Doctoral Program Information

Doctor of Philosophy
The Doctor of Philosophy (PhD) degree is not only an exploration of the knowledge in a given discipline but also an original contribution to it. To the extent that doctoral education has been successful, the student's relationship to learning is significantly changed. Having made a discovery, developed an insight, tested a theory or designed an application, the PhD recipient is no longer a student but a colleague of the faculty. It is for this reason that the PhD is the highest degree offered by a university.

The core mission of PhD programs at research universities is to educate the future faculty of other research universities and institutions of higher education. Graduates of Washington University participate in research and teaching; they also make valuable contributions to society by applying the analytical and creative skills required for scholarship to careers in the business, government and nonprofit sectors.

Among the critical components the university provides for these purposes are a small and select graduate student body, faculty members dedicated to scholarly work, and the physical facilities needed for research. In these regards, Washington University compares favorably to the finest graduate institutions in the world. However, the key ingredients of PhD completion must be provided by the student: a love of learning and a desire to increase the sum of human knowledge. Motivation and perseverance are prerequisites for success in PhD programs.

Doctor of Science
The Doctor of Science (DSc) degree is conferred in recognition of the candidate's abilities and attainments in some field of engineering. The DSc is a doctorate in science equivalent to a PhD doctoral degree. The departments of Electrical & Systems Engineering and Mechanical Engineering & Materials Science offer both the PhD and DSc doctoral options for graduate students.

The requirements for the DSc are identical to those for the PhD except for the following: (1) the mentored teaching experience is not required for the DSc; (2) the residency requirement for the DSc is limited to 24 units completed at Washington University; and (3) the requirements for research rotations and the time limits for completion of the qualifying exam, proposal, and thesis defense for the PhD do not apply to the DSc.

The DSc is recommended for students who will pursue doctoral studies part-time. Stipend support from grants or contracts is typically not available to DSc candidates.

General Requirements
Candidates for doctoral degrees at Washington University must complete all courses required by their department; maintain satisfactory academic progress; pass certain examinations; fulfill residence and teaching requirements (if applicable); write, defend and submit a dissertation; and file an Intent to Graduate form on WebSTAC (https://acadinfo.wustl.edu).

Engineering-based doctoral degrees require a minimum of 72 units. The doctoral program requires 36 to 48 units of course work and 24 to 36 units of research. The specific distribution decisions are made by the individual programs and departments.

The doctorate can be awarded only to those students whose knowledge of their field of specialization meets contemporary standards. Course work completed more than seven years prior to the date the degree is awarded generally cannot be accepted as satisfying degree requirements. No courses will be accepted toward degree requirements if the course exceeds the 10-year maximum time period unless they are formally approved by the Engineering Graduate Board. In addition, all milestone requirements for the degree must be completed within seven years from the time the student is admitted to a graduate program.

The doctoral degree has a residency requirement of one year. To satisfy the requirement, the student must devote full time for two consecutive semesters to academically relevant activities on the Washington University campus. A limited amount of outside employment may be permitted, but only with the approval of the department or program chairman and/or the dean. Candidates for the Doctor of Philosophy degree and the Doctor of Science degree are required to follow the guidelines of the Office of the Provost and of the McKelvey School of Engineering. Please refer to the DSc and PhD Comparison (PDF) (http://bulletin.wustl.edu/grad/engineering/doctorates/DoctoralComparisonSection.pdf) for more information about the DSc requirements.

Advisor & Doctoral Committee
Once admitted to graduate standing, each doctoral student will have an advisor appointed by the chair or director of the designated area of specialization. It is the responsibility of the advisor to help the student plan a graduate program.

Each department within McKelvey School of Engineering has its own policy related to the selection of a doctoral committee; therefore, students should consult with their faculty advisor regarding the appointment of their doctoral committee.

Doctoral Qualifying Examination
To be admitted to candidacy for a doctoral degree, the student must pass a comprehensive qualifying examination that may consist of both written and oral portions. The examination is administered by the student's department or program, and the
student should consult their advisor for information concerning
the scope of the examination and the dates on which it is given.
The examining panel will consist of faculty members approved
by the department chair or the program director.

**Doctoral Dissertation**

Doctoral candidates must submit a satisfactory dissertation that
involves independent creative work in an area of specialization
and that demonstrates an ability for critical and constructive
thinking. It must constitute a definite contribution to knowledge in
some field of engineering. The research that is the subject of the
dissertation must have been performed under the supervision
of a member of the faculty of McKelvey School of Engineering.
The candidate must defend the dissertation during a final oral
examination by an examining committee to be nominated by the
advisor and approved by the appropriate dean.

For specific information about preparing the dissertation
for submission, candidates should refer to the thesis and
dissertation submission procedures on the McKelvey School
of Engineering webpage (https://engineering.wustl.edu/offices-
services/student-services/graduate-student-services/thesis-
dissertation-submission.html).

Each candidate for the doctoral degree must electronically
submit a final approved version of their dissertation. The
dissertation should include an abstract that embodies the
principal findings of the research and that has been approved by
the doctoral committee as ready for publication. Such an abstract
will be published in Dissertation Abstracts, which announces the
availability of the dissertation for distribution.
