Department of Neuroscience

The Department of Neuroscience plays a key role in the development and teaching of basic sciences in the Medical School Gateway curriculum (https://sites.wustl.edu/gatewaycurriculum/), including human anatomy, histology, and neuroscience. In conjunction with the Division of Biology & Biomedical Sciences (DBBS) program in neuroscience, the department also offers introductory graduate courses in cellular, molecular, and systems neuroscience (http://neuroscienceprogram.wustl.edu/Program/-Curriculum/). In addition, the department also offers a number of advanced courses that are primarily designed for graduate students but that are also open to students in the medical curriculum. Finally, advanced elective research activities are offered by faculty in the department.
