Research

Mentored Research

All students enrolled in the Mentored Research course will complete a master's thesis, which may involve conducting and reporting a comprehensive data analysis or conducting research and reporting on a focused methodological problem; the latter may include a computer simulation approach to solve a problem, an in-depth review of available methods in a certain topical area, or the development of new methods. Each student will work closely with a mentor with expertise in biostatistics or a related quantitative field. The grade for each student will be determined in consultation with the mentor.

Internship

The primary goal of the Internship program is for all students enrolled in the Internship to acquire critical professional experience so that they will be well-prepared to enter the job market upon graduation. This provides an opportunity for students to test-drive the job market, develop contacts, build marketable skills, and figure out likes and dislikes in the chosen field.
