Chemistry

The Department of Chemistry offers a PhD in Chemistry, with research specializations available in biological, organic, inorganic, physical, and nuclear chemistry. Doctoral students often work at the interface of two or more subfields of chemistry. They may also work at the interface of different scientific disciplines. Lab assignments are therefore made according to each student’s research project. Chemistry students may work in a lab outside the department or alongside students from other departments in a chemistry lab.

The department’s research strengths in each subfield of chemistry are as follows:

- Biological: biophysical, bioorganic, bioinorganic, biochemical
- Organic: synthetic, organometallic, bioorganic, physical organic, asymmetric catalysis
- Inorganic: coordination, organometallic, materials, bioinorganic, main group
- Physical: computational, laser spectroscopy, theoretical, magnetic resonance
- Interdisciplinary: biophysical, physical organic, materials
- Nuclear and radiochemistry: stability of nuclei, radioisotopes for medical studies

Washington University’s graduate student stipends are in the top 25% of stipends at similar universities, and St. Louis has a low cost of living. The department has an excellent record of placing its graduates in a wide variety of jobs: academic, industrial, governmental, legal, consulting, writing/editing, and entrepreneurial.

Faculty

Chair

Jennifer Heemstra
Charles Allen Thomas Professor
PhD, University of Illinois, Urbana-Champaign

Professor and Chancellor Emeritus

Mark Wrighton
James and Mary Wertsch Distinguished University Professor
PhD, California Institute of Technology

Endowed Professor

Gary J. Patti
Michael and Tana Powell Professor of Chemistry
PhD, Washington University

Professors

John R. Bleeke
PhD, Cornell University

Michael L. Gross
PhD, University of Minnesota

Sophia E. Hayes
PhD, University of California, Santa Barbara

J. Dewey Holten
PhD, University of Washington

Richard A. Loomis
PhD, University of Pennsylvania

Kevin D. Moeller
PhD, University of California, Santa Barbara

Jay Ponder
PhD, Harvard University

Lee G. Sobotka
PhD, University of California, Berkeley

John-Stephen Taylor
PhD, Columbia University

Associate Professors

Jonathan Barnes
PhD, Northwestern University

Vladimir B. Birman
PhD, University of Chicago

Richard Mabbs
PhD, University of Nottingham (UK)

Bryce Sadtler
PhD, University of California, Berkeley
**Degree Requirements**

**PhD in Chemistry**

**Requirements:**
- 72 units of graduate credit in courses and research
- Satisfactory performance on oral cumulative examinations
- Satisfactory performance in annual pre-thesis committee meetings
- Demonstration of teaching competence
- Dissertation research and preparation of dissertation
- Satisfactory performance on a final oral dissertation defense

On average, students take between five and six years to complete the PhD.

Requirements specific to Chemistry include attendance at faculty research presentations during the student's first fall semester, presenting and passing an oral examination within the first four semesters, and annual recertification in laboratory safety.

Almost all students participate in mentored teaching experiences during their first two years and must perform satisfactorily. Students must also make annual research presentations to their advisory committee, prepare a satisfactory dissertation research proposal, and pass an oral examination.
