine and discuss race, with emphasis on how conceptions of race and collective identity have deep historical roots and have changed over time. This course takes the position that race-like gender, class and sexuality-is socially constructed. That said, while race is socially constructed, this course also emphasizes that racialization and racial categories have social, political, and economic consequences in people's everyday lives. Meaning the socially and historically constructed category of race has real implications for people and communities. Ultimately, the purpose of the course is to teach students to read, think and write critically about one of today's most contentious topics-race-by exposing them to readings and other course materials that consider race and the process of racialization in specific contexts and time periods throughout the world.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, HUM EN: H

SOC 2010 The Roots of Ferguson: Understanding Racial Inequality in the Contemporary U.S.
This course provides an overview of sociological understandings of race, with a particular focus on race relations in the contemporary United States. The course begins by inquiring how sociologists understand racial distinctions, asking: What comprises a racial group? What constitutes a group in the social sense? The course then shifts to explore patterns of racial inequality in the U.S., particularly through investigating the intersections of economic, political, and racial stratification. After analyzing national trends in racial stratification, the course narrows its focus to particular regions and metropolitan areas, including St. Louis, to shed light on pressing public concerns such as the interrelationships between race and the criminal justice system. The course ends by looking beyond U.S. borders to compare the way that race is understood in other countries. Are there common patterns of racial classification shared by many societies? What makes the U.S. system of racial stratification distinctive? No prerequisite.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

SOC 2020 Order and Change in Society
This course identifies and analyzes processes that create social order and forces that generate social change. What kinds of structures make social life coherent so that people can navigate a wide range of social settings? How do societies sometimes mobilize to alter the status quo, and what kinds of barriers limit those efforts to change social systems? This course engages with such core issues through a sociological lens. Specific topics include: the emergence of social roles and status systems; how social networks matter in communities, schools, and other groups; and the performance, reproduction, and, subversion of privilege and inequality. No prerequisite.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring, Summer

SOC 2030 Social Movements
Social movements are collective efforts to produce political, economic, and/or cultural change. This course draws on a range of historical and contemporary case studies to analyze such collective actions by interrogating distinctive aspects of movements and their associated campaigns. Key questions include: when and where do movements occur, who participates and why, how do protest strategies and tactics develop, how do police and other movement targets react to challenges to the status quo, and how can we assess the direct and indirect impacts of contention? No prerequisite.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

SOC 2040 Social Inequality in America
Americans face different challenges and opportunities that depend on a variety of characteristics, including race, class, gender, and sexual orientation. This class examines these intersecting categories from a sociological perspective - not simply as ways to classify people, but as social constructions that help to explain social inequality. Students will examine these systems in a variety of institutional contexts, such as popular culture, family life, education, the criminal justice system, and the labor force. No prerequisite.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

SOC 2050 Inequality By Design: Understanding Racial/Ethnic Health Disparities
This course critically examines health status and health care disparities among racial/ethnic minority groups in the United States. The course will utilize sociological, demographic, epidemiological, and psychological concepts to introduce students to racial/ethnic health disparities research. Students will be exposed to the descriptive demography and epidemiology of health indicators across population groups, as well as to the theories used to understand and explain racial/ethnic health disparities. In particular, the course will examine the ways in which multiple forms of interpersonal and institutional discrimination, neighborhood and community factors, and inequalities in socioeconomic status influence health behaviors, access to health care services, and health status outcomes across racial/ethnic groups. Concepts such as acculturation, patient preferences, provider congruence and cultural competence will also be explored in this course. Finally, students will be challenged to use the theories and frameworks introduced in this course to develop and present policy approaches to address racial/ethnic disparities in health and health care in the United States. No prerequisite.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

SOC 2060 Punishment and Inequality
This course examines the institutions and policies that shape punishment in the United States, with a particular focus on mass incarceration. The U.S. incarceration rate has more than quadrupled since the early 1970s. In this course, students examine how the United States became the world's leader in incarceration and how racial and class disparities in imprisonment became so large. The course next investigates the consequences of incarceration, both in terms of its high rates and intense social concentration. The course concludes by assessing recent attempts to reform the criminal justice system. No prerequisite.
Credit 3 units. A&S IQ: SSC, SC BU: BA EN: S
Typical periods offered: Fall

SOC 2070 Families and Social Inequality
Families have changed dramatically in recent decades in the United States. Dual-earner families, single parents, cohabiting families, and blended families are now common in the contemporary family landscape. The prevalence of increasingly diverse and complex family configurations varies substantially by social class, race and ethnicity, and gender. Men's and women's work and family lives have also become more similar over time, but gender inequalities in child care remain significant. Drawing on insights from sociology, demography, and economics, this course aims to understand the causes and consequences of social inequalities in family life. The course focuses primarily on the contemporary U.S. context, but also explores historical and cross-national variation in families. The course also considers the role of social policy in affecting inequalities. No prerequisite.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

SOC 2091 Media, Culture, and Society
This introductory level course will focus on the critical analysis of media at both structural and interactional levels. The course will approach critical questions about media as a social institution, such as how media is socially constructed and, relatedly, how media shapes the social world. Core themes students will consider include critical media theory, representation in media, consumption of media, and action/engagement with social issues concerning media. Along these themes, the course will consider key concepts such as race, gender, class, sexuality, nation, language, law/justice, generation, space/place, and social change. The course will use an intersectional, social justice framework to discern how media reflects, commodifies, oppresses, liberates, and constructs social life. This course will be an accessible entry point for students who are new to sociology as a discipline. No prerequisite.
Credit 3 units. A&S IQ: SSC, SC EN: S
Typical periods offered: Spring, Summer

SOC 2500 Topics in Sociology
This course acts as an introductory-level seminar that provides in-depth explorations of sociological concepts, methods, or perspectives. Topics of study vary. No prerequisite.
Credit 3 units. A&S IQ: SSC
Typical periods offered: Fall

SOC 2996 Sociology Elective - 200 Level
Course used for transfer units to denote Sociology elective
Credit 3 units. EN: S
Typical periods offered: Fall, Spring, Summer

SOC 3000 Social Theory
This course provides an overview of major theoretical frameworks used by sociologists to understand social behavior and group patterns. This course explores classical theories, including those developed by Marx, Weber, and Durkheim, along with contemporary perspectives such as functionalist, interactionist, and conflict theories. Class discussions and writing assignments emphasize students' application of theory to understand current social experiences and structures. The course has no specific prerequisites, but students should be prepared for intensive study of challenging ideas and the application of these ideas in new contexts relevant to modern society. This course counts toward the program's Theory component which Sociology majors and minors must complete to fulfill degree requirements.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

SOC 3003 Black Feminist Theory
What makes Black feminist theory unique? Whose theorizing is considered theory worthy of canonizing? What are the different strands of Black feminist thought ? What has Black feminist thought contributed to academic and popular culture? Through engaging with primary text and producing their own text, students in this seminar will develop answers to these questions through exploration of (contemporary) Black feminist thought. The course has no specific prerequisites, but students should be prepared for intensive study of challenging ideas and the application of these ideas in new contexts relevant to modern society. This course counts toward the program's Theory component which Sociology majors and minors must complete to fulfill degree requirements.
Credit 3 units. A&S IQ: SSC, SC Art: SSC EN: S
Typical periods offered: Fall

SOC 3030 Introduction to Research Methods
This course offers an overview of research methods commonly used to investigate sociological phenomena, including experiments, surveys, ethnographic field research, and analysis of existing data. The course explores general issues in sociological research, such as research design, conceptualization and measurement, reliability, validity, sampling, and ethical conduct. Students will also review applications of research methods in specific sociological studies and analyze how research results are communicated. This is a core course within the Sociology program and is required of all Sociology majors; Sociology minors are encouraged to take this course to fulfill their Methods requirement within their course of study. The course has no specific prerequisites, but some familiarity with sociological analysis is recommended.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

SOC 3040 Statistics for Sociology
This course acts as an introduction to descriptive and inferential statistical techniques used in sociological research. Topics addressed include: probability distributions, data presentation and visualization, confidence intervals, hypothesis testing, and linear regression. Students will learn to design and evaluate statistical analysis drawn from sociological research and other social science data sources, such as polling and economic data. Students will use statistical software to complete lab assignments. This is a core course within the Sociology program and is required of all majors; Sociology minors are encouraged to take this course to fulfill the Methods requirement within their course of study. The course has no specific prerequisites, but some familiarity with sociological analysis is recommended.
Credit 3 units. A&S IQ: NSM, AN Art: NSM
Typical periods offered: Fall, Spring

SOC 3100 The Social Construction of Race
This course examines race, ethnicity, and racism from a sociological perspective to understand race as a socially-constructed phenomenon manifested in a wide range of social institutions. The course focuses on how race and racism impact contemporary social problems and public policy issues including immigration, affirmative action, education, media representation, and work. Students will learn to apply sociological analysis to understand current race-related events. This course has no specific prerequisites, but completion of an introductory Sociology course is recommended prior to enrollment.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

SOC 3110 The New Inequality
This course explores recent trends of economic inequality in the United States that have reached levels not seen since before the Great Depression. Students will examine factors that account for the decades-long increase in economic disparities, paying particular attention to patterns in educational attainment, political developments, and the role of technological change. Students will also compare recent movements in economic inequality and macroeconomic performance in the U.S. to other advanced industrialized nations. This course has no specific prerequisites but successful completion of an introductory Sociology course is recommended prior to enrollment.
Credit 3 units. A&S IQ: SSC, SC, WI Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

SOC 3120 Getting Paid: A Sociological Investigation of Wages and Salaries
A Burger King worker in the United States today performs the same duties and requires the same skills as a Burger King worker in Denmark. However, the worker in Denmark earns two-and-a-half times as much money. Why? A full-time construction worker in the United States today earns $10,000 less per year (adjusted for inflation) than a worker with the same job in 1973. Construction work cannot be shipped overseas, so why the decline? What determines one's pay? Are people paid fairly? How might one know? This course seeks to answer these questions. Students will draw on a range of comparative, historical, and contemporary case studies to explore changes in the ways in which American workers get paid. Key areas of focus include: employer strategies to prevent workers from realizing their market value, the role Wall St. plays in influencing pay, and ongoing efforts to measure and reward individual productivity. The ultimate goal of the course is to upend students' taken-for-granted assumptions about pay-setting, and to provide students with a richer and more complex understanding of the contemporary world of wage and salary determination. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor.
Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH EN: S
Typical periods offered: Fall, Spring

SOC 3130 Sociology of Work
This course acts as an overview of the sociological understandings of work, and in particular, how work reduces or replicates inequality. This course will cover classic and contemporary sociological theories of work; how work in the U.S. has changed over time; and how workers are matched to good and bad jobs. Threaded through the course is the exploration of barriers to racial, gender, and class to inclusion and advancement at work. Students will explore how organizational structures, policies, and practices can increase or decrease those barriers. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S

SOC 3140 Social Conflict
This course is a comparative and historical examination of conflict between social groups, including groups defined by race, ethnicity, and class. Course readings will combine classical and contemporary perspectives on collective conflict with in-depth analyses of historical and contemporary episodes. The course will discuss the various ways in which conflicts can manifest, including: the formation and hardening of divisive attitudes; discriminatory lawmaking and criminal justice practices; riots and collective violence; residential segregation; and sustained social movement activity. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

SOC 3150 Sociology of Immigration
This course reviews theoretical and empirical research on how and why people migrate across international borders, and the consequences of international migration for immigrants and natives in the United States. While immigration is one of the most controversial issues in the contemporary United States, these contentious debates are not new. Americans once voiced the same concerns about the economic and social impact of Southern and Eastern European immigrants that today are aimed at immigrants from Latin America, Asia, Africa, and the Caribbean. In this course, students will compare historical (1880-1920) and contemporary (1965-present) waves of immigration to the United States. In this, students will explore why and how people migrate; immigrant integration; the impact of immigration on native-born Americans; and how government policies - at the national, state, and local level - shape immigrant assimilation and what it means to be considered truly American in a social as well as a legal sense. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

SOC 3170 Poverty and the New American City
This course explores structural changes that are transforming the American urban landscape, especially for low-income populations. The course begins with a review of classic theories of urban poverty and consider their relevance in the modern context. Students will then analyze key political, economic, demographic, and geographic shifts in how urban poverty is organized and reproduced, including gentrification, immigration, social policy reform, and the credit crisis. Special attention will be devoted to exploring the social and political implications of changing urban policy approaches, as well as the suburbanization of poverty. The course will conclude by discussing how urban poverty interfaces with broader social structures, including law, markets, and the state. Prerequisite: successful completion of an introductory sociology course or consent of the instructor.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall

SOC 3180 Philanthropy Lab
This experiential course is designed to give students a theoretical and practical understanding of philanthropy. Students will apply their skills and grant up to $50,000 in funding to local non-profits. The course will delve into the sociological and historical roots of philanthropy in the United States, including the origins of philanthropic dollars and their utilization. It will also explore the government's role in funding nonprofits and new philanthropic tools, such as donor-advised funds. The course will examine philanthropy's role in addressing social issues and the growing interest in and need for advocacy among institutional givers, providing a thorough knowledge of the field. This course has no specific prerequisites, but some familiarity with sociological analysis is recommended.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

SOC 3190 Gender in Society
This course acts as an introduction to the sociological study of gender. The primary focus of the course will be on U.S. society, but the course will also discuss gender in an international context. From the moment of birth, boys and girls are treated differently. Gender structures the experiences of people in all major social institutions, including the family, the workplace, and schools. Students will explore how gender impacts lives and life chances. The central themes of the course are historical changes in gender beliefs and practices; socialization practices that reproduce gender identities; how race/ethnicity, class,

and sexuality shape the experience of gender; and the relationship between gender, power, and social inequality. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor.

Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S

Typical periods offered: Fall, Spring

SOC 3191 How Many Sociologists Does It Take To Change a Lightbulb: Studying Humor in Social Life

What makes things funny? What roles does humor play in society? How is humor used by various groups and to what ends? What are the relationships between humor, identity, and inequality? In this course, we will investigate humor and its place in social life from a sociological perspective. We will read classic and contemporary theorists on what people find funny while considering the positive and negative effects of humor in the contemporary world.

Credit 3 units. A&S IQ: SSC, SC

Typical periods offered: Fall, Spring

SOC 3201 Deviance and Society

In sociology, deviance is the term used to describe actions or identities that differ from group norms. It encompasses everything from serious crimes (e.g. murder) to non-criminal, but frowned upon, behavior (e.g. talking loudly at the movies). Why do certain actions and identities become labeled as deviant and others do not? In what ways do societal conceptions of deviance change over time? How do people labeled as deviant manage their deviant identities and deal with any associated stigma? In this course, students will think about and explore how sociology and related disciplines have approached the study of social deviance and consider what can be learned about societies by looking at the way they construct deviant identities and acts. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor.

Credit 3 units. A&S IQ: SSC, SC

Typical periods offered: Fall

SOC 3210 Foundations of Population Dynamics

How do morbidity and mortality patterns differ across countries and over time? What are the causes and consequences of aging populations? What is the impact of migration on the demographic structures of destination societies? How do policies influence fertility desire and behaviors? Is there a limit to human life expectancy? This course will address such questions by introducing students to the key theories and elementary measures for understanding how vital events-deaths, births, and migration-shape the structure of human societies around the world. Merging insights from Sociology, Demography, Population Health, Global Health, and Population Biology, we will study the social, economic, and political causes and consequences of changes in human populations in terms of their size, composition, and distribution. In addition to reading key theories and perspectives about population change *(e.g., epidemiologic & demographic transitions),* students will also learn fundamental methods of demographic analysis *(e.g., estimating population growth, standardizing mortality rates, constructing life tables).* While this course involves some basic quantitative analyses, students with basic math skills (addition, subtraction, multiplication, and division) will have no trouble. We will work on calculations together in class, and you are encouraged to work on problem sets in groups.

Credit 3 units. A&S IQ: SSC, AN, SC

Typical periods offered: Fall, Spring

SOC 3290 Sociology of Religion

Global conflicts, raising children, electing presidents, praying for a loved one: from the mundane to the extraordinary, religion plays a significant role in social life, regardless of whether or not one considers oneself religious. In this course students will investigate religion and its impacts in society from a sociological perspective. Questions the course will ask include: How does religion fit into society? What are the contours of contemporary religion in the United States and around the world? How do religious identities interact with other aspects of social life, including gender, race and politics? In what ways have religions and religious life changed over time? As social scientists, how can we best study religion? The course will use examples from a variety of religious and secular traditions to help students understand religion's sociological significance in the contemporary world.

Credit 3 units. A&S IQ: SSC, SC

Typical periods offered: Fall, Spring

SOC 3512 Topics in Sociology

An intermediate- to advanced-level seminar focused upon various topics and subject areas within - and adjacent to - the field of Sociology. Themes and content of course will vary by offering and instructor. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor.

Credit 3 units.

SOC 3810 Film and the City

What makes a city a city? Is there something unique about urban life, in comparison to the way life is lived in rural areas and small towns? Only recently has over half of the world's population started to live in urban centers. What issues, if any, might have arisen from this development? In this course, students will think about and explore how sociology and related disciplines have approached the study of cities. Students will read classic and contemporary theorists on urban life and consider how cities shape the human experience. Then, they will apply what they learn to consider the city as portrayed in film. Movies will become the lab where students grapple with the good, the bad, the ugly, and also the beauty of cities. This course has no specific prerequisites, but completion of an introductory Sociology course is recommended prior to enrollment.

Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S

Typical periods offered: Fall, Spring

SOC 3996 Sociology Elective

Credit 0 units. EN: S

SOC 4000 Advanced Topics in Sociology

This course is an upper-level seminar course providing in-depth explorations of sociological concepts, methods, or perspectives intended for advanced Sociology majors or minors and graduate students. Topics of study vary. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor. Graduate students should enroll in the 500-level offering.

Credit 3 units. BU: BA

Typical periods offered: Spring

SOC 4010 Applied Sociological Research

This couse is an advanced seminar that aims to connect sociological reasoning with practical data analysis. Course instructors will select current issues in contemporary sociology and identify relevant data that students will use to explore a range of related research questions. The course develops computational and statistical skills in order to put sociological ideas into practice by learning to analyze and evaluate data, in addition to presenting study results in ways that communicate one's research findings effectively. Topics and subject areas covered

will vary by offering and instructor. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor. Completion of - or concurrent enrollment in - Introduction to Research Methods (SOC 3030) and/or an introductory statistics course (SOC 3050 or equivalent) is strongly encouraged. Graduate students should enroll in the 500-level offering.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

SOC 4011 Childhood and Society
This discussion-based course will focus on the social context and critical analysis of childhood as a social construct and as a valuable site of sociological research, social inquiry, and social action. The course will discuss critical questions about how social inequalities and social institutions shape life chances and outcomes from early childhood through young adulthood. The breadth of the analytic framing of this course will range from the prenatal context and birth to early childhood, school age, pre-teen and teen stages and will also importantly consider how the social transition to adulthood is both socially constructed and has concrete impacts and outcomes. Students will consider intersections of inequality and childhood including but not limited to economic inequalities, race, gender, sexuality, education, criminal justice, health, disability, immigration, media, environment, and social change as the course highlights an intersectional lens. Students focus on an applied sociological perspective of childhood and will emphasize social action and social change. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor. Graduate students should enroll in the 500-level offering.
Credit 3 units. A&S IQ: SSC, SC EN: S

SOC 4017 Healing and Social Justice
What makes activism sustainable and accessible? Not just ideologically or politically, but physically, emotionally, and some would ask, spiritually? How do actors in social justice movements enact care for movement survival? Conversely, when might care serve to depoliticize or otherwise undermine political action? How do race, gender, sexuality, class and other aspects of identity shape the ways we approach these questions? Including the contested topics of burnout and self-care, questions of movement survival and activist sustainability touch on Marxist, Black, and Disabled feminisms, queer theory, the sociology of health and illness, critical theory, and other theoretical lineages. This course takes as its starting points Sarah Ahmed's concept of feminist killjoy survival kits, Black feminist epistemology, adrienne marie brown's Pleasure Activism, and the sociology of lay health experiences. Ultimately, this course will analyze, theorize, and critique care in activism and social movements. At the same time, it will create space to discern what our own visions of sustainable, politically committed wellbeing look like.
Credit 3 units. A&S IQ: HUM, SC BU: BA, HUM

SOC 4111 Sick Society: Social Determinants of Health and Health Disparities in the United States
Improving the health of the U.S. population and reducing disparities in health are national priorities. To reach these goals, much research has sought to determine the factors that influence health status beyond health care quality and access. This course explores the broad area of study termed the social determinants of health while placing special emphasis on the exploration of health disparities in the United States. The course will examine the social conditions that relate to the health of populations, paying particular attention to how patterns of health vary by social class, race/ethnicity, and gender. The course will also consider mechanisms that produce and maintain these differences. In addition to sociology, students will draw upon the work of multiple disciplines, including public health, demography, anthropology, public policy, economics, and medicine to understand what makes our populations sick and what might make them better. The class will be taught through an active learning approach, with class discussions, small group work, presentations, and critical writing assignments being central to the learning process. Student participation through reading and discussions is essential for both the success of the class and individual student learning. While this course has no specific prerequisites, some familiarity with sociologicla analysis is strongly recommended. Graduate students should enroll in the 500-level offering.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Spring

SOC 4120 Migration and Health
This course explores the complex relationship between migration and health, with a focus on immigrant health in the United States. Topics include the immigrant health paradox, the impact of immigration enforcement on health and health behavior, access to health care, the health effects of migration on those left behind, and refugee health. Throughout the course, students will pay particular attention to the diverse mechanisms through which immigration and immigration status affect health. In addition to sociology, students will draw on scholarship from the fields of anthropology, demography, medicine, public health, and public policy. Prerequisite: successful completion of an introductory Sociology course or consent of instructor. Graduate students should enroll in the 500-level offering.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Spring

SOC 4130 Race, Ethnicity, and Migration
This course will explore theoretical and empirical analyses of race, ethnicity and migration through a sociological lens, focusing on children of immigrants and later-generation descendants of migrants in the United States. Students will compare the experiences and outcomes of various racial and ethnic groups, including whites/Europeans, Blacks/African-Americans, Latinos/Hispanics, and Asians, investigating how migration processes and patterns shape racial/ethnic group formations and inequalities. Examples of specific topics related to these issues include: assimilation; ethnic and racial identities; multiraciality; language; legality; intergroup relations; and education. This course will be taught in a seminar style where student engagement within class discussions is required and one's participation is central to the learning process. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor. Graduate students should enroll in the 500-level offering.
Credit 3 units. A&S IQ: LCD, SSC, SC Art: SSC BU: BA, IS EN: S
Typical periods offered: Spring

SOC 4140 Political Sociology
In this course, students will be discussing politics, the way that people interact with politics, and the way that politics shape our lives. Why do individuals participate in politics (e.g., vote) or become engaged in their communities (e.g., join a voluntary association, protest, etc.)? What role do social connections play in political and civic engagement? What does political competition in the US look like today? What accounts for increasing political partisanship in the United States? Who has access to political institutions? How amenable is our political system to change? Who has the power to impact policy and institutions? How do shifts in political participation, civic engagement, and partisanship all shape policymaking? How does policy shape participation? In this class students will engage with these questions through course discussion, group work, class data collection and analysis, and more. Prerequisite: successful completion of an introductory-level Sociology course or consent of instructor. Graduate students should enroll in the 500-level offering.
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall

SOC 4170 Global Structures and Problems
This course examines social problems around the world and their relationship to globalization - that is, the increasing connectedness of social and economic life across borders. Students will investigate a range of these problems - such as environmental degradation, labor exploitation, human rights abuses, ethnic conflict, poverty, and inequality - and these issues' links to both personal experiences and larger social structures. The course is premised on the idea that to understand current global social problems, one must understand the evolution of markets, states, civil society and social movements, gender hierarchies, ethnic categories, and global governance over the past century. While the course has no specific prerequisites, some familiarity with sociological analysis is strongly recommended. Graduate students should enroll in the 500-level offering.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, IS EN: S
Typical periods offered: Fall, Spring

SOC 4213 Land of Dollars: Race, Money, and the Politics of Equity
This course will explore how racialized meanings and structures shape the circulation and accumulation of money throughout the market economy. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor. Graduate students should enroll in the 500-level offering.
Credit 3 units. A&S IQ: SSC, SC BU: BA
Typical periods offered: Spring

SOC 4214 Race and Place
In this course, students will investigate the claim that race and place are mutually constitutive; that is, race shapes how people perceive and organize places, and places in turn shape understandings and experiences of race. This investigation will span time - form the beginning of colonization in North America to the present - and space - from rural communities to central cities. Students will use a primarily sociological lens, but will also draw insights from history, political science, demography, and philosophy. Topics of study include segregation, housing, the criminal legal system, schooling, work, and more. This seminar is an upper level course intended for advanced sociology majors and minors, as well as graduate students. Graduate students should enroll in the 500-level offering.
Credit 3 units. A&S IQ: SSC, SC Art: SSC EN: S
Typical periods offered: Fall, Spring

SOC 4215 Work, Family, and Gender Inequality in the Contemporary U.S.
Despite dramatic increases in women's education and employment over the past century, progress toward gender equality in both the public and private sphere has slowed or stalled in recent decades. Drawing on research in sociology, economics, and demography, this course examines why gender inequality persists in the workplace and in family life. Students focus primarily on the contemporary U.S. context but also draw on historical and cross-national comparisons. In addition, the course considers the role of cultural norms and work-family policy in shaping gender inequality. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor. Graduate students should enroll in the 500-level offering.
Credit 3 units. A&S IQ: SSC, SC Art: SSC EN: S
Typical periods offered: Spring

SOC 4240 Social Stratification
To the extent that sociology has a “core,” it lies in the study of the complex processes that generate inequalities of power, privilege, and prestige in human societies. This course introduces this core by surveying the major classical and current approaches to social stratification and inequality. Who gets what, and why? How are resources distributed across individuals and groups, and why is it that some enjoy more than others? We consider how different dimensions of inequality have evolved over time, with special focus on inequalities across race, class, and gender. We assess how inequality shapes the lives of individuals in society, how and why inequality persists, and how people have worked to both challenge and reproduce their places in society.
Credit 3 units. A&S IQ: SSC, SC
Typical periods offered: Fall, Spring

SOC 4351 War and Peace
What happens when wars end? This course examines social experiences around violent conflict and its aftermath. How does the portrayal and memory of war shape future possibilities - whether in terms of social policy or ideas about civic inclusion? How does martial conflict shape social policies? We examine war and the social experiences of those adjacent to geopolitical conflict through the experiences of survivors, policy makers, soldiers and families, and international relief agencies. Our emphasis is in understanding the social implications of war - what are the social consequences of martial conflict and how is war represented to those not directly involved? How is war and its aftermath witnessed and how is its commemoration and remembrance constitutive for future action?
Credit 3 units.

SOC 4530 Sociology of Education
This course provides an overview of sociological theory and research on education in contemporary U.S. society. Drawing from sociological perspectives, it covers the implications of schools and schooling for social inequality, mobility, and group relations. It examines major theoretical perspectives on the purpose and social organization of mass education in the United States, and topics related to the organization and function of schools, access to educational resources, and group disparities in school experiences and outcomes.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA, ETH EN: S
Typical periods offered: Fall, Spring

SOC 4721 Race, Reproduction, and Justice
Reproduction is biological, economic, political, and social. Of course, individuals reproduce, but when, how, why, and with whom we do (or do not) is also a matter of public policy and social concern. Drawing on readings from sociology, law and other fields that engage continually with these key questions: Why is reproduction an important site through which to understand sociology? How do statuses such as race, class, gender, sexuality, and ability influence people's reproductive possibilities? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers? Students will review theoretical pieces, empirical research, media and more to explore the answers. This course primarily focuses on the US but will expose students to global reproductive concerns. Class sessions include lecture, in-class discussion and online discussion, media analysis and other activities. This upper-level seminar presumes an understanding of the basic concepts in sociology such as sociological imagination and social construction. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor. Graduate students should enroll in this 500-level offering.
Credit 3 units. A&S IQ: SSC, SC EN: S
Typical periods offered: Fall

SOC 4831 Global Racial Systems
This course will examine the history and contemporary expressions of racism around the world. Specifically, it aims to illuminate the entwinement of racist systems with capitalism, gender, science/knowledge production, and politics over time, focusing on global convergences and localized manifestations of such overlapping structures. The course aims to highlight the effects of global racism across spectrums of (dis)advantage as well as social movements, programs, and policies resisting racism and its effects. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor. Graduate students should enroll in the 500-level offering.
Credit 3 units. A&S IQ: LCD, SSC, SC Art: SSC EN: S
Typical periods offered: Fall

SOC 4900 Capstone Paper for Sociology Majors
This course requires students to carry out an independent research and writing project pertaining to the material covered within the student's choice of an associated 300- or 400-level class that they have successfully completed prior to this Capstone course - or such a course in which the student is currently enrolled. Student work will be supervised and evaluated by the faculty member who instructed or is instructing the course on which this paper is written. Registration may be concurrent with the associated course or after the course is completed. Successful completion of this paper satisfies the capstone requirement for the Sociology major. Students will normally enroll in the minimum one credit required to fulfill the capstone requirement, but students may register for up to three credits with the approval of their faculty supervisor. This course is open to Sociology majors only. Students should obtain faculty approval for their sponsorship and proposed paper topic well in advance of course registration. Students will register for the section assigned to their respective faculty supervisor and will be waitlisted until supervisor approval is confirmed. Prerequisites: approval of faculty supervisor and upper-level class standing at the time of enrollment.
Credit 3 units.
Typical periods offered: Fall, Spring

SOC 4902 Sociology Honors Thesis
The Honors Thesis program is a two-semester sequence of coursework that aids students in developing, designing, executing, and producing original research within the field of sociology. Successful completion of this sequence and the thesis product is required for a student to be eligible for Latin Honors in Sociology. In the fall term, students will participate in a seminar-style course centered upon research design and obtaining needed approvals for carrying out their proposed project. In the spring term, students will be supervised by faculty mentors in an independent study as they carry out their research, analyze their findings, construct the thesis document, and defend their work in a formal defense. Students may be required to share their work in additional venues, such as departmental symposiums or institution-wide undergraduate research events. Successful completion of both terms of coursework and completion of a defendable thesis paper satisfies the capstone requirement for the Sociology major. Additionally, students may count three of the six-credit sequence's hours toward the major's upper-level requirements.This course is open to Sociology majors only. Students who are interested in the thesis program should contact the department's Director of Undergraduate Studies and/or the Academic Coordinator - as well as their planned faculty mentor(s) - prior to their planned enrollment. Students will be waitlisted until program acceptance and faculty approval is confirmed. Prerequisites: acceptance into Honors Sociology Program; consent of instructor and faculty mentor(s).
Credit 3 units. A&S IQ: SSC EN: S
Typical periods offered: Fall, Spring

SOC 4910 Internship in Sociology
Students may receive up to three units of credit for an approved, faculty-sponsored internship that relates to the study and application of sociological material. To fulfill the major's capstone requirement, students must enroll in no less than two credit hours and complete at least 90 approved hours at their internship site, in addition to constructing an academic product to be submitted to and evaluated by their faculty advisor. Specific academic and work requirements will be set by the faculty supervisor in consultation with the student's supervisor at the organization where the internship work is completed. Students must complete and submit an Internship Learning Agreement prior to their course enrollment and no less than two weeks after beginning at their internship site. This course is open to sociology majors; Sociology minors may enroll with departmental permission. Student should register for the section assigned to their faculty supervisor. Students will be waitlisted until their completed Internship Learning Agreements have been received. Prerequisites: completion and submission of the department's Internship Learning Agreement and approval of faculty and internship site supervisors.
Credit 3 units.
Typical periods offered: Fall, Spring

SOC 4920 Teaching Practicum in Sociology
Students may receive up to 3 units of credit for work assisting in course instruction, tutoring, and preparation of course materials under the supervision of a faculty member. This course may fulfill sociology major requirements with the permission of one's advisor and/or the Director of Undergraduate Studies. Students may enroll in this course multiple times, but may only receive program credit once. Register for the section assigned to the faculty supervisor. This course is open only to students who have been approved and assigned to work as a departmental course assistant. Students who register will be waitlisted until practicum assignments have been confirmed with faculty supervisors. Please contact the department's Academic Coordinator for additional details. Prerequisites: approval for practicum participation from supervising faculty and Academic Coordinator.
Credit 3 units.
Typical periods offered: Fall, Spring

SOC 4950 Research in Sociology
Students will conduct independent research on a sociological topic as directed by a faculty member within the Department of Sociology. The student and supervising professor will agree in writing on the course goals, requirements, readings, assignments, meeting schedule, and evaluation criteria. The written agreement must be submitted to the department's Academic Coordinator and approved by the Director of Undergraduate Studies before registration will be authorized. Students should enroll in the section assigned to their faculty supervisor. Students will be waitlisted until faculty supervisor approval is confirmed. Students may take the course for up to three credits, and, with the approval of the supervising faculty member may be repeated. However, this course may be taken for program credit no more than twice (a maximum of 6 credit hours), depending on the student's status as a major or minor. Prerequisites: approval of faculty supervisor and Academic Coordinator.
Credit 3 units.
Typical periods offered: Fall, Spring

SOC 4996 Sociology Elective
Credit 0 units. EN: S

Sociology Major

Program Requirements

- **Total Units Required:** 31-36 (credits may vary based on capstone option)
- **Grade Requirement:** Courses that satisfy major requirements must be completed with a letter grade of C- or better. Courses taken on a Pass/No Pass basis do not satisfy program requirements, save for internships used for capstone credit.

Required Courses

The major requires the successful completion of 10 courses:

a. **Introductory requirement** (6 credits): Any two 1000- or 2000-level Sociology courses. Students may substitute an upper-level Sociology elective for one of their two introductory courses with the written approval of their major advisor.

b. **Theory requirement** (3 credits): Either SOC 3000 Social Theory *or* SOC 3003 Black Feminist Theory

c. **Methods requirement** (6 credits): SOC 3030 Introduction to Research Methods *and* SOC 3040 Statistics for Sociology
We strongly encourage students to enroll in Sociology's statistics course. However, students may substitute SDS 2020 Elementary Probability and Statistics, SDS 3020 Elementary to Intermediate Statistics and Data Analysis, or a social science statistics course for SOC 3040 Statistics for Sociology with the written approval of their major advisor. Courses used to fulfill other programs' major or minor requirements cannot be used in this substitution. Majors who receive approval to fulfill this requirement with a course from another department or university are required to take an additional upper-level Sociology elective in lieu of SOC 3040 Statistics for Sociology for a total of six upper-level Sociology electives rather the standard five.

d. **Upper-level Sociology electives** (15 credits): Any five 3000- or 4000-level Sociology courses. An independent learning course (i.e., independent research, a teaching assistantship, or an internship) can fulfill one of these five elective course requirements. Courses taken to fulfill Theory and Methods requirements cannot count toward upper-level elective program credit.

e. **Capstone:** Majors need to complete one of the following options:

(1) *Capstone project* (1 to 3 credits): A capstone project in Sociology usually resembles a paper like an extended literature review. It can also be a more creative project, such as a podcast, art installation, or community lecture. Regardless of the final product the student submits, capstone projects need to align with a course taken during or prior to the semester in which they intend to complete the capstone — usually in one's junior or senior years. Typically, the faculty instructor of the selected class will serve as the capstone project advisor; however, Sociology faculty (and in some cases, faculty affiliates) may oversee capstone projects. The capstone project should demonstrate the student's ability to synthesize research and integrate new ideas with the selected course's content. The capstone project option is not appropriate for students who wish to conduct independent empirical research; instead, students should consider undertaking a Sociology Honors Thesis.

To begin the capstone project, students should meet with the instructor before the start of the semester to discuss goals, expectations, product(s) to be graded, and timelines, and fill out the Capstone Project Learning Agreement. Capstone Project Learning Agreements must be completed and filed with their faculty advisor and the Sociology Academic Coordinator no later than two weeks after the start of the semester (before the semester's Add/Drop deadline). Students who do not submit the Capstone Project Learning Agreement will not be authorized to enroll in their advisor's section of SOC 4900 Capstone Project for Sociology Majors. Credit cannot be awarded retroactively for previous work or unapproved projects.

To complete the capstone requirement, students must enroll in at least 1 letter-graded credit of SOC 4900 Capstone Project for Sociology Majors but can register for up to 3 credits. Students should expect to invest three hours per week for each credit in which they enroll. Students who successfully complete an approved capstone project with a C- or better will satisfy the capstone requirement.

(2) *Internship* (2 or 3 credits): Capstone internships are intended to integrate and apply the knowledge gained in the classroom to community and organizational settings. Students should aim to secure and complete the capstone internship before the final semester of their senior year, usually during one's junior year or over the summer leading into one's senior year. Students are responsible for finding and securing internship positions. For help identifying options in St. Louis, students may reference the Gephardt Institute's internship opportunities listings and the Center for Career Engagement's resources.

After securing a capstone-eligible internship, students should meet with both their faculty internship advisor and internship site supervisor before the work begins to discuss goals, expectations, product(s) to be graded, and timelines, and fill out the Internship Learning Agreement. The finalized Internship Learning Agreement should be filed with the Sociology Academic Coordinator, faculty internship advisor, and internship site supervisor no later than two weeks from the start of the internship (prior to the semester's Add/Drop deadline). Students who do not submit the Internship Learning Agreement will not be authorized to enroll in their advisor's section of SOC 4910 Internship in Sociology. Credit cannot be awarded retroactively for previous or unapproved internships.

To fulfill the capstone requirement, students need to enroll in at least 2 credits of SOC 4910 Internship in Sociology. If the internship takes place over the summer, the student should register for SOC 4910 Internship in Sociology to receive credit in the following fall semester. Per Arts & Sciences policy, all internships must be taken for Pass/No Pass credit; the student must earn a Pass to successfully complete the program's capstone requirement.

Students need to complete at least 90 internship hours to fulfill the 2-credit capstone requirement or 135 hours for a 3-credit internship. 1-credit internships cannot be combined to count toward capstone requirements. Students interested in 1-credit internship opportunities are encouraged to consider seeking general Arts & Sciences elective credit for this work.

(3) *Honors thesis* (6 credits): The Sociology Honors Thesis program is a two-semester sequence undertaken in one's senior year, during which students conduct independent empirical research. The program is only open to Sociology majors. There is no non-honors thesis option.

Students interested in the program need to submit an application by May 1 of their junior year. Students accepted into the program will be notified by late May.

In the fall of their senior year, students admitted to the program will enroll in SOC 4902 Sociology Honors Thesis Seminar for 3 credits. In this once-weekly course, students will develop and complete a thesis proposal. In the spring semester, students will undertake independent research under faculty mentor supervision through a 3-credit independent study, SOC 4900 Capstone Project for Sociology Majors. Students who choose the thesis capstone option can apply their 3 thesis credits toward the major's elective requirement (part d above). In other words, students who complete the year-long thesis program only need to compete four (rather than five) 3000- or 4000-level courses. Students must complete both the fall Honors Thesis Seminar and the spring independent study components to be eligible for these modified program requirements and consideration for Latin Honors.

By midway through the fall semester, students should identify a faculty member who will serve as their thesis committee chair. Students and faculty will work together to establish expectations and timelines for the thesis, and to complete the Honors Thesis Learning Agreement. This document should be filed with the Sociology Academic Coordinator no later than two weeks from the start of the spring semester (prior to the Add/Drop deadline). Students who do not submit the Honors Thesis Learning Agreement will not be authorized to enroll in their advisor's section of SOC 4900 Capstone Project for Sociology Majors, forfeiting their program membership and eligibility for Latin Honors.

In addition to completing required coursework, students should expect to conduct independent research and data analysis, culminating in a written work that resembles an empirical journal article (roughly 35 pages, though many theses are longer). Sociology Honors Thesis Program students must also successfully defend their thesis at a one-hour meeting near the end of the spring semester with their thesis committee (a chair and a reader). Additionally, students are expected to share their work at a departmental honors thesis colloquium in late April or early May.

For more information, please visit Sociology's Honors Thesis Program page.

(4) The department occasionally offers special 4000-level courses that fulfill the capstone requirement (for example, collaborative and community-based research opportunities like SOC 4930 In \Visible St. Louis: People, Place, and Power in the Divided City). Only juniors and seniors may enroll and earn capstone credit for their work. Please contact the Sociology Academic Coordinator to inquire about the upcoming availability of such courses.

Additional Information

Professional Development Opportunities

Students interested in undergraduate research, teaching assistantships, or leadership development opportunities within the Department of Sociology should contact the Academic Coordinator.

Transfer Credits and Study Abroad

Majors may apply up to 6 credits of Study Abroad coursework approved through Washington University or approved transfer credits from another U.S. institution. This may include one lower-level and one upper-level elective, or two upper-level electives. The Department of Sociology has many preapproved Sociology Study Abroad programs. Students who plan to study abroad should first consult Overseas Programs. Students will then complete a study plan and submit this form to the Director of Undergraduate Studies. Students who want to apply Study Abroad credits or transfer credits to their program requirements should contact the Director of Undergraduate Studies, who serves as the department's Study Abroad advisor. Upon completion of their Study Abroad program, students will complete a credit evaluation form and a brief departmental survey about their experiences.

In exceptional cases, students may request a course outside of Sociology to count toward their program requirements if it has sufficient sociological content. Please contact the Director of Undergraduate Studies for more information about course substitutions.

Latin Honors

To be eligible for Latin honors in Sociology, students must complete an honors thesis. For more information, please review the Requirements entry above or visit Sociology's Honors Thesis Program page. Juniors interested in the Sociology Honors Thesis Program should submit their applications by May 1. Students accepted into the program will be notified by late May with more details about the process.

Sociology Minor

Program Requirements

- **Total Units Required:** 15 credits
- **Grade Requirement:** Courses taken Pass/No Pass and courses in which a student earns less than a C- cannot fulfill program requirements.

Required Courses

To earn the minor in Sociology, students must complete the following:

- **Introductory requirement** (3 credits): One 1000- or 2000-level Sociology course
- **Theory requirement** (3 credits): Either SOC 3000 Social Theory **or** SOC 3003 Black Feminist Theory
- **Methods requirement** (3 credits): Either SOC 3030 Introduction to Research Methods **or** SOC 3040 Statistics for Sociology
- **Additional upper-level sociology electives** (6 credits): Any two 3000- or 4000- level Sociology courses. Upper-level courses taken to fulfill Theory or Methods requirements cannot be used to fulfill required elective credits.

Additional Information

Minors may apply up to 3 credits of Study Abroad coursework approved through Washington University or approved transfer credits from another U.S. institution. Students who want to apply Study Abroad credits or transfer credits to their program requirements should contact the Director of Undergraduate Studies, who serves as the department's Study Abroad Advisor. Upon completion of their Study Abroad program, students will complete a credit evaluation form and a brief departmental survey about their experiences.

Students interested in undergraduate research, teaching assistantships, or leadership development opportunities in the Department of Sociology should contact the Academic Coordinator.

Speech and Hearing

The minor in speech and hearing is offered by the Program in Audiology and Communication Sciences (PACS) in the School of Medicine and is designed for students interested in exploring topics related to typical and disordered human communication. The required coursework provides an overview of the fields of hearing, deafness, language, and speech with opportunities to explore related topics in more depth. This minor is especially valuable for students in fields such as psychological and brain sciences, education, philosophy-neuroscience-psychology (PNP), and linguistics, but it has broad applicability for many fields of study. Courses completed as part of this minor can also be used to fulfill the total unit requirements for graduation and as prerequisites for graduate studies in audiology, deaf education, and speech-language pathology. However, the minor may not be used as an Integration in Arts & Sciences Integrated Inquiry (IQ) curriculum, and it does not otherwise fulfill any Arts & Sciences distribution requirements.

Faculty

Minor Advisor

Kate McClannahan
Assistant Professor of Otolaryngology

Program Directors

Kate McClannahan
Director of Undergraduate Studies
Assistant Professor of Otolaryngology

Amanda Ortmann
Director of Audiology Studies
Assistant Professor of Otolaryngology

Casey Reimer
Director of Deaf Education Studies
Assistant Professor of Otolaryngology

Faculty and Staff List

For a full list of faculty and staff, please visit the PACS website.

Majors

There is no major in this area. The minor in speech and hearing is offered by the Program in Audiology and Communication Sciences at Washington University School of Medicine. The program also offers graduate study in the fields of audiology, deaf education, and speech and hearing sciences, which lead to the following degrees: Doctor of Audiology (AuD), Master of Science in Deaf Education (MSDE), and Doctor of Philosophy (PhD)—Speech and Hearing Sciences.

Minors

- Speech and Hearing Minor (p. 953)

Courses

To view offerings, visit the PACS course listings page. Please visit the Speech and Hearing Minor page (p. 953) for courses that are open to undergraduate students.

Speech and Hearing Minor

Program Requirements

- **Total Units Required:** 15
- **Grade Requirement:** C- or better; Pass/No Pass grades do not count for the minor.

Required Course

Code	Title	Units
EDUC 2100	Introduction to Speech, Language, and Hearing Sciences	3

Elective Courses

At least four of the following, totaling at least 12 units:

Code	Title	Units
LING 1600	Introduction to Linguistics	3
LING 3050	Phonetics	3
PACS 3000	Acoustics and Speech Perception	3
PACS 3010	Introduction to Audiology	3
PACS 3993	Observation and Methods in Audiology	3
PACS 3994	Observation and Methods in Speech-Language Pathology	3
PACS 4000	Anatomy and Physiology and Speech and Hearing	3
PACS 4050	Sign Language I	2
PACS 4051	Sign Language II	2
PACS 4052	Sign Language III	2
PACS 4060	Typical Language Development	3
PACS 4080	Speech and Language Disorders	3

Additional Information

- This minor is composed of a minimum of 15 units that focus on the study of speech, language, and hearing. Of the 15 units, 3 units must be EDUC 2100; at least 9 units must be at the 3000 level or higher; and at least 9 units must be offered by the department.
- To count toward the minor, courses must be selected from the courses listed above or approved in advance by the minor advisor.
- A grade of C- or higher is required for a course to count toward the minor; Pass/No Pass grades do not count for the minor.
- For students who intend to pursue graduate studies in audiology, speech-language pathology, or deaf education, we recommend meeting with the minor advisor to develop a course of study that will fulfill prerequisite requirements for the intended area of study.
- Because the Minor in Speech and Hearing Sciences is offered by the Program in Audiology and Communication Sciences (PACS) in the School of Medicine, it may not be used as an Integration and does not otherwise fulfill any Arts & Sciences distribution requirements.

Statistics and Data Science

Statistics — as a core discipline focusing on data-driven discovery, understanding, and decision-making — is rapidly evolving and advancing in the data science era. The new Department of Statistics and Data Science (SDS) strives to be a world-class department with outstanding scholars who will transform the university's intellectual community not only through their own activities and achievements but also through synergistic collaborations with faculty and departments across Arts & Sciences, the McKelvey School of Engineering, the School of Medicine, and all of the other schools at the university.

The department aims to provide a foundation for ambitious and innovative digital transformation across a range of disciplinary areas, filling a vital niche in the current academic landscape that leverages the emerging opportunities of computational and data science. SDS values foundational as well as transdisciplinary scholarship and will focus on using data to offer solutions to some of the most complex global issues.

The Department of Statistics and Data Science offers two Bachelor of Arts degrees:

1. Statistics: The BA in Statistics provides flexible and rigorous training in statistics for a wide range of career paths in industry or further graduate studies.
2. Data Science: Jointly offered with Computer Science & Engineering (CSE), the BA in Data Science offers students the formal foundation needed to understand the applicability and consequences of the various approaches to analyzing data with a focus on statistical modeling and machine learning.

Both programs are offered as a prime or a double major. In addition, SDS offers a Minor in Statistics and an Accelerated BA/MA in Statistics. All our programs are flexible enough to allow a broad range of double majors or major/minor combinations. Majors are encouraged to complete additional work in other related areas.

Why choose the BA in Statistics? Data permeates every aspect of our lives. The ability to comprehend, synthesize, analyze, extract valuable information, and draw sound conclusions from data is a must-have in almost all human endeavors and activities. Statistics not only facilitates the implementation and evaluation of mathematical and computational models that represent reality but also acknowledges the inherent randomness in data, rendering it indispensable for the making of informed decisions in a wide range of domains.

Why choose the BA in Data Science? Data science arises in the midst of a new era of data revolution and the challenges faced by the standard mathematical and statistical approaches when dealing with massive datasets, high dimensionality, and extremely complex data objects. These datasets appear in modern applications ranging from medicine to climatology to social sciences, to name just a few. Students trained in data science are already in high demand across a wide spectrum of industries. Data science is by nature interdisciplinary, requiring the mastery of a variety of skills and concepts, including many traditionally associated with the fields of statistics, computer science, and mathematics. In crafting the BA in Data Science, SDS and CSE have sought to leverage courses that are already taught as much as possible, while at the same time judiciously introducing a handful of new courses that capture unique aspects at the intersection of the two disciplines. The program features a novel practicum component during which students undertake a mentored experience to apply their knowledge and skills in industry or research.

The Accelerated BA/MA in Statistics allows highly qualified undergraduate majors to earn both the BA and MA degrees with two additional semesters of work (i.e., usually a total of five years). Participants can count up to 15 units of 4000-/5000-level coursework earned during the four years of undergraduate study (with grades of B or better) toward the MA course requirements. Counting these 15 units makes it possible to finish the master's requirements in one additional year, but the program is still fast-paced and requires a lot of intense work and careful planning. For more information, visit the Statistics and Data Science page of the graduate Arts & Sciences *Bulletin.*

Overview of Faculty Research

The interdisciplinary interests of our faculty span a broad range of areas including the application of statistics and data science to medicine, finance, environmental sciences, and technology. Research interests of our faculty include the following:

- Bioinformatics
- Bootstrap methodology
- Environmental statistics
- Functional data analysis
- High-dimensional statistics
- Statistical computing for massive data
- Mathematical and statistical finance
- Model selection and post-selection inference
- Network analysis
- Objective Bayes
- Robust statistics
- Statistical and machine learning
- Time series and spatial statistics

Email:	sds@wustl.edu
Website:	https://sds.wustl.edu

Faculty

Chair

Xuming He
Kotzubei-Beckmann Distinguished Professor
PhD, University of Illinois at Urbana-Champaign
Robust statistics; quantile regression; Bayesian inference; post-selection inference

Director of Graduate Studies, PhD Program

José Figueroa-López
Professor
PhD, Georgia Institute of Technology
Inference methods for stochastic processes based on high-frequency sampling data; nonparametric estimation and model selection methods; time series analysis; high-frequency algorithmic trading, limit order book modeling, and asset price formation

Director of Master's Program

Nan Lin
Professor
PhD, University of Illinois at Urbana–Champaign
Statistical computing in big data, quantile regression, causal inference, longitudinal data and functional data analysis, and statistical applications in anesthesiology

Directors of Undergraduate Studies

Jimin Ding
Associate Professor
PhD, University of California, Davis
Survival analysis; longitudinal data analysis; joint modeling of longitudinal and survival data; functional data analysis; nonparametric smoothing methods; systems of differential equations; dynamical systems; profile likelihood; asymptotic theories

Joe Guinness
Associate Professor
PhD, University of Chicago
Computing and methodology for large spatial and spatial-temporal datasets; Gaussian process models

Department Faculty

Likai Chen
Assistant Professor
PhD, University of Chicago
Time series; high dimensional data analysis; statistical learning theory

Ran Chen
Assistant Professor
PhD, University of Pennsylvania
Reinforcement learning; data-driven decision-making; optimization; statistical machine learning; high-dimensional statistics; nonparametric statistics

Hong Hu
Assistant Professor
PhD, Harvard University
Statistical signal processing; machine learning

Abigail Jager
Senior Lecturer
PhD, University of Chicago
Statistics; causal inference

Vasileios (Bill) Katsianos
Senior Lecturer
PhD, University of Chicago
Statistical genetics; multiple testing with dependence; graphical models; Markov Chain Monte Carlo methods; time series analysis; model-based clustering

Todd Kuffner
Associate Professor
PhD, Imperial College London
Statistics; econometrics; Bayesian asymptotics; applications of differential geometry to statistics; empirical likelihood; variable and model selection methods

Soumendra Lahiri
Stanley A. Sawyer Professor
PhD, Michigan State University
Asymptotic expansions, astrostatistics, inference for high dimensional and massive data sets, machine learning and predictive modeling, resampling and computer intensive methods, spatial statistics, time series and econometrics

Bo Li
Stanley A. Sawyer Professor
PhD, Texas A&M University
Spatial and spatiotemporal statistics; univariate and multivariate spatiotemporal data modeling; functional data analysis; multiple testing; copula methods; Bayesian hierarchical modeling; spatial extremes

Robert Lunde
Assistant Professor
PhD, Carnegie Mellon University
Statistical network analysis; time series; resampling methods; high-dimensional statistics

Carlos Misael Madrid Padilla
Assistant Professor
PhD, University of Notre Dame
High-dimensional statistics; nonparametric statistics; change point detection; causal inference; Bayes methodology

Debashis Mondal
Associate Professor
PhD, University of Washington
Spatial statistics; computational science; machine learning; applications in ecology (including microbial ecology); environmental sciences

Lizda Nazdira Moncada Morales
Lecturer
PhD, University of Notre Dame
Statistical machine learning; combinatorial commutative algebra

Xiaofeng Shao
Lecturer
PhD, University of Chicago
Econometrics; time series analysis; change-point analysis; high-dimensional statistics; nonparametric statistics; functional data analysis

Debjoy Thakur
Postdoctoral Lecturer
PhD, Indian Institute of Technology
Spatial statistics, resampling method, copula, spatial extreme, statistical neural network

Shota Takeishi
Postdoctoral Lecturer
PhD, University of Tokyo
Heterogeneity; survival analysis; asymptotic theory

Majors

- Data Science Major (p. 958)
- Statistics Major (p. 962)

Minors

- Statistics Minor (p. 963)

Courses

SDS 1600 Introducation to Statistics
Basic concepts of statistics. Data collection (sampling, designing experiments), data organization (tables, graphs, frequency distributions, numerical summarization of data), statistical inference (elementary probability and hypothesis testing).
Credit 3 units. A&S IQ: NSM, AN
Typical periods offered: Spring

SDS 1998 Statistics and Data Science Elective: 100-Level
Credit 3 units.

SDS 2020 Elementary Probability and Statistics
An elementary introduction to statistical concepts, reasoning and data analysis. Topics include statistical summaries and graphical presentations of data, discrete and continuous random variables, the logic of statistical inference, design of research studies, point and interval estimation, hypothesis testing, and linear regression. Students will learn a critical approach to reading statistical analyses reported in the media, and how to correctly interpret the outputs of common statistical routines for fitting models to data and testing hypotheses.

A major objective of the course is to gain familiarity with basic R commands to implement common data analysis procedures. Students intending to pursue a major or minor in statistics or wishing to take 400 level or above statistics courses should instead take Math/SDS 3200 or Math/SDS 3211. Prerequisite: Math 131

Credit 3 units. A&S IQ: NSM, AN Art: NSM

Typical periods offered: Fall, Spring

SDS 3020 Elementary to Intermediate Statistics and Data Analysis

An introduction to probability and statistics. Major topics include elementary probability, special distributions, experimental design, exploratory data analysis, estimation of mean and proportion, hypothesis testing and confidence, regression, and analysis of variance. Emphasis is placed on development of statistical reasoning, basic analytic skills, and critical thinking in empirical research studies. The use of the statistical software R is integrated into lectures and weekly assignments. Required for students pursuing a major or minor in statistics or wishing to take 400 level or above statistics courses. Prerequisite: Math 132. Though Math 233 is not essential, it is recommended.

Credit 3 units. A&S IQ: NSM, AN Art: NSM

Typical periods offered: Fall, Spring

SDS 3030 Statistics for Data Science I

This course starts with an introduction to R that will be used to study and explore various features of data sets and summarize important features using R graphical tools. It also aims to provide theoretical tools to understand randomness through elementary probability and probability laws governing random variables and their interactions. It integrates analytical and computational tools to investigate statistical distributional properties of complex functions of data. The course lays the foundation for statistical inference and covers important estimation techniques and their properties. It also provides an introduction to more complex statistical inference concepts involving testing of hypotheses and interval estimation. Required for students pursuing a major in Data Science. Prerequisite: Multivariable Calculus (Math 233). No prior knowledge of Statistics is required. NOTE: Math/SDS 3211 and Math/SDS 3200 can not both count towards any major or minor in the Statistics and Data Science Department.

Credit 3 units. A&S IQ: NSM, AN Art: NSM

Typical periods offered: Fall, Spring

SDS 3110 Biostatistics

A second course in elementary statistics with applications to life sciences and medicine. Review of basic statistics using biological and medical examples. New topics include incidence and prevalence, medical diagnosis, sensitivity and specificity, Bayes' rule, decision making, maximum likelihood, logistic regression, ROC curves and survival analysis. Prerequisite: CSE 131 or 200; Math/SDS 3200, Math/SDS 3211, or a strong performance in Math/SDS (with permission of the instructor).

Credit 3 units. A&S IQ: NSM

Typical periods offered: Spring

SDS 3111 Applied Linear Modeling

This course is an introduction to applied linear regression and analysis of variance. The course will cover simple linear regression, multiple linear regression, and simple experimental design. Emphasis will be placed on estimating, interpreting, and using statistical inference to answer scientific questions. This course is intended for students who would like to further their statistical knowledge past the level of introductory statistics, but without pursuing a statistics or data science major. This course will count as an elective for the minor in statistics, but not for the majors in statistics or data science.

Credit 3 units. A&S IQ: NSM, AN

Typical periods offered: Fall

SDS 3996 Statistics and Data Science Elective: 300-Level

Credit 3 units.

SDS 4000 Undergraduate Independent Study

This course is for independent study. Approval of instructor required.

Credit 3 units.

Typical periods offered: Fall

SDS 4010 Probability

Mathematical theory and application of probability at the advanced undergraduate level; a calculus based introduction to probability theory. Topics include the computational basics of probability theory, combinatorial methods, conditional probability including Bayes' theorem, random variables and distributions, expectations and moments, the classical distributions, and the central limit theorem. permission of the instructor.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Fall, Spring

SDS 4020 Mathematical Statistics

Theory of estimation, minimum variance and unbiased estimators, maximum likelihood theory, Bayesian estimation, prior and posterior distributions, confidence intervals for general estimators, standard estimators and distributions such as the Student-t and F-distribution from a more advanced viewpoint, hypothesis testing, the Neymann-Pearson Lemma (about best possible tests), linear models, and other topics as time permits.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Fall

SDS 4030 Statistics for Data Science II

This builds on the foundation from the first course (SDS I) and further develops the theory of statistical hypotheses testing. It also covers advanced computer intensive statistical methods, such as the Bootstrap, that will make extensive use of R. The emphasis of the course is to expose students to modern statistical modeling tools beyond linear models that allow for flexible and tractable interaction among response variables and covariates/feature sets. Statistical modeling and analysis of real datasets is a key component of the course. Prerequisites: Math/SDS 3211, or Math/SDS 3200 and Math/SDS 493; Math/SDS 439 (Math/SDS 439 can be taken concurrently).

Credit 3 units. A&S IQ: NSM, AN Art: NSM

Typical periods offered: Fall, Spring

SDS 408 Nonparametric Statistics

Statistical methods that make few or no assumptions about the data distribution. Permutation tests of different types; nonparametric confidence intervals and correlation coefficients; jackknife and bootstrap resampling; nonparametric regressions. If there is time, topics chosen from density estimation and kernel regression. Short computer programs will be written in a language like R or C. Prerequisite: CSE 131 or 200, Math 3200 and Math 493, or permission of instructor

Credit 3 units. A&S IQ: NSM

SDS 4110 Experimental Design

A first course in the design and analysis of experiments, from the point of view of regression. Factorial, randomized block, split-plot, Latin square, and similar design.

Credit 3 units. A&S IQ: NSM Art: NSM

Typical periods offered: Fall

SDS 4120 Survival Analysis
Life table analysis and testing, mortality and failure rates, Kaplan-Meier or product-limit estimators, hypothesis testing and estimation in the presence of random arrivals and departures, and the Cox proportional hazards model. Techniques of survival analysis are used in medical research, industrial planning and the insurance industry.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Fall

SDS 4130 Linear Statistical Models
Theory and practice of linear regression, analysis of variance (ANOVA) and their extensions, including testing, estimation, confidence interval procedures, modeling, regression diagnostics and plots, polynomial regression, colinearity and confounding, model selection, geometry of least squares, etc. The theory will be approached mainly from the frequentist perspective and use of the computer (mostly R) to analyze data will be emphasized. Prerequisite: CSE 131 or 200; a course in linear algebra (such as Math 309 or 429); Math/SDS 3211 or Math/SDS 3200 and Math/SDS 493 (493 can be taken concurrently). If Math/SDS 3211 is taken, Math/SDS 493 is not required.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall, Spring

SDS 4135 Applied Statistics Practicum
This course develops critical thinking, practical data analysis skills, and effective communication by working on a series of data analysis projects. For each project, the instructor will give an introduction to the dataset and the desired outcome of the data analysis, along with a review of statistical methodology appropriate to each project. Students will be expected to produce written reports and give oral presentations for each project. The course will also cover how to collaborate on a data science project and produce information-rich data visualizations. We will also cover a number of practical skills for data analysis, including command line tools, version control, and reproducibility.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Fall, Spring

SDS 4140 Advanced Linear Statistical Models
Review of basic linear models relevant for the course; generalized linear models including logistic and Poisson regression (heterogeneous variance structure, quasilikelihood); linear mixed-effects models (estimation of variance components, maximum likelihood estimation, restricted maximum likelihood, generalized estimating equations), generalized linear mixed-effects models for discrete data, models for longitudinal data, optional multivariate models as time permits. The computer software R will be used for examples and homework problems. Implementation in SAS will be mentioned for several specialized models. Prerequisites: Math/SDS 439 and a course in linear algebra (such as Math 309 or 429).
Credit 3 units. A&S IQ: NSM
Typical periods offered: Spring

SDS 4155 Time Series Analysis
Time series data types; autocorrelation; stationarity and nonstationarity; autoregressive moving average models; model selection methods; bootstrap condence intervals; trend and seasonality; forecasting; nonlinear time series; filtering and smoothing; autoregressive conditional heteroscedasticity models; multivariate time series; vector autoregression; frequency domain; spectral density; state-space models; Kalman filter. Emphasis on real-world applications and data analysis using statistical software.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

SDS 4210 Statistical Computation
Introduction to modern computational statistics. Pseudo-random number generators; inverse transform and rejection sampling. Monte Carlo approximation. Nonparametric bootstrap procedures for bias and variance estimation; bootstrap confidence intervals. Markov chain Monte Carlo methods; Gibbs and Metropolis-Hastings sampling; tuning and convergence diagnostics. Cross-validation. Time permitting, optional topics include numerical analysis in R, density estimation, permutation tests, subsampling, and graphical models. Prior knowledge of R at the level used in Math 494 is required. Acquaintance with fundamentals of programming in R is helpful.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

SDS 4310 Bayesian Statistics
Introduces the Bayesian approach to statistical inference for data analysis in a variety of applications. Topics include: comparison of Bayesian and frequentist methods, Bayesian model specification, choice of priors, computational methods such as rejection sampling, and stochastic simulation (Markov chain Monte Carlo), empirical Bayes method, hands-on Bayesian data analysis using appropriate software.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Spring

SDS 4430 Statistical Learning
A modern course in multivariate statistics. Elements of classical multivariate analysis as needed, including multivariate normal and Wishart distributions. Clustering; principal component analysis. Model selection and evaluation; prediction error; variable selection; stepwise regression; regularized regression. Cross-validation. Classification; linear discriminant analysis. Tree-based methods. Time permitting, optional topics may include nonparametric density estimation, multivariate regression, support vector machines, and random forests.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Spring

SDS 4440 Mathematical Foundations of Data Science
Mathematical foundations of data science. Core topics include: Probability in high dimensions; curses and blessings of dimensionality; concentration of measure; matrix concentration inequalities. Essentials of random matrix theory. Randomized numerical linear algebra. Data clustering. Depending on time and interests, additional topics will be chosen from: Compressive sensing; efficient acquisition of data; sparsity; low-rank matrix recovery. Divide, conquer and combine methods. Elements of topological data analysis; point cloud; Cech complex; persistent homology. Selected aspects of high- dimensional computational geometry and dimension reduction; embeddings; Johnson-Lindenstrauss; sketching; random projections. Diffusion maps; manifold learning; intrinsic geometry of massive data sets. Optimization and stochastic gradient descent. Random graphs and complex networks. Combinatorial group testing. A willingness to learn new mathematics as needed is essential.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Spring

SDS 4480 Topics in Statistics: Machine Learning Methods in Biological Sciences
Novel scientific discoveries are made nowadays by analyzing increasingly large and noisy biological datasets thanks to next-generation high-throughput technology. Machine learning methods which have been developed to extract complex patterns from image, text and speech datasets are now regularly being utilized to investigate

conjectures in biology and medicine. The goal of this course will be to review some key concepts and methods in statistical learning and apply these to biological datasets. The course's focus is on the methods and applications rather than the theory and is intended for a broad audience. We will first explore predictive algorithms which perform classification and regression based on training datasets, such as logistic regression, decision trees, random forests, boosting, naive Bayes classifiers, Gaussian process regression, linear discriminant analysis and support vector machines. As much as time allows it, we will then review clustering algorithms and dimensionality reduction techniques used to identify patterns in large-scale biological datasets, such as hierarchical clustering, mixture models and principal component analysis.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

SDS 4481 Special Topics in Statistics and Data Science: An Introduction in Python
At the end of the course, students will have a solid grasp of Python programming basics and have been exposed to the entire data science workflow. This includes interacting with SQL databases to query and retrieve data, through to data wrangling, reshaping, summarizing, analyzing and ultimately reporting results.The course will introduce and use popular Python libraries such as pandas, numpy, seaborn and matplotlib and use the Jupyter notebooks framework for coding. "Special Topics in Statistics and Data Science" is a variable-credit course that covers computational/practical methods or tools of broad interests in Statistics and Data Science. The title of the course will change from semester to semester.
Credit 1.5 units.
Typical periods offered: Spring

SDS 4482 Topics in Statistics
Topic changes each semester.
Credit 3 units. A&S IQ: NSM
Typical periods offered: Fall, Spring

SDS 4720 Stochastic Processes
Content varies with each offering of the course. Past offerings have included such topics as random walks, Markov chains, Gaussian processes, empirical processes, Markov jump processes, and a short introduction to martingales, Brownian motion and stochastic integrals.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Spring

SDS 4971 Topics in Statistics: Data Mining
Data mining is the process of uncovering meaningful patterns and making predictions from data, often in large and complex datasets. This course provides both a practical and theoretical foundation in data mining, emphasizing computational techniques and statistical reasoning. Students will explore supervised and unsupervised learning methods, applying them to real-world datasets across different domains. The course balances conceptual understanding with hands-on programming, ensuring students grasp both the principles behind data mining algorithms and their implementation. Topics covered include essential data mining techniques, such as information retrieval and similarity measures, dimensionality reduction (PCA, MDS, Isomap, UMAP), clustering (k-means, hierarchical clustering), regression (linear regression, ridge regression, lasso), and classification (KNN, LDA, QDA, decision trees). Additional topics, including advanced clustering methods, ensemble learning techniques (bagging, boosting, random forests), and artificial neural networks, may be covered as time permits. All programming throughout the course will be conducted in Python.
Credit 3 units. A&S IQ: NSM Art: NSM
Typical periods offered: Fall

SDS 4990 Study for Honors
Senior standing, a distinguished performance in upper level statistics courses, and permission of the Chair of the Undergraduate Committee. Register for the section (listed in department header) corresponding to your honors project supervisor.
Credit 3 units.
Typical periods offered: Fall, Spring

SDS 4996 Statistics and Data Science Elective: 400-Level
Credit 3 units.

Data Science Major

Program Requirements

- **Total Units Required:** 51-54
- **Grade Requirement:** All courses must be passed with a grade of C- or better

Required Courses and Practicum

- 12 core requirement courses (36 credits)
- Four elective courses (12 credits)
- A course in Ethics and Professional Responsibility (3 credits)
- Practicum requirement (3 credits if completed via independent study or a project-focused course)
- We will allow undergraduates to take any SDS 5000-level courses that are not listed as undergraduate courses

The College of Arts & Sciences and McKelvey School of Engineering developed a new major that efficiently captures the intersection of mathematics and statistics with computer science for data science. The Bachelor of Arts in Data Science (BADS) will give students the formal foundation needed to understand the applicability and consequences of the various approaches to analyzing data with a focus on statistical modeling and machine learning.

Students who declare this major must fulfill the core course requirements and electives listed below. In addition, students need to meet the ethics and professional responsibility requirement as well as the practicum requirement. Arts & Sciences students who declare this major must fulfill all other requirements for a BA degree. McKelvey Engineering students who declare this major must complete all other requirements for the Applied Science degree in the McKelvey School of Engineering. They must also complete ENGR 3100 Technical Writing and 8 units of courses designated as Natural Sciences & Math (NSM) from Anthropology (ANTHRO), Biology and Biomedical Sciences (BIOL), Chemistry (CHEM), Earth, Environmental, and Planetary Sciences (EEPS), Physics (PHYSICS), or Environmental Studies (ENST).

Data Science Core Requirements (CR)

Code	Title	Units

Data Science Technical Electives

Four courses can be chosen from the list of approved electives given below, with the following caveats:

- At least one course from Statistics and Data Science (at the 4000 level or above)
- At least one course from Computer Science & Engineering (at the 4000 level or above)
- At most one course at the 2000 level

List of Approved Data Science Technical Electives

Computer Science and Engineering

PHIL 4250	Normative Ethical Theory	3
POLSCI 3313	Theories of Social Justice	3

* CSE 3050 and CSE 4101 cannot be double counted as technical electives.

Practicum Requirement

- Students must complete an approved comprehensive data science project or experience for their practicum requirement. The practicum must be approved by the committee of data science faculty.
- The practicum experience should be completed during the next-to-last semester of study (i.e., the first semester of senior year). It is important that practicum plans be submitted for review *prior to starting the project or coursework* to ensure the proposed work is sufficient for the objectives of the practicum. After-the-fact approvals are possible but not guaranteed.
- Appropriate practicum work is possible via the following pathways:
  - Independent Study (CSE 4001 or SDS 4000)
  - Project-focused courses, including (but not limited to) CSE 4109 Introduction to AI for Health, CSE 4307 Software Engineering Workshop, CSE 4504 Software Engineering for External Clients, and SDS 4135 Applied Statistics Practicum. Students should contact course instructors in advance to identify the degree of agency the student will have over project selection and requirements.
  - Internships related to data science can be used to fulfill the practicum. Internships (paid or unpaid) cannot count for credit, but can satisfy the practicum requirement.
- To initiate the approval process, majors through the McKelvey School of Engineering should contact the CSE undergraduate coordinator (cse.undergrad@wustl.edu) in the CSE department, and majors through Arts & Sciences should contact the Undergraduate Director(s) (sdsundergraddirector@wustl.edu) in the Department of Statistics and Data Science.

AP Credit, Waivers, and Course Substitutions

AP credit can be applied for Math 1510 Calculus I and Math 1520 Calculus II.

CSE 1301 Introduction to Computer Science may be waived with approval from the Director of Undergraduate Studies of the Department of Computer Science and Engineering.

Aside from the approved cases listed below, course substitutions will be considered on a case-by-case basis.

- ESE 3260 may be substituted for SDS 3020.
- If both MATH 2801 and MATH 2802 are taken, they can be substituted for the entire calculus sequence MATH 1510, MATH 1520, and MATH 2130.

Course Transfer

Courses transferred from other accredited colleges and universities can be counted with department approval and with the following caveats:

- Courses transferred from a two-year college (e.g., a community college) cannot be used to satisfy upper-level requirements.
- Courses from the School of Continuing & Professional Studies cannot be used to fulfill minor requirements.

Distinctions in Data Science

Distinction

- For Distinction in Data Science, a student must take an additional two electives for a total of six electives.
- The student's GPA in the six electives must be at least 3.7. If the student takes additional courses that satisfy these requirements, the courses with the lowest grades may be omitted when calculating the GPA for this purpose.
- The electives need to be taken from the list of approved data science technical electives. Electives need to be passed with a grade of B or better.

High Distinction

- Complete all requirements for Distinction.
- Complete an honors thesis in either department (Statistics and Data Science or Computer Science & Engineering).

Highest Distinction

- Complete the requirements for High Distinction.
- Complete one of the two options described below:
  - **Qual Option:** Take either SDS 5061–SDS 5062 or SDS 5071–SDS 5072, which corresponds to one of the qualifiers for the PhD in Statistics, earning a grade of B+ or better in each course.
  - **Course Option:** Complete three additional electives from the list of approved data science technical electives for a total of 12 courses. As with Distinction, the student's GPA in the 12 electives must be at least 3.7 with the student earning a grade of B+ or better in each course, and additional courses beyond 12 can be disregarded when calculating the GPA. At least four of these 12 courses must be from the Department of Statistics and Data Science, and at least four must be from the Department of Computer Science & Engineering.

Latin Honors

At the time of graduation, the Department of Statistics and Data Science will recommend that a candidate receive Latin Honors (cum laude, magna cum laude, or summa cum laude) if that student has completed the department's requirements for High Distinction or Highest Distinction in Mathematics, including an Honors Thesis. The actual award of Latin Honors is managed by the College of Arts & Sciences.

The Honors Thesis

Arts & Sciences majors who want to be candidates for Latin Honors, High Distinction, or Highest Distinction must complete an honors thesis. Writing an honors thesis involves a considerable amount of independent work, reading, creating mathematics, writing a paper that meets acceptable professional standards, and making an oral presentation of the results.

Types of Projects

An honors thesis can take three forms:

1. A thesis that presents significant work by the student on one or more nontrivial statistics or probability problems.
2. A project in applied statistics that involves an in-depth analysis of a large data set. To do an honors thesis involving data analysis, it is usually necessary to have completed SDS 3020,SDS 4010, and SDS 4020 (or SDS 3030 and SDS 4030) by the end of the junior year and to have the ability to work with statistical software such as SAS, R, or Python.
3. A substantial expository paper that follows independent study on an advanced topic under the guidance of a department faculty member. Such a report would involve the careful presentation of ideas and the synthesis of materials from several sources.

Process and Suggested Timeline

Junior Year, Spring Semester:

1. Talk with a faculty advisor about possible projects.
2. Complete the Honors Proposal Form and submit it to the SDS Undergraduate Director(s) (sdsundergraddirector@wustl.edu).

Senior Year:

1. By the end of January, provide the advisor with a draft abstract and outline of the paper.
2. By the end of February, submit a rough draft, including an abstract, to the advisor.
3. The student and the advisor should agree on a date that the writing will be complete and on a date and time for the oral presentation in mid-March (the deadline is March 31).

Departmental Prizes

Each year, the department considers graduating majors for several departmental prizes and awards a prize to a junior. Recipients are recognized at an annual awards ceremony in April where graduating majors each receive a certificate and a set of honors cords to be worn as part of the academic dress at Commencement. Awards are noted on the student's permanent university record.

Statistics Major

Program Requirements

- **Total Units Required:** 42
  - Ten core courses (30 units)
  - At least four elective courses (12 units)
- **Grade Requirement:** All courses must be passed with a grade of C- or better

Required Courses

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
MATH 1510	Calculus I	3
MATH 1520	Calculus II	3
MATH 2130	Calculus III	3
MATH 3300 Matrix Algebra **or** MATH 4301 Linear Algebra		3
SDS 3020	Elementary to Intermediate Statistics and Data Analysis	3
SDS 4010	Probability	3
SDS 4020	Mathematical Statisitcs	3
SDS 4130	Linear Statistical Models	3
SDS 4310 Bayesian Statistics **or** SDS 4210 Statistical Computation		3
Total Units		**30**

Elective Courses

In addition to the required courses, students must complete at least 12 units of electives from the approved list of electives. Typically, this is satisfied by taking 4 courses, worth 3 units each; however, a student may use any number of approved elective courses, as long as the total number of elective units is at least 12.

At least 6 of the elective units must be from SDS courses numbered 4000 or above. At most, 3 units of independent study or research can count towards electives.

In addition to the list below, any SDS course numbered 4000 or above, except SDS 4211, can be counted as an elective.

We will allow undergraduates to take any SDS 5000-level courses that are not listed as undergraduate courses.

Approved Electives

Code	Title	Units
CSE 4107	Machine Learning	3
CSE 5104	Data Mining	3
CSE 5105	Bayesian Methods in Machine Learning	3
CSE 5100	Deep Reinforcement Learning	3
ECON 4151	Applied Econometrics	3
ESE 4030	Operations Research	3
ESE 4150	Optimization	3
ESE 4170	Machine Learning and Pattern Classification	3
ESE 4261	Statistical Methods for Data Analysis with Applications to Financial Engineering	3
ESE 4270	Financial Mathematics	3
MATH 3010	Foundations for Higher Mathematics	3
MATH 4101	Introduction to Analysis	3
MATH 4102	Introduction to Lebesgue Integration	3
MATH 4501	Numerical Applied Mathematics	3
MATH 4502	Topics in Applied Mathematics	3
MATH 4560	Financial Mathematics	3
SDS 3110	Biostatistics	3

AP Credit, Waivers, and Course Substitutions

AP credit can be applied for Math 1510 Calculus I, Math 1520 Calculus II.

CSE 1301 Introduction to Computer Science may be waived with approval from the Director of Undergraduate Studies of the Department of Computer Science and Engineering.

Aside from the approved cases listed below, course substitutions will be considered on a case-by-case basis.

- ESE 3260 may be substituted for SDS 3020
- If both MATH 2801 and 2802 are taken, they can be substituted for the entire calculus sequence MATH 1510,1520, and 2130.

Course Transfers

Courses transferred from other accredited colleges and universities can be counted with department approval and with the following caveats:

- Courses transferred from a two-year college (e.g., a community college) cannot be used to satisfy 4000-level requirements.
- Courses from the School of Continuing & Professional Studies cannot be used to fulfill major requirements.

Distinctions in Statistics

Students who satisfy the following requirements may contact the SDS Academic Coordinator to notify the department that they request to graduate with distinctions in their senior year.

Distinction

Complete at least 21 units of SDS courses numbered 4000 or above, excluding independent study courses, achieving at least a 3.7 GPA in these courses. The GPA is weighted by the number of units of each course. If more than 21 units are taken, only the 21 units with the highest grades are used in the GPA calculation.

High Distinction

Complete all requirements for Distinction, and complete an Honors Thesis.

Highest Distinction

Complete all requirements for High Distinction, plus one of the two paths below:

- **Graduate Qualifier Path:**
  - Complete a two-semester graduate qualifier course sequence and pass the graduate qualifier exam for this sequence. Graduate qualifier courses are two-semester course sequences that start in the fall. These qualifier courses can count toward the additional course requirements for Distinction.
- **Course Work Path:**
  - Complete 9 additional units of approved electives, 6 of which must be SDS courses numbered 4000 or above, achieving at least a 3.7 GPA in the 30 units (21+9) required for highest distinction.

Latin Honors

At the time of graduation, the Department of Statistics and Data Science will recommend that a candidate receive Latin Honors (cum laude, magna cum laude, or summa cum laude) if that student has completed the department's requirements for High Distinction or Highest Distinction in Statistics, including an Honors Thesis. The actual award of Latin Honors is managed by the College of Arts & Sciences.

The Honors Thesis

Arts & Sciences majors who want to be candidates for Latin Honors, High Distinction, or Highest Distinction must complete an Honors Thesis. Writing an Honors Thesis involves a considerable amount of independent work, reading, research, writing a paper that meets acceptable professional standards, and making an oral presentation of the results.

Types of Projects

An Honors Thesis can take three forms:

1. A thesis that presents significant work by the student on one or more nontrivial statistics or probability problems.
2. A project in applied statistics that involves an in-depth analysis of a large data set. To do an honors thesis involving data analysis, it is usually necessary to have completed SDS 3020, SDS 4010, and SDS 4020 (or SDS 3030 and SDS 4030) by the end of the junior year and to have the ability to work with statistical software such as SAS, R, or Python.
3. A substantial expository paper that follows independent study on an advanced topic under the guidance of a department faculty member. Such a report would involve the careful presentation of ideas and the synthesis of materials from several sources.

Process and Suggested Timeline

Junior Year, Spring Semester:

- Talk with a faculty advisor about possible projects.
- Complete the Honors Proposal Form and submit it to sdsundergraddirector@wustl.edu.

Senior Year:

- By the end of January, provide the advisor with a draft abstract and outline of the paper.
- By the end of February, submit a rough draft, including an abstract, to the advisor.
- The student and the advisor should agree on a date that the writing will be complete and on a date and time for the oral presentation in mid-March (the deadline is March 31).

Departmental Prizes

Each year, the department considers graduating majors for several departmental prizes and awards a prize to a junior. Recipients are recognized at an annual awards ceremony in April where graduating majors each receive a certificate and a set of honors cords to be worn as part of the academic dress at Commencement. Awards are noted on the student's permanent university record.

Statistics Minor

Program Requirements

- **Total Units Required:** 27
  - Six required courses (18 units)
  - Three elective courses (from list) (9 units)
- **Grade Requirement:** All courses must be passed with a grade of C- or better.

Required Courses

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
MATH 1510	Calculus I	3
MATH 1520	Calculus II	3
MATH 2130	Calculus III	3
MATH 3300	Matrix Algebra	3
SDS 3020 Elementary to Intermediate Statistics and Data Analysis **or** SDS 4020 Mathematical Statistics		3
Total Units		**18**

Elective Courses

In addition to the required courses, students must complete 3 elective courses, totaling at least 9 units, from the approved list of electives. In addition to the approved list below, any SDS course numbered 4000 or above, except SDS 4211, can count as an elective.

Approved Electives

Code	Title	Units
ECON 4151	Applied Economics	3
ESE 4030	Operations Research	3
SDS 3110	Biostatistcs	3
SDS 3111	Applied Linear Modeling	3

AP Credit, Waivers, and Course Substitutions

AP credit can be applied for MATH 1510 Calculus I and MATH 1520 Calculus II.

CSE 1301 Introduction to Computer Science may be waived with approval from the director of undergraduate studies of the Department of Computer Science and Engineering.

Aside from the approved cases listed below, course substitutions will be considered on a case-by-case basis.

- ESE 3260 may be substituted for SDS 3020.
- MATH 4301 may be substituted for MATH 3300.
- If both MATH 2801 and MATH 2802 are taken, they can be substituted for the entire calculus sequence MATH 1510, MATH 1520, and MATH 2130.

Course Transfers

Courses transferred from other accredited colleges and universities can be counted with department approval and with the following caveats:

- Courses transferred from a two-year college (e.g., a community college) cannot be used to satisfy 4000-level requirements.
- Courses from the School of Continuing & Professional Studies cannot be used to fulfill minor requirements.
- At least 6 units of the 4000-level courses required in a minor must be earned at Washington University or in a Washington University-approved overseas study program.

Women, Gender, and Sexuality Studies

Faculty and students in the Department of Women, Gender, and Sexuality Studies use an interdisciplinary approach to examine the construction of women, gender, and sexuality throughout the world. The interdisciplinary research and training in our department position our students to be thought leaders and agents in addressing inequality in all of its forms. Our graduates have gone on to work in fields such as business, entertainment, law, medicine, and social work. This community of scholars and activists is committed to doing the critical work of reimagining and producing a more inclusive future.

Among the first of its kind in the nation (est. 1972), the Department of Women, Gender, and Sexuality Studies at Washington University has emphasized the importance of gender and sexuality to such disciplines and interdisciplinary programs as philosophy, psychology, history, education, law, architecture, art history and archaeology, anthropology, political science, international studies, American culture studies, and studies in culture and languages.

Women, Gender, and Sexuality Studies students are often leaders in campus organizations that deal with issues concerning women, gender relations, sexuality, and health.

Courses

WGSS 1006 First-Year Seminar: Feminist and Queer Science and Technology Studies
This course will introduce students to key concepts and ideas emerging from the fields of feminist and queer science and technology studies. Science and scientific practice are commonly understood to proceed from a neutral, objective perspective aimed at producing universal truths. Similarly, technological innovation is understood to be an unquestioned good for human development. Feminist and queer thinkers have critiqued these views along epistemological, methodological, and socio-political lines. They have consistently pointed to both the gaps in scientific knowledge production and the risks of uncritical technological development for reproducing marginalization and oppression. At the same time, feminist and queer thinks have critically imagined the possibilities of both science and technology as potential forces for addressing social injustice. We will survey a number of these interventions while considering how this work might inform our present contexts. Course is for first-year, non-transfer students only.
Credit 3 units. A&S IQ: HUM, SC BU: HUM EN: H
Typical periods offered: Fall

WGSS 1101 First Sem:Sex & Gender in the Gutter: An Intro to Gender and Sexuality Studies Through Comics
This freshman seminar serves as an introduction to some of the history and concepts important in the field of gender and sexuality studies through graphic storytelling. Topics include the history of feminism in the United States, violence against girls and women, queer theory, intersectionality, and transnational feminism. Please be advised that while we will read comics-most of these texts are not for kids. We discuss traumatic issues and will look at some disturbing images. Please spend some looking at descriptions of the required texts and think about whether or not this class is for you.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, HUM EN: H

WGSS 1102 First Year Seminar: Gender, Sexuality and Settler Colonialism
This course examines settler colonial societies through the lens of gender and sexuality. Central questions of the course include: How is colonialism a fundamentally gendered process? What is settler colonialism and how is it different from/similar to extractive or franchise colonialism? How does the political, legal and social construction of indigeneity intersect with other social categories such as race, gender, class and sexuality? How have social movements mobilized against land dispossession globally in ways that incorporate diverse understandings of gender? Looking at various global case studies, we will examine how indigenous feminist scholars and organizers think about and respond to resource extraction, economic exploitation, gender violence, and land theft. Drawing on anti-colonial, queer, indigenous feminist, two-spirit, transnational feminist and anti-capitalist traditions, we will compare settler colonial regimes and modes of organizing across economic, cultural, political, and environmental spheres. This course is for first-year, non-transfer students only.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, ETH
Typical periods offered: Spring

WGSS 1500 Introduction to Women, Gender, and Sexuality Studies
This course will provide an introduction to the foundational concepts, histories, and theories that form the interdisciplinary field of women, gender and sexuality studies. Topics may include the history of feminist movements, masculinity, intersectionality, intimate partner violence, and queer and trans identities and politics. All sections will include periodic testing with in-class exams that may include several unit/module exams or a midterm and final exam.

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, HUM EN: H
Typical periods offered: Fall, Spring, Summer

WGSS 1996 Women, Gender and Sexuality Studies Elective
Credit 0 units. EN: H

WGSS 2060 Introduction to Queer Studies
This course offers an introduction to the topics, questions, and approaches that characterize the rapidly growing field of lesbian/gay/bisexual/trans/queer studies. Using an interdisciplinary approach, we will explore such topics as the relation between gender and sexual identity, the history of same-sex relations, homophobia and heterosexism, queer cultures, and LGBTQ politics, particularly in the United States. Our focus will be on asking whether and how LGBTQ functions as a coherent category of analysis or identity, and we will pay particular attention to differences (of race, age, gender, sexual practice, class, national origin, temperament, and so on) that are contained within and that often disrupt that category. This course is not open to students who have taken L77 203 or L77 3031.
Credit 3 units. A&S IQ: HUM, SC Art: HUM BU: BA, HUM EN: H
Typical periods offered: Fall, Spring

WGSS 2070 Sexuality and the State: Introduction to Sexuality Studies
Taking Michel Foucault's idea of biopolitics as a starting point. This course examines the ways in which sexuality has been produced and regulated by the state. Drawing on history, theory, and literature, we will look at contemporary examples of the relationship between the state and sexuality. What assumptions lie behind our ideas of sexuality? How are bodies linked by the prevailing logic of sexuality? How does sexuality inform the way that we see bodies as gendered, raced, or able-bodied. In addition to looking at the relationship between sexuality and capitalism, religion, and nation, this course asks how these ideas are embodied in particular raced and gendered ideologies.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, HUM EN: H
Typical periods offered: Fall

WGSS 2080 Constructions of Black Womanhood and Manhood in the Black Community
This course introduces students to everyday and representational experiences of Black women and men. We will explore different understandings of Black gender through engaging scholarly work and creative texts/performances/visual representations. How is the construction of gender informed by race and other categories of difference (e.g., sexuality, class)? How might we gain a better understanding of how gender is (re)constructed within American society? What role does gender play in Black community politics and issues? This course is for first-year and sophomore students only.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall

WGSS 2101 Sophomore Seminar: Globalization and Its Disguises
The metanarrative of globalization and global inter-connections privileges the story of markets, growth, and mobility. That story is relentlessly optimistic, and simultaneously, devoid of an understanding of gender, sexual difference or race. In this course, we take a different approach. We discard the more conventional metrics of globalization by focusing instead on another equally global story: the manner by which human beings have been gendered and racialized over time. Doing so allows us to revisit globalization through its own deceptions, its interconnected secrets. We confront a different set of questions: how has intimacy shaped global mobility, what is the relationship between caste and MAMAA, between custom and the movement of capital, between slums and scale, between outsourcing and incarceration, how does the normative family propel global racial regimes? Most crucially, how and why is the emotional and intimate story of globalization concealed? The seminar class utilizes a wide array of sources, historical documents, scholarly critiques, novels and film and largely considers the longer, global history of India as the case study. Our specific focus will be on the secretive interconnections of slavery, seclusion, settlers, servitude, surrogacy, and scholarship, as we take a deep dive into the disguises, and the more hidden aspects, of globalization.
Credit 3 units. A&S IQ: HUM, LCD BU: BA, HUM, IS EN: H
Typical periods offered: Fall

WGSS 2210 Gender and Texts
Discussion of canonical and non-traditional texts, most by women. Emphasis on how these texts represent gender, how literature contributes to identity-formation, and how women have used the written word to change their social and imaginative conditions.
Credit 3 units. A&S IQ: HUM, SC Art: HUM BU: HUM EN: H
Typical periods offered: Spring

WGSS 2230 Undergraduate Teaching Assistant
In this course an advanced undergraduate can assist a faculty member in the teaching of an introductory level Women and Gender Studies course. Students can enroll in one course only after having obtained permission from a faculty member who is willing to supervise. Students will not engage in any grading but may serve in a variety of other capacities - as discussion leaders, in providing logistical support, or in otherwise assisting with the transmission of course material.
Credit 3 units.
Typical periods offered: Fall, Spring

WGSS 2900 Directed Research in Women, Gender, and Sexuality Studies
Introduces first-years and sophomores to research by engaging them in ongoing faculty research projects within the department. Under the direction of a faculty mentor, students take part in tasks that contribute to the mentor's research. Through this hands-on experience, students learn about the research process and build foundational research skills that can benefit their future academic experience and development. Faculty mentors provide regular guidance, training, and feedback to support students' understanding and growth. Students are registered by the department after approval from the faculty member leading the research project. The course may be taken for 1-3 credit hours based on the weekly hours required. Credit/No Credit only
Credit 3 units.

WGSS 2910 Peer Counseling Training: Sexual Assault and Rape Anonymous Helpline
SARAH (The Sexual Assault and Rape Anonymous Helpline) is a confidential student-run helpline serving the Washington University in St. Louis community 24 hours a day, 7 days a week. An institutional resource of the university, SARAH offers peer counseling and resource referral on topics including (but not limited to) sexual assault, sexual harassment, intimate partner and sexual violence, relationships, and mental and sexual health. The training and dialogue course will provide students with skill development and preparation to become peer counselors who will take over-the-phone calls, which may entail crisis counseling. Prerequisite: Must be selected as a member to enroll in this course. The curriculum includes 100 hours of training instruction and additional hours of evaluation and preparation. For further information, contact the RSVP Center at 314-935-3445.
Credit 3 units. A&S IQ: SSC BU: BA
Typical periods offered: Spring

WGSS 2996 Women, Gender and Sexuality Studies Elective
Credit 0 units. EN: H

WGSS 2999 Independent Study: Internships
This course number is to be used for internships only.
Credit 3 units.
Typical periods offered: Fall, Spring

WGSS 3020 Justice as Failure: Abolitionist Theory and Praxis
In this course, we will explore the links between prison abolition, feminist praxis, and the political organizing of queer and trans people of color. In particular, we will ask what it means to re-envision justice in a world without prisons and what the role of feminism, especially as practiced by queer and trans people of color, is in this kind of collective project. We will focus on developing a solid grounding in critical prison studies as an expansive, interdisciplinary field by reading foundational texts in the study of prisons. We'll take up analytic frameworks developed by prison abolitionists, paying special attention to the role Black and Asian American studies have played in shaping contemporary abolitionism. Our focus will especially be on the activist and academic work by and about QTPOC prison abolitionists in the United States.
Credit 3 units. A&S IQ: HUM, SC, WI BU: HUM
Typical periods offered: Fall, Spring

WGSS 3025 On Love and Intimacy: Theorizing Kinship in the Multiple
Love and Intimacy are terms that have a lot of cultural cache. In this course, we will analyze the ways in which intimacy has been embedded within certain discourses of privacy, rights, and individuality. In addition to the couple form, we will examine friendship, celibacy, therapy and relationships people form with pets and with objects to flesh out intimacy's multiplicities to see how these forces impact these affective tides. This course will bring together history, critical theory, and film to think through various expressions of intimacy and what it means to relate to the other. Prerequisites: Any 100- or 200- level Women, Gender, and Sexuality Studies course or permission from the instructor.
Credit 3 units. A&S IQ: HUM, SC Art: HUM BU: BA, ETH, HUM EN: H

WGSS 3030 Queering Citizenship: Gender/Abolition
Queering Citizenship: Gender/Abolition asks how the struggle for gender self-determination overlaps with struggles to refigure, transform, and abolish political institutions. We will ask: How have queer thinkers/social movements in the last four decades helped create collective forms of life and social organization beyond the state and the prison-industrial complex? Global resistance to citizenship, borders, carceral violence and gender injustice makes these question unavoidable for queer and feminist thinkers and activists. Through our study of queer theory and abolitionist politics, we will consider the costs of exclusion from, as well as inclusion in, citizenship regimes transnationally and state discourses of LGBT recognition. The course considers connections between heteronormativity and citizenship; carceral and gender violence; state support for the white, middle-class nuclear family; the policing of intimacy; queer liberation and abolition democracy; gender anarchy and political anarchism; and the surveillance of gender and the political economy of prisons and policing. In each of these areas, we will attend to the politics of transgender recognition; gay imperialism; campaigns to defund the police; legislative violence against transgender youth; and overlaps between global abolitionist movements and the struggle for bodily autonomy and sovereignty.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

WGSS 3045 Queer Theory
This course provides students with an interdisciplinary examination of the history, politics, and cultural expressions of gay and lesbian communities in American culture. It explores the ways lesbians, gay men, and bisexual and transgender people construct, participate in, and resist various constructions of gender and sexuality. We question desire and social/cultural power, the nature and power of social change, and so on. Particular attention is paid to examining the roots and effects of heterosexism and homophobia, the call for hate crime legislation, the ethics of outing and passing, the impact of AIDS, partnership recognition, and domestic violence in LGBT communities. Throughout the course, students are encouraged to examine the intersections of gender, race, ethnicity, and social class with sexual orientation.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, HUM EN: H
Typical periods offered: Fall, Spring

WGSS 3050 Sex, Gender, and Popular Culture
A critical survey of sex and gender in the production, reception, and content of contemporary popular culture. Possible topics include: television, film, advertising, popular fiction, music, comics, internet, foodways, and fashion. Themes include: the representation and stylization of sexed and gendered bodies; popular models of sexual and gendered social relations; production of normative and alternative sex and gender identities through media consumption; sex and gender in systems of popular cultural production.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, HUM EN: H

WGSS 3055 Making Sex and Gender: Understanding the History of the Body
This course provides an overview of history of the body in Europe and the United States from medieval to modern times using feminist and queer theoretical frameworks. We explore the shifting authority in defining a normal body as the fields of medicine and science become professionalized, the cultural interaction with science and medicine in the modern era, and how aesthetics and popular perception of science inform the notion of ideal body, gender, race, sex, and sexuality in the modern era. Prerequisite: Any -100 or -200 level Women, Gender, and Sexuality Studies course or permission of instructor.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, HUM EN: H
Typical periods offered: Spring

WGSS 3056 European Population Politics, 1900 - 2000
Credit 3 units.

WGSS 3070 Masculinities
This course critically examines the subject of masculinity through a number of themes including history, society, politics, race, gender, sexuality, art and popular culture. Interdisciplinary readings are drawn from the fields of sociology, anthropology, literature, history, art history and cultural studies. We will examine the challenges presented to 'masculinity' (and a variety of responses) by the late-twentieth century emergency of gender studies. Our goal is to come to a working definition of masculinity/ies and gain an understanding of some past, current and possible future masculine behaviors, mythologies, ideologies, experiences and identities. Previous coursework in Women, Gender, and Sexuality Studies strongly recommended but not required. ATTENDANCE MANDATORY FIRST DAY IN ORDER TO RESERVE YOUR CLASS ENROLLMENT.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

WGSS 3071 Feminism, Families, and Social Change
This course will offer a feminist analysis of how dynamics of gender, race and class shape U.S. family life. The major objective of this course will be to examine women's studies research and theory addressing the question: Is there a family crisis in contemporary American society?
Credit 3 units.

WGSS 3081 From Hysteria to Hysterectomy: Women's Health Care in America
This course examines issues surrounding women's health care in America. While the scope is broad, the major emphasis will be on the nineteenth and twentieth centuries. Through an examination of popular writing, scientific/medical writing, letters, diaries, and fiction, we will look at the changing perceptions and conceptions of women's bodies and health in America.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall

WGSS 3083 Topics in Asian American Lit: Gender and Sexuality in American Literature
Topics in Asian American literature which will vary from semester to semester. This course satisfies the Global and Minority Literature Requirement.
Credit 3 units.

WGSS 3090 Sex and Money: Economies of Desire
This interdisciplinary course explores the connections between sexuality and money. First, we investigate the role of money in sexual life that appears to exist outside of the market. How does heterosexuality reproduce capitalism, and are there sexual formations that escape capitalism's reach? Can there be meaningful consent so long as there is rent to pay? How do economics, race, and colonialism shape desire? What is the role of money in dating and marriage, and should these be understood as forms of legalized prostitution, as Marxist feminists and sex workers have long suggested? Next, we turn to sex work to explore how explicit economic exchange shapes sexuality. What power dynamics does money engender, and how do sex workers navigate and subvert them? Is sex work merely an extension of the work we do as women, as sex worker activists wrote in a 1977 manifesto? Finally, we close with the question of whether women have better sex under socialism. What economic systems make way for sexual liberation, and how might projects for economic justice center demands for better sexual futures?
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Spring

WGSS 3135 The Racial and Sexual Politics of Public Health
Race and sexuality have long been concerns of public health. From hygienic campaigns against Mexican immigrants in early-1900s California to the 1991 quarantine of Haitian refugees with HIV at Guantanamo Bay, race and sexuality have proven crucial to how society identifies health and, by extension, determines who is fit to be a citizen. This interdisciplinary course interrogates the intersections of race, sexuality, and medicine, discussing how each domain has been constitutive of the other in the American context. Via feminist and queer theorizing, we will examine the political and economic factors under which diseases, illnesses, and health campaigns have impacted racial and sexual minorities over the last two centuries. An orienting question for the course is the following: How has the state wielded public health as a regulatory site to legitimatize perceived racial differences and to regulate ostensible sexual deviations? Through primary and secondary sources, we will likewise explore the various forms of health activism undertaken by these very same targeted populations. Themes to be addressed will include the medicalization of racial and sexual difference; activism both in and against health institutions; and the roles of race, class, gender, sexuality, and disability in contemporary health issues. Case studies include the Tuskegee syphilis experiment; the sterilization of black, Mexican, Puerto Rican, and Native American women; the medicalization of homosexuality during the Cold War; and the role of mass incarceration in the diffusion of HIV. At a moment in time when access to health continues to be shaped by categories of social difference, understanding the role of public health in the normalization and subversion of racial and sexual hierarchies in the West is more pertinent than ever.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall

WGSS 3136 Community-Engaged Learning: Feminist and Queer Youth Studies
The categorizing of life experience into childhood and adolescence is a relatively new construct. The first part of this course will examine how the categories of early childhood and adolescence developed in social and medical discourses. The remainder of the course encourages students to draw connections between Feminist and Queer theoretical scholarship on children and the practice of designing and implementing programming for children. Students will examine the relationship between the course readings and their experience working with various agencies in St. Louis. Note: This is a community-engaged learning class, which means that it combines classroom learning with outside work at a community organization. In addition to regular class time, there is a service requirement, which will necessitate an additional four to five hours of time per week. Before beginning the community service component, students must complete required training and submit material for a background check. Prerequisite: L77 100B.
Credit 4 units. A&S IQ: SSC, SC BU: BA EN: S
Typical periods offered: Fall

WGSS 3155 Gender, Health, and Society
In this class, we will identify and study a broad range of health issues and experiences within the context of gender and sexuality. The course will focus both on the health care system and lived, lay experiences of health and wellbeing. Topics will include discussions on mental health, reproductive issues, caregiving, and survivorship, as well as the politics of health and gender, the role of health and care in activism, gender differences in health status, and the impact of race and socioeconomic status on health. Prerequisties: any 100- or 200-level Women's, Gender, and Sexuality Studies course or permission from the instructor. If you have taken L77 316 Contemporary Women's Health, you may not register for this course. Waitlists controlled by Department; priority given to WGSS majors. Enrollment capped at 20.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

WGSS 3165 Queer Histories
Queer history is a profoundly political project. Scholars and activists use queer histories to assert theories of identity formation, build communities, and advance a vision of the meanings of sexuality in modern life and the place of queer people in national communities. This history of alternative sexual identities is narrated in a variety of settings-the internet as well as the academy, art and film as well as the streets-and draws upon numerous disciplines, including anthropology, geography, sociology, oral history, fiction and memoir, as well as history. This discussion-based course will examine the sites and genres of queer history, with particular attention to moments of contestation and debate about its contours and meanings.

Typical periods offered: Fall, Spring

WGSS 3170 Community-Engaged Learning: Gender and Incarceration

Since President Reagan declared the war on drugs in the 1980s, the numbers of women in prison have increased dramatically. Due to mandatory minimum sentencing requirements and increasingly harsh sentences for nonviolent offenses, the U.S. prison population has swelled to unprecedented numbers over the last few decades. While women are the fastest growing population in prison, men still make up the vast majority of prisoners, and the system is largely geared toward men and their needs. In this course, we will explore the historical treatment of and contemporary issues related to women and girls who get caught up in the criminal justice system. Through readings, films, reflective writings, and facility tours, we will explore the impact of incarceration on women and their families. Although our scope will be national, we will focus on the corrections system in Missouri. Note: This is a community-engaged learning class, which means that it combines classroom learning with outside work at a community organization. In addition to regular class time, there is a service requirement that will necessitate an additional four to five hours per week. There are several organizations with which we are partnering, and students will be assigned to one of these groups to work with for the entire semester. Moreover, there is a required all-day field trip to visit the women's prison in Vandalia, Mo., and the men's prison in Bowling Green, Mo. If students cannot commit to these out-of-class obligations, which are required to pass the course, they should not register for this course. Prerequisite: Intro to Women and Gender Studies or Intro to Sexuality Studies. Juniors and seniors only. Waitlists controlled by Department; priority given to WGSS majors.

WGSS 3175 Community-Engaged Learning: Documenting the Queer Past in St. Louis

Around the United States and the world, grassroots LGBTQ history projects investigate the queer past as a means of honoring the courage of those who have come before, creating a sense of community today as well aas building an understanding of the exclusions and divisions that shaped these communities and that continue to limit them. In this course, we participate in this national project of history-making by helping to excavate the queer past in the greater St. Louis region. Course readings will focus on the ways that sexual identities and communities in the United States have been shaped by urban settings since the late 19th century, with particular attention to the ways that race, class, and gender have structured queer spaces and communities. In their community service project, students will work with local LGBTQ groups, including the St. Louis LGBT History Project, to research St. Louis's queer past. Each student will also conduct an oral history interview with an LGBTQ community member. Note: This is a community-engaged learning class, which means that it combines classroom learning with outside work at a community organization. In addition to regular class time, there is a service requirement, which necessitates an additional three to five hours per week. Before beginning the community service component, students must complete required training. Prerequisite: Introduction to Women, Gender, and Sexuality Studies; Introduction to Queer Studies; or permission of instructor.

Typical periods offered: Fall

WGSS 3176 Community Engaged Learning: Feminist and Queer Community Praxis

Using St. Louis as a lens, the course focuses on examining the imbrication of class, gender, race, and sexuality in the US and the variety of community efforts that use feminist and queer principles to enact social change. Course readings present theories of class, gender, race, and sexuality as well as visions of community response. Service work in community engagement placements enables students to ask how their understanding of social change is challenged when put into practice and how communities can and should shape academic discourse. Course assignments ask students to evaluate both academic and community praxis (theory in practice) with the goal of creating a more just and equitable St. Louis. Students can do engagement hours with a group with which they already have established a relationship, but must notify instructor when enrolling in the course. Course enrollment is limited to Juniors and Seniors. Course expects significant community work outside of class meeting hours and thus carries 4 credits.

Typical periods offered: Spring

WGSS 3215 Bodies Out of Bounds: Feminist and Queer Disability Studies

For many, disability seems like a concept with a relatively stable definition and a fairly straightforward relationship to questions of health and well-being. But in the past few decades, scholars and activists have begun to challenge the notion that disability is a tragedy to be medically prevented or inspirationally overcome. These scholars have instead focused their attention on the social aspects of disability: how it came to be constructed as a category of identity, the physical and institutional barriers that have excluded disabled people from public life, and the distortion of disabled lives within the mainstream representation. More recently, writers have turned their attention to the way disability has been defined though norms of race, gender, and sexuality. These intersections will be the focus of this course. From the diagnoses of hysteria to debates over selective abortion and the recent proliferation of breast cancer memoirs, we will consider how the politics of disability has both complemented and complicated the usual goals of feminism. We will also explore some of the ways that disability studies as a discipline has redefined and in turn been shaped by the fields of queer theory, masculinity studies, and critical race theory. We will consider how deviant genders have been the target of medicalization, the relationship between corrective surgery and compulsory gendering, the desexualization and hypersexualization of disabled bodies, and the role that medicine has played in justifying colonial conquest and perpetuating racial inequalities. Prerequisite: any 100- or 200-level Women, Gender, and Sexuality Studies course.

Typical periods offered: Fall, Spring

WGSS 3240 Girls' Media and Popular Culture

This course will analyze girls as cultural consumers, mediated representations, cultural producers, and subjects of social anxiety. Readings will cover a range of media that have historically been associated with girlhood, including not only film, television, and digital media but also dolls, magazines, literature, and music. We will explore what role these media texts and technologies have had in the socialization of girls, the construction of their gendered identities, and the attempts at regulation of their behavior, sexuality, and appearance. Although the course will focus on girlhood media since the 1940s, we will consider how constructions of girlhood identity have changed over time and interrogate how girlhood identity intersects with race, sexuality, and class. The course will examine important debates and tensions arising in relation to girls' media. We will evaluate concerns and moral panics about girls and their relationship to or perceived overinvestment in media and compare and contrast this with accounts of girls as active media consumers and producers. We will critically analyze how girls have been understood to negotiate agency in relation to commercialized culture -- how they have been represented as wielders of girl power, as passive or active consumers, as fans, and as media producers themselves. We will also analyze attempts

to intervene in girls' media and popular culture and consider how these interventions have attempted to empower, inspire, or regulate girls or how they have worked to reinforce or challenge gendered understandings of childhood.

WGSS 3256 Sex Trafficking
Sex trafficking is a complex social problem with multiple contributing factors largely rooted in intersecting inequalities. Both in the United States and on a global level, interrelated inequities in gender, sex, sexual orientation, gender identity, power, class, opportunity, education, culture, politics, and race are among the social phenomena that contribute to sex trafficking/CSE victimization. In this course, we will examine the dynamics of sex trafficking on a local and global level from various feminist and political perspectives, with particular attention given to the sexed and gendered social and structural conditions that impact sex trafficking. This course will cover the extent and nature of the problem, as well as current debates in the field, including demand, prevalence, experiences of survivors, types of sex trafficking, methods of traffickers, the role of weak social institutions, cultural dynamics, and global power dynamics. The course will also examine international, federal, and state legislation as well as organizational and grassroots efforts to prevent and respond to sex trafficking victimization. The aim of this course is to provide students with a holistic understanding of sex trafficking drawing from interdisciplinary sources and presenting a variety of perspectives.

Typical periods offered: Spring

WGSS 3340 Feminist Theory
This course begins by examining the 19th and early 20th century historical context out of which contemporary feminist theory emerged. We then turn to the 1960's and the emergence of the Second Wave of Feminism. We focus on some of the major theories that developed during the 1960's, 1970's and 1980's and the conflicts and internal problems these theories generated. We then examine some of the ways these problems were resolved in feminist theory of the 1990's. The last part of the course focuses on topics of concern to contemporary feminists -- such as the family, sexuality and globalism -- and the contributions feminist theory brings to these topics. Open to graduate students by enrolling in L77 WS 500; contact the Women, Gender, and Sexuality Studies office for details.
Credit 3 units. A&S IQ: HUM, SC Art: HUM BU: BA, HUM EN: H

WGSS 3405 Revolutionize It! the Radical History of Second-Wave Feminisms
In this discussion-based course, we explore the complex, contradictory and profoundly multiracial history of the so-called second wave of the feminist movement (1960s-1980s). We will focus on those activists who understood themselves to be radicals and revolutionaries -- women's liberationists, women of color (or third-world) feminists, and lesbian-feminists -- as they collaborated and collided with each other. Among the questions we will ask are the following: What happens to our understanding of the second wave when we center the activism of African-American, Latinx, indigenous and anti-capitalist feminists? What were the promises and the pitfalls of a politics of sisterhood? How did sexual desire and sexual conflict shape both notions of identity and the movement on the ground? We will also consider the legacy of second-wave feminism for the politics of our time, including #MeToo, reproductive freedom, and the struggle for trans liberation. Prerequisite: L77 100B or permission of instructor.

WGSS 3446 No Boys Allowed: Girlhood and Programming for Girls in 19th and 20th Centuries, United States
This course takes an intersectional feminist approach to studying girlhood in 19th and 20th Century United States using fictional accounts of girlhood, conduct books for girls, the history of girls' education, psychological theories of girlhood, girls' toys, and the development of extracurricular programming for girls. Each topic will allow us to study the way stereotypical girlhood of a particular historical moment serves a political purpose in articulating American identity. At the end of the course students will understand how the concept of girlhood is socially constructed, which means that understanding historical context is a core component of the course. The title of the course is a play on words because in the 19th century and the first half of the 20th century, most schools and boys' clubs excluded girls. All are welcome to enroll in the course.

Typical periods offered: Spring

WGSS 3470 Law, Gender, and Justice
This course explores how social constructions of gender, race, class, and sexuality have shaped traditional legal reasoning and American legal concepts, including women's legal rights. We will begin by placing our current legal framework, and its gender, race, sexuality, and other societal assumptions, in an historical and Constitutional context. We will then examine many of the questions raised by feminist theory, feminist jurisprudence, and other critical perspectives. For example, is the legal subject gendered male, and, if so, how can advocates (for women and men) use the law to gain greater equality? What paradoxes have emerged in areas such as employment discrimination, family law, or reproductive rights, as women and others have sought liberal equality? What is the equality/difference debate about and why is it important for feminists? How do intersectionality and various schools of feminist thought affect our concepts of discrimination, equality, and justice? The course is thematic, but we will spend time on key cases that have influenced law and policy, examining how they affect the everyday lives of women. Over the years, this course has attracted WGSS students and pre-law students. This course is taught by law students under the supervision of a member of the School of Law faculty.

Typical periods offered: Fall, Spring

WGSS 3475 Queering the History of Health
This course identifies the key conceptual and methodological terrain pertinent to the historical development of the concepts of health disease, and ability. We will use an intersectional lens to trace various contingencies that produce a set of false binaries, including healthy, slender, responsible self v. the medically diseased, disabled, fat, and irresponsible other. Historically, these binaries have created and maintained social, political, and cultural inequalities and have been used as a powerful ideological weapon against queer and trans people of color, people with disabilities, people living with HIV/AIDS, fat people, and other people who do not/cannot embody normative race, gender, sexuality, and ability. However, as we will see, these inequalities, somehow counterintuitively, also enable a predisposition for a resistance, world-making, and political agency. While the course serves as an introduction to the key terms that surround the construction of health from the establishment of modern nation-states in the 19th century to the present, it is structured as a history of the present-it assesses how different notions pertinent to health shape our daily lives and inform the choices we make still today(?).

Typical periods offered: Spring

WGSS 3500 Trans Studies
This course surveys the interdisciplinary field of trans studies by emphasizing how trans identities, activism, and scholarship are intertwined with broader histories of gender, sexuality, race, disability, and class. Students will explore the vibrant intellectual, political, and cultural productions of trans people. The primary geographic focus for the course is the United States, but we will situate U.S. trans studies within broader conversations about gender variance transnationally. While attention will be paid to understanding how transphobia operates, the course emphasizes thinking through the possibilities afforded by trans histories of resistance and refusal.

WGSS 3510 Women and Social Movements: Gender and Sexuality in U.S. Social Movements
This course examines the history of grassroots activism and political engagement of women in the United States. Looking at social movements organized by women or around issues of gender and sexuality, class texts interrogate women's participation in, and exclusion from, political life. Key movements organizing the course units include, among others: the Temperance Movement, Abolitionist Movements, the Women's Suffrage Movements, Women's Labor Movements, Women's Global Peace Movements, and Recent Immigration Movements. Readings and discussion will pay particular attention to the movements of women of color, as well as the critiques of women of color of dominant women's movements. Course materials will analyze how methods of organizing reflect traditional forms of doing politics, and we will also examine strategies and tactics for defining problems and posing solutions particular to women.

WGSS 3530 Neither Man Nor Woman: Transgender Ethnographies in Global Context
This seminar examines transgenderism and gender variance more broadly in a global context that includes, but does not privilege, Western analytical frameworks. We will read ethnographic accounts of gender diversity that complicate Western notions of sex, gender, and sexuality. In particular, we will interrogate the idea of transgenderism as a crossing from one gender to an opposite one (i.e. male to female or female to male), investigate the relationship between gender identity and sexuality, and examine the particularities of local gender forms in cultural context.Any of the following are suitable (but not required) courses to take before enrolling in this class: L77 100B, L77 105, L77 205 or L77 3091
Credit 3 units. A&S IQ: LCD, SSC EN: S

WGSS 3555 Caste: Sexuality, Race and Globalization.
Be it sati or enforced widowhood, arranged or love marriage, the rise of national leaders like Indira Gandhi and Kamala Harris, or the obsession with fair skin, caste shapes possibilities and perceptions for billions. In this class we combine a historical understanding of the social caste structure with the insights made by those who have worked to annihilate caste. We will re-visit history with the analytic tools provided by the concepts of compulsory endogamy, surplus woman, and brahmanical patriarchy, and we will build an understanding of the enduring yet invisible sexual-caste complex. As we will see, caste has always relied on sexual difference, its ever-mutating power enabled by the intersectionalities of race, gender and class. We'll learn how caste adapts to every twist in world history, increasingly taking root outside India and South Asia. We will delve into film and memoir, sources that document the incessant injustices of caste and how they have compounded under globalization. The class will research the exchange of concepts between anti-race and anti-caste activists: how caste has shaped the work of prominent anti-racist intellectuals and activists in the United States such as W.E.B. DuBois and Isabel Wilkerson and in turn, the agenda and creativity of groups such as the Dalit Panthers. Finally, the course will build a practical guide to engaging with and interrupting caste in the context of the contemporary global world today. Waitlists controlled by Department; priority given to WGSS majors. Enrollment cap 15.

Typical periods offered: Spring

WGSS 3575 Confronting Capitalism: Feminism, Work and Solidarity
This course explores the relationship between gender, the ideological construction of work and workers, and feminist and queer mobilizations against labor exploitation. To examine how notions of the ideal worker shape and are shaped by gender, sexuality, and race, we will study various forms of work, including care work and reproductive labor; affective and emotional labor; migrant labor; service work; and sex work. Considering what is new and old about late (or neoliberal) capitalism, we will explore how the relationship between citizenship, the state and political economy has shifted over the last four decades. Across each of these registers, we will engage thinkers spanning Marxist feminist, radical feminist, liberal feminist, indigenous feminist, Black feminist, and disability justice traditions. We will ask how these interwoven genealogies grapple with U.S. imperialism and the relationship between race, class, and patriarchy, while mapping out various visions of solidarity economies, internationalism, and anti-work politics. Prerequisite: Intro to WGSS or permission of instructor.
Credit 3 units. A&S IQ: HUM, SC BU: BA, HUM EN: H
Typical periods offered: Fall, Spring

WGSS 3580 Scribbling Women: 19th-Century American Women Writers
In 1855, Nathaniel Hawthorne wrote to his publisher, William Tichnor, that America is now wholly given over to a damned mob of scribbling women and I should have no chance of success while the public taste is occupied with their trash. In this class, we examine works of those scribbling women of the nineteenth century. We read one of the best selling novels of the century, one that created a scandal and ruined the author's literary reputation, along with others that have garnered more attention in our time than their own. In addition to focusing on these women writers, we also explore questions about the canon and American literature: What makes literature good? What constitutes American literature? How does an author get in the canon and stay there? Finally, in this writing intensive course, there are frequent writing assignments and a strong emphasis on the essential writing process of drafting and revising.

Typical periods offered: Spring

WGSS 3640 Gender, War, and Migration
This course will examine the forced transnational migration of war refugees and their resettlement in host societies. A central question that guides this course is: How does war impact and complicate belonging and influence the movement of people across borders and boundaries? With this question in mind, we will explore the dynamic relationships between specific groups of refugees and nation-states, while considering inseparable intersectional configurations of gender, race, sexuality, ethnicity, class, age, and religion as lenses through which to consider ideas of personhood and notions of national belonging. In the first part of the semester we will focus on transnational displacement because of conflict and deterritorialization. We will utilize readings in feminist theory, post-colonial theory, and cultural studies to examine historical processes of dislocation and relocation. The second part of the semester will examine ethnographic case studies of resettled refugees in different sites and their day-to-day practices to understand how displaced people earn a place in host societies. We will also explore how identity categories influence the architecture of personhood in nation-states. Lastly, we will analyze the multi-layered ways in which diasporic subjects and nations rearticulate themselves virtually and digitally (via Internet and social media). We will combine diverse readings and theoretical engagements, lectures, documentary films, discussion, and class-based activities to interrogate notions of subjectivity, alterity, and belonging across time, place, and space. Pre-Requisite: L77 100B or consent of instructor.

WGSS 3650 The Global History of HIV/AIDS
Most (if not all) of us have never known a world without HIV/AIDS. The potential risk of seroconversion has been integrated into sexual health education and popular media for more than three decades. At the same time, HIV has often been portrayed as either an issue of a minority (e.g., gay men, intravenous drug users, sex workers) or as existing over there in the Global South, overlooking the major crisis within the United States. This course tackles the history of HIV/AIDS as a global history of gender and sexuality between the Global North and the Global South. Throughout the course, we will consider major ethical questions regarding disease and control. Who gets to be a victim, and who is labeled a culprit? What actions should be pursued in the midst of an epidemic? Who controls the narrative about disease? We will look at international biopolitical practices by tracing the downward flow of researchers and specialists from the Global North to the Global South and the upward flow of scientific knowledge and capital. In this way, we will see how the Global South has played a crucial role in the perceptions, treatment, and profiting of HIV/AIDS in the United States and the Global North through the recent breakthrough in pre-exposure prophylaxis (PrEP), sold on the market as Truvada/Descovy. The course has three thematic sections: Discovery and Reaction, Politics and Activism, and Research and Health.

Typical periods offered: Spring

WGSS 3690 Community-Engaged Learning: Projects in Domestic Violence
In this course, students explore the links between the theories and practices of Women, Gender, and Sexuality Studies through a combination of research and direct community engagement. Course readings focus on the ways that poverty and violence -- along with race and gender expectations -- shape the lives of women. A required community service project for this course asks students to examine the relationship between the course readings and the lives of actual women in St. Louis. Over the course of the semester, students design and execute programming for women at a local community agency. This is a writing-intensive course. Majors and minors in WGSS receive first priority. Other students will be admitted as course enrollment allows.
Credit 4 units. A&S IQ: SSC, SC, WI Art: SSC EN: S
Typical periods offered: Fall, Spring

WGSS 3700 Gender and Social Class
Using St. Louis as a lens, the course focuses in on the development of class in the US and attempts to trace historically how class, race, sexuality, and gender influence each other and how this mutual influence shapes our society through immigration, gentrification, welfare, and work. Course readings present classical understandings of class and asks how these understandings are challenged when these other categories of identity are made prominent. Attendance on the first day mandatory.

WGSS 4005 Advanced Queer Theory: The Intimacy of Precarity
This seminar will use precarity to produce a map of some trends in queer theory today in order to outline the stakes of this current intellectual work and ask how we can use this work to rethink sexuality. In outlining the current stakes of precarity, this seminar will focus on two main threads of queer theory--queer of color critique and public feelings because both of these spaces have enabled complex theoretical and political discussions centered around precarity and both also introduce historical framings of queer theory. By orienting their contributions to queer studies around precarity, these scholars are asking both how one lives with this condition and what formations of knowledge have produced these conditions of liminality and vulnerability. Overall, this emphasis on precarity has made certain tensions surrounding the place of difference within queer theory visible and highlighted the role of structures, particularly neoliberalism, which is a particular nexus of collusion between the state and formations of capital, over the individual.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, HUM EN: H

WGSS 4006 Advanced Topics in Trans Theories: Femme
In the current moment, femme is used to index a variety of gender and sexual expressions. This course explores the aesthetics and politics of femme through the lens of trans theories. A quick search for femme in relation to gender and sexuality will show that one of its origin stories is within lesbian communities often in relation to the butch/femme relationship. The lipstick lesbian is the figure who emerges here as exemplifying a kind of adherence to traditional forms of femininity even while being queer. Trans women are often criticized for attachments to similar forms of gender expression. Femininity is often derided as unserious or, worse, hopelessly entangled in the dynamics of heteropatriarchy. To be feminine, then, is often taken as a sign of a retrograde politics or submission to normative ideals of gender. This course will take up this problem as a way of beginning to think through what interventions femme might make into our ordinary ways of understanding gender and sexuality.

WGSS 4015 Feminist and Queer Media Studies
This seminar serves both as an introduction to some of the foundational texts in feminist and queer media studies and a snapshot of recent scholarship in the field.
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, HUM EN: H
Typical periods offered: Spring

WGSS 4016 Queer of Color Critique
That sensation produces surplus, often uncontainable knowledge, is something that is beginning to be explored in various arenas of queer theory as an important component of queer of color critique. This seminar will explore different sensational arenas, the different possible critiques that they produce, and what this means for thinking about sexuality, gender, and queer theory. Throughout the course of the semester, we will explore sensation in multiple ways 1) as a diagnostic tool for understanding some of the different ways that race, gender, and sexuality intersect 2) as a way to trouble the dichotomy between interiority and exteriority to understand the ways in which orders of knowledge become imprinted on the body 3) as a mode of producing alternate forms of knowledge about gender, race, and sexuality. In addition to reading about different sensations and their relationships to politics and sexuality, this course will require students to think creatively as they attempt to write about sensation, sexuality, and politics. Ultimately, the purpose of this class is to examine sexuality and sensation as collections of embodied and politicized experiences. Prerequisite: Introduction to Women, Gender, and Sexuality Studies (L77 100B) or permission of instructor.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

WGSS 4017 Healing and Social Justice
What makes activism sustainable and accessible? Not just ideologically or politically, but physically, emotionally, and some would ask, spiritually? How do actors in social justice movements enact care for movement survival? Conversely, when might care serve to depoliticize or otherwise undermine political action? How do race, gender, sexuality, class and other aspects of identity shape the ways we approach these questions? Including the contested topics of burnout and self-care, questions of movement survival and activist sustainability touch on Marxist, Black, and Disabled feminisms, queer theory, the sociology of health and illness, critical theory, and other theoretical lineages. This course takes as its starting points Sarah Ahmed's concept of feminist killjoy survival kits, Black feminist epistemology, adrienne marie brown's Pleasure Activism, and the sociology of lay health experiences. Ultimately, this course will analyze, theorize, and critique care in activism and social movements. At the same time, it will create space to discern what our own visions of sustainable, politically committed wellbeing look like.
Credit 3 units.

WGSS 4020 Transnational Queer Activism
This course explores the recent emergence of visible movements for sexual and gender minorities across the globe. The course begins with an overview of theories of collective action, putting canonical texts in social movement studies in conversation with postcolonial, queer, and transnational feminist approaches to activism and resistance. The aim is to lay a theoretical foundation for transnational analysis that does not center Western experience. The second part of the course moves through some key issues in LGBTI organizing that are overlooked when focusing on Euro-America, including: the importance of democratic transition for social movements; the prevalence of human rights as frames for sexual rights in the global South; limitations of the term homophobia when conceiving of hostility toward sexual minorities cross-culturally; and the role of colonialism and neo-colonialism in the globalization of LGBTI identities. Students will read texts attentive to the specificities of activism and resistance in the global South such as Out in Africa: LGBT Organizing in Namibia and South Africa, Queer Activism in India, and Mobilizing Gay Singapore: Rights and Resistance in an Authoritarian State. Course materials will also include primary source material from translated interviews with Argentine transgender activists the months before the passage of the Gender Identity Law. Oral presentations will compare a case of LGBTI activism discussed in class to the work done by a St. Louis-based organization. By the end of the course, the students will be able to explain the important ways global Southern LGBTI movements differ from their Northern counterparts, contextualize news reports of events like the passage of the anti-homosexuality bill in Uganda, and craft research contributions based on global Southern case studies.Prerequisite: Introduction to Women, Gender, and Sexuality Studies (L77 100B) or permission of instructor.
Credit 3 units. A&S IQ: LCD, SSC, SC Art: SSC EN: S

WGSS 4045 Queering Theory: Collaborating, Solidarity, and Working Together
This class aims to use theory to destabilize the concepts of race, sexuality, gender, disability, and academic methodology. This class will submerge you in some of the most influential texts in queer theory. The selected readings range across many disciplines, including biology, philosophy, anthropology, sociology, history, and cultural studies. The core premise of this class is that to queer something is to destabilize it. Therefore, not all of the readings will specifically be about gay, lesbian, bisexual, or transgender people. However, these readings will help any scholar in their future work in queer theory. Prerequsitie: Any 300 level WGSS class or equivalent or permission from instructor.
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

WGSS 4085 Everyday Unruliness: Feminist and Queer Resistance
This course is interested in the ways ordinary people break rules, flout norms, and make trouble. We know that resistance manifests in social movements, militant activism, and direct confrontation, but it also comes through quieter acts of unruliness and noncompliance. Looking at power from below, readings focus on everyday interventions in systems of control. Garment workers threaten good pay or bum work, queers fail at reproductive heterosexuality, and shiftless people steal moments of leisure from a system that wants us either productive or dead. These acts may not be obviously political, but because people at the margins have so often been left outside (and also opt out) of formal politics, subtle resistance is particularly interesting for feminist and queer scholars. Everyday acts do threaten the status quo -- otherwise, why would they be so rigidly policed? But questions remain. Throughout the semester, we will ask the following: What counts as resistance? What are its ethics? When is a bad attitude an act of rebellion, and does it matter if that rebellion is conscious? Does survival constitute resistance for those not meant to survive? On the other hand, for those subjects whose active engagement sustains the status quo, is withdrawal the more radical choice? Does the refusal of sociality constitute a form of resistance? Or are there ways to forge communities of mutual care that erode the status quo rather than reproduce it? Prerequisite: L77 110B (Intro to Women, Gender, and Sexuality Studies) or permission of instructor.
Credit 3 units. A&S IQ: SSC, SC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

WGSS 4115 Gender, Religion, Medicine and Science
Have you ever wondered why some topics are argued using religion as a guide, while others may approach the topic from what is perceived as a strictly scientific point of view? This course explores how and why gender and sexuality tend to be at the center of debates that pit Medicine and Science against Religion. Using feminist and queer scholarship, this course explores five hundred years of rhetorical strategies related to defining, or regulating, gender and sexuality. We will consider how much debates have changed from sixteenth-century Europe to 21st century United States by asking when, why and how either Medicine & Science or Religion influenced social thought and laws. Finally, we will consider how, and if, contemporary debates on vaccines are either part of the long history of debating bodily autonomy (as is the case with the other topics addressed in class), or if the conflict between religion, medicine and science in the modern era is new and distinctly different from past rhetorical strategies. Prerequisite: Introduction to Women, Gender and Sexuality Studies
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: ETH, HUM, IS EN: H
Typical periods offered: Fall

WGSS 4135 The Politics of Pleasure
This 400 level seminar interrogates the concept of pleasure. Pleasure occupies a fraught space in feminist and queer theory. This course examines several ways that people have theorized pleasure as a space for politics, a space for conservatism, or a way to think about racialized difference. This course is not interested in defining what pleasure is, but it interrogates what the stakes of talking about pleasure have been within contemporary theory and culture. Beginning with an examination of pleasure in the context of early twentieth century sexology, this course looks at the sex wars of the 1970s, the turn toward pleasure as a space of protest, and ends by thinking of ways to imagine pleasure outside of current paradigms of sexuality. The course takes gender, race, and sexuality as central analytic components to understand how pleasure is defined and who has access to it. Either Introduction to Sexuality Studies or Introduction to Women, Gender, and Sexuality Studies are prerequisites.
Credit 3 units. A&S IQ: HUM, SC BU: HUM EN: H
Typical periods offered: Fall

WGSS 4141 Feminist and Queer Research Methodologies
What does it mean to do research through the lens of feminist and queer politics? This course surveys key methodological approaches to feminist and queer research. Interdisciplinary at its core, it draws from methodological traditions across the humanities and social sciences while focusing on forms of inquiry that resist these boundaries. We explore how feminist and queer politics inform the work of knowledge production. We ask how scholars, organizers and artists engage and repurpose various research methodologies and how they reflect on the politics of power, experience, domination, and resistance in the research encounter. We ask who research is for, parsing the political stakes of scholarship that archives the stories of collective resistance, survival, collaboration, and domination, at the same time as it authorizes hierarchies of expertise, builds institutional power, and (too often) extracts from those studied. What might a redistributive approach to feminist and queer research look like? This class is a writing intensive course. Waitlists controlled by Department; priority given to WGSS majors.
Credit 3 units. A&S IQ: SC, WI
Typical periods offered: Fall

WGSS 4142 Thesis Proposal Workshop
This 1-credit thesis proposal workshop will guide students on the conventions of proposal writing, as well as giving students an opportunity to get feedback on their ideas. The course focuses on five main components, each of which build upon each other: 1) outlining a proposed honors thesis topic and developing the research question; 2) understanding and drafting the literature review; 3) outlining and drafting the methods section; 4) detailing a timeline for thesis research; and 5) incorporating feedback from prior drafts and producing a full, edited honors thesis proposal for submission. The course will also address some of the nuts and bolts of research, from the IRB process to the logistics of gather data or exploring an archive. Finally, the course will encourage students to reflect on their own writing practices, from preliminary brainstorming around a research topic to building out a plan for data collection, interpretation, and argumentation. Requirement: Feminist/Queer Research Methodologies (concurrently during the same semester or completed in a prior semester).
Credit 1 unit.
Typical periods offered: Fall Half B

WGSS 4150 Feminist Literary and Cultural Theory
This course provides a historical overview of feminist literary and cultural theories since the 1960s and 70s, acquainting students with a diversity of voices within contemporary feminism and gender studies. Readings will include works of French feminism, Foucault's History of Sexuality, feminist responses to Foucault, queer (LGBTQ+) theory,

postcolonial and decolonial feminism, feminist disability theory, and writings by US feminists of color (African-American, Asian-American, Latina, Native-American). The reading list will be updated each year to reflect new developments in the discipline. We will approach these readings from an intersectional and interdisciplinary perspective, considering their dialogue with broader sociopolitical, cultural, and philosophical currents. By the end of the course, students are expected to have gained a basic knowledge of the major debates in feminist literary and cultural studies in the last 50 years, as well as the ability to draw on the repertoire of readings to identify and frame research questions in their areas of specialization. The class will be largely interactive, requiring active participation and collaborative effort on the part of the students. Students will be encouraged to make relevant connections between the class readings, everyday social and political issues, and their own research interests. NOTE: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Prerequisite: advanced course work in WGSS or in literary theory (300 level and above) or permission of the instructor.

Typical periods offered: Spring

WGSS 4153 Decolonization to Globalization: How to End an Empire
The conventional markers of the twentieth century - imperialism, decolonization and globalization - are acutely compromised if we mobilize gender and sexuality as modes of analysis. In this course we bring questions of sexual difference and gender to the wider stories of colonialism, nationalism, decolonization, neocolonialism, US imperialism, neoliberalism, globalization, WoT, and majoritarianism. We engender the contradiction between enormous turning points and the lived experiences of billions. We probe how the non-profit industrial complex, development aid, and the normative family have shaped and given shape to the very idea of gender. Finally, we examine the capacious power of gender to interrupt the power of the state and to reorganize extractive relations of race and caste.
Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Spring

WGSS 4155 Contemporary Feminisms
The purpose of this course is to provide a framework, a map, within which students can locate feminist ideas. The course, which may be presented historically, explores and compares different types of feminism selected from, for example, the following feminisms: liberal; Marxist; socialist; radical; lesbian; black; existentialist; postmodern. The class considers how such feminisms analyze the nature and sources of women's oppressions, the worlds they envision, and the means they use to bring about change. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite: Completion of at least one Women, Gender, and Sexuality Studies course or permission of the instructor.
Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM EN: H

WGSS 4165 From Mammy to the Welfare Queen: African American Women Theorize Identity
How do representations of identity affect how we see ourselves and the world sees us? African American women have been particularly concerned with this question, as the stories and pictures circulated about black female identity have had a profound impact on their understandings of themselves and political discourse. In this course we will look at how black feminist theorists from a variety of intellectual traditions have explored the impact of theories of identity on our world. We will look at their discussions of slavery, colonialism, sexuality, motherhood, citizenship, and what it means to be human.
Credit 3 units. A&S IQ: HUM, SC BU: HUM EN: H
Typical periods offered: Spring

WGSS 4200 Feminist Political Theory
This course asks how feminist thinkers from various political and intellectual traditions critique,adopt and transform political theories of justice, citizenship, property and the state. To uncover how different feminist theories have been adopted in the struggle for political transformation and social justice, we will pursue two main lines of inquiry. The first asks how feminist thinkers from various traditions critique and engage the history of political thought within the social contract tradition. We will ask, in particular, how gender, race, slavery, colonialism and empire shape conceptions of citizenship and property. We will also examine transnational feminist critiques of the public/private division in the Western political theory canon as it impacts the role of women and the social construction of women's bodies. During the second half of the semester, we will ask how various transnational social movements have engaged and adopted feminist theories in efforts to resist state violence, colonialism, labor exploitation and resource extraction. In following these lines of inquiry we will draw from postcolonial, decolonial, liberal, Black, radical, Marxist and Chicana feminist perspectives. Part of our goal will be to uncover how various feminist theories treat the relationship between politics and embodied experience, how gendered conceptions of family life affect notions of political power and how ideas about sexuality and sexual conquest intersect with empire-building. Majors and minors in WGSS receive first priority. Other students will be admitted as course enrollment allows.
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, HUM EN: H
Typical periods offered: Fall

WGSS 4230 Black Sexual Politics
Borrowing from Patricia-Hill Collins perspective in Black Sexual Politics, this seminar examines the historic and popular understandings of black sexuality and how they maintain color line, as well as threaten to spread what Hill-Collins refers to as a new brand of racism. Particularly, this course engages questions about sexuality that have only begun to be discussed with African-American Studies and the larger public sphere. Taking the intersections of identities very seriously, this course interrogates the ways in which these constructions have affected black women, while also being attentive to how others are implicated within discourses of black sexuality. Similarly, we will also engage the various distortions of black men - depictions of the black and masculine as almost always violent, sexually and socially irresponsible, brutish, questionable, and unfaithful. Together we will use various critical texts and media to better understand the impact and the importance of visual and material images in the interplay of race, sex, and politics in contemporary America.
Credit 3 units. A&S IQ: SSC, SC EN: S
Typical periods offered: Fall

WGSS 4245 Transnational Feminisms
This course engages contemporary feminist theories from diverse transnational contexts, as well as the social movements and local resistances they inspire. Through engagement with key works of feminist theory, political manifestos, and creative works of resistance, we will explore how transnational feminist alliances and coalitions have contested and responded to gendered and racialized forms of exploitation, navigating and reshaping territorial and social boundaries. We will engage with debates around the notion of a global sisterhood; tensions between universal and local feminist practice; the role of difference, nationality and culture in navigating the possibility of solidarity; the role of the Internet in forging cross-border alliances; human rights-based activism; women's work; transgender inclusivity and transfeminisms. Part of our goal will be to ask how feminist theories from diverse geographical locations have influenced the politics of borders, movements for environmental justice, migrations and mobility, resistance to imperialism and the forging of alternative economies.

We will also explore the gray areas existing in between binaries such as feminist/anti-feminist; local/global; home/away; global South/North; victim/agent; domination/dependency. Finally, we will ask how processes of knowledge-production take shape within different intellectual and political movements such as post-colonial feminism, decolonial and indigenous feminism, liberal and radical feminism, Marxist feminism and religiously-based feminisms.
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA EN: S
Typical periods offered: Fall, Spring

WGSS 4270 Thinking About Consent
Consent has become a dominant framework we use to think about sex and sexual violence. We often assume that consent is clear, unambiguous, and consistent. At the same time, popular representations of sex and sexual violence suggest that situations and experiences are often fuzzy, messy, or icky -- in other words, questions of consent do not always have the clear answers that we might like to imagine. In this course, we will use recent literary, film, and pop culture expressions of unpleasant, ambiguous, and ambivalent sex to explore and interrogate feminist and queer theories of consent, sexual harm, and autonomy. Works will include Kristen Roupenian's Cat Person, Patricia Lockwood's Rape Joke, and Kate Elizabeth Russell's My Dark Vanessa, along with work by Sara Ahmed, Wendy Brown, Octavia Butler, Angela Davis, Joseph J. Fischel, Ida B. Wells, and others. Topics include philosophies of consent; concepts of consent in queer, racialized, minoritized, disabled, and incarcerated communities; the experience of survivors; and alternatives to consent.
Credit 3 units. A&S IQ: SSC, SC BU: BA, ETH EN: S
Typical periods offered: Fall

WGSS 4280 Sex and Gender in Public
This two-semester course is a research capstone class combined with hands-on workshops designed to help students produce a public project related to gender and/or sexuality studies. It is designed as a capstone that allows students to build on their coursework in WGSS, and it may speak to specific professional goals, but that is not a requirement. It is open to both majors and minors but required for students in the health or politics tracks. Topics covered will include exhibition, podcasts, website design, storymaps, comics, and community education. However, students are not limited to these methods in their final projects.
Credit 1.5 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: HUM EN: H
Typical periods offered: Fall

WGSS 4350 Queer and Feminist Geographies
There is a tendency to see space and place as backdrops, mere stages where human social interactions simply play out. Yet when we fail to interrogate the processes behind the social production of space, we run the risk of naturalizing space as heteronormative and obfuscating its inherent exclusions. This upper-level seminar seeks to challenge such assumptions by treating space and place as dynamic formations that actively influence our identities, behaviors, and politics. Using queer and feminist perspectives within the realm of geography, we will explore how spaces, places, and boundaries are shaped, experienced, and contested through diverse gender identities and sexual formations. Questions driving our inquiry include: How do queer and feminist geographies intersect to shape landscapes- both urban and rural in the United States and abroad? What role do geographic spaces play in the construction of LGBTQ identities across different social milieus? And in what ways can queer and feminist perspectives contribute to decolonial and environmental justice movements? In addition to queer and feminist spatial theories, topics will include sexuality and place-making, transnational queer migrations, queer ecologies and environmental justice, and the queering of the public and private divide at the heart of spatial taxonomies in the West. By mobilizing queer and feminist forms of spatial analysis, this seminar will equip you with tools to identify the ways in which spaces, places, and boundaries can further social inequalities and the opportunity to theorize alternative geographies that promote inclusion and more just worlds.

Typical periods offered: Fall

WGSS 4370 Reformers and Radicals: Feminist Thinking Through History
We bring gender and sexual debates into conversation across time and space. And we explore the method by which different histories can be brought into meaningful dialogue, specifically how the agendas of South Asia based activists and theorists might resonate with US based histories of reform and radical change. For instance, what are the challenges as well as the advances in reading Malala Yousafzai alongside the historic statement issued by the Combahee River Collective; how might we mobilize the multilayered agenda of Dalit feminisms in the context of debates over intersectionality? Can an awareness of feminist ecologies inflect the move toward decolonization and the return of stolen land on turtle island; does the radical potential of queer politics illuminate battles over political power in urban India? We layer these questions with debates on method, particularly the method of staging cross-cultural and temporal comparisons. As students in an advanced course in the method of comparative gender and sexuality studies, each of us will bring our theoretical apparatus to the larger case studies of India and South Asia. Collectively we seek to question and appreciate how globalization has produced reformers and radicals, and conversely, how reformers and radicals might work alongside one another in an increasingly stratified world.

Typical periods offered: Spring

WGSS 4390 The Arab & Muslim Americas: Feminist Perspectives
Migratory movements from the Middle East and North Africa into the Americas were precipitated by multiple and intersecting factors. This course will examine the historical and contemporary waves of Arab and Muslim migrants and refugees into the Americas from the nineteenth to the twenty-first century. It will explore how empire, globalization, and war influenced and continue to influence the flow of people across borders and impact policies and ideas of belonging in receiving nation-states. We will examine Arab and Muslim identity in light of gendered, ethnoreligious, class, and national affiliations and investigate the racialization of Islam and the gendered-Orientalist constructions of Arabs and Muslims in Latin America (Brazil, Mexico, Argentina, Honduras, Cuba) and the US. Utilizing interdisciplinary texts in Transnational Feminist Theory, Cultural Studies, and history, we will trace the ways that specific diasporic subjects have been incorporated into host nation-states and analyze, through a comparative framework, the receptions and rejections of Arabs and Muslims in the US and Latin America.
Credit 3 units. A&S IQ: LCD, SSC, SC EN: S
Typical periods offered: Fall

WGSS 4440 Sex and Gender in Public

WGSS 4500 Women, Law and Society
Credit 3 units. A&S IQ: SSC BU: BA

WGSS 4690 East Asian Feminisms
This course will study the beginnings and the transformations in feminist thought as found in East Asia. It will explore feminism as found in China, Taiwan, Japan, and Korea focusing on the period from the late 1800s to the present. Emphasis will be on the diversity of feminisms both between and within these cultures.
Credit 3 units.

WGSS 4980 Supervised Reading and Research
This course is designed for students who are pursuing an independent study project as part of the Department Honors Program. Students must apply to the Department. May be repeated once. Prerequisite: Senior Standing and permission of the department.
Credit 3 units.
Typical periods offered: Fall, Spring

WGSS 4991 Honors Thesis: Research and Writing
Enrollment in this course is limited to students accepted into the Honor's Program. Petition for permission to enroll is available in the Women, Gender, and Sexuality Studies Office, 210 McMillan Hall.
Credit 3 units. EN: H
Typical periods offered: Fall, Spring

WGSS 4996 Women, Gender and Sexuality Studies Elective.
Credit 0 units. EN: H

WGSS 4999 Independent Study
Directed readings and research in women and gender studies. Prerequisite: permission of instructor.

Typical periods offered: Fall, Spring

Women, Gender, and Sexuality Studies Major

Program Requirements

- **Total Units Required:** 27
- **Grade Requirement:** C- or better; Pass/No Pass grades do not count for the major.

Required Courses

Requirements for the Major

The following six requirements must be fulfilled through WGSS courses or WGSS-approved courses in another department taken at Washington University. The theory and methods/service learning requirements must be completed at Washington University. Students requesting an exception and who wish to transfer credits in the theory or methods/service learning category must petition the department chair or the director of undergraduate studies, who will consider the request.

Only one course may fulfill two requirements (i.e., one course may double count for two of the six required areas). Students on approved study abroad programs may petition for one course to count toward one of these six requirements.

1. One 1000-Level Introductory Course: 3 credits

Students must complete the following course and file a copy of a paper from this course with the WGSS office (McMillan Hall, Room 210):

Code	Title	Units
WGSS 1500	Introduction to Women, Gender, and Sexuality Studies	3

2. One Theory Course: 3 credits

Choose one of the following:

Code	Title	Units
WGSS 3020	Justice as Failure: Abolitionist Theory and Praxis	3
WGSS 3045	Queer Theory	3
WGSS 3215	Bodies Out of Bounds: Feminist and Queer Disability Studies	3
WGSS 3340	Feminist Theory	3
WGSS 3475	Queering the History of Health	3
WGSS 3575	Confronting Capitalism: Feminism, Work and Solidarity	3
WGSS 3615	Topics in Women, Gender, and Sexuality Studies: Spectacular Blackness, Race, Gender, & Visual Culture	3
WGSS 4006	Advanced Topics in Trans Theories: Femme	3
WGSS 4015	Feminist and Queer Media Studies	3
WGSS 4016	Queer of Color Critique	3
WGSS 4045	Queering Theory: Collaborating, Solidarity, and Working Together	3
WGSS 4085	Everyday Unruliness: Feminist and Queer Resistance	3
WGSS 4135	The Politics of Pleasure	3
WGSS 4150	Feminist Literary and Cultural Theory	3
WGSS 4165	From Mammy to the Welfare Queen: African American Women Theorize Identity	3
WGSS 4200	Feminist Political Theory	3
WGSS 4245	Transnational Feminisms	3
WGSS 4350	Queer and Feminist Geographies	3

3. One Feminist Research Methods or Community-Engaged Learning Course: 3 credits

Choose one of the following:

Code	Title	Units
WGSS 3176	Community Engaged Learning: Feminist and Queer Community Praxis	3
WGSS 3690	Community-Engaged Learning: Projects in Domestic Violence	3
WGSS 4141	Feminist and Queer Research Methodologies	3
WGSS 4280	Sex and Gender in Public	1.5
WGSS 4440	Sex and Gender in Public	1.5

Note:

- Students who plan to write an honors thesis must take WGSS 4141 Feminist and Queer Research Methodologies and must also enroll in the 1-credit WGSS 4142 Thesis Proposal Workshop offered concurrently with WGSS 4141. WGSS 4142 is restricted to students who plan to submit an honors thesis proposal. Both WGSS 4141 and WGSS 4142 should be taken during the fall semester of the student's junior year unless special departmental approval has been given.
- Students who take WGSS 4141 Feminist and Queer Research Methodologies must submit a copy of their final paper from this course to the WGSS office at wgss@wustl.edu. After the successful completion of WGSS 4141 and WGSS 4142 and the approval of their honors thesis proposal, students enroll in WGSS 4991 Honors Thesis: Research and Writing during the time they are writing the honors thesis, which is usually two semesters.

4. Two 4000-Level Courses or an Honors Thesis: 6 credits

Courses taken in any of the above categories will satisfy this requirement, or the student may choose to write an honors thesis. One of the 3-credit courses must be a 4000-level WGSS course from the following list:

Code	Title	Units
WGSS 4006	Advanced Topics in Trans Theories: Femme	3
WGSS 4016	Queer of Color Critique	3
WGSS 4017	Healing and Social Justice	3
WGSS 4115	Gender, Religion, Medicine and Science	3
WGSS 4153	Decolonization to Globalization: How to End an Empire	3
WGSS 4165	From Mammy to the Welfare Queen: African American Women Theorize Identity	3
WGSS 4200	Feminist Political Theory	3
WGSS 4245	Transnational Feminisms	3
WGSS 4350	Queer and Feminist Geographies	3
WGSS 4370	Reformers and Radicals: Feminist Thinking Through History	3
WGSS 4991	Honors Thesis: Research and Writing	3

The second may be either a 4000-level course in WGSS or a 4000-level course approved for this degree offered by another program.

Code	Title	Units
ARTARCH 4913	Queer: Arts, History, Theory	3
ELIT 4102	Medieval English Literature II: Medieval Womens Writing	3
HISTORY 4124	Advanced Seminar: Women and Religion in Medieval Europe	3
WGSS 4006	Advanced Topics in Trans Theories: Femme	3
WGSS 4016	Queer of Color Critique	3
WGSS 4017	Healing and Social Justice	3
WGSS 4115	Gender, Religion, Medicine and Science	3
WGSS 4153	Decolonization to Globalization: How to End an Empire	3
WGSS 4165	From Mammy to the Welfare Queen: African American Women Theorize Identity	3
WGSS 4200	Feminist Political Theory	3
WGSS 4245	Transnational Feminisms	3
WGSS 4350	Queer and Feminist Geographies	3
WGSS 4370	Reformers and Radicals: Feminist Thinking Through History	3
WGSS 4991	Honors Thesis: Research and Writing	3

5. One Historical Context Course: 3 credits

Students must choose one course that explores gender, sex, or sexuality in historical context or that studies the history of these categories. A single course may not fulfill both the historical context category and the ethnic/global/racial context category. In other words, one may not double count a class even if it is listed in both categories. This course must be a WGSS course or a WGSS-approved course in another department. **Note:** A course that satisfies one of the previous four requirement areas in this list may also fulfill this requirement.

Choose one of the following:

Code	Title	Units
AMCS 3705	Topics in Gender and American Culture	3
ELIT 3501	Topics in English and American Literature (30 Years of Queer)	3
ELIT 3502	Topics in American Literature: Girls' Fiction	3
ELIT 4102	Medieval English Literature II:Medieval Womens Writing	3
FILM 3450	Sexual Politics in Film Noir and Hard-Boiled Literature	3
GLOBAL 3890	Furies and Die-Hards: Women in Rebellion and War	3
HISTORY 3146	Topics in European History: Modern European Women	3

HISTORY 3234	Women and Crime in the Evolution of American History	3
HISTORY 3259	I Know IT When I See It. a History of Obscenity & Pornography in the United States	3
HISTORY 3226	Gender and Sexuality in 1950s America: Writing Intensive Seminar	3
HISTORY 4124	Advanced Seminar: Women and Religion in Medieval Europe	3
JIMES 3870/JIMES 4850	Topics in Jewish Studies	3
KOREA 4550	Topics in Korean Literature and Culture: Gender in Korean Literature and Film	3
REST 4061	Nuns	3
WGSS 2118	First Year Seminar: Angels, Prostitutes and Chicas Modernas: Women in Latin American History	3
WGSS 3002	Feminist Fire!: Radical Black Women in the 20th Century	3
WGSS 3055	Making Sex and Gender: Understanding the History of the Body	3
WGSS 3081	From Hysteria to Hysterectomy: Women's Health Care in America	3
WGSS 3101	An Intellectual History of Sex and Gender: Text and Traditions	3
WGSS 3121	Topics in American Literature: Girls' Fiction	3
WGSS 3130	Sexuality in Early Christianity	3
WGSS 3135	The Racial and Sexual Politics of Public Health	3
WGSS 3152	Sex and Gender in Greco-Roman Antiquity	3
WGSS 3153	The Women of Greek Tragedy	3
WGSS 3165	Queer Histories	3
WGSS 3175	Community-Engaged Learning: Documenting the Queer Past in St. Louis	3
WGSS 3405	Revolutionize It! the Radical History of Second-Wave Feminism	3
WGSS 3416	War, Genocide and Gender in Modern Europe	3
WGSS 3446	No Boys Allowed: Girlhood and Programming for Girls in 19th and 20th Centuries, United States	3
WGSS 3475	Queering the History of Health	3
WGSS 3510	Women and Social Movements: Gender and Sexuality in U.S. Social Movements	3
WGSS 3548	Gender, Sexuality & Communism in 20th-Century Europe	3
WGSS 3555	Caste: Sexuality, Race and Globalization	3
WGSS 3650	The Global History of HIV/AIDS	3
WGSS 3700	Gender and Social Class	3
WGSS 3740	Imperialism and Sexuality: India, South Asia, and the World: Writing-Intensive Seminar	3
WGSS 3751	Topics in Women's History: Women, Gender and Sexuality in Postwar America	3
WGSS 4115	Gender, Religion, Medicine and Science	3
WGSS 4153	Decolonization to Globalization: How to End an Empire	3
WGSS 4231	Topics in American Literature I	3
WGSS 4551	Intersectional Identities in Medieval France	3
WGSS 4700	Ancient Greek and Roman Gynecology	3
WGSS 4918	Advanced Seminar: Sexuality in the United States	3
WGSS 4993	Advanced Seminar: Women and Religion in Medieval Europe	3

6. One Ethnic/Global/Racial Context Course: 3 credits

Students must choose one course that considers gender and ethnicity, gender and race, or gender in a global context. This course must be in WGSS or a WGSS-approved course in another department. **Note:** A course that satisfies one of the first four requirement areas in this list may also fulfill this requirement.

Choose one of the following:

Code	Title	Units
AFAS 2232	Gender and Sexuality in the African Diaspora	3
AFAS 4040	Gender, Sexuality, and Change in Africa	3
AMCS 3705	Topics in Gender and American Culture	3
ANTHRO 3201	Gender, Culture and Madness	3
GLOBAL 4414	Gender Analysis for International Affairs	3
HBRW 3090	Israeli Women Writers	3
HISTORY 4993	Advanced Seminar: Women and Religion in Medieval Europe	3
ITAL 2800	Sex in Italian Culture and Media	3
ITAL 3500	Topics: Global Italy: Race, Gender, Migration and Citzenship	3
JAPAN 4455	Japanese Fiction	3
JAPAN 4490	Modern Japanese Women Writers	3
KOREA 4550	Topics in Korean Literature and Culture: Gender in Korean Literature and Film	3
LATAM 3110	The Body in Brazil: Race, Representation, Ontologies	3
POLSCI 3080	Race and Ethnicity in American Politics	3
POLSCI 3151	Gender and Politics in Global Perspective	3
SOC 3003	Black Feminist Theory	3
SOC 4721	Race, Reproduction, and Justice	3
WGSS 1102	First Year Seminar: Gender, Sexuality and Settler Colonialism	3

WGSS 2080	Constructions of Black Womanhood and Manhood in the Black Community	3
WGSS 2101	Sophomore Seminar: Globalization and Its Disguises	3
WGSS 2118	First Year Seminar: Angels, Prostitutes and Chicas Modernas: Women in Latin American History	3
WGSS 2232	Gender and Sexuality in the African Diaspora	3
WGSS 3002	Feminist Fire!: Radical Black Women in the 20th Century	3
WGSS 3020	Justice as Failure: Abolitionist Theory and Praxis	3
WGSS 3030	Queering Citizenship: Gender/Abolition	3
WGSS 3135	The Racial and Sexual Politics of Public Health	3
WGSS 3152	Sex and Gender in Greco-Roman Antiquity	3
WGSS 3153	The Women of Greek Tragedy	3
WGSS 3181	Gender, Sexuality and Power in Brazil	3
WGSS 3201	Gender, Culture, and Madness	3
WGSS 3416	War, Genocide and Gender in Modern Europe	3
WGSS 3548	Gender, Sexuality & Communism in 20th-Century Europe	3
WGSS 3555	Caste: Sexuality, Race and Globalization	3
WGSS 3560	Black Women Writers	3
WGSS 3575	Confronting Capitalism: Feminism, Work and Solidarity	3
WGSS 3615	Topics in Women,gender, and Sexuality Studies: Spectacular Blackness, Race, Gender, & Visual Culture	3
WGSS 3650	The Global History of HIV/AIDS	3
WGSS 3740	Imperialism and Sexuality: India, South Asia, and the World: Writing-Intensive Seminar	3
WGSS 3861	Psychology of Black Women	3
WGSS 4016	Queer of Color Critique	3
WGSS 4134	The AIDS Epidemic: Inequalities, Ethnography, and Ethics	3
WGSS 4135	The Politics of Pleasure	3
WGSS 4153	Decolonization to Globalization: How to End an Empire	3
WGSS 4231	Topics in American Literature I	3
WGSS 4245	Transnational Feminisms	3
WGSS 4401	Intersectionality	3
WGSS 4675	Beyond the Harem: Women, Gender, and Revolution	3
WGSS 4993	Advanced Seminar: Women and Religion in Medieval Europe	3

General WGSS Education Credits: 6 credits

6 credit units of general WGSS and WGSS-approved courses are required to complete the major. Students may earn elective credits abroad or at another university. General education may be chosen from the following or from courses listed above under other WGSS requirements.

General WGSS education credits may be chosen from the following:

Code	Title	Units
AMCS 3705	Topics in Gender and Culture	3
ANTHRO 4610	Queer Medicine	3
ARTARCH 4913	Queer: Arts, History, Theory	3
COMPLITTHT 4270	Technology and Feminist Practice: Gender Violence Prevention Tools	3
EDUC 3030	Gender and Education	3
GLOBAL 4414	Gender Analysis for International Affairs	3
IPH 4270	Technology and Feminist Practice: Gender Violence Prevention Tools	3
POLSCI 4218	Gender and the Future of Work	3
WGSS 1006	First-Year Seminar: Feminist and Queer Science and Technology Studies	3
WGSS 1101	First Sem:Sex & Gender in the Gutter: An Intro to Gender and Sexuality Studies Through Comics	3
WGSS 1102	First Year Seminar: Gender, Sexuality and Settler Colonialism	3
WGSS 2060	Introduction to Queer Studies	3
WGSS 2070	Sexuality and the State: Introduction to Sexuality Studies	3
WGSS 3012	Gender and Politics	3
WGSS 3070	Masculinities	3
WGSS 3090	Sex and Money: Economies of Desire	3
WGSS 3155	Gender, Health, and Society	3
WGSS 3240	Girls' Media and Popular Culture	3
WGSS 3256	Sex Trafficking	3
WGSS 3410	Gender in Society	3
WGSS 3470	Law, Gender, and Justice	3
WGSS 3500	Trans Studies	3
WGSS 3522	Topics in Literature: Drama Queens: Cleopatra in Elizabethan England	3
WGSS 3685	Gender Violence	3
WGSS 3943	Violence Against Women Court Project	3
WGSS 4331	Topics in Feminist Theory: Feminist Philosophy	3

Additional Information

Study Abroad

We strongly encourage and support students who wish to study abroad. Therefore, we accept up to 9 credits from study abroad (3 of those credits could fulfill the historical context or ethnic/global/racial requirement). Please contact Amy Cislo (acislo@wustl.edu), WGSS Study Abroad Faculty Advisor, about this option.

Transfer Credit

Current students who wish to take courses at other universities during the summer may transfer up to 6 credit units. However, these credits cannot be used to fulfill the introductory course or the theory or methods/service-learning requirements. Students transferring to Washington University who wish to complete the major in WGSS may transfer no more than 9 credits of coursework taken elsewhere.

Women, Gender, and Sexuality Studies Major, Health Specialization

Program Requirements

- **Total Units Required:** 27
- **Grade Requirement:** C- or better; Pass/No Pass grades do not count for the major.

Required Courses

Requirements for the Major

WGSS majors may choose an optional specialization within the major called Health if the students' interests lie primarily within this area of WGSS. Students enrolled in the Health specialization must complete the WGSS major using the approved courses in each required category below. Only 6 units may be taken at the 1000 or 2000 level. In addition, 6 units must be taken at the 4000 level. One of the 4000-level courses can be double-counted for one other category. For example, one class may count toward the 4000-level class and it may fulfill the theory requirement.

1. One 1000-Level Introductory Course: 3 credits

Code	Title	Units
WGSS 1500	Introduction to Women, Gender, and Sexuality Studies	3

2. One Theory Course: 3 credits

Code	Title	Units
WGSS 3020	Justice as Failure: Abolitionist Theory and Praxis	3
WGSS 3215	Bodies Out of Bounds: Feminist and Queer Disability Studies	3
WGSS 3475	Queering the History of Health	3
WGSS 4006	Advanced Topics in Trans Theories: Femme	3

3. One History Course: 3 credits

Code	Title	Units
WGSS 3055	Making Sex and Gender: Understanding the History of the Body	3
WGSS 3081	From Hysteria to Hysterectomy: Women's Health Care in America	3
WGSS 3135	The Racial and Sexual Politics of Public Health	3
WGSS 4115	Gender, Religion, Medicine and Science	3

4. One Race or Non-U.S. Course: 3 credits

Code	Title	Units
ANTHRO 3201	Gender, Culture and Madness	3
ANTHRO 4022	Transnational Reproductive Health Issues: Meanings, Technologies, Practices	3
SOC 4721	Race, Reproduction, and Justice	3
WGSS 3020	Justice as Failure: Abolitionist Theory and Praxis	3
WGSS 3135	The Racial and Sexual Politics of Public Health	3
WGSS 3201	Gender, Culture, and Madness - Gender, Culture, and Madness	3
WGSS 3650	The Global History of HIV/AIDS	3
WGSS 4134	The AIDS Epidemic: Inequalities, Ethnography, and Ethics	3

5. One Required Health Elective: 3 credits

Code	Title	Units
WGSS 3155	Gender, Health, and Society	3
WGSS 3500	Trans Studies	3
WGSS 3685	Gender Violence	3
WGSS 4017	Healing and Social Justice	3

6. One Methods Course: 3 credits

Code	Title	Units
WGSS 3176	Community Engaged Learning: Feminist and Queer Community Praxis	3
WGSS 3690	Community-Engaged Learning: Projects in Domestic Violence	3
WGSS 4141	Feminist and Queer Research Methodologies	3
WGSS 4280	Sex and Gender in Public	1.5
WGSS 4440	Sex and Gender in Public	1.5

Notes:

Students who plan to write an honors thesis must take WGSS 4141 Feminist and Queer Research Methodologies and must also enroll in the 1-credit WGSS 4142 Thesis Proposal Workshop offered concurrently with WGSS 4141. WGSS 4142 is restricted to students who plan to submit an honors thesis proposal. Both WGSS 4141 and WGSS 4142 should be taken during the fall semester of the student's junior year unless special departmental approval has been given.

Students who take WGSS 4141 Feminist and Queer Research Methodologies must submit a copy of their final paper from this course to the WGSS office at WGSS@wustl.edu. After the successful completion of WGSS 4141 and WGSS 4142 and the approval of the honors thesis proposal, students enroll in WGSS 4991 Honors Thesis: Research and Writing during the time they are writing the honors thesis, which is usually two semesters.

7. Two 4000-level Courses or an Honors Thesis: 6 credits

Courses taken in any of the above categories will satisfy this requirement, or the student may choose to write an honors thesis. One of the 3-credit courses must be a 4000-level course in WGSS course selected from the following list:

Code	Title	Units
ANTHRO 4022	Transnational Reproductive Health Issues: Meanings, Technologies, Practices	3
ANTHRO 4610	Queer Medicine	3
WGSS 4017	Healing and Social Justice	3
WGSS 4115	Gender, Religion, Medicine and Science	3
WGSS 4141	Feminist and Queer Research Methodologies	3
WGSS 4991	Honors Thesis: Research and Writing	3

The second may be either a 4000-level course in WGSS or a 4000-level course approved for this degree offered by another program (e.g., has a different course subject code than WGSS). Consult with your WGSS major advisor to to ensure your chosen course meets this requirement.

8. Elective Courses: 9 credits

- Students select 9 units of any WGSS or WGSS-approved courses as electives.

Additional Information

Study Abroad

We strongly encourage and support students who wish to study abroad. Therefore, we accept up to 9 credits from study abroad (3 of those credits could fulfill the historical context or ethnic/global/racial requirement). Please contact Amy Cislo (acislo@wustl.edu), WGSS Study Abroad Faculty Advisor, about this option.

Transfer Credit

Current students who wish to take courses at other universities during the summer may transfer up to 6 credit units. However, these credits cannot be used to fulfill the introductory course or the theory or methods/service-learning requirements. Students transferring to Washington University who wish to complete the major in WGSS may transfer no more than 9 credits of coursework taken elsewhere.

Women, Gender, and Sexuality Studies Major, Politics Specialization

Program Requirements

- **Total Units Required:** 27
- **Grade Requirement:** C- or better; Pass/No Pass grades do not count for the major.

Required Courses

Requirements for the Major

WGSS majors may choose an optional specialization within the major called Politics if the students' interests lie primarily within this area of WGSS. Students enrolled in the Politics specialization must complete the WGSS major using the approved courses in each required category below. Only 6 units may be taken at the 1000 or 2000 level. In addition, 6 units must be taken at the 4000 level. One of the 4000-level courses can be double-counted for one other category. For example, one class may count toward the 4000-level class and it may fulfill the theory requirement.

1. One 1000-Level Introductory Course: 3 credits

Code	Title	Units
WGSS 1500	Introduction to Women, Gender, and Sexuality Studies	3

2. One Race/Ethnicity/Politics Course: 3 credits

Students select one of the following. These courses can also be electives.

Code	Title	Units
POLSCI 3080	Race and Ethnicity in American Politics	3
SOC 4721	Race, Reproduction, and Justice	3
WGSS 3002	Feminist Fire!: Radical Black Women in the 20th Century	3
WGSS 3020	Justice as Failure: Abolitionist Theory and Praxis	3
WGSS 3740	Imperialism and Sexuality: India, South Asia, and the World: Writing-Intensive Seminar	3
WGSS 4165	From Mammy to the Welfare Queen: African American Women Theorize Identity	3

3. One Sexuality and Politics Course: 3 credits

Students select one of the following. These courses can also be electives.

Code	Title	Units
WGSS 2070	Sexuality and the State: Introduction to Sexuality Studies	3
WGSS 3030	Queering Citizenship: Gender/Abolition	3
WGSS 3090	Sex and Money: Economies of Desire	3
WGSS 3135	The Racial and Sexual Politics of Public Health	3
WGSS 3165	Queer Histories	3
WGSS 3256	Sex Trafficking	3

4. One Non-U.S. Course: 3 credits

Code	Title	Units
RELPOL 3070	Islam, Gender, Sexuality	3
WGSS 3416	War, Genocide and Gender in Modern Europe	3
WGSS 3548	Gender, Sexuality & Communism in 20th-Century Europe	3
WGSS 3740	Imperialism and Sexuality: India, South Asia, and the World: Writing-Intensive Seminar	3
WGSS 4245	Transnational Feminisms	3

5. One Theory Course: 3 credits

Code	Title	Units
WGSS 3215	Bodies Out of Bounds: Feminist and Queer Disability Studies	3
WGSS 3575	Confronting Capitalism: Feminism, Work and Solidarity	3
WGSS 4085	Everyday Unruliness: Feminist and Queer Resistance	3
WGSS 4165	From Mammy to the Welfare Queen: African American Women Theorize Identity	3
WGSS 4200	Feminist Political Theory	3
WGSS 4245	Transnational Feminisms	3
WGSS 4350	Queer and Feminist Geographies	3

6. One History Course: 3 credits

Code	Title	Units
AMCS 3705	Topics in Gender and American Culture	3
ELIT 3501	Topics in English and American Literature (30 Years of Queer)	3
ELIT 3502	Topics in American Literature: Girls' Fiction	3
ELIT 4102	Medieval English Literature II:Medieval Womens Writing	3
FILM 3450	Sexual Politics in Film Noir and Hard-Boiled Literature	3
GLOBAL 3890	Furies and Die-Hards: Women in Rebellion and War	3
HISTORY 3146	Topics in European History: Modern European Women	3
HISTORY 3226	Gender and Sexuality in 1950s America: Writing Intensive Seminar	3
HISTORY 3259	I Know IT When I See It. a History of Obscenity & Pornography in the United States	3
HISTORY 4124	Advanced Seminar: Women and Religion in Medieval Europe	3
JIMES 3870/JIMES 4850	Topics in Jewish Studies	3
KOREAN 4550	Topics in Korean Literature and Culture: Gender in Korean Literature and Film	3
REST 4061	Nuns	3
WGSS 2118	First Year Seminar: Angels, Prostitutes and Chicas Modernas: Women in Latin American History	3

WGSS 3002	Feminist Fire!: Radical Black Women in the 20th Century	3
WGSS 3055	Making Sex and Gender: Understanding the History of the Body	3
WGSS 3081	From Hysteria to Hysterectomy: Women's Health Care in America	3
WGSS 3101	An Intellectual History of Sex and Gender: Text and Traditions	3
WGSS 3121	Topics in American Literature: Girls' Fiction	3
WGSS 3130	Sexuality in Early Christianity	3
WGSS 3135	The Racial and Sexual Politics of Public Health	3
WGSS 3152	Sex and Gender in Greco-Roman Antiquity	3
WGSS 3153	The Women of Greek Tragedy	3
WGSS 3165	Queer Histories	3
WGSS 3175	Community-Engaged Learning: Documenting the Queer Past in St. Louis	3
WGSS 3405	Revolutionize It! the Radical History of Second-Wave Feminism	3
WGSS 3416	War, Genocide and Gender in Modern Europe	3
WGSS 3446	No Boys Allowed: Girlhood and Programming for Girls in 19th and 20th Centuries, United States	3
WGSS 3475	Queering the History of Health	3
WGSS 3510	Women and Social Movements: Gender and Sexuality in U.S. Social Movements	3
WGSS 3548	Gender, Sexuality & Communism in 20th-Century Europe	3
WGSS 3555	Caste: Sexuality, Race and Globalization	3
WGSS 3650	The Global History of HIV/AIDS	3
WGSS 3700	Gender and Social Class	3
WGSS 3740	Imperialism and Sexuality: India, South Asia, and the World: Writing-Intensive Seminar	3
WGSS 3751	Topics in Women's History: Women, Gender and Sexuality in Postwar America	3
WGSS 4115	Gender, Religion, Medicine and Science	
WGSS 4153	Decolonization to Globalization: How to End an Empire	3
WGSS 4231	Topics in American Literature I	3
WGSS 4551	Intersectional Identities in Medieval France	3
WGSS 4700	Ancient Greek and Roman Gynecology	3
WGSS 4918	Advanced Seminar: Sexuality in the United States	3
WGSS 4993	Advanced Seminar: Women and Religion in Medieval Europe	3

7. One Methods Course: 3 credits

Code	Title	Units
WGSS 3174	Community Engaged Learning: Feminist and Queer Community Praxis	3
WGSS 4141	Feminist and Queer Research Methodologies	3
WGSS 4280	Sex and Gender in Public	1.5
WGSS 4440	Sex and Gender in Public	1.5

Note:

Students who plan to write an honors thesis must take WGSS 4141 Feminist and Queer Research Methodologies and must also enroll in the 1-credit WGSS 4142 Thesis Proposal Workshop offered concurrently with WGSS 4141. WGSS 4142 is restricted to students who plan to submit an honors thesis proposal. Both WGSS 4141 and WGSS 4142 should be taken during the fall semester of the student's junior year unless special departmental approval has been given.

Students who take WGSS 4141 Feminist and Queer Research Methodologies must submit a copy of their final paper from this course to the WGSS office at WGSS@wustl.edu. After the successful completion of WGSS 4141 and WGSS 4142 and the approval of the honors thesis proposal, students enroll in WGSS 4991 Honors Thesis: Research and Writing during the time they are writing the honors thesis, which is usually two semesters.

8. Two 4000-level Courses or an Honors Thesis: 6 credits

Courses taken in any of the above categories will satisfy this requirement, or the student may choose to write an honors thesis. One of the 3-credit courses must be a 4000-level course in WGSS course from the following list:

Code	Title	Units
AFAS 4030	Sexual Health and the City: A Studiolab Course Course On the Politics of Reproduction	3
WGSS 4016	Queer of Color Critique	3
WGSS 4017	Healing and Social Justice	3
WGSS 4085	Everyday Unruliness: Feminist and Queer Resistance	3
WGSS 4115	Gender, Religion, Medicine and Science	3
WGSS 4141	Feminist and Queer Research Methodologies	3
WGSS 4165	From Mammy to the Welfare Queen: African American Women Theorize Identity	3
WGSS 4200	Feminist Political Theory	3
WGSS 4245	Transnational Feminisms	3
WGSS 4350	Queer and Feminist Geographies	3

WGSS 4370	Reformers and Radicals: Feminist Thinking Through History	3
WGSS 4401	Intersectionality - Intersectionality	3
WGSS 4991	Honors Thesis: Research and Writing	3

The second may be either a 4000-level course in WGSS or a 4000-level course approved for this degree offered by another program (e.g., has a different course subject code than WGSS). Consult with your WGSS major advisor to to ensure your chosen course meets this requirement.

9. Elective Courses

- Students select 6 units of any WGSS or WGSS-approved courses as electives, but one of the courses listed below is encouraged:

Code	Title	Units
POLSCI 4218	Gender and the Future of Work	3
WGSS 3215	Bodies Out of Bounds: Feminist and Queer Disability Studies	3
WGSS 3405	Revolutionize It! the Radical History of Second-Wave Feminism	3
WGSS 3410	Gender in Society	3
WGSS 3470	Law, Gender, and Justice - Law, Gender, and Justice	3
WGSS 3685	Gender Violence - Gender Violence	3
WGSS 3700	Gender and Social Class	3
WGSS 4017	Healing and Social Justice	3

Additional Information

Study Abroad

We strongly encourage and support students who wish to study abroad. Therefore, we accept up to 9 credits from study abroad (3 of those credits could fulfill the historical context or ethnic/global/racial requirement). Women, Gender, and Sexuality Studies Minor

Program Requirements

Total units required: 18 units, 12 of which must be taken in courses numbered 3000 or higher.

Required Courses

Individual programs are designed in consultation with an advisor in light of each student's interests and abilities, major course of study, and plans for the future. All courses must be in WGSS or a WGSS-approved course in another department.

Code	Title	Units
WGSS 1500	Introduction to Women, Gender, and Sexuality Studies	3
WGSS 3030	Queering Citizenship: Gender/Abolition	3
WGSS 3135	Bodies Out of Bounds: Feminist and Queer Disability Studies	3
WGSS 3155	Gender, Health, and Society	3
WGSS 3470	Law, Gender, & Justice	3
WGSS 3690	Community-Engaged LEarning: Projects in Domestic Violence	3
WGSS 4013	Queer of Color Critique: Sense and Sexuality	3
WGSS 4115	Gender, Religion, Medicine and Science	3
WGSS 4141	Feminist and Queer Research Methodologies	3

WGSS-approved courses in other departments:

Code	Title	Units
ARTARCH 4913	Queer: Arts, History, Theory	3
COMPLITTHT 4270	Technology and Feminist Practice: Gender Violence Prevention Tools	3
ELIT 3501	Topics in English and American Literature (30 Years of Queer)	3
ELIT 3502	Topics in American Literature: Girls' Fiction	3
ELIT 4102	Medieval English Literature II: Medieval Womens Writing	3
GLOBAL 4414	Gender Analysis for International Affairs	3
HISTORY 4993	Advanced Seminar: Women and Religion in Medieval Europe	3
JAPAN 4490	Modern Japanese Women Writers	3
POLSCI 4218	Gender and the Future of Work	3
SOC 3003	Black Feminist Theory	3

Additional Information

- All minor courses must be WGSS or approved by WGSS in another department. All courses taken for the minor must be taken for a grade, and students must earn a grade of C- or higher.
- We strongly encourage and support students who wish to study abroad and will accept up to 6 credits from approved programs. Please contact Amy Cislo (acislo@wustl.edu), WGSS Study Abroad Supervisor, about this option.

Phone:	314-935-5102

Website:	https://wgss.wustl.edu

Degree Requirements

The faculty of the College of Arts & Sciences believes each student should strive toward breadth and depth of study, as represented in the formal requirements for each program of study. The faculty also believes that the primary responsibility for the selection of an academic program rests with the student, in consultation with academic advisors. This freedom of choice carries with it a corresponding responsibility for the consequences of such choices, and students are, therefore, expected to familiarize themselves with and meet the requirements detailed below. Students who study abroad on a Washington University–approved study abroad program may request up to two area waivers for coursework taken as part of the abroad program. Otherwise, all core and area requirements must be taken in residence.

Planning

The degree requirements for the Bachelor of Arts (BA) degree in Arts & Sciences are designed to provide students with strong and sustained training in writing and numerical applications; to enable students to construct a coherent program in which courses reinforce each other in challenging and productive ways; and to take advantage of two distinctive features of the academic environment at Washington University: the strong tradition of cooperation among faculty working in different disciplines and the fact that teaching and learning at Washington University draw energies from an environment of vigorous and creative research.

The College of Arts & Sciences regards active student engagement in curricular planning as central to successful student learning. Each semester, the student's advisors will help them develop a personalized academic plan that responds to what they have already learned about the university, about the structure and aims of intellectual disciplines, and about themselves.

By the end of the sophomore year, students must have declared a major and constructed and nominated an online curricular plan that will satisfy all of the following General Education requirements:

Core Skills

A. **College Writing (3 units):** Students demonstrate proficiency in reading and writing English and begin to develop mature skills in framing and revising arguments by completing coursework determined by the College Writing Program with a grade of C- or higher. This requirement should be completed during the first year.

B. **Applied Numeracy (3 units):** Students develop their skills in numerical applications by completing one of an approved list of "AN" courses with a grade of C- or higher. Students often find that there is an AN course in their major field of interest. This course may also satisfy other degree requirements.

C. **Social Contrasts (3 units):** Students take one course with primary emphasis on the formation, maintenance, or impact of social categories, such as race, ethnicity, gender, class, sexual orientation, religious affiliation, ability status, or other categories. This course, which may be taken Pass/No Pass, must be selected from an approved list of "SC" courses. It may also satisfy other requirements.

D. **Writing-Intensive Course (3 units):** To consolidate their written communication skills, students must take a writing-intensive course, preferably in their major field. The course, selected from an approved list of "WI" courses, must be completed with a C- or higher. It may also satisfy other requirements.

Area Requirements

A. Students must complete coursework in each of the following academic areas:
   1. Humanities (HUM): three courses totaling at least 9 units
   2. Natural Sciences and Mathematics (NSM): three courses totaling at least 9 units
   3. Social Sciences (SSC): three courses totaling at least 9 units
   4. Linguistic and Cultural Diversity (LCD): either three sequenced courses of at least 3 units each in a single foreign language or at least four courses of at least 3 units each designated "LCD"

   Up to 12 units of the area requirements may be taken Pass/No Pass.

B. To achieve depth and coherence, students must complete three integrations in at least two of the four areas of study (HUM, NSM, SSC, LCD). There are four types of integrations:
   - Arts & Sciences majors, second majors (p. 1013), and minors (p. 1014)
   - Ampersand programs (p. 990)
   - Designated study away programs (p. 991)
   - Integrated inquiries (p. 992)

The Major

Students must complete a major by taking no fewer than 18 units of courses numbered 3000 or greater and earning grades of C- or higher. Individual departments may specify additional units or stricter minimum-grade requirements. Students should refer to the department program pages in this *Bulletin* for program-specific requirements.

Degree completion is based on the primary major of record. At least half of the units for the major must be completed in residence. Students are strongly encouraged to complete a capstone experience in their major as a way of culminating their undergraduate education.

For more details regarding majors — including information about second majors, special majors, and majors across schools — visit the main Arts & Sciences (p. 176) section of this *Bulletin*. For more information regarding specific departments' major requirements, visit the Majors pages (p. 1013) of this *Bulletin*.

Additional Requirements

A. Students must complete 120 units with at least 30 units in advanced courses (numbered 3000 or greater). The 30 units in advanced courses may include the number of advanced units required for the major.
B. Students must have an overall grade point average of at least 2.0.
C. Students must earn the final 30 units toward the degree at Washington University while enrolled in the College of Arts & Sciences. Students pursuing 3-2 degrees should follow the requirements laid out by their master's program.
D. Students must be recommended by the College of Arts & Sciences to the Board of Trustees.

Regulations

A. No more than 24 units may be earned using the Pass/No Pass option, and no more than 12 of the 24 Pass/No Pass units may be for area distribution requirements.
B. No more than 15 units of pre-matriculation credit may be counted toward the degree. Pre-matriculation sources include Advanced Placement (AP), British Advanced (A) Levels, the International Baccalaureate (IB), and course credit earned by proficiency (i.e., back credit). Pre-matriculation sources may also include college courses taken after the sophomore year in high school but not applied toward the high school diploma. Credits earned via the High School Summer Scholars or High School College Access programs at Washington University are considered to be pre-matriculation units and are subject to the same regulation.
C. Students may not earn more than 12 units toward the bachelor's degree (BA) in group and/or individual performance courses. Exceptions may be made for students majoring in departments that require a large number of performance courses for the major, such as dance, drama, and music.
D. No more than 18 units of credit in independent study may be applied to the BA; no more than 6 units of independent study may be attempted in a single semester.
E. No more than 6 units of internship credit may be applied to the BA; no more than 3 units of internship credit may be attempted in a single semester.
F. A student may receive no more than a total of two majors and one minor or one major and two minors.
G. Core and area requirements must be taken in residence at Washington University. The only exception is that students who study abroad on a Washington University–approved study abroad program may request up to two area waivers for coursework taken as part of the abroad program.

Transfer Students

Transfer students will follow the requirements of the Integrated Inquiry Curriculum, outlined above. Where appropriate, previous coursework may be applied to the distribution requirements based on the following guidelines:

A. Transfer students who have not taken a college writing course at their prior school will take College Writing during their first year at Washington University. Students who have taken such a course may be eligible to submit a writing portfolio to the College Writing Program for evaluation. The program will review the portfolio to determine if the College Writing requirement has been satisfied or if the student must complete additional writing coursework.
B. The transfer advisors will evaluate a student's transcript on an individual basis. Generally speaking, coursework taken at the previous institution may count toward the College's area requirements but not toward the core requirements. For students transferring after one year at another institution, the three required integrations must be completed through courses taken in residence. Students transferring after two years at another institution must complete two integrations through courses taken in residence. Whether coursework taken at the previous institution may count toward a major or minor program of study is at the discretion of the major/minor department or program.
C. Transfer students must be enrolled for at least four consecutive full-time semesters, which may include an approved semester abroad program, to satisfy the residency requirement. These full-time semesters do not include Summer Session. Students must complete a minimum number of units at Washington University and a minimum number of units in the College of Arts & Sciences according to the following table. No more than 3 units per semester may be taken on a Pass/No Pass basis.

Semesters in Residence	Arts & Sciences Units in Residence	Total WashU Units in Residence
Seven semesters	78 units	105 units
Six semesters	69 units	90 units
Five semesters	57 units	75 units
Four semesters	45 units	60 units

Sealing of the Transcript

Conferral of the degree seals the student's academic record at Washington University. No changes can be made to the student's academic record after conferral of the degree. All students are strongly advised to obtain a copy of their final transcript, which is available for order from the Office of the University Registrar. Please visit the Transcripts page of the University Registrar's website for additional details.

A&S Integration: Ampersand Programs

This page documents programs currently designed and approved to fill Arts & Sciences integration requirements.

Beyond Boundaries (HUM, SSC)

Two courses are required:

Select any two of the following courses:

Code	Title	Units
BEYOND 1001	Earth's Future: Causes and Consequences of Global Climate Change	3
BEYOND 1002	The Business of Elections	3
BEYOND 1003	When I'm Sixty-Four: Preparing Ourselves and Society for a Good Long Life	3
BEYOND 1004	To Sustainability and Beyond: People, Planet, Prosperity (P3)	3
BEYOND 1005	The Endgame of Entrepreneurship: Leveraging Capitalism for Good	3
BEYOND 1006	Gender, Youth, and Global Health	3
BEYOND 1007	Designing Creativity: Innovation Across Disciplines	3
BEYOND 1008	Religious Freedom in America	3
BEYOND 1009	The Art of Medicine	3
BEYOND 1011	Law, Race, and Design: Examining the St. Louis Story	3
BEYOND 1012	St. Louis and the Documentary Image	3
BEYOND 1013	Morality and Markets	3
BEYOND 1014	Environmental Racism and the Health of Everyone	3

Ampersand: 50 Years of Hip Hop (HUM)

Two courses are required:

Code	Title	Units
AFAS 3330	Beats, Rhymes & Life: A Cultural History of Hip-Hop	3
AFAS 1240	A Cultural History of Hip-Hop	3

Ampersand: American Stories (HUM)

Two courses are required:

Code	Title	Units
AMCS 1101	Ampersand: American Stories: Place, Power, and Imagination	3
AMCS 1102	Ampersand: American Stories: St. Louis, Power, and the Making of an American City	3

Ampersand: Biotech Explorers Pathway (NSM)

Three courses are required:

Code	Title	Units
BIOL 1210	Ampersand: The Science of Biotechnology	3
BIOL 1211	Ampersand: Biotechnology Entrepreneurs Seminar	3
BIOL 3010	Biotechnology Project	3

Ampersand: Global Citizenship Program (HUM, SSC)

Four courses are required:

Code	Title	Units
GLOBAL 1106	Ampersand: Geographies of Globalization and Development	3
GLOBAL 1107	Global Migration and Transnational Cultures in Modern Times	3
GLOBAL 1503	Workshop for the Global Citizenship Program	1
GLOBAL 1504	Workshop for the Global Citizenship Program II	1

Ampersand: The History, Memory, and Representation of the Holocaust (HUM, LCD, SC)

Two courses are required:

Code	Title	Units
JIMES 2850	Ampersand: The Holocaust: A European Experience	3
HISTORY 2851	Ampersand: Representations of the Holocaust in Literature and Film	3

Ampersand: Literary Culture of Modern Ireland (HUM)

Two courses are required:

Code	Title	Units
ELIT 2811	Ampersand: Literary Culture of Modern IrelandAmpersand: Literary Culture of Modern Ireland	3
ELIT 2812	Ampersand: Literary Culture of Modern Ireland II	3

Ampersand: Medicine and Society (LCD, SSC)

Two courses are required:

Code	Title	Units
ANTHRO 1141	Ampersand: Medicine and Society	3
ANTHRO 1142	Ampersand: Medicine and Society	3

Ampersand: Mind, Brain, and Behavior (NSM, SSC)

Two courses are required:

Code	Title	Units
PNP 1200	Ampersand: Introduction to Study of the Mind-Brain: Psychological, Biological, & Philosophical Perspectives	3
PNP 1201	Ampersand: Introduction to the Study of the Mind Brain II	3

Ampersand: Pathfinder: A Sense of Place: Discovering Missouri's Natural Heritage (NSM)

Two courses are required:

Code	Title	Units
ENST 2031	Ampersand: Environmental Seminar	3
ENST 2032	Ampersand: Pathfinder - a Sense of Place: Discovering the Environment of St. Louis	3

Ampersand: People, Planet, Health (NSM)

Two courses are required:

Code	Title	Units
ENST 1210	Ampersand: People, Planet, Health	3
ENST 2220	One Health: Linking the Health of Humans, Animals, and the Environment	3

Ampersand: Phage Hunters (NSM)

Two courses are required:

Code	Title	Units
BIOL 1910	Ampersand: Phage Hunters	3
BIOL 1920	Ampersand: Phage Bioinformatics	3

Ampersand: Safe Asylum: Refugee Politics and Pathways (SSC)

Two courses are required:

Code	Title	Units
JIMES 2241	Ampersand: Mediterranean Migration: Dymanics and Consequences on the Eu and Mena	3
JIMES 2242	Ampersand: Migration Policies and Colonialism: Refugee Resettlement and Integration	3

Ampersand: Text and Traditions (HUM)

Two courses are required:

Code	Title	Units
COMPLITTHT 2107	Classical to Renaissance Literature: Text & Traditions	3
COMPLITTHT 2108	Early Political Thought: Text & Traditions	3

A&S Integration: Study Away Programs

This page documents programs currently designed and approved to fill Arts & Sciences integration requirements.

The Program in Chile (HUM, LCD)

The Washington University Program in Chile offers students an exciting opportunity to study at the Pontificia Universidad Católica de Chile (PUC) in Santiago. Students further their Spanish fluency by studying the language as a representation of the dynamic and concrete realities of the national regional culture of Santiago, augmenting their classroom study with activities in the city. They also explore contemporary issues of cultural, social, political, and literary importance related to the "Southern Cone," seeking to determine what specifically can be expressed about national identity, globalization, and the environment as Chile and its neighbors face the 21st century.

Offered Spring, Fall, Academic Year

Two courses are required:

Code	Title	Units
SPAN 3130	Chilean Contemporary Culture	3
SPAN 3154	A View From the Southern Cone: Perspectives on Art, Literature and Culture	3

WU Healthcare in France (HUM, LCD)

The WU Healthcare in France program offers students a transformative opportunity to directly engage with the French healthcare system, enhance their French language skills, and deepen their cultural understanding in a fully immersive environment. Set against the picturesque backdrop of Nice and France's Mediterranean coast, this five-week program combines real-life experience in French hospitals with a profound exploration of health and human well-being in course work.

Offered Summer only

Two courses are required:

Code	Title	Units
FRENCH 3193	Healthcare in France: Observational Internship	3
FRENCH 3720	The Art of Health in Nice	3

Music in Florence Summer Program @ Accademia Europea di Firenze (HUM)

The Summer Music Study in Florence Program engages students in the musical arts as composers, improvisers, singers, instrumentalists, and lyricists. Courses, lessons, and ensembles in the program divisions of chamber music, jazz, musical theatre, popular music, film music, and composition/new music are made available to students of all levels. In addition, weekly master classes are offered from visiting artists with translation by William Lenihan (Professor the Practice in the Department of Music), combining cultural immersion in the City of the Renaissance and professional performing opportunities along with regular lectures, on-site classes, field trips, and ensembles.

Offered Summer only

Two courses are required:

Code	Title	Units
MUSIC 1270	Musicianship I	1
MUSIC 3190 **or** MUSIC 3238	Jazz Improvisation I **or** Towards a New Music	3

WU French and African Studies Summer Program in Senegal (HUM, LCD)

The summer program to Senegal, West Africa, is designed for students who want to build their conversational French language skills, learn more about Francophone West Africa, and experiment with field research. Dakar, Senegal, provides the perfect opportunity to explore themes in African and Francophone studies because of its geographical space and unique history. Geographically, Dakar naturally opens itself to the wider world, as reflected in its history, its role in the former French empire, its religious landscape, and its current relationships with other countries. Senegal, very proud of its place as an intellectual center, is the epicenter of many artistic and cultural movements. Dakar is a stable, cosmopolitan, and culturally rich capital city.

Offered Summer only

Two courses are required:

Students must take the following course:

Code	Title	Units
AFAS 3390	Senegal: History, Politics and Culture	3

Students must take one of the following:

Code	Title	Units
AFAS 1630	Intensive Introductory Wolof	3
FRENCH 3016	Conversational Fluency	3

WU Spanish Language Summer Institute (HUM, LCD)

This is a dynamic, intensive program in Spanish language and culture offering full immersion for approximately 6 weeks in Madrid and other areas of Spain. It is designed to accelerate the language acquisition process of intermediate students in Spanish and to introduce them to the experience of life in this modern European country with its very unique history and traditions.

Offered Summer only

Two courses are required:

Code	Title	Units
SPAN 3110	Hispanic Culture and Civilization I	3
SPAN 3122	Advanced Conversation in Spain	3

A&S Integration: Integrated Inquiries

This page documents integrated inquiry (IQ) programs currently designed and approved to fill Arts & Sciences integration requirements.

Twentieth-Century Political Dynamics (HUM, LCD, SSC)

What were the major events, personalities, and struggles of 20th-century international history? How do we explain or interpret them? What was their significance, and what were their enduring legacies for world and regional politics? This IQ explores these issues though courses that examine central institutions, social movements, and regions in global affairs. Students will deepen their historical and/or theoretical understanding of current issues. They will also gain a greater appreciation of what happened in the past and how it continues to shape the present in important ways.

Note: Students complete two courses, each from a different department outside of their major.

African and African American Studies

Code	Title	Units
AFAS 3113	Culture, Politics, and Society in Francophone Africa (SSC, LCD, SC)	3
AFAS 3130	African Civilization: 1800 to the Present (HUM, LCD)	3

Anthropology

Code	Title	Units
ANTHRO 2004	Anthropology and the Modern World (SSC, LCD)	3

East Asian Languages and Cultures

Code	Title	Units
CHINA 3160	Historical Landscape and National Identity in Modern China (HUM, LCD)	3
HISTORY 3322	Japan Since 1868 (HUM, LCD)	3

History

Code	Title	Units
HISTORY 1146	Introduction to World History: The Second World War in World History (HUM, LCD)	3
HISTORY 3070	Modern Latin America (HUM, LCD)	3
HISTORY 3138	20th-Century Russian History (HUM, LCD)	3
HISTORY 3295	Modern South Asia (HUM, LCD)	3
HISTORY 3313	Modern Mexico: Land, Politics and Development (HUM, LCD)	3

Latin American Studies

Code	Title	Units
LATAM 1000	Latin America: Nation, Ethnicity and Social Conflict (HUM, LCD, SC)	3

Political Science

Code	Title	Units
HISTORY 3070	Modern Latin America (HUM, LCD)	3
POLSCI 1100	Introduction to Comparative Politics (SSC, LCD)	3
POLSCI 1200	International Politics (SSC)	3
POLSCI 3096	Politics of the European Union (SSC, LCD)	3
POLSCI 3283	Latin-American Politics (SSC, LCD)	3

Religion and Politics

Code	Title	Units
RELPOL 3200	Religion and Politics in 20th Century U.S. History (HUM)	3

Along the Silk Road (HUM, LCD, SSC)

How were civilizations connected throughout history? How did societies from East Asia, Central Asia, the Near East, and Europe shape each other's material and ideological worlds? The "Silk Routes" comprised one of the most extensive and diverse networks of trade and social interaction in history. The exchange and diffusion of material culture, technological innovations, ideology, food, and social institutions across this vast overland system resulted in the growth and development of societies from Japan to Europe and everywhere in between. This IQ is designed to provide students with a multidisciplinary view of the history of Eurasia in light of major transformations in art and archaeology, religion, political organization, and literature that linked Eurasian societies within a wider world system.

Note: Students complete two courses, each from a different department outside of their major.

Anthropology

Code	Title	Units
ANTHRO 3053	Nomadic Strategies and Extreme Ecologies (SSC)	3
ANTHRO 3775	Ancient Eurasia and the New Silk Roads (SSC, LCD)	3

Art History

Code	Title	Units
ARTARCH 1510	Introduction to Asian Art (HUM, LCD)	3
ARTARCH 3170	Art of the Islamic World (HUM, LCD)	3

East Asian Languages and Cultures

Code	Title	Units
CHINA 2270	Chinese Civilization (HUM, LCD)	3
JAPAN 2260	Japanese Civilization (HUM, LCD)	3
KOREA 2230	Korean Civilization (HUM, LCD)	3

History

Code	Title	Units
HISTORY 3047	Early Modern China (HUM, LCD)	3
HISTORY 3284	The Late Ottoman Middle East (HUM, LCD)	3

Jewish, Islamic, and Middle Eastern Studies

Code	Title	Units
JIMES 2100	Introduction to Islamic Civilization (HUM, LCD)	3

Literature

Code	Title	Units
CHINA 3410	Early and Imperial Chinese Literature (HUM, LCD)	3
JAPAN 3320	Japanese Literature: Beginnings to 19th Century (HUM, LCD)	3
RUSS 3500	The 19th-Century Russian Novel (HUM, LCD, WI)	3

Religious Studies

Code	Title	Units
EALC 3340	Topics in East Asian Religions (HUM, LCD)	3

The Americas (HUM, LCD, SSC)

What shared histories of indigenous settlement, colonialism, and nation-building unite the Americas as the "New World" that sparked the imaginations of so many travelers, immigrants, and empire builders of the past and present? How do the Americas today reflect this shared history yet also reveal vast differences in cultural tradition, wealth and inequality, and visions of the future? This IQ will allow students to explore a range of historical roots: from pre-European empires and worlds of indigenous peoples to the revolutionary struggles of the 18th century and the rise of nation-states. Students may also delve into the political and cultural complexities that shape the Americas today. Across these histories, this IQ draws attention to struggles over identity and resources that lay the foundations for the Americas as we know them today and to the rise of ideas and institutions that shaped these places in very different ways over the centuries. By completing this IQ, students will gain a deeper understanding of their own place in the Americas and of the ways that scholars of different disciplines engage the social, historical, and political-economic complexities of world regions.

Note: Students complete two courses, each from a different department outside of their major.

American Culture Studies

Code	Title	Units
AMCS 2270	Topics in Native American Culture (SSC, LCD)	3
ANTHRO 3887	American Indians and American Empire (SSC, LCD)	3

Anthropology

Code	Title	Units
ANTHRO 3125	Before Columbus: Indigenous Histories of North America Before 1492 (SSC, LCD)	3
ANTHRO 3351	The Ancient Maya: Archaeology and History (SSC, LCD)	3

Art History & Archaeology

Code	Title	Units
LATAM 2070	Latinx Art (HUM, LCD, SC)	3
LATAM 3120	Mexican Visual Culture (HUM, LCD)	3

Economics

Code	Title	Units
ECON 3640	American Economic History (SSC)	3

History

Code	Title	Units
HISTORY 3070	Modern Latin America (HUM, LCD)	3
HISTORY 3313	Modern Mexico: Land, Politics and Development (HUM, LCD, SC)	3
HISTORY 3323	Introduction to Colonial Latin America Until 1825 (HUM, LCD, SC)	3

Latin American Studies

Code	Title	Units
HISTORY 3070	Modern Latin America (HUM, LCD)	3
HISTORY 3323	Introduction to Colonial Latin America Until 1825 (HUM, LCD)	3
LATAM 1000	Latin America: Nation, Ethnicity and Social Conflict (HUM, LCD, SC)	3

Political Science

Code	Title	Units
POLSCI 3283	Latin-American Politics (SSC, LCD)	3

Religion and Politics

Code	Title	Units
RELPOL 2010	Religion and Politics in American History (HUM, SC)	3
RELPOL 2070	Puritans, Native Americans, and Revolutionaries: Empire and Encounter in Early America (HUM)	3

Spanish

Code	Title	Units
SPAN 3020	Cultures and Communication in the Spanish-Speaking World (LCD-LS)	3
SPAN 3030	Cultures and Communication in the Spanish-Speaking World II (LCD-LS)	3

Arts and Society (HUM, LCD)

How do the performed arts (dance, music, and theater), the visual arts, and the cinematic arts relate to the societies in which they are practiced? What roles do they play in the formation of individual or social consciousness? How is the practice and understanding of these arts influenced by what happens in the social context? Answers to these questions vary from art to art and society to society, so the courses in this IQ focus on the historical development of artistic practices within particular cultures and the ways in which such practices function in the development of particular societies. By completing this IQ, students will develop language with which to analyze acts and works of nonliterary art and gain a richer understanding of how these arts function in people's lives.

Note: Students complete two courses, each from a different department outside of their major.

African and African American Studies

Code	Title	Units
AFAS 3040	A History of African-American Theater (HUM, SC)	3

Art History

Code	Title	Units
ARTARCH 1510	Introduction to Asian Art (HUM, LCD)	3
ARTARCH 1515	History of Western Art, Architecture & Design (HUM)	3
ARTARCH 2020	Introduction to Modern Art, Architecture and Design (HUM, LCD)	3

Dance

Code	Title	Units
DANCE 3090	Histories of Theatrical and Concert Dance (HUM)	3
DANCE 3130	Movement and Meaning: Dance in a Global Context (HUM, LCD)	3

Drama

Code	Title	Units

MUSIC 1040	Musics of the World (HUM, LCD)	3
MUSIC 1050	Popular Music in American Culture (HUM)	3
MUSIC 1130	History of Jazz (HUM)	3
MUSIC 1200	Exploring Music (HUM)	3
MUSIC 3070	Jazz in American Culture (HUM)	3

The Culture of European Modernity (HUM, LCD)

How did artists and intellectuals respond to the social, political, and economic transformations that swept through 18th-, 19th-, and 20th-century Europe? The courses in this IQ investigate some of the remarkable cultural and intellectual innovations of this tumultuous period and also attempt to situate them within their broader social and historical contexts. Students who complete this IQ will have a better understanding of what we mean when we talk about European modernity, modernization, and modernism and a better sense of how works of art, literature, and philosophy both reflect and help to shape the historical epochs out of which they emerge.

Note: Students complete two courses, each from a different department outside of their major.

Art History

Code	Title	Units
ARTARCH 2020	Introduction to Modern Art, Architecture and Design (HUM, LCD)	3
ARTARCH 3500	The Modernist Project: Art in Europe and the United States, 1905-1980 (HUM)	3
ARTARCH 3520	Rococo to Revolution: Art in Eighteenth-Century Europe (HUM)	3

Comparative Literature and Thought

Code	Title	Units
COMPLITTHT 2109	Modern Political Thought: Text & Traditions	3
COMPLITTHT 3050	Literary Modernities in Europe and America: Text & Traditions	3
COMPLITTHT 3120	Introduction to Digital Humanities	3

Drama

Code	Title	Units

History

Code	Title	Units
HISTORY 1020	Introduction to Modern European History (HUM, LCD, SC)	3
HISTORY 3111	Modern Germany (HUM, LCD)	3
HISTORY 3148	The First World War and the Making of Modern Europe (HUM, LCD)	3

Philosophy

Code	Title	Units
PHIL 3260	Descartes to Hume (HUM)	3
PHIL 3290	Kant and 19th-Century Philosophy (HUM)	3
PHIL 3340	Existentialism (HUM, LCD)	3

The Development of U.S. Democracy (HUM, LCD, SSC)

What does it mean to live in a democracy? In what ways are the institutions of government bound by the wishes of American citizens, and in what ways does a broader culture inform how democracy takes shape? This IQ explores those questions through courses that consider the complex ways that Americans have conceived of the relationship between citizens and their government. While some courses examine the formal structures of that government, others consider how democracy takes shape through forms of culture that exist outside the familiar definitions of politics.

Note: Students complete two courses, each from a different department outside of their major.

African and African American Studies

Code	Title	Units
AFAS 2140	Juvenile Justice in the Black Experience (SSC, SC)	3

English Literature

Code	Title	Units

Religion and Politics

Code	Title	Units
RELPOL 2000	Religion and American Society (HUM, SC)	3
RELPOL 2010	Religion and Politics in American History (HUM, SC)	3

Women, Gender, and Sexuality Studies

Code	Title	Units
WGSS 3470	Law, Gender, and Justice (SSC, SC)	3

Environmental Issues (HUM, LCD, NSM, SSC)

How do humans interact with the natural world? The courses in this IQ investigate the dynamic and highly interdependent nature of the natural and social systems that shape the Earth's environment as well as the profound impact of humans on the diversity and distribution of life on Earth. Students who complete this IQ will better understand how environmental issues transcend traditional disciplinary and political boundaries.

Note: Students complete two courses, each from a different department outside of their major.

Anthropology

Code	Title	Units
ANTHRO 3182	Ancient Africa: Social Mosaics and Environmental Challenges (SSC, LCD)	3
ANTHRO 3610	Culture and Environment (SSC, LCD)	3
ANTHRO 3796	Meltdown: The Archaeology of Climate Change (SSC)	3

Biology

Code	Title	Units
BIOL 2150	Introduction to Environmental Biology (NSM)	3

Earth, Environmental, and Planetary Sciences

Code	Title	Units
EEPS 1080	Oceans and the Atmosphere (NSM)	3

POLSCI 3760	Globalization, Urbanization, and the Environment (SSC)	3

Writing

Code	Title	Units
WRITING 3005	Writing the Natural World (HUM, WI)	3

Ethics and Morality (HUM, LCD, SSC)

What is a good life for a human being? What do we, individually and collectively, owe to other humans (and to non-human animals)? How can social institutions (such as government or religion) help us to lead good lives and meet our moral obligations? Courses in this IQ expose students to historical and contemporary debates about these fundamental questions from a variety of secular and religious perspectives. Students will be introduced to rival accounts of virtue, arguments about the source and content of our rights and duties, and diverse understandings of the meaning and purpose of human lives.

Note: Students complete two courses, each from a different department outside of their major.

Forms of Creative Expression: Theory and Practice (HUM, LCD)

How does a poem, sonata, pas de deux, or play mean? How does writing a play, making a film, choreographing a dance, or composing music help us to understand these forms from within? By theoretically and practically engaging dance, film, theater, music, or creative writing, one develops the body, the emotions, and the mind in new ways. The arts do not merely reflect culture and knowledge; they create new ways and forms of knowing and feeling, and they are, therefore, vital engines of cognition. They require imagination, cunning, the control of resistant materials, empathy, and the ability to both master and violate conventions. Students taking this IQ will appreciate the rich theoretical dimensions of art forms and, by making art, learn how to match the stuff of raw inspiration with material form.

Note: Students complete two courses, each from a different department outside of their major. Students who are placed by the Dance department into higher-level courses should speak with their advisor about obtaining an override.

The Individual and Society (HUM, LCD, SSC)

How do societies structure and shape the lives of their members? Courses in this IQ analyze the ways in which individuals are impacted by social institutions, including both formal institutions (such as government, the economy, and schools) and informal institutions (such as religious and cultural norms). Social institutions play a major role in determining our options, guiding our choices, and endowing our actions with meaning. Social institutions create differences between individuals (especially by producing and reproducing inequalities of status, power, opportunity, income, and wealth), but those same institutions also create similarities among a society's members (in their behavior, beliefs, values, identities, tastes, and habits). Students who complete this IQ should improve their understanding of how social institutions work, where they come from, and how they change. Students should also improve their ability to reason about whether and how particular social institutions should be changed.

Note: Students complete two courses, each from a different department outside of their major.

Language: Theory and Practice (HUM, LCD, SSC)

How can people effectively use language to convey their thoughts, feelings, and beliefs? What properties of language allow it to be used so creatively? How do children acquire language in the first place? The courses in this IQ examine language from a variety of perspectives. They examine the structures of language itself: the sounds, phrases, and sentences that convey meaning; they examine the role of language in effective communication; and they examine the properties of the mind responsible for language.

Note: Students complete two courses, each from a different department outside of their major.

Life and Physical Sciences (NSM)

What are the fundamental principles upon which advanced scientific knowledge is based? How are these principles, drawn from different academic fields, related to each other? This IQ provides students with a rigorous introduction to the life and physical sciences, teaching both principles and applications of foundational scientific knowledge. Moreover, the concepts taught in these courses reinforce each other, such that students pursuing this IQ will gain a better understanding of how one discipline complements and completes the others. Because advances in medical and biomedical science rests upon the introductory material explored in this IQ, it is an excellent inquiry for life sciences students not majoring in one of the natural sciences.

Note: Students complete two courses, each from a different department outside of their major.

Mind, Brain, Cognition (HUM, NSM, SSC)

How do we perceive, remember, and think? What is the relation of the mind to the brain? These questions are addressed in cognitive science, an interdisciplinary field that combines philosophy, psychology, neurobiology, and computer science. In this IQ, you will be exposed to recent empirical research and theory in which new avenues have been opened for understanding the nature of consciousness, our ability to use and understand language, varieties of memory, the functional organization of the brain, the nature of reasoning, and how perceptual experience may vary across individuals.

Note: Students complete two courses, each from a different department outside of their major.

Modes of Inquiry and Analysis (NSM, SSC)

In a world in which we are bombarded by information, how can data best be evaluated and interpreted? How can we determine the nature of relationships between variables? Students who explore this IQ will be able to think critically when confronted with a wide variety of information. In addition to learning to evaluate the claims of others, students will also learn to interpret, summarize, and effectively communicate information themselves.

Note: Students complete two courses, each from a different department outside of their major.

Race and Ethnicity in America (HUM, SSC)

How have encounters among diverse peoples affected the historical, political, and artistic landscape in America? Is American "exceptionalism" a product of such encounters? How should we consider the ideal of "America" as a conceptual construct in light of the legacies of genocide, slavery, and discrimination? The courses in this IQ investigate the varied roles race has played in shaping history, politics, and arts in America. By completing it, students will have a deeper understanding of and a more nuanced appreciation for the roles and contributions of race to American culture and society.

Note: Students complete two courses, each from a different department outside of their major.

Science and Society (HUM, NSM, SSC)

What does science teach us about the natural world, and how should we integrate that knowledge into our decision making? In the last century, systematic scientific investigation has given us great insight into the world around us and great power to influence it to our benefit. Students investigating this IQ will explore that knowledge and grapple with deeper questions that science raises, including our understanding of our place in the universe, how to evaluate our own impact on the world, and how to make responsible use of the scientific knowledge we are acquiring.

Note: Students complete two courses, each from a different department outside of their major.

Western Roots (HUM, LCD)

What conditions and concerns shaped the history, literature, and art of the ancient Mediterranean world? Why did the cultures of Greece, Rome, and the Near East come to inspire key Western institutions and values? What do we gain by studying ancient cultures, not just as our monolithic "foundations" but also with an appreciation for the alien, the inconsistent, and the ambiguous? Our cultural ancestors prove most valuable when we recognize this range of qualities in them, and the courses in this IQ give students the critical tools to do so. Students who complete this IQ acquire a deeper knowledge of one or more of the "foundational" ancient Mediterranean cultures and, in the process, learn to interpret both textual and material primary sources.

Note: Students complete two courses, each from a different department outside of their major.

World Arts and Letters (HUM, LCD)

What do we gain from an encounter with other cultures? Anthropologist Margaret Mead observed the following: "A knowledge of one other culture should sharpen our own ability to scrutinize more steadily, to appreciate more lovingly, our own." The courses in this IQ will help students broaden their horizons as global citizens, introducing them to the richness and diversity of other cultural traditions — some diametrically different from their own and others surprisingly similar. These courses address a wide range of forms of cultural production within these traditions, from literature, cinema, and music to the performing arts, architecture, and material culture. Students who complete this IQ will be challenged to grow as individuals with a greater appreciation of their own cultural heritages.

Note: Students complete two courses, each from a different department outside of their major.

College Writing Program

Regardless of your area of study, you must be able to effectively communicate your ideas. Taking courses in the College Writing Program will help you acquire analytical and research writing skills transferable to areas of study across the Washington University curriculum and beyond. Courses taught in College Writing emphasize interdisciplinary inquiry, which invites you to read and write about a variety of texts across various modalities and from diverse academic disciplines. By taking courses in the Program, you'll learn how to critically analyze the ideas of others and to put these ideas in conversation with your own. Through research grounded in primary source analysis, you will begin to develop a scholarly voice and to recognize academic scholarship as a creative form of expression. Visit the College Writing Program website for more information.

Courses

1000-Level Courses

College Writing: CWP 1502-1510

Through this course, students complete a sequence of three major writing projects in analysis, argumentation, and research and two portfolio-based assignments connected to the theme for their sections. Regardless of theme and section, the course focuses on organizational strategies and rhetorical moves that support the effective written communication of ideas and the development of scholarly habits of mind. The course emphasizes writing as a process, that happens best when in conversation with others and through revision. It offers students an opportunity to engage with and respond in writing to a variety of texts, written and visual, scholarly and popular. This course typically fulfills the university's first-year writing requirement.

College Writing is taught through themed inquiry. All of the following themed courses fulfill Washington University's first-year writing requirement:

- CWP 1502 Citizen Scientist
- CWP 1503 Dreams & Nightmares
- CWP 1504 Writing Identity
- CWP 1506 Place & Perspective
- CWP 1507 Power & Commodity Culture
- CWP 1508 Technology & Selfhood
- CWP 1509 Writing on Aging
- CWP 1510 Text & Traditions

Fall & Spring | 3 Credit Units

CWP 1001 Foundations of Academic Writing

This course may be required of some students before they take College Writing (placement to be determined by the College Writing Program). In this course, particular attention is paid to foundational skills like reading comprehension, critical thinking, organization of ideas and grammar. In some cases, students may be required to enroll in a one-credit tutorial along with this course.

Fall Only | 3 Credit Units

2000-Level Courses

The College Writing Program offers 2000-level courses that will help students continue to learn and grow as writers. These courses are elective and do not satisfy the First-Year Writing Requirement at WashU.

CWP 2001 Writing Workshop

This workshop focuses on engaging research, with all of the multiple meanings implied in the phrase's wordplay: engaging as interesting and interested; as active, responsive to and engaged with others. Just what we mean by engaging — and by research, for that matter — will be our topic of conversation all semester, and you should come prepared to contribute your views on that topic and to complicate your current understanding. Where possible, we will focus on practical, applied work with sources, which should provide a good foundation for advanced research and writing in your discipline, and we'll give some thought to the different methods by which different audiences and scholarly disciplines select, analyze, evaluate, incorporate, and document the works of others. Along the way, we will attend to the relationship between different kinds of research projects and the types of sources that suit them, and we'll practice techniques for drawing on the ideas and writings of others in responsible and engaged ways. Finally, we will grapple with the subtleties and complexities of Academic Integrity, attempting to understand not only the principles that govern responsible research but also the assumptions that underlie them. Ultimately, this course should enhance your ability to produce scholarly writing that not only draws on the voices and views of others responsibly, but that also speaks with its own distinct, engaging voice, that builds its own original arguments.

Prerequisite: Satisfactory completion of College Writing or with approval from the College Writing Program.

Additional 2000-Level Electives

- CWP 2020 Pump Up the Volume: Collaboration and Cultural Impact Through Podcasting
- CWP 2030 Food Writing Workshop: From Identity to Social Justice
- CWP 2040 Conspiracy Theories and Online Hoaxes: The Rhetoric of Disinformation
- CWP 2050 Navigating New Media
- CWP 2060 The Scholar and Social Change: Writing between Research and Political Urgency

Academic Honors & Awards

Dean's List: At the end of each semester, in recognition of exceptional scholarship, the College compiles a list of those students whose work has been particularly worthy of commendation. Students will be recognized on the Dean's List if they complete a minimum of 14 units of quality-graded coursework while achieving a grade point average of 3.6 or higher for the semester. No grades of Incomplete (I) or N grading notations may be outstanding as part of the semester record. All work must be completed and grades posted by the first day of the following semester in order to be considered for Dean's List. For spring semester courses, all work must be completed by the beginning of Summer Session II (typically mid-June).

College Honors: Upon assessment by the College Office, the BA with College Honors will be awarded to any student who achieves College-wide academic excellence as measured by a cumulative GPA of 3.6 or better through their degree completion and who does not receive Latin Honors.

Latin Honors: Latin Honors are awarded by the College to students who are receiving the Bachelor of Arts degree in Arts & Sciences. To be eligible, students must have maintained a 3.65 or better GPA throughout their education at Washington University and must be accepted for candidacy by their major department or program. Students may pursue Latin Honors in either their first or their second major; however, Latin Honors are not available through an Arts & Sciences minor. Latin Honors candidates must enroll in such courses as their department or program may require, satisfactorily complete a significant project appropriate to the nature of the discipline, and pass such written and/or oral examinations as the department or program may set.

Upon certification by the department that the Honors program has been satisfactorily completed, the student may be awarded the BA cum laude, magna cum laude, or summa cum laude according to the following proportions:

- The top 15% in overall GPA of the full cohort of Latin Honors candidates who complete the necessary requirements of their major departments will graduate summa cum laude
- The next 35% magna cum laude
- The next 50% cum laude

To be eligible for Latin Honors, transfer students must have earned a minimum of 48 letter-graded Washington University units. Grades earned at other institutions do not figure in the calculation of minimum averages required for eligibility for Latin Honors.

Phi Beta Kappa: For more than 200 years, election to Phi Beta Kappa has been a distinctive recognition of intellectual accomplishment in the liberal arts and sciences. The Washington University chapter, Beta of Missouri (established in 1913), strives to enhance worthy intellectual endeavors and to recognize individual achievement.

Candidates for Phi Beta Kappa should have demonstrated both superior scholarship and breadth and depth of interest in the liberal arts. Study of a foreign language and of mathematics, while not required, strongly enhances candidacy. Extensive study in pre-professional fields detracts from candidacy.

Students do not apply for Phi Beta Kappa; rather, each year, the Washington University chapter elects students into membership from the College of Arts & Sciences. The chapter also gives the annual Burton M. Wheeler Sophomore Book Award for distinguished achievement during the first three semesters. Selection committees are composed of Washington University faculty who are members of Phi Beta Kappa.

Departmental Prizes and Awards

Several departments recognize the superior achievement of graduating seniors with election to the honor societies of their major fields. These honor societies include Sigma Gamma Epsilon for earth, environmental, and planetary sciences students; Omicron Delta Epsilon for economics students; Delta Phi Alpha for German students; Phi Alpha Theta for history students; Sigma Iota Rho for international and area studies students; Pi Mu Epsilon for mathematics students; Mu Phi Epsilon for music students; Pi Sigma Alpha for political science students; and Psi Chi for psychological & brain sciences students.

Departments may recognize work a student has accomplished within the major by awarding the major with highest distinction, high distinction, or distinction.

In a number of academic fields, special recognition is given to students whose accomplishments have been exceptionally noteworthy. The majority of such awards carry modest monetary prizes and include the following, listed alphabetically by department:

- Best Essay on Any Subject Related to African-American Culture and Life in the United States (African and African-American Studies)
- Henry Hampton Prize for Best Civil Rights Essay
- James Baldwin Essay Prize for Best Essay on African-American Culture and Life in the United States
- Julius Nyerere Essay Prize for Best Essay on African Culture and Life
- Louis Lomax Journalism Prize in African and African-American Studies
- Ralph Bunche Prize for Best Political Science Essay about Africans or African Americans
- Sylvia Wynter Essay Prize for Best Essay on African Culture and Life Outside of the United States
- Lynne Cooper Harvey Undergraduate Writing Prize in American Culture Studies
- John W. Bennett Prize to the Outstanding Graduating Senior in Anthropology
- Mark S. Weil Prize for Distinction in Art History and Museum Practice
- Murphy Family Prize for Outstanding Honors Thesis in Art History and Archaeology
- Yale Book Prize for Distinction in Art History and Archaeology
- Harrison D. Stalker Prize in Biology
- Marian Smith Spector Prize for Outstanding Graduate in Biology
- John C. Sowden Prize for Outstanding Senior in Chemistry
- The Hemholtz Award in Chemistry
- The Lipkin Award in Chemistry
- The Wahl Award in Chemistry
- The Weissman Award in Chemistry
- Stanley Spector Memorial Award for Outstanding Paper in East Asian Languages and Cultures
- Ansehl Prize for Excellence in Chinese
- Yukiko Takahashi Prize for Excellence in Japanese
- Carl Conrad Prize for Excellence in Classical Studies
- Eugene Tavenner Prize for Excellence in the Study of Classics
- Edward Weltin Award for Excellence in the Study of Ancient History
- Liselotte Dieckmann Prize for Excellence in Comparative Literature
- William H. Matheson Prize for Excellence in Comparative Literature
- A.E. Hotchner Playwriting Competition Award

- Annelise Mertz Memorial Award for Outstanding Achievement in Modern Dance
- Ian D.W. Cramer Prize for Outstanding Achievement in Dance
- John J. Jutkowitz Memorial Prize for Outstanding Contributions in Performing Arts
- Margaret Ewing Memorial Prize for Outstanding Achievement in Acting
- Stephen H. Duncan Prize for Outstanding Achievement in Design and Technical Theatre
- Courtney Werner Memorial Prize for Outstanding Academic Achievement in Earth, Environmental, and Planetary Sciences
- Ernest L. Ohle Jr. Award for Outstanding Potential in Earth, Environmental, and Planetary Sciences
- Margaret E. Bewig Memorial Field Camp Award for Academic Merit in Earth, Environmental, and Planetary Sciences
- Adam Smith Prize for Excellence in Economics
- Hyman P. Minsky Prize for Excellence in Economics
- Olin Prize for Excellence in Economics
- Howard Nemerov Award Prize in Poetry
- James Merrill Prize for Poetry
- Julia Viola McNeely Prize for Poetry
- Norma Lowry Memorial Prize in Poetry
- Roger Conant Hatch Prize for Lyric Poetry
- F. Ward Denys Prize for Critical Prose
- Herbert E. Metz Prize for Literary Criticism
- Leanna Boysko Prize for Best Essay in English Literature
- Admussen Prize for Outstanding Senior Honors Thesis in French
- Cecilia L. Hospes Scholarship for Study Abroad in Germany
- David Bronsen Prize for Excellence in German Studies
- Raoul Wallenberg Prize for Excellence in Swedish Studies
- J. Walter Goldstein Prize for Best Senior Thesis in History
- Rowland T. Berthoff Award in History
- Shirley McDonald Wallace Prize in History
- The Madeleine Albright Scholarship in Global Studies
- Outstanding Senior Honors Thesis in Global Studies
- Paul and Silvia Rava Prize for Excellence in Italian Studies
- David and Sarah Visenberg Prize for Outstanding Thesis in Jewish Studies
- Steven S. Schwarzschild Prize for Overall Excellence in Jewish Studies
- Martin Silverstein Award for Outstanding Student in Mathematics/Statistics and Probability
- Putnam Examination Prize for Mathematics
- Ross Middlemiss Prize for Outstanding Mathematics Major
- Antoinette Frances Dames Award for Productive Scholarship in Music
- Clare M. Westmont Award in Music
- The Friends of Music Award
- Lewis B. Hilton Award in Music
- Helen Stenner Memorial Essay Prize in Philosophy
- Nishi Luthra Prize for Outstanding Graduate in Philosophy
- Greg Delos Prize for Undergraduate Research in Physics
- Robert N. Varney Prize for Excellence in Introductory Physics
- Antoinette Frances Dames Prizes for Lower-Division Paper in Political Science
- Antoinette Frances Dames Prizes for Upper-Division Paper in Political Science
- Antoinette Frances Dames Prizes for Best Senior Honors Thesis in Political Science
- Arnold J. Lien Prize for Outstanding Graduate in Political Science
- Grossman-Alexander Prize for Outstanding Graduate in American Politics
- Robert H. Salisbury Prize for Initiative, Leadership, and Service in Political Science
- Todd Lewis Friedman Memorial Prize for Outstanding Work in Comparative or International Politics
- William Benton Parshall Prize for Outstanding Paper on Women in Politics
- Hyman Meltzer Memorial Award for Undergraduate Research in Psychology
- John A. Stern Award for Undergraduate Research in Psychology
- Louis G. Zelson Award for Outstanding Junior in the Spanish Program
- Sherman Eoff Prize for Excellence in Spanish
- Helen Power Women, Gender, and Sexuality Studies Award for Scholarship and Service

Academic Regulations

Attendance

Successful education at the college level depends, to a large extent, on regular attendance at classes and laboratories. The College of Arts & Sciences has no fixed rules for "cuts" or "excused absences" but leaves the number of absences of any kind a student may have and still expect to pass a course to the judgment of each department or instructor. Each instructor should give reasonable consideration to unavoidable absences and to the feasibility of making up missed work. The student is expected to explain the reasons for such absences to instructors and to discuss the possibility of completing missed assignments with instructors.

Washington University has a policy for absences related to religious holidays (PDF).

Credits and Grades

The grading system used by the College of Arts & Sciences assumes that evaluation is useful to effective learning and that grades provide an indicator of accomplishment to the student, advisors and the College Office, graduate and professional schools, and employers to whom the student chooses to submit their grades. Grades are symbols of achievement in a particular endeavor and should not be confused with achievement itself or with personal worth.

Grades are important, particularly for students with pre-professional interests, but the student whose concern for grades is primary may lose sight of the total educational process.

Grade	Points per Unit
A+	4.0
A	4.0
A-	3.7
B+	3.3
B	3.0
B-	2.7
C+	2.3
C	2.0
C-	1.7
D+	1.3
D	1.0
D-	0.7
F	0.0
P	Pass (credit awarded, work not given finer evaluation)
NP	No Pass (credit not awarded due to unsatisfactory work)
I	Coursework incomplete
W	Withdrawal
R	Repeat
L	Successful audit
Z	Unsuccessful audit
T	Transfer (coursework transferred in)
EC	Exam credit

In the rare event that an instructor is unable to submit a grade by the grade deadline, an N, signifying that the grade has not yet been submitted, may temporarily appear as a transcript notation on the student's record. Grades that are not posted within 120 days of the last day of the semester for which the N notation was posted will result in these temporary notations being automatically changed to a grade of F (or, in the case of a course taken as Pass/No Pass, to a grade of NP).

Grades cannot be changed after the sealing of a student's transcript, which follows conferral of the student's degree.

Grades earned in physical education courses are not included when calculating the student's grade point average.

Online Courses

Online courses are not applicable to Arts & Sciences degree programs. Therefore, students may not enroll in online courses offered by other schools at Washington University (with the exception of CSE 1301 Introduction to Computer Science offered online during Summer Session through the McKelvey School of Engineering at Washington University, approved online courses offered during Summer Session through the College of Arts & Sciences, and courses offered online through approved 3-2 programs) nor attempt to transfer courses, taken at other institutions, that were delivered online.

Auditing a Course

In any semester, a full-time student may register for one course as an auditor, which entitles the student to all of the privileges of a regularly enrolled member of the class; however, courses taken for audit do not earn credits and thus do not count toward the degree. Consult the instructor regarding the requirements of a successful audit as unsatisfactory performance results in a grade of Z. A successful audit results in a grade of L.

Grade Appeals

If a student receives a grade they believe to be unjustified, whether for a single assignment or for the course grade as a whole, they have the right to discuss any grade(s) with their instructor and to appeal the grade(s). (Students considering appealing their grades are encouraged to consult first with their four-year advisor; they may also contact the Arts & Sciences Undergraduate Faculty-Student Mediator. Neither the four-year advisor nor the mediator may make any decisions with regard to the appeal, but they can inform students about possible options for approaching the appeal.)

Grounds for Appeal

Sufficient grounds for appeal include clerical or mathematical errors in calculating the grade; inequitable use of the syllabus's grading rubric or policies; and grading impacted by issues beyond the course content.

Students should be aware that an appeal may include a complete review of the student's work in the course as a whole, which may result in a grade being either raised or lowered.

Students may not appeal to raise their grade by completing additional assignments (i.e., "extra credit") or by submitting late work except in the case of an official Incomplete.

If a student believes that the grade is the result of identity-based discrimination, they should make a report to the Office of Institutional Equity rather than file a grade appeal through this process. Additionally, grades that are a result of sanctions for a violation of Academic Integrity (as determined by the Academic Integrity Board) are not eligible for appeal through this process.

Timing of Appeals

Grade appeals must be initiated within 30 days of the grade being posted and must be addressed by the instructor in a timely manner. Grade appeals in the semester prior to the student's graduation must be raised immediately and addressed on an expedited timeline so that the appeal may be resolved prior to the conferral of a degree and the sealing of the student's transcript. A grade appeal submitted after a student graduates will not be reviewed as grade changes cannot be made following degree conferral.

Appeals Process

- The student must first appeal the grade with the instructor. The appeal must be in writing, reference this grade appeal policy, and outline the reasons for the appeal. The instructor must reply to the student in writing within two weeks of the student's request, providing detailed justification for retaining the assigned grade or confirming that the grade will be changed in light of the student's appeal.
- If the student's written concerns have not been met by the instructor's justification, they may raise the grade appeal to the director of undergraduate studies (DUS) in the appropriate department or program (based on the department or program that owns the course and not on the student's program of enrollment) within one week of the instructor's response. The subsequent appeal must be submitted in writing, and it must reference this grade appeal policy, respond to the instructor's detailed justification, and explain why the student believes there remains cause for appeal. Disagreement with the instructor's professional judgement is insufficient grounds for further appeal, and appeals to the DUS that merely reiterate a student's initial concerns will not be considered. The DUS will review the appeal and provide a written response to the student within three weeks.
- In the rare instance that the student believes further appeal to be necessary, the student may direct a final appeal to the Vice Dean of Undergraduate Affairs. If a student wants to pursue a grade appeal at this level, the appeal must be in writing and be submitted within one week of the written response from the DUS. The student's statement should acknowledge both the instructor's and the DUS's responses and explain why the student believes there remains cause for appeal. Disagreement with the instructor's or DUS's professional judgement is insufficient grounds for further appeal. The Vice Dean of Undergraduate Affairs must respond in writing within four weeks of the student's appeal. The decision of the Vice Dean is final.

Incomplete Grades

Students who are not making satisfactory progress in a course should withdraw from the course prior to the published withdrawal deadline. However, should a student experience medical or acute personal challenges after the withdrawal deadline that make the satisfactory completion of coursework difficult or unlikely, they may be eligible for a grade of Incomplete. In extreme circumstances, students may want to discuss a Medical Leave of Absence with their advisor.

To request a grade of Incomplete (I) from one or more instructors, students must take the following steps with each instructor:

1. The student should meet with the instructor before the final examination or due date for the final paper/project to request the Incomplete.
2. If the instructor grants the Incomplete, the student and instructor should agree on the scope of the work remaining to complete the course and a date when it will be submitted. This date should be within 120 days of the last day of the semester in which the course is being taken. The instructor should confirm with the student, in writing, the details of the work with respective deadlines.

Whether or not to grant an Incomplete is at the instructor's discretion. When determining whether to do so, the instructor should consider whether the student has consistently attended and engaged with the course (for example, whether the student has submitted all assignments except the final assignments/assessments) and made satisfactory progress in the course. Incompletes should not be granted unless the student has completed at least two thirds of the assignments/assessments for the course.

If sufficient work has not been completed, the grade of Incomplete will not be feasible. In such situations, the instructor will submit whatever final grade the student has earned. The student may repeat the course at a later time if they choose. (For information about repeating a course, see below.)

If an Incomplete is granted, the work should be completed in the time frame agreed upon with the instructor. However, this time frame should not extend more than 120 days from the last day of the semester in which the Incomplete is granted/the course for which the Incomplete is granted is taken.

Failure to submit completed work and for the earned grade to be posted within 120 days of the last day of the semester in which the Incomplete was granted will result in the grade of Incomplete being automatically changed to a grade of F (or, in the case of a course being taken as Pass/No Pass, to a grade of NP).

Furthermore, students cannot have a grade of Incomplete on their transcripts when their degrees are conferred. Thus, students who are expecting to graduate at the end of the semester in which the course being considered for an Incomplete was taken should not request or be granted a grade of Incomplete.

Any student who does have an Incomplete on their transcript at the time of certification and degree conferral will have the Incomplete changed to a grade of F (or, in the case of a course being taken as Pass/No Pass, to a grade of NP).

Grades cannot be changed after the conferral of a student's degree.

Note: If an Incomplete is granted, students cannot be added to the Canvas shell of a subsequent offering of the course in order to complete the previous enrollment. Instead, at the instructor's request, the student can be given access to the original course shell, and the instructor can reopen assignments within that course shell. All work for an Incomplete should occur within the original course's Canvas course shell or outside of Canvas entirely.

By action of the faculty of the College of Arts & Sciences and the ArtSci Council, the College limits the number of accrued grades of Incomplete (I). The policy is intended to protect the student from building an overwhelming burden of unfulfilled coursework. The regulation reads as follows: "Students who accrue three or more Incompletes will not be permitted to enroll for any subsequent semester until the number is reduced to two or fewer." Should students have too many Incompletes, they will be declared ineligible for subsequent semesters until they have complied with the regulation. Compliance is normally achieved by the posting of grades, but it also may be achieved by the instructor(s) confirming to the College Office that the student has turned in all requisite assignments for the relevant class(es).

Pass/No Pass Option

To encourage students to enroll in courses they might not otherwise take, the faculty has established the Pass/No Pass option under which a student may register for courses and receive a grade of Pass (P) or No Pass (NP). During any semester, a full-time student may enroll in one course under the Pass/No Pass option. A maximum of 24 credits earned under this option may be applied toward the BA degree. No change into or out of the Pass/No Pass option may be made after the end of Week 12.

No more than 12 of the 24 credits allowed for the Pass/No Pass option may be applied to area distribution requirements.

It is the student's responsibility to discuss what constitutes a successful Pass in a particular course with the faculty member. Although the Pass mark is generally a C-, instructors have the discretion to set the Pass mark higher in their individual courses.

The first-year writing course, the writing-intensive course, the applied numeracy course, and courses in the major and minor are excluded from the Pass/No Pass option. Pre-professional and prospective graduate students should also seriously consider the strong probability that professional schools may seek more definite grades than P in courses that are required or strongly recommended for admission to professional or graduate study.

A few courses, particularly designated by departments, may require enrollment on a Pass/No Pass basis. When courses are designated as Pass/No Pass, students are permitted to elect an additional course to be taken as Pass/No Pass but should carefully consider the consequences of that choice. In addition, credits earned in courses with required Pass/No Pass grade options are counted toward the maximum of 24 Pass/No Pass credits that may be applied toward the BA degree.

Reading Days and Final Examination Period

When registering for classes at Washington University, students commit to all course requirements, including the examination procedures chosen and announced by the course instructor. When selecting courses, students are advised to take note of all final exam information. Students anticipating conflicts in their final examination schedule should seek to resolve them with the relevant instructors before enrolling. Students should not register for courses that result in three or more final examinations on one day. If a student does so, the instructors are not obligated to offer an alternative exam.

Final exam days and times are subject to change. The most current final exam schedule information can be found on the Final Exam and Evening Exam Schedules page of the Office of the University Registrar website.

Minimum and Maximum Course Loads

The average course load necessary to fulfill the required 120 credits for the bachelor's degree in a timely fashion is 15 credits — typically five courses — each semester. Except for students approved for a reduced course load through Disability Resources, students must attempt a minimum of 12 credits to be considered full-time. Students may not enroll for more than 21 credits without permission and an additional per-credit tuition charge. Any enrollment between 12 and 18 credits is considered typical.

Courses that require more preparation and class time than average — for example, foreign languages, mathematics, and science — may carry 4 or 5 units of credit. When enrolled in these and other demanding courses, students should consider taking fewer than 15 credits of academic work in that particular semester and balancing such intensive semesters with a modestly increased number of credits in subsequent semesters.

Repeating a Course

Students whose performance in a course has not met their expectations are permitted to retake courses in which they have earned a B- or lower. (Grades of P for Pass, A+, A, A-, B+, B, and Incomplete are not eligible for retakes; audits — whether successful or unsuccessful — are also not eligible for retakes.) When a course is repeated, the attempt with the highest grade will be used to calculate credit and will factor into the student's GPA. The other attempt(s) will have the letter R (denoting the retake) placed next to the grade. All registrations will show on the transcript; however, only the grade and credits of the enrollment with the highest grade will be used to calculate the student's GPA. If a course is transferred into Washington University as an equivalent of a course previously completed at Washington University, it will also be included in course attempts. Courses articulated as general department credit (not as direct course equivalencies) will not be included in course attempts.

Regulations: Although courses initially taken as Pass/No Pass may be retaken for a letter grade, courses initially taken for a letter grade *must* be retaken for a letter grade.

Academic Progress

Students are expected to maintain the highest level of scholarship during their time at Washington University. The College of Arts & Sciences requires that students complete a minimum of 12 credits per semester (unless officially approved for Reduced Course Load)

with a minimum 2.0 semester GPA. In addition, students are expected to maintain Satisfactory Academic Progress (SAP) and/or align with expectations for scholarships and financial aid from Student Financial Services.

Each student's semester GPA is computed as the total grade points earned during the semester divided by the total letter-graded credits attempted. At the same time, the cumulative GPA is computed as the quotient of the cumulative total of grade points divided by the cumulative total of letter-graded credits attempted. The computations are made on the basis of the grade point scale indicated in the Credits and Grades section above. Courses taken on a Pass/No Pass basis are not included in these calculations.

Following the grading deadline each semester, all student records are examined by the Committee on Academic Progress at the close of each semester, with an initial focus on the semester and cumulative grade point averages and earned credits. Students who do not meet the criteria above (i.e., at least 12 credits earned and/or a cumulative grade point average at or above 2.0) will be reviewed further by the Committee to determine the appropriate academic action, which may include Academic Concern, Academic Notice, or Academic Time Away. Students already on an academic action will also be reviewed, regardless of the semester's earned credits and GPA. After this review, the committee may remove, reduce, retain, or escalate the action based on the criteria detailed below. In all cases, the College will work with students to develop a plan for improvement and/or returning to satisfactory academic progress.

For all students, active engagement in the academic and community environment aligns with student success. Therefore, failure to attend class, complete assignments on time, or follow recommended improvement strategies may lead to the termination of enrollment for that specific semester or consideration for future semester academic actions.

Academic Concern

Academic Concern is a proactive notification that additional support may be needed to maintain academic progress. This status is not noted on the official transcript or enrollment verifications. Academic Concern status may be applied when a student meets any of the following criteria:

- Student received an unsatisfactory or failing grade (e.g., D, F, or NP) in a course
- Student earned a semester GPA or has a cumulative GPA between 2.0 and 2.5 at the end of the semester
- Student earned lower than a C- in College Writing
- Student has one unresolved grade of Incomplete (I)
- Student completed fewer than 12 credits in the semester (without prior approval for reduced course load)

Students who are assigned to Academic Concern status are encouraged to utilize WashU resources and partner with their advisor(s) to address the issue(s) that led to that status.

Academic Notice

Students experiencing more significant academic difficulties may be placed on Academic Notice. Students on Academic Notice are not in good academic standing. This status is not noted on the official transcript but is included in enrollment verifications requesting academic standing. Students on Academic Notice are not permitted to participate in University Athletics and may be ineligible to hold certain student group or University leadership positions.

This status may be applied when a student meets any of the following criteria in one or more semesters:

- Student received unsatisfactory or failing grades (e.g., D, F, or NP) in more than one course
- Student has two unresolved grades of Incomplete (I)
- Student earned a semester GPA or has a cumulative GPA below 2.0 at the end of the semester
- Student did not earn the minimum required grade in at least one major-related course
- Student completed fewer than 12 credits in the semester (unless officially approved for Reduced Course Load)
- While on Academic Action, student did not address the issue(s) that led to that status in the previous semester

Students placed on Academic Notice are expected to participate in an academic success program in the designated semester. These measures are designed to assist students to return to good academic standing. The student must complete an academic agreement that articulates an improvement plan. Students may remain on Academic Notice (i.e., Continued Notice) in consecutive semesters if the performance indicators above continue to fall below minimum criteria but do not intensify to warrant progression to Academic Time Away.

To be eligible to return to good academic standing, a student on Academic Notice must improve performance indicators and participate in support programs specified by the review committee.

Academic Time Away

Students experiencing severe academic difficulties that jeopardize their potential for timely degree completion may be placed on Academic Time Away. Students on Academic Time Away are not in good academic standing. This status is noted on the official transcript. Students on this standing are mandated to take a minimum one-semester break from the university to invest time to address significant obstacles that have hindered their academic progress.

Students on Academic Time Away are not eligible for University privileges including but not limited to living in university housing, participating in registered student groups or university athletics, holding a student group leadership position, or attending/planning a student group-sponsored event.

Academic Time Away may be applied when the student meets one of the following criteria:

- Student received unsatisfactory or failing grades (e.g., D, F, or NP) and/or Incomplete grades (I) in the majority of their courses
- Student received unsatisfactory or failing grades (e.g., D, F, or NP) and/or Incomplete grades (I) while on Academic Action
- Student has three or more unresolved Incomplete grades (see the Incomplete Grades (p. 1009) section above)
- Student did not participate in programs recommended or required by the College (e.g., Progress Counseling and/or the College Intensive Study Program) to support academic progress

Students may return to the College of Arts & Sciences from Academic Time Away after completing the Reinstatement process, provided they demonstrate, under the specific conditions set for each student, the ability to work productively at the level required by the College. Eligible students will receive communication regarding reinstatement for the next eligible semester via their WashU email accounts.

Leaves of Absence

Undergraduate students may be eligible to request a leave of absence for health or other personal reasons (e.g., family, military service, professional obligations, religious mission). Leave of absences are designed to provide a temporary break in enrollment without officially withdrawing to allow flexibility for students who may face personal, medical, or academic challenges, or need time for other important life events. Leaves may not exceed two years from the effective date of the leave.

Students should verify their academic program policies and any other relevant requirements related to immigration or financial aid/support policies as they consider leave and reinstatement options.

Access to other University privileges such as recreation facilities and libraries as well as participation in activities are paused during a leave of absence.

Students wishing to take a leave of absence will create a Request for Time Away in Workday Student. The College Office reviews the information provided to make a decision about the leave request. Deadlines are strictly followed. Consultation from WashU Cares is required for requests for medical reasons. Additional consultation from relevant University offices may be sought to ensure essential support offerings are provided. Your submission may be shared with, but are not limited to, WashU Cares, WUPD, the Student Health Center, Counseling and Psychological Services, Residence Life, Athletics, Gender Equity and Title IX Compliance Office, the Office of Institutional Equity, or Overseas

Students request reinstatement to their program of study via the process outlined on the Office of the University Registrar website. Additional information is available on the College of Arts & Sciences' Policies & Procedures webpage.

Transfer Credit

With preapproval, courses from accredited colleges and universities can be transferred to Washington University and will count toward the student's 120 credits required for the Bachelor of Arts degree; such courses may also serve as prerequisites to advanced courses and may count, with prior departmental approval, toward a student's major or minor. Transfer credits do not, however, substitute in Integrations or count toward other Arts & Sciences distribution requirements. No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or Academic Integrity Policy.

For further information pertaining to transfer credit, matriculating first-year students should visit the Pre-Matriculation Credit (p. 176) section in this *Bulletin*; transfer students should visit the Transfer Students (p. 988) section in this *Bulletin*.

Military Training

Army and Air Force ROTC programs are available at Washington University.

ROTC courses numbered MARM 3010, MARM 3020, MARM 4010, and MARM 4020 and AFROTC courses numbered MAIR 3010, MAIR 3020, MAIR 4010, and MAIR 4020 will be granted full credit toward the BA degree for a total of 12 credits. The courses do not count toward the 90 minimum Arts & Sciences credits required for the BA degree and are categorized in the 30 maximum credits that students may earn in courses taken from the McKelvey School of Engineering, the Olin Business School, the Sam Fox School, or the School of Continuing & Professional Studies (CAPS). These courses are letter graded and count toward the GPA, as do courses from the schools listed above.

ROTC courses numbered MARM 1010, MARM 1020, MARM 2010, and MARM 2020 and AFROTC courses numbered MAIR 1010, MAIR 1020, MAIR 2010, and MAIR 2020 will be granted 1 credit each for the Physical Training component, as is commensurate with performance courses currently receiving credit toward the BA degree, including courses listed under Physical Education. Such courses do not count toward the GPA.

School of Continuing & Professional Studies Courses

Students in the College of Arts & Sciences may not enroll in online coursework offered by the School of Continuing & Professional Studies (CAPS). However, students in the College of Arts & Sciences may enroll in one in-person School of Continuing & Professional Studies course per semester with a maximum total of 24 credits allowed. Any credits earned through the School of Continuing & Professional Studies are subject to the degree requirement stipulating that a maximum of 30 credits from Washington University schools other than Arts & Sciences may be applied to the Bachelor of Arts degree. School of Continuing & Professional Studies courses do not fulfill distribution requirements and may only count for a major or minor with approval from the relevant department.

Administration

Feng Sheng Hu, PhD
Richard G. Engelsmann Dean of Arts & Sciences
Lucille P. Markey Distinguished Professor in Arts & Sciences
Professor of Biology and of Earth, Environmental, and Planetary Sciences

Erin McGlothlin, PhD
Vice Dean of Undergraduate Affairs in Arts & Sciences
Gloria M. Goldstein Professor of Holocaust Studies
Professor of German and Jewish Studies

For more information about the College's leadership and the advisory and administrative staff, please visit the Arts & Sciences Staff Directory.

Majors (directory)

A

- African & African American Studies Major (p. 206)
- American Culture Studies Major (p. 218)
- Ancient Studies Major (p. 383)
- Anthropology Major (p. 270)
- Anthropology Major, Global Health and Environment Specialization (p. 272)
- Applied Mathematics Major (p. 699)
- Arabic Major (p. 667)
- Art History and Archaeology Major (p. 313)
- Astrophysics Major (p. 796)

B

- Biology Major (p. 337)
- Biology Major, Ecology and Evolution Specialization (p. 339)
- Biology Major, Genomics and Computational Biology Specialization (p. 341)
- Biology Major, Microbiology Specialization (p. 343)
- Biology Major, Molecular Biology and Biochemistry Specialization (p. 345)
- Biology Major, Neuroscience Specialization (p. 347)

C

- Chemistry Major (p. 362)
- Chemistry Major, Biochemistry Specialization (p. 364)
- Classics Major (p. 384)
- Comparative Literature and Thought Major (p. 404)
- Comparative Literature and Thought Major, Comparative Arts Specialization (p. 406)

D

- Dance Major (p. 757)
- Data Science Major (p. 958)
- Drama Major (p. 759)

E

- Earth Science Major (p. 420)
- East Asian Languages and Cultures Major (p. 446)
- East Asian Languages and Cultures Major, Chinese Specialization (p. 448)
- East Asian Languages and Cultures Major, Japanese Specialization (p. 449)
- East Asian Languages and Cultures Major, Korean Specialization (p. 450)
- Economics and Computer Science Major (p. 464)
- Economics Major (p. 465)
- Educational Studies Major (p. 481)
- English Literature Major (p. 510)
- English Literature Major, Creative Writing Specialization (p. 513)
- English Literature Major, Publishing Specialization (p. 516)
- Environmental Analysis Major (p. 530)
- Environmental Biology Major (p. 349)
- Environmental Policy Major (p. 817)
- Environmental Science Major (p. 422)

F

- Film and Media Studies Major (p. 552)
- Film and Media Studies Major, Film and Media Production Specialization (p. 553)
- Financial Economics Specialization for Economics Majors (p. 468)
- French Major (p. 932)

G

- Germanic Languages and Literatures Major (p. 407)
- Global Studies Major, Development Concentration (p. 564)
- Global Studies Major, Eurasian Studies Concentration (p. 573)
- Global Studies Major, European Studies Concentration (p. 576)
- Global Studies Major, Global Asias Concentration (p. 581)
- Global Studies Major, Global Cultural Studies Concentration (p. 587)
- Global Studies Major, International Affairs Concentration (p. 598)

H

- Hebrew Major (p. 668)
- History Major (p. 642)

I

- Italian Major (p. 933)

J

- Jewish, Islamic, and Middle Eastern Studies Major, Comparative Jewish and Islamic Studies Concentration (p. 670)
- Jewish, Islamic, and Middle Eastern Studies Major, Modern Middle Eastern Studies Concentration (p. 671)

L

- Latin American Studies Major (p. 685)
- Linguistics Major (p. 690)

M

- Mathematical Sciences Major (p. 701)
- Mathematics and Computer Science Major (p. 704)
- Mathematics and Economics Major (Economics) (p. 466)
- Mathematics and Economics Major (Mathematics) (p. 708)
- Mathematics Major (p. 711)
- Music Major (BA) (p. 728)
- Music Major (BMus) (p. 729)
- Music Major, Composition Concentration (BMus) (p. 730)
- Music Major, General Concentration (BMus) (p. 731)
- Music Major, History and Culture Concentration (BMus) (p. 732)
- Music Major, Performance Concentration (BMus) (p. 733)
- Music Major, Theory Concentration (BMus) (p. 734)

P

- Philosophy Major (p. 770)
- Philosophy Major, Law and Policy Specialization (p. 772)
- Philosophy Major, Philosophy of Science Specialization (p. 773)
- Philosophy Major, Philosophy Research Specialization (p. 774)
- Philosophy-Neuroscience-Psychology Major, Cognitive Neuroscience Concentration (p. 781)
- Philosophy-Neuroscience-Psychology Major, Language Cognition and Culture Concentration (p. 783)
- Physics Major (p. 798)
- Physics Major, Biophysics Specialization (p. 799)
- Planetary Science Major (p. 424)
- Political Science Major (p. 818)
- Political Science Major, American Politics Specialization (p. 819)
- Political Science Major, Comparative Politics Specialization (p. 821)
- Political Science Major, International Politics Specialization (p. 822)
- Political Science Major, Political Methodology Specialization (p. 824)
- Political Science Major, Political Theory Specialization (p. 825)
- Psychological & Brain Sciences Major (p. 842)
- Psychological & Brain Sciences Major, Cognition in Children Specialization (p. 845)
- Psychological & Brain Sciences Major, Cognitive Neuroscience Specialization (p. 848)
- Psychological & Brain Sciences Major, Experimental Psychopathology Specialization (p. 850)
- Psychological & Brain Sciences Major, Lifespan Development Specialization (p. 853)
- Psychological & Brain Sciences Major, Personality and Individual Differences Specialization (p. 855)
- Psychological & Brain Sciences: Cognitive Neuroscience Major (p. 843)
- Psychological & Brain Sciences: Cognitive Neuroscience Major, Cognition in Children Specialization (p. 858)
- Psychological & Brain Sciences: Cognitive Neuroscience Major, Experimental Psychopathology Specialization (p. 861)
- Psychological & Brain Sciences: Cognitive Neuroscience Major, Lifespan Development Specialization (p. 864)
- Psychological & Brain Sciences: Cognitive Neuroscience Major, Personality and Individual Differences Specialization (p. 867)
- Public Health & Society Major (p. 873)

R

- Religious Studies Major (p. 897)
- Romance Languages and Literatures Major (p. 934)

S

- Sociology Major (p. 950)
- Spanish Major (p. 935)
- Statistics Major (p. 962)

W

- Women, Gender, and Sexuality Studies Major (p. 979)
- Women, Gender, and Sexuality Studies Major, Health Specialization (p. 983)
- Women, Gender, and Sexuality Studies Major, Politics Specialization (p. 984)

Minors (directory)

A

- African & African American Studies Minor (p. 208)
- American Culture Studies Minor (p. 220)
- Ancient Studies Minor (p. 385)
- Anthropology Minor (p. 273)
- Anthropology Minor, Global Health and Environment Specialization (p. 274)
- Applied Linguistics Minor (p. 278)
- Applied Microeconomics Minor (p. 469)
- Arabic Minor (p. 672)
- Art History and Archaeology Minor (p. 315)
- Asian American Studies Minor (p. 221)
- Astrophysics and Astroparticle Physics Minor (p. 801)

B

- Bioinformatics Minor (p. 350)
- Biology Minor (p. 351)
- Biomedical Physics Minor (p. 802)

C

- Chemistry Minor (p. 365)
- Children's Studies Minor (p. 519)
- Classics Minor (p. 385)
- Comparative Literature and Thought Minor (p. 408)

D

- Dance Minor (p. 761)
- Data Science in the Humanities Minor (p. 409)
- Drama Minor (p. 762)

E

- Earth Science Minor (p. 427)
- East Asian Languages and Cultures Minor (p. 451)
- Educational Studies Minor (p. 483)
- English Minor (p. 520)
- Environmental Science Minor (p. 427)
- Environmental Studies Minor (p. 534)

F

- Film and Media Studies Minor (p. 553)
- French Minor (p. 937)

G

- General Economics Minor (p. 470)
- Geospatial Science Minor (p. 428)
- Germanic Languages and Literatures Minor (p. 410)
- Global Film and Media Studies Minor (p. 554)

H

- Hebrew Minor (p. 673)
- History Minor (p. 644)

I

- Italian Minor (p. 937)

J

- Jazz Studies Minor (p. 735)
- Jewish, Islamic, and Middle Eastern Studies Minor, Comparative Jewish and Islamic Studies Concentration (p. 674)
- Jewish, Islamic, and Middle Eastern Studies Minor, Modern Middle Eastern Studies Concentration (p. 675)

L

- Latin American Studies Minor (p. 686)
- Legal Studies Minor (p. 410)
- Linguistics Minor (p. 691)

M

- Mathematics Minor (p. 713)
- Medical Humanities Minor (p. 645)
- Medieval and Renaissance Studies Minor (p. 410)
- Music – General Studies Minor (p. 736)

P

- Philosophy Minor (p. 776)
- Philosophy of Science Minor (p. 777)
- Philosophy-Neuroscience-Psychology Minor (p. 785)
- Physics Minor (p. 803)
- Planetary Science Minor (p. 429)
- Political Science Minor (p. 826)
- Psychological & Brain Sciences Minor (p. 870)
- Public Health & Society Minor (p. 877)

R

- Religion and Politics Minor (p. 892)
- Religious Studies Minor (p. 898)
- Russian Language and Literature Minor (p. 941)

S

- Sociology Minor (p. 952)
- South Asian Studies (Hindi) Minor (p. 676)
- Spanish Minor (p. 938)
- Speech and Hearing Minor (p. 953)
- Statistics Minor (p. 963)

T

- Translation Studies Minor (p. 411)

W

- Women, Gender, and Sexuality Studies Minor (p. 987)
- Writing Minor (p. 521)

Additional Academic Opportunities

- Accelerated Bachelor's/Master's Program (p. 1016)
- Ampersand Programs (p. 1016)
- Bachelor's and Master's Degrees in the Professional Schools (p. 1018)
- Combined Undergraduate Degree Opportunities (p. 1019)
- French for Medical Professionals Pathway (p. 1019)
- Individual and Group Performance (p. 1020)
- Internships (p. 1020)
- Majors Across Schools (p. 1020)
- Medicine & Society (p. 1020)
- Other First-Year Programs (p. 1022)
- Overseas Study Programs (p. 1022)
- Physical Education (p. 1022)
- Special Major and Special Minor (p. 1024)
- Undergraduate Pre-Professional Preparation (p. 1024)

Accelerated Bachelor's/ Master's Program

Exceptional students who bring to the university a definite commitment to a field of study in the College of Arts & Sciences and a demonstrated capacity for intensive work may be able to complete a master's degree in a one-year accelerated program after completing the BA degree. This accelerated program, which begins each year in the fall semester, is open exclusively to students who graduated during the immediately preceding December, May, or August. Applications may be submitted at any time during the senior year up to the deadline of March 15. Graduate Record Examination (GRE) scores are not required. The program is available only to students currently in their senior year and only for continuous enrollment the next year. There is no option for deferred admission. The application for admission must be made to the department, which forwards the application and recommendation for admission to the Office of Graduate Studies, Arts & Sciences. Application forms are available on the website of the Office of Graduate Studies, Arts & Sciences.

Some departments may not participate in this program, and some departments that do not otherwise offer a master's degree may provide this opportunity to Washington University undergraduates. Contact the relevant department for more specific information about its admission policies and requirements. Students admitted to the program will be regular, full-time graduate students enrolled in the School of Arts & Sciences at Washington University.

Most master's degrees in Arts & Sciences require 36 credits. The accelerated program allows Washington University undergraduates to complete a master's degree in one academic year by applying up to five 3-credit courses or four 4-credit courses (a maximum of 16 units), taken as an undergraduate at the 4000 level or above, toward the master's degree requirements. For master's programs requiring fewer than 36 units, three courses at the 4000 level or above (with a maximum of 12 units) may be applied toward the master's degree. Master's programs requiring more than 36 units may require an additional semester or summer of enrollment. These undergraduate courses must be in an appropriate discipline, approved by the department, and completed with a grade of B or higher.

Ampersand Programs

Ampersand Programs are special multi-semester seminar programs open only to matriculating first-year Arts & Sciences students. An Ampersand Program combines a coherent, group-oriented learning experience with out-of-classroom activities while still allowing time for electives. There are no majors or minors available in this area. Ampersand Programs change each year and have included topics such as the following:

- 50 Years of Hip Hop
- American Stories
- Biotech Explorers Pathway
- Confronting the Past: Transformative Justice in St. Louis and Beyond
- Global Citizenship Project
- History, Memory & Representation of the Holocaust
- Literary Culture of Modern Ireland
- Medicine and Society
- Mind Brain Behavior
- Pathfinder Fellows in Environmental Leadership
- People, Planet, Health
- Phage Hunters
- Rome: The Eternal City?
- Safe Asylum: Refugee Politics and Pathways
- Text and Traditions

Enrollment in each Ampersand Program is limited to ensure closely mentored personalized instruction. All Ampersand Programs constitute integrations and, therefore, fulfill one of the requirements for the Bachelor of Arts degree. Ampersand Programs are open only to matriculating first-year Arts & Sciences students, regardless of their intended majors, and they complement any major or pre-professional curriculum. The full list of Ampersand Programs and sign-up details are available on the First-Year Programs website.

Faculty

Participating Faculty

Todd Braver
Professor of Psychological & Brain Sciences, Radiology, and Neuroscience
PhD, Carnegie Mellon

Amber Burgett
Assistant Dean of Advising
PhD, Washington University in St. Louis

Emily Cohen-Shikora
Senior Lecturer in Psychological & Brain Sciences
PhD, Washington University in St. Louis

David Cunningham
Professor of Sociology
PhD, University of North Carolina

Michelle DeLair
Lecturer in American Culture Studies
PhD, Washington University in St. Louis

Elizabeth Eichman
Lecturer in American Culture Studies
PhD, Saint Louis University

Christopher Erdman
Assistant Professor of Classics
PhD, University of California

Jonathan Fenderson
Associate Professor of African and African American Studies
PhD, University of Massachusetts

David Fike
Professor
PhD, Massachusetts Institute of Technology

Erin Finneran
Lecturer
PhD, Washington University in St. Louis

Linling Gao-Miles
Senior Lecturer in Global Studies
PhD, Nagoya University, Japan

Kathleen Hafer
Professor of the Practice of Biology
PhD, Washington University in St. Louis

Anna Jacobsen
Director of Anthropology's Medicine and Society Program
PhD, Washington University in St. Louis

Joseph Jez
Professor of Biology
PhD, University of Pennsylvania

Dirk M. Killen
Associate Dean, College of Arts & Sciences
PhD, Harvard University

Ron Mallon
Chair and Professor of Philosophy and Philosophy-Neuroscience-Psychology
PhD, Rutgers University

Zachary Manditch-Prottas
Lecturer in African and African American Studies and American Culture Studies
PHD, University of California, Berkeley

Beth Martin
Teaching Professor in Environmental Studies
MS EECE, Washington University in St. Louis

Erin McGlothlin
Associate Professor
PhD, University of Virginia

Timothy Moore
Classics Department Chair
PhD, University of North Carolina at Chapel Hill

Eleanor Pardini
Assistant Director and Director of Undergraduate Studies
PHD, University of Georgia

Meghann Pytka
Instructional Specialist
PhD, Northwestern University

Elizabeth Reynolds
Lecturer in Global Studies
PhD, Columbia University

Chris Shaffer
Lecturer
PhD, Cornell University

Nicole Svobodny
Teaching Professor of Global Studies
PhD, Columbia University

Younasse Tarboni
Senior Lecturer in Arabic
PhD, Université PSL

Chelsea Viteri
Instructor, Global Citizenship Program
MA, Clark University

Geoff Ward
Professor of African and African American Studies
PHD, Sociology, University of Michigan

Kathryn Wilson
Lecturer
PhD, University of Pennsylvania

Courses

Visit the Ampersand Programs website to view semester offerings.

Bachelor's and Master's Degrees in the Professional Schools

The College of Arts & Sciences — in conjunction with the Brown School, the McKelvey School of Engineering, the Olin Business School, and the Program in Occupational Therapy at the School of Medicine — offers dual (3-2) degree programs. If accepted into a 3-2 degree program, a student may work toward the BA degree during the initial three years at Washington University and toward the professional degree during the fourth and fifth years. A student electing to do a 3-2 program must complete a combined 150 academic units to earn both the BA degree and the professional degree.

Prior to entry into a 3-2 program, a student in the College of Arts & Sciences must complete the following:

1. At least 90 academic units of coursework offered in the College of Arts & Sciences
2. All distribution requirements
3. All requirements for an Arts & Sciences major
4. At least 18 of the 30 required units in upper-level coursework

Note: Some graduate programs may allow one or two courses for the undergraduate degree to be taken concurrently with graduate-level course work. Students should consult carefully with advisors in both programs to determine whether this option is available and, if so, if it is advisable.

A transfer student who seeks the BA degree under this plan must complete at least four semesters in full-time residence in the College of Arts & Sciences at Washington University.

The 30 units of graduate academic credit taken during the fourth year will complete the 120 academic units required for the BA degree. The professional degree is earned when 150 combined academic units and all degree requirements for the professional school are completed. A student must be recommended by the faculty of the professional school to the dean of the College of Arts & Sciences in order to receive the combined degree.

Students interested in a 3-2 degree program should do the following:

1. Discuss degree options with a dean in the College of Arts & Sciences and with a dean in the professional school.
2. Request the Eligibility Certification Form from the College of Arts & Sciences.
3. Submit the completed Eligibility Certification Form with the application for the 3-2 program to the professional school early in the spring semester of their junior year.

BA dual master's degree students are formally admitted into the graduate program of the professional school for a 3-2 program during their fourth year. For students accepted into these 3-2 programs, the undergraduate division will remain the primary school for the fourth year. The professional school program will not become primary until after the eighth semester of study as an undergraduate (or after early graduation with a bachelor's degree). In the fifth year, the professional program will become primary.

Students in 3-2 programs will pay the standard full-time undergraduate tuition rate for the fourth year, except for those students enrolled in the MBA program, which charges a premium above the undergraduate tuition rate. Students will receive financial aid for the fourth year based upon their eligibility for undergraduate financial aid awards, including Pell Grants.

There is no commitment for undergraduate financial aid beyond the fourth year of study. Students in 3-2 programs may apply to the professional programs (MBA, Social Work) for graduate student financial aid for study in the professional program beyond the fourth year.

This policy applies to all Arts & Sciences undergraduates who have completed less than the equivalent of eight semesters of academic work toward their bachelor's degree. If these students enroll in any Washington University graduate or post-baccalaureate degree program to begin course work toward a graduate degree during their fourth year before they have been awarded a Washington University bachelor's degree or completed the equivalent of eight semesters of undergraduate enrollment, they are covered by this policy.

This policy applies to current 3-2 programs involving Washington University bachelor's and master's programs and to any future 3-2 programs.

Brown School: Master of Social Work Program

The Social Work 3-2 program leads to a BA degree from the College of Arts & Sciences and an MSW degree from the Brown School. Interested students should apply to the Brown School during the second semester of their junior year. Students from all academic disciplines with an interest in social work are encouraged to apply. For more information, please visit the Brown School's 3-2 MSW Program website.

McKelvey School of Engineering

The combined BA/master's program is designed to enable students in the College of Arts & Sciences to pursue a coordinated five-year program of study leading to a BA degree in the College of Arts & Sciences and a master's degree in the McKelvey School of Engineering.

Olin Business School

A five-year program combining an undergraduate degree and a master's degree is available to a select number of students. More information about the Olin Business School 3+2 Program is available on the Olin website.

School of Medicine: Occupational Therapy Program

The Washington University 3-2 Occupational Therapy program allows students to earn both their undergraduate degree and a Master of Science in Occupational Therapy (MSOT) within five and a half years.

School of Public Health: Master of Public Health Program

The Public Health 3-2 program leads to a BA degree from the College of Arts & Sciences and an MPH degree from the School of Public Health. Interested students should apply to the School of Public Health during the first semester of their junior year. Students from all academic disciplines with an interest in public health are encouraged to apply. For more information, please visit the School of Public Health's 3-2 MPH Program website.

Combined Undergraduate Degree Opportunities

Students may work toward the Bachelor of Arts (BA) degree in the College of Arts & Sciences while simultaneously earning another undergraduate degree in architecture, art, business, or engineering. Students undertaking such a dual degree program must earn 150 units, 90 of which must be in the College of Arts & Sciences. They must also fulfill the requirements for a major in each of the two schools and complete the distribution requirements for both schools. Interested students should contact both a dean in the College and the designated dean in the appropriate professional school as early as possible during their undergraduate careers.

French for Medical Professionals Pathway

The French program is pleased to offer undergraduate students the opportunity to prepare for a diploma in Français professionnel de la santé (FPS) as part of the French for Medical Professionals Pathway. Washington University houses the first exam center in the United States, supported through the French program in Arts & Sciences. The pathway, supported by the Paris Chamber of Commerce and Industry (CCIP), includes specially trained French faculty that provide a sequence of specialized courses and administers the test for the Français Professionnel de la Santé.

Undergraduate students interested in French for Medical Professionals Pathway take a sequence of four courses, selected from the list below. This sequence helps prepare students for the exam that will qualify them to receive a certificate recognized by the French government. Any coursework completed for this pathway at the 3000-level or above can count towards the French major or minor or the Medical Humanities minor and may be of interest to students in psychology or global health. The requirements are summarized below.

Requirements

Total Units Required: 12

Required Course

Students must complete the following course:

Code	Title	Units
FRENCH 3015	Medical French (prerequisite: FRENCH 3070 Cultural Expression)	3

The remaining 9 units are to be selected from the following:

- First Year Seminar (FYS) with Medical Humanities focus (example: Global Health in the Francophone World)
- In-Perspective course with Medical Humanities focus (example: Development on Virality)
- In-Depth course with Medical Humanities focus (examples: Medical Narratives, Narrative Medicine)
- 4000-level seminar with Medical Humanities focus (example: FR 4680 Topics in French Literature: Disability Studies, Before “Disability”)

Additional Information

Up to 6 units completed in the French for the Pre-Med summer study abroad program in Nice or the Junior spring abroad programs in Paris or Toulouse can count toward the pathway.

Study Abroad

We encourage French for Medical Professionals pathway students to participate in a study abroad program, specifically the French for the Pre-Med summer study abroad program in Nice or the Junior spring abroad programs in Paris or Toulouse. Students should complete an In-Perspective course prior to attending the Nice, Toulouse, or Paris programs.

Personnel

- Lionel Cuillé
- Vincent Jouane
- Julie Singer

Diploma Candidate Information

Valid for life, the French Health Diploma is aimed at all those who practice a medical profession and who need to work and communicate in French with patients, their families, as well as with nursing and medical staff.

It attests to your ability to use French effectively, whether orally or in writing, in everyday professional communication situations, by offering activities as close as possible to professional reality:

- Complete a medical file, design a prevention support, complete a care protocol, or write a prevention note on health risks
- Explain a medical procedure or speak on a public health topic to a non-specialist audience

The exam is conducted on a computer, followed by an oral interview with an examiner.

Current information on registration and examination conditions, as well as specific Washington University policies and procedures, can be discussed with the personnel listed above and found on the Les Francais Des Affaires website.

Individual and Group Performance

Opportunities for individual and group performance include participation in various musical organizations sponsored by the Department of Music (e.g., mixed choir, symphony orchestra, wind ensemble) and in courses offered in physical education. To encourage students to pursue such creative, physical, and social activities, the College allows up to 12 units of credit toward the bachelor's degree for the successful completion of enrollment in individual and group performance. Exceptions to the minimums may be made for students majoring in departments that require a large number of performance courses, such as dance, drama, and music.

Internships

Students participating in internships that contribute to their academic or professional development may earn credit for those internships. Registration in an internship for credit is conditional upon the satisfactory completion of the Internship Learning Agreement form provided by the College Office and the approval of this completed form by the College Office, the faculty sponsor, and the internship sponsor.

Credit awarded for an internship corresponds to the time spent in work activities. The student is expected to work 45 hours of internship experience over a period of six to eight weeks for each unit of credit. Registration for 1 to 3 units of credit is possible.

Students may complete the work for an internship over the summer and receive credit during the subsequent semester. Any internship completed this way must satisfy all requirements stated here. The learning agreement must be submitted and approved prior to the student beginning work at the internship site. Therefore, credit cannot be awarded retroactively.

Internship courses are offered for Pass/No Pass grades only and, therefore, count toward the maximum of 24 Pass/No Pass units that may be applied toward graduation requirements. Internships do not count toward the advanced unit requirement and may count toward the major only with departmental approval. Students may not receive more than 3 units of internship credit in any semester and may count no more than 6 units of internship credit toward the 120 units required for graduation. (These regulations, along with all others governing the BA degree, are detailed on the Arts & Sciences Academic Regulations page (p. 1007).)

Note: Students may earn both Washington University credit and wages for their internships. It is not necessary for students to choose between credit and employment wages.

Majors Across Schools

Students may earn a BA degree with a first major in the College of Arts & Sciences and a second major in art and design, business, or engineering by fulfilling all the distribution requirements for the BA degree and completing the requirements both for the first major in Arts & Sciences and for the second major in art and design, business, or engineering. With careful planning, meeting these requirements can be accomplished within the 120 units required for the BA degree. Students should keep careful count to ensure that they complete at least 90 units of credit in the College of Arts & Sciences. For further information about second majors in art and design, visit the College of Art (p. 119)*Bulletin* page; for further information about second majors in business, visit the Olin Business School website; and for further information about second majors in engineering, visit the McKelvey School of Engineering website.

Medicine & Society

The Medicine & Society Program is an exciting opportunity for undergraduate students in Arts & Sciences who are interested in exploring the interface of culture, behavior and health from a social science perspective. The program addresses the important social and cultural foundations of health and illness in human societies, with a specific emphasis on service, research, and mentoring opportunities. In addition to the academic activities, Medicine & Society has a robust sense of community with several opportunities to work with, spend time with, and serve with other Medicine & Society Scholars.

The Medicine & Society program is supported by a grant from the Danforth Foundation and administered through the Department of Anthropology. It is not a major/minor program; it is a four-year program that is available by application only.

Eligibility

The Medicine & Society Program is a four-year program designed for matriculating first-year students. Admission to this program is highly competitive. Academic credentials, aptitude and interest in a health-related career, and personal statements all will be considered when selecting up to 20 participants to join the entering cohort. The program will particularly appeal to students with a long-term commitment to careers and research in healthcare and related fields. All evaluations for admission into this program are blind.

Curriculum

The Medicine & Society Program has its intellectual and programmatic roots in the field of medical anthropology, which is broadly defined as the study of human health and illness across culture, time and space. Medical anthropologists examine the role of culture and society in the shaping of illness experiences. Foci of inquiry may include such issues as traditional health beliefs and practices; cultural clashes between traditional medicine and biomedicine; political and economic

foundations of health disparities; ethical considerations pertaining to health care research, access, and the experience of care and illness; alternative and complementary medicine; social and behavioral factors that affect disease rates; and public health responses to emerging health problems. These topics all share a focus on community as a primary area of inquiry and population as a primary unit of analysis.

Requirements

Once admitted to the program, students must complete the following during the 4-year period of their undergraduate careers (Total of 18 credit hours) the table lists required courses, the information below it provides information about additional program requirements:

Code	Title	Units
ANTHRO 1141	Ampersand: Medicine and Society	3
ANTHRO 1142	Ampersand: Medicine and Society	3
ANTHRO 3423	Health and Wellness in the Community: A Service Learning Seminar	4
ANTHRO 4423	Advanced Seminar in Medicine and Society: Patients, Politics, Policy	3

- First-year Medicine & Society year-long seminar (1141*, 1142*)
- Community health internship or service-learning course (3423*)
- A major or minor in anthropology
- A junior/senior advanced seminar addressing contemporary issues in Medicine & Society (4423)
- 2 additional Medical Anthropology electives.
  - Sample elective courses offered in Medical Anthropology can be found here: Global Health and the Environment
- The W.H.R Rivers Project, which is a final project, paper, capstone, or honors thesis conducted during their senior year. All students will present these projects during the spring semester of their senior year at the W.H.R Rivers Showcase.

Students who are accepted into the Medicine & Society Program are enrolled in a year-long first-year seminar on culture, health and society in the Department of Anthropology. This seminar provides the academic foundation for future community health work in St. Louis. Beginning as early as the sophomore year, students identify and select a community health site for internship placement or service-learning activities. The internship/service-learning opportunity provides students with a location for focusing their interest and involvement in community health and allows them to participate in the work of the host organization. During the junior and senior years, students have the opportunity to intensify their academic and service activities at the internship or service-learning site, which may culminate in a senior honors thesis or a capstone project based on original research and investigation. Students in the Medicine & Society Program are encouraged to graduate with honors, based on their independent research and academic achievement.

* Please note that, with the transition to Workday, course numbers will/may be shifting.

Personnel

The Medicine & Society Program is directed by Dr. Anna Jacobsen, a sociocultural and medical anthropologist whose previous work discussed issues pertaining to religion and morality as they influence perspectives and understandings of personhood and mental and spiritual health. Her current work explores end of life spaces of care, including hospice and palliative care. She is interested in how individual and intersubjective personhood is constructed and engaged with by the individual, their loved ones, and the care team, with a particular attention to the temporal space that is coded as simultaneously urgent and protracted. Included in her work are individuals whose diagnoses and prognoses shift to where individuals occupy a space of being that is chronically terminal. This impacts not only how care is administered but importantly how the chronically terminal person experiences and performs themselves, their care, and is treated by others.

The Medicine & Society Program's Assistant Director is A.J. Jones, a medical and psychological anthropologist. In her research, Dr. Jones is broadly interested in developing accessible and creative ethnographic methods to explore experiences of disability and queerness in medicine. Her previous work on the genetic condition Turner Syndrome centered a series of rehearsals and original, co-written plays to share her interlocutors' experiences with disability, infertility, and gender and sex identity. She is currently working with geneticists at WashU to develop visual aids to facilitate public engagement with increasingly individualized, dynamic, and mosaic chromosomal information. Her upcoming project will investigate how asexual and aromantic folks in the St. Louis area conceptualize intimacy and citizenship through a series of multimodal workshops.

Erin Coleman, the Medicine & Society Program Administrator, is also the Administrative Coordinator for the Undergraduate Program in the Department of Anthropology as well as the Study Abroad Coordinator for the Anthropology department. She has a background in cultural anthropology and international studies as well as extensive experience in community organizing and direct service within nonprofit organizations in the St. Lous are.

Students should also be aware that they also have full access to other faculty in anthropology and related disciplines who offer courses of relevance and interest.

Courses

Please refer to the requirements in the Medicine & Society Overview (p. 1020) section, where required courses are listed. Please visit the Medicine & Society page for additional information about the program and courses. Each semester the department offers a range of Medical Anthropology and Global Health electives. During Fall 2025, these courses will include the following:

Code	Title	Units
ANTHRO 307A	Human Variation	3
ANTHRO 3151	Evolution of the Human Diet	3
ANTHRO 3201	Gender, Culture, and Madness	3
ANTHRO 3885	Global Mental Health	3

Other First-Year Programs

Students who have already made a firm commitment to a particular discipline in the humanities, natural sciences, or social sciences — as well as students who are uncertain about what they would like to pursue — have a wide variety of academic options throughout their college careers. The course schedule can be either widely exploratory or oriented toward a particular objective, such as pre-health studies. Students who are still exploring their options are strongly encouraged to consider enrolling in a First-Year Seminar or another First-Year Opportunity when selecting courses in consultation with their four-year academic advisors. First-Year Seminars are single-semester, small-group courses that enable entering students to work closely with peers and faculty around an exciting topic of inquiry. First-Year Opportunities are single-semester, 1- or 2-unit courses designed to highlight interesting research while complementing other elective coursework.

Overseas Study Programs

The guiding principle of international study through the College of Arts & Sciences is to encourage students to acquire the broad cultural knowledge, languages, and practical skills to enable them to participate fully in a global society.

For information about the 100-plus study abroad programs offered in more than 50 countries, visit the Overseas Programs website or the webpages of specific departments and programs.

Physical Education

Undergraduate students may take both lecture-laboratory and performance courses through the Department of Athletics. A total of 12 performance units may be included in the 120 units required for graduation.

Students may take both lecture-laboratory and performance courses through the Department of Athletics; however, there are no majors or minors in this area. All courses are offered only on a Pass/No Pass basis.

Courses

PE 1010 Topics in Physical Education: Beginning Weight Training
Major emphasis is on strength development. First class will meet in the Burmesiter Lounge, Sumers Recreation Center.
Credit 1 unit.
Typical periods offered: Fall

PE 1040 Topics in Physical Education: Varsity Sports
Varsity Sports. Prerequisite, Permission of Instructor.
Credit 1 unit.

PE 1050 Fundamentals of Rowing for Fitness
This eight-week course will focus on the effective use of Concept II Rowing as tools to learn the rowing stroke as well as to maintain aerobic fitness and develop strength. Emphasis will be placed on the correct use of technique to decrease risk of injury; varying duration and intensity of work on the machine to develop different energy systems; and using these new skills in developing lifetime fitness. Instruction will include the use of videotape and video monitoring. Athletic shoes and clothes that are not baggy are needed to participate. There will be a minimum amount of running and light, low-impact aerobic activity required as a warm-up.
Credit 1 unit.
Typical periods offered: Fall

PE 1070 Topics in Physical Education: Group Fitness
This 10-week course is designed to give students the unique experience of a group fitness class catered just to them. Using various formats of group exercise, Group Fitness will provide a fun and dynamic way to motivate participants to reach their desired results. Topics will include cycling, bootcamp, pilates, yoga, cardio, strength training, TRX suspension training, and a variety of other formats specific to the group, helping students to improve their overall fitness and wellness. First class meets in the Olympic Studio, Sumers Recreation Center.
Credit 1 unit.
Typical periods offered: Fall, Spring

PE 1110 Fitness and Conditioning
Students complete fitness testing at the beginning and end of the semester. Individual workout schedules are followed outside of class time. Orientation sessions will take place in the Burmeister Lounge, Sumers Recreation Center.
Credit 1 unit.
Typical periods offered: Fall

PE 1120 Indoor Cycling
Music, stationary bicycles, and an instructor who cues you to ride through hills, valleys, and other terrain, changing resistance and pace to simulate different types of riding. All levels welcome; students can tailor the ride to fit their personal fitness goals and needs. A water bottle and towel are required for this class. There will be a $45.00 fee for this class.
Credit 1 unit.
Typical periods offered: Fall

PE 1130 Topics in Physical Education: Intermediate/Advanced Tennis
Intermediate/advanced tennis.
Credit 1 unit.
Typical periods offered: Fall

PE 1140 Topics in Physical Education: Beginning Tennis
Beginning tennis.
Credit 1 unit.
Typical periods offered: Fall

PE 1160 Topics in Physical Education: Life Skills for Scholar Champions
Participation includes informal leadership tasks under the direction of Washington University Athletic Department personnel. The selection of the task and the scope of work is to be determined before enrollment by conference with the instructor. Prerequisite: permission of the department.
Credit 1 unit.
Typical periods offered: Fall

PE 1180 Fundamentals of Fitness: Personal Training
This course is designed to provide students with the foundational knowledge and skills needed to pass the American College of Sports Medicine's (ACSM) Certified Personal Trainer exam. Classes will be a fusion of lecture and practical application to ensure an environment of applied knowledge. The primary emphasis will include basic human anatomy, physiology, bioenergetics, biomechanics, nutrition and their relationship with exercise. Using the guidelines provided by the ACSM and the accreditation standards of the National Commission for Certifying Agencies (NCCA), students will familiarize themselves with industry standards. Specifically, this course will refer to guidelines provided by the ACSM regarding health screening, scope of practice, client safety, behavior change strategies, program design, fitness assessments and legal issues. At the conclusion of this course, students will take a final comprehensive written and pracitical exam as their final evaluation. A $90 course activity fee is required.
Credit 1 unit.
Typical periods offered: Fall

PE 2015 Weight Training
Beginning weight training. Major emphasis on strength development.

Credit 1 unit.
Typical periods offered: Spring

PE 2020 Topics in Physical Education: Varsity Sports
Varsity sports. Prerequisite: permission of the department.
Credit 1 unit.
Typical periods offered: Fall, Spring

PE 2030 Topics in Physical Education: Intermediate and Advanced Basketball
Designed to develop an appreciation for basketball through team competition and activity. Individual instruction and skill development will also be available.
Credit 1 unit.
Typical periods offered: Fall, Spring

PE 2036 Topics in Physical Education: Fitness and Conditioning
Students complete fitness testing at the beginning and end of the semester. Individual workout schedules are followed outside of class time.
Credit 1 unit.
Typical periods offered: Spring

PE 2039 Topics in Physical Education: Beginning Tennis
Eight-week course: Start 3/1-4/28. MW 1:00-2:30. Sumers Rec/Tennis Courts.
Credit 1 unit.
Typical periods offered: Spring

PE 2041 Topics in Physical Education: Intermediate Tennis
Eight-week course, Start 3/2-4/29. Sumers Rec Center/TAO Tennis Courts.
Credit 1 unit.
Typical periods offered: Spring

PE 2060 Soccer
Designed to develop an appreciation for soccer through the development of soccer skills, concepts of group play and team competition.
Credit 1 unit.
Typical periods offered: Spring

PE 2110 Topics in Physical Education: Lifeguard Training
This course provides skill instruction and knowledge needed to prevent and respond to aquatic emergencies in a pool setting. Successful completion of requirements results in certification in American Red Cross Lifeguard Training for swimming pools, CPR and First Aid. Prerequisite: swimming test given during the first week of class. Course materials fee: $100. Sumers Rec Center/Millstone Pool. 8 week course: 1/26-3/25.
Credit 1 unit.
Typical periods offered: Spring

PE 2140 Topics in Physical Education: Intermediate Volleyball
Intermediate volleyball.
Credit 1 unit.

PE 2996 Physical Education Elective: 2000-Level
This course is used for transcribing 2000-level PE elective units.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

PE 3996 Physical Education Elective: 3000-Level
This course is for transcribing 3000-level PE elective units.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

Special Major and Special Minor

On some occasions, a student's interests may fall in the intersection of two or more formally organized major programs, in which case a student may propose a special major that brings the related course work together. Students who propose a special major should be prepared to undertake honors-level work as all special majors must complete a capstone project of 3 to 6 units during their senior year.

Students interested in creating a special major or minor must confer with the dean charged with coordinating this program. Email college@wustl.edu or call 314-935-6800 to get in contact with the appropriate dean.

After consultation, students must submit a formal proposal to the appropriate dean. The proposal must include the following:

1. A description of the program of study, including an explanation of the program's integrating idea
2. A list of courses to be taken
3. A letter of support from the proposed academic advisor
4. A letter of support from a faculty member in a second, related department who has approved the proposal

A proposal for a special major must be submitted no later than the fifth semester of undergraduate enrollment. A proposal for a special minor must be submitted no later than the sixth semester of undergraduate enrollment.

The Special Major and Minor Committee is responsible for final action on these proposals.

Undergraduate Pre-Professional Preparation

Students planning to pursue pre-professional studies should refer to the general recommendations given below. For more specific recommendations, visit the appropriate webpages.

Architecture

Please refer to the College of Architecture (p. 69) section in this *Bulletin*.

Business Administration

Students in the College of Arts & Sciences are welcome to consult with the associate dean for the undergraduate program in the Olin Business School concerning any aspect of preparation for careers in business. For more information, visit the Olin Business School website.

Law

The two most significant factors law schools use in determining who to admit for legal study are the undergraduate GPA (taking into consideration the difficulty of courses attempted and the breadth of study) and the score on the Law School Admission Test (LSAT). Admission to law school requires a bachelor's degree.

There is no required set of courses for pre-law study at the undergraduate level. Many law school applicants have majors in economics, English, history, philosophy, and political science, but law schools also seek students with undergraduate majors in business, engineering, science, and other disciplines. Whatever areas pre-law students choose to emphasize in their undergraduate studies, they should take courses that require significant amounts of writing, develop analytic thinking skills, encourage the application of principles or theories to new situations, and require the original writing and revision of written work in response to comment and critique. It is also important to learn to read and analyze complex written material and to develop sound research skills.

Economics, history, philosophy, and political science courses can help students to develop an understanding of the traditions behind and the development of the U.S. legal system. Accounting, logic, and statistics courses also provide valuable background for legal study and the practice of law.

The pre-law advisors in the College of Arts & Sciences are available to help students plan a course of study and prepare a strategy for applying for admission to law school. For more information, visit the pre-law website.

Medicine

Pre-medical students in the College of Arts & Sciences of Washington University complete the bachelor's degree before admission to a medical school. In addition to fulfilling the requirements for the BA, pre-medical students must fulfill the entrance requirements of the medical schools to which they plan to apply. Specific requirements, which may vary, are summarized in the *Medical College Admission Requirements* online handbook, published annually by the Association of American Medical Colleges.

Pre-medical students must demonstrate high academic achievement and possess the character, responsibility, and level of commitment suitable for a career in medicine. Although requirements for specific medical schools are increasingly varied, most schools have traditionally required at least one year each of English, general biology, inorganic chemistry, organic chemistry, and physics with laboratory components traditionally required for all of the core science courses. In addition, students preparing to take the Medical College Admissions Test (MCAT) should take one semester each of biochemistry, psychology, and sociology. Medical schools also encourage applicants to develop a broad intellectual background that includes the humanities, the social and behavioral sciences, and a demonstrated understanding of and appreciation for social and cultural diversity.

Students interested in the health professions may choose a major in any field — the humanities, the social sciences, or the natural sciences — as long as they complete the pre-medical requirements. Any student planning to apply to MD/PhD programs is strongly advised to major in one of the natural sciences and to begin gaining bench research experience no later than the beginning of their sophomore year. Research opportunities are available on the Danforth Campus and at the School of Medicine, and these opportunities are open to both science and nonscience majors. Health-related volunteer opportunities are also widely available.

Students who enter the university planning to apply to medical school should, with the aid of their advisors, structure their course of study to include the medical school requirements. There is no one right or best sequence of courses, and there are numerous pathways to medical school. Because each student's pathway is different, students interested in a career in the health professions are encouraged to consult the PreHealth deans in the College in addition to their academic advisors. Additional information can be found on the PreHealth website.

Other Health Professions

Students interested in pursuing other careers in the health professions — including dentistry, nursing, occupational therapy, optometry, physical therapy, and veterinary medicine — are invited to visit with a specialist advisor from the PreHealth advising team. Interested students will find additional information on the PreHealth advising website.

Summer Session

The Summer Session in Arts & Sciences offers courses for current Washington University students and visiting students, including pre-college learners. Summer courses are scheduled over five separate sessions. Visit the Summer Session website for more information.

Enrollment Eligibility

WashU Undergraduate Students

Students who are admitted to a degree program and who have completed at least one full semester at Washington University in St. Louis may enroll in Summer Session courses provided that they have a cumulative grade point average of 2.0 or higher. Any student who has been suspended or dismissed from (and not formally readmitted to) any school within Washington University may not register without the written permission of their former dean. In addition, students who have been placed on academic notice or academic time away or who have taken a regular leave of absence must be reinstated and/or cleared by the College Office (or the dean of their respective school if not an Arts & Sciences student) prior to enrolling in Summer Session courses.

Please note that reinstatements are typically issued for the fall semester and not for Summer Session. Matriculated Washington University undergraduate students register for Arts & Sciences summer courses directly through Workday Student.

Domestic Visiting Students

Undergraduates in good academic standing attending another U.S. college or university are welcome to register through the visiting student program. Prior to registration, we strongly encourage that students consult with their home institution advisors to discuss courses and transfer credit procedures.

International Visiting Students

International students currently studying on F-1 or J-1 visas sponsored by another U.S. college or university may register through the visiting student program. Students will be required to provide the following official documents before their request is reviewed:

1. Official I-20 or DS-2019
2. Official I-94
3. Official score report from TOEFL or IELTS
4. Transcript of record from home institution

If students have questions about their current visa status, they should contact the Office for International Students and Scholars.

Pre-College Students

Arts & Sciences Pre-College Programs offer a variety of programs for middle and high school students. Please visit the Pre-College Programs (p. 1026) page of this *Bulletin* for more information.

Maximum Credit Load

Due to the intensive nature of summer courses, students may carry no more than the maximum credit load for each session, indicated below:

- Session I: Maximum of 4 units
- Session II: Maximum of 7 units
- Session III: Maximum of 7 units
- Session IV: Maximum of 7 units

When enrolled in overlapping sessions, students may still carry no more than 7 units at one time. Finally, students are limited to taking no more than 12 units total over the course of the summer.

Contact:	Ashley June Moore
Phone:	314-935-3968
Email:	summersession@wustl.edu
Website:	https://summersession.wustl.edu

Pre-College Programs

The Pre-College Program offerings in Arts & Sciences at Washington University in St. Louis provide opportunities for qualified middle and high school students to study on a non-degree basis. Both credit and noncredit course work is available during the academic year and summer.

Students interested in attending a Pre-College Program must submit an application for admission that may include essays, transcripts, and teacher recommendations. Students are expected to meet the age/year-in-school eligibility of the program unless an exception has been granted. International students for whom English is a second language should provide documentation of their ability to complete coursework in English by providing a minimum TOEFL score of 90 (iBT) or a minimum IELTS Academic score of 6.5. Students may request a waiver based on the current standards of English proficiency certification set by the Office for International Students and Scholars.

Credit courses enrolled in through a Pre-College Program are considered pre-matriculation units and are subject to Washington University policies regarding Pre-Matriculation Credit Units (p. 44).

Admission to and participation in a Pre-College Program does not imply or guarantee acceptance into a degree program at Washington University.

Need-based scholarship assistance is available for all programs. Information about applying for scholarship assistance is available on the Pre-College Programs website.

Summer Programs

Summer Pre-College Programs are designed for mature, academically motivated students enrolled in challenging curriculum that may include honors, advanced placement, and International Baccalaureate courses, if offered by their high schools. Students who are collaborative, intellectually curious, and creative thinkers thrive in these programs. Courses are taught by Washington University instructors from across disciplines and research fields. Course offerings rotate each year. For current course offerings, visit the Pre-College Programs website.

In addition to course work, students participate in enrichment programming designed to support the development of college readiness skills.

High School Summer Scholars Program

Through the High School Summer Scholars Program, students enroll in one or two courses for credit. Students choose from a selection of Arts & Sciences undergraduate courses. To be eligible for the program, students must be current juniors in high school. Students must meet any prerequisites listed for a course in order to be approved to enroll.

High School Summer Institutes

Through the noncredit High School Summer Institutes, students discover a new passion or dive deeper into an existing one through an interdisciplinary environment. Each institute has a specific theme or focus and includes traditional undergraduate classroom activities like lectures, discussions, small group collaboration, and final projects. To be eligible for the program, students must be current sophomores or juniors in high school, and they must meet any prerequisites listed for the institute to which they are applying.

High School Summer Launch

Through the noncredit High School Summer Launch program, students participate in a series of daily lectures, workshops, and seminars designed to build a strong foundation for future academic studies and to prepare students for the college application process. To be eligible for the program, students must be current freshmen or sophomores in high school.

High School Summer Kickstart

Through the noncredit High School Summer Kickstart program, students have the exciting opportunity to build a strong foundation for high school success. This program offers a comprehensive schedule designed to prepare students for the challenges and opportunities they will encounter in high school and beyond. Activities include workshops, hands-on experiments, and small group work. To be eligible for the program, interested individuals must be current eighth-grade students.

Middle School Summer Challenge

Through the noncredit Middle School Summer Challenge program, students participate in a humanities-themed course, leadership and team-building workshops, and a STEM course to create a well-rounded summer experience. To be eligible for the program, interested individuals must be current sixth- or seventh-grade students.

Academic Year Programs

Early College Scholars Program

The Early College Scholars Program is an academic year program that allows St. Louis area high school students to enroll in courses for credit. To be eligible for the program, students must be current 12th-grade St. Louis-area high school students, and they must meet any prerequisites listed for a course. Priority for enrollment in the fall and spring semesters is given first to full-time degree students. If space is available, pre-college students may then be permitted to enroll in a course pending instructor and department approval.

Exploration Courses

The noncredit, online Exploration Courses allow students to explore a topic or subject through a series of interactive activities, lectures, and discussions. To be eligible, interested individuals must be current high school students, and they must meet any prerequisites listed for the courses.

Contact:	Becki Baker
Phone:	314-935-4807
Email:	precollege@wustl.edu
Website:	https://precollege.wustl.edu/

Undergraduate Visiting Students

The Undergraduate Visiting Student offerings in Arts & Sciences at Washington University in St. Louis provide opportunities for qualified individuals to register for undergraduate courses in Arts & Sciences on a non-degree basis.

Permission to register under this arrangement does not constitute or imply admission to a degree program at Washington University. However, at a future date, qualified visiting students may apply for admission to one of the degree-granting divisions of the university. Courses taken during visiting status may be applied to a degree program at Washington University only if authorized by the appropriate academic division.

Students seeking admission to an undergraduate degree program at Washington University should contact the Office of Undergraduate Admissions (admissions@wustl.edu). Students seeking admission to a graduate degree program in Arts & Sciences at Washington University should contact the Office of Graduate Studies, Arts & Sciences (artscigrads@wustl.edu). Individuals wishing to pursue non-degree coursework in art, architecture, business, or engineering should contact those schools directly for information relating to non-degree study. High school students wishing to pursue non-degree coursework at Washington University should contact the Early College Scholars Program (precollege@wustl.edu).

Summer Session Opportunities

Students from other colleges and universities are eligible to enroll in summer courses as visiting students in the College of Arts & Sciences.

Policies and Procedures

- To be eligible to enroll, students must be at least 18 years of age by the start of the session and meet one or more of the following eligibility criteria:
  - Be a matriculated undergraduate student at another U.S. college or university
  - Be a matriculated international undergraduate student attending a U.S. college or university
  - Be able to provide an official transcript from a U.S. college or university
- Additional eligibility requirements are as follows:
  - The student must be in good academic standing (a transcript will be required during the enrollment process). Good standing is defined as having a minimum 3.0 GPA on a 4.0 scale.
  - International students must be able to verify fluency in the English language by providing a minimum TOEFL score of 90 (iBT) or a minimum IELTS Academic score of 6.5. Students may request a waiver based on the current standards of English Proficiency Certification set by the Office for International Students and Scholars.

  (Please refer to the Summer Session visiting student eligibility requirements for additional clarification.)
- Any student who has been suspended or dismissed from any school within Washington University may not register without written permission from their former dean.
- Individuals wishing to enroll as visiting students in Arts & Sciences during the Summer Session must complete the enrollment request form and provide all requested information.

Housing

On-campus housing is available to visiting students during Summer Session. For more information about housing options, please visit Summer Housing.

Academic Year Opportunities

Undergraduate Visiting Student offerings during the academic year are considered on a case-by-case basis and are designed for individuals who are currently undergraduate degree candidates in good standing at other colleges or universities who wish to take a leave of absence from their home institutions and enroll full-time in undergraduate courses at Washington University on a temporary basis.

Policies and Procedures

- Eligibility for visiting student status includes current matriculation in good standing and completion of at least one semester of full-time study (12 or more units) at another accredited college or university with a 3.0 minimum grade point average in previous college work.
- Undergraduate visiting students may register for a minimum of 12 units and a maximum of 21 units of course work during a single semester.
- Undergraduate visiting students are eligible to register for a maximum of two semesters of full-time study at Washington University.
- All course enrollments are on a space-available basis and subject to instructor and Arts & Sciences approval.
- If approved, undergraduate visiting students register for courses with an academic advisor and pay tuition and course-related fees in full at the time of registration.
- Visiting students are not eligible for federal or institutional financial assistance.
- International students are eligible to apply for non-degree study as undergraduate visiting students if they already hold a visa that permits full-time study.
- Individuals wishing to participate in Undergraduate Visiting Student opportunities in Arts & Sciences during the academic year should contact Ashley June Moore, Director of Summer Session & Programmatic Initiatives, at college@wustl.edu.

Housing

On-campus housing is not available to visiting students during the academic year. Off-campus housing, however, is available. For more information about housing options, please contact the Office of Residential Life at reslife@wustl.edu or Quadrangle Housing at quadrangle@wustl.edu.

Business

About Olin Business School

At Washington University's Olin Business School, students learn to look beyond the bottom line and make thoughtful decisions that benefit business and society. Our curriculum prepares students to tackle the greatest challenges of our day and to change the world, for good.

As a leading research-oriented business school, Olin has a network of partners on campus, in the St. Louis community, and around the world. Students are able to apply what they have learned in the classroom to real-world situations through experiential learning opportunities that include student consulting, internships, case competitions, and study abroad programs, among others. Students also develop an entrepreneurial mindset that allows them to act nimbly and quickly in the constantly changing business landscape.

Olin is a welcoming community that allows for a deeper level of engagement, collaboration and program customization. Students can rely on support from faculty, staff and their peers while feeling accomplished in the rigorous coursework.

Bachelor of Science in Business Administration

Olin Business School offers a full-time Bachelor of Science in Business Administration (BSBA) degree program of instruction. Our BSBA students enroll in business courses during their first year, and the curriculum covers the core functional areas of business. At least one major course of study in a field of business is chosen, and at least 40% of the coursework must be in non-business fields, from fine arts to science; this allows students to pursue individual careers and ensures a well-rounded educational experience.

Majors

Students in the BSBA program are offered the option to focus their studies in a specific field of business. Although a business student is not required to declare a business major, almost all of our business students earn at least one professional major. A student may pursue one or two majors from the list below:

- Accounting
- Economics and Strategy
- Entrepreneurship
- Finance
- Financial Engineering (offered as a second major option only)
- Health Care Management
- Marketing
- Organization and Strategic Management
- Supply Chain, Operations, and Technology

Specific requirements for each major can be found in the Majors for BSBA Degree Candidates (p. 1031) section of this page.

Minors

Many departments and schools in the university offer minors. Business students can also pursue a minor outside of Olin Business School in any recognized academic discipline offered within the university by satisfactorily completing all of the requirements for both the BSBA degree and the minor. Required courses for a minor outside of the business school may range from 15 to 27 units, depending on the specific regulations of the academic department. A business student who applies for a minor and completes all of the requirements will have the award of the minor noted on the official transcript. A student must be approved for admission to a minor program by the department offering the minor.

BSBA students may choose the following minors offered through the Olin Business School:

- Business of Social Impact
- Business of Sports
- Business of Entertainment
- Business of the Arts
- Business Analytics

Specific requirements for each major can be found in the Minors for BSBA Degree Candidates (p. 1031) section of this page.

Combined Majors

Business students have the option to major in more than one field of study. BSBA students can earn a total of two majors, either both in business or one in business and one from outside of Olin. For example, a student could earn a BSBA degree with a major in finance and a major in English literature from the College of Arts & Sciences. Students must complete the specific courses required for the second major, but they are not required to complete the general requirements for the second degree. Students should consult with their academic advisors for additional information. Upon completion, the student's transcript would show a BSBA degree along with the earned second major. A diploma is awarded for the degree, with reference to any major(s) appearing on the official transcript.

Combined Degrees

A student also can earn two undergraduate degrees simultaneously: a BSBA degree and another undergraduate degree offered at the university. The student must be admitted to the other degree-granting program, and they must meet specific degree requirements for both schools. Typically, this option requires additional time to complete all requirements. For example, if a student combines a business degree with a degree from the College of Arts & Sciences, the student must complete a minimum of 150 units between the two disciplines. Of the 150 units, at least 90 units must be from the College of Arts & Sciences, and at least 60 units must be from Olin Business School. Some courses

may be used to satisfy both degree requirements simultaneously. Because requirements for a second degree vary from discipline to discipline, students should talk with their primary advisor to plan their program.

Non-BSBA Students

Students in other undergraduate divisions of the university may choose to complete a second major or a minor in a business discipline. This opportunity allows students to combine their academic interests between two schools. If students wish to pursue a second major or minor in business, they are required to follow the degree requirements for their primary school/major along with a set of core business or prerequisite requirements and 15 units of professional major/minor coursework. Additional information for students from other schools of Washington University who wish to pursue business second majors and minors can be found in the Non-BSBA Programs (p. 1032) section of this page.

Joint Programs

Bachelor of Science in Business and Computer Science

The Bachelor of Science in Business and Computer Science degree program provides an integrated educational experience that involves both the Olin Business School and the McKelvey School of Engineering. The objectives of this program are to provide students with the fundamental knowledge and perspectives of computer science and business and to expose them to the unique opportunities created by combining these disciplines. As one of the only such joint programs in the country, the Bachelor of Science in Business and Computer Science features unique curricular and cocurricular elements that help to create a distinctive program.

Please visit the Bachelor of Science in Business and Computer Science page (p. 1104) of this *Bulletin* for more information.

Olin Graduate Programs

Master of Business Administration (MBA)

A special five-year program — often referred to as the 3+2 program — that combines an undergraduate degree with the Master of Business Administration degree is available to a select number of undergraduates. Interested candidates should contact the Olin MBA Admissions office by calling 314-935-7301 or emailing Olin Graduate Admissions (OlinGradAdmissions@wustl.edu).

Specialized Master's Programs

A specialized master's degree is highly concentrated and singular in focus, providing intensive education in one business discipline. Olin Business School offers a variety of specialized master's programs that can be combined with an undergraduate degree. Visit our website for more information about dual undergraduate and specialized master's programs. Interested candidates should contact the Olin MBA Admissions office by calling 314-935-7301 or emailing Olin Graduate Admissions (OlinGradAdmissions@wustl.edu).

Opportunities

Academic Advising

Olin Business School provides students with expert academic advising and support. Olin undergraduate programs have academic advisors who serve as professional advisors to all undergraduate students on procedural matters, course planning, registration and other academic matters. Students are required to meet with their advisors at least once per semester to discuss course registration, but they are strongly encouraged to meet more frequently to allow advisors the opportunity to learn about the student's goals, plans and career objectives.

Independent Study

Independent study under the direction of a faculty member is available on a selective basis. The purpose of independent study is to provide an opportunity for students to pursue subject matter beyond the specific course offerings found in the business school. Projects may be done for 1 to 6 units of credit, but normally no more than 3 units will be granted in any one semester. The Independent Study Form must be submitted to the student's academic advisor by the end of the second week of the academic semester. Students may apply a maximum of 6 units of independent study in business and 6 units from outside of Olin toward the 120 unit degree requirement.

For more information, please speak with an academic advisor for the Olin Business School undergraduate programs.

Global Programs

Upon graduation, students are working at some of the top institutions across the globe. This is why Olin has chosen to integrate meaningful, purposeful and impactful global experiences into its academics. Having an international experience signals to employers that our students are in possession of valuable traits such as adaptability, comfort in ambiguity, and global leadership. All students have the opportunity to study abroad, providing they meet the eligibility requirements. Detailed information and eligibility requirements for study abroad are available on the Olin Global Programs website or in the Undergraduate Programs office.

Options include the following:

- **Olin International Internship Programs** combine classroom learning with a full-time internship placement of approximately 10 to 12 weeks. Students complete a significant research project in conjunction with the internship experience.
- **Olin Semester Study Abroad Opportunities** are offered across the globe in Asia, Europe and South America. Students choose courses on offer at local universities or study centers in the areas of business, language and general studies. Some programs require intensive language courses, although most are taught in English.

- **Short-Term and Summer Programs** last from two to eight weeks for 3 to 6 credits, including opportunities through the Center for Experiential Learning as well as Olin-run programs in Europe and Israel.

A unique aspect of many of our semester programs are the Academic Study Tours. Academic Study Tours are a required academic component for several of our study abroad programs, and students earn business credit for this experience. These tours are designed to develop research, analysis and presentation skills in an experiential format to allow students to apply theory, concepts and skills gained at Olin to consulting-type exercises abroad. They also allow students the opportunity to explore the business and culture of the region in which they are studying.

Other Study Abroad Options

Students with second majors outside of business may consider study abroad programs sponsored by Overseas Programs in the College of Arts & Sciences to earn credit toward their non-business major.

Center for Experiential Learning

The Center for Experiential Learning (CEL) is an educational center at Olin Business School. The CEL facilitates real-world experiential learning courses. Last year, dozens of our expert advisors and faculty oversaw 140+ live consulting engagements with nearly 1,000 Washington University student participants. The CEL's partners include startups, nonprofits, multinational enterprises, and NGOs in St. Louis, across the country, and around the globe. Visit the Center for Experiential Learning website for more information.

Center for Career Engagement

WashU's Center for Career Engagement (CCE) provides comprehensive career support, including career coaching and planning, career assessment and skills training, and access to a global community of leaders, recruiters, influencer networks, and WashU alumni. To get the most out of career support, students are encouraged to meet with coaches early in the school year to discuss their personal and professional goals.

Through the CCE, students can access 24/7 digital tools and resources, self-assessments, résumé and cover letter reviews, and networking sessions. In addition, they can connect to employer activities, including company information sessions, speaker panels, on-campus interviews, skill-building workshops, and career fairs.

Students are encouraged to join the Business Career Community, an industry-focused space dedicated to exploring careers, making connections, and inspiring confidence.

For more information, please visit the Center for Career Engagement website or call 314-935-5930.

Majors

Majors for BSBA Degree Candidates

In addition to the 42 core professional units required, which are listed on the Degree Requirements (p. 1048) page of this *Bulletin*, a BSBA degree candidate must complete at least 18 professional elective units. BSBA students may apply these professional electives toward a specific professional major. Majors in the business curriculum are opportunities to focus study in a specific field of business. All major courses must be taken in residence. Coursework from an approved Washington University study abroad program will count as in-residence work. However, only one course per major may be taken through a study abroad experience.

BSBA students may select a major from the following disciplines:

- Accounting, BSBA (p. 1054)
- Economics and Strategy, BSBA (p. 1054)
- Entrepreneurship, BSBA (p. 1054)
- Finance, BSBA (p. 1055)
- Health Care Management, BSBA (p. 1056)
- Marketing, BSBA (p. 1056)
- Organization and Strategic Management, BSBA (p. 1057)
- Supply Chain, Operations, and Technology, BSBA (p. 1057)

The following is offered as a Second Major only for BSBA students:

- Financial Engineering (p. 1055)

Minors

Minors for BSBA Degree Candidates

Note: All BSBA minors require 12 unique credits of coursework.

BSBA students may select a minor from the following disciplines:

- Business Analytics Minor (p. 1062)
- Business of Entertainment Minor (p. 1063)
- Business of Social Impact Minor (p. 1064)
- Business of Sports Minor (p. 1065)
- Business of the Arts Minor (p. 1066)

Non-BSBA Programs

Pursuing a Second Major or Minor in Olin as a Non-BSBA Candidate

Students in other undergraduate divisions of Washington University may choose to complete a second major or a minor in a business discipline. This opportunity allows students to combine their academic interests between two schools. If students wish to pursue a second major or minor in business, they are required to follow the degree requirements for their primary school/major along with a set of core business or prerequisite requirements and 15 units of professional major/minor coursework.

Second Majors for Non-BSBA Candidates

Regulations for Second Majors

All non-BSBA students pursuing any business second major must do the following:

1. Declare their second major online through Workday by the end of their junior year. To be eligible to declare a second major, students will need to complete MATH 1520 Calculus II, plus two business courses before their declaration will be approved. A second major will not be awarded to a student unless proper declaration is made.
2. Second majors must complete the specific requirements listed for the individual major.
3. Non-BSBA second majors may not pursue a minor from Olin in the following disciplines: Accounting, Entrepreneurship, Finance, Health Care Management, Managerial Economics, Marketing, Organization and Strategic Management, or Supply Chain, Operations, and Technology.
4. Second majors may not count one course toward two Olin majors or toward an Olin second major and minor.
5. Take all core and major specific courses for any business major for a grade.
6. An overall 2.0 average must be achieved in coursework taken as part of the business major.
7. Complete a minimum of 24 graded business units through Olin Business School.
8. Take all major courses in residence. Coursework from an approved Washington University study abroad program will satisfy this residency policy. However, second majors may only take one core course and one major course through a study abroad experience.
9. Meet the prerequisites as stated in Workday course descriptions to enroll in Olin courses. Students will not be able to enroll in a course if they do not meet the pre-/co-requisite courses. Please review course descriptions in Workday.
10. Complete DAT 1200 Managerial Statistics I or an approved substitution.
    a. Advanced Placement credit for SDS 2020 Elementary Probability and Statistics will not serve as a substitute for the DAT 1200.
    b. The following courses are not approved substitutions for DAT 1200: ENGR 3280, SDS 3030 (formerly SDS 3211), and PSYCH 3000.
11. Engineering students who have taken ESE 3260 Probability and Statistics for Engineering and who are majoring in finance will not be required to take DAT 1200 Managerial Statistics I or DAT 1201 Managerial Statistics II. However, DAT 1201 Managerial Statistics II must be taken if listed as a prerequisite for non-Finance courses.
12. School of Continuing & Professional Studies courses will not count toward any business major.

Second Major Core Business Requirements

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
ACCT 2620	Principles of Managerial Accounting	3
DAT 1200	Managerial Statistics I	3
or ESE 3260	Probability and Statistics for Engineering	
or POLSCI 2400	Data Science for Politics	
or POLSCI 3630	Quantitative Political Methodology	
or SDS 2020	Elementary Probability and Statistics	
or SDS 3020	Elementary to Intermediate Statistics and Data Analysis	
DAT 1201	Managerial Statistics II	3
or ECON 3150	Introduction to Econometrics	
or ECON 4150	Introduction to Econometrics With Writing	
or SDS 4010	Probability	
or SDS 4130	Linear Statistical Models	
MATH 1520	Calculus II	3
MGT 1000	Individual in a Managerial Environment	3
or MGT 3800	Business Strategy	
MEC 2900	Microeconomics	3
or ECON 4001	Intermediate Microeconomic Theory	
MEC 2920	Global Economy	3
or ECON 1502	Introduction to Macroeconomics	
Total Units		**24**

Second Major Options

Non-BSBA students may select a second major from the following disciplines:

- Second Major in Accounting (p. 1057)
- Second Major in Economics and Strategy (p. 1058)
- Second Major in Entrepreneurship (p. 1058)
- Second Major in Finance (p. 1059)
- Second Major in Financial Engineering (p. 1059)
- Second Major in Health Care Management (p. 1060)
- Second Major in Marketing (p. 1060)
- Second Major in Organization and Strategic Management (p. 1061)
- Second Major in Supply Chain, Operations, and Technology (p. 1061)

Minors for Non-BSBA Degree Candidates

Regulations for Non-BSBA Minors

All non-BSBA students pursuing any business minor must do the following:

1. Declare their minor online through Workday no later than the end of their junior year.
2. A minimum of a 2.0 average GPA in all business minor coursework is required.
3. Non-BSBA minors in Accounting, Entrepreneurship, Finance, Health Care Management, Managerial Economics, Marketing, Organization and Strategic Management, or Supply Chain, Operations, and Technology may not pursue a second major from Olin in the following disciplines: Accounting, Entrepreneurship, Finance, Health Care Management, Managerial Economics, Marketing, Organization and Strategic Management, or Supply Chain, Operations, and Technology.
4. Satisfy all prerequisites. (It is preferred that prerequisites be completed at Washington University.) Additional prerequisites may be needed to remain enrolled in certain courses. Please review course descriptions in Workday.
5. Take all 15 units of required courses at Olin Business School. Non-BSBA students may take one minor course through an approved study abroad program. Courses taken in the School of Continuing & Professional Studies or at another university do not satisfy the requirements for any of the five required minor courses.
6. Take all 15 units of required minor courses for grades (i.e., no Pass/No Pass).
7. Minor prerequisites may be taken as Pass/No Pass. However, if a minor is switched to a second major or a BSBA degree, Pass/No Pass courses cannot be used toward the second major.
8. 15 additional units are required to earn a second business minor. Students may not double count courses toward two Olin minors or an Olin second major and minor.
9. BUCS students must complete 15 unique credits to earn a business minor, as coursework may not overlap with BUCS business requirements.

Minor Options

Non-BSBA degree students are eligible to pursue a minor in one of the specific fields of business listed below:

- Accounting Minor (Non-BSBA) (p. 1062)
- Business Analytics Minor (Non-BSBA) (p. 1063)
- Business of Entertainment Minor (Non-BSBA) (p. 1064)
- Business of Social Impact Minor (Non-BSBA) (p. 1065)
- Business of Sports Minor (Non-BSBA) (p. 1066)
- Business of the Arts Minor (Non-BSBA) (p. 1066)
- Entrepreneurship Minor (Non-BSBA) (p. 1067)
- Finance Minor (Non-BSBA) (p. 1068)
- Health Care Management Minor (Non-BSBA) (p. 1068)
- Managerial Economics Minor (Non-BSBA) (p. 1068)
- Marketing Minor (Non-BSBA) (p. 1069)
- Organization and Strategic Management Minor (Non-BSBA) (p. 1069)
- Strategy Minor (Non-BSBA) (p. 1070)
- Supply Chain, Operations, and Technology Minor (Non-BSBA) (p. 1070)

Courses

Courses include the following:

- ACCT (p. 1033): Accounting
- DAT (p. 1035): Data Analytics
- FIN (p. 1036): Finance
- INTL (p. 1038): International Studies
- MEC (p. 1039): Managerial Economics
- MGT (p. 1040): Management
- MKT (p. 1045): Marketing
- OB (p. 1047): Organizational Behavior
- SCOT (p. 1048): Supply Chain, Operations, and Technology

Accounting

ACCT 2610 Principles of Financial Accounting
ACCT 2610 provides an overview of the financial accounting reporting process, with a primary focus on the analysis of economic events and their effect on the major financial statements (balance sheet, income statement, and statement of cash flows).
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

ACCT 2620 Principles of Managerial Accounting
Emphasis on the accumulation and analysis of data for internal decision makers. Introduces the vocabulary and mechanics of managerial accounting and accounting techniques used by internal managers in planning, directing, controlling, and decision-making activities within their organizations.
Credit 3 units.
Typical periods offered: Fall, Spring

ACCT 3610 Intermediate Financial Accounting I: Finance Related Topics
The first of a two-course sequence in corporate financial reporting. Examines the environment of financial accounting, the standards-setting process, and the conceptual framework that underlies financial accounting in the United States. Topics: review accounting basics, events, and transactions that impact financial statements, comprehension of corporate financial reports, and examination of political and economic factors influencing accounting policy.
Credit 3 units.
Typical periods offered: Spring

ACCT 3620 Intermediate Financial Accounting II
Continuation of ACCT 3610. Focus on the accounting and reporting of various stakeholders' claims against the corporate entity. Claims of shareholders, long-term creditors, employees and governmental bodies are examined. An in-depth understanding of applicable generally accepted accounting principles is developed by examining the strengths and weaknesses of these principles and alternative accounting practices.
Credit 3 units.
Typical periods offered: Fall

ACCT 3650 Taxation of Business Entities
This course involves an examination of tax laws at the federal, state, and international levels, with an emphasis on corporate taxpayers and partnerships. A data-driven approach will be used to show how various business transactions affect a business entity's tax liability. Attention will also be given to various ways in which business entities might structure transactions to avoid or reduce tax liability and how the choice of business entity type affects these decisions.
Credit 3 units.
Typical periods offered: Spring

ACCT 3660 Carbon Accounting
This course provides the student with an understanding of the current structure of emissions reporting with an emphasis on carbon reporting. The course will give an overview of the regulatory bodies involved in setting standards for carbon reporting. We will discuss the various rating agencies and indices currently used by stakeholders (e.g., investors and activist funds). The course will provide details on what companies report and how they inform investing and consumption decisions. We will discuss the supply and demand for carbon emissions information and how those economic forces are likely to shape changes in carbon reporting and the decision-usefulness of carbon information.
Credit 1.5 units.
Typical periods offered: Fall

ACCT 4003 Not-For-Profit Accounting
Students will gain an understanding of the unique facets of not-for-profit accounting, including understanding not-for-profit financial statements, differences in not-for-profit GAAP, and the IRS Form 990.
Credit 1.5 units.
Typical periods offered: Spring

ACCT 4013 Ethics I
This course is designed to help the student understand ethical reasoning and behavior, and it will help them to define their own moral compass using case studies as the primary source of instruction. The primary goal is to make the student a role model for others in ethical behavior. Students will learn not just how to determine the proper ethical choice; more importantly, they will learn how to effectively implement the behavioral changes required to achieve solutions to ethical dilemmas. To quote (while paraphrasing) the authors of the textbook, we strive in [these courses] not only to educate accounting students to be future leaders in the accounting profession but to stimulate [the student's] ethical perception and cultivate virtue thereby awakening [their] sense of duty and obligation to the public interest.
Credit 1.5 units.
Typical periods offered: Fall, Spring

ACCT 4014 Ethics II
This course was designed to help students develop a deeper understanding of ethical behavior, including dealing with fraud in financial statements, legal obligations of auditors, Wall Street expectations and earnings management, and what it takes to be an ethical leader. To quote the author, ...it comes down to one's sense of right and wrong and willingness to voice values to positively impact (the) auditor responsibility. This second segment of Ethical Decision Making in Accounting is offered for the purpose of creating ethical leaders in the accounting and auditing profession, the business community, and society and to instill that sense of right and wrong and the eagerness to put it into action.
Credit 1.5 units.
Typical periods offered: Fall, Spring

ACCT 4550 Accounting Policy and Research
This course will enable students to develop their knowledge and appreciation of current debates that surround the accounting profession. Students will develop critical thinking skills regarding these issues and form and defend opinions about contemporary regulatory and market issues. The course will also provide an opportunity for students to learn important technical and research tools used by accounting practitioners. Finally, students will gain an appreciation of the primary methods underlying academic research in accounting.
Credit 3 units.
Typical periods offered: Spring

ACCT 4640 Auditing
This course deals with the professional service industry of auditing. The auditing industry provides the service of objectively obtaining, evaluating, and communicating evidence regarding managerial assertions about economic events. Specifically, auditing ascertains the degree of correspondence between managerial assertions and established criteria. The course is organized around the basic categories of: (1) the economic role of external corporate auditing in securities markets, (2) the composition of the firms in the auditing industry, (3) the regulatory environment of auditing, (4) litigation issues facing the accounting/auditing industry, and (5) the requirements for conducting audits. Topics included in the last area include a consideration of the scope and application of Generally Accepted Auditing Standards (GAAS) and the general technology of auditing which are some general auditing topics typically covered on the CPA exam. Grading is based on homework, a group-based project, and two exams.
Credit 3 units.
Typical periods offered: Fall

ACCT 4660 Financial Statement Analysis
Designed to enhance your understanding of the process of evaluating financial statement information. Requires a basic familiarity with financial accounting and the assumptions underlying measurements reported in financial statements, an understanding of the economic and regulatory forces underlying corporate disclosure of financial statement information and their effects on financial statement information, and familiarity with data sources and analytical tools to extract and evaluate this data. Objectives are to develop familiarity with this type of analysis and to gain an appreciation for its limitations. Topics: profitability and risk analysis, credit risk models, forecasting, and valuation.
Credit 3 units.
Typical periods offered: Fall

ACCT 4670 Taxation of Individuals
This course provides an introduction to federal income taxation with primary emphasis on the tax implications of business transactions. The objectives of the course are to develop a basic understanding of federal income tax laws and to provide a framework for integrating income tax planning into the decision-making process. The course is of value to all students who need to recognize the important tax consequences of many common business transactions and is not intended solely for accounting majors or those students interested in becoming tax specialists.
Credit 3 units.
Typical periods offered: Fall

ACCT 4675 Volunteer Income Tax Assistance
VITA is an experiential learning course where students volunteer at an external organization, the Gateway EITC Community Coalition ("Gateway"), which provides free federal and state tax preparation services to low- to moderate-income families and individuals, seniors, persons with disabilities, and limited English-speaking taxpayers who need tax preparation assistance. Students will need to initially complete the VITA Training Program, pass a certification exam administered by Gateway, and volunteer at Gateway tax preparation sites in the St. Louis area. Students who have completed ACCT 4670, Taxation of Individuals, will find the subject matter easier to address.
Credit 1.5 units.
Typical periods offered: Spring

ACCT 4680 M&A Accounting
Examination of the nature and financial reporting aspects of various business transactions: corporate acquisitions, mergers, and the formation of other strategic alliances. Topics: accounting for business combinations and consolidations, joint ventures and foreign currency translation, accounting and financial reporting issues facing government entities.
Credit 3 units.
Typical periods offered: Spring

ACCT 4755 International Taxation
In today's global economy, questions regarding what activity and income get taxed and which jurisdiction enjoys taxing priority have never been more important. Recent U.S. tax reform has caused a monumental shift in the U.S. taxation of multinational transactions and activities. U.S. and global legislative proposals continue to focus on the tax rules applicable to multinational enterprises as parameters around these topics continue to evolve. This course will be an introduction to international taxation, focusing on such topics as tax jurisdiction, source-of-income rules, transfer pricing, tax treaties, and international tax practice and procedure. Core course materials will be supplemented with discussion around current relevant transactions (particularly M&A transactions) in the business headlines.
Credit 1.5 units.
Typical periods offered: Spring

ACCT 4756 Advanced International Taxation
In today's global economy, questions regarding what activity and income get taxed and which jurisdiction enjoys taxing priority have never been more important. Recent U.S. tax reform has caused a monumental shift in the U.S. taxation of multinational transactions and activities. U.S. and global legislative proposals continue to focus on the tax rules applicable to multinational enterprises as parameters around these topics continue to evolve. This course will address advanced international taxation, focusing on such topics as foreign currency, export benefits, transfer pricing, tax treaties, as well as planning from both an outbound and inbound investment perspective.
Credit 1.5 units.
Typical periods offered: Spring

Data Analytics

DAT 1200 Managerial Statistics I
The first of a two-course sequence in business applications of statistics, focused on descriptive statistics, probability and distributions, inferential statistics, and linear regression. Approximately, the first quarter of the course is about descriptive statistics and applications of covariance. The second quarter is devoted to probability: basic rules, conditional probabilities, Bayes' theorem, expected values, and probability distributions. This work is followed by an introduction to sampling distributions and inferential statistics. Confidence intervals and hypothesis testing are introduced to make inferences about parameters. The last one-fourth of the course focuses on simple linear regression. Throughout the course, functions, data analysis, VBA, and solver features of Excel are introduced.
Credit 3 units.
Typical periods offered: Fall, Spring

DAT 1201 Managerial Statistics II
The second of a two-course sequence in business applications of statistics, focused on forecasting. The course is devoted to the use of linear regression models in business, and ways to deal with problems of collinearity, outliers, non-linear relationships, and heteroscedasticity. Advanced topics including time series regression and logistic models are covered as time permits. There are quizzes and group projects in addition to a midterm and final.
Credit 3 units.
Typical periods offered: Fall, Spring

DAT 2200 Analytics and Modeling for Business Decisions
The primary goal of this course is to help students become effective problem solvers, smart consumers of data, and finally intelligent business decision-makers in various management situations. The course utilizes structured problem-solving approaches heavily relying on data to define the problem, uncover useful relationships between critical variables and outcomes, define measures for evaluating alternatives, and model underlying conceptual relationships with constraining resources. Applications of those analytic tools will be illustrated using examples from various business functional areas such as finance, marketing, operations, economics, and strategy. Prerequisites: DAT 120 and completion or concurrent enrollment in DAT 121.
Credit 3 units.
Typical periods offered: Fall, Spring

DAT 3015 Data Analytics in Python
This course is an introduction to data science in Python, which assumes no prior programming experience. The course is broken down into two units. In the first unit, students will be introduced to the basics of Python as a programming language. The second unit of the course is devoted to data analytics; students will use Python to explore and visualize real-world data sets from various industries including finance, sports, and technology.
Credit 3 units.
Typical periods offered: Fall, Spring

DAT 4001 Data Management Tools for Business Decisions
This course prepares students for success in many business analyst roles. The tools covered in this course will prepare students well for roles in finance, accounting, quantitative marketing, information systems, operations, talent analytics, and others. As companies collect more data internally and augment this with external data sources, collecting, maintaining, and organizing data is becoming an essential skill for success in many roles. Developing creative reports and dashboards that are updated in real time are demanded in today's data-driven decision-making environment. While there are a plethora of tools available to support business analysts, this course focuses on VBA in Excel and SQL, two critical tools for reporting and dashboards. Students will also be introduced to Tableau, the state-of-the-art visualization software. These tools are introduced within the broader organizational data environment to provide an understanding of the role of the business analyst within the organization. Companies' data environments traditionally include enterprise resource planning (ERP) systems, customer relationship management (CRM) systems, relational databases, external data sources, data warehouses, and data cubes. Understanding the roles of each component of the data environment enables students to utilize each effectively.
Credit 3 units.
Typical periods offered: Spring

Finance

FIN 3150 Capital Markets and Financial Management
Students will learn how the decisions of a company affect shareholder value and what decisions can increase it. To understand the perspectives of shareholders, we will study basic principles of investing: time value of money, valuation of debt and equity securities, discounted cash flow as a foundation for stock prices, the impact of diversification and leverage on portfolio risk, the relationship between risk and expected return in securities markets, and capital market efficiency. We will use these principles to analyze capital investment decisions by estimating cash flows and discounting them at the appropriate cost of capital. We will also study how shareholder value is affected by a firm's financing decisions, such as the choice of using debt or equity capital.
Credit 3 units.
Typical periods offered: Fall, Spring

FIN 3175 Information, Intermediation, and Financial Markets
This course is a study of financial intermediation. It first develops a conceptual framework for why and how financial institutions as intermediaries play a vital role in the functioning of the global economy, then examines applications to commercial banks, investment banks, mutual funds, hedge funds, broker-dealers, insurance companies, and more from the corporate perspective. We will also discuss current topics in financial regulations, challenges, and opportunities in the aftermath of the financial crises as well as the rise of AI. From this course, students will (1) develop familiarization with current practices of the institutions that make up the financial markets while understanding their vulnerabilities and changes over time, (2) understand the purpose of banking and other types of financial services in economic development and stability, and (3) assess job opportunities in the financial sector from the viewpoint of career development through case studies and guest speeches.
Credit 3 units.
Typical periods offered: Fall

FIN 4010 Advanced Valuation
This course covers advanced topics in valuation. Main topics covered will be the valuation of private firms and young businesses, and the valuation of financial services firms such as banks and insurance companies. The course applies both theory and practical valuation methods through the analysis of cases and real world examples.
Credit 1.5 units.
Typical periods offered: Spring

FIN 4023 Venture Capital Methods
Students are exposed to the process of analyzing, valuing and structuring potential equity investments in privately-held, entrepreneurial, venture-stage businesses. The goal is to develop critical thinking skills in evaluating potential investments and understanding the dynamics of various risk factors predominant in such investments, including market risk, execution risk and technology risk. The classes will be a combination of individual readings, case learning, presentations and panel discussions by industry experts, and experiential learning in a team format. Classes will be case study driven and will focus on company-and fund specific situations. Guest lecturers will be used extensively and will provide content integral to the course. The final sessions of the class will be conducted as a presentation and analysis of a potential investment.
Credit 1.5 units.
Typical periods offered: Fall, Spring

FIN 4024 Venture Capital Practice
This capstone course offers students interested in early-stage investing an immersive experience in angel and early-stage investment practices within private companies. Collaborating with professionals in the St. Louis community, students engage in activities spanning from identifying potential investment opportunities to closing deals, gaining practical skills essential for the field.
Credit 1.5 units.
Typical periods offered: Fall

FIN 4025 Private Equity Methods
This course will provide the student with an understanding of the basic terminology, due diligence, and analytical methodologies critical to evaluating private equity investments. The course will also cover the history of private equity and the different roles of private equity, including growth capital, LBO/MBO, roll-up, and so on in the evolution of the firm. Private equity funds in the context of the overall market (i.e., strategic vs. financial acquirers) will be discussed as will be the role of leveraged lending and bank financing of financial sponsors. Private equity as an investment and its role in portfolio construction will also be analyzed. Finally, the legal structure of private equity funds in the context of firm control and governance will be reviewed.
Credit 1.5 units.
Typical periods offered: Fall, Spring

FIN 4026 Private Equity Practice
This course is the capstone for students interested in pursuing careers in private equity. Students will develop practical skills for investing in private companies. Students will partner with professionals in the St. Louis community to perform various activities, including transaction sourcing, evaluating investment opportunities and, where appropriate, negotiating, arranging financing, and closing investments. The course also heavily relies on bringing in professionals from the local community to provide real-world perspectives on private equity investing.
Credit 1.5 units.
Typical periods offered: Fall, Spring

FIN 4232 Mergers & Acquisitions
This course focuses on identifying ways to increase firm value through mergers and acquisitions (M&A). We will survey the drivers of success and failure in M&A transactions, develop your skills in deal design, explore the deal process, and develop LBO and merger models similar to those used by investment bankers. Other topics addressed in the course are M&A regulation, the sell-side and buy-side M&A process, valuations, takeover strategies and antitakeover defenses, structuring of transactions to minimize tax consequences, the acquisition method of accounting, merger arbitrage, and auction vs negotiation sale processes.
Credit 1.5 units.
Typical periods offered: Fall, Spring

FIN 4280 Investment Praxis
Students serve as managers of a portfolio, the Investment Praxis Fund, which is owned by the university. Students analyze investment opportunities in various industries and present recommendations to the class for possible purchases or sales of stocks, consistent with the style and objectives of the fund. Valuation tools, financial statement analysis and investment techniques are emphasized as part of a thorough analysis. The course focus is on developing and implementing investment ideas.
Credit 3 units.
Typical periods offered: Spring

FIN 4370 Advanced Derivative Securities
This course focuses on implementation of models for pricing and hedging derivative securities in the equity, currency, and fixed-income markets. Students will learn to write programs in a programming environment such as MATLAB to implement the Black-Scholes model, binomial models, Monte-Carlo methods and finite-difference methods. The derivatives studied will include exotic equity and currency derivatives and caps, floors and swaptions. The goals of the course are to learn more about the various instruments that are traded, the various assumptions and methods that may be chosen in modeling them, and the importance of the assumptions in determining the prices and hedges that are chosen. The course will be especially useful to students pursuing careers in sales and trading who will interact with research departments and students pursuing careers in asset management.
Credit 3 units.
Typical periods offered: Spring

FIN 439E Real Estate Finance
This course provides a broad introduction to real estate finance and investments. Topics include both equity and debt. We begin with an overview of real estate markets in the United States. On the equity side students will be introduced to the fundamentals of real estate financial analysis, including pro forma analysis and cash flow models, and elements of mortgage financing and taxation. Ownership structures, including individual, corporate, partnerships and REITS will also be covered. On the debt side, we examine a number of financing tools in the context of the evolution of the secondary mortgage market, both residential and commercial. Those wishing to pursue more advanced topics in real estate finance could follow this course with Fixed Income and Mortgage-Backed Securities. Prerequisite: FIN 340.
Credit 1.5 units.
Typical periods offered: Spring

FIN 4410 Investments
Introduces the theory and practice of investments from the point of view of an investment/portfolio manager. We will begin with a review of asset classes, financial history, and preferences for risk. Next, we will have a brief review of statistics and finance and we will review matrix algebra. We will then apply these tools to examine the trade-off between risk and return and to develop and implement Modern Portfolio Theory. The major topics covered will include the Capital Asset Pricing Model (CAPM), Markowitz optimization, performance evaluation, market efficiency, and Arbitrage Pricing Theory (APT). The last portion of the course will be devoted to fixed income securities including interest rates, bond valuation, and bond immunization.
Credit 3 units.
Typical periods offered: Fall, Spring

FIN 4430 International Finance
This course provides a framework for making financial decisions in an international context. Topics include relevant features of financial markets and instruments (e.g., foreign exchange, currency futures and options, swaps); exchange rates; corporate risk management; international investing; and capital budgeting issues.
Credit 3 units.
Typical periods offered: Fall

FIN 4480 Advanced Financial Management
Advanced study of corporate financial management. A major focus is the relationship between the internal decisions of the corporation and the valuation of the firm in the capital market. Topics: capital budgeting systems, capital structure, debt policy, cash and working capital management, short- and long-term financial planning.
Credit 3 units.
Typical periods offered: Fall, Spring

FIN 4506 Financial Technology: Methods and Practice
This course will provide an overview of financial technology and will cover specific topics in this area. Topics covered include data-driven credit modeling, crypto currencies, digital wallets and block chains, robo advising, high-frequency trading, and crowd funding, and peer-to-peer lending. The course will also discuss regulatory aspects of FinTech. The course will cover different methods as well as practical applications.
Credit 3 units.
Typical periods offered: Spring

FIN 4510 Options, Futures and Derivative Securities
Examines the theory and practical application of derivative securities such as futures, options and swaps. Central to the theory of derivative security pricing is arbitrage and payoff replication. In practice, derivative securities provide a principal route to manage and, in particular, hedge financial risk. Futures, options and swaps on different types of underlying assets are examined with emphasis on pricing and application.
Credit 3 units.
Typical periods offered: Fall, Spring

FIN 4601 Research Methods in Finance
The course is designed to prepare students for independent research in finance by exploring methods and techniques in a manner that will allow the students to implement them correctly and efficiently. The curriculum will emphasize practical applications of empirical methods used in financial research and how to implement them. Students in the course will learn empirical methods in corporate finance and asset pricing; obtain basic knowledge and familiarity of the databases used in common finance research; get exposure to recent research in finance which applies the methods covered; and learn how to implement the methods covered using relevant programming languages. Note: There will be significant overlap in the course tools used in both MEC 4710 and FIN 4601. However, the applications and papers for each class will be entirely different.
Credit 3 units.
Typical periods offered: Fall

International Studies

INTL 3001 Planning for International Learning
The primary focus of this course is on preparation for the study abroad/internship experience. Topics include the following: What does a global firm look for in a globally competent recruit; Development of goals and objectives for international experience; Develop a working knowledge of host country key features such as businesses, culture, and politics; Overview of logistics for abroad, including timeline expectations, visa, housing, travel, contact with Olin, and registration for return semester; Career Services resources on how to use study abroad/internship to obtain a summer job/internship.
Credit 0.5 units.
Typical periods offered: Fall, Spring

INTL 3002 Applying International Experiences
Focus is on strengthening student experiences while on a study abroad/internship experience. Topics include the following: Minimalizing impact of culture shock and new academic programming though participation in on-site orientations; Maximizing academic advising services while abroad; Identifying opportunities to engage with the local culture; Connecting your individual personal and professional goals by revisiting actions and outcomes.
Credit 0.5 units.
Typical periods offered: Fall, Spring

INTL 3200 Business, Innovation and Entrepreneurship in Israel
Israel is an innovation and entrepreneurial hub with more listings on the NASDAQ than any country other than the US, more patents per capita and more entrepreneurial events occurring in Israel in both the commercial and social arena than anywhere else in the world. Students will learn about the Israel economy, different industries, Israeli culture and politics along with the critical business challenges and opportunities that face Israel. This course includes a required immersion experience to Israel and contains an additional lab fee for the immersion.
Credit 3 units. EN: S
Typical periods offered: Fall, Summer

INTL 3230 Business of Art: The European Capitals of Culture
This unique course is designed for students of the arts and students of business interested in the relationship between arts and management, culture and commerce, as a site of possibility. Based in two sites - London and Galway in the west of Ireland - the course looks through the lens of the European Capitals of Culture (ECoC) program, established in 1985. Visiting Galway 2020 will enable you to gain first-hand experience of how the vision of 'creative cities' - manifested through a yearlong program of events and initiatives - celebrates the arts and cultural engagement as 'drivers' for social and economic regeneration. Whilst London is an established center for business and the arts, Galway, is a smaller, regional city, which is hoping to use the awarding of the ECoC to grow in these areas. You will gain working knowledge of the complex needs of cultural producers, managers and entrepreneurs as leaders, facilitators and catalysts. You will come away with insights in to what is at stake for the people and environment in the spheres in which they operate. Whilst gaining knowledge of theoretical frameworks, the course has an emphasis on creativity and arts-based learning - debate, critique and visual and experiential methods. Preference is given to students minoring in Busines of Arts.
Credit 3 units.
Typical periods offered: Summer

INTL 3231 Entrepreneurship in the Middle East: United Arab Emirates & Israel
The Middle East is in the process of transforming from predominantly relying on energy to drive the economies to become hubs of global innovation and entrepreneurship. INTL 325 provides students with a unique opportunity to learn about an established entrepreneurial country (Israel) and an emerging entrepreneurial country (UAE) and to understand the unique interconnectedness between culture, politics, and business and how all three produce a unique and successful business and entrepreneurial environment in the Middle East focused on the UAE & Israel, the leading countries in the region. This course will provide (1)an understanding of the journey the countries have been on and the impact that culture, politics, and the Abraham Accords have on the innovation ecosystem in Israel and the UAE. (2) Develop the ability to conduct research on an Israeli & UAE businesses/industry and analyze the primary drivers for their success. (3) Solve an unstructured business problem from a startup with a presence in the UAE and Israel. (4) Contrast and compare elements of Israeli & Emirati businesses to American businesses on an industry level while understanding the global business environment.
Credit 3 units.
Typical periods offered: Summer

INTL 3994 International Internship in Business
This online course deepens the overall learning a student gains from an international internship. By completing structured assignments that relate to both the work completed during the internship and to elements of the broad-based Olin business curriculum, the value of the internship increases markedly, for both the student and employers. To enroll, you need admission to one of Olin's International Internship Programs.
Credit 1.5 units.
Typical periods offered: Fall, Spring

INTL 4200 Business Research Internship
This is the capstone course for overseas internship programs where students learn to apply rigorous statistical and analytical approaches to research questions in business, but not limited to questions relating to marketing, management, finance and economics, operations, and policy. Students will identify a research topic, and present this topic to Faculty supervisors for approval. The goal is to capitalize on the practical knowledge gained while interning abroad, and apply that to a research question in the area in which a student is interning. Students will be required to review the current literature on their topic, formulate their own research question, identify potential data sources they can use to address these questions, and make recommendations to add to the body of knowledge on their chosen subject.
Credit 3 units.

Typical periods offered: Fall, Spring

Managerial Economics

MEC 2900 Microeconomics
Provides a rigorous analysis of the behavior of consumers and firms in competitive and monopoly markets; oligopoly markets are introduced. Consumer topics include preferences and utility, budget constraints, consumer optimal choice and demand curves. Firm topics include technology, cost minimization and profit maximization. The course concludes with price determination in monopoly and competitive markets, and an introduction to oligopoly and game theory. The focus of the course is on microeconomics as a decision making tool for consumers and managers.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

MEC 2920 Global Economy
Introduces the fundamentals of international economic analysis. Provides an economic foundation to the analysis of business decisions and strategies in the global setting. Topics include: introduction to the global economy; comparative advantage as the basis for international trade and sources of comparative advantage; economies of scale and imperfect competition as the basis for international trade; tariffs and other instruments of trade policy; political, legal, and institutional factors influencing international trade; balance of payments; exchange rates and the foreign exchange market; international capital flows; national competitive advantage and industrial policies; global economic competition and business strategy.
Credit 3 units.
Typical periods offered: Fall, Spring

MEC 2922 Global Economy - Australia
Introduces the fundamentals of international economic analysis. Provides an economic foundation to the analysis of business decisions and strategies in the global setting. Topics include: introduction to the global economy; comparative advantage as the basis for international trade and sources of comparative advantage; economies of scale and imperfect competition as the basis for international trade; tariffs and other instruments of trade policy; political, legal, and institutional factors influencing international trade; balance of payments; exchange rates and the foreign exchange market; international capital flows; national competitive advantage and industrial policies; global economic competition and business strategy. Prerequisites: Admission to the Asia Pacific Internship Program.
Credit 3 units.
Typical periods offered: Spring

MEC 3210 Health Economics and Policy
The basic tenets of health economics will be covered. This course will place a unique emphasis on incorporating materials from three broad source categories -- textbook elements, lay press and media, and academic journal publications -- with the aim of fostering the application of rigorous, critical thought to media presentations of health care economics and policy issues.
Credit 3 units.
Typical periods offered: Fall

MEC 3220 Health Care Management
The goal of the course is to develop facility in applying basic tenets of general management to actual situations and dilemmas that might be faced by health care managers, consultants, financiers, investors, innovators, or providers in the course of their work. Issues addressed will include but not be limited to financial issues, management challenges, and conduct of operations. The first phase will cover the basic background on the structure and financing of the health care industry to include very brief reviews of critical topics like insurance and government-provided health care. A few basic frameworks will then be developed for students to apply to course topics moving forward, such as cost/benefit analyses and evaluation of risk. The remainder of the course will involve critical analyses of health care cases involving varied subjects and management challenges. Class sessions will emphasize student-led discussions.
Credit 3 units.
Typical periods offered: Spring

MEC 3550 Health Insurance in the US
This course is designed to introduce students to the nature and complexity of the US health insurance industry, with a particular focus on the drivers of financial success for health insurance firms. Students should expect a broad introduction to key concepts, nomenclature, and dynamics for the industry with a heavy emphasis on case-based discussions. This course is particularly relevant for students interested in careers in healthcare service delivery, health insurance, consulting, and healthcare finance, though it provides a good introduction for general managers and HR professionals involved in selecting insurance products for firms. Additionally, the course will provide useful context for students interested in the development or products and services in the biotechnology space.
Credit 1.5 units.
Typical periods offered: Fall, Spring

MEC 3630 Olin Grand Rounds: The Business and Practice of Medicine
Grand rounds in medical schools are a forum for presenting new and challenging clinical problems and cases. The goal of Olin Grand Rounds is to focus on the challenges and solutions facing the business of medicine. The course will therefore provide an introduction to the current issues facing the health care sector that integrates management tools and clinical knowledge. The objective is to provide students new insights into how modern management tools can be combined with scientific and clinical knowledge to manage health care organizations more efficiently and practice medicine more effectively.
Credit 3 units.
Typical periods offered: Fall

MEC 3700 Game Theory for Business
Provides students with a methodological framework to analyze strategic business situations. Building on a background in microeconomics and statistics, this course includes such topics as the following: modeling strategic problems, games with sequential moves, games with simultaneous moves, strategies and the derivation of strategic forms, general classes of games, uncertainty and information, strategy and voting, auctions, bargaining.
Credit 3 units. EN: S
Typical periods offered: Spring

MEC 4100 Research in Industry Analysis
Research in Industry Analysis will build on the materials taught in MEC 370 (Game Theory) MEC 470 (Market Competition and Value Appropriate) and MEC 471 (Empirical Techniques in Industry Analysis), integrating them with methods of industry analysis used in practice and applying them to companies.

Credit 3 units.

Typical periods offered: Spring

MEC 4600 Economics of Entertainment

This course will focus on the unusual economics of the entertainment industry and the associated management challenges. The sessions will cover the basic economics of entertainment, then focus specifically on the music and movie industries, plus one other that will vary from year to year. Classes will consist of lecture and discussion, as well as speakers from the relevant industries. The primary student deliverable will be a twenty minute documentary-style production in which student teams present findings of their research into specific industries within the broader industries studied in class, e.g., rock, classical or rap within music, blockbusters within music, etc.

Credit 3 units.

Typical periods offered: Fall

MEC 4610 Business of Arts

This course is for students who aspire to a career in the creative side of the Art Business, including visual art, dance, music, fashion, architecture, photography, writing/poetry, film, communication design, etc.; it may also be of interest to those who plan to work in the business side of Art, but in close connection with the creative side, e.g., A&R at a record label, or acquisitions in a movie or TV studio. It will complement MGT432E, Business Management of Arts Organizations. This course provides a diverse collection of business skills that form the foundation for the course's main deliverable: a multi-year plan for the development of an art business that will have commercial success sufficient to enable the artist to pursue their art as a profession. It includes interaction with successful artists, numerous presentations and experiential activities as the business plan develops throughout the semester.

Credit 3 units.

Typical periods offered: Fall

MEC 4660 Health Analytics

This is the capstone course for the Health Management major in which students learn to apply rigorous statistical and analytical approaches to research questions in health services, including but not limited to questions relating to management, finance and economics, operations, and policy. Faculty will identify several available research project options and present these options in class. The goal is to capitalize on the strength of the university medical school and affiliated medical centers, in addition to capitalizing on existing relationships between Olin and various health care firms to identify student research projects. Students will also be encouraged to formulate their own research questions and to identify potential data sources they could use to address these questions, if they so desire. Students will work in teams of three or four using the approaches developed for the Practicum and Hatchery courses.

Credit 3 units.

Typical periods offered: Spring

MEC 4700 Industrial Economics

Provides students with theoretical frameworks for making intelligent decisions in evolving markets. Course begins with general game theory concepts which form the basis for deeper exploration of market dynamics, competitive and cooperative firm relationships, and strategy. Students will apply theoretical frameworks in the context of a detailed industry study on which they will present in class.

Credit 3 units.

Typical periods offered: Fall

MEC 4710 Empirical Techniques for Industry Analysis

Students will learn how to use data to answer a wide variety of questions regarding the incentives and behavior that generate market activity. We emphasize inference about the strategic decisions of firms and consumers. Students are introduced to new statistical and econometric tools by examining the application of these tools to current research in economics. Among the topics considered are the empirical implications of: strategic bidding in auctions, price discrimination and dispersion, differences across products, and the internal organization of firms. .

Credit 3 units.

Typical periods offered: Fall

Management

MGT 1000 Individual in a Managerial Environment

As an introduction to the foundations of business, this course covers four major themes: (1) how markets work; (2) motivating and managing people; (3) business strategy and firm performance. This is a first-year level course and may not be completed beyond the sophomore year.

Credit 3 units.

Typical periods offered: Fall, Spring

MGT 1500 Foundations of Business

Provides first semester business students with an introduction to each of the functional areas of business as well as the entrepreneurial function. As they work to design their own enterprise, students will build skills in teamwork, communication, critical thinking, and an understanding of the complex interplay of business functions. Fall semester enrollment is only open to incoming business freshmen and students must be concurrently enrolled in MGT 1000.

Credit 2 units.

Typical periods offered: Fall, Spring

MGT 2001 Business Fundamentals for Non-Business Students

This course is intended to help successfully position arts and sciences, engineering, and design majors for careers in organizations such as non-profits, entrepreneurial ventures, and corporations, among others. Students will learn key technical and professional skills that are valued and often required by employers. Topics addressed include working in teams, data-driven decision making, financial and business analysis, concepts for organizational strategy, professional communication, and career strategies. The course will use a combination of lectures, exercises, projects, and cases to introduce participants to these topics. The class is designed for Washington University undergraduates in Arts & Sciences, Engineering, and Design and Visual Arts who are preparing for internships or jobs. Recommended for sophomores and juniors. BSBA and BUCS students cannot receive credit.

Credit 3 units.

Typical periods offered: Fall, Spring

MGT 2002 Venture Creation

Venture Creation is designed for students who are interested in exploring the venture creation process, or the undertaking of creating a new business from scratch. The course allows students to experience entrepreneurship in a unique and innovative manner by integrating theory and practice in an interactive learning by doing process. The goal of the course is to assist and support students in the realization of a business vision from inception of an idea to fruition of a company producing value.

Credit 3 units.

Typical periods offered: Summer

MGT 2010 Management Communication
Managers who write and speak effectively excel in business leadership. Persuasive and authentic communication is not only useful in advancing your business career; business employers also consider communication skills to be the most important attribute in people they hire. Effective communication involves more than mastering technical writing and presentation skills. Successful communicators use critical thinking to assess business scenarios and the audience who will hear or read a message; they craft communication in order to attain targeted results. This course gives you the opportunity to become a more polished communicator as you work toward the following goals: Applying rhetorical principles to management communication; Using critical thinking to analyze the audience, the organizational environment, and problems before choosing communication strategies; Implementing principles of plain language and effective design; Collaborating with colleagues to create a communication strategy for a live corporate client.
Credit 4 units.
Typical periods offered: Fall, Spring

MGT 3010 Legal Environment of Business Management
Surveys the various areas of law that make up the legal environment of business. Develops a basic understanding of law as it relates to business, with traditional emphasis on private law and business transactions. This study of the micro law of business will review the detailed substantive rules in the areas of contracts, sales, products liability, agency, corporations, and partnership. In addition, a summary review of contemporary legal problems such as insider trading, discrimination in employment, sexual harassment, and ethics may be discussed, if time permits. Case studies are analyzed in order to give the student an understanding of how various laws apply to actual situations.
Credit 3 units.
Typical periods offered: Fall

MGT 3080 Introduction to Global Business
Focus on the aspects of management of a business enterprise that are necessary to compete in the global marketplace. The course begins with a survey of the environmental context in which international companies operate (economic systems and cultural factors). This is followed by a review of International Trade Theory and Economics. This forms a basis for concentration in the second half of the course on strategies and structure for global operations. The course deals with the situations in Europe, Japan, Latin America and China through case studies and discussion of current topics and their relation to the fundamental aspects of global business management.
Credit 3 units.
Typical periods offered: Fall, Spring

MGT 3515 Global Entrepreneurship
Global Entrepreneurship will expose students to the differences and challenges of start-ups in South America, the Middle East, Africa and India. In addition to hearing from and engaging with entrepreneurial leaders from each of these regions, students will have the opportunity to solve a strategic problem for a start-up in each region.
Credit 3 units.
Typical periods offered: Spring

MGT 3565 Sports Entrepreneurship and Emerging Technologies
This course is an introduction to the concepts, theories, and practices unique to sports entrepreneurship and emerging technology. This course seeks to understand the fundamentals of early-stage companies and their growth trajectories from idea to exit. This course covers key topics in sports entrepreneurship and technology, including the various stages of the startup, the art of the pitch, market data-driven decision making, investor relations, and valuation. It surveys the rapidly changing ecosystem of entrepreneurship and technology across the global sports industry. Artificial intelligence, machine learning, augmented reality, virtual reality, human performance, Esports/gaming, and venue tech as they relate to entrepreneurial concepts, practical applications, and principles will also be addressed.
Credit 1.5 units.
Typical periods offered: Fall

MGT 3800 Business Strategy
The course adopts the perspective of the general manager -- the individual charged with developing and implementing the long-term strategy of a business. The course develops basic tools and concepts in strategy formulation, including competitive advantage, value creation and capture, industry analysis, capability assessment, competitive positioning, and strategy implementation. The course is designed to develop students' skills in both analyzing observed strategies and in formulating and implementing new ones.
Credit 3 units. EN: S
Typical periods offered: Fall, Spring

MGT 4020 Ethical Issues in Managerial Decision Making
This course considers not only what ethical behavior means for a business entity, but how to: (i) balance competing ethical concerns against each other; and (ii) implement and sustain this balance across an organization. Readings and classwork zero in on the issues and situations most likely to put a manager in jail and the company in bankruptcy. Classes include Socratic discussion, simulations, analysis of video clips, and team tasks. The emphasis is on practical frameworks and tools managers can apply in the real world.
Credit 1.5 units.
Typical periods offered: Fall, Spring

MGT 4022 Applied Problem Solving for Organizations
Applied Problem Solving for Organizations will provide rising junior BSBA students an opportunity to work on strategic problems for organizations on a virtual team. This class will be completely remote. The course runs from June 1st - July 16th and will have some scheduled meeting times, but the majority of the work will be coordinated by the group in consultation with their professor.
Credit 1.5 units.
Typical periods offered: Summer

MGT 4101 CEL Entrepreneurial Consulting Team
Fuel your entrepreneurial spirit and tackle real-world challenges — through CELect, an experiential consulting course offered through the Center for Experiential Learning. Connecting students with startups in St. Louis or San Francisco, working in teams of four to six, you will provide strategic insights to help emerging ventures scale, applying classroom knowledge to market research, financial strategy, forecasting, and growth planning. Through direct collaboration with clients and faculty, you'll develop critical skills in consulting, leadership, project management, data analysis, and persuasive communication. The St. Louis section includes a required kickoff session (August 21-22, 2025), ongoing client collaboration, and a final presentation. The San Francisco section (October 4-7, 2025) requires travel, a $750 course fee, and client meetings in person. Eligibility: To enroll, you must complete an application by April 7, 2025, at sites.wustl.edu/olincel. If selected, the CEL will handle course registration. Open to undergraduate and graduate students. Law students must take Corporations as a prerequisite/corequisite and may not provide legal advice or draft legal documents without supervision from a licensed attorney. This course is cross-listed with B63 MGT 501C.

Law students may take the course only once for law school credit and will be graded on a modified pass/fail scale: HP (3.94), P, LP (2.98), F (2.50). Dropping the course after client introductions may affect eligibility for future CEL leadership roles.
Credit 3 units.
Typical periods offered: Fall, Spring

MGT 4103 CEL Practicum
Drive meaningful change by consulting for established companies — Practicum, through the Center for Experiential Learning, allows you to collaborate with peers, faculty advisors, and corporate clients to solve real-world business challenges in areas such as market strategy, financial management, and operational efficiency. You'll gain practical consulting experience working with a student consulting team while refining critical skills in leadership, strategy development, project management, data analysis, and professional communication. Students are evaluated based on deliverables throughout the semester, including the final written and oral report at the project's conclusion. Additional Information: Dropping this course after being introduced to a client may impact your ability to engage in leadership roles in future CEL courses.
Credit 3 units.
Typical periods offered: Fall, Spring

MGT 4104 Small Business Initiative
Empower local businesses and gain real-world consulting experience — The Small Business Initiative (SBI), through the Center for Experiential Learning, gives you the opportunity to work closely with small, local businesses that form the backbone of the St. Louis economy. Through this hands-on consulting experience, you'll help these businesses address key challenges such as growth, marketing, and operational efficiency while developing crucial skills in critical thinking, leadership, and project management, all resulting in a meaningful impact on the local business ecosystem. Students are evaluated based on deliverables throughout the semester, including the final written and oral report at the project's conclusion. Additional Information: Dropping this course after being introduced to a client may impact your ability to engage in leadership roles in future CEL courses.
Credit 3 units.
Typical periods offered: Fall, Spring

MGT 4105 Taylor Community Consulting Project
Make a meaningful impact on local nonprofit organizations and communities — The Taylor Community Consulting Program (TCCP), through the Center for Experiential Learning, allows you to partner with local, regional, and national nonprofit organizations to address strategic challenges and operational inefficiencies. Through this hands-on consulting experience, you'll work as a part of student consulting team to apply insights from your coursework to real-world problems under faculty supervision, helping nonprofits grow and enhance their impact. Students are evaluated based on deliverables throughout the semester, including the final written and oral report at the project's conclusion. Additional Information: Dropping this course after being introduced to a client may impact your ability to engage in leadership roles in future CEL courses. Prerequisite: Open to both undergraduates and graduates.
Credit 3 units.
Typical periods offered: Fall, Spring

MGT 4210 Introduction to Entrepreneurship
Through case studies, frequent guest speakers, and the professor's own experience, the real world of entrepreneurship will be brought into the classroom to provide a context for students to learn the fundamentals of founding, operating, and exiting a start-up business. Students will learn new perspectives that will teach them to think like an entrepreneur. Those who are interested in the general study of entrepreneurship, those who want to be entrepreneurs, and those who would like to leverage entrepreneurial principles in other career paths are all good candidates for the course. This course can only be taken for a grade. Students can either enroll in either MGT 4210 or MGT 4603. You can't receive credit for both courses.
Credit 3 units. EN: S
Typical periods offered: Fall, Spring

MGT 4240 Business Planning for New Enterprises [the Hatchery]
Students form teams to pursue their own or an outside entrepreneur's commercial or social venture. The first session will feature a Team Formation event where students and community members pitch their ideas and opportunities to the class. During the semester, the teams are supported and advised by the Instructor, Executive Coach, and Mentor(s) as they research and develop startup plans. Academic deliverables include two presentations to a panel of judges and a complete business plan for commercial ventures or sustainability plan for social ventures. The course is open to students from all disciplines and degree programs. Most of the work will be done outside the classroom with the support of the coaches, mentors, advisors and instructor. Classes will be held once per week for the first half of the semester. Workshops and rehearsals will be required in the second part of the term.
Credit 3 units.
Typical periods offered: Fall, Spring

MGT 4250 The Business of Presidential Elections
This course will examine Presidential elections, particularly the 2020 election through an multi-disciplinary approach with an emphasis on how campaigns are entrepreneurial ventures. Campaigns are start ups that rely on strategy, branding, financing and other business concepts to achieve the elections of their candidate. The course will also allow students to examine how different candidates policies/platforms may impact different constituencies/sectors of the business/labor world as well as the economy.
Credit 3 units. EN: S
Typical periods offered: Fall

MGT 4290 Management and Corporate Responsibility
Our goal is to help managers incorporate corporate social responsibility demands into their actions within their firms. Assuming that no managers wish to work at a socially irresponsible company, this requires us to understand precisely what these socially responsible demands entail and how they might run counter to taking actions that increase value for the firm's owners and make the manager. We will take care to rigorously define these socially responsible demands and subject them to philosophical and economic examination so that we can assess and implement them. This inquiry would also require us to understand the public relations and political implications of the outsiders' perceptions about the social responsibility of the actions of the firm and its managers, with an eye toward improving these perceptions and reducing political costs.
Credit 1.5 units.
Typical periods offered: Fall

MGT 4325 Business Management of Arts Organizations
This course is for students who want to work in arts-related organizations and corporations. It will complement the Business of Arts course, which is directed to individual artists who need a business background and who may become entrepreneurs. The intent of this course is to provide business-oriented students who want to work in organizations producing a wide array of arts -- including the performing arts, architecture and design, art galleries (both museum and sales), fashion or media -- the knowledge of how these institutions are

managed and financially run, in both the for-profit and non-profit areas. The course will build on basic business skills and combine lectures, case studies and expert professional interactions. This will include on-site visits and presentations. The course will also provide a framework for experiential learning practicum projects. which will be conducted simultaneously with various arts organizations.
Credit 3 units.
Typical periods offered: Spring

MGT 4400 Sports Management
This course examines business and management issues involved in the sports industry. This industry is very diverse, ranging from global sports events (such as the Olympic Games, World Cup Soccer, etc.) to major national competitions (such as the National Football League, Major League Baseball, etc.). Engaged in this industry are many different players, including franchises, governing leagues, sponsors, media, stadium owners, government, fans, and so forth. This course will take a practical look at the world of sports management and administration, with an eye on extracting key lessons for corporate management and administration.
Credit 3 units.
Typical periods offered: Spring

MGT 4455 Entrepreneurship Through Acquisition
The purpose of this course is to provide students with an opportunity to explore being an entrepreneur by acquiring a company rather than starting one from scratch. The readings and class discussions will help students understand how to purchase a business, finance an acquisition, and operate and grow a business. The cases and conversations will help students understand what it is like being a young, first-time CEO and what types of challenges and issues will be encountered.
Credit 1.5 units.
Typical periods offered: Spring

MGT 4500 The Business of Sports
This course provides an overview of the major aspects of the sports business industry, including but not limited to the following: (1) the primary revenues and expenditures of pro and college sports; (2) collective bargaining agreements; (3) sports media rights; (4) facility financing; (5) sports sponsorships and athlete endorsements; (6) the role that sports commissions play within communities; and (7) current events that affect the growth and evolution of the sports business industry.

MGT 4510 Business & Government: Understanding and Influencing the Regulatory Environment
The United States as well as many of the world's governments has entered a new episode with respect to the interaction of business and government. Now, more than ever, government regulations are attempting to spur job growth and the economy on one hand, but also is intruding into many aspects of business and the markets on the other hand. Business students must not only understand the shifting business government landscape, but also how to engage government officials and legislators to help shape policies that affect their firms and industries. As an introductory course, student will learn from business and government leaders how to interact with and affect the processes of regulation.
Credit 3 units.

MGT 4600 Critical Thinking and Complex Problem Solving for Business
The course introduces students to rigorous techniques for critical and strategic thinking, problem formulation and problem solving, advancing their ability to provide valuable advice to organizations and preparing them for management consulting company interviews by exploring methods to engage in case analysis, various cognitive biases that can emerge as a problem is being formulated and analyzed, such as the use of inappropriate analogies, confirmation bias, self-serving bias, conflation of correlation and causation, etc.
Credit 1.5 units.
Typical periods offered: Fall

MGT 4601 Corporate and Global Strategy
Business-level strategy involves a firm's choices regarding how to compete in a particular single industry or market. Corporate strategy, on the other hand, involves choices about which sets of different industries or markets to compete in, and how to do so. It also involves choices about which kinds of activities to undertake within the firm, and which to organize through contracts or alliances with other firms. Global strategy is a particular type of corporate strategy that involves choices about which geographic regions or national markets to compete in and how.

Typical periods offered: Fall

MGT 4602 Sports Business Analytics
This course introduces students to business analytics through sports-themed applications, academic research pertaining to sports topics, class readings, and guest lecturers from industry. Objectives for students include: 1) learning estimation and forecasting skills/trends used in sports; and 2) develop critical thinking skills necessary to assist managerial decision making to augment the performance of sports teams, leagues, or companies.
Credit 3 units.
Typical periods offered: Spring

MGT 4604 Business of Social Impact
This course is designed for students interested in understanding how social change and social impact can be achieved, borrowing tools and approaches from a broad spectrum of disciplines by asking the following questions: What is social impact and what is social change? How has the concept of social impact developed, where did it come from and how is it useful? How can social impact be meaningfully measured? What examples exist for cooperation and mutual support in the achievement of social impact? What role do for-profit organizations play in creating and promoting social impact? How do CSR, PPP and BOP achieve social impact? The course is based around social impact as a concept, measuring social impact and building institutions, and partnerships around social impact. It will be taught with a practical bent using examples from existing social impact organizations, including those of the professor. Guest speakers will provide case studies of social impact approaches from the local area.
Credit 1.5 units.
Typical periods offered: Fall, Spring

MGT 4605 Ownership Insights: The Competitive Advantage of Family- and Employee-Owned Firms
This course is designed to introduce students to the unique governance and financing issues faced by owners of closely held businesses, with particular emphasis on employee- and family-controlled firms. The core issue addressed in this course is that of sustainability: What actions are required of the current owners to increase the likelihood that the business will last beyond them? What best practices can

we learn from successful employee-owned and multigenerational family businesses, some of which have been in existence for more than 150 years? There are three target audiences for this course: 1) students who may be or who are considering working for a closely held business, be it employee- or family-owned; 2) entrepreneurs who build successful businesses and want their businesses to be passed on to their employees or family members; and 3) students seeking to work in the private equity, investment banking, legal or wealth-management industries and who will be calling on this segment of the market. The course will be multidisciplinary and more qualitative than quantitative. Each class will have a lecture and case component; there will be guest speakers at each session. Students will be required to complete a case study in advance of each class (not more than two pages). There will be no final exam. Class attendance and active participation are expected.
Credit 1.5 units.
Typical periods offered: Spring

MGT 4610 Legal Issues in Sports
This course introduces the fundamentals of sports law. It teaches the basic tenets of a variety of legal disciplines through the lens of sport. It focuses on legal issues that have a direct relationship to sport with an emphasis on current legal sports issues in the news. In the tort arena, we will explore the potential liability of athletes for reckless violent actions toward their competitors, of sports teams and leagues for failing to adequately protect the health of participants (e.g. concussion lawsuits), of coaches, trainers and medical personnel at all levels for failing to properly train, monitor and assess athletes, of product manufacturers for injuries caused by defective sports equipment, and of teams for injuries to spectators, among other potential liabilities.
Credit 1.5 units.
Typical periods offered: Fall, Spring

MGT 4720 Defining Moments: Lessons in Leadership & Character From the Top
Most successful leaders can point to a handful of defining moments in their careers - key choice points that defined the trajectory of their character, their career, and/or their company. How can aspiring business leaders prepare themselves to face these defining moments with insight and integrity? How do leaders achieve business performance without sacrificing character or integrity? This course examines these questions by learning from notable leaders who exemplify both business excellence and personal character. Top executives from leading companies will sit down with us to talk about their defining moments and to engage with us in considering these questions. These conversations will be supplemented with contemporary cases and readings on leadership and character. Prerequisites: Senior status or juniors with permission of instructor.
Credit 1.5 units.
Typical periods offered: Spring

MGT 4765 Innovating for Healthcare
n this entrepreneurial course, students form teams and work on solving real problems facing the healthcare industry by producing solution prototypes that may also be commercialized by the students once the class is completed. The majority of the course work involves weekly customer interviews and team presentations on those findings. Using Lean Startup Theory, this course will provide an entrepreneurial platform that can develop solution prototypes that match the healthcare industry users' needs in just weeks, rather than months or years. Depending on the industry, grants or investors may provide follow-on funding to student teams for further refinement and the development of solution prototypes. The course is demanding; students will present during every class, work closely with their teams, and receive relentlessly direct feedback. Problem sponsors, mentors, industry liaisons, corporate partners, investors, and journalists may be in the room while students are solving real problems for real customers in real time. This is a course designed for all graduate and upper-level undergraduates in all WashU schools and programs. It takes an entrepreneurial, interdisciplinary approach to the healthcare industry's biggest challenges. It is assumed that students will come into the course with a basic understanding of ideation, research methods, corporate entities, funding sources, intellectual property, and related concepts.
Credit 1.5 units.
Typical periods offered: Spring

MGT 4775 Launching and Scaling New Enterprises (The League)
This advanced entrepreneurship course acts as an accelerator, encouraging students to actually launch and scale a business. Students must apply at https://sites.wustl.edu/theleague/ either with a business idea OR to join a student team that is about to launch their business. Students will be notified of their selection to join The League (of Extraordinary Entrepreneurs) shortly after the application deadline. Our most successful alumni in technology have agreed to be part of the class. This course covers leadership; crafting a story; product development; attracting customers; an innovative mindset; building successful teams; scaling to billion-dollar valuations and the mind of the high tech investor. The deliverables in the course include reflections on each of the unicorn guest speakers and how it applies to the students' ideas; actually launching their website and MVP of their product; meeting the growth goals the teams set for themselves; pitching real VC's and Angel Investors at the end of the course; and applying for a St. Louis Arch Grant.
Credit 3 units.

Marketing

MKT 3150 Principles of Marketing

Marketing is the window to the customer, making the function a critical component of any successful organization. Through a mixture of lectures, case discussions and classroom exercises, this course will give students an overview of the best theories and practices in marketing management today. Specific topics will include: how to segment the customer base and choose target markets, how to create perceived value both from an economic and psychological perspective, how to differentiate a product or service from a competitor's offering, how to build and maintain a strong brand, and how to employ different marketing tools such as advertising, pricing, product design, service, and location. The class will also provide students with some basic tools for evaluating the financial impact of marketing activities.

Credit 3 units. EN: S

Typical periods offered: Fall, Spring

MKT 3250 Applied Marketing Research

This course is designed to provide you with an appreciation of the role of marketing research (MR) in the formulation and solution of marketing problems. You will be developing an understanding of the marketing research process, and understand how to read reports and use output from marketing research to make managerial decisions. While the course will cover the process of engaging in marketing research, the emphasis is on understanding how to interpret output from marketing research so that you can gain greater mileage from marketing research reports that are run for your company, and on understanding what types of information can be collected so you will understand what types of information you can commission once you step into a managerial role. BSBA students can't enroll in this course. Students may not receive credit for both MKT 3780 and this course.

Credit 3 units.

Typical periods offered: Fall

MKT 3770 Consumer Behavior

A successful marketing strategy must be built around an understanding of consumers, and this same understanding can help consumers make better choices. MKT 3770 incorporates the latest research in psychology, marketing, and other social sciences to help students understand why consumers act as they do. In addition, this course includes a community-engaged learning component, so that students apply what they learn while they also help to meet a marketing need identified by a nonprofit community partner.

Credit 3 units. EN: S

Typical periods offered: Fall, Spring

MKT 3780 Marketing Research

The goal of the course is to familiarize students with the fundamentals of Marketing Research. Marketing Research involves developing research questions, collecting data, analyzing it and drawing inferences, with a view to making better business decisions. To this end the course is organized into two basic parts: (1) Data Collection and Research Design, and (2) Tools and Applications of Marketing Research. In essence, this is an Applied Statistics course where we focus on inference from Marketing Research data.

Credit 3 units.

Typical periods offered: Fall, Spring

MKT 3810 Inclusive Marketing

Inclusive Marketing Strategies examines the importance of integrating inclusive thinking from the beginning of the strategic marketing process - and in every key decision that follows. The course will explore what we know about societal, cultural, demographic shifts and spending power and how these changes will affect our marketing approach and ultimate success. The course will feature discovery through strategic insights, current marketplace examples, group discussion and theory application.

Credit 1.5 units.

Typical periods offered: Spring

MKT 4000 Elements of Sales: Tools and Techniques

This course will provide students with a thorough understanding of the sales function in a managerial context as well as the process of selling from prospecting through solution selling and account maintenance. Specific topics addressed include sales force structure, salesperson selection, evaluation, and compensation. Students will study sales technique, strategic selling, and key account management.

Credit 3 units.

Typical periods offered: Fall

MKT 4001 Digital Marketing and Analytics

This course teaches students how to utilize key technologies and data sets to drive business growth via digital channels, and how to properly measure investments. In addition to learning how to utilize various paid, earned, and owned digital media tactics, students learn how to build performance-driven websites and how to utilize digital data to better understand consumers and markets. This course is widely applicable to students seeking marketing, entrepreneurial, or strategy-driven careers.

Credit 3 units.

Typical periods offered: Spring

MKT 4002 Creating & Launching Innovative New Products

This course teaches students how to successfully create and launch new solutions (i.e., products, services, and technologies) inclusive of the business models that power them. Students learn cutting-edge approaches to uncover opportunities, curate ideas, discover solutions, and then realize the potential via successful launch. In addition, they

learn how to build innovative environments and build the culture needed within them. This course applies to students seeking careers as brand managers, product managers, product marketers, consultants, and those who aim to be entrepreneurs.

Credit 3 units.

Typical periods offered: Spring

MKT 4003 Understanding and Conducting Business Experiments

This course teaches students causal inference methods. Making good business and policy decisions often demands decision makers to move beyond discovering correlations in the data, and to understand the underlying processes that have generated these correlations. In fact, the range of business- and policy-relevant questions requiring causal inference is broader than commonly recognized, including topics like churn prediction in business settings. Therefore, a deep understanding of causal inference is crucial, especially in the era of expanding Artificial Intelligence capacities.

Credit 3 units.

Typical periods offered: Fall, Spring

MKT 4004 Sports Marketing

This is a specialized class focused on Sports Marketing. It is essential for anyone going into the field of Sports Marketing, but given the experience of the instructor, I would recommend it to anyone with an interest in the topic.

Credit 3 units.

Typical periods offered: Spring

MKT 4315 Marketing Metrics

Experiential Learning: Growing a startup is incredibly challenging. This reality helps to explain why a scroll through LinkedIn or Twitter will likely introduce entrepreneurs to concepts such as product-led growth and flywheels. It also explains why a search for startup marketing on Google will introduce them to ideas often referred to as growth hacks. These examples highlight the nuance of successfully marketing a startup, entrepreneurs' demand to learn these nuances, and the difficulty of correctly learning how to do the right things and do them well. Marketing Metrics provides students an opportunity to engage in active and applied learning through work on real-world, team-based projects, working with a real client. Each project is unique, but all are centered on driving data-driven, implementable solutions to help their client achieve their growth objectives.

Credit 1.5 units.

Typical periods offered: Fall, Spring

MKT 4700 Pricing Strategies

Marketing strategic decisions require long-term planning and are often costly to change once implemented. They often involve more than one marketing mix variable (price, advertising, promotions, loyalty program) that have to be consistent with a firm's core competencies and complementary with each other, with the purpose of establishing competitive advantages over competitors. A good strategic planning requires careful analysis of market environments related to customers and competitors of a company. With the development of the information technology in recent decades, companies have collected valuable data, either by themselves or from third-party data providers, on customers and competitors. The biggest challenge for most companies, however, is how to use the data for strategic decision-making. The objective of this course is to provide a comprehensive framework to help understand the strategic situations of firms and trade-offs in the decision-making. This course covers some analytical and modeling techniques but the focus is on the use of analysis results. It provides students the fundamental knowledge of analyzing data and solving business problems that have long-term impacts on business. Different marketing topics will be covered. One example is customer analysis, which is the most important strategic component for marketers. Other topics related to market competition, including competitor analysis, positioning, product and entry strategies, pricing and advertising planning will also be covered. The goal of this course is closely related to two of the four pillars of excellence of Olin, Values based and data driven and Entrepreneurial This course is analysis driven, with the focus on better use of data. Doing so helps to develop initiatives for strategic planning to better compete in the market.

Credit 3 units.

Typical periods offered: Fall

MKT 4770 International Marketing

Addresses three fundamental decisions confronting a company whose operations extend beyond the domestic market: (1) choosing which foreign markets to penetrate; (2) determining the mode of market entry; and (3) devising the international marketing plan. Topics include global marketing planning; environmental and cultural influences on international marketing decisions; organizational and control issues in international marketing decisions; global marketing intelligence; foreign risk and feasibility studies; and issues of ethics in other countries.

Credit 3 units. EN: S

Typical periods offered: Fall

MKT 4800 Marketing Strategy

Successful business plans are dependent on well-defined and carefully crafted marketing strategies. In this course, students will explore the interconnections between business strategy and marketing strategy through a series of lectures, case discussions, and participation in an online marketing simulation exercise. The course also places heavy emphasis on the discussion of topical marketing issues faced by companies in the current environment. Students are required to read the relevant business press and bring real world issues into the class for brainstorming and interactive discussion. Through this process, students will become astute observers of the strategic trends in marketing across a variety of industries.

Credit 3 units.

Typical periods offered: Spring

MKT 4810 Advertising and Promotions

This course focuses on an Integrated Marketing Communications (IMC) approach to advertising and other forms of commercial communications. The purpose is to provide future managers and practitioners with a foundation in communications theory, based on understanding the target's role in the demand chain for goods and services, as well as hands on experience in developing marketing communications plans. A practical understanding is provided of each of the range of marketing communications vehicles: consumer and business-to-business advertising, sales promotion/incentives, direct marketing, public relations, events and sponsorships, as well as online/interactive communications. Copy strategy, creative development, media planning, promotion strategy, and the evaluation of these programs are all addressed in this course. Industry experts will give guest lectures. We will have 4 companies in different industry sectors for which the class will develop marketing communications plans during the course.

Credit 3 units.

Typical periods offered: Fall

MKT 4820 Brand Management

The course examines brand equity and explores brand architecture with the purpose of maximizing brand equity. It is suitable for those interested in careers in brand development.

Credit 3 units.

Typical periods offered: Spring

Organizational Behavior

OB 3150 Organization Behavior Within the Firm
While proficiency in technical skills is essential for success in the workplace, your ability to understand and manage the human side of an organization will be what ultimately sets you and others apart. This course will provide you with concepts and tools that help you understand and manage human behavior in complex organizations. The knowledge and skills you develop in this course will be critical to you as you plan your career, manage your relationships with co-workers, design and change the groups or the organization you belong to, and work to achieve your goals in complex organizational settings.
Credit 3 units.
Typical periods offered: Fall, Spring

OB 3250 Human Resources Management
Emphasis on development of attitudes and skills of managers and supervisors in solving human problems and in building and maintaining effective employer-employee relations. Major topic areas include: selection and placement, training, and compensation. Other topics include legal aspects of employment policies, labor relations, and other aspects of human resources management.
Credit 3 units.
Typical periods offered: Spring

OB 4002 Women in Leadership
This course uses a multi-faceted approach to learn about women and leadership. To better prepare students to lead in organizations, we will learn from notable leaders who will share their experiences and advice with the class. These conversations will be supplemented with cases and readings of women leaders pulled from a range of organizations as well as a review the current state of empirical evidence about the status of women as leaders. Finally, there will be time to engage in deep reflection about what students expect from their careers as well as a chance to consider the pathways they must take to become effective and inclusive leaders in increasingly diverse organizations.
Credit 1.5 units.
Typical periods offered: Fall

OB 4300 Thinking Creatively and Leading Creative Teams
This course is for students who want to improve their ability to develop creative solutions to tricky problems and to lead in a way that fosters creativity in others. Data suggest that the ability to solve problems in new and better ways is one the leadership skills that is increasing in importance and that will set you apart from your peers. Future leaders who have mastered the skills of creativity and can foster those skills in others are therefore in a position to add tremendous value to their firms and, ultimately, to society. This course is designed to help you understand and begin to master those skills.
Credit 1.5 units.
Typical periods offered: Fall

OB 4340 Talent Analytics
Finding, developing, and retaining the best talent has always been the key to sustained success in business. Organizations today have potential access to far more useful information about people than ever before, but most struggle to access and use it effectively. In a highly competitive global market, rigorously analyzing data to enable timely and strategic decisions about talent provides a critical edge. In this course, students will learn how to use analytics to bring data and rigorous modelling to bear on people-related issues, such as recruiting, performance evaluation, leadership development and succession, job design, and compensation. Together, these factors can help organizations achieve their long-range strategic goals, rather than simply serving as administrative support functions.
Credit 1.5 units.
Typical periods offered: Spring

OB 4350 People Metrics
Since metrics are at the core of people analytics, this course introduces students to the foundations of assessing behavior in organizations using novel measurement approaches and large datasets. Through classroom discussions and real-world applications, this course will enable students to add value to organizations through the development, use, and interpretation of innovative people metrics. Specifically, after taking this course, students will be able to develop a clear and logical conceptual measurement model. A conceptual measurement model is the foundation of creating novel and useful new approaches for assessing intrapersonal characteristics (e.g., personality) and interpersonal behavior (e.g., knowledge sharing, teamwork).
Credit 1.5 units.
Typical periods offered: Spring

OB 4610 Negotiation
Through reading, practice, and discussion, this course teaches skills and knowledge to successfully negotiate in various contexts.
Credit 3 units.
Typical periods offered: Fall, Spring

OB 4620 Leadership in Organizations
This course is designed to fulfill three broad objectives for students. The first is to provide a useful overview of the primary leadership perspectives, focusing on how each framework links individual leadership to organizational outcomes. The second objective involves student self-assessment of strengths and weaknesses in relation to the abilities and skills that are predictive of leadership effectiveness. The third goal of the course is to enable participants to articulate an effective strategic plan for individual leadership development. Course topics include perspectives on individual leadership effectiveness, leadership and motivation, developing subordinates, leading groups and teams, leading the resolution of conflict, and leading organizational change.
Credit 3 units.
Typical periods offered: Spring

OB 4660 Leadership in the Trenches
The course design is based on the idea that effective leadership development combines three elements: (a) a challenging leadership experience, (b) developmental feedback from coaching, and (c) formal instruction. For the experiential component, the course partners with the Center for Experiential Learning and targets those students who have been selected as practicum team leaders. Similar to leading a team in a consulting firm, these team leaders must manage, organize, and motivate team members, manage the relationship with the client to guide expectations and delivery, and work with the faculty advisor and the CEL. Team leaders spend an average 5-10 hours per week throughout the semester.
Credit 1.5 units.
Typical periods offered: Fall

OB 4685 Mindfulness and Performance in the Workplace
Most major companies in the world are not single-business operations but portfolios of businesses spanning multiple locations. Single business firms today ultimately become multi-business firms to sustain their growth as they exhaust opportunity in existing markets. This course provides tools, frameworks and processes that help you understand the unique opportunities and challenges for firms spanning multiple products, business units, and geographic locations.
Credit 1.5 units.
Typical periods offered: Fall, Spring

OB 4720 Defining Moments: Lessons in Leadership and Character From the Top
Most successful leaders can point to a handful of defining moments in their careers - key choice points that defined the trajectory of their character, their career, and/or their company. How can aspiring business leaders prepare themselves to face these defining moments with insight and integrity? How do leaders achieve business performance without sacrificing character or integrity? This course examines these questions by learning from notable leaders who exemplify both business excellence and personal character. Top executives from leading companies will sit down with us to talk about their defining moments and to engage with us in considering these questions. These conversations will be supplemented with contemporary cases and readings on leadership and character.
Credit 1.5 units.
Typical periods offered: Spring

Supply Chain, Operations, and Technology

SCOT 2850 Operations Consulting via Experiential Projects
This course offers an in-depth exploration into leading and managing corporate consulting projects, with a special focus on mostly data driven, analytic challenges within complex supply chain and operational settings. Utilizing real-world data from Boeing Center member companies, students will learn the intricacies of team management, client engagement, problem formulation, critical thinking and data-driven problem-solving. Expected outcome is to make informed decisions and provide actionable solutions for complex operational challenges, and also communicate them effectively to the client. Various pedagogical techniques and methodologies will be used to maximize learning impact (e.g., group presentations, videos, readings, and coaching for client presentations). This course is designed for undergraduate students interested in management consulting, with a special interest in supply chain analytics and operational excellence projects.
Credit 3 units.
Typical periods offered: Fall, Spring

SCOT 3150 Operations and Manufacturing Management
Introduces a variety of common operations issues that are frequently dealt with in both manufacturing and service industries and that affect other functions of the business as well. Topics: inventory systems, process design and control, quality, facility location and layout, and forecasting.
Credit 3 units.
Typical periods offered: Fall, Spring

SCOT 4300 Operations Fun: Data-Driven Optimization
The intent of this course of this course is to present a comprehensive look into the practical appeal of linear and integer programming. Each unit will focus on a particular class of optimization problems, and include a data-driven case study revolving around a real-world application. The topics of these case studies run the gamut from fantasy football line-up selection to Amazon delivery truck routing to picking the perfect McDonald's order. DAT 3015 or CS 1301 strongly recommended.
Credit 3 units.
Typical periods offered: Fall

SCOT 4580 Operations Analytics
Examines the concepts and techniques essential for effective operations planning, scheduling, and control in various manufacturing and service organizations. Discusses the use of various models for inventory control, forecasting, production planning, and operations scheduling. Just-in-time techniques and material requirements planning systems will also be discussed.
Credit 3 units.
Typical periods offered: Spring

Degree Requirements

The Bachelor of Science in Business Administration degree is awarded to students by recommendation of the faculty. Standards established by the faculty for recommendation are as follows:

1. Satisfactory completion of requirements regarding required and elective courses, accumulation of a minimum of 120 credits of coursework, and satisfactory fulfillment of other requirements established in accordance with the rules and regulations of the Olin Business School.
2. Completion of the last 30 credits in residence at Washington University for entering first-year students. Transfer students must complete a minimum of 60 credits in residence at Washington University.
3. Students must earn a minimum 2.0 overall grade-point average and a 2.0 GPA in all professional coursework taken at Olin Business School.
4. Students must be recommended by Olin Business School faculty for degree confirmation by the Board of Trustees.

Regulations

1. Students must complete a minimum of 120 credits, including 48 credits outside of Olin Business School and 60 credits from within the Olin Business School. Students who substitute a non-business course for a business requirement will still be required to enroll in another business course, as a minimum of 60 credits must be earned in Olin Business School.
2. BSBA students may earn a maximum of two majors to include two professional majors or one professional major and one major outside of Olin Business School.
3. BSBA students may earn one or two minors, depending on the number of majors they pursue. The options are two majors and one minor or one major and two minors.

4. BSBA students may enroll in one physical education course per semester.
5. BSBA students may transfer up to 6 credits per summer toward their BSBA degree requirements. Olin Business School does not accept any online course work for transfer credit (exceptions were granted for Summer 2020 and 2021).
6. BSBA students must complete 54 of the 60 professional credits in residence. Course work taken as part of an approved Washington University international program will satisfy this residency policy.
7. BSBA students must complete all professional courses for each business major in residence. Course work taken as part of an approved Washington University international program will satisfy this residency policy.
8. BSBA students may double count only one course between two business majors. For example, if a BSBA student is majoring in both Marketing and Entrepreneurship, they could not count MKT 3780 Marketing Research and MKT 4820 Brand Management toward both majors.
9. ROTC credits numbered 3000 or above will count toward the student's 120 credits required for graduation. These credits may count toward the advanced non-business requirements if the course is taken for a grade.
10. Students are obligated to complete the requirements and adhere to the policies in place at the time of matriculation into the BSBA program. However, faculty has and reserves the right to make changes to degree requirements, policies, and procedures — including modifying or adding new requirements, policies, and procedures — at any time.
11. For more policies, visit the Academic Regulations page (p. 1051) of this *Bulletin.*

General Requirements (a minimum of 48 credits)

Each student must complete a minimum of 48 credits outside of Olin Business School to include the following specific requirements:

1. College Writing (3 credits): Students must demonstrate proficiency in the reading and writing of the English language by satisfactorily completing one College Writing Program themed writing course with a grade of C– or better.
2. Calculus (3-6 credits): Students must complete MATH 1510 Calculus I and MATH 1520 Calculus II or other calculus courses approved by the Olin Business School.
3. Distribution Requirements (18 credits): Students must complete 3 credits of physical and life sciences, 3 credits of humanities, 6 credits of international studies, 3 credits of behavioral analysis, and 3 credits of ethics and values. Approved course selections are available in the university's course listings.
4. Advanced Electives (12 credits): Students must complete at least 12 graded credits of advanced coursework. Advanced electives are defined as any course numbered 3000 or higher that is offered as any day division course (excluding Olin courses). Advanced electives may also satisfy a distribution requirement.

Professional Requirements (a minimum of 60 credits)

Core Requirements (42 credits)

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
ACCT 2620	Principles of Managerial Accounting	3
DAT 1200	Managerial Statistics I	3
DAT 1201	Managerial Statistics II	3
FIN 3150	Capital Markets and Financial Management	3
MEC 2900	Microeconomics	3
MEC 2920	Global Economy	3
MGT 1000	Individual in a Managerial Environment	3
MGT 1500	Foundations of Business	2
MGT 2010	Management Communication	4
MKT 3150	Principles of Marketing	3
OB 3150	Organization Behavior Within the Firm	3
SCOT 2000	Quantitative Business Decision Making	3
SCOT 3150	Operations and Manufacturing Management	3
Total Units		**42**

* Transfer students entering Olin Business School must take MGT 1000 Individual in a Managerial Environment or MGT 3800 Business Strategy to satisfy this requirement.

Professional Electives (a minimum of 18 credits)

Professional electives are non-required business courses offered by Olin Business School that may or may not lead toward a specific business major. Additional information about the specific requirements for each business major is available on the Olin Business School Majors page (p. 1031).

Experiential Learning Degree Requirement (3 credits)

Beginning with the Class of 2029, all BSBA degree students are required to complete 3 credits of experiential coursework. Experiential learning immerses students in real-world scenarios that mirror the complexity and ambiguity of modern business. Unlike case-based or simulated learning, this hands-on approach bridges the gap between theory and practice, preparing students for dynamic, evolving industries.

With guidance from their four-year advisors, students will explore experiential learning opportunities that align with their purpose, discipline, career goals, and/or industry focus while also meeting their degree requirements. The following courses satisfy the experiential learning degree requirement. Experiential learning credits cannot be applied to major or minor requirements.

Courses

Code	Title	Units
FIN 4024	Venture Capital Practice (formerly FIN 400X)	1.5
FIN 4026	Private Equity Practice (formerly FIN 400M)	1.5
INTL 3230	Business of Art: The European Capitals of Culture (formerly INTL 323)	3
INTL 4200	Business Research Internship (formerly INTL 420)	3
MGT 2002	ISBA: Venture Creation (formerly MGT 200C)	3
MGT 3501	European Study Tour (formerly MGT 450Z)	1.5
MGT 4101	CELect (STL, Domestic, & INTL) (formerly MGT 401C)	3
MGT 4103	CEL Practicum (formerly MGT 401P)	3
MGT 4104	Small Business Initiative (formerly MGT 401S)	3
MGT 4105	Taylor Community Consulting (formerly MGT 401T)	3
MGT 4504	Honors Thesis - Research (formerly MGT 450D)	3
MGT 4505	Honors Thesis - Writing and Presentation (formerly MGT 450E)	3
MGT 4990	CEL Experiential Learning	.75
MGT 4991	CEL Experiential Learning	1.5
MGT 4992	CEL Experiential Learning	3
MKT 4315	Marketing Metrics (formerly MKT 431E)	1.5
SCOT 2850	Operations Consulting via Experiential Projects	3

Global Mindset Component (1.5-3 credits)

For the BSBA class of 2025-2028, the Global Mindset component for the undergraduate BSBA degree is designed to support the Olin Pillars of providing world-changing business education, research, and impact. Through a Global Mindset experience, students will have the opportunity to expand their intellectual curiosity, gain confidence in their ability to make decisions under pressure, and enhance their leadership advantage in a rapidly changing global society. Students will be able to satisfy the Global Mindset component of their degree through a variety of experiences that expose them to new academic and professional ideas, peoples, cultures, and philosophies. This could be done through an Olin-approved study abroad program or with a carefully curated set of experiences completed on campus and in the St. Louis community, including INTL 3500 Glocal Learning, a 1.5-credit course.

Electives (credits will vary)

Students must take enough electives to earn the minimum of 120 credits.

Typical Four-Year Curriculum for a BSBA Student

Typically, students must earn 30 credits per year to stay on target with a four-year graduation plan and to earn the 120 minimum credits required.

First Year

Fall	Units	Spring	Units
MGT 1000 Individual in a Managerial Environment	3	MEC 2900 Microeconomics	3
MGT 1500 Foundations of Business	2	Electives	6
MATH 1510 or higher*	3	DAT 1200 Managerial Statistics I	3
English Composition**	3	MATH 1520 or elective	3
Electives	3-6		

Sophomore Year

Core/ Professional requirements	6-12	Core/ Professional requirements	6-12
Electives	3-9	Electives	3-9

Senior Year

Fall	Units	Spring	Units
Professional electives	6	Professional electives	6
Electives	9	Electives	9

* Students may enroll in a higher level of calculus if their academic preparation suggests a different level of calculus would be appropriate.

** BSBA students are assigned to enroll in their College Writing Program course in either the fall or spring semester of their first year. Some students may start at a different level of English preparation and may take their writing course as late as sophomore year.

Academic Honors & Awards

Scholars in Business Program: The Scholars in Business program allows alumni, corporations and friends of Olin Business School to provide scholarship funds to students of high academic promise who require financial support to attend the university. Students are considered for this award when they apply for financial aid in the fall of each year. Donors and students meet each other at an annual Scholars in Business event.

Dean's List: Dean's List honors are awarded to undergraduates who have completed a minimum of 14 graded units and achieved a semester grade-point average of 3.6 or above. No Incomplete or N grades may be outstanding as part of the student's semester record.

Beta Gamma Sigma Honor Society: The top 7% of the junior class and the top 10% of the senior class will be considered for membership in Beta Gamma Sigma, provided that the student's cumulative GPA is in the top 7% or top 10% of their respective graduating class. A student's cumulative GPA will include their coursework at Washington University as well as any coursework taken out of residence. The student must have completed a minimum of 30 units at Washington University to be eligible.

Latin Honors: Graduating seniors in the top 5% of the class, based on overall university academic records, graduate summa cum laude. Seniors in the top 6% to 15% of the class graduate magna cum laude. These designations are recorded on the official university transcripts. All candidates for the BSBA degree in August, December or May will be considered as one group for purposes of final honors. Honors are determined in May for all graduates.

Honors in Management: The Honors in Management (HIM) Seminar is a two-semester sequence course that gives students the opportunity to work with senior-level faculty in a specialized format. In the fall semester, the HIM course will be team taught with various faculty members. For the spring semester, students will form teams to develop substantial research projects under the direction of one of the participating faculty for the remainder of the academic year. HIM students must successfully complete both MGT 4980 and MGT 4981 in order to receive the Honors in Management designation at graduation.

Honors Thesis: The Olin BSBA Honors Thesis challenges students to move beyond traditional coursework and apply critical thinking skills to an academic business thesis. The Honors Thesis is a two-semester sequence in which the student engages in research and analysis during the first semester; with successful progress, the student writes, presents and defends their research during the subsequent semester. Students must apply and be approved to participate in this experience. All applicants must be senior BSBA degree students in good standing with a cumulative GPA of 3.7 or above.

Academic Regulations

Code of Conduct

The Olin Business School is a community of individuals with diverse backgrounds and interests who share certain fundamental goals. Primary among these goals is the creation and maintenance of an atmosphere conducive to learning and personal growth for everyone in the community. Becoming a member of the Olin and Washington University community is a privilege that brings certain responsibilities and expectations. It is imperative that all individuals associated with Olin and Washington University conduct themselves with the utmost integrity in all aspects of their lives, both on and off campus.

- Learn more about **Olin's Code of Conduct** by reviewing the Olin Undergraduate Policies site.
- The **Academic Integrity Policy for Undergraduate Students** can be found on the Provost's website.
- The **University Conduct Code** can be found on the Student Conduct & Community Standards website.

Attendance

Olin Business School allows each instructor of a course to decide how many absences the student may have and still pass the course. The Olin Business School expects faculty to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their instructors the reasons for any absences and to discuss with them the possibility of making up missed assignments.

Enrollment

BSBA students must be enrolled in a minimum of 12 credits to a maximum of 21 credits each semester. Olin undergraduates will be assessed a full-time tuition charge for their course of study through eight semesters of enrollment.

Credits and Grades

Credits (often called "units" at WashU) are assigned to courses based on measures of time in class and academic activities and engagement between instructors and students, as defined in university policy (p. 25). Grade points per course are calculated by multiplying the number of units of a course by the grade points earned. The Undergraduate Study page (p. 36) details the grades and grade points in use.

Auditing a Course

A student may take a maximum of one course per semester on a Pass/No Pass/Audit basis. Students may not audit a business course. However, a student may take non-business courses for audit with the approval of the professor. An audited course does not count toward the student's degree requirements. A grade of L indicates the satisfactory completion of an audit; unsatisfactory completion results in a grade of Z. Fees for auditing a course are assessed at the same rate as for all other courses.

Pass/No Pass Option

A student may take a maximum of one course per semester on a Pass/No Pass/Audit basis. A grade of Pass indicates that credit has been awarded but the work was not subject to finer evaluation. The following policies are in effect starting Fall 2021. Courses taken previously will not retroactively be changed.

- All Olin professional, major, and minor courses must be taken for a letter grade. This includes any non-BU courses counting toward Olin's professional coursework (i.e., ECON 1502 Introduction to Macroeconomics as a substitute for MEC 2920 Global Economy). For second majors and minors outside of Olin, students should speak with their second major or non-Olin minor advisor.
- Olin courses taken Pass/No Pass cannot count toward the 60 required business credits. However, they will count toward the 120 credits required for graduation.
- A maximum of 6 Olin credits may be taken as Pass/No Pass after a student has completed six full-time semesters of enrollment or if the student is in their senior year.
- Pass/No Pass cannot be used for MATH 1510 Calculus I, MATH 1520 Calculus II, College Writing, or the Ethics and Values distribution requirement.
- A maximum of 9 credits of distribution or advanced electives can be taken Pass/No Pass. The Pass/No Pass course may only count toward one requirement. In other words, a single Pass/No Pass course cannot be double counted toward a distribution and an advanced elective.
- Not all courses have the Pass/No Pass option.

Incomplete Grades

A student may be given an I (incomplete) when extenuating circumstances preclude the satisfactory completion of course work during the semester in which a particular course is taken. While an incomplete grade is sometimes appropriate, a student should make every effort to avoid the accumulation of incomplete grades. Incomplete grades are expected to be finished. Failure to finish an incomplete grade within 120 days of the semester's grades due date will result in a failing grade.

Grade Appeals

Course grade appeals must be made within 120 days following the official end of the semester in which the course occurred. The official end of each semester is available on the website of the University Registrar and should align with deadline date for course grades to be uploaded. Appeals after 120 days will only be allowed in extenuating circumstances and will require approval from the Vice Dean of Education.

Repeating or Retaking a Course

Most courses are designed to be completed once, and credit may only be earned once. A student may retake such a course if a higher grade is required (e.g., if the initial final grade is below that required to apply to major requirements). Students may not register themselves for another instance of a course in which the initial final grade is a B or higher, an Incomplete, a successful Audit, or a Pass. For a student retaking a course, credit is only given once; both grades earned remain on the record, but only the higher grade is used to compute the grade point average. An R notation is added to identify the retaken course.

Course Conflicts

Per University Policy, students may not enroll in courses with any time conflict. Exceptions will only be made in the most extraordinary of circumstances. Any and all exceptions must be approved by the Office of the Provost and the student's home school. Questions should be answered by reviewing the University Policy.

Minimum and Maximum Course Loads

Olin Business School students are required to enroll in a minimum of 12 credits to a maximum of 21 credits each semester at Washington University. For more information, please visit the Undergraduate Study (p. 36) page of this *Bulletin.*

Academic Standing

Olin students are expected to maintain a high level of scholarship during their time at Washington University. Approximately three weeks after the end of a semester, the Academic Review Committee reviews the record of each enrolled student. Students must attain and maintain a minimum 2.0 GPA in their professional (business), semester, and cumulative GPAs to be in good academic standing. In addition, students must be making progress to complete their professional requirements within a reasonable time period. Failure to achieve minimum standards may result in the student's academic records being reviewed for academic action.

To learn more about academic standing, please review the University's policies (p. 36).

Satisfactory Academic Progress for Title IV Federal Financial Aid

The minimum GPA requirements needed to maintain eligibility for Satisfactory Academic Progress are dictated by the specific program of study. In each case, per the requirements of 34 C.F.R. 668.34(a)(4(ii), the federal student aid program requires a minimum of a C average to maintain eligibility for aid, but an individual degree or certificate program may have a higher minimum GPA for federal Satisfactory Academic Progress. Olin Business School requires a minimum 2.0 cumulative GPA for Satisfactory Academic Progress. (Additional information about Satisfactory Academic Progress is available from Student Financial Services.)

Time Away: Leave of Absence or Withdrawal

Olin undergraduate students who need to take time away from their studies, whether a temporary leave or a withdrawal, must formally request to do so. This helps ensure enrollments, grades, accounts, and statuses are updated properly. For students requesting a temporary leave, this process helps maintain academic continuity and ensures that students have the necessary resources when planning their return. Please review the Office of the University Registrar's website for additional information.

Transfer Credit

The Olin School expects that all degree requirement courses be taken at Washington University. However, students who are enrolled at Olin and wish to receive transfer credit for course work taken at another institution may request course approval. Transfer course approval must be received prior to the start of the transfer course. General guidelines are as follows:

- A grade of a C or better must be earned for all transfer credit to be accepted (including course work taken through a Washington University–approved study abroad program).
- The Olin School expects that all business courses will be taken at Washington University. Under certain circumstances, permission may be granted for a student to take a business course from another university with accreditation from the Association to Advance Collegiate Schools of Business (AACSB) International. For consideration to be given, a syllabus showing the text used must be submitted.
- All business major and minor course work must be taken in residence. Although major and minor course work can be taken through an approved study abroad program, only one course will be counted for each major and minor.
- The institution must meet accreditation requirements.
- A syllabus for each course must be submitted with the request for review.
- No credit will be granted for course work taken online through another university.
- 54 of the 60 Olin professional credits must be taken in residence.
- A maximum of 6 credits may be taken during a summer program from another university.
- Credit will not be given for course work taken at another institution during a student's last 30 credits.
- No course work may be taken at a two-year institution after a student has accumulated 60 credit of work.
- No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Conduct Code or Academic Integrity policy.
- No transfer credit will be accepted for courses taken while a student is on a leave of absence.

School of Continuing & Professional Studies Courses

Courses taken through the School of Continuing & Professional Studies will not count toward the 120 credits needed for the BSBA degree nor toward the student's GPA.

Pre-Matriculation Credits

Pre-matriculation credits are earned before the student's enrollment at Washington University as a first-year student. These credits would include Advanced Placement (AP) examinations, International Baccalaureate (IB) programs, British Advanced (A) Levels, and college credit earned after the student's sophomore year in high school. These credits will be noted on the student's transcript. The maximum number of pre-matriculation credits awarded is 15. These pre-matriculation credits will transfer as general elective course work and will not satisfy any distribution requirements. If a student takes a course in residence for which they have already received AP credit, the AP credit will be removed automatically. All BSBA students and second majors will be required to take DAT 1200 Managerial Statistics I, even when AP credit is earned for SDS 2020 Elementary Probability and Statistics.

Olin Undergraduate Student Handbook

The Olin Undergraduate Student Handbook includes general academic policies and procedures for the undergraduate programs of the Olin Business School at Washington University. Please read and refer to the handbook to answer any questions about the undergraduate business program. If a student has questions about the interpretation of the policies and procedures or topics that are not in the handbook, they should consult their academic advisor.

Administration

Michael Mazzeo, PhD
Dean of Olin Business School
PhD, Stanford University

Paige LaRose
Senior Associate Dean of Undergraduate Programs

For more information about Olin's leadership, please visit Olin Business School Leadership.

Majors (directory)

BSBA students may select a major from the following disciplines:

- Accounting, BSBA (p. 1054)
- Economics and Strategy, BSBA (p. 1054)
- Entrepreneurship, BSBA (p. 1054)
- Finance, BSBA (p. 1055)
- Health Care Management, BSBA (p. 1056)
- Marketing, BSBA (p. 1056)
- Organization and Strategic Management, BSBA (p. 1057)
- Supply Chain, Operations, and Technology, BSBA (p. 1057)

The following is offered as a Second Major only for BSBA students:

- Financial Engineering (p. 1055)

Non-BSBA students may select a second major from the following disciplines:

Please review the non-BSBA second major regulations (p. 1032) for additional information.

- Second Major in Accounting (p. 1057)
- Second Major in Economics and Strategy (p. 1058)
- Second Major in Entrepreneurship (p. 1058)
- Second Major in Finance (p. 1059)
- Second Major in Financial Engineering (p. 1059)
- Second Major in Health Care Management (p. 1060)
- Second Major in Marketing (p. 1060)
- Second Major in Organization and Strategic Management (p. 1061)
- Second Major in Supply Chain, Operations, and Technology (p. 1061)

Accounting, BSBA

Total credits required: 12

- Accounting Core: 3 credits

Code	Title	Units
ACCT 3610	Intermediate Financial Accounting I: Finance-Related Topics	3

Financial Engineering, Second Major for BSBA Students

The financial engineering major is offered only as a second major option. Therefore, students in the BSBA program must select another business major in order to be eligible to pursue this major. Students must have a 3.3 or higher grade point average to pursue this second major; this includes the cumulative GPA, the Business GPA, and the Engineering GPA.

Total credits required: 30 required credits and 15 credits of prerequisite coursework

- Background Requirements: 15 credits

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
DAT 1201	Managerial Statistics II	3
or ECON 3150	Introduction to Econometrics	
or ECON 4150	Introduction to Econometrics With Writing	
or ESE 3260	Probability and Statistics for Engineering	
or SDS 4010	Probability	
or SDS 4130	Linear Statistical Models	
MATH 2130	Calculus III	3
MATH 2500	Differential Equations	3
or ESE 2170	Differential Equations and DynamicalSystems Modeling in Engineering	
or MATH 3520	Differential Equations and DynamicalSystems	

MATH 3300	Matrix Algebra	3
or ESE 2180	Linear Algebra and Component Analysis	
or MATH 4301	Linear Algebra	
Total Units		**15**

Engineering Professional Requirements (15 credits)

- Engineering Professional Core Requirements: 6 credits minimum

Code	Title	Units
ESE 4150	Optimization	3
ESE 4170	Introduction to Machine Learning and Pattern Classification	3
or CSE 4107	Introduction to Machine Learning	
ESE 4261	Statistical Methods for Data Analysis With Applications to Financial Engineering	3
ESE 4270	Financial Mathematics * **	3

- Engineering Electives:

Code	Title	Units
CSE 2407	Data Structures and Algorithms	3
ESE 4031	Optimization for Engineered Planning, Decisions and Operations	3
ESE 5130	Large-Scale Optimization for Data Science	3
ESE 5200	Probability and Stochastic Processes	3

Olin Professional Requirements (15 credits)

- Olin Professional Core Requirements: 9 credits

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
FIN 3150	Capital Markets and Financial Management	3
FIN 4410	Investments	3
Total Units		**9**

- Olin Electives: 6 credits required

Code	Title	Units
FIN 4370	Advanced Derivative Securities	3
FIN 4506	Financial Technology: Methods and Practice	3
FIN 4510	Options, Futures and Derivative Securities * **	3
FIN 5017	Quantitative Risk Management	3
FIN 5018	Topics in Quantitative Finance	3
FIN 5321	Data Analysis for Investments	3
FIN 5390	Mathematical Finance	3
FIN 5520	Fixed Income Derivatives	3

* ESE 4270 Financial Mathematics must be taken after FIN 3150 Capital Markets and Financial Management and can be used to satisfy the FIN 4510 Options, Futures and Derivative Securities prerequisite of Olin Elective courses.

** FIN 4510 Options, Futures and Derivative Securities, ESE 4270 Financial Mathematics, or both must be taken to complete the second major.

Health Care Management, BSBA

Total credits required: 15

- Health Care Management Core: 12 credits

Code	Title	Units

Marketing, BSBA

Total credits required: 12

- Marketing Core: 3 credits

Code	Title	Units
MKT 3780	Marketing Research	3
Total Units		**3**

- Marketing Electives: 9 credits

Group A Marketing Elective Choices (at least 6 credits required):

Code	Title	Units
MKT 3770	Consumer Behavior	3
MKT 4001	Digital Marketing and Analytics	3
MKT 4003	Understanding and Conducting Business Experiments	3
MKT 4700	Pricing Strategies	3
MKT 4800	Marketing Strategy	3
MKT 4820	Brand Management	3

Group B Marketing Elective Choices:

Code	Title	Units
MKT 3810	Inclusive Marketing	1.5
MKT 4000	Elements of Sales: Tools and Techniques	3
MKT 4002	Business & Marketing Innovation	3
MKT 4004	Sports Marketing	3
MKT 4095	Entrepreneurship Marketing Models	1.5
MKT 4315	Marketing Metrics	1.5
MKT 4770	International Marketing	3
MKT 4810	Advertising and Promotions	3

Organization and Strategic Management, BSBA

Total credits required: 12 credits

- Organization & Strategic Management Group A Elective Choices (at least 3 credits required):

Code	Title	Units
OB 4002	Women in Leadership	1.5
OB 4300	Thinking Creatively and Leading Creative Teams	1.5
OB 4610	Negotiation	3
OB 4620	Leadership in Organizations	3
OB 4685	Mindfulness and Performance in the Workplace	1.5
OB 4720	Defining Moments: Lessons in Leadership and Character From the Top	1.5

- Organization & Strategic Management Group B Elective Choices (at least 3 credits required):

Code	Title	Units
MGT 3800	Business Strategy	3
MGT 4020	Ethical Issues in Managerial Decision Making	1.5
MGT 4290	Management and Corporate Responsibility	1.5
MGT 4510	Business & Government: Understanding and Influencing the Regulatory Environment	3
MGT 4601	Corporate and Global Strategy	3

- Organization & Strategic Management Group C Elective Choices (recommended for HR/HR consulting):

Code	Title	Units
MGT 4605	Ownership Insights: The Competitive Advantage of Family and Employee Owned Firms	1.5
OB 3250	Human Resources Management	3
OB 4340	Talent Analytics	1.5
OB 4350	People Metrics	1.5

Supply Chain, Operations, and Technology, BSBA

Total credits required: 12 credits

- Group A SCOT Elective Choices (at least 6 credits required):

Code	Title	Units
DAT 3015	Data Analytics in Python	3
SCOT 3800	Supply Chain Management	3
SCOT 4300	Operations Fun: Data-Driven Optimization	3
SCOT 4505	Generative Artificial Intelligence	3
SCOT 4580	Operations Analytics	3

- Group B SCOT Elective Choices (at least 3 credits required):

Code	Title	Units
MGT 3800	Business Strategy	3
MGT 4601	Corporate & Global Strategy	3
MKT 3780	Marketing Research	3
MKT 4003	Understanding and Conducting Business Experiments	3

Second Major in Accounting

Total credits required: 12

- Accounting Core: 3 credits

Code	Title	Units
ACCT 3610	Intermediate Financial Accounting I: Finance-related topics	3

- Accounting Electives: 9 credits

Code	Title	Units
ACCT 3620	Intermediate Financial Accounting II	3
ACCT 3650	Taxation of Business Entities	3
ACCT 3660	Carbon Accounting	1.5
ACCT 4003	Not-For-Profit Accounting	1.5
ACCT 4013	Ethics I	1.5
ACCT 4014	Ethics II *	1.5
ACCT 4550	Accounting Policy and Research *	3
ACCT 4640	Auditing *	3
ACCT 4660	Financial Statement Analysis	3
ACCT 4670	Taxation of Individuals	3
ACCT 4680	M&A Accounting	3
ACCT 4755	International Taxation	1.5
ACCT 4756	Advanced International Taxation *	1.5

* Additional prerequisites are required to take this elective.

Second Major in Economics and Strategy

Total credits required: 12

- Economics and Strategy Core: 12 credits

Code	Title	Units
MEC 3700	Game Theory for Business *	3
MEC 4100	Research in Industry Analysis	3
MEC 4700	Industrial Economics	3
MEC 4710	Empirical Techniques for Industry Analysis	3
Total Units		**12**

* MEC 2900 Microeconomics or ECON 4001 Intermediate Microeconomic Theory must be taken prior to MEC 3700. ECON 1501 will not satisfy the prerequisite requirement for MEC 3700 Game Theory for Business.

Second Major in Entrepreneurship

Total credits required: 15

- Entrepreneurship Core: 6 credits

Code	Title	Units
MGT 4210	Introduction to Entrepreneurship	
or MGT 4603	Introduction to Social Entrepreneurship	
or MGT 1065	The Endgame for Entrepreneurship: Leveraging Capitalism for Good	
or BEYOND 1005	The Endgame for Entrepreneurship: Leveraging Capitalism for Good	
MGT 4240	Business Planning for New Enterprises (The Hatchery)	
or MGT 4775	Launching and Scaling New Enterprises (The League)	

- Entrepreneurship Electives: Choose at least one course from two of the three following tracks for a total of 9 elective credits:

Industry Elective Choices:

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
ECON 3210	Money and Banking	3
FASHION 2410	Business of Fashion	3
FIN 5400	Special Topics: Real Estate Finance *	1.5
INTL 3200	Business, Innovation, and Entrepreneurship in Israel *	3
MEC 3630	Olin Grand Rounds: The Business and Practice of Medicine	3
MEC 4600	Economics of Entertainment	3
MGT 3800	Business Strategy	3
MGT 4400	Sports Management	3
MGT 4755	Innovating for Defense	3
MGT 4765	Innovating for Healthcare *	1.5
MKT 3150	Principles of Marketing	3

Experiential Elective Choices:

Code	Title	Units
INTL 0970	Entrepreneurship and Startups in Europe *	3
MGT 2002	Venture Creation	3
MGT 4101	CEL Entrepreneurial Consulting Team *	3
MGT 4103	CEL Practicum *	3
MGT 4104	Small Business Initiative *	3
MGT 4105	Taylor Community Consulting Project *	3

Skills Elective Choices:

Code	Title	Units
ACCT 4660	Financial Statement Analysis *	3
CSE 2004	Web Development *	3
CSE 3300	Rapid Prototype Development & Creative Programming *	3
CSE 4308	Mobile Application Development *	3
FIN 4025	Private Equity Methods *	1.5
FIN 4026	Private Equity Practice *	1.5

MEC 3700	Game Theory for Business	3
MEC 4700	Industrial Economics *	3
MGT 3010	Legal Environment of Business Management	3
MGT 4455	Entrepreneurship Through Acquisition	1.5
MKT 3780	Marketing Research *	3
MKT 4000	Elements of Sales: Tools and Techniques *	3
MKT 4002	Business & Marketing Innovation *	3
MKT 4095	Entrepreneurship Marketing Methods	1.5
MKT 4315	Marketing Metrics	1.5
MKT 4820	Brand Management *	3
OB 4610	Negotiation *	3

* Application or additional prerequisites are required to take this elective. Please consult the prerequisites in Workday.

Second Major in Finance

Total credits required: 15

- Finance Core: 12 credits

Code	Title	Units
FIN 3150	Capital Markets and Financial Management	3
FIN 4410	Investments	3
FIN 4480	Advanced Financial Management	3
FIN 4510	Options, Futures and Derivative Securities	3
Total Units		**12**

- Finance Electives: 3 credits

Code	Title	Units
FIN 3175	Banking and Financial Institutions	3
FIN 4010	Advanced Valuation	1.5
FIN 4023	Venture Capital Methods	1.5
FIN 4024	Venture Capital Practice	1.5
FIN 4025	Private Equity Methods	1.5
FIN 4026	Private Equity Practice	1.5
FIN 4232	Mergers & Acquisitions	1.5
FIN 4280	Investment Praxis	3
FIN 4370	Advanced Derivative Securities	3
FIN 4400	Real Estate Finance	1.5
FIN 4430	International Finance	3
FIN 4506	Financial Technology: Methods and Practice	3
FIN 4601	Research Methods in Finance	3

Second Major in Financial Engineering

Financial engineering in a shared major between the McKelvey School of Engineering and Olin Business School. A second major in financial engineering is ideal for students who are interested in careers or graduate study in financial engineering, quantitative finance, or related fields. This program covers courses in engineering, computer science, and business. Students interested in this second major must have a 3.3 or higher grade point average; this includes the cumulative GPA, the Business GPA, and the Engineering GPA. The financial engineering major is offered to any undergraduate day division student as a second major option.

Financial Engineering Requirements

Total credits required: 30 required credits and 15 credits of prerequisite coursework

- Background Requirements: 15 credits

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
DAT 1201	Managerial Statistics II	3
or ECON 3150	Introduction to Econometrics	
or ECON 4150	Introduction to Econometrics With Writing	
or ESE 3260	Probability and Statistics for Engineering	
or SDS 4010	Probability	
or SDS 4130	Linear Statistical Models	
MATH 2130	Calculus III	3
MATH 2500	Differential Equations	3
or ESE 2170	Differential Equations and Dynamical Systems Modeling in Engineering	
or MATH 3520	Differential Equations and Dynamical Systems	
MATH 3300	Matrix Algebra	3
or ESE 2180	Linear Algebra and Component Analysis	
or MATH 4301	Linear Algebra	
Total Units		**15**

Engineering Professional Requirements (15 credits)

- Engineering Professional Core Requirements: 6 credits minimum

Code	Title	Units
ESE 4150	Optimization	3
ESE 4170	Introduction to Machine Learning and Pattern Classification	3
or CSE 4107	Introduction to Machine Learning	
ESE 4261	Statistical Methods for Data Analysis With Applications to Financial Engineering	3
ESE 4270	Financial Mathematics * **	3

- Engineering Electives:

Code	Title	Units
CSE 2407	Data Structures and Algorithms	3
ESE 4031	Optimization for Engineered Planning, Decisions and Operations	3
ESE 5130	Large-Scale Optimization for Data Science	3
ESE 5200	Probability and Stochastic Processes	3

Olin Professional Requirements (15 credits)

- Olin Professional Core Requirements: 9 credits

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
FIN 3150	Capital Markets and Financial Management	3
FIN 4410	Investments	3
Total Units		**9**

- Olin Electives: 6 credits required

Code	Title	Units
FIN 4370	Advanced Derivative Securities	3
FIN 4506	Financial Technology: Methods and Practice	3
FIN 4510	Options, Futures and Derivative Securities * **	3
FIN 5017	Quantitative Risk Management	3
FIN 5018	Topics in Quantitative Finance	1.5
FIN 5321	Data Analysis for Investments	1.5
FIN 5390	Mathematical Finance	1.5
FIN 5520	Fixed Income Derivatives	1.5

* ESE 4270 Financial Mathematics must be taken after FIN 3150 Capital Markets and Financial Management and can be used to satisfy the FIN 4510 Options, Futures and Derivative Securities prerequisite of Olin Elective courses.

** FIN 4510 Options, Futures and Derivative Securities, ESE 4270 Financial Mathematics, or both must be taken to complete the second major.

Second Major in Health Care Management

Total credits required: 15

- Health Care Management Core: 12 credits

Code	Title	Units
MEC 3210	Health Economics and Policy	3
MEC 3220	Health Care Management	3
MEC 3630	Olin Grand Rounds: The Business and Practice of Medicine	3
MEC 4660	Research in Health Care Management	3
Total Units		**12**

- Health Care Management Electives: 3 credits

Code	Title	Units
ANTHRO 3136	The Second Wave of the Pandemic: Science & Society	3
ANTHRO 3263	Bioprospecting	3
ANTHRO 3283	Introduction to Global Health	3
ANTHRO 3310	Health, Healing, and Ethics: Intro. To Medical Anthropology	3
ANTHRO 3626	Adventures in Nosology: The Nature & Meaning of Disease	3
ANTHRO 3875	Pharmaceutical Personhood	3
ANTHRO 4134	The AIDS Epidemic: Inequalities, Ethnography, & Ethics	3
ANTHRO 4883	The Political Economy of Health	3
BIOL 1210	Ampersand: The Science of Biotechnology	3
LATAM 3160	Cultures of Health in Latin America	3
MEC 3550	Health Insurance	3
MEC 3551	Drugs and Devices	3
PHIL 2060	Biomedical Ethics	3
PHIL 3000	Philosophy of Medicine	3
WGSS 3081	From Hysteria to Hysterectomy: Women's Healthcare in America	3
WGSS 3155	Feminist Health Studies	3

Second Major in Marketing

Total credits required: 15

- Marketing Core: 6 credits

Code	Title	Units
MKT 3150	Principles of Marketing	3
MKT 3780	Marketing Research	3
Total Units		**6**

- Marketing Electives: 9 credits

Group A Elective Choices (at least 6 credits *required):*

Code	Title	Units
MKT 3770	Consumer Behavior	3
MKT 4001	Digital Marketing and Analytics	3
MKT 4003	Understanding and Conducting Business Experiments	3
MKT 4700	Pricing Strategies	3
MKT 4800	Marketing Strategy	3
MKT 4820	Brand Management	3

Group B Elective Choices:

Code	Title	Units
MKT 3810	Inclusive Marketing	1.5
MKT 4000	Elements of Sales: Tools and Techniques	3
MKT 4002	Business & Marketing Innovation	3
MKT 4004	Sports Marketing	3
MKT 4095	Entrepreneurship Marketing Models	1.5
MKT 4315	Marketing Metrics	1.5
MKT 4770	International Marketing	3
MKT 4810	Advertising and Promotions	3

Second Major in Organization and Strategic Management

Total credits required: 15

- Organization and Strategic Management Core Requirement: 3 credits

Code	Title	Units
OB 3150	Organization Behavior Within the Firm	3
Total Units		**3**

- Organization and Strategic Management Electives: 12 credits

Leadership Group A Elective Choices (at least 3 credits *required):*

Code	Title	Units
OB 4002	Women in Leadership	1.5
OB 4300	Thinking Creatively and Leading Creative Teams	1.5
OB 4610	Negotiation	3
OB 4620	Leadership in Organizations	3
OB 4685	Mindfulness and Performance in the Workplace	1.5
OB 4720	Defining Moments: Lessons in Leadership and Character From the Top	1.5

Organization and Strategic Management Group B Elective Choices (at least 3 credits *required):*

Code	Title	Units
MGT 3800	Business Strategy	3
MGT 4020	Ethical Issues in Managerial Decision Making *	1.5
MGT 4290	Management and Corporate Responsibility	1.5
MGT 4510	Business & Government: Understanding and Influencing the Regulatory Environment	3
MGT 4601	Corporate and Global Strategy	3

Organization and Strategic Management Group C Elective Choices (recommended for HR/HR consulting):

Code	Title	Units
MGT 4605	Ownership Insights: The Competitive Advantage of Family and Employee Owned Firms	1.5
OB 3250	Human Resources Management *	3
OB 4340	Talent Analytics *	1.5
OB 4350	People Metrics *	1.5

* Additional prerequisites are required to take this elective.

Second Major in Supply Chain, Operations, and Technology

Total credits required: 15 credits

- SCOT Core: 6 credits

Code	Title	Units
SCOT 2000	Quantitative Business Decision Making	3
SCOT 3150	Operations and Manufacturing Management	3
Total Units		**6**

- SCOT Electives: 9 credits minimum with at least 6 credits from Group A

SCOT Group A Elective Choices (at least 6 credits *required):*

Code	Title	Units
DAT 3015	Data Analytics in Python	3
SCOT 3800	Supply Chain Management	3
SCOT 4300	Operations Fun: Data-Driven Optimization	3
SCOT 4505	Generative Artificial Intelligence	
SCOT 4580	Operations Analytics	3

SCOT Group B Elective Choices:

Code	Title	Units
MGT 3800	Business Strategy	3
MGT 4601	Corporate & Global Strategy	3
MKT 3780	Marketing Research *	3
MKT 4003	Understanding and Conducting Business Experiments	3

* Additional prerequisites are required to take this elective. Consult Course Listings for the prerequisites.

Minors (directory)

BSBA students may select a minor from the following disciplines:

12 unique credits of coursework are required for BSBA students pursuing a minor.

- Business Analytics Minor (p. 1062)
- Business of Entertainment Minor (p. 1063)
- Business of Social Impact Minor (p. 1064)
- Business of Sports Minor (p. 1065)
- Business of the Arts Minor (p. 1066)

Non-BSBA degree students may select a minor from the following disciplines:

Please review the non-BSBA minor regulations (p. 1033) for additional information.

- Accounting Minor (Non-BSBA) (p. 1062)
- Business Analytics Minor (Non-BSBA) (p. 1063)
- Business of Entertainment Minor (Non-BSBA) (p. 1064)
- Business of Social Impact Minor (Non-BSBA) (p. 1065)
- Business of Sports Minor (Non-BSBA) (p. 1066)
- Business of the Arts Minor (Non-BSBA) (p. 1066)
- Entrepreneurship Minor (Non-BSBA) (p. 1067)
- Finance Minor (Non-BSBA) (p. 1068)
- Health Care Management Minor (Non-BSBA) (p. 1068)
- Managerial Economics Minor (Non-BSBA) (p. 1068)
- Marketing Minor (Non-BSBA) (p. 1069)
- Organization and Strategic Management Minor (Non-BSBA) (p. 1069)
- Strategy Minor (Non-BSBA) (p. 1070)
- Supply Chain, Operations, and Technology Minor (Non-BSBA) (p. 1070)

Accounting Minor (Non-BSBA)

Prerequisites:

- Calculus II: MATH 1520 Calculus II
- Microeconomics: MEC 2900 Microeconomics, ECON 1501 Introduction to Microeconomics, or ECON 4001 Intermediate Microeconomic Theory
- Statistics I: DAT 1200 Managerial Statistics I, ESE 3260 Probability and Statistics for Engineering, POLSCI 2400 Data Science for Politics, POLSCI 3630 Quantitative Political Methodology, SDS 2020 Elementary Probability and Statistics, or SDS 3020 Elementary to Intermediate Statistics and Data Analysis (AP credit for SDS 2020 [2200] will fulfill this prerequisite).

Total credits required: 15 credits

- Required Courses:

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
ACCT 2620	Principles of Managerial Accounting	3
ACCT 3610	Intermediate Financial Accounting I: Finance-related topics	3
Total Units		**9**

- Accounting Electives (at least 6 credits required):

Code	Title	Units
ACCT 3620	Intermediate Financial Accounting II	3
ACCT 3650	Taxation of Business Entities	3
ACCT 3660	Carbon Accounting	1.5
ACCT 4003	Not-For-Profit Accounting	1.5
ACCT 4013	Ethics I	1.5
ACCT 4014	Ethics II *	1.5
ACCT 4550	Accounting Policy and Research *	3
ACCT 4640	Auditing *	3
ACCT 4660	Financial Statement Analysis	3
ACCT 4670	Taxation of Individuals	3
ACCT 4680	M&A Accounting	3
ACCT 4755	International Taxation	1.5
ACCT 4756	Advanced International Taxation *	1.5

* Additional prerequisites are required to take this elective.

Business Analytics Minor

Total credits required: 15 credit**s** (12 must be unique)

- Required Courses:

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
DAT 3015	Data Analytics in Python	3
DAT 4001	Data Management for Business Decisions	3
Total Units		**9**

- Business Analytics Group A Electives (at least 3 credits required):

Code	Title	Units
FIN 4601	Research Methods in Finance	3
MEC 4710	Empirical Techniques for Industry Analysis	3
MKT 4003	Understanding & Conducting Business Experiments	3

- Business Analytics Group B Electives:

Code	Title	Units
DAT 4550	Machine Learning Tools for Prediction of Business Outcomes	3
FIN 4506	Financial Technology: Methods and Practice	3
MGT 4602	Sports Business Analytics	3
MKT 3780	Marketing Research	3
MKT 5002	Customer Analytics	3
OB 4340	Talent Analytics	1.5
OB 4350	People Metrics	1.5
SCOT 4300	Operations Fun: Data-Driven Optimization	3
SCOT 4580	Operations Analytics	3

Business Analytics Minor (Non-BSBA)

Prerequisites:

- Calculus II: MATH 1520 Calculus II
- Financial Accounting: ACCT 2610 Principles of Financial Accounting
- Microeconomics: MEC 2900 Microeconomics, ECON 1501 Introduction to Microeconomics, or ECON 4001 Intermediate Microeconomic Theory.
- Statistics I: DAT 1200 Managerial Statistics I, ESE 3260 Probability and Statistics for Engineering, POLSCI 2400 Data Science for Politics, POLSCI 3630 Quantitative Political Methodology, SDS 2020 Elementary Probability and Statistics, or SDS 3020 Elementary to Intermediate Statistics and Data Analysis (AP credit for SDS 2020 [2200] will fulfill this prerequisite).
- Statistics II: DAT 1201 Managerial Statistics II, ECON 3150 Introduction to Econometrics, ECON 4150 Introduction to Econometrics With Writing, SDS 4010 Probability, or SDS 4130 Linear Statistical Models.
- Modeling: SCOT 2000 Quantitative Business Decision Making

Total credits required: 15 credits

- Required Courses:

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
DAT 3015	Data Analytics in Python	3
DAT 4001	Data Management for Business Decisions	3
Total Units		**9**

- Business Analytics Group A Electives (at least 3 credits required):

Code	Title	Units
FIN 4601	Research Methods in Finance *	3
MEC 4710	Empirical Techniques for Industry Analysis *	3
MKT 4003	Understanding & Conducting Business Experiments	3

- Business Analytics Group B Electives:

Code	Title	Units
DAT 4550	Machine Learning Tools for Prediction of Business Outcomes *	3
FIN 4506	Financial Technology: Methods and Practice *	3
MGT 4602	Sports Business Analytics	3
MKT 3780	Marketing Research *	3
MKT 5002	Customer Analytics	3
OB 4340	Talent Analytics *	1.5
OB 4350	People Metrics *	1.5
SCOT 4300	Operations Fun: Data-Driven Optimization	3
SCOT 4580	Operations Analytics *	3

* Additional prerequisites are required to take this elective.

Business of Entertainment Minor

Total credits required: 12 credits

- Required Courses (3 credits):

Code	Title	Units
MEC 4600	Economics of Entertainment	3
Total Units		**3**

- Entertainment Group A Electives (at least 3 credits required):

Code	Title	Units
FILM 3490	Media Cultures	3
FILM 2200	Introduction to Film Studies	3
FILM 2250	Making Movies *	3
FILM 3330	Making Movies II: Intermediate Narrative Filmmaking *	3
FILM 4230	Histories of Media Convergence	3
MEC 3150	Business of Luxury Hospitality	3

- Entertainment Group B Electives (at least 3 credits required):

Code	Title	Units
FIN 4480	Advanced Financial Management	3
MEC 4710	Empirical Techniques for Industry Analysis	3
MGT 3010	Legal Environment of Business Management	3
MGT 4325	Business Management of Arts Organizations	3
MKT 3780	Marketing Research	3
MKT 4820	Brand Management	3

* Additional prerequisites are required to take this elective. Please review the prerequisites on Workday.

Business of Entertainment Minor (Non-BSBA)

Prerequisites:

- Calculus II: MATH 1520 Calculus II
- Statistics I: DAT 1200 Managerial Statistics I, ESE 3260 Probability and Statistics for Engineering, POLSCI 2400 Data Science for Politics, POLSCI 3630 Quantitative Political Methodology, SDS 2020 Elementary Probability and Statistics, or SDS 3020 Elementary to Intermediate Statistics and Data Analysis (AP credit for SDS 2020 [2200] will fulfill this prerequisite).

Note: Non-BSBA students must take a minimum of 12 credits in Olin Business School to earn the business of entertainment minor.

Total credits required: 15 credits

- Required Courses:

Code	Title	Units
MEC 2900	Microeconomics	3
or ECON 4001	Intermediate Microeconomic Theory	
MEC 4600	Economics of Entertainment	3
MKT 3150	Principles of Marketing	3
Total Units		**9**

- Entertainment Group A Electives (at least 3 credits required):

Code	Title	Units
FILM 3490	Media Cultures	3
FILM 2200	Introduction to Film Studies	3
FILM 2250	Making Movies *	3
FILM 3330	Making Movies II: Intermediate Narrative Filmmaking *	3
FILM 4230	Histories of Media Convergence	3
MEC 3150	Business of Luxury Hospitality	3

- Entertainment Group B Electives (at least 3 credits required):

Code	Title	Units
FIN 4480	Advanced Financial Management *	3
MEC 4710	Empirical Techniques for Industry Analysis *	3
MGT 3010	Legal Environment of Business Management	3
MGT 4325	Business Management of Arts Organizations *	3
MKT 3780	Marketing Research *	3
MKT 4820	Brand Management *	3

* Additional prerequisites are required to take this elective.

Business of Social Impact Minor

Total credits required: 12 credits

- Required Courses:

Code	Title	Units
MGT 4604	Business of Social Impact	1.5
OB 4720	Defining Moments: Lessons in Leadership and Character From the Top	1.5
Total Units		**3**

- Business of Social Impact Group A Electives (at least 3 credits required):

Code	Title	Units
MGT 4104	Small Business Initiative	3
MGT 4105	Taylor Community Consulting Project	3

- Business of Social Impact Group B Electives (at least 3 credits required):

Code	Title	Units
ACCT 3660	Carbon Accounting	1.5
ACCT 4003	Not-For-Profit Accounting	1.5
MGT 4020	Ethical Issues in Managerial Decision Making	1.5
MGT 4510	Business & Government: Understanding & Influencing the Regulatory Environment	3
MGT 4603	Introduction to Social Entrepreneurship	3

- Business of Social Impact Group C Electives (at least 3 credits required):

Code	Title	Units
ARCH 3404	Community Building	3
ARCH 4504	Explore & Contribute: Collaboration Between Washington University & Henry Elementary School	3

BEYOND 1001	Earth's Future: Causes and Consequences of Global Climate Change	3
EEPS 1530	Introduction to Global Climate Change in the 21st Century	3

Business of Social Impact Minor (Non-BSBA)

Total credits required: 15 credits

- Required Courses:

Code	Title	Units
MGT 1000	Individual in a Managerial Environment *	3
or MGT 2001	Business Fundamentals for Non-Business Students	
or MGT 3800	Business Strategy * **	
MGT 4604	Business of Social Impact	1.5
OB 4720	Defining Moments: Lessons in Leadership and Character From the Top	1.5
Total Units		**6**

- Business of Social Impact Group A Electives (at least 3 credits required):

Code	Title	Units
MGT 4104	Small Business Initiative **	3
MGT 4105	Taylor Community Consulting Project **	3

- Business of Social Impact Group B Electives (at least 3 credits required):

Code	Title	Units
ACCT 3660	Carbon Accounting **	1.5
ACCT 4003	Not-For-Profit Accounting **	1.5
MGT 4020	Ethical Issues in Managerial Decision Making **	1.5
MGT 4510	Business & Government: Understanding & Influencing the Regulatory Environment	3
MGT 4603	Introduction to Social Entrepreneurship	3

- Business of Social Impact Group C Electives (at least 3 credits required):

Code	Title	Units
ARCH 3404	Community Building	3
ARCH 4504	Explore & Contribute: Collaboration Between Washington University & Henry Elementary School	3
BEYOND 1001	Earth's Future: Causes and Consequences of Global Climate Change	3
EEPS 1530	Introduction to Global Climate Change in the 21st Century	3
EEPS 2000	Introduction to Earth, Environmental, and Planetary Science	3
EEPS 2190	Energy and the Environment	3
ENST 2520	Sustainability in Business	3
ENST 3520	Ecological Economics	3
ENST 3610	Urban Ecology	3
POLSCI 2000	Introduction to Environmental Policy	3
POLSCI 3328	Energy Politics	3
SOC 3190	Gender in Society	3
URST 2000	The Study of Cities and Metropolitan America	3

* MGT 1000 is recommended for students in their first or sophomore year. Juniors and seniors should take MGT 3800. Please note that MGT 3800 requires MEC 2900 or ECON 4001 as a prerequisite.

** Application or additional prerequisites are required to take this elective.

Business of Sports Minor

Total required credits: 12

- Required Courses: 6 credits

Code	Title	Units
MGT 4400	Sports Management	3
MGT 4500	The Business of Sports	3
Total Units		**6**

- Group A Electives (3 credits):

Code	Title	Units
MGT 3565	Sports Entrepreneurship and Emerging Technologies	1.5
MGT 4602	Sports Business Analytics	3
MGT 4610	Legal Issues in Sports	1.5
MKT 4004	Sports Marketing	3

- Group B Electives:

Code	Title	Units
DAT 4550	Machine Learning Tools for Prediction of Business Outcomes	3
MEC 4600	Economics of Entertainment	3
MKT 3780	Marketing Research	3
MKT 4000	Elements of Sales: Tools and Techniques	3
MKT 4820	Brand Management	3

Business of Sports Minor (Non-BSBA)

Prerequisites:

- Calculus II: MATH 1520 Calculus II
- Microeconomics: MEC 2900 Microeconomics or ECON 4001 Intermediate Microeconomic Theory
- Statistics I: DAT 1200 Managerial Statistics I, ESE 3260 Probability and Statistics for Engineering, POLSCI 2400 Data Science for Politics, POLSCI 3630 Quantitative Political Methodology, SDS 2020 Elementary Probability and Statistics, or SDS 3020 Elementary to Intermediate Statistics and Data Analysis (AP credit for SDS 2020 [2200] will fulfill this prerequisite).
- Marketing: MKT 3150 Principles of Marketing

Total required credits: 15

- Required Courses: 6 credits

Code	Title	Units
MGT 4400	Sports Management	3
MGT 4500	The Business of Sports	3
Total Units		**6**

- Group A Electives (3 credits):

* Additional prerequisites or applications are required to take this elective.

Finance Minor (Non-BSBA)

Prerequisites:

- Calculus II: MATH 1520 Calculus II
- Microeconomics: MEC 2900 Microeconomics, ECON 1501 Introduction to Microeconomics, or ECON 4001 Intermediate Microeconomic Theory.
- Statistics I: DAT 1200 Managerial Statistics I, ESE 3260 Probability and Statistics for Engineering, POLSCI 2400 Data Science for Politics, POLSCI 3630 Quantitative Political Methodology, SDS 2020 Elementary Probability and Statistics, or SDS 3020 Elementary to Intermediate Statistics and Data Analysis (AP credit for SDS 2020 [2200] will fulfill this prerequisite).
- Statistics II: DAT 1201 Managerial Statistics II, ECON 3150 Introduction to Econometrics, ECON 4150 Introduction to Econometrics With Writing, SDS 4010 Probability, or SDS 4130 Linear Statistical Models.
  - Engineering students who have taken ESE 3260 Probability and Statistics for Engineering and who are majoring in finance will not be required to take DAT 1200 Managerial Statistics I or DAT 1201 Managerial Statistics II. However, DAT 1201 Managerial Statistics II must be taken if listed as a prerequisite for non-finance courses.

Total credits required: 15

- Required Courses (12 credits):

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
FIN 3150	Capital Markets and Financial Management	3
FIN 4410	Investments	3
FIN 4480	Advanced Financial Management	3
Total Units		**12**

- Finance Electives (3 credits)

Code	Title	Units
FIN 3175	Banking and Financial Institutions	3
FIN 4010	Advanced Valuation	1.5
FIN 4023	Venture Capital Methods	1.5
FIN 4024	Venture Capital Practice *	1.5
FIN 4025	Private Equity Methods	1.5
FIN 4026	Private Equity Practice *	1.5
FIN 4232	Mergers & Acquisitions	1.5
FIN 4280	Investment Praxis	3
FIN 4370	Advanced Derivative Securities *	3
FIN 4400	Real Estate Finance	1.5
FIN 4430	International Finance	3
FIN 4506	Financial Technology: Methods and Practice	3
FIN 4510	Options, Futures and Derivative Securities	3
FIN 4601	Research Methods in Finance	3

* Additional prerequisites or applications are required to take this elective.

Health Care Management Minor (Non-BSBA)

Prerequisites:

- Calculus II: MATH 1520 Calculus II
- Microeconomics: MEC 2900 Microeconomics, ECON 1501 Introduction to Microeconomics, or ECON 4001 Intermediate Microeconomic Theory.
- Statistics I: DAT 1200 Managerial Statistics I, ESE 3260 Probability and Statistics for Engineering, POLSCI 2400 Data Science for Politics, POLSCI 3630 Quantitative Political Methodology, SDS 2020 Elementary Probability and Statistics, or SDS 3020 Elementary to Intermediate Statistics and Data Analysis (AP credit for SDS 2020 [2200] will fulfill this prerequisite).

Total credits required: 15

- Required Courses:

Code	Title	Units
MEC 3630	Olin Grand Rounds: The Business and Practice of Medicine	3
MEC 3210	Health Economics and Policy	3
MEC 3220	Health Care Management	3
MEC 4660	Research in Health Care Management	3
MGT 1000	Individual in a Managerial Environment	3
Total Units		**15**

Managerial Economics Minor (Non-BSBA)

Prerequisites:

- Calculus II: MATH 1520 Calculus II
- Statistics I: DAT 1200 Managerial Statistics I, ESE 3260 Probability and Statistics for Engineering, POLSCI 2400 Data Science for Politics, POLSCI 3630 Quantitative Political Methodology, SDS 2020 Elementary Probability and Statistics, or SDS 3020 Elementary to Intermediate Statistics and Data Analysis (AP credit for SDS 2020 [2200] will fulfill this prerequisite).

- Statistics II: DAT 1201 Managerial Statistics II, ECON 3150 Introduction to Econometrics, ECON 4150 Introduction to Econometrics With Writing, SDS 4010 Probability, or SDS 4130 Linear Statistical Models.

Total credits required: 15

- Required Courses:

Code	Title	Units
MEC 2900	Microeconomics	3
MEC 3700	Game Theory for Business	3
MEC 4100	Research in Industry Analysis	3
MEC 4700	Industrial Economics	3
MEC 4710	Empirical Techniques for Industry Analysis	3
Total Units		**15**

Marketing Minor (Non-BSBA)

Prerequisites:

- Calculus I: MATH 1510 Calculus I
- Microeconomics: MEC 2900 Microeconomics, ECON 1501 Introduction to Microeconomics, or ECON 4001 Intermediate Microeconomic Theory.
- Statistics I: DAT 1200 Managerial Statistics I, ESE 3260 Probability and Statistics for Engineering, POLSCI 2400 Data Science for Politics, POLSCI 3630 Quantitative Political Methodology, SDS 2020 Elementary Probability and Statistics, or SDS 3020 Elementary to Intermediate Statistics and Data Analysis (AP credit for SDS 2020 [2200] will fulfill this prerequisite).

Total credits required: 15

- Required Courses:

Code	Title	Units
MKT 3150	Principles of Marketing	3
MKT 3250	Applied Marketing Research	3
or MKT 3780	Marketing Research *	
Total Units		**6**

- Electives (9 credits required):

Code	Title	Units
MKT 3770	Consumer Behavior	3
MKT 4000	Elements of Sales: Tools and Techniques	3
MKT 4001	Digital Marketing and Analytics	3
MKT 4002	Business & Marketing Innovation	3
MKT 4003	Understanding and Conducting Business Experiements	3
MKT 4004	Sports Marketing	3
MKT 4700	Pricing Strategies	3
MKT 4770	International Marketing	3
MKT 4800	Marketing Strategy **	3
MKT 4810	Advertising and Promotions	3
MKT 4820	Brand Management **	3

* The prerequisites for MKT 3780 are MKT 3150, MATH 1520, and completion or concurrent enrollment in DAT 1201.
** Additional prerequisites are required to take this elective.

Organization and Strategic Management Minor (Non-BSBA)

Prerequisites:

- Calculus II: MATH 1520 Calculus II
- Microeconomics: MEC 2900 Microeconomics, ECON 1501 Introduction to Microeconomics, or ECON 4001 Intermediate Microeconomic Theory.
- Statistics I: DAT 1200 Managerial Statistics I, ESE 3260 Probability and Statistics for Engineering, POLSCI 2400 Data Science for Politics, POLSCI 3630 Quantitative Political Methodology, SDS 2020 Elementary Probability and Statistics, or SDS 3020 Elementary to Intermediate Statistics and Data Analysis (AP credit for SDS 2020 [2200] will fulfill this prerequisite).

Total credits required: 15

- Required Courses (12 credits):

Code	Title	Units
MGT 1000	Individual in a Managerial Environment	3
OB 3150	Organization Behavior Within the Firm	3
OB 4610	Negotiation	3
OB 4620	Leadership in Organizations	3
Total Units		**12**

- Electives (at least 3 credits required):

Code	Title	Units
MGT 2010	Management Communication *	4
OB 4002	Women in Leadership	1.5
OB 4300	Thinking Creatively and Leading Creative Teams *	1.5
OB 4340	Talent Analytics*	1.5
OB 4350	People Metrics*	1.5
OB 4685	Mindfulness and Performance in the Workplace	1.5
OB 4720	Defining Moments: Lessons in Leadership and Character From the Top *	1.5

* Additional prerequisites are required to take this elective.

Strategy Minor (Non-BSBA)

Prerequisites:

- Calculus II: MATH 1520 Calculus II
- Microeconomics: MEC 2900 Microeconomics or ECON 4001 Intermediate Microeconomic Theory.
- Statistics I: DAT 1200 Managerial Statistics I, ESE 3260 Probability and Statistics for Engineering, POLSCI 2400 Data Science for Politics, POLSCI 3630 Quantitative Political Methodology, SDS 2020 Elementary Probability and Statistics, or SDS 3020 Elementary to Intermediate Statistics and Data Analysis (AP credit for SDS 2020 [2200] will fulfill this prerequisite).

Total credits required: 15

- Required Courses (6 credits):

Code	Title	Units
MGT 1000	Individual in a Managerial Environment	3
MGT 3800	Business Strategy	3
Total Units		**6**

- Electives (at least 9 credits required):

Code	Title	Units
MEC 3700	Game Theory for Business	
MGT 4020	Ethical Issues in Managerial Decision Making*	
MGT 4210	Introduction to Entrepreneurship	
MGT 4510	Business & Government: Understanding & Influencing the Regulatory Environment	
MGT 4601	Corporate and Global Strategy	
MKT 4800	Marketing Strategy*	
OB 4300	Thinking Creatively and Leading Creative Teams	
OB 4620	Leadership in Organizations*	

* Additional prerequisites are required to take this elective.

Supply Chain, Operations, and Technology Minor (Non-BSBA)

Prerequisites:

- Calculus II: MATH 1520 Calculus II
- Financial Accounting: ACCT 2610 Principles of Financial Accounting
- Microeconomics: MEC 2900 Microeconomics, ECON 1501 Introduction to Microeconomics, or ECON 4001 Intermediate Microeconomic Theory (MEC 4710 requires MEC 2900 or ECON 4001).
- Statistics I: DAT 1200 Managerial Statistics I, ESE 3260 Probability and Statistics for Engineering, POLSCI 2400 Data Science for Politics, POLSCI 3630 Quantitative Political Methodology, SDS 2020 Elementary Probability and Statistics, or SDS 3020 Elementary to Intermediate Statistics and Data Analysis (AP credit for SDS 2020 [2200] will fulfill this prerequisite).

Total credits required: 15

- Required Courses (9 credits):

Code	Title	Units
DAT 1201	Managerial Statistics II	3
SCOT 2000	Analytics and Modeling for Business Decisions	3
SCOT 3150	Operations and Manufacturing Management	3
Total Units		**9**

- SCOT Electives (at least 6 credits required):

Code	Title	Units
DAT 3015	Data Analytics in Python *	3
MKT 4003	Understanding and Conducting Business Experiments	3
SCOT 3800	Supply Chain Management	3
SCOT 4300	Operations Fun: Data-Driven Optimization	3
SCOT 4580	Operations Analytics	3

* Additional prerequisites are required to take this elective.

Engineering

Mission Statement

The mission of the McKelvey School of Engineering at Washington University in St. Louis is to promote independent inquiry in engineering research and education with an emphasis on scientific excellence, innovation and collaboration without boundaries.

WashU Engineers produce new knowledge that changes the world, and our faculty are educating students to explore and create in a world we cannot yet imagine. Through research and education, we are making a positive impact on the local community, the country and the world.

Undergraduate Degree Programs

The McKelvey School of Engineering offers four-year, full-time programs of instruction leading to bachelor of science degrees in the following fields: biomedical engineering, chemical engineering, electrical engineering, environmental engineering, mechanical engineering, and systems science and engineering.

In addition, the Department of Computer Science and Engineering offers bachelor of science degrees in computer engineering, computer science, computer science + math, computer science + economics, data science, and business and computer science. The Bachelor of Science in Business and Computer Science (p. 1104) is an integrated joint-degree program offered through the Olin Business School and the McKelvey School of Engineering. Students in this program will be equipped with the fundamental knowledge and perspectives of computer science and business and will have unique opportunities to converge these two disciplines.

If a student is interested in an academic program broadly based on the engineering sciences, the McKelvey School of Engineering offers the Bachelor of Science (BS) Major in Applied Science degree with several options, including chemical engineering, electrical engineering, mechanical engineering, and systems science & engineering. These degree options provide more flexibility for students who do not intend to become licensed engineers and want to select their coursework according to their personal educational objectives. For example, some students use this flexibility to gain technical background and training while pursuing or preparing for professional training in medicine, business or law. Although the flexibility exists to do so, it is not necessary to combine an applied science degree program with another major or degree. Students may also use this added flexibility to achieve a well-rounded undergraduate education by selecting courses from across the university while pursuing a degree in the McKelvey School of Engineering.

BS in Engineering (Individually Designed Major)

The requirements to be admitted to an individually designed major (IDM) are more stringent than those for our other engineering degree programs. The IDM will not be available to students when they first enter Washington University, so it will not be listed on the admissions application as an option.

Students applying for an IDM should meet the following requirements:

- Have already completed at least one semester at Washington University
- Apply before the beginning of the junior year
- Have at least a 3.5 cumulative grade-point average at Washington University and be maintaining good standing in the McKelvey School of Engineering
- Find an Engineering faculty member who will agree to serve as their IDM advisor (The student and advisor will design a plan of study that lists the courses that must be successfully completed to earn the IDM. That plan must include at least 42 engineering units of credit.)
- Satisfy all other general engineering degree requirements
- Present (with the help of their advisor) the plan to a standing engineering committee (normally the Engineering Undergraduate Studies Committee), which will then assess the proposed plan and approve or deny the request

Combined Majors and/or Multiple Degrees

Multiple Majors in Engineering

All undergraduate divisions at Washington University allow students to pursue majors and degrees in more than one division. The following options are available:

Second Degrees

A student in any undergraduate division of the university may be allowed by another division to pursue a second bachelor's degree. For this, the student must satisfactorily complete all of the degree requirements for *both* degrees in order to earn two diplomas. These requirements may include a residency requirement. For engineering majors, this residency requirement is described elsewhere on this page. In addition, the College of Arts & Sciences requires any student earning an AB degree and a bachelor's degree from another division to earn a minimum of 150 total units. If the additional residency and units requirement for a second degree are incompatible with a student's plan, then the student should consider a second major as a more convenient and equally viable alternative.

Second Majors

A student pursuing a bachelor's degree in engineering may also pursue second majors offered by other undergraduate divisions. There are six second majors offered by the McKelvey School of Engineering: computer science, computer science + mathematics, data science, electrical engineering science, financial engineering and systems science. In addition, there are second majors offered by the College of Arts & Sciences and Olin Business School. Students may declare a second major online via Workday up until the time they have applied for program completion. Upon completion of the requirements, the student's transcript will show an engineering degree and all earned second majors. Only one diploma is granted; no reference to the second major is noted on the diploma.

Minors

Undergraduate students are allowed to pursue minors offered by any undergraduate division of the university. A minor usually requires five to six courses. The minor program's home division sets the requirements for admission to and completion of the minor program. Students may declare a minor online via Workday up until the time they have applied for program completion. An engineering student who completes all of the requirements will have the award of the minor noted on the official transcript; no reference to the minor is noted on the diploma.

Residency Rule for Engineering Minors: No more than 6 units of credit transferred from another institution (outside of Washington University) can be used to meet the requirements of any minor offered by the McKelvey School of Engineering. The remaining units (up to the amount required for the minor) must be applicable units from Washington University. The review committee that oversees a minor has the authority to establish a more stringent residency rule.

Inter-School Transfers

Washington University embraces a student's opportunity to change academic majors, even across different undergraduate divisions on campus. Exploration and flexibility are attributes of an excellent undergraduate experience.

In order to ensure a proper background for success in the McKelvey School of Engineering, prior to an inter-school transfer request being accepted, students must do the following:

1. Complete at least one non-summer semester in residence at the Washington University Danforth Campus immediately prior to the requested semester of transfer.
2. Successfully complete a College Writing Program (CWP) course or an equivalent approved transfer course.
3. Complete at minimum MATH 1520 Calculus II with a grade of B or better.
4. Complete at least one 3-credit course within the intended major being pursued with a grade of B or better. (Additional requirements for majors in the Department of Computer Science & Engineering are given below.)
5. Achieve a cumulative grade-point average of 3.0 or higher and grades of B or better in math and science courses and courses taken in the McKelvey School of Engineering (some departments may require a higher GPA), with no outstanding incomplete (I) grades.
6. Demonstrate a high regard for academic integrity. (Students found to be in violation of the Academic Integrity Policy may be required to delay their entry for a specified time as determined by the transfer dean.)
7. Meet with the transfer dean or a four-year advisor in Engineering Undergraduate Student Services (303 Lopata Hall) to ensure that the curriculum plan is on track for progress toward graduation.
8. Understand that undergraduate McKelvey Engineering students may only enroll in a limited number of School of Continuing & Professional Studies courses that have been preapproved by the Engineering Undergraduate Studies Committee. (Refer to our policy on School of Continuing & Professional Studies courses (p. 1168) for more information.)
9. Be aware that changing majors may result in the need to complete one or more additional semesters to graduate.

These are the minimum requirements. Each student is evaluated on a case-by-case basis.

There are additional minimum requirements to complete for the following degree programs:

- **BS in Data Science, CS+Math, CS+Econ, and Computer Engineering**
  - Complete CSE 2407 Data Structures and Algorithms with a grade of B or better.
- **BS in Computer Science**
  - Complete CSE 1302 Introduction to Computer Engineering, CSE 2400 Logic and Discrete Mathematics, and CSE 2407 Data Structures and Algorithms with grades of B or better.
- **BS in Business and Computer Science**
  - Maintain a minimum GPA of 3.5 overall and in all business and computer science courses.
  - Complete a minimum of two business and two computer science core courses that are required as part of the BS in Business and Computer Science curriculum.
  - Demonstrate the ability to complete the degree in a timely manner.

Bachelor's/Master's Program in Engineering

This program provides students the opportunity to earn McKelvey master's degrees, including Sever master's degrees. Interested students are encouraged to discuss the program with faculty advisors by the end of their junior year in order to best develop a plan for their master's study.

Students must meet the admission requirements and application deadlines stipulated by McKelvey and the department of interest. A minimum 3.0 GPA is required for admission, but some programs may have higher GPA requirements. Each McKelvey department has the option to participate as well as to select which master's programs to offer students.

Scholarship support may be offered to students during their master's study. Financial policies and their related deadlines are established by the McKelvey Dean. Full-time student status is typically required to be eligible for scholarship support.

For more information, please visit the Bachelor's/Master's Program website.

McKelvey Undergraduates

The Bachelor's/Master's Program for current McKelvey undergraduate students normally takes one additional year to complete. When approved by the department, up to 6 units counted toward the undergraduate program requirements can be used to satisfy the graduate program requirements. However, at least 144 units must still be completed, and all stipulated degree requirements for all programs must be satisfied.

Undergraduate programs include all degree programs, second majors, and minors. Graduate programs include all master's degrees and graduate certificates. This means that the full undergraduate experience may only overlap with the full graduate experience by 6 units. All course sharing restrictions among undergraduate programs will still be enforced, and all restrictions among graduate programs will still be enforced.

To satisfy residency, McKelvey BS/MS students must complete a minimum of 84 applicable Washington University units. Students must also meet the minimum residency required by their graduate programs.

The cumulative GPA used to determine undergraduate final Latin honors will include all undergraduate and graduate coursework completed up until the time Latin honors are officially determined.

Non-McKelvey Undergraduates

Non-McKelvey Washington University undergraduate students (i.e., undergraduate students in Arts & Sciences, Olin, and Sam Fox) are also eligible to participate in the Bachelor's/Master's Program. These students earn a bachelor's degree from their non-McKelvey undergraduate school and complete a master's degree with McKelvey.

Admitted students are required to meet all application deadlines and admission requirements. They are limited to the course sharing between undergraduate program requirements and graduate program requirements outlined above and must meet the 144 units of required coursework. The minimum residency required by their graduate program must be satisfied.

Admitted students might take longer than one year to complete the requirements for a McKelvey master's degree. A reasonable number of required prerequisite courses as defined by the department may be taken while admitted to the master's program, but these courses will not be counted toward the McKelvey master's degree if they are courses not normally counted toward its requirements. Prerequisite courses will count in the student's GPA when determining probation/suspension eligibility and Satisfactory Academic Progress (SAP) standards.

Other Bachelor's/Master's Programs

These programs allow engineering undergraduates to earn master's degrees outside of the McKelvey School of Engineering. Students in these 3/2 programs will pay the standard full-time undergraduate tuition rate for the fourth year, except for those in the MBA program, which charges a premium above the undergraduate tuition rate. Students will receive financial aid for the fourth year based on their eligibility for undergraduate financial aid awards, including Pell grants.

There is no commitment for undergraduate financial aid beyond the fourth year of study; students in 3/2 programs may apply to the professional programs for graduate student financial aid for study in the professional program beyond the fourth year.

This policy applies to the current 3/2 programs involving bachelor's/master's programs in engineering, social work and business and to any future Washington University 3/2 programs.

BS/MBA Program

The McKelvey School of Engineering and the Olin Business School offer a five-year program leading to the Bachelor of Science engineering degree and the Master of Business Administration degree. The purpose of the program is to provide students with the opportunity to develop an educational background particularly in demand by industry.

Students should apply to this joint program by April 1 of their junior year. They must complete the application for admission to the Olin Business School, which is available through the business school. There is no GPA requirement, but students must take the Graduate Management Admission Test (GMAT). Registration materials for the test may be obtained through the business school. Applicants are judged on undergraduate performance, GMAT scores, summer and/or co-op work experience, recommendations and personal interviews.

The BS/MBA student's fourth-year curriculum is composed largely of business courses. The fifth-year curriculum is divided almost evenly between business and engineering courses. Because the merging of the two curricula results in very tight scheduling, it is possible that course overloads may be necessary to complete both programs in 10 semesters. Students are strongly urged to meet with their advisors to plan the remaining years of the program.

Dual Degree Program

The McKelvey School of Engineering offers a dual degree program with numerous affiliated liberal arts colleges and universities. Qualified students earn both a non-engineering baccalaureate from the first school and a Washington University bachelor's degree in engineering by attending the affiliated institution for three or four years, then completing the program with two years of concentrated engineering study at Washington University.

If students are enrolled at an affiliated institution, they may apply for admission to dual degree study under this program, provided they are recommended by an official representative of their college or university and will receive or have received the non-engineering baccalaureate. For more information, please visit the Dual Degree Program website.

Engineering Undergraduate Degree (Undergraduate Two-Year Option)

Students enter as undergraduate students and complete a liberal arts degree from their current school and an engineering undergraduate degree from Washington University. Participants are undergraduate students who commonly follow a 3/2 or a 4/2 schedule, entering Washington University after their junior or senior year. Please note that all students earning an undergraduate engineering degree are required to complete a minimum of 60 course units at Washington University.

Engineering Undergraduate and Graduate Degrees (Graduate Three-Year Option)

Students enter as graduate students and complete both a liberal arts degree from their current school and then an engineering undergraduate degree and engineering master's degree in three years at Washington University. The engineering master's degree and the undergraduate degree can be in different areas. Participants commonly follow a 3/3 or 4/3 schedule, entering Washington University after their junior or senior year. Please note that all students earning both an undergraduate and graduate degree are required to complete a minimum of 84 course units at Washington University and adhere to the Bachelor's/Master's policies outlined above. The GRE is not required for admission.

Study Abroad and International Experiences

Students in the McKelvey School of Engineering can study abroad in a number of countries and participate in several global experiences to help broaden their educational experience. These opportunities enable students to become global citizens who are better able to address current issues.

For information about these programs, please visit the McKelvey School of Engineering website.

Cooperative Education and Internships

The McKelvey School of Engineering offers two options for completing academically relevant work experience while remaining enrolled as a student. The Engineering Co-op and the Engineering Internship each allow McKelvey students to gain in-depth engineering experience while working alongside practicing engineers.

The Engineering Co-op and the Engineering Internship are available to students enrolled in degree-seeking programs housed in McKelvey. Students pursuing degrees outside of McKelvey — even those seeking second majors or minors within McKelvey — are not eligible to participate. Each experience has additional eligibility criteria as outlined on the below linked site. An application and departmental approval are required.

For more information about the Engineering Co-op and the Engineering Internship, please visit the Engineering Co-op and Engineering Internship website.

Pre-Medical Education

The McKelvey School of Engineering makes available, as options within its undergraduate degree programs, curricula that prepare students for entry into medical, dental or veterinary school while they pursue the undergraduate degree.

These curricula were formulated in recognition of the increasing importance in medicine of the methods and subject matter of the basic engineering sciences. The student who successfully completes one of the curricula will be well prepared for the study of medicine and will have, in addition, a solid background in engineering. Moreover, the student who decides not to go on to medical school will have an exceptionally wide selection of options, including not only those commonly open to the graduate in engineering but also those usually undertaken after graduate study in the life sciences. In accordance with the recommendations of the school's Pre-Medicine Committee, all curricula include — in addition to the normal degree requirements — the following courses:

- **Biology:** BIOL 2960, BIOL 2970
- **Biochemistry:** BIOL 4510
- **General Chemistry:** two semesters with lab
- **Organic Chemistry:** two semesters with lab
- **General Physics:** two semesters with lab
- **Psychology:** PSYCH 1000
- **Social Sciences:** one course related to health care access and disparities

Many medical schools have other assorted prerequisites, which can be found in the AMCAS Instruction Manual. Students may download the manual from the Association of American Medical Colleges (AAMC) website.

If students are interested in attending medical or dental school, they must consult and register with the Engineering Pre-Medicine Advisor before the end of their sophomore year. Engineering students should contact the pre-medical advisor in Engineering Undergraduate Student Services, Lopata Hall, Room 303.

There is extensive detailed information concerning the Medical College Admission Test, the choice of advanced biology or chemistry courses, and the choice of medical school that should be discussed prior to the beginning of the junior year. Students requesting a cover letter from the Pre-Medicine Committee must complete the Pre-Health Application Institutional Review (PIR) by April of the year in which they apply.

Engineering Summer School

The McKelvey School of Engineering offers a variety of engineering courses each summer. Class times are varied to accommodate both traditional daytime students and those with full- or part-time employment.

For more information, please visit the Engineering Summer School website.

If students are interested in enrolling in an engineering summer course, they can obtain further information in Lopata Hall, Room 303, or by phone at 314-935-6100.

Student Services

Engineering Undergraduate Student Services

Engineering Undergraduate Student Services, which is located in Lopata Hall, Room 303, has three main areas: Admissions, Advising Support, and Registrar. Our admissions officers work closely with the university Admissions Office to provide current and useful information to students and parents who are learning about our university, our community, and the opportunities available in the McKelvey School of Engineering. The advising staff has a comprehensive knowledge of all campus resources and can help with such items as tutoring, international studies, assistance with the registration process, and general advising. The registrar handles class scheduling, transfer and AP credit, course registration, graduation eligibility, and other student-records–related processes. Engineering Undergraduate Student Services serves all students, faculty and staff. For an appointment, call 314-935-6100.

Engineering Communication Center

The Engineering Communication Center offers all engineering students, faculty and postdocs free help with their engineering communication needs. The faculty who staff the center work with individuals to define audiences and purposes, develop and organize ideas, create effective graphics and page design, and sharpen self-editing skills. Help is offered for résumés and employment correspondence, proposals, formal reports, lab reports, graduate program application statements, and presentations. For an appointment, call 314-935-4902 or email the Engineering Communication Center (ecc@seas.wustl.edu).

WashU Center for Career Engagement

The WashU Center for Career Engagement helps engineering students prepare for a lifetime of career management by offering innovative approaches to help prepare them for a successful co-op experience, internship and job search. The WashU Center for Career Engagement offers a variety of services and resources for engineering undergraduate and graduate students.

Whether students are looking for a summer internship, a co-op experience, or a full-time job, the center is here to help with in-person and virtual advising, email coaching, drop-in hours and live chat. The WashU Center for Career Engagement offers a breadth of resources, including an online job, co-op and internship database; mentoring programs; special events; professional development workshops; résumé reviews; career fairs and on-campus interviews.

The WashU Center for Career Engagement offers one-on-one career guidance to students at any stage of their career-planning process. Students are encouraged to meet with a career advisor early in their academic career and at least once each year to build a relationship. To schedule an advising appointment, please visit the WashU Center for Career Engagement website.

- University of Missouri-St. Louis/Washington University Joint Undergraduate Engineering Program (p. 1160)

Biomedical Engineering

About Biomedical Engineering

Biomedical engineering is an interdisciplinary field in which the concepts, methods and techniques of engineering are applied to solving problems in biology and medicine. It applies quantitative, analytical and integrative methods from the molecular level to that of the whole organism to further our understanding of basic biological processes and to develop innovative approaches for the prevention, diagnosis and treatment of disease.

A student majoring in biomedical engineering will have the opportunity to participate in the world-class research activities of engineering and medical faculty in biomaterials, imaging, cardiovascular engineering, cell and tissue engineering, molecular cellular and systems engineering, neural engineering, regenerative engineering, and women's health technologies. All students in biomedical engineering are encouraged to join and be active in the Biomedical Engineering Society.

Mission Statement

The Department of Biomedical Engineering at Washington University in St. Louis (WashU BME) seeks to provide a first-class engineering education that prepares students for a variety of careers and a cutting-edge graduate program that advances knowledge and technology with the goal to improve human well-being.

Program Educational Objectives

Our overall educational objective is to prepare those receiving a bachelor's degree in biomedical engineering for a variety of career paths. To that end, our undergraduate curriculum is designed to provide technical proficiency and other professional skills so that our graduates will be able to:

- Pursue careers in the biomedical engineering industry or related fields
- Undertake advanced study (e.g., MS, PhD) in biomedical engineering or a related field
- Complete professional degrees (e.g., in medicine, dentistry, law)

Academic Programs

The Bachelor of Science in Biomedical Engineering (BS-BME) is designed to prepare graduates for the practice of engineering at a professional level. The BS in Biomedical Engineering program at Washington University in St. Louis is accredited by the Engineering Accreditation Commission of ABET, under the commission's General Criteria and Program Criteria for Biomedical Engineering.

The curriculum is structured around a basic core of 80 credits. In addition, a complementary set of courses totaling at least 40 credits completes the degree requirements.

To satisfy ABET requirements, all professional engineering curricula at the baccalaureate level must include the equivalent of one and one-half years of engineering topics, including engineering sciences and engineering design appropriate to biomedical engineering. The BS–BME degree at Washington University requires 47 credits of engineering topics. The basic core curriculum includes 32 engineering topics credits. Therefore, students pursuing a BS–BME degree will need 15 additional engineering topics credits beyond the basic core curriculum. They also may receive up to 6 credits of academic credit for a research or design project by BME 4000, BME 4001, BME 4002, or BME 4003 Independent Study. In addition, their course program must include sufficient laboratory experience to ensure competence in experimental design, data collection and data analysis. For more information regarding engineering topics credit requirements, please refer to the Undergraduate Curriculum webpage.

Bachelor's/Master's (BS/MS) Program in Engineering

This program provides undergraduate students the opportunity to earn a McKelvey master's degree by combining undergraduate and graduate studies in an integrated curriculum. Interested engineering students should discuss the program with their BME academic and Engineering Undergraduate Students Services advisors by the end of their junior year in order to best develop a plan for their senior year leading into their master's year. For McKelvey undergraduates, this program normally takes one additional year to complete. More information is available on the McKelvey undergraduate Bulletin page. (p. 1071)

Double Majors

An option available to students majoring in biomedical engineering is the double major, which leads to a second professional BS degree in one of the other engineering disciplines in four years. A BME degree in combination with a professional degree in one of the traditional engineering disciplines can be expected to enhance employment options in industry. Depending upon the second major chosen, total unit requirements may range from 140 to 148 (or less if the student enters with advanced placement credits). Hence, some summer work may be necessary in order to complete a double major within four academic years. To determine the specific requirements to be satisfied for both degrees, students are urged to consult with an advisor in the second department as early as possible.

Premedical Preparation

Training in BME is also excellent preparation for various professional schools, particularly medical schools. Many students complete their premedical requirements while obtaining their BME degrees. Premedical preparation is not a major; rather, it allows students to fulfill the requirements needed for entry to medical school. Further information can be obtained by visiting the Premedicine webpage and by contacting the McKelvey School of Engineering's Health Professions Advisor, Jessica Allen (jessicaa@wustl.edu).

Cooperative Experience

Cooperative experience is available to upper-level students at numerous life science/technology companies both in the St. Louis area and nationwide. This experience is particularly valuable for students who wish to enter industry. However, since most companies ask that students spend the equivalent of one semester and a summer participating in these experiences, it may be difficult to complete the degree requirements in eight semesters, unless students enter with sufficient advanced placement credits and/or take summer courses.

Please visit our website for the most current and up-to-date information.

Faculty

Chair

Lori A. Setton
Lucy and Stanley Lopata Distinguished Professor of Biomedical Engineering
PhD, Columbia University
Biomaterials for local drug delivery; tissue regenerations specific to the knee joints and spine

Endowed Professor

Rohit V. Pappu
Gene K. Beare Distinguished Professor of Biomedical Engineering
PhD, Tufts University
Macromolecular self assembly and function; computational biophysics

Professors

Dennis L. Barbour
MD, PhD, Johns Hopkins University
Application of novel machine learning tools to diagnose and treat disorders of perception and cognition

Cory Berkland
PhD, University of Illinois
Developing new therapeutics and biomaterials for improving human health

Hong Chen
PhD, University of Washington
Physical acoustics; therapeutic ultrasound and ultrasound imaging

Jianmin Cui
PhD, State University of New York–Stony Brook
Ion channels; channel structure-function relationship; biophysics

Song Hu
PhD, Washington University in St. Louis
Optical and photoacoustic technologies for high-resolution structural, functional, metabolic and molecular imaging in vivo

Daniel Moran
PhD, Arizona State University
Motor control; neural engineering; neuroprosthetics; movement biomechanics

Baranidharan Raman
PhD, Texas A&M University
Computational and systems neuroscience; neuromorphic engineering; pattern recognition; sensor-based machine olfaction

Jin-Yu Shao
PhD, Duke University
Cell mechanics; receptor and ligand interactions; molecular biomechanics

Jon Silva
PhD, Washington University
Ion channel biophysics

Yan Yu
Art Krieg Professor of Chemistry and of Biomedical Engineering
PhD, University of Illinois, Urbana-Champaign
Integrate nanotechnology and imaging techniques to study, detect, and manipulate the immune system and diseases

Chao Zhou
PhD, University of Pennsylvania
Optical coherence tomography

Quing Zhu
Edwin H. Murty Professor of Engineering
PhD, University of Pennsylvania
Biophotonics and multimodality ultrasound and optical imaging

Associate Professors

Abhinav Kumar Jha
PhD, University of Arizona
Development of computational-imaging solutions for diagnosing and treating diseases

Jai S. Rudra
PhD, Louisiana Tech University
Peptide-based biomaterials; immunoengineering; immunology of nanoscale aggregates; development of vaccines and immunotherapies

Kurt A. Thoroughman
PhD, Johns Hopkins University
Human motor control and motor learning; neural computation

Michael D. Vahey
PhD, Massachusetts Institute of Technology
Biophysical mechanisms of infectious disease; fluorescence microscopy; microfluidics

Assistant Professors

Yifan Dai
PhD, Case Western Reserve University
Decodes and encodes the physical chemistry of biological soft matter to understand biology and engineering precision medicine

Nate Huebsch
PhD, Harvard University
Cell-material Interactions, iPSC-based tissue modeling to study cardiac development and disease

Christine M. O'Brien
PhD, Vanderbilt University
Developing optical spectroscopy and imaging tools to solve global problems in maternal-fetal health and reproductive diseases

Alexandra Rutz
PhD, Northwestern University
Engineering of electronic tissues using materials design and fabrication-based approaches

Ismael Seáñez
PhD, California Institute of Technology
Neuro-rehabilitation tools and programs that promote active use of residual mobility and maximize recovery through the use of body-machine interfaces

Teaching Professor

Patricia Widder
MS, Washington University

Senior Lecturer

Katherine Schreiber
PhD, Saint Louis University

Professor of Practice

Joseph Klaesner
PhD, Vanderbilt University

Senior Professor

Larry Taber
PhD, Stanford University
Mechanics of growth and development; cardiac mechanics

Senior Emeritus Professors

Yoram Rudy
Fred Saigh Distinguished Professor of Engineering
PhD, Case Western Reserve University
Cardiac electrophysiology; modeling of the cardiac system

Frank Yin
MD, PhD, University of California, San Diego

Majors

- Bachelor of Science in Biomedical Engineering (p. 1081)

Minors

- Minor in Biomedical Data Science (p. 1082)

Courses

BME 1400 Introduction to Biomedical Engineering
An introduction to the vast and diverse field of biomedical engineering (BME), this very challenging course has two main purposes. One is to teach students -- via lectures, reading assignments, homework and exams, to think on their own, to solve problems and know how engineering principles are applied to the areas of bioelectricity, biomechanics, biomolecules, biotechnology and bioimaging. The second is to introduce students -- via guest lectures by school of medicine and engineering faculty, to some of the fascinating and challenging ongoing research in these areas. The course is challenging because students at this early stage, by and large, lack the knowledge base to understand either the engineering / biological aspects of the topical areas or the research being presented. Nevertheless, because future success depends on such, emphasis throughout is placed on developing self-learning as well as quantitative and analytical problem-solving skills, but at an appropriate level. By the end of the course it is hoped that students will have begun to acquire the skills and approaches necessary to succeed in the engineering curriculum as well as a much more in-depth and informed perspective of BME.
Credit 3 units.
Typical periods offered: Fall

BME 2200 Introduction to Biomedical Circuits
Electricity is central to normal and abnormal biological function, spanning scales from the subcellular to whole systems. Scientists and engineers also use electrical engineering to design and implement interaction with biological tissue, from classical physiological experiments to cutting-edge brain-computer interfaces. This course will begin the study of bioelectrical engineering by introducing simple electrical elements, circuits, amplifiers, and instrumentation. Relevant biological examples and computer modeling will be used throughout. The lab component will provide hands-on laboratory practice with simple electrical elements, circuits, amplifiers, instrumentation, and computer modeling, with a focus on biomedical applications. BME 220 fulfills the circuits requirement for BME students in place of ESE 230.
Credit 4 units.
Typical periods offered: Fall, Spring

BME 2201 Biomedical Circuits Laboratory
This course covers the lab portion only of E62 BME220. It is open only to those students who have completed an approved lecture-only circuits course and who need to fulfill the circuits lab requirement for the BS-BME degree.
Credit 1 unit.
Typical periods offered: Fall, Spring

BME 2310 Foundations of Biomedical Computing
This elective course provides a basis for solving problems in biomedical engineering through coding and computation. Coding structures applied to concepts in linear algebra, statistics, and probability are introduced as a foundation to more advanced biomedical data science applications in machine learning and artificial intelligence. The course is taught using Python; no prior knowledge of Python is expected or required. Students should be comfortable with high school level algebra and geometry. This course is required as prerequisite for BME440, Biomedical Data Science, and is a required course for the Biomedical Data Science minor.
Credit 3 units.
Typical periods offered: Spring

BME 2400 Biomechanics
Principles of static equilibrium and solid mechanics applied to the human anatomy and a variety of biological problems. Statics of rigid bodies with applications to the musculoskeletal system. Mechanics of deformable media (stress, strain; stretching, torsion, and bending) with introduction to nonlinear behavior, viscoelasticity, and growth in living tissue. Applications to cells, bone, muscle, arteries, the heart, and the cochlea.
Credit 3 units.
Typical periods offered: Fall, Spring

BME 2401 Biomechanics Laboratory
This course will consist of hands-on laboratory experiments in topics relevant to bioengineering mechanics such as statics of rigid bodies, viscoelasticity, and stress/strain analysis of biological materials. A focus of the course will be extending fundamental mechanical principles to biological applications through experimentation. The course is

designed to follow and enhance the material covered in BME 240. Additionally, students will have the opportunity to design their own experiments, explore topics of special interest, and present their findings.
Credit 1 unit.
Typical periods offered: Fall, Spring

BME 3010 Quantitative Physiology I
A course (lectures, recitation and supervised laboratory sections) designed to elaborate the physiological background necessary for advanced work in biomedical engineering. A quantitative model-oriented approach to physiological systems is stressed. Topics include bioinstrumentation, eye movement, muscle mechanics, action potentials, sensory systems, neuroprosthetics.
Credit 4 units.
Typical periods offered: Fall

BME 3015 Quantitative Physiology II
A course (lecture and supervised laboratory sessions) designed to elaborate the physiological background necessary for advanced work in biomedical engineering. A quantitative model-oriented approach to physiological systems is stressed. Topics include electrocardiography; heart contractility and molecular bases; cell signaling, pulse wave propagation in arteries; pulmonary function; renal function; imaging, and systems biology. immune system; drug delivery.
Credit 4 units.
Typical periods offered: Spring

BME 3200 Bioengineering Thermodynamics
This course covers the foundations of thermodynamics with strong emphasis on concepts and the translation of concepts. Topics to be covered include the first and second laws of thermodynamics, probabilistic descriptions of entropy, consequences of the first and second laws in ideal and non-ideal single- and multicomponent systems, free energies as descriptors of equilibria in laboratory and biological systems, chemical equilibria, phase equilibria, treatment of aqueous solvents and mixtures, colligative properties, thermodynamics of protein folding, and protein binding equilibria. The material, the lectures, and the homeworks emphasize learning that enables the translation of concepts into mathematical analysis. A strong background in differential calculus of multiple variables and differential equations (Math 217) is required. Emphasis is placed on regular homeworks and working in collaborative groups. The main textbook for the course will be Molecular Driving Forces: Statistical Thermodynamics in Chemistry and Biology, 2nd edition by Ken A. Dill and Sarina Bromberg published by Garland Science. The lectures and course notes will also draw on other sources including the classical book by Herbert Callen. A weekly recitation section will be offered. Students are strongly urged to attend lectures and the recitation section.
Credit 3 units.
Typical periods offered: Fall

BME 3290 Biothermodynamics in Practice
This course will include hands-on, laboratory experiments in topics relevant to bioengineering thermodynamics, such as heat transfer, relationships involving temperature and pressure, equilibria, mixing, and solution chemistry. A focus of the course will be extending fundamental scientific principles to biological applications. Students will have the opportunity to design their own experiments, explore topics of special interest, and present their findings.
Credit 3 units.
Typical periods offered: Spring

BME 3350 Molecular and Cellular Physiology
The overall goal of this course is to provide an understanding of the molecular basis of how eukaryotic cells function in the context of whole organisms. The molecular mechanisms of cell biology as they pertain to mammalian physiology will be explored. Emphasis is placed on the molecular mechanisms of gene expression, translation, cell cycle regulation, protein trafficking, signal transduction pathways, and metabolic regulation all in the context of human health and disease.
Credit 3 units.
Typical periods offered: Fall

BME 3660 Transport Phenomena in Biomedical Engineering
Many processes of importance in biology and medicine involve the transfer of mass, heat or momentum. Through the use of the differential control volume approach, the fundamental transport equations will be derived. Systematic derivation of differential equations appropriate for different types of transport problems will be explored. Solutions of the resulting differential equations for simple chemical/biological systems will then be sought. Macroscopic descriptions of fluid flow will be applied to the design of blood pumps for the heart. Unsteady mass transfer with diffusion, advection and chemical reactions will also be applied to the transport of proteins, metabolites and therapeutics throughout the body.
Credit 3 units.
Typical periods offered: Fall, Spring

BME 4000 Independent Study
Independent investigation on topic of special interest. This course has no engineering topics units. Approval of the BME Undergraduate Studies Committee is required for enrollment.
Credit 6 units.
Typical periods offered: Fall, Spring

BME 4001 Independent Study
Independent investigation on a topic of special interest. This course has 1 unit of engineering topics. The student and mentor must justify the number of engineering topic units being requested and the BME Undergraduate Studies Committee must approve the requested number of engineering topics. Approval of the BME Undergraduate Studies Committee is required for enrollment.
Credit 1 unit.
Typical periods offered: Fall, Spring

BME 4002 Independent Study
Independent investigation on a topic of special interest. This course has 2 units of engineering topics. The student and mentor must justify the number of engineering topic units being requested and the BME Undergraduate Studies Committee must approve the requested number of engineering topics. Approval of the BME Undergraduate Studies Committee is required for enrollment.
Credit 2 units.
Typical periods offered: Fall, Spring

BME 4003 Independent Study
Independent investigation on a topic of special interest. This course has 3 units of engineering topics. The student and mentor must justify the number of engineering topic units being requested and the BME Undergraduate Studies Committee must approve the requested number of engineering topics. Approval of the BME Undergraduate Studies Committee is required for enrollment.
Credit 3 units.
Typical periods offered: Fall, Spring

BME 4021 Biomedical Data Science Capstone Design
Previously described as BME 401DS. This course provides a client-centered design experience in biomedical data science. Students will work as individuals or in small teams with possible clients to define and scope an unmet need in biomedical data science. The students will work on an original solution or a redesign of an existing solution to address the unmet need. The design experience will involve application of knowledge and skills acquired in earlier coursework. It will also incorporate best practices in biomedical data science, including ethical considerations such as respect for persons, social license, and vulnerabilities; patient safety and privacy; and HIPAA compliance. Students will be guided through the design process and will produce and present appropriate deliverables for their project. This course is required for the Biomedical Data Science minor.
Credit 3 units.
Typical periods offered: Spring

BME 4062 Grand Challenges for Biomedical Engineering
National and international organizations, both historically and currently, use grand challenges to inspire transformative breakthroughs. Grand challenges can spark innovative solutions, across engineering, scientific, and medical mindsets. Challenges can focus on disease, intervention, technology, holistic health, or at-risk communities. This course will study grand challenges emerging from federal, nonprofit, academic, and global sources; analyze and model the problems and emergent solutions; and integrate over case studies to discern relative success of these approaches. Student teams will then formulate their own grand challenges, following the formalism of national organizations, and present frameworks for creative and transformative solutions.
Credit 3 units.
Typical periods offered: Fall

BME 4100 Service Learning Experience in Guangdong and Hong Kong
This pass/fail course is a 2-week international service-learning experience in conjunction with the faculty and students of our partner, Department of Biomedical Engineering at the Hong Kong Polytechnic University (PolyU). During the summer, students first attend an orientation at PolyU to learn about functional electrical stimulation (FES) and treating cerebral palsy with orthotic devices. The entire group then goes to a clinic in mainland China where they put into practice what they have learned, the former in patients who have suffered strokes and the latter in children with cerebral palsy - working in teams to diagnose, fit and fabricate orthotic devices. A written summary of the experience is the final product. Academic credits are awarded at the end of the fall semester following the summer experience.
Credit 2 units.
Typical periods offered: Spring

BME 4320 Physics of Biopolymers
This course will cover physics concepts from the statistical physics of polymers and polymer solutions to describe proteins, nucleic acids, and bioinspired polymers. Topics include statistical physics concepts, theoretical and numerical descriptions of polymers, applying these descriptions to biopolymers, the thermodynamics of polymer solutions, concepts of polymer dynamics, descriptions of polymeric materials and advanced topics in phase transitions and molecular design. The material will be fast-paced and involve rigorous mathematical descriptions, experimental design, interpretations of experimental data, and some numerical simulations. The course will be heavy on individual homework and team-based project work. Direct connections between concepts and modern topics in biology and biomaterials will be emphasized.
Credit 3 units.
Typical periods offered: Fall, Spring

BME 4330 Biomedical Signal Processing
An advanced undergraduate/graduate level course. Continuous-time and discrete-time application of signal processing tools to a variety of biomedical problems. Course topics include linear systems theory, frequency transforms, sampling theorem, basis functions, linear filtering, feature extraction, noise analysis, system identification. Concepts learned in class will be applied using software tools to real biomedical signals such as speech, ECG, EEG, medical images.
Credit 3 units.
Typical periods offered: Spring

BME 4400 Biomedical Data Science
This course will cover data analysis, statistical methods, AI, machine learning, predictive modeling, and data visualization, with applications to medicine and health. As part of the course, BME faculty will present biomedical data science topics from their research areas. Students will learn to prepare, transform, visualize, validate, model, and communicate information about datasets, and they will design and implement an independent project to address a biomedical data science problem. Prior Python experience required.
Credit 3 units.
Typical periods offered: Fall

BME 4420 Biomacromolecules Design and Engineering
Biological macromolecules (i.e., carbohydrates, lipids, proteins, and nucleic acids) are important components of the cell and its supporting matrix that perform a wide array of functions. This course will introduce the principles and recent advances in nucleic acid/gene engineering, protein/peptide engineering, and chemical/enzymatic conjugation technologies; it will also discuss the application of engineered biomacromolecules in clinical therapeutics/diagnostics, biosensing, bioimaging, and biocatalysis. Students will learn material through lectures, reading, homework, scientific publications, and molecular visualization tools. Students will work individually or in pairs/groups to develop and lead discussions on engineering biomacromolecules and molecular characterization techniques.
Credit 3 units.
Typical periods offered: Spring

BME 4700 Mathematics of Imaging Science
This course will expose students to a unified treatment of the mathematical properties of images and imaging. This will include an introduction to linear vector space theory, operator theory on Hilbert spaces, and concepts from applied functional analysis. Further, concepts from generalized functions, Fourier analysis, and radon transform will be discussed. These tools will be applied to conduct deterministic analyses of imaging systems that are described as continuous-to-continuous, continuous-to-discrete, and discrete-to-discrete mappings from object properties to image data. In addition, imaging systems will be analyzed in a statistical framework where stochastic models for objects and images will be introduced. Familiarity with Engineering-level mathematics, Calculus, Linear algebra, introduction to Fourier analysis is expected. Prerequisite: Senior standing or permission of instructor.
Credit 3 units.
Typical periods offered: Fall

BME 4710 Bioelectric Phenomena
This course is a quantitative introduction to the origins of bioelectricity, with an emphasis on neural and cardiac electrophysiology. Topics will include electric fields and current flow in volume conductors; cell membrane channels and their role in generating membrane

potentials; and action potentials and their propagation in myelinated and unmyelinated axons as well as cardiac tissue. Minor topics of discussion will include both skeletal muscle and non-human (e.g., electric fish) sources of bioelectricity.
Credit 3 units.
Typical periods offered: Fall

BME 4736 Biomedical Engineering Entrepreneurship
Students will learn about entrepreneurship, including IP, business development, and fundraising, through case studies.
Credit 3 units.
Typical periods offered: Fall

BME 4790 Biofabrication & Medical Devices
This course will cover materials design and modern manufacturing methods for biofabricated tissues and medical devices (with a particular emphasis on bioelectronic devices). Topics will include additive manufacturing and their materials requirements along with how these methods have evolved to use biomaterials and cells, such as bioprinting. State-of-the-art in vitro and implantable devices for diagnostic and therapeutic purposes will be discussed with emphasis on how their properties have advanced from developments in materials and manufacturing. Lecture material and assignments will draw from both current market devices and the clinical standard-of-care as well as ongoing research and recent scientific literature. Registration will be split between undergraduate and graduate students.
Credit 3 units.
Typical periods offered: Fall

BME 4960 Design and Development of Optical Imaging Systems
In this course, students will learn the design principles of optical imaging systems and learn to use optical simulation software, such as ZEMAX/OpticsStudio. There is also hands-on imaging system development components that will allow students to practice skills developed to make prototype imaging systems.
Credit 3 units.
Typical periods offered: Fall

BME 4970 Senior Capstone Design a
A hands-on design experience to provide students practical application of engineering. Working in small teams, students will either meet with possible clients to discern a biomedical problem, or bring an original idea of their own to the class. The students will work on an original design or redesign of a component or system of biomedical engineering significance. The students will be taught how to craft a project scope with the required design specifications. The design experience will require application of knowledge and skills acquired in earlier coursework; it will incorporate engineering standards and realistic constraints that include most of the following considerations: economic, environmental, sustainability, manufacturability, ethical, health and safety, FDA, social, and political. Students will prepare written reports and present their designs orally to a panel of faculty members and industrial representatives. The final product of BME 401A will be a descriptive paper design of their solution.
Credit 2 units.
Typical periods offered: Fall

BME 4971 Senior Capstone Design B
A hands-on design experience to provide students practical application of engineering. Working in small teams, students will work towards building a prototype of the student design which was a product of 401A. The students will be expected to design a verification and validation plan to test the prototype built. The design experience will require application of knowledge and skills acquired in earlier coursework and lab experiences; it will incorporate engineering standards and realistic constraints that include most of the following considerations: economic, environmental, sustainability, manufacturability, ethical, health and safety, FDA, social, and political. Students will prepare written reports and present their designs orally to a panel of faculty members and industrial representatives. The final product of BME 401B will be a prototype, and a descriptive paper describing their solution documenting how the prototype satisfies the design specifications, with the validation and verification results.
Credit 2 units.
Typical periods offered: Spring

BME 4980 Biomedical Engineering Design
A design project experience to prepare students for engineering practice. Working individually or in small groups, students will undertake an original design or redesign of a component or system of biotechnological significance. The design experience will require application of knowledge and skills acquired in earlier classes and laboratory work; it will incorporate engineering standards and realistic constraints that include most of the following considerations: economic, environmental, ethical, manufacturability, sustainability, health and safety, social and political. Students will prepare written reports and present their designs orally to their classmates and panels of faculty members and industrial representatives. Prototype construction is not generally required but may be encouraged subject to available time, financial and material resources.
Credit 4 units.
Typical periods offered: Fall

BME 4981 Senior Design II
BME 402 is a continuation of BME 401. Working in small groups, students will take a paper design completed in BME 401 and build a prototype. They will evaluate, optimize, and undertake the building of the design. The design experience will require the application of knowledge and skills acquired in earlier course work; it will incorporate engineering standards and realistic constraints that include most of the following considerations: economic, environmental, sustainability, manufacturability, ethical, health and safety, social and political. Students will prepare written reports and participate in oral design reviews involving a panel of faculty members and industrial representatives. Prototype construction is the final goal of the class.
Credit 1 unit.
Typical periods offered: Spring

BME 4999 Independent Study
Undergraduate independent study.
Credit 3 units.

Bachelor of Science in Biomedical Engineering (BME)

The BS in Biomedical Engineering requires completion of the courses in the Core Curriculum as well as five upper-level Tier courses beyond the Core, as described below. Students must meet all McKelvey School of Engineering and Washington University requirements, including the English proficiency requirement (please refer to the Engineering Degree Requirements (p. 1160) page). They must also satisfy ABET

requirements for a professional degree, which require the accrual of 47 engineering topics units over their course work. A list of Topics Units - Engineering Courses is available on the Engineering Student Services website.

The Basic Core

The Biomedical Engineering Core Curriculum consists of 80 credits, outlined below.

Courses	Units
Physical Sciences	
General Chemistry (CHEM 1701 or CHEM 1601, CHEM 1702 or CHEM 1602)(1701 and 1702 recommended)	6
General Chemistry Laboratory I, II (CHEM 1751, CHEM 1752)	4
General Physics (PHYS 1740, PHYS 1741, PHYS 1742, PHYS 1743)	8
	18
Biological Science	
Principles of Biology I (BIOL 2160)	4
Physiological Control Systems (BIOL 3057)	3
	6
Mathematics	
Calculus II & III (MATH 1520, MATH 2130)	6
Differential Equations (MATH 2500)	3
Engineering Mathematics A & B (ESE 3180, ESE 3190)	6
Engineering Statistics (ENGR 3280)*	3
	18
Engineering Science	
Introduction to Engineering Computing (ENGR 1201)	3
	3
Biomedical Engineering	
Introduction to Biomedical Engineering (BME 1400)	3
Introduction to Biomedical Circuits (BME 2200)**	4
Biomechanics (BME 2400) and Biomechanics Lab (BME 2401)	4
Quantitative Physiology I, II (BME 3010, BME 3015)	8
Bioengineering Thermodynamics (BME 3200)	3
Transport Phenomena in BME (BME 3660)	3
Senior Capstone Design A & B (BME 4970, BME 4971)	4
	29
Other	
Engineering Practice and Professional Values (ENGR 4501, ENGR 4502 and ENGR 4503)	3
Technical Writing (ENGR 3100)	3
	6
Total Basic Core	**80**

* ESE 3260 Probability and Statistics for Engineering can be substituted for ENGR 3280 Engineering Statistics with Probability.

** ESE 2300 Introduction to Electrical and Electronic Circuits can be substituted for BME 2200 Intro to Biomedical Circuits.

Students must complete **five upper-level Tier engineering courses (15 units), five humanities and social sciences courses (15 units), and three general electives courses (minimum 10 units)** beyond the Core Curriculum to complete the major and to prepare for particular fields of employment or education beyond the baccalaureate degree. At least two of the five Tier electives need to be drawn from the Tier I course list below; the remaining three can be chosen from Tier I or Tier II. Students must complete a minimum of **120 units** to meet the degree requirements.

Tier I

For the most up-to-date Tier list, please refer to the BME website.

Tier II

All upper-level (3000-5000) engineering and physics courses that carry 3 engineering topics units (with the exception of required courses such as BME 3010, BME 3015, BME 3200, and so on) count as Tier II electives.

Minor in Biomedical Data Science (BME)

The minor in Biomedical Data Science is designed to integrate data science principles — preparing, transforming, modeling, visualizing, validating, and communicating data — with the unique challenges and considerations of medicine and health care. The curriculum encompasses the following: (1) fundamental mathematics concepts such as linear algebra, probability, statistics, and computer modeling; (2) the specialized data science education necessary to practically approach the particular challenges of genomic data, sensor data, and health care data; and (3) the ethical considerations of privacy, equity, and access unique to medical data sharing and analysis.

A minor in Biomedical Data Science requires the completion of 18 units selected from the following courses. McKelvey Engineering students of all disciplines as well as students majoring in biology, physics, neuroscience, or other sciences are ideal candidates for this minor. All courses must be taken with a credit option to qualify for the minor.

Curriculum

Core Biomedical Engineering Courses (required; all must be completed):

Code	Title	Units
BME 2310	Foundations of Biomedical Computing	3
BME 4021	Biomedical Data Science Capstone Design	3
BME 4400	Biomedical Data Science	3

Mathematics Course (students must complete one from the following list):

Code	Title	Units
ENGR 3180	Engineering Mathematics A	3
MATH 3300	Matrix Algebra	3
MEMS 2210	Numerical Methods and Matrix Algebra	3

Probability and Statistics Course (students must complete one from the following list):

Code	Title	Units
ENGR 3280	Engineering Statistics With Probability	3
ESE 3260	Probability and Statistics for Engineering	3
SDS 2020	Elementary Probability and Statistics	3
SDS 3020	Elementary to Intermediate Statistics and Data Analysis	3

Biomedical Engineering Upper Level Elective (students must complete one from the following list):

Code	Title	Units
BME 5190	Advanced Cognitive, Computational, and Systems Neuroscience	3
BME 5330	Biomedical Signal Processing	3
BME 5700	Mathematics of Imaging Science	3
BME 5720	Biological Neural Computation	3
CSE 5504	Geometric Computing for Biomedicine	3

Additional courses may be added to these lists as new courses are developed. Questions about the Biomedical Data Science minor can be addressed to Professor Patricia Widder (pwidder9876@wustl.edu).

Computer Science & Engineering

About Computer Science & Engineering

The field of computer science and engineering studies the design, analysis, implementation and application of computation and computer technology. Computing plays an important role in virtually all fields, including science, medicine, music, art, business, law and human communication; hence, the study of computer science and engineering can be interdisciplinary in nature. Whether a student's goal is to become a practitioner or to take a few courses to develop a basic understanding of computing for application to another field, the Department of Computer Science & Engineering at Washington University is committed to helping students gain the background they need.

People are attracted to the study of computing for a variety of reasons. Consequently, the department offers a wide variety of academic programs, including a five-course minor, a second major, five undergraduate degrees, combined undergraduate and graduate programs, and several undergraduate research opportunities. Each academic program can be tailored to a student's individual needs.

The breadth of computer science and engineering may be best understood in terms of the general areas of *applications, software systems*, *hardware* and *theory*.

Applications are the ways in which computer technology is applied to solve problems, often in other disciplines. Most applications courses provide background not only in the applications themselves but also in how the applications are designed and implemented. Examples of application areas include artificial intelligence, computer graphics, game design and computational biology.

Software systems are collections of interacting software components that work together to support the needs of computer applications. Courses in this area help students gain a solid understanding of how software systems are designed and implemented. During the process, students develop their own software systems. Examples include operating systems, which manage computational resources; network protocols, which are responsible for the delivery of information; programming languages, which support the construction of software systems and applications; and compilers, which translate computer programs into executable form.

Hardware is the term used to describe the physical and mechanical components of a computer system. Courses in this area provide background in logic circuits, which carry out basic computations; computer architecture, which defines the organization of functional components in a computer system; and peripheral devices such as disks, robot arms that are controlled by the computer system, and sensor systems that gather the information that computer systems use to interact with the physical world.

Theory is the study of the fundamental capabilities and limitations of computer systems. A knowledge of theory helps students choose among competing design alternatives on the basis of their relative efficiency and helps them to verify that their implementations are correct. Theory courses provide background in algorithms, which describe how a computation is to be carried out; data structures, which specify how information is to be organized within the computer; analytical techniques to characterize the time or space requirements of an algorithm or data structure; and verification techniques to prove that solutions are correct.

A well-rounded study of computing includes training in each of these areas. However, depending on a student's educational goals, the student may prefer to concentrate on certain areas for greater depth of knowledge. To help students balance their elective courses, most upper-level departmental courses are classified into one of the following categories: S for software systems, M for machines (hardware), T for theory, or A for applications. If a student's interests

are concentrated in the first two areas, a computer engineering degree might be best. Students are encouraged to meet with a faculty advisor in the Department of Computer Science & Engineering to discuss their options and develop a plan consistent with their goals.

Undergraduate Programs

The Department of Computer Science & Engineering (CSE) offers an array of courses that can be taken as requirements or electives for any of the undergraduate degree programs. We offer a Bachelor of Science in Computer Science (BSCS), a Bachelor of Science in Computer Engineering (BSCoE), a Bachelor of Science in Business and Computer Science (CS+Business), a Bachelor of Science in Computer Science + Mathematics (CS+Math), a Bachelor of Science in Computer Science + Economics (CS+Econ), and a Second Major in Computer Science. In addition to these six programs, CSE offers a pre-medical option and combined undergraduate/graduate programs. As a part of our program, each student is assigned an advisor who can help to design an individualized program, monitor a student's progress, and consult about curriculum and career options. Additional information can be found on our CSE website, or any of the CSE faculty can offer further guidance and information about our programs.

BSCS: The computer science major is designed for students planning a career in computing.

BSCoE: The computer engineering major encompasses studies of hardware, software and systems issues that arise in the design, development and application of computer systems.

CS+Business: This joint major provides students with the fundamental knowledge and perspectives of computer science and business and of the unique opportunities created by combining them.

CS+Econ: This applied science major (p. 1098) allows students interested in both economics and computer science to combine these two complementary disciplines efficiently.

CS+Math: This applied science major efficiently captures the intersection of the complementary studies of computer science and math.

Second Major in Computer Science: The second major provides an opportunity to combine computer science with another degree program. A second major in computer science can expand a student's career options and enable interdisciplinary study in areas such as cognitive science, computational biology, chemistry, physics, philosophy and linguistics. The second major is also well suited for students planning careers in medicine, law, business, architecture and fine arts.

Pre-Medical Option within Computer Science: Students may pursue a pre-medicine curriculum in conjunction with either the BS degree or the second major in computer science programs. Students interested in the pre-medical option should refer to the McKelvey School of Engineering (p. 1074) *Bulletin* page for details.

Combined Undergraduate and Graduate Study

The Department of Computer Science & Engineering offers in-depth graduate study in many areas. Students entering the graduate programs require a background in computer science fundamentals. Washington University undergraduates seeking admission to the graduate degree program to obtain a master's degree in computer science or computer engineering do not need to take the Graduate Record Examination (GRE). For more information, contact the department office by email at admissions@cse.wustl.edu or by phone at 314-935-6132.

The Joint Bachelor's/Master's Program

This program provides undergraduate students the opportunity to earn a McKelvey master's degree by combining undergraduate and graduate studies in an integrated curriculum. The combination of the two programs extends the flexibility of the undergraduate curriculum to more advanced studies, thereby enabling students to plan their entire spectrum of computing studies in a more comprehensive educational framework. For McKelvey undergraduates, this program normally takes one additional year to complete. More information is available on the McKelvey School of Engineering undergraduate Bulletin page (p. 1071).

BS/MBA Program

The growing importance of computer-based information systems in the business environment has produced a sustained high demand for graduates with master's degrees in business administration and undergraduate majors in computer science and engineering.

Students should apply to this joint program by February 1 of their junior year. The application for admission to Olin Business School (p. 1029) is available through the business school. Applicants are judged on undergraduate performance, GMAT scores, summer and/or co-op work experience, recommendations and a personal interview.

Undergraduate Courses

Course requirements for the minor and majors may be fulfilled by CSE 1301 Introduction to Computer Science, CSE 1302 Introduction to Computer Engineering, CSE 2400 Logic and Discrete Mathematics, CSE 2407 Data Structures and Algorithms, CSE 3407 Analysis of Algorithms, and CSE courses with a letter suffix in any of the following categories: software systems (S), hardware (M), theory (T) and applications (A). In addition, with approval of the instructor, up to 6 units of CSE 4001 Independent Study can be used toward the CSE electives of any CSE degree. Other CSE courses provide credit toward graduation but not toward the CSE elective requirements for the second major or the BSCS, BSCoE, CS+Math or CS+Business degrees. Undergraduates are encouraged to consider 5000-level courses. If a student is interested in taking a course but is not sure if they have the needed prerequisites, the student should contact the instructor.

Broadening Experiences

If a student wants to become involved in computer science or computer engineering research or to gain experience in industry while they are an undergraduate, there are many opportunities to do so. A few of these are listed below.

Co-op: McKelvey's Engineering Cooperative Education (Co-op) experience allows a student to get valuable experience working in industry while an undergraduate. A co-op experience can give students another perspective to their education and may lead to full-time employment. More information is available on the Engineering Co-op and Engineering Internship page of the McKelvey School of Engineering website.

Research: Participating in undergraduate research is a great way to learn more about a specific area. Research projects are available either for pay or for credit through CSE 4001 Independent Study.

Study Abroad: Students in the McKelvey School of Engineering can study abroad in a number of countries and participate in several global experiences to help broaden their educational experience. These opportunities will help students become global citizens who are better able to address current issues.

The study of computer science and engineering is especially well suited and popular for study abroad. Students from our department routinely study abroad in Europe, the United Kingdom, Australia, Israel and many other places. Our department works closely with students to identify courses suitable for computer science credit.

For more information about these programs, please visit the McKelvey School of Engineering website.

Research Opportunities

The Department of Computer Science & Engineering actively promotes a culture of strong undergraduate participation in research. Many undergraduates work in research labs with state-of-the-art equipment that provides them the opportunity to take part in computer science and computer engineering research. Sensor networks, high-speed routers, specialized FPGA hardware, wireless devices, RF tags, digital cameras, robots, large displays and multiprocessors are just a few of the hardware devices undergraduates often use in their projects. Opportunities for exploring modern software development techniques and specialized software systems further enrich the range of research options and help undergraduates sharpen their design and programming skills.

Advanced Placement/ Proficiency

Students receiving a 4 or 5 on the AP Computer Science A exam are awarded credit for CSE 1301 Introduction to Computer Science. Any student can take the CSE 1301 Introduction to Computer Science proficiency exam, and a suitable score will waive CSE 1301 Introduction to Computer Science as a requirement.

Upon request, the computer science department will evaluate a student for proficiency for any of our introductory courses. If a student is determined to be proficient in a given course, that course will be waived (without awarding credit) in the student's degree requirements, and the student will be offered guidance in selecting a more advanced course. Questions should be directed to the associate chair (associatechair@cse.wustl.edu).

Faculty

Chair

Roch Guérin
Harold B. and Adelaide G. Welge Professor of Computer Science
PhD, California Institute of Technology
Computer networks and communication systems

Professors

Kunal Agrawal
PhD, Massachusetts Institute of Technology
Parallel computing, cyber-physical systems and sensing, theoretical computer science

Sanjoy Baruah
PhD, University of Texas at Austin
Real-time and safety-critical system design, cyber-physical systems, scheduling theory, resource allocation and sharing in distributed computing environments

Ian Bogost
PhD, University of California, Los Angeles
Philosopher, computationalist and award-winning game designer

Aaron Bobick
James M. McKelvey Professor and Dean
PhD, Massachusetts Institute of Technology
Computer vision, graphics, human-robot collaboration

Michael R. Brent
Henry Edwin Sever Professor of Engineering
PhD, Massachusetts Institute of Technology
Systems biology, computational and experimental genomics, mathematical modeling, algorithms for computational biology, bioinformatics

Jeremy Buhler
PhD, Washington University
Computational biology, genomics, algorithms for comparing and annotating large biosequences

Roger D. Chamberlain
DSc, Washington University
Computer engineering, parallel computation, computer architecture, multiprocessor systems

Yixin Chen
PhD, University of Illinois at Urbana-Champaign
Mathematical optimization, artificial intelligence, planning and scheduling, data mining, learning data warehousing, operations research, data security

Patrick Crowley
PhD, University of Washington
Computer and network systems, network security

Ron K. Cytron
PhD, University of Illinois at Urbana-Champaign
Programming languages, middleware, real-time systems

Christopher D. Gill
DSc, Washington University
Parallel and distributed real-time embedded systems, cyber-physical systems, concurrency platforms and middleware, formal models and analysis of concurrency and timing

Nathan Jacobs
PhD, Washington University in St. Louis
Develops learning-based computer vision algorithms, with a focus on geospatial and medical applications

Raj Jain
Barbara J. & Jerome R. Cox Jr. Professor of Computer Science
PhD, Harvard University
Network security, blockchains, medical systems security, industrial systems security, wireless networks, unmanned aircraft systems, internet of things, telecommunications networks, traffic management

Caitlin Kelleher
Hugo F. & Ina Champ Urbauer
Career Development Associate Professor
PhD, Carnegie Mellon University
Human-computer interaction, programming environments, and learning environments

Tao Ju
PhD, Rice University
Computer graphics, visualization, mesh processing, medical imaging and modeling

Chenyang Lu
Fullgraf Professor in the Department of Computer Science & Engineering
PhD, University of Virginia
Internet of things, real-time, embedded, and cyber-physical systems, cloud and edge computing, wireless sensor networks

Yevgeniy Vorobeychik
PhD, University of Michigan
Artificial intelligence, machine learning, computational economics, security and privacy, multi-agent systems

Associate Professors

Roman Garnett
PhD, University of Oxford
Active learning (especially with atypical objectives), Bayesian optimization, and Bayesian nonparametric analysis

Brendan Juba
PhD, Massachusetts Institute of Technology
Theoretical approaches to artificial intelligence founded on computational complexity theory and theoretical computer science more broadly construed

Ulugbek Kamilov
PhD, École Polytechnique Fédérale de Lausanne, Switzerland
Computational imaging, image and signal processing, machine learning and optimization

I-Ting Angelina Lee
PhD, Massachusetts Institute of Technology
Designing linguistics for parallel programming, developing runtime system support for multi-threaded software, and building novel mechanisms in operating systems and hardware to efficiently support parallel abstractions

Fuhai Li
Associate Professor of Pediatrics, School of Medicine
Integration and interpretation of diverse and heterogeneous pharmacogenomics data using statistical and machine learning

Alvitta Ottley
PhD, Tufts University
Designing personalized and adaptive visualization systems, including information visualization, human-computer interaction, visual analytics, individual differences, personality, user modeling and adaptive interfaces

William Yeoh
PhD, University of Southern California
Artificial intelligence, multi-agent systems, distributed constraint optimization, planning and scheduling

Ning Zhang
PhD, Virginia Polytechnic Institute and State University
System security, software security

Assistant Professors

Chien-Ju Ho
PhD, University of California, Los Angeles
Design and analysis of human-in-the-loop systems, with techniques from machine learning, algorithmic economics, and online behavioral social science

Jiaxin Huang
PhD, University of Illinois at Urbana-Champaign
Leverages large language models to enable label-efficient knowledge acquisition and utilization

Umar Iqbal
PhD, University of Iowa
Computer security and privacy

Gregory Kehne
PhD, Harvard University
Works on online and approximation algorithms and using computer science to study and improve collective decision-making.

Qinghua Liu
PhD, Princeton University
Machine learning for decision-making

Netanel Raviv
PhD, Technion, Haifa, Israel
Mathematical tools for computation, privacy and machine learning

Hussein Sibai
PhD, University of Illinois, Urbana-Champaign
Trustworthy autonomy, spanning the areas of cyber-physical systems (CPS), formal methods, control theory and machine learning

Chenguang Wang
PhD, Peking University, China
Natural language processing and machine learning

Chongjie Zhang
PhD, University of Massachusetts Amherst
Deep reinforcement learning, multi-agent systems, human-AI interaction

Teaching Professors

Marion Neumann
PhD, University of Bonn, Germany
Machine learning with graphs; solving problems in agriculture and robotics

Bill Siever
PhD, Missouri University of Science and Technology
Computer architecture, organization, and embedded systems

Todd Sproull
PhD, Washington University
Computer networking and mobile application development

Professor of the Practice

Dennis Cosgrove
BS, University of Virginia
Programming environments and parallel programming

Senior Lecturers

Steve Cole
PhD, Washington University in St. Louis
Parallel computing, accelerating streaming applications on GPUs

David Ferry
PhD, Washington University in St. Louis
Real-time systems, parallel runtime systems, and cyber-physical systems design

Brian Garnett
PhD, Rutgers University
Discrete mathematics and probability, generally motivated by theoretical computer science

James Orr
PhD, Washington University
Real-time systems theory and implementation, cyber-physical systems, and operating systems

Jonathan Shidal
PhD, Washington University
Computer architecture and memory management

Douglas Shook
MS, Washington University
Imaging sensor design, compiler design and optimization

Lecturers

Ilan Goodman
MS, Stanford University
Mathematical computer science, data structures, algorithms, machine learning/AI, and data science/engineering

Michael Hall
PhD, Washington University
Reconfigurable logic, circuit and PCB design, networking, software engineering, parallel programming, optimization, and data science

Cynthia Ma
PhD, Washington University
Data Mining

Athena Tabakhi
PhD, Washington University
AI and multi-agent systems, including constraint-based systems and preference elicitation

Senior and Emeritus Professors

Jonathan S. Turner
PhD, Northwestern University
Design and analysis of internet routers and switching systems, networking and communications, algorithms

Takayuki D. Kimura
PhD, University of Pennsylvania
Communication and computation, visual programming

Majors

Please visit the following pages for information about computer science and engineering majors:

- Bachelor of Science in Computer Engineering (p. 1096)
- Bachelor of Science in Computer Science (p. 1097)
- Bachelor of Science in Computer Science + Economics (p. 1098)
- Bachelor of Science in Computer Science + Mathematics (p. 1099)
- Bachelor of Science in Data Science (p. 1102)
- Bachelor of Science in Business and Computer Science (p. 1104)

- Second Major in Computer Science (p. 1106)
- Second Major in Computer Science + Mathematics
- Second Major in Data Science

Minors

Please visit the following pages for information about computer science and engineering minors:

- Minor in Bioinformatics (p. 1111)
- Minor in Computer Science (p. 1112)
- Minor in Human-Computer Interaction (p. 1112)

Courses

Prerequisites are advisory in our course listings, but students are cautioned against taking a course without the necessary background. Note that if one course mentions another as its prerequisite, the prerequisites of the latter course are implied to be prerequisites of the former course as well. Students in doubt of possessing the necessary background for a course should correspond with the course's instructor.

CSE 1007 Data Science Playground
Data science plays an increasingly important role in research, industry, and government. Researchers seek to understand behavior and mechanisms, companies seek to increase profits, and government agencies make policies intended to improve society. While we are awash in an abundance of data, making sense of data is not always straightforward. At its core, students of data science learn techniques for analyzing, visualizing, and understanding data. However, students must also cultivate curiosity about data, including the data's provenance, ethical considerations such as bias, and skepticism concerning correlation and causality. In the beginning, students investigate a curated collection of data sets, asking questions they find interesting and exploring data using a popular platform for such studies. Thereafter, researchers on campus present their work in the context of data science, challenging students to explore data in the domain of their research areas. Throughout the course, students present their findings in their group and to the class. This course is offered in an active-learning setting in which students work in small teams. The course has no prerequisites, and programming experience is neither expected nor required. All credit for this pass/fail course is based on work performed in the scheduled class time.
Credit 1 unit.
Typical periods offered: Fall

CSE 1301 Introduction to Computer Science
An introduction to software concepts and implementation, emphasizing problem solving through abstraction and decomposition. Introduces processes and algorithms, procedural abstraction, data abstraction, encapsulation, and object-oriented programming. Recursion, iteration, and simple data structures are covered. Concepts and skills are mastered through programming projects, many of which employ graphics to enhance conceptual understanding. Java, an object-oriented programming language, is the vehicle of exploration. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisites: Comfort with algebra and geometry at the high school level is assumed. Patience, good planning, and organization will promote success. This course assumes no prior experience with programming. *CSE 1301 has mandatory evening exams; the specific days and times will be listed under assessments on the course section once confirmed.
Credit 3 units. BU: SCI
Typical periods offered: Fall, Spring, Summer

CSE 1302 Introduction to Computer Engineering
This course introduces students to fundamental concepts in the basic operation of computers, ranging from desktops and servers to microcontrollers and handheld devices. Subjects include digital and analog input/output, sensing the physical world, information representation, basic computer architecture and machine language, time-critical computation, machine-to-machine communication and protocol design. Students will use both desktop systems and handheld microcontrollers for laboratory experiments. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisite: CSE 131.
Credit 3 units. BU: SCI
Typical periods offered: Fall, Spring, Summer

CSE 1391 Seminar: Computer Science I
A seminar and discussion session that complements the material studied in CSE131. Provides background and breadth for the disciplines of computer science and computer engineering. Features guest lectures and highly interactive discussions of diverse computer science topics. Highly recommended for majors and for any student seeking a broader view of computer science or computer engineering. Pass/Fail only.
Credit 1 unit.
Typical periods offered: Fall, Spring

CSE 1392 Seminar: Computer Science II
This course is a seminar and discussion session that complements the material studied in CSE 132. It provides background and breadth for the disciplines of computer science and computer engineering, and it features guest lectures and highly interactive discussions of diverse computer science topics. Highly recommended for majors and for any student seeking a broader view of computer science or computer engineering.
Credit 1 unit.
Typical periods offered: Spring

CSE 1997 Computer Science Department Seminar
This seminar will host faculty, alumni, and professionals to discuss topics related to the study and practice of computer science. Attendance is mandatory to receive a passing grade.
Credit 0 units.
Typical periods offered: Fall, Spring

CSE 2000 Engineering and Scientific Computing
This course provides an introduction to numerical methods for scientific computation which are relevant to engineering problems. Topics addressed include interpolation, integration, linear systems, least-squares fitting, nonlinear equations and optimization and initial value problems. Basic procedural programming concepts (procedural and data abstraction, iteration, recursion) will be covered using MATLAB. C will be briefly covered so the students understand that the algorithms and programming concepts apply in both. Prerequisite: Math 132.
Credit 3 units.

CSE 2004 Web Development
This course explores elementary principles for designing, creating, and publishing effective websites and web application front-ends. Topics include page layout concepts, design principles, HTML, CSS, JavaScript, front-end frameworks like Angular and React, and other development tools. Students apply the topics by creating a series of websites that are judged based on their design and implementation. Prerequisite: CSE 131 or equivalent experience.
Credit 3 units. BU: SCI
Typical periods offered: Fall, Spring

CSE 2107 Introduction to Data Science
This course provides an introduction to data science and machine learning, and it focuses on the practical application of models to real-world supervised and unsupervised learning problems. We will discuss methods for linear regression, classification, and clustering and apply them to perform sentiment analysis, implement a recommendation system, and perform image classification or gesture recognition. One of the main objectives of the course is to become familiar with the data science workflow, from posing a problem to understanding and preparing the data, training and evaluating a model, and then presenting and interpreting the results. We will also touch on concepts such as similarity-based learning, feature engineering, data manipulation, and visualization. The course uses Python, which is currently the most popular programming language for data science. This course does not teach programming in Python. Prerequisites: CSE 131, MATH 233, and CSE 247 (can be taken concurrently).
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 2201 Internet of Things
With the advent of the Internet of Things, we can address, control, and interconnect formerly isolated objects to create new and interesting applications. In this course we study fundamental technologies behind Internet-of-Things devices, and Appcessories, which include smart watches, health monitors, toys, and appliances. In addition to learning about IoT, students gain hands-on experience developing multi-platform solutions that control and communicate with Things using via mobile device friendly interfaces. Students apply their knowledge and skill to develop a project of their choosing using topics from the course. Prerequisite: CSE 132.
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 2301 Introduction to Parallel and Concurrent Programming
This course explores concepts, techniques, and design approaches for parallel and concurrent programming. We study how to write programs that make use of multiple processors for responsiveness and that share resources reliably and fairly. Parallel programming concepts include task-level, functional, and loop-level parallelism. Concurrent programming concepts include threads, synchronization, and locks. We cover how to adapt algorithms to achieve determinism and avoid data races and deadlock. Concepts and skills are acquired through the design and implementation of software projects. Prerequisite: CSE 131.
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 2302 Programming Skills Workshop
This course provides an overview of practical implementation skills. Topics include compilation and linking, memory management, pointers and references, using code libraries, testing and debugging. Prerequisite: CSE 247.
Credit 1 unit.
Typical periods offered: Fall

CSE 2307 Programming Tools and Techniques
This course offers an introduction to the tools and techniques that allow programmers to write code effectively. Tools covered include version control, the command line, debuggers, compilers, unit testing, IDEs, bug trackers, and more. The course also places a heavy emphasis on code quality: how can we write code that is functional and that also meets quality standards? Peer review exercises will be used to show the importance of code craftsmanship. Prerequisite: CSE 131.
Credit 3 units.
Typical periods offered: Spring

CSE 2400 Logic and Discrete Mathematics
Introduces elements of logic and discrete mathematics that allow reasoning about computational structures and processes. Generally, the areas of discrete structures, proof techniques, probability and computational models are covered. Topics typically include propositional and predicate logic; sets, relations, functions and graphs; direct and indirect proof methods, induction and recursion; finite state machines and regular languages. Prerequisite: CSE 131 Note that this course will be held in-person. *CSE 2400 has mandatory evening exams; the specific days and times will be listed under assessments on the course section once confirmed.
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 2402 Discrete Math Seminar
This semester, this course will focus on clear, compelling, and concise proofs. Students will read, critique, and write proofs throughout the semester, with the goal of becoming more proficient in understanding, authoring, and evaluating proofs. Admission is by permission of the instructor, and this course carries elective credit for all computer science programs. Students will be admitted to this course based on their performance in other math and computer science courses, and with the understanding that they will serve as TAs for our proof-based classes next semester.
Credit 3 units.
Typical periods offered: Fall

CSE 2407 Data Structures and Algorithms
Study of fundamental algorithms, data structures, and their effective use in a variety of applications. Emphasizes importance of data structure choice and implementation for obtaining the most efficient algorithm for solving a given problem. A key component of this course is worst-case asymptotic analysis, which provides a quick and simple method for determining the scalability and effectiveness of an algorithm. Online textbook purchase required. Prerequisite: CSE 131/501N, and fluency with summations, derivatives, and proofs by induction. *CSE 2407 has mandatory evening exams; the specific days and times will be listed under assessments on the course section once confirmed.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

CSE 2497 Seminar: Data Structures and Algorithms
The content of this seminar will vary by semester, but it will generally complement the material taught in CSE 247 Data Structures and Algorithms. Corequisite: CSE 247.
Credit 1 unit.
Typical periods offered: Fall, Spring

CSE 2506 Introduction to Human-Centered Design
This course provides an introduction to human-centered design through a series of small user interface development projects covering information foraging, learnability, and problem solving. Projects will begin with reviewing a relevant model of human behavior. Each project will then provide an opportunity to explore how to apply that model in the design of a new user interface. Prerequisite: CSE 131.
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 2600 Introduction to Digital Logic and Computer Design
Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture, hardware description languages, simulation); design of simple processors and memory subsystems; program execution in simple processors; basic techniques for enhancing processor performance; configurable logic devices. Prerequisites: CSE 131
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 3050 Responsible Data Science
In today's data-driven world, understanding the ethical and responsible use of data is critical. This course provides a comprehensive overview of the key principles and challenges in responsible data science. The first wave of data science focuses on accuracy and efficiency-what we can do with data. The second wave focuses on responsibility-what we should or should not do. This technical course addresses ethical and responsible data science, including legal compliance, data quality, algorithmic fairness and diversity, transparency, privacy, and data protection.Through case studies, hands-on activities, and discussions, students will learn how to apply ethical frameworks and data governance principles to real-world data science problems. By the end of the course, participants will be equipped with the tools to make informed, ethical decisions in data science practices.
Credit 3 units.
Typical periods offered: Spring

CSE 3058 Programming Usable Interfaces
In this course, students develop the skills necessary to program and prototype novel user interfaces. The course will introduce common software architecture patterns, including model-view-controller, view trees, and event handling. Students will create projects that build interactivity and logic, introduce dynamic content handling through document model object (DOM) modification in various ways, parse and filter data in standard formats, using data to generate UI elements and visualization, and query web-based APIs.
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 3101 Introduction to Intelligent Agents Using Science Fiction
The course uses science-fiction short stories, TV episodes, and movies to motivate and introduce fundamental principles and techniques in intelligent agent systems. Topics covered may include game theory, decision theory, machine learning, distributed algorithms, and ethics. Prerequisite: CSE 247.
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 3103 Artificial Intelligence Lab
Project course in artificial intelligence. Students are required to solve AI problems for which there are not existing canonical approaches. Standard approaches are discussed, but the objective is to be creative and to produce working software rather than to master concepts. Projects usually contain elements of computer vision, natural language processing, game playing, heuristic search and heuristic optimization, the application and representation of knowledge and automatic inference. Prerequisites: CSE 132 and 240, familiarity with UNIX.
Credit 3 units.
Typical periods offered: Fall

CSE 3104 Data Manipulation and Management
As the base of data science, data needs to be acquired, integrated and preprocessed. This important step in the data science workflow ensures both quantity and quality of data and improves the effectiveness of the following steps of data processing. Students will gain an understanding of concepts and approaches of data acquisition and governance including data shaping, information extraction, information integration, data reduction and compression, data transformation as well as data cleaning. The course will further highlight the ethical responsibility of protecting the integrity of data and proper use of data. Prerequisites: CSE 131, CSE 217A; Corequisite: CSE 247
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 3106 Social Network Analysis
This course looks at social networks and markets through the eyes of a computer scientist. We will look at questions including, Why are acquaintances rather than friends more likely to get us job opportunities? and, Why do the rich get richer? We begin by studying graph theory (allowing us to study the structure) and game theory (allowing us to study the interactions) of social networks and market behavior at the introductory level. Among other topics, we will study auctions, epidemics, and the structure of the Internet (including web searches). This course examines the intersection of computer science, economics, sociology, and applied mathematics. Prerequisites: CSE 240 and CSE 247
Credit 3 units.
Typical periods offered: Fall

CSE 3300 Rapid Prototype Development and Creative Programming
This course uses web development as a vehicle for developing skills in rapid prototyping. Students acquire the skills to build a Linux web server in Apache, to write a web site from scratch in PHP, to run an SQL database, to perform scripting in Python, to employ various web frameworks, and to develop modern web applications in client-side and server-side JavaScript. The course culminates with a creative project in which students are able to synthesize the course material into a project of their own interest. The course implements an interactive studio format: after a formal presentation of a topic, students develop a related project under the supervision of the instructor. Prerequisite: CSE 131 Revised: 2019-02-21
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

CSE 3302 Object-Oriented Software Development Laboratory
Intensive focus on practical aspects of designing, implementing and debugging software, using object-oriented, procedural, and generic programming techniques. The course emphasizes familiarity and proficiency with a wide range of C++ language features through hands-on practice completing studio exercises and lab assignments,

supplemented with readings and summary presentations for each session. Prerequisites: CSE 131 and CSE 247 *CSE 3302 has mandatory evening exams; the specific days and times will be listed under assessments on the course section once confirmed.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

CSE 3401 Parallel and Sequential Algorithms
The course aims to teach students how to design, analyze and implement parallel algorithms. The emphasis is on teaching fundamental principles and design techniques that easily transfer over to parallel programming. These techniques include divide and conquer, contraction, the greedy method, and so on. Prerequisites: CSE 240, CSE 247, and Math 310.
Credit 3 units.

CSE 3407 Analysis of Algorithms
This course introduces techniques for the mathematical analysis of algorithms, including randomized algorithms and non-worst-case analyses such as amortized and competitive analysis. It also introduces the standard paradigms of divide-and-conquer, greedy, and dynamic programming algorithms, as well as reductions, and it provides an introduction to the study of intractability and techniques to determine when good algorithms cannot be designed. Prerequisites: (CSE 240 or Math 310) and CSE 247 *CSE 3407 has mandatory evening exams; the specific days and times will be listed under assessments on the course section once confirmed.
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 3487 Analysis of Algorithms Recitation
This course is the recitation component of CSE 347. Registration and attendance for 347R is mandatory for students enrolled in 347.
Credit 0 units.
Typical periods offered: Fall

CSE 3601 Introduction to Systems Software
This course is an introduction to the hardware and software foundations of computer processing systems. The course provides a programmer's perspective of how computer systems execute programs and store information. The course material aims to enable students to become more effective programmers, especially when dealing with issues of performance, portability and robustness. It also serves as a foundation for other system courses (e.g., those involving compilers, networks, and operating systems), where a deeper understanding of systems-level issues is required. Topics covered include machine-level code and its generation by optimizing compilers, performance evaluation and optimization, computer arithmetic, memory organization and management, and supporting concurrent computation. Prerequisites: CSE 131 and CSE 132.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

CSE 3602 Computer Architecture
This course explores the interaction and design philosophy of hardware and software for digital computer systems. Topics include: Processor architecture, Instruction Set Architecture, Assembly Language, memory hierarchy design, I/O considerations, and a comparison of computer architectures. Prerequisite: CSE 260M.
Credit 3 units.
Typical periods offered: Fall

CSE 3605 Elements of Computing Systems
All computers are made up of 0s and 1s. However, the conceptual gap between the 0s and 1s and the day to day operation of modern computers is enormously wide. This fast-paced course aims to bridge the divide by starting with simple logic gates and building up the levels of abstraction until one can create games like Tetris. There is no specific programming language requirement, but some experience with programming is needed. Prerequisite: CSE 247
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 4000 Independent Study
This course allows the student to investigate a topic in computer science and engineering of mutual interest to the student and a mentor. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form (https://wustl.box.com/s/gp2mffz8r7ql9rgsil5zfyz5pz05b8tb) declaring the agreement must be filed in the departmental office. This course carries university credit, but it does not count toward a CSE major or minor. To arrange for CSE major or minor credit for independent study, a student must enroll in CSE 400E instead of CSE 400. Consult also CSE 400E.
Credit 6 units.
Typical periods offered: Fall, Spring, Summer

CSE 4001 Independent Study
Investigation of a topic in computer science and engineering of mutual interest to the student and a mentor. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form (https://wustl.box.com/s/gp2mffz8r7ql9rgsil5zfyz5pz05b8tb) declaring the agreement must be filed in the departmental office. Credit earned for CSE400E can be counted toward a student's major or minor program, with the consent of the student's advisor. See also: CSE400
Credit 6 units.
Typical periods offered: Fall, Spring, Summer

CSE 4027 Introduction to Natural Language Processing
This course provides an introduction to Natural Language Processing (NLP), a core area of Artificial Intelligence (AI) focused on enabling computers to understand, interpret, and generate human language. Students will explore both foundational concepts and recent advances in NLP, gaining hands-on experience with techniques and applications such as language modeling, machine translation, conversational agents, and question answering systems. The course emphasizes both theoretical understanding and practical implementation.
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 4059 Applied Parallel Programming: Gpus for High-Performance Computing On Manycore Architectures
This course teaches parallel programming for manycore processor architectures, with an emphasis on Graphics Processing Units(GPUs) as the target architecture. Students learn fundamentals of a GPU architecture and its development platform, practicetechniques for efficiently mapping parallel computation onto a GPU, study common parallel computation patterns and theirapplication to real-world data processing tasks, and explore performance measurement and optimization. Hands-on studios andprogramming assignments are an integral part of the course. Prerequisite: CSE 361S
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 4061 Text Mining
Text mining extracts valuable insights and actionable information from vast amounts of unstructured textual data. It is a rapidlyevolving field at the intersection of natural language processing and machine learning, and is applied in various domains includinghealthcare, social media analysis, financial prediction and beyond. This undergraduate course covers a wide range of text miningapproaches, from traditional statistical methods to cutting-edge techniques. Students will gain both in-depth knowledge offundamental concepts and hands-on experience in practical applications. Topics of the course include text representation learning,text classification, named entity recognition, relation extraction, taxonomy and knowledge graph construction, and retrieval-augmented generation. Through programming assignments and a semester-long project, students will develop hands-on textmining skills necessary for real-world scenarios. Prerequisite: CSE 417T
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 4101 AI and Society
AI has made increasing inroads in a broad array of applications, many that have socially significant implications. This course will study a number of such applications, focusing on issues such as AI used for social good, fairness and accountability of AI, and potential security implications of AI systems. Prerequisite: CSE 247.
Credit 3 units.
Typical periods offered: Fall

CSE 4102 Introduction to Artificial Intelligence
The discipline of artificial intelligence (AI) is concerned with building systems that think and act like humans or rationally on some absolute scale. This course is an introduction to the field, with special emphasis on sound modern methods. The topics include knowledge representation, problem solving via search, game playing, logical and probabilistic reasoning, planning, dynamic programming, and reinforcement learning. Programming exercises concretize the key methods. The course targets graduate students and advanced undergraduates. Evaluation is based on written and programming assignments, a midterm exam and a final exam. Prerequisites: CSE 247, ESE 326 (or Math 3200 or Math 3211 or Engr 328), and Math 233. This course will be taught using Zoom and will be recorded. *CSE 4102 has mandatory evening exams; the specific days and times will be listed under assessments on the course section once confirmed.
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 4103 Web Privacy and Security
This course introduces the fundamental concepts of web privacy and security. It explores the challenges and techniques related to protecting personal privacy online and securing web applications from threats and vulnerabilities. Why take this course: Given that the vast majority of user-facing software is consumed through the web platform, developing an understanding of the web ecosystem is crucial in improving user privacy and security, overall. Topics include: Webpage execution (e.g., JavaScript execution), Browser security model (e.g., site isolation), Online tracking (e.g., cookies, fingerprinting), Privacy enhancing technologies (e.g., tracker blocking), Technology policy (privacy laws, policies). Prereqs: CSE 247
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 4106 Data Science for Complex Networks
This course examines complex systems through the eyes of a computer scientist. We will use the representative power of graphs to model networks of social, technological, or biological interactions. Network analysis provides many computational, algorithmic, and modeling challenges. We begin by studying graph theory, allowing us to quantify the structure and interactions of social and other networks. We will then explore how to practically analyze network data and how to reason about it through mathematical models of network structure and evolution. We will also investigate algorithms that extract basic properties of networks in order to find communities and infer node properties. Finally, we will study a range of applications including robustness and fragility of networks such as the internet, spreading processes used to study epidemiology or viral marketing, and the ranking of webpages based on the structure of the webgraph. This course combines concepts from computer science and applied mathematics to study networked systems using data mining. Prerequisites: CSE 247, ESE 326, MATH 309, and programming experience (note: we will parse data and analyze networks using Python)
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 4107 Introduction to Machine Learning
The field of machine learning is concerned with the question of how to construct computer programs that automatically improve with experience. This course is a broad introduction to machine learning, covering the foundations of supervised learning and important supervised learning algorithms. Topics to be covered are the theory of generalization (including VC-dimension, the bias-variance tradeoff, validation, and regularization) and linear and non-linear learning models (including linear and logistic regression, decision trees, ensemble methods, neural networks, nearest-neighbor methods, and support vector machines). Prerequisites: CSE 247, ESE 326 (or Engr 328) , Math 233, and Math 309 (can be taken concurrently).
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 4109 Introduction to AI for Health
Artificial Intelligence (AI) has emerged as a powerful tool for solving complex health problems using advanced data-driven techniques. AI for health is fueled by both the advancement in AI methods and the increasing availability of health data. This course will introduce the interdisciplinary field of AI for health including applications of AI in various healthcare domains. Students will read and critique research papers and perform projects to develop AI models and solutions for health care.
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 4202 Operating Systems Organization
This course involves a hands-on exploration of core OS abstractions, mechanisms and policies in the context of the Linux kernel. Readings, lecture material, studio exercises, and lab assignments are closely integrated in an active-learning environment in which students gain experience and proficiency writing OS code, as well as tracing and evaluating OS operations via user-level programs and kernel-level monitoring tools. Topics include: system calls, interrupt handling, kernel modules, concurrency and synchronization, proportional and priority-based scheduling of processes and threads, I/O facilities, memory management, virtual memory, device management, and file system organization. Prerequisite: CSE 361S
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

CSE 4205 Programming Systems and Languages
A systematic study of the principles, concepts and mechanisms of computer programming languages: their syntax, semantics and pragmatics; the processing and interpretation of computer programs; programming paradigms; and language design. Illustrative examples are selected from a variety of programming language paradigms. Prerequisites: CSE 332S
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

CSE 4207 Cloud Computing With Big Data Applications
This course provides an overview of the tools necessary to harness big data on the cloud for real world analytic applications. Each lecture will cover an important cloud computing concept or framework, and will be accompanied by a lab. There will be an emphasis on hands-on experience through using each of the tools taught in this course in a small project. Topics include Cloud based security and storage, Linux, Docker and Kubernetes, Data modeling through JSON and SQL, Database concepts and storage architectures, distributed systems, and finally real-world applications. Labs will build on each other and require the completion of the previous week's lab. The course will end with a multi-week, open-ended final project. Prerequisites: CSE 131,CSE 247, and CSE 330.
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 4208 Multi-Paradigm Programming in C++
Intensive focus on how modern C++ language features support procedural, functional, generic, and object-oriented programming paradigms and allow those paradigms to be applied both separately and in combination. Topics covered will include various C++ language features and semantics, especially from the C++11 standard onward, with studio exercises and lab assignments designed to build proficiency in using them effectively within and across the different programming paradigms. Prerequisite: CSE 332S or CSE 504N; or graduate standing and basic proficiency in C++.
Credit 3 units.
Typical periods offered: Fall

CSE 4301 Translation of Computer Languages
The theory of language recognition and translation is introduced in support of compiler construction for modern programming languages. Topics include syntactic and semantic analysis, symbol table management, code generation, and runtime libraries. A variety of parsing methods is covered, including top-down and bottom-up. Machine problems culminate in the course project, for which students construct a working compiler.
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 4303 Introduction to Computer Security
Secure computing requires the secure design, implementation, and use of systems and algorithms across many areas of computer science. Fundamentals of secure computing such as trust models and cryptography will lay the groundwork for studying key topics in the security of systems, networking, web design, machine learning algorithms, mobile applications, and physical devices. Human factors, privacy, and the law will also be considered. Hands-on practice exploring vulnerabilities and defenses using Linux, C, and Python in studios and lab assignments is a key component of the course. Prerequisites: CSE 247 and either CSE 361 or CSE 332.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

CSE 4304 Reverse Engineering and Malware Analysis
This course will focus on reverse engineering and malware analysis techniques. Reverse engineering -- the process of deconstructing an object to reveal its design and architecture -- is an essential skill in the information security community. Although hackers often use reverse engineering tools to discover and exploit vulnerabilities, security analysts and researchers must use reverse engineering techniques to find what a specific malware does, how it does it, and how it got into the system. In this course, we will explore reverse engineering techniques and tools, focusing on malware analysis. Students will use and write software during in-class studios and homework assignments to illustrate mastery of the material. Prerequisite: CSE 361S.
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 4305 Database Management Systems
A study of data models and the database management systems that support these data models. The design theory for databases is developed and various tools are utilized to apply the theory. General query languages are studied and techniques for query optimization are investigated. Integrity and security requirements are studied in the context of concurrent operations on a database, where the database may be distributed over one or more locations. The unique requirements for engineering design databases, image databases, and long transaction systems are analyzed. Prerequisite: CSE 247.
Credit 3 units.
Typical periods offered: Fall, Spring

CSE 4307 Software Engineering Workshop
An introduction and exploration of concepts and issues related to large-scale software systems development. Areas of exploration include technical complexities, organization issues, and communication techniques for large-scale development. Students participate through teams emulating industrial development. The projects cover the principal system development life-cycle phases from requirements analysis, to software design, and to final implementation. Issues relating to real-time control systems, human factors, reliability, performance, operating costs, maintainability and others are addressed and resolved in a reasonable manner. Book Requirement: https://www.oreilly.com/library/view/kubernetes-up-and/9781492046523/. Prerequisite: Junior or Senior standing, and CSE 330S.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

CSE 4308 Mobile Application Development
Learn how to create iOS apps in the Swift programming language. This course covers a variety of topics in the development of modern mobile applications, with a focus on hands-on projects. Students will create multiple fully-functional apps from scratch. The course emphasizes object-oriented design patterns and real-world development techniques. Time is provided at the end of the course for students to work on a project of their own interest. Prerequisite: CSE 247.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

CSE 4309 Mobile Application Development II
In this course, students will work in groups to design, develop, test, publish, and market an iOS mobile application. Throughout the semester, students will operate in different roles on a team, serving as lead developer, tester, and project manager. Topics include how to publish a mobile application on an app store, APIs and tools for testing and debugging, and popular cloud-based SDKs used by developers. This course requires completion of the iOS version of CSE 438 Mobile Application Development or the appropriate background knowledge of the iOS platform.

Credit 3 units.

Typical periods offered: Spring

CSE 4393 Seminar: Capture the Flag (CTF) Studio

This course provides a collaborative studio space for hands-on practice solving security-relevant puzzles in Capture The Flag (CTF) format. Students will engage CTF challenges individually and in teams, and online CTF resources requiring (free) account signup may be used. Students will be encouraged to attempt challenges commensurate with their ability, but no prior CTF experience or security knowledge is assumed. The goal of the course is to build skills in the fundamentals of security analysis, including usage of the Linux command line and console-based security tools, creativity in applying theoretical knowledge to practical challenges, and confidence in approaching under-specified problems. Prerequisite/corequisite: CSE 433S or equivalent.

Credit 1 unit.

Typical periods offered: Fall, Spring

CSE 4397 Technical Interviewing

Students will study, give, and receive technical interviews in this seminar course. The focus will be on improving student performance in a technical interview setting, with the goal of making our students as comfortable and agile as possible with technical interviews. Professionals from the local and extended Washington University community will mentor our students in this seminar.

Credit 2 units.

Typical periods offered: Spring

CSE 4402 Introduction to Cryptography

This course is an introduction to modern cryptography, with an emphasis on its theoretical foundations. Topics will include one-way functions, pseudorandom generators, public key encryption, digital signatures, and zero-knowledge proofs. Prerequisites: CSE 240 and CSE 247.

Credit 3 units.

Typical periods offered: Fall, Spring

CSE 4470 Introduction to Formal Languages and Automata

An introduction to the theory of computation, with emphasis on the relationship between formal models of computation and the computational problems solvable by those models. Specifically, this course covers finite automata and regular languages; Turing machines and computability; and basic measures of computational complexity and the corresponding complexity classes. Prerequisites: CSE 240 and CSE 247

Credit 3 units.

Typical periods offered: Spring

CSE 4500 Video Game Programming

This course teaches the core aspects of a video game developer's toolkit. Students work in groups and with a large game software engine to create and playtest a full-featured video game. Students will explore topics around the design of games through analysis of current games. Students have the opportunity to explore additional topics including graphics, artificial intelligence, networking, physics, and user interface design through their game project. Prerequisite: CSE247.

Credit 3 units.

Typical periods offered: Fall, Spring, Summer

CSE 4501 Video Game Programming II

This course is a continuation of CSE 450A Video Game Programming I. Students will work in groups and with a large game software engine to make a full-featured video game. Students will have the opportunity to work on topics in graphics, artificial intelligence, networking, physics, user interface design, and other topics. Prerequisites: CSE 450A and permission of instructor.

Credit 3 units.

Typical periods offered: Fall, Spring

CSE 4502 Computer Graphics

Introduction to computer graphics. The course covers fundamental concepts, data structures, and algorithms related to the construction, display, and manipulation of three-dimensional objects. Topics include scan-conversion, basic image processing, transformations, scene graphs, camera projections, local and global rendering, fractals, and parametric curves and surfaces. Students develop interactive graphics programs using C++ language.Prerequisite: CSE 332S and Math 309

Credit 3 units.

CSE 4504 Software Engineering for External Clients

Teams of students will design and develop a solution to a challenging problem posed by a real-world client. Students will gain experience with a variety of facets of software development, such as gathering and interpreting requirements, software design/architecture, UI/UX, testing, documentation, and developer/client interactions. Prerequisite: E81 CSE 330S or E81 CSE 332S and at least junior standing

Credit 3 units.

Typical periods offered: Fall

CSE 4507 Introduction to Visualization

Disciplines such as medicine, business, science, and government are producing enormous amounts of data with increasing volume and complexity. In this course, students will study the principles for transforming abstract data into useful information visualizations. They will learn about the state of the art in visualization research and development and gain hands-on experience with designing and developing interactive visualization tools for the web. They will also also learn how to critique existing visualizations and how to evaluate the systems they build. Topics include design, data mapping, visual perception, and interaction. Prerequisite: CSE 330S.

Credit 3 units.

Typical periods offered: Fall

CSE 4600 Switching Theory

Advanced topics in switching theory as employed in the synthesis, analysis, and design of information processing systems. Combinational techniques: minimization, multiple output networks, state identification and fault detection, hazards, testability and design for test are examined. Sequential techniques: synchronous circuits, machine minimization, optimal state assignment, asynchronous circuits, and built-in self-test techniques. Prerequisite: CSE 260M

Credit 3 units.

CSE 4602 Computer Systems Design

Introduction to modern design practices, including FPGA and PCB design methodologies. Student teams use Xilinx Vivado for HDL-based FPGA design and simulation and do schematic capture, PCB layout, fabrication, and testing of the hardware portion of a selected computation system. The software portion of the project uses Microsoft Visual Studio to develop a user interface and any additional support

software required to demonstrate final projects to the faculty during finals week. Prerequisites: CSE 361S and 362M from Washington University in St. Louis or permission of the instructor. Revised: 2019-02-22

Credit 3 units.

Typical periods offered: Spring

CSE 4603 Digital Integrated Circuit Design and Architecture

This is a project-oriented course on digital VLSI design. The course material focuses on bottom-up design of digital integrated circuits, starting from CMOS transistors, CMOS inverters, combinational circuits and sequential logic designs. Important design aspects of digital integrated circuits such as propagation delay, noise margins and power dissipation are covered in the class, and design challenges in sub-micron technology are addressed. The students design combinational and sequential circuits at various levels of abstraction using a state-of-the-art CAD environment provided by Cadence Design Systems. The goal of the course is to design a microprocessor in 0.5 micron technology that will be fabricated by a semiconductor foundry. Prerequisites: CSE 260M and ESE 232.

Credit 3 units.

Typical periods offered: Spring

CSE 4607 Embedded Computing Systems

This course introduces the issues, challenges, and methods for designing embedded computing systems -- systems designed to serve a particular application and which incorporate the use of digital processing devices. Examples of embedded systems include cellular phones, appliances, game consoles, automobiles, and drones. Emphasis is given to aspects of design that are distinct to embedded systems. The course examines hardware, software, and system-level design. Hardware topics include microcontrollers, digital signal processors, memory hierarchy, and I/O. Software issues include languages, run-time environments, and program analysis. System-level topics include real-time operating systems, scheduling, power management, and wireless sensor networks. Students will perform a course project on a real embedded system testbed. Prerequisites: CSE 260M (and either CSE 132 or ESE 205).

Credit 3 units.

Typical periods offered: Fall

CSE 4608 Introduction to Quantum Computing

This course introduces students to quantum computing, which leverages the effects of quantum-mechanical phenomena to solve problems. The course begins with material from physics that demonstrates the presence of quantum effects. Mathematical abstractions of quantum gates are studied with the goal of developing the skill to reason about existing quantum circuits and to develop new quantum circuits as required to solve problems. Students will develop a quantum-computer simulator and make use of open simulators as well as actual devices that can realize quantum circuits on the Internet. Prerequisites: CSE247, Math 309 and Math 3200 (or ESE 326 or Engr 328).

Credit 3 units.

Typical periods offered: Fall, Spring

CSE 4690 Security of the Internet of Things and Embedded System Security

This course presents a deep dive into the emerging world of the Internet of Things from a cybersecurity perspective. With billions of internet-enabled devices projected to impact every nook and cranny of modern existence, the concomitant security challenge portends to become dazzlingly complex. Students will learn the fundamentals of IoT architecture and operations from a layered perspective and focus on identifying, assessing, and mitigating the threats and vulnerabilities therein. Through a blend of lecture and hands-on studios, students will gain proficiency in the range of approaches, methods, and techniques required to address embedded systems security and secure the internet of things using actual devices from both hardware and software perspectives and across a range of applications.

Credit 3 units.

CSE 4703 Introduction to Computer Networks

A broad overview of computer networking. Topics include history, protocols, Hyper Text Transfer Protocol (HTTP), File Transfer Protocol (FTP), Simple Mail Transfer Protocol (SMTP), Domain Name System (DNS), peer-to-peer (P2P), transport layer design issues, transport layer protocols, Transmission Control Protocol (TCP), User Datagram Protocol (UDP), TCP congestion control, network layer, Internet Protocol version 4 (IPv4), Internet Control Message Protocol (ICMP), Internet Protocol version 6 (IPv6), routing algorithms, routing protocols, Open Shortest Path First (OSPF), Routing Information Protocol (RIP), Border Gateway Protocol (BGP), datalink layer and local area networks carrier sense multiple access with collision detection (CSMA/CD), Ethernet, virtual local area networks (VLANs), Point-to-Point Protocol (PPP), Multi-Protocol Label Switching, wireless and mobile networks, multimedia networking, security in computer networks, cryptography, and network management. Prerequisite: CSE 247; CSE 132 is suggested, but not required. Revised: 2019-02-22

Credit 3 units.

Typical periods offered: Fall, Spring

CSE 4970 Senior Project I

Implementation of a substantive project on an individual basis, involving one or more major areas in computer science. Problems pursued under this framework may be predominantly analytical, involving exploration and extension of theoretical structures, or may pivot around the design/development of solutions for particular applications drawn from areas throughout the University and/or community. In either case, the project serves as a focal point for crystallizing the concepts, techniques, and methodologies encountered throughout the curriculum. Students intending to take CSE 497-498 must submit a project proposal form (https://cse.wustl.edu/undergraduate/PublishingImages/Pages/undergraduate-research/Independent%20Study%20Form%20400.pdf) for approval by the department during the spring semester of the junior year. Prerequisite: senior standing.

Credit 3 units.

Typical periods offered: Fall, Spring

CSE 4971 Senior Project II

Implementation of a substantive project on an individual basis, involving one or more major areas in computer science. Problems pursued under this framework may be predominantly analytical, involving exploration and extension of theoretical structures, or may pivot around the design/development of solutions for particular applications drawn from areas throughout the University and/or community. In either case, the project serves as a focal point for crystallizing the concepts, techniques, and methodologies encountered throughout the curriculum. Students intending to take CSE 497-498 must submit a project proposal form (https://cse.wustl.edu/undergraduate/PublishingImages/Pages/undergraduate-research/Independent%20Study%20Form%20400.pdf) for approval by the department during the spring semester of the junior year. Prerequisite: senior standing.

Credit 3 units.

Typical periods offered: Fall, Spring

CSE 4975 Undergraduate Honors Thesis
Working closely with a faculty member, the student investigates an original idea (algorithm, model technique, etc.), including a study of its possible implications, its potential application, and its relationship to previous related work reported in the literature. Contributions and results from this investigation are synthesized and compiled into a publication-quality research paper presenting the new idea. Prerequisites: a strong academic record and permission of instructor. Credit 3 units.
Typical periods offered: Fall, Spring

Bachelor of Science in Computer Engineering (CSE)

Computer engineering encompasses studies of hardware, software, and systems issues that arise in the design, development, and application of computer systems. Computer engineers are particularly well suited to address the particular challenges that exist as computing systems interact with the real, physical world. This includes sensing, actuation, timing, security, and computing systems with widely varying form factors, ranging from servers to mobile devices to the "internet of things." The degree requires 120 units including core courses, technical electives, a capstone course, and common studies.

The Bachelor of Science in Computer Engineering degree is jointly administered by the Department of Computer Science and Engineering and the Department of Electrical and Systems Engineering.

Students working toward a Bachelor of Science in Computer Engineering degree must meet all requirements for an engineering degree from the McKelvey School of Engineering. Required courses and technical electives cannot be taken on a Pass/No Pass basis.

- **Core Requirements*:**

The following courses are required of all computer engineering students:

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
CSE 1302	Introduction to Computer Engineering	3
CSE 2407	Data Structures and Algorithms	3
CSE 2600	Introduction to Digital Logic and Computer Design	3
CSE 3601	Introduction to Systems Software	3
CSE 3602	Computer Architecture	3
ESE 1050	Introduction to Electrical and Systems Engineering	4
ESE 2300	Introduction to Electrical and Electronic Circuits	4
ESE 2320	Introduction to Electronic Circuits	3
ESE 3260	Probability and Statistics for Engineering	3
Total Units		**32**

* Each of these core courses must be passed with a grade of C- or better.

- **Technical Elective Requirements:**

21 units of technical electives that fulfill the following requirements:

1. At least two courses from the following list (the "hardware" list):

Code	Title	Units
ESE 3300	Electromagnetic Theory	3
ESE 3301	Electromagnetics Lab	3
ESE 3310	Electronics Lab	3
ESE 3510	Signals and Systems	3
ESE 4301	Quantum Mechanics for Engineers	3
ESE 4310	Introduction to Quantum Electronics	3
ESE 4330	Radio Frequency and Microwave Technology for Wireless Systems	3
ESE 4360	Semiconductor Devices	3
ESE 4410	Control Systems	3
ESE 4440	Sensors and Actuators	3
ESE 4460	Robotics: Dynamics and Control	3
CSE 4603	Digital Integrated Circuit Design and Architecture	3
ESE 4650	Digital Systems Laboratory	3
ESE 4710	Communications Theory and Systems	3
ESE 4820	Digital Signal Processing	3

2. At least two courses from the following list (the "software" list):

Code	Title	Units
CSE 2301	Introduction to Parallel and Concurrent Programming	3
CSE 3302	Object-Oriented Software Development Laboratory	3
CSE 3605	Elements of Computing Systems	3
CSE 4202	Operating Systems Organization	3
CSE 4205	Programming Systems and Languages	3
CSE 4301	Translation of Computer Languages	3
CSE 4303	Introduction to Computer Security	3
CSE 4304	Reverse Engineering and Malware Analysis	3
CSE 4607	Embedded Computing Systems	3
CSE 4608	Introduction to Quantum Computing	3
CSE 4703	Introduction to Computer Networks	3

3. The remaining three courses can be any CSE course with an S, M, T, or A suffix; or CSE 3407; or any ESE course at the 3000 level or higher; or ESE 2050, ESE 2180, or ESE 2190. Additional courses (beyond the two required) in the above lists count toward this requirement.

The above can include courses at the graduate level; however, they must still meet one of the two criteria above. Up to 6 units of independent study (CSE 4001, CSE 4970-CSE 4975, ESE 4999, ESE 4991) can count toward technical electives. There is no limit as to how many independent study courses can count toward the general 120 units.

- **Capstone Requirement:**

The capstone requirement can be met by taking either CSE 4602 or ESE 4970.

- **Common Studies Requirements:**

Code	Title	Units
CWP 1500	College Writing	3
ENGR 3100	Technical Writing	3
Humanities and Social Sciences electives		18
MATH 1510	Calculus I	3
MATH 1520	Calculus II	3
MATH 2130	Calculus III	3
MATH 2500	Differential Equations	3
Natural Sciences elective		3
PHYSICS 1740	Physics I	3
PHYSICS 1551	Physics I - First Years Only	3
PHYSICS 1553	Physics I - Sophomores, Juniors, and Seniors Only	3
PHYSICS 1741	Physics I Laboratory	1
PHYSICS 1742	Physics II	3
PHYSICS 1743	Physics II Laboratory	1
Total Units		**53**

Upon completing a course in the calculus sequence (MATH 1510-MATH 1520-MATH 2130) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the mathematics department's back credit policy.

The natural sciences requirement is for 3 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies or Physics. These courses must be completed with a grade of C- or better.

The College Writing Program, humanities, and social sciences requirements are those required of all students in the McKelvey School of Engineering.

Bachelor of Science in Computer Science (CSE)

The Bachelor of Science in Computer Science (BSCS) is designed for students planning a career in computing. Students working toward a BSCS degree must meet all requirements for an applied science degree (p. 1160) from the McKelvey School of Engineering. In addition, there are the following departmental course requirements:

- **Computer Science Core Requirements* (21 units total):**

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
CSE 1302	Introduction to Computer Engineering	3
CSE 2400	Logic and Discrete Mathematics	3
or MATH 3010	Foundations for Higher Mathematics	
CSE 2407	Data Structures and Algorithms	3
CSE 3302	Object-Oriented Software Development Laboratory	3
CSE 3407	Analysis of Algorithms	3
CSE 3601	Introduction to Systems Software	3
Total Units		**21**

* Each of these core courses must be passed with a grade of C- or better.

- **Systems Requirement (3 units). Choose one of the following**:**

Code	Title	Units
CSE 4202	Operating Systems Organization	3
CSE 4205	Programming Systems and Languages	3
CSE 4301	Translation of Computer Languages	3
CSE 4303	Introduction to Computer Security	3
CSE 4304	Reverse Engineering and Malware Analysis	3
CSE 4703	Introduction to Computer Networks	3

**The selected course must be passed with a grade of C- or better.

- **Methods Requirement (3 units). Choose one of the following***:**

Code	Title	Units
CSE 2506	Introduction to Human-Centered Design	3
CSE 4101	AI and Society	3
CSE 4102	Introduction to Artificial Intelligence	3
CSE 4106	Data Science for Complex Networks	3
CSE 4107	Introduction to Machine Learning	
or ESE 4170	Introduction to Machine Learning and Pattern Recognition (ESE 4170 would not count toward the required two CSE courses at the 4000+ level and would be counted as an out-of-department course.)	
CSE 4402	Introduction to Cryptography	3
CSE 4507	Introduction to Visualization	3
CSE 4608	Introduction to Quantum Computing	3

***The selected course must be passed with a grade of C- or better.

- **Computer Science Technical Elective Requirements:**

Students must complete 15 additional units (five courses) of CSE Technical Electives, which can come from any CSE classroom course including Systems and Methods Courses.

- **Overall Degree Restrictions:**

Up to 6 units total can come from a combination of approved CSE Independent Study (CSE 4001, CSE 4970, CSE 4971, CSE 4975) or approved courses from other departments (e.g., ESE 4170). Courses taken in other departments must have significant technical computing content, including those outside of the McKelvey School of Engineering. Students must complete the Elective Request form to request review of non-CSE courses. Students with interests in a particular area of computing should refer to the technical elective course sequences for suggestions on which courses are relevant to that area.

At least two courses must be CSE classroom courses at the 4000 level or higher.

All courses must be taken for a grade. Core, Systems, and Methods requirements require a C- or better. All other courses require a passing grade.

- **Math Requirements:**

Code	Title	Units
MATH 1510	Calculus I	3
MATH 1520	Calculus II	3
MATH 2130	Calculus III	3
MATH 3300	Matrix Algebra	3
or ENGR 3180	Engineering Mathematics A	
ESE 3260	Probability and Statistics for Engineering	3
or SDS 3020	Elementary to Intermediate Statistics and Data Analysis	
or SDS 5212	Statistics for Data Science I	
or DAT 120 & DAT 121	Managerial Statistics I & II	
Total Units		**15**

Upon completing a course in the calculus sequence (MATH 1510-MATH 1520-MATH 2130) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the Department of Mathematics' back credit policy.

- **Additional Departmental Requirements:**

Code	Title	Units
CWP 1500	College Writing	3
ENGR 3100	Technical Writing	3
Natural sciences electives		8
Humanities and social sciences electives		18
Total Units		**32**

The College Writing Program, humanities, and social sciences requirements are required of all students in the McKelvey School of Engineering. For information about how to fulfill the school's English proficiency requirement, please visit the Degree Requirements page of this Bulletin (p. 1162).

The natural sciences requirement is for 8 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology; Biology; Chemistry; Earth, Environmental, and Planetary Sciences; Environmental Studies; or Physics. The College Writing Program and natural sciences courses must be completed with a grade of C- or better.

All courses taken to meet any of the above requirements (with the exception of the humanities and social sciences electives) cannot be taken on a Pass/No Pass basis.

Bachelor of Science in Computer Science + Economics (CSE)

The College of Arts & Sciences and the McKelvey School of Engineering have developed a new major that allows students interested in both economics and computer science to combine these two complementary disciplines efficiently, without having to pursue them as two separate majors.

Course Requirements*

Code	Title	Units
MATH 1510	Calculus I	3
MATH 1520	Calculus II	3
SDS 3020	Elementary to Intermediate Statistics and Data Analysis**	3
or ESE 3260	Probability and Statistics for Engineering	
or SDS 3030	Statistics for Data Science I	
MATH 2130	Calculus III	3
CSE 1301	Introduction to Computer Science	3
CSE 2400	Logic and Discrete Mathematics	3
or MATH 3010	Foundations for Higher Mathematics	
CSE 2407	Data Structures and Algorithms	3
CSE 3407	Analysis of Algorithms	3
ECON 1501	Introduction to Microeconomics	3
ECON 1502	Introduction to Macroeconomics	3
ECON 4001	Intermediate Microeconomic Theory	3
ECON 3150	Introduction to Econometrics	3
or ECON 4150	Introduction with Econometrics with Writing	
Total Units		**36**

* Each of these core courses must be passed with a grade of C- or better.

**Of these options, SDS 3020 is the preferred course.

Electives

Six upper-level approved courses from the Department of Economics and Computer Science & Engineering (CSE) are required: three from Economics and three from CSE. Students who have AP credits to satisfy the requirements for ECON 1501 - Introduction to Microeconomics and/or ECON 1502 - Introduction to Macroeconomics can instead take approved electives in either department, and they can add at most one approved course from outside both departments.

Economics Electives

Three 3-unit economics electives drawn from any ECON 4001 Intermediate Microeconomic Theory prerequisite course, including ECON 4002 Intermediate Macroeconomic Theory, are required.

Economics electives of particular relevance include (but are not limited to) ECON 4315 Market Design, ECON 4151 Applied Econometrics, ECON 4335 Industrial Organization, ECON 4710 Game Theory, and ECON 4420 Computational Macroeconomics.

Computer Science Electives

Code	Title	Units
CSE 2107	Introduction to Data Science	3
CSE 3101	Introduction to Intelligent Agents Using Science Fiction	3
CSE 3104	Data Manipulation and Management	3
CSE 3300	Rapid Prototype Development and Creative Programming	3
CSE 3302	Object-Oriented Software Development Laboratory	3
CSE 3401	Parallel and Sequential Algorithms	3
CSE 4000	Independent Study (MUST be approved by CSE CS+Econ Director)	3
CSE 4061	Text Mining	3
CSE 4101	AI and Society	3
CSE 4102	Introduction to Artificial Intelligence	3
CSE 4106	Data Science for Complex Networks	3
CSE 4107	Introduction to Machine Learning	3
or ESE 4170	Introduction to Machine Learning and Pattern Classification	
CSE 4205	Programming Systems and Languages	3
CSE 4207	Cloud Computing With Big Data Applications	3
CSE 4305	Database Management Systems	3
CSE 4507	Introduction to Visualization	3
CSE 5104	Data Mining	3
CSE 5107	Machine Learning	3
CSE 5108	Human-in-the-Loop Computation	3
CSE 5403	Algorithms for Nonlinear Optimization	3
CSE 5507	Advanced Visualization	3

Additional Departmental Requirements

Code	Title	Units
CWP 1500	College Writing	3
ENGR 3100	Technical Writing	3
Natural Sciences electives		8
Humanities and Social Sciences electives		18

The College Writing Program, humanities, and social sciences requirements are those required of all students in the McKelvey School of Engineering. For information about how to fulfill the school's English proficiency requirement, please visit the Degree Requirements page (p. 1162).

The natural sciences requirement is for 8 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology; Biology; Chemistry; Earth, Environmental, and Planetary Sciences; Environmental Studies; or Physics. The College Writing Program and natural sciences courses must be completed with a grade of C- or better.

All courses taken to meet any of the above requirements (with the exception of the humanities and social sciences electives) cannot be taken on a Pass/No Pass basis.

Bachelor of Science in Computer Science + Mathematics (CSE)

This major, developed through a collaboration between the McKelvey School of Engineering and the College of Arts & Sciences, efficiently captures the intersection of the complementary studies of computer science and math.

McKelvey Engineering students who declare this major must fulfill the core course requirements listed below and all other requirements for the Applied Science degree in the McKelvey School of Engineering. They must also complete ENGR 3100 Technical Writing and 8 units of courses designated as NSM (Natural Sciences & Math) from Anthropology (ANTHRO), Biology and Biomedical Sciences (BIOL), Chemistry (CHEM), Earth, Environmental, and Planetary Sciences (EEPS), Physics (PHYSICS), or Environmental Studies (ENST).

Arts & Sciences students who declare this major must fulfill the distribution requirements and all other requirements for the Bachelor of Arts (BA) degree in addition to the specific requirements listed below.

Core Course Requirements*

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
CSE 2400	Logic and Discrete Mathematics **	3
CSE 2407	Data Structures and Algorithms	3
CSE 3407	Analysis of Algorithms	3
MATH 1510	Calculus I **	3
MATH 1520	Calculus II **	3
MATH 2130	Calculus III **	3
MATH 3010 Foundations for Higher Mathematics ** **or** MATH 3015 Foundations for Higher Mathematics With Writing **		3
MATH 3300	Matrix Algebra **	3
SDS 3020 Elementary to Intermediate Statistics and Data Analysis **or** SDS 3030 Statistics for Data Science I **or** ESE 3260 Probability and Statistics for Engineering		3
Total Units		**30**

* Each of these core courses must be passed with a C- or better.

** AP credit may be applied in place of MATH 1510 and/or MATH 1520. Students who complete the MATH 2801 Honors Mathematics I and MATH 2802 Honors Mathematics II sequence will be considered to have completed MATH 1510, MATH 1520, MATH 2130, and CSE 2400; these students are also recommended to bypass MATH 3010/MATH 3015 and MATH 3300, for which they may substitute any other upper-level Mathematics courses.

Electives

Seven upper-level courses from Math or Computer Science & Engineering can be chosen from the approved list, with the following caveats:

- At least three courses must be taken from CSE and at least three courses must be taken from Math.
- At most one preapproved course from outside both departments can be selected.
- CSE 4000 or CSE 4001 Independent Study may be taken for a maximum of 3 units and must be approved by a CS+Math review committee.
- For each of the following pairs of electives, students may count one as an elective toward the major but not both:
  - CSE 2107 Introduction to Data Science **or** BME 4400 Biomedical Data Science
  - CSE 4107 Introduction to Machine Learning **or** ESE 4170 Introduction to Machine Learning and Pattern Classification
  - CSE 4109 Introduction to AI for Health **or** CSE 5310 AI for Health
  - MATH 4560 Topics in Financial Mathematics **or** ESE 4270 Financial Mathematics

List of Approved Electives

Humanities and social sciences electives		18
Natural sciences electives		8

The College Writing Program, humanities, and social sciences requirements are those required of all students in the McKelvey School of Engineering. For information about how to fulfill the school's English proficiency requirement, please visit the Degree Requirements page (p. 1162).

The natural sciences requirement is for 8 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies or Physics. The College Writing Program and natural sciences courses must be completed with a grade of C- or better.

All courses taken to meet any of the above requirements (with the exception of the humanities and social sciences electives) cannot be taken on a pass/no pass basis.

Bachelor of Science in Data Science (CSE)

The College of Arts & Sciences and McKelvey School of Engineering developed a new major that efficiently captures the intersection of mathematics and statistics with computer science for data science. The Bachelor of Arts in Data Science (BADS) will give students the formal foundation needed to understand the applicability and consequences of the various approaches to analyzing data with a focus on statistical modeling and machine learning.

Students who declare this major must fulfill the core course requirements and electives listed below. In addition, students need to meet the ethics and professional responsibility requirement as well as the practicum requirement. Arts & Sciences students who declare this major must fulfill all other requirements for a BA degree. McKelvey Engineering students who declare this major must complete all other requirements for the Applied Science degree in the McKelvey School of Engineering. They must also complete ENGR 3100 Technical Writing and 8 units of courses designated as Natural Sciences & Math (NSM) from Anthropology (ANTHRO), Biology and Biomedical Sciences (BIOL), Chemistry (CHEM), Earth, Environmental, and Planetary Sciences (EEPS), Physics (PHYSICS), or Environmental Studies (ENST).

Data Science Core Requirements (CR)

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
CSE 2107	Introduction to Data Science	3
CSE 2407	Data Structures and Algorithms	3
CSE 3104	Data Manipulation and Management	3
CSE 4107 Introduction to Machine Learning **or** SDS 4430 Multivariate Statistical Analysis **or** ESE 4170 Introduction to Machine Learning and Pattern Classification		3
MATH 1510	Calculus I	3
MATH 1520	Calculus II	3
MATH 2130	Calculus III	3
MATH 3300	Matrix Algebra	3
SDS 3030	Statistics for Data Science I	3
SDS 4030	Statistics for Data Science II	3
SDS 4130	Linear Statistical Models	3
Total Units		**36**

Data Science Technical Electives

Four courses can be chosen from the list of approved electives given below, with the following caveats:

- At least one course from Statistics and Data Science (at the 4000 level or above)
- At least one course from Computer Science & Engineering (at the 4000 level or above)
- At most one course at the 2000 level

List of Approved Data Science Technical Electives

Computer Science and Engineering

Code	Title	Units
CSE 2307	Programming Tools and Techniques	3
CSE 2506	Introduction to Human Centered Design	3
CSE 3050*	Responsible Data Science	3
CSE 3101	Introduction to Intelligent Agents Using Science Fiction	3
CSE 3407	Analysis of Algorithms	3
CSE 4061	Text Mining	3
CSE 4101*	AI and Society	3
CSE 4102	Introduction to Artificial Intelligence	3
CSE 4107**	Introduction to Machine Learning	3
CSE 4109***	Introduction to AI for Health	3
CSE 4207	Cloud Computing	3
CSE 4305	Database Management Systems	3
CSE 4507	Introduction to Visualization	3
CSE 5104	Data Mining	3
CSE 5105	Bayesian Methods in Machine Learning	3
CSE 5107	Machine Learning	3
CSE 5108	Human in the Loop Computation	3
CSE 5403	Algorithms for Nonlinear Optimization	3
CSE 5509	Computer Vision	3

* CSE 3050 and CSE 4101 cannot be double counted in EPR.
** CSE 4107 cannot be double counted in CR.
*** CSE 4109 cannot be double counted as Practicum.

Statistics and Data Science

Code	Title	Units
SDS 3110	Biostatistics	3
SDS 4020	Mathematical Statistics	3
SDS 4110	Experimental Design	3
SDS 4120	Survival Analysis	3
SDS 4135	Applied Statistics Practicum*	3
SDS 4140	Advanced Linear Statistical Models	3

SDS 4155	Time Series Analysis	3

ESE 5130	Large Scale Optimization for Data Science	3

Energy, Environmental & Chemical Engineering

Code	Title	Units
EECE 2020	Computational Modeling in Energy, Environmental and Chemical Engineering	3

Linguistics

Code	Title	Units
LING 3250	Introduction to Computational Linguistics	3

Ethics and Professional Responsibility Requirement (EPR)

- 3 units of courses from the following list:

List of EPR Course Options

Code	Title	Units
CSE 3050*	Responsible Data Science	3
CSE 4101*	AI and Society	3
ENGR 4501	Engineering Ethics and Sustainability	1
ENGR 4502	Engineering Leadership and Team Building	1
ENGR 4503	Conflict Management and Negotiation	1
MSB 5560	Ethics in Biostatistics and Data Science	2
PHIL 2070	Business Ethics	3
PHIL 3160	Classical Ethical Theories	3
PHIL 4250	Normative Ethical Theory	3
POLSCI 3313	Theories of Social Justice	3

* CSE 3050 and CSE 4101 cannot be double counted as technical electives.

Practicum Requirement

- Students must complete an approved comprehensive data science project or experience for their practicum requirement. The practicum must be approved by the committee of data science faculty.
- The practicum experience should be completed during the next-to-last semester of study (i.e., the first semester of senior year). It is important that practicum plans be submitted for review *prior to starting the project or coursework* to ensure the proposed work is sufficient for the objectives of the practicum. After-the-fact approvals are possible but not guaranteed.
- Appropriate practicum work is possible via the following pathways:
  - Independent Study (CSE 4001 or SDS 4000)
  - Project-focused courses, including (but not limited to) CSE 4109 Introduction to AI for Health, CSE 4307 Software Engineering Workshop, CSE 4504 Software Engineering for External Clients, and SDS 4135 Applied Statistics Practicum. Students should contact course instructors in advance to identify the degree of agency the student will have over project selection and requirements.
  - Internships related to data science can be used to fulfill the practicum. Internships (paid or unpaid) cannot count for credit, but can satisfy the practicum requirement.

- To initiate the approval process, majors through the McKelvey School of Engineering should contact the CSE undergraduate coordinator (cse.undergrad@wustl.edu) in the CSE department, and majors through Arts & Sciences should contact the Undergraduate Director(s) (sdsundergraddirector@wustl.edu) in the Department of Statistics and Data Science.

Bachelor of Science in Business and Computer Science (CSE)

The Bachelor of Science in Business and Computer Science degree program provides an integrated educational experience that involves both the Olin Business School and the McKelvey School of Engineering. The objectives of this program are to provide students with the fundamental knowledge and perspectives of computer science and business and to expose them to the unique opportunities created by combining these disciplines. As one of the only such joint programs in the country, the Bachelor of Science in Business and Computer Science features unique curricular and cocurricular elements that help to create a distinctive program.

General Degree Requirements

- Complete at least 120 applicable units
- Earn at least a C (2.0 cumulative grade point average) in all applicable courses taken at Washington University
- Earn at least a C (2.0 GPA) in each separate school of study
- Complete a minimum of 60 units at Washington University (at least 30 units must be B courses and at least 30 units must be E courses taken at Washington University)
- Complete the last 30 units at Washington University

Foundation Course Requirements (31 units)

Code	Title	Units
MATH 1510	Calculus I (AP credit may satisfy this requirement)	3
MATH 1520	Calculus II (AP credit may satisfy this requirement)	3
MATH 2130	Calculus III	3
MATH 3300	Matrix Algebra (Prerequisite: Math 1520)	3
DAT 1200	Managerial Statistics I	3
or ESE 3260	Probability and Statistics for Engineering	
or SDS 3020	Elementary to Intermediate Statistics and Data Analysis	
DAT 1201	Managerial Statistics II	3
MGT 2010	Management Communication	4
ENGR 3100	Technical Writing	3
One College Writing Program course (themed writing course)		3
One Natural Sciences course designated NSM (Natural Sciences and Mathematics)		3
Total Units		**31**

Upon completing a course in the calculus sequence (MATH 1510-MATH 1520-MATH 2130) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the mathematics department's back credit policy.

The Natural Sciences requirement is for 3 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies or Physics. These courses must be completed with a grade of C- or better.

The school's English proficiency requirement is satisfied only by a grade of C- or better in one of the themed college writing courses developed by the College Writing Program.

Breadth/Free Elective Course Requirements (24 units)

- Humanities and Social Sciences (15 units): Any course with A&S attributes of Humanities (HUM), Language and Cultural Diversity (LCD), or Social and Behavioral Sciences (SSC). These courses must be taken with the credit grade option only (not Pass/No Pass). At least one course must be an ethics course from the program's list of approved ethics courses.
- Free Electives (9 units): Any course from any day-school division, including prematriculation credit (e.g., AP credit). The free elective courses may be taken with the Pass/No Pass grade option. A student may take a maximum of one course per semester as Pass/No Pass. If a course is only offered as Pass/No Pass, a student may choose another course to audit or take as Pass/No Pass.

Capstone/Integrated Learning Experience Requirements (6 units)

- 6 units of coursework jointly approved by the faculty curriculum oversight committees of both Business and Engineering
- Junior Year Capstone: MGT 4101 CEL Entrepreneurial Consulting Team
- Senior Year Capstone: CSE 4307 Software Engineering Workshop, CSE 4309 Mobile Application Development II, or CSE 4501 Video Game Programming II

Major Course Requirements (60 units)

- Business Course Requirements (30 units) as listed in the section below
- Computer Science Course Requirements (30 units) as listed in the section below

Business Course Requirements (30 total units)

Choose one of the two following clusters:

Business Analytics Cluster

Business Core Course Requirements (18 units):

Code	Title	Units
ACCT 2610	Principles of Financial Accounting (Prerequisites: Second-semester first-year standing)	3
FIN 3150	Capital Markets and Financial Management (Prerequisites: ACCT 2610, and DAT 1200)	3
MEC 2900	Microeconomics (Prerequisites: MATH 1510 or concurrent enrollment in MATH 1520 or MATH 2130)	3
MKT 3150	Principles of Marketing (Prerequisites: Sophomore standing and MEC 2900 or ECON 1011 or MGT 1000)	3
SCOT 2200	Quantitative Business Decision Making (Prerequisites: DAT 1200 and completion or concurrent enrollment in DAT 1201)	3
SCOT 3150	Operations and Manufacturing Management (Prerequisites: ACCT 2610, MEC 2900 or ECON 1011, and completion or concurrent enrollment in SCOT 2000)	3
Total Units		**18**

Electives (choose 12 units):

Code	Title	Units
DAT 3015	Data Analytics in Python (Prerequisite: Sophomore standing)	3
FIN 4480	Advanced Financial Management (Prerequisites: FIN 3150 and DAT 1201)	3
FIN 4510	Options, Futures and Derivative Securities (Prerequisite: FIN 3150, DAT 1201, and MATH 1520)	3
MEC 4710	Empirical Techniques for Industry Analysis (Prerequisites: MEC 2900, DAT 1200, DAT 1201)	3
MKT 3780	Marketing Research (Prerequisites: MKT 3150, DAT 1200, and DAT 1201 or concurrent enrollment in DAT 1201)	3
MKT 4001	Digital Marketing and Analytics (Prerequisites: MKT 3150 and either DAT 1200, MATH 2200, MATH 3200, or ESE 3260)	3
SCOT 4300	Operations Fun: Data Driven Optimization (Prerequisite: SCOT 2000)	3
SCOT 4580	Operations Analytics (Prerequisite: SCOT 3150)	3

Strategy & Leadership Cluster

Business Core Course Requirements (15 units):

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
FIN 3150	Capital Markets and Financial Management	3
MEC 2900	Microeconomics	3
MGT 1000	Individual in a Managerial Environment	3
OB 3150	Organization Behavior Within the Firm (MGT 1000 or Sophomore standing)	3
Total Units		**15**

Electives (choose 15 units):

Code	Title	Units
MEC 3700	Game Theory for Business (MEC 2900 or ECON 4001)	3
MEC 4700	Industrial Economics (MEC 3700)	3
MGT 3800	Business Strategy (MEC 2900 or ECON 4001)	3
MGT 4020	Ethical Issues in Managerial Decision Making (Senior Standing)	1.5
MGT 4210	Introduction to Entrepreneurship	3
or MGT 4603	Introduction to Social Entrepreneurship	
MGT 4290	Management and Corporate Responsibility	1.5
MGT 4601	Corporate and Global Strategy	3
OB 4300	Thinking Creatively and Leading Creative Teams (OB 3150)	1.5
OB 4340	Talent Analytics (OB 3150 and SCOT 2000)	1.5
OB 4350	People Metrics (OB 3150 and SCOT 2000)	1.5
OB 4610	Negotiation (OB 3150)	3
OB 4620	Leadership in Organizations (Sophomore standing)	3
OB 4685	Mindfulness and Performance in the Workplace	1.5
OB 4720	Defining Moments: Lessons in Leadership & Character From the Top (Senior standing or Junior standing with instructor permission)	1.5

Computer Science Course Requirements (30 total units)

Computer Science Core Course Requirements (9 units, C- grade required):

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
CSE 2407	Data Structures and Algorithms	3
CSE 3302	Object-Oriented Software Development Laboratory	3
Total Units		**9**

Electives (choose 21 units):

Code	Title	Units
Choose seven courses from any CSE courses with a Workday course tag of CSE Applications, CSE Machines, CSE Systems, or CSE Theory. CSE 1302, CSE 2400, CSE 3050, and CSE 3407 will count as electives in this category. Note that ESE 4170 will be accepted as a CSE elective as well.		

Notes:

- Students earning this degree will not be eligible to earn a second undergraduate degree or a second major in computer science, computer science + math, computer science + economics, data science, or a minor in computer science.
- Students earning this degree will not be eligible to earn a second undergraduate degree or second major in business. Students are eligible to earn a business minor, but 15 additional units are required, as coursework cannot double count.
- Students earning this degree will not be eligible to earn a second major in financial engineering.

Second Major in Computer Science (CSE)

The second major provides an opportunity to combine computer science with another degree program. A second major in computer science can expand a student's career options and enable interdisciplinary study in areas such as cognitive science, computational biology, chemistry, physics, philosophy and linguistics. The second major is also well suited for students planning careers in medicine, law, business, architecture and fine arts. The requirements are as follows. There are no additional distribution or unit requirements for the second major.

- **Computer Science Core Requirements* (21 Units Total):**

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
CSE 1302	Introduction to Computer Engineering	3
CSE 2400 Logic and Discrete Mathematics **or** MATH 3010 Foundations for Higher Mathematics		3
CSE 2407	Data Structures and Algorithms	3
CSE 3302	Object-Oriented Software Development Laboratory	3
CSE 3407	Analysis of Algorithms	3
CSE 3601	Introduction to Systems Software	3
Total Units		**21**

* Each of these core courses must be passed with a grade of C- or better.

- **Systems Requirement (3 Units). Choose one of the following**:**

Code	Title	Units
CSE 4202	Operating Systems Organization	3
CSE 4205	Programming Systems and Languages	3
CSE 4301	Translation of Computer Languages	3
CSE 4303	Introduction to Computer Security	3
CSE 4304	Reverse Engineering and Malware Analysis	3
CSE 4703	Introduction to Computer Networks	3

** The selected course must be passed with a grade of C- or better.

- **Methods Requirement (3 Units). Choose one of the following***:**

Code	Title	Units
CSE 2506	Introduction to Human-Centered Design	3
CSE 4101	AI and Society	3
CSE 4102	Introduction to Artificial Intelligence	3
CSE 4106	Data Science for Complex Networks	3
CSE 4107 Introduction to Machine Learning **or** ESE 4170 Introduction to Machine Learning and Pattern Recognition (ESE 4170 would not count toward the required two CSE courses at the 4000+ level and would be counted as an out-of-department course.)		3
CSE 4402	Introduction to Cryptography	3
CSE 4507	Introduction to Visualization	3
CSE 4608	Introduction to Quantum Computing	3

*** The selected course must be passed with a grade of C- or better.

- **Computer Science Technical Elective Requirements:**

Students must complete 15 additional units (five courses) of CSE Technical Electives, which can come from any CSE classroom course including Systems and Methods Courses.

- **Overall Degree Restrictions:**

Up to 6 units total can come from a combination of approved CSE Independent Study (CSE 4001, CSE 4970, CSE 4971, CSE 4975) or approved courses from other departments (e.g., ESE 4170). Courses taken in other departments must have significant technical computing content, including those outside of the McKelvey School of Engineering. Students must complete the Elective Request form to request review of non-CSE courses. Students with interests in a particular area of computing should refer to the technical elective course sequences for suggestions on which courses are relevant to that area.

At least two courses must be CSE classroom courses at the 4000 level or higher.

All courses must be taken for a grade. Core, Systems, and Methods requirements require a C- or better. All other courses require a passing grade.

- **Math Requirements:**

Code	Title	Units
MATH 1510	Calculus I	3
MATH 1520	Calculus II	3
MATH 2130	Calculus III	3
MATH 3300 Matrix Algebra **or** ESE 3180 Engineering Mathematics A		3
ESE 3260 Probability and Statistics for Engineering **or** SDS 3020 Elementary to Intermediate Statistics and Data Analysis **or** SDS 5212 Statistics for Data Science I **or** DAT 120 Managerial Statistics I + DAT 121 Managerial Statistics II		3
Total Units		**15**

Upon completing a course in the calculus sequence (MATH 1510-MATH 1520-MATH 2130) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the Department of Mathematics' back credit policy.

- **Additional Departmental Requirements:**

Code	Title	Units
CWP 1500	College Writing	3
ENGR 3100	Technical Writing	3
Natural sciences electives		8
Humanities and social sciences electives		18
Total Units		**32**

The College Writing Program, humanities, and social sciences requirements are required of all students in the McKelvey School of Engineering. For information about how to fulfill the school's English proficiency requirement, please visit the Degree Requirements page of this Bulletin (p. 1162).

The natural sciences requirement is for 8 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology; Biology; Chemistry; Earth, Environmental, and Planetary Sciences; Environmental Studies; or Physics. The College Writing Program and natural sciences courses must be completed with a grade of C- or better.

All courses taken to meet any of the above requirements (with the exception of the humanities and social sciences electives) cannot be taken on a pass/no pass basis.

Second Major in Computer Science + Mathematics (CSE)

This second major, developed through a collaboration between the McKelvey School of Engineering and the College of Arts & Sciences, efficiently captures the intersection of the complementary studies of computer science and math.

McKelvey Engineering students who declare this major must fulfill the core course requirements listed below and all other requirements for the Applied Science degree (p. 1160) in the McKelvey School of Engineering. They must also complete ENGR 3100 Technical Writing and 8 units of courses designated as NSM (Natural Sciences & Math) from Anthropology (ANTHRO), Biology and Biomedical Sciences (BIOL), Chemistry (CHEM), Earth, Environmental, and Planetary Sciences (EEPS), Physics (PHYSICS), or Environmental Studies (ENST).

Arts & Sciences students who declare this major must fulfill the distribution requirements and all other requirements for the Bachelor of Arts (BA) degree (p. 988) in addition to the specific requirements listed below.

Core Course Requirements*

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
CSE 2400	Logic and Discrete Mathematics **	3
CSE 2407	Data Structures and Algorithms	3
CSE 3407	Analysis of Algorithms	3
MATH 1510	Calculus I **	3
MATH 1520	Calculus II **	3
MATH 2130	Calculus III **	3
MATH 3010 Foundations for Higher Mathematics ** **or** MATH 3015 Foundations for Higher Mathematics With Writing **		3
MATH 3300	Matrix Algebra **	3
SDS 3020 Elementary to Intermediate Statistics and Data Analysis **or** SDS 3030 Statistics for Data Science I **or** ESE 3260 Probability and Statistics for Engineering		3
Total Units		**30**

* Each of these core courses must be passed with a C- or better.

** AP credit may be applied in place of MATH 1510 and/or MATH 1520. Students who complete the MATH 2801 Honors Mathematics I and MATH 2802 Honors Mathematics II sequence will be considered to have completed MATH 1510, MATH 1520, MATH 2130, and CSE 2400; these students are also recommended to bypass MATH 3010/MATH 3015 and MATH 3300, for which they may substitute any other upper-level Mathematics courses.

Electives

Seven upper-level courses from Math or Computer Science & Engineering can be chosen from the approved list, with the following caveats:

- At least three courses must be taken from CSE and at least three courses must be taken from Math.
- At most one preapproved course from outside both departments can be selected.
- CSE 4000 or CSE 4001 Independent Study may be taken for a maximum of 3 units and must be approved by a CS+Math review committee.
- For each of the following pairs of electives, students may count one as an elective toward the major but not both:
  - CSE 2107 Introduction to Data Science **or** BME 4400 Biomedical Data Science
  - CSE 4107 Introduction to Machine Learning **or** ESE 4170 Introduction to Machine Learning and Pattern Classification
  - CSE 4109 Introduction to AI for Health **or** CSE 5310 AI for Health
  - MATH 4560 Topics in Financial Mathematics **or** ESE 4270 Financial Mathematics

Additional Departmental Requirements

ENGR 3100 Technical Writing	3
One themed writing course from the College Writing Program	3
Humanities and social sciences electives	18
Natural sciences electives	8

The College Writing Program, humanities, and social sciences requirements are those required of all students in the McKelvey School of Engineering. For information about how to fulfill the school's English proficiency requirement, please visit the Degree Requirements page of this Bulletin (p. 1162).

The natural sciences requirement is for 8 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology; Biology; Chemistry; Earth, Environmental, and Planetary Sciences; Environmental Studies; or Physics. The College Writing Program and natural sciences courses must be completed with a grade of C- or better.

All courses taken to meet any of the above requirements (with the exception of the humanities and social sciences electives) cannot be taken on a pass/no pass basis.

Second Major in Data Science (CSE)

The College of Arts & Sciences and McKelvey School of Engineering developed a new major that efficiently captures the intersection of mathematics and statistics with computer science for data science. The second major provides an opportunity to combine data science with another degree program.

Data Science Core Requirements (CR)

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
CSE 2107	Introduction to Data Science	3
CSE 2407	Data Structures and Algorithms	3
CSE 3104	Data Manipulation and Management	3
CSE 4107 Introduction to Machine Learning **or** SDS 4430 Statistical Learning **or** ESE 4170 Introduction to Machine Learning and Pattern Classification		3
MATH 1510	Calculus I	3
MATH 1520	Calculus II	3
MATH 2130	Calculus III	3

MATH 3300	Matrix Algebra	3
SDS 3030	Statistics for Data Science I	3
SDS 4030	Statistics for Data Science II	3
SDS 4130	Linear Statistical Models	3
Total Units		**36**

Data Science Technical Electives

Four courses can be chosen from an approved list, with the following caveats:

- At least one course from Statistics and Data Science (at the 4000 level or above)
- At least one course from Computer Science & Engineering (at the 4000 level or above)
- At most one course at the 2000 level

List of Approved Data Science Technical Electives

Computer Science & Engineering

Code	Title	Units
CSE 2307	Programming Tools and Techniques	3
CSE 2506	Introduction to Human-Centered Design	3
CSE 3050	Responsible Data Science (Cannot be double-counted in EPR)	3
CSE 3101	Introduction to Intelligent Agents Using Science Fiction	3
CSE 3407	Analysis of Algorithms	3
CSE 4061	Text Mining	3
CSE 4101	AI and Society (Cannot be double-counted in EPR)	3
CSE 4102	Introduction to Artificial Intelligence	3
CSE 4106	Data Science for Complex Networks	3
CSE 4107	Introduction to Machine Learning (Cannot be double-counted in CR)	3
CSE 4190	Introduction to AI for Health (Cannot be double-counted as Practicum)	3
CSE 4207	Cloud Computing	3
CSE 4305	Database Management Systems	3
CSE 4507	Introduction to Visualization	3
CSE 5104	Data Mining	3
CSE 5105	Bayesian Methods in Machine Learning	3
CSE 5107	Machine Learning	3
CSE 5108	Human-In-The-Loop Computation	3
CSE 5403	Algorithms for Nonlinear Optimization	3
CSE 5509	Computer Vision	3

Statistics and Data Science

Code	Title	Units
SDS 3110	Biostatistics	3
SDS 4020	Mathematical Statistics	3
SDS 4061	Time Series Analysis	3
SDS 4096	Topics in Statistics	3
SDS 4110	Experimental Design	3
SDS 4120	Survival Analysis	3
SDS 4140	Advanced Linear Statistical Models	3
SDS 4210	Statistical Computation	3
SDS 4310	Bayesian Statistics	3
SDS 4430	Statistical Learning (Cannot be double-counted in CR)	3
SDS 4440	Mathematical Foundations of Data Science	3
SDS 4720	Stochastic Processes	3
SDS 5061	Theory of Statistics I	3
SDS 5062	Theory of Statistics II	3
SDS 5071	Advanced Linear Models I	3
SDS 5072	Advanced Linear Models II	3
SDS 5531	Advanced Statistical Computing I	3
SDS 5532	Advanced Statistical Computing II	3
SDS 5595	Topics in Statistics: Spatial Statistics	3
SDS 5800	Topics in Statistics	3
SDS 5805	Topics in Statistics	3

Mathematics

Code	Title	Units
MATH 4501	Numerical Applied Mathematics	3
MATH 4502	Topics in Applied Mathematics	3
MATH 4560	Topics in Financial Mathematics	3
MATH 5223	Geometry/Topology III: Differential Geometry	3

Electrical & Systems Engineering

Code	Title	Units
ESE 3590	Signals, Data and Equity	3
ESE 4031	Optimization for Engineered Planning, Decisions and Operations	3
ESE 4150	Optimization	3
ESE 4270	Financial Mathematics	3
ESE 5130	Large-Scale Optimization for Data Science	3

Energy, Environmental, & Chemical Engineering

Code	Title	Units
EECE 2020	Computational Modeling in Energy, Environmental and Chemical Engineering	3

Linguistics

Code	Title	Units
LING 3250	Introduction to Computational Linguistics	3

Ethics and Professional Responsibility Requirement (EPR)

- 3 units of courses from an approved list

List of Approved Courses

Code	Title	Units
CSE 3050	Responsible Data Science (Cannot be double-counted as Technical Elective)	3
CSE 4101	AI and Society (Cannot be double-counted as Technical Elective)	3
ENGR 4501	Engineering Ethics and Sustainability	1
ENGR 4502	Engineering Leadership and Team Building	1
ENGR 4503	Conflict Management and Negotiation	1
MSB 5560	Ethics in Biostatistics and Data Science	2
PHIL 2070	Business Ethics	3
PHIL 3160	Classical Ethical Theories	3
PHIL 4250	Normative Ethical Theory	3
POLSCI 3313	Theories of Social Justice	3

Practicum Requirement

- Students must complete an approved comprehensive data science project or experience for their practicum requirement. The practicum must be approved by the committee of data science faculty.
- The practicum experience should be completed during the next-to-last semester of study (i.e., the first semester of senior year). It is important that practicum plans be submitted for review *prior to starting the project or coursework* to ensure the proposed work is sufficient for the objectives of the practicum. After-the-fact approvals are possible but not guaranteed.
- Appropriate practicum work is possible via the following pathways:
  - Independent Study (CSE 4001 or SDS 4000)
  - Project-focused classes, including (but not limited to) CSE 4109 Introduction to AI for Health, CSE 4307 Software Engineering Workshop, and CSE 4504 Software Engineering for External Clients. Students should contact course instructors in advance to identify the degree of agency the student will have over project selection and requirements.
  - Internships related to data science can be used to fulfill the practicum. Internships (paid or unpaid) cannot count for credit, but they can satisfy the practicum requirement.
- To initiate the approval process, majors through the McKelvey School of Engineering should contact the CSE undergraduate coordinator (cse.undergrad@email.wustl.edu) in the CSE department, and majors through Arts & Sciences should contact the Undergraduate Director(s) (:sdsundergraduatedirector@wustl.edu) in the Department of Statistics and Data Science.

Minor in Bioinformatics (CSE)

- **Total Units Required:** 23-24 units

Mindful of the emerging opportunities at the interface of biology and computer science, the Department of Biology and the Department of Computer Science & Engineering have fashioned the minor in bioinformatics.

Core Courses

Code	Title	Units
ESE 3260	Probability and Statistics for Engineering	3
BIOL 2960	Principles of Biology I	4
BIOL 2970	Principles of Biology II	4
CSE 1301	Introduction to Computer Science	3
CSE 2407	Data Structures and Algorithms	3
or SDS 2020	Elementary Probability and Statistics	
or SDS 3020	Elementary to Intermediate Statistics and Data Analysis	
or MATH 3211	Statistics for Data Science	
or DAT 1200	Managerial Statistics I **and** DAT 1201: Managerial Statistics II	
Total Units		**17**

Advanced Biology Elective

Choose one of the following:

Code	Title	Units
BIOL 3492	Laboratory Experiments with Eukaryotic Microbes*	3
BIOL 3493	Bacterial Bioprospecting and Biotechnology	3
BIOL 4181	Population Genetics	3

BIOL 4220	Practical Bioinformatics	4
BIOL 4342	Research Explorations in Genomics	4
BIOL 4343	Research Explorations in Genomics*	4
BIOL 4370	DNA Manipulations Lab	3
BIOL 4525	Structural Bioinformatics of Proteins*	4

* These courses also satisfy the Arts & Sciences writing-intensive requirement.

Computer Science & Engineering Elective

Choose one of the following:

Code	Title	Units
CSE 5104	Data Mining	3
CSE 5804	Algorithms for Biosequence Comparison	3
CSE 5807	Algorithms for Computational Biology	3

Additional Information

It is anticipated that, for certain students, some portion of the introductory sequence will overlap with the courses required for the major and that these courses will be applicable to both the major and the minor. Upper-level courses used to fulfill the minor requirements may not be used to fulfill the requirements of another major or minor in Arts & Sciences.

Arts & Sciences students should declare the minor within Arts & Sciences. They will be assigned an advisor in Biology. Per Arts & Sciences policy, students with a major in the Department of Biology are not eligible to declare this minor. Per Arts & Sciences policy, Arts & Sciences students must complete 9 units of upper-level course work toward the minor.

McKelvey, Olin, and Sam Fox students should declare the minor within the McKelvey School of Engineering. They will be assigned an advisor in Computer Science & Engineering.

A minimum grade of C- is required for all courses to count toward the minor. Students may apply no more than one course taken outside of Washington University toward the minor requirements. Courses earned through Washington University–approved study abroad programs are considered to be resident units and may count toward this minor where applicable with no limit.

Minor in Computer Science (CSE)

If a student's goal is a basic foundation in computer science for application to another field but they are not planning a career as a practicing computer scientist, the minor in computer science is a good choice. The minor consists of five CSE courses: four core courses and one elective. The core courses provide an introduction to computer science concepts and problem-solving techniques. The electives offer flexibility to integrate computer science studies with a major area. Students select the courses that are most important to them, whether their interests are in fine arts, linguistics, psychology, philosophy, law, business, medicine, the natural sciences or anything else.

Units required: 15

Required courses (12 units):

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
CSE 1302	Introduction to Computer Engineering	3
CSE 2407	Data Structures and Algorithms	3
CSE 3302	Object-Oriented Software Development Laboratory	3
Total Units		**12**

One elective from the following list (3 units):

Code	Title	Units
CSE 2400	Logic and Discrete Mathematics	3
or MATH 3010	Foundations for Higher Mathematics	
CSE 3300	Rapid Prototype Development and Creative Programming	3
CSE 3601	Introduction to Systems Software	3

Additional Information

All courses used for the computer science minor must be taken for a grade, and the student must earn a C- or better. Should the student decide to go further in the field, all courses in the computer science minor can be used toward a second major in computer science or a degree in computer science or computer engineering.

Minor in Human-Computer Interaction (CSE)

The human-computer interaction (HCI) minor is designed to give any undergraduate student at Washington University a multidisciplinary understanding of the principles and applications of HCI. This minor will introduce students to the techniques necessary to create effective user interfaces: requirements gathering, ideation, prototyping, visual design and evaluation. Students will explore these ideas in a variety of application contexts.

The HCI minor is intended for students who are interested in the design of user-centered interactive technologies and those desiring jobs that include user interface creation, product design, UX/UI design, app development, virtual and augmented realities, and so on. This minor should appeal to students in the College of Art — particularly designers and computationally intrigued artists — who are interested in gaining a more in-depth knowledge of back-end development skills. It will also be of interest to engineering students looking for more experience

with aesthetics and front-end design skills. In addition to being useful for these primary audiences, this minor allows students from other departments on campus to support their studies with a clear track in a hybrid pursuit of design and programming.

Coursework

Students must complete two pillar courses, one integration course and three approved electives. Courses listed below are considered approved elective offerings between the Sam Fox School and the McKelvey School of Engineering.

- **Pillar Courses* (6 units):**

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
DESIGN 1265	Visual Principles for the Screen	3

- **Integration Courses* (3 units):**

Code	Title	Units
CSE 2506	Introduction to Human-Centered Design	3
DESIGN 2258	Interaction Design: Understanding Health and Well-Being	3

* Each of the pillar and integration courses must be completed with a grade of C- or better.

- **Electives (9 units, with at least one course each from CSE and Art/Design):**

Code	Title	Units
CSE 2004	Web Development	3
CSE 3300	Rapid Prototype Development and Creative Programming	3
CSE 4308	Mobile Application Development	3
CSE 4500	Video Game Programming	3
CSE 4507	Introduction to Visualization	3
CSE 5506	Human-Computer Interaction Methods	3
CSE 5507	Advanced Visualization	3
DESIGN 2506	Digital Game Design	3
DESIGN 3250	Interaction Design: User-Centered Applications	3
DESIGN 3253	Advanced Interaction Design	3
DESIGN 3254	Communication Design: Interaction Foundations	3
DESIGN 3620	UX Research Methods for Design	3
DESIGN 3261	Interaction Design: Layout Systems	3
DESIGN 3302	Conditional Design	3
DESIGN 3508	Game Design Principles & Practice	3
DESIGN 4270	Advanced Visual Principles for the Screen	3
DESIGN 4280	Design with Artificial Intelligence	3
PNP 2000	Introduction Cognitive Science	3
PSYCH 3600	Cognitive Psychology	3

Additional approved elective courses can be found by viewing the Google Docs file maintained for this program.

Electrical & Systems Engineering

About Electrical & Systems Engineering

The mission of our undergraduate programs is to instill in students the knowledge and perspective — appropriate for both a professional career and the pursuit of advanced degrees — of fields that rely on key electrical engineering and systems principles and practices. Such principles and practices include rigorous quantitative reasoning and robust engineering design. This mission is accomplished by ensuring that students achieve both depth and breadth of knowledge in their studies and by maintaining a high degree of flexibility in the curriculum. Our programs also seek to provide good preparation for life, including the ability to communicate in written and oral forms and a desire to continue learning throughout life. In addition, these programs aim to provide the opportunity and training necessary for students to acquire the skills and attitudes to become leaders.

The department offers courses of study leading to degrees in both electrical engineering and systems science and engineering. Opportunities for study and research currently available in the department include semiconductor theory and devices, optoelectronics, nanophotonics, communication theory and systems, information theory, signal and image processing, tomographic imaging, linear and nonlinear dynamics and control, robotics, identification and estimation, multisensor fusion and navigation, computational mathematics, optimization, optimal control, autonomous systems, operations research and financial engineering. Students are encouraged to participate in research activities as soon as they have received training in the fundamentals appropriate for a given research area.

Electrical engineering is the profession for those intrigued with electrical phenomena and eager to contribute their skills to a society increasingly dependent on electricity and sophisticated electronic devices. It is a profession of broad scope, with many specialty careers designed for engineers who seek an endless diversity of career paths on the cutting edge of technology. The Institute of Electrical and Electronics Engineers publishes transactions on about 60 different topics, from aerospace and electronic systems to visualization and computer graphics. This is a breadth so great that no single electrical engineering department can hope to span it. Moreover, those fields themselves encompass still more fascinating specialties. We provide the basics; the future is the student's to shape.

Systems science and engineering is based on an approach that views an entire system of components as an entity rather than simply as an assembly of individual parts; each component is designed to fit properly with the other components rather than to function by itself. The engineering and mathematics of systems is a rapidly developing field. It is one of the most modern segments of applied mathematics as well as an engineering discipline. It is concerned with the identification, modeling, analysis, design and control of systems that are potentially as large and complex as the U.S. economy or as precise and vital as a space voyage. Its interests run from fundamental theoretical questions to the implementation of operational systems. It draws on the most modern and advanced areas of mathematics. A very important characteristic of the systems field is that its practitioners must, of necessity, interact within a wide interdisciplinary environment, not only with various engineers and scientists but also with economists, biologists and sociologists. Such interaction is both emphasized and practiced in the programs.

Our Department of Electrical & Systems Engineering offers a challenging basic curriculum, a broadly qualified faculty, and modern facilities so that students can receive a contemporary preparation for a career in electrical or systems engineering.

Undergraduate Degree Programs

The Department of Electrical & Systems Engineering (ESE) offers four undergraduate degree programs: two professional degrees and two applied science degrees. The two professional degrees are the Bachelor of Science in Electrical Engineering (BSEE) and the Bachelor of Science in Systems Science & Engineering (BSSSE). These two programs are accredited by the Engineering Accreditation Commission of ABET. The two applied science degrees are the Bachelor of Science in Applied Science (Electrical Engineering) and the Bachelor of Science in Applied Science (Systems Science & Engineering). All programs have flexible curricula as well as specific requirements, and students may elect programs of study tailored to individual interests and professional goals.

In the professional BSEE curriculum, there are required courses in electrical circuits, signals and systems, digital systems and electromagnetic fields, along with laboratory and design courses, which provide students with a common core of experience. Subsequently, the student may orient the program toward breadth so that many disciplines within the profession are spanned or toward a specialty with more emphasis on depth in one or more disciplines. Areas of specialization include modern electronics, applied physics, telecommunications, control systems, and signal and image processing.

Students in the professional BSSSE degree program take required courses in engineering mathematics, signals and systems, operations research, and automatic control systems, along with laboratory and design courses. This program emphasizes the importance of real-world applications of systems theory; accordingly, students are required to take a concentration of courses in one of the traditional areas of engineering or science. There are numerous elective courses in control theory and systems, signal processing, optimization, robotics, probability and stochastic processes, and applied mathematics.

Students enrolled in any of the ESE undergraduate degree programs have a variety of opportunities to augment their educational experience at Washington University. Students may participate in the Pre-Medical Engineering program or in the Cooperative Education program. Some students pursue double majors, in which two sets of degree requirements — either within or outside the ESE department — are satisfied concurrently.

Students who seek a broad undergraduate education in electrical engineering or systems science and engineering but who plan on careers outside of engineering may pursue the applied science degrees: Bachelor of Science in Applied Science (Electrical Engineering) and Bachelor of Science in Applied Science (Systems Science & Engineering). These programs of study are appropriate for students planning to enter medical, law or business school and who desire a more technical undergraduate experience than what otherwise may be available to them.

The ESE department also offers a variety of educational opportunities for students enrolled in other departments. These include the second major in systems science and engineering and the second major in electrical engineering, which are open to students inside as well as outside of the McKelvey School of Engineering, such as the College of Arts & Sciences and Olin Business School. They also include the minor in quantum engineering, the minor in electrical engineering, the minor in energy engineering, the minor in mechatronics, the minor in robotics, and the minor in systems science & engineering.

Bachelor's/Master's Programs in Electrical & Systems Engineering

Students enrolled in any of the undergraduate degree programs in the McKelvey School of Engineering may choose to extend their educational experience by enrolling in a five-year Bachelor's/Master's program. The Master of Science in Electrical Engineering (MSEE), the Master of Science in Systems Science and Mathematics (MSSSM), and the Master of Science in Engineering Data Analytics and Statistics (MSEDAS) degrees are participating graduate degrees, and these may be combined with any undergraduate degree that provides the appropriate background.

General requirements for the Bachelor's/Master's programs include the residency and other applicable requirements of the university and the McKelvey School of Engineering, which are found elsewhere in this Bulletin (p. 1071). In summary, students must complete all the degree requirements for both the undergraduate and graduate degrees.

Phone:	314-935-5565
Website:	https://ese.wustl.edu/academics/undergraduate-programs/index.html

Faculty

Chair

Bruno Sinopoli
Das Family Distinguished Professor
PhD, University of California, Berkley
Designs safe and secure networked embedded control systems

Endowed Professors

Shantanu Chakrabartty
Clifford W. Murphy Professor
Vice Dean for Research and Graduate Education
PhD, Johns Hopkins University
Explores frontiers in analog and neuromorphic integrated circuits

Jr-Shin Li
Newton R. and Sarah Louisa Glasgow Wilson Professor of Engineering
PhD, Harvard University
Studies complex large-scale systems arising from emerging physical, biological and medical applications

Joseph A. O'Sullivan
Samuel C. Sachs Professor of Electrical Engineering
Dean, UMSL/WashU Joint Undergraduate Engineering Program
PhD, Notre Dame University
Discovers ways to improve CT imaging & optical imaging

Lan Yang
Edward H. & Florence G. Skinner Professor of Engineering
PhD, California Institute of Technology
Focuses on advanced nano/micro photonic devices with outstanding optical properties

Professor

ShiNung Ching
Associate Chair for Research
PhD, University of Michigan
Engineering Neuroscience, Dynamics, Control

Associate Professors

Xudong Chen
PhD, Harvard University
Develops revolutionary methods for analysis and control of large-scale multi-agent systems

Andrew Clark
PhD, University of Washington
Focused on control and security of networked and cyber-physical systems

Ulugbek Kamilov
PhD, École Polytechnique Fédérale de Lausanne, Switzerland
Advances imaging technology through research on computational imaging, computer vision, machine learning and optimization

Matthew Lew
Associate Chair for Academic Programs
PhD, Stanford University
Builds new nanoscale imaging technologies

Jung-Tsung Shen
PhD, Massachusetts Institute of Technology
Exploits the unique properties of quantum nano-photonics for applications in quantum communication, computation and biomedical imaging

Chuan Wang
Director of Graduate Programs
PhD, University of Southern California
Develops large-scale and cost-effective materials for flexible and stretchable electronic systems

Assistant Professors

Hong Hu
PhD, Harvard University
Developing theoretical foundations for high-dimensional information processing

Ioannis (Yiannis) Kantaros
PhD, Duke University
Designs safe and distributed autonomy algorithms for large-scale multi-robot systems

Mark Lawrence
PhD, University of Birmingham
Builds novel systems and devices for applications in telecommunications, computing and quantum information

Janet Sorrells
PhD, University of Illinois at Urbana-Champaign
Developing new technologies in label-free nonlinear optical microscopy to enable new applications in biology and medicine

Shen Zeng
PhD, University of Stuttgart
Develops data-integrated computational approaches for controlling complex dynamic systems

Senior Professors

Paul S. Min
PhD, University of Michigan
Routing and control of telecommunication networks, fault tolerance and reliability, software systems, network management

Robert E. Morley Jr.
DSc, Washington University in St. Louis
Computer engineering, lower-power VLSI design, computer architecture, signal processing, microprocessors systems design

Hiro Mukai
PhD, University of California, Berkeley
Theory and computational methods for optimization, optimal control, systems theory, electric power system operations, differential games

Daniel L. Rode
PhD, Case Western Reserve University
Optoelectronics and fiber optics, semiconductor materials, light-emitting diodes and lasers, semiconductor processing, electronics

Ervin Y. Rodin
PhD, University of Texas at Austin
Optimization, differential games, artificial intelligence, mathematical modeling

Heinz Schaettler
PhD, Rutgers University
Optimal control, nonlinear systems, mathematical models in biomedicine

Barbara A. Shrauner
PhD, Harvard University (Radcliffe)
Plasma processing, semiconductor transport, symmetries of nonlinear differential equations

Barry E. Spielman
PhD, Syracuse University
High-frequency/high-speed devices, radiofrequency and microwave integrated circuits, computational electromagnetics

Tzyh Jong Tarn
DSc, Washington University
Quantum mechanical systems, bilinear and nonlinear systems, robotics and automation, life science automation

Professors of Practice

Dennis Mell
MS, University of Missouri–Rolla
Focuses on cross-disciplinary applications of robotics and automation systems

Ed Richter
MS, Washington University
Designs and develops biomedical signal processing systems including analog instrumentation, digital circuits with microcontrollers and FPGAs, and application programming; teaches electrical and computer engineering lab courses in FPGA design and development and signal processing and communications

Jason Trobaugh
DSc, Washington University
Ultrasound imaging, diffuse optical tomography, image-guided therapy, ultrasonic temperature imaging

Teaching Professor

James Feher
PhD, Missouri University of Science and Technology
Interested in the use and implementation of open source hardware and software as it is applied to engineering education

Vladimir Kurenok
PhD, Belarus State University (Minsk, Belarus)
Focuses on studying and applications of random models under low regularity assumptions

Senior Lecturers

Martha Hasting
PhD, Saint Louis University
Mathematics education

Tsitsi Madziwa-Nussinov
PhD, University of California, Los Angeles
Teaches Introduction to Electrical and Electronic Circuits

Dorothy Wang
PhD, Virginia Tech
Fiber optic sensing, electro-optical sensors

Jinsong Zhang
PhD, University of Miami
Focused on signal, data and information processing with applications to engineering systems

Lecturers

Michael Hall
PhD, Washington University in St Louis
Teaches computer engineering, preparing students with essential skills and knowledge to achieve their professional goals and contribute to technological advancements that benefit society

Ben Wormleighton
PhD, University of California, Berkeley
Seeks to cultivate formative learning spaces and practices that develop creative and communal thinkers

Professors Emeriti

R. Martin Arthur
Newton R. and Sarah Louisa Glasgow Wilson Professor of Engineering
PhD, University of Pennsylvania
Ultrasonic imaging, electrocardiography

Arye Nehorai
The Eugene & Martha Lohman Emeritus Professor of Electrical Engineering
PhD, Stanford University
Statistical signal processing, machine learning, imaging, biomedicine

Majors

Please visit the following pages for more information about our majors:

- Bachelor of Science in Electrical Engineering (p. 1123)
- Bachelor of Science in Systems Science & Engineering (p. 1125)
- Bachelor of Science in Computer Engineering (p. 1126)
- Bachelor of Science in Applied Science (Electrical Engineering) (p. 1128)
- Bachelor of Science in Applied Science (Systems Science & Engineering) (p. 1128)

- Second Major in Electrical Engineering (p. 1129)
- Second Major in Systems Science & Engineering (p. 1129)
- Second Major in Financial Engineering (p. 1130)

Minors

Please visit the following pages for more information about our minors:

- Minor in Electrical Engineering (p. 1130)
- Minor in Energy Engineering (p. 1131)
- Minor in Mechatronics (p. 1131)
- Minor in Robotics (p. 1132)
- Minor in Systems Science & Engineering (p. 1132)
- Minor in Quantum Engineering (p. 1133)

Courses

ESE 1050 Introduction to Electrical and Systems Engineering
This course will offer students a rigorous introduction to fundamental mathematical underpinnings of ESE and their relationship to a number of contemporary application areas. Major emphasis will be placed on linear algebra and associated numerical methods, including the use of MATLAB. Topics covered will include vector spaces, linear transformations, matrix manipulations and eigenvalue decomposition. Students will learn how this mathematical theory is enacted in ESE through the completion of four case studies spanning application areas: (i) Dynamical Systems and Control, (ii) Imaging, (iii) Signal Processing, and (iv) Circuits.
Credit 4 units.
Typical periods offered: Fall

ESE 2050 Introduction to Engineering Design
This is a hands-on course in which students, in groups of two or three, will creatively develop projects and solve problems throughout the semester using tools from electrical and systems engineering. Groups will work under the supervision of an academic team consisting of faculty and higher-level students. Project objectives will be set by the academic team in collaboration with each student group. Evaluation will consider completion of these objectives as well as the originality and innovation of the projects. A weekly 90-minute lab with the academic team is required. Prerequisites: CSE 131, Physics 197, or equivalent. Corequisite Course(s): ESE 105, Phy192
Credit 3 units.
Typical periods offered: Fall, Spring

ESE 2170 Differential Equations and Dynamical Systems Modeling in Engineering
This course will provide students with an introduction to differential equations in the context of electrical and systems engineering. Students will gain a foundation in the use of differential equations to describe, model and engineer systems and devices. The course will cover fundamental mathematical principles of ordinary differential equations including: (i) existence of solutions, (ii) elementary solution strategies, and (iii) the conceptual foundation for frequency domain solution techniques. An introduction to early concepts in dynamical systems theory, such as state-space analysis, equilibria and stability, will also be provided. Finally, students will obtain an initial introduction to partial differential equations in ESE in the context of wave propagation. Mathematical developments will be closely accompanied by computational implementations and numerical simulations. Further, students will engage several case studies, in which students will use the mathematical theory to perform analysis and design within ESE contexts spanning systems, circuits and applied physics.
Credit 3 units.
Typical periods offered: Spring

ESE 2180 Linear Algebra and Component Analysis
Linear algebra is the foundation of scientific computing across many disciplines of engineering. This course will introduce the numerical and computational issues that arise from solving large-scale problems, with motivation from data science, machine learning, and signal processing. Topics to be covered include least-squares problems, eigenvalue/eigenvector analysis, singular value decomposition, component analysis, rotation of bases, and concepts of computational complexity and numerical stability. A focus of the class will be studying concepts from signal processing and machine learning such as K-means, Fourier analysis, wavelet analysis, and sampling within the framework of linear algebra. The course will include case studies touching on a broad range of topics including systems science, signals and imaging, devices and circuits, and quantum science/applied physics.
Credit 3 units.
Typical periods offered: Fall

ESE 2190 Vector Calculus and Dynamics of Physical Systems
This course will explore fundamental concepts in vector calculus and partial differential equations with a focus on their practical applications and conceptual understanding. We will derive the Laplace, diffusion, and wave equations and explore their solutions in different coordinate systems. The course will emphasize computational solutions and data visualization in case studies involving applications to areas such as electrostatics, heat conduction in solids , transmission lines, antennas, and wave propagation, providing hands-on experience in solving partial differential equations in real-world scenarios.
Credit 3 units.
Typical periods offered: Spring

ESE 2300 Introduction to Electrical and Electronic Circuits
Electrical energy, current, voltage, and circuit elements. Resistors, Ohm's Law, power and energy, magnetic fields and DC motors. Circuit analysis and Kirchhoff's voltage and current laws. Thevenin and Norton transformations and the superposition theorem. Measuring current, voltage and power using ammeters and voltmeters. Energy and maximum electrical power transfer. Computer simulations of circuits. Reactive circuits, inductors, capacitors, mutual inductance, electrical transformers, energy storage, and energy conservation. RL, RC and RLC circuit transient responses. AC circuits, complex impedance, RMS current and voltage. Electrical signal amplifiers and basic operational amplifier circuits. Inverting, non-inverting, and difference amplifiers. Voltage gain, current gain, input impedance, and output impedance. Weekly laboratory exercises related to the lectures are an essential part of the course.
Credit 4 units.
Typical periods offered: Fall

ESE 2310 Electrical & Electronic Circuits Laboratory
This course covers the lab portion only of E35 230. It is open only to those students who have completed an approved lecture-only circuits course and who need to fulfill the circuits lab requirement for an ESE degree.
Credit 1 unit.
Typical periods offered: Fall

ESE 2320 Introduction to Electronic Circuits
Analysis and design of linear and nonlinear electronic circuits. Detailed analysis of operational amplifier circuits, including non-ideal characteristics. Terminal characteristics of active semiconductor devices. Incremental and DC models for diodes, metal-oxide-semiconductor field effect transistors (MOSFETs), and bipolar junction transistors (BJTs). Design and analysis of single- and multi-stage amplifiers. Introduction to CMOS logic as well as static and dynamic memory circuits. Students will be required to design, analyze, build and demonstrate several of the circuits studied, including frequency response analysis and use of simulation tools.
Credit 3 units.
Typical periods offered: Spring

ESE 2991 Experience Research in ESE
This course provides students with an initial exposure to research in ESE. This is a mentored experience and requires the agreement of an ESE faculty member to serve in a mentorship role. Students must identify a mentor and obtain their agreement before registering for this course. Activities are to be designed by the student in conjunction with the faculty mentor, and will amount to 2-4 hours of commitment per week. Examples of such activities include, but are not limited to, observation of laboratory experiments, attendance of weekly group meetings, discussions with the mentor, or independent readings. The course is suitable for students at all levels.
Credit 1 unit.
Typical periods offered: Fall, Spring

ESE 2992 Introduction to Research in ESE
This course provides students with an introductory experience with research in ESE. This is a mentored experience and requires the agreement of an ESE faculty member to serve in a mentorship role. Students must identify a mentor and obtain their agreement before registering for this course. Activities are to be designed by the student in conjunction with the faculty mentor, and will amount to 4-6 hours of commitment per week. The research activities will enable the student to gain a deeper understanding of ongoing research related to the mentor's field, or in an area mutually agreed upon by the mentor and the student. The student may also have an opportunity to actively participate in ongoing research activities, such as through assistance of graduate students or postdoctoral associates. Because activities may be unstructured, this course is will require strong time-management skills and self-discipline. The final grade will be determined on the basis of a set of deliverables that are agreed upon by the student and faculty member.
Credit 2 units.
Typical periods offered: Fall, Spring

ESE 3050 Special Topics in Robotics: Practicum in Robotic Systems Design
This is an exciting hands-on course where teams of students (in groups of 4-6) will put a broad range of their engineering skills to use by designing, constructing, and debugging a complex electro-mechanical robotic system. The robotic system will be targeted at some proposed real-world application. Each team will engineer and implement their own solution to the problem. This course is designed to teach students how to apply their theory-based classroom engineering knowledge by exposing students to the design/test/debug/iterate process needed to develop a working integrated system. Some of the topics/skills experienced in the class will include feedback control, real sensor/actuator implementation, circuit design/layout, soldering, asynchronous programming, project management, Design-For-Manufacturability, and more. Students will use the WUSTL Maker Space in this class to learn other valuable hands-on skills (e.g. CAD, CNC machining, 3D printing, laser cutting, etc.).
Credit 3 units.
Typical periods offered: Fall

ESE 3090 Special Topics in Systems Engineering: Modeling and Design of Social Choice Systems
Social choice systems are all around us, from how we decide to split the check to who becomes president. This course introduces many conceptual and computational problems in the study of systems of social choice and offers a variety of tools to understand them. We will consider both micro and macro social choice systems; for the latter drawing on modern statistical techniques to understand (and reframe) questions like what is a fair map of congressional districts? In order to address modeling and design challenges in social choice systems we will explore mathematical and software tools such as game theory, linear optimization, Monte Carlo / MCMC methods, and geographical data representation in Python.
Credit 3 units.
Typical periods offered: Fall

ESE 3260 Probability and Statistics for Engineering
Study of probability and statistics together with engineering applications. Probability and statistics: random variables, distribution functions, density functions, expectations, means, variances, combinatorial probability, geometric probability, normal random variables, joint distribution, independence, correlation, conditional probability, Bayes theorem, the law of large numbers, the central limit theorem. Applications: reliability, quality control, acceptance sampling, linear regression, design and analysis of experiments, estimation, hypothesis testing. Examples are taken from engineering applications.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

ESE 3300 Engineering Electromagnetics Principles
Electromagnetic theory as applied to electrical engineering: vector calculus; electrostatics and magnetostatics; Maxwell's equations, including Poynting's theorem and boundary conditions; uniform plane-wave propagation; transmission lines, TEM modes, including treatment of general lossless lines, and pulse propagation; introduction to guided waves; introduction to radiation and scattering concepts.
Credit 3 units.
Typical periods offered: Fall

ESE 3301 Electromagnetics Laboratory: Spectrum From Radio to Photonics
Engineering electromagnetics focuses on applying electromagnetic theory to modern technologies including communication, sensing, imaging and medical engineering. This laboratory course provides students with hands-on and practical exposure to the topics covering the electromagnetic spectrum from microwave to optics. Weekly labs will cover topics such as the following: microwave propagation and coupling, transmission line, antenna, RF circuits, basic optoelectronic devices, Fourier optics, light microscopy, holography, light polarization, electro-optics and fiber optics. Students are expected to carry out tests and measurements; analyze, interpret and present experiment data; learn how to perform engineering analysis and design when electromagnetic principles are applied; and gain in-depth understanding of the physics and mathematics underlying the techniques.
Credit 3 units.
Typical periods offered: Fall, Spring

ESE 3310 Electronics Laboratory
Laboratory exercises provide students with a combination of hands-on experience involving electronic circuits. Students will use a variety of real instruments, analysis techniques and circuit simulation tools to summarize measurement results in written reports that clearly communicate laboratory results. A sequence of lab experiments provide hands-on experience in: properties of diodes and transistors, realistic operational amplifier characteristics, grounding and shielding techniques, signal analysis, and op amp based active filter design and characterization. Students will gain experience working with: sampling oscilloscopes to make measurements in the time and frequency domains, signal generators, digital multimeter and frequency measurements, and in creating circuits and making connections on contemporary circuit boards. The course concludes with a hands-on project to design, demonstrate and document the design of an electronic component.
Credit 3 units.
Typical periods offered: Fall, Spring

ESE 3320 Power, Energy, and Polyphase Circuits
Fundamental concepts of power and energy; electrical measurements; physical and electrical arrangement of electrical power systems; polyphase circuit theory and calculations; principal elements of electrical systems such as transformers, rotating machines, control, and protective devices, their description and characteristics; elements of industrial power system design.
Credit 3 units.
Typical periods offered: Spring

ESE 3510 Signals and Systems
This course presents an introduction to concepts and methodology of linear dynamic systems in relation to discrete- and continuous-time signals. Topics include mathematical modeling; representation of systems and signals; Fourier, Laplace, and Z-transforms and convolution; input-output description of linear systems, including impulse response and transfer function; time-domain and frequency-domain system analysis, including transient and steady-state responses, system modes, stability, frequency spectra, and frequency responses; and system design, including filter, modulation, and sampling theorem. Continuity is emphasized from analysis to synthesis. MATLAB will be used.
Credit 3 units.
Typical periods offered: Spring

ESE 3590 Signals, Data and Equity
This course introduces the design of classification and estimation systems for equity -- that is, with the goal of reducing the inequities of racism, sexism, xenophobia, ableism, and other systems of oppression. Systems that change the allocation of resources among people can increase inequity due to their inputs, the systems themselves, or how the systems interact in the context in which they are deployed. This course presents background in power and oppression to help predict how new technological and societal systems might interact and when they might confront or reinforce existing power systems. Measurement theory -- the study of the mismatch between a system's intended measure and the data it actually uses -- is covered. Multiple examples of sensing and classification systems that operate on people (e.g., optical, audio, and text sensors) are covered by implementing algorithms and quantifying inequitable outputs.
Credit 3 units.
Typical periods offered: Fall

ESE 4031 Optimization for Engineered Planning, Decisions and Operations
This course will introduce students to the philosophy and skillset of applied optimization with an emphasis on its utility in context. Students will engage with both exact, analytical methods and iterative, numerical methods in a variety of settings, all heavily drawing on MatLab or Python. We will explore linear and integer programming, dynamic programming, the simplex method, network optimization, critical point theory, gradient methods, line search methods, and least squares. Applications include: scheduling, signal denoising, urban planning, portfolio optimization, regression, machine learning.
Credit 3 units.
Typical periods offered: Fall

ESE 4150 Optimization
Optimization problems with and without constraints. The projection theorem. Notions of convexity. Lagrange multipliers and Kuhn-Tucker-type conditions. Duality. Computational methods. Applications of optimization in engineering.
Credit 3 units.
Typical periods offered: Fall, Spring

ESE 4170 Introduction to Machine Learning and Pattern Classification
This course provides a broad introduction to machine learning and statistical pattern classification. Students will study theoretical foundations of learning and several important supervised and unsupervised machine learning methods and algorithms, including linear model of regression and classification, logistic regression, Bayesian learning methods, neural networks, nearest neighbor method, support vector machines methods, clustering methods and principal component analysis. Students will also learn to use Python programming language to implement learned models and methods to solve pattern classification problems.
Credit 3 units.
Typical periods offered: Fall, Spring

ESE 4210 Decision and Estimation Theory for Discrete Stochastic Processes
This course is designed for senior students and first-year graduate students. The primary goal is to teach early-stage decision theory and estimation theory, two pivotal topics in system theory. The curriculum covers the fundamentals of discrete-time finite-state Markov processes (including asymptotic behavior, convergence analysis, and ergodicity), the Hidden Markov model along with associated filtering and smoothing problems, and the Markov decision process (including the principle of optimality and dynamic programming). Additionally, a few advanced topics, such as partially observable Markov decision processes (MDPs), Markov games, andreinforcement learning, will be discussed.
Credit 3 units.
Typical periods offered: Fall

ESE 4250 Random Processes and Kalman Filtering
Probability and random variables; random processes, autocorrelation, power spectral density; transient and steady-state analysis of linear dynamic systems and random inputs, filters, state-space, discretization; optimal estimation; the discrete Kalman filter; linearization and the extended Kalman filter for nonlinear dynamic systems; related MATLAB exercises.
Credit 3 units.
Typical periods offered: Spring

ESE 4261 Statistical Methods for Data Analysis With Applications to Financial Engineering

Introduction to modern methods of statistical data analysis. Data will be used primarily from the financial industry. The course is both computational and mathematical in nature. Most facts will be stated in a rigorous manner, motivated by applications and justified at an intuitive level, but usually not proven rigorously. Emphasis will be on the relevance of concepts and the practical use of tools. A broad range of topics will be covered, including some standard techniques of univariate and multivariate data analysis (histograms, kernel density estimators, Q-Q plots), Monte Carlo simulations and calculations, analysis of heavy tailed data, use of copulas, various parametric and non-parametric regression models, both local and nonlocal, as well as analysis of time series data and Kalman filtering. Methods will be demonstrated on numerous concrete examples, with extensive use of the programming language R.

Credit 3 units.

Typical periods offered: Spring

ESE 4270 Financial Mathematics

This course is a self-contained introduction to financial mathematics at the undergraduate level. Topics to be covered include pricing of the financial instruments such as options, forwards, futures and their derivatives along with basic hedging techniques and portfolio optimization strategies. The emphasis is put on using of discrete, mostly binary models. The general, continuous case including the concepts of Brownian motion, stochastic integral, and stochastic differential equations, is explained from intuitive and practical point of view. Among major results discussed are the Arbitrage Theorem and Black-Scholes differential equations and their solutions.

Credit 3 units.

Typical periods offered: Fall

ESE 4290 Basic Principles of Quantum Optics and Quantum Information

This course provides an accessible introduction to quantum optics and quantum engineering for undergraduate students. This course covers the following topics: Concept of photons, quantum mechanics for quantum optics, radiative transitions in atoms, lasers, photon statistics (photon counting, Sub-/Super-Poissionian photon statistics, bunching, anti-bunching, theory of photodetection, shot noise), entanglement, squeezed light, atom-photon interactions, cold atoms, atoms in cavities. The course will also provide an overview for quantum information processing: quantum computing, quantum cryptography, and teleportation.

Credit 3 units.

Typical periods offered: Fall, Spring

ESE 4301 Quantum Mechanics for Engineers

This course provides an accessible introduction to quantum mechanics and quantum engineering for undergraduate students. Examples are drawn from practical areas of applications of quantum engineering. This course covers the following topics and examples: quantum mechanics and nano-technology, Schrodinger's equation, electron transport in various potential profiles, quantum dots and defects, harmonic oscillator, nano-mechanical oscillator and quantum LC circuit, Stark effect in semiconductors, Bloch theorem, crystal and band structures, Kronig-Penney and tight-binding models, semiclassical and quantum descriptions of light-atom interactions, spontaneous and stimulated emissions, quantum flip-flops, approximate methods in quantum mechanics, spin, quantum gyroscope, spin transistor, and many-particle quantum mechanics for bosons and fermions. Prerequisites: Simple differential equations and matrix algebra at the level of ESE 318/319 Engineering Mathematics A/B or equivalent and familiarity with a modern scientific computing software package (e.g., MATLAB, Mathematica).

Credit 3 units.

Typical periods offered: Fall

ESE 4310 Introduction to Quantum Electronics

Describing the flow of electrical current in nanodevices involves a lot more than just quantum mechanics; it requires an appreciation of some of the most advanced concepts of non-equilibrium statistical mechanics. In the past decades, electronic devices have been shrinking steadily to nanometer dimensions, and quantum transport has accordingly become increasingly important not only to physicists but also to electrical engineers. Traditionally, these topics are spread out over many physics/chemistry/engineering courses that take many semesters to cover. The main goal of this course is to condense the essential concepts into a one-semester course that is accessible to both senior-level undergraduate and junior-level graduate students. This course will be accessible to students with diverse backgrounds in electrical engineering, physics, chemistry, biomedical engineering, and mathematics.

Credit 3 units. Art: NSM

Typical periods offered: Spring

ESE 4330 Radio Frequency and Microwave Technology for Wireless Systems

Focus is on the components and associated techniques employed to implement analog and digital radio frequency (RF) and microwave (MW) transceivers for wireless applications, including: cell phones; pagers; wireless local area networks; global positioning satellite based devices; and RF identification systems. A brief overview of system-level considerations is provided, including modulation and detection approaches for analog and digital systems; multiple-access techniques and wireless standards; and transceiver architectures. Focus is on RF and MW: transmission lines; filter design; active component modeling; matching and biasing networks; amplifier design; and mixer design.

Credit 3 units.

Typical periods offered: Fall

ESE 4340 Solid-State Power Circuits and Applications

Study of the strategies and applications power control using solid-state semiconductor devices. Survey of generic power electronic converters. Applications to power supplies, motor drives, and consumer electronics. Introduction to power diodes, thyristors, and MOSFETs. Prerequisites: ESE 232, 351.

Credit 3 units.

Typical periods offered: Fall

ESE 4350 Electrical Energy Laboratory

Experimental studies of principles important in modern electrical energy systems. Topics include: AC power measurements, electric lighting, photovoltaic cells and arrays, batteries, DC-DC and DC-AC converters, brushed and brushless DC motors and three-phase circuits. Each experiment requires analysis, simulation with MultiSim, and measurement via LabVIEW and the Elvis II platform. Prerequisites: ESE 230 and 351

Credit 3 units.

Typical periods offered: Fall

ESE 4360 Semiconductor Devices
This course covers the fundamentals of semiconductor physics and operation principles of modern solid-state devices such as homo- or hetero-junction diodes, solar cells, inorganic/organic light-emitting diodes, bipolar junction transistors, and metal-oxide-semiconductor field-effect transistors. These devices form the basis for today's semiconductor and integrated circuit industry. In addition to device physics, semiconductor device fabrication processes, new materials, and novel device structures will also be briefly introduced. At the end of this course, students will be able to understand the characteristics, operation, limitations and challenges faced by state-of-the-art semiconductor devices. This course will be particularly useful for students who wish to develop careers in the semiconductor industry.
Credit 3 units.
Typical periods offered: Fall

ESE 4361 Semiconductor Fabrication Lab
This course provides a comprehensive, hands-on introduction to semiconductor processing, focusing on the design, layout, fabrication, and testing of semiconductor devices from start to finish. Throughout the semester, students will learn key techniques and principles in semiconductor device fabrication, including wafer preparation, thermal oxidation, photolithography, doping (activation and diffusion), deposition (CVD, PVD, and ALD), etching (wet and dry), annealing, passivation, and chemical mechanical polishing (CMP). The course highlights the critical role of plasma physics and chemistry in modern semiconductor manufacturing, covering topics such as reactive ion etching (RIE) and plasma-enhanced chemical vapor deposition (PECVD). In addition, students will gain hands-on experience with industry-standard simulation tools used in semiconductor design and analysis. Through a combination of lectures and weekly lab sessions, students will acquire practical experience in cleanroom environments, mastering the tools and processes required to create functional semiconductor devices. The course culminates in final presentations, where students will share their results and analysis.
Credit 3 units.
Typical periods offered: Spring

ESE 4370 Sustainable Energy Systems
We will survey the field of sustainable energy and explore contributions within electrical and systems engineering. Topics include introductory electric power systems, smart grids, and the roles of heat engines, photovoltaics, wind power, and energy storage, as well as analysis and optimization of energy systems. The course will include review and discussion of literature, problem sets, exams, and student projects. Prerequisites: ESE 318 or 319 and ESE 230 or ESE 351 or permission of instructor.
Credit 3 units.
Typical periods offered: Spring

ESE 4380 Applied Optics
Topics relevant to the engineering and physics of conventional as well as experimental optical systems and applications explored. Items addressed include geometrical optics, Fourier optics such as diffraction and holography, polarization and optical birefringence such as liquid crystals, and nonlinear optical phenomena and devices.
Credit 3 units.
Typical periods offered: Spring

ESE 4390 Introduction to Quantum Communications
This course covers the following topics: quantum optics, single-mode and two-mode quantum systems, nonlinear optics, and quantum systems theory. Specific topics include the following: Dirac notation quantum mechanics; harmonic oscillator quantization; number states, coherent states, and squeezed states; direct, homodyne, and heterodyne detection; linear propagation loss; phase insensitive and phase sensitive amplifiers; entanglement and teleportation; field quantization; quantum photodetection; phase-matched interactions; optical parametric amplifiers; generation of squeezed states, photon-twin beams, non-classical fourth-order interference, and polarization entanglement; optimum binary detection; quantum precision measurements; and quantum cryptography. Prerequisites: ESE 330, or PHY 421; Physics 217 or equivalent.
Credit 3 units.
Typical periods offered: Spring

ESE 4410 Control Systems
Introduction to the theory and practice of automatic control for dynamical systems. Dynamical systems as models for physical and observed phenomena. Mathematical representation of dynamical systems, such as state-space differential and difference equations, transfer functions, and block diagrams. Analysis of the time evolution of a system in response to control inputs, steady-state and transient responses, equilibrium points and their stability. Control via linear state feedback, and estimation using Leunberger observers. Relating the time response of a system to its frequency response, including Bode and Nyquist plots. Input-output stability and its relation to the stability of equilibrium points. Simple frequency-based controllers, such as PID and lead-lag compensators. Exercise involving the use of MATLAB/Simulink (or equivalent) to simulate and analyze systems.
Credit 3 units.
Typical periods offered: Fall

ESE 4440 Sensors and Actuators
The course provide engineering students with basic understanding of two of the main components of any modern electrical or electromechanical system; sensors as inputs and actuators as outputs. The covered topics include transfer functions, frequency responses and feedback control. Component matching and bandwidth issues. Performance specification and analysis, Sensors: analog and digital motion sensors, optical sensors, temperature sensors, magnetic and electromagnetic sensors, acoustic sensors, chemical sensors, radiation sensors, torque, force and tactile sensors. Actuators: stepper motors, DC and AC motors, hydraulic actuators, magnet and electromagnetic actuators, acoustic actuators. Introduction to interfacing methods: bridge circuits, A/D and D/A converters, microcontrollers. This course is useful for those students interested in control engineering, robotics and systems engineering.
Credit 3 units.
Typical periods offered: Fall

ESE 4450 Sensing, Planning, and Control in Robotics
This course introduces planning, control, and sensing algorithms for autonomous robots. Topics include control systems, task and motion planning, and estimation techniques for localization and mapping. If time permits, an introduction to formal methods for task and safety specifications will be provided. Students will be evaluated based on a project that involves designing sensor-based navigation algorithms for robot missions in unknown environments. Throughout the semester, students will complete multiple smaller projects that progressively contribute to the final project. The algorithms developed will be demonstrated using the Robot Operating System (ROS) in simulated and real robot platforms. A brief introduction to ROS will be provided, but students are expected to independently familiarize themselves with it as part of their projects. Familiarity with Python is required.
Credit 3 units.
Typical periods offered: Fall

ESE 4460 Robotics: Dynamics and Control
Homogeneous coordinates and transformation matrices. Kinematic equations and the inverse kinematic solutions for manipulators, the manipulator Jacobian and the inverse Jacobian. General model for robot arm dynamics, complete dynamic coefficients for six-link manipulator. Synthesis of manipulation control, motion trajectories, control of single- and multiple-link manipulators, linear optimal regulator. Model reference adaptive control, feedback control law for the perturbation equations along a desired motion trajectory. Design of the control system for robotics.
Credit 3 units.
Typical periods offered: Spring

ESE 4480 Control Systems Design Laboratory
This course involves the experimental study of real and simulated systems and their control. Topics covered will include modeling; identification; model validation and control of systems, including noise effects, using a two-link robotic manipulator as an experimental testbed; mathematical modeling of robotic systems; nonlinear and linearized models; input-output and state-space techniques; model validation and simulation; and stabilization using linear and nonlinear control techniques.
Credit 3 units.
Typical periods offered: Fall, Spring

ESE 4481 Autonomous Aerial Vehicle Control Laboratory
This course covers the integration of dynamical systems and control engineering principles toward the manipulation of a quadrotor unmanned aerial vehicle (UAV), sometimes referred to as a drone. Students will analytically transform a nonlinear description of the UAV system used for dynamic simulation into a conventional, linear state space system. Students will use key control engineering concepts -- including system identification, state estimation and control synthesis -- to command their UAVs to hover, climb, and orbit. In addition to principles of estimation and identification, students will learn about the theory of guidance and navigation, with projects such as flight planning and execution, collision avoidance, and competitive or cooperative tasks (e.g., formation flight). The overall objective is to expose students to the fusion of control, estimation, and identification techniques that are fundamental to systems theory.
Credit 3 units.
Typical periods offered: Fall, Spring

ESE 4482 Design Challenges in Ese: Modeling and Controlling Human Movement and Choices
The goal of this design-based course is for students to design a system that predicts a human user's motion in a motion capture environment while also influencing their decision-making when presented with multiple choices. The goal is to predict the user's future movement, influence their choice of direction or path, and maximize an objective such as rewards or task completion efficiency. Students will work in teams to complete the task, culminating in a report and presentation. The course is structured as a competition, with a scoring criteria provided as a design specification.
Credit 3 units.
Typical periods offered: Spring

ESE 4590 Special Topics in Cyber-Physical Systems
The industrial internet of things (IIoT) refers to the extension and use of the internet of things (IoT) in industrial sectors and applications. With a strong focus on machine-to-machine (M2M) communication, big data, and machine learning, the IIoT enables industries and enterprises to have better efficiency and reliability in their operations. The IIoT encompasses industrial applications, including robotics, medical devices, and software-defined production processes. This class, through lectures and labs, will cover essentials of IoT hardware and software as well as design thinking as a method of applying empathy and creativity to generate novel solutions to challenging problems in the IIoT space. Students will be presented with a design brief focused on an interactive installation to be placed on campus and will work in groups to develop tiered solutions to the design problem.
Credit 3 units.
Typical periods offered: Fall

ESE 4610 Design Automation for Integrated Circuit Systems
Integrated circuit systems provide the core technology that power today's most advanced devices and electronics: smart phones, wearable devices, autonomous robots, and cars, aerospace or medical electronics. These systems often consist of silicon microchips made up by billions of transistors and contain various components such as microprocessors, DSPs, hardware accelerators, memories, and I/O interfaces, therefore design automation is critical to tackle the design complexity at the system level. The objectives of this course is to 1) introduce transistor-level analysis of basic digital logic circuits; 2) provide a general understanding of hardware description language (HDL) and design automation tools for very large scale integrated (VLSI) systems; 3) expose students to the design automation techniques used in the best-known academic and commercial systems. Topics covered include device and circuits for digital logic circuits, digital IC design flow, logic synthesis, physical design, circuit simulation and optimization, timing analysis, power delivery network analysis. Assignments include homework, mini-projects, term paper and group project.
Credit 3 units.
Typical periods offered: Fall

ESE 4650 Digital Systems Laboratory
Hardware/software co-design; processor interfacing; procedures for reliable digital design, both combinational and sequential; understanding manufacturers' specifications; use of test equipment. Several single-period laboratory exercises, several design projects, and application of microprocessors in digital design.
Credit 3 units.
Typical periods offered: Fall

ESE 4690 Fundamentals of Machine Learning Hardware
This course provides an overview of machine learning algorithms and hardware; inference engines; training engines; emerging hardware architectures; performance analysis; and testing of machine learning accelerators.
Credit 3 units.
Typical periods offered: Fall

ESE 4710 Communications Theory and Systems
Introduction to the concepts of transmission of information via communication channels. Amplitude and angle modulation for the transmission of continuous-time signals. Analog-to-digital conversion and pulse code modulation. Transmission of digital data. Introduction to random signals and noise and their effects on communication. Optimum detection systems in the presence of noise. Elementary information theory. Overview of various communication technologies such as radio, television, telephone networks, data communication, satellites, optical fiber, and cellular radio.
Credit 3 units.
Typical periods offered: Spring

ESE 4740 Introduction to Wireless Sensor Networks
This is an introductory course on wireless sensor networks for senior undergraduate students. The course will use a combination of lecturing and reading and discussion of research papers to help each student to understand the characteristics and operations of various wireless sensor networks. Topics covered include sensor network architecture, communication protocols on Medium Access Control and Routing, sensor network operation systems, sensor data aggregation and dissemination, localization and time synchronization, energy management, and target detection and tracking using acoustic sensor networks.
Credit 3 units.
Typical periods offered: Spring

ESE 4820 Digital Signal Processing
Introduction to analysis and synthesis of discrete-time linear time-invariant (LTI) systems. Discrete-time convolution, discrete-time Fourier transform, z-transform, rational function descriptions of discrete-time LTI systems. Sampling, analog-to-digital conversion, and digital processing of analog signals. Techniques for the design of finite impulse response (FIR) and infinite impulse response (IIR) digital filters. Hardware implementation of digital filters and finite-register effects. The Discrete Fourier Transform and the Fast Fourier Transform (FFT) algorithms.
Credit 3 units.
Typical periods offered: Fall

ESE 4880 Signals and Imaging Laboratory
Hands-on design and analysis that motivates ESE research and courses in signals, communications and imaging. Projects in digital audio signal processing, communication systems, and computational imaging and inverse problems in optics.
Credit 3 units.
Typical periods offered: Fall, Spring

ESE 4970 Electrical Engineering Capstone Design Projects
Capstone design project supervised by the course instructor. The project must use the theory, techniques, and concepts of the student's major: electrical engineering or systems science & engineering. The solution of a real technological or societal problem is carried through completely, starting from the stage of initial specification, proceeding with the application of engineering methods, and terminating with an actual solution. Collaboration with a client, typically either an engineer or supervisor from local industry or a professor or researcher in university laboratories, is encouraged. A proposal, an interim progress update, and a final report are required, each in the forms of a written document and oral presentation, as well as a Web page on the project. Weekly progress reports and meetings with the instructor are also required. Note: this course will meet at the scheduled time only during select weeks. If you cannot attend at that time, you may still register for the course.
Credit 3 units.
Typical periods offered: Fall, Spring

ESE 4971 Systems Science and Engineering Capstone Design Project
Capstone design project supervised by the course instructor. The project must use the theory, techniques, and concepts of the student's major: electrical engineering or systems science & engineering. The solution of a real technological or societal problem is carried through completely, starting from the stage of initial specification, proceeding with the application of engineering methods, and terminating with an actual solution. Collaboration with a client, typically either an engineer or supervisor from local industry or a professor or researcher in university laboratories, is encouraged. A proposal, an interim progress update, and a final report are required, each in the forms of a written document and oral presentation, as well as a Web page on the project. Weekly progress reports and meetings with the instructor are also required. Note: this course will meet at the scheduled time only during select weeks. If you cannot attend at that time, you may still register for the course.
Credit 3 units.
Typical periods offered: Fall, Spring

ESE 4991 Undergraduate Research
Undergraduate research under the supervision of a faculty member. The scope and depth of the research must be approved by the faculty member prior to enrollment. Final deliverables include a poster presentation at a departmental event, submission of the poster in electronic form for archiving, and written documentation at the discretion of the instructor.
Credit 3 units.
Typical periods offered: Fall, Spring

ESE 4992 Honors Thesis Research
This is the premier research experience for students in ESE, offering a challenging but rewarding opportunity for committed students to work at the cutting edge of engineering research. This is a mentored experience and requires the agreement of an ESE faculty member to serve in a mentorship role. To register for this course, students must obtain the nomination of two faculty members, including their proposed mentor. Nomination must reflect strong academic preparation, interest in research and ability to manage time and work independently. During this course, students will work within their mentor's research group or laboratory to pursue one or more specific research aims. Research is expected to result in a podium presentation and a thesis document that will be archived. Students completing honors thesis will participate in a departmental recognition event.
Credit 4 units.
Typical periods offered: Fall, Spring

ESE 4999 Independent Study
Opportunities to acquire experience outside the classroom setting and to work closely with individual members of the faculty. A final report must be submitted to the department. Not open to first-year or graduate students. Consult adviser. Hours and credit to be arranged.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

Bachelor of Science in Electrical Engineering (ESE)

The Bachelor of Science in Electrical Engineering (BSEE) degree program is accredited by the Engineering Accreditation Commission of ABET under the General Criteria and Electrical Engineering Program Criterion.

Program Educational Objectives

Within a few years of graduation, BSEE degree program recipients are expected to do the following:

- Our graduates will be engaged as practicing professionals in a broad range of careers in industry or government or be pursuing advanced degrees in academic graduate education in engineering or a related field.
- Our graduates will function effectively as members of teams demonstrating sensitivity to professional and societal contexts, integrity and versatility.

Student Outcomes

Graduates of the BSEE program are expected to know or have the following by the time of graduation:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. An ability to communicate effectively with a range of audiences
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

BSEE Degree Requirements

To obtain the BSEE degree, students must complete a minimum of 120 units consistent with the residency and other applicable requirements of Washington University and the McKelvey School of Engineering (p. 1160) and subject to the program requirements below. All courses below must be taken for a letter grade unless otherwise specified.

Code	Title	Units
Electrical Engineering Core Courses [1]		**38**

1 The BSEE degree requires a minimum of 45 units of engineering topics (typically satisfied by fulfilling EE core and elective requirements). Courses carrying engineering topics units will be noted in workday'. Also add "Courses taken on a pass/no pass basis may be used for engineering topics units.

2 Requirements for the EE electives:

a. 15 units in electrical engineering subjects from the following list: ESE 2992, ESE 3301–3990, ESE 4100-4260, ESE 4290–4999 and ESE 5030–5890. (Electives cannot be used to satisfy other requirements in the degree program.)

b. Students must take at least two courses from ESE 4290, ESE 4301, ESE 4310, ESE 4330, ESE 4360, ESE 4380, ESE 4410, ESE 4610, ESE 4710, and ESE 4820.

c. No more than 6 units of the combined units of ESE 2992, ESE 4991, ESE 4992, and ESE 4999 may be applied.

d. No more than 3 credits of 5000-level courses may be applied.

3 Two upper-level laboratory courses (6 units) from the following list: ESE 3301, ESE 3310, ESE 4480, ESE 4481, ESE 4650, and ESE 4880. The selection must contain at least one course from ESE 3301, ESE 3310, ESE 4650, and ESE 4880.

4 Students are also encouraged to take CSE 2407 Data Structures and Algorithms (3 units).

[5] Engineering and science breadth requirements: 9 units in engineering or science outside of electrical engineering. These units must be taken in the following areas: biomedical engineering, chemical engineering, computer science and engineering, mechanical engineering, systems science and engineering, economics, mathematics, physics, biology, chemistry, earth and planetary sciences, and pre-medicine. These units must be at the 2000 level or higher and cannot be used to satisfy the Common Studies requirements or the computer science requirement. Courses in other fields can be arranged with special departmental approval. Engineering and science breadth courses may be taken on a pass/no pass basis. See the McKelvey common studies page (p. 1160) for reference.

[6] CHEM 1701 is preferred, but CHEM 1601 will be allowed.

[7] Humanities and social sciences courses may be taken on a pass/no pass basis.

For more information about the BS in Electrical Engineering curriculum, please visit the ESE website.

Bachelor of Science in Systems Science & Engineering (ESE)

Systems Engineering broadly covers how to integrate different components in engineering systems. Applications range from operations research and mathematical solutions to business problems to control engineering, the basic theory and practice used to control diverse systems such as jet airplanes, electric power grids, or the nation's economy. The Systems Science and Engineering program is ideal for students interested in math, physics and computing; business, finance or financial engineering; or applied mathematics.

The Bachelor of Science in Systems Science & Engineering (BSSSE) program lays the engineering and mathematical foundations for modeling, analyzing and designing complex systems and highlights their applications in contemporary engineering and scientific application domains. Graduates will be competent in employing a versatile, interdisciplinary systems perspective to translate practical problem formulations into mathematical models, recognizing structural commonalities across diverse systems, and solving analysis and design objectives using suitable methods at the core of systems science and engineering. The basic methodological knowledge at the core of systems science includes mathematical competence and knowledge of systems analysis, control, design methods, numerical methods, differential equations, dynamic systems theory, automatic control theory, system stability, estimation, optimization, modeling, identification, simulation and basic computer programming. Graduates will have an engineering outlook and be able to interact fully with other engineers. They will also possess sufficient proficiency in computer use to design algorithms for simulation, estimation, control and optimization.

The Bachelor of Science in Systems Science and Engineering (BSSSE) degree program is accredited by the Engineering Accreditation Commission of ABET under the General Criteria.

Program Educational Objectives

Within a few years of graduation, BSSSE degree program recipients are expected to do the following:

- Our graduates will be engaged as practicing professionals in a broad range of careers in industry or government or be pursuing advanced degrees in academic graduate education in engineering or a related field.
- Our graduates will function effectively as members of teams demonstrating sensitivity to professional and societal contexts, integrity and versatility.

Student Outcomes

Graduates of the BSSSE program are expected to know or have the following by the time of graduation:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. An ability to communicate effectively with a range of audiences
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

BSSSE Degree Requirements

Code	Title	Units

Humanities & Social Sciences [7]		

[1] The BSSSE degree requires a minimum of 45 units of engineering. Courses carrying engineering topics units will be noted in workday. Courses taken on a Pass/No Pass basis may be used for engineering topics units.

[2] Requirements for the BSSSE electives:

a. 12 units in elective courses in systems science and engineering are required: ESE 2992, ESE 3590, ESE 4000–4280, ESE 4370, ESE 4400–4590, ESE 4700–4999, ESE 5020–5290 and ESE 5400–5590.

b. No more than 6 units of the combined units of ESE 2992, ESE 4991, ESE 4992, and ESE 4999 may be applied.

[3] Two upper-level laboratory courses (6 units) from the following list: ESE 4480, ESE 4481, ESE 4650 and ESE 4880. The selection must contain at least one course from ESE 4480 and ESE 4481.

[4]

a. 12 units in outside concentration outside of systems science and engineering are required. These units must all be taken in one of the following engineering areas: Biomedical Engineering, Chemical Engineering, Computer Science & Engineering, Electrical Engineering, or Mechanical Engineering & Materials Science.

b. Sequences for concentrations in economics, mathematics, physics, pre-medicine and other fields can be arranged with special departmental approval to meet a student's specific needs. When a non-engineering discipline is chosen as the outside concentration, the student needs to pay special attention to the engineering topics unit requirement and make sure that enough engineering content is obtained from the other courses.

c. Of the 12 units, 9 units must be at the 2000 level or higher. Courses taken on a pass/fail basis may be used for outside concentration units.

d. Courses used for the outside concentration requirements cannot also be used for other BSSSE requirements.

[5] Students are also encouraged to take CSE 2407.

[6] The recommended chemistry sequence is CHEM 1701–CHEM 1751, but CHEM 1601–CHEM 1751 will be allowed.

[7] Humanities and social sciences courses may be taken on a Pass/No Pass basis.

For more information about the BS in Systems Science & Engineering curriculum, please visit the ESE website.

Bachelor of Science in Computer Engineering (ESE)

Computer engineering encompasses studies of hardware, software, and systems issues that arise in the design, development, and application of computer systems. Computer engineers are particularly well suited to address the particular challenges that exist as computing systems interact with the real, physical world. This includes sensing, actuation, timing, security, and computing systems with widely varying form factors, ranging from servers to mobile devices to the "internet of things." The degree requires 120 units including core courses, technical electives, a capstone course, and common studies.

The Bachelor of Science in Computer Engineering degree is jointly administered by the Department of Computer Science and Engineering and the Department of Electrical and Systems Engineering.

Students working toward a Bachelor of Science in Computer Engineering degree must meet all requirements for an engineering degree from the McKelvey School of Engineering. Required courses and technical electives cannot be taken on a Pass/No Pass basis.

- **Core Requirements*:**

The following courses are required of all computer engineering students:

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
CSE 1302	Introduction to Computer Engineering	3
CSE 2407	Data Structures and Algorithms	3
CSE 2600	Introduction to Digital Logic and Computer Design	3

CSE 3601	Introduction to Systems Software	3
CSE 3602	Computer Architecture	3
ESE 1050	Introduction to Electrical and Systems Engineering	4
ESE 2300	Introduction to Electrical and Electronic Circuits	4
ESE 2320	Introduction to Electronic Circuits	3
ESE 3260	Probability and Statistics for Engineering	3
Total Units		**32**

* Each of these core courses must be passed with a grade of C- or better.

- **Technical Elective Requirements:**

21 units of technical electives that fulfill the following requirements:

1. At least two courses from the following list (the "hardware" list):

Code	Title	Units
ESE 3300	Electromagnetic Theory	3
ESE 3301	Electromagnetics Lab	3
ESE 3310	Electronics Lab	3
ESE 3510	Signals and Systems	3
ESE 4301	Quantum Mechanics for Engineers	3
ESE 4310	Introduction to Quantum Electronics	3
ESE 4330	Radio Frequency and Microwave Technology for Wireless Systems	3
ESE 4360	Semiconductor Devices	3
ESE 4410	Control Systems	3
ESE 4440	Sensors and Actuators	3
ESE 4460	Robotics: Dynamics and Control	3
CSE 4603	Digital Integrated Circuit Design and Architecture	3
ESE 4650	Digital Systems Laboratory	3
ESE 4710	Communications Theory and Systems	3
ESE 4820	Digital Signal Processing	3

2. At least two courses from the following list (the "software" list):

Code	Title	Units
CSE 2301	Introduction to Parallel and Concurrent Programming	3
CSE 3302	Object-Oriented Software Development Laboratory	3
CSE 3605	Elements of Computing Systems	3
CSE 4202	Operating Systems Organization	3
CSE 4205	Programming Systems and Languages	3
CSE 4301	Translation of Computer Languages	3
CSE 4303	Introduction to Computer Security	3
CSE 4304	Reverse Engineering and Malware Analysis	3
CSE 4607	Embedded Computing Systems	3
CSE 4608	Introduction to Quantum Computing	3
CSE 4703	Introduction to Computer Networks	3

3. The remaining three courses can be any CSE course with an S, M, T, or A suffix; or CSE 3407; or any ESE course at the 3000 level or higher; or ESE 2050, ESE 2180, or ESE 2190. Additional courses (beyond the two required) in the above lists count toward this requirement.

The above can include courses at the graduate level; however, they must still meet one of the two criteria above. Up to 6 units of independent study (CSE 4001, CSE 4970-CSE 4975, ESE 4999, ESE 4991) can count toward technical electives. There is no limit as to how many independent study courses can count toward the general 120 units.

- **Capstone Requirement:**

The capstone requirement can be met by taking either CSE 4602 or ESE 4970.

- **Common Studies Requirements:**

Code	Title	Units
CWP 1500	College Writing	3
ENGR 3100	Technical Writing	3
Humanities and Social Sciences electives		18
MATH 1510	Calculus I	3
MATH 1520	Calculus II	3
MATH 2130	Calculus III	3
MATH 2500	Differential Equations	3
Natural Sciences elective		3
PHYSICS 1740	Physics I	3
PHYSICS 1551	Physics I - First Years Only	3
PHYSICS 1553	Physics I - Sophomores, Juniors, and Seniors Only	3
PHYSICS 1741	Physics I Laboratory	1
PHYSICS 1742	Physics II	3
PHYSICS 1743	Physics II Laboratory	1
Total Units		**53**

Upon completing a course in the calculus sequence (MATH 1510-MATH 1520-MATH 2130) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the mathematics department's back credit policy.

The natural sciences requirement is for 3 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies or Physics. These courses must be completed with a grade of C- or better.

The College Writing Program, humanities, and social sciences requirements are those required of all students in the McKelvey School of Engineering.

Bachelor of Science in Applied Science (Electrical Engineering) (ESE)

Students who do not plan to pursue a career in electrical engineering but who seek a strong foundation in the principles of electrical engineering may choose the Bachelor of Science in Applied Science (Electrical Engineering). The program ensures that the student learns the foundations of electrical engineering through breadth requirements. In addition, there is flexibility in selecting upper-level courses to meet the student's individual objectives. This program also may be attractive for students interested in obtaining multiple degrees, because the requirements are less strict than for the BSEE degree. Historically, students have matched a degree in electrical engineering with degrees in other engineering disciplines, in the natural sciences, in music, in history and in business; other combinations are possible. This also may be an attractive option for students planning graduate studies in a variety of disciplines, including medicine, law or business. This applied science degree is not accredited by the Engineering Accreditation Commission of ABET.

The degree requirements include the residency and general requirements of the university and the McKelvey School of Engineering as well as the following:

Code	Title	Units
Required courses in Electrical Engineering		*29*
ESE 1050	Introduction to Electrical and Systems Engineering	4
ESE 2180	Linear Algebra and Component Analysis	3
ESE 2190	Vector Calculus and Dynamics of Physical Systems	3
ESE 2300	Introduction to Electrical and Electronic Circuits	4
ESE 2320	Introduction to Electronic Circuits	3
CSE 2600	Introduction to Digital Logic and Computer Design	3
ESE 3260	Probability and Statistics for Engineering	3
ESE 3300	Engineering Electromagnetics Principles	3
ESE 3510	Signals and Systems	3
Upper-level elective courses in electrical engineering (ESE 2050, ESE 2992, ESE 3300–3990, ESE 4100-4260, ESE 4290–4999, ESE 5030–5890)		18
Free electives		28
Mathematics, science and engineering electives		24
Computer Science requirement (CSE 1301)		3
Humanities and social sciences electives		18
Total		**120**

[1] No more than 6 units of the combined units of ESE 2992, ESE 4991, ESE 4992, and ESE 4999 may be applied.

Bachelor of Science in Applied Science (Systems Science & Engineering) (ESE)

This program provides the student with the opportunity to prepare their academic career with maximum flexibility but also with enough organization to ensure substantive, consistent training in systems science methodology and outlook. This program is recommended if students wish to pursue a program that does not follow conventional lines. It is an especially advantageous degree for a double major in association with mathematics, physics, economics or another engineering discipline. The program can be planned to provide a desirable background for graduate work in biological, medical or management fields. This applied science degree is not accredited by the Engineering Accreditation Commission of ABET.

The degree requirements include the residency and general requirements of the university and the McKelvey School of Engineering as well as the following:

Code	Title	Units
Required courses in Systems Science & Engineering		*26*
ESE 1050	Introduction to Electrical and Systems Engineering	4
ESE 2180	Linear Algebra and Component Analysis	3
ESE 2190	Vector Calculus and Dynamics of Physical Systems	3
ESE 2300	Introduction to Electrical and Electronic Circuits	4
ESE 3260	Probability and Statistics for Engineering	3
ESE 3510	Signals and Systems	3
ESE 4031	Optimization for Engineered Planning, Decisions and Operations	3
or ESE 4150	Optimization	
ESE 4410	Control Systems	3
Elective systems science & engineering electives (ESE 2050, ESE 2992, ESE 3590, ESE 4000–4280, ESE 4370, ESE 4400–4590, ESE 4700–4999, ESE 5020–5290 and ESE 5400–5590.)		18
Free electives		40
Mathematics, science and engineering electives		24
Computer Science requirement (CSE 1301)		3
Humanities and social sciences electives		18
Total		**120**

Second Major in Electrical Engineering (ESE)

A second major in electrical engineering is ideal for students majoring in many areas, such as mathematics, physics, chemistry and biology. Students in the McKelvey School of Engineering as well as the other undergraduate divisions at Washington University now have the opportunity to pursue a second major in electrical engineering. Students are not allowed to add this second major to either the BS in Electrical Engineering or the BS in Applied Science (Electrical Engineering).

The requirements for a second major in electrical engineering are as follows:

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
CSE 2600	Introduction to Digital Logic and Computer Design	3
ESE 1050	Introduction to Electrical and Systems Engineering	4
ESE 2180	Linear Algebra and Component Analysis	3
ESE 2190	Vector Calculus and Dynamics of Physical Systems	3
ESE 2300	Introduction to Electrical and Electronic Circuits	4
ESE 2320	Introduction to Electronic Circuits	3
ESE 3260	Probability and Statistics for Engineering	3
ESE 3300	Engineering Electromagnetics Principles	3
ESE 3510	Signals and Systems	3
Total Units		**32**

In addition, students must select 18 units of ESE electives from the following list: ESE 2050, ESE 2992, ESE 3300–3990, ESE 4100–4260, ESE 4290–4999, and ESE 5030–5890.

Students may petition to substitute electrical-science–oriented courses from other disciplines in Arts & Sciences (e.g., certain courses in physics or applied mathematics) for up to two of the above required courses. Within this second major in electrical engineering, areas of concentration are possible in devices and circuits, applied physics, signals and imaging, and control systems.

For more information, please contact the director of the program, Chuan Wang.

Second Major in Systems Science & Engineering (ESE)

A second major in systems science and engineering is ideal for study in many areas, including physics, chemistry, economics, finance, supply chain management and computational biology. Students in the McKelvey School of Engineering as well as the other undergraduate divisions at Washington University have the opportunity to pursue a second major in systems science and engineering in the Preston M. Green Department of Electrical & Systems Engineering in the McKelvey School of Engineering. Students are not allowed to add this second major to either the BS in SSE or the BS in Applied Science (SSE).

The requirements for a second major in systems science and engineering are as follows:

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
ESE 1050	Introduction to Electrical and Systems Engineering	4
ESE 2180	Linear Algebra and Component Analysis	3
ESE 2190	Vector Calculus and Dynamics of Physical Systems	3
ESE 2300	Introduction to Electrical and Electronic Circuits	4
ESE 3260	Probability and Statistics for Engineering	3
ESE 3510	Signals and Systems	3
ESE 4031	Optimization for Engineered Planning, Decisions and Operations	3
or ESE 4150	Optimization	
ESE 4410	Control Systems	3
Total Units		**29**

In addition, 18 units of ESE courses in the systems area are to be chosen from the following list: ESE 2050, ESE 2992, ESE 3590, ESE 4000–4280, ESE 4370, ESE 4400–4590, ESE 4700–4999, ESE 5020–5290 and ESE 5400–5590.

Students may petition to substitute systems-oriented courses from other disciplines in Arts & Sciences for two of these six courses (for example, courses in computational physics, econometrics or computational mathematics).

Within this second major in systems science and engineering, areas of concentration are possible in robotics, control systems and operations research.

For more information, contact the director of the program, Shen Zeng.

Second Major in Financial Engineering (ESE)

A second major in financial engineering is ideal for students who are interested in careers or graduate study in financial engineering, quantitative finance, or related fields. This program covers classes in engineering, computer science, and business. Students interested in the second major must have completed the background courses or being in the process of completing them and have a 3.3 or higher grade point average to pursue this second major. The grade point average includes the cumulative GPA, the Business GPA, and the Engineering GPA. Students must complete 30 total units (15 Engineering units and 15 Olin Business units).

Code	Title	Units
Background Coursework		**15**
CSE 1301	Introduction to Computer Science	3
ESE 3260	Probability and Statistics for Engineering	3
or SDS 3200	Elementary to Intermediate Statistics and Data Analysis	
or DAT 1201	Managerial Statistics II	
or ECON 3150	Introduction to Econometrics	
or ECON 4150	Introduction to Econometrics With Writing	
or SDS 4130	Linear Statistical Models	
or SDS 4010	Probability	
MATH 2500	Differential Equations	3
or ESE 2170	Differential Equations and Dynamical Systems Modeling in Engineering	
or MATH 3520	Differential Equations and Dynamical Systems	
MATH 2130	Calculus III	3
MATH 3300	Matrix Algebra	3
or ESE 2180	Linear Algebra and Component Analysis	
or MATH 4301	Linear Algebra	

Students must complete 15 Engineering units. At least 6 of those units must be from the Engineering Core Courses:

Code	Title	Units
Engineering Core Courses		
ESE 4150	Optimization	3
ESE 4170	Introduction to Machine Learning and Pattern Classification	3
or CSE 4107	Introduction to Machine Learning	
ESE 4261	Statistical Methods for Data Analysis With Applications to Financial Engineering	3
ESE 4270	Financial Mathematics	3
Engineering Elective Courses		
CSE 2407	Data Structures and Algorithms	3
ESE 4031	Optimization for Engineered Planning, Decisions and Operations	3
ESE 5130	Large-Scale Optimization for Data Science	3
ESE 5200	Probability and Stochastic Processes	3

Students must complete 15 Olin Business units, including all 9 units of Olin Professional Core Courses and 6 elective units.

Code	Title	Units
Olin Professional Core Courses		**9**
ACCT 2610	Principles of Financial Accounting	3
FIN 3150	Capital Markets and Financial Management	3
FIN 4410	Investments	3
Olin Electives		**6**
FIN 4506	Financial Technology: Methods and Practice	3
FIN 4510	Options, Futures and Derivative Securities	3
FIN 4370	Advanced Derivative Securities	3
FIN 5017	Quantitative Risk Management	3
FIN 5018	Topics in Quantitative Finance	1.5
FIN 5321	Data Analysis for Investments	1.5
FIN 5390	Mathematical Finance	1.5
FIN 5520	Fixed Income Derivatives	1.5

[1] At least one of FIN 4510 or ESE 4270 must be taken to complete the second major. ESE 4270, if taken after FIN 3150, can be used to satisfy the FIN 4510 prerequisite of Olin elective courses.

For more information, contact the director of the program, Vladimir Kurenok.

Minor in Electrical Engineering (ESE)

This minor consists of fundamental courses in core electrical engineering areas of devices and circuits, applied physics, and signals and systems. Elective choices allow further depth in advanced devices, optics, signal processing, and control systems or greater breadth within electrical engineering.

Units required: 16

Code	Title	Units
ESE 2300	Introduction to Electrical and Electronic Circuits	4
ESE 2320 Introduction to Electronic Circuits **or** ESE 3300 Engineering Electromagnetics Principles		3
ESE 3510	Signals and Systems	3

In addition, students must take 6 units from the following list: ESE 1050, ESE 2050, ESE 2180, ESE 2190, ESE 2320, ESE 2992, ESE 3300–3990, ESE 4100–4260, ESE 4290–4999, and ESE 5030–5890.

For more information, contact the director for the minor, Chuan Wang.

Minor in Energy Engineering (ESE)

Objective: The goal of this minor is to provide students with a course work experience that will enhance their background, knowledge and skills in the topical area of energy engineering. The minor encompasses courses in several fields of science and engineering, including the Department of Energy, Environmental & Chemical Engineering; the Department of Electrical & Systems Engineering; and the Department of Mechanical Engineering & Materials Science.

A minor in energy engineering requires the completion of at least 18 units selected from the following lists. It is open to any undergraduate student pursuing an engineering major, a major in the sciences (biology, chemistry, physics) in Arts & Sciences, or the environmental studies major.

Interested departments should expose students to energy and related concepts in their introductory courses.

Basic and Applied Sciences (fundamental content) (two courses):

Code	Title	Units
EECE 2000 Process Analysis and Thermodynamics **or** MEMS 3400 Thermodynamics		4 or 3
EECE 3000 Transport Phenomena I: Basics and Fluid Mechanics **or** MEMS 3410 Fluid Mechanics		3
EECE 3510 Transport Phenomena II: Energy and Mass Transfer **or** MEMS 3420 Heat Transfer		4 or 3
ESE 3320	Power, Energy, and Polyphase Circuits	3

Social Science/Policy/Economics Elective (students choose one course):

Code	Title	Units
ECON 3350	Environmental Policy	3
ENST 3330	Multiparty Environmental Decision Making	3
ENST 3340	Writing Skills for Environmental Professionals	3
ENST 3400	Energy Governance in Israel and the Middle East	3
ENST 3530	Sustainable Cities	3
ENST 4810	Reset - Renewable Energy Policy, Engineering and Business	3
POLSCI 3328	Energy Politics	3

Electives:

Students choose three courses. One of the courses is required to be chosen from outside of the student's major degree department. A partner department may approve the use of a course listed under basic and applied sciences as an elective.

Code	Title	Units
EECE 3110	Green Engineering	3
EECE 4060	Energy Conversion and Storage	3
EECE 4061	Electrochemical Processes	3
EECE 4993	International Experience in EECE	3
EECE 5080	Combustion Phenomena	3
EECE 5180	Biomass Energy Systems and Engineering	3
EECE 5200	Electrochemical Engineering	3
EEPS 3150	Environmental Impacts of Human Energy Use	3
ESE 4340	Solid-State Power Circuits and Applications	3
ESE 4350	Electrical Energy Laboratory	3
MEMS 3430	Design of Thermal Systems	3
MEMS 5422	Solar Thermal Energy Systems	3
MEMS 5423	Sustainable Environmental Building Systems	3
MEMS 5424	Thermo-Fluid Modeling of Renewable Energy	3
MEMS 5427	Fundamentals of Fuel Cells	3
MEMS 5705	Wind Energy Systems	3

Committee to Oversee Energy Engineering Minor

Peng Bai (EECE, Coordinator); Bruno Sinopoli (ESE); Xianglin Li (MEMS)

The committee ensures that any course added to the above lists contains a significant amount of energy topics and that the entire program is cohesive.

Minor in Mechatronics (ESE)

Advancements in power electronics, electronic sensors, and computer hardware and software have led to an expanding role for "smart" systems, which combine electronic and mechanical components. Automotive examples illustrate this point. The replacement of carburetors by fuel injection systems is almost universal, and hybrid/electric cars are replacing traditional automobiles. Not only are auxiliary devices such as fuel pumps, air bags and air-conditioner compressors driven by electric motors controlled by microprocessors, but fundamental components such as intake and outtake valves soon will be driven in this way. The internal combustion engine itself may be replaced by fuel cells and motors. Medical devices, micro-electromechanical systems, robots, fly-by-wire aircraft and wind turbines also all rely on electronic sensing of mechanical parameters and actuation of motion. These examples suggest strongly that engineers who are adept in the design, analysis and simulation of electromechanical systems will be in demand. The minor in mechatronics is created to encourage our students to study this important subject and provide recognition to those who do so.

This program is primarily designed for students in the ESE and MEMS departments and has been approved by the two departments. It is available for others as well.

The proposed minor program consists of four required courses, two electives and one prerequisite:

Four required courses:

Code	Title	Units
ESE 4440	Sensors and Actuators	3
ESE 4460	Robotics: Dynamics and Control	3
or MEMS 5206	Modern Robotics: Mechanics, Planning and Control	
MEMS 2520	Dynamics	3
MEMS 4110	Mechanical Engineering Design Project	3
Total Units		**12**

Two electives chosen from the following:

Code	Title	Units
ESE 4360	Semiconductor Devices	3
ESE 4820	Digital Signal Processing	3
MEMS 4320	Modeling, Simulation and Control	3
or ESE 4410	Control Systems	
MEMS 4310	Vibrations	3

Prerequisite:

Code	Title	Units
CSE 1301	Introduction to Computer Science	3

For more information about the minor, contact Dennis Mell (ESE) or Jackson Potter (MEMS).

Minor in Robotics (ESE)

Robotic systems have a wide range of applications in modern technology and manufacturing. Robots can vary in complexity and use, from the microrobots used for surgical procedures to the moderate-sized robots common in manufacturing and undersea exploration to the macrorobots used for the disposal of nuclear waste and as arms on space-station modules. The program designed for a minor in robotics provides a fundamental understanding of robotic operation and preliminary training in the design and use of robots.

Units required: 18

Prerequisites:

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
MATH 2500	Differential Equations	3
PHYSICS 1740	Physics I	4
and PHYSICS 1741	Physics I Laboratory	
PHYSICS 1742	Physics II	4
and PHYSICS 1743	Physics II Laboratory	
Total Units		**14**

Required courses:

Code	Title	Units
ESE 3510	Signals and Systems	3
or MEMS 4310	Vibrations	
ESE 4460	Robotics: Dynamics and Control	3
or MEMS 5206	Modern Robotics: Mechanics, Planning and Control	
ESE 4480	Control Systems Design Laboratory	3
MEMS 2520	Dynamics	3
Total Units		**12**

Two additional courses must be chosen with the approval of the director of the program for a minor in robotics. Suggested courses include the following:

Code	Title	Units
CSE 5406	Computational Geometry	3
ESE 4170	Introduction to Machine Learning and Pattern Classification	3
or CSE 4107	Introduction to Machine Learning	
ESE 4410	Control Systems	3
or MEMS 4320	Modeling, Simulation and Control	
ESE 4450	Sensing, Planning and Control in Robotics	3
MEMS 3110	Machine Elements	3
MEMS 5207	Robot Design	3
or ESE 4480	Control Systems Design Laboratory	

For more information about the minor, contact Dennis Mell (ESE) or Jackson Potter (MEMS).

Minor in Systems Science & Engineering (ESE)

This minor consists of fundamental courses in control systems and operations research. In the area of control systems, students will be introduced to design techniques for controlling engineering and socioeconomic systems such as airplanes, automobiles, nuclear reactors, ecological systems, communication networks, the nation's economy and biological systems. In the area of operations research, students are introduced to techniques for optimally managing business resources and controlling business networks such as supply chains.

Units required: 15

Code	Title	Units
ESE 2170	Differential Equations and Dynamical Systems Modeling in Engineering	3
ESE 4031	Quantum Mechanics for Engineers	3
or ESE 4150	Optimization	
ESE 4410	Control Systems	3

In addition, students must take 6 units from the following list ESE 1050, ESE 2050, ESE 2180, ESE 2190, ESE 2992, ESE 3590, ESE 4000–4280, ESE 4370, ESE 4400–4590, ESE 4700–4999, ESE 5020–5290, and ESE 5400–5590.

For more information, contact the director for the minor, Shen Zeng.

Minor in Quantum Engineering (ESE)

Quantum engineering is an emerging field that fuses physics, engineering, and computer science. It incorporates radical new ideas for computing, materials, devices and sensors. Advances in quantum sensing, encryption, and computing will transform science and engineering and have a far-reaching impact on the industry, the economy, and other aspects of our society.

The Minor in Quantum Engineering integrates quantum knowledge — quantum physics, quantum information science, and quantum technologies — into the engineering education at Washington University. The curriculum encompasses both fundamental physics and the broad engineering skill set necessary to meet the practical challenges of the future.

Students with background in applied physics or electrical engineering are ideal candidates for this program, but the minor is open to any undergraduate student enrolled in a degree program at Washington University in St. Louis.

Prerequisites

The course ESE 4301 Quantum Mechanics for Engineers is designed to be the entry course for the quantum engineering curriculum, which provides the foundations — that is, the mathematical and physical knowledge — required for all subsequent core courses. By design, this course is made to be accessible to second-year engineering undergraduates with knowledge of linear algebra and calculus at the level of ESE 2180 Linear Algebra and Component Analysis and ESE 2190 Vector Calculus and Dynamics of Physical Systems, or ENGR 3180/ENGR 3190 Engineering Mathematics A/B, or the equivalent.

Required Courses

The Minor in Quantum Engineering requires the completion of 15 units from the courses listed below. At least two courses must be from the Core Courses list.

Core Courses

Students select at least two courses from this list:

Code	Title	Units
CSE 4608	Introduction to Quantum Computing	3
ESE 4290	Basic Principles of Quantum Optics and Quantum Information	3
or ESE 5360	Introduction to Quantum Optics	
ESE 4301	Quantum Mechanics for Engineers	3
ESE 4310	Introduction to Quantum Electronics	3

Program Electives

Code	Title	Units
PHYSICS 3180	Introduction to Quantum Physics II	3
or PHYSICS 4071	Quantum Mechanics	
or PHYSICS 5230	Quantum Mechanics I	
ESE 4360	Semiconductor Devices	3
ESE 4390	Introduction to Quantum Communications	3
ESE 5320	Introduction to Nano-Photonic Devices	3
ESE 5820	Fundamentals and Applications of Modern Optical Imaging	3
CHEM 4010	Physical Chemistry I	3
CHEM 5330	Time-Dependent Quantum Mechanics & Spectroscopy	3
CHEM 5014	Physical Properties of Quantum Nanostructures	3
MATH 4570	The Mathematics of Quantum Theory	3
or 5057	The Mathematics of Quantum Theory	
PHYSICS 4072	Solid State Physics	3
PHYSICS 5890	Selected Topics in Physics I	3

For more information, contact the director for the minor, Jung-Tsung Shen.

Energy, Environmental & Chemical Engineering

About Energy, Environmental & Chemical Engineering

Our department focuses on environmental engineering, energy systems engineering and chemical engineering. We provide integrated and multidisciplinary programs of scientific education. Our mission is accomplished by instilling a tradition of lifelong learning; offering a curriculum of fundamental education coupled with applications in advanced focal areas and strengthened by our breadth in other disciplinary areas; participating in cutting-edge research with faculty and industrial partners; and providing access to state-of-the-art facilities and instrumentation. Most undergraduate students in the department will pursue the BS in Chemical Engineering degree or the BS in Environmental Engineering degree, both accredited by the Engineering Accreditation Commission of ABET. Other students may pursue the BS in Applied Science degree with a major in chemical

engineering. The department offers a minor in environmental engineering science, and, in collaboration with other engineering departments, we co-sponsor a minor in energy engineering and a minor in nanoscale science and engineering. Graduate degrees (Master of Engineering, Master of Science and Doctor of Philosophy) in Energy, Environmental & Chemical Engineering are also offered by the department.

Chemical engineers are involved in the transfer of scientific discoveries to modern technologies and novel products that benefit society and minimize the impact on the environment. They deal with multiscale aspects of generating clean energy, producing novel and superior materials, and utilizing the biological revolution to manufacture new products. They are involved in the development and manufacture of consumer products as well as in the design, operation and control of processes in a variety of industries (e.g., petroleum, petrochemical, chemical, consumer products, food, feed, pharmaceuticals). Their broad training in basic sciences (e.g., chemistry, physics, biology, mathematics) coupled with a strong foundation in chemical engineering principles (e.g., thermodynamics, mass and energy balances, transport phenomena, kinetics, separations, reaction engineering, control, product development, process design) makes them invaluable team members and leaders in any engineering enterprise. It also prepares them well for graduate studies in biochemical, biomedical, chemical, environmental and materials engineering. In addition, the BS in Chemical Engineering is a great starting point for pursuing a degree in business, law or medicine.

Environmental engineers apply scientific and engineering principles to assess, manage and design sustainable systems for the protection of human and ecological health. The designs and technologies that they develop provide safe and sufficient public water supplies, enable effective and efficient treatment and resource recovery from wastewater and other wastes, and control pollutant releases that protect water, soil and air quality. Environmental engineers also seek to understand the effect of technological advances on the environment and to identify opportunities to improve the environmental sustainability of new technologies. Environmental engineers have broad training in basic sciences, mathematics and computational approaches as well as an engineering foundation that includes mass and energy balances, thermodynamics, transport phenomena, and chemical, physical and biological treatment processes. The training of environmental engineers also includes natural science and environmental social science and the humanities. This training prepares environmental engineers to apply technological solutions within specific environmental and societal contexts. Environmental engineering graduates are prepared to enter professional practice and to pursue graduate study in environmental engineering and allied fields.

The curricula are planned to provide students with a strong background in basic engineering concepts while allowing students individual latitude to emphasize study in a specialized area or to obtain added breadth both within and outside of chemical or environmental engineering.

Mission Statement

The mission of the department is to teach energy, environmental and chemical engineering principles and their application in an inspiring learning environment; to prepare students for engineering careers by developing the skills of critical thinking, analysis and communication proficiency; and to instill a sense of professional ethics and societal responsibility.

Advising

The department takes pride in its mentoring of undergraduate students. Each student who declares chemical or environmental engineering as a (potential) major is assigned an academic advisor from the full-time department faculty. Typically, the same advisor follows the student's academic progress and serves as a mentor from the first year through graduation.

Website:	https://eece.wustl.edu/academics/undergraduate-programs/index.html

Faculty

Department Chair and Professor

Joshua Yuan
Lucy & Stanley Lopata Professor
PhD, University of Tennessee
Design-based engineering to address challenges in energy, the environment and health

Endowed Professors

Richard L. Axelbaum
The Stifel & Quinette Jens Professor of Environmental Engineering Science
PhD, University of California, Davis
Combustion, advanced energy systems, clean coal, aerosols, nanoparticle synthesis, rechargeable battery materials, thermal science

Daniel E. Giammar
Walter E. Browne Professor of Environmental Engineering
Director, Center for the Environment
PhD, California Institute of Technology
Aquatic chemistry, environmental engineering, water quality, water treatment

Zhen (Jason) He
Laura and William Jens Professor of Energy, Environmental & Chemical Engineering
Director of Graduate Studies
PhD, Washington University
Environmental biotechnology, bioenergy production, biological wastewater treatment, resource recovery, bioelectrochemical systems, sustainable desalination technology, anaerobic digestion, forward osmosis, membrane bioreactors

Randall Martin
Raymond R. Tucker Distinguished Professor
PhD, Harvard University
Characterizing atmospheric composition to inform effective policies surrounding major environmental and public health challenges ranging from air quality to climate change

Vijay Ramani
Vice Provost for Graduate Education and International Affairs
Roma B. and Raymond H. Wittcoff Distinguished University Professor
PhD, University of Connecticut
Electrochemical engineering, energy conversion

Jay R. Turner
Head of the Division of Engineering Education
Vice Dean for Education
James McKelvey Professor of Engineering Education
DSc, Washington University
Air quality planning and management, aerosol science and engineering, green engineering

Fuzhong Zhang
Francis F. Ahmann Professor
PhD, University of Toronto
Metabolic engineering, protein engineering, synthetic and chemical biology

Professors

Rajan Chakrabarty
PhD, University of Nevada, Reno
Characterizing the radiative properties of carbonaceous aerosols in the atmosphere, researching gas-phase aggregation of aerosols in cluster-dense conditions

Feng Jiao
PhD, University of St. Andrews
Electrocatalysis, carbon dioxide utilization, electrochemical devices, energy storage

Young-Shin Jun
PhD, Harvard University
Aquatic processes, molecular issues in chemical kinetics, environmental chemistry, surface/physical chemistry, environmental engineering, biogeochemistry, nanotechnology

Xinhua Liang
PhD, University of Colorado Boulder
Gas-phase synthesis, surface science and catalysis, nanostructured films and devices, energy and environmental applications

Yinjie Tang
PhD, University of Washington
Metabolic modeling, fermentation engineering, algal bioprocesses

Jian Wang
Director of the Center for Aerosol Science and Engineering (CASE)
PhD, California Institute of Technology
Aerosol properties and processes, nucleation and new particle formation, aerosols in the marine environment, effects of aerosols on cloud microphysical properties and macrophysical structure

Gang Wu
PhD, Harbin Institute of Technology
Advanced materials, catalysis, electrochemical engineering, sustainability

Associate Professors

Peng Bai
PhD, Tsinghua University, China
Develop next-generation batteries; probe the in situ electrochemical dynamics of miniature electrodes down to nanoscales; capture the heterogeneous and stochastic nature of advanced electrodes; identify the theoretical pathways and boundaries for the rational design of materials, electrodes, and batteries through physics-based mathematical modeling and simulation

Marcus Foston
Director of Diversity Initiatives
PhD, Georgia Institute of Technology
Utilization of biomass resources for fuel and chemical production, renewable synthetic polymers, development of advanced aerosol instruments

Kimberly M. Parker
PhD, Stanford University
Investigation of environmental organic chemistry in natural and engineered systems

Elijah Thimsen
PhD, Washington University in St. Louis
Gas-phase synthesis of inorganic nanomaterials for energy applications, novel plasma synthesis approaches

Assistant Professors

Christopher Cooper
PhD, Stanford University
Responsive, soft materials for applications in energy storage, environmental sustainability and human health

Jenna Ditto
PhD, Yale University
Chemical composition of indoor and outdoor air, indoor air chemistry, health impacts of air pollution exposure

Fangqiong Ling
PhD, University of Illinois at Urbana-Champaign
Microbial ecosystem analysis and modelling, process modelling, machine learning, NextGen sequencing bioinformatics, environmental microbiology, bioreactor design

Lu Xu
PhD, Georgia Institute of Technology
Air quality, climate change, atmospheric chemistry

Research Assistant Professor & Senior Lecturer

Benjamin Kumfer
DSc, Washington University
Advanced coal technologies, biomass combustion, aerosol processes and health effects of combustion-generated particles

Teaching Professor

Janie Brennan
Associate Chair for Undergraduate Education
PhD, Purdue University
Chemical engineering education, biomaterials

Senior Lecturers

Raymond Ehrhard
BS, Missouri University of Science and Technology
Water and wastewater treatment technologies, process energy management

Trent Silbaugh
PhD, University of Washington
Chemical engineering education, catalysis, carbon capture and conversion

Kristen Wyckoff
PhD, University of Tennessee
Environmental engineering education, stormwater runoff, environmental microbiology

Lecturer

Kurt Russell
PhD, Purdue University
Chemical engineering education, catalysis

Affiliated Faculty

Gary Moore
Senior Lecturer for the Joint Engineering Program
MS, Missouri University of Science and Technology
Environmental management

Adjunct Faculty

Grigoriy Yablonsky
PhD, Boreskov Institute of Catalysis
Chemical reaction engineering and heterogeneous catalysis

Emeritus Professor

Milorad P. Dudukovic
Laura and William Jens Emeritus Professor
PhD, Illinois Institute of Technology
Chemical reaction engineering, multiphase reactors, visualization of multiphase flows, tracer methods, environmentally benign processing

Majors

Please visit the following pages for information about the energy, environmental and chemical engineering majors:

- Bachelor of Science in Chemical Engineering (p. 1140)
- Bachelor of Science in Environmental Engineering (p. 1141)
- Bachelor of Science in Applied Science (Chemical Engineering) (p. 1142)
- Double Majors and the Pre-Medical Program (p. 1142)

Minors

Please visit the following pages for information about the energy, environmental and chemical engineering minors:

- Minor in Energy Engineering (p. 1143)
- Minor in Environmental Engineering Science (p. 1144)
- Minor in Nanoscale Science & Engineering (p. 1144)

Courses

EECE 1000 Introduction to Energy, Environmental and Chemical Engineering
Key technical issues that face our society and some of the emerging technologies that hold promise for the future are examined and discussed. Relationship to chemical engineering principles is emphasized.
Credit 3 units.
Typical periods offered: Fall

EECE 1010 Topics in Energy, Environmental and Chemical Engineering
Key technical issues that face our society and some of the emerging technologies that hold promise for the future are examined and discussed. Emphasizes providing a broader context for content delivered in concurrent core chemical and environmental engineering courses.
Credit 1 unit.
Typical periods offered: Fall

EECE 1999 Independent Study
Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience.
Credit 3 units.
Typical periods offered: Fall, Spring

EECE 2000 Process Analysis and Thermodynamics
This course is an introduction to the use of mathematics and methods of engineering in the analysis of chemical and physical processes. It will address the use of balances (e.g., mass, energy, entropy) to describe processes with and without chemical reactions in both transient and steady-state conditions as well as classical thermodynamics focused on processes, first and second laws, and properties of pure substances.
Credit 4 units.

Typical periods offered: Fall

EECE 2020 Computational Modeling in Energy, Environmental and Chemical Engineering
Computational tools to solve engineering, design and scientific problems encountered in thermodynamics, transport phenomena, separation processes and reaction kinetics. Introduction to programming skills in MATLAB and use of various MATLAB toolboxes. Theory and application of numerical methods for solution of common problems, including methods for root-finding/optimization, curve fitting (regression, interpolation, and spline), integration, differentiation, and ordinary differential equations and boundary value problems. Illustrative application examples.
Credit 3 units.
Typical periods offered: Spring

EECE 2100 Introduction to Environmental Engineering
The objective of this course is to introduce students to the field of environmental engineering. The course will emphasize basic principles of mass and energy conservation which govern physical, chemical and biological processes. Applications include the estimation of contaminant concentrations and the design of environmental controls.
Credit 3 units.
Typical periods offered: Spring

EECE 2510 Thermodynamics II in EECE
Molecular motions, kinetic theory of gases, kinetic theory of dense phases, chemical kinetics.
Credit 3 units.
Typical periods offered: Spring

EECE 2999 Independent Study
Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience.
Credit 3 units.
Typical periods offered: Fall, Spring

EECE 3000 Transport Phenomena I: Basics and Fluid Mechanics
Engineering principles involved in the exchange of heat and matter in chemical processes. Laws governing the flow of liquids and gases in laboratory and plant equipment.
Credit 3 units.
Typical periods offered: Spring

EECE 3100 Water Resources Engineering
This course further develops student knowledge of water resources engineering specific to the movement of water through natural and built environments. Combines existing fluid mechanics knowledge with hydrology and hydrogeology to introduce students to the design and analysis of surface water, open channel flow, pipe flow, and groundwater systems. Students will have an opportunity to describe, model, and calculate surface water and stormwater runoff hydrology; design and analyze open channel flow; quantify flow in partially full pipes; predict and analyze groundwater flow conditions for confined and unconfined aquifers using hydrogeology; and calculate groundwater flow and well drawdown.
Credit 3 units.
Typical periods offered: Fall

EECE 3110 Green Engineering
Strategies and methods for waste minimization and pollutant emission reduction. Principles of green engineering. Environmental transport and fate modeling. Design of heat and mass exchange networks for energy and waste reduction.
Credit 3 units.
Typical periods offered: Fall

EECE 3120 Air Quality Engineering With Lab
Introduction to air quality and pollution control. Pollutant emissions, atmospheric chemistry, and fate. Air pollution meteorology and atmospheric dispersion. Application of chemistry, thermodynamics, and fluid mechanics in the selection and design of air pollution control equipment. Labs to measure air quality and demonstrate control principles.
Credit 4 units.
Typical periods offered: Fall

EECE 3130 Environmental Engineering Fate and Transport
The objective of this course is to introduce students to the fundamental processes that control contaminant fate and transport in the natural and built environment. The course will highlight mass transport and transformation in surface water, soil and groundwater, and atmosphere. Students will be introduced to environmental transport modeling software to solve applied problems.
Credit 3 units.
Typical periods offered: Spring

EECE 3510 Transport Phenomena II: Energy and Mass Transfer
This course covers introductory treatment of the principles of heat transfer by conduction, convection, and radiation; mathematical analysis of steady and unsteady conduction along with numerical methods; analytical and semi-empirical methods of forced and natural convection systems; boiling and condensation heat transfer; and principles of mass transfer (diffusion and convection) introduced by analogy to heat transfer.
Credit 4 units.
Typical periods offered: Fall

EECE 3520 Materials Science
Introduces the chemistry and physics of engineering materials. Emphasis on atomic and molecular interpretation of physical and chemical properties, the relationships between physical and chemical properties, and performance of an engineering material.
Credit 3 units.
Typical periods offered: Fall

EECE 3530 Chemical Reaction Engineering
Introduction to chemical reaction engineering principles and applications in process and product development. Evaluation of reaction rates from mechanisms and experimental data, quantification of pertinent transport effects and application to reactor and product design.
Credit 3 units.
Typical periods offered: Fall

EECE 3540 Mass Transfer Operations
Stagewise and continuous mass transfer operations, including distillation, gas absorption, humidification, leaching, liquid extraction, and membrane separations.
Credit 3 units.
Typical periods offered: Spring

EECE 3550 Biology in EECE
The course provides an introduction to molecular biology, biochemistry, microbiology, and biotechnology. The course focuses on an engineering approach to microbiology and molecular biology. Topics include basics of molecular biology, mathematical analysis of biological systems, genetic engineering, and biotechnological applications.
Credit 3 units.
Typical periods offered: Spring

EECE 3999 Independent Study
Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

EECE 4000 Process Design, Economics and Simulation
This is a lecture and computer lab-based course covering engineering science and design, fundamentals of process and product development, process safety and sustainability, computational techniques, and economic principles used for the design of chemical, biological, and environmental processes and procedures. A guided design project is included.
Credit 2 units.
Typical periods offered: Fall

EECE 4001 Bridging Academia and Industry in Chemical & Environmental Engineering
This course bridges the gap between academic learning and professional practice in chemical and environmental engineering by connecting students with industry professionals. Through weekly meetings, students will gain insights into these fields, understand current trends, and build valuable networks. A comprehensive career development component is included to assist students in effectively searching for jobs and positioning themselves for industry roles.
Credit 1 unit.
Typical periods offered: Fall, Spring

EECE 4010 Advanced Energy Lab
Laboratory experiments to illustrate the application of engineering fundamentals to the study of advanced energy generation, storage, distribution, and delivery systems. Modules include both lecture and laboratory components and explore topics such as fossil fuel combustion, solar PV and solar thermal systems, wind-derived energy, biofuels production, electrochemical energy storage. Extensive metering of energy use in Brauer Hall will be used to study systems performance including energy efficiency.
Credit 3 units.
Typical periods offered: Fall

EECE 4020 Aerosol Science and Engineering Summer School
Aerosol science and engineering encompasses the basic principles that describe the formation, growth, and evolution of a system of particles suspended in a gaseous medium, and the measurement, characterization, and modeling of their properties. Advances in this cross-disciplinary area of research are pivotal for improving our understanding and estimation of climate change; ensuring air quality protection; assessment of health impacts; and enablement of advanced material synthesis. This course will review the current knowledge on measurement, modeling, and characterization techniques for aerosols. It is team-taught and will involve participation by leading scholars across the country with expertise in aerosol science and engineering. This is a broad, introductory course for beginning graduate students and junior and senior undergraduates.
Credit 3 units.
Typical periods offered: Summer

EECE 4030 Instrumental Analysis
This course bridges the gap between academic learning and professional practice in chemical and environmental engineering by connecting students with industry professionals. Through weekly meetings, students will gain insights into these fields, understand current trends, and build valuable networks. A comprehensive career development component is included to assist students in effectively searching for jobs and positioning themselves for industry roles.
Credit 1 unit.
Typical periods offered: Spring

EECE 4060 Energy Conversion and Storage
Renewable electricity from solar and wind will be the primary energy source for our future distributed energy and mobility system. At the foundation of that energy system are the electrochemical energy devices including fuel cells, electrolyzers and batteries. The objectives of this course are to introduce basic concepts and principles of electrochemistry as well as their potential applications. The chemical engineering fundamentals (e.g., mass & energy balances, thermodynamics, and mass & heat transport) will be applied to describe in mathematical terms the catalytic and mass transport processes.
Credit 3 units.
Typical periods offered: Fall

EECE 4061 Electrochemical Processes
Renewable electricity from solar and wind will be the primary energy source for our future distributed energy and mobility system. At the foundation of that energy system are the electrochemical energy devices including fuel cells, electrolyzers and batteries. The objectives of this course are to introduce basic concepts and principles of electrochemistry as well as their potential applications. The chemical engineering fundamentals from previous EECE courses (e.g., mass & energy balances, thermodynamics, and mass & heat transport) will be applied to describe in mathematical terms the catalytic and mass transport processes. A particular emphasis of the course is electrocatalysis at the electrochemical interfaces.
Credit 3 units.
Typical periods offered: Fall

EECE 4070 Industrial Process Safety
This course covers the analysis and management of fire and explosion hazards; control of human exposure to toxic materials; codes, standards, and regulations; transportation and disposal of noxious substances; analysis of drift from clouds, flares, and stacks; venting of pressure vessels; hazard evaluation and safety review of processes; and emergency plans for accidents and disasters.
Credit 3 units.
Typical periods offered: Spring

EECE 4080 Introduction Into Zymurgy
Students will be introduced to the engineering principles and key chemical and physical processes of beer brewing. This course combines lectures with hands-on brewing, laboratory testing, and tours of breweries across multiple scales. Topics include fermentation, mash kinetics, water chemistry, heat transfer, and measurement of off-

flavor compounds. By the conclusion of the course, students will be able to independently design and craft their own beers. Students are expected to have completed prior coursework in chemistry and heat/mass transfer. Students will be required to schedule brewing times with instructors which may fall outside of listed lab hours. Must be 21 or older or receive instructor approval. Due to space limitations, the following application must completed to be considered for enrollment: https://wustl.az1.qualtrics.com/jfe/form/SV_0rEzAlBjOGYGVX8
Credit 3 units.
Typical periods offered: Spring

EECE 4090 Entrepreneurial Engineering
Quality education with a background in engineering and science can lead engineers to create innovations with high potential value. Nevertheless, unlocking value from innovation is not an entirely intuitive enterprise, and success is not guaranteed. This course is created to better prepare students for a future of innovation and entrepreneurial success. The course outline comprises three phases of entrepreneurship: the creative phase, the critical phase, and the crusader phase. It endeavors to provide students with useful skills and practical experiences that are relevant to each phase. Each week will include a brief presentation to set the direction, followed by short discussions of the assigned case studies and a review of fundamental principles from the core text. Student teams will regularly present work to the group, create success metrics, and chart progress. The Creative Phase: The class will work in small groups to create a new business concept. Students will learn brainstorming techniques, leadership, teamwork, and business model innovation. With core values set as a foundation, teams will present their proposed business models and rational basis for income forecasting. The Critical Phase: The class will identify and challenge assumptions to assess commercial viability. Students will find third-party market research to size up the opportunity and gather real customer feedback to refine their strategy. Skills gaps will be appreciated and negotiated solutions sought. Financial and growth metrics will be established to measure success, and threats will be faced. Students will present their SWOT analysis (strengths, weaknesses, opportunities, and threats) and link this to their revised strategy (business model). The Crusader Phase: Students will learn what is acceptable risk and develop a growth mindset (in contrast with fixed mindset), gain power from emotional intelligence, deal with failures (decide to pivot or punt), and learn the difference between ideation and implementation. Students will make progress and get the word out, and they will prepare a short proposal for grant funding or investment with a suitable income stream. By the end of the semester, students will know how to create business model, how to work with teams, how to assess commercial viability, how to establish a rationale for financial forecast, how to assess skills and resource gaps, how to negotiate to fill in gaps, and how to write high-level proposals. Students will demonstrate their knowledge through written submissions and oral presentations.
Credit 3 units.

EECE 4100 Environmental Engineering Laboratory
This course includes laboratory experiments to illustrate the application of engineering fundamentals to environmental systems. Applications of experimental design and data analysis principles are also included, and relevant analytical instrumentation and laboratory techniques are introduced. Laboratory work supported by theoretical analysis and modeling is performed as appropriate.
Credit 3 units.
Typical periods offered: Spring

EECE 4110 Environmental Biotechnology
This course aims to provide students with a background in current environmental biotechnology and to stimulate ideas about future potential new technologies. Students will gain qualitative and quantitative skills related to bioreactor designs in environmental applications (e.g., activated sludge, anaerobic digester, membrane bioreactors). Special focus will be placed on the application of mathematical models that are currently widely used in wastewater engineering, such as the International Water Association models. Hands-on experience with biological water treatment process modeling will be provided. Finally, students will be encouraged to explore links between environmental biotechnologies and a one health approach to public health.
Credit 3 units.
Typical periods offered: Fall

EECE 4510 Chemical Process Dynamics and Control
A state-of-the-art industrial virtual plant is used for the development of dynamic simulations, selection of instrumentation, statistical analysis of variability, and implementation of process control to improve process operation and efficiency.
Credit 3 units.
Typical periods offered: Fall

EECE 4511 Digital Process Control Laboratory
Applications of digital control principles to laboratory experiments supported by a networked distributed control system. Lecture material reviews background of real-time programming, data acquisition, process dynamics, and process control. Exercises in data acquisition and feedback control design using simple and advanced control strategies. Experiments in flow, liquid level, temperature, and pressure control. Term project.
Credit 3 units.
Typical periods offered: Spring

EECE 4520 Unit Operations Laboratory
This course involves laboratory projects focused on the application of chemical engineering principles (e.g., transport, thermodynamics, separations). Student teams design multi-week experiments using unit operations equipment to solve realistic engineering problems, including the analysis of safety and instrumentation. The course has one laboratory period each week, with supplemental lecture sessions. Emphasis is on independent learning, teamwork, and technical communication skills.
Credit 4 units.
Typical periods offered: Fall

EECE 4971 Environmental Engineering Capstone
Methodology for formulating and solving open-ended design problems. The methodology is illustrated through a series of team projects drawn from multiple areas of environmental engineering practice. Topics addressed include the design process, cost estimation, consideration of codes and regulations, sustainability, and reliability. The course also provides content on professional practice, ethics, and professional licensure.
Credit 3 units.
Typical periods offered: Spring

EECE 4975 ChE Capstone
Application of engineering science and design, fundamentals of process and product development, computational techniques and economic principles to design of chemical and biological processes and procedures. A design project and/or an AIChE national design contest is included.

Credit 3 units.
Typical periods offered: Spring

EECE 4979 Senior Thesis
Research project to be selected by the student in senior standing with the permission and recommendation of a faculty supervisor and the approval of the department chair. At conclusion of project, student prepares a report in the form of a senior thesis.
Credit 6 units.
Typical periods offered: Fall, Spring

EECE 4980 ChE Honors Design Project for Aiche Student Contest Problem
Application of engineering science and design, fundamentals of process and product development, computational techniques and economic principles to design of chemical and biological processes and procedures in solving the AIChE national student contest problem. Up to two single and up to two group (2-3 per group) solutions may be chosen for national competition.
Credit 1 unit.
Typical periods offered: Spring

EECE 4993 International Experience in EECE
This course will provide undergraduate students with an international experience related to energy, environmental and/or chemical engineering. The country visited will vary from year to year with one or more EECE faculty members developing the program in collaboration with McDonnell Global Energy and Environment Partnership (MAGEEP) universities. Example activities include conducting field or laboratory research, attending short courses taught by MAGEEP university faculty members, and visiting attractions relevant to the course focus (e.g., industrial facilities). Students will also gain an understanding of the local culture and history of the country visited. Course content will include a seminar series in the spring semester prior to the international experience, a two-to-three week visit to the location of study, and a follow-up student project and presentations during the fall semester which draws upon the experience. Students will enroll in EECE 411 for the fall semester following the trip.
Credit 3 units.
Typical periods offered: Fall

EECE 4999 Independent Study
Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience.
Credit 6 units.
Typical periods offered: Fall, Spring, Summer

Bachelor of Science in Chemical Engineering (EECE)

The Bachelor of Science in Chemical Engineering (BSChE) degree program is designed to provide students with comprehensive training in chemical engineering fundamentals. This degree program is accredited by the Engineering Accreditation Commission of ABET under the General Criteria and the Chemical Engineering Program Criteria.

The BSChE degree requires the satisfactory completion of a minimum of 126 units as indicated in the BSChE Requirements table below. Of the courses listed in that table, the humanities and social sciences courses (except ENGR 450X courses) may be taken Pass/No Pass.

The program of study consists of 25 units of physical and biological sciences (i.e., biology, chemistry and physics); 24 units of mathematics and engineering computing; 38 units of core chemical engineering courses; 21 units of humanities, social sciences and technical writing; and 18 units of chemical engineering electives. The chemical engineering electives permit students to tailor their studies toward specific goals such as obtaining more depth in a chemical engineering subdiscipline (e.g., materials) or increasing breadth by choosing courses from different subdisciplines. Some of these 18 units may be taken in other engineering departments or in the natural sciences or physical sciences. Students, in collaboration with their advisors, design a course of study (subject to certain requirements) for the chemical engineering electives. Consult the EECE department website for more details, including the requirements that must be satisfied by these chemical engineering electives.

BSChE Requirements

Total Units Required: 126

Biological Science	Units
Biology in EECE (EECE 3550) or Principles of Biology I (BIOL 2960)	3 or 4
Unit Subtotal	**3 or 4**

Mathematics & Computing	Units
Calculus II, III (MATH 1520, MATH 2130)	6
Differential Equations (MATH 2500)	3
Engineering Mathematics A, B (ENGR 3180, ENGR 3190)	6
Introduction to Engineering Computing (ENGR 1201)	3
Engineering Statistics with Probability (ENGR 3280) or Probability and Statistics for Engineering (ESE 3260)	3
Computational Modeling in Energy, Environmental and Chemical Engineering (EECE 2020)	3
Unit Subtotal	**24**

Chemical Engineering Core	Units
Introduction to Energy, Environmental and Chemical Engineering (EECE 1000)	3
Process Analysis and Thermodynamics (EECE 2000)	4
Thermodynamics II in EECE (EECE 2510)	3
Transport Phenomena I: Basics and Fluid Mechanics (EECE 3000)	3
Transport Phenomena II: Energy and Mass Transfer (EECE 3510)	4
Mass Transfer Operations (EECE 3540)	3
Materials Science (EECE 3520)	3
Chemical Reaction Engineering (EECE 3530)	3
Chemical Process Dynamics and Control (EECE 4510)	3

Unit Operations Laboratory (EECE 4520)	4
Process Design, Economics and Simulation (EECE 4000)	2
ChE Capstone (EECE 4975)	3
Unit Subtotal	**38**

Other	Units
Chemical Engineering electives (some of these courses can be taken outside the EECE department)	18
Engineering Ethics and Sustainability (ENGR 4501)	1
Engineering Leadership and Team Building (ENGR 4502)	1
Conflict Management and Negotiation (ENGR 4503)	1
Humanities and social sciences electives	15
Technical Writing (ENGR 3100)	3
Unit Subtotal	**39**

Program Educational Objective

The Program Educational Objective for the BSChE degree program is that, within a few years of graduation, graduates will do the following:

1. Thrive in their professional practice or graduate education, leveraging their knowledge and skills to address complex challenges in chemical engineering or their chosen field.
2. Foster a lifelong commitment to learning, growth, and professional development, seeking opportunities to advance their expertise and contribute to their chemical engineering practice or chosen field.
3. Be dedicated to positively advancing society by promoting equity, diversity, sustainability, and ethical practices in their professional endeavors.

Bachelor of Science in Environmental Engineering (EECE)

The Bachelor of Science in Environmental Engineering (BSEnvE) degree program is designed to provide students with comprehensive training in environmental engineering fundamentals. The program is accredited by the Engineering Accreditation Commission of ABET under the General Criteria and the Environmental Engineering Program Criteria. The EnvE degree requires satisfactory completion of a minimum of 126 units as indicated in the BSEnvE Requirements table below. Of the courses listed in that table, the humanities and social sciences courses (except Engr 450X courses) may be taken Pass/No Pass.

The program of study consists of 26 units of physical and biological sciences (i.e., biology, chemistry, and physics); 21 units of mathematics and engineering computing; 43 units of core environmental engineering courses; 21 units of humanities, social sciences and technical writing; and 15 units of environmental engineering and science electives. The environmental engineering electives permit students to tailor their studies toward specific goals. Some of these 15 units may be taken in other engineering departments, and one course is explicitly required to be chosen from a set of natural science options. Students, in collaboration with their advisors, design a course of study (subject to certain requirements) for the environmental engineering and science electives. Consult the EECE department website for more details, including the requirements that must be satisfied by these environmental engineering and science electives.

BSEnvE Requirements

Total Units Required: 126

Physical Sciences	Units
General Chemistry (CHEM 1701 or CHEM 1601, CHEM 1702 or CHEM 1602) (CHEM 1701 and CHEM 1702 Recommended)	6
General Chemistry Laboratory (CHEM 1751, CHEM 1752)	4
General Physics (PHYSICS 1740 or PHYSICS 1760, PHYSICS 1742 or PHYSICS 1680)	6 or 8
Physics Laboratory (PHYSICS 1741, PHYSICS 1743)	2
Organic Chemistry I (CHEM 2561)	4
Unit Subtotal	**22**

Biological Science	Units
Principles of Biology I (BIOL 2960)	4
Unit Subtotal	**4**

Mathematics & Computing	Units
Calculus II, III (MATH 1520, MATH 2130)	6
Differential Equations (MATH 2500)	3
Engineering Mathematics A (ENGR 3180)	3
Introduction to Engineering Computing (ENGR 1201)	3
Engineering Statistics with Probability (ENGR 3280) or Probability and Statistics for Engineering (ESE 3260)	3
Computational Modeling in Energy, Environmental and Chemical Engineering (EECE 2020)	3
Unit Subtotal	**21**

Environmental Engineering Core	Units
Introduction to Energy, Environmental and Chemical Engineering (EECE 1000)	3
Process Analysis and Thermodynamics (EECE 2000)	4
Introduction to Environmental Engineering (EECE 2100)	3
Transport Phenomena I: Basics and Fluid Mechanics (EECE 3000)	3
Water Resources Engineering (EECE 3100)	3
Environmental Engineering Fate and Transport (EECE 3130)	3
Green Engineering (EECE 3110)	3
Air Quality Engineering with Lab (EECE 3120)	4
Environmental Biotechnology (EECE 4110)	3
Environmental Engineering Laboratory (EECE 4100)	3
Environmental Chemistry Selection (EECE 5050 or EECE 5120)	3

Physical and Chemical Processes for Water Treatment (EECE 5130)	3
Process Design, Economics and Simulation (EECE 4000)	2
Environmental Engineering Capstone (EECE 4971)	3
Unit Subtotal	**43**

Other	Units
Environmental Engineering electives (some of these courses can be taken outside the EECE department)	12
Natural science elective	3
Engineering Ethics and Sustainability (ENGR 4501)	1
Engineering Leadership and Team Building (ENGR 4502)	1
Conflict Management and Negotiation (ENGR 4503)	1
Environmental humanities or social sciences elective	3
Other humanities and social sciences electives	12
Technical Writing (ENGR 3100)	3
Unit Subtotal	**36**

Program Educational Objective

The Program Educational Objective for the BSEnvE degree program is that, within a few years of graduation, graduates will do the following:

1. Thrive in their professional practice or graduate education, leveraging their knowledge and skills to address complex challenges in environmental engineering or their chosen field.
2. Foster a lifelong commitment to learning, growth, and professional development, seeking opportunities to advance their expertise and contribute to their environmental engineering practice or chosen field.
3. Be dedicated to positively advancing society by promoting equity, diversity, sustainability, and ethical practices in their professional endeavors.

Bachelor of Science in Applied Science (Chemical Engineering) (EECE)

This degree serves students who wish to be exposed to key chemical engineering principles yet seek a more flexible curriculum. In addition to the general requirements for a McKelvey Applied Science Degree (p. 1161), the Bachelor of Science in Applied Science (Chemical Engineering) requires 25 units of core courses as well as at least 8 units of upper-level chemical engineering courses from the list of options below. The core courses provide a foundation in both chemical engineering and key technical skills, and the electives allow the student to explore chemical engineering areas of interest.

Core Courses

All core courses in this list must be completed for a letter grade.

Code	Title	Units
ENGR 1201	Introduction to Engineering Computing	3
ENGR 3100	Technical Writing	3
ENGR 3280 Engineering Statistics with Probability **or** ESE 3260 Probability and Statistics for Engineering		3
EECE 2000	Process Analysis and Thermodynamics	4
EECE 2020	Computational Modeling in Energy, Environmental and Chemical Engineering	3
EECE 2510	Thermodynamics II in EECE	3
EECE 3000	Transport Phenomena I: Basics and Fluid Mechanics	3
EECE 3540	Mass Transfer Operations	3

Chemical Engineering Electives

At least 8 units of courses from this list must be completed for a letter grade.

Code	Title	Units
EECE 3510	Transport Phenomena II: Energy and Mass Transfer	4
EECE 3520	Materials Science	3
EECE 3530	Chemical Reaction Engineering	3
EECE 4000	Process Design, Economics and Simulation	2
EECE 4510	Chemical Process Dynamics and Control	3
EECE 4511	Digital Process Control Laboratory	3
EECE 4520	Unit Operations Laboratory	4
EECE 4975	ChE Capstone	3

Double Majors and the Pre-Medical Program (EECE)

Double Majoring in the EECE Department

The Applied Science/Chemical Engineering (BSAS-ChE) degree cannot be combined as a double major with either environmental engineering (BSEnvE) or chemical engineering (BSChE). Students may, in principle, double major in both environmental engineering (BSEnvE) and chemical engineering (BSChE), but this is not recommended for logistical and course load reasons. Specifically, in the third and fourth years, each of the two majors will have multiple required courses in the same semester, possibly at conflicting times. For example, both Capstone courses would be required.

For students wishing to combine chemical and environmental interests, it is recommended that they major in chemical engineering (BSChE) and minor in environmental engineering science.

Double Majors & Premedicine

Some students may be able to take more than the 126-unit minimum during a four-year program, especially if they have Advanced Placement units. This permits the choice of additional free electives from such areas as biology, computer science, humanities, social sciences or other engineering courses. It also provides an opportunity to pursue a double major. The rules for combining majors in engineering and multiple majors involving other university divisions are described in the Combined Majors and/or Multiple Degrees (p. 1071) section of the McKelvey School of Engineering *Bulletin.*

Traditionally, the department's undergraduate degrees have been popular with students interested in medicine because the curriculum automatically satisfies many of the premedical requirements. Many of the additional needed courses can be taken as electives.

Minor in Energy Engineering (EECE)

Objective: The goal of this minor is to provide students with a course work experience that will enhance their background, knowledge and skills in the topical area of energy engineering. The minor encompasses courses in several fields of science and engineering, including the Department of Energy, Environmental & Chemical Engineering; the Department of Electrical & Systems Engineering; and the Department of Mechanical Engineering & Materials Science.

A minor in energy engineering requires the completion of at least 18 units selected from the following lists. It is open to any undergraduate student pursuing an engineering major, a major in the sciences (biology, chemistry, physics) in Arts & Sciences, or the environmental studies major.

Interested departments should expose students to energy and related concepts in their introductory courses.

Basic and Applied Sciences (fundamental content) (two courses):

Code	Title	Units
EECE 2000 Process Analysis and Thermodynamics **or** MEMS 3400 Thermodynamics		4 or 3
EECE 3000 Transport Phenomena I: Basics and Fluid Mechanics **or** MEMS 3410 Fluid Mechanics		3
EECE 3510 Transport Phenomena II: Energy and Mass Transfer **or** MEMS 3420 Heat Transfer		4 or 3
ESE 3320	Power, Energy, and Polyphase Circuits	3

Social Science/Policy/Economics Elective (students choose one course):

Code	Title	Units
ECON 3350	Environmental Policy	3
ENST 3330	Multiparty Environmental Decision Making	3
ENST 3340	Writing Skills for Environmental Professionals	3
ENST 3400	Energy Governance in Israel and the Middle East	3
ENST 3530	Sustainable Cities	3
ENST 4810	Reset - Renewable Energy Policy, Engineering and Business	3
POLSCI 3328	Energy Politics	3

Electives:

Students choose three courses. One of the courses is required to be chosen from outside of the student's major degree department. A partner department may approve the use of a course listed under basic and applied sciences as an elective.

Code	Title	Units
EECE 3110	Green Engineering	3
EECE 4060	Energy Conversion and Storage	3
EECE 4061	Electrochemical Processes	3
EECE 4993	International Experience in EECE	3
EECE 5080	Combustion Phenomena	3
EECE 5180	Biomass Energy Systems and Engineering	3
EECE 5200	Electrochemical Engineering	3
EEPS 3150	Environmental Impacts of Human Energy Use	3
ESE 4340	Solid-State Power Circuits and Applications	3
ESE 4350	Electrical Energy Laboratory	3
MEMS 3430	Design of Thermal Systems	3
MEMS 5422	Solar Thermal Energy Systems	3
MEMS 5423	Sustainable Environmental Building Systems	3
MEMS 5424	Thermo-Fluid Modeling of Renewable Energy	3
MEMS 5427	Fundamentals of Fuel Cells	3
MEMS 5705	Wind Energy Systems	3

Committee to Oversee Energy Engineering Minor

Peng Bai (EECE, Coordinator); Bruno Sinopoli (ESE); Xianglin Li (MEMS)

The committee ensures that any course added to the above lists contains a significant amount of energy topics and that the entire program is cohesive.

Minor in Environmental Engineering Science (EECE)

The EECE department sponsors an undergraduate minor in environmental engineering science. This 21-unit program prepares the student to seek an entry-level position as an environmental engineer, scientist or analyst. The minor also provides a solid foundation for undertaking graduate study in environmental engineering. Visit the EECE department website for more information.

Total Units Required: 21

Required Courses

Select from the following menus:

Introduction* (3 units):

Code	Title	Units
EECE 1000	Introduction to Energy, Environmental and Chemical Engineering (fall)	3
EECE 2100	Introduction to Environmental Engineering (spring)	3

Environmental Chemistry (3 units):**

Code	Title	Units
EECE 5050	Aquatic Chemistry (fall)	3
EECE 5120	Environmental Organic Chemistry (fall)	3

Environmental Engineering Electives (9 units):**

Code	Title	Units
EECE 3100	Water Resources Engineering (fall)	3
EECE 3110	Green Engineering (fall)	3
EECE 3120	Air Quality Engineering with Lab (fall)	4
EECE 3130	Environmental Engineering Fate and Transport (spring)	3
EECE 4100	Environmental Engineering Laboratory (spring)	3
EECE 4110	Environmental Biotechnology (fall)	3
EECE 5040	Aerosol Science and Technology (fall)	3
EECE 5090	Atmospheric Science and Climate (spring)	3
EECE 5130	Physical and Chemical Processes for Water Treatment (spring)	3

Additional eligible courses (new courses, special offerings) will be posted on the EECE website as they become available.

Natural Science (3 units):

Code	Title	Units
BIOL 3810	Introduction to Ecology (spring)	3
EEPS 3230	Biogeochemistry (spring)	3
EEPS 3863	The Earth's Climate System	3
EEPS 4134	Introduction to Soil Science	3
EEPS 4284	Hydrology	3
EEPS 4424	Aqueous Geochemistry	3

Environmental Policy and Social Science (3 units):

Code	Title	Units
ECON 3350	Environmental Policy	3
ENST 3330	Multiparty Environmental Decision Making	3
ENST 3520	Ecological Economics	3
ENST 3530	Sustainable Cities	3
ENST 3540	Environmental Justice	3
ENST 4510	Intro to Environmental Law	3
ENST 4820	International Climate Negotiation Seminar	4
ENST 5830	Interdisciplinary Environmental Clinic	var.; max 3
POLSCI 3328	Energy Politics	3

* First-year students potentially interested in majoring in chemical engineering should take EECE 1000; all other students working toward the minor in environmental engineering science should take EECE 2100.

** Students taking both environmental chemistry courses can count one of them toward the environmental engineering electives.

Committee to Oversee Environmental Engineering Science Minor

Daniel Giammar (EECE, Coordinator); Kristen Wyckoff (EECE)

Minor in Nanoscale Science & Engineering (EECE)

Nanotechnology deals with materials, structures and devices with dimensions that are in the 1- to 100-nm length scale. These entities have properties (physical, chemical and biological) that are very different from their bulk counterparts, and they can be tuned to obtain novel and desired functionalities. The goal of this minor is to enhance the student's background, knowledge and skills in the topical area of nanotechnology. The minor includes courses in several fields of science and engineering; it encompasses all of the departments in the McKelvey School of Engineering as well as several departments in Arts & Sciences. It is open to undergraduate students pursuing an engineering degree or a related Arts & Sciences major (e.g., chemistry, physics, biology, environmental studies, pre-med).

The minor in nanoscale science and engineering involves the following components. Starting with courses covering the fundamentals, students gain knowledge in synthesis and applications as well as characterization, structure and modeling. Two additional requirements are a cleanroom lab class (MEMS 5611 or MEMS 5801) and the completion of a faculty-supervised independent study project over the course of at least two semesters. The mix of courses should provide the student with a significant background in nanotechnology, and it should promote independent thinking through the student's work on a research or educational project.

Units required: 18

Required courses: Select from the following menus:

Fundamentals (choose one course):

Code	Title	Units
CHEM 4010	Physical Chemistry I	3
CHEM 4620	Solid-State and Materials Chemistry	3
CHEM 4810	General Biochemistry I	3
EECE 3520	Materials Science	3
MEMS 2610	Materials Science	3
MEMS 5618	Electronic Behavior of Materials	3
PHYSICS 2170	Introduction to Quantum Physics	3
PHYSICS 3352	Physics of Biomolecules	3
PHYSICS 4072	Solid State Physics	3

Synthesis and Applications (choose one course):

Code	Title	Units
EECE 5040	Aerosol Science and Technology	3
EECE 5140	Environmental Nanochemistry	3
ESE 4360	Semiconductor Devices	3
ESE 4380	Applied Optics	3
ESE 5320	Introduction to Nano-Photonic Devices	3
MEMS 5606	Soft Nanomaterials	3
MEMS 5611	Principles and Methods of Micro and Nanofabrication	3
MEMS 5803	Nanotechnology Concepts and Applications	3

Characterization, Structure and Modeling (choose one course):

Code	Title	Units
CHEM 5014	Physical Properties of Quantum	3
CHEM 5843	Mass Spectrometry	3
EECE 5100	Measurement Techniques for Particle Characterization	3
MEMS 5602	Non-Metallics	3
MEMS 5603	Materials Characterization Techniques I	3
MEMS 5604	Materials Characterization Techniques II	3
MEMS 5612	Atomistic Modeling of Materials	3

Cleanroom Laboratory/Theory Class (choose one course):

Code	Title	Units
MEMS 5611	Principles and Methods of Micro and Nanofabrication	3
MEMS 5801	Micro-Electro-Mechanical Systems I	3

Independent Study Project (required):

Students should sign up for at least **two semesters** of independent study and work on a project related to nanotechnology under the supervision of a faculty member. A list of projects with potential faculty mentors will be circulated during the spring semester each year. Before completing the independent study project, students must be registered for the nanoscale science and engineering minor program, and they must have completed at least two of the courses from the above categories. Students can also come up with their own ideas for projects, but these require approval from the Nanoscale Science and Engineering Minor Committee and a faculty mentor. All independent study projects should address one of the following two criteria:

- Connect material processing to structural features on the length scale of 1 to 100 nm
- Connect structural features on the 1- to- 100-nm length scale in a material to its physical or chemical properties

The courses listed above will count for elective credit for all Engineering majors; however, students should check with their major advisors to confirm this.

Committee to Oversee Nanoscale Science and Engineering Minor

Rohan Mishra (MEMS, Coordinator), Elijah Thimsen (EECE)

Visit the EECE website for more information.

Mechanical Engineering & Materials Science

About Mechanical Engineering & Materials Science

The Department of Mechanical Engineering & Materials Science (MEMS) offers the Bachelor of Science in Mechanical Engineering (BSME) and the Bachelor of Science in Applied Science (Mechanical Engineering). In addition, minors in aerospace engineering, energy engineering, environmental engineering science, materials science & engineering, nanoscale science & engineering, robotics, mechatronics, and mechanical engineering as well as in related scientific and engineering fields are available to students.

The MEMS curriculum emphasizes the core principles of mechanics (i.e., the study of forces, materials and motion) that underlie mechanical engineering. The common curriculum during the student's early academic development encourages breadth of understanding, interdisciplinary thinking and creativity. During their first, sophomore and early junior years, students are focused on learning fundamental concepts in statics, dynamics, fluid mechanics and thermodynamics. During the junior and senior years, students choose electives that

emphasize their specific interests and prepare them for a particular professional or academic career. The undergraduate curriculum for the BSME degree provides MEMS students with a strong base in fundamental mathematics, science and engineering. It exposes the students to diverse applications of mechanics and materials, and it provides them with the flexibility to explore creative ideas through undergraduate research and project-based courses.

Mechanical engineering is critical to a variety of important emerging technologies. Mechanical engineers design and develop artificial organs, prosthetic limbs, robotic devices, adaptive materials, efficient propulsion mechanisms, high-performance aerospace structures, and advanced renewable energy systems. The core concepts of mechanics, thermal systems and materials science are at the heart of these technologies.

Mission Statement

The MEMS faculty is committed to providing the best possible undergraduate mechanical engineering education possible. We strive to nurture the intellectual, professional and personal development of the students, to continually improve the curriculum, to be professionally current, and to maintain state-of-the-art facilities for teaching and learning.

We seek to prepare students for professional practice with a scientifically grounded foundation in the major topics of mechanical engineering: solid mechanics, mechanical design, dynamics and vibrations, systems control, fluid mechanics, thermal science and materials science.

Graduate Programs

The department offers programs for graduate study at both the master's and doctoral levels. All programs are designed to direct advanced study into an area of specialization and original research that includes recent scientific and technological advances.

A graduate degree can provide significant advantages and rewards to a mechanical engineer, including increased income and a wider range of career options. Graduate programs include professional, course-option master's degrees (MS and MEng) as well as research-based master's (MS) and doctoral (PhD) degrees. The undergraduate curriculum provides an excellent foundation for graduate study, and a careful selection of electives during the third and fourth years can facilitate the transition to graduate work. The master's degrees can be pursued on a part-time or full-time basis, whereas the PhD degrees are typically pursued by full-time students.

Faculty

Interim Chair

Spencer P. Lake
PhD, University of Pennsylvania
Soft-tissue biomechanics

Associate Chair

Emily J. Boyd
PhD, University of Texas at Austin
Thermofluids

Endowed Professors

Ramesh K. Agarwal
William Palm Professor of Engineering
PhD, Stanford University
Computational fluid dynamics, computational physics

Philip V. Bayly
The Lee Hunter Distinguished Professor of Mechanical Engineering
PhD, Duke University
Nonlinear dynamics, vibrations, biomechanics

Katharine M. Flores
Christopher I. Byrnes Professor of Engineering
PhD, Stanford University
Mechanical behavior of structural materials

Guy M. Genin
Harold & Kathleen Faught Professor of Mechanical Engineering
PhD, Harvard University
Solid mechanics, fracture mechanics

Jianjun Guan
Earl E. & Myrtle E. Walker Professor of Engineering
PhD, Zhejiang University
Biomimetic biomaterials synthesis, scaffold fabrication

Mark J. Jakiela
Lee Hunter Professor of Mechanical Design
PhD, University of Michigan
Mechanical design, design for manufacturing, optimization, evolutionary computation

David A. Peters
McDonnell Douglas Professor of Engineering
PhD, Stanford University
Aeroelasticity, vibrations, helicopter dynamics, aerodynamics

Srikanth Singamaneni
Lilyan and E. Lisle Hughes Professor of Mechanical Engineering
PhD, Georgia Institute of Technology
Microstructures of cross-linked polymers

Professors

James Friend
PhD, Missouri University of Science and Technology
Small-scale acoustic phenomena

Spencer P. Lake
PhD, University of Pennsylvania
Soft-tissue biomechanics

Amit Pathak
PhD, University of California, Santa Barbara
Cellular biomechanics

Jessica E. Wagenseil
DSc, Washington University
Arterial biomechanics

Associate Professors

Xianglin Li
PhD, University of Connecticut
Multiphase heat and mass transfer in energy systems; computational fluid dynamics

J. Mark Meacham
PhD, Georgia Institute of Technology
Micro-/nanotechnologies for thermal systems and the life sciences

Rohan Mishra
PhD, The Ohio State University
Computational materials science

Sara Roccabianca
PhD, University of Trento
Biomechanics of the urinary tract and cardiovascular systems

Patricia B. Weisensee
PhD, University of Illinois at Urbana-Champaign
Thermal fluids

Assistant Professors

Sang-Hoon Bae
PhD, University of California, Los Angeles
Materials growth, optoelectronics, renewable energy

Matthew R. Bersi
PhD, Yale University
Biomedical engineering

Christopher Cooper
PhD, Stanford University
Responsive, soft materials for application in energy storage

Fanwei Kong
PhD, University of California, Berkeley
Develop machine learning and computational methods

Francisco Lagunas Vargas
PhD, University of Illinois Chicago
Developing structure-property relationships in functional materials

Professors of the Practice

Swami Karunamoorthy
DSc, Washington University
Helicopter dynamics, engineering education

Ed Whalen
PhD, University of Illinois Urbana-Champaign
Aerospace engineering

Louis G. Woodhams
BS, University of Missouri–St. Louis
Computational biomechanics

Teaching Professors

Emily J. Boyd
PhD, University of Texas at Austin
Thermofluids

Ruth J. Okamoto
DSc, Washington University
Biomechanics, solid mechanics

Research Professor

Anders E. Carlsson
PhD, Harvard University
Biophysical Modeling, Mechanobiology

Joint Faculty

Richard L. Axelbaum (Energy, Environmental & Chemical Engineering)
Stifel & Quinette Jens Professor of Environmental Engineering Science
PhD, University of California, Davis
Combustion, nanomaterials

Christopher Cooper (Energy, Environmental & Chemical Engineering)
PhD, Stanford University
Responsive, soft materials for applications in energy storage, environmental sustainability and human health

Elliot L. Elson (Biochemistry & Molecular Biophysics)
Professor Emeritus of Biochemistry & Molecular Biophysics
PhD, Stanford University
Biochemistry, molecular biophysics

Michael D. Harris (Physical Therapy, Orthopaedic Surgery, and Mechanical Engineering & Materials Science)
PhD, University of Utah
Whole body and joint-level orthopaedic biomechanics

Kenneth F. Kelton (Physics)
Arthur Holly Compton Professor of Arts & Sciences
PhD, Harvard University
Study and production of titanium-based quasicrystals and related phases

Eric C. Leuthardt (Neurological Surgery and Biomedical Engineering)
MD, University of Pennsylvania School of Medicine
Neurological surgery

Lori Setton (Biomedical Engineering)
Lucy and Stanley Lopata Distinguished Professor of Biomedical Engineering
PhD, Columbia University
Biomechanics for local drug delivery, tissue regeneration specific to the knee joints and spine

Matthew J. Silva (Orthopaedic Surgery)
Julia and Walter R. Peterson Orthopaedic Research Professor
PhD, Massachusetts Institute of Technology
Biomechanics of age-related fractures and osteoporosis

Simon Tang (Orthopaedic Surgery and Biomedical Engineering)
PhD, Rensselaer Polytechnic Institute
Biological mechanisms

Senior Professors

Phillip L. Gould
PhD, Northwestern University
Structural analysis and design, shell analysis and design, biomechanical engineering

Kenneth L. Jerina
DSc, Washington University
Materials, design, solid mechanics, fatigue, fracture

Shankar M.L. Sastry
PhD, University of Toronto
Materials science, physical metallurgy

Barna A. Szabo
PhD, State University of New York at Buffalo
Numerical simulation of mechanical systems, finite-element methods

Senior Lecturers

Afaque Manzoor
PhD, Jeju National University
Soft robotics and flexible electronics

J. Jackson Potter
PhD, Georgia Institute of Technology
Senior design

Lecturers

Chiamaka Asinugo
MS, Washington University
Mechanical engineering design

Sharniece Holland
PhD, University of Alabama
Additive manufacturing, mathematics

Jeffery Krampf
MS, Washington University
Fluid mechanics, modeling, design

H. Shaun Sellers
PhD, Johns Hopkins University
Mechanics, materials

Adjunct Instructors

Derek Barkey
MS, University of Southern California
Structures, numerical methods and simulation

Robert G. Becnel
MS, Washington University
FE review

Andrew W. Cary
PhD, University of Michigan
Computational fluid dynamics

Keith Coleman
MS, Missouri University of Science and Technology
Aerospace defense and project management

Joshua Dustin
PhD, Purdue University
Structures and materials

Richard S. Dyer
PhD, Washington University
Propulsion, thermodynamics, fluids

Richard R. Janis
MS, Washington University
Building environmental systems

Krishnan K. Sankaran
PhD, Massachusetts Institute of Technology
Metallic materials

Charles Svboda
PhD, University of Kansas
Aircraft design

Michael C. Wendl
DSc, Washington University
Mathematical theory, computational methods in biology and engineering

Majors

Please visit the following pages for more information about our undergraduate programs:

- Bachelor of Science in Mechanical Engineering (p. 1151)
- Bachelor of Science in Applied Science (Mechanical Engineering) (p. 1153)

Minors

Please visit the following pages for information about our minors:

- Minor in Aerospace Engineering (p. 1154)
- Minor in Energy Engineering (p. 1154)
- Minor in Environmental Engineering Science (p. 1155)
- Minor in Materials Science & Engineering (p. 1156)
- Minor in Mechanical Engineering (p. 1157)
- Minor in Mechatronics (p. 1158)
- Minor in Nanoscale Science & Engineering (p. 1158)
- Minor in Robotics (p. 1159)

Courses

MEMS 1000 Introduction to Mechanical Engineering and Mechanical Design
Mechanical engineers face new challenges in the areas of energy, materials, and systems. This course introduces students to these areas through team-based, hands-on projects that emphasize engineering design, analysis, and measurement skills.
Credit 2 units.
Typical periods offered: Fall, Spring

MEMS 1100 Machine Shop Practicum
Operation of basic machine tools including: lathe, drill press, grinder and mill. Machine tool use and safety are covered. Student shop privilege requires completion of this practicum.
Credit 1 unit.
Typical periods offered: Fall, Spring

MEMS 1110 Advanced Machine Shop Practicum
Students will learn to use the vertical machining centers (LPM and 2op), bed mill, and CNC Lathe. Conversation programming and CAD/CAM programming will be taught. Learning to load and unload tooling, set tooling offset, reconcile tools within a program, satisfy machine operational requirements, and complete safety checks will be part of the learning experience. You will learn to read G-Code and M-Code generated by the CAM program and recognize machining events in real time.
Credit 1 unit.
Typical periods offered: Fall, Spring

MEMS 1150 Computer-Aided Design
An introduction to computer aided engineering design in the context of mechanical and structural engineering. Students learn the fundamentals of spatial reasoning and graphical representation. Freehand sketching skills, including pictorial and orthographic views, are applied to the design process. Computer modeling techniques provide accuracy, analysis, and visualization tools necessary for the design of structures, devices and machines. Topics include: detailing design for production, fasteners, dimensioning, tolerancing, creation of part and assembly drawings, computer aided design, analysis and optimization of parts and assemblies; solid modeling of complex surfaces, assembly modeling, assembly constraints, and interference checking.
Credit 2 units.
Typical periods offered: Fall, Spring

MEMS 1160 Computer Aided Design - AutoCAD
AutoCAD is the most used two-dimensional drawing software for Architectural and Engineering production drawings. Introduction to AutoCAD, title blocks, drawing setup, absolute and relative coordinates, drawing entities, layouts, drafting geometry, dimensioning, plotting drawings to scale, sectional and other special views, isometric pictorial views. Classwork involves typical drawings from industry.
Credit 1 unit.
Typical periods offered: Fall

MEMS 2000 Introduction to Electrical and Electronic Circuits for Mechanical Engineering
The purpose of the course is to introduce and expand student knowledge of the field of electrical circuits. The course will be tailored to better meet the needs of Mechanical Engineering students and should not be a substitution for the traditional ESE students. The course will be a lecture/lab environment and introduce students to various concepts necessary to analyze basic electrical circuits. The main objective is to give each student a comfort level in the subject of electrical circuits, which will serve as both a basis for further study and a valuable life-long asset. Topics to be covered include: electrical energy and power, current, voltage, and circuit elements (resistors, capacitors, inductors, diodes, transistors, and operational amplifiers), Ohm's law, magnetic fields and motors, Kirchhoff's laws, Thevenin/Norton, superposition, circuit analysis, maximum power transfer, RL circuits, RC circuits, RLC circuits, filters, basic operational amplifier circuits, AC/DC power supplies, Arduino microcontroller, level shifters, I2C bus interface, stepper motor drivers, servo motor/encoder system, and PWM. The class format will be a lecture/lab combination where major lab projects will be the basis for lecture material.
Credit 3 units.
Typical periods offered: Fall, Spring

MEMS 2050 Mechanics and Materials Science Laboratory
Laboratory experiments and exercises focusing on mechanical properties of engineering materials; metallography; heat treatment; beam deflection; stress and strain measurement; properties and structure of engineering materials; calibration and use of instrumentation; acquisition, processing, and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports; and presentation of data.
Credit 2 units.
Typical periods offered: Spring

MEMS 2150 Advanced Computer-Aided Design
Topics covered will include computer-aided design, analysis, and optimization of parts and assemblies; solid modeling of complex surfaces, creation of detail drawings, and dimensioning and tolerancing; assembly modeling, assembly constraints, and interference checking; motion constraints, force and acceleration analysis, and thermal analysis; and part optimization for weight, strength, and thermal characteristics using SOLIDWORKS software.
Credit 3 units.
Typical periods offered: Spring

MEMS 2210 Numerical Methods and Matrix Algebra
This course provides students with computational tools for solving mechanical, structural, and aerospace engineering problems. An introduction to MATLAB will be presented, including data input/output, program flow control, functions and graphics. Topics covered include matrices, determinants, rank, vector spaces, solutions of linear systems, interpolation and curve fitting, numeric differentiation and integration, eigenvalue and initial-value problems, nonlinear equations, and optimization. Each topic will be treated in the context of a typical engineering application.
Credit 3 units.
Typical periods offered: Spring

MEMS 2510 Statics and Mechanics of Materials
Principles of statics, solid mechanics, force systems and equilibrium. Equivalent systems of forces and distributed forces. Applications to trusses, frames, machines, beams, and cables. Mechanics of deformable solids and indeterminate problems. Stress, strain, deflection, yield and failure in beams, columns, and torsion members. * MEMS 2510 has mandatory evening exams; the specific days and times will be listed under assessments on the course section once confirmed.
Credit 3 units.
Typical periods offered: Fall

MEMS 2520 Dynamics
Review of vector algebra and calculus. Kinematics of a particle. Newton's laws and the kinetics of a particle. Work and energy. Impulse and momentum. Kinematics of rigid bodies. General theorems for systems of particles. Kinetics of rigid bodies. The inertia tensor. Computer problems form a significant part of the class.
Credit 3 units.
Typical periods offered: Fall, Spring

MEMS 2610 Materials Science
Introduction to properties, chemistry and physics of engineering materials; conduction, semiconductors, crystalline structures, imperfections, phase diagrams, kinetics, mechanical properties, ceramics, polymers, corrosion, magnetic materials, and thin films; relationship of atomic and molecular structure to physical and chemical properties; selection of materials for engineering applications; relationships between physical properties, chemical properties and performance of engineering materials.
Credit 3 units.
Typical periods offered: Spring

MEMS 3050 Fluid Mechanics and Heat Transfer Laboratory
Laboratory experiments and exercises focusing on fluid properties, flow phenomena, thermal science and heat transfer phenomena; calibration and use of instrumentation; acquisition, processing, and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports; and presentation of data.
Credit 2 units.
Typical periods offered: Spring

MEMS 3110 Machine Elements
This course includes weekly lectures and a bi-weekly lab. Lectures introduce the engineering design process, review stresses and failure theories, and present a variety of machine elements (such as bearings, shafts, gears, belts, springs, etc.) and their governing equations. In lab, students use a commercial CAD package (SolidWorks) to create and constrain models of machine assemblies, analyze stresses in machine components, and create animations to demonstrate machine motion. Course material is presented in the context of a semester-long engineering design problem that culminates in a final group project. Student teams generate their own design concept to embody in CAD and characterize it with engineering and analytical models.
Credit 3 units.
Typical periods offered: Spring

MEMS 3120 Multidisciplinary Design & Prototyping
This hands-on course introduces students to the engineering design process and a variety of prototyping tools and techniques. Skills are developed through weekly studios, individual exercises, and a design project performed in small groups. Lectures focus on design principles and real-world issues for engineered products. The theme for this semester is environmental data collectors, seeking to create accurate, robust, low-cost, and easy-to-use devices that measure and record physical conditions (such as temperature, chemical content, noise, light, wind velocity, etc.) for ecological and environmental research.
Credit 3 units.
Typical periods offered: Fall

MEMS 3400 Thermodynamics
This course of classical thermodynamics is oriented towards mechanical engineering applications. It includes properties and states of a substance, processes, cycles, work, heat, and energy. Steady-state and transient analyses utilize the First and Second Laws of Thermodynamics for closed systems and control volumes, as well as the concept of exergy.
Credit 3 units.
Typical periods offered: Fall

MEMS 3410 Fluid Mechanics
Fundamental concepts of fluids as continua. Topics include: viscosity, flow fields, velocity, vorticity, streamlines, fluid statics, hydrostatic forces, manometers, conservation of mass and momentum, incompressible inviscid flow, dimensional analysis and similitude, flow in pipes and ducts, flow measurement, boundary-layer concepts, flow in open channels.
Credit 3 units.
Typical periods offered: Fall

MEMS 3420 Heat Transfer
This course provides an introductory treatment of the principles of heat transfer by conduction, convection, or radiation; analysis of steady and unsteady conduction with numerical solution methods; analytical and semi-empirical methods of forced and natural convection; boiling and condensation heat transfer; and radiation heat transfer.
Credit 3 units.
Typical periods offered: Spring

MEMS 3430 Design of Thermal Systems
Analysis and design of advanced thermo-fluid systems. Student teams participate in the design process which could involve research, design synthesis, codes, standards, engineering economics, a design project report, and formal presentations. Topics include thermo-fluid systems and components such as: power, heating and refrigeration systems; pumps, fans, compressors, combustors, turbines, nozzles, coils, heat exchangers and piping.
Credit 3 units.
Typical periods offered: Spring

MEMS 3530 Solid Mechanics
A continuation of MEMS 253 containing selected topics in the mechanics of deformable solids, presented at a level intermediate between introductory strength of materials and advanced continuum mechanics. Lectures will discuss elastic and elasto-plastic response, failure criteria, composites, beams, and structural stability, as well as an introduction of the tensorial formulation of stress and strain and the governing equations of 3-D linear elasticity. Mathematical methods from calculus, linear algebra and linear differential equations will be used. Computer problems form a significant part of the class. MEMS 255 not required.
Credit 3 units.
Typical periods offered: Fall, Spring

MEMS 4001 Fundamentals of Engineering Review
A review and preparation of the most recent NCEES Fundamentals of Engineering (FE) Exam specifications is offered in a classroom setting. Exam strategies will be illustrated using examples. The main topics for the review include: engineering mathematics, statics, dynamics, thermodynamics, heat transfer, mechanical design and analysis, material science and engineering economics. A discussion of the importance and responsibilities of professional engineering licensure along with ethics will be included.
Credit 1 unit.
Typical periods offered: Spring

MEMS 4050 Vibrations Lab
Laboratory experiments, data analysis, and simulation, focusing on vibration of mechanical systems; kinematic and dynamic response; and design of mechanisms and machine components; displacements, velocities, and accelerations in mechanical systems and components; response to static and dynamic forces; transient and steady state response; design of mechanical components for power transmission; calibration and use of instrumentation; acquisition, processing, and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports and presentation of data. MATLAB will be used for data analysis and simulation.
Credit 1 unit.
Typical periods offered: Fall

MEMS 4110 Mechanical Engineering Design Project
Student groups work on an open-ended mechanical design problem and finish the semester by presenting a physical prototype and a formal report to an external review board. Groups are guided through the engineering design process by completing a set of project deliverables. The quality of these deliverables provides a basis for evaluation of individual and team performance. This course emphasizes the importance of user-centric design, communication and presentation skill, consideration of real-world constraints, sketching and creativity, prototyping, and data-driven decision making using engineering models and analyses.
Credit 3 units.
Typical periods offered: Fall

MEMS 4120 Manufacturing Processes
Manufacturing processes and machinery are explained and described. Topics include: analytical tools of machine science, heat transfer, vibrations and control theory are applied to the solution of manufacturing problems, analytical development and application of engineering theory to manufacturing problems, machine tools and automated production equipment.
Credit 3 units.
Typical periods offered: Fall

MEMS 4240 Introduction to Finite Element Methods in Structural Analysis
Application of finite element methods to beams, frames, trusses and other structural components. Modeling techniques for different types of structural engineering problems. Topics in stress analysis, applied loads, boundary conditions, deflections and internal loads, matrix methods, energy concepts, structural mechanics and the development of finite element modeling methods.
Credit 3 units.
Typical periods offered: Spring

MEMS 4310 Vibrations
Introduction to the analysis of vibrations in single- and multi- degree of freedom systems; free and forced vibration of multi-degree of freedom and distributed parameter mechanical systems and structures; methods of Laplace transform; complex harmonic balance; matrix formulation; Fourier series; and transient response of continuous systems by partial differential equations.
Credit 3 units.
Typical periods offered: Fall

MEMS 4320 Modeling, Simulation and Control
Introduction to simulation and control concepts. Topics include: block diagram representation of single-and multi-loop systems, control system components, transient and steady-state performance, stability analysis, Nyquist, Bode, and root locus diagrams, compensation using lead, lag and lead-lag networks, design synthesis by Bode plots and root-locus diagrams, state-variable techniques, state-transition matrix, state-variable feedback.
Credit 3 units.
Typical periods offered: Spring

MEMS 4999 Independent Study
Independent investigation on topic of special interest. Students must complete the Independent Study Approval Form available in the department office.
Credit 3 units.
Typical periods offered: Fall, Spring, Summer

Bachelor of Science in Mechanical Engineering (MEMS)

The mission of the undergraduate program in mechanical engineering is to prepare students within the broad and evolving field of mechanical engineering. The program instills in students a capacity for creative design through critical and analytical thought. The Bachelor of Science in Mechanical Engineering (BSME) is the first step toward a career in industry, academia or government; it encourages a commitment to independent lifelong learning and professional development. In addition to their technical studies, students learn to communicate their ideas clearly and to conduct themselves in an ethical and socially responsible manner.

Program Educational Objectives

Program educational objectives are broad statements that describe what graduates are expected to attain within a few years of graduation. These objectives are based on the needs of the program's constituencies.

Within a few years of graduation, graduates of the BSME program are expected to do the following:

- Engage in professional practice and/or advanced study
- Further their knowledge and skills through education and/or professional development
- Serve society by using and communicating their knowledge and values

Student Outcomes

The Mechanical Engineering program has the following student outcomes that describe what students are expected to know and be able to do by the time of graduation. These relate to the knowledge, skills and behaviors that students acquire as they progress through the program.

The student outcomes of the BSME program are as follows:

- An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
- An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
- An ability to communicate effectively with a range of audiences
- An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts
- An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
- An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
- An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Curriculum

The curriculum is a four-year program leading to the first professional degree, the BSME, and it is accredited by the Engineering Accreditation Commission of ABET under the Commission's General Criteria and Program Criteria for Mechanical Engineering. The curriculum prepares the student for professional practice or postgraduate education in a broad spectrum of mechanical and other engineering or professional fields. It provides critical knowledge in solid mechanics, fluid mechanics, thermodynamics and heat transfer, materials science, dynamics and control, and design. It includes 34 units of mathematics and basic sciences, 58 units of engineering topics, and 28 units of general education for a total degree requirement of 120 units. The general education requirement includes 18 units of social science and humanities.

Core courses must be taken for credit (i.e., for a grade). The social science and humanities courses may be taken on a pass/no pass basis. The undergraduate program provides the necessary foundations in these areas and the opportunity to specialize in topics of particular interest. Specialization is accomplished via the judicious choice of engineering electives taken as 3000-, 4000-, or 5000-level courses approved by the student's advisor. At the end of the four-year program, the student is ready to go on to graduate education or into research or professional practice.

Basic Core Courses

Computing Requirements

Code	Title	Units
Students should take one of the following:		
ENGR 1201	Introduction to Engineering Computing **or**	
CSE 1301	Introduction to Computer Science	
Total Units		**3**

Humanities, Social Sciences, and Writing

Code	Title	Units
Humanities and social sciences (refer to McKelvey School of Engineering degree requirements for details)		15
Free elective		3
ENGR 3100	Technical Writing	3
ENGR 4501	Engineering Ethics and Sustainability	1
ENGR 4502	Engineering Leadership and Team Building	1
ENGR 4503	Conflict Management and Negotiation	1
Total Units		**24**

Mathematics and Basic Science

Code	Title	Units
MATH 1520	Calculus II	3
MATH 2130	Calculus III	3
MATH 2500	Differential Equations	3
MEMS 2210	Numerical Methods and Matrix Algebra	3
or ENGR 3180	Engineering Mathematics A	
ENGR 3190	Engineering Mathematics B	3
ENGR 3280	Engineering Statistics with Probability	3
or ESE 3260	Probability and Statistics for Engineering	
CHEM 1751	General Chemistry Laboratory I	2
CHEM 1601	Principles of General Chemistry I	3
or CHEM 1701	General Chemistry I	
PHYSICS 1740	Physics I	3
or PHYSICS 1760	Focused Physics I	
PHYSICS 1741	Physics I Laboratory	1
PHYSICS 1742	Physics II	3
or PHYSICS 1680	Focused Physics II	
PHYSICS 1743	Physics II Laboratory	1

Physical or Life Science (2000 level or above natural science course in Biology; Chemistry; Physics; Earth, Environmental, and Planetary Sciences; or Environmental Studies)	3
Total Units	**34**

Mechanical Engineering

Code	Title	Units
MEMS 1000	Introduction to Mechanical Engineering and Mechanical Design	2
MEMS 1100	Machine Shop Practicum	1
MEMS 1150	Computer-Aided Design	2
MEMS 2000	Introduction to Electrical and Electronic Circuits for Mechanical Engineering	3
MEMS 2050	Mechanics and Materials Science Laboratory	2
MEMS 2510	Statics and Mechanics of Materials	3
MEMS 2520	Dynamics	3
MEMS 2610	Materials Science	3
MEMS 3050	Fluid Mechanics and Heat Transfer Laboratory	2
MEMS 3110	Machine Elements	3
MEMS 3400	Thermodynamics	3
MEMS 3410	Fluid Mechanics	3
MEMS 3420	Heat Transfer	3
MEMS 3430	Design of Thermal Systems	3
MEMS 3530	Solid Mechanics	3
MEMS 4050	Vibrations Laboratory	1
MEMS 4110	Mechanical Engineering Design Project	3
MEMS 4310	Vibrations	3
MEMS 4320	Modeling, Simulation and Control	3
MEMS senior electives		9

Bachelor of Science in Applied Science (Mechanical Engineering) (MEMS)

The Bachelor of Science in Applied Science (Mechanical Engineering) program provides substantive and consistent training in mechanical engineering with maximum flexibility. This program is advantageous if a student wishes to pursue a more flexible program than the accredited Bachelor of Science in Mechanical Engineering (BSME) degree program.

Students who do not desire to become licensed engineers but who seek to acquire analytical engineering thinking skills may choose to pursue this program. The added degree flexibility allows these students to pursue additional second majors and/or minors and to increase their ability to participate in programs such as study abroad. It is especially suitable for a double major in combination with mathematics, physics, chemistry, biology, economics or another engineering discipline. The program can be planned to provide a background for graduate work in biological, medical or management fields. The Bachelor of Science in Applied Science is a nonprofessional degree; it is not accredited by the Engineering Accreditation Commission of ABET.

The degree requirements include the residency and general requirements of the university and the school. The Bachelor of Science in Applied Science (Mechanical Engineering) degree requirements are as follows:

- Complete a total of at least 120 applicable units
- Complete a minimum of 60 units at Washington University
- Complete at least 42 units at the 3000 level or higher
- Complete at least 48 units in mathematics, natural science and engineering
- Complete at least 30 units of mechanical engineering (MEMS) courses
- Satisfy the McKelvey School of Engineering English composition requirement
- Satisfy the McKelvey School of Engineering humanities and social sciences requirement
- Satisfy the residency requirement of 30 units of 2000 level or higher engineering courses
- Earn at least a 2.0 cumulative grade-point average in all applicable courses taken at Washington University
- Earn at least a 2.0 cumulative GPA in all engineering courses

Pre-Medical Option

Research and practice in the biological and medical sciences increasingly involves advanced technology, including mechanical engineering. For those interested in a career in medicine, the pre-medical option in MEMS makes it possible to obtain an accredited Bachelor of Science while simultaneously meeting the admission requirements of most medical and dental schools. The program also provides a foundation for graduate study and research in biomedical engineering. The essential requirements of the pre-medical option are two semesters of general biology (BIOL 2960, BIOL 2970); two semesters of general chemistry with a laboratory; two semesters of organic chemistry with a laboratory (CHEM 1701, CHEM 1751, CHEM 1702, CHEM 1752, CHEM 2561, CHEM 2562); and one semester of biochemistry (BIOL 4510). Psychology (PSYCH 1000) and sociology are highly recommended. One semester of organic chemistry may be counted as an upper-level MEMS elective; the student must take 6 units of other upper-level mechanical engineering electives to complete the 9-unit requirement. The pre-medical option is easier for those who have a high school background in biology or who, by reason of advanced placement in math/science, have reduced requirements in the Common Studies portion of the curriculum. For additional information about the pre-medical option, please refer to the Pre-Medical Education (p. 1074) section of this *Bulletin,* which is

located in the introduction to the McKelvey School of Engineering's Undergraduate Programs. Interested individuals may also contact the pre-health advisor, Jessica Allen, at jessicaa@wustl.edu for additional information.

Minor in Aerospace Engineering (MEMS)

Whether students are intent on a career in aviation or simply enthusiastic about space and flight, a minor in aerospace engineering can satisfy their scientific curiosity, prepare them for a job, or uncover opportunities for technical contributions. The minor in aerospace engineering is available to all undergraduates, but it is most attractive to those pursuing a degree in mechanical engineering. The minor in aerospace engineering requires a minimum of 15 units of courses selected from the list below; it is possible to earn the minor without increasing the number of units (120) required for the Bachelor of Science in Mechanical Engineering (BSME).

Aerospace engineering deals with the analysis, design and performance of flight vehicles such as transport and military aircraft, helicopters, missiles and launch vehicles, and spacecraft. Students learn about aerospace engineering by taking courses in aerodynamics, aircraft flight dynamics and control, aerospace propulsion, aerospace structures and aerospace vehicle design. Students may also have the opportunity to gain experience in aerospace engineering design through collaborative programs with local companies such as Boeing. Aerospace engineers from industry teach courses as adjunct instructors at Washington University, and many Washington University faculty members have extensive aerospace industry experience.

Units required: 15

Required courses (6 units):

Code	Title	Units
MEMS 4320	Modeling, Simulation and Control	3
or ESE 4410	Control Systems	
MEMS 5700	Aerodynamics	3
Total Units		**6**

Core courses (3-6 units):

Code	Title	Units
MEMS 5701	Aerospace Propulsion	3
MEMS 5704	Aircraft Structures	3

Electives (3-6 units):

Any course from the aerospace MS concentration list (PDF) can be used as an aerospace minor elective.

To find out more about this minor, contact the department chair or the advisor for the minor in aerospace engineering, or visit the Minors page of the Mechanical Engineering & Materials Science website.

Minor in Energy Engineering (MEMS)

Objective: The goal of this minor is to provide students with a course work experience that will enhance their background, knowledge and skills in the topical area of energy engineering. The minor encompasses courses in several fields of science and engineering, including the Department of Energy, Environmental & Chemical Engineering; the Department of Electrical & Systems Engineering; and the Department of Mechanical Engineering & Materials Science.

A minor in energy engineering requires the completion of at least 18 units selected from the following lists. It is open to any undergraduate student pursuing an engineering major, a major in the sciences (biology, chemistry, physics) in Arts & Sciences, or the environmental studies major.

Interested departments should expose students to energy and related concepts in their introductory courses.

Basic and Applied Sciences (fundamental content) (two courses):

Code	Title	Units
EECE 2000	Process Analysis and Thermodynamics **or** MEMS 3400 Thermodynamics	4 or 3
EECE 3000	Transport Phenomena I: Basics and Fluid Mechanics **or** MEMS 3410 Fluid Mechanics	3
EECE 3510	Transport Phenomena II: Energy and Mass Transfer **or** MEMS 3420 Heat Transfer	4 or 3
ESE 3320	Power, Energy, and Polyphase Circuits	3

Social Science/Policy/Economics Elective (students choose one course):

Code	Title	Units
ECON 3350	Environmental Policy	3
ENST 3330	Multiparty Environmental Decision Making	3
ENST 3340	Writing Skills for Environmental Professionals	3
ENST 3400	Energy Governance in Israel and the Middle East	3
ENST 3530	Sustainable Cities	3
ENST 4810	Reset - Renewable Energy Policy, Engineering and Business	3
POLSCI 3328	Energy Politics	3

Electives:

Students choose three courses. One of the courses is required to be chosen from outside of the student's major degree department. A partner department may approve the use of a course listed under basic and applied sciences as an elective.

Code	Title	Units
EECE 3110	Green Engineering	3
EECE 4060	Energy Conversion and Storage	3
EECE 4061	Electrochemical Processes	3
EECE 4993	International Experience in EECE	3
EECE 5080	Combustion Phenomena	3
EECE 5180	Biomass Energy Systems and Engineering	3
EECE 5200	Electrochemical Engineering	3
EEPS 3150	Environmental Impacts of Human Energy Use	3
ESE 4340	Solid-State Power Circuits and Applications	3
ESE 4350	Electrical Energy Laboratory	3
MEMS 3430	Design of Thermal Systems	3
MEMS 5422	Solar Thermal Energy Systems	3
MEMS 5423	Sustainable Environmental Building Systems	3
MEMS 5424	Thermo-Fluid Modeling of Renewable Energy	3
MEMS 5427	Fundamentals of Fuel Cells	3
MEMS 5705	Wind Energy Systems	3

Committee to Oversee Energy Engineering Minor

Peng Bai (EECE, Coordinator); Bruno Sinopoli (ESE); Xianglin Li (MEMS)

The committee ensures that any course added to the above lists contains a significant amount of energy topics and that the entire program is cohesive.

Minor in Environmental Engineering Science (MEMS)

The EECE department sponsors an undergraduate minor in environmental engineering science. This 21-unit program prepares the student to seek an entry-level position as an environmental engineer, scientist or analyst. The minor also provides a solid foundation for undertaking graduate study in environmental engineering. Visit the EECE department website for more information.

Total Units Required: 21

Required Courses

Select from the following menus:

Introduction* (3 units):

Code	Title	Units
EECE 1000	Introduction to Energy, Environmental and Chemical Engineering (fall)	3
EECE 2100	Introduction to Environmental Engineering (spring)	3

Environmental Chemistry (3 units):**

Code	Title	Units
EECE 5050	Aquatic Chemistry (fall)	3
EECE 5120	Environmental Organic Chemistry (fall)	3

Environmental Engineering Electives (9 units):**

Code	Title	Units
EECE 3100	Water Resources Engineering (fall)	3
EECE 3110	Green Engineering (fall)	3
EECE 3120	Air Quality Engineering with Lab (fall)	4
EECE 3130	Environmental Engineering Fate and Transport (spring)	3
EECE 4100	Environmental Engineering Laboratory (spring)	3
EECE 4110	Environmental Biotechnology (fall)	3
EECE 5040	Aerosol Science and Technology (fall)	3
EECE 5090	Atmospheric Science and Climate (spring)	3
EECE 5130	Physical and Chemical Processes for Water Treatment (spring)	3

Additional eligible courses (new courses, special offerings) will be posted on the EECE website as they become available.

Natural Science (3 units):

Code	Title	Units
BIOL 3810	Introduction to Ecology (spring)	3
EEPS 3230	Biogeochemistry (spring)	3
EEPS 3863	The Earth's Climate System	3
EEPS 4134	Introduction to Soil Science	3
EEPS 4284	Hydrology	3
EEPS 4424	Aqueous Geochemistry	3

Environmental Policy and Social Science (3 units):

Code	Title	Units
ECON 3350	Environmental Policy	3
ENST 3330	Multiparty Environmental Decision Making	3
ENST 3520	Ecological Economics	3
ENST 3530	Sustainable Cities	3
ENST 3540	Environmental Justice	3
ENST 4510	Intro to Environmental Law	3
ENST 4820	International Climate Negotiation Seminar	4
ENST 5830	Interdisciplinary Environmental Clinic	var.; max 3
POLSCI 3328	Energy Politics	3

* First-year students potentially interested in majoring in chemical engineering should take EECE 1000; all other students working toward the minor in environmental engineering science should take EECE 2100.

** Students taking both environmental chemistry courses can count one of them toward the environmental engineering electives.

Committee to Oversee Environmental Engineering Science Minor

Daniel Giammar (EECE, Coordinator); Kristen Wyckoff (EECE)

Minor in Materials Science & Engineering (MEMS)

Materials Science & Engineering (MSE) is an interdisciplinary field that applies the fundamental knowledge of the physical sciences to create engineering innovations. In general, the term *engineering* refers to actively designing a system for a given application; MSE enables the design of systems from the atoms up. MSE focuses on the interrelationship between a material's structure (from the subatomic level to the macro scale) and the properties or behaviors that the material exhibits. Materials synthesis and processing techniques enable engineers to control and change the material structure in order to obtain the desired properties. Understanding the structure–properties–processing relationship requires a fundamental knowledge of the underlying chemistry and physics, and it is key to obtaining materials with the desired performance for engineering applications in a wide variety of fields, from computing to medicine to energy.

The minor in MSE builds upon the fundamental insights into material structure and properties gained through required introductory courses in chemistry and materials science. Students then select at least two courses from specialization "pick lists" to gain depth in a particular application area. A free elective provides the opportunity to gain additional depth in the fundamentals or exposure to another application area.

For more information, students should contact the advisor for the Minor in Materials Science & Engineering: Professor Katharine Flores (floresk@wustl.edu) (MEMS).

Some courses have prerequisites. Students will be approved for the minor after discussing appropriate course selection with the advisor for the minor.

Requirements

Units required: 17

Courses	Units
Three required courses	8
Two courses from specialization "pick lists"	6
One additional coure from any list	3
Total Units	**17**

Required Courses

Code	Title	Units
CHEM 1701	General Chemistry I	3
or CHEM 1601	Principles of General Chemistry I	
CHEM 1751	General Chemistry Laboratory I	2
or MEMS 2050	Mechanics and Materials Science Laboratory	
MEMS 2610	Materials Science	3
or EECE-E44 3520	Materials Science	
Total Units		**8**

Specialization "Pick Lists"

Students should select at least two courses (6 units) from any one of the following categories:

Structural Materials

Code	Title	Units
MEMS 5506	Experimental Methods in Solid Mechanics	3
MEMS 5507	Fatigue and Fracture Analysis	3
MEMS 5601	Mechanical Behavior of Materials	3
MEMS 5605	Mechanical Behavior of Composites	3
MEMS 5615	Metallurgy and Design of Alloys	3
MEMS 5616	Defects in Materials	3

Electronic/Optical Materials

Code	Title	Units
CHEM 5014	Physical Properties of Quantum Nanostructures	3
ESE 4290	Basic Principles of Quantum Optics and Quantum Information	3
ESE 4360	Semiconductor Devices	3
ESE 5310	Nano and Micro Photonics	3
MEMS 5803	Nanotechnology Concepts and Applications	3
MEMS 5611	Principles and Methods of Micro and Nanofabrication	3
MEMS 5801	Micro-Electro-Mechanical Systems I	3

MEMS 5617	Advanced Study of Solid-State Electronics	3
MEMS 5618	Electronic Behavior of Materials	3
PHYSICS 5072	Solid State Physics	3
or PHYSICS 4072	Solid State Physics	

Biomaterials/Soft Materials

Code	Title	Units
BME 4790	Biofabrication & Medical Devices	3
BME 4320	Physics of Biopolymers	3
or BME 5320	Physics of Biopolymers and Bioinspired Polymers	
BME 5230	Biomaterials Science	3
CHEM 4511	Synthetic Polymer Chemistry	3
CHEM 4570	Synthetic Polymer Chemistry Laboratory	3
EECE 5420	Polymers for Energy, Sustainability, and Human Health	3
MEMS 5606	Soft Nanomaterials	3
MEMS 5607	Introduction to Polymer Blends and Composites	3
MEMS 5608	Introduction to Polymer Science and Engineering	3
MEMS 5613	Biomaterials Processing	3
MEMS 5614	Polymeric Materials Synthesis and Modification	3

Materials for Energy and Environmental Technologies

Code	Title	Units
CHEM 4360	Inorganic Electrochemistry and Photochemistry	3
EECE 5040	Aerosol Science and Technology	3
EECE 5050	Aquatic Chemistry	3
EECE 5200	Electrochemical Engineering	3
EECE 5420	Polymers for Energy, Sustainability, and Human Health	3
EEPS 3360	Minerals and Rocks in the Environment	3
EEPS 5670	Planetary Materials	3

Materials Design and Manufacturing

Code	Title	Units
MEMS 4101	Manufacturing Processes	3
MEMS 5611	Principles and Methods of Micro and Nanofabrication	3
MEMS 5612	Atomistic Modeling of Materials	3
MEMS 5621	Materials Selection in Design	3
MEMS 5615	Metallurgy and Design of Alloys	3
MEMS 5801	Micro-Electro-Mechanical Systems	3

Materials Chatacterization

Code	Title	Units
MEMS 5506	Experimental Methods in Solid Mechanics	3
MEMS 5603	Materials Characterization Techniques I	3
MEMS 5604	Materials Characterization Techniques II	3

Fundamentals of MSE

These are core courses for the PhD program in Materials Science and Engineering. Pursue with caution!

Code	Title	Units
PHYSICS 4072	Solid State Physics	3
or PHYSICS 5072	Solid-State Physics	
CHEM 4620	Solid-State and Materials Chemistry	3
or CHEM 5620	Solid-State and Materials Chemistry	
MEMS 5610	Quantitative Materials & Engineering	3
MEMS 5619	Thermodynamics of Materials	3
MEMS 5620	Kinetics of Materials	3

* CHEM 4620 and CHEM 5620 are co-taught covering the same material. CHEM 4620 is intended for undergraduates, while CHEM 5620 is intended for graduate students. Students with credit for one may not be allowed to enroll in the other, and only one version of the course can be counted toward the minor.

Free Electives: To complete the minor, students may select one additional course from any category above. Students may also fulfill the free elective with 3 credits of MEMS 4999 Independent Study for an independent study project on a materials science and engineering topic. The project topic and description must be *preapproved* by the advisor for the minor.

Minor in Mechanical Engineering (MEMS)

The minor in mechanical engineering complements a major in a field related to mechanical engineering, such as biomedical engineering, electrical engineering, physics, chemistry or architecture. The minor is intended to provide students with a credential that could enhance their opportunities for employment or graduate study. Completion of the minor demonstrates that the student has pursued a structured program approved by the faculty of the Department of Mechanical Engineering & Materials Science.

Students pursuing the minor in mechanical engineering must complete a total of 15 units of coursework as described below. Courses selected for the minor program may count toward program requirements of the student's major. The subjects selected for a minor in mechanical engineering are expected to constitute a coherent program within the field of mechanical engineering. Courses taken under the Pass/No Pass grading option cannot be used for a minor program.

Required courses:

Code	Title	Units
MEMS 2510	Statics and Mechanics of Materials	3
or BME 2400	Biomechanics	
MEMS 2520	Dynamics	3
or PHYSICS 5011	Mechanics	
MEMS 3530	Solid Mechanics	3
Total Units		**9**

Two electives from the following list:

Code	Title	Units
MEMS 3400	Thermodynamics	3
MEMS 3110	Machine Elements	3
or BME 3200	Bioengineering Thermodynamics	
MEMS 3410	Fluid Mechanics	3
MEMS 2610	Materials Science	3
MEMS 4310	Vibrations	

To find out more about this minor, contact the department chair or the advisor for the minor in mechanical engineering or visit the Minors webpage.

Minor in Mechatronics (MEMS)

Advancements in power electronics, electronic sensors, and computer hardware and software have led to an expanding role for "smart" systems, which combine electronic and mechanical components. Automotive examples illustrate this point. The replacement of carburetors by fuel injection systems is almost universal, and hybrid/electric cars are replacing traditional automobiles. Not only are auxiliary devices such as fuel pumps, air bags and air-conditioner compressors driven by electric motors controlled by microprocessors, but fundamental components such as intake and outtake valves soon will be driven in this way. The internal combustion engine itself may be replaced by fuel cells and motors. Medical devices, micro-electromechanical systems, robots, fly-by-wire aircraft and wind turbines also all rely on electronic sensing of mechanical parameters and actuation of motion. These examples suggest strongly that engineers who are adept in the design, analysis and simulation of electromechanical systems will be in demand. The minor in mechatronics is created to encourage our students to study this important subject and provide recognition to those who do so.

This program is primarily designed for students in the ESE and MEMS departments and has been approved by the two departments. It is available for others as well.

The proposed minor program consists of four required courses, two electives and one prerequisite:

Four required courses:

Code	Title	Units
ESE 4440	Sensors and Actuators	3
ESE 4460	Robotics: Dynamics and Control	3
or MEMS 5206	Modern Robotics: Mechanics, Planning and Control	
MEMS 2520	Dynamics	3
MEMS 4110	Mechanical Engineering Design Project	3
Total Units		**12**

Two electives chosen from the following:

Code	Title	Units
ESE 4360	Semiconductor Devices	3
ESE 4820	Digital Signal Processing	3
MEMS 4320	Modeling, Simulation and Control	3
or ESE 4410	Control Systems	
MEMS 4310	Vibrations	3

Prerequisite:

Code	Title	Units
CSE 1301	Introduction to Computer Science	3

For more information about the minor, contact Dennis Mell (ESE) or Jackson Potter (MEMS).

Minor in Nanoscale Science & Engineering (MEMS)

Nanotechnology deals with materials, structures and devices with dimensions that are in the 1- to 100-nm length scale. These entities have properties (physical, chemical and biological) that are very different from their bulk counterparts, and they can be tuned to obtain novel and desired functionalities. The goal of this minor is to enhance the student's background, knowledge and skills in the topical area of nanotechnology. The minor includes courses in several fields of science and engineering; it encompasses all of the departments in the McKelvey School of Engineering as well as several departments in Arts & Sciences. It is open to undergraduate students pursuing an engineering degree or a related Arts & Sciences major (e.g., chemistry, physics, biology, environmental studies, pre-med).

The minor in nanoscale science and engineering involves the following components. Starting with courses covering the fundamentals, students gain knowledge in synthesis and applications as well as characterization, structure and modeling. Two additional requirements are a cleanroom lab class (MEMS 5611 or MEMS 5801) and the completion of a faculty-supervised independent study project over the course of at least two semesters. The mix of courses should provide the student with a significant background in nanotechnology, and it should promote independent thinking through the student's work on a research or educational project.

Units required: 18

Required courses: Select from the following menus:

Fundamentals (choose one course):

Code	Title	Units
CHEM 4010	Physical Chemistry I	3
CHEM 4620	Solid-State and Materials Chemistry	3
CHEM 4810	General Biochemistry I	3
EECE 3520	Materials Science	3
MEMS 2610	Materials Science	3
MEMS 5618	Electronic Behavior of Materials	3
PHYSICS 2170	Introduction to Quantum Physics	3
PHYSICS 3352	Physics of Biomolecules	3
PHYSICS 4072	Solid State Physics	3

Synthesis and Applications (choose one course):

Code	Title	Units
EECE 5040	Aerosol Science and Technology	3
EECE 5140	Environmental Nanochemistry	3
ESE 4360	Semiconductor Devices	3
ESE 4380	Applied Optics	3
ESE 5320	Introduction to Nano-Photonic Devices	3
MEMS 5606	Soft Nanomaterials	3
MEMS 5611	Principles and Methods of Micro and Nanofabrication	3
MEMS 5803	Nanotechnology Concepts and Applications	3

Characterization, Structure and Modeling (choose one course):

Code	Title	Units
CHEM 5014	Physical Properties of Quantum	3
CHEM 5843	Mass Spectrometry	3
EECE 5100	Measurement Techniques for Particle Characterization	3
MEMS 5602	Non-Metallics	3
MEMS 5603	Materials Characterization Techniques I	3
MEMS 5604	Materials Characterization Techniques II	3
MEMS 5612	Atomistic Modeling of Materials	3

Cleanroom Laboratory/Theory Class (choose one course):

Code	Title	Units
MEMS 5611	Principles and Methods of Micro and Nanofabrication	3
MEMS 5801	Micro-Electro-Mechanical Systems I	3

Independent Study Project (required):

Students should sign up for at least **two semesters** of independent study and work on a project related to nanotechnology under the supervision of a faculty member. A list of projects with potential faculty mentors will be circulated during the spring semester each year. Before completing the independent study project, students must be registered for the nanoscale science and engineering minor program, and they must have completed at least two of the courses from the above categories. Students can also come up with their own ideas for projects, but these require approval from the Nanoscale Science and Engineering Minor Committee and a faculty mentor. All independent study projects should address one of the following two criteria:

- Connect material processing to structural features on the length scale of 1 to 100 nm
- Connect structural features on the 1- to- 100-nm length scale in a material to its physical or chemical properties

The courses listed above will count for elective credit for all Engineering majors; however, students should check with their major advisors to confirm this.

Committee to Oversee Nanoscale Science and Engineering Minor

Rohan Mishra (MEMS, Coordinator), Elijah Thimsen (EECE)

Visit the EECE website for more information.

Minor in Robotics (MEMS)

Robotic systems have a wide range of applications in modern technology and manufacturing. Robots can vary in complexity and use, from the microrobots used for surgical procedures to the moderate-sized robots common in manufacturing and undersea exploration to the macrorobots used for the disposal of nuclear waste and as arms on space-station modules. The program designed for a minor in robotics provides a fundamental understanding of robotic operation and preliminary training in the design and use of robots.

Units required: 18

Prerequisites:

Code	Title	Units
CSE 1301	Introduction to Computer Science	3
MATH 2500	Differential Equations	3
PHYSICS 1740	Physics I	4
and PHYSICS 1741	Physics I Laboratory	
PHYSICS 1742	Physics II	4
and PHYSICS 1743	Physics II Laboratory	
Total Units		**14**

Required courses:

Code	Title	Units
ESE 3510	Signals and Systems	3
or MEMS 4310	Vibrations	
ESE 4460	Robotics: Dynamics and Control	3
or MEMS 5206	Modern Robotics: Mechanics, Planning and Control	
ESE 4480	Control Systems Design Laboratory	3
MEMS 2520	Dynamics	3
Total Units		**12**

Two additional courses must be chosen with the approval of the director of the program for a minor in robotics. Suggested courses include the following:

Code	Title	Units
CSE 5406	Computational Geometry	3
ESE 4170	Introduction to Machine Learning and Pattern Classification	3
or CSE 4107	Introduction to Machine Learning	
ESE 4410	Control Systems	3
or MEMS 4320	Modeling, Simulation and Control	
ESE 4450	Sensing, Planning and Control in Robotics	3
MEMS 3110	Machine Elements	3
MEMS 5207	Robot Design	3
or ESE 4480	Control Systems Design Laboratory	

For more information about the minor, contact Dennis Mell (ESE) or Jackson Potter (MEMS).

University of Missouri-St. Louis/Washington University Joint Undergraduate Engineering Program

In 1993, Washington University and the University of Missouri–St. Louis held the first classes in the Joint Undergraduate Engineering Program. This partnership — the first of its kind in the United States — offers University of Missouri–St. Louis students the opportunity to benefit from the engineering program at Washington University and its century-long tradition of excellence. Effective in October 1999, the three bachelor's degrees (civil, electrical and mechanical engineering) offered in our joint program were accredited by the Engineering Accreditation Commission of ABET. In addition to being the first undergraduate engineering degrees offered in a public/private partnership, these are also the first such degrees to receive ABET accreditation.

The courses are organized for both full-time students and part-time students with daytime commitments who need to attend classes in the evening. Students who enter the program take about half of their course work — mathematics, physics, chemistry, humanities and social sciences — on the campus of the University of Missouri–St. Louis. The remaining half of the degree program, which consists of upper-level engineering courses and laboratories, is taken on the Washington University campus. Students may choose civil, electrical or mechanical engineering. Students receive their undergraduate engineering degrees from the University of Missouri.

For information about this program, please contact the University of Missouri–St. Louis Joint Undergraduate Engineering Program at 314-516-6800 or the Washington University McKelvey School of Engineering at 314-935-6510.

Website: https://engineering.wustl.edu/about/UMSL-joint-undergraduate-engineering-program.html

Faculty

Faculty Members at the University of Missouri–St. Louis

Dean

Joseph A. O'Sullivan
Samuel C. Sachs Professor of Electrical Engineering
PhD, University of Notre Dame

Associate Dean

Haiyan Cai
PhD, University of Maryland

Associate Director of Advising and Student Services

Mary E. McManus
MEd, University of Missouri–St. Louis

Degree Requirements

Undergraduate Bachelor of Science (BS) degrees awarded by the McKelvey School of Engineering include several categories as listed below.

Engineering degrees include the following:

- BS in Biomedical Engineering
- BS in Chemical Engineering
- BS in Computer Engineering
- BS in Electrical Engineering
- BS in Environmental Engineering
- BS in Mechanical Engineering
- BS in Systems Science & Engineering

Computer science degrees include the following:

- BS in Computer Science
- BS in Computer Science + Mathematics
- BS in Computer Science + Economics
- BS in Data Science

Applied science degrees include the following:

- BS Major in Applied Science (Chemical Engineering)
- BS Major in Applied Science (Electrical Engineering)
- BS Major in Applied Science (Mechanical Engineering)
- BS Major in Applied Science (Systems Science & Engineering)

Joint degrees with other undergraduate divisions on campus include the following:

- BS in Business and Computer Science

Engineering Bachelor of Science Degrees

To earn the BS in Biomedical Engineering, BS in Chemical Engineering, BS in Computer Engineering, BS in Electrical Engineering, BS in Environmental Engineering, BS in Mechanical Engineering, or BS in Systems Science & Engineering, a student must satisfy all of the following general distribution requirements:

1. Complete the engineering Common Studies courses outlined below with passing letter grades:
   a. Calculus (MATH 1510, MATH 1520, MATH 2500, and MATH 2130)
   Note 1: The BS in Electrical Engineering and the BS in Systems Science & Engineering require ESE 2170 instead of MATH 2500.
   b. Physics (PHYSICS 1740, PHYSICS 1741, PHYSICS 1742, and PHYSICS 1743)
   c. Chemistry (CHEM 1701 or CHEM 1601 and CHEM 1751)
   Note 1: Some programs also require CHEM 1702 or CHEM 1602 and CHEM 1752.
   Note 2: The BS in Computer Engineering program permits alternate science courses to satisfy this requirement.
   Note 3: CHEM 1701 is required for Biomedical Engineering students; CHEM 1751 is required with CHEM 1701 and CHEM 1601.
   d. Technical Writing (ENGR 3100)
2. Satisfy the specific degree requirements of one of the engineering degree programs as outlined in other sections of this *Bulletin*.
3. Satisfy the requirements listed under All Undergraduate Degrees below.

Computer Science and Applied Science Bachelor of Science Degrees

To earn the BS in Applied Science (Chemical Engineering), BS in Applied Science (Electrical Engineering), BS in Applied Science (Mechanical Engineering), BS in Applied Science (Systems Science & Engineering), BS in Computer Science, BS in Computer Science + Mathematics, BS in Computer Science + Economics, or the BS in Data Science, a student must satisfy all of the following general distribution requirements:

1. Complete at least 120 applicable units.
2. Complete at least 48 units of the 120 in mathematics, natural sciences, and engineering.
3. Complete at least 42 units of the total 120 units at the 3000 level or higher.
4. Satisfy the specific degree requirements of one of the applied science degree programs, as outlined in other sections of this *Bulletin*.
5. Satisfy the requirements outlined under All Undergraduate Degrees below.

Note: Diplomas for applied science degrees state "Bachelor of Science" and do not indicate the major on the diploma. The major (e.g., Chemical Engineering) is posted on the official transcript.

All Undergraduate Degrees

To earn any undergraduate degree in the McKelvey School of Engineering, a student must accomplish all of the following:

1. Earn at least a C (2.0) cumulative grade-point average in all applicable courses taken at Washington University. All courses must be taken for a letter grade unless otherwise specified. Other course restrictions may apply, and students should closely review the remainder of this *Bulletin* as well as the degree audit system.
2. Earn at least the minimum total number of units specified for the particular degree. All degrees require students to complete at least 120 applicable units.
3. Earn at least a C (2.0) GPA in all engineering courses taken.
4. Satisfy all of the following residency requirements:
   a. Complete a minimum of 30 units of 2000 level or higher courses from the school while matriculated at Washington University in a degree program. An approved engineering course transferring in as 2000 level or higher from an exchange program or a study abroad experience sanctioned by the McKelvey School of Engineering may be counted as a school equivalent course for the purpose of satisfying this requirement.
   b. Complete a minimum of 60 units at Washington University while matriculated at Washington University in a degree program. Exchange program or study abroad courses sanctioned by the school may be counted toward this requirement.

c. For students who pursue multiple engineering BS degrees, for each additional BS degree from the school, students must complete an additional 15 resident units of 2000 level or higher courses from the school, which are in addition to the 30 units of 2000 level or higher engineering courses that are listed in 4a above. No more than two BS degrees from the McKelvey School of Engineering may be earned by the same student.

d. For students enrolled in a Washington University undergraduate joint or combined degree program connected to a McKelvey academic department and an academic department outside of McKelvey, the McKelvey academic department may designate specific Washington University courses (2000 level or higher) taken outside of the McKelvey School of Engineering to satisfy the residency requirement listed in 4a above. Such designated courses must be required for the core or elective portions of the major-specific requirements of the joint or combined degree program.
Note: Some departments may have program-specific residency requirements that require students to complete a minimum number of units at Washington University for their specific degree programs. This is currently true in Computer Science & Engineering.

5. Complete the English proficiency requirement as well as the humanities and social sciences requirement of the McKelvey School of Engineering.

English Proficiency Requirement

All incoming McKelvey students are invited to complete the in-person Writing Placement Exam during Bear Beginnings. *This exam is required for all international students and optional for everyone else.*

Following the Writing Placement Exam, students may be placed into one of the following:

- College Writing
- Preparatory course taken prior to College Writing
- Be exempted from taking College Writing

Students who do not take the Writing Placement Exam will automatically be required to enroll in College Writing, which is typically taken in the spring semester of the first year. The school's English proficiency requirement is satisfied only by a grade of C- or better in one of the themed college writing courses developed by the College Writing Program.

Courses taken at other institutions to satisfy the English proficiency requirement must be approved by the school's English proficiency coordinator. If the course is approved, the student must pass with a grade of C or better.

Humanities and Social Sciences Requirement

To earn any bachelor's degree from the McKelvey School of Engineering, students must complete the school's humanities and social sciences requirement:

1. Minimum units: At least 18 units of humanities and social sciences courses must be completed with passing grades. Humanities and social sciences courses (other than transfer courses) may be taken for Pass/No Pass credit.
2. Breadth: At least 6 units of the 18 must be in the humanities, and at least 6 units must be in the social sciences.
3. Upper-level courses: At least 3 units of the 18 units completed must be from one or more courses numbered 3000 or higher.

Note: Joint degree programs may have different humanities/social science degree requirements.

Washington University courses labeled with the McKelvey School of Engineering::Engineering Humanity or McKelvey School of Engineering::Engineering Social Science course tag in the semester course listings will count, respectively, toward the humanities or social sciences requirement for engineering degrees. In general, most art courses (ART) will count toward the engineering school's humanities requirement, even if they do not have the specific McKelvey School of Engineering::Engineering Humanity designation. Some upper-level art courses are open only to students with an open art program.

Transfer courses must be approved through Engineering Undergraduate Student Services as acceptable transfer credit and as applicable humanities or social sciences courses. All transfer courses must be taken for credit (i.e., not Pass/No Pass), and students must earn a C or better in transfer courses for the credit to transfer to the school. Grades do not transfer.

Advanced Placement (AP) credit and International Baccalaureate (IB) credit approved through Engineering Undergraduate Student Services may be used to satisfy all or part of the breadth requirement (i.e., the humanities 6-unit requirement and/or the social science 6-unit requirement); however, AP and IB credit may not be used to satisfy the 18 minimum units needed to satisfy the school's overall humanities and social sciences requirement. Students may individually petition Engineering Undergraduate Student Services to have their AP or IB credit counted toward the humanities 6-unit requirement and/or the social sciences 6-unit requirement. Petitions will be reviewed to determine if they conform to guidelines established for awarding humanities and social sciences credit. Guidelines are approved by the Engineering Undergraduate Studies Committee.

Engineering Topics Units

Bachelor's degree programs accredited by the Engineering Accreditation Commission of ABET require that the program require a minimum of 45 units of engineering topics. A course carrying engineering topics units will be marked in with a McKelvey School of Engineering::Engineering Topics course tag.

Engineering Topics/Design Component

Engineering design is the process of devising a system, component or process to meet desired needs. It is a decision-making process (often iterative) in which basic sciences, mathematics and engineering sciences are applied to convert resources optimally to meet a stated objective. Among the fundamental elements of the design

process are the establishment of objectives and criteria, synthesis, analysis, construction, testing and evaluation. The engineering design component of a curriculum must include most of the following features: development of student creativity, use of open-ended problems, development and use of modern design theory and methodology, formulation of design problem statements and specifications, consideration of alternative solutions, feasibility considerations, production processes, concurrent engineering design and detailed system descriptions. Further, it is essential to include a variety of realistic constraints, such as economic factors, safety, reliability, aesthetics, ethics and social impact.

Engineering Topics/Science Component

The engineering sciences have their roots in mathematics and basic sciences but carry knowledge further toward creative application. These studies provide a bridge between mathematics and basic sciences on the one hand and engineering practice on the other. Such subjects include mechanics, thermodynamics, electrical and electronic circuits, materials science, transport phenomena and computer science (other than computer programming skills), along with other subjects, depending on the discipline. Although it is recognized that some subject areas may be taught from the standpoint of either basic sciences or engineering sciences, the ultimate determination of the engineering science content is based on the extent to which there is extension of knowledge toward creative application. In order to promote breadth, the curriculum must include at least one engineering course outside of the major disciplinary area.

ABET Mathematics and Basic Science Requirement

Bachelor degree programs accredited by the Engineering Accreditation Commission of ABET require that the program require a minimum of 30 units of college-level mathematics and basic sciences (some with experimental experience) appropriate to the discipline. The basic sciences are defined as biology, chemistry and physics.

Applicable Undergraduate Engineering Degree Requirements

Undergraduate engineering students are required to satisfy the engineering degree requirements that are published in the online undergraduate Bulletin *(p. 12)* in effect at the time they first enroll at the university as degree-seeking undergraduate students.

Undergraduate engineering students must complete all undergraduate degree requirements and graduate within 10 consecutive years of enrolling as degree-seeking undergraduate students at the university.

A student who does not graduate within 10 consecutive years will be required to satisfy the degree requirements that are in the most recently published online undergraduate *Bulletin* and to retake courses identified by the chair of the department in which the student is seeking the degree.

- When a student wishes to return to complete coursework and earn a degree after the 10-year time period has passed, the most recent online undergraduate *Bulletin* is defined as the catalog in effect when the student re-enrolls in the McKelvey School of Engineering as an undergraduate student seeking a degree.
- When a student has left the university and wishes to complete coursework at another university to then transfer back and graduate from the McKelvey School of Engineering and when more than 10 years have elapsed since the student was first enrolled as an undergraduate engineering degree-seeking student, the most recent online undergraduate *Bulletin* is defined as the catalog in effect when the student applies for program completion for an engineering undergraduate degree. The coursework that the student intends to complete and transfer back to the McKelvey School of Engineering must be approved by the school before the student enrolls in the coursework.

Academic Honors & Awards

Dean's List

The Dean's List is composed of first-year, sophomore, junior, and senior engineering students who, for the preceding semester, have achieved a 3.6 or higher grade point average based on a minimum of 12 units of applicable courses taken for letter grades (i.e., not Pass/No Pass or Audit). An appropriate entry is added to these students' official transcripts.

No I (incomplete) or N (no grade reported) grades may be a part of the semester's record. For a student to be eligible for the fall Dean's List, all final grades must be posted by January 15. For the spring semester, all final grades must be posted by June 15 for a student to be considered. There is no Dean's List for summer terms.

Latin Honors

For students graduating with undergraduate engineering degrees, Latin honors from the school will be awarded based on the cumulative Washington University GPA. In June, the GPA cutoffs used to select Latin honors for the upcoming year will be assigned by calculating cumulative averages from the three most recent graduation years. For the upcoming graduating class, the three-year average of the top 10% will determine which students are awarded summa cum laude; the three-year average of the next top 10% will determine which students are awarded magna cum laude; and the three-year average of the next top 10% will determine which students are awarded cum laude. Latin honors will be awarded to students whose cumulative GPAs at the time of graduation meet the predefined three-year average GPA cutoffs, which are determined during June of the prior year.

4.0 Cumulative GPA Recognition at Graduation

Graduating seniors with a 4.0 cumulative GPA who entered as first-year students (i.e., not transfer students) receive special acknowledgement at the annual McKelvey Recognition Ceremony in May. Students must have earned a 4.0 cumulative GPA, which is not due to GPA upward rounding (i.e., only A and A+ grades have been earned), at Washington University with no repeated courses (i.e., students who have not taken advantage of the course retake policy). Grades earned in approved transfer courses do not count in the cumulative GPA.

Academic Policies

Attendance

Each professor in the McKelvey School of Engineering decides how many absences a student may have and still pass the course. Professors are expected to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their professors the reasons for any absences and to discuss with them the possibility of making up missed assignments.

Credits and Grades

Credits (often called "units" at WashU) are assigned to courses based on measures of time in class and academic activities, and engagement between instructors and students, defined in university policy (p. 25). Grade points per course are calculated by multiplying the number of units of a course by the grade points earned. The Undergraduate Study page (p. 36) details the grades and grade points in use.

Auditing a Course

A student may register for some courses as an auditor. The criteria for a successful audit are determined by the course instructor, and the student should work with the instructor to ensure that these criteria are understood. Generally speaking, the completion of homework and the taking of exams are not required. The grade L signifies a successful audit, and the grade Z signifies an unsuccessful audit. Neither grade affects a student's grade point average, and the course's units do not contribute to the student's total cumulative degree-seeking units. Audit courses do not count toward any degree, nor do they count toward full-time status determination. They do count toward the 21-unit cap per semester, and audit units are charged at the standard full-time or part-time per-unit rate. Class attendance is normally required to earn a grade of L; unsatisfactory attendance will result in a grade of Z. Computer science courses do not allow students with auditor status.

Incomplete Grades

Incomplete Coursework

Washington University expects students to finish their coursework on time or remove themselves by dropping or withdrawing from the course by published deadlines. When situations outside a student's control arise, preventing timely course completion, a grade of I indicates that work is outstanding. McKelvey students may request an incomplete grade of I only in a course in which they have substantially completed the work, including any requirements of attendance or engagement. Students must also be passing the course based on materials submitted thus far to be eligible for an incomplete I grade.

This policy allows but does not compel I grades in the above circumstances. Grading is the purview of the faculty, as governed by school policies, and they may choose to deny requests for incomplete grades.

Impact of Incomplete Grades

An Incomplete will prevent a student from moving forward in a sequence of courses when the unfinished course is required (prerequisite) to move ahead. An Incomplete is also factored into academic standing reviews and Satisfactory Academic Progress (SAP) reviews.

Finishing Incomplete Coursework

Incomplete grades will change to final failing grades four months (120 days) following the last day of the term in which the course was taken if the student does not submit missing work and the instructor does not submit a final grade. Therefore, students must complete missing work and submit it with enough time to allow the instructor to evaluate the work and submit the grade before the 120-day window ends. For example, a student working with a fall semester Incomplete must submit their work to the instructor in time for them to evaluate the work and assign a final grade by mid-April of the following year. Instructors may establish an earlier deadline than Washington University's deadline in this policy. Students and instructors are strongly encouraged to establish an agreement specifying the work remaining and the deadline for it to be submitted; some schools may require this (see school-specific policies).

Students must not re-enroll in an upcoming section of the unfinished course to make up the incomplete; re-enrollment invokes the course retake policy (p. 1165). Students planning to graduate before the grade change deadline must complete courses and receive grades before graduating. Incompletes remaining at the time of degree conferral will be changed to final grades of failure. Grade changes are not permitted after a degree has been conferred.

N Grades – No Grade Submitted

In the rare event that an instructor is unable to submit a grade by the grade deadline, an N, signifying that the grade has not yet been submitted, may temporarily appear as a transcript notation on the student's record. N grades will change to final failing grades four months (120 days) following the last day of the term in which the course was taken if the instructor does not submit a final grade.

Course Retake Policy

Students whose performance in a course has not met their expectations are permitted to retake courses in which they have earned a B- or lower (grades of Pass, A+, A, A-, B+, B, and Incomplete are not eligible for retakes; audits — whether successful or unsuccessful — are also not eligible for retakes). When a course is repeated, the attempt with the best grade will be used to calculate credit and will factor into the student's GPA. The other attempt(s) will have the letter R (denoting the retake) placed next to the grade. All registrations will show on the transcript; however, only the grade and units of the enrollment with the best grade will be used to calculate the student's GPA.

If an engineering student repeats a course elsewhere (i.e., as a preapproved transfer course from another university), the student must take the course for credit and earn a C or better for the units to transfer to Washington University. After an official transcript showing the final grade for the repeated course is received, the symbol R next to the first enrollment's grade indicates that the course was later retaken. The original grade will no longer figure into the student's GPA, nor will the transfer course grade figure into the GPA. The grade for the transfer course does not display on the student's Washington University record, but the units for the transfer course will count toward the degree program.

Course Descriptions

The McKelvey School of Engineering is subdivided into five academic departments: Biomedical Engineering (BME); Computer Science & Engineering (CSE); Electrical & Systems Engineering (ESE); Energy, Environmental & Chemical Engineering (EECE); and Mechanical Engineering & Materials Science (MEMS). Each department may offer courses leading to one or more bachelor's, master's, or doctoral degrees.

The courses of instruction are numbered according to the following system:

- 1000 to 1999 are primarily for first-year students.
- 2000 to 2999 are primarily for sophomores.
- 3000 to 3999 are primarily for juniors.
- 4000 to 4999 are primarily for juniors and seniors, although certain courses may carry graduate credit.
- 5000 and above are offered to graduate students and to juniors and seniors who have met all stated requirements. If there are no stated requirements, juniors and seniors should obtain permission of the instructor.

One unit of credit is given for each hour of lecture, and one unit is given for each two and one-half hours of laboratory. Each course description shows the course's credit. Courses assigned the course tag "topics" in Workday carry topics units of the same value as the credit of the course.

Definition of Class Levels

For classification purposes, a student's undergraduate class level is defined according to the year in which they intend to graduate.

Pass/No Pass Option

All undergraduate engineering students are eligible to register each semester for up to 6 units with the Pass/No Pass option, for up to a maximum of 18 units attempted. Some departments require students to take certain courses Pass/No Pass; credits in these courses do not count toward either the semester limit of 6 units or the cumulative limit of 18 units. Other than these courses, *only elective courses may be taken with this option,* including courses in other divisions of the university but that are still contingent upon and subject to departmental requirements. Humanities, social sciences and some technical electives specifically allowed by individual engineering programs, as well as some engineering courses (both undergraduate and graduate that are not specifically required for the student's major program), may be taken with the Pass/No Pass option. Some programs do not allow any courses (either required or elective) to be taken with the Pass/No Pass option. Graduate courses taken on a Pass/No Pass basis cannot be transferred later for credit toward a graduate degree.

Changes from the regular grade basis to Pass/No Pass or vice versa may not be made after the last dates specified in the current McKelvey Academic Calendar. The normal regulations for withdrawal or change to auditor status also apply to Pass/No Pass courses.

It is the student's responsibility to discuss with the faculty member what constitutes a pass in a particular course. Although the general pass mark is a C-, instructors have the discretion to set the pass mark higher in their course(s).

A final grade of Pass will earn degree credit where applicable. A final grade of No Pass will not earn degree credit. Neither Pass nor No Pass will affect the GPA.

Academic Standing

This policy applies to all McKelvey undergraduate degree-seeking students. Students who enter as Dual Degree 3-Year Option (3/3) students pursue a McKelvey undergraduate degree for two years and then a McKelvey master's degree during the third year. While pursuing the undergraduate degree during the first two years, this policy is applied to these students. McKelvey graduate academic standing rules are applied during the third year, when these students are primarily pursuing master's degree requirements.

A fundamental requirement for all students is to make sufficient academic progress toward degree completion. In order to make sufficient academic progress, students must earn adequate grades and complete enough units in order to satisfy degree requirements in a timely manner.

The following key performance indicators are used to determine whether a student pursuing an undergraduate degree in McKelvey remains in good academic standing at the end of each fall and spring semester:

- Minimum semester GPA of 2.0
- Minimum cumulative GPA of 2.0
- Completion of 12 units with passing letter grades (D- or higher) or Pass with the Pass/No Pass grade option
  - Course units that will not count as being successfully completed include the following:
    - Courses with an incomplete grade
    - Courses taken for audit credit
    - Courses receiving a failing course grade
    - Courses withdrawn (W)
    - Courses without any final grades posted

An inability to maintain each indicator above will result in a student being placed into one of the three academic standing categories described below, which is a signal that minimum standards for graduating are in danger of not being met. Unless a student demonstrates improvement, thereby indicating their ability to fulfill degree requirements within a reasonable time period, the student may be dismissed from the university.

If a performance indicator contributing to the status of an academic standing category is raised above the threshold (e.g., by the resolution of an incomplete grade or the change of a final grade), then that academic standing may be reconsidered if the student has not yet graduated. However, repeating a course which then results in the first grade earned in the course to no longer count in a GPA will not result in a past academic standing status to be reconsidered.

Academic Concern

Any of the following performance indicators at the end of a semester will cause the student's standing to be reviewed and may cause the student to be placed on Academic Concern:

1. Receiving an incomplete final course grade (first occurrence and all subsequent occurrences)
2. Earning a semester GPA of less than 2.0 (first occurrence)
3. Earning fewer than a total of 12 units in a regular semester (first occurrence)

When a student qualifies for Academic Concern in more than one semester by earning a semester GPA of less than 2.0 (1.b. above) *and/or* by earning fewer than a total of 12 units in a regular semester (1.c. above), then the second (or additional) Academic Concern qualification will immediately convert to Academic Notice or Academic Time Away as described below. Academic Concern is noted only the first time that a student qualifies for an academic action based upon a semester GPA of less than 2.0 *and/or* earning fewer than 12 units.

Example: In semester A, Justin earns less than a 2.0 semester GPA and is placed on Academic Concern. In semester B, Justin earns fewer than 12 units and is placed on Academic Notice.

After an incomplete grade is changed to a grade, the semester GPA and cumulative GPA for that semester may be reevaluated in a future semester to determine if the student has become eligible for a different academic action for the semester the incomplete grade was changed. If a different academic standing category is identified, the student will be notified of the new academic standing category.

Example: In semester A, Bailey earns an incomplete grade and is placed on Academic Concern. The incomplete work was not submitted, so the incomplete grade is converted to a failing F grade, which changed the semester A GPA to less than 2.0. Bailey would be notified that they are placed on an academic action (Academic Concern, Academic Notice, or Time Away, as appropriate) due to semester A GPA being less than 2.0.

While a student placed on Academic Concern remains in good academic standing, this status is a signal to the student that academic performance is below minimum standards and, if continued, will likely cause the student to fall out of good standing. This status is not noted on the official transcript. Because it does not cause the student to fall out of good standing, it will not be incorporated into enrollment verifications requesting confirmation of academic standing.

Academic Notice

Any of the following performance indicators at the end of a semester will cause the student's standing to be reviewed and may cause the student to be placed on Academic Notice:

1. Cumulative GPA of less than 2.0 (first occurrence and all subsequent occurrences)
2. Semester GPA of less than 2.0 (second occurrence and all subsequent occurrences)
3. Earning fewer than a total of 12 units in a regular semester (second occurrence and all subsequent occurrences)
4. First occurrence of 2.b and/or 2.c. above if a student had previously been placed on Academic Concern due to 1.b. and/or 1.c.

Example: At the end of semester A, Rocky is placed on Academic Concern for earning fewer than 12 units. At the end of semester B, Rocky earns a semester GPA of less than 2.0 (their first semester below 2.0), and is then placed on Academic Notice.

Academic Notice status indicates that a student is not in good academic standing. Although this status is not noted on the official transcript, it will be incorporated into enrollment verifications requesting confirmation of a student's standing.

Academic Time Away

Any of the following performance indicators at the end of a semester will cause the student's standing to be reviewed and may cause the student to be placed on Academic Time Away, which is a pause in enrollment at Washington University:

1. Any third time a student becomes eligible for Academic Notice
2. Any second sequential semester a student becomes eligible for Academic Notice
3. Any semester in which a student was enrolled in courses but earns no degree credit that semester (e.g., fails all courses)

Academic Time Away status indicates that a student is not in good academic standing. Because this status is marked by a break in enrollment, this status is noted on the official transcript.

Academic Time Away is not viewed as punitive. Rather, it is an academic pause applied when it is clear that something is interfering with a student's ability to complete degree requirements. It is not in a student's best interest to continue with their studies unless changes are made that will enable successful and consistent academic progress toward graduation.

Students placed on Academic Time Away are given the option to appeal. Students choosing to appeal must follow a prescribed appeal process within provided specific deadlines. Students who successfully appeal their Academic Time Away will be allowed to continue their enrollment and their academic status category will change to Academic Notice. Students deciding not to appeal, or if their appeal is unsuccessful, will have their registration cancelled for the upcoming semester and their academic record will be closed. When this occurs, it is possible for the student to request reinstatement with McKelvey at a future time. Students in this situation will need to show that they have successfully completed challenging coursework at a different institution (normally, at least for one year), or be employed in a paid position (normally, at least for one year), or a combination of the two (school and work). Students who have been placed on Academic Time Away will be allowed to return when it appears that they are genuinely ready to successfully complete coursework at Washington University.

Dual-Degree Students

A student who enters as a Dual-Degree 3-Year Option (3/3) student pursues a McKelvey undergraduate degree for two years and then a McKelvey master's degree the third year. While pursuing the undergraduate degree during the first two years, undergraduate academic standing rules are applied to the student. McKelvey graduate probation and suspension rules are applied during the third year, when the student is pursuing the master's degree.

Satisfactory Academic Progress for Title IV Financial Aid

Federal regulations require that students receiving federal Title IV financial aid maintain Satisfactory Academic Progress (SAP). The minimum GPA requirements needed to maintain eligibility for SAP are dictated by the specific program of study. In each case, per the requirements of 34 C.F.R. 668.34(a)(4(ii), the federal student aid program requires a minimum of a C average to maintain eligibility for aid, but an individual degree or certificate program may have a higher minimum GPA for federal SAP.

SAP is evaluated annually at the end of the spring semester. In order to maintain SAP and thus be eligible for federal financial aid, a student must maintain minimum requirements for cumulative GPA ($\geq$2.0 for undergraduates, $\geq$2.70 for master's students, and $\geq$3.0 for doctoral students). A student must also maintain minimum requirements for pace (credit earned for at least 67% of the credits attempted). In addition, the degree must be completed within the maximum time frame allowed for the program (defined as 150% of the required credits). Students who are not maintaining SAP will be notified by the McKelvey Registrar and, barring an approved appeal, are ineligible for aid for future semesters.

More information about Satisfactory Academic Progress is available from Student Financial Services.

Full-Time and Part-Time Enrollment

Engineering undergraduate degree programs are full-time programs. All undergraduate students are automatically charged full-time tuition each semester. Full-time enrollment is 12 to 21 units of credit per semester. Courses taken in audit status do not count toward full-time enrollment status. Students may not enroll in more than 21 units without special permission. An additional per-unit tuition charge is assessed for enrolled units exceeding the 21-unit limit in a semester.

Part-time enrollment is not allowed unless it is formally approved by Disability Resources or the Student Health Center. Students approved for part-time status may enroll in 1 to 11 units and are charged part-time tuition, along with all standard undergraduate fees. Each semester, these students should contact the Engineering Registrar and request to have their tuition adjusted to reflect their part-time enrolled units. Financial aid may not be available for part-time enrollment, so students should contact Student Financial Services to discuss their specific situations.

Seniors who need to enroll for an extra semester in order to graduate may request part-time enrollment and part-time tuition charges for that additional semester of study. These students will not have full-time student status if they are enrolled in less than 12 units. For students who enrolled as first-year students, part-time enrollment may be requested after their eighth academic semester of study. For dual-degree undergraduate students, part-time enrollment may be requested after their fourth academic semester of study. Prior to the add/drop deadline for the semester, these seniors may petition the Engineering Registrar to have their tuition adjusted to reflect their part-time enrolled units. Students approved for reduced tuition will have their bills adjusted after the add/drop deadline has passed. Summer sessions are not counted as academic semesters.

Leaves of Absence

Engineering students may request to take a leave of absence. For information on how to request a leave of absence, please visit the university's Time Away: Leave of Absence, Withdrawal, and Reinstatement Process webpage. For a leave of absence, students in good standing are assured re-enrollment within the next year. In order to return, students should notify the McKelvey School of Engineering and request a reinstatement in Workday at least six weeks prior to the beginning of the appropriate term.

A student wishing to take a medical leave of absence or be reinstated from a medical leave of absence must have a recommendation from WashU Cares. Additional steps are required in this case and are outlined at the link above. After review of the recommendation made by WashU Cares, the school will decide whether or not to grant the leave or reinstatement request.

Tuition Refunds

All full-time undergraduate students in Engineering are assessed tuition at a full-time tuition rate and do not receive refunds for dropping individual courses. Students who officially withdraw from the university (drop all semester courses) will receive a tuition refund as outlined on the Undergraduate Tuition & Fees page (p. 62) of this *Bulletin.* After the date of the first class meeting, refunds are not granted for short courses, which run less than the full semester length.

Transfer Credit

A student must get prior approval before taking a course at another university. After completing the course, the student must have an official copy of the transcript sent to the McKelvey School of Engineering for evaluation. If the credit is accepted, the course will appear on the transcript with the units but not the grade. Only units of credit for courses with a grade of C or better will transfer. No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Conduct Code or the Academic Integrity policy. The transfer course approval process is outlined on the McKelvey School of Engineering website.

Transfer credit is never accepted for online courses.

School of Continuing & Professional Studies Courses

The focus of the WashU School of Continuing & Professional Studies (CAPS) is to serve working adults in the St. Louis region. It is specifically oriented toward part-time students who are balancing work, family, and educational goals.

Engineering undergraduate students in their final year of study may enroll in one CAPS course each semester, provided CAPS allows day-school students to enroll in those specific courses. Other engineering undergraduate students may only enroll in CAPS courses that have been preapproved by the Engineering Undergraduate Studies Committee. Consult with your four-year advisor in Engineering Undergraduate Student Services (Lopata Hall room 303) if you have questions.

CAPS courses completed by engineering undergraduate students are counted as free electives, but will not fulfill specific engineering degree requirements (e.g., humanities, social science, natural science).

Exceptions

Exceptions to the above rules may exist for a student's declared degree program when working toward a non-Engineering minor or a dual degree program.

Military Training

Army and Air Force ROTC programs are available at Washington University. These courses are counted as free electives. The last course in the sequence, MILS 4020, will count for social science credit.

Course descriptions for Air Force ROTC and Army ROTC (p. 1178) can be found in the appropriate sections of this *Bulletin*.

Sever Institute Courses

Sever graduate courses are allowed to count as general units and in the GPA for all undergraduate and graduate McKelvey students. The units earned in Sever graduate courses will count as general units needed to satisfy any McKelvey degree, and they will count toward the general Washington University residency requirement for undergraduate degrees. However, they will not count toward the engineering ("E" course) residency requirement for McKelvey undergraduate degrees. The GPA earned in Sever graduate courses will count toward the cumulative GPA, the semester GPA, the Dean's List, the class rank, and Latin honors. Unless approved by the McKelvey department offering the student's degree program, Sever graduate courses will not satisfy any course requirement (core or elective requirement) for any McKelvey undergraduate degree, graduate degree, second major, minor, or certificate program.

Online Courses

Online courses taken by engineering undergraduate students will not count toward graduation requirements. Exceptions include only those courses offered by McKelvey departments and courses offered by Arts & Sciences departments.

Academic Integrity

All students in the McKelvey School of Engineering are expected to conform to high standards of conduct. To review our school statement and university policies on Academic Integrity as well as our violation allegation process, please visit the Academic Integrity at McKelvey webpage.

Academic Calendar

In addition to the university's academic calendar, McKelvey maintains an Engineering Academic Calendar with dates and deadlines that are specific to McKelvey students. This calendar includes course information, which is also helpful for non-McKelvey students taking engineering courses.

Majors (directory)

Below is a list of majors offered by the McKelvey School of Engineering. Visit the following sections of this *Bulletin* for more information about a specific major. Students must log into Workday and request to switch their major program within Engineering or to add a second major or minor.

- Bachelor of Science in Applied Science (Chemical Engineering) (EECE) (p. 1142)
- Bachelor of Science in Applied Science (Electrical Engineering) (ESE) (p. 1128)
- Bachelor of Science in Applied Science (Mechanical Engineering) (MEMS) (p. 1153)
- Bachelor of Science in Applied Science (Systems Science & Engineering) (ESE) (p. 1128)
- Bachelor of Science in Biomedical Engineering (BME) (p. 1081)
- Bachelor of Science in Business and Computer Science (CSE) (p. 1104)
- Bachelor of Science in Chemical Engineering (EECE) (p. 1140)
- Bachelor of Science in Computer Engineering (CSE) (p. 1096)
- Bachelor of Science in Computer Engineering (ESE) (p. 1126)
- Bachelor of Science in Computer Science (CSE) (p. 1097)
- Bachelor of Science in Computer Science + Economics (CSE) (p. 1098)
- Bachelor of Science in Computer Science + Mathematics (CSE) (p. 1099)
- Bachelor of Science in Data Science (CSE) (p. 1102)
- Bachelor of Science in Electrical Engineering (ESE) (p. 1123)
- Bachelor of Science in Environmental Engineering (EECE) (p. 1141)
- Bachelor of Science in Mechanical Engineering (MEMS) (p. 1151)
- Bachelor of Science in Systems Science & Engineering (ESE) (p. 1125)
- Double Majors and the Pre-Medical Program (EECE) (p. 1142)
- Second Major in Computer Science (CSE) (p. 1106)
- Second Major in Computer Science + Mathematics (CSE) (p. 1107)
- Second Major in Data Science (CSE) (p. 1109)
- Second Major in Electrical Engineering (ESE) (p. 1129)
- Second Major in Financial Engineering (ESE) (p. 1130)
- Second Major in Systems Science & Engineering (ESE) (p. 1129)

Minors (directory)

Residency Rule for Engineering Minors

No more than 6 units of credit transferred from another institution (outside Washington University) can be used to meet the requirements of any minor offered by the McKelvey School of Engineering. The remaining units (up to the amount required for the minor) must be applicable units from Washington University taken for a letter grade. Classes taken with the Pass/No Pass grade option do not meet requirements unless specifically allowed. The review committee that oversees a minor has the authority to establish a more stringent residency rule.

Minors

Below is a list of minors offered by the McKelvey School of Engineering. Visit the following sections of this *Bulletin* for more information about a specific minor. Students must log into Workday and add a secondary program of study to add a minor.

- Minor in Aerospace Engineering (MEMS) (p. 1154)
- Minor in Bioinformatics (CSE) (p. 1111)
- Minor in Biomedical Data Science (BME) (p. 1082)
- Minor in Computer Science (CSE) (p. 1112)
- Minor in Electrical Engineering (ESE) (p. 1130)
- Minor in Energy Engineering (EECE) (p. 1143)
- Minor in Energy Engineering (ESE) (p. 1131)
- Minor in Energy Engineering (MEMS) (p. 1154)
- Minor in Environmental Engineering Science (EECE) (p. 1144)
- Minor in Environmental Engineering Science (MEMS) (p. 1155)
- Minor in Human-Computer Interaction (CSE) (p. 1112)
- Minor in Materials Science & Engineering (MEMS) (p. 1156)
- Minor in Mechanical Engineering (MEMS) (p. 1157)
- Minor in Mechatronics (ESE) (p. 1131)

- Minor in Mechatronics (MEMS) (p. 1158)
- Minor in Nanoscale Science & Engineering (EECE) (p. 1144)
- Minor in Nanoscale Science & Engineering (MEMS) (p. 1158)
- Minor in Quantum Engineering (ESE) (p. 1133)
- Minor in Robotics (ESE) (p. 1132)
- Minor in Robotics (MEMS) (p. 1159)
- Minor in Systems Science & Engineering (ESE) (p. 1132)

Washington University in St. Louis

Beyond Boundaries Program

Program Overview

The Beyond Boundaries Program is a two- or four-year program that allows students to be a part of an ecosystem of interdisciplinary scholars intent on problem solving through cross-discipline collaboration.

The Beyond Boundaries Program will prepare student scholars to engage in interdisciplinary teams and will center around three pillars:

1. Academic preparation for interdisciplinary work
2. Ecosystem of scholars intent on problem solving through cross-discipline collaboration
3. Ongoing support across four years at Washington University

Throughout their time in the program, students will focus on three questions:

1. What role(s) do I want to play on collaborative problem-solving teams?
2. What skills, knowledge, and partnerships are necessary for interdisciplinary work?
3. How can I use my time at Washington University to grow these skills?

Learning Objectives

Students participating in the Beyond Boundaries Program will be able to do the following:

- Describe the value of interdisciplinary approaches to problem solving.
- Apply disciplinary perspectives to interdisciplinary problem solving.
- Assemble interdisciplinary teams around a problem or subject.
- Design interventions/solutions based on interdisciplinary perspectives.
- Facilitate and organize collaborative teams.

Program Completion

Students who participate in and complete the program requirements for their first two years will receive a milestone notation on their official transcript. A description of specific program requirements can be found on the Curriculum tab of this page.

Program students then have the option to leave the program after year two or continue to participate for years three and four. Those who complete years three and four will received an additional milestone notation on their official transcript.

The minimum grade point average requirements needed to maintain eligibility for Satisfactory Academic Progress are dictated by the specific program of study. In each case, per the requirements of 34 C.F.R. 668.34(a)(4(ii), the federal student aid program requires a minimum of a C average to maintain eligibility for aid, but an individual degree or certificate program may have a higher minimum GPA for federal Satisfactory Academic Progress. Beyond Boundaries Program students are required to maintain a 2.0 cumulative GPA. To be in good academic standing in the program on a semesterly basis, students are expected to complete a minimum of 12 units per semester with a minimum 2.0 semester GPA.

Curriculum

Phase 1: Foundation (Years 1 and 2)

Year 1 (6 required credits)

Year 1 requirements include an introductory curricular sequence that teaches writing, the framework of interdisciplinary study, and collaborative problem solving, as well as one Beyond Boundaries course:

- Beyond Boundaries Seminar (3 credits total, 1 credit in fall and 2 credits in spring)
- Beyond Boundaries Courses (3 credits, 1 course in fall or spring)

College Writing (a supporting course): Analytical, communication, and research skills are critical to interdisciplinary practice. Through College Writing, students will have the opportunity to practice these skills in skills through a variety texts, contexts, and approaches they can carry with them in the Beyond Boundaries Program.

Fall Semester

- Beyond Boundaries Seminar (1 credit, Beyond Boundaries Program students only)
- One Beyond Boundaries Course (3 credits, either fall or spring)

Spring Semester

- Beyond Boundaries Seminar (2 credits, Beyond Boundaries Program students only)
- One Beyond Boundaries Course (3 credits, either fall or spring)

Year 2: Beyond Boundaries programming and self-directed interdisciplinary learning

In Year 2 of the program, students will shift to self-directed learning. Components of this year include the following:

- Participation in Beyond Boundaries peer mentoring
- Beyond Boundaries workshops and events
- Engagement in on-/off-campus activities, such as these:
  - Speakers or exhibits
  - Networking events or workshops
  - Community service/volunteering events
  - Seminars or conferences
  - Internships/fellowships
  - Interdisciplinary courses/projects/programs

These various opportunities are designed to allow students the flexibility to achieve their academic and cocurricular goals beyond the Beyond Boundaries Program, while keeping them connected to the program community.

Students who complete Years 1 and 2 of the Beyond Boundaries Program receive a milestone notation on their transcript. Students may opt to continue this program into their third and fourth years.

For more information, please review the Beyond Boundaries Program's detailed description of self-directed learning.

Note: Students need to complete all of the requirements for Phase 1 of the Beyond Boundaries Program in order to continue on to Phase 2.

Phase 2: Focus (Years 3 and 4)

Year 3: Beyond Boundaries programming and self-directed interdisciplinary learning

The components mentioned above in Year 2 will also be applicable in Years 3 and 4. In addition, students in this second phase of the program will begin receiving support as they start working on their interdisciplinary capstone projects and thesis papers.

Year 4

This final year will culminate in the completion of the above-mentioned program requirements, including the incorporation of a capstone project or thesis paper.

Students who meet the program requirements of this second phase of the program will receive an additional milestone notation on their official transcript.

Courses

Year 1 Courses for Beyond Boundaries Students

Core Courses

To find Beyond Boundaries courses in Workday, search “Beyond Boundaries” in the subject line on the left.

Beyond Boundaries courses are offered for credit only to all students. They are not offered Pass/No Pass.

Beyond Boundaries Seminar (3 credits total)

The knowledge gained in the Beyond Boundaries Seminar series is designed to contribute to academic success, personal development, and a more rewarding social and academic experience throughout the college experience. The series consists of both a fall and spring course during the first year. The fall class is a 1-credit (1-hour) lecture, and the spring class combines a 1-credit (1-hour) lecture and a 1-credit (1-hour) discussion section.

BEYOND 1000 and BEYOND 1001: Beyond Boundaries Seminar

The Beyond Boundaries Seminar is designed to support students' development in interdisciplinary thinking and collaborative problem solving. Over the course of two semesters, students will engage in discussions, workshops, skill-building exercises, and panel presentations to grow their skills and knowledge in these areas. Over the course of the academic year, we will ask the following questions:

1. What role(s) do I want to play on collaborative problem-solving teams?
2. What skills and knowledge are necessary for interdisciplinary work?
3. How can I use my time at Washington University to grow these skills?

This course (for credit only) is required for all first-year students in the Beyond Boundaries Program and open only to first-year students in the Beyond Boundaries Program.

Beyond Boundaries Courses (3 credits each, open to all first-year students)

In addition to the course mentioned above, first-year students in the Beyond Boundaries Program will be required to complete one Beyond Boundaries course (during their first year), for which they will have priority enrollment.

Beyond Boundaries courses, which are funded by the Office of the Provost and offered to first-year students *only,* are designed to prepare students for a rapidly evolving world characterized by social, political, scientific, and economic challenges that cannot be solved using knowledge from a single discipline. Team-taught by faculty from different schools across Washington University, Beyond Boundaries courses offer a window into how scholars from different disciplines approach big, critical topics such as our aging population, the nature of creativity, the phenomenon of climate change, and the art of medicine.

Not all courses are offered every year.

BEYOND 1002: Beyond Boundaries: The Business of Elections

This course will focus on understanding the primary and presidential elections — particularly the current election cycle — through a multidisciplinary approach that primarily involves political science and business. Campaigns are start-ups that rely on strategy, branding, influencing consumers (voters), financing and other concepts to achieve the election of their candidate. At the same time, American politics is highly polarized, with voters who are increasingly hostile to listening to the other side. Given this context, how does a campaign succeed as an entrepreneurial venture? This course will allow students to compare and contrast how different candidates' policies and platforms may affect different constituencies/sectors of the business/labor world as well as the economy, how the media portrays them, and what role they will play in the general election.

BEYOND 1003: Beyond Boundaries: When I'm 64: Preparing Ourselves and Society for a Good Long Life

Whether you know it or not, you're living in the midst of a revolution — a revolution that is going to change your personal and professional lives. Although old age may seem a long way off, you'll likely live to age 80 or beyond, with a 50% chance of seeing your 100th birthday. The demographic revolution you're going to live through will change the health care you receive, the house you live in, the car you drive, the jobs you do, and the relationships you have. This class will give you a competitive edge in understanding how you can harness what's happening to shape your career and lifestyle. In class you'll be introduced to leaders and ideas from many fields — medicine, engineering, architecture, public health, social work, law, business, art, and psychology — focused on the issues of our aging society. There will also be opportunities to tailor the class to your interests through events on and off campus, including movies, lectures, performances, field trips, and community projects. Each week, we'll gather for lectures and also break into small groups for discussion. This course will set you on a path to lead the aging revolution and transform the society of tomorrow.

BEYOND 1004: Beyond Boundaries: To Sustainability and Beyond: People, Planet, Prosperity (P3)

This class examines the subject of sustainability from multiple perspectives to gain an appreciation for its interconnected environmental, social, and economic dimensions. We explore foundational concepts and principles through a variety of activities and assignments, including readings, discussions, group work, case studies, presentations, and projects. The goal is to integrate knowledge and methods from different disciplines to achieve a holistic understanding of sustainability problems and solutions.

BEYOND 1005: Beyond Boundaries: The Endgame of Entrepreneurship: Leveraging Capitalism for Good

Historically, profit has been a key driver of human behavior. In this class, students will learn to take advantage of the profit-seeking motive of capitalism while also learning from mistakes and unintended consequences capitalism has caused throughout history. Students will apply these learnings toward profit-seeking solutions for the United Nations' Sustainable Development Goals — which are global challenges that call us to work together with boldness and urgency. We will explore how skills from entrepreneurship and venture creation can be used to improve water, climate, education and gender equality globally and here in St. Louis. In interdisciplinary teams, students will learn how to define a problem; listen to customers, competitors and collaborators; create value; measure impact; and communicate their vision. Bold entrepreneurial spirit and skills learned in this class will guide students in their further WashU studies and beyond.

BEYOND 1006: Beyond Boundaries: Gender, Youth, and Global Health

Through in-depth case studies, this course provides an introduction to gender-specific issues in the context of childhood and adolescence, poverty, and global health. Students will learn to identify how gender and gender differences affect conditions of life in the areas of reproductive health, nutrition, conflict, access to healthcare, and the social determinants of health, especially for young people. Students will learn to analyze health conditions and disparities in relation to both the micro dynamics of local worlds and the macro dynamics of large-scale social forces in the postcolonial global field. In addition, students will come to understand the current challenges that global health practitioners and institutions confront in achieving gender equity and the current efforts toward closing the gap. These learning objectives will be achieved using lectures as well as discussion-based sessions and Skype-based interactions with NGOs and experts who are currently working in the field.

BEYOND 1007: Beyond Boundaries: Designing Creativity: Innovation Across Disciplines

From "Ah-ha" epiphanies to slow-developing discoveries, the creative process has been employed by innovators and artists in virtually every corner of the globe for centuries. Designing Creativity is a course that will explore the study and practice of the creative process across many disciplines with input from prominent thinkers and practitioners in the areas of medicine, neuroscience, law, engineering, architecture, human-centered design, business, stage design, and the performing arts. The class will also incorporate practice of design thinking and creativity techniques in a LAB component that will allow students to explore the development of innovative ideas in collaborative teams followed by project presentations to core faculty and classmates.

BEYOND 1008: Beyond Boundaries: Religious Freedom in America

The intersection of religion and law in American society has sparked some of the fiercest cultural engagements in recent memory: Should a for-profit religious corporation have a right not to fund birth control for its employees? Can a public college expel campus religious groups whose membership is not open to all students? May a Muslim grow a beard for religious reasons in prison? Should a cake baker or a florist be permitted to refuse services for a gay wedding? Can a church hire and fire its ministers for any reason? These current debates and the issues that frame them are interwoven in the American story. This course introduces students to the major texts and historical arguments underlying that story. Drawing from the respective expertise of the instructors, it exposes students to a variety of scholarly methods related to the issue: legal history and case law, intellectual history and canonical texts, social history and narrative accounts, and political philosophy and contemporary analyses. For more from these professors, listen to their podcast episode.

BEYOND 1009: Beyond Boundaries: The Art of Medicine

This interdisciplinary, cross-school course at the intersection of history, visual culture and the visual arts includes a roster of notable speakers and offers students a singular encounter with western medicine from ancient times to the present day. In tandem with the history of medicine, the course examines the capacity of the arts to frame medical practice and to raise questions and influence perceptions, both positively and negatively, of medical advancements.

BEYOND 1012: Beyond Boundaries: St. Louis and the Documentary Image

From magazines to maps to documentary movies and TV, we look to pictures to tell us the truth. But no image is ever completely objective; every visual reflection of the real world is mediated by technology, culture, politics, and memory. How do we — as viewers, as creators, as people — sort out the complicated claims pictures make on the world around us? Drawing on collaborations between four areas in two schools — Visual Arts, English, American Culture Studies, and Film and Media Studies — this course will introduce students to theories and practices of visual nonfiction within the city of Saint Louis. Through immersive, site-specific course units focused on a variety of approaches to visual nonfiction in different media, students will engage with the tumultuous history, material culture, and landscapes of St. Louis. The course will introduce first-year students both to their city and their university, preparing them to explore existing coursework in Arts & Sciences and the Sam Fox School.

BEYOND 1013: Beyond Boundaries: Morality and Markets

What does it look like to live a moral life in today's market system? We know all too well what it does not look like. The news is filled with moral failures of leaders and executives at top firms. We like to believe that we would behave differently, but what kinds of pressures inform our moral choices? What pulls us, what pushes us, and what persuades us to act one way rather than another? These are the questions that a course combining business and literature can address in unique ways; the world of fiction helps us to examine the ethical dilemmas of the market we inhabit every day. In this course, we use great books, classics of film and modern television, and the tools of modern psychology and business strategy to think critically about what is entailed in living a moral life in the midst of the modern market.

BEYOND 1015: Beyond Boundaries: Earth's Future: Causes and Consequences of Global Climate Change

Climate change is said by many to be one of the most important issues of our time. This course examines 1) the physical basis for climate change; 2) how climates are changing and how we know and assess that climates are changing; and 3) the effects of climate change on natural and human systems. The course is team-taught and will involve participation by scholars across the university with expertise in specific subjects. Earth's Future is a broad, introductory course for first-year students. While this course presumes no special subject matter knowledge on the part of the student you will be exposed to a broad array of scholarship across the sciences, social sciences, engineering, and humanities.

ENST 1540: Beyond Boundaries: Environmental Racism and the Health of Everyone

Environmental inequalities threaten the health and well-being of low-income communities and communities of color who are increasingly on the front lines in the fight against climate change, air and water pollution, food security, and many other urgent environmental problems. Like many urban areas, the St. Louis region faces egregious social, environmental and health disparities. In this course, we critically examine the role of racism and other structural policy inequalities that produce unequal environments and how those unequal environments contribute to public health disparities in St. Louis and beyond. We explore the use of public health data, policy options, and case studies that allow for evidence-based solutions to environmental racism and improved population health. This course that combines small group sessions, case studies and speakers working on environmental justice in the St. Louis region. We provide students with interdisciplinary perspectives and methods, challenging them to address racism and environmental policy through a population health lens. Student learning will be assessed through case studies, reflections, online assignments, and exams.

Bear Bridge Courses (3 credits): Spring Semester

In the spring semester, first-year students in the Beyond Boundaries Program have an opportunity to apply their interdisciplinary knowledge to important social and intellectual questions via a Bear Bridge course.

Bear Bridge courses are intended to do the following:

- Apply knowledge and experience from team-taught Beyond Boundaries courses in a project-based, applied context.
- Reinforce cohort experience within the Beyond Boundaries Program. Students enrolled in the Beyond Boundaries Program will have additional curricular and cocurricular cohort-building experiences, and Bear Bridge courses will reinforce these connections.
- Prepare students for ongoing interdisciplinary approaches in their following three years on campus. Bear Bridge courses will give students a set of tools to apply interdisciplinary approaches, including informing their choice of major, their approach to their capstone project, and their self-identity as a scholar.

BEYOND 1010: Beyond Boundaries: Empathy First: Creating Solutions with Heart

Decisions that impact the daily lives of people are often made without consideration of the lived experience of those impacted, resulting in harm and eroded trust. Empathy is a critical tool for understanding the lived experience of others and creating better quality of life for all people. This course will introduce the integration of empathy into decisions through the methods, processes, and approaches used in design and social work. Students will examine how empathy is incorporated into the development and implementation of new solutions to wicked problems through conversations with experts in health, law, and business; community-based team projects; and reflection and discussion.

BEYOND 1011: Beyond Boundaries: Law, Race, and Design: Examining the St. Louis Story

This interdisciplinary course focuses on the intersection of law, race, and design in St. Louis. From Dred Scott to Ferguson, St. Louis has served as a focal point for some of the most important issues in our country's long and still unfinished work toward racial equality. The law has played an important role in these developments; judicial opinions, city ordinances, and commission reports have shaped how we understand questions of race and equality. But the law is not simply the written word: it involves people, practices, places, and the stories we tell about them. How we communicate our stories ultimately affects how we understand those stories and how we understand ourselves. This course situates law within stories and equips students to communicate those stories in ways that draw from a range of communication design methodological tools. Using design research, thinking, and a human-centered design approach, this course will challenge students to connect the words of legal documents with the experiences of those whose lives are situated by them. There will be two required self-guided visits outside of normal class time, each of which should take 2.5 to 3 hours, including travel to and from the site. Accommodations for normal class sessions (either ending early or canceling class) will take place to offset some of this time commitment.

Supporting Courses

College Writing (3 credits)

Analytical, communication, and research skills are critical to interdisciplinary practice. Through College Writing, students will have the opportunity to practice these skills through a variety texts, contexts, and approaches that they can carry with them in the Beyond Boundaries Program.

Interdisciplinary Opportunities

Washington University offers courses through interdisciplinary programs that include studies in a variety of disciplines that cross traditional academic boundaries and support academic areas outside of the schools.

- A limited opportunity for some Washington University students to enroll in courses at Saint Louis University and the University of Missouri-St. Louis is available through the Inter-University Exchange Program (p. 1176).
- ROTC (p. 1177) courses are offered in conjunction with the U.S. Air Force and U.S. Army.
- The Skandalaris Center (p. 1180) offers cocurricular programming and practical, hands-on training and funding opportunities to students and faculty in all disciplines and schools.

Inter-University Exchange Program

The Inter-University Exchange (IE) program between Washington University, Saint Louis University (SLU), and the University of Missouri–St. Louis (UMSL) began in 1976 as an exchange agreement encouraging greater inter-institutional cooperation at the graduate level. Over time, this program has evolved to include undergraduate education. The basic provisions of the original agreement are still in place today, and participation continues to be at the discretion of each academic department or unit.

At Washington University, there are several schools that *do not participate* in this program (i.e., degree-seeking students in these schools are not eligible to participate in the IE program, and courses offered in these schools are not open to SLU and UMSL students attending Washington University through the IE program). They are the School of Law, the School of Medicine, the McKelvey School of Engineering, and the School of Continuing & Professional Studies. The Washington University schools that are open to participation in the IE program may have specific limitations or requirements for participation; details are available in those offices.

The following provisions apply to all coursework taken by Washington University students attending SLU or UMSL through the IE program:

- Such courses can be used for the fulfillment of degree or major requirements. (Students should consult with their dean's office for information about how IE coursework will count toward their grade-point average, units and major requirements.)
- Such courses are not regularly offered at Washington University.
- Registration for such courses requires preliminary approval of the student's major/department advisor, the student's division office or dean, and the academic department of the host university.
- Students at the host institution have first claim on course enrollment (i.e., a desired course at SLU or UMSL may be fully subscribed and unable to accept Washington University students).
- Academic credit earned in such courses will be considered as resident credit, not transfer credit.
- Tuition for such courses will be paid to Washington University at the prevailing Washington University rates; there is no additional tuition cost to the student who enrolls in IE coursework on another campus. However, students are responsible for any and all fees charged by the host school.
- Library privileges attendant on enrolling in a course on a host campus will be made available in the manner prescribed by the host campus.

Instructions

Washington University students must be enrolled full-time to participate in the IE program and have no holds, financial or otherwise, on their academic record at Washington University or at the host institution.

1. The student must complete the IE program application form. Forms are available from the Office of the University Registrar website.
2. The student must provide all information requested in the top portion of the form and indicate the course in which they wish to enroll.
3. The student must obtain the approval signature of the professor teaching the class or the department chair at SLU or UMSL, preferably in person.
4. The student also must obtain the approval signatures of their major advisor at Washington University and the appropriate individual in their dean's office.
5. Completed forms must be submitted to the Office of the University Registrar in the Women's Building a minimum of one week before the start of the term.

Course enrollment is handled administratively by the registrars of the home and host institutions. Washington University students registered for IE coursework will see these courses on their class schedule and academic record with the subject codes SLU and UMSL. Final grades are recorded when received from the host institution. The student does not need to obtain an official transcript from SLU or UMSL to receive academic credit for IE coursework at Washington University.

Reserve Officers Training Corps (ROTC)

The number of ROTC credits that may be counted toward graduation requirements depends on the student's program of study. ROTC students should consult with their academic advisor to determine if or how ROTC course work will satisfy their graduation requirements.

- Undergraduate Arts & Sciences Academic Regulations (p. 1012)
- Undergraduate Business Degree Requirements (p. 1048)
- Undergraduate Engineering Academic Policies (p. 1168)

Air Force ROTC — Aerospace Studies

Professor

S. Michael Castlen
Lieutenant Colonel, USAF

Military Aerospace Science. Our Core Values: Integrity First, Service Before Self, Excellence In All We Do. Air Force operations are currently conducted in the technologically demanding environments of air, space and cyberspace.

Air Force ROTC (AFROTC) is an officer development program that produces the leaders of tomorrow's Air Force. The program's purpose is to train and develop outstanding college students to earn commissions as U.S. Air Force Officers. Numerous Washington University students have participated in AFROTC and gone on to distinguish themselves as Air Force aviators, engineers, lawyers, physicians and astronauts.

In AFROTC, Washington University students have the opportunity to be challenged within a unique leadership environment, with the potential to earn a commission as a second lieutenant. Participation in AFROTC is available to undergraduate and graduate Washington University students and does not obligate these students to serve in the U.S. Air Force.

AFROTC attracts the very best and brightest college students. The categorization of officer candidates within AFROTC is based on competitive selection criteria.

For more information, contact AFROTC:

Detachment 207 in St. Louis
314-977-8230
Detachment 207 website

U.S. Air Force ROTC
888-4-AFROTC
AFROTC website

For AFROTC scholarship information, refer to the Scholarship Funds section of this *Bulletin*.

Army ROTC

Military Science. The Army ROTC program is designed to develop leaders for life. In doing so, it develops leadership, management and training skills, regardless of a student's career plans. Those who successfully complete the program earn commissions and serve as second lieutenants in the U.S. Army, Army Reserve or Army National Guard.

All students are eligible to participate in Army ROTC courses. Introductory courses are designed to develop a student's confidence, self-esteem and motivation. The intent is to develop and refine the student's leadership traits and skills to ensure their future success in military and nonmilitary environments. Instruction also includes the role of the military in national defense strategy. The number of ROTC credits that may be counted toward graduation requirements depends upon the student's program of study. ROTC students should consult with their academic advisor to determine if or how ROTC course work satisfies graduation requirements. Once a student accepts a scholarship or enters the advanced ROTC courses (300 and 400 levels), they incur a military obligation.

For more information, contact the Military Science Department, Washington University in St. Louis, 700 Rosedale Ave., Suite 1550, St. Louis, MO 63112; call 314-935-5521; visit the Washington University Army ROTC website; or email Lee Rodriguez (lee.e.rodriguez@wustl.edu), the Army ROTC Scholarships and Enrollment Officer.

For Army ROTC scholarship information, refer to the Financial Support section of this *Bulletin*.

Requirements

Airforce ROTC — Aerospace Studies Program Requirements

For more information, call the detachment for additional information about ROTC cadet in-processing and the first day of class at 314-977-8328. The Saint Louis University Air Force ROTC facility (main office) is located at 3450 Lindell Boulevard, Suite 1033, St. Louis, MO 63103.

Army ROTC Program Requirements

Army ROTC provides the leadership skills needed to balance working with both civilians and enlisted personnel, instilling confidence as an officer, a leader, a trainer, and a mentor. Army ROTC prepares college students to succeed in any competitive environment. The leadership training and experiences that students have in Army ROTC will provide them with a foundation to become commissioned Army Officers upon graduation. Any undergraduate or graduate student can enroll in a Military Science course and participate only in the classes or in the additional military training, such as physical fitness training, leadership labs, and field training exercises.

Courses

- MAIR (p. 1178): Air Force ROTC — Aerospace Studies
- MARM (p. 1179): Army ROTC

Air Force ROTC — Aerospace Studies

MAIR 1010 Heritage and Values of the United States Air Force 1
This course is the first part of a two-course sequence designed to introduce students to the United States Air Force and provides an overview of the basic characteristics, missions, and organization of the Air Force. Leadership Laboratory is mandatory for Air Force ROTC cadets and it complements this course by providing students with followership experiences and prepares them for Field Training. Classroom activity 1 hour and 15 minutes per week; Leadership Laboratory 2 hours per week.
Credit 0 units.
Typical periods offered: Fall

MAIR 1020 Heritage and Values of the United States Air Force 2
This course is the second part of a two course sequence designed to introduce students to the United States Air Force and provides an overview of the basic characteristics, missions, and organization of the Air Force. Leadership Laboratory is mandatory for Air Force ROTC cadets and it complements this course by providing students with followership experiences and prepares them for Field Training. Classroom activity 1 hour and 15 minutes per week; Leadership Laboratory 2 hours per week.
Credit 0 units.
Typical periods offered: Spring

MAIR 2010 Team and Leadership Fundamentals 1
This course is the first part of a two-course sequence that focuses on laying the foundation for teams and leadership. Topics include skills that will allow cadets to improve their leadership on a personal level and within a team. Leadership Laboratory is mandatory for Air Force ROTC cadets and it complements this course by providing the first opportunity for applied leadership experiences and prepares them for Field Training. Classroom activity 1 hour and 15 minutes per week; Leadership Laboratory 2 hours per week. Prerequisites: I02 1010 and lab.
Credit 0 units.
Typical periods offered: Fall

MAIR 2020 Team and Leadership Fundamentals 2
This course is the second part of a two course sequence that focuses on laying the foundation for teams and leadership. Topics include skills that will allow cadets to improve their leadership on a personal level and within a team. Leadership Laboratory is mandatory for Air Force ROTC cadets and it complements this course by providing the first opportunity for applied leadership experiences and prepares them for Field Training. Classroom activity 1 hour and 15 minutes per week; Leadership Laboratory 2 hours per week. Prerequisites: I02 1020 and lab.
Credit 0 units.
Typical periods offered: Spring

MAIR 3010 Leading People and Effective Communication 1
This course is the first part of a two-course sequence that teaches advanced skills and knowledge in management and leadership. Special emphasis is placed on enhancing leadership skills and communication. A mandatory Leadership Laboratory complements this course for Air Force ROTC cadets. Leadership Laboratory provides advanced leadership experiences and gives cadets opportunities to develop and apply leadership skills. Classroom activity 3 hours per week; Leadership Laboratory 2 hours per week. Prerequisites: I02 1010, 1020, 2010, 2020, and labs.
Credit 0 units.
Typical periods offered: Fall

MAIR 3020 Leading People and Effective Communication 2
This course is the second part of a two course sequence that teaches advanced skills and knowledge in management and leadership. Special emphasis is placed on enhancing leadership skills and communication. A mandatory Leadership Laboratory complements this course for Air Force ROTC cadets. Leadership Laboratory provides advanced leadership experiences and gives cadets opportunities to develop and apply leadership skills. Classroom activity 3 hours per week; Leadership Laboratory 2 hours per week. Prerequisites: I02 1010, 1020, 2010, 2020, 3010, and labs.
Credit 0 units.
Typical periods offered: Spring

MAIR 4010 National Security Affairs/Preparation for Active Duty
Cadets learn about the role of the professional military leader in a democratic society; societal attitudes toward the armed forces; the requisites for maintaining adequate national defense structure; the impact of technological and international developments on strategic preparedness and the overall policy-making process; and military law. In addition, cadets will study topics that will prepare them for their first active-duty assignment as officers in the Air Force. A mandatory Leadership Laboratory complements this course. Leadership Laboratory provides advanced leadership experiences and gives cadets opportunities to develop and apply fundamental leadership and management skills while planning and conducting corps activities. Classroom activity 3 hours per week; Leadership Laboratory 2 hours per week. Aerospace Studies courses (MAIR 3010 through MAIR 4020) are advanced courses designed to improve communication and management skills required of Air Force officers. Prerequisites: I02 1010, 1020, 2010, 2020, 3010, 3020, and labs.
Credit 0 units.
Typical periods offered: Fall

MAIR 4020 Preparation for Active Duty
Cadets learn about the role of the professional military leader in a democratic society; societal attitudes toward the armed forces; the requisites for maintaining adequate national defense structure; the impact of technological and international developments on strategic preparedness and the overall policy-making process; and military law. In addition, cadets will study topics that will prepare them for their first active-duty assignment as officers in the Air Force. A mandatory Leadership Laboratory complements this course. Leadership Laboratory provides advanced leadership experiences and gives cadets opportunities to develop and apply fundamental leadership and management skills while planning and conducting corps activities. Classroom activity 3 hours per week; Leadership Laboratory 2 hours per week. Aerospace Studies courses (MAIR 3010 through MAIR 4020) are advanced courses designed to improve communication and management skills required of Air Force officers. Prerequisites: I02 1010, 1020, 2010, 2020, 3010, 3020, 4010, and labs.
Credit 0 units.
Typical periods offered: Spring

Army ROTC

MARM 1010 Introduction to Leadership I
Examine the challenges and competencies that are critical for effective leadership. You will learn how the personal development of life skills such as cultural understanding, goal setting, time management, mental/physical resiliency, and stress management relate to leadership, officership, and the Army profession. Open to all students and enrollment does not require a commitment to join the US Army.
Credit 2 units.
Typical periods offered: Fall

MARM 1020 Introduction to Leadership II
Investigate leadership fundamentals such as problem-solving, listening, presenting briefs, providing feedback, and using effective writing skills. You will explore dimensions of leadership attributes and core leader competencies in the context of practical, hands-on, and interactive exercises. Learn fundamental military concepts and explore the Army's leadership philosophy. I25 MILS 1020 is open to all students and enrollment does not require a commitment to join the US Army.
Credit 2 units.
Typical periods offered: Spring

MARM 2010 Innovative Team Leadership
Explore the dimensions of creative and innovative tactical leadership strategies and styles by examining team dynamics and leadership theories. The course continues to build on developing knowledge of leadership attributes and core leader competencies through the understanding of Army rank, structure, and duties as well as broadening knowledge of land navigation and squad tactics. Enrollment in I25 MILS 2010 does not require a commitment to join the US Army.
Credit 3 units.
Typical periods offered: Fall

MARM 2020 Foundations of Tactical Leadership
Develop greater self-awareness as you assess your own leadership styles and practice communication and team building skills. Examine and practice the challenges of leading teams in the complex operational environment. Study dimensions of terrain analysis, patrolling, and operation orders. Explores the dynamics of adaptive leadership in the context of military operations. Enrollment in I25 MILS 2020 does not require a commitment to join the US Army.
Credit 3 units.
Typical periods offered: Spring

MARM 3010 Adaptive Team Leadership
This is an academically challenging course where you will study, practice, and apply the fundamentals of Army leadership, officership, Army values and ethics, and small unit tactics. At the conclusion of this course, you will be capable of planning, coordinating, navigating, motivating, and leading a team or squad in the execution of a tactical mission during a classroom practical exercise (PE), a leadership lab, or during a military situational training exercise (STX) in a field environment. Prerequisites: successful completion of I25 MILS 1010, 1020, 2010, and 2020 or attendance at the Leader's Training Course (LTC). Contact the Military Science Department for more details.
Credit 3 units.
Typical periods offered: Fall

MARM 3020 Applied Team Leadership
Continue to learn and apply the fundamentals of Army leadership, officership, Army values and ethics as you hone your leadership abilities in a variety of tactical environments and the classroom. Successful completion of this course will help prepare you for success at the ROTC Leader Development and Assessment Course (LDAC) which you will attend the summer following this course at Fort Lewis, Washington. You will receive systematic and specific feedback on your leadership attributes, values and core leader competencies from your instructors, other ROTC cadre, and senior cadets. Prerequisite: successful completion of I25 MILS 3010.
Credit 3 units.
Typical periods offered: Spring

MARM 4010 Adaptive Leadership
This course focuses on practical application of adaptive leadership. Throughout the semester, students will apply the fundamentals of principles of training, the Army writing style, and military decision making. Students will study the special trust reposed to Army Officers by the US Constitution and the President of the United States--a special trust given to no other civilian professions. Students will also study the Army officer's role in the Uniform Code of Military Justice, and the counseling and development of subordinates. Prerequisite: successful completion of the ROTC Leadership Development and Assessment Course (LDAC) or permission of instructor.
Credit 3 units.
Typical periods offered: Fall

MARM 4020 Leadership in a Complex World
Explore the dynamics of leading in the complex situation of current military operations in the contemporary operating environment. Examine differences in customs and courtesies, military law, principles of war, and rules of engagement in the face of international terrorism. You will also explore aspects of interacting with non-government organizations, civilians on the battlefield and host nation support. Significant emphasis is placed on your transition to officership, preparing you for your branch school and first unit of assignment. Prerequisite: successful completion of I25 MILS 4010 or permission of instructor.
Credit 3 units.
Typical periods offered: Spring

MARM 4500 Modern American Military History
A survey of US military involvement beginning with the Treaty of Versailles following World War I and concluding with the current Global War on Terror. Students will follow a chronological study of crucial battles of World War II, Korea, and Vietnam and conclude with in-depth case studies from Iraq and Afghanistan. The class focuses on both tactical and strategic lessons learned and the political and cultural influences that affect the way wars are fought. Prerequisite: sophomore status and good standing in the ROTC program.
Credit 3 units.
Typical periods offered: Fall

MARM 4501 Advanced American Military History
This course is a continuation of the fall semester prerequisite Modern American Military History course, outlining major conflicts that have occurred throughout the course of American history in post WWII 20th and 21st Century. It aims to highlight the contemporary American military's efforts to modernize in a multi-polar international relations environment in its struggle to become the global hegemon. This course familiarizes students with the context of the current profession of arms.

The philosophy guiding the curriculum is centered around how and why the military is structured in present form and how officership in particular has shaped the macro and micro aspects of combat over the last 75 years.
Credit 3 units.
Typical periods offered: Spring

Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship

The Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship is the hub of creativity, innovation, and entrepreneurship at Washington University. We believe everyone can be entrepreneurial. Skandalaris provides programming where anyone can explore their creative and entrepreneurial interests, develop an entrepreneurial mindset, and go from ideation to launch.

Mission

The Skandalaris Center fosters and empowers an inclusive community that finds opportunities in problems and transforms ideas into action. We build an ecosystem of education, research, and resources that engages all WashU students, faculty, alumni, and staff as entrepreneurial leaders and collaborators.

Who We Serve

We work with the best and brightest at WashU — the change-makers, thought leaders, and visionaries — to solve the world's problems and meet local needs through innovation and entrepreneurship. As an interdisciplinary center, our initiatives serve students, faculty, staff, and alumni from all levels and disciplines.

Our Initiatives

We develop programs for WashU entrepreneurs, creatives, innovators, and scholars. Our commitment to interdisciplinary innovation and entrepreneurship is motivated by the following beliefs:

- *Everyone can be creative.* We provide hands-on experiences and the creative means to solve problems.
- *Innovation is the backbone of entrepreneurship.* Our opportunities are designed to develop and share new ideas while connecting with other WashU entrepreneurs and innovators.
- *Good ideas are one opportunity away from success.* Our programs are created to help WashU entrepreneurs and innovators access the resources they need to take their ideas to the next level.
- *Knowledge and skills are key to innovation and entrepreneurship.* Our Center offers events and opportunities to help our community of WashU entrepreneurs, creatives, and innovators learn the ins and outs of innovation and entrepreneurship.

Programs and Resources

- **Course: The Endgame of Entrepreneurship: Leveraging Capitalism for Good**
  This course is offered through the Beyond Boundaries Program. Students will learn to take advantage of the profit-seeking motive of capitalism while also learning from the mistakes and unintended consequences that capitalism has caused throughout history.
- **Experts on Call**
  This program provides an opportunity for the WashU community to connect with experts in the Skandalaris Center or remotely, free of charge.
- **Honors in Innovation & Entrepreneurship**
  Students who have shown exemplary involvement in innovation and entrepreneurship during their time at Washington University are recognized through this program. Honors are earned by accumulating points through a combination of curricular and cocurricular activities.
- **In-Residence Program**
  This program provides WashU students, faculty, staff, and alumni with the opportunity to learn from and work with professionals with extensive industry experience.
- **PhD Citation in Entrepreneurship**
  This program provides opportunities for PhD students who are interested in developing skills and experiences in the areas of entrepreneurship and innovation.
- **Resources**
  The Skandalaris Center, Washington University, and external services and resources are available to support innovators and entrepreneurs.
- **Skandalaris Spaces**
  Our collaboration space is available for hosting meetings or events. Requests should be made a week in advance.
- **Skandalaris Startup Webinars, Panel Discussions, and Workshops**
  These webinars provide an exciting way for alumni to reconnect and share their experiences with entrepreneurship. We also offer free, noncredit workshops designed to encourage creativity, innovation, and entrepreneurship.
- **Startup Venture Promotion**
  The Skandalaris Center is happy to help Washington University in St. Louis students, faculty, staff, and alumni with promoting their startup ventures.
- **St. Louis Entrepreneurial Fellowship**
  This year-long program gives WashU students a chance to explore entrepreneurship at WashU and in St. Louis. The experience includes a spring semester seminar that explores innovation and entrepreneurship, a 10-week paid summer internship at a St. Louis startup, a fall semester capstone project, professional development opportunities, and programs and events to engage with entrepreneurs, founders, and innovators.
- **Student Entrepreneurial Program (StEP)**

StEP provides a unique opportunity for students to own and operate a business on campus that serves the WashU community. Student owners can supplement the valuable business and entrepreneurial skills they learn in the classroom while gaining real-world experience as they manage and lead their own businesses.

- **Student Groups**
  There are many organizations that allow students to gain experience and make valuable interdisciplinary connections in the areas of creativity, innovation, and entrepreneurship.
- **Venture Development**
  The WashU community is invited to set an appointment with a member of our team for help with ideas and businesses at any stage. We will work with these individuals to brainstorm ideas, strengthen financial models, draft business plans, perfect pitches, and more.
- **Washington University Entrepreneurship Courses**
  Courses in entrepreneurship offered across the university are available to students at all levels and in all disciplines.

Competitions

- **IdeaBounce®**
  IdeaBounce® is both an online platform and an event for sharing venture ideas and making connections. This is an opportunity for participants to pitch their ideas (no matter how "fresh"), get feedback on them, and make connections. In-person events happen frequently throughout the fall and spring semesters.
- **Skandalaris Venture Competition (SVC)**
  The SVC provides expert mentorship to new ventures and startups to ready them for commercializing their ideas, launching, and pitching to investors. Teams will develop materials focused on explaining the ideas that they are working on to a broad audience.
  - **Who Can Apply:** Current Washington University students and alumni (within one year of graduation) with an early-stage venture or idea
  - **Award:** Up to $22,500
- **Global Impact Award (GIA)**
  The GIA awards WashU–affiliated ventures with inventions, products, ideas, and business models that will have a broad and lasting impact on society.
  - **Who Can Apply:** WashU students, postdocs, residents, and alumni who have graduated within the last 10 years
  - **Award:** Up to $50,000
