Physics

The Department of Physics offers Master of Arts (AM) and Doctor of Philosophy (PhD) programs in physics. Research in this department covers a wide area of experimental and theoretical physics and benefits from close contacts with nuclear and inorganic chemists in the chemistry department, planetary scientists in the earth and planetary sciences department, applied scientists in the McKelvey School of Engineering and the Institute of Materials Science & Engineering, and biological scientists both on the Danforth Campus and at the School of Medicine. The department is a major participant in the McDonnell Center for the Space Sciences, the Institute of Materials Science & Engineering, and the Center for Quantum Sensors.

Experimental research areas include the following:
- Astrophysics (observations of cosmic rays, gamma rays, X-rays, dark matter detection, high-precision tests of gravity)
- Space sciences (laboratory analysis of meteorites, stardust, interplanetary dust particles)
- Condensed matter and materials physics (graphene and other two-dimensional atomic crystals, nanostructured materials, metallic glasses and liquids, magnetism and superconductivity, high-pressure physics, topological materials)
- Quantum information science (quantum sensing, simulation and computation)
- Biophysics (computational neurophysics, systems cell biology)

Theoretical research areas include the following:
- Biophysics (nonequilibrium dynamics in biological cells, theory of the microbiome)
- Condensed matter physics and quantum materials (strongly correlated electron systems, topological phases, excited states of many-electron systems, density functional theory and glasses)
- Elementary particle physics (astroparticle physics, dark matter, theoretical cosmology, strong interactions, non-Hermitian Hamiltonians, quark physics beyond the Standard Model)
- Nuclear theory (atomic nuclei, infinite neutron and nuclear matter, nuclear structure and reactions, ab initio calculations, nuclear models, quark matter, neutron star mergers, physics beyond the Standard Model)

Students spend their first two years taking graduate courses. At the end of this time, they will typically have completed requirements for the master’s degree. Students planning to complete a PhD will also need to find a dissertation advisor and start their research. PhD candidates will receive a stipend and complete two semesters of mentored teaching experiences.

After achieving the required course grades and passing an oral examination at the end of their second year, PhD students are normally paid from research funds while working on their research and writing a dissertation. The PhD program typically takes between five and six years to complete.

Faculty

Chair

Henric Krawczynski
Wayman Crow Professor of Physics
PhD, University of Hamburg
Experimental high-energy astrophysics

Associate Chair

Saori Pastore
PhD, Old Dominion University
Theoretical nuclear physics

Endowed Professors

Ramanath Cowsik
James S. McDonnell Professor of Space Sciences
PhD, University of Bombay
Astrophysics and space sciences

Kenneth F. Kelton
Arthur Holly Compton Professor of Physics
PhD, Harvard University
Condensed matter and materials physics

Professors

Mark Alford
Professor
PhD, Harvard University
Nuclear/particle physics

James H. Buckley
PhD, University of Chicago
Experimental high-energy astrophysics

Anders E. Carlsson
PhD, Harvard University
Biophysics
Assistant Professors

Bhupal Dev (https://physics.wustl.edu/people/bhupal-dev/)
PhD, University of Maryland, College Park
Theoretical astroparticle physics and cosmology

Manel Errando (https://physics.wustl.edu/people/manel-errando/)
PhD, Universitat Autonoma de Barcelona
High-energy astrophysics, black holes, active galactic nuclei

James Mertens (https://physics.wustl.edu/people/james-mertens/)
PhD, Case Western Reserve University
Theoretical high-energy astrophysics

Shankar Mukherji (https://physics.wustl.edu/people/shankar-mukherji/)
PhD, Massachusetts Institute of Technology/ Harvard Medical School
Systems cell biology

Johanna Nagy (https://physics.wustl.edu/people/johanna-nagy/)
PhD, Case Western Reserve University
Experimental astrophysics

Andrina Nicola
PhD, ETH Zurich
Cosmology and machine learning

Ryan Ogliore (https://physics.wustl.edu/people/ryan-ogliore/)
PhD, California Institute of Technology
Cosmochemistry, planetary science

Maria Piarulli (https://physics.wustl.edu/people/maria-piarulli/)
PhD, Old Dominion University
Theoretical nuclear physics

Sheng Ran (https://physics.wustl.edu/people/sheng-ran/)
PhD, Iowa State University
Condensed matter, quantum materials

Mikhail Tikhonov (https://physics.wustl.edu/people/mikhail-tikhonov/)
PhD, Princeton University
Microbiome, microbial ecology and evolution

Yajie Yuan
PhD, Stanford University
Theoretical high energy astrophysics

Chong Zu (https://physics.wustl.edu/people/chong-zu/)
PhD, Tsinghua University
Atomic, molecular and optical physics; condensed matter; quantum information

Joint Professor

Lee G. Sobotka (https://physics.wustl.edu/people/lee-sobotka/)
PhD, University of California, Berkeley
(Chemistry)
Experimental nuclear physics

Associate Professors

Francesc Ferrer (https://physics.wustl.edu/people/francesc-ferrer/)
PhD, Universitat Autonoma de Barcelona
Theoretical astroparticle physics and cosmology

Erik Henriksen (https://physics.wustl.edu/people/erik-henriksen/)
PhD, Columbia University
Condensed matter and materials science

Assistant Professors

Bhupal Dev (https://physics.wustl.edu/people/bhupal-dev/)
PhD, University of Maryland, College Park
Theoretical astroparticle physics and cosmology

Manel Errando (https://physics.wustl.edu/people/manel-errando/)
PhD, Universitat Autonoma de Barcelona
High-energy astrophysics, black holes, active galactic nuclei

James Mertens (https://physics.wustl.edu/people/james-mertens/)
PhD, Case Western Reserve University
Theoretical high-energy astrophysics

Degree Requirements

The information below summarizes the physics department's degree requirements. These requirements are in addition to those established by the Office of Graduate Studies, Arts & Sciences. For more information about requirements for doctoral degrees (http://bulletin.wustl.edu/grad/gsas/phd/academic/) or master's degrees (http://bulletin.wustl.edu/grad/gsas/masters/academic/) in the Office of Graduate Studies, Arts & Sciences, please visit the appropriate sections of this Bulletin.

Master of Arts in Physics

36-Unit Academic Credit Course Requirement

Courses that count toward academic credit are as follows:

- Any regular 400- or 500-level lecture courses in the physics department, including Physics 582 Research Seminar
- Courses outside of the physics department, if approved by the master's program director
- Selected Topics courses, for which students should register for Physics 589 Selected Topics in Physics I/Physics 590 Selected Topics in Physics II
- Supervised research, for which students should register for Physics 593 Introduction to Methods in Physics/Physics 594 Introduction to Methods in Physics (This can be used for a maximum of 6 units of academic credit.)

Students can take up to six 400-level physics classes toward their academic credit requirements without special permission from the graduate studies committee. However, they should discuss the merits of doing so with their advisor.

Core Course Requirements

For qualification, students must pass five core 500-level physics courses. In those courses, the student must maintain an average of a B (a grade-point average of 3.0), with no more than one grade lower than B-. A given core course may be taken only once. If more than five courses are taken, the average will be determined from the best five course grades.

Students must take the following three courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 505</td>
<td>Classical Electrodynamics I</td>
<td>3</td>
</tr>
<tr>
<td>Physics 523</td>
<td>Quantum Mechanics I</td>
<td>3</td>
</tr>
<tr>
<td>Physics 529</td>
<td>Statistical Mechanics</td>
<td>3</td>
</tr>
</tbody>
</table>

They must also take at least two of the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 506</td>
<td>Classical Electrodynamics II</td>
<td>3</td>
</tr>
<tr>
<td>Physics 507</td>
<td>Classical Mechanics</td>
<td>3</td>
</tr>
<tr>
<td>Physics 509</td>
<td>Nonlinear Dynamics</td>
<td></td>
</tr>
<tr>
<td>Physics 524</td>
<td>Quantum Mechanics II</td>
<td>3</td>
</tr>
</tbody>
</table>

PhD in Physics

Outline of Requirements

- Complete 36 units of academic credit (detailed below), maintaining an average grade of at least B (3.0 GPA).
- Pass the PhD qualification procedure. This must be done before a student can formally join a research group, and it is normally completed before the start of the third year.
- Complete the teaching requirements.
- Write a thesis (doctoral dissertation (https://graduateschool.wustl.edu/degree-requirements/#anchor-group-13909)).
- Pass an oral dissertation defense examination.

36-Unit Academic Credit Course Requirement

Courses that count toward academic credit are as follows:

- Any regular 400- or 500-level lecture courses in the physics department, including Physics 597 Supervised Teaching of Physics and Physics 582 Research Seminar
- Courses outside of the physics department, if approved by the student's advisor and the director of graduate studies
- Special topics courses, for which students should register for Physics 589 Selected Topics in Physics I/Physics 590 Selected Topics in Physics II
- Supervised research, for which students should register for Physics 593 Introduction to Methods in Physics/Physics 594 Introduction to Methods in Physics (This can be used for a maximum of 6 units of academic credit.)

Students can take up to four 400-level physics classes toward their academic credit requirements without special permission from the graduate studies committee. However, they should discuss the merits of doing so with their advisor.

PhD Qualification: Course Requirements

For qualification, students must pass six core 500-level physics courses. In those courses, the student must maintain an average of a B (3.0 GPA), with no more than one grade lower than B-. A given core course may be taken only once. If more than six core courses are taken, the average will be determined from the best six course grades.

Students must take the following four courses:
They must also take at least two of the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physics 502</td>
<td>Methods of Theoretical Physics II</td>
<td>3</td>
</tr>
<tr>
<td>Physics 506</td>
<td>Classical Electrodynamics II</td>
<td>3</td>
</tr>
<tr>
<td>Physics 507</td>
<td>Classical Mechanics</td>
<td>3</td>
</tr>
<tr>
<td>or Physics 509</td>
<td>Nonlinear Dynamics</td>
<td></td>
</tr>
<tr>
<td>Physics 524</td>
<td>Quantum Mechanics II</td>
<td>3</td>
</tr>
</tbody>
</table>

These requirements can be modified or waived for students with previous graduate experience (e.g., a master's degree in physics).

**PhD Qualification: Oral Examination Requirement**

To qualify, the student must give a presentation to a committee of three physics faculty members (i.e., the prospective research advisor and two others). The student should demonstrate a basic understanding of a major topic of current research in the selected area of study, chosen in consultation with the student’s prospective thesis advisor. One week before the oral exam, the student must prepare a written paper (approximately 1500-3000 words) summarizing the content of the presentation and give it to the committee. The student’s responses to questions raised by the examination committee are graded as adequate or not. Students have a chance to answer inadequately answered questions in writing within 48 hours after the examination. The student is not allowed to receive assistance in preparing the written response from any other individuals. The answers should either be given in person to the chair of the examination committee or emailed to the chair as a PDF file so that it is time stamped. The committee will determine whether the written answers are sufficient.

The committee must be chosen and approved by the department chairman by the end of a student’s third semester (typically in December of the second year). The oral examination should be taken by the end of a student’s fourth semester (typically in May of the second year). If the student fails the oral examination, they can take it again one additional time.

**Teaching Requirements**

These requirements must be completed before the student submits their doctoral dissertation to the Office of Graduate Studies, Arts & Sciences:

- **Complete L31 Physics 597**: Graduate students are required to take Physics 597 Supervised Teaching of Physics prior to serving as an assistant in instruction. Students typically take this course during their first fall semester.
- **Complete at least two semesters of mentored teaching experiences**
- **Complete four hours of oral presentations**: Graduate students must complete a total of four hours of specialized oral presentations. Examples of such presentations include teaching a class (e.g., when substituting for a professor); giving seminars, such as the weekly graduate seminar; or giving oral presentations at conferences, journal clubs, and the like.

**Dissertation Requirements**
