L75 JIMES 577 History of Slavery in the Middle East

This course examines slavery and its abolition in the Middle East and North Africa from 600 C.E. to the 20th Century. It addresses slavery as a discourse and a question of political economy. We begin with an overview of slavery in late antiquity to contextualize the evolution of this practice after the rise of Islam in the region. We then examine how it was practiced, imagined, and studied under major empires, such as the Umayyads, the Abbasids, the Fatimids, the Mamluks, the Ottomans, and the Safavids. In addition to examining the Qur'anic discourse and early Islamic practices of slavery, to monitor change over time we address various forms of household, field, and military

slavery as well as the remarkable phenomenon of "slave dynasties" following a chronological order. We discuss, through primary sources, theoretical, religious, and moral debates and positions on slavery, including religious scriptures, prophetic traditions, religious law, and a plethora of narratives from a range of genres. We highlight a distinct theme each week to focus on until we conclude our discussion with the abolition of slavery in the 19th and 20th centuries. Topics of discussion include various forms of male and female slavery, Qur'anic and prophetic discourse on slavery, legal and moral views on slavery, slavery as represented in religious literature, political, military, and economic structures of slavery, issues of race and gender as well as slave writings to reflect on the experiences of slavery from within. The goal is to enable students to understand the histories of slavery in the Middle East and eventually compare it to that of other regions and cultures, such as European and Atlantic slavery. No second language required.

L75 JIMES 5810 Between Sand and Sea: History, Environment, and Politics in the Arabian Peninsula

Although it is today primarily associated with oil, the Arabian peninsula was for most of its history defined by water: its surrounding seas, its monsoon-driven winds, and its lack of water in its vast and forbidding interior deserts. As home to the major holy cities of Islam and a key source of global oil, the region has played an important role in the Western European and North American imagination. Despite being relatively sparsely populated, the peninsula hosts millions of believers each year on the annual Muslim pilgrimage, and it has been the site of major wars and military occupations by European, American, and other Middle Eastern countries for much of the 20th and 21st centuries. It has been an outpost of the Ottoman Empire, a center of British colonialism and (at Aden) an axis of its global empire, the location of Egypt's "Vietnam" (its long war in Yemen in the 1960s), the Gulf Wars I and II, and the recent wars in Yemen, to name just a few of the major conflicts. Often depicted as unchanging until caught up by the influx of massive oil wealth, this region is frequently characterized as a place of contradictions: home to some of the world's largest skyscrapers and also the most inhospitable and largest sand desert in the world, known as "the Empty Quarter"; the location of crucial American allies and the home of al-Qa'eda founder `Usama Bin Laden. In this course, we will examine the development of the peninsula historically to understand these contradictory images. We will investigate changes in the following arenas: environment and society; colonial occupation; newly independent states; the demise and development of key economic sectors (pearling; shipping; agriculture; oil; finance; piracy); political regimes; resources such as water, oil, and date palms; the growth of oil

extraction infrastructure and its effects on the political regimes and societies in the region; the emergence of new Gulf cities; Islamic law; women's rights; human rights debates; and religious and ethnic minorities.

Korean

The Department of East Asian Languages and Cultures (EALC) offers a major and a minor in Korean language and culture. As a major in Korean, a student can expect to gain some proficiency in the language and to acquire a foundation in Korean literature, history and culture from earliest times to the present. All students majoring in Korean must complete first- and second-level Korean or their equivalent. They also must complete a prerequisite 200-level civilization course, two literature/culture courses, and additional advanced-level (300- and 400-level) courses. In addition, all prime majors must complete the required EALC capstone experience.

The department strongly encourages the overseas study of Korean language and culture. All majors and minors are expected to maintain at least a B- average in all departmental courses.

Language Placement: Placement tests are required for all students entering our language programs, with the exception of those students who have had no previous exposure to the language and wish to enroll in the first semester of the first year of instruction. Students who test into second-year Korean and satisfactorily complete (with a grade of B- or better) at least one semester of language study may petition for 3 units of

retroactive credit; students who test into third year or above and satisfactorily complete (with a grade of B- or better) at least one semester of language study may petition for 6 units of retroactive credit. Credit is limited to 3 units for those testing into second year and 6 units for those testing into the third year or above. Please note that students with native language proficiency as determined by the Korean language section as well as students who enroll in courses below their placement level are ineligible for retroactive credit units. Students who misrepresent their language proficiency so as to gain entrance into a course at the elementary or intermediate level will be dropped from that course.

Phone: 314-935-4448

Majors

The Major in Korean Language and Culture

Units required: Eight courses for a minimum of 24 upper-level (300-level or above) units

Prerequisites:

1. First- and second-level modern Korean or the equivalent
2. Korean 223C Korean Civilization

Requirements:

Eight courses for a minimum of 24 advanced (300-level or above) units, including the following:

1. Korean 352 Literature of Modern and Contemporary Korea
2. Korean 355 Topics in Korean Literature and Culture
3. 400-level capstone course (prime majors):
Korean prime majors may satisfy their capstone requirement in one of two ways, both of which require a presentation at the EALC Senior Symposium in the spring:
 - a. Successful completion of a senior honors thesis. This option, which also entitles the student to Latin Honors, requires a minimum grade-point average of 3.65. The thesis is researched and written over two semesters for a total of 6 units, which are *in addition* to the 24 upper-level units required for the major.
 - b. Successful completion of an approved 400-level seminar course, to be taken during the senior year. This course may be *included* among the 24 advanced units required for the major.

Additional Information

1. With adviser approval, students may include one course in a related area offered outside the department among the 24 advanced units. (For example, a student with focus on Korea/Korean may take one course in Film and Media Studies or Art History that focuses on Korea.) With adviser approval, students may count one course from another area within the department among the 24 advanced units. (For example, a student with focus on Korea/Korean may take one course in either Chinese or Japanese.)
2. Students must earn at least a B- in a language course in order to continue to the next level. They must also maintain at least a B- average in all required courses for the major. Students who do not meet this requirement may either repeat the course or courses in question or earn at least a B- in an approved equivalent course or courses (either during the summer or in a study abroad program).
3. Courses for the major may not be taken credit/no credit.
4. Core courses (i.e., Korean 223C, Korean 352, and Korean 355) should be taken in residence.
5. Up to 6 units of credit may be applied toward the major from one semester abroad, and up to 12 units of credit may be applied from two semesters abroad. Note that EALC no longer distinguishes study abroad credits earned in advanced language courses from those credits earned in other content (non-language) courses.
6. No more than 3 units of independent study may be counted toward the required 24 upper-level units.
7. EALC awards Departmental Honors to majors as an acknowledgment of exemplary work in the major.

Minors

The Minor in Korean Language and Culture

Units required: 18 units

Requirements:

- Two semesters of Korean language
- At least 9 units of 300-level courses or above
- At least two literature/culture courses, such as the following:

Code	Title	Units
Korean 223C	Korean Civilization	3
Korean 352	Literature of Modern and Contemporary Korea	3
Korean 355	Topics in Korean Literature and Culture	3

Additional Information

- Students must earn at least a B- in a language course in order to continue to the next level. They must also maintain at least a B- average in all courses taken to fulfill the minor requirements. Students who do not meet this requirement may either repeat the course or courses in question or successfully complete an approved equivalent course or courses (either during the summer or in a study abroad program).
- Korean 437 and Korean 438 can fulfill either the language requirement or an upper-level elective requirement.
- Courses for the minor may not be taken credit/no credit.
- Core courses (i.e., Korean 223C, Korean 352, and Korean 355) should be taken in residence.
- No more than 3 units of transfer or study abroad non-language courses may be applied toward the minor.

Courses

Visit online course listings to view semester offerings for L51 Korean (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L51&crslvl=1:4>).

L51 Korean 107 Basic Korean I

Basic Korean I is a slower-paced class that covers half of the content of First-Level Modern Korean I (L51 117D). This course is designed for students who are interested in learning Korean language but who cannot commit the time required for the regular 5-credit class. The course emphasizes the acquisition of all four areas of language function -- listening, speaking, reading, and writing -- as well as intercultural competence. After completing Basic Korean I in the spring semester, students can enroll in Basic Korean II in the fall semester. Upon completion of Basic Korean II, students can join First-Level Modern Korean II (L51 118) in the spring semester. Basic Korean I and Basic Korean II do not fulfill the language sequence requirement. Credit 3 units. A&S IQ: HUM, LCD BU: HUM EN: H

L51 Korean 108 Basic Korean II

Basic Korean II is the second course in the slower-paced Basic Korean language curriculum sequence, and it will cover the content of the second half of First-Level Modern Korean I (L51 117D). This course is designed for students who are interested in learning the Korean language but who cannot commit the time required for the regular 5-credit class. This course will use the same textbook and learning materials that are used for the First-Level Modern Korean I course. The course emphasizes the acquisition of all areas of language function -- listening, speaking, reading, and writing -- as well as intercultural competence. Upon completion of Basic Korean II, students can join First-Level Modern Korean II (L51 118) in the spring semester. Basic Korean I and Basic Korean II do not fulfill the language sequence requirement or the two-semester language requirement for the Korean minor. Credit 3 units. A&S IQ: HUM, LCD EN: H

L51 Korean 117D First-Level Modern Korean I

Introduction to the modern spoken and written language of Korea. Acquisition of the fundamentals of grammar, morphology and oral communication skills. Note: students with some previous Korean language background must take the placement examination.

Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

L51 Korean 118D First-Level Modern Korean II

Emphasis is placed upon the understanding, speaking, reading and writing of Korean. Continuation of the acquisition of the fundamentals of grammar and morphology. Prerequisite: grade of B- or better in Korean 117D or placement by examination.

Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

L51 Korean 217 Second-Level Modern Korean I

Second-year course in standard modern Korean. Emphasis is placed upon speaking, reading and writing of modern Korean. Prerequisite: grade of B- or better in Korean 118D or placement by examination.

Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

L51 Korean 218 Second-Level Modern Korean II

Continuation of second-year course in standard modern Korean. Prerequisite: grade of B- or better in Korean 217 or placement by examination.

Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

L51 Korean 223C Korean Civilization

A comprehensive introduction to the study of Korea. Following a historical survey, the course examines key cultural themes and social institutions and explores aspects of Korea's relationship with its East Asian neighbors. Attention also is paid to contemporary issues, social problems and cultural trends.

Credit 3 units. A&S IQ: HUM, LCD, SD Arch: HUM Art: HUM BU: IS EN: H

L51 Korean 298 Korean Undergraduate Teaching Assistants

In this course undergraduate students with native or near native proficiency in Korean assist in the first-, second-, and third-level modern Korean language classes by serving as one-on-one session tutors, lab drill and practice session tutors, or discussion leaders under close supervision of the faculty. Students can only enroll in the class with permission from the faculty member. Interested students must contact Professor Kim (mmkim@wustl.edu) for information.

Credit 1 unit.

L51 Korean 2980 Undergraduate Internship in Korean

Students receive credit for a faculty-directed and approved internship. Registration requires the completion of the Learning Agreement, which the student obtains from the Career Center and which must be filled out and signed by the Career Center and the faculty sponsor prior to beginning internship work. Credit should correspond to actual time spent in work activities (e.g., eight to ten hours a week for thirteen or fourteen weeks to receive 3 units of credit; 1 or 2 credits for fewer hours). Credit/no credit only.

Credit variable, maximum 3 units.

L51 Korean 299 Independent Study

Prerequisite: permission of the instructor and the department chair.

Credit variable, maximum 6 units.

L51 Korean 346 Topics in East Asian Religion

This course explores one of the various topics in East Asian Religions. Recent topics have included "The Zhuangzi" (a Daoist classic); Tantric Buddhism; and death, dying and the afterlife in East Asian religions.

Same as L23 Re St 346

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

L51 Korean 352 Literature of Modern and Contemporary Korea

This undergraduate course surveys the major writers and works of 20th-century Korean literature. During the 20th century, Korea went through a radical process of modernization. From its colonization by Japan to its suffering of a civil war within the cold war order to its growth into a cultural and economic powerhouse, Korea's historical experience is at once unique and typical of that of a third-world nation. By immersing ourselves in the most distinctive literary voices from Korea, we examine how the Korean experience of modernization was filtered through its cultural production. In class discussions, we pay special attention to the writers' construction of the self and the nation. How do social categories such as ethnicity, class, gender, and race figure in the varying images of the self? How do these images relate to the literary vision of the nation? Along the way, we observe the prominent ideas, themes, and genres of Korean literature. This class combines discussion with lecture, with students strongly encouraged to participate. All literary texts are in English translation and no previous knowledge of Korean is required.

Credit 3 units. A&S IQ: HUM, LCD, SD Arch: HUM Art: HUM BU: IS EN: H

L51 Korean 355 Topics in Korean Literature and Culture

Topics course on Korean literature and culture. Subject matter varies by semester; consult current semester listings for topic.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

L51 Korean 370 When Tigers Smoke: Songs and Stories from Traditional Korea

This course has two purposes: (1) to introduce major works and topics in Korean classical literature and the cultural world in which they were produced and (2) to explore modern reimaginings of these historical works and events and wider context through contemporary literature and film. The former involves a journey through various genres, including foundation myths, songs, biographies, essays, poetry, fiction, memoirs, letters and oral performance, all produced before the 20th century. For a modern perspective, we turn to films, dramas, cartoons and short stories, which serve as our basis for discussing the modern recreations of historical events, characters, and Korean culture more broadly. In addition to

details of the works themselves, topics will include Korea's place in the context of a Sino-centric world order; the significance of two writing systems, hanmun (literary Chinese) and han'gul (Korean vernacular writing); gender and literary practice; and the dynamic relationship between tradition and creativity. No knowledge of Korean history or language is required. All readings in English.

Credit 3 units. A&S IQ: HUM, LCD BU: IS EN: H

L51 Korean 403 Topics in East Asian Religions

Topics in East Asian Religions is a course for advanced undergraduate and graduate students on specific themes and methodological issues in East Asian religions.

Same as L23 Re St 403

Credit 3 units. A&S IQ: HUM, LCD EN: H

L51 Korean 417 Third-Level Modern Korean I

Third-year course in standard modern Korean. Emphasis is placed upon reading and writing of modern Korean. Prerequisite: grade of B- or better in Korean 218 or placement by examination.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L51 Korean 418 Third-Level Modern Korean II

Continuation of third-year course in standard modern Korean. Emphasis is placed upon reading and writing. Prerequisite: grade of B- or better in Korean 417 or placement by examination.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L51 Korean 4181 Sexuality and Gender in East Asian Religions

In this course we will explore the role of women in the religious traditions of China, Japan and Korea, with a focus on Buddhism, Daoism, Shamanism, Shinto and the so-called "New Religions." We will begin by considering the images of women (whether mythical or historical) in traditional religious scriptures and historical or literary texts. We will then focus on what we know of the actual experience and practice of various types of religious women — nuns and abbesses, shamans and mediums, hermits and recluses, and ordinary laywomen — both historically and in more recent times. Class materials will include literary and religious texts, historical and ethnological studies, biographies and memoirs, and occasional videos and films. Prerequisites: This class will be conducted as a seminar, with minimal lectures, substantial reading and writing, and lots of class discussion. For this reason, students who are not either upper-level undergraduates or graduate students, or who have little or no background in East Asian religion or culture, will need to obtain the instructor's permission before enrolling.

Same as L23 Re St 418

Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch: HUM Art: HUM EN: H

L51 Korean 427 Fourth-Level Modern Korean I

Fourth-year course in standard modern Korean (advanced level). Emphasis is placed on developing proficiency in all four areas of language skills (speaking, listening, reading and writing) beyond the intermediate level. Prerequisite: grade of B- or better in Korean 418 or placement by examination.

Credit 3 units. A&S IQ: LCD, LS BU: IS EN: H

L51 Korean 428 Fourth-Level Modern Korean II

Continuation of the fourth-year course in standard modern Korean. Emphasis is placed upon the further development of speaking, listening, reading and writing, beyond the intermediate level. Prerequisite: grade of B- or better in Korean 427 or placement by examination.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L51 Korean 437 Contemporary Korean I: History, Literature, and Popular Culture

Advanced- to high advanced-level Korean course in standard modern Korean. Emphasis is placed on developing an advanced level of reading proficiency in Korean and writing ability in Korean for an academic or professional purpose. This course to be taken in the fall semester. Prerequisite: grade of B- or better in Korean 418 or placement by examination with instructor's permission.

Credit 3 units. A&S IQ: LCD, LS BU: IS EN: H

L51 Korean 438 Contemporary Korean II

Continuation of Korean 437. Advanced to high advanced level Korean course in standard modern Korean. Emphasis is placed on developing an advanced level of reading proficiency in Korean and writing ability in Korean for an academic or professional purpose. This course to be taken in the spring semester. Prerequisite: grade of B- or higher in Korean 437 or placement by examination with instructor's permission.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L51 Korean 497 Guided Readings in Korean

This course normally is taken after successful completion of Korean 418 or by instructor's permission. May be repeated once. Prerequisite: instructor's permission.

Credit variable, maximum 3 units. EN: H

Latin

The Department of Classics offers course work in the language, history, literature, archaeology and culture of the ancient Roman world. At the heart of these courses are classes in the Latin language.

Students of beginning Latin master the grammar in two semesters and go on immediately, starting in the third semester, to read authors such as Caesar, Catullus and Cicero. Students who have studied Latin in high school begin with a placement exam, and many can begin their studies in more advanced

courses. Students have the opportunity to study numerous Latin authors, including the great poets Vergil and Ovid, the historians Livy and Tacitus, and the novelists Apuleius and Petronius. More advanced undergraduates often work alongside graduate students in our vigorous graduate program, and they also have the opportunity to do their own research or to assist with faculty members' research projects. It is a remarkable and dynamic environment, one that students find both rewarding and stimulating.

Resources on campus that support the study of Latin include the Wulffing Coin Collection, one of the largest collections of ancient coins owned by an American university. The Department of Classics also offers a variety of courses in Roman history, literature, archaeology and culture; these courses are addressed both to the general undergraduate population and to those pursuing majors and minors within the department.

Additional Information

Study Abroad: Washington University is associated with both the Intercollegiate Center for Classical Studies (<https://sa.wustl.edu/>?FuseAction=Programs.ViewProgram&Program_ID=10117) (ICCS) in Rome and the College Year in Athens (<https://sa.wustl.edu/>?FuseAction=Programs.ViewProgram&Program_ID=10112) (CYA). Certain other study abroad programs also allow students to earn credit in Latin. Students interested in these programs should contact Timothy Moore (<https://classics.wustl.edu/people/timothy-moore/>).

Faculty

For a list of faculty who teach Latin, please visit the Department of Classics faculty page (p. 365).

Majors

Students interested in Latin should explore either the major in Classics (p. 366) or the major in Ancient Studies (p. 366) offered through the Department of Classics (p. 365).

Minors

Students interested in Latin should explore either the minor in Classics (p. 367) or the minor in Ancient Studies (p. 367) offered through the Department of Classics (p. 365).

Courses

Visit online course listings to view semester offerings for L10 Latin (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L10&crsLvL=1:4>).

L10 Latin 101D Beginning Latin I

An introduction to Latin, the language of Ancient Rome and the European Middle Ages and Renaissance, and the most important source of English medical and scientific terms. Beginning with the foundations of Latin grammar, students work toward developing reading knowledge with the goal of reading literary texts. Students who have already begun their study of Latin should consult the chair of the department.
Credit 4 units. A&S IQ: LCD, LS BU: HUM EN: H

L10 Latin 102D Beginning Latin II

Continuation and completion of the program begun in Latin 101D. Prerequisite: Latin 101D or equivalent or permission of instructor.
Credit 4 units. A&S IQ: LCD, LS BU: HUM EN: H

L10 Latin 210 Intensive Elementary Latin II

Completion of work begun in Latin 190D followed by readings in original Latin poetry and prose. Successful completion of Latin 210 with a grade of B+ or better allows the student to proceed directly to Latin 318C.
Credit 5 units. A&S IQ: LCD, LS BU: IS

L10 Latin 301 Introduction to Latin Literature I

Review of Latin grammar and syntax and development of reading skills and translation techniques through short readings from original texts in prose and poetry such as Caesar and Ovid. Prerequisites: Latin 102D or Latin 190D, placement by examination, or permission of instructor.
Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: HUM EN: H

L10 Latin 3161 Introduction to Latin Literature II: Elementary Prose and Poetry

Appreciation of literary forms through study of selected elementary literary texts in Latin prose and poetry. Prerequisite: Latin 301, placement by examination or permission of the instructor.
Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: HUM EN: H

L10 Latin 3171 Survey of Latin Literature: The Republic

A sampling of the major literary achievements of the last two centuries of the Roman Republic, including prose and verse authors. Readings are typically drawn from Catullus, Lucretius, Caesar, and Cicero. There will be regular, selective grammar review and discussion of translation strategies. Prerequisite: Latin 102D or Latin 190D with a grade of B+ or better, or Latin 301 and Latin 3161, or placement by examination.
Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: HUM EN: H

L10 Latin 3181 Survey of Latin Literature: The Empire

Readings in the verse and prose literature of the Roman Empire, particularly its first two centuries, with targeted grammar review and stylistic analysis. Readings may be drawn from Vergil, Livy, Suetonius, or other appropriate authors. Prerequisite: Latin 102D with a grade of B+ or better, or Latin 301, or Latin 3161, or placement by examination.

Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: HUM EN: H

L10 Latin 350W Writing About Latin Literature

Latin courses at the 300 level with enhanced writing requirements may be taken under this designation as writing-intensive courses. Required: permission of instructor.

Credit 3 units. A&S IQ: HUM, HUM, LCD, WI BU: HUM EN: H

L10 Latin 370 Topics in Latin Literature

Study in selected problems, eras or generic sequences; specific topic for each semester in course listings. May be repeated for credit for study of different topics. Prerequisites: Latin 318C or permission of instructor.

Credit 3 units. A&S IQ: HUM BU: HUM

L10 Latin 400 Independent Study

Credit 3 units. EN: H

L10 Latin 401 Medieval Latin

Credit 3 units. A&S IQ: HUM, LCD, LS Art: HUM

L10 Latin 413 Latin Philosophical Writers

Readings among various writers of philosophy in Latin, ranging from Cicero to Seneca to Augustine. Texts vary; therefore, course may be taken more than once.

Credit 3 units. A&S IQ: HUM, LCD, LS Art: HUM

L10 Latin 415 Cicero

Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM EN: H

L10 Latin 416 Seneca

Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM EN: H

L10 Latin 4161 Seneca: Philosopher and Friend

Seneca the Younger was a philosopher, politician, playwright and propagandist; he rose from the province of Spain to become tutor and adviser to Nero, only to fall from favor and commit suicide at the emperor's command. We will study Seneca's life and works, focusing on the *Epistulae Morales* and select philosophical treatises. We will pay special attention to issues of language and style, cultural and historical context, and ideological and philosophical content. Prerequisites: Latin 3171 and Latin 3181 (or equivalent) and sophomore standing or above.

Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM EN: H

L10 Latin 419 Julius Caesar and His Image

Credit 3 units. A&S IQ: HUM, LCD, LS EN: H

L10 Latin 421 Roman Comedy

Credit 3 units.

L10 Latin 4215 Plautus

Readings from the comedies of Plautus. Discussion of play production in Republican Rome, reception and interpretation. The advanced-level Latin reading load is supplemented by secondary readings, quizzes and short reports. Prerequisites: Latin 3171 and Latin 3181 (or equivalent) and sophomore standing or above.

Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM EN: H

L10 Latin 422 Lucretius

Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM EN: H

L10 Latin 431 Vergil: The Aeneid

Credit 3 units. A&S IQ: HUM, LCD, LS Art: HUM BU: HUM EN: H

L10 Latin 432 Horace

This course examines Roman poetry that illuminates ancient and still-influential ideas about the functions of literature. Horace's monumental "Ars Poetica" and his other literary-critical works will be the major texts. These works convey the complexity of contemporary debates about literature's role in society and history and about the merits of various genres (epic, tragedy, comedy, satire, epigram). Readings in secondary sources will help to fill out the picture of Horace's career and of the climate of literary production in early Imperial Rome.

L10 Latin 433 Ovid

Credit 3 units. A&S IQ: HUM, LCD, LS BU: HUM EN: H

L10 Latin 441 Roman Satire

This course focuses on the genre of hexameter satire represented by the Roman poets Lucilius, Horace, Persius, and Juvenal (second century BCE - second century CE). The Roman professor Quintilian called satire "entirely Roman" (*tota nostra*), and our readings will allow us to explore the meaning of this claim for satire's authors and readers. We will read a large sampling of satiric verse in the original Latin, practice reading the dactylic hexameter, and observe and discuss differences between the poets' styles and themes. We'll also read and discuss scholarship on the genre's formal characteristics and influences, its origins in Republican literary culture, and its development in the Imperial period.

Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM EN: H

L10 Latin 444 Latin Prose Composition

Readings in select authors coupled with Latin composition, primarily in prose but occasionally in verse, with attention to grammatical and idiomatic accuracy as well as elegance of style.

Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM EN: H

L10 Latin 451 The Roman Historians

Credit 3 units. A&S IQ: HUM

L10 Latin 465 Silver Latin Epic: Lucan

Lucan's epic poem about the civil war between Caesar and Pompey, written under Nero, investigates themes of individuality, citizenship, morality, and historical inevitability in Roman history. We will read selections from the poem, focusing on Lucan's literary models and poetic style; his treatment of the past and of historical figures like Caesar, Pompey and Cato; and Lucan's place in the political, philosophical and literary world of Neronian Rome. Prerequisites: Latin 3171 and Latin 3181 (or equivalent) and sophomore standing or above.

Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM EN: H

L10 Latin 471 Elegiac Poetry

Credit 3 units. A&S IQ: HUM, LCD, LS Art: HUM EN: H

L10 Latin 493 Readings in Latin Prose: Apuleius

A survey of the major genres of Latin prose, history, oratory and philosophy. Authors may include Caesar, Cicero, Seneca, Tacitus. Aim is to develop reading facility and understanding. Credit 3 units. A&S IQ: HUM, LCD, LS Art: HUM EN: H

L10 Latin 494W Topics in Latin Literature

Advanced Latin seminars with enhanced writing requirements may be taken under this designation as writing-intensive courses. Required: permission of instructor.

Credit 3 units. A&S IQ: HUM, LCD, LS, WI EN: H

L10 Latin 495 Topics in Republican Latin

May be repeated for credit for study of different topics.

Credit 3 units. A&S IQ: HUM, LCD, LS Art: HUM

L10 Latin 496 Tacitus

Tacitus, the great historian and orator of the late first and early second centuries CE, is one of our best sources for the early history of the Roman Empire. With his concise style and scathing political insight, Tacitus' writings influenced later authors from Ammianus Marcellinus to Macchiavelli. We will read selections from Tacitus' historical works, paying particular attention to: prose style; genre, rhetoric and historiography; and Tacitus' critique of the Principate. Prerequisites: Latin 3171 and Latin 3181 (or equivalent) and sophomore standing or above. Credit 3 units. A&S IQ: HUM, LCD, LS Art: HUM EN: H

L10 Latin 4961 Topics in Empire Latin

May be repeated for credit for study of different topics.

Credit 3 units. A&S IQ: HUM, LCD, LS Art: HUM EN: H

L10 Latin 4962 Juvenal and Martial

This course examines satiric representations of life in the city of Rome in the *Epigrams* of Martial and *Satires* of Juvenal. The two poets, who were near-contemporaries and acquaintances, have had a massive impact on modern perceptions of imperial Rome in the ages of Domitian, Nerva, Trajan, and Hadrian (80s-120s CE). The Rome they represent is both a real place and a poetic world full of dramas and fictions. From our readings from Martial, Juvenal, and sources on their work and times, we will gain an

understanding of their literary agendas and of the realities of Roman life that their poems represent and distort. Topics will include the poetic career, the public spaces of Rome, amicitia and its rituals, private life, sexual behavior, and family affairs. Credit 3 units. A&S IQ: HUM, LCD, LS EN: H

L10 Latin 4963 Martial

Martial, the prolific first-century Latin poet, left behind 15 books of poetry. Martial's epigrams can be witty, sincere, caustic, and often quite sexually explicit. In this course, we will read a selection of Martial's epigrams in Latin, and we will discuss various themes related to Martial's work, such as gender and sexuality, ancient conceptions of authorship and publishing, flattery, invective, and the many personae Martial adopts. We will also pay close attention to Martial's language and style, and we will discuss where Martial fits into the wider social and historical context.

Latin American Studies

Latin American Studies (LAS) is a gateway to the region and its cultures, politics and history. The major in LAS can be studied on its own, providing knowledge about a region valuable for employers across different fields and industries. Focusing on Latin America allows students to engage with one of the most fascinating historical trajectories in the world; to explore diverse cultures where the traditional and the modern are always negotiating; and to participate in vibrant business, intellectual and political scenes. Latin America is a region at the forefront of policy reform, embedded in the complex networks of global economics, development, social engagement and cultural expression. Because of the region's importance, the LAS major provides key skills for today's jobs.

A major or minor in LAS is also an excellent complement to any other major program. Latin America is the location of major U.S. trade partners, and Latin American immigrants constitute the largest segment of market growth in the United States, including in the major economic markets of Boston, California, New York, Chicago, Texas and Florida. This makes the LAS major a great companion to a business degree. In this world, business majors and MBA graduates with an LAS background have a comparative advantage in the world market, as large corporations seek executives with a better understanding of the region's complex social, cultural and economic issues.

Pre-medical students and public health majors will find value in the fact that the growing Latino population and the diverse Latin American peoples are two major topics in the health care field. Majors in international and area studies (IAS), political science, economics and other social sciences can complete their studies by becoming experts in one of the most economically and politically complex regions in the world; Latin America is a true policy laboratory. Scientists of all disciplines work in the region's spectacular biodiversity. LAS students can attend study abroad programs across the region, earn credit, and explore any field of study.

Latin America offers an increasing number of study abroad and fellowship opportunities. At Washington University, we have in place in-house programs in Chile, Mexico and Ecuador, with other countries forthcoming. Some of our students apply to other programs and fellowships with environmental, political and social organizations in the region. NGOs and institutions such as Fullbright, Comexus, the Ford Foundation, Human Rights Watch, and Greenpeace have a strong presence in Latin America, and students with a Latin American background have a wide array of fellowship and internship opportunities available to them.

Given these reasons and more, Washington University students are more encouraged to look into LAS with each passing day. In the job market, in the academic field, and in the world at large, Latin America is the way to go! LAS alumni have gone on to work in the coffee industry, at the Center for International Policy, and at other nonprofit think tanks; they have also pursued graduate degrees in such fields as international relations and public policy.

Majors

The Major in Latin American Studies

The major in LAS allows undergraduate students to pursue an in-depth study of Latin America across diverse disciplines, theoretical approaches and historical periods. Through regular courses, seminars and additional activities such as film series, programs abroad, lectures, and the like, students will explore the processes that resulted in the integration of the so-called New World and Western civilizations, from the discovery of America to the present. An essential aspect of this major is the focus on economic, social and political dynamics corresponding to intercultural relations developed between indigenous cultures, Creole societies, and European and North American nations.

This aspect of the major stresses the study of social change, migration, social movements, multiculturalism, inequality, violence and social justice, and it combines regional analysis with critical interdisciplinary approaches. The program of study combines the analysis of urban environments; issues of education, gender, language and ethnicity; and modernization and border studies. It emphasizes transatlantic approaches as well as the study of topics related to autochthonous cultures in their conflictive interaction with Western traditions, systems of domination, values and economic/political projects.

Focusing on Latin America allows students to engage with a fascinating historical trajectory that promotes a multifaceted reflection on colonialism, diversity issues, economic development and international relations. The major has been designed to provide students with a historical background that will be instrumental both in itself, as an exciting field of specialization, and in combination with their pursuit of other fields of inquiry, such as international relations, business, globalization, and the like. Latin America is a region embedded in the complex networks of global economics, development, social engagement and cultural innovation.

The LAS major offers a sound, updated and competitive approach to the study of the region, both in its specificity and in its connections to the world, through the study of Latin America's processes of internationalization and its changing position in global scenarios. This major has also been designed to further contribute to the university mission of improving engagement with race, ethnicity and diversity.

Credit Requirements

The major in LAS requires students to complete 30 credits. At least 24 units must be at the 300 level or higher, and at least 9 units must be at the 400 level. All credits must be exclusive to the major and may not be double counted, unless the College of Arts & Sciences regulations state otherwise. Credits must be fulfilled as follows:

- 3 units for the successful completion of LatAm 165D Latin America: Nation, Ethnicity and Social Conflict, offered annually. LatAm 165C can also fulfill this requirement.
- 3 units for the successful completion of an elective introductory class at the 100, 200 or 300 level. Classes that fulfill this requirement must meet the approval of the director of undergraduate studies (DUS). This requirement may also be fulfilled with an approved course abroad or with a 300-level elective approved by the DUS.
- 3 units in history or politics at the 300 level or higher. Courses may come from relevant offerings in the departments of History or Political Science, the International and Area Studies (IAS) program, or study abroad. Courses must be cross-listed with LatAm (L45) or approved by the DUS. Existing examples of courses include but are not limited to the following:
 - **Political Science:** LatAm 326B Latin American Politics (offered annually); LatAm 4231 Contemporary Issues in Latin America (every two years)
 - **History:** LatAm 321C Introduction to Colonial Latin America until 1825 (annually); LatAm 322C Modern Latin America (annually); LatAm 3220 Modern Mexico (every two to three years)
 - **IAS:** LatAm 356 Andean History: Culture and Politics (annually); LatAm 4201 International Relations of Latin America (annually); LatAm 4661 Populism and Neopopulism in Latin America (annually); LatAm 4660 Geographies of Development in Latin America: Critical Perspectives and Contemporary Challenges (annually)
- 3 units in literary or cultural studies at the 300 level or higher. These may include courses offered by the departments of Romance Languages and Literatures, Art History, and Archaeology; LAS home-based courses; and study abroad. Courses include but are not limited to LatAm 343 Latin American Literatures and Cultures (every semester); LatAm 331 Hispanic Art/Arte Hispano (annually); LatAm 3800 Survey of Hispanic Cultures; LatAm 4500 Seminar on Hispanic Cultures; LatAm 381 Mexican Visual Culture; and LatAm 3824 Film and Revolution in Latin America.
- 3 units in anthropology or pre-Columbian cultures at the 300 level or higher. These courses may come from offerings in the anthropology department or study abroad. These include LatAm 3351 The Ancient Maya: Archaeology and History (annually); LatAm 3092 Indigenous Peoples and Movements in Latin America (annually); LatAm 3093 Anthropology of Modern Latin America; and Anthro 3093 Anthropology of Modern Latin America.
- 9 units of elective credit at the 300 level or higher. At least 3 of these units must be fulfilled at the 400 level. 3 units of elective credit may be fulfilled through an honors thesis (LatAm 486) or a special project (LatAm 425).

- 6 units of a Latin American seminar. Seminar courses are 400-level classes designed as such that are taught by core LAS faculty on theoretical issues related to the region. These include LatAm 461 Latin American Cultural Studies: Critical and Theoretical Approaches; LatAm 457 Gender and Modernity in Latin America; LatAm 463 Seminar on Urban Cultures in Latin America; LatAm 464 Nation and Desire in Latin America; and LatAm 483 Bodily Injuries: Violence, Gender and Representation in Latin America.

Capstone. Prime majors in LAS must fulfill their capstone requirement by writing an honors thesis (if the student meets the College of Arts & Sciences requirements to do so), writing a Latin American research paper (LatAm 425), or completing the two LAS seminar courses with a grade of B+ or better.

Language requirement. LAS requires all majors to complete a language requirement in Spanish or Portuguese. The Spanish requirement may be fulfilled by the completion of Span 302, Span 3021 or certification as a native speaker by the Spanish DUS.

The Portuguese requirement may be fulfilled as follows:

- Successful completion of Reading and Conversation II: Intermediate Portuguese (Portug 220) with a grade of B- or higher
- Native or heritage speaker status, as determined by the DUS in LAS or Spanish
- Successful completion of a program abroad, conducted in Portuguese, with a minimum of 3 credit units in the target language

Study Abroad

All majors in Latin American Studies must complete at least a study abroad experience in Latin America. This requirement may be fulfilled by the completion of a summer or semester program in the region approved by the Office of Overseas Programs.

Students who attend study abroad programs may request credit for appropriate courses at the 300 level, with approval from the DUS. A maximum of 9 credits for one semester (or equivalent) of study abroad or of 12 credits for more than one semester is allowed. LatAm 165D and 400-level credit must be completed in residence at Washington University.

Students unable to attend a study abroad program may complete an additional 3 units of 300-level elective credit instead.

Minors

The Minor in Latin American Studies

The minor in LAS allows undergraduate students pursuing other major programs to complement their existing curriculum with a study of Latin America across diverse disciplines and of the way in which the region engages with the Western world —

to which it belongs — at large. The minor in LAS is conceived as an option for students across a variety of disciplines in the social sciences, the humanities, the sciences, the pre-med program, and business and engineering to add knowledge about Latin America to their professional portfolio. The vast relations that the United States has with Latin America in all fields make the minor in LAS the source of valuable skills for our existing population. It also allows students in other major programs to access discussions of socioeconomic and ethnic diversity in one of the regions central to those debates in the world.

Credit Requirements

The minor in Latin American Studies requires students to complete 18 credits. At least 15 units must be at the 300 level or higher, and at least 3 units must be at the 400 level. All credits must be exclusive to the minor and may not be double counted, unless the College of Arts & Sciences regulations state otherwise. The requirements for the minor mirror some of the requirements for the major. Credits must be fulfilled as follows:

- 3 units for the successful completion of LatAm 165D Latin America: Nation, Ethnicity and Social Conflict, offered annually. LatAm 165C can also fulfill this requirement.
- 3 units in history or politics at the 300 level or higher. Courses may come from relevant offerings in the departments of History or Political Science, the IAS program, or study abroad.
- 3 units in literary or cultural studies at the 300 level or higher. These may include courses offered by the departments of Romance Languages and Literatures, Art History, and Archaeology; LAS home-based courses; and study abroad.
- 3 units in anthropology or pre-Columbian cultures at the 300 level or higher. These courses may come from offerings in the anthropology department or study abroad.
- 3 units of elective credit at the 300 level or higher.
- 3 units of a Latin American seminar. Seminar courses are 400-level classes designed as such that are taught by core LAS faculty on theoretical issues related to the region.

Language requirement. LAS requires all majors to complete a language requirement in Spanish or Portuguese. The Spanish requirement may be fulfilled by the completion of Span 302, Span 3021 or certification as a native speaker by the Spanish DUS.

The Portuguese requirement may be fulfilled as follows:

- Successful completion of Portug 215 Reading and Conversation I with a grade of B- or higher
- Native or heritage speaker status, as determined by the DUS in LAS or Spanish
- Successful completion of a program abroad, conducted in Portuguese, with a minimum of 3 credit units in the target language

Study Abroad

All minors in LAS are strongly encouraged (but not required) to pursue a study abroad program in the region. Students who attend study abroad programs may request credit for appropriate courses at the 300 level, with approval from the DUS. A maximum of 6 credits is allowed. LatAm 165D and the seminar requirement must be completed in residence at Washington University.

Courses

Visit online course listings to view semester offerings for L45 LatAm (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L45&crslvl=1:4>).

L45 LatAm 165D Latin America: Nation, Ethnicity and Social Conflict

This class is an interdisciplinary introduction to the academic study of modern and contemporary Latin America. The course focuses on main issues in Latin American politics, history and culture, both in the continent at large and in the specific regions and subregions within it. The class will particularly explore topics such as nation creation, national identity, modes of citizenry, the role of race, ethnicity, gender and class in the region's historical development, as well as social and political conflicts, which have defined the region over the centuries. This course is suggested before taking any other upper-level courses on Latin America or going abroad to other countries, and required for all Latin American Studies majors and minors. Through the course, students gain basic bibliographic knowledge and experience with research tools for a comparative study of Latin American politics society and culture. Prerequisites: none.

Credit 3 units. A&S IQ: HUM, LCD, SC, SD BU: IS EN: H

L45 LatAm 170 First-Year Seminar: Bodies in Brazil: Race, Representation and Nation

This course will examine the cultural expressions of the body in Brazil from an interdisciplinary perspective. We will examine how ideas about bodies -- both individual bodies and the "body of the nation" -- have mattered in Brazil's history and been expressed through art, literature, and film. We will also analyze how the body features in cultural forms, from Carnival to capoeira, from the "Globeleza" competition to the sensual politics of Anita and Pablo Vittar, and from indigenous body decoration to disability arts. Moving from the formation of national identity to contemporary culture, we will explore the multiple ways in which bodies are made to matter in Brazil. Rather than proceed in pure chronological order, this course will move dynamically between the past and the present, between different scales of time and space, and between cultural forms and everyday practices. Our materials span disciplines such as cultural studies, anthropology, sociology, and history, offering a broad array of angles from which to understand the significance of bodies in Brazil. We will address a wide range of topics, including slavery and national formation, modernist reimaginings of the social body, gender and sexuality, Brazilian Carnival, violence and incarceration, urban space, indigenous peoples, capoeira, hunger, religion, and the political significance of contemporary Brazilian pop stars.

Credit 3 units. A&S: FYS

L45 LatAm 2118 First-Year Seminar: Angels, Prostitutes and Chicas Modernas: Women in Latin American History

Women have been active players in the construction of Latin American nations. In the last two decades, leading scholars in the field have taken up the challenge of documenting women's participation. This research explosion has produced fruitful results to allow for the development of specialized courses. This course looks at the nation building process through the lens of Latin American women. Students will examine the expectations, responsibilities and limitations women confronted in their varied roles from the Wars of Independence to the social revolutions and dictatorial regimes of the 20th century. Besides looking at their political and economic lives, students will explore the changing gender roles and relations within marriage and the family, as well as the changing sexual and maternal mores.

Same as L22 History 2118

Credit 3 units. A&S: FYS A&S IQ: HUM, LCD, SD BU: HUM, IS EN: H

L45 LatAm 2119 First-Year Seminar: Race and Ethnicity in Latin America: Myths, Realities and Identities

What does it mean to identify as mestizo, moreno, or mulato? How have Latin American nations dealt with their mixed racial populations and their rich African and indigenous heritages? What does it mean to be black in nations where the official discourse is one of racial hybridity or color blindness? This course examines the history of racial thinking and the experience of race in Latin America. While the focus of the course will be on the complexities of race in Latin America, a place of enormous ethnic and cultural diversity, we will also draw comparisons to the history of race in the U.S.

Same as L22 History 2119

Credit 3 units. A&S: FYS A&S IQ: HUM Arch: HUM Art: HUM BU: HUM, IS EN: H

L45 LatAm 301L Historical Methods - Latin American History

This is a small-group reading course in which students are introduced to the skills essential to the historian's craft. Emphasis will be on acquiring research skills, learning to read historical works critically, and learning to use primary and secondary sources to make a persuasive and original argument. See Course Listings for current topics. Required for history majors. Preference given to History majors; other interested students welcome.

Same as L22 History 301L

Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM, IS EN: H

L45 LatAm 3021 Music of the African Diaspora

This course explores musical cross-fertilization between the African continent and South America, the Caribbean, and Europe. Beginning with traditional musics from selected regions of the African continent, the course examines the cultural and musical implications of transnational musical flows on peoples of the African diaspora and their multicultural audiences.

Same as L27 Music 3021

Credit 3 units. A&S IQ: HUM, LCD BU: IS EN: H

L45 LatAm 304 Survey of Brazilian Cultures: Race, Nation and Society

This course will introduce students to Brazilian culture from the colonial period to the present through literature, art, music, film and other cultural forms. The course gives a historical overview of Brazilian culture and society, exploring major sociohistorical

and artistic moments from the colonial, imperial, and republican periods and their "legacies" or influences on Brazilian society. Students will learn about the Amerindian, European, and African influences of Brazilian culture through the study of representative texts and cultural practices. The course also illustrates Brazil's place within Latin America and the world. The course will seek to deconstruct and expand preconceived notions of Brazil, such as Lusotropicalism and racial democracy. Classes will combine lectures by the instructor, student presentations, collective debates, and cooperative learning, and they will involve the use of required bibliography and audiovisual materials.

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: IS EN: H

L45 LatAm 305 Survey of Mexican Cultures

This course provides an interdisciplinary introduction to the study of Mexico, with a particular focus on the 20th and the 21st century. The class will cover the main historical and cultural processes of Mexico in this period: The Mexican Revolution; the consolidation of a one-party political system; the construction of Mexican national identity and the arrival of neoliberalism. The course also focuses on the main aspects of Mexico's relationship to the United States: the Free Trade Agreement, the history of Mexican migration and the Drug War. From this framework, the course touches upon questions of race (particularly the politics of racial mixture), modernization, construction of social identities and the unique nature of governance in Mexico, due to the single-party regime. It also touches on Mexico's specificities and particularities due to the uniqueness of situation as the southern neighbor of the United States. Prerequisites: none.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

L45 LatAm 3092 Indigenous Peoples and Movements in Latin America

This course focuses on the contemporary lives and political struggles of Indigenous Peoples in Latin America, with specific focus on Ecuador, Peru, and Bolivia. Through course lectures, ethnographic texts, and four in-depth case studies, we explore how the politics of Indigeneity articulate with political and economic processes including (neo)colonialism, global capitalism, state transformation and social movement struggle. Themes include: demands for territory and autonomy; environmentalism and natural resource exploitation; gender and economic inequality; race, racism and political violence; language and education; and the complexities of building multicultural or "plurinational" democracies.

L45 LatAm 3093 Anthropology of Modern Latin America

A survey of current issues in the anthropological study of culture, politics, and change across contemporary Latin American and the Caribbean. Topics include machismo and feminismo, the drug war, race and mestizaje,uppies and revolutionaries, ethnic movements, pop culture, violence, multinational business, and the cultural politics of U.S.-Latin American relations. Attention will be given to the ways that anthropology is used to understand complex cultural and social processes in a region thoroughly shaped by globalization.

L45 LatAm 3095 The Incas and Their Ancestors: The Archaeology of the Ancient Andes

From the hyper-arid desert of the Pacific Coast to the high-mountain plateaus of the Andes more than 12,000 feet above sea level to the lush forested Amazonian lowlands, Western South America presents one of the most diverse natural and cultural environments in the world and one of the few places where social complexity first developed. Beginning with the earliest human occupations in the region more than 12,000 years ago, this course examines how domestication, urbanization, the rise of early states, and major technological inventions changed life in the Andes from small village societies to the largest territorial polity of the Americas: the Inca Empire. Students will become familiar with the major debates in the field of Andean archaeology. Together, we will examine archaeological evidence (e.g., architecture, art, ceramics, metals, textiles, plant and animal remains), from the context of everyday life (e.g., households, food production, craft production) to the rituals and ceremonies (e.g., offerings, tombs) that took place in domestic and public spaces. We will also touch on the role of Andean archaeology in the context of national politics and heritage sustainability.

L45 LatAm 310C Ancient Civilizations of the New World

An examination of the Inca empire in Peru, and the Maya and Aztec empires in Mexico, through the inquiry into the roots, development, form, and evolutionary history of pre-Colombian civilization in each region from its earliest times to the rise of the classic kingdoms. Examples of respective artistic accomplishments are presented and discussed.

L45 LatAm 313 Hello, Hello Brazil! Popular Culture, Media, and the Making of a Nation

Our image of Brazil has been deeply shaped by its cultural production, from Tom Jobim and Vinicius de Moraes' ever-popular "Girl from Ipanema" to the spectacular mega-production of Carnival in Rio and from the Afro-Brazilian martial art of capoeira to the international stardom of pop artists like Anitta. This course is an introduction to popular culture in contemporary Brazil. Students will approach the theme through theoretical works that seek to define popular culture, understanding it as a hybrid form of expression that troubles the line between the "traditional" and the mass-produced. This course will examine how the circulation of sounds and images manifests and shapes Brazilian culture historically and in the present. We will also interrogate the different ways in which culture is produced and received, how it circulates in symbolic markets, and how it comes to be both consumed by diverse audiences and utilized in often unexpected ways. The course will cover topics such as the Tropicalia movement, Afro-centric Carnival blocos, street art such as graffiti, baile funk, forró, favela protest theater, telenovelas (soap operas), the popularization of samba, soccer and the World Cup, and Carnival. Students will use an interdisciplinary lens to approach popular culture in Brazil through music lyrics, TV and film, cultural performances, and

graphic novels. These materials will form the basis of our class discussions and written assignments. The course will be taught in English. Prerequisite: L45 165D, L45 304, or another course on Latin America suggested.

Credit 3 units. A&S IQ: HUM, LCD BU: BA, IS

L45 LatAm 319 The Body in Brazil: Race, Representation, Ontologies

This course is an introduction to various ways of understanding, representing, and performing the body in Brazil. Course materials will draw on insights from anthropology, the medical humanities, and science and technology studies in order to approach the body not just as biological material but also in its social, cultural, and spiritual dimensions. We will cover topics such as the importance of race and ethnicity since the time of colonization, sexualized media representations of gendered bodies, how some bodies are cast as disposable or "out of place" in contexts of social inequality, indigenous ways of viewing the body in relation to the natural and spiritual world, the politics of disability and access, and constructions of the "body politic" in the formation of national identity through ideas such as "antropofagia" (cultural cannibalism). Throughout, we will pay particular attention to how race, gender, sexuality, and disability shape the lived experiences of Brazilians. Topics will include the impact of slavery in the construction of the body in Brazil, the role played by race in the construction of discourses of corporeality, and the development of beauty stereotypes and practices such as the medical industry of plastic surgery, among others. Students will analyze visual materials, ethnographies, historical texts, and internet sources in dialogue with critical theories from the social sciences and humanities, assessing how the body "matters" in a variety of ways that reflect Brazil's cultural diversity while also starkly highlighting its persistent racialized and gendered social inequities. These materials will form the basis of our class discussions and written assignments. The course will be taught in English. Prerequisite: L45 165D, L45 304, or another course on Latin America suggested.

L45 LatAm 321C Introduction to Colonial Latin America until 1825

This course surveys the history of Latin America from the pre-Columbian civilizations through the Iberian exploration and conquest of the Americas until the Wars of Independence (roughly 1400–1815). Stressing the experiences and cultural contributions of Americans, Europeans and Africans, we consider the following topics through primary written documents, firsthand accounts, and excellent secondary scholarship, as well as through art, music and architecture: Aztec, Maya, Inca and Iberian civilizations; models of conquest in comparative perspective (Spanish, Portuguese and Amerindian); environmental histories; consolidation of colonialism in labor, tributary and judicial systems; race, ethnicity, slavery, caste and class; religion and the Catholic Church and Inquisition; sugar and mining industries, trade and global economies; urban and rural life; the roles of women, gender and sexuality in the colonies. Geographically, we cover Mexico, the Andes and, to a lesser extent, Brazil, the Southwest, Cuba, and the Southern Cone. Premodern, Latin America.

L45 LatAm 322C Modern Latin America

This course aims to present a survey of Latin American history from Independence to the present. Topics to be covered include the Wars of Independence; caudillismo; nationalism; liberalism; slavery and indigenous peoples; urbanization, industrialization and populism; ideas of race & ethnicity; the Mexican and Cuban Revolutions; US intervention; modernity, modernism and modernization; motherhood and citizenship; the Cold War; terror and violence under military dictatorships and popular resistance movements. While the course aims to provide students with an understanding of the region, it will focus primarily on the experiences of Mexico, Cuba, Brazil, Argentina and Central America.

L45 LatAm 325 Cultures of Health in Latin America

This course is a survey of the cultural and political-economic aspects of health, illness, and embodied difference in Latin America. We will approach these themes from an interdisciplinary perspective with an emphasis on anthropology and history, exploring how local, national, regional, and global factors affect health and healthcare and how people experience and respond to them. Topics will include interactions between traditional healing practices and biomedicine; the lasting impacts of eugenic sciences on contemporary ideas about race and disability; the unequal impacts of epidemic disease; Indigenous cosmologies and healing systems; the politics of access to healthcare; the cultural and political specificities of reproductive health; and the intersections of race, gender, ethnicity, class, and bodily capacities in the pursuit of well-being. This course is designed for students of all levels interested in health and/or Latin American cultures. It will be taught in English.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

L45 LatAm 326B Latin American Politics

This course is an introduction to the politics in Latin America, focusing on the trend toward the establishment of democracy. We examine the impact of political culture, economic development, and the legacy of authoritarian regimes on contemporary politics. The course also reviews many of the most pressing challenges confronting governments Latin American governments: the role of the military in politics, the reform of political institutions, threats from radical guerrillas and drug traffickers, debt and economic restructuring, and relations with the United States. Country studies focus on Argentina, Brazil, Chile, Peru, Mexico, and Nicaragua. Prerequisites: 100-level introductory course in Political Science or its equivalent in History or IAS.

L45 LatAm 331 Hispanic Art/Arte Hispano

This course focuses on the most important movements, artistic expressions and its representatives of the art history of Latin America and Spain. From the pre-Columbian art of the Mayas, Aztecs and Incas, to the syncretism of Postcolonial Latin American art, the Mexican Muralism and the self-reconstruction portraits of Mexican artist Frida Kahlo to the Chicano Art in the U.S.A. From the Medieval paintings of religious Spain, to the criticism of the Spanish nobility by Diego Velazquez, the Spanish Civil War of Guernica by Pablo Picasso, to the Surrealism of Salvador Dalí and Antonio Gaudi. The students visit the St. Louis and the Kemper Art Museums. Prerequisite: Span 308E. May be used for elective credit in the Spanish major or minor. In Spanish.

L45 LatAm 3351 The Ancient Maya: Archaeology and History

This course focuses on the ancient Maya civilization because there are many exciting new breakthroughs in the study of the Maya. The Olmec civilization and the civilization of Teotihuacan in the Valley of Mexico are considered as they related to the rise and development of the Maya civilization. The ancient Maya were the only Pre-Columbian civilization to leave us a written record that we can use to understand their politics, religion and history. This course is about Maya ancient history and Maya glyptic texts, combined with the images of Maya life from their many forms of art. The combination of glyptic texts, art and archaeology now can provide a uniquely detailed reconstruction of ancient history in a New World civilization.

L45 LatAm 3354 Ancient Mesoamerica

Mesoamerica encompasses the Pre-Columbian complex societies of Mexico and upper Central America, including Guatemala, Belize, and parts of Honduras and El Salvador. It was an agrarian world of great and enduring cities, far-flung trade networks, transcendent religions, kingdoms and empires. This survey lecture course begins with the pioneering hunters and gatherers, reviews the establishment of farming communities and the first Olmec Formative states, the flowering of highland Mexican Classic Period Teotihuacan and other great cities like Tajin in Veracruz, the dynasties of the lowland Maya and summarizes with the Aztec Empire and the period of the Spanish Conquest. The course touches on the many and diverse other cultures that contributed to this vibrant world.

L45 LatAm 343 Latin American Literatures and Cultures

How did Latin America become Latin America? This course explores the different inventions and reinventions of the region through its literatures and cultures. Beginning with the encounter of Europeans with America, students will engage themes like colonization and colonialism, urban and rural cultures, nation formation, modernization, media and popular culture, as well as

gender and race relations. Authors studied may include Colón, Sor Juana, Sarmiento, Neruda, Borges, García Márquez, or Morejón. Prereq: Spanish 308E or Spanish 303, or concurrent enrollment in 308E or 303. Taught in Spanish.

L45 LatAm 3546 Art and Archaeology of the Ancient Andes

This course chronologically surveys the arts and archaeology of the Andean region of western South America from approximately 3000 BCE to 1532 CE. We will examine the material culture of selected cultures as our point of entry into the understanding of ancient social, political, and religious life. Visual analysis of architecture, metalwork, sculpture, ceramics, textiles, and other art forms will be supplemented by archaeological evidence, colonial documents, theories of religions, and the natural sciences. We will also critically read contemporary scholarship in order to address class themes of power structures, regional interaction, sacred landscape, and materiality. Prerequisite: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215) or permission of instructor.

Same as L01 Art-Arch 3546

L45 LatAm 356 Andean History: Culture and Politics

Since pre-Columbian times, the central Andean mountain system, combining highlands, coastal and jungle areas, has been the locus of multiethnic polities. Within this highly variegated geographical and cultural-historical space, emerged the Inca Empire, the Viceroyalty of Peru — Spain's core South American colony, and the central Andean republics of Ecuador, Peru and Bolivia. Taking a chronological and thematic approach, this course examines pre-Columbian Andean societies, Inca rule, Andean transformations under Spanish colonialism, post-independence nation-state formation, state-Indian relations, reform and revolutionary movements, and neo-liberal policies and the rise of new social movements and ethnic politics. This course focuses primarily on the development of popular and elite political cultures, and the nature and complexity of local, regional and national power relations.

L45 LatAm 364 Anarchism: History, Theory, and Praxis

This course analyzes the origins, historical trajectories, and influence of anarchism from its classical period (1860s-1930s) until the present. It examines the major personalities, complex ideas, vexing controversies, and diverse movements associated

with anarcho-collectivism, anarcho-communism, individualist anarchism, anarcho-syndicalism, anarchist feminism, green anarchism, lifestyle anarchism, and poststructuralist anarchism. In doing so, it explores traditional anarchist concerns with state power, authority, social inequality, capitalism, nationalism, imperialism and militarism. It also analyzes anarchism's conception of individual and collective liberation, mutual aid, workers' organization, internationalism, direct democracy, education, women's emancipation, sexual freedom and social ecology. Special attention will be given to past and contemporary globalizing processes and their relation to the dissemination and reception of anarchism in the global South.

L45 LatAm 3640 Gender, War, and Migration

This course will examine the forced transnational migration of war refugees and their resettlement in host societies. A central question that guides this course is: How does war impact and complicate belonging and influence the movement of people across borders and boundaries? With this question in mind, we will explore the dynamic relationships between specific groups of refugees and nation-states, while considering inseparable intersectional configurations of gender, race, sexuality, ethnicity, class, age, and religion as lenses through which to consider ideas of personhood and notions of national belonging. In the first part of the semester we will focus on transnational displacement because of conflict and deterritorialization. We will utilize readings in feminist theory, post-colonial theory, and cultural studies to examine historical processes of dislocation and relocation. The second part of the semester will examine ethnographic case studies of resettled refugees in different sites and their day-to-day practices to understand how displaced people earn a place in host societies. We will also explore how identity categories influence the architecture of personhood in nation-states. Lastly, we will analyze the multi-layered ways in which diasporic subjects and nations rearticulate themselves virtually and digitally (via Internet and social media). We will combine diverse readings and theoretical engagements, lectures, documentary films, discussion, and class-based activities to interrogate notions of subjectivity, alterity, and belonging across time, place, and space. Pre-Requisite: L77 100B or consent of instructor.

L45 LatAm 3824 Film and Revolution in Latin America

This class is a Writing Intensive course focused on the study of the way in which four landmark Latin American revolutions (The Independence Wars, The Mexican Revolution, The Cuban Revolution and The Bolivarian Revolution) are represented in cinema. Each one of these revolutions will constitute a unit of study, and students will be expected to work with historical texts, films and works of film theory and criticism for each one of them. The course will engage in subjects such as the difference between fiction and nonfiction films when representing history; the politics that underlie specific representations; the way in which cinema questions and revises ideas developed

by historians; and the uses of film in creating popular views of history in Latin America. Students will develop a research project comparing two revolutionary processes over the semester. Prerequisites: L45 165D (Latin America: Nation, Ethnicity and Social Conflict) for LAS majors. Otherwise none. Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: IS EN: H

L45 LatAm 4107 Latin America and the Rise of the Global South

The rise of the global south — and the reordering of global geopolitics, economics and cultural imaginaries — is characterized by progressive change and intense conflict. Economic growth coincides with the impacts of global warming, the assault on natural resources, the rise of new consumers and the entrenchment of deep inequalities. We also see the emergence of cultural and political formations that range from the horrific to the inspiring. Latin America is a central node of the new global south. Here history takes unpredictable turns in the face of declining U.S. hegemony, the economic growth of Brazil, legacies of militarism and political violence, a feverish attack on nature, resurgent economic nationalism, and defiant "anti-globalization" movements. Through close reading of contemporary ethnographies of Latin America we explore emergent cultural and political-economic processes in the region, we consider south-south articulations (theoretical, cultural, political-economic) between Latin America, China, Africa and India, and we reflect on the changing role, meaning and relationships of the United States in the region.

L45 LatAm 4201 International Relations of Latin America

This course examines Latin American foreign relations in the world from the 1820s to the present with a primary emphasis on the period since 1945. Focusing on inter-state and transnational relations, it seeks to historically contextualize and analyze long term patterns and trends between Latin American states and between Latin America and the United States, Europe, and the global South. Given Latin America's shared experience with imperialism and more recently with neo-imperialism, special attention will be paid to the ways Latin America has sought to manage and/or resist foreign domination, especially U.S. hegemonic pretensions. To this end it will analyze patterns of inter-American conflict and cooperation. When, why, and under what conditions Latin America articulated an independent foreign policy, forged anti-imperialist blocs, embraced U.S. sponsored diplomatic efforts and military alliances, and pursued Latin American unity and solidarity will be closely examined. To better understand the continuities, discontinuities, contradictions, and complexities of Latin American foreign policy, this course will also assess the influence of changing regional and national political cultures from both a theoretical and a historical perspective. In doing so, it explores how elite culture, the

balance of domestic social forces, ideological and economic development, and shared cultural identities and meanings informed national political cultures and how these in turn shaped Latin American foreign policies.

Same as L97 IAS 4201

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L45 LatAm 4231 Contemporary Issues in Latin America

How do the institutional designs of contemporary democratic governments help us understand the nature and quality of representation? We concentrate on variations in the powers granted presidents by constitutions as well as the institutional determinants of whether executives are likely to find support for their policies in the legislature. In addition, we explore how incentives established by electoral laws influence the priorities of members of congress. Given all these variations in democratic institutional design, can voters go to the polls with the confidence that politicians will implement the economic policies for which their parties have long stood or which they promised in their campaigns?

L45 LatAm 439 The Arab & Muslim Americas: Feminist Perspectives

Migratory movements from the Middle East and North Africa into the Americas were precipitated by multiple and intersecting factors. This course will examine the historical and contemporary waves of Arab and Muslim migrants and refugees into the Americas from the nineteenth to the twenty-first century. It will explore how empire, globalization, and war influenced and continue to influence the flow of people across borders and impact policies and ideas of belonging in receiving nation-states. We will examine Arab and Muslim identity in light of gendered, ethnoreligious, class, and national affiliations and investigate the racialization of Islam and the gendered-Orientalist constructions of Arabs and Muslims in Latin America (Brazil, Mexico, Argentina, Honduras, Cuba) and the US. Utilizing interdisciplinary texts in Transnational Feminist Theory, Cultural Studies, and history, we will trace the ways that specific diasporic subjects have been incorporated into host nation-states and analyze, through a comparative framework, the receptions and rejections of Arabs and Muslims in the US and Latin America.

L45 LatAm 4517 Anthropology and Development

What is "development"? Economic progress for all? A slow and gradual "improvement" in the human condition? Helping people with "projects"? Westernization? Modernization? The sorting out of bodies that are useful and can be put to work from those less useful bodies that must be contained, imprisoned or killed? The militarized accumulation of capital? The commodification of labor? The exhaustion of nature? In this advanced seminar we will consider how anthropologists — as writers, analysts and theorists — have engaged the theories, meanings, practices and consequences of (sometimes externally directed) economic and political change. We focus on issues of the contemporary

moment: oil; urban poverty and inequality (sex work, migration, water, debt, and cash transfer programs); and cultures of militarism. The course is designed to provide a graduate-level introduction to theory and ethnography based on intensive reading, discussion, critique and writing, with revision. It is open to advanced undergraduates and fulfills writing-intensive (WI) requirements, as well as capstone requirements for some majors.

L45 LatAm 457 Gender and Modernity in Latin America

The purpose of this course is to introduce students to the particular forms modernity assumes in Latin American countries and to the ways in which national cultures, identity politics, and gender issues interweave during the 20th century. The course will discuss three particular articulations of this topic: (1) gender and the national question in Argentina: Eva Peron; (2) gender and visual arts: Frida Kahlo; and (3) gender and ethnicity: Rigoberta Menchu. Through these iconic figures, students will be introduced to the specific features that characterized three very different but representative cultural scenarios in Latin America. In each case, the context for the emergence of these highly influential public figures will be studied from historical, social, and cultural perspectives. In order to explore the cultural and political significance of Eva Peron, Frida Kahlo, and Rigoberta Menchu, the course will utilize literary texts (e.g., speeches, letters, diaries), visual materials (e.g., photography, films, paintings), and critical bibliography.

L45 LatAm 461 Latin American Cultural Studies: Critical and Theoretical Approaches

The goal of the course is to provide students with critical and theoretical tools that could be used for the analysis of Latin American cultural history from a transdisciplinary perspective, from colonial times to the present. Some of the concepts to be discussed in class are: colonialism and coloniality, national culture, dependency theory, cultural antropofagia, lettered city, miscegenation, heterogeneity, hybridity, transculturation, peripheral modernity, media and mediation, postmodernity, postcoloniality, and collective memory.

Credit 3 units. A&S IQ: HUM EN: H

L45 LatAm 4611 Latin American Populism and Neo-populism

A salient feature of Latin America in the 20th and early 21st centuries has been the recurrence of populism. Mass-based political and social movements animated by nationalist and reformist impulses dominated Latin American politics in the 1920s, 1930s–60s, and 1980s to the present. This course provides a general historical and theoretically informed analysis of the origins, internal dynamics, and outcomes of classical populist and neo-populist governments and parties. Among the notable populist and neo-populist cases examined include: Peronism in Argentina, Velasquismo in Ecuador, Cardenismo

in Mexico, APRA in Peru, Vargasmo in Brazil, Garcia/Fujimori in Peru, Menem/Kirchners in Argentina, and Hugo Chávez in Venezuela. Issues pertaining to leader-follower relations, populist discourses, citizenship rights, populist gender and racial policies, labor and social reforms, and mass mobilization politics also are explored.

L45 LatAm 462 Latin America and the West

From the perspective of postcolonial theory, the course covers different aspects related to Latin America's cultural history, from the Discovery to the present. Some of the issues discussed in class are: the colonial encounter; Baroque culture and the emergence of Creole societies in the "New World," the connections between Enlightenment and nationalism, as well as the interweaving of "coloniality" and modernity. Prerequisite: Survey of Latin American Culture or an advanced-level course on Latin America.

Credit 3 units. A&S IQ: HUM EN: H

L45 LatAm 4622 Labor and Labor Movements in Global History

Focusing on the period from mid-19th century (industrial revolution) until the present neoliberal capitalist era, this course analyzes working class formation, organization, collective action, and politics on a worldwide scale. It seeks to explore the connections between historical and contemporary workers' movements in the global North and global South, eschewing national perspectives and global/local dichotomies. Special attention is given to Latin American workers and labor movements. In particular, it examines the influence of immigration, the role of export workers, the impact of radical ideologies, the development of labor relations systems, the nature of informal work, and recent struggles for workers' control. The principal aim of this course is to introduce students to the key topics and themes pertaining to global labor history. These themes are varied and complex and range from workers' struggles.

Credit 3 units. A&S IQ: LCD, SSC, SC, SD Arch: SSC Art: SSC EN: S

L45 LatAm 463 Seminar on Urban Cultures in Latin America

The course focuses on the key role urban development and urban cultures have had in Latin America, with particular emphasis on contemporary times. The goal of the course is to discuss the connections between the formation and expansion of cities, the definitions of citizenship, and the role of modernity in the development of "high" and "popular" cultures within different historical and geocultural contexts. Particular attention is paid to the issues of race, class and gender. The course, which uses an interdisciplinary and comparative approach, also focuses on the phenomena of marginality, cultural resistance, nationalism and consumerism as well as on the role played by the media in contemporary Latin American societies. Some of the cultural expressions analyzed in the course are music (rock, pop, rap), sports, film and video. Prerequisite: IAS 165C Survey of Latin American Culture.

Credit 3 units. A&S IQ: HUM EN: H

L45 LatAm 4630 Modernity, Culture and the State in Mexico

This course is an advanced seminar on the process of the cultural, ideological and institutional modernization of Mexico. Drawing on readings from fields such as history, cultural anthropology, political sociology and cultural theory, the course discusses the shaping of various forms of social subjectivity and cultural ideology that sustained the formation and development of the state. The course also engages with the identities and processes that led both to the formation of structures of citizenship and to the contestation of state power. This course is structured chronologically, following the development of three interrelated processes unfolding between 1810 and the present: (1) the creation of state institutions and ideology and their evolution in relationship to events such as the liberal Reforma of the 1850s and the Mexican Revolution; (2) the cultural and social implication of processes of capitalist development, modernization and globalization; and (3) the ways in which Mexico's histories of sociocultural difference led to political and cultural insurgencies and rebellions. This course fulfills the seminar requirement for Latin American Studies majors. Prerequisite: L45 165D, L45 305, any other 300-level course with significant focus on Mexico, or permission of instructor.

Credit 3 units. A&S IQ: HUM, LCD

L45 LatAm 4633 20th-Century Latin American Revolutions

Latin America was arguably one of the most "revolutionary" regions of the world in the 20th century. It registered four "great revolutions": Mexico 1910, Bolivia 1952, Cuba 1959, and Nicaragua 1979. These social revolutions entailed a substantial, violent, and voluntarist struggle for political power and the overthrow of the established political, economic, social and cultural orders. In the wake of these successful revolutions, new revolutionary institutions of governance were founded, radical structural changes were implemented, and a new revolutionary ethos was adopted. With the exception perhaps of the Bolivian Revolution, these revolutions had a profound impact on Latin American and world politics. The primary aim of this course is to analyze and compare the causes, processes and outcomes of the Mexican, Cuban and Nicaraguan revolutions.

Same as L97 IAS 4633

Credit 3 units. A&S IQ: LCD, SSC, SC, SD EN: S

L45 LatAm 464 Nation and Desire in Latin America

The purpose of this course is to analyze the process of nation formation in Latin America from the imaginaries of the "Creole nation" to the first half of the 20th century. Class discussion encompasses the study of theories on nation formation and nationalism as well as textual representations of national projects, such as Simon Bolivar's letters and discourses, selections from *Facundo*, *Civilization and Barbarism* by Domingo F. Sarmiento; selected texts by Andres Bello, Alfonso Reyes, et al; *Ariel*, by J.E. Rodo; Pedro Henriquez Urena's *Seis ensayos en busca de nuestra expresion*; Jose Vasconcelos' *La raza cosmica*; José Carlos Mariátegui's *Siete ensayos de interpretacion de la realidad peruana*; and José Martí's "Nuestra América" and other essays. Some of the main topics discussed are the leading role of Creole elites in the consolidation of national cultures, the marginalization of women as well as indigenous and Afro-Hispanic populations, and the role of nationalism in the shaping of modern societies. Colonialism, Occidentalism, liberalism, positivism, nationalism and modernity are some of the concepts that are explored both theoretically

and in their particular discursive usages. Finally, the concept of nation(alism) is studied as a political/rhetorical device and as the resulting expression of agency, interest and desire, in peripheral societies.

Credit 3 units. A&S IQ: HUM EN: H

L45 LatAm 465 Cities, Race and Development in Latin America

This course offers a multidisciplinary approach to the study of the Latin American city: its history, development and inherent economic, social, cultural, ethnic and political tensions. Lectures, readings and class debates will explore interactions between the materiality and structure of Latin American modern cities and the social and cultural phenomena related to urban life in multicultural societies. Particular attention will be devoted to the effects of internal/external migration, and to the development of public spaces and sites of memory. Patterns of social segregation, marginalization, inequality and the like, will be analyzed in order to elaborate on the contemporary challenges of the city in a globalized yet traditional world. In addition to the analysis of living, institutional and commercial spaces, the course will cover social dynamics that break the discipline of the city through different forms of transgression, including crime, informal housing and underground movements. The goal of the course is to expose students to historical and social developments as exemplified in a variety of urban environments, and to encourage reflection on issues of social justice related to the living conditions of rural, disadvantaged and indigenous populations. The course will be conducted in English. Mandatory readings will be in English. Additional readings in Spanish will be required for those students fluent in the language. Prerequisites: none.

Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch: HUM Art: HUM BU: BA, IS EN: H

L45 LatAm 466 Popular Culture and the Representation of Youth in Latin America

The objective of this course is to introduce students to different aspects related to the representation of youth in Latin America, particularly through the depiction this sector receives in the realm of popular culture. The course will focus on the relationship between youth and social/political conflict and on the literary and cinematic representation of juvenile sectors in cultural production in different Latin American countries. The roles of music, melodrama and the media will be studied in connection to the construction of subjectivity and collective identity. The course will also analyze the involvement of juvenile sectors in narco-culture, gangs, maras, and the like, as well as the impact of violence, fear, and social inequality in early life. The analysis of films, literary texts, critical studies and cultural practices will be approached through a combination of biopolitical analysis and the analysis of representational strategies utilized in the elaboration of symbolic materials. This course fulfills the seminar requirement for Latin American Studies majors and minors. Prerequisite: LatAm 165D or another Latin American Studies course.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

L45 LatAm 4660 Geographies of Development in Latin America: Critical Perspectives and Contemporary Challenges

This course provides an overview to the geographies of development throughout Latin America. We begin by examining a variety of theoretical perspectives, definitions and critiques of "development." We highlight the uneven processes of development at multiple, overlapping scales and the power imbalances inherent in much of development discourse. In the second half of the course we focus our considerations toward specific contemporary trends and development issues, utilizing case studies drawn primarily from Latin America. These themes include sustainability, NGOs, social movements, social capital, security and conflict, identity, ethnicity and gender issues, participatory development, and micro-credit and conditional cash transfers. Students acquire the critical theoretical tools to develop their own perspectives on how development geographies play out in Latin America.

Same as L97 IAS 4660

Credit 3 units. A&S IQ: LCD, SSC, SC, SD EN: S

L45 LatAm 4662 Central American Geographies of Violence

This course provides an in-depth examination of the geographies of violence in Central America. As a region frequently characterized as endemically prone to violence, it is vital to analyze and contextualize the violence. Approaching violence in Central America from a geographic perspective involves not only locating and "placing" the violence but also thinking relationally about the multiple overlapping scales of activity, both within and beyond the region. The course is divided into three parts. In the first section of the course, we begin with an overview of the foundations for understanding violence in Central America. In addition to covering the physical and human geography of the region, we also delve into various ways of defining violence, with a particular emphasis on how geographers conceptualize violence. In the second section, we delve into various theoretical approaches for understanding the nature of multiple types of violence and draw from historical and contemporary events in Central America. In the third section of the course, we take a closer look at specific case studies in the region, covering topics such as genocide, alcoholism, immigration, gangs, and drug trafficking. Prerequisite: sophomore standing or above.

Same as L97 IAS 4662

Credit 3 units. A&S IQ: LCD, SC, SD EN: H

L45 LatAm 467 Constructing the (Racial) Other: From the Colonial Caste System to U.S. Latinos

The goal of this course is to introduce students to categories and concepts related to the questions of race and ethnicity in Latin America, from colonial times to the present. The course also covers U.S. Latinos as a population of Latin American descent that presents particular characteristics connected to the issues of migration, identity politics, reterritorialization, and cultural hybridity. Based on the theoretical and critical study of problems related to colonialism, social classification, miscegenation, whiteness, discrimination, and the like, representative literary and visual materials will be discussed to illustrate the connections between race, social roles, domestic/public spaces, work, democracy and modernization. The issue of race will be analyzed in its multiple articulations to the themes of nationalism, interculturalism, migration, and symbolic

representation. This course covers the seminar requirement for Latin American Studies majors. Prerequisite: L45 165D, one other class in Latin American studies, or one class on race studies.

Credit 3 units. A&S IQ: HUM, SC, SD EN: H

L45 LatAm 483 Bodily Injuries: Violence, Gender and Representation in Latin America

The course focuses on the definitions, uses and "languages" of violence in Latin America, particularly during the last decades of the 20th century and the beginning of the 21st century. Students are introduced to philosophical, ethical and political issues related to the existence of "structural" violence and to the problems connected to the symbolic representation of this phenomenon in literature, fictional/documentary films, and visual arts. One of the course's objectives is to problematize the conceptualization of violence and to promote critical thinking about its emergence, significance and effects on local/global societies. Some of the topics analyzed are the body in its multiple manifestations (the body politic, the social body, the individual body, the treatment of the corpse, etc.), the narrativization of violence (violence as discourse, documentation and fictional elaborations, violence and the media, violence and ideology, etc.), violence and the city, citizenry and otherness, bio-politics, etc. Finally, violence is presented in different contexts and associated to different activities (ordinary crime, narco-cultures, maras, political movements, domestic environments) and different situations (e.g., violence in rural areas, violence in the borderlands, violence and migration). In all cases the course calls for a reflection on the interrelations between private/public spheres, gender politics, ideological/aesthetic values, and individual/institutional levels. The role of memory and emotions is emphasized as a crucial element for the construction/mobilization of subjectivity and for the elaboration of agendas that challenge the State's monopoly of legitimate violence and propose alternative and often perverse forms of association and mobilization at the margins of institutional configurations.

This is the second course in the sequence for Latin American Studies thesis writers. Enrollment requires completion of LatAm 485 and permission from LASP and the undergraduate director.

Credit 3 units.

L45 LatAm 4876 Advanced Seminar: Mexican Agriculture: Land, Politics and Development

Access to and ownership of land has been a major issue in Mexican history. Land tenure in economic development has been a constant source of tension and debate since the 18th century. Paradoxically, land tenure has been put forth as both the obstacle and the solution to the country's modernization. Given its centrality in the construction of the modern period, this course examines liberalism, agrarian revolts, the revolution, the green revolution and neoliberalism through the lens of land issues. This course will also explore how these have shaped and have been shaped by indigenous peoples and peasants, from

land disentailment to the fight against GMO maize. Students will evaluate agrarian reforms, agricultural modernization programs, concepts of and transformations of natural resources, food production/consumption and social policies.

Same as L22 History 4876

Credit 3 units. A&S IQ: HUM, LCD, SD Arch: HUM Art: HUM EN: H

L45 LatAm 4885 Advanced Seminar: Medicine, Disease and Empire

This course examines the history of medicine in connection with the politics of colonialism and empire building from the 16th century through the 20th century. Topics covered include epidemic disease outbreaks (e.g., smallpox, cholera, malaria); the role of science and medicine in endorsing the "civilizing missions" of empires; tropical climates and tropical diseases as Western constructs; tensions between Western medicine and indigenous healing practices and beliefs; ideas of race and racism in science and medicine; modern advancements in sanitation and public health and their implementation overseas; and the historical roots of the modern global health movement.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H

L45 LatAm 4926 Contemporary Art of the US-Mexico Border and Beyond

The question of the materiality of borders has attained new urgency with the resurgence of nationalist and anti-globalist movements. Calls for a "big, beautiful wall" on the U.S.-Mexico border are but one striking example of this phenomenon. A wall, a fence, a line, or a zone may focus attention on a narrow space, but it does so at the expense of broader narratives of structural inequality, the lingering violence of colonialism, and the rapid scale of climate change. The simplicity of a barrier is a particularly damaging fiction, one that avoids examinations of the larger forces that divide us. This upper-level and graduate seminar will delve into the history of "border art" as a category -- whether public art, sculpture, installation, new media, or performance -- using the U.S.-Mexico border as an extended in-depth case study. Analysis will not be limited to this region, as the course encourages a comparative approach that places disparate regions into dialogue with each other. In addition, we will also consider the issue of divides and borders locally, within the St. Louis area and its suburbs. Prerequisites: Intro to Western Art or Intro to Modern Art, plus one 300-level course in Art History.

Legal Studies

The Legal Studies minor is an interdisciplinary program that allows students to study the role of law and legal institutions in society.

Students who minor in Legal Studies learn about law in courses from anthropology, economics, history, philosophy, political science and other disciplines. The curriculum emphasizes the forces that shape law and the ways that peoples of different cultures and from different historical periods have used and interpreted the law.

Because Legal Studies is interdisciplinary in nature and offers a variety of courses, each student can design a course of study that addresses their individual needs and interests.

Students may choose to take advantage of internships available in law and government. Legal Studies is an excellent pre-law program. It also prepares students well for other graduate study, as well as for careers in academia, business, politics or social services.

Phone: 314-935-4200

Majors

There is no major available in Legal Studies. Students interested in undergraduate, preprofessional preparation for the study of law should contact the pre-law adviser (<http://artsci.wustl.edu/resources/prelaw-advising/>) in the College of Arts & Sciences, who is available to help plan a course of study and prepare a strategy for students applying for admission to law school.

Minors

The Minor in Legal Studies

Units required: 18

The minor in legal studies requires six courses (18 graded units), at least three of which must be upper-division (300- or 400-level) courses. Two of the six courses may be drawn from the student's major, but, as in all College of Arts & Sciences programs, they can not be double-counted (i.e., applied to both the major and the minor). The six courses also must be distributed across three of four thematic subject areas. For details, please visit the Legal Studies website (<https://legalstudies.wustl.edu/>) or consult the Director of Legal Studies.

Courses

The following is a list of courses that have been offered in Legal Studies in recent years. Note that some of these courses are not currently offered and that some new courses may also count toward the minor. For a current list of courses in Legal Studies, please visit the Legal Studies website (<https://legalstudies.wustl.edu/>) or contact the Director of Legal Studies.

Visit online course listings to view semester offerings for L84 Lw St (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L84&crslvl=1:4>).

L84 Lw St 105G Logic and Critical Analysis

Introduction to the elementary tools of logic required for constructing and critically evaluating arguments and the claims they support. Topics include: the nature of an argument; argument structure; how arguments can fail both in structure and in content; formal and informal fallacies; propositional logic and predicate calculus; and critical analysis of rhetorical strategies for presenting arguments. Students will be encouraged to develop critical reasoning skills that can be widely applied.

L84 Lw St 120A Religious Freedom in America

The intersection of religion and law in American society has sparked some of the fiercest cultural engagements in recent memory: Should a for-profit religious corporation have a right not to fund birth control for its employees? Can a public college expel campus religious groups whose membership is not open to all students? May a Muslim in prison grow a beard for religious reasons? Should a cake baker or a florist be permitted to refuse services for a gay wedding? Can a church hire and fire its ministers for any reason? These current debates and the issues that frame them are interwoven in the American story. This course introduces students to the major texts and historical arguments underlying that story. Drawing from the respective expertise of the instructors, the course will expose students to a variety of scholarly methods related to the issue: legal history and case law, intellectual history and canonical texts, social history and narrative accounts, and political philosophy and contemporary analyses. This course is for first-year (non-transfer) students only.

Same as I60 BEYOND 120

Credit 3 units. EN: H

L84 Lw St 126 Ampersand: Law and Society

This course considers the basic aspects of the American legal system: its foundations, processes, institutions and rights. We will also study some specific substantive areas of the law. The course consists of two 90-minute Socratic lectures per week. Upon completion of this course, students should have a basic knowledge of the American legal system, which is an important part of a general education. The hope is that such knowledge will enable students to better understand and assess current legal events and to develop an increased interest in those events. This course should also enable students to consider law as a future area of study and career. Interested students may continue their study in the spring semester with an optional 1-credit seminar focusing on contemporary Supreme Court cases. Course is for first-year students in the Law and Society Program only.

L84 Lw St 131F Present Moral Problems

An investigation of a range of contemporary moral issues and controversies that draws on philosophical ethics and culturewide moral considerations. Topics may include: racism, world hunger, war and terrorism, the distribution of income and wealth, gender discrimination, pornography, lesbian and gay rights, abortion, euthanasia, and capital punishment. The aim of the course is to present diverse points of view regarding these topics and to provide conceptual and theoretical tools that enable the student to make headway in thinking carefully and critically about the issues.

Same as L30 Phil 131F

L84 Lw St 203C Early Political Thought: Text and Tradition

A selected survey of the political and moral thought of Europe from the rise of Athenian democracy to the Renaissance, with emphasis on analysis and discussion of writers such as Thucydides, Plato, Aristotle, St. Augustine, Castiglione and Machiavelli. The course aims to introduce students to basic texts in the intellectual history of Western Europe, understood both as products of a particular time and place and as self-contained arguments that strive to instruct and persuade. The texts are simultaneously used to chart the careers of such fundamental notions as liberty, virtue and justice. Preference given to Text and Tradition and IPH students.

L84 Lw St 207 Crossing Borders: An Introduction to

Institutions and Concepts in International and Area Studies

This course provides an overview of the emergence of international governing institutions, the ideologies that shaped them, and concepts helpful for understanding them. Identifying the systems that have emerged to govern modern human societies at the national and international levels provides the means to consider how human beings are categorized within those systems, as citizens, subjects, asylum seekers, refugees, and the stateless. We engage a few classic works -- including "The Communist Manifesto," "Imagined Communities," and "Orientalism" -- and consider how they have transformed knowledge. The goal is for students to gain an empirical grasp of world institutions and a critical vocabulary that will provide the means for an informed engagement with international issues across different world regions and academic approaches.

Same as L97 IAS 207

Credit 3 units. A&S IQ: LCD, SSC, SC BU: IS EN: S

L84 Lw St 207C Modern Political Thought: Text and Tradition

What is power? Why are societies divided along lines of race, class, and gender? When did politics become split between the right and the left? Can religion be reconciled with the demands of modern life? Can democracy? These are some of the questions that will be addressed in this survey of modern political thought. Thinkers covered will include Thomas Hobbes, Immanuel Kant, Karl Marx, WEB Du Bois, Hannah Arendt, and Michel Foucault.

L84 Lw St 2110 Social Inequality in America

Americans face different challenges and opportunities that depend on a variety of characteristics, including race, class, gender and sexual orientation. This class examines these intersecting categories from a sociological perspective — not simply as ways to classify people, but as social constructions

that help to explain social inequality. We examine these systems in a variety of institutional contexts, such as popular culture, family life, education, the criminal justice system and the labor force. Introductory level, no prerequisites.

Same as L40 SOC 2110

Credit 3 units. A&S IQ: SSC, SC, SD BU: BA EN: S

L84 Lw St 225 Religion and Politics in American History

The United States has often been imagined as both a deeply Christian nation and a thoroughly secular republic. These competing visions of the nation have created conflict throughout American history and have made the relationship between religion and politics quite contentious. This course surveys the complex entanglements of religion and public life from the colonial era through the contemporary landscape. Topics covered include: religious liberty and toleration, secularization, the rise of African-American churches, the Civil War, national identity and the Protestant establishment, the religious politics of women's rights, religion and the presidency, the Cold War, the religious left and right, and debates over church-state separation.

Same as L57 RelPol 225

L84 Lw St 233F Biomedical Ethics

A critical examination, in the light of contemporary moral disagreements and traditional ethical theories, of some of the moral issues arising out of medical practice and experimentation in our society. Issues that might be discussed include euthanasia, genetic engineering, organ transplants, medical malpractice, the allocation of medical resources, and the rights of the patient.

Same as L30 Phil 233F

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L84 Lw St 235F Introduction to Environmental Ethics

A general survey of current issues in environmental ethics, focusing on problems such as the obligation to future generations, protection of endangered species, animal rights, problems of energy and pollution, wilderness, global justice and business obligations. Students also learn some ethical and political theory.

Same as L30 Phil 235F

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L84 Lw St 2443 First-Year Seminar: The Nuremberg Trials and International Justice

This course is an exercise in understanding how professional historians and the general public discover and use the past. The main goals of this course are to understand the many different methods and standards applied to the past; to understand how and why each generation changes the past as it seeks to make it "usable"; and to develop the skills of exposition and argumentation necessary to describe and analyze complex historical issues and to express critical ideas effectively.

The subject of this inquiry will be the Nuremberg trials: the innovations and critiques around the law and politics of the trials themselves as well as the trials' legacies with regard to ideas about international justice in postwar America and the world. Course is for first-year, non-transfer students only.

Same as L22 History 2443

Credit 3 units. A&S: FYS A&S IQ: HUM BU: HUM, IS EN: H

L84 Lw St 260 Game Theory in Science and Culture

Introduces the major intellectual insights of game theory in a nontechnical fashion, and examines the influence game theory has had on geopolitics, social philosophy, psychology, art and the humanities. In addition to covering the basic machinery of the theory, the class: participates in numerous illustrative classroom games; examines game theory in film, literature and literary criticism; sees how game theory has contributed to social theory; and learns about the background of game theory and its history and perception as a hoped-for tool in the Cold War. Grades based on problems, short essays, two short-essay exams, and participation.

Same as L32 Pol Sci 260

L84 Lw St 263 Linguistics for Legal Purposes

This course exposes students to an array of legal matters in which forensic linguistic science can play a key role. It simultaneously introduces them to linguistic concepts, theories, and methods that can be differentially applied for a combination of forensic and legal purposes. Topics include trademark disputes, defamation suits, civil litigation, authorship identification, and linguistic evaluations of testimony presented during murder trials. Assignments will include the formulation of affidavits and the production of legal opinions derived from diverse linguistic analyses.

Same as L44 Ling 263

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L84 Lw St 299 Undergraduate Internship in Legal Studies

Students receive credit for a faculty-directed and approved internship. Registration requires completion of the Learning Agreement which the student obtains from the Career Center and which must be filled out and signed by the Career Center and the faculty sponsor prior to beginning internship work. Credit should correspond to actual time spent in work activities, e.g., 8-10 hours a week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours. Students may not receive credit for work done for pay but are encouraged to obtain written evaluations about such work for the student's academic adviser and career placement file.

Credit variable, maximum 3 units.

L84 Lw St 3012 Biblical Law and the Origins of Western Justice

This course will explore how law developed from the earliest periods of human history and how religious ideas and social institutions shaped law. The course will also illuminate how biblical law was influenced by earlier cultures and how the ancient Israelites reshaped the law they inherited. It will further analyze the impact of biblical law on Western culture and will investigate how the law dealt with those of different social classes and ethnic groups, and we will probe how women were treated by the law.

Same as L75 JIMES 3012

L84 Lw St 315 Introduction to Social Psychology

Introduction to the scientific study of individual behavior in a social context. Topics: person perception, stereotyping and prejudice, attitudes, memory and political psychology, among other issues. Prerequisite: Psych 100B.

Same as L33 Psych 315

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L84 Lw St 3255 The Development of the American Constitution

The U.S. Constitution has been so long maintained because it has adapted to new circumstances. Contrary to common mythology, this adaptation goes far beyond formal amendment and court interpretation. But past performance is no guarantee of future results. The course examines the processes through which American constitutional democracy has developed, considers its successes and failures, and assesses some of its most pressing challenges. In doing so the course treats topics such as: the Electoral College; the justice system; executive powers in war and peace; Congress versus the president; regulation and taxation; civil rights and Reconstructions; amendment politics; and constitutional rhetoric and beliefs.

Same as L32 Pol Sci 3255

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Same as L32 Pol Sci 331
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH, HUM EN: S

L84 Lw St 331F Classical Ethical Theories

Intensive readings of great works in the history of ethics, especially by Plato, Aristotle, Hume, Kant, and Mill. Topics may include: the sources of moral knowledge, the nature of practical moral judgment, the moral role of emotion and desire, weakness of will, moral autonomy, and the universality of moral norms.
Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor.
Same as L30 Phil 331F
Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH EN: H

L84 Lw St 3325 Constitutional Politics in the United States

The principal purpose of this course is to introduce students to the politics of constitutional interpretation. We first discuss the origins of the constitution, the structure operation and work of courts, and judicial decision making. Afterward, we examine various areas of the law relating to institutional powers and constraints (e.g., federalism, presidential powers, Congressional authority). In so doing, we develop an understanding for the legal doctrine in each area of the law and also examine explanations for the legal change we observe.
Same as L32 Pol Sci 3325
Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L84 Lw St 335S Poverty and the New American City

Exploration of structural changes that are transforming the American urban landscape, especially for low-income populations. We begin with a review of classic theories of urban poverty and consider their relevance in the modern context. We then analyze key political, economic, demographic and geographic shifts in how urban poverty is organized and reproduced, including gentrification, immigration, social policy reform and the credit crisis. Special attention will be devoted to exploring the social and political implications of changing urban policy approaches, as well as the "suburbanization" of poverty. We will conclude by discussing how urban poverty interfaces with broader social structures, including law, markets and the state. Prerequisite: An introductory course in sociology or consent of the instructor.
Same as L40 SOC 3350
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L84 Lw St 3373 Law and Culture

We live in an age when social policy is increasingly displaced into the realm of law, when justice and equality are matters of courtroom debate rather than public discussion. Legal language has become a key resource in all kinds of struggles over livelihood and ways of life. In this course, we study the cultural dimensions of law and law's changing relationship to state power, the global economy, social movements, and everyday life. We approach law as a system of rules, obligations, and procedures, but also a cultural practice, moral regime, and disciplinary technique. How are relationships between legal, political, and economic realms structured and with what consequences? How does law provide tools for both social struggle and social control? What does anthropology contribute to research on these issues? In exploring these questions, we combine readings from classical legal anthropology with recent ethnographic work from around the globe.
Same as L48 Anthro 3373
Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: ETH EN: S

L84 Lw St 340 Topics: Environmental Justice

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.
Same as L32 Pol Sci 340
Credit 3 units. A&S IQ: SSC Arch: SSC Art: CPSC, SSC BU: BA EN: S

L84 Lw St 340F Social and Political Philosophy

Study of certain fundamental issues concerning government, society, and culture. For example: what are the nature and limits of legitimate political authority? Are ordinary human beings capable of governing themselves justly? Do citizens have a duty to obey the state? If so, to what extent, if at all, is that duty grounded in consent or contract? Should the state limit or regulate the personal relationships of citizens, such as marriage, family, and sexuality? How should social institutions rectify a history of political or social injustice against oppressed groups? Readings from historical and contemporary sources.
Prerequisites: one course in Philosophy at the 100 or 200-level, or permission of the instructor. Priority given to majors in Philosophy & PNP.
Same as L30 Phil 340F
Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH, HUM EN: H

L84 Lw St 3431 Constitutional Law: Institutional Powers and Constraints

Introduction to constitutional law and practice in the United States. Emphasis on the role of the U.S. Supreme Court as an interpreter of the Constitution.
Same as L32 Pol Sci 3431
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L84 Lw St 344 Courts and Civil Liberties

This course focuses on constitutional law principles in the Bill of Rights, and examines how Supreme Court decisions influence these principles in everyday life. We explore how the courts, and particularly the Supreme Court, have interpreted these rights in light of changing times and emerging issues. Topics include the First Amendment; free exercise of religion and the establishment clause; freedom of speech, assembly and association; freedom of the press; the Fourth Amendment and the rights of those accused and convicted of crimes; the right

to privacy, including reproductive freedom and the right to die; equal protection and civil rights, including race, gender, sexual orientation; immigrants' rights and voting rights; and civil liberties after September 11. Recommended for the Liberal Arts and Business (LAB) Certificate.

Same as L32 Pol Sci 344

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, ETH, HUM

L84 Lw St 3441 Defendant's Rights

This course explores the operations of the American criminal justice system. Substantial emphasis on the constitutional rights accorded to the criminally accused. Readings consist primarily, but not exclusively, of Supreme Court cases.

Same as L32 Pol Sci 3441

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, ETH EN: S

L84 Lw St 345 Issues in Applied Ethics

Advanced study of a selected topic in applied ethics. Abstract ethical theories and methods are brought to bear on the moral problems that arise in an area of social and professional practice such as medicine, business, law, journalism, engineering, or scientific and humanistic research. Possible topics include: reproductive healthcare and policy, the just distribution of medical resources, the social responsibilities of corporations, accountability in the media and public office, and the ethics of research on or affecting human subjects. Prerequisites: one course at the 100 or 200-level in applied ethics; or permission of the instructor.

Same as L30 Phil 345F

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L84 Lw St 346 Philosophy of Law

This course will first focus on the philosophical foundations of law, examining both the relationship between law and rules, as well as the types of legal reasoning. Second, the course will focus on philosophical issues that arise in the key substantive areas of law: contracts, torts, property, criminal law, and constitutional law, as well in specialized areas such as family and employment law. The course will end with a brief discussion of several problems in legal ethics. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Same as L30 Phil 346

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L84 Lw St 3462 The Politics of Privacy in the Digital Age

This course explores the changing nature of privacy in contemporary society.

Same as L32 Pol Sci 3462

L84 Lw St 346J Islamic Law

This course presents a general overview of Islamic law and an introduction to the study of religious legal authority which values consensus. It then explores the formation of the major schools of law. Next it debates the notions of "ijihad" and "taqlid" and discuss how open and independent legal decisions have

been in the Islamic world. It also traces the transmission of legal knowledge in religious institutions across time and place by focusing on medieval Muslim societies and by closely examining the education of a modern-day Ayatollah.

L84 Lw St 3507 Legal Conflict in Modern American Society

Thousands of lawsuits are filed daily in the state and federal courts of the United States. The disputes underlying those lawsuits are as messy and complex as the human, commercial, cultural and political dynamics that trigger them, and the legal processes for resolving those disputes are expensive, time-consuming and, for most citizens, seemingly impenetrable. At the same time, law and legal conflict permeate public discourse in the United States to a degree that is unique in the world, even among the community of long-established democracies. The overarching objective of the course is to prepare our undergraduate students to participate constructively in that discourse by providing them with a conceptual framework for understanding both the conduct and resolution of legal conflict by American legal institutions, and the evolution of — and values underlying — the substantive law American courts apply to those conflicts. This is, at core, a course in the kind of legal or litigation "literacy" that should be expected of the graduates of first-tier American universities. Some of the legal controversies that are used to help develop that "literacy" include those surrounding the permissible use of lethal force in self-defense, the constitutionality of affirmative action in university admissions, contracts that are unconscionably one-sided, sexual harassment in the workplace, the duty of landlords to prevent criminal assaults on their tenants, groundwater pollution alleged to cause pediatric cancers, and warrantless searches of cellphone locator data by police.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L84 Lw St 3561 Women and the Law

This course (formerly called "Women and the Law") explores how social constructions of gender, race, class and sexuality have shaped traditional legal reasoning and American legal concepts, including women's legal rights. We will begin by placing our current legal framework, and its gender, race, sexuality, and other societal assumptions, in an historical and Constitutional context. We will then examine many of the questions raised by feminist theory, feminist jurisprudence, and other critical perspectives. For example, is the legal subject gendered male, and, if so, how can advocates (for women and men) use the law to gain greater equality? What paradoxes have emerged in areas such as employment discrimination, family law, or reproductive rights, as women and others have sought liberal equality? What is the equality/difference debate about and why is it important for feminists? How do intersectionality and various schools of feminist thought affect our concepts of discrimination, equality and justice? The course is thematic, but we will spend time on key cases that have influenced law and policy, examining how they affect the everyday lives of women. Over the years, this course has attracted WGSS students and pre-law students. This course is taught by law students under the supervision of a member of the School of Law faculty. *Students who have taken L77 3561 Women and the Law can not take this class.*

L84 Lw St 358 Law, Politics, and Society

This course is an introduction to the functions of law and the legal system in American society. The course material will stress the realities of the operation of the legal system (in contrast to legal mythology) as well as the continuous interaction and feedback between the legal and political systems. There are four specific objectives of this course: (1) to introduce students to legal concepts and legal theories; (2) to analyze the operation of the appellate courts, with particular emphasis on the U.S. Supreme Court; (3) to analyze the operation of American trial courts, especially juries and the criminal courts; and (4) to examine the linkages between culture and law.

Same as L32 Pol Sci 358

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L84 Lw St 3670 The Long Civil Rights Movement

The Civil Rights Movement is known as a southern movement, led by church leaders and college students, fought through sit-ins and marches, dealing primarily with non-economic objectives, framed by a black and white paradigm, and limited to a single tumultuous decade. This course seeks to broaden our understanding of the movement geographically, chronologically and thematically. It pays special attention to struggles fought in the North, West and Southwest; it seeks to question binaries constructed around "confrontational" and "accommodationist" leaders; it reveals how Latinos, Native Americans, and Asian Americans impacted and were impacted by the movement; and it seeks to link the public memory of this movement with contemporary racial politics.

L84 Lw St 3866 Interrogating "Crime and Punishment"

Whether read as psychological thriller, spiritual journey, or social polemic, Dostoevsky's 1866 novel *Crime and Punishment* has inspired diverse artistic responses around the world. From the 19th century to the present day, writers and filmmakers have revisited (and often subverted) questions that Dostoevsky's novel poses: What internal and external forces cause someone to "step over" into crime? What are the implications of a confession? To what extent can the legal system provide a just punishment? Are forgiveness and redemption possible, or even relevant? What role does grace — or luck — play in the entire process? This course begins with our close reading of Dostoevsky's novel and then moves on to short stories, novels, literary essays and movies that engage in dialogue with the Russian predecessor. A central concern of our intertextual approach is to explore the interplay between specific socio-historical contexts and universal questions. All readings are in English. No prerequisites.

L84 Lw St 389 Power, Justice and the City

This course examines normative theoretical questions of power and justice through the lens of the contemporary city, with a particular focus on American urban life. It explores urban political economic problems, questions of racial hierarchy and racial injustice in the modern metropolis, and the normative and practical dilemmas posed by "privatism" in cities and their suburbs. In addition, the course devotes considerable attention to honing students' writing skills, through class assignments that stress rewriting and revising, and also through four in-class writing workshops devoted to formulating a thesis and making an argument, revising and rewriting, writing with style, and peer consultation.

L84 Lw St 390 Gender Violence

This course explores the issue of violence against women within families, by strangers in the workplace, and within the context of international and domestic political activity. In each area, issues of race, class, culture and sexuality are examined as well as legal, medical and sociological responses. Readings cover current statistical data, research and theory as well as information on the history of the battered women's movement, the rape crisis center movement, violent repression of women's

political expressions internationally, and the effect of violence on immigrant and indigenous women in the United States and abroad. Not open to students who have taken U92 (UCollege) WGSS 363.

Same as L77 WGSS 393

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L84 Lw St 391 History of Political Thought I: Justice, Virtue and the Soul

This course offers a critical introduction to the main issues and debates in western political theory, including but not limited to the topics of justice, legitimacy, equality, democracy, liberty, sovereignty, and the role of history in the political and social world. This course is designed to be the first in a three-semester sequence on the history of political thought, and students are encouraged, but not required, to take the courses in chronological sequence. The first semester begins with ancient Greek political thought, and follows its development up to the early 16th century.

Same as L32 Pol Sci 391

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S UColl: ML

L84 Lw St 392 History of Political Thought II: Legitimacy, Equality, and the Social Contract

Government is often justified as legitimate on the grounds that it is based on the consent of the governed. In History of Political Thought II, "Legitimacy, Equality, and the Social Contract," we examine the origins of this view, focusing our attention on canonical works in the social contract tradition, by Thomas Hobbes (1588-1679), John Locke (1632-1704), Jean-Jacques Rousseau (1712-1778), David Hume (1711-1776), and Immanuel Kant (1724-1804). This course is the second in a three-semester sequence on the history of political thought. Students are encouraged but not required to take all three courses. Prerequisite: One previous course in political theory or political philosophy.

Same as L32 Pol Sci 392

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L84 Lw St 393 History of Political Thought III: Liberty, Democracy and Revolution

How, if at all, should the political institutions of the modern state express and secure the liberty and equality of citizens? What is the political significance of private property? Is world history to be understood as progress toward one best form of government — capitalist democracy, perhaps, or communism? What forces drive history? We address these and other timeless political questions through close reading and rigorous analysis of classic texts in the history of Western political thought. Authors studied include Kant, Hegel, Marx, Tocqueville, John Stuart Mill, and Nietzsche. Prerequisite: one previous course in political theory or political philosophy. The course is the third in a three-semester sequence on the history of political thought, and students are encouraged but not required to take the courses in chronological sequence.

Same as L32 Pol Sci 393

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L84 Lw St 4002 Directed Fieldwork in Legal Research

A fieldwork project in empirical and/or archival legal research under the direction of a member of the Washington University faculty. The fieldwork may be planned and undertaken individually or as part of a formal project. Permission of supervising faculty member and director of the program is required.

Credit variable, maximum 6 units. EN: H

L84 Lw St 4013 Negotiating Major Legislation in Congress

This course examines the outcomes of the legislative process in the United States. The first third of the course examines key concepts and major determinants of the negotiation process: majority rule instability, agenda control, political parties, the amendment process and the uncovered set. The rest of the course examines the negotiations that led to some of the most significant legislation in the past 100 years, from the Federal Reserve Act of 1913 through the Voting Rights Act of 1965 to the immigration bill of 2006. Along with other assignments, each student writes several drafts of a major research project on a major piece of legislation. Each research project examines the amendments offered, the strategic intentions of the amendments' sponsors, the agenda process and the role of party. Prerequisite: Pol Sci 101B.

Same as L32 Pol Sci 4013

Credit 3 units. A&S IQ: SSC, WI EN: S

L84 Lw St 4030 Political Theory of Education

This course explores issues of authority, legitimacy, citizenship, freedom and equality through contemporary readings in the political theory of education. What is to be done when parents, citizens, and educational experts make conflicting judgments about the proper education of children? When should the state defer to parental judgments and what are the grounds for legitimately refusing to do so? How should public schools aim to equip their students for the responsibilities of citizenship in a diverse liberal democratic state? What do the concepts of equality and equality of opportunity mean in the context of education, and (how) should governments pursue these values through education policy? We explore these issues through contemporary works of political theory as well as through considering a number of important U.S. court cases, including those dealing with the schooling of children from minority religious and cultural groups, affirmative action in university admissions, and school desegregation plans. Prerequisite: one previous course in political theory or political philosophy.

Same as L32 Pol Sci 4030

Credit 3 units. A&S IQ: SSC BU: ETH EN: S

L84 Lw St 4070 Global Justice

This course examines contemporary debates and controversies regarding global justice. Seminar discussions are arranged around significant issues in the current literature. For example: What (if anything) do we owe to the distantly needy? Do we have special obligations to our compatriots? Do political borders have normative significance? And so on. This course is of interest not only to political theorists, but also students in other fields interested in social justice or international relations generally.

Same as L32 Pol Sci 4070

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L84 Lw St 425A Law, Religion, and Politics

What is the role of religious argument in politics and law? What kinds of arguments are advanced, and how do they differ from one another? Are some of these arguments more acceptable than others in a liberal democracy? This course will explore these questions through the work of legal scholars, theologians and political theorists. Our topics include the nature of violence and coercion in the law, constraints on public reason, the relationship between religion and government, and the nature of religious practice and tradition.

Same as L57 RelPol 425

Credit 3 units. A&S IQ: HUM EN: H

L84 Lw St 429 Feminist Political Theory

This course asks how feminist thinkers from various political and intellectual traditions critique, adopt and transform political theories of justice, citizenship, property and the state. To uncover how different feminist theories have been adopted in the struggle for political transformation and social justice, we will pursue two main lines of inquiry. The first asks how feminist thinkers from various traditions critique and engage the history of political thought within the social contract tradition. We will ask, in particular, how gender, race, slavery, colonialism and empire shape conceptions of citizenship and property. We will also examine transnational feminist critiques of the public/private division in the Western political theory canon as it impacts the role of women and the social construction of women's bodies. During the second half of the semester, we will ask how various transnational social movements have engaged and adopted feminist theories in efforts to resist state violence, colonialism, labor exploitation and resource extraction. In following these lines of inquiry we will draw from postcolonial, decolonial, liberal, Black, radical, Marxist and Chicana feminist perspectives. Part of our goal will be to uncover how various feminist theories treat the relationship between politics and embodied experience, how gendered conceptions of family life affect notions of political power and how ideas about sexuality and sexual conquest intersect with empire-building. Pre-Requisite: L77 100B or consent of instructor.

Same as L77 WGSS 429

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L84 Lw St 440 Religion, Politics, and the University

This course explores in depth current issues related to pluralism, difference, and belonging in matters pertaining to religion and other important issues, with a particular focus on how these play out in the university context. The instructors, John Inazu and Eboo Patel, are two of the leading national commentators on these issues. Prerequisite: Students enrolling in this class must submit a brief statement of interest (<http://law.wustl.edu/COURSES/INAZU/seminar1/summaries/>) to Professor John Inazu.

Same as L57 RelPol 440

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L84 Lw St 4400 Advanced Social and Political Philosophy

A selective investigation of one or two advanced topics in the philosophical understanding of society, government and culture. Readings may include both historical and contemporary materials. Possible topics include: liberalism, socialism,

communitarianism, citizenship, nationalism, cosmopolitanism, social contract theory, anarchism, and the rights of cultural minorities. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Same as L30 Phil 4400

Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L84 Lw St 4402 Topics in Political and Social Theory: Constitutionalism

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Same as L32 Pol Sci 4402

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L84 Lw St 472 Social Theory and Anthropology

A seminar on social theory and its ethnographic implications. Course combines major works of modern social theory, including Marx, Weber, and Durkheim, with current work by contemporary anthropologists, such as Clifford Geertz, Eric Wolf, Marshall Sahlins, and Fredrik Barth, and ethnographers from related disciplines, such as Pierre Bourdieu and Paul Willis. Prerequisite: previous anthropology course work or permission of instructor.

Same as L48 Anthro 472

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC EN: S

L84 Lw St 4981 Advanced Seminar: Historical Perspectives on Human Rights

This course offers a historical perspective on the modern international human rights regime, using materials drawn from diplomatic, legal, political, and cultural studies. Successful completion of this seminar involves designing, researching and writing a 25-30 page paper on a historically-oriented, human-rights-related topic of student's choice.

Same as L22 History 4981

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

Linguistics

At Washington University, the Linguistics program offers an undergraduate major and minor. The core of the Linguistics program focuses on the study of how languages are structured. Students examine how words are built from sounds, how sentences are built from words, and how all of this structure manages to communicate meaning. With a good understanding of these formal properties, students can pursue other questions about language. How does language change over time? Do diverse languages have more in common than meets the eye? What functions does language play in society? What is its relation to thought? What are its biological and psychological underpinnings? And just how do children manage to acquire language so well in the first place?

Linguistics takes a scientific approach to the study of language and develops skills in data analysis and scientific experimental methods. Linguistics students may or may not speak many languages, but they definitely will learn how to collect and analyze data about languages in an effort to answer these questions.

Majors

The Major in Linguistics

Total units required: 30 units, at least 18 of which must be from courses at the 300 level or higher

Required courses: 12 units

Code	Title	Units
Ling 170D	Introduction to Linguistics	3
Ling 309	Syntactic Analysis	3
Ling 313	Phonological Analysis	3
Ling 317	Introduction to Computational Linguistics	3
Total Units		12

Elective courses: 18 units

At least 6 units must come from the following list:

Code	Title	Units
Ling 306G	Philosophy of Language	3
Ling 311	Introduction to Semantics	3
Ling 312	Phonetics	3
Ling 315	Morphology	3
Ling 320	Historical and Comparative Linguistics	3
Ling 339	Introduction to Sociolinguistics	3
Ling 408	Psychology of Language	3
Psych 358	Language Acquisition	3

The remaining electives may be drawn from either the above list or the following:

Code	Title	Units
Ling 148	First-Year Seminar: The Linguistics of Constructed Languages	3
Ling 225D	Latin and Greek in Current English	3
Ling 234	Introduction to Speech and Hearing Sciences and Disorders	3
Ling 258	Methods in Linguistic Research	3
Ling 263	Linguistics for Legal Purposes	3
Ling 301G	Symbolic Logic	3
Ling 340	Linguistic Pragmatics	3
Ling 341	Linguistic Diversity in the United States	3
Ling 3701	Introduction to Hispanic Linguistics	3
Ling 396	Linguistics Seminar	3
Ling 427	Computation and Learnability in Linguistic Theory	3
Ling 466	Second Language Acquisition	3
Ling 495	Senior Seminar in Linguistics: Metrical Stress Theory	3
Ling 499	Independent Work For Senior Honors	6 max
Ling 500	Independent Work in Linguistics	3
AFAS 210	The Linguistic Legacy of the African Slave Trade in Interdisciplinary Perspective	3
Anthro 3386	Language, Culture and Society	3

Under certain circumstances, students may count toward their major a limited number of relevant courses not listed here. Such circumstances include study abroad and preparation for a specialized capstone. A specific plan of study must be worked out in advance with advisers in the linguistics program.

Language requirement: Majors should normally have foreign language competency equivalent to one year of study at the college level. Classes taken to fulfill this requirement do not normally count toward the 30 total units required for the major.

Additional Information

Capstone: A senior project is required of primary majors. This normally will be done while taking Ling 495 or Ling 500 or by completing the senior honors program (Ling 499).

Senior Honors: Students with a university grade-point average of 3.65 or higher and a linguistics GPA of 3.65 or higher at the end of their junior year may apply to enter the honors program by submitting a proposal for a senior thesis. If admitted into the program, the student registers for 3 units of Ling 499 during each semester of the senior year. The student must complete the thesis and pass an oral defense by the middle of March of the senior year.

Minors

The Minor in Linguistics

Units required: 15 units, at least 9 of which must be from courses at the 300 level or higher

Required course: 3 units

Code	Title	Units
Ling 170D	Introduction to Linguistics	3

Elective courses: 12 units

At least 6 units must come from the following list:

Code	Title	Units
Ling 309	Syntactic Analysis	3
Ling 311	Introduction to Semantics	3
Ling 312	Phonetics	3
Ling 313	Phonological Analysis	3
Ling 315	Morphology	3
Ling 317	Introduction to Computational Linguistics	3
Ling 320	Historical and Comparative Linguistics	3
Ling 339	Introduction to Sociolinguistics	3

The remaining elective units may be drawn from any course acceptable as an elective for the major.

L44 Ling 148 First-Year Seminar: The Linguistics of Constructed Languages

Credit 3 units. A&S: FYS A&S IQ: SSC Arch: HUM Art: HUM BU: HUM EN: S

L44 Ling 170D Introduction to Linguistics

Language is one of the fundamental capacities of the human species, and there are many interesting and meaningful ways in which it can be studied. This course explores the core components of linguistic theory: speech sounds (phonetics and phonology), word formation (morphology), sentence structure (syntax) and meaning (semantics). It also provides an overview of interdisciplinary ideas and research on how language is acquired and processed, its relation to the mind-brain and to society, and the question of whether the essential properties of language can be replicated outside the human mind (specifically, in chimpanzees or computer programs).

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, HUM EN: S

L44 Ling 225D Latin and Greek in Current English

An astonishingly large number of English words, especially in areas such as medicine, science, and law, are derived from Latin and Greek. This course will provide a study of the impact of Latin and Greek on the English language through study of the Latin and Greek roots, prefixes, and suffixes that are most commonly found in English technical and non-technical vocabulary and the linguistic principles through which these elements have entered the English language.

Same as L08 Classics 225D

Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM EN: H

L44 Ling 258 Methods in Linguistic Research

This course will introduce students to a range of formal, computational, and experimental tools for conducting linguistic research. Students will learn about different types of linguistic data, experimental design, and statistical techniques in the context of research in general linguistics, psycholinguistics and sociolinguistics. This course aims to make students more capable readers of linguistic research (and scientific research more generally) and to provide them with hands-on experience in employing linguistic research methods. The course will also serve as an introduction to R for statistical computing. The class is intended for freshman and sophomore students who are considering advanced study in the linguistics program.

Prerequisite: Ling 170D.

Credit 3 units. A&S IQ: SSC EN: S

L44 Ling 263 Linguistics for Legal Purposes

This course exposes students to an array of legal matters in which forensic linguistic science can play a key role. It simultaneously introduces them to linguistic concepts, theories, and methods that can be differentially applied for a combination of forensic and legal purposes. Topics include trademark disputes, defamation suits, civil litigation, authorship identification, and linguistic evaluations of testimony presented during murder trials. Assignments will include the formulation of affidavits and the production of legal opinions derived from diverse linguistic analyses.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L44 Ling 301G Symbolic Logic

In the first half of the course, we will be studying some features of truth-functional and first-order classical logics, including studying the model theory and metatheory for first-order logic in much greater depth than in Phil 100. In the second half of the course, we will go on to study three different styles of proof-system: tableaux, axiomatic, and natural deduction. This course continues on where Phil 100 leaves off. It is recommended for students who have already taken that introductory course or for students who already have a strong background in mathematics. Priority given to majors in philosophy and PNP.

Same as L30 Phil 301G

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: HUM

L44 Ling 306G Philosophy of Language

A survey of major philosophical problems concerning meaning, reference, and truth as they have been addressed within the analytic tradition. Readings that represent diverse positions on these focal issues will be selected from the work of leading philosophers in the field, for example: Frege, Russell, Wittgenstein, Davidson, Quine, Kripke, and Putnam. Students are encouraged to engage critically the ideas and arguments

presented, and to develop and defend their own views on the core topics. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Same as L30 Phil 306G

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L44 Ling 309 Syntactic Analysis

The ability to produce and understand an infinite number of sentences is perhaps the most fascinating aspect of the human language faculty. Syntax is the study of how the brain organizes sentences from smaller phrases and words. This course explores syntactic analysis from several perspectives within generative linguistics, focusing primarily on the Government and Binding framework but also introducing Minimalist and Optimality Theoretic approaches. Topics discussed include phrase structure, transformations, case theory, thematic roles and anaphora. Assignments help students learn to construct and compare analyses of syntactic problems in English and other languages. Prerequisite: Ling 170D or 440, or permission of instructor.

Credit 3 units. A&S IQ: SSC BU: HUM EN: S

L44 Ling 311 Introduction to Semantics

Semantics is the branch of linguistics that studies how speakers assign meaning to words, sentences and larger units of discourse. We combine perspectives from both linguistics and philosophy to explore a variety of topics including polysemy, compositionality, quantification, anaphora, definite descriptions, attitude reports, presupposition and implicature. Prerequisite: Ling 170D or Phil 301G or permission of instructor.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: HUM EN: S

L44 Ling 312 Phonetics

Phonetics is the study of the sounds of the languages of the world. The primary goal of the course is to learn how speech sounds are produced, so that the student can describe them in articulatory terms, write them out in a standard notational system, and produce them accurately. Other topics include a basic introduction to the acoustics of speech and the use of personal computers to display, analyze and synthesize human speech. The course should prove useful to students desiring a deeper understanding of one of the fundamental underpinnings of linguistics, but also has practical applications in such fields as foreign language learning and the appreciation and acquisition of new dialects and accents. Prerequisite: Ling 170D or permission of instructor.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: HUM EN: S

L44 Ling 313 Phonological Analysis

There are several important abilities involved in the use of human language, one of these being the ability to organize speech sounds. The system that the brain uses to accomplish this task is the subject matter of phonology. This course explores phonology from several perspectives within generative linguistics, including both traditional rule-based and current Optimality Theoretic approaches. Topics discussed include phonological features, lexical phonology, prosodic morphology, tone and metrical stress. Assignments help students learn

to analyze phonological problems in a variety of languages and to evaluate the consequences of using different analytic approaches. Prerequisite: Ling 170D or 440, or permission of instructor.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L44 Ling 315 Morphology

Concepts covered: morphemic analysis and investigation of morphological processes. Additional topics may include relationship of morphology to language-typology and to syntax. Prerequisite: Ling 170D, or permission of instructor.

Credit 3 units. A&S IQ: SSC EN: S

L44 Ling 317 Introduction to Computational Linguistics

Use of computers to analyze, understand and generate human language. Emphasis on appreciating practical applications such as text analysis; search and creation of dictionaries and corpora; information retrieval; machine translation; and speech interfaces. Survey of rule-based and statistical techniques. Students acquire programming skills appropriate for solving small- to medium-scale problems in linguistics and text processing, using a language such as Python. Students have regular programming assignments and complete a semester project. No previous knowledge of programming required. Prerequisites: Ling 170D or permission of instructor.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L44 Ling 320 Historical and Comparative Linguistics

Historical linguistics focuses on how languages change over time. Comparative linguistics focuses on their similarities and differences. In this course we trace some of the differences and changes in sound (phonetics and phonology), word formation (morphology), sentence structure (syntax) and meaning (semantics). Topics include linguistic universals; the structural and genetic classification of languages; the techniques of reconstructing proto-languages; and the causes of language change. Examples from Indo-European languages (for example, Greek, English and Spanish) and from Native American languages (for example, Quechua and Mayan) are emphasized. Prerequisite: Ling 170D.

Credit 3 units. A&S IQ: LCD, SSC Art: HUM BU: HUM EN: S

L44 Ling 339 Introduction to Sociolinguistics

Studies of language in social context are presented, including research related to diglossia, bilingualism, pidginization, creolization and dialectology. Discourse analyses and conversational analyses of face-to-face conversation are examined in methodological and analytical terms. Beyond assigned readings, critical discourse analyses, the ethnography of speaking, the sociology of language, and accommodation theory are also considered. Students are required to develop a course project related to one or more studies of language in use. Experimental studies of sociophonetics and sociohistorical linguistics are presented during lectures to demonstrate advanced interdisciplinary research with potential educational and legal relevance. Prerequisite: Ling 170D.

Credit 3 units. A&S IQ: SSC, SC, SD BU: HUM EN: S

L44 Ling 340 Linguistic Pragmatics

Discourse analysis and pragmatics are the subfields of linguistics that investigate language as it is used in real-life contexts. The focus of this course is on the following question: What do people do with language, and how do they do it? One goal is to

demonstrate how the results of such investigations are relevant for a number of concrete problems in human communication. Some of the more specific questions we will explore are as follows: What distinguishes discourse analysis and pragmatics from each other? What is their relation to the other branches of linguistics? How can the two fields contribute to the establishment of a paradigm for interdisciplinary and intercultural studies? Prerequisite: Ling 170D or permission of instructor.

Credit 3 units. A&S IQ: SSC BU: HUM EN: S

L44 Ling 341 Linguistic Diversity in the United States

Linguistic diversity has always existed within the United States, and this course begins with a survey of many of the indigenous Native American languages that existed prior to European colonization. The emphasis of this course is linguistic research, as we examine diverse studies of language across the nation with respect to regional differences, racial and ethnic differences, historical differences, and differences in education and economic status. American bilingualism is explored, as are many of the dialects that have evolved in different parts of the nation. Students study a range of sophisticated linguistic analyses of language diversity in different parts of the United States at different points in the nation's history. The culmination of the course explores practical linguistic applications in legal and educational contexts. Prerequisites: Ling 170D and some familiarity with elementary statistics.

Credit 3 units. A&S IQ: SSC, SC, SD BU: BA EN: S

L44 Ling 3701 Introduction to Hispanic Linguistics

An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax), and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages.

Same as L38 Span 370

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

L44 Ling 390 Linguistics Service Learning I

Because language is fundamental to human communication, differences in language can present particularly difficult barriers to learning. Taking classes in a language that is not your native language, for example, presents special challenges both to students and their teachers. For speakers of nonstandard dialects, taking classes in a standard dialect presents subtler — and in some ways, even more difficult — challenges. This course provides students with a concrete understanding of the practical difficulties arising from linguistic differences and helps them discover ways in which these difficulties can be addressed. In particular, students are expected to devote two hours per week tutoring local K-12 students and to keep a journal focusing on their experiences from a linguistic perspective. Students will be expected to attend weekly meetings with faculty and community partners to relate challenges that they have encountered and to discuss possible solutions. Students will also receive training on how to better understand and serve under-sourced and diverse populations. Prerequisite: at least two 300-level courses in Linguistics or permission of the instructors.

Credit 3 units. A&S IQ: SSC BU: HUM EN: S

L44 Ling 391 Linguistics Service Learning II

Linguistics Service Learning II meets with Linguistics Service Learning I, but it requires completion of additional written assignments. Prerequisite: Ling 390.

Credit 3 units. A&S IQ: SSC BU: HUM EN: S

L44 Ling 396 Linguistics Seminar

Readings on a selected topic in theoretical linguistics with an emphasis on discussion, presentation and writing. Prerequisite: varies with topic.

Credit 3 units. A&S IQ: SSC EN: S

L44 Ling 396W Linguistics Seminar: Writing Intensive

Readings on a selected topic in theoretical linguistics, with an emphasis on discussion, presentation, and writing. Prerequisite: varies with topic.

Credit 3 units. A&S IQ: SSC, WI EN: S

L44 Ling 408 Psychology of Language

This course surveys current research and theory in psycholinguistics, covering the biological bases, cognitive bases and learning of language. We consider studies of normal children and adults, the performance of individuals with various types of language disorders, and computer simulations of language processes. Topics range from the perception and production of speech sounds to the management of conversations. Each student carries out an original research project on some aspect of psycholinguistics. Prerequisites: Ling 170D and Psych 100B. Same as L33 Psych 433

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L44 Ling 427 Computation and Learnability in Linguistic Theory

This course introduces the advanced linguistics or computer science student to the fields of learnability and computation as they apply to the study of linguistic theories and natural language. Topics covered include the formal language hierarchy, including the subregular languages; issues in the learnability of phonology, morphology, and syntax; and algorithms specific to constraint-based linguistic grammars. Prerequisites: either CS 130 or Ling 317 and at least one of the following: Ling 309, Ling 311, Ling 313, or Ling 315.

Credit 3 units. A&S IQ: SSC EN: S

L44 Ling 466 Second Language Acquisition

There are many ways in which a second language can be learned: from infancy as the child of bilingual parents, or later through formal instruction, immersion in a new culture, or in a particular work or social situation. This class is an inquiry into the processes by which acquisition occurs. Topics include the nature of language learning within the scope of other types of human learning; the relationship between first- and second-language acquisition; the role of linguistic, cognitive and sociocultural factors; insights gained from analyzing learners' errors; key concepts such as interlanguage and communicative competence; bilingualism; the optimal age for second-language acquisition; and a critical appraisal of different theories of second-language acquisition. Both theoretical and instructional implications of second-language acquisition research are considered. This course can be used toward certification in

TESOL and is a required course for the Graduate Certificate in Language Instruction. Prerequisite: Ling 170D or equivalent is recommended, especially for undergraduates, but is not required.

Credit 3 units. A&S IQ: HUM EN: H

L44 Ling 4691 Second Language Reading and Writing:

Theory, Research and Practice

This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students discuss how to bridge research and practice, and they create reading and writing activities driven by theory and empirical investigations. This course is a required course for the undergraduate minor in applied linguistics and an elective for the Graduate Certificate in Language Instruction.

Same as L38 Span 4691

Credit 3 units. A&S IQ: SSC EN: S

L44 Ling 478 Topics in Linguistics

Meets with designated linguistics course, but with additional writing and research required for graduate credit and certification.

Credit 3 units. A&S IQ: SSC EN: S

L44 Ling 495 Senior Seminar in Linguistics: Metrical Stress Theory

The Senior Seminar affords students an opportunity to integrate the various fields of linguistics. Readings, discussions and presentations let students address issues that combine the content and the research methods of areas such as phonetics, phonology, morphology, syntax, diachrony and semantics. Students have individual projects within the scope of the semester's particular topic, but the class as a whole helps in choosing, developing and refining the treatment. This course fulfills the requirement for a senior capstone for primary majors in linguistics. It is the normal option for students who wish to take the capstone as a regular class rather than as sponsored independent study.

Credit 3 units. A&S IQ: SSC EN: S

L44 Ling 499 Independent Work For Senior Honors

Prerequisites: senior standing and permission of the Linguistics program.

Credit variable, maximum 6 units.

Mathematics and Statistics

Mathematics has always held a central position in the liberal arts, and over time it has also come to play an important role in more and more aspects of our lives. Mathematical analysis and modeling are involved in many areas far beyond the traditional association of mathematics with the physical sciences and engineering. This fact is reflected in the diversity of the

students who study at least some mathematics during their time at Washington University — students who recognize the importance of quantitative skills in a world that becomes more and more technological.

Students major in mathematics for many reasons. Some are planning academic careers in mathematics or statistics that involve teaching or research. Others plan to work as actuaries or at other jobs in industry or government. Some plan careers in secondary education. Many majors do not intend to become "mathematicians" at all but simply realize that quantitative training is a valuable asset in many kinds of careers; often, work in mathematics or statistics is meant to complement their study in other areas. Still other majors just view mathematics as an interesting concentration in their liberal arts education, even though they plan to enter professional fields such as medicine or law.

The Mathematics and Statistics program gives majors and minors a broad introduction to the subject. Majors choose among several tracks to complete their study; these tracks add different emphases to their programs and reflect individual interests or professional goals. Majors are encouraged to complete additional work (perhaps even a minor or a second major) in other related areas.

Majors

Requirements for All Majors

Total units required: 12 units

- The three-course calculus sequence (9 units)* and an introductory computer science course (3 units)**.

Code	Title	Units
Math 131	Calculus I	3
Math 132	Calculus II	3
Math 233	Calculus III	3
CSE 131	Introduction to Computer Science	3
Total Units		12

* AP credit can be applied, and students who have completed Math 203 Honors Mathematics I and Math 204 Honors Mathematics II will have this requirement waived.

** This course may be waived after consultation with the director of undergraduate studies of the Department of Computer Science & Engineering.

The Major in Mathematical Sciences

Total units required: 24 units of upper-level courses, including the following:

Code	Title	Units
Math 309	Matrix Algebra	3
Math 310	Foundations for Higher Mathematics	3
Math 3200	Elementary to Intermediate Statistics and Data Analysis	3

- One of the following full-year 400-level sequences*:

Code	Title	Units
Math 4111 & Math 4121	Introduction to Analysis and Introduction to Lebesgue Integration	6
Math 4171 & Math 4181	Topology I and Topology II	6
Math 429 & Math 430	Linear Algebra and Modern Algebra	6
Math 449 & Math 450	Numerical Applied Mathematics and Topics in Applied Mathematics	6
Math 494 & Math 439	Mathematical Statistics and Linear Statistical Models	6

- * Students whose primary major is secondary education may fulfill this requirement by taking Math 302 Elementary Geometry from an Advanced Point of View and Math 331 Algebraic Systems.
- At least one course from the following list (that has not already been used to fulfill any of the previous requirements listed):

Code	Title	Units
Math 370	Introduction to Combinatorics	3
Math 371	Graph Theory	3
Math 410	Introduction to Fourier Series and Integrals	3
Math 4111	Introduction to Analysis	3
Math 415	Partial Differential Equations	3
Math 416	Complex Variables	3
Math 4171	Topology I	3
Math 429	Linear Algebra	3
Math 434	Survival Analysis	3
Math 4351	Number Theory and Cryptography	3
Math 439	Linear Statistical Models	3
Math 449	Numerical Applied Mathematics	3

The Major in Mathematics

Total units required: 30 units of upper-level courses, including the following:

Code	Title	Units
Math 310	Foundations for Higher Mathematics	3
Math 4111	Introduction to Analysis	3
Math 4121	Introduction to Lebesgue Integration	3
Math 429	Linear Algebra	3
Math 430	Modern Algebra	3
Math 416	Complex Variables	3
Math 4171	Topology I	3

At least one of the following:

Math 407	An Introduction to Differential Geometry	3
Math 415	Partial Differential Equations	3
Math 4181	Topology II	3
Math 4351	Number Theory and Cryptography	3

The Major in Applied Mathematics

Total units required: 30 units of upper-level courses, including the following:

Code	Title	Units
Math 310	Foundations for Higher Mathematics	3
Math 4111	Introduction to Analysis	3
Math 4121	Introduction to Lebesgue Integration	3
Math 429	Linear Algebra	3
Math 449	Numerical Applied Mathematics	3
Math 450	Topics in Applied Mathematics	3

At least two of the following:

Math 410	Introduction to Fourier Series and Integrals	3
Math 415	Partial Differential Equations	3
Math 416	Complex Variables	3
Math 4351	Number Theory and Cryptography	3

The Major in Statistics

Total units required: 30 units of upper-level courses, including the following:

Code	Title	Units
Math 309	Matrix Algebra	3
Math 3200	Elementary to Intermediate Statistics and Data Analysis	3
Math 493	Probability	3
Math 494	Mathematical Statistics	3
Math 439	Linear Statistical Models	3
Math 459	Bayesian Statistics	3
or Math 475	Statistical Computation	

- At least two probability or statistics courses at the 400 level or above, which may include the following:

Code	Title	Units
Math 420	Experimental Design	3
Math 434	Survival Analysis	3
Math 4392	Advanced Linear Statistical Models	3
Math 459	Bayesian Statistics	3
Math 460	Multivariate Statistical Analysis	3
Math 461	Time Series Analysis	3

Math 462	Mathematical Foundations of Big Data	3
Math 475	Statistical Computation	3
Math 495	Stochastic Processes	3
Math 496	Topics in Statistics	3

The Major in Mathematics and Computer Science

The McKelvey School of Engineering and the College of Arts & Sciences developed a new major that efficiently captures the intersection of the complementary studies of computer science and math.

McKelvey Engineering students who declare this major must fulfill the core course requirements listed below and all other requirements for the Applied Science degree (p. 1134) in the McKelvey School of Engineering. They must also complete Engr 310 Technical Writing and 8 units of courses designated as NSM (Natural Sciences & Math) from Anthropology (L48 Anthro), Biology and Biomedical Sciences (L41 Biol), Chemistry (L07 Chem), Earth and Planetary Sciences (L19 EPSc), Physics (L31 Physics) or Environmental Studies (L82 EnSt).

Arts & Sciences students who declare this major must fulfill the distribution requirements and all other requirements for an AB degree (p. 971) in addition to the specific requirements listed below.

Core Course Requirements

Code	Title	Units
Math 131	Calculus I (AP credit may satisfy this requirement)	3
Math 132	Calculus II (AP credit may satisfy this requirement)	3
Math 233	Calculus III	3
CSE 131	Introduction to Computer Science	3
Math 310 or Math 310W or CSE 240	Foundations for Higher Mathematics Foundations for Higher Mathematics with Writing Logic and Discrete Mathematics	3
CSE 247	Data Structures and Algorithms	3
Math 309	Matrix Algebra	3
Math 3200 or ESE 326	Elementary to Intermediate Statistics and Data Analysis Probability and Statistics for Engineering	3
CSE 347	Analysis of Algorithms	3

Electives

Eight upper-level courses from Math or Computer Science & Engineering can be chosen from an approved list (https://docs.google.com/spreadsheets/d/1nVxiw2jVScJ7tpwTh5OQ6vPiljGmyAi19Q37_RBsxQ/edit#gid=0), with the following caveats:

- No fewer than three courses can be chosen from each department.
- Up to two preapproved courses from outside both departments can be selected.

Notes to All Majors in Mathematics and Statistics

1. Students who entered Washington University **before fall 2020** should visit the Prior Bulletins (<http://bulletin.wustl.edu/prior/>) section of this *Bulletin* to view the major requirements that were in place for the appropriate year of matriculation.
2. Upper-level mathematics courses are those with course numbers that begin with a "3" or higher (e.g., Math 3200). Lower-level courses do not count toward upper-level mathematics requirements, even if they are cross-listed as an upper-level course in another department or program. For example, if Math 2200 were cross-listed by another department as 3***, then registering for that 3*** course would not satisfy an upper-level mathematics requirement.
3. All required courses (both lower- and upper-level courses) must be completed with a grade of C- or better.
4. Math 318 and Math 308 cannot both be used to fulfill major requirements.
5. Courses transferred from other accredited colleges and universities with department approval can be counted, with the following caveats:
 - a. Courses transferred from a two-year college (e.g., a community college) cannot be used to satisfy upper-level requirements.
 - b. At least half the upper-level units required in a major must be earned at Washington University or in a Washington University-approved overseas study program.
 - c. Courses from University College cannot be used to fulfill major requirements.
6. At most 3 units of independent study or research work can count toward the major requirements.
7. No **upper-level** course used to satisfy a major requirement can be counted toward the requirements of any other major or minor (i.e., no double-counting of courses).

8. Certain approved substitutions are found on the Department of Mathematics and Statistics webpage (<https://math.wustl.edu/major-and-minor-details/>). However, in all cases, at most one substitution can be used that involves a course not home-based in the department.

Additional Information

Independent Study: Majors with a plan for independent work or a research project may apply for independent study with a faculty member. Majors are encouraged (but not required) to consider a senior project or an honors project.

Graduation with Awards for Distinction or Latin Honors: The department offers the awards Distinction in Mathematics, High Distinction in Mathematics, and Highest Distinction in Mathematics. Recommendations for students to receive Latin honors (which are awarded by the College of Arts & Sciences, not the department) are keyed to the requirements for the distinction awards, as indicated below. In these requirements, the term *regularly scheduled mathematics course* refers to a course that is home-based in the mathematics department (L24) and that is not an independent study or research course.

- Core course work for all distinction awards (core course work alone earns no award)
- A grade-point average of at least 3.65 in upper-level mathematics (L24) courses
- Completion of the following with grades of B or better (not B-):
 - One of the course sequences Math 4111-4121, 429-430, 493-494 or 449-450 **and**
 - Three additional regularly scheduled 400- or 500-level mathematics courses
- *Distinction in Mathematics.* Awarded for core course work **plus** the following:
 - Completion of one additional regularly-scheduled mathematics course at the 400 or 500 level with grade of B or better (not B-) **or**
 - Passing the first actuarial exam (Exam P) from the Society of Actuaries
- *High Distinction in Mathematics.* Awarded for core course work **plus** satisfactory completion of an honors thesis. Details about honors theses (<https://math.wustl.edu/undergraduate-honors/>) are available on the department webpage.
- *Highest Distinction in Mathematics.* Awarded for core course work **plus** satisfactory completion of an honors thesis **plus** one of the following:

- Course work including the completion of at least one of the graduate sequences Math 5021-5022, 5031-5032, 5041-5042(3), 5051-5052 or 5061-5062 **and** passing the graduate qualifying exam for that course sequence **or**
- Course work including all of the requirements for the department's Honors Program in Statistics (<https://math.wustl.edu/undergraduate-honors/>)
- *Latin Honors.* For majors in the College of Arts & Sciences, the department will recommend that the AB degree be awarded with Latin honors if the student has an overall GPA of 3.65, as required by the college, and if the student has earned the department award of High or Highest Distinction. These majors must apply to the department for admission to candidacy for Latin honors by the end of their junior year. The level of Latin honors (cum laude, magna cum laude, or summa cum laude) is determined by the college as described in the Arts & Sciences Academic Honors & Awards (p. 973) section of this *Bulletin*.

More details are available on the Department of Mathematics and Statistics website (<https://math.wustl.edu/>).

Study Abroad: Students interested in a semester or year abroad studying mathematics intensively should consider the Budapest Semesters in Mathematics Program (<http://www.budapestsemesters.com/>).

Minors

The Minor in Mathematics

Units required: 24

Required courses:

Code	Title	Units
One course in computer science chosen from CSE 131, CSE 132, CSE 200 and CSE 247		3
Math 131	Calculus I	3
Math 132	Calculus II	3
Math 233	Calculus III	3
Math 309	Matrix Algebra	3
Math 318	Introduction to Calculus of Several Variables	3
or Math 308	Mathematics for the Physical Sciences	
Math 3200	Elementary to Intermediate Statistics and Data Analysis	3
or Math 493	Probability	
Total Units		24

Additional Information

1. Students who entered Washington University **before fall 2015** should visit the Prior Bulletins (<http://bulletin.wustl.edu/prior/>) section of this *Bulletin* to view the minor requirements that were in place for the appropriate year of matriculation. These requirements can also be found from the department's undergraduate webpage (<https://math.wustl.edu/major-and-minor-details/>).
2. All required courses (both lower- and upper-level courses) must be completed with a letter grade of C- or better.
3. Math 318 and Math 308 cannot both be used to fulfill minor requirements.
4. Courses transferred from other accredited colleges and universities with department approval can be counted, with the following caveats:
 - a. Courses transferred from a two-year college (e.g., a community college) cannot be used to satisfy upper-level requirements.
 - b. At least 6 of the upper-level units required in a minor must be earned at Washington University or in a Washington University-approved overseas study program.
 - c. Courses from University College cannot be used to fulfill minor requirements.
5. No upper-level course used to satisfy a minor requirement can be counted toward the requirements of any other major or minor (i.e., no double-counting of courses).
6. At least three of the four upper-level courses required for the minor must be courses that are home-based in the mathematics and statistics department. One approved course from another department may be substituted. Approved substitutions can be found on the Department of Mathematics and Statistics webpage (<https://math.wustl.edu/major-and-minor-details/>).

Courses

Visit online course listings to view semester offerings for L24 Math (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L24&crslvl=1:4>).

L24 Math 100 Foundations for Calculus

A limited enrollment class for students planning to take calculus but who need additional precalculus preparation. The course aims to build both the technical skills and the conceptual understanding needed to succeed in calculus. Course emphasizes links between the graphical, numeric and algebraic viewpoints. A variety of approaches are used to present the material. Prerequisites: two years of high school algebra and a course in geometry (or the equivalent). Credit 3 units. A&S IQ: NSM

L24 Math 1011 Introduction to Statistics

Basic concepts of statistics. Data collection (sampling, designing experiments), data organization (tables, graphs, frequency distributions, numerical summarization of data), statistical inference (elementary probability and hypothesis testing). Prerequisite: two years of high school algebra. Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L24 Math 109 Mathematics and Music

An elementary introduction to the connections between mathematics and musical sound. Review of integers, ratios, prime numbers, functions, rationality, exponents, logarithms, trigonometry. Review of scales, clefs, key signatures, intervals, time signatures. Frequency and pitch. The connection between intervals and logarithms. Tuning and temperament, just intonation. Scales and modular arithmetic. The mathematics of harmony; the sound of the low prime numbers and their roles in harmony. Harmonics, partials and overtones. Numerical integration and basic Fourier analysis. The nature of complex tones. Analysis of instrument sounds. Human vowels and formants. Prerequisites: two years of high school algebra, and trigonometry.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L24 Math 131 Calculus I

Derivatives of algebraic, trigonometric and transcendental functions, techniques of differentiation, Mean Value Theorem, applications of the derivative. The definite integral and Fundamental Theorem of Calculus. Areas. Simpler integration techniques. Prerequisites: high-school algebra and precalculus, including trigonometry.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L24 Math 131E Calculus I Extended

Math 131E covers the same content as Math 131 but includes the additional review of precalculus concepts integrated throughout the semester. It is aimed at students whose precalculus skills are not yet fully developed. By the end of this course, students should be ready to enroll in Math 132.

Credit 3 units. A&S IQ: NSM, AN

L24 Math 132 Calculus II

Continuation of Math 131. A brief review of the definite integral and Fundamental Theorem of Calculus. Techniques of integration, applications of the integral, sequences and series, Taylor polynomials and series, and some material on differential equations. Prerequisite: Math 131 or a B or better in a one-year high school calculus course, or permission of the department. Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L24 Math 203 Honors Mathematics I

This is the first half of a one-year calculus sequence for first year students with a strong interest in mathematics with an emphasis on rigor and proofs. The course begins at the beginning but assumes the students have already studied the material from a more "mechanical" view. Students who complete both semesters will have completed the material Calc III and other topics that may let them move through the upper-level math curriculum more quickly. Sets, functions, real numbers, and methods of proof. The Riemann-Darboux integral, limits and continuity,

differentiation, and the fundamental theorems of calculus. Sequences and series of real numbers and of functions. Vector spaces and linear maps. Prerequisite: Score of 5 on the AP Calculus Exam, BC version, or the equivalent.

Credit 4 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L24 Math 204 Honors Mathematics II

Matrices, linear systems, and determinants. Eigenvalues and eigenvectors, diagonalization, and the spectral theorem. Scalar and vector fields, differential and integral calculus of several variables, and the fundamental theorems of Green, Gauss, and Stokes. Restricted to first year students who have completed Math 203 in the fall semester. Math 204 can replace Math 233 in major/minor requirements.

Credit 4 units. A&S IQ: NSM, AN Art: NSM

L24 Math 217 Differential Equations

Introduction to ordinary differential equations: first-order equations, linear equations, systems of equations, series solutions, Laplace transform methods, numerical solutions. Prerequisite: Math 233 (or Math 233 concurrently).

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L24 Math 220 Finite Mathematics

Topics from discrete mathematics will be explored with an emphasis on problem-solving and methods of proofs. Modules on counting; combinatorial tools; binomial coefficients and Pascal's triangle; Fibonacci numbers; combinatorial probability; integers, divisors and primes; and graphs will be covered as well as additional topics as time permits. Addressed mainly to college freshmen and sophomores; it would also be suitable to advanced high school students with an interest in mathematics. Prerequisites: A good understanding of high school mathematics.

Credit 3 units. A&S IQ: NSM, AN Art: NSM

L24 Math 2200 Elementary Probability and Statistics

An elementary introduction to statistical concepts, reasoning and data analysis. Topics include statistical summaries and graphical presentations of data, discrete and continuous random variables, the logic of statistical inference, design of research studies, point and interval estimation, hypothesis testing, and linear regression. Students will learn a critical approach to reading statistical analyses reported in the media, and how to correctly interpret the outputs of common statistical routines for fitting models to data and testing hypotheses. A major objective of the course is to gain familiarity with basic R commands to implement common data analysis procedures. Students intending to pursue a major or minor in mathematics or wishing to take 400-level or above statistics courses should instead take Math 3200. Prerequisite: Math 131.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L24 Math 233 Calculus III

Multivariable calculus. Topics include differential and integral calculus of functions of two or three variables: vectors and curves in space, partial derivatives, multiple integrals, line integrals, vector calculus at least through Green's Theorem. Prerequisite: Math 132 or a score of 4-5 on the Advanced Placement Calculus Exam (BC version).

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L24 Math 302 Elementary Geometry from an Advanced Point of View

A rigorous modern treatment of Euclidean geometry and an introduction to non-Euclidean geometry. Prerequisite: Math 310 or permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 308 Mathematics for the Physical Sciences

Continuation of Math 233 emphasizing topics of interest in the physical sciences. Topics in multivariable and vector calculus (div, grad, curl); line, surface integrals and connections to electromagnetism; Fourier series and integrals; boundary value problems (diffusion and wave equations); additional topics if time permits. Students may not receive credit toward a math major or minor for both Math 308 and Math 318. Prerequisite: Math 233 and 217, or permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L24 Math 309 Matrix Algebra

An introductory course in linear algebra that focuses on Euclidean n-space, matrices and related computations. Topics include: systems of linear equations, row reduction, matrix operations, determinants, linear independence, dimension, rank, change of basis, diagonalization, eigenvalues, eigenvectors, orthogonality, symmetric matrices, least square approximation, quadratic forms. Introduction to abstract vector spaces.

Prerequisite: Math 132.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L24 Math 310 Foundations for Higher Mathematics

Introduction to the rigorous techniques used in more advanced mathematics. Topics include postpositional logic, use of quantifiers, set theory, methods of proof and disproof (counterexamples), foundations of mathematics. Use of these tools in the construction of number systems and in other areas such as elementary number theory, combinatorial arguments and elementary proofs in analysis. Prerequisite: Math 233.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 310W Foundations for Higher Mathematics with Writing

Introduction to the rigorous techniques used in more advanced mathematics. Topics include basic logic, set theory, methods of proof and counterexamples, foundations of mathematics, construction of number systems, counting methods, combinatorial arguments and elementary analysis. At least 3 papers will be required, which with at least one revision.

Prerequisite: Math 233.

Credit 3 units. A&S IQ: NSM, WI

L24 Math 312 Differential Equations and Dynamical Systems

Qualitative theory of ordinary differential equations. Picard's existence and uniqueness theorem, the phase plane, Poincare-Bendixon theory, stationary points, attractors and repellers, graphical methods. Physical applications, including chaos, are indicated. Prerequisite: Math 217.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 318 Introduction to Calculus of Several Variables

Selected topics for functions of several variables involving some matrix algebra and presented at a level of rigor intermediate between that of Calculus III and higher-level analysis courses. Students may not receive credit toward a mathematics major or minor for both Math 308 and 318. Prerequisites: Math 233 and Math 309.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 3200 Elementary to Intermediate Statistics and Data Analysis

An introduction to probability and statistics. Major topics include elementary probability, special distributions, experimental design, exploratory data analysis, estimation of mean and proportion, hypothesis testing and confidence, regression, and analysis of variance. Emphasis is placed on development of statistical reasoning, basic analytic skills, and critical thinking in empirical research studies. The use of the statistical software R is integrated into lectures and weekly assignments. Required for students pursuing a major or minor in mathematics or wishing to take 400-level or above statistics courses. Prerequisite: Math 132. Though Math 233 is not essential, it is recommended.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L24 Math 322 Biostatistics

A second course in elementary statistics with applications to life sciences and medicine. Review of basic statistics using biological and medical examples. New topics include incidence and prevalence, medical diagnosis, sensitivity and specificity, Bayes' rule, decision making, maximum likelihood, logistic regression, ROC curves and survival analysis. Prerequisites: Math 3200, or a strong performance in Math 2200 and permission of the instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 331 Algebraic Systems

Polynomials, binomial expansions, factoring, rings (integers and polynomials), unique factorization, and other topics relevant to the high school curriculum. Designed for future secondary school teachers and other students looking for a course in algebra at a less abstract level than Math 430. Prerequisite: Math 310 or permission of instructor.

Credit 3 units. A&S IQ: NSM Art: NSM

L24 Math 370 Introduction to Combinatorics

Basics of enumeration (combinations, permutations and enumeration of functions between finite sets), generating functions; the inclusion-exclusion principle, partition theory and introductory graph theory. As time permits, additional topics may include Ramsey's Theorem, probabilistic methods in combinatorics and algebraic methods in combinatorics. Prerequisites: Math 132, 309 and 310, or permission of the instructor.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L24 Math 371 Graph Theory

Introduction to graph theory including the basic definitions and theorems and some more advanced topics that drive much current research in graph theory: Ramsey's Theorem, random graph theory and, if time permits, Szemerédi's regularity lemma. Graphs are studied as abstract objects; however, graph theory is also of interest to applied mathematicians because graphs are natural models for networks (social, electric). Prerequisite: Math

310 or a roughly equivalent course, or permission of instructor. Students should know what a proof is and how to produce one. Some informal understanding of probability is helpful, but students need not have taken a probability course.

Credit 3 units. A&S IQ: NSM

L24 Math 407 An Introduction to Differential Geometry

A study of properties of curves and surfaces in 3-dimensional Euclidean space. The course is essentially a modern recounting of a seminal paper of Gauss. Prerequisites: Math 233 and Math 309.

Credit 3 units. A&S IQ: NSM

L24 Math 410 Introduction to Fourier Series and Integrals

The basic theory of Fourier series and Fourier integrals including different types of convergence. Applications to certain differential equations. Prerequisites: Math 233 and Math 309.

Credit 3 units. A&S IQ: NSM

L24 Math 4111 Introduction to Analysis

The real number system and the least upper-bound property; metric spaces (completeness, compactness and connectedness); continuous functions (in \mathbb{R}^n ; on compact spaces; on connected spaces); $C(X)$ (pointwise and uniform convergence; Weierstrass approximation theorem); differentiation (mean value theorem; Taylor's theorem); the contraction mapping theorem; the inverse and implicit function theorems. Prerequisite: Math 310 or permission or instructor.

Credit 3 units. A&S IQ: NSM

L24 Math 4121 Introduction to Lebesgue Integration

Riemann integration; measurable functions; measures; Lebesgue measure; the Lebesgue integral; integrable functions; L^p spaces; modes of convergence; decomposition of measures; product measures. Prerequisite: Math 4111 or permission of the instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 415 Partial Differential Equations

Introduction to the theory of PDE's with applications to selected classical problems in physics and engineering. Linear and quasilinear first-order equations, derivation of some of the classical PDE's of physics, and standard solution techniques for boundary and initial value problems. Preliminary topics such as orthogonal functions, Fourier series and variational methods introduced as needed. Prerequisites: Math 217 and Math 309, or permission of instructor.

Credit 3 units. A&S IQ: NSM Art: NSM

L24 Math 416 Complex Variables

Analytic functions, elementary functions and their properties, line integrals, the Cauchy integral formula, power series, residues, poles, conformal mapping and applications. Prerequisites: Math 318, Math 308 or ESE 317, or permission of instructor.

Credit 3 units. A&S IQ: NSM Art: NSM

L24 Math 4171 Topology I

An introduction to the most important ideas of topology. Course includes necessary ideas from set theory, topological spaces, subspaces, products and quotients, compactness and connectedness. Some time is also devoted to the particular

case of metric spaces (including topics such as separability, completeness, completions, the Baire Category Theorem, and equivalents of compactness in metric spaces). Prerequisite: Math 310 or permission of instructor.

Credit 3 units. A&S IQ: NSM

L24 Math 4181 Topology II

A continuation of Math 4171 featuring more advanced topics in topology. The content may vary with each offering. Prerequisite: Math 4171, or permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 420 Experimental Design

A first course in the design and analysis of experiments, from the point of view of regression. Factorial, randomized block, split-plot, Latin square, and similar design. Prerequisite: CSE 131 or 200, Math 3200, or permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 429 Linear Algebra

Introduction to the linear algebra of finite-dimensional vector spaces. Includes systems of equations, matrices, determinants, inner product spaces, spectral theory. Prerequisite: Math 310 or permission of instructor. Math 309 is not an explicit prerequisite but students already should be familiar with such basic topics from matrix theory as matrix operations, linear systems, row reduction and Gaussian elimination. Material on these topics in early chapters of the text are covered very quickly.

Credit 3 units. A&S IQ: NSM Art: NSM

L24 Math 430 Modern Algebra

Introduction to groups, rings and fields. Includes permutation groups, group and ring homomorphisms, field extensions, connections with linear algebra. Prerequisite: Math 429 or permission of the instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 434 Survival Analysis

Life table analysis and testing, mortality and failure rates, Kaplan-Meier or product-limit estimators, hypothesis testing and estimation in the presence of random arrivals and departures, and the Cox proportional hazards model. Techniques of survival analysis are used in medical research, industrial planning and the insurance industry. Prerequisites: CSE 131 or 200, Math 309 and 3200, or permission of the instructor.

Credit 3 units. A&S IQ: NSM Art: NSM

L24 Math 4351 Number Theory and Cryptography

The course covers many of the basics of elementary number theory, providing a base from which to approach modern algebra, algebraic number theory and analytic number theory. It also introduces one of the most important real-world applications of mathematics, namely the use of number theory and algebraic geometry in public key cryptography. Topics from number theory involve divisibility (Euclidean algorithm, primes, Fundamental Theorem of Arithmetic), congruences (modular arithmetic, Chinese Remainder Theorem, primality testing and factorization). Topics from cryptography include RSA encryption, Diffie-Hellman key exchange and elliptic curve cryptography. Topics about algebraic numbers may be included if time permits. Prerequisites: Math 233, 309 and 310 (or permission of instructor).

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 436 Algebraic Geometry

Introduction to affine and projective algebraic varieties; the Zariski topology; regular and rational mappings; simple and singular points; divisors and differential forms; genus; the Riemann-Roch theorem. Prerequisites: Math 318, Math 429 and Math 430, or permission of the instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 439 Linear Statistical Models

Theory and practice of linear regression, analysis of variance (ANOVA) and their extensions, including testing, estimation, confidence interval procedures, modeling, regression diagnostics and plots, polynomial regression, collinearity and confounding, model selection, geometry of least squares, etc. The theory will be approached mainly from the frequentist perspective, and use of the computer (mostly R) to analyze data will be emphasized. Prerequisite: CSE 131 or 200, Math 3200 and a course in linear algebra (such as Math 309 or 429), or permission of instructor.

Credit 3 units. A&S IQ: NSM Art: NSM

L24 Math 4392 Advanced Linear Statistical Models

Review of basic linear models relevant for the course; generalized linear models including logistic and Poisson regression (heterogeneous variance structure, quasileikelihood); linear mixed-effects models (estimation of variance components, maximum likelihood estimation, restricted maximum likelihood, generalized estimating equations), generalized linear mixed-effects models for discrete data, models for longitudinal data, optional multivariate models as time permits. The computer software R will be used for examples and homework problems. Implementation in SAS will be mentioned for several specialized models. Prerequisites: Math 439 and a course in linear algebra (such as Math 309 or 429), or consent of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 449 Numerical Applied Mathematics

Computer arithmetic, error propagation, condition number and stability; mathematical modeling, approximation and convergence; roots of functions; calculus of finite differences; implicit and explicit methods for initial value and boundary value problems; numerical integration; numerical solution of linear systems, matrix equations and eigensystems; Fourier transforms; optimization. Various software packages may be introduced and used. Prerequisites: CSE 200 or CSE 131 (or other computer background with permission of the instructor); Math 217 and Math 309.

Credit 3 units. A&S IQ: NSM

L24 Math 450 Topics in Applied Mathematics

Topic may vary with each offering of the course. Prerequisites: CSE 131 (or 200) and Math 449, or permission of the instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 456 Topics in Financial Mathematics

An introduction to the principles and methods of financial mathematics, with a focus on discrete-time stochastic models. Topics include no-arbitrage pricing of financial derivatives, risk-neutral probability measures, the Cox-Ross-Rubenstein and Black-Scholes-Merton options pricing models, and implied volatility. Prerequisites: Math 233 and Math 3200 or permission of instructor.

Credit 3 units. A&S IQ: NSM

L24 Math 459 Bayesian Statistics

Introduces the Bayesian approach to statistical inference for data analysis in a variety of applications. Topics include: comparison of Bayesian and frequentist methods, Bayesian model specification, choice of priors, computational methods such as rejection sampling, and stochastic simulation (Markov chain Monte Carlo), empirical Bayes method, hands-on Bayesian data analysis using appropriate software. Prerequisites: Math 493 and either Math 3200 or 494; or permission of the instructor. Some programming experience such as CSE 131 is also helpful (consult with the instructor).

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 460 Multivariate Statistical Analysis

A modern course in multivariate statistics. Elements of classical multivariate analysis as needed, including multivariate normal and Wishart distributions. Clustering; principal component analysis. Model selection and evaluation; prediction error; variable selection; stepwise regression; regularized regression. Cross-validation. Classification; linear discriminant analysis. Tree-based methods. Time permitting, optional topics may include nonparametric density estimation, multivariate regression, support vector machines, and random forests. Prerequisite: multivariable calculus (Math 233), linear or matrix algebra (Math 429 or Math 309), multivariable-calculus-based probability and mathematical statistics (Math 493, Math 494) and linear models (Math 439). Prior knowledge of R at the level introduced in Math 439 is assumed.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 461 Time Series Analysis

Time series data types; autocorrelation; stationarity and nonstationarity; autoregressive moving average models; model selection methods; bootstrap confidence intervals; trend and seasonality; forecasting; nonlinear time series; filtering and smoothing; autoregressive conditional heteroscedasticity models; multivariate time series; vector autoregression; frequency domain; spectral density; state-space models; Kalman filter. Emphasis on real-world applications and data analysis using statistical software. Prerequisites: Math 493 and either Math 3200 or 494; or permission of the instructor. Some programming experience may also be helpful (consult with the instructor).

Credit 3 units. A&S IQ: NSM

L24 Math 462 Mathematical Foundations of Big Data

Mathematical foundations of data science. Core topics include: probability in high dimensions; curses and blessings of dimensionality; concentration of measure; matrix concentration inequalities. Essentials of random matrix theory. Randomized numerical linear algebra. Data clustering. Depending on time and interests, additional topics will be chosen from: compressive sensing; efficient acquisition of data; sparsity; low-rank matrix recovery. Divide, conquer and combine methods. Elements of topological data analysis; point cloud; Čech complex; persistent homology. Selected aspects of high-dimensional computational geometry and dimension reduction; embeddings; Johnson-Lindenstrauss; sketching; random projections. Diffusion maps; manifold learning; intrinsic geometry of massive data sets. Optimization and stochastic gradient descent. Random graphs and complex networks. Combinatorial group testing. Prerequisite: multivariable calculus (Math 233), linear or matrix

algebra (Math 429 or 309), and multivariable-calculus-based probability and mathematical statistics (Math 493-494). Prior familiarity with analysis, topology, and geometry is strongly recommended. A willingness to learn new mathematics as needed is essential.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 475 Statistical Computation

Introduction to modern computational statistics. Pseudo-random number generators; inverse transform and rejection sampling. Monte Carlo approximation. Nonparametric bootstrap procedures for bias and variance estimation; bootstrap confidence intervals. Markov chain Monte Carlo methods; Gibbs and Metropolis-Hastings sampling; tuning and convergence diagnostics. Cross-validation. Time permitting, optional topics include numerical analysis in R, density estimation, permutation tests, subsampling, and graphical models. Prior knowledge of R at the level used in Math 494 is required. Prerequisite: Math 233, 309, 493, 494 (not concurrently); acquaintance with fundamentals of programming in R.

Credit 3 units. A&S IQ: NSM Art: NSM

L24 Math 493 Probability

Mathematical theory and application of probability at the advanced undergraduate level; a calculus based introduction to probability theory. Topics include the computational basics of probability theory, combinatorial methods, conditional probability including Bayes' theorem, random variables and distributions, expectations and moments, the classical distributions, and the central limit theorem. Prerequisites: Math 233. Math 318 or Math 308 is recommended.

Credit 3 units. A&S IQ: NSM Art: NSM

L24 Math 494 Mathematical Statistics

Theory of estimation, minimum variance and unbiased estimators, maximum likelihood theory, Bayesian estimation, prior and posterior distributions, confidence intervals for general estimators, standard estimators and distributions such as the Student-t and F-distribution from a more advanced viewpoint, hypothesis testing, the Neymann-Pearson Lemma (about best possible tests), linear models, and other topics as time permits. Prerequisites: CSE 131 or 200, Math 3200 and 493, or permission of the instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L24 Math 495 Stochastic Processes

Content varies with each offering of the course. Past offerings have included such topics as random walks, Markov chains, Gaussian processes, empirical processes, Markov jump processes and a short introduction to martingales, Brownian motion and stochastic integrals. Prerequisites: Math 318 and Math 493, or permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

Medical Humanities

The minor in medical humanities draws on courses from a variety of departments and programs, including art history, classics, history, languages and literature, music, philosophy, and gender and sexuality studies. The minor is housed in the Washington University Center for the Humanities.

The minor approaches health, disease and medical care as culturally embedded human experiences that vary across time and place. In addition to exploring health, disease and medical care as core human experiences, the program of study is designed to provide a solid grounding in the textual-historical approach essential to all humanities scholarship. The minor combines disciplinary diversity with thematic unity to engage students with a set of tightly related "big" topics and issues. These include the contested meanings of health and disease; the ethical dimensions of medicine; illness narratives; debates over health and development; the role of medicine in war, empire and nation building; the relationship between religion and medicine; exchange and friction between biomedicine and other healing traditions; and the burden of disease as it relates to gender, race and class.

Medical Humanities aspires to instill the values shared by all humanities disciplines: to appreciate multiple worlds and viewpoints, to communicate clearly and gracefully, and to read and think critically. Students will emerge from the minor able to apply the insights and critical methods of literature, philosophy, history and the arts to subjects often left solely to the natural and social sciences. Its goal is to demonstrate the enduring relevance of humanistic inquiry to understanding a basic realm of human experience.

Majors

Medical humanities is an interdepartmental minor; Washington University does not offer an independent major in medical humanities.

Minors

The Minor in Medical Humanities

Units required: 18

At least one gateway course (3 units) is required for the minor. These include the following:

Code	Title	Units
MedH 130	The Art of Medicine	3
MedH 151	First-Year Seminar: Stories of Medicine	3
History 1640	Health and Disease in World History	3
MedH 233F	Biomedical Ethics	3

An additional 15 units of Medical Humanities courses are required to complete the minor: At least 12 of these units must be core courses, designated by the "CFH MH" attribute, whereas the remaining 3 credits can come from either the core or affiliate lists shown below. At least 9 units of core courses must be at the 300 level or above. Core courses include the gateway courses, as well as the following:

Code	Title	Units
MedH 126	Chinese for Medical Purposes	3
MedH 3001	Philosophy of Medicine	3
MedH 301R	Historical Methods — European History (when offered as The Black Death and the Plague in Europe)	3
MedH 3031	Music and Healing	3
MedH 3033	Religion and Healing	3
WGSS 3041	Making Sex and Gender: Understanding the History of the Body	3
MedH 3044	Humors, Pox, and Plague: Medieval and Early Modern Medicine	3
History 3067	Topics in the History of Medicine: History of Madness	3
MedH 307	Writing and Medicine	3
MedH 310	From Hysteria to Hysterectomy: Women's Health Care in America	3
MedH 312W	Topics in English and American Literature: The Body in Pain	3

IS 326	The Doctor Is In: Anton Chekhov and Narrative Medicine (U43)	3
MedH 353	Medical Spanish	3
MedH 360	Trans* Studies	3
Phil 366	Art and the Mind-Brain	3
MedH 3672	Medicine, Healing and Experimentation in the Contours of Black History	3
ELit 370	The Writing and Representation of Pain (U65)	3
MedH 375	Medical Narratives, Narrative Medicine	3
MedH 3801	Ancient Greek and Roman Medicine	3
MedH 385	What is Medical Humanities?	3
MedH 391W	Literature and Medicine	3
MedH 408	Disease, Madness, and Death Italian Style	3
MedH 418	Sexuality and Gender in East Asian Religions (when offered as "The Body in Daoism")	3
MedH 423	Philosophy of Biological Science	3
Drama 456	A Madman in the Theater: The History of Insanity on Stage from Sophocles to Shaffer	3
MedH 4647	Ancient Madness	3
MedH 468	Topics in French Literature: Disability Studies, Before "Disability"	3
MedH 474	Frankenstein: Origins and Afterlives	3
MedH 4885	Advanced Seminar: Medicine, Disease, and Empire	3
MedH 491	Staging Illness	3
MedH 4990	Advanced Seminar: History of the Body	3
History 49CJ	Advanced Seminar: Medicine on the Frontiers	3

Note: The 9 credits of advanced medical humanities core courses (at the 300 level or above) must also come from at least **two** of six different disciplinary categories: Classics & Art History; History; Languages/Literature/Culture; Performing Arts & Music; Philosophy & Religious Studies; and Women, Gender, and Sexuality Studies. (The interdisciplinary "What is Medical Humanities?" course, MedH 385, can count toward any of these disciplinary categories.) Core courses may also require additional prerequisites within their home departments or programs.

Up to 3 units of affiliate courses from complementary disciplines in the sciences and social sciences (designated by the "CFH MHA" attribute) may be applied to the minor. These include the following:

Code	Title	Units
SOC 2510	Sociological Approaches to American Health Care	3
SOC 2520	Inequality By Design: Understanding Racial/Ethnic Health Disparities	3
Anthro 3283	Introduction to Global Health	3
Anthro 3310	Health, Healing and Ethics: Introduction to Medical Anthropology	3
Anthro 3620	Anthropological Perspectives on the Fetus	3
Anthro 3626	Adventures in Nosology: The Nature and Meaning of Disease	3
Psych 399	Living, Dying, and Death: A Biopsychosocial Approach to Understanding the End of Life	3
Anthro 4033	Culture, Illness and Healing in Asia	3

Additional Information

The most up-to-date list of medical humanities courses and medical humanities affiliate courses can be found by searching Washington University Course Listings for the "CFH MH" and "CFH MHA" attributes or by consulting the course requirements (<https://humanities.wustl.edu/medical-humanities-minor-requirements/>) online.

Courses

Medical Humanities began listing courses under the L85 MedH designation in spring 2017; we are adding new courses to that designation as they are offered, but some potential Medical Humanities courses may not be represented in the list below, while others are only crosslisted into Medical Humanities when they address a certain topic. For a more complete overview of Medical Humanities courses in any given semester, please search Course Listings (<https://acadinfo.wustl.edu/Courselistings/Semester/Search.aspx>) for the CFH MH (Medical Humanities) and CFH MHA (Medical Humanities: Affiliate) attributes.

Visit online course listings to view semester offerings for L85 MedH (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L85&crslvl=1:4>).

L85 MedH 126 Chinese for Medical Purposes

This course is the continuation of Beginning Chinese taught in the fall at the Shanghai Fudan program. The spring course is targeted specifically to pre-medicine and/or health care students who have studied at the Shanghai Fudan program in the fall. Students without the Fudan experience can also enroll after language evaluation. Prerequisites: L04 101D, L04 117F or the equivalent.

Same as L04 Chinese 126

L85 MedH 130 The Art of Medicine

This interdisciplinary, cross-school course at the intersection of history and the visual arts offers students a singular encounter with the Western medical tradition. In tandem with the history of medicine, from ancient plagues to modern germ theory, this course examines the capacity of the arts to frame medical practice and to raise questions about and influence perceptions -- both positively and negatively -- of medical advancements. Core faculty come from the Sam Fox School of Design & Visual Arts and the College of Arts & Sciences, and collaborating faculty include biomedical ethicists, artists, medical practitioners, and public health leaders. This course is for first-year (non-transfer) students only.

Same as I60 BEYOND 130

L85 MedH 233F Biomedical Ethics

A critical examination, in the light of contemporary moral disagreements and traditional ethical theories, of some of the moral issues arising out of medical practice and experimentation in our society. Issues that might be discussed include euthanasia, genetic engineering, organ transplants, medical malpractice, the allocation of medical resources, and the rights of the patient.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L85 MedH 3001 Philosophy of Medicine

Philosophy of medicine is an investigation into what doctors know, and how they know it. This course will investigate the following questions: What is disease? What is health? How do we classify disease? What counts as good evidence and good evidential reasoning in medicine? Is medicine a science? If so, what makes it distinctive as a science? What kinds of evidential roles do case studies play in medicine? How ought we to measure and compare outcomes in clinical trials and in systematic reviews? What is the appropriate relationship between medicine and the basic sciences, or, medicine and the public health sciences (e.g., epidemiology, biostatistics, economics, and behavioral science)? What role, if any, ought private industry - such as the pharmaceutical industry, or health insurance industry - play in shaping the practice of medicine? How ought we to define and measure "effectiveness" in medicine? Do values inform decision making about health policy, and if so, how? The overall goal of the course is to develop a reasoned, reflective approach to research and practice in medicine, through critical analysis of texts, and case studies in the history of medicine. You do not need a major in philosophy or background in philosophy to take this course. This course is intended to be of special interest to pre-health professionals, or philosophy or science majors. For graduate students in philosophy, this course satisfies the seminar requirement. Extra assignments will be provided to satisfy graduate coursework; please see me for details.

Same as L30 Phil 3001

Credit 3 units. A&S IQ: HUM EN: H

L85 MedH 301R Historical Methods — European History

This is a small-group reading course in which students are introduced to the skills essential to the historian's craft. Emphasis will be on acquiring research skills, learning to read historical works critically, and learning to use primary and secondary sources to make a persuasive and original argument. See Course Listings for current topics. Required for history majors. Preference given to History majors; other interested students welcome. Credit 3 units. L85 MedH 3031 Music and Healing

In this course, we broadly consider issues of music and healing, drawing from the fields of medical ethnomusicology, medical anthropology, music therapy, and psychology. Our case studies are multi-sited, as we interrogate musical healings and healing music from diverse global and historical perspectives. We approach our study of musical practices with the understanding that the social, cultural and political contexts where "music" and "healing" are themselves created inform the sounds of the music and its various — and often conflicting — interpretations and meanings. We read a variety of academic literature and use media texts and listening examples to develop interdisciplinary and cross-cultural analyses of music and healing. Issues of national consciousness, postcolonialism, gender, sexuality, race, ethnicity, class, religion, dis/ability and the role of history/memory remain central to our explorations of music and healing.

Same as L27 Music 3031

Credit 3 units. A&S IQ: LCD BU: BA EN: H

L85 MedH 3033 Religion and Healing

This course explores the relationship between religion and healing through historical and comparative study of Christian, Jewish and other religious traditions. We will examine how specific religious worldviews influence conceptions of the body and associated healing practices, how states of health and disease are identified and invested with religious significance, and how religious thought contributed to and coexisted alongside the growth of modern Western medicine. While much of the course will draw on specific case studies, students will be encouraged to pursue their own interests in the area of religion and healing through final projects.

Same as L23 Re St 3033

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

L85 MedH 3041 Making Sex and Gender: Understanding the History of the Body

This course provides an overview of the history of the body from antiquity to modern times using an interdisciplinary approach. By exploring selections from medical texts, literature, fashion, art, accounts of "new world" exploration, legal records, self-help books and contemporary media representations of human bodies, we will consider the changing historical perception of the body. The intersection of gender, race and class will factor significantly in our discussions of how the body has been construed historically and how it is currently being constructed in contemporary American culture. This course will also provide an introduction to feminist/gender methodologies that apply to understanding the history of the body. This course is not open to students who have taken L77 204. Prerequisite: Any -100 or -200 level Women, Gender, and Sexuality Studies course or permission of instructor.

Credit 3 units. A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA EN: H

L85 MedH 3044 Humors, Pox, and Plague: Medieval and Early Modern Medicine

This course examines how people thought about, experienced and managed disease in the medieval and early modern periods. Students will consider developments in learned medicine alongside the activities of a diverse range of practitioners — e.g., surgeons, empirics, quacks, midwives, saints, and local healers — involved in the business of curing a wide range of ailments. Significant attention will be paid to the experiences of patients and the social and cultural significance of disease. Major topics include: the rise and fall of humoral medicine; religious explanations of illness; diseases such as leprosy, syphilis and plague; the rise of anatomy; herbs and pharmaceuticals; the experience of childbirth; and the emergence of identifiably "modern" institutions such as hospitals, the medical profession, and public health. The focus will be on Western Europe but we'll also consider developments in the Islamic world and the Americas.

L85 MedH 3067 Current Topics in the History of Medicine

Mental health -- its diagnosis, social implications, and experience -- is a central and increasingly visible part of the practice of medicine. This course explores "madness." How have different societies explained and responded to states of mind, behavior, and emotion judged to be unreasonable? What role has medicine played in framing understandings about mental disorders and their management? During this course we will engage these questions, charting the shifting experience of mental illness roughly from the Middle Ages to the present. Themes covered include: religious models of madness; humoral medicine and disorders such as melancholy; the pre-modern madhouse and the emergence of the modern asylum; the history of psychiatry; the insanity defense in the courtroom; patient autobiography; gender, race, and mental health.

L85 MedH 312W Topics in English and American Literature:

The Body in Pain

Since Elaine Scarry's "The Body in Pain: The Making and Unmaking of the World," there has been an abundance of interdisciplinary work dedicated to the representation of pain at every level, from private suffering to public policy. How do we pathologize our feelings, and how can we communicate pain without inflicting it? This course explores a range of discourses about pain, including theoretical and technical ones. To what extent has literature developed special modes of expression for pain, and to what extent is the literary construction of pain gendered and open to cultural change? In addition to Scarry's book, we read a diverse collection of works, including selections from the Bible and Ovid, Freud's "Anna O," Kafka's "In the Penal Colony," W.G. Sebald's "The Emigrants," Wilde's "The Nightingale and the Rose," Woolf's "On Being Ill," and poetry by Nazim Hikmet and Sylvia Plath. Students will be encouraged to draw on personal experience as well as their intellectual resources, and there will be opportunity to write creatively as well as academically. This course is Writing Intensive. Satisfies the 20th Century and Later requirement.

Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L85 MedH 316 Contemporary Women's Health

We identify and study a broad range of health issues that are either unique to women or of special importance to women. The roles that women play as both providers and consumers of health care in the United States will be examined. The interface of gender, race, and class and their impact on an individual's access to and experience in the health care system will be central concerns. Topics are wide-ranging and include discussions of breast cancer, mental health, cardiovascular disease in women, women and eating (from anorexia to obesity), reproductive issues (from menstruation to fertility to menopause), as well as the politics of women's health, gender differences in health status, the effect of employment on health, the history of women's health research.

L85 MedH 353 Medical Spanish

Designed for future medical professionals, this course will provide students with a complete vocabulary and cultural sensitivity necessary for treating Spanish-speaking patients. While the main focus is oral/aural, written exams, varied reading and some research are required. Volunteer work recommended for enrolled students. Advanced students will be given priority.

Prereq: Span 308E or 303.

Same as L38 Span 353

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

L85 MedH 360 Trans* Studies

Trans* Studies is an interdisciplinary course that was previously named Transgender Studies. The new course title represents the development of the field and the identity in U.S. culture. In this course students engage with the following questions: When and why did the category gender emerge? What is the relationship between sex, sexuality and gender? How have the fields of medicine and psychology dealt with gender? How have approaches to "gender dysphoria" changed over time? Why is LGBT grouped together as a social movement? What

are the advantages and disadvantages of this grouping? What are the legal obstacles faced by people who resist normative gender categories? What legal obstacles are faced by people who transition from one sex to another? To what extent do U.S. citizens have autonomy over defining their gender or sex? How are trans people represented in fiction? What does it mean to apply transgender theory to interpret fictional accounts of trans? Any of the following are suitable (but not required) courses to take before enrolling in this class: WGSS 100B, WGSS 105, WGSS 205 or WGSS 3091.

Same as L77 WGSS 360

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L85 MedH 3672 Medicine, Healing and Experimentation in the Contours of Black History

Conversations regarding the history of medicine continue to undergo considerable transformation within academia and the general public. The infamous Tuskegee syphilis experiment serves as a marker in the historical consciousness regarding African Americans and the medical profession. This course taps into this particular evolution, prompting students to broaden their gaze to explore the often delicate relationship of people of African descent within the realm of medicine and healing. Tracing the social nature of these medical interactions from the period of enslavement through the 20th century, this course examines the changing patterns of disease and illness, social responses to physical and psychological ailments, and the experimental and exploitative use of black bodies in the field of medicine. As a history course, the focus is extended toward the underpinnings of race and gender in the medical treatment allocated across time and space — the United States, Caribbean and Latin America — to give further insight into the roots of contemporary practice of medicine.

Same as L22 History 3672

Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch: HUM Art: HUM BU: BA, HUM EN: H

L85 MedH 375 Medical Narratives, Narrative Medicine

Narrative medicine is an approach grounded in the recognition that patients live and communicate their embodied experiences as stories. This approach underscores the need for medical practitioners to cultivate skills of observation, analysis, storytelling, and cultural competency -- skills that are traditionally developed in humanities coursework. In this course, students will hone their competencies in observation, close reading, and written and oral expression in French through readings of medical narratives. Texts will include Jean-Dominique Bauby, "Le Scaphandre et le Papillon"; Molière, "Le Médecin Malgré Lui"; Michel de Montaigne, "De L'Expérience"; Marguerite Duras, "La Douleur"; and excerpts from works by René Descartes, Honoré de Balzac, Émile Zola, Olivia Rosenthal, and Philippe Lançon. Whether considering works of art, patient testimonials, or classic works of literature, we will observe carefully, describe and understand what we see, tell stories, and attend to the details of the stories that others tell. Prerequisite: French 308 or equivalent.

Same as L34 French 375

L85 MedH 3801 Ancient Greek and Roman Medicine

This course introduces students to the practice and theory of medicine in the ancient Mediterranean, beginning in Egypt and continuing through Greece and Rome. It ends in the Middle Ages. Greco-Roman medicine will be our focus. How was disease understood by practitioners and, as far as can be reconstructed, by laypeople? What form did surgical, pharmacological, and dietetic treatment take? What were the intellectual origins of Greek medicine? The social status of medical practitioners? How was medicine written and in what terms did its practitioners conceive it?

Same as L08 Classics 3801

Credit 3 units. A&S IQ: HUM, LCD, SD Arch: HUM Art: HUM BU: IS EN: H

L85 MedH 385 What is Medical Humanities?

What is medical humanities? What are its core questions and methods? When and how did the field emerge? To whom does it matter and why? These questions will ground our exploration of recent work in medical humanities. We begin with readings chosen by the instructor to illuminate various humanistic methods (e.g., historical, literary, philosophical) and their approach to recurrent topics and problems in the field (e.g., the doctor-patient relationship, illness as experience, the social construction of disease, health inequality, medicalization). In the second part of the course, students will be guided in co-writing and co-teaching the rest of the syllabus. Students will finish the class able to provide their own definition of medical humanities and to explain the field's origins and concerns as well as why and to whom the field matters. Enrollment preference will be given to students who have already declared the minor in medical humanities.

L85 MedH 399 Independent Work in Medical Humanities

This designation can be used for independent studies and reading courses in medical humanities. It requires prior approval from the director of the medical humanities minor.

Credit variable, maximum 3 units.

L85 MedH 408 Disease, Madness, and Death Italian Style

Italian literary history teems with representations of illness, insanity, and death. From the ghastly 1348 plague that frames Boccaccio's "Decameron" to the midday madness of errant Renaissance knights and from 16th-century tales of poisoning and 19th-century Pirandellian madmen to the contemporary scourge of mafia killings, disease, madness, and death are dominant facts of reality, points of view, symbols, and cultural characteristics of Italian poetry and prose. This course undertakes a pathology of these tropes in Italian literary history and seeks to understand their meaning for the changing Italian cultural identity across time and the Italian peninsula. We will read primary literary texts and view excerpts from films alongside articles focused on the cultural history of medicine, religion, and criminal justice. Taught in English. No final.

Same as L36 Ital 408

Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: BA, IS EN: H

L85 MedH 418 Sexuality and Gender in East Asian Religions

In this course we will explore the role of women in the religious traditions of China, Japan and Korea, with a focus on Buddhism, Daoism, Shamanism, Shinto and the so-called "New Religions." We will begin by considering the images of women (whether mythical or historical) in traditional religious scriptures and historical or literary texts. We will then focus on what we know of the actual experience and practice of various types of religious women — nuns and abbesses, shamans and mediums, hermits and recluses, and ordinary laywomen — both historically and in more recent times. Class materials will include literary and religious texts, historical and ethnological studies, biographies and memoirs, and occasional videos and films. Prerequisites: This class will be conducted as a seminar, with minimal lectures, substantial reading and writing, and lots of class discussion. For this reason, students who are not either upper-level undergraduates or graduate students, or who have little or no background in East Asian religion or culture, will need to obtain the instructor's permission before enrolling.

Same as L23 Re St 418

Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch: HUM Art: HUM EN: H

L85 MedH 423 Philosophy of Biological Science

This course examines a number of theoretical, conceptual, and methodological issues that arise in the attempts of biologists to explain living systems. One sort of problem concerns the relation between biology (and biological descriptions and explanations) and physics and chemistry. Biological phenomena have often seemed very different from ordinary physical phenomena in being teleological or goal oriented. Vitalists, accordingly, resisted the attempt to invoke physics and chemistry in the attempt to explain biological phenomena. But recently biology has come more and more to draw upon physics and chemistry; we will examine the conceptual frameworks that underlie these efforts. Another sort of problem concerns the adaptiveness of living organisms. Charles Darwin offered one naturalistic explanation of this feature, an explanation that was further developed in this century as the synthetic theory of evolution. A number of controversial issues have arisen within this context of adaptation, and the range of levels at which selection can occur. The ubiquity of evolution, moreover, has been challenged in recent years, as a number of non-selectionist explanations have recently been put forward. We will consider the arguments for the synthetic theory and these alternatives.

Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L85 MedH 4647 Ancient Madness

In this course we will ask what madness meant in Greek and Roman culture. We will find reading strategies that are sensitive both to ancient evidence and to the ethical demands of talking about, evaluating, and categorizing people treated as mad. While we will concentrate on literary (particularly tragic and epic), philosophical, and medical texts, we will also look at visual representations and evidence from ritual and cult. An important part of our project will involve tracing the afterlife of classical ideas: the history of melancholia will ground this aspect of the course. Finally, we will consider how antiquity informs psychoanalysis (Oedipus, Antigone, Narcissus), and how ancient madness might partake in a critique of contemporary understandings of mental illness.

L85 MedH 4885 Advanced Seminar: Medicine, Disease, and Empire

This course examines the history of medicine in connection to the politics of colonialism and empire-building, spanning the 16th century through the 20th century. Topics covered include: epidemic disease outbreaks (e.g., smallpox, cholera, malaria); the role of science and medicine in endorsing the "civilizing missions" of empires; tropical climates and tropical diseases as western constructs; tensions between western medicine and indigenous healing practices and beliefs; ideas of race and racism in science and medicine; modern advancements in sanitation and public health and their implementation overseas; and the historical roots of the modern global health movement.

L85 MedH 491 Staging Illness

"Suddenly some force struck him in the chest and side, making it still harder to breathe, and he fell through the hole and there at the bottom was a light." This quotation, from Tolstoi's story "The Death of Ivan Ilych," offers an example of how artists have employed serious or life-threatening diseases as a means of illuminating both physical suffering and spiritual rebirth. Even as it invades the body and isolates us from our fellow man, illness may offer opportunities for spiritual growth and renewal, serving as an apt metaphor for human survival in times of extremis. In her brilliant essay, "Illness as Metaphor" (1978), Susan Sontag takes issue with how illnesses like tuberculosis were misunderstood or even romanticized during the 19th century in works like Dumas's "Camille" and Puccini's "La Boheme." During the AIDS crisis in the 1980s and 1990s, American artists -- particularly theatre artists, whose communities were decimated by the disease -- were forced to consider how this global pandemic impacted their lives, especially at a time when the term AIDS was not even mentioned by the President of the United States. In conjunction with the Performing Arts Department's 25th anniversary production of Tony Kushner's extraordinary play, "Angels in America, Part 1, Millennium Approaches," this new course examines how disease has been a focal point of artistic inquiry over the course of centuries. By examining works that are focused on illness throughout history, the seminar offers both a deeper understanding of and context for Kushner's masterpiece and the AIDS crisis, and it considers how illness has always been an important subject for the investigation of what it means to be fully human.

L85 MedH 4990 Advanced Seminar: History of the Body

Do bodies have a history? Recent research suggests that they do. Historians have tapped a wide variety of sources - including vital statistics, paintings and photographs, hospital records, and sex manuals - to reconstruct changes in how humans have conceptualized and experienced their own bodies. We will pay particular attention to the intersection of European cultural history and history of medicine since 1500.

Medicine & Society

The Medicine & Society Program is an exciting opportunity for undergraduate students in Arts & Sciences who are interested in exploring the interface of culture, behavior and health from a social science perspective. The program addresses the important social and cultural foundations of health and illness in human societies, with a specific emphasis on service and research opportunities. The program is supported by a grant from the Danforth Foundation and administered through the Department of Anthropology.

Eligibility

The Medicine & Society Program is a four-year program designed for matriculating first-year students. Upon acceptance to Washington University in the spring, students may apply online for admission to the program by indicating their interest in Medicine & Society. A description of the program and how to apply online is in *Getting Started*, a brochure sent to students in mid-May.

Admission to this program is highly competitive. Academic credentials, aptitude and interest in a health-related career, and personal statements all will be considered when selecting up to 40 participants to join the entering cohort. The program will particularly appeal to students with a long-term commitment to careers in the health professions and related areas.

Curriculum

The Medicine & Society Program has its intellectual and programmatic roots in the field of medical anthropology, which is broadly defined as the study of human health and illness across culture, time and space. Medical anthropologists examine the role of culture and society in the shaping of illness experiences. Foci of inquiry may include such issues as traditional health beliefs and practices; cultural clashes between traditional medicine and biomedicine; political and economic foundations of health disparities; alternative and complementary medicine; social and behavioral factors that affect disease rates; and public health responses to emerging health problems. These topics all share a focus on community as a primary area of inquiry and population as a primary unit of analysis.

Requirements

Once admitted to the program, students must complete the following:

- First-year Medicine & Society seminar
- Community health internship or service-learning activity
- Anthro 260 Topics in Health and Community
- A major or minor in anthropology or the global health and environment track of anthropology
- A junior/senior seminar addressing contemporary issues in Medicine & Society
- Senior capstone or honors thesis

Students who are accepted into the Medicine & Society Program are enrolled in a year-long first-year seminar on culture, health and society in the Department of Anthropology. This seminar provides the academic foundation for future community health work in St. Louis. Beginning as early as the sophomore year, students identify and select a community health site for internship placement or service-learning activities. The internship/service-learning opportunity provides students with a location for focusing their interest and involvement in community health and allows them to participate in the work of the host organization. During the junior and senior years, students have the opportunity to intensify their academic and service activities at the internship or service-learning site, which may culminate in a senior honors thesis or a capstone project based on original research and investigation. Students in the Medicine & Society Program are encouraged to graduate with honors, based on their independent research and academic achievement.

This course of study provides an excellent foundation for future graduate work in medicine, public health or any of the allied health professions, such as nursing or physical and occupational therapy. Students who complete the program will also be highly competitive for admission to other professional schools, such as law, business or social work.

Personnel

The Medicine & Society Program is directed by Bradley Stoner, a medical anthropologist and infectious disease physician at Washington University. Dr. Stoner has extensive experience as a physician and public health researcher, and he holds a joint appointment in the Department of Internal Medicine at Washington University School of Medicine. He oversees student training in medical anthropology and placement in the community internship sites. Dr. Stoner is assisted in these efforts by the program's assistant director, Dr. Anna Jacobsen, a cultural anthropologist with broad interests in global health and wellness. Students also have full access to other faculty in anthropology and related disciplines who offer courses of relevance and interest.

Majors

The Medicine & Society Program is not a major/minor program; it is a four-year program that is available by application only.

Current students who are interested in the Medicine & Society curriculum are advised to investigate a major (p. 245) or minor in anthropology (p. 246) with a focus on medical anthropology or the optional global health and environment track (p. 245) of the anthropology major or minor.

Minors

The Medicine & Society Program is not a major/minor program; it is a four-year program that is available by application only.

Current students who are interested in the Medicine & Society curriculum are advised to investigate a major (p. 245) or minor in anthropology (p. 246) with a focus on medical anthropology or the optional global health and environment track (p. 245) of the anthropology major or minor.

Courses

Please refer to the requirements in the Medicine & Society Overview (p. 759) section, where required courses are listed. Please visit the Anthropology page (p. 247) for specific course information.

Medieval and Renaissance Studies

Interested students may pursue a minor in Medieval and Renaissance studies or a major in Renaissance studies under the auspices of the Interdisciplinary Project in the Humanities (IPH). The major offers students the opportunity to gain a broad understanding of the early modern world — the seedbed of modern Western civilization — through the integrated study of Renaissance literature, history, philosophy, art history and music. (A full description of the requirements for completing the Renaissance studies track in the IPH may be found in the general listing for the IPH (p. 588).)

Courses are drawn from a wide range of departments. This allows students to develop their own course of study, to select areas of concentration that are of particular personal interest, and to work closely with faculty from different areas. Students study the themes and social issues of the period through art, history, literature and popular culture. Topics examined include the rise of urban life, the flowering of vernacular languages and new literary genres, the growing emphasis on education, the reconception of pictorial representation and architectural space, the expression and subversion of power in politics and culture, and the transformation of religious doctrines and institutions.

Majors

Students seeking a major concentration in Medieval or Renaissance Studies are advised to pursue it under the aegis of either the Interdisciplinary Project in the Humanities (p. 588) or one of the other departments or programs in the humanities. They should achieve foreign language competency in French, Spanish, German, Italian, Latin, Arabic or Greek, and they are strongly urged to pursue their studies across several departments and programs.

Minors

The Minor in Medieval and Renaissance Studies

Total units required: 18

The minor in Western Medieval Studies and the minor in Renaissance Studies have the same structure. Students must complete two years of college-level language study in Spanish, French, Italian, Latin, German, Arabic or Greek, and they are encouraged to continue their foreign-language study further. They are expected to take six additional courses; three should come from the following list:

Code	Title	Units
Art-Arch 113	History of Western Art, Architecture & Design	3
History 101C	Western Civilization	3
IPH 201C	Ampersand: Classical to Renaissance Literature	3
IPH 203C	Ampersand: Early Political Thought	3
IPH 209	Ampersand: Scriptures and Cultural Traditions: Text & Traditions	3

Students interested in pursuing the minor in Medieval and Renaissance Studies should contact the offices of the Interdisciplinary Project in the Humanities (<http://iph.wustl.edu/>).

Additional Information

Students must also take three courses in either Medieval or Renaissance Studies (depending on the concentration chosen) from at least two different departments or programs. Students will select these three courses in consultation with their minor adviser: Michael Sherberg (<https://rlw.wustl.edu/people/michael-sherberg/>) for Western Medieval Studies or Joseph Loewenstein (<https://english.wustl.edu/people/joe-loewenstein/>) for Renaissance Studies.

Courses

Please visit the list of courses offered by the Interdisciplinary Project in the Humanities (p. 592).

Music

The Department of Music offers a music program of exceptional quality and diversity. In this varied course of study — where music is approached as a liberal and fine art rather than as an isolated, separate subject — students may pursue practical and creative music making or study musical traditions and individual works. Music courses are open to all students in the university.

We offer students the opportunity to develop performance skills in voice or instruments through private instruction or through participation in small or large ensembles. Private music lessons with our prominent faculty, including members of the St. Louis Symphony Orchestra, are available in voice, piano, organ, guitar, and all orchestral and jazz instruments.

Music majors can explore critical issues of tradition, individual composers, compositional craft, aesthetic interpretation, and music's social and cultural significance through a wide range of courses, from introductory classes to highly specialized seminars. Instruction is available in jazz, popular music, world musics, the history and literature of Western music, ethnomusicology, music theory and analysis, musical composition, and electronic music. All performance and creative and academic endeavors in music are supported by a thorough grounding in musicianship and keyboard skills.

Music majors may take advantage of study abroad programs in music in Italy, England and France. Summer research projects under faculty direction are also available.

Several options are available for students interested in music: the Bachelor of Arts degree with a major in music, the Bachelor of Music degree, a minor in music, and a minor in jazz studies. Students may take the AB degree in combination with a major in another field or as their primary major in a broad liberal arts education. Majoring in music can prepare students well for graduate work and for a variety of musical careers and other professions.

Performance Opportunities

Ensembles: The department sponsors numerous performing ensembles that draw members from the university and the surrounding community. Students must audition for admission to the ensembles. All ensembles are available for graded credit, for credit/no credit, or off roster. Ensembles give one or more public performances each semester. Students who are enrolled for credit in one of the department's ensembles may be entitled to a scholarship that covers a portion of the fee for music lessons.

Vocal Ensembles: Concert Choir, Chamber Choir

Instrumental Ensembles: Flute Choir, Jazz Band, Chamber String Ensembles, Symphony Orchestra, Wind Ensemble, Jazz Combos

Lessons: Students may take lessons in voice, piano, organ, guitar, and all orchestral and jazz instruments in the appropriate course sequences. A separate fee is charged for private instruction. Music majors and minors receive a scholarship to cover all or a portion of the fee, respectively. If students enroll for credit in one of the department's ensembles, they are entitled to a scholarship for a portion of the fee for each semester in which they are enrolled. In addition, the department has a limited number of partial scholarships that are based on need and merit.

Majors

Becoming a Music Major: Students who plan to declare a major in music should consult with the department as early as possible. Students interested in pursuing a music major should begin the appropriate course sequences in music theory, music history, keyboard skills and musicianship. All music majors must complete a senior capstone, which could take the form of a thesis, recital, lecture-demonstration, composition portfolio or 400-level course.

The Bachelor of Arts in Music Major

Total units required: 45

Code	Title	Units
Music 121C & Music 122C	Classical Theory I and Classical Theory II	6
or Music 121J & Music 122J	Jazz Theory I and Jazz Theory II	
Music 221C	Classical Theory III	3
Music 321T	Music Theory IV: Topics in Music Theory	3
Music 3012	Music History II: The Invention of Classical Music, 1700-1850	3
Music 3014	Ethnomusicology	3
Choose two of the following three courses:		6
Music 3011	Music History I: Music in Europe from the Earliest Notation to 1700	
Music 3015	American Popular Music and Media	
Music 3017	Music History III: Classical Music in Flux, 1850 to the Present	
Music 2231	Musicianship I (should be taken concurrently with Music 221C)	1
Music 2241	Musicianship III (should be taken concurrently with Music 321T)	1
Two semesters of Keyboard Skills; course placement determined by piano faculty		2
Performance courses: private lessons, small ensembles, and/or large ensembles		4
Also required:		
Music 4992	Senior Capstone: Performance, Composition, or Theory (or Music 4993 or Music 4994) or an approved 400-level Music course	3
Lower-level elective units (courses, lessons, and/or ensembles)		7
Upper-level elective units (courses, lessons, and/or ensembles)		3
Total Units		45

The Bachelor of Music Major

Total units required: 74-78

Declaration of this major must be approved by the department before the end of a student's sophomore year. In addition to the required courses, majors must complete a minimum of 12 to 30 units in advanced courses, depending on the area of concentration. Students may earn the BMus degree with concentration in performance, composition, music theory, or music history and culture, or they may pursue a general program that combines two or more of these areas.

Each concentration requires a major senior capstone, such as a thesis, recital, lecture-demonstration or composition portfolio. All majors must also pass a keyboard proficiency examination.

Required courses:

Code	Title	Units
Music 121C & Music 122C	Classical Theory I and Classical Theory II	6
or Music 121J & Music 122J	Jazz Theory I and Jazz Theory II	
Music 221C	Classical Theory III	3
Music 321T	Music Theory IV: Topics in Music Theory	3
Music 2231	Musicianship I (should be taken concurrently with Music 221C)	1
Music 2241	Musicianship III (should be taken concurrently with Music 321T)	1
Music 3231	Advanced Musicianship	3
Music 3011	Music History I: Music in Europe from the Earliest Notation to 1700	3
Music 3012	Music History II: The Invention of Classical Music, 1700-1850	3
Music 3017	Music History III: Classical Music in Flux, 1850 to the Present	3
1 unit of keyboard skills per semester as necessary to complete Music 2242		1-4
Music 4991 or Music 4992 or Music 4993 or Music 4994	Senior Project: Musicology or Analysis Senior Capstone: Performance, Composition, or Theory Senior Honors Capstone: Musicology or Analysis Honors Project: Performance, Composition or Theory	3

Lesson and Ensemble Requirements: In addition to the courses listed above, BMus students must also register for music lessons and at least one ensemble every semester once the major has been declared. Students with a performance emphasis must take at least 2 units of music lessons per semester; all others must take at least 1 unit per semester.

Elective courses: Each of the five BMus concentrations includes additional requirements, as follows:

Performance Emphasis:

Code	Title	Units
Upper-level music history elective (other than Music 3011-Music 3017)		3
Music 424	Analysis II	3
400- or 500-level music theory elective		3
Music 439	Diction I (Vocal performance majors only)	3
Junior half-recital		0
Total Units		12

Theory Emphasis:

Code	Title	Units
Music 424	Analysis II	3
400- or 500-level electives		12
Upper-level music history elective (other than Music 3011-Music 3017)		3
Music 401 & Music 402	Elementary Technique of Electronic Music and Advanced Techniques of Electronic Music	6
or Music 429 & Music 430	Composition and Composition	
Total Units		24

Composition Emphasis:

Code	Title	Units
Upper-level music composition (Music 429, Music 430; repeatable)		12
Upper-level music history elective (other than Music 3011-Music 3017)		3
Music 424	Analysis II	3
400- or 500-level music theory electives		6
Music 401 & Music 402	Elementary Technique of Electronic Music and Advanced Techniques of Electronic Music	6
Total Units		30

History and Culture Emphasis:

Code	Title	Units
Upper-level music history electives (other than Music 3011-Music 3017)		15
Music 424	Analysis II	3
400- or 500-level music theory electives		6
Total Units		24

General Emphasis:

Code	Title	Units
Upper-level music history electives (other than Music 3011-Music 3017)		6
Music 424	Analysis II	3
400- or 500-level music theory electives		6
Elective units		9
Total Units		24

Senior Honors: Music majors are encouraged to work toward Latin Honors. To qualify, students must have an outstanding academic record and satisfactorily complete a senior honors capstone project, including an oral examination with a faculty committee. Project proposals are due at the end of the junior year.

Minors

The Minor in Music — General Studies

Units required: 18

Required courses:

Code	Title	Units
Music 121C & Music 122C	Classical Theory I and Classical Theory II	6
or Music 121J & Music 122J	Jazz Theory I and Jazz Theory II	
One of the following courses:		
Music 3011	Music History I: Music in Europe from the Earliest Notation to 1700	3
or Music 3012	Music History II: The Invention of Classical Music, 1700-1850	
or Music 3014	Ethnomusicology	
or Music 3015	American Popular Music and Media	
or Music 3017	Music History III: Classical Music in Flux, 1850 to the Present	
Lower-level electives		
Upper-level electives		6
Total Units		18

Additional Information

Special scholarships are available for lessons and ensembles.

Students whose interests are not served by these requirements may apply to the department chair with an alternative proposal.

The Minor in Jazz Studies

Units required: 18

Required courses:

Code	Title	Units
Music 121J & Music 122J	Jazz Theory I and Jazz Theory II	6
Music 105	History of Jazz	3
Music 3023	Jazz in American Culture	3
Music 3091	Jazz Improvisation I	3
One of the following courses:		
Music 3015	American Popular Music and Media	3

or Music 3017	Music History III: Classical Music in Flux, 1850 to the Present
or Music 3021	Music of the African Diaspora
or Music 3235	Compositional Craft in Film Scores and Musical Theatre
or Music 3236	Music Arranging for the Multi-Genre Artist
or Music 3237	The Art of Popular Song: From Folk and Musical Theatre to Rock and Contemporary A Capella
or upper-level applied music in jazz	
Total Units	18

Additional Information

Other upper-level credits in music or kindred studies (e.g., African and African-American Studies) may be approved at the discretion of the department chair.

Credit variable, maximum 2 units.

L27 Music 101E Introductory Survey of Western Music I

A survey of "art" music in Western culture from the Middle Ages to the mid-18th century. Emphasis in the first term is on sacred and secular music of the church, court and middle-class society in its historical and cultural context. Regular listening and writing assignments are designed to develop the capacity to hear perceptively and write critically about the music studied. No prior knowledge of musical notation required. This course is not recommended for music minors or majors. For a one-semester course covering Western classical and popular music and music from other cultures, refer to Music 114E.

Credit 3 units. A&S IQ: HUM BU: HUM

L27 Music 1021 Musics of the World

This course provides an introduction to the field of ethnomusicology as well as a survey of selected musics from around the world. We will investigate not only musical sound itself but how music interacts with other cultural domains, such as religion/cosmology, politics, economics, and social structure. The course will use case studies from regions around world (such as Indonesia, India, the Middle East, Sub-Saharan Africa, and Latin America) to illustrate the conceptual problems and methodologies raised by the cross-cultural study of music, as well as acquaint you with the rich variety of music around the globe.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H

L27 Music 1022 Popular Music in American Culture

American popular music from 1800s to the present, with emphasis on technology, social and political contexts, and popular music as a realm of interracial encounter. Musics covered include early jazz, classic blues, swing, classic pop, rock and roll, soul, disco, hip hop and the changing relationship between popular music, film, and television.

Credit 3 units. A&S IQ: HUM, SD Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 1023 Beethoven in His Time and Ours

Ludwig van Beethoven not only composed some of the most significant works of Western classical music — he continues to make his mark as the prototypical "troubled genius," symbol for a wide range of political causes, subject of numerous films, and classical music's main representative in American pop culture. We begin with an exploration of Beethoven's life, music and historical context and continue by tracing how, after his death, Beethoven became a cultural hero whose image took on a life of its own. Throughout, we unravel the interaction of music, culture and mythmaking. No previous musical experience required.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 1024 Mozart: The Humor, Science and Politics of Music

Wolfgang Amadeus Mozart is one of the most recognized composers of "classical" music. A child prodigy of astonishing precocity, he has come to symbolize genius for Western culture — a composer whose music embodies superhuman, even utopian beauty and perfection. In this course, we learn that there was more to Mozart. Mozart was a lover of codes and puzzles who delighted in the science of music, a sampler of non-Western music, and a musical humorist whose comedies make provocative statements — ranging from cynical to poignant — about politics, gender and morality. Our focus works include Mozart's symphonies, piano music, string quartets, and such comedies as *The Magic Flute* and *The Marriage of Figaro*. We also explore Mozart's afterlife — how his music has figured in film, literature and popular culture. This course is open to all undergraduates. No previous musical course work or experience is required.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 1026 First-Year Seminar: You Never Heard Such Sounds in Your Life: American Avant-Garde Music

This first-year seminar introduces students to the fascinating history of avant-garde music making in the United States. A series of case studies will address a number of important avant-garde musicians and schools of thought spanning the early 20th century to the present. In exploring avant-garde music, students will encounter new ways of thinking about art's place in the world and broaden their notions of music itself. No previous training in music is required. Course is for first-year, non-transfer students only.

Credit 3 units. A&S: FYS A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 1027 First-Year Seminar: Sound On: Listening in/ to Digital Culture and Music

What does 21st-century life sound like? The aim of this course is to interrogate, denaturalize, and critique familiar experiences and technologies of contemporary listening: from earbuds and mobile devices to streaming services and social media to the ambient music of capitalism and the (mediated) persistence of live performance. Readings in musicology, sound studies, and media theory will be examined alongside students' contemporary lived musical experience. Musical and sonic exercises in close, situated listening as well as examinations of distracted, ubiquitous listening will form some of the primary materials of the course. Analyses of both readings and activities will result in the production of a collaborative weekly digital newsletter as well as culminating projects by individual students. This course is for first-year, non-transfer students only.

Credit 3 units. A&S: FYS A&S IQ: HUM BU: HUM EN: H

L27 Music 102E Introductory Survey of Western Music II

A survey of "art" music in Western culture from the middle of the 18th century to the present. Music of composers from Haydn and Mozart to George Crumb and John Cage are studied in its historical and cultural context. Regular listening and writing assignments are designed to develop the capacity to hear perceptively and write critically about the music studied. No prior knowledge of musical notation required. This course is not recommended for music minors or majors.

Credit 3 units. A&S IQ: HUM BU: HUM

L27 Music 103E Theory I: Introduction to Music Theory

Vocabularies and skills basic to music theory introduced through concentrated work in notation, the development of specific compositional skills, and musical analysis. Concepts of musical structure and aesthetic experience are explored through the study of music from three periods of the western tradition: medieval liturgical chant, music of the Classical period, and music of the early 20th century. Ability to read musical notation required. Keyboard skills desirable. Music 103E is the entry-level course for all music minors and majors.

Credit 3 units. A&S IQ: HUM BU: HUM

L27 Music 104E Music Theory II

A systematic introduction to the basic principles of tonality as manifested in western European music of the 18th and early 19th centuries. Topics include pitch, time, line and linear elaboration, counterpoint, harmony, phrase, form and chromaticism. The principles are explored through both musical composition and interpretation of musical art works. Prerequisite: Music 103E.

Credit 3 units. A&S IQ: HUM BU: HUM

L27 Music 105 History of Jazz

History of jazz to the present, including its African elements. Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 107 Listening Laboratory

Optional analytical listening sessions to supplement Music 101E and 102E respectively. Taped listening assignments. Required of music majors and of students in the first-year seminar section. Concurrent registration in Music 101E or 102E is required. Credit 1 unit. A&S IQ: HUM

L27 Music 109 Ragtime

A history of ragtime music: survey of composers and performers. Emphasis on St. Louis and the music of Scott Joplin. University College students should register for U24 109 Section 02. Credit 2 units. A&S IQ: HUM BU: HUM

L27 Music 1091 Jazz Theory I

Jazz Theory I introduces the jazz music language as a preparation for the study of improvisation. The course study consists of basic music theory including music-reading skills and notation, scales, intervals and triads. An introduction to extended tertian chords as derived from the 21 modes of the major, melodic and harmonic minor scales forms the basis of the jazz harmonic language. The study of chord progression and chord substitution, song form and the blues prepares the student for a detailed study of the modern jazz language.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 1092 Jazz Theory II

Jazz Theory II outlines the harmonic, rhythmic and improvisational practices from the Bebop period of the late 1940s to the jazz music of the present day. Discussions include intermediate to advanced chord substitution, quartal and bitonal harmony, modal improvisation, pentatonic scales and polyrhythmic drumming, concentrating on the work of the major improvisers of the 1950s to 1970s. Prerequisite: Music 1091. Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 109M Mathematics and Music

An elementary introduction to the connections between mathematics and musical sound. Review of integers, ratios, prime numbers, functions, rationality, exponents, logarithms, trigonometry. Review of scales, clefs, key signatures, intervals, time signatures. Frequency and pitch. The connection between intervals and logarithms. Tuning and temperament, just intonation. Scales and modular arithmetic. The mathematics of harmony; the sound of the low prime numbers and their roles in harmony. Harmonics, partials and overtones. Numerical integration and basic Fourier analysis. The nature of complex tones. Analysis of instrument sounds. Human vowels and formants. Prerequisites: two years of high school algebra, and trigonometry.

Same as L24 Math 109

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L27 Music 110G Study in Guitar

Students taking guitar off-roster/not for credit.

L27 Music 110P Study in Piano

Students taking piano not for credit/off-roster.

L27 Music 110S Study in Strings

Students taking strings not for credit.

L27 Music 110V Study in Voice

Students taking voice not for credit.

L27 Music 110W Study in Woodwinds

Students taking woodwinds not for credit.

L27 Music 113 Fundamentals of Music

This course provides a broad overview of music fundamentals designed to enhance the student's experience of music as well as provide a foundation for further study in music theory. Students become acquainted with the basic vocabulary and building blocks of music: intervals, rhythms, scales, triads, chords and harmony.

Credit 2 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 114E Exploring Music

A wide-ranging introduction to music in its many forms. Western classical and popular music are studied along with music from other cultures to highlight the varied conceptions, functions and practices of music in different times and places. Discussion of specific pieces facilitates growth in basic musical skills and provide insights into music's multifaceted historical/cultural resonances. No previous musical background required. Includes regular reading and listening assignments.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 115 Reading Music

Elements of music notation for those with little or no music-reading skill. Designed to develop a basic acquaintance with the principles of notation for students enrolled in introductory courses, applied music and ensembles as well as those with a general interest in learning to read music.

Credit 1 unit.

L27 Music 1161 First-Year Seminar: Writing About Music

This course explores the various ways in which writers from the 18th century to the present discuss music. Issues include respect for a tried and true musical "canon," music as an imitative vs. absolute art form, and a focus on performing virtuosity/spectacle vs. musical content. In addition to reading what previous authors have written, students write on a regular basis about examples from classical, popular and non-Western music and critique each others' work. Ability to read music is not required.

Credit 3 units. A&S: FYS A&S IQ: HUM BU: HUM

L27 Music 1162 First-Year Seminar: Bruce Springsteen's USA

This course examines the career and work of Bruce Springsteen as songwriter, singer, rock musician, pop star, and public figure. Conducted in seminar format, the primary course materials are Springsteen's recordings and videos, as well as the many interviews he has given. Selections from the vast body of popular and academic scholarship on Springsteen also informs class discussions. The course is limited to freshmen.

Credit 3 units. A&S: FYS A&S IQ: HUM BU: HUM EN: H

L27 Music 1163 First-Year Seminar: Youth in Revolt: Popular Music as Protest

When is popular music also protest music? In this course we will listen to music linked to the mid-century Civil Rights Movement, the Vietnam War, Black Power, the wars in Iraq, Occupy Wall Street, and the recent confrontations between protesters and the police. While exploring genres such as rock, soul, pop, punk, hip-hop and grunge, we will ask how popular musics might express or embody various forms of protest in American life. Selections from contemporaneous testimonials, alternative presses, interviews, and popular and academic writing will also inform our discussions.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 1164 Love Songs and Laptops: Rediscovering Medieval Music in the Digital Age

Using our laptops as portals into the past, students will gain first-hand experience as historical detectives. In this seminar, we will explore the world of medieval love — from the chivalrous and courtly to the bodily and obscene — as represented in books of songs from the 15th century. Scrumptiously decorated and preserved, five interrelated songbooks from central France, known as the "Loire Valley Chansonniers" contain the majority of love songs from this period. Working from digitized versions of the songbooks, online editions, and modern audio recordings, we will address the following questions: What do the songbooks tell us about the culture in which they were created? How do the graphic decorations that frame each song interact with its music and lyrics? Lastly, by contextualizing these digital sources with respect to the growing interest in the interface between the humanities and digital technology, we will discuss what we can gain from these developments and what — if anything — we stand to lose. Ability to read music not required.

Credit 3 units. A&S: FYS A&S IQ: HUM EN: H

L27 Music 117 Women and Music

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 119 Guitar Class I

Jazz Guitar Class I introduces the fundamentals of music as a preparation for the study of jazz proper, guiding the student to the development of an operational musical language on the instrument. This performance practice class consists of basic music theory realized on the guitar including major and minor diatonic and pentatonic scales, triads in all positions and inversions, seventh chords and an introduction to extended tertian chords. As well, music reading, rhythmic skills and basic performance techniques are emphasized. The course culminates in the reading of jazz lead-sheets where students play the melody in all positions of the key and also play the harmony from chord symbols. Note: If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the private lesson fee will be prorated accordingly.

Credit 1 unit.

L27 Music 120 Guitar Class II

Jazz Guitar Class II reinforces the materials of Music 119 including scales and triads in all positions, while introducing new materials including 9th, 11th, 13th and altered chords. An introduction to improvisation, this course stresses making music

in real time through the embellishment of melody, the study of arpeggio, the modes of the major scale and idiomatic devices of the jazz language. The course stresses the development of strong rhythmic skills while furthering a proper technique. Jazz Guitar II culminates in the reading of jazz lead-sheets where the student improvises in fundamental ways. Note: If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the private lesson fee will be prorated accordingly.

Credit 1 unit.

L27 Music 121C Classical Theory I

Introduction to vocabularies and skills basic to music theory through concentrated work in notation, the development of specific compositional skills, and musical analysis. Concepts of musical structure and aesthetic experience are explored through the study of music from the Western classical tradition. Ability to read musical notation required. Keyboard skills desirable. Students who register for Music 121C are required to register for one of the subsections.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 121J Jazz Theory I

Introduction to the jazz music language as a preparation for the study of improvisation. The course of study consists of basic music theory including music-reading skills and notation, scales, intervals and triads. An introduction to extended tertian chords as derived from the 21 modes of the major, melodic and harmonic minor scales forms the basis of the jazz harmonic language. The study of chord progression and chord substitution, song form, and the blues prepares the student for a detailed study of the modern jazz language. Students who register for Music 121J are required to register for one of the subsections.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 122C Classical Theory II

A review of diatonic harmony and followed by a study of chromatic harmony and issues of tonality and form. Topics include tonicization and modulation, chromatic voice-leading, modal mixture, altered and extended chords, modulation to foreign keys, and elaboration of diatonic sequences. Work involves written and class-related exercises, analysis of 18th- and 19th-century works, and model composition. Students who register for Music 122C are required to register for one of the subsections. Prerequisite: Music 121C.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 122J Jazz Theory II

A study of the harmonic, rhythmic, and improvisational practices from the Bebop period of the late 1940s to the jazz music of the present day. Discussions include intermediate to advanced chord substitution, quartal and bitonal harmony, modal improvisation, pentatonic scales, and polyrhythmic drumming, concentrating on the major improvisors of the 1950s-1970s. Students who register for Music 122J are required to register for one of the subsections. Prerequisite: Music 121J.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 1232 Keyboard Skills I

An introduction to basic techniques of keyboard harmony using intervals, scales and root position chords. Transposition and sight-reading skills developed. Prerequisite: permission of instructor for nonmajors. One and one-half class hours a week. Credit 1 unit.

L27 Music 1242 Keyboard Skills II

An introduction to basic techniques of keyboard harmony using intervals, scales and root position chords. Transposition and sight-reading skills developed. Prerequisite: permission of instructor for nonmajors. One and one-half class hours a week. Credit 1 unit.

L27 Music 128 Selected Area for Special Study

In-depth study in areas of special interest.
Credit 3 units. BU: HUM

L27 Music 129 Composition Workshop

An introductory course in contemporary music composition, with a 30-minute private lesson and weekly master class.
Credit 2 units.

L27 Music 130 Composition Workshop

An introductory course in contemporary music composition, with a 30-minute private lesson and weekly master class.
Prerequisite: Music 129 or permission of instructor.
Credit 2 units.

L27 Music 1313 Digital Audio and Multitracking

This introductory course in computer music composition is a project-based class that covers the theory and application of digital audio recording, processing, multitracking, mixing, and spatialization using current audio software.
Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 151G Introductory Guitar

Credit variable, maximum 2 units.

L27 Music 151P Introductory Piano

Credit variable, maximum 2 units.

L27 Music 151S Introductory Strings

Credit variable, maximum 2 units.

L27 Music 151V Introductory Voice

Credit variable, maximum 2 units.

L27 Music 151W Introductory Winds and Percussion

Credit variable, maximum 2 units.

L27 Music 155 Class Guitar

Credit 1 unit.

L27 Music 159 Piano Class

Intended for students with little to no formal musical training. An introduction to keyboard fundamentals through the study of note reading, intervals, technique and repertoire. Students may self-enroll or be placed by audition. There is a \$150 lab fee for the course. *Note:* If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the fee is prorated accordingly.

Credit 1 unit.

L27 Music 160 Piano Class

Continuation of L27 159. Note: If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the fee will be prorated accordingly. Prerequisite L27-159 or permission of instructor.

Credit 1 unit.

L27 Music 175G Guitar

Credit variable, maximum 2 units.

L27 Music 175O Organ

Credit variable, maximum 2 units.

L27 Music 175S Strings

Credit variable, maximum 2 units.

L27 Music 175V Voice

Credit variable, maximum 2 units.

L27 Music 175W Winds and Percussion

Credit variable, maximum 2 units.

L27 Music 177C Voice Class: Fundamentals of Singing Technique

Voice Class teaches basic techniques of bel canto vocal production that apply to singing solo repertoire and singing in choral ensembles. Basic techniques include breathing in singing, resonance, articulation and registration. Study of the International Phonetic Alphabet, very basic skills for reading music and vocal health issues also are included. *Note:* If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the private lesson fee will be prorated accordingly.

Credit 1 unit.

L27 Music 178C Voice Class II: Fundamentals of Singing Technique

Voice Class teaches basic techniques of bel canto vocal production that apply to singing solo repertoire and singing in choral ensembles. Basic techniques include breathing in singing, resonance, articulation and registration. Study of the International Phonetic Alphabet in English and Italian, skills for reading music, in-depth study in musical interpretation, and acting skills. More advanced work in poetic analysis and line reading. Prerequisite: Music 177C or approval by instructor by audition. *Note:* If a class does not have three students enrolled at the end of the drop/add period, it will be cancelled. Pending studio space, enrolled students may then opt to take private lessons for the remainder of the semester, and the private lesson fee will be prorated accordingly.

Credit 1 unit.

L27 Music 221 Music Theory III

Concentrated study of the principles of tonal counterpoint and their application to the interpretation of Bach keyboard suites. Class work includes both writing and analysis. Prerequisite: Music 104E.

Credit 3 units. A&S IQ: HUM

L27 Music 2211 Opera Projects

Students may contract with a faculty supervisor for credit for work on opera productions or research. Contracts must be signed by the student and the faculty supervisor before the work can commence. Prerequisite: permission of the instructor. Credit variable, maximum 2 units.

L27 Music 2212 Opera Projects

Students may contract with a faculty supervisor for credit for work on opera productions or research. Contracts must be signed by the student and the faculty supervisor before the work can commence. Prerequisite: permission of the instructor. Credit variable, maximum 2 units.

L27 Music 2213 Singers' Performance Workshop

Developing performance skills for young singers in musical theatre, operetta and opera that help students prepare music for rehearsal, performance and audition. Semester's work includes musical, vocal and diction coachings, research and dramatic analysis. The class culminates in the preparation and performance of both solo and ensemble pieces. Prerequisite: audition and permission of instructor.

Credit 3 units. A&S IQ: HUM EN: H

L27 Music 221C Classical Theory III

A synthesis of the knowledge gained in Theory I-II as it applies to the detailed analysis of 18th-, 19th-, and selected 20th-century works (Bach through Bartok). Prerequisite: Music 122C or 122J. Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 222 Music Theory IV

Continuation of Music 221 with study of 18th- and 19th-century harmonic, textural and structural procedures (Bach through Brahms). Prerequisite: Music 221. Credit 3 units. A&S IQ: HUM

L27 Music 2231 Musicianship I

Basic ear training, sight singing and dictation skills. Three hours a week. Prerequisite: Music 104E. Credit 1 unit.

L27 Music 2232 Keyboard Skills III

Intermediate skills in score reading as well as the introduction of inversions, figured bass and improvising melodies. Prerequisites: Music 1242 and permission of instructor for nonmajors. One and one-half class hours a week. Credit 1 unit.

L27 Music 2241 Musicianship III

Continuation of Music 2231. Intermediate-level ear training, sight singing and dictation skills. Prerequisite: Music 2231. Two and one-half class hours a week. Credit 1 unit.

L27 Music 2242 Keyboard Skills IV

Intermediate skills in score reading as well as the introduction of inversions, figured bass and improvising melodies. Prerequisite: permission of instructor for nonmajors. Concurrent registration in Music 2231 and 2241 required of all music majors. One and one-half class hours a week. Credit 1 unit.

L27 Music 227 Selected Area for Special Study

In-depth study in areas of special interest. Prerequisite: permission of instructor. Credit 3 units.

L27 Music 228 Selected Area for Special Study

In-depth study in areas of special interest. Prerequisite: permission of instructor. Credit 3 units. A&S IQ: HUM EN: H

L27 Music 230 Composition

An intermediate course in contemporary music composition, with a 30-minute private lesson and weekly master class. Prerequisite: Music 229 or permission of instructor. Credit 2 units.

L27 Music 231C Small Chamber Ensembles

Students interested in performance of chamber music are organized into various ensembles and assigned a coach. A public chamber music concert is given once each semester. May be repeated for credit. Prerequisite: permission of the instructor. Consult course listings for more information. Credit variable, maximum 1 units.

L27 Music 232W Wind Ensemble

A group of select woodwind and brass players who form brass and woodwind choirs and smaller ensembles such as quintets and quartets. The weekly rehearsals are coached. The ensembles perform on student recitals and at various campus functions.

Credit variable, maximum 1 units.

L27 Music 233 Jazz Band

Study of the literature of big band jazz. Concerts presented each semester. May be repeated for credit. Prerequisite: admission by audition. Two and one-half rehearsal hours a week.

Credit variable, maximum 1 units.

L27 Music 234S Symphony Orchestra

Performance and reading of works for orchestra. May be repeated for credit. Prerequisite: admission by audition. Two and one-half class hours a week including sectionals.

Credit variable, maximum 1 units.

L27 Music 235F Flute Choir

Weekly two-hour rehearsals of flute ensemble literature of many styles, Bach to bop. Developing skills of tone production, technique, intonation, sight reading and musicianship. One performance per semester required. Prerequisite: admission by audition. Special fee applicable.

Credit variable, maximum 1 units.

L27 Music 236J Jazz Combo

Students are placed in small combos for regular, weekly coaching. May be repeated for credit. Prerequisite: permission of department.

Credit variable, maximum 1 units.

L27 Music 237 Concert Choir

A study of the repertory of the vocal ensemble from the Renaissance to the 20th century, with performance in public concerts. May be repeated for credit. Prerequisite: audition and consent of instructor. Four class hours a week.

Credit variable, maximum 2 units.

L27 Music 238 Chamber Choir

Study and performance of advanced repertoire for small vocal ensemble from Renaissance to the present. May be repeated for credit. Prerequisites: audition and consent of instructor.

Credit variable, maximum 1 units.

L27 Music 270G Jazz Guitar

Credit variable, maximum 2 units.

L27 Music 270J Jazz Brass

Credit variable, maximum 3 units.

L27 Music 270P Jazz Piano

Credit variable, maximum 2 units.

L27 Music 270S Jazz Strings

Credit variable, maximum 2 units.

L27 Music 270V Jazz Voice

Credit variable, maximum 2 units.

L27 Music 270W Jazz Winds and Percussion

Credit variable, maximum 2 units.

L27 Music 275G Guitar

Credit variable, maximum 2 units.

L27 Music 275O Organ

Credit variable, maximum 2 units.

L27 Music 275P Piano

Credit variable, maximum 2 units.

L27 Music 275S Strings

Credit variable, maximum 2 units.

L27 Music 275V Voice

Credit variable, maximum 2 units.

L27 Music 275W Winds and Percussion

Credit variable, maximum 2 units.

L27 Music 295 Independent Study

Supervised independent study in areas in which there are no current course offerings. Student must submit to the department chair an outline of the work to be covered, the number of credit hours requested for the work, and the name of the instructor who will be asked to supervise the work. Class hours variable, depending on credit.

Credit variable, maximum 3 units.

L27 Music 296 Independent Study

Supervised independent study in areas in which there are no current course offerings. Student must submit to the department chair an outline of the work to be covered, the number of credit hours requested for the work, and the name of the instructor who will be asked to supervise the work. Class hours variable, depending on credit.

Credit variable, maximum 3 units.

L27 Music 298 Directed Internship

Students receive credit for a faculty-directed and approved internship, usually with a music professional or musical organization. The primary objective of the internship is to obtain professional experience outside the classroom. Students obtain a Learning Agreement from the Career Center and have it signed by the Career Center, the faculty sponsor, and the site supervisor, if appropriate. A final written project is to be agreed upon before work begins and will be evaluated by the faculty

sponsor at the end of the internship. Credit should correspond to actual time spent in work activities; e.g., 8-10 hours per week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours. Refer to ** section/faculty list at start of this departmental entry for faculty selections in this course.

Credit variable, maximum 3 units.

L27 Music 299 Performance Project

Students may contract with a faculty supervisor for credit for work on musical performance projects or research on musical performance. Contracts must be signed by the student, the faculty supervisor and the department chair before the student's work on the project commences. Consult department for faculty selections in this course.

Credit variable, maximum 3 units.

L27 Music 3011 Music History I: Music in Europe from the Earliest Notation to 1700

A study of music history and literature from the Middle Ages to 1700. Composers treated include Machaut, Dufay, Josquin, Palestrina, Monteverdi, Vivaldi, Handel, and Bach. Prereq: Music 121 or permission of the instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 3012 Music History II: The Invention of Classical Music, 1700-1850

A study of music history and literature from 1700 to 1850. Composers treated include Haydn, Mozart, Beethoven, Schumann and his contemporaries. Prereq Music 3011 or Music 104E.

Credit 3 units. A&S IQ: HUM, WI BU: HUM EN: H

L27 Music 3014 Ethnomusicology

This course provides an introduction to the field of ethnomusicology, defined broadly as "the study of music in — or as — culture" or "the study of people making music." We will explore the varied ethnographic, anthropological, historical, and music-analytical approaches that ethnomusicologists have employed to explain the vital role of music-making in diverse human societies. We will seek to understand the social significance of a variety of musical practices, drawing on ethnomusicological scholarship to address music's performance, circulation, and reception. Case studies from around the world will demonstrate the multiple ways that sound shapes — and is shaped by — issues of cultural practice and representation, ideologies of authenticity, intersectional identities, cultural memory, ideas and structures of tradition, colonialism and postcolonialism, transnationalism and globalization. Our case studies will introduce students to a number of important musical genres and traditions, including (in the order in which they appear in the class): Mbira (Zimbabwe), Andean Kena music (Peru), Jazz (U.S.), Samba (Brazil), Gamelan (Java), Funk (U.S.), Egyptian musics, Ottoman-Turkish classical music, Karnatic Music (South India), Gisaeng music (Korea), Ngoma (South Africa), Agbekor (Ghana), Hip-Hop (U.S.), and Noise (Japan). Prerequisites: Music 121C (Theory I) or Music 121J (Jazz Theory I) or permission of instructor.

Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L27 Music 3015 American Popular Music and Media

This course considers the history of American popular music as delivered by successive mass media platforms in the industrial and post-industrial eras: from mass-produced sheet music in the mid-19th century to digital music and video on the internet. Historical contextualization and in-depth analysis of musical scores and various kinds of audio recordings and audiovisual texts will be at the center of the course. Topics to be considered include: the history of sound recording technologies and formats; the role of electronic mass media structures (radio, film, television, the internet); urbanization, national commercial music centers (New York, Hollywood, Nashville), and the importance of regional sounds in a national context; the formation and transformation of select genres (rock, country, various black musics); legal frameworks relating to music as a commodity (copyright, sampling); the impact of visual media on music dissemination, performance, and meanings; and how recorded media of all kinds have transformed the act of listening. Issues of race, gender, sexuality, personal, and national identity will be considered across the course. Prerequisites: Music 121C (Theory I) or Music 121J (Jazz Theory I) or permission of instructor.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 3017 Music History III: Classical Music in Flux,

1850 to the Present

A study of music history and literature from 1850 to the present. Composers treated include Mahler, Debussy, Stravinsky, Schoenberg, Bartok, Copland, Shostakovich, Cage, Reich, and Gubaidulina. Prerequisites: L27 3012 or L27 122C.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 3020 Music of the Caribbean

Wanna get away? This and other tourism slogans depend on a popular conception of regions such as the Caribbean as distant and desirable, simple places out of sync with the modern world. This course critiques constructions of the Caribbean through engaging ethnomusicological literature representing the diversity of the region. It is a topical appraisal of Caribbean music, emphasizing history and memory, tourism, and cultural influence. The chosen readings are not meant to represent the entire region; rather, they are intended to prompt ideas and questions about regional discourses.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 3021 Music of the African Diaspora

This course explores musical cross-fertilization between the African continent and South America, the Caribbean and Europe. Beginning with traditional musics from selected regions of the African continent, the course examines the cultural and musical implications of transnational musical flows on peoples of the African diaspora and their multicultural audiences.

Credit 3 units. A&S IQ: HUM, LCD BU: IS EN: H

L27 Music 3022 Native American Musical Traditions of the Western United States

Exploration of music and its historical and contemporary contexts among Native American cultures of the Southwest and the Northern Plains, chiefly Navajo and Lakota, but with some considerations of Pueblo, Shoshone and other nations. Examinations of intertribal pow-wow movements, crossover musics, European appropriation and refashioning of Native American culture in Hollywood and elsewhere.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM

L27 Music 3023 Jazz in American Culture

This course will address the role of jazz within the context of 20th-century African-American and American cultural history, with particular emphasis on the ways in which jazz has shaped, and has been shaped by, ideas about race, gender, economics and politics. We will make use of recordings and primary sources from the 1910s to the present in order to address the relationship between jazz performances and critical and historical thinking about jazz. This course is not a survey, and students should already be familiar with basic jazz history. Prerequisite: L27 Music 105 or permission of instructor.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 3024 From Cage to Glass and Beyond

Explores the various directions composers took in the second half of the 20th century, including "chance" music of John Cage, minimalism of Philip Glass and postmodernism. Includes concert attendance. Prerequisite: Ability to read music is advisable but not required.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 3025 Women of Music

Popular music and art music around the world, from the perspective of women. The roles of women as creators, performers, sponsors and consumers. The representation of women in music and how it relates to cultures of the past and present.

Credit 3 units. A&S IQ: HUM, SD EN: H

L27 Music 3027 Close Harmony: A Cappella Musical Traditions

An examination of ensemble music for unaccompanied voices. Although it focuses on the Western art tradition (e.g., Renaissance sacred and secular polyphony), it also addresses genres of "world music" (Yankton Sioux choral peyote songs, Makwayera singing of Zimbabwe) and less "high style," more popular unaccompanied vocal textures (e.g., shape-note, barbershop, spirituals, the Comedian Harmonists, male gospel quartets, doowop). Study of the historical and cultural contexts of the various musical types balances examination of representative musical works. Prerequisite: the ability to read music, permission of instructor; Music 103 is highly recommended, but not required.

Credit 3 units. A&S IQ: HUM EN: H

L27 Music 3028 Music of the 1960s

The music of the 1960s played a significant and widely noted role in an era of global political and social upheaval. This course surveys a broad range of music produced during the decade, spanning the world but with emphasis on Anglo-American

popular music. While a music course traditionally deals with a single genre such as "world music," classical or jazz, this course analyzes several genres together to show how each influenced the others and how all were informed by broader social and cultural concerns. The course thus both familiarizes students with diverse musical traditions and introduces them to a new way of thinking about music and culture. Topics discussed include the transnational music industry; the contested concept of "folk" and "traditional" music; music and political protest; music and migration; and music's relation to ethnic and class identity.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 3029 Game of Thrones, Game of Tones: Medieval Music in the Age of HBO

Credit 3 units. A&S IQ: HUM, LCD BU: HUM EN: H

L27 Music 3030 Love Songs and Laptops: Rediscovering Medieval Music in the Digital Age

Using our laptops as portals into the past, students will gain first-hand experience as historical detectives. In this course, we will explore the world of medieval love — from the chivalrous and courtly to the bodily and obscene — as represented in books of songs from the 15th century. Scrumptiously decorated and preserved, five interrelated songbooks from central France, known as the "Loire Valley Chansonniers" contain the majority of love songs from this period. Working from digitized versions of the songbooks, online editions, and modern audio recordings, we will address the following questions: What do the songbooks tell us about the culture in which they were created? How do the graphic decorations that frame each song interact with its music and lyrics? Lastly, by contextualizing these digital sources with respect to the growing interest in the interface between the humanities and digital technology, we will discuss what we can gain from these developments and what — if anything — we stand to lose. (Ability to read music not required.)

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 3031 Music and Healing

In this course, we broadly consider issues of music and healing, drawing from the fields of medical ethnomusicology, medical anthropology, music therapy, and psychology. Our case studies are multi-sited, as we interrogate musical healings and healing music from diverse global and historical perspectives. We approach our study of musical practices with the understanding that the social, cultural and political contexts where "music" and "healing" are themselves created inform the sounds of the music and its various — and often conflicting — interpretations and meanings. We read a variety of academic literature and use media texts and listening examples to develop interdisciplinary and cross-cultural analyses of music and healing. Issues of national consciousness, postcolonialism, gender, sexuality, race, ethnicity, class, religion, dis/ability and the role of history/memory remain central to our explorations of music and healing.

Credit 3 units. A&S IQ: LCD BU: BA EN: H

L27 Music 3032 The Science of Singing

This course presents an introductory look at the physiology and acoustics of singing. Topics we will study include how the voice works in general and the different ways individual singers use their voices; how understanding this science can improve one's singing; how to maintain vocal health; how the voice changes across the life span; and psychological aspects of performing. The ability to read music is not required for this course.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L27 Music 3033 Music, Sound, and the Body

How do musicians use their bodies when creating music? How do audiences, listeners, and dancers feel music in their bodies and contribute to making sound? This course explores embodied perspectives on making, sensing, and moving to music and sound. Examining theories of the body and the senses as they relate to sound practices, the course draws on scholarship from ethnomusicology, anthropology, sound, dance and performance studies, music cognition and other fields. Case studies include EDM, reggae, and salsa dance; Afro-Brazilian and Buddhist religious practices; and music healing and therapy. Because centering the body means considering lived experience along intersecting axes of difference, course readings and discussions will focus on issues of race, ethnicity, gender, sexuality, and (dis)ability. Students will develop their own ethnographic project, and they will be asked to participate in music-movement workshops throughout the course. However, neither previous dance experience nor normative bodily ability are required.

Credit 3 units. A&S IQ: HUM, LCD, SC BU: HUM EN: H

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 3050 Music and Masculinity in the Movies of Martin Scorsese

This course considers the work of American filmmaker Martin Scorsese, with close attention to (1) how Scorsese uses music (and sound) to construct intense cinematic worlds and (2) how his film characters and plots represent various sorts of white American men. The consistent collision between Scorsese's interest in music as a driver of film style and content and his penchant for male-centered, frequently violent narratives makes him an ideal central figure for our study of white American masculinities at the movies over the last five decades. Films to be studied include "Mean Streets," "Taxi Driver," "Raging Bull," "Goodfellas," "Cape Fear," "The Departed," "Shutter Island," and "The Wolf of Wall Street." Required screenings.

Same as L53 Film 305

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 3051 Text and Music

How do composers respond to the structure and meaning of text? Can spoken language become musical sound? Can musical sounds become textual signifiers? The course explores these questions by examining a broad range of textured music: Gregorian chant, Japanese Noh drama, English madrigals, Bach cantatas, 19th-century German lieder, operas by Mozart and Wagner, American musical theater, high modernist works by Schoenberg, Stockhausen, Berio and Lansky, as well as popular music. Some knowledge of music theory is required, and

familiarity with German is helpful, though all texts are provided with English translations. A lot of listening and reading, several short and analytical assignments, three essays. Prerequisite: one year of music theory or permission of instructor.

Credit 3 units.

L27 Music 3091 Jazz Improvisation I

An introduction to improvising music in the jazz tradition, including diatonic and chromatic harmony, extended chords, modes, and jazz scales. Exercises in basic aspects of the blues and in the styles of bebop and modern jazz. Prerequisite: Music 121J or permission of instructor.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 3112 Choral Music Before 1800

A study of choral music of the Western world, from the medieval period through the 18th century, examining both the repertoire itself and the evolution of the chorus. Topics include the development of various choral forms, the role of choral music in sacred and secular settings, the changing nature of choirs over the centuries, and the hallmarks of choral style and performance practice in the Medieval, Renaissance, Baroque and Classical periods. Choral music for small and large forces, both for voices alone and with accompaniment, are surveyed. Works from each period are examined from textual, analytical and cultural perspectives. Composers studied include Palestrina, Monteverdi, Handel, J. S. Bach, Mozart and Haydn, as well as lesser-known contemporaries. Prerequisite: Ability to read music is helpful, but not required.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 3113 Choral Music from Beethoven to the Present

A study of choral music of the Western world from the time of Beethoven to the present, examining both the repertoire itself and the evolution of the choral instrument. Topics include the development of various choral forms, the role of choral music in sacred and secular settings, the changing nature of choirs over the centuries, and the hallmarks of choral style and performance practice in the late Classical, Romantic, and Contemporary periods. Choral music for small and large forces, both for voices alone and with accompaniment, are surveyed. Works from each period are examined from textual, analytical and cultural perspectives. Composers studied include masters such as Beethoven, Schubert, Brahms, Britten, Stravinsky, as well as well-established present-day composers such as Lauridsen, Larsen and Whitacre. Prerequisites: Ability to read music is helpful, but not required.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 3132 Romantic Revolutions in European Music and Culture

The early 19th century in Europe witnessed sweeping changes in social, political and cultural life, but some of the most fascinating happened in music. This course considers intersections between Romantic thinking about music — which inspired an idealistic vision of the art form as a source of quasi-spiritual experience — and other contemporary "revolutions." To what extent was Romantic music a "holy art" that offered a refuge from the world? In what ways was it a worldly participant in larger currents in society and culture? By exploring these questions and more, students develop the skills and framework needed to incorporate works of music into their investigation of enduring issues in history and the humanities. Although this course requires listening and viewing of musical works, it

is designed for students with intellectual curiosity but without prior musical background. We also require weekly readings, occasional presentations, three short papers and spirited class discussion.

L27 Music 320 The American Musical Film

Film musicals were crucial to the success of the American film industry from the dawn of sound film in the late 1920s to the demise of the studio system in the late 1950s. This course examines the American film musical from a variety of aesthetic, critical and historical perspectives, with particular attention to how the genre interacted with popular music and dance and the major political and social trends of the Thirties, Forties and Fifties. Required screenings.

Same as L53 Film 359

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 321T Music Theory IV: Topics in Music Theory

Credit 3 units. BU: HUM

L27 Music 3221 Music Cognition

An introduction to modern research on music perception and cognition. The course covers four main topics: the perception of key, the psychoacoustics of dissonance, the relationship between attention and musical meter, and the process by which melodies establish, fulfill, and deny expectations. Students read and discuss research from both cognitive science and music theory, in addition to completing several projects.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: HUM

L27 Music 3223 Computational Models of Music Theory and Cognition

We will study computational models that simulate the perception of several aspects of music: phase structure, meter, melody, key, harmony, counterpoint, and texture. In addition to reading about and discussing these models, students will work with them directly by running them on their own. We will also spend some class time on perceptual experiments related to the models we study. Although the course will focus on models of perception, emphasis will be placed on ones that are also pertinent to music theory, and these connections will be discussed.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 3231 Advanced Musicianship

Individualized instruction in advanced ear training, sight singing and dictation skills. Prerequisite: Music 2241.

Credit 3 units. BU: HUM

L27 Music 3232 Keyboard Skills V

Advanced skills in score reading, figured bass and improvisation, as well as drills, including seventh chords and modulation. Prerequisite: Music 2242. One and one-half class hours a week. Credit 1 unit.

L27 Music 3235 Compositional Craft in Film Scores and Musical Theatre

This course examines compositional techniques and aesthetics in two forms of popular music: film/television scores and musical theatre. Popular songs and other musical works associated with film, television, and musicals are analyzed from multiple perspectives, giving students insight into the sonic, visual, and dramatic techniques employed by major composers. Students engage with the material in rigorous yet practical ways, from analytical projects to deep-listening exercises. This approach emphasizes sonic experience and situated musicianship as the primary means of accessing complex concepts from music theory.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 3236 Music Arranging for the Multi-Genre Artist

This course examines the practice of music arranging for numerous applications, including ensembles in jazz, rock, pop, a cappella, classical music, new music, and new media. Students analyze musical scores for small and large groups and compose arrangements in a variety of genres. Also learned are instrumentation, vocal ranges, basic orchestration, idiomatic instrumental techniques, chord voicings, and textures, all in the context of specific styles and genres. Overall, the course provides an introduction to industry-standard techniques of music arranging.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 3237 The Art of Popular Song: From Folk and Musical Theatre to Rock and Contemporary A Capella

This course explores the art of songwriting through the lens of American popular music. Students examine landmark songs from multiple eras and create their own original songs in a variety of styles, from classical music, folk music and Broadway to rock, pop and a capella. Through composing and arranging, listening and analysis, students gain insight into the sonic structure and cultural significance of popular music. The course also responds to students' individual interests and performance backgrounds, offering opportunities to write music for vocal ensembles, small groups, singer-songwriter formats, and electronic media.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L27 Music 3238 Towards a New Music

Towards a New Music addresses the numerous possibilities for emerging music, including future musics in a reimagined world of the nature of music itself. In our study, music is situated as part of a web of metapatterns that explain the structure and nature of musical materials, the actions in composition and improvisation, and musical phenomena. Students are placed on a listener's journey of discovery to find the nature of music through philosophy, cognitive science, mathematics, biology,

architecture and the structure of sound itself. Music theory topics both simple and advanced are discussed in ways appropriate for the novice as well as the advanced student. The course functions as a music theory and music literature study through the lens of the humanities. The course embraces both culture and nature, seeking out the grand-scale patterns that help explain the qualities of our musical endeavor. The course begins with the archetypal patterns of space, both structural/formal and relational, and then turns to the concepts that infuse the workings of time: a virtual sonic reality of space and time and the mind of music, revealed in thought-provoking and new contexts. Credit 3 units. A&S IQ: HUM EN: H

L27 Music 325 Instrumentation and Orchestration

A study of the principles of instrumentation and orchestration. In-class assignments will aid in the understanding of the capabilities and limitations of the orchestral instruments. Analysis of orchestral scores will provide insight into efficient and creative use of the orchestra. Prerequisite: Music 121C or permission of the instructor.

Credit 3 units.

L27 Music 326 Orchestration

A practicum in writing for orchestra and groups of orchestral instruments. Prerequisite: Music 325.

Credit 3 units.

L27 Music 328 History of the Film Score

This course looks at the role of music in Hollywood films from the beginning of the sound era to the present. Larger themes include the importance of technology, industry structures shaping the nature of scores, notable film music composers, the relationship between music, gender and genre, music's role in the adaptation of literary texts to film, the power of directors to shape the content of film scores, and the importance of popular music as a driving economic and aesthetic force in film music history. Films screened include *From Here to Eternity*, *Stagecoach*, *High Noon*, *The Night of the Hunter*, *Butch Cassidy and the Sundance Kid*, *Born on the Fourth of July*, *Casino*, *Jarhead* and *The Social Network*. Required screenings.

Same as L53 Film 360

L27 Music 3313 Interactivity and DSP

This course is a project-based course in interactivity and digital signal processing using the MaxMSP programming environment. It will cover the composition of interactive computer music, as well as the theory and application of MIDI, synthesis, and digital signal processing. Programming examples, along with scores and recordings, will be presented for weekly study in class. Readings from the required texts, tutorials that demonstrate programming with MaxMSP, and weekly exercises that promote an understanding of the programming demonstrated in class, will be assigned for completion outside of class. Students will also produce a midterm project and final project. These will be interactive pieces that utilize the different techniques that have been discussed in class and experimented with in the exercises. Both pieces should be planned in advance and worked on throughout the semester. The final exam will be a short programming exercise that covers topics that have been presented in class and realized in the weekly exercises, and it will be completed in the scheduled two-hour exam period.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 339 Introduction to Conducting I

Fundamentals of conducting, including the study of transposing instruments and practice in score reading. Prerequisite: permission of instructor.

Credit 2 units.

L27 Music 340 Introduction to Conducting II

Fundamentals of conducting, including the study of transposing instruments and practice in score reading. Prerequisite: permission of instructor.

Credit 2 units.

L27 Music 3431 West African Music and Dance in Context

A West African dance course specifically focused on the Ivorian dance traditions of the Baule, Bete Dan, Lobi, Makinke, and Senufo peoples. The course addresses the relationship between music and dance as well as their social and cultural significance. Study of myths, art, costumes and masks as they relate to various dances and music is also included. A studio course with related reading material.

Same as L29 Dance 343

Credit 2 units. A&S IQ: HUM Arch: HUM Art: CPSC, HUM EN: H

L27 Music 3581 Musica Ebraica: Jewish Identities in Western Music from 1600 to the 21st Century

The course explores Western music from the 17th century to the 21st century through the prism of musical works that were written by Jews and for Jews and of musical compositions reflecting their composers' identifying themselves as Jews. Jewish art music from these periods will be examined against the background of musical development in general, the social, political, and religious context of the composers, and written reflections about Jewish music. Examples of Jewish art music will be analyzed through different approaches in order to determine the cultural interrelationships between Jews and non-Jews, Jewish cultural autonomy, and the perception of Jewishness in music.

Same as L75 JIMES 3581

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

L27 Music 3582 Music in Jewish Culture and Society

The common term "Jewish Music" raises numerous questions that emanate from the difficulty to define "Jewish" identity of any given music. This course deals with various approaches to the definition of Jewish music, perceived as a cultural and sociological component in the Jewish communities throughout the diaspora. We survey the functions in which music is performed in traditional Jewish communities, especially Jewish liturgy, and the substantial vicissitudes in these musics after the European Enlightenment, European colonialism in north-Africa, and in the Mediterranean. We study the background and the different characteristics of selected Jewish communities — Ashkenazic, Sephardic, Italian, Yemenite, and others — as well as instrumental music, questions of gender, and the relationship between music and text. A secondary goal of this course is the study of the bibliography and discography of Jewish musics.

Same as L75 JIMES 3582

Credit 3 units. A&S IQ: HUM, LCD EN: H

L27 Music 3583 The Soundtrack of Israeli History

This course explores connections between Israeli history, nationality and culture, and between Israeli art music. Such an encounter between reveals the reflection of, and responses to, local social developments in various historic and constitutive moments in Israeli history such as: the fifth Aliya (wave of immigration) in the 1930s, the statehood years, the waning of nationalistic sentiments in the late 1950s, the aftermath of Israeli wars, the negotiation between Israeli and Jewish identities, and even artistic expressions of postmodernity within the Israeli context. These histories are surveyed through historical studies as well as through their musics and against the background of developments in 20th-century music.

Same as L75 JIMES 3583

Credit 3 units. A&S IQ: HUM, LCD EN: H

L27 Music 3584 Music in the Holocaust: Sonic Portrayals from Past to Present

The course explores Germany's road to totalitarianism through three different stages seen through its musical contexts: the embedment of "music libels" against Jews in 19th-century European culture in general and German culture in particular; the association of Jewish culture with the threat of modernism until World War II; and Nazi policies in the 1930s regarding music and their repercussion on musical activities in the different ghettos (especially Terezin and Lodz). The last segment of this class deals with the challenge of commemorating the holocaust through music.

Same as L75 JIMES 3584

Credit 3 units. A&S IQ: HUM EN: H

L27 Music 3585 Islam, Music, Muslim Media

How do Muslim individuals and communities understand and negotiate the relationship between sound and spirituality? How does Islamic philosophy challenge Western definitions of music? How do music and cultural practices reflect and shape diverse Muslim identities and political struggles? To what extent can we speak of an "Islamic world," musical or otherwise? In this course, we investigate Islamic musics and musical practices in the lives and experiences of Muslims throughout the world. We approach our study of Muslim musical practices with the understanding that the social, cultural and political contexts where music is created, disseminated and consumed inform the sounds of the music and its various — and often conflicting — interpretations

and meanings. We engage with a variety of academic, musical and media texts to develop interdisciplinary analyses about Islam, music, sound experience and Muslim subjectivities. Issues of nationalism and transnationalism, class, race and ethnicity, gender and sexualities, colonialism and postcolonialism, history and memory remain central to our exploration of spirituality and religion in Muslim musical and cultural practices.

Credit 3 units. A&S IQ: HUM, LCD BU: IS EN: H

L27 Music 3586 Combat Movie Music and Sound After Vietnam

This course considers the Hollywood combat movie genre after the Vietnam War (post 1975) by listening closely to how these always noisy films use music and sound effects to tell stories of American manhood and militarism. Centering on an elite group of prestige films — action movies with a message for adult audiences — the course examines thirty-five years of Hollywood representations of World War II, the Vietnam War, the Gulf War, and post-9/11 wars against terrorism. Close analysis of how combat film directors and composers have used music and sound in conjunction with the cinematic image are set within a larger context of ancillary texts (source materials, soundtrack recordings, published and unpublished scripts), media folios (press kits, reviews, editorials, newspaper and magazine stories and interviews), and scholarly writing from across the disciplines. Films screened include *Apocalypse Now*, *Platoon*, *Hamburger Hill*, *Courage Under Fire*, *Saving Private Ryan*, *The Thin Red Line*, *We Were Soldiers*, *Flags of our Fathers*, *The Hurt Locker*, and *Act of Valor*, as well as pre-1975 combat films starring John Wayne. The ability to read music is not required. Required screenings. Prerequisites: none.

Credit 3 units.

L27 Music 401 Elementary Technique of Electronic Music

Individual and small group instruction in "classical" procedures and relevant electronic technology. Prerequisite: open to music majors; to others by permission of instructor. Credit contingent upon completion of Music 402.

Credit 3 units.

L27 Music 402 Advanced Techniques of Electronic Music

Practical composition studies to build technique in electronic music. Prerequisite: Music 401.

Credit 3 units.

L27 Music 4052 Music, Sound, and the Body

This course examines theories of the body, embodiment, and the senses as they relate to music and sound practices. Readings draw on scholarship from ethnomusicology, anthropology and geography of the senses, sound studies, dance studies, performance studies, and music cognition. If ethnomusicology is "the study of people making music," this course explores how people make and experience music and sound with their bodies, through the full range of their senses. We will consider questions surrounding the ways in which musicians, audiences, listeners, and dancers perceive and experience music in their bodies and contribute to the making of sound. By centering the body, we will necessarily consider lived experience along intersecting axes of difference such as race, ethnicity, gender, sexuality, and (dis)ability. Course readings and discussions will therefore focus on the social and political affordances and limitations of body-based practices and their theorization. Case

studies will include a broad range of sound-movement practices, from electronic dance music and black social dance to Sufi and Buddhist religious practices, queer taiko drumming, and deaf music-making. Over the course of the semester, students will develop their own project exploring course themes, and they will be asked to participate in music-movement workshops throughout the course. This is an upper-level/graduate-level course, so some knowledge of music and/or dance concepts is assumed, but neither previous music/dance experience nor normative bodily ability are required.

Credit 3 units. A&S IQ: HUM, LCD, SC EN: H

L27 Music 411 Music of the Medieval Period

An intensive survey of Western monophonic and polyphonic music from the beginnings of Christian chant to ca. 1450. Prerequisites: Music 3011 or permission of instructor. Credit 3 units. A&S IQ: HUM EN: H

L27 Music 412 Music of the Renaissance Period

A survey of music literature from ca. 1450 to ca. 1600. Prerequisite: Music 3011 or permission of instructor. Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 413 Music in the Baroque Era

An intensive survey of the primary musical forms and styles in 17th-century Italy, France, Germany and England. Prerequisite: Music 3012 or permission of instructor. Credit 3 units. A&S IQ: HUM EN: H

L27 Music 4131 Music in the 18th Century

Musical activity in Europe during the 18th century is the subject of this course, which brings the high baroque, galant and classical eras into a single narrative. Patronage, publishing, star performers and highly specific musical publics were central to the music-making across the century. How these forces shaped the professional and creative lives of major 18th-century composers is a principal theme of the course. A broad range of 18th-century instrumental and vocal music is surveyed, including works by Corelli, F. Couperin, Vivaldi, Rameau, Telemann, Handel, Hasse, Haydn, Mozart, D. Scarlatti and several members of the Bach family. Extensive listening assignments and score analysis are supplemented by readings drawn from recent scholarship and examination of 18th-century music publishing and other period sources in facsimile. Credit 3 units. A&S IQ: HUM EN: H

L27 Music 414 Music of the Classic Period

An intensive survey of music literature from ca. 1750 to ca. 1830 with attention to the music of Haydn, Mozart, Beethoven and some of their predecessors. Prerequisite: Music 3012 or permission of instructor. Credit 3 units.

L27 Music 415 Music in the Romantic Era: Aesthetics and Ideologies

This course explores pivotal developments in nineteenth-century thinking about music's cultural and aesthetic significance—developments that reverberate well beyond that historical period. Rather than surveying repertoire, we will emphasize in-depth exploration of selected issues and music, reading important contemporary writings and grappling with challenging musical works. Our topics will include, to cite but a few examples,

discourses about musical interiority, the post-Beethovenian symphony, the Lied tradition, performance aesthetics and the creative agency of the performer, intersections of music and literature, and canon formation and its consequences.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L27 Music 416 Contemporary Music

Survey of musical styles from the end of the 19th century to the Postmodernism of the 1980s. Developments in music considered in context of intellectual history of the century with specific attention to parallels with literature and visual arts. Readings from a variety of sources and extensive listening assignments. Prerequisite: Music 3013 or permission of instructor. Credit 3 units. A&S IQ: HUM

L27 Music 4161 Divas, Monsters, Material Girls: Women in Music Videos

The stark black and white of Madonna's "Vogue" and the pinks and sparkles of "Material Girl." The lavish cinematic spectacle of Lady Gaga's "Telephone" and the thinkpiece-launching intertextuality of Ariana Grande's "thank u next." The explosive surprise releases of Beyoncé's "BEYONCÉ" and "Lemonade" visual albums. Since MTV's advent in 1981, hit music videos have made a number of pop songs inextricable from the iconic imagery of their videos; ubiquitous digital devices and the rise of YouTube have only increased pop music's audiovisuality. Looking at and listening to female pop icons raises fraught questions of agency, representation, race, sexuality/sexualization, bodies, commodification, and capital. In this course, students will gain a vocabulary for talking about both the audio and visual parameters of music videos, and they will use this vocabulary to engage with critical frameworks for examining meaning, circulation, and reception in contemporary music videos. Assignments across the course will allow students to experiment with a range of writing and media genres, from critical close readings, micro-reception histories, mock (or real) thinkpieces, podcast episodes, and video essays.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: CPSC, HUM BU: HUM EN: H

L27 Music 4221 Introduction to the Analysis of 20th-Century Music

An introduction to theory and analysis of music from the 20th-century repertoire. In-class analysis and individual assignments emphasize aural understanding and tools for modeling pitch structures in post-tonal and 12-tone works. In the latter portion of the course focus turns toward works in which pitch structures play a smaller role. Prerequisite: Music 222 (for undergraduates) or Music 423 (for graduates). Credit 3 units. A&S IQ: HUM

L27 Music 423 Analysis I

A study of structural principles underlying music of all periods: motivic usage, melodic shape, varieties of texture and structure with an emphasis on fugue, variation forms and proportional forms such as rondo and sonata-allegro. Prerequisite: graduate standing or permission of instructor. Credit 3 units. A&S IQ: HUM EN: H

L27 Music 424 Analysis II

Continuation of Music 423, concentrating on approaches to larger and more complex works of classically tonal music, including 18th-century symphonies and string quartets, late works by Beethoven, chamber music and symphonies of Brahms and symphonies of Mahler. Prerequisite: Music 423 or permission of instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L27 Music 425 Counterpoint I

Concentrated independent study in 16th-century contrapuntal composition. Prerequisite: Music 222.

Credit 3 units.

L27 Music 426 Counterpoint II

Concentrated independent study in 18th-century contrapuntal composition. Prerequisite: Music 222.

Credit 3 units.

L27 Music 427 Selected Areas for Special Study

In-depth study in areas of special interest. Prerequisite: senior standing, graduate standing or permission of instructor.

Credit 3 units. A&S IQ: HUM EN: H

L27 Music 428 The Solo Song of Brahms

In-depth study in areas of special interest. Prerequisite: senior standing, graduate standing or permission of instructor.

Credit 3 units. A&S IQ: HUM EN: H

L27 Music 4281 The Italian Madrigal

The most important musical genre of the late Renaissance, the madrigal, intersects with poetry, theater and the visual arts, and thus, constitutes an ideal point of entry to early modern Italy. This course explores the stylistic development of the madrigal from its origins in the early 16th century to its demise some hundred years later. The course is structured around close readings of madrigals by Verdelot, Arcadelt, Willaert, Rore, Wert, Marenzio, Luzzaschi, Fontanelli, Gesualdo and Monteverdi. Secondary readings focus on the relation between words and music; the construction of subjectivity; concepts of mode; theories of chromaticism; and performance practice, framed in the context of 16th-century society and culture. Prerequisite: Music 3011, graduate standing or permission of instructor.

Credit 3 units. A&S IQ: HUM EN: H

L27 Music 4282 The "Crossover" Tradition in Anglo-American Music Theater

The musical stage in the United States and Britain has remained a vital artistic and commercial arena over the past 100 years despite the emergence of mass media formats such as film and television. Audiences continue to clamor for stage stories where actors sing or singers act, and composers, writers, producers and directors have created a stunning variety of musical theater styles to meet the demand. This course surveys important English-language operas, operettas and singer-centered musicals from the turn of the 20th century to the start of the 21st with an emphasis on "crossover" works that blur the lines between opera and the commercial musical stage. All the works included in the course continue to be performed today, forming a core repertory of music theater works in English that emphasize singers and singing. The overlapping, ever-changing spheres of the opera house and Broadway and West End theaters provide

the geography of the course, which is peopled by performers, creators and audiences. In-class analysis of 14 works focuses on how the singing voice has been used as an expressive vehicle and how theater singers have adapted to an age of amplification and recording. Works studied include *Carousel*, *Sweeney Todd*, *The Phantom of the Opera*, *Show Boat*, *Candide*, *Street Scene*, *The Pirates of Penzance*, *The Light in the Piazza*, *My Fair Lady*, *Albert Herring*, *Porgy and Bess*, *The Most Happy Fella*, *Margaret Garner* and *The Student Prince*. In-class singing is encouraged as a means to get inside the musical and dramatic values of these works. Prerequisites: ability to read music, and graduate or upper-division standing.

Credit 3 units. A&S IQ: HUM EN: H

L27 Music 429 Composition

Concentrated independent work in composition and a weekly master class for experienced composers. Prerequisite: Music 330 or permission of instructor.

Credit variable, maximum 3 units.

L27 Music 430 Composition

Concentrated independent work in composition and a weekly master class for experienced composers. Prerequisite: Music 429 or permission of instructor.

Credit 3 units. A&S IQ: HUM EN: H

L27 Music 4370 Music and Performance

In his 1998 book, *Musicking*, Christopher Small asserts that music is not a thing but an activity — something that people do. Starting from this premise, this course explores musical performance as a live event, one in which additional aspects of performance — dramatic enactments, costume, choreography, and stage design — also come into play. While recorded music plays an important role in our investigations, we focus on musical events that take place before and with live audiences. Exploring the choices of performers and the expectations of audience members in settings from gospel churches to Radio City Music Hall, this course moves through a wide variety of musical genres, including cabaret, blues, opera, protest song, musical theater, and rock. We examine artists whose work blurs the line between "music" and "theater," including George Clinton, Taylor Mac, and Gertrude Stein, as well as everyday people, such as the singers of the Civil Rights Movement, who used the power of live musical performance to change the course of human history. We also attend performances around St. Louis, guided by the interests of the class. Students with an interest in music, theater, dance, cultural history, American studies, and African-American studies are especially welcome.

Same as L98 AMCS 4370

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L27 Music 439 Diction I

Principles of Italian, French, and German pronunciation covered in an interrelated approach; application of these principles to songs. Prerequisite: permission of instructor.

Credit 3 units. A&S IQ: HUM

L27 Music 4539 Advanced Conducting I

Advanced training in conducting skills, including opportunities to conduct ensembles on campus. Prerequisite: graduate standing or permission of instructor.

Credit 2 units. A&S IQ: HUM

L27 Music 4540 Advanced Conducting II

Advanced training in conducting skills, including opportunities to conduct ensembles on campus. Prerequisite: graduate standing or permission of instructor.

Credit 3 units.

L27 Music 4561 Soundtrack Studies: Music, Voices, Noise

This course considers the interaction of film, sound and music from the silent era to the present by screening representative films from around the world and exploring current directions in scholarship from the disciplines of film studies and musicology. Topics include: historical and critical understandings of the sound track, major film sound theorists (such as Michel Chion), technological shifts (such as synchronized sound, Dolby and digital surround sound), the uses of Richard Wagner (both his music and his ideas), the relationship between a film genre (noir) and sound and music and the relationship between a musical genre (opera) and film, and the juxtaposition of popular and classical, Western and non-Western musical styles in art cinema. Films screened include Meek's *Cutoff*, *Blow Out*, *Days of Heaven*, *Sous le toits de Paris*, *Love Me Tonight*, *Casablanca*, *Alien*, *Apocalypse Now*, *La cérémonie*, *Le Cercle rouge*, *The Pillow Book*, *The Scent of Green Papaya*, and *The Bourne Ultimatum*. The course is in seminar format. Readings from recent scholarly work on film sound and music inform class discussions of the screened films. Close analysis of how music, sound and image interact in film making and the film experience lies at the heart of the course. The ability to read music is not required. A primary goal of the course is the development of specific listening skills that are useful when working in this area. Targeted writing assignments ask students to write about film sound and music from a variety of critical and historical perspectives. Prerequisites: graduate status or completion of Film 360 The History of the Film Score, or AMCS 360 or Music 328 and permission of the instructor. Required screenings. Same as L53 Film 456

Credit 3 units. A&S IQ: HUM EN: H

L27 Music 4571 From Vitaphone to YouTube: Popular Music and the Moving Image

This course considers American popular music as represented in audiovisual media from 1926 to the present. The relationship between the popular music industry (a commercial sphere oriented primarily toward the selling of sheet music and audio recordings) and audiovisual technologies (various screens and formats encountered in changing social and commercial contexts) will be explored along two complementary tracks: popular music performers as presented in performance-centered media and popular music as a narrative topic or resource in feature films. Three related analytical frames will shape our discussions: industrial and technological history (the material conditions for the making and distribution of popular music and moving images); the question of "liveness" in recorded audiovisual media; aesthetics of various popular music styles as translated into audiovisual forms and contexts. The course is in seminar format. The ability to read music is not required but students with music reading or transcription skills will be encouraged to draw upon these tools. Prerequisites: graduate status or completion of a 300-level FMS or Music course and permission of the instructor.

Credit variable, maximum 3 units.

L27 Music 4621 Ancient Greek and Roman Music

Music played a vital role in Ancient Greece and Rome. New resources and perspectives now allow us to appreciate the ancients' music better than ever before. This course addresses the nature of ancient music (instruments, melody and rhythm, modes), ancient attitudes toward music, and its contribution to public and private life. The focus throughout is on our ancient sources, both literary and archaeological.

L27 Music 4991 Senior Project: Musicology or Analysis

Supervised research in music history or analysis culminating in a major paper. Required of Bachelor of Music students whose program focuses on music history or analysis. Prerequisite: senior standing.

Credit 3 units.

L27 Music 4992 Senior Capstone: Performance, Composition, or Theory

Supervised work in performance, composition or theory culminating in some combination of a paper, composition and/or performance. Required of Bachelor of Music students whose program focuses on performance, composition or theory. Prerequisite: senior standing.

Credit 3 units.

L27 Music 4993 Senior Honors Capstone: Musicology or Analysis

Prerequisites: senior standing, a grade point average of 3.0 or higher and permission of the faculty supervisor, director of undergraduate studies, and the chair of the department.

Credit 3 units. EN: H

L27 Music 4994 Honors Project: Performance, Composition or Theory

Prerequisite: senior standing, a grade point average of 3.0 or higher and permission of the faculty supervisor, the director of undergraduate studies and the chair of the department.

Credit 3 units. EN: H

Performing Arts

Performing Arts at Washington University comprise dance (p. 782) and drama (p. 782).

Dance

Students may select dance (p. 390) as a major through the Performing Arts Department. This course of study combines intensive studio work in the technique and theory of modern dance, ballet and composition with seminars that examine dance as a global phenomenon containing forms that reflect

culturally specific historical, aesthetic and ethnological features.

The program also includes a broad range of courses such as stagecraft, music resources, improvisation, anatomy for dancers, pedagogy, dance therapy, musical theater dance, world dance forms, jazz and tap. In addition, students may choose to minor in dance or in world music, dance and theater. The interdisciplinary minor in world music, dance and theater encourages students already interested in the performing arts to explore those outside of Euro-American traditions. A certificate program in somatic studies is offered through the University College division of Arts & Sciences.

The senior capstone experience is framed in consultation with Performing Arts faculty. In April, prior to registration for the fall semester, dance majors discuss the capstone requirement with their advisers. The dance capstone requirement can be satisfied by a senior honors thesis or a senior dance project. The format may range from a research paper or a written analysis of the student's dance development to a project emphasizing movement expression (e.g., the creation of a video résumé, a performance or a choreographic project). In all cases, dance capstones have a written component.

Those who study dance at Washington University learn from faculty members who have both professional experience and academic degrees. Students also have the opportunity to study with guest artists-in-residence who teach master classes and set choreography.

Students may audition for the Washington University Dance Theatre, which holds annual auditions for students. Selected students will appear in faculty- and guest artist-choreographed concerts in Edison Theatre. Dance students particularly interested in performance may audition for the student repertory company, Washington University Dance Collective (WUDC). WUDC rehearses and performs throughout the year at area venues and on campus. Students may also participate in departmental drama productions as well as student work in choreography and theater. Each year, students have the opportunity to attend the regional American College Dance Conference to adjudicate work, perform, and take master classes.

Dance students may pursue study abroad at University of Auckland, New Zealand; University of Ghana, Legon; and Roehampton University, London. With approval from the Dance program, courses at these institutions may fulfill dance major and minor requirements. Courses in other disciplines taught at these institutions may also be accepted by Washington University.

Drama

The drama (p. 400) major combines the historical, cultural and theoretical study of theater and performance with a full array of theater production courses, including acting, directing, performance art, design (i.e., set, costume, lighting, and sound) and playwriting.

The theater and performance studies faculty offer courses in theater history, performance studies, and dramatic and performance theory. Majors may also take cross-listed courses in such departments as African and African-American Studies; Classics; English; East Asian Languages and Literatures; and Film and Media Studies. Our courses analyze theater and performance as resonant and significant cultural practices, both historically and currently. Courses combine critical analysis with attention to the corporeal and material embodiment of actual performance.

In small, individualized classes (capped at a maximum of 16 students) characterized by a high number of weekly contact hours, professionally and academically trained faculty teach a rigorous system of production courses. A carefully graduated four-semester sequence in acting culminates in a class for seniors (Acting IV) that is focused on individual projects. A two-course directing sequence issues into a public showing of student-directed work, and some students have chosen to direct a fully designed production as their Senior Honors thesis. Recent graduates of the acting and directing sequence have been placed in prestigious MFA programs, in internships and jobs in regional American theaters, and in various professional schools and graduate programs. Our nationally recognized program in design and technical theater works students through a structure of costume, scene, lighting and sound design courses, with several electives on such topics as mask making and baroque costume that are informed by historical and cultural study. A highly successful playwriting program, enriched by the annual A.E. Hotchner Playwriting Competition and annual workshops run by leading American dramaturges, has produced playwrights whose work is now being performed in nationally recognized venues such as Chicago's Steppenwolf Theater.

The culture of performance is abundantly rich at Washington University. A wide array of student theater groups, with a particular focus on improvisation, provides many opportunities for student-generated performance on campus.

Since 1991, the Performing Arts Department and Globe Education (London) have been running a national summer program held at Shakespeare's Globe in London. This four-week program includes a 3-unit course on the textual, historical and cultural study of Shakespeare; a 3-unit course on acting Shakespeare (with particular attention to acting on the Globe stage); master classes taught by Globe personnel; playgoing in London and Stratford; and more.

Minors

The Minor in World Music, Dance and Theater

Required units: 17-19

Required courses:

Code	Title	Units
Music 1021	Musics of the World	3
Dance 331	Movement and Meaning: Dance in a Global Context	3

One to two of the following courses (3-5 units):

Code	Title	Units
AFAS 301	A History of African-American Theater	3
Chinese 467	The Chinese Theater	3
Drama 223	Cross-Cultural Women Playwrights	3
Dance 343	West African Music and Dance in Context	2
Japan 446	The Japanese Theater	3

Elective courses (8 units):

Code	Title	Units
Drama 368	Black Theater Workshop III	3
Music 3021	Music of the African Diaspora	3
Music 3022	Native American Musical Traditions of the Western United States	3
Dance 305Z	Music Resources for Dance	2
Dance 340	Ballet as Ethnic Dance and Classical Art	3
Dance 343	West African Music and Dance in Context	2

Additional electives available in University College (U31):

Code	Title	Units
Dance 235	Dance Doorway to India	2
Dance 328	Dance of West Africa: Intermediate	2
Dance 335	Bharata Natyam as Movement Narrative	1

Additional Information

This is an interdisciplinary minor that draws on the distinctive methodologies and training inherent in several disciplines. This minor encourages the student already interested in the performing arts to explore those outside Euro-American traditions. However, students majoring in fields such as anthropology, political science, psychology, education, comparative literature, history and foreign languages may find this minor a useful complement to their primary discipline.

Philosophy

Philosophy tackles central questions in human life, such as the following: *What counts as human knowledge? How should I live? What is truth? How is the mind related to the body? What is a just society?* These difficult but fundamental questions are rigorously explored in philosophy and worked through by drawing on the historical tradition and utilizing careful reasoning. Because philosophers have shaped many of the central ideas on which Western civilization is based, the study of philosophy plays a vital role in a well-rounded liberal arts education.

Philosophy courses at Washington University provide opportunities to gain deeper knowledge of the history of philosophy, from the work of the ancient philosophers Plato and Aristotle through key thinkers such as Descartes and Kant to the present. Students can study the interface between philosophy and other disciplines (e.g., psychology, environmental studies, women's studies, law, political science); they can also examine the methods of inquiry and the underlying conceptual frameworks of scientific work itself. Courses in logic equip students to think and argue clearly and rigorously, while courses in analytic philosophy allow for the exploration of fundamental questions about knowledge and metaphysics. The department offers a variety of courses in ethics, where students can consider different theoretical approaches to current political, social, medical and environmental problems.

Majors

The Major in Philosophy

Total units required: 27; at least 6 units must be at the 400 level, and an additional 15 units must be at the 300 level or above.

Majors are encouraged to take more than this minimum number of courses, especially if they are considering graduate work in philosophy. Majors and minors are encouraged to fulfill the writing-intensive requirement by taking Phil 390 Philosophical Writing. All majors are required to complete a capstone experience in philosophy: either an honors thesis (Phil 499) or the philosophy capstone course (Phil 3991). Majors who are planning to do graduate work in philosophy should attain at least reading proficiency in German, Greek, Latin or French.

Required courses:

Majors must complete at least one core course in each of the three areas below. Students who do not take Phil 390 will be required to take one additional core course. The core courses, by area, are as follows:

Contemporary/Aalytic Philosophy:

Code	Title	Units
Phil 301G	Symbolic Logic	3
Phil 306G	Philosophy of Language	3
Phil 3113	Theory of Knowledge	3
Phil 315	Philosophy of Mind	3
Phil 321G	Philosophy of Science	3
Phil 3481	Introduction to Metaphysics	3
Phil 361	Philosophy of Emotions	3

History of Philosophy:

Code	Title	Units
Phil 347C	Ancient Philosophy	3
Phil 349C	Descartes to Hume	3
Phil 357C	Kant and 19th-Century Philosophy	3
Phil 358	Conceptual Foundations of Modern Science	3

Value Theory:

Code	Title	Units
Phil 331F	Classical Ethical Theories	3
Phil 339F	Philosophy of the Arts	3
Phil 340F	Social and Political Philosophy	3
Phil 345F	Issues in Applied Ethics	3
Phil 346	Philosophy of Law	3
Phil 361	Philosophy of Emotions	3

On occasion, it may be appropriate to substitute a 400-level course in one of these areas for a 300-level core course; individual petitions for substitutions will be considered by the director of undergraduate studies. Generally, for a course to count either as "core" or as partly satisfying the requirement for 6 units at the 400 level, it must be home-based in Philosophy. At most, 3 units of credit in Phil 499 or Phil 500 can be counted toward the required 6 units of 400-level course work.

Optional tracks: The department offers the following three special tracks through the major: the philosophy research track, the law and policy track, and the philosophy of science track. For more information about these tracks, please visit the Department of Philosophy website (<https://philosophy.wustl.edu/major-and-minor-requirements/>).

Philosophy Research Track

The philosophy research track is especially recommended for students who plan to pursue graduate studies and an advanced degree in philosophy, which is a must for anyone interested in a career as a university or college philosophy teacher. It will give the student a broad background in philosophy, which is a competitive advantage when applying to graduate programs in the field.

Requirements:

- At least 36 units total
- Phil 100G Logic and Critical Analysis
- One 100-level class in addition to Phil 100G Logic and Critical Analysis, preferably Phil 120F Problems in Philosophy or Phil 125C Great Philosophers

In Contemporary/Analytic:

Code	Title	Units
Phil 301G	Symbolic Logic	3
Phil 3113 or Phil 3481	Theory of Knowledge Introduction to Metaphysics	3
Phil 306G or Phil 315 or Phil 321G or Phil 361	Philosophy of Language Philosophy of Mind Philosophy of Science Philosophy of Emotions	3
Total Units		9

- In History: Any two core courses (a 400-level History course may be substituted for a second 300-level course):

Code	Title	Units
Phil 347C	Ancient Philosophy	3
Phil 349C	Descartes to Hume	3
Phil 357C	Kant and 19th-Century Philosophy	3
Phil 358	Conceptual Foundations of Modern Science	3

- In Value Theory (Phil 4310 or Phil 4315 can satisfy a 400-level requirement):

Code	Title	Units
Phil 331F	Classical Ethical Theories	3
Phil 4310 or Phil 4315 or Phil 361	20th-Century Metaethics Normative Ethical Theory Philosophy of Emotions	3
Total Units		6

- Phil 390 Philosophical Writing or another core course
- Phil 3991 Philosophy Capstone Course or Phil 499 Study for Honors
- At least 30 units at the 300 level or above (including core courses)*
- At least 6 of those 30 units at the 400 level**
- Courses taken pass/fail **cannot** count toward the major.

Law and Policy Track

This track is especially recommended for students who intend to pursue a career in law or public policy. The track involves taking certain specific courses for the major (and possibly a few extra courses) that will provide the student with additional preparation and a competitive edge when applying to law school, postgraduate programs in public policy, and related jobs.

Requirements:

- At least 27 units total
- Phil 100G Logic and Critical Analysis or Phil 301G Symbolic Logic
- Strongly recommended: a 100-level class in addition to Phil 100G Logic and Critical Analysis
- One core course in **Contemporary/Analytic** and one core course in **History**

Contemporary/Analytic Courses:

Code	Title	Units
Phil 301G	Symbolic Logic	3
Phil 306G	Philosophy of Language	3
Phil 3113	Theory of Knowledge	3
Phil 315	Philosophy of Mind	3
Phil 321G	Philosophy of Science	3
Phil 361	Philosophy of Emotions	3

History Courses:

Code	Title	Units
Phil 347C	Ancient Philosophy	3
Phil 349C	Descartes to Hume	3
Phil 357C	Kant and 19th-Century Philosophy	3
Phil 358	Conceptual Foundations of Modern Science	3

- Phil 340F Social and Political Philosophy and Phil 346 Philosophy of Law
- Strongly recommended: at least one other **Value Theory** course:

Code	Title	Units
Phil 340F	Social and Political Philosophy	3
Phil 346 or Phil 361	Philosophy of Law Philosophy of Emotions	3

- Strongly recommended: at least one 200-level course
- Phil 390 Philosophical Writing or another core course
- Phil 3991 Philosophy Capstone Course or Phil 499 Study for Honors
- At least 21 units at the 300 level or above (including core courses)*
- At least 6 of those 21 units at the 400 level**
- Courses taken pass/fail **cannot** count toward the major.

Philosophy of Science Track

The philosophy of science track is available only as a second major in combination with work in one or more of the sciences. It is intended for those students with a scientific background who have an interest in pursuing philosophical issues relating to the natural and physical sciences.

Requirements:

- At least 27 units total
- In Contemporary/Analytic:

Code	Title	Units
Phil 301G	Symbolic Logic	3
Phil 321G	Philosophy of Science	3
Total Units		6

- In History: Any one of the core courses listed below:

Code	Title	Units
Phil 347C	Ancient Philosophy	3
Phil 349C	Descartes to Hume	3
Phil 358	Conceptual Foundations of Modern Science	3

- In Advanced Philosophy of Science:

Code	Title	Units
Phil 4210	Topics in Advanced Philosophy of Science	3

- Any three of the supplementary courses listed below, which must include Phil 390 Philosophical Writing if the writing-intensive requirement is to be fulfilled in Philosophy
- Phil 3991 Philosophy Capstone Course or Phil 499 Study for Honors
- At least 27 units at the 300 level or above (including core courses)*
- At least 6 of those 27 units at the 400 level**
- Courses taken pass/fail **cannot** count toward the major.

Supplementary Courses:

General Philosophy Courses:

Code	Title	Units
Phil 390	Philosophical Writing	3
Phil 426	Theories of Concepts	3

Logic and Method Courses:

Code	Title	Units
Phil 403	Mathematical Logic I	3
Phil 404	Mathematical Logic II	3
Phil 405	Philosophical Logic	3
Phil 4051	Philosophy of Logic	3

Epistemology and Metaphysics Courses:

Code	Title	Units
Phil 3113	Theory of Knowledge	3
Phil 3481	Introduction to Metaphysics	3
Phil 4141	Advanced Epistemology	3
Phil 4142	Advanced Metaphysics	3
Phil 4332	Cognition and Computation	3

Life and Science Courses:

Code	Title	Units
Phil 3001	Philosophy of Medicine	3
Phil 4212	Philosophy of Neuroscience	3
Phil 423	Philosophy of Biological Science	3

Mind and Science Courses:

Code	Title	Units
Phil 315	Philosophy of Mind	3
Phil 418	Current Controversies in Cognitive Science	3
Phil 419	Philosophy of Psychology	3
Phil 4212	Philosophy of Neuroscience	3
PNP 495	PNP Seminar (with approval of topic)	3

- * At least 27 units of the required upper-level courses must be completed with a minimum of a C-.
- ** Three of these credits (one course) must not be from Honors Thesis or Independent Study.

Additional Information

Senior Honors: Eligible majors are encouraged to work toward Senior Honors. To qualify, students must have the agreement of a faculty member to serve as thesis adviser. In addition, at the end of their junior year, they must have an overall grade-point average of at least 3.65. For important additional information regarding Senior Honors, consult our Undergraduate Honors webpage (<https://philosophy.wustl.edu/undergraduate-honors/>).

The Writing-Intensive Seminar: Majors are encouraged to fulfill their writing-intensive requirement by taking Phil 390, which is specially designated as writing intensive. It is typically taken during the junior year, and it is limited to 15 students. Significant attention is devoted to conceiving, researching, writing, revising, critiquing and presenting philosophical essays. A philosophy major who does not take a philosophy writing-intensive seminar must take a fourth core course from any of the three core areas. Priority is given to philosophy majors and minors who have not yet completed their writing-intensive requirement.

Capstone Experience: All philosophy majors are required to complete a capstone experience either by writing an honors thesis or by taking Phil 3991 Philosophy Capstone Course.

Please be aware that the capstone course is offered only in the spring semester, so students will need to plan their class schedules accordingly if they decide not to write an honors thesis. To qualify to write an honors thesis, at the end of their junior year, students must have a GPA of at least 3.5 in the major, a GPA of at least 3.5 in advanced philosophy courses, and an overall GPA of at least 3.65. Alternatively, majors should sign up for Phil 3991 (a 3-credit course), which will draw together a variety of different philosophical areas. Only philosophy majors of senior standing may take this course; preference is given to students not pursuing honors.

Study Abroad: Students can pursue the philosophy major while studying abroad. The department has special study abroad arrangements with University College, London; King's College, London; Trinity College, Dublin (Ireland); Sussex University (U.K.); Utrecht University (the Netherlands); and the University of Auckland (New Zealand). Information about study abroad and about specific overseas programs is available from the departmental website (<https://philosophy.wustl.edu/study-abroad/>) and the study abroad adviser.

Minors

The Minor in Philosophy

Units required: 18

Required courses:

Philosophy minors are required to complete at least 12 units at the 300 level or above, which must include at least one course in each of the following three core areas:

Contemporary/Analytic Philosophy:

Code	Title	Units
Phil 301G	Symbolic Logic	3
Phil 306G	Philosophy of Language	3
Phil 3113	Theory of Knowledge	3
Phil 315	Philosophy of Mind	3
Phil 321G	Philosophy of Science	3
Phil 3481	Introduction to Metaphysics	3
Phil 361	Philosophy of Emotions	3

History of Philosophy:

Code	Title	Units
Phil 347C	Ancient Philosophy	3
Phil 349C	Descartes to Hume	3
Phil 357C	Kant and 19th-Century Philosophy	3
Phil 358	Conceptual Foundations of Modern Science	3

Value Theory:

Code	Title	Units
Phil 331F	Classical Ethical Theories	3
Phil 339F	Philosophy of the Arts	3
Phil 340F	Social and Political Philosophy	3
Phil 345F	Issues in Applied Ethics	3
Phil 346	Philosophy of Law	3
Phil 361	Philosophy of Emotions	3

Additional Information

Minors are encouraged to take the writing-intensive course Phil 390 Philosophical Writing. A philosophy minor must receive a grade of C- or higher in each course. Many philosophy courses can also be taken as part of a minor in history, philosophy of science, or legal studies.

The Minor in Philosophy of Science

Units required: 18

Required courses:

Code	Title	Units
Phil 301G	Symbolic Logic	3
Phil 321G	Philosophy of Science	3
Phil 4210	Topics in Advanced Philosophy of Science	3
Total Units		9

Elective courses:

At least one of the following three courses:

Code	Title	Units
Phil 347C	Ancient Philosophy	3
Phil 349C	Descartes to Hume	3
Phil 358	Conceptual Foundations of Modern Science	3

At least two courses from the following list:

Code	Title	Units
Phil 3001	Philosophy of Medicine	3
Phil 3113	Theory of Knowledge	3
Phil 315	Philosophy of Mind	3
Phil 3481	Introduction to Metaphysics	3
Phil 390	Philosophical Writing	3
Phil 403	Mathematical Logic I	3
Phil 404	Mathematical Logic II	3
Phil 405	Philosophical Logic	3
Phil 4051	Philosophy of Logic	3
Phil 4141	Advanced Epistemology	3
Phil 4142	Advanced Metaphysics	3
Phil 418	Current Controversies in Cognitive Science	3
Phil 419	Philosophy of Psychology	3
Phil 4212	Philosophy of Neuroscience	3
Phil 423	Philosophy of Biological Science	3
Phil 426	Theories of Concepts	3
Phil 4332	Cognition and Computation	3
PNP 495	PNP Seminar (with approval of topic)	3

Courses

Visit online course listings to view semester offerings for L30 Phil (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L30&crslvl=1:4>).

L30 Phil 100G Logic and Critical Analysis

Introduction to the elementary tools of logic required for constructing and critically evaluating arguments and the claims they support. Topics include: the nature of an argument; argument structure; how arguments can fail both in structure and

in content; formal and informal fallacies; propositional logic and predicate calculus; and critical analysis of rhetorical strategies for presenting arguments. Students will be encouraged to develop critical reasoning skills that can be widely applied.

Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: HUM

L30 Phil 102 Introduction to Scientific Reasoning

This course analyzes scientists' reasoning strategies. Case studies from the history of astronomy, epidemiology, molecular biology, and neuroscience provide a basis for understanding of the character of scientific theories and the means by which they are evaluated. Special attention is given to the construction and evaluation of statistical and causal hypotheses, including experimental design, and to the use of scientific knowledge in public policy decision-making. Students acquire basic skills in critical thinking and scientific reasoning and an introductory understanding of issues in the philosophy of science.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: SCI

L30 Phil 120F Problems in Philosophy

Introduction to philosophical methods and concepts through an investigation of major issues in Western philosophy such as: what counts as knowledge; truth and belief; the existence of God; the mind-body problem; materialism and idealism; moral theory and concepts of justice. A range of historical and contemporary views on these issues is considered. The aim of the course is to prepare students to think and write about philosophical problems on their own.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L30 Phil 125C Great Philosophers

In this course we focus on some of the most important texts in the history of Western philosophy in order to discuss a wide range of central philosophical problems. We typically consider, for example, the existence of God, the justification of claims to knowledge, and the requirements of a good human life, including the demands of morality. Among the philosophers most likely studied are Plato, Aristotle, Descartes, Hume, Kant, Marx, Nietzsche and Wittgenstein. Our goal is not just to appreciate the genius of some great philosophers but also to grapple with the current philosophical problems they have bequeathed to us.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

L30 Phil 131F Present Moral Problems

An investigation of a range of contemporary moral issues and controversies that draws on philosophical ethics and culturewide moral considerations. Topics may include: racism, world hunger, war and terrorism, the distribution of income and wealth, gender discrimination, pornography, lesbian and gay rights, abortion, euthanasia, and capital punishment. The aim of the course is to present diverse points of view regarding these topics and to provide conceptual and theoretical tools that enable the student to make headway in thinking carefully and critically about the issues.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L30 Phil 202A Puzzles and Revolutions: Text and Tradition

One major force in human history has been inquiry into the natural world. Especially after 1550, natural science, by virtue of its role in the development of technology and the improvement of health, has brought about great changes on all scales of human existence, first in Western Europe and then globally. In this course, the changing character of inquiry into the natural world, from antiquity forward, will be the object of study. Does natural science enable us, for example, to study nature as it is in itself, or are culturally-determined perspectives or frameworks inescapable? How is it that natural science has, especially since 1800, proved so useful in the development of technology? How has it impinged on the arts? The requirements will include writing several short papers and brief responses to the readings.

Same as L93 IPH 201a

Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

L30 Phil 233F Biomedical Ethics

A critical examination, in the light of contemporary moral disagreements and traditional ethical theories, of some of the moral issues arising out of medical practice and experimentation in our society. Issues that might be discussed include euthanasia, genetic engineering, organ transplants, medical malpractice, the allocation of medical resources, and the rights of the patient.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L30 Phil 234F Business Ethics

Study of the nature and justification of economic systems, business organizations, and business practices. Focus on contemporary business and the ideology it embodies. Discussion of moral problems arising in business includes both the analysis of structural factors that cause them and the evaluation of courses of action that might resolve them.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L30 Phil 235F Introduction to Environmental Ethics

A general survey of current issues in environmental ethics, focusing on problems such as the obligation to future generations, protection of endangered species, animal rights, problems of energy and pollution, wilderness, global justice, and business obligations. Students also learn some ethical and political theory.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L30 Phil 237F Introduction to Aesthetics

Study of characteristic problems in aesthetics and the philosophy of art, e.g., the nature of aesthetic entities, of aesthetic experience, and of individual differences in the various arts. Primary emphasis on solutions various theories offer to these problems.

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM

L30 Phil 239 Topics in Philosophy and Environment

Philosophical questions are central to study of the environment. Such questions span many philosophical fields including metaethics, value theory, applied ethics, aesthetics, political philosophy and philosophy of science. Given such a diversity of important questions, this course focuses on a different

intersection of philosophy and environment each time it runs. It aims to develop students' understanding of the complex philosophical claims and problems that lie behind environmental values, practices and policies. Examples of topics considered are: wilderness, food and agriculture, and animals.

Credit 3 units. A&S IQ: HUM EN: H

L30 Phil 2401 Jewish Political Thought

This course uses the concepts of political theory to explore the diverse Jewish political tradition. While this tradition includes writing from and about the three historical periods of Jewish self-rule (including the modern state of Israel), most of the Jewish political tradition comes from the understanding of politics as viewed from outsiders to mainstream communities. Additionally, Jewish political thought can be found through a Jewish community's self-understanding based on its interpretation of Jewish text and law by which it bound itself. Because we span over 2,000 years of recorded history, we will not attempt to discern a single "Jewish political thought" but rather look at JPT through the lens of familiar concepts of political theory. The fundamental questions we will explore are the relationship of the Jewish tradition to concepts such as authority, law, consent, sovereignty and justice. We will ask how the Jewish tradition views government and the relationship between the authority of God and the authority of temporal powers. We will explore these questions through a range of materials that include both primary and secondary literature.

Credit 3 units. A&S IQ: HUM BU: BA EN: H

L30 Phil 2451 Love and Reason

Love often seems dramatically unreasonable, and reason can seem coldly rational in a way that excludes any emotion, passion, or affiliation even akin to love. The supposed opposition between love and reason has been used by Christian and secular thinkers throughout modernity to organize ways of knowing and judging, and to criticize claims of faith, belief, and desire. But are love and reason really so distinct? What does it mean to say so, and why might someone make this claim? Can love be reasoned, and even reasonable? Can reason be aided by love, and even driven by it? How might different answers to these questions affect our understanding of other possibly unreasoned categories like faith, belief, and piety? This course offers an introduction to modern Christian thought and Western philosophy through these questions and themes.

Same as L57 RelPol 245

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H

L30 Phil 2501 Zionism

Zionism is often thought of as a commitment to the principle that the Jewish People, as a distinct "people," has a right to self-determination in its own historical land of the biblical Palestine. Yet the history of the term and the set of ideologies show a much more complex understanding. In this course we trace the emergence of a number of different "Zionisms" that would lead to the creation of the modern state of Israel. And we explore how the political principles at the core of these ideologies have fared in the 65 years since the founding of the modern Jewish state. The course is, at its heart, applied political theory: a case study of the way that ideas emerge from historical events, take on a life of their own, and then shape real outcomes in the world. The readings will weave together history, philosophy, literature and government.

Same as L57 RelPol 250

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA
EN: S

L30 Phil 297 Undergraduate Independent Study

Prerequisite: permission of the department.
Credit variable, maximum 6 units.

L30 Phil 299 Internship in Philosophy

Students receive credit for a faculty-directed and approved internship. Registration requires completion of the Learning Agreement, which the student obtains from the Career Center and which must be filled out and signed by the Career Center, the site supervisor and the faculty sponsor prior to beginning internship work. Credit should correspond to actual time spent in work activities, e.g., eight to 10 hours a week for 13 or 14 weeks to receive 3 units of credit; 1 or 2 credits for fewer hours.
Credit variable, maximum 3 units.

L30 Phil 3001 Philosophy of Medicine

Philosophy of medicine is an investigation into what doctors know, and how they know it. This course will investigate the following questions: What is disease? What is health? How do we classify disease? What counts as good evidence and good evidential reasoning in medicine? Is medicine a science? If so, what makes it distinctive as a science? What kinds of evidential roles do case studies play in medicine? How ought we to measure and compare outcomes in clinical trials and in systematic reviews? What is the appropriate relationship between medicine and the basic sciences, or, medicine and the public health sciences (e.g., epidemiology, biostatistics, economics, and behavioral science)? What role, if any, ought private industry - such as the pharmaceutical industry, or health insurance industry - play in shaping the practice of medicine? How ought we to define and measure "effectiveness" in medicine? Do values inform decision making about health policy, and if so, how? The overall goal of the course is to develop a reasoned, reflective approach to research and practice in medicine, through critical analysis of texts, and case studies in the history of medicine. You do not need a major in philosophy or background in philosophy to take this course. This course is intended to be of special interest to pre-health professionals, or philosophy or science majors. For graduate students in philosophy, this course satisfies the seminar requirement. Extra assignments will be provided to satisfy graduate coursework; please see me for details.

Credit 3 units. A&S IQ: HUM EN: H

L30 Phil 301G Symbolic Logic

In the first half of the course, we will be studying some features of truth-functional and first-order classical logics, including studying the model theory and metatheory for first-order logic in much greater depth than in Phil 100. In the second half of the course, we will go on to study three different styles of proof-system: tableaux, axiomatic, and natural deduction. This course continues on where Philosophy 100: An Introduction to Logic and Critical Analysis leaves off. It is recommended for students who have already taken that introductory course or for students who already have a strong background in mathematics. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: HUM

L30 Phil 306G Philosophy of Language

A survey of major philosophical problems concerning meaning, reference and truth as they have been addressed within the analytic tradition. Readings that represent diverse positions on these focal issues will be selected from the work of leading philosophers in the field, for example: Frege, Russell, Wittgenstein, Davidson, Quine, Kripke, and Putnam. Students are encouraged to engage critically the ideas and arguments presented, and to develop and defend their own views on the core topics. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L30 Phil 308 Introduction to Semantics

Semantics is the branch of linguistics which studies how speakers assign meaning to words, sentences, and larger units of discourse. We combine perspectives from both linguistics and philosophy to explore a variety of topics including polysemy, compositionality, quantification, anaphora, definite descriptions, attitude reports, presupposition and implicature. Prerequisite: Ling 170D or Phil 301G or permission of instructor.

Same as L44 Ling 311

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: HUM EN: S

L30 Phil 309 Topics in the Wilderness

Philosophical questions are central to study of the environment. Such questions span many philosophical fields including metaethics, value theory, applied ethics, aesthetics, political philosophy and philosophy of science. Given such a diversity of important questions, this course focuses on a different intersection of philosophy and environment each time it runs. It aims to develop students' understanding of the complex philosophical claims and problems that lie behind environmental values, practices and policies. Examples of topics considered are: wilderness, food and agriculture, and animals.

Credit 3 units. A&S IQ: HUM BU: ETH

L30 Phil 310 Contemporary Jewish Thought

A study of the representative figures and problems of modern Jewish thought from Spinoza to the present. Other topics include: the impact of the European Enlightenment; Zionism; Buber; Rosenzweig; Kaplan; and Soloveitchik. Prerequisite: JINE 208F or the equivalent.

Same as L75 JIMES 310

Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH

L30 Phil 3101 The Problem of Evil: The Holocaust and Other Horrors

The question of how God can allow evil to occur to the righteous or innocent people has been a perennial dilemma in religion and philosophy. We study the classic statement of the problem in the biblical book of Job, the ancient Near Eastern literature on which Job is based, and traditional Jewish and Christian interpretation of Job. We study the major approach to the problem of evil in Western philosophical and religious thought.

Same as L23 Re St 3101

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

L30 Phil 3113 Theory of Knowledge

This course will focus on issues in epistemology with the aim of providing a survey of contemporary work. The course begins with a close reading of Descartes' first three Meditations. These should help us set some of the problems that figure in more recent work and provide an introduction to certain fundamental epistemological concepts. No particular background will be assumed, but participants are expected to come to class prepared to discuss topics at an advanced level. Readings are taken from original sources and can be challenging. Although most assignments are reasonably short, students should allow time for careful reading and re-reading. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP. Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L30 Phil 315 Philosophy of Mind

An introduction to philosophical analyses of the nature of mind, especially those developed by contemporary philosophers. The focus will be on questions such as the following: What is a mind? How does it relate to a person's brain? How does it relate to a person's body and the external world? Can a mind exist in a very different kind of body (e.g., a computer or a robot)? Does thinking require a language-like code? If so, can nonlinguistic species think? What is it to have a mental image or to experience pain? Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L30 Phil 316 Mind and Morals

This course explores a number of issues at the intersection of ethics and cognitive science. Possible topics include: Are we rational? Do we know our own thoughts and motivations? Can one believe that one ought to do something without being motivated to do it? Do emotions impair or enhance our ability to reason? How do moral beliefs develop through childhood? Are traits such as intelligence and character unchangeable, and what implications follow if they are (or are not)? Does retaining my identity over time require having the same mind, and, if so, am I the same person now as I was as a child? Are nonhuman animals worthy of moral consideration? If brain activity is determined by causal laws, can we have free will? Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP. Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH EN: H

L30 Phil 321G Philosophy of Science

Pivotal concepts common to empirical sciences are examined and clarified. These include: explanation, confirmation, prediction, systematization, empirical significance, and the relationship of all these concepts to the structure of scientific theory. Examples may be drawn from both contemporary and historical science, including the social, biological and physical sciences. Students with a background in science are particularly encouraged to consider this course. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM EN: H

L30 Phil 3238 Towards a New Music

Towards a New Music addresses the numerous possibilities for emerging music, including future musics in a reimagined world of the nature of music itself. In our study, music is situated as part of a web of metapatterns that explain the structure and nature of musical materials, the actions in composition and improvisation, and musical phenomena. Students are placed on a listener's journey of discovery to find the nature of music through philosophy, cognitive science, mathematics, biology, architecture and the structure of sound itself. Music theory topics both simple and advanced are discussed in ways appropriate for the novice as well as the advanced student. The course functions as a music theory and music literature study through the lens of the humanities. The course embraces both culture and nature, seeking out the grand-scale patterns that help explain the qualities of our musical endeavor. The course begins with the archetypal patterns of space, both structural/formal and relational, and then turns to the concepts that infuse the workings of time: a virtual sonic reality of space and time and the mind of music, revealed in thought-provoking and new contexts. Same as L27 Music 3238

Credit 3 units. A&S IQ: HUM EN: H

L30 Phil 327 Philosophy of Religion

This course focuses on debates concerning the existence of God as well as on special issues that arise within religion generally and also on some that arise within specific religious traditions. Topics include: the rationality of religious belief, the problem of evil, the coherence of theism, and the freedom-foreknowledge problem.

Credit 3 units. A&S IQ: HUM BU: ETH EN: H

L30 Phil 331F Classical Ethical Theories

Intensive readings of great works in the history of ethics, especially by Plato, Aristotle, Hume, Kant, and Mill. Topics may include: the sources of moral knowledge, the nature of practical moral judgment, the moral role of emotion and desire, weakness of will, moral autonomy, and the universality of moral norms. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor.

Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH EN: H

L30 Phil 339F Philosophy of the Arts

An examination both of general issues that apply to all types of art and of issues specific to particular art forms. For example, what is art? What are the central artistic values: beauty, truth, emotional expressiveness, representational power, or something else? Does art have a moral or political function? How can we account for the history of art and for different artistic styles? In regard to selected forms, there are important questions concerning how pictures represent, whether music and dance are forms of "language," and the nature of literary interpretation. Some consideration is given to the relation of psychology and theories of the mind to art. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP. Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH EN: H

L30 Phil 340F Social and Political Philosophy

Study of certain fundamental issues concerning government, society and culture. For example: What are the nature and limits of legitimate political authority? Are ordinary human beings capable of governing themselves justly? Do citizens have a duty to obey the state? If so, to what extent, if at all, is

that duty grounded in consent or contract? Should the state limit or regulate the personal relationships of citizens, such as marriage, family and sexuality? How should social institutions rectify a history of political or social injustice against oppressed groups? Readings from historical and contemporary sources. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH, HUM EN: H

L30 Phil 345F Issues in Applied Ethics

Advanced study of a selected topic in applied ethics. Abstract ethical theories and methods are brought to bear on the moral problems that arise in an area of social and professional practice such as medicine, business, law, journalism, engineering, or scientific and humanistic research. Possible topics include: reproductive health care and policy, the just distribution of medical resources, the social responsibilities of corporations, accountability in the media and public office, and the ethics of research on or affecting human subjects. Prerequisites: one course at the 100 or 200 level in applied ethics; or permission of the instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L30 Phil 346 Philosophy of Law

This course will first focus on the philosophical foundations of law, examining both the relationship between law and rules, as well as the types of legal reasoning. Second, the course will focus on philosophical issues that arise in the key substantive areas of law: contracts, torts, property, criminal law and constitutional law, as well in specialized areas such as family and employment law. The course will end with a brief discussion of several problems in legal ethics. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L30 Phil 347C Ancient Philosophy

An examination of the high-water marks of philosophy in ancient Greece and Rome, focusing primarily on Plato and Aristotle. A wide range of philosophical problems is discussed, including the nature of the good life, the justification of knowledge, and the ultimate nature of mind and world. Attention is paid to how these problems unfolded in their historical context and to how the ancient treatments of them compare to contemporary efforts. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: ETH EN: H

L30 Phil 3481 Introduction to Metaphysics

This course is an introduction to central debates of contemporary analytic metaphysics. Metaphysics is concerned with the nature of the most general kinds of things and the relationship between these things. We will discuss the nature of and relationship between properties, material objects, persons, time, space, and modality. Prerequisite: one course in Philosophy at the 100 or 200 level or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L30 Phil 349C Descartes to Hume

An examination of major philosophical systems and problems in Modern Philosophy as presented in the original writings of the 17th and 18th centuries. Topics may include rationalism and empiricism, idealism, materialism, and skepticism, with readings selected from the continental rationalists, Descartes, Spinoza, and Leibniz, and from the British empiricists, Locke, Berkeley, and Hume. Central problems include the mind-body problem, representationalism, and transcendentalism. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

L30 Phil 3507 Legal Conflict in Modern American Society

Thousands of lawsuits are filed daily in the state and federal courts of the United States. The disputes underlying those lawsuits are as messy and complex as the human, commercial, cultural and political dynamics that trigger them, and the legal processes for resolving those disputes are expensive, time-consuming and, for most citizens, seemingly impenetrable. At the same time, law and legal conflict permeate public discourse in the United States to a degree that is unique in the world, even among the community of long-established democracies. The overarching objective of the course is to prepare our undergraduate students to participate constructively in that discourse by providing them with a conceptual framework for understanding both the conduct and resolution of legal conflict by American legal institutions, and the evolution of — and values underlying — the substantive law American courts apply to those conflicts. This is, at core, a course in the kind of legal or litigation "literacy" that should be expected of the graduates of first-tier American universities. Some of the legal controversies that are used to help develop that "literacy" include those surrounding the permissible use of lethal force in self-defense, the constitutionality of affirmative action in university admissions, contracts that are unconscionably one-sided, sexual harassment in the workplace, the duty of landlords to prevent criminal assaults on their tenants, groundwater pollution alleged to cause pediatric cancers, and warrantless searches of cellphone locator data by police.

Same as L98 AMCS 3507

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H

L30 Phil 351 History of Western Philosophy: Modern

This course offers a survey of the history of 17th and 18th century Western (European) Philosophy, with a focus on the nature and limits of knowledge. Topics include skepticism, the mind-body relationship, the existence of God, the problem of induction, the distinction between primary and secondary qualities, personal identity, causation, and a priori versus a posteriori knowledge. We examine the canonical texts of Descartes, Locke, Berkeley, Hume, and Kant.

Credit 3 units. BU: ETH

L30 Phil 357C Kant and 19th-Century Philosophy

Examination of Kant and 19th-century philosophy. We will discuss Kant's "Copernican Turn" in metaphysics and epistemology, as well as his moral philosophy, and we will study works of selected 19th-century philosophers such as those of Hegel, Marx, Mill, and Nietzsche. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH EN: H

L30 Phil 358 Conceptual Foundations of Modern Science

The aim of this course is to present some of the basic concepts underlying modern science. Insofar as many of those concepts first appeared or became predominant in the 17th and early 18th centuries, the course concentrates on primary works from that period. Among the concepts to be studied are: 1. Nature and natures: the ontology of matter and force; causal closure. 2. Methods: observing and intervening, systematic and organized. 3. Explanations: appeal to laws and mechanisms; teleology. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L30 Phil 361 Philosophy of Emotions

Emotions like fear, joy, disgust, sadness and love are central to how we engage with each other and understand the world around us. But what can we say about what emotions are, how they function, and when they are valuable? This course will draw on research in philosophy as well as the social and cognitive sciences. The aim will be to develop a rich combination of conceptual, empirical, and phenomenological resources and bring them to bear on central questions about the nature and significance of emotions.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA EN: H

L30 Phil 366 Art and the Mind-Brain

In recent years, there has been a growing interest in the bearing of cognitive science on the perception and understanding of art. This interest has roots in tradition: historically, art, aesthetics, and vision science have often been linked. But the growth of knowledge in cognitive science has opened up new opportunities for understanding art and addressing philosophical questions. The converse is also true. The production, perception, and understanding of art are human capacities that can shed light on the workings of the mind and brain. This course considers questions such as the following: What is art? How do pictures represent? Does art express emotion? Why does art have a history? Prerequisites: one course in Philosophy at the 100 or 200 level or permission of the instructor. Priority given to majors in philosophy and PNP.

Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM EN: H

L30 Phil 375 Existentialism

The philosophical systems of selected philosophers such as Kierkegaard, Nietzsche and Sartre are examined to determine their historical origins, their ontological and epistemological ramifications, and their relationships to contemporary philosophy. Prerequisite: one course in Philosophy at the 100 or 200 level or permission of the instructor.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

L30 Phil 3801 Ancient Greek and Roman Medicine

This course introduces students to the practice and theory of medicine in the ancient Mediterranean, beginning in Egypt and continuing through Greece and Rome. It ends in the Middle Ages. Greco-Roman medicine will be our focus. How was disease understood by practitioners and, as far as can be reconstructed, by laypeople? What form did surgical,

pharmacological, and dietetic treatment take? What were the intellectual origins of Greek medicine? The social status of medical practitioners? How was medicine written and in what terms did its practitioners conceive it?

Same as L08 Classics 3801

Credit 3 units. A&S IQ: HUM, LCD, SD Arch: HUM Art: HUM BU: IS EN: H

L30 Phil 390 Philosophical Writing

This seminar has a different topic of central philosophical importance each semester. Significant attention also is devoted to conceiving, researching, writing, revising, critiquing and presenting philosophical essays. Limited to 15 students. Priority is given to philosophy majors and minors who have not yet completed their writing-intensive requirement.

Credit 3 units. A&S IQ: HUM, WI BU: HUM EN: H

L30 Phil 397 Undergraduate Independent Study

Credit variable, maximum 6 units.

L30 Phil 3991 Philosophy Capstone Course

This course focuses either on classic writings from the past century or on contemporary writings that address a major philosophical concern, such as "the meaning of life" or "the concept of self." In either case, the course draws together a variety of philosophical specializations. Must be taken by all philosophy majors who are not writing an honors project. Work for the course typically consists of one written project, one oral presentation, and one commentary on another student's oral presentation. Prerequisites: senior standing and major in philosophy; preference given to those majors not pursuing Honors.

Credit 3 units. A&S IQ: HUM EN: H

L30 Phil 403 Mathematical Logic I

A first course in mathematical logic, an introduction to both proof theory and model theory. The structure and properties of first-order logic are studied in detail, with attention to such notions as axiomatic theory, proof, model, completeness, compactness and decidability. Prerequisite: Phil 301G or equivalent or a background in mathematics.

Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM

L30 Phil 404 Mathematical Logic II

Gödel's Incompleteness Theorem: its proof, its consequences, its reverberations. Prerequisite: Phil 403 or a strong background in mathematics.

Credit 3 units. A&S IQ: HUM Art: HUM

L30 Phil 405 Philosophical Logic

What the philosophy student needs to know of logic, its techniques and its use as a tool in philosophical analysis. Some attention to the history of the subject and to its metatheory. Prerequisite: previous exposure to formal logic, or permission of instructor.

Credit 3 units.

L30 Phil 4051 Philosophy of Logic

This course surveys some important issues in the philosophy of logic. We begin with basic foundational issues in classical logic, including the relation of logic to psychological reasoning and Tarski's definition of logical consequence, and gradually go on

to consider the motivations and status of well-known extensions (sometimes regarded as "neo-classical" logics) such as modal logics and second-order logic. In the last weeks of the course, we examine some outright challengers, including intuitionistic and paraconsistent logics. After evaluating the arguments for and against these challenges, we examine one recent, controversial view-logical pluralism — which suggests that we might not need to choose among the rival systems. Many of the readings for this course are classics of contemporary philosophy, and the subject is likely to be of especial interest to students who have interests in logic, and in the philosophy and foundations of mathematics and language. Some of the important ideas in the course presuppose at least a basic acquaintance with formal logic, and hence either Phil 100 or Phil 301 (or permission of the instructor) are prerequisites.

Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 4061 Topics in the Philosophy of Language

Focus on the work of a single philosopher of language such as Carnap, Chomsky, Foucault, or Kripke, or on a central topic such as the theory of reference, the theory of meaning, or the problem of cross-cultural translation. Prerequisite: one course in epistemology, philosophy of language, or analytic philosophy, or permission of instructor.

Credit 3 units. BU: HUM

L30 Phil 4065 Advanced Philosophy of Language

An advanced-level treatment of basic topics in the philosophy of language as this discipline is understood in the analytic tradition. The main positions and the problems they pose are surveyed; focal themes include meaning, reference and truth. The aim of the course is to help students develop effective expository techniques and to provide them with the necessary conceptual resources to analyze and criticize different theoretical views. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 4070 Global Justice

This course examines contemporary debates and controversies regarding global justice. Seminar discussions are arranged around significant issues in the current literature. For example: What (if anything) do we owe to the distantly needy? Do we have special obligations to our compatriots? Do political borders have normative significance? And so on. This course will be of interest not only to political theorists, but also students in other fields interested in social justice or international relations generally.

Same as L32 Pol Sci 4070

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L30 Phil 410 Theories of Perception

A consideration of recent work in philosophy and cognitive science on the nature of perception and its contribution to thought, knowledge and behavior. Special attention is paid to two questions: To what extent can perceptual experience be changed through learning? In what sense do perceptual states have content? The relation of these issues to more general theories of mental content, to the possibility of objective and theory-neutral observation in science, and to the directness or indirectness of perception are discussed. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of instructor.

Credit 3 units.

L30 Phil 4141 Advanced Epistemology

An advanced survey of selected issues in contemporary epistemology. Careful attention will be given to one or more specific epistemological topics, such as skepticism, certainty, coherence, perception, induction, virtue epistemology, testimony, formal epistemology, the nature and value of understanding, or epistemic normativity. Prerequisite: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor. Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 4142 Advanced Metaphysics

Through readings from both classical and contemporary sources, a single traditional metaphysical concern is made the subject of careful and detailed analytic attention. Possible topics include such concepts as substance, category, cause, identity, reality and possibility, and such positions as metaphysical realism, idealism, materialism, relativism and irrealism. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 418 Current Controversies in Cognitive Science

An advanced survey of current debates in cognitive science with an emphasis on the philosophical issues raised by these debates. Topics may include: evolutionary psychology; innateness and neural plasticity; perception and action; consciousness; connectionism; robotics; embodied cognition; moral reason; emergence and artificial life; concepts and content; animal cognition. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Same as L64 PNP 418

Credit 3 units. A&S IQ: HUM EN: H

L30 Phil 419 Philosophy of Psychology

An investigation of the philosophical presuppositions and implications of various traditions in psychology, including behaviorism, Gestalt and cognitivism, with a special emphasis on the development of the information processing approach of contemporary cognitivism. The conception of psychological phenomena, data and explanation central to each of these traditions are examined, and typical topics include the debates between propositional and imagistic models of representation, different accounts of concepts and categorization, and the relation of psychology to ethics. Prerequisites: one previous course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM Art: HUM

L30 Phil 4210 Topics in Advanced Philosophy of Science

This course varies in topics related to philosophy of science from semester to semester. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L30 Phil 4212 Philosophy of Neuroscience

This course focuses on the historical roots of neuroscience as well as its contemporary developments. Topics include: (1) the nature of explanatory strategies in neuroscience; (2) the relation between neuroscience research and higher-level

disciplines such as psychology; and (3) the epistemology of the investigatory tools of neuroscience. Prerequisites: one previous course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM Art: HUM

L30 Phil 423 Philosophy of Biological Science

This course examines a number of theoretical, conceptual, and methodological issues that arise in the attempts of biologists to explain living systems. One sort of problem concerns the relation between biology (and biological descriptions and explanations) and physics and chemistry. Biological phenomena have often seemed very different from ordinary physical phenomena in being teleological or goal oriented. Vitalists, accordingly, resisted the attempt to invoke physics and chemistry in the attempt to explain biological phenomena. But recently biology has come more and more to draw upon physics and chemistry; we will examine the conceptual frameworks that underlie these efforts. Another sort of problem concerns the adaptiveness of living organisms. Charles Darwin offered one naturalistic explanation of this feature, an explanation that was further developed in this century as the synthetic theory of evolution. A number of controversial issues have arisen within this context of adaptation, and the range of levels at which selection can occur. The ubiquity of evolution, moreover, has been challenged in recent years, as a number of non-selectionist explanations have recently been put forward. We will consider the arguments for the synthetic theory and these alternatives.

Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 426 Theories of Concepts

Concepts are the building blocks of thought. They are implicated in just about every cognitive task. Beyond that, there is little consensus. What information do concepts encode? How are they acquired? How are they combined to form thoughts? How are they related to perception and imagery? Each of these questions has been answered in numerous ways. In this course, we explore competing theories of concepts that have been proposed by philosophers, psychologists and other cognitive scientists. No prior acquaintance with these issues is required. Prerequisite: one previous course in Philosophy at the 300 level, graduate standing or permission of the instructor.

Credit 3 units. A&S IQ: HUM Art: HUM

L30 Phil 430 Topics in Ethics

Selected advanced topics in ethics. Prerequisite: 6 units of philosophy, or permission of instructor.

Credit 3 units. A&S IQ: HUM EN: H

L30 Phil 4310 20th-Century Metaethics

An examination of metaphysical and epistemological issues in ethics. Topics include: the nature of the good and the right, the meaning of ethical terms, the logic of moral argument, and the status of moral knowledge. We consider philosophical works written since 1900 by such authors as Moore, Ross, Stevenson, Ayer, Foot, Hare, Brink, Harmon, Blackburn, and McDowell. Prerequisites: one previous course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L30 Phil 4315 Normative Ethical Theory

An exploration of the three major normative ethical theories debated by philosophers in the last hundred years: Kantian ethics, utilitarianism, and virtue theory. Authors covered in the course may include: Henry Sidgwick, R. M. Hare, R.B. Brandt, John Rawls, Bernard Williams, Philippa Foot, Thomas Nagel, Christine Korsgaard, Michael Slote, and Barbara Herman.

Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L30 Phil 4320 British Moralists

An investigation of the work of the great British moral philosophers of the 17th-19th centuries, especially Hobbes, Hume, and Mill. Other figures may include Reid, Butler, Hutcheson, Bentham, and Sidgwick. In considering these philosophers, we explore the relations between normative ethics, moral psychology, and political philosophy, and may include a discussion of legal, social and economic philosophies as well. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 4332 Cognition and Computation

This course introduces students to some of the key frameworks for thinking about the mind in computational terms. We will be looking at some basic topics in the theory of computation, in addition to considering philosophical issues raised by computational models of cognitive processes. This course is required for graduate students in the PNP PhD program. Prerequisites: at least two 400-level PNP courses cross-listed in Philosophy.

Same as L64 PNP 4332

Credit 3 units. A&S IQ: SSC EN: S

L30 Phil 438 Aesthetics

A careful consideration of selected issues regarding the experience of visual art, architecture, music or literature, as well as of the power or beauty of nature, people and artifacts. For example, is there a special form of aesthetic experience or aesthetic attitude? In what do aesthetic power and beauty consist? Are they different in art and nature? Do the artists' intentions matter? Some central concerns are: how do visual art and literary texts have "meaning," what role do the viewer's or reader's interpretations play, and how might recent work in cognitive science and social theory shed light on these issues? Prerequisites: one course in Philosophy at the 300 level, graduate standing or permission of the instructor.

Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 4400 Advanced Social and Political Philosophy

A selective investigation of one or two advanced topics in the philosophical understanding of society, government and culture. Readings may include both historical and contemporary materials. Possible topics include: liberalism, socialism, communitarianism, citizenship, nationalism, cosmopolitanism, social contract theory, anarchism and the rights of cultural minorities. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 451 Plato

An examination of some of Plato's most important dialogues, typically including *Gorgias*, *Phaedo*, and *The Republic*, with the aim of grasping the development of Plato's most influential thoughts in ethics and in metaphysics and epistemology. In order to provide both historical understanding and philosophical evaluation, attention is paid to the context and structure of the dialogues and to the best of recent secondary literature. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

L30 Phil 452 Aristotle

This course offers a maximally full and detailed introduction to the works of Aristotle. His logic, natural philosophy, psychology, metaphysics, ethics and political philosophy are discussed, and stress is laid on the interpretive problems facing contemporary philosophers seeking to understand Aristotle's achievement. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

L30 Phil 4530 Hellenistic Philosophy

The Hellenistic Age, traditionally dated from the death of Alexander and his (Macedonian) Empire at 323 BCE to the birth of Augustus' (Roman) Empire in 31 BCE, gave the West three of its most innovative and influential schools of philosophy: Epicureanism, Skepticism and Stoicism. This course investigates the central features of their thought. Special attention is paid to the still-relevant debates between the Stoics and Skeptics about the possibility of knowledge, to the disagreements among all three schools about the issues of freedom, responsibility and determinism, and to their ethical theories. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM EN: H

L30 Phil 4550 Continental Rationalism

A rationalist is a philosopher for whom at least one certain truth is inborn or comes from reason rather than from empirical or sensory experience. The major systemic writings of Descartes, Spinoza and Leibniz are examined with a focus on the question: does the epistemology determine the ontology of these philosophical systems or vice versa? The lines of development connecting these philosophers are traced, and such enduring problems as the relation of mind to body are examined. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM Art: HUM

L30 Phil 4570 Kant's Critique of Pure Reason

An in-depth investigation of Kant's *Critique of Pure Reason*, one of the most important books in the history of Western philosophy. Some supplementary readings from other philosophers are used to situate Kant's work in a systematic and historical context, to present some "Kantian" positions in current philosophy, and to bring in some important contrasting views and criticisms. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L30 Phil 4575 Kant's Moral Theory

An in-depth examination of Kant's practical philosophy: his moral and political theory. Readings include the *Critique of Practical Reason*, parts of the *Metaphysics of Morals*, *Perpetual Peace* and other writings. Supplementary readings are used to situate Kant's work in its systematic and historical context, to provide orientation in the world of Kant scholarship, and to introduce important contrasting views and criticisms. We also discuss recent reformulations of Kantian themes in the works of contemporary philosophers. Prerequisite: one course in Philosophy at the 300 level, graduate standing or permission of the instructor.

Credit 3 units. A&S IQ: HUM EN: H

L30 Phil 464 Advanced Continental Philosophy

A study of selected texts by such major figures of 20th-century continental philosophy as Husserl, Heidegger, Merleau-Ponty, Sartre, de Beauvoir, Levinas, Habermas, Foucault, Derrida and Irigaray. Such topics as phenomenology, hermeneutics, existentialism, critical theory, structuralism and post-structuralism are investigated. Prerequisite: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM Art: HUM

L30 Phil 465 Topics in the History of Philosophy

Study of individual philosophers or themes from the ancient, medieval, and/or modern periods. Examples: Spinoza, St. Thomas Aquinas, neo-Platonism, universals in ancient and medieval thought, ancient and modern theories of space and time. Prerequisite: 6 units in philosophy or permission of instructor.

Credit 3 units. A&S IQ: HUM EN: H

L30 Phil 4751 Reformers and Radicals: Feminist Thinking Through History

We focus on feminist thought in Western culture but also examine non-Western ideas about feminisms. We trace the relationship among emergent feminist ideas and such developments as the rise of scientific methodology, Enlightenment thought, revolutionary movements and the gendering of the political subject, colonialism, romanticism, socialism, and global feminisms. Readings are drawn from both primary sources and recent feminist scholarship on the texts under consideration. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite: completion of at least one Women, Gender, and Sexuality Studies course or permission of the instructor. Students who have taken L77 WGSS 475 Intellectual History of Feminism can not take this class.

Same as L77 WGSS 475

Credit 3 units.

Philosophy-Neuroscience-Psychology

Philosophy-Neuroscience-Psychology (PNP) is an interdisciplinary program that provides an opportunity to examine the mind from multiple perspectives. Students who choose to major in PNP will learn to bring some of the newest findings in science to bear on some of the oldest questions in philosophy; they will also see new questions emerge and learn to pursue those as well. They will consider questions like the following: Is the mind-brain a single entity, or does having a mind involve something over and above the activity of a brain? What assumptions are made by cognitive psychologists when they divide mental activity into separate processes and use response times or other measures of task performance to describe those processes? What assumptions are made by neuroscientists when they use imaging techniques to determine where in the brain a cognitive process is carried out? What are we to make of Chomsky's claim that language is an innate mental organ designed to generate an infinite number of sentences? PNP majors will seek answers to questions such as these in courses offered by PNP and PNP's affiliated departments.

Majors

The Major in Philosophy-Neuroscience-Psychology

I. Core Undergraduate Requirements for PNP

Required for all students, regardless of track:

Entry Sequence

Choose one of the following:

PNP Sequence

PNP 200 Introduction to Cognitive Science and

PNP 201 Inquiry in the Cognitive Sciences **or**
Psych 301 Experimental Psychology

or

Mind, Brain, Behavior Sequence (MBB)

FYP 120A Amp:Introduction to Study of the Mind-Brain: Psychological, Biological, & Philosophical Perspectives

FYP 122A Ampersand: Introduction to the Study of the Mind Brain II **or** PNP 200 Introduction to Cognitive Science

Core Philosophy Requirements

Prerequisites:

Code	Title	Units
Phil 100G	Logic and Critical Analysis	3
or Phil 102	Introduction to Scientific Reasoning	
or Phil 120F	Problems in Philosophy	
or Phil 125C	Great Philosophers	

Upper division: Two courses at the 300 or 400 level

Majors must take either

PNP 315 Philosophy of Mind **or**
PNP 306 Philosophy of Language

and another from the list below:

Code	Title	Units
Phil 3001	Philosophy of Medicine	3
PNP 301	Symbolic Logic	3
PNP 306	Philosophy of Language	3
PNP 315	Philosophy of Mind	3
PNP 316	Mind and Morals	3
PNP 321	Philosophy of Science	3
Music 3221	Music Cognition	3
Phil 339F	Philosophy of the Arts	3
Phil 3481	Introduction to Metaphysics	3
Phil 349C	Descartes to Hume	3
PNP 3581	Conceptual Foundations of Modern Science	3
Phil 361	Philosophy of Emotions	3
Phil 366	Art and the Mind-Brain	3
Phil 390	Philosophical Writing (upon approval of subject matter, consult PNP office for each semester)	3
Phil 403	Mathematical Logic I	3
Phil 404	Mathematical Logic II	3
Phil 405	Philosophical Logic	3
Phil 4051	Philosophy of Logic	3
Phil 4061	Topics in the Philosophy of Language	3
PNP 4065	Advanced Philosophy of Language	3
Phil 410	Theories of Perception	3
PNP 4141	Advanced Epistemology	3
PNP 4142	Advanced Metaphysics	3
PNP 418	Current Controversies in Cognitive Science	3
PNP 419	Philosophy of Psychology	3
PNP 4210	Topics in Advanced Philosophy of Science: Scientific Explanation	3
Phil 4212	Philosophy of Neuroscience	3
Phil 423	Philosophy of Biological Science	3
PNP 426	Theories of Concepts	3
PNP 4332	Cognition and Computation	3
PNP 495	PNP Seminar	3
PNP 496	PNP Seminar: Rationality	3

Core Psychological & Brain Sciences Requirements

Prerequisite: Psych 100B Introduction to Psychology

Upper division: Two courses at the 300 or 400 level

Unless a student has completed FYP 120A with a grade of B- or higher, they must take

PNP 360 Cognitive Psychology **or**
PNP 408 Psychology of Language

and another from the list below:

Code	Title	Units
Psych 300	Introduction to Psychological Statistics	3
Psych 301	Experimental Psychology	4
PNP 3151	Introduction to Social Psychology	3
PNP 3211	Developmental Psychology	3
Psych 326	Introduction to the Psychology of Aging	3
PNP 330	Sensation and Perception	3
PNP 3401	Biological Psychology	3
PNP 3451	Genes, Environment, and Human Behavior	3
PNP 3531	Psychology of Personality	3
PNP 3541	Abnormal Psychology	3
Psych 357	Introduction to Clinical Psychology	3
Psych 358	Language Acquisition	3
PNP 360	Cognitive Psychology	3
PNP 361	Psychology of Learning	3
PNP 362	The Biological Basis of Human Behavior	3
Psych 374	Drugs, Brain and Behavior	3
PNP 380	Human Learning and Memory	3
PNP 408	Psychology of Language	3
Psych 4046	Developmental Neuropsychology (Writing Intensive)	3
Psych 4182	Perception, Thought and Action	3
Psych 4301	Contemporary Topics in Cognitive Development	3
PNP 4302	Cognitive Psychology Applied to Education	3
Psych 4351	Reading and Reading Development	3
Psych 4352	Reading and Reading Development (Writing Intensive)	3
Psych 4625	Autobiographical Memory	3
Psych 4651	History and Modern Systems of Psychology	3
Psych 4746	Biological Pathways to Psychopathology: From Genes and the Environment to Brain and Behavior	3
PNP 495	PNP Seminar	3

II. Track-Specific Requirements

Courses Required for the Cognitive Neuroscience (CN) track

Prerequisites: Biol 2960 or Psych 3401*

and permission of instructor; Biol 3058 recommended.

Upper division: Two neuroscience courses at the 300 or 400 level. Students **must** take the following:

Code	Title	Units
Biol 3411	Principles of the Nervous System	3
Psych 3604	Cognitive Neuroscience	3

* Psych 3401 Biological Psychology **can** count toward the depth requirement, if taken as a prerequisite.

Courses Required for the Language, Cognition and Culture (LCC) track

Prerequisites:

Code	Title	Units
Anthro 170D	Introduction to Linguistics	3
Anthro 150A	Introduction to Human Evolution	3

Upper division: Two courses at the 300 or 400 level, chosen from those below:

Code	Title	Units
PNP 301	Symbolic Logic	3
PNP 306	Philosophy of Language	3
PNP 309	Syntactic Analysis	3
PNP 3111	Introduction to Semantics	3
Ling 312	Phonetics	3
PNP 313	Phonological Analysis	3
PNP 3171	Introduction to Computational Linguistics	3
PNP 320	Historical and Comparative Linguistics	3
Anthro 3383	Cognition and Culture	3
Anthro 3386	Language, Culture and Society	3
Ling 339	Introduction to Sociolinguistics	3
Psych 358	Language Acquisition	3
PNP 362	The Biological Basis of Human Behavior	3
PNP 3662	Primate Biology	3
PNP 3701	Introduction to Hispanic Linguistics	3
PNP 396	Linguistics Seminar: Pragmatics in Second Language Learning	3
PNP 406	Primate Ecology and Social Structure	3
PNP 4065	Advanced Philosophy of Language	3
PNP 408	Psychology of Language	3
PNP 4122	Language and Gender	3
Span 413	Linguistics and Language Learning	3
Span 416	Introduction to Hispanic Linguistics	3
PNP 4192	Primate Cognition	3
PNP 4315	Culture, Language and the Education of Black Students	3
Psych 4351	Reading and Reading Development	3

Psych 4352	Reading and Reading Development (Writing Intensive)	3
PNP 466	Second Language Acquisition	3
PNP 467	Grammar and Vocabulary Acquisition	3
Span 469	Reading and Writing in a Second Language	3

III. Depth Requirement

Students on the CN track must complete at least 9 units, including at least 3 units at the 400 level or above, in one area of either philosophy, psychology or neuroscience.

Students on the LCC track must complete at least 9 units, including at least 3 units at the 400 level or above, in one area of either philosophy, psychology, anthropology or linguistics.

Three units of FYP 3001 **may** be counted toward the depth requirement, in an area appropriate to the research undertaken (e.g., a psychology research project would count toward the psychology depth requirement). All 9 depth requirement units **must** be taken in a single area.

Philosophy

Code	Title	Units
Phil 3001	Philosophy of Medicine	3
PNP 301	Symbolic Logic	3
PNP 306	Philosophy of Language	3
PNP 315	Philosophy of Mind	3
PNP 316	Mind and Morals	3
PNP 321	Philosophy of Science	3
Phil 3481	Introduction to Metaphysics	3
Phil 349C	Descartes to Hume	3
PNP 3581	Conceptual Foundations of Modern Science	3
Phil 361	Philosophy of Emotions	3
Phil 366	Art and the Mind-Brain	3
Phil 390	Philosophical Writing	3
Phil 339F	Philosophy of the Arts	3
Phil 403	Mathematical Logic I	3
Phil 404	Mathematical Logic II	3
Phil 405	Philosophical Logic	3
Phil 4051	Philosophy of Logic	3
Phil 4061	Topics in the Philosophy of Language	3
PNP 4065	Advanced Philosophy of Language	3
Phil 410	Theories of Perception	3
PNP 4141	Advanced Epistemology	3
PNP 4142	Advanced Metaphysics	3
PNP 418	Current Controversies in Cognitive Science	3
PNP 419	Philosophy of Psychology	3

PNP 4210	Topics in Advanced Philosophy of Science: Scientific Explanation	3
Phil 4212	Philosophy of Neuroscience	3
Phil 423	Philosophy of Biological Science	3
PNP 426	Theories of Concepts	3
PNP 4332	Cognition and Computation	3
PNP 495	PNP Seminar	3
PNP 496	PNP Seminar: Rationality	3

Psychology

Code	Title	Units
Psych 300	Introduction to Psychological Statistics	3
Psych 301	Experimental Psychology	4
Psych 304	Educational Psychology	3
PNP 3151	Introduction to Social Psychology	3
PNP 3211	Developmental Psychology	3
Psych 326	Introduction to the Psychology of Aging	3
PNP 330	Sensation and Perception	3
PNP 3401	Biological Psychology	3
PNP 3451	Genes, Environment, and Human Behavior	3
PNP 3531	Psychology of Personality	3
PNP 3541	Abnormal Psychology	3
Psych 357	Introduction to Clinical Psychology	3
Psych 358	Language Acquisition	3
PNP 360	Cognitive Psychology	3
PNP 361	Psychology of Learning	3
PNP 362	The Biological Basis of Human Behavior	3
Psych 367	Positive Psychology: The Science of Happiness	3
Psych 374	Drugs, Brain and Behavior	3
PNP 380	Human Learning and Memory	3
Psych 4046	Developmental Neuropsychology (Writing Intensive)	3
Psych 4048	Neuropsychology of Dementia	3
PNP 408	Psychology of Language	3
PNP 4302	Cognitive Psychology Applied to Education	3
Psych 4182	Perception, Thought and Action	3
Psych 4361	Psychological Perspectives on the Self	3
Psych 4408	Trauma and Memory	3
Psych 4413	Advanced Cognitive Neuroscience (Writing Intensive)	3
PNP 4450	Functional Neuroimaging Methods	3
Psych 4541	Personality and Psychopathology	3

Psych 4591	The Development of Social Cognition	3
Psych 4592	Development of Social Cognition (Writing Intensive)	3
Psych 462	Psychology of Memory and Cognition	3
Psych 4625	Autobiographical Memory	3
Psych 4651	History and Modern Systems of Psychology	3
Psych 4746	Biological Pathways to Psychopathology: From Genes and the Environment to Brain and Behavior	3
Psych 4765	Inside the Disordered Brain: Biological Bases of the Major Mental Disorders	3
PNP 495	PNP Seminar	3
PNP 496	PNP Seminar: Rationality	3

Neuroscience

Code	Title	Units
Biol 3058	Physiological Control Systems	2
Psych 3401	Biological Psychology	3
Biol 3421	Introduction to Neuroethology	3
Biol 3422	Genes, Brains and Behavior	3
PNP 350	Physics of the Brain	3
PNP 355	Physics of Vision	3
Biol 360	Biophysics Laboratory	3
PNP 402	The Physiology and Biophysics of Consciousness	2
Biol 4030	Biological Clocks	3
Biol 4031	Biological Clocks (WI)	3
PNP 404	Laboratory of Neurophysiology	4
Psych 4046	Developmental Neuropsychology (Writing Intensive)	3
Psych 4048	Neuropsychology of Dementia	3
Phil 4212	Philosophy of Neuroscience	3
Psych 4413	Advanced Cognitive Neuroscience (Writing Intensive) (WI)	3
PNP 4450	Functional Neuroimaging Methods	3
PNP 4488	The Cognitive Neuroscience of Film	3
Psych 4746	Biological Pathways to Psychopathology: From Genes and the Environment to Brain and Behavior	3
BME 4902	Cellular Neurophysiology	3
PNP 495	PNP Seminar	3
PNP 496	PNP Seminar: Rationality	3

Anthropology

Code	Title	Units
Anthro 3383	Cognition and Culture	3
Anthro 3386	Language, Culture and Society	3
PNP 362	The Biological Basis of Human Behavior	3
PNP 3662	Primate Biology	3
PNP 406	Primate Ecology and Social Structure	3
PNP 4122	Language and Gender	3
PNP 4190	Primate Behavior	3
PNP 4192	Primate Cognition	3
PNP 495	PNP Seminar	3
PNP 496	PNP Seminar: Rationality	3

Linguistics

Code	Title	Units
PNP 301	Symbolic Logic	3
PNP 306	Philosophy of Language	3
PNP 309	Syntactic Analysis	3
PNP 3111	Introduction to Semantics	3
Ling 312	Phonetics	3
PNP 313	Phonological Analysis	3
PNP 3171	Introduction to Computational Linguistics	3
PNP 320	Historical and Comparative Linguistics	3
Anthro 3386	Language, Culture and Society	3
Ling 339	Introduction to Sociolinguistics	3
Psych 358	Language Acquisition	3
PNP 3701	Introduction to Hispanic Linguistics	3
PNP 396	Linguistics Seminar: Pragmatics in Second Language Learning	3
Phil 4061	Topics in the Philosophy of Language	3
PNP 4065	Advanced Philosophy of Language	3
Psych 433	Psychology of Language	3
PNP 4122	Language and Gender	3
Span 413	Linguistics and Language Learning	3
Span 416	Introduction to Hispanic Linguistics	3
Span 417	Spanish Phonetics, Phonology and Dialectology	3
PNP 4315	Culture, Language and the Education of Black Students	3
Psych 4413	Advanced Cognitive Neuroscience (Writing Intensive)	3
PNP 466	Second Language Acquisition	3
PNP 467	Grammar and Vocabulary Acquisition	3

Span 469	Reading and Writing in a Second Language	3
PNP 495	PNP Seminar	3
PNP 496	PNP Seminar: Rationality	3

IV. Capstone

The capstone is required for honors students and first majors; it is recommended for second majors. It consists of one of the following:

- A PNP honors project (PNP 499, 6 units; requires PNP honors form to be filled out and approved by honors coordinator)
- The 2-unit PNP Reading Class plus PNP Seminar (PNP 495) or PNP Seminar: Rationality (PNP 496)
- The PNP Reading Class (formerly PNP Book Club) plus 3 advanced units of independent study (PNP 500). The independent study details (<https://pnp.wustl.edu/independent-study/>) are available on the PNP website.

Units from a capstone experience can count toward the depth requirement in either the CN or LCC track.

Minors

The Minor in Philosophy- Neuroscience-Psychology

Units required: 15

Required courses: Minors are required to complete at least 15 units, 9 of which must be at the 300 level or above.

The minor is composed of a **6-unit introductory sequence** (PNP 200 and PNP 201 or FYP 120A and FYP 122A), followed by the below courses:

- 3 units of Philosophy:

PNP 315 Philosophy of Mind/Phil 315 **or**
PNP 306 Philosophy of Language/Phil 306G

- 3 units of Neuroscience:

PNP 3411 Principles of the Nervous System/Biol 3411 **or**
Psych 3604 Cognitive Neuroscience

- 3 units of Psychology:

PNP 360 Cognitive Psychology/Psych 360 **or**
PNP 408 Psychology of Language

Additional Information

Psych 100B is the prerequisite for all psychological & brain science courses at the 300 level and above. Note that no more than 6 units counted toward a minor in PNP may be transferred or earned abroad.

Courses

Visit online course listings to view semester offerings for L64 PNP (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L64&crsLvL=1:4>).

L64 PNP 200 Introduction to Cognitive Science

We seek to understand the mind-brain by integrating findings from several of the cognitive sciences, including philosophy, psychology, neuroscience, linguistics, anthropology and artificial intelligence. This course considers multiple perspectives on such topics as mental imagery, concepts, rationality, consciousness, emotion, language, thought, memory, attention and machine intelligence. Prerequisite: completion of at least one of the following courses: Psych 100B, Phil 120F, Phil 125C, Biol 296A, MBB 120A or Ling 170D.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L64 PNP 201 Inquiry in the Cognitive Sciences

Understanding the mind-brain involves orchestrating a variety of conceptual tools and modes of inquiry from the cognitive sciences. This course offers a hands-on introduction to a variety of research tactics used in the behavioral and biological sciences and emphasizes the advantages of combining them. For example, neuroimaging can enhance the interpretation of experiments by cognitive psychologists and modeling can be used to simulate and understand the effects of brain lesions. Prerequisite: completion of at least one of the following courses: Psych 100B, Phil 120F, Phil 125C, Biol 296A, MBB 120 or Ling 170D.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L64 PNP 301 Symbolic Logic

During the first half of the course, we will be studying some features of truth-functional and first-order classical logics, including studying the model theory and metatheory for first-order logic in much greater depth than in Phil 100. During the second half of the course, we will go on to study three different styles of proof-system: tableaux, axiomatic, and natural deduction. This course continues on where Phil 100 leaves off. It is recommended for students who have already taken that introductory course or for students who already have a strong background in mathematics. Priority given to majors in philosophy and PNP.

Same as L30 Phil 301G

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: HUM

L64 PNP 306 Philosophy of Language

A survey of major philosophical problems concerning meaning, reference, and truth as they have been addressed within the analytic tradition. Readings that represent diverse positions on these focal issues will be selected from the work of leading philosophers in the field, for example: Frege, Russell, Wittgenstein, Davidson, Quine, Kripke, and Putnam. Students are encouraged to engage critically the ideas and arguments presented, and to develop and defend their own views on the core topics. Prerequisites: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Same as L30 Phil 306G

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN:

H

L64 PNP 309 Syntactic Analysis

The ability to produce and understand an infinite number of sentences is perhaps the most fascinating aspect of the human language faculty. Syntax is the study of how the brain organizes sentences from smaller phrases and words. This course explores syntactic analysis from several perspectives within generative linguistics, focusing primarily on the Government and Binding framework but also introducing Minimalist and Optimality Theoretic approaches. Topics include phrase structure, transformations, case theory, thematic roles and anaphora. Assignments help students learn to construct and compare analyses of syntactic problems in English and other languages. Prerequisite: Ling 170D or permission of instructor. Same as L44 Ling 309

Credit 3 units. A&S IQ: SSC BU: HUM EN: S

L64 PNP 3111 Introduction to Semantics

Semantics is the branch of linguistics which studies how speakers assign meaning to words, sentences, and larger units of discourse. We combine perspectives from both linguistics and philosophy to explore a variety of topics including polysemy, compositionality, quantification, anaphora, definite descriptions, attitude reports, presupposition and implicature. Prerequisite: Ling 170D or Phil 301G or permission of instructor. Same as L44 Ling 311

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: HUM EN: S

L64 PNP 313 Phonological Analysis

There are several important abilities involved in the use of human language, one of these being the ability to organize speech sounds. The system that the brain uses to accomplish this task is the subject matter of phonology. This course explores phonology from several perspectives within generative linguistics, including both traditional rule-based and current Optimality Theoretic approaches. Topics discussed include phonological features, lexical phonology, prosodic morphology, tone, and metrical stress. Assignments help students learn to analyze phonological problems in a variety of languages and to evaluate the consequences of using different analytic approaches. Prerequisite: Ling 170D or permission of instructor. Same as L44 Ling 313

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L64 PNP 315 Philosophy of Mind

An introduction to philosophical analyses of the nature of mind, especially those developed by contemporary philosophers. The focus will be on questions such as the following: What is a mind? How does it relate to a person's brain? How does it relate to a person's body and the external world? Can a mind exist in a very different kind of body (e.g., a computer or a robot)? Does thinking require a language-like code? If so, can non-linguistic species think? What is it to have a mental image or to experience pain? Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Same as L30 Phil 315

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L64 PNP 3151 Introduction to Social Psychology

Introduction to the scientific study of individual behavior in a social context. Topics: person perception, stereotyping and prejudice, attitudes, memory, and political psychology, among other issues. Prerequisite: Psych 100B.

Same as L33 Psych 315

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L64 PNP 316 Mind and Morals

This course explores a number of issues at the intersection of ethics and cognitive science. Possible topics include: Are we rational? Do we know our own thoughts and motivations? Can one believe that one ought to do something without being motivated to do it? Do emotions impair or enhance our ability to reason? How do moral beliefs develop through childhood? Are traits such as intelligence and character unchangeable, and what implications follow if they are (or are not)? Does retaining my identity over time require having the same mind, and, if so, am I the same person now as I was as a child? Are non-human animals worthy of moral consideration? If brain activity is determined by causal laws, can we have free will? Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP. Same as L30 Phil 316

Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH EN: H

L64 PNP 3171 Introduction to Computational Linguistics

Use of computers to analyze, understand, and generate human language. Emphasis on appreciating practical applications such as text analysis, search and creation of dictionaries and corpora, information retrieval, machine translation, and speech interfaces. Survey of rule-based and statistical techniques. Students acquire programming skills appropriate for solving small- to medium-scale problems in linguistics and text processing, using a language such as Python. Students have regular programming assignments and complete a semester project. No previous knowledge of programming required. Prerequisite: L44 Ling 170D.

Same as L44 Ling 317

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L64 PNP 320 Historical and Comparative Linguistics

Historical linguistics focuses on how languages change over time. Comparative linguistics focuses on their similarities and differences. In this course we trace some of the differences and changes in sound (phonetics and phonology), word formation (morphology), sentence structure (syntax), and meaning (semantics). Topics include linguistic universals, the structural and genetic classification of languages, the techniques of reconstructing proto-languages, and the causes of language change. Examples from Indo-European languages (for example, Greek, English, and Spanish) and from Native American languages (for example, Quechua and Mayan) are emphasized. Prerequisite: Ling 170D.

Same as L44 Ling 320

Credit 3 units. A&S IQ: LCD, SSC Art: HUM BU: HUM EN: S

L64 PNP 321 Philosophy of Science

Pivotal concepts common to empirical sciences are examined and clarified. These include: explanation, confirmation, prediction, systematization, empirical significance, and the relationship of all these concepts to the structure of scientific theory. Examples may be drawn from both contemporary and

historical science, including the social, biological, and physical sciences. Students with a background in science are particularly encouraged to consider this course. Priority given to majors in philosophy and PNP.

Same as L30 Phil 321G

Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM EN: H

L64 PNP 3211 Developmental Psychology

This course concentrates on the cognitive and social development of the person from conception to adolescence. Topics covered include: infant perception, attachment, cognitive development from Piagetian and information processing perspectives, aggression and biological bases of behavior.

Prerequisite: Psych 100B.

Same as L33 Psych 321

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L64 PNP 3221 Music Cognition

An introduction to modern research on music perception and cognition. The course covers four main topics: the perception of key, the psychoacoustics of dissonance, the relationship between attention and musical meter, and the process by which melodies establish, fulfill, and deny expectations. Students read and discuss research from both cognitive science and music theory, in addition to completing several projects.

Same as L27 Music 3221

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: HUM

L64 PNP 330 Sensation and Perception

What's involved in seeing and hearing? This course will cover perception from the physical stimuli (light and sound) that impinge upon the sensory receptors through the higher-level percepts that the stimuli generate. Demonstrations and illusions will be used as we learn about the anatomy and physiology of the sensory systems, and study the brain mechanisms that are involved in vision and audition. PREREQ: Psych 100B.

Same as L33 Psych 330

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: BA, SCI

L64 PNP 3401 Biological Psychology

An introduction to biological mechanisms underlying behavior. Topics include the physiology of nerve cells, anatomy of the nervous system, control of sensory and motor activity, arousal and sleep, motivation and higher mental processes. Prerequisite: Psych 100B.

Same as L33 Psych 3401

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

L64 PNP 3411 Principles of the Nervous System

This course will provide a broad introduction to neuroscience, starting at the level of cellular and molecular neuroscience and ultimately ending at systems and theoretical neuroscience, with emphasis on the organization of the mammalian central nervous system. Topics will include neuronal structure, the action potential, information transmission between neurons, sensory/motor systems, emotion, memory, disease, drugs, behavior, and network dynamics. A fundamental goal of this course is to provide students with the ability to approach complex problems using the scientific method and to understand the limits of knowledge. This course will also expose students to

some of the neuroscience community at Washington University. Prerequisites: Biol 2960, Biol 2970 (recommended) and Biol 3058 (recommended) or Psych 3401 and permission of instructor.

Same as L41 Biol 3411

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L64 PNP 3451 Genes, Environment, and Human Behavior

This class will examine how genetic influences impact various dimensions of human behavior, ranging from traits (e.g., personality) to psychiatric disorders. Topics to be covered include methods used to study genetic influence, how genetic predispositions interact with the environment, and ethical implications. Modern methods for gene-identification, such as genome-wide association studies, polygenic risk scores and epigenetic experiments will be examined in detail. Emphasis will be placed on understanding core concepts (e.g., what is identity-by-descent) as well as application (e.g., calculate heritability, interpretation of results from published studies). Prerequisite: Psych 100B.

Same as L33 Psych 345

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: SCI EN: S

L64 PNP 350 Physics of the Brain

Concepts and techniques of physics are applied to study the functioning of neurons and neuronal circuits in the brain. Neurons and neural systems are modeled at two levels: (i) at the physical level, in terms of the electrical and chemical signals that are generated and transmitted and (ii) at the information-processing level, in terms of the computational tasks performed. Specific topics include: neuronal electrophysiology, neural codes, neural plasticity, sensory processing, neural network architectures and learning algorithms, and neural networks as dynamical and statistical systems. Course grade is based primarily on an individualized term project. Prerequisite: Physics 117A-118A, Physics 197-198, or permission of the instructor.

Same as L31 Physics 350

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI EN: BME T, SU, TU

L64 PNP 3531 Psychology of Personality

Review of basic theoretical orientations to the understanding of personality and complex human behavior. Overview of related techniques, procedures, and findings of personality assessment and personality research. Discussion of critical issues in evaluation of personality theories. Prerequisite: Psych 100B.

Same as L33 Psych 353

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L64 PNP 3541 Abnormal Psychology

This is an introductory course in psychopathology or the scientific study of mental health disorders. The course includes definitions, theories and classification of abnormal behavior. Content focuses on symptoms, classification, prevalence, etiology, and treatment of mental health disorders, including mood, anxiety, eating, schizophrenia spectrum, substance use and personality disorders. Prerequisite: Psych 100B.

Same as L33 Psych 354

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L64 PNP 355 Physics of Vision

How do the eyes capture an image and convert it to neural messages that ultimately result in visual experience? This lecture and demonstration course covers the physics of how we see. The course is addressed to physics, pre-medical, and life-sciences students with an interest in biophysics. Topics include physical properties of light, evolution of the eyes, image formation in the eye, image sampling with an array of photoreceptors, transducing light into electrical signals, color coding, retinal organization, computing with nerve cells, compressing the 3-D world into optic nerve signals, inferring the 3-D world from optic nerve signals, biomechanics of eye movement, engineered vision in machines. The functional impact of biophysical mechanisms for visual experience are illustrated with psychophysical demonstrations. Corequisite: Physics 117A, Physics 197 or permission of instructor.

Same as L31 Physics 355

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI EN: BME T, TU

L64 PNP 3581 Conceptual Foundations of Modern Science

The aim of this course is to present some of the basic concepts underlying modern science. Insofar as many of those concepts first appeared or became predominant in the 17th and early 18th centuries, the course concentrates on primary works from that period. Among the concepts to be studied are the following: (1) Nature and natures: the ontology of matter and force; causal closure. (2) Methods: observing and intervening, systematic and organized. (3) Explanations: appeal to laws and mechanisms; teleology. Prerequisite: one course in Philosophy at the 100 or 200 level or permission of the instructor. Priority given to majors in philosophy and PNP.

Same as L30 Phil 358

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L64 PNP 360 Cognitive Psychology

Introduction to the study of thought processing from an information-processing approach. Emphasis will be placed on theoretical models that are grounded in empirical support. Topics include pattern recognition, attention, memory, reasoning, language processes, decision making, and problem solving. Prerequisite: Psych 100B.

Same as L33 Psych 360

Credit 3 units. A&S IQ: NSM Arch: SSC Art: NSM BU: BA

L64 PNP 361 Psychology of Learning

Basic learning processes in animals, such as conditioning, reinforcement, aversive control, and constraints on learning. Comparisons and interactions between classical and operant conditioning. Consideration given to learning theorists and theories, along with applications from the laboratory to the "real world." Prerequisite: Psych 100B.

Same as L33 Psych 361

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

L64 PNP 362 The Biological Basis of Human Behavior

Infidelity, marriage customs, inner city violence, infanticide, intelligence...Are the behavioral patterns we see genetically fixed and racially variable? What is the evolutionary and biological basis of human behavior? This course offers a critical evaluation of these from an anthropological perspective.

Same as L48 Anthro 362

Credit 3 units. A&S IQ: LCD, NSM, SD Arch: NSM Art: NSM BU: BA

L64 PNP 363 The Neuroscience of Movement: You Think, So You Can Dance?

Although humans have expressed themselves through movement throughout time, only recently have neurophysiological investigative techniques allowed us to glimpse the complex neural processes that allow the coordination and integration of thought, action, and perception. This course introduces students to the nascent yet growing field of dance neuroscience. In part one of this course, we explore fundamental concepts of motor control, including how our central nervous system integrates information to allow us to maintain posture and balance, to coordinate our limbs to external rhythms, and to move our bodies gracefully and expressively through space and time. In part two, we explore theoretical frameworks of motor learning as they pertain to movement. We delve into the neuromechanisms underlying common tools that dancers and athletes use to improve motor performance and how dance training induces neuroplasticity in brain structure and function. In part three, we explore the neural underpinnings of aesthetic appreciation while watching dance, including the action observation network and affective responses to art. Required work includes short assignments, a final project and presentation on a topic of your choice related to the course focus, and a few movement workshops (for which dance training is not required). Prerequisite: introductory course in dance, biology, or neuroscience, or permission from the instructor.

Same as L29 Dance 363

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L64 PNP 366 Art and the Mind-Brain

In recent years, there has been a growing interest in the bearing of cognitive science on the perception and understanding of art. This interest has roots in tradition: historically, art, aesthetics, and vision science have often been linked. However, the growth of knowledge in cognitive science has opened up new opportunities for understanding art and addressing philosophical questions. The converse is also true. The production, perception, and understanding of art are human capacities that can shed light on the workings of the mind and brain. This course considers questions such as the following: What is art? How do pictures represent? Does art express emotion? Why does art have a history? Prerequisites: one course in philosophy at the 100 or 200 level or permission of the instructor. Priority given to majors in philosophy and PNP.

Same as L30 Phil 366

Credit 3 units. A&S IQ: HUM Art: HUM BU: HUM EN: H

L64 PNP 3662 Primate Biology

This course takes a multifaceted introductory approach to the primates, the closest relatives of human beings, by investigating anatomy, growth and development, reproduction, behavioral adaptations, ecology, geographic distribution, taxonomy and evolution. Emphasis is placed not only on the apes and monkeys, but also on the lesser-known lemurs, lorises, bushbabies, tarsiers and many others. The importance of primate biology to the discipline of anthropology is discussed. Intended for students who have already taken Anthro 150A, and recommended for students who wish to take the more advanced 400-level courses on primates. Prerequisite: Anthro 150A or permission of instructor.

Same as L48 Anthro 3661

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

L64 PNP 3701 Introduction to Hispanic Linguistics

An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax), and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages.

Same as L38 Span 370

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

L64 PNP 380 Human Learning and Memory

A survey of issues related to the encoding, storage and retrieval of information in humans. Topics include memory improvement strategies, people with extraordinary memories, memory illusions and distortions, among other topics. Limited to 25 students.

Prerequisite: Psych 100B.

Same as L33 Psych 380

Credit 3 units. A&S IQ: NSM Art: NSM BU: BA

L64 PNP 390 PNP Reading Class

Each time this course is offered a book is selected that does an exemplary job of bringing together insights and results from multiple disciplines in targeting an important topic. We read and discuss the book and possibly a small amount of supplementary reading. A short presentation and paper are required. Prerequisite: PNP major standing.

Credit 2 units. A&S IQ: SSC BU: HUM EN: S

L64 PNP 396 Linguistics Seminar: Pragmatics in Second Language Learning

Readings on a selected topic in theoretical linguistics with an emphasis on discussion, presentation and writing. Prerequisite: varies with topic.

Same as L44 Ling 396

Credit 3 units. A&S IQ: SSC EN: S

L64 PNP 402 The Physiology and Biophysics of Consciousness

This course will explore the questions surrounding the search to understand the biophysical substrate of consciousness. Some areas to be explored: 1. Can consciousness be addressed like any other biological property in the sense that it has evolved by natural selection and that some elements of it are present in simple model systems, such as the fruit fly? Can insight be gained studying simple model systems? 2. Where in the brain is consciousness? What is the pattern of neurological events that occurs during consciousness? Is brain activity generating consciousness localized or distributed? Does it involve interacting brain regions? Does brain activity generating consciousness migrate to different brain regions? 3. How does the dynamic core hypothesis of Edelman relate to these questions? What can functional brain imaging add to these questions? Are Gamma waves involved in higher mental activity, and do they promote synchronized firing of neurons from different brain areas? How does this relate to the binding problem? 4. How does the brain's ability to function as a

computer relate to consciousness? In many respects the brain functions as a computer using electrical signals called Action Potentials. Action potentials in neuronal networks function in an analogous way as DC electrical impulses function in computer circuits. What is the output of computation in an electrical device? What are the theoretical limitations regarding what computation can achieve and ask whether electrical activity in the brain also has a fundamentally different purpose in addition to computation. 5. Is our knowledge of the physical world too primitive and incomplete to understand consciousness? The brain is an electronic device and consciousness clearly depends on its electrical activity. Yet, electrical forces are poorly understood, both in the context of classical physics and quantum physics. Will understanding consciousness have to wait for a unified theory that more accurately describes electrical forces? Taught in the medical school: McDonnell Science Building 983. Prerequisites: Bio3411 or equivalent. College-level physics, some knowledge of computers.

Credit 2 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L64 PNP 404 Laboratory of Neurophysiology

Neurophysiology is the study of living neurons. Students record electrical activity of cells to learn principles of the nervous system including sensory transduction and coding, intercellular communication and motor control. The course meets for 9 hours each week. Students may leave the lab for up to 2 hours. Prerequisites: Biol 3411 or Psych 4411 and permission of Student Coordinator, Erin Gerrity. Biol 3411 may be taken concurrently.

Same as L41 Biol 404

Credit 4 units. A&S IQ: NSM, WI Arch: NSM Art: NSM

L64 PNP 4041 Math Logic II

Gödel's Incompleteness Theorem: its proof, its consequences, its reverberations. Prerequisite: Philosophy 403 or a strong background in mathematics.

Same as L30 Phil 404

Credit 3 units. A&S IQ: HUM Art: HUM

L64 PNP 406 Primate Ecology and Social Structure

Survey of the ecology, individual and social behavior, adaptations, and interactions of the major groups of primates. Emphasis on studies designed to examine the relationships among ecology, morphophysiology, and behavior. Methods used in collecting data on primates in the field. Prerequisite: Anthro 150A or one 100-level biology course.

Same as L48 Anthro 406

Credit 3 units. A&S IQ: NSM Art: NSM

L64 PNP 4065 Advanced Philosophy of Language

An advanced-level treatment of basic topics in the philosophy of language as this discipline is understood in the analytic tradition. The main positions and the problems they pose are surveyed; focal themes include meaning, reference and truth. The aim of the course is to help students develop effective expository techniques and to provide them with the necessary conceptual resources to analyze and criticize different theoretical views. Prerequisite: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Same as L30 Phil 4065

Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L64 PNP 408 Psychology of Language

This course surveys current research and theory in psycholinguistics, covering the biological bases, cognitive bases and learning of language. We consider studies of normal children and adults, the performance of individuals with various types of language disorders, and computer simulations of language processes. Topics range from the perception and production of speech sounds to the management of conversations. Each student carries out an original research project on some aspect of psycholinguistics. Prerequisites: Ling 170D and Psych 100B. Same as L33 Psych 433

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L64 PNP 4141 Advanced Epistemology

An advanced survey of selected issues in contemporary epistemology. Careful attention will be given to one or more specific epistemological topics, such as skepticism, certainty, coherence, perception, induction, virtue epistemology, testimony, formal epistemology, the nature and value of understanding, or epistemic normativity. Prerequisite: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor. Same as L30 Phil 4141

Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L64 PNP 4142 Advanced Metaphysics

Through readings from both classical and contemporary sources, a single traditional metaphysical concern will be made the subject of careful and detailed analytic attention. Possible topics include such concepts as substance, category, cause, identity, reality and possibility, and such positions as metaphysical realism, idealism, materialism, relativism and irrealism. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor. Same as L30 Phil 4142

Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L64 PNP 418 Current Controversies in Cognitive Science

An advanced survey of current debates in cognitive science with an emphasis on the philosophical issues raised by these debates. Topics may include: evolutionary psychology; innateness and neural plasticity; perception and action; consciousness; connectionism; robotics; embodied cognition; moral reason; emergence and artificial life; concepts and content; animal cognition. Prerequisites: one course in Philosophy at the 300 level, graduate standing, or permission of the instructor.

Credit 3 units. A&S IQ: HUM EN: H

L64 PNP 419 Philosophy of Psychology

An investigation of the philosophical presuppositions and implications of various traditions in psychology, including behaviorism, Gestalt and cognitivism, with a special emphasis on the development of the information processing approach of contemporary cognitivism. The conception of psychological phenomena, data and explanation central to each of these traditions are examined, and typical topics include the debates between propositional and imagistic models of representation, different accounts of concepts and categorization, and the relation of psychology to ethics. Prerequisite: one previous course in Philosophy at the 300 level, graduate standing, or permission of the instructor. Same as L30 Phil 419

Credit 3 units. A&S IQ: HUM Art: HUM

L64 PNP 4190 Primate Behavior

Discussion and analysis of recent research on the social behavior of nonhuman primates. Data from both field and laboratory study. Prerequisite: Anthro 406, or permission of instructor.

Same as L48 Anthro 419

Credit 3 units. A&S IQ: NSM Art: NSM BU: BA

L64 PNP 4192 Primate Cognition

This course investigates historical and current views regarding the cognitive capacities of nonhuman primates, and the extent to which these abilities are shared with humans. Topics for this class include: social cognition, problem-solving, tool use, culture, communication, theory of mind, deception, self-recognition, imitation, and numerical cognition. The classes involve discussion and critical evaluation of theory and methods in this challenging and exciting area of primate cognitive research.

Same as L48 Anthro 4191

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L64 PNP 4210 Topics in Advanced Philosophy of Science: Scientific Explanation

This course will vary in topics related to Philosophy of Science from semester to semester. Prerequisites: one course in Philosophy at the 300-level, graduate standing, or permission of the instructor.

Same as L30 Phil 4210

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L64 PNP 426 Theories of Concepts

Concepts are the building blocks of thought. They are implicated in just about every cognitive task. Beyond that, there is little consensus. What information do concepts encode? How are they acquired? How are they combined to form thoughts? How are they related to perception and imagery? Each of these questions has been answered in numerous ways. In this course, we will explore competing theories of concepts that have been proposed by philosophers, psychologists, and other cognitive scientists. No prior acquaintance with these issues is required. Prerequisites: one previous course in Philosophy at the 300 level, graduate standing, or permission of the instructor. Same as L30 Phil 426

Credit 3 units. A&S IQ: HUM Art: HUM

L64 PNP 4302 Cognitive Psychology Applied to Education

This course is intended to cover topics in the cognitive psychology of human memory, conceptual learning and comprehension with special focus on areas, theory and research that have potential application to education. Thus, the course provides selective coverage of theoretical and empirical work in cognitive psychology that provides potential to inform and improve educational practice. The applicability of these themes is explicitly developed and evaluated through the primary research literature using educationally oriented experimental paradigms. The course is of interest and benefit to education majors and to psychology majors interested in cognitive psychology and its applications. Prerequisites: junior/senior status, 9 units in psychology and Psych 100B or junior/senior status, 9 units in education and Psych 100B. Same as L33 Psych 4302

Credit 3 units. A&S IQ: SSC EN: S

L64 PNP 4315 Culture, Language and the Education of Black Students

This course examines the communicative patterns of what is called variously African-American language, Pan-African linguistic systems and Ebonics within the context of public school policy and practice. In addition to a review of the structural and pragmatic aspects of black speech, the course highlights relationships between controversies within the linguistic community, contrasting views of speech within black lay communities, public discourse, and educational policy. Students also conduct a field-based research project in accord with their particular interests.

Same as L12 Educ 4315

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

L64 PNP 4332 Cognition and Computation

This course introduces students to some of the key frameworks for thinking about the mind in computational terms. We look at some basic topics in the theory of computation, in addition to considering philosophical issues raised by computational models of cognitive processes. This course is required for graduate students in the PNP PhD program. Prerequisites: at least two 400-level PNP courses cross-listed in Philosophy.

Credit 3 units. A&S IQ: SSC EN: S

L64 PNP 4488 The Cognitive Neuroscience of Film

To understand complex events in real life depends on perception, action and memory. To understand movies, people probably depend on similar psychological and neural mechanisms. This seminar uses results from psychology and neuroscience to try to better understand the experience of a movie viewer, and uses theory and practice to explore psychological hypotheses about perception. Prerequisite: Psych 360 or Psych 3604, or Psych 4604, or graduate standing in psychology.

Same as L33 Psych 488

Credit 3 units. A&S IQ: NSM

L64 PNP 466 Second Language Acquisition

There are many ways in which a second language can be learned: from infancy as the child of bilingual parents, or later through formal instruction, immersion in a new culture, or in a particular work or social situation. This class is an inquiry into the processes by which acquisition occurs. Topics include the nature of language learning within the scope of other types of human learning; the relationship between first- and second-language acquisition; the role of linguistic, cognitive and sociocultural factors; insights gained from analyzing learners' errors; key concepts such as interlanguage and communicative competence; bilingualism; the optimal age for second-language acquisition; and a critical appraisal of different theories of second-language acquisition. Both theoretical and instructional implications of second-language acquisition research are considered. This course can be used toward certification in TESOL and is a required course for the Graduate Certificate in Language Instruction. Prerequisite: Ling 170D or equivalent is recommended, especially for undergraduates, but is not required.

Same as L44 Ling 466

Credit 3 units. A&S IQ: HUM EN: H

L64 PNP 467 Grammar and Vocabulary Acquisition

This course examines theoretical and instructional implications of research on grammar and vocabulary acquisition. Topics include making form-meaning connections during language learning; developmental stages; the role of input and input processing; explicit and implicit methods of grammar instruction; pertinent factors in vocabulary acquisition, such as a learning context and processing resource allocation; and comparisons of incidental and direct vocabulary instruction techniques. Major theories of language acquisition (e.g., nativism, emergentism) are critically examined in light of the research presented, and research findings are applied to instructional practices.

Same as L38 Span 467

Credit 3 units. A&S IQ: LCD BU: BA EN: H

L64 PNP 4691 Second Language Reading and Writing:

Theory, Research and Practice

This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students discuss how to bridge research and practice, and they create reading and writing activities driven by theory and empirical investigations. This course is a required course for the undergraduate minor in applied linguistics and an elective for the Graduate Certificate in Language Instruction.

Same as L38 Span 4691

Credit 3 units. A&S IQ: SSC EN: S

L64 PNP 494 Behavioral Psychology Readings Group

This weekly journal-style readings class provides the opportunity for students to read and discuss seminal as well as current papers on the conceptual aspects of behavioral psychology and relevant research. Points of contact among behaviorism, cognitivism, and neuroscience and the natural lines of fracture will be examined. Prerequisite: Psych 100B and one of the following: Psych 361, Psych 360, or a Philosophy course.

Same as L33 Psych 494

Credit 1 unit. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L64 PNP 495 PNP Seminar

Subject varies per semester. Not always offered as writing-intensive, refer to individual semester listing. Prerequisites: a 300-level philosophy course (Phil/PNP 315 is recommended) and PNP major standing or approval of instructor.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L64 PNP 495W PNP Seminar: Writing Intensive

Subject varies per semester. Fulfills Writing Intensive (WI) requirement. Prerequisites: a 300-level philosophy course (Phil/PNP 315 is recommended); and PNP major standing or approval of instructor.

Credit 3 units. A&S IQ: SSC, WI EN: S

L64 PNP 496 PNP Seminar: Rationality

Subject varies each semester. Prerequisite: a 300-level Philosophy course (Phil/PNP 315 is recommended); and PNP Major standing or approval of instructor.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L64 PNP 499 Study for Honors

Prerequisites: Visit the PNP Honors webpage (<http://pnp.artsci.wustl.edu/undergraduate/honors/prerequisites/>).
Credit 3 units. EN: S

Physical Education

Undergraduate students may take both lecture-laboratory and performance courses through the Department of Athletics. A total of 12 performance units may be included in the 120 units required for graduation. All courses are offered only on a credit/no credit basis.

L28 P.E. 115 Topics In Physical Education: Beginning Weight Training

Major emphasis is on strength development. First class will meet in the Burmesiter Lounge, Sumers Recreation Center.
Credit 1 unit.

L28 P.E. 1201 Fundamentals of Rowing for Fitness

This eight-week course will focus on the effective use of Concept II Rowing as tools to learn the rowing stroke as well as to maintain aerobic fitness and develop strength. Emphasis will be placed on the correct use of technique to decrease risk of injury; varying duration and intensity of work on the machine to develop different energy systems; and using these new skills in developing lifetime fitness. Instruction will include the use of videotape and video monitoring. Athletic shoes and clothes that are not baggy are needed to participate. There will be a minimum amount of running and light, low-impact aerobic activity required as a warm-up.
Credit 1 unit.

L28 P.E. 131 Topics in Physical Education: Group Fitness

This 10-week course is designed to give students the unique experience of a group fitness class catered just to them. Using various formats of group exercise, Group Fitness will provide a fun and dynamic way to motivate participants to reach their desired results. Topics will include cycling, bootcamp, pilates, yoga, cardio, strength training, TRX suspension training, and a variety of other formats specific to the group, helping students to improve their overall fitness and wellness. A \$40 course activity fee is required. First class meets in the Olympic Studio, Sumers Recreation Center.
Credit 1 unit.

L28 P.E. 132 Topics in Physical Education: High-Intensity Conditioning

This eight-week course offers a varied program of high-intensity conditioning techniques specifically designed for individual needs. Supervised areas covered are cardiovascular and strength testing; weight training; pliometric training; flexibility and stretching; and aerobic and anaerobic training. There will be an organizational meeting in the Burmeister Lounge, Sumers Recreation Center.
Credit 1 unit.

L28 P.E. 136 Fitness and Conditioning

Students complete fitness testing at the beginning and end of the semester. Individual workout schedules are followed outside of class time. Orientation sessions will take place in the Burmeister Lounge, Sumers Recreation Center.
Credit 1 unit.

L28 P.E. 139 Topics in Physical Education: Intermediate/Advanced Tennis

Intermediate/advanced tennis.
Credit 1 unit.

L28 P.E. 140 Topics in Physical Education: Beginning Tennis

Beginning tennis.
Credit 1 unit.

L28 P.E. 148 Topics in Physical Education: Individual Physical Education

This course is intended for students who have a physical or medical condition that prohibits them from participating in any other P.E. class. The student must have a medical referral from their physician or the student health service. P.E.148 is an independent study class that requires three 30-minute meetings

with the instructor (first week, mid-semester, final week). An exercise program is designed based on the student's goals and limitations. The student keeps a written log that is reviewed periodically and turned in at the end of the semester.
Credit 1 unit.

L28 P.E. 160 Fundamentals of Fitness: Personal Training

This course is designed to provide students with the foundational knowledge and skills needed to pass the American College of Sports Medicine's (ACSM) Certified Personal Trainer exam. Classes will be a fusion of lecture and practical application to ensure an environment of applied knowledge. The primary emphasis will include basic human anatomy, physiology, bioenergetics, biomechanics, nutrition and their relationship with exercise. Using the guidelines provided by the ACSM and the accreditation standards of the National Commission for Certifying Agencies (NCCA), students will familiarize themselves with industry standards. Specifically, this course will refer to guidelines provided by the ACSM regarding health screening, scope of practice, client safety, behavior change strategies, program design, fitness assessments and legal issues. At the conclusion of this course, students will take a final comprehensive written and practical exam as their final evaluation. A \$90 course activity fee is required.
Credit 1 unit.

L28 P.E. 220 Topics in Physical Education: Varsity Sports

Varsity sports. Prerequisite: permission of the department.
Credit 1 unit.

L28 P.E. 232 Topics in Physical Education: High-Intensity Conditioning

High-intensity conditioning. Varied program of high-intensity conditioning techniques designed for individual needs. Supervised areas covered are cardiovascular and strength testing, weight training, plyometric training, flexibility and stretching, and aerobic and anaerobic training.
Credit 1 unit.

L28 P.E. 234 Topics in Physical Education: Lifeguard Training

This course provides the skill instruction and knowledge needed to prevent and respond to aquatic emergencies in a pool setting. Successful completion of requirements results in certification in American Red Cross Lifeguard Training for swimming pools, CPR and first aid. Prerequisite: Swimming test given during the first week of class.
Credit 1 unit.

L28 P.E. 236 Topics in Physical Education: Fitness and Conditioning

Students complete fitness testing at the beginning and end of the semester. Individual workout schedules are followed outside of class time. Students are required to attend an orientation session. Step Plus is primarily designed around step aerobics, with occasional workouts using other fitness techniques such as box aerobics and interval training. Combo Training involves the combination of many fitness techniques, such as step aerobics, box aerobics, and low-impact aerobics. Prerequisite: P.E. 208.
Credit 1 unit.

L28 P.E. 239 Topics in Physical Education: Beginning Tennis

Nine-week course.
Credit 1 unit.

L28 P.E. 240 Topics in Physical Education: Intermediate Tennis

Nine-week course. All students who register must check in with the departmental office during the first two weeks of the semester.
Credit 1 unit.

L28 P.E. 248 Topics in Physical Education: Individual Physical Education

Individual physical education. Prerequisite: medical referral needed.
Credit 1 unit.

L28 P.E. 255 Topics in Physical Education: Practicum in Sports Leadership

Practicum in sports leadership. Participation in formal leadership tasks under the direction of the Washington University Athletic Department personnel. Selection of task and scope of work is determined before enrollment by conference with instructor. Prerequisite: permission of the department.
Credit 1 unit.

L28 P.E. 258 Indoor Cycling

Indoor cycling is a high-energy cardiovascular workout performed on stationary bikes. All levels welcome; the workout can be tailored to the student's personal fitness goals and needs. A water bottle and towel are required. There will be a \$45.00 fee for a heart-rate monitor for this class.
Credit 1 unit.

L28 P.E. 291 Fundamentals of Athletic Training

Study of the duties of the athletic trainer in relation to physical education classes, competitive sports, and recreation, including the study and practice of first-aid care and the prevention of injuries.
Credit 3 units.

Physics

Physics is the discipline that deals with the most fundamental aspects of our universe, such as the properties of atoms, nuclei and elementary particles; the nature of the forces between them; and the collective behavior of atoms in solids, liquids and gases. It deals with the entire universe, from its birth to its ultimate fate. At the same time, physics provides the tools that help us to understand extremely complex everyday things, like the behavior of sand piles, the strength of materials, or processes in the brain. Physics seeks to discover and understand the mathematical rules that govern the behavior of things. Its early successes in comprehending motion, thermodynamics, electricity and magnetism provided a foundation upon which other physical sciences have grown.

For students planning a career in science and technology or intending to pursue graduate studies in physics, astronomy, earth sciences, environmental sciences, medical physics, meteorology or oceanography, a major in physics provides a solid foundation. The program is sufficiently flexible to allow students to combine a physics major with a second major in chemistry, mathematics or engineering; with pre-medical studies; or with other disciplines in the humanities and social sciences. In addition to the fundamentals of physics, the program is designed to give students a broad range of skills in laboratory techniques, critical thinking, computer use, and teamwork, which will serve them well in their chosen careers. In consultation with a faculty adviser, students may design a program of study to meet individual goals and interests. Physics majors are strongly encouraged to participate in physics research projects directed by faculty members.

Introductory Physics: The Physics 191–Physics 192 and Physics 191L–Physics 192L sequence is a calculus-based introduction to physics intended for adequately prepared students interested in majoring in science or engineering or undertaking pre-medical studies. Physics 191 fulfills the requirements for the Sam Fox School. The sequence uses interactive, active-learning techniques. Calculus I (Math 131) is a corequisite, although previous or concurrent enrollment in Calculus II (Math 132) is strongly recommended.

The department also offers several other courses of general interest to the nonscience student. In most cases, these courses have no prerequisites.

Majors

The Major in Physics

Total units required: 42

Required courses: Majors in physics are required to complete the following courses:

Code	Title	Units
Physics 191	Physics I	3
Physics 191L	Physics I Laboratory	1
Physics 192	Physics II	3
Physics 192L	Physics II Laboratory	1
Physics 322	Physical Measurement Laboratory	3
Physics 411	Mechanics	3
Physics 421	Electricity and Magnetism	3
Total Units		17

Physics 201 and Physics 204 are also recommended for physics majors.

One quantum physics course. Choose from the following:

Code	Title	Units
Physics 217	Introduction to Quantum Physics	3
Physics 318	Introduction to Quantum Physics II	3
Physics 471	Quantum Mechanics	3

Note that Physics 217 does not fulfill the requirement of an upper-level course.

One additional upper-level laboratory course. Choose from the following:

Code	Title	Units
Physics 316	Optics and Wave Physics Laboratory	3
Physics 321	Electronics Laboratory	3
Physics 360	Biophysics Laboratory	3
Physics 435	Nuclear and Radiochemistry Lab	3

Upper-Level Courses. Majors are required to complete a minimum of 21 units of advanced courses (300-level or higher), excluding Physics 341, Physics 342, Physics 441, Physics 442, Physics 499 and Physics 500. These 21 units include courses listed above.

Math courses required for the physics major:

Code	Title	Units
Math 131	Calculus I	3
Math 132	Calculus II	3
Math 233	Calculus III	3
Math 217	Differential Equations (We recommend that Math 217 precede Physics 411)	3
Total Units		12

Math courses recommended for the physics major:

- Math 308 Mathematics for the Physical Sciences or ESE 318 Engineering Mathematics A (We recommend that this course precede Physics 421.)

- Math 309 Matrix Algebra (We recommend that this course precede Physics 471.)
- Physics 501/Math 501 and Physics 502/Math 502 also are recommended.

Science-breadth requirement: Majors must select three of the following courses to satisfy the science-breadth requirement. One of the three courses must be Chem 105, Chem 106, Chem 111A, Chem 112A, Chem 401 or Chem 402.

Code	Title	Units
Biol 2960	Principles of Biology I	4
Biol 2970	Principles of Biology II	4
Chem 105	Introductory General Chemistry I	3
Chem 106	Introductory General Chemistry II	3
Chem 111A	General Chemistry I	3
Chem 112A	General Chemistry II	3
Chem 151	General Chemistry Laboratory I	2
Chem 152	General Chemistry Laboratory II	2
Chem 401	Physical Chemistry I	3
Chem 402	Physical Chemistry II	3
Chem 445	Instrumental Methods: Physical Chemistry	3
CSE 131	Introduction to Computer Science	3
CSE 132	Introduction to Computer Engineering	3
CSE 247	Data Structures and Algorithms	3

Biophysics Track

Physics majors may concentrate in the subfield of biophysics by taking the following (as part of their distribution requirement):

Physics requirement:

Code	Title	Units
Physics 463	Statistical Mechanics and Thermodynamics	3

One of the following:

Code	Title	Units
Physics 450	Physics of the Brain	3
Physics 455	Physics of Vision	3

One of the following:

Code	Title	Units
Physics 454	Physics of Living Systems	3
Physics 481	Critical Analysis of Scientific Data	3
Physics 509	Nonlinear Dynamics	3
Physics 563	Topics in Theoretical Biophysics	3

Biology requirements:

Code	Title	Units
Biol 2960	Principles of Biology I	4
Biol 2970	Principles of Biology II	4

Note: Students wanting to have the biophysics track displayed on their transcript must send an email to the director of undergraduate studies (dus@physics.wustl.edu) at least one semester before their graduation date.

The Major in Astrophysics

Total units required: 47

Required courses: Majors in astrophysics are required to complete the following courses:

Code	Title	Units
Physics 191	Physics I	3
Physics 191L	Physics I Laboratory	1
Physics 192	Physics II	3
Physics 192L	Physics II Laboratory	1
Physics 312	Introduction to Astrophysics	3
Physics 322	Physical Measurement Laboratory	3
Physics 411	Mechanics	3
Physics 421	Electricity and Magnetism	3
Total Units		20

Physics 201 and Physics 204 are recommended for astrophysics majors.

One quantum physics course. Choose from the following:

Code	Title	Units
Physics 217	Introduction to Quantum Physics	3
Physics 318	Introduction to Quantum Physics II	3
Physics 471	Quantum Mechanics	3

One additional laboratory course. Choose from the following:

Code	Title	Units
Physics 316	Optics and Wave Physics Laboratory	3
Physics 321	Electronics Laboratory	3
Physics 435	Nuclear and Radiochemistry Lab	3

Required advanced courses: In addition to the above requirements, students who are earning the astrophysics major are required to complete three advanced electives from the following list:

Code	Title	Units
Physics 446	Galactic Astrophysics	3
Physics 456	Stellar Astrophysics	3
Physics 460	X-Ray & Gamma-Ray Astrophysics	3
Physics 476	Astrophysics	3
Physics 478	From Black Holes to the Big Bang	3

They must also complete one additional course from the preceding list of four courses or one from the following list of courses (3 units):

Code	Title	Units
Physics 422	Electricity and Magnetism II	3
Physics 474	Introduction to Particle Physics	3
Physics 477	Physics of Finite and Infinite Nuclear Systems	3
Physics 547	Intro to Elementary Particle Physics	3
Physics 558	Relativistic Astrophysics	3
EPSc 352	Earth Materials	5
EPSc 353	Earth Forces	4
EPSc 407	Remote Sensing	3
MEMS 3410	Fluid Mechanics	3

Math courses required for the astrophysics major:

Code	Title	Units
Math 131	Calculus I	3
Math 132	Calculus II	3
Math 233	Calculus III	3
Math 217	Differential Equations	3
Total Units		12

Science-breadth requirement: Majors must select one of the following courses to satisfy the science-breadth requirement:

Code	Title	Units
Chem 105	Introductory General Chemistry I	3
Chem 106	Introductory General Chemistry II	3
Chem 111A	General Chemistry I	3
Chem 112A	General Chemistry II	3
Chem 151	General Chemistry Laboratory I	2
Chem 152	General Chemistry Laboratory II	2
Chem 401	Physical Chemistry I	3
Chem 402	Physical Chemistry II	3
Chem 445	Instrumental Methods: Physical Chemistry	3
EPSc 201	Earth and the Environment	4

Additional Information

Senior Honors: Students are encouraged to work toward Latin honors (p. 973) (i.e., cum laude, magna cum laude, and summa cum laude). To qualify, students must meet the academic requirements of the college and successfully complete a suitable project under the supervision of a faculty member in the department. The project, whether experimental or theoretical, should demonstrate the student's capacity for independent work. Honors candidates must apply to the Undergraduate Studies Committee no later than the first day of classes of their senior year. The application should include a description of the

proposed project that has been co-signed by the supervising professor. A written report of the completed work must be submitted to the committee by a deadline in March. By enrolling in Physics 499, students may earn up to 6 units of credit for the honors project.

The physics department also offers physics majors the possibility to earn departmental distinctions. These distinctions require the same grade-point average cutoffs as Latin honors (p. 973) but are calculated exclusively from the grades in physics courses (i.e., all courses with the prefix L31). Three levels of distinction are offered: 1) highest distinction; 2) high distinction; and 3) distinction. The highest and high distinctions require at least one semester of undergraduate research and a senior thesis describing the results; these distinctions are limited to the top 15% (highest distinction) and the top 15% to 50% (high distinction) of the physics majors in their senior year as ranked by their GPA in the physics courses. Students who meet the GPA cutoff but who do not undertake undergraduate research and a senior thesis may only receive the third level of distinction.

Minors

The Minor in Physics

Units required: 17

Required courses:

Code	Title	Units
Physics 191	Physics I	3
Physics 191L	Physics I Laboratory	1
Physics 192	Physics II	3
Physics 192L	Physics II Laboratory	1
Physics 217	Introduction to Quantum Physics	3
Physics 318	Introduction to Quantum Physics II	3
Total Units		14

Elective courses:

At least one course at the 300 level or above (with the exception of Physics 303, Physics 304, Physics 341, Physics 342, Physics 441, Physics 442, Physics 499 and Physics 500) with a grade of C- or better.

The Minor in Astrophysics and Astroparticle Physics

Units required: 20

Required courses:

Code	Title	Units
Physics 191	Physics I	3
Physics 191L	Physics I Laboratory	1
Physics 192	Physics II	3
Physics 192L	Physics II Laboratory	1
Physics 217	Introduction to Quantum Physics	3
Physics 312	Introduction to Astrophysics	3
Total Units		14

Two of the following seven courses:

Code	Title	Units
Physics 318	Introduction to Quantum Physics II	3
Physics 446	Galactic Astrophysics	3
Physics 456	Stellar Astrophysics	3
Physics 460	X-Ray & Gamma-Ray Astrophysics	3
Physics 474	Introduction to Particle Physics	3
Physics 476	Astrophysics	3
Physics 478	From Black Holes to the Big Bang	3

The Minor in Biomedical Physics

Units required: 17

Required courses:

Code	Title	Units
Physics 191	Physics I	3
Physics 191L	Physics I Laboratory	1
Physics 192	Physics II	3
Physics 192L	Physics II Laboratory	1
Total Units		8

Elective courses:

Two of the following four courses:

Code	Title	Units
Physics 350	Physics of the Brain	3
Physics 354	Physics of Living Systems	3
Physics 355	Physics of Vision	3
Physics 481	Critical Analysis of Scientific Data	3

One of the following four laboratory courses:

Code	Title	Units
Physics 316	Optics and Wave Physics Laboratory	3
Physics 321	Electronics Laboratory	3
Physics 322	Physical Measurement Laboratory	3
Physics 360	Biophysics Laboratory	3

Additional Information

This is a minor for students interested in the discussion and application of methods and techniques from physics to topics in the area of biology and medicine. The program may be of interest to the pre-medicine student or the research-oriented science major. New courses are being developed that will also satisfy these requirements.

Courses

Visit online course listings to view semester offerings for L31 Physics (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L31&crslvl=1:4>).

L31 Physics 125A Solar System Astronomy

Designed for the nonscience major, this course deals with the planets, their moons and rings, comets, meteorites and interplanetary dust particles. In order to understand both classical astronomy and the results obtained from modern telescopes and the space program, basic scientific ideas (including optics and the laws of motion) are reviewed first. There also is some discussion of astronomical history to show how we have arrived at our present ideas of the structure and evolution of the solar system. Prerequisites: high school algebra and trigonometry or concurrent enrollment in Math 131.

Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI

L31 Physics 126A Stars, Galaxies and Cosmology

Intended as a general survey for the nonscience major. Topics include the structure and evolution of stars, such as red giants, white dwarfs, neutron stars, pulsars and black holes; galaxies and quasars; cosmology and the Big Bang theory. Prerequisites: high school algebra and trigonometry, or concurrent enrollment in Math 131.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: SCI

L31 Physics 141 Selected Topics in Physics I

Topics of special interest (e.g., superconductivity, quasicrystals, neural networks, chaos, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S IQ: NSM Art: NSM BU: SCI

L31 Physics 142 Selected Topics in Physics I

Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S IQ: NSM Art: NSM BU: SCI

L31 Physics 171A Physics and Society

Introduction to physics as it applies to the world we have built for ourselves. Energy as a unifying principle of physics and society's use of energy. Atoms, heat, and power. Essentials of conventional and alternative forms of energy. Nuclear energy, including radiation, waste, and weapons. Global climate change. Credit 3 units. A&S IQ: NSM, AN Art: NSM BU: SCI

L31 Physics 191 Physics I

Calculus-based introduction to the concepts, laws, and structure of physics. Topics include kinematics, Newton's laws, energy, linear momentum, angular momentum, the conservation laws, gravitational force, harmonic motion, wave motion and interference, sound, and special relativity. A daily regimen of homework and reading as well as weekly homework assignments, small-group problem-solving exercises, and active class participation are integral parts of this course. Prerequisite: previous or concurrent enrollment in Calculus I (Math 131) is required; previous or concurrent enrollment in Calculus II (Math 132) strongly recommended. Students may not receive credit for more than one of Physics 117A, Physics 191, and Physics 197. Credit 3 units. A&S IQ: NSM, AN Arch: NSM BU: SCI

L31 Physics 191F Physics I — First-Years Only

This section of Physics 191 is for rising first-years only. Any non-first-year student enrolled in this section will be removed from the course. Non-first-year students should enroll in Physics 191U. Calculus-based introduction to the concepts, laws, and structure of physics. Topics include kinematics, Newton's laws, energy, linear momentum, angular momentum, the conservation laws, gravitational force, harmonic motion, wave motion and interference, sound, and special relativity. Two evening exams required, followed by a required final exam. Prerequisite: previous or concurrent enrollment in Calculus I (Math 131) is required; previous or concurrent enrollment in Calculus II (Math 132) strongly recommended. A combination of Physics 191 and Physics 191L is a replacement for Physics 197. Students may not receive credit for more than one of Physics 117A, Physics 191, or Physics 197.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM BU: SCI

L31 Physics 191L Physics I Laboratory

Laboratory experience is an integral component of introductory physics. It is designed to provide a hands-on opportunity to explore concepts introduced in the lecture course and to develop careful measurement and documentation skills. Prerequisite/corequisite: Physics 191. Students may not receive credit for Physics 191L if they have already received credit for Physics 117A or 197.

Credit 1 unit. Arch: NSM

L31 Physics 191U Physics I — Sophomores, Juniors, and Seniors Only

This section of Physics 191 is for rising seniors, juniors, and sophomores only. Any first-year student enrolled in this section will be removed from the course. First-year students should enroll in Physics 191F. Calculus-based introduction to the concepts, laws, and structure of physics. Topics include kinematics, Newton's laws, energy, linear momentum, angular momentum, the conservation laws, gravitational force, harmonic motion, wave motion and interference, sound, and special relativity. Two evening exams required, followed by a required final exam. Prerequisite: previous or concurrent enrollment in Calculus I (Math 131) is required; previous or concurrent

enrollment in Calculus II (Math 132) strongly recommended.

Combination of Physics 191 and Physics 191L is a replacement for Physics 197. Students may not receive credit for more than one of Physics 117A, Physics 191, and Physics 197.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM BU: SCI

L31 Physics 192 Physics II

Continuation of Physics 191. Calculus-based introduction to concepts, laws, and structure of physics. Topics include electromagnetic forces and fields, direct current circuits, capacitance and inductance, electromagnetic radiation, light, physical optics, interference and diffraction, early quantum theory, and nuclear physics. A daily regimen of homework and reading as well as weekly homework assignments, small-group problem-solving exercises, and active class participation are integral parts of this course. Prerequisite: Physics 191, Physics 197, or Physics 117A; Calculus I (Math 131); previous or concurrent enrollment in Calculus II (Math 132) is very strongly recommended. Students may not receive credit for more than one of Physics 118A, Physics 192, and Physics 198.

Credit 3 units. A&S IQ: NSM, AN BU: SCI

L31 Physics 192L Physics II Laboratory

Laboratory experience is an integral component of Introductory Physics. It is designed to provide a hands-on opportunity to explore concepts introduced in the lecture course and to develop careful measurement and documentation skills. Prerequisite/Corequisite: Physics 192. Students who have taken Physics 118 or Physics 198 may not receive credit for Physics 192L.

Credit 1 unit.

L31 Physics 201 Honors Problem Solving I

This is a problem-solving course for students considering a physics- or mathematics-heavy major. The problems we will focus on will be more difficult and sophisticated than those encountered in Physics 197. However, the content will be tightly linked to the weekly schedule of Physics 197, and the course will be taught by a Physics 197 instructor. This course is for incoming first-year students and rising sophomores. Prerequisites: concurrent enrollment in Physics 197 or AP physics and permission of the instructor.

Credit 1 unit. Arch: NSM

L31 Physics 204 Honors Problem Solving II

This is the second semester of a problem-solving course for students considering a physics- or mathematics-heavy major. The problems we will focus on will be more difficult and sophisticated than those encountered in Physics 192. However, the content will be tightly linked to the weekly schedule of Physics 192, and the course will be taught by a Physics 192 instructor. This course is for incoming first-year students and rising sophomores. Prerequisite: previous enrollment in Physics 201, concurrent enrollment in Physics 192, or permission of the instructor.

Credit 1 unit.

L31 Physics 216 Introduction to Relativity: The Special Theory

Introduction to the special and general theories of relativity. Einstein's postulates of the principle of relativity and the constancy of the speed of light. Simple kinematics and dynamics: simultaneity, time dilation, space-time diagrams, twin

and other "paradoxes," $E=mc^2$, laws of motion. Elements of general relativity; curved spacetime, experimental tests, black holes, gravitational waves. Prerequisite: Physics 117A, Physics 197 or permission of the instructor.

Credit 1 unit. A&S IQ: NSM Arch: NSM Art: NSM

L31 Physics 217 Introduction to Quantum Physics

Theoretical and experimental basis for quantum mechanics, following the historical development of 20th-century physics. Failure of classical physics; the Bohr theory of the atom; the Heisenberg uncertainty principle; the Schroedinger equation; atomic and molecular structure. Prerequisites: Physics 117A and 118A or Physics 197 and 198.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: SCI

L31 Physics 241 Selected Topics in Physics II

Topics of special interest (e.g., superconductivity, quasicrystals, neural networks, chaos, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L31 Physics 242 Selected Topics in Physics II

Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: IS

L31 Physics 312 Introduction to Astrophysics

This course covers the physics needed for higher-level astrophysics courses, and is a requirement for those courses. Furthermore, it gives a first introduction to several topics in modern astrophysics, including stars (stellar structure and evolution), compact objects (neutron stars and black holes), galaxies (galactic structure), and cosmology. The course should be taken by everybody interested in astrophysics. Prerequisite: Physics 117A and 118A; or Physics 197 and 198; or permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L31 Physics 316 Optics and Wave Physics Laboratory

Introduction to optics and to treatment of experimental data. Experiments and lectures on refraction, interference, diffraction, polarization and coherence properties of waves with emphasis on light. Data analysis using statistical methods. Prerequisites: Physics 117A–Physics 118A or Physics 197–Physics 198. Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L31 Physics 318 Introduction to Quantum Physics II

Application of elementary quantum principles to atomic and molecular physics, solid-state physics, and nuclear and particle physics. Prerequisite: Physics 217.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: SCI

L31 Physics 321 Electronics Laboratory

Elements of linear and nonlinear circuits, amplifiers, feedback, with applications in experimental physics. Prerequisite: Physics 118A, Physics 198 or permission of instructor. Two three-hour laboratories and two one-hour lectures a week.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: SCI EN: BME T, DU, SU, TU

L31 Physics 322 Physical Measurement Laboratory

A variety of classical and modern experiments in physics, including five experiments in nuclear radiation. Use of computers in experiment control, data acquisition, and data analysis. Development of skills in writing lab notebooks and formal reports and giving short oral presentations on experiments. Two laboratory periods each week. Prerequisites: Physics 217 or permission of instructor; junior- or senior-level standing.

Credit 3 units. A&S IQ: NSM, AN, WI Arch: NSM Art: NSM BU: SCI EN: TU

L31 Physics 341 Selected Topics in Physics III

Topics of special interest (e.g., superconductivity, quasicrystals, neural networks, chaos, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L31 Physics 342 Selected Topics in Physics III

Topics of special interest (e.g., holography, relativity, nuclear power, computer application in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L31 Physics 344 Energy and Environmental Physics

This intermediate-level course applies basic physics principles to this increasingly important area. It is designed for all science and engineering majors with an interest in energy and environmental issues. Topics covered include population trends, fossil fuel use, renewable energy sources, energy storage strategies and climate change. Particular emphasis is given to the use of the fundamental laws of physics, such as energy conservation, as well as more general concepts such as local and global stability, chaotic behavior, probability and risk. The aim of the course is the development of analytical skills and familiarity with important concepts, in order to enable an independent and informed view of environmental problems and possible solutions. A one-year introductory physics class on the level of Physics 117–118 or 197–198 is required. This course also may be taken as Physics 444, which requires an additional independent project.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: SCI

L31 Physics 350 Physics of the Brain

Concepts and techniques of physics are applied to study the functioning of neurons and neuronal circuits in the brain. Neurons and neural systems are modeled at two levels: (1) at the physical level, in terms of the electrical and chemical signals that are generated and transmitted, and (2) at the information-processing level, in terms of the computational tasks performed. Specific topics include: neuronal electrophysiology, neural codes, neural plasticity, sensory processing, neural network architectures and learning algorithms, and neural networks as dynamical and statistical systems. Course grade is based primarily on an individualized term project. Prerequisites: Physics 117A–118A, Physics 197–198, or permission of the instructor. Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI EN: BME T, SU, TU

L31 Physics 351 Introduction to Biomedical Physics

Principles and application of key physical methods used in the diagnosis and treatment of diseases, and in biomedical research. Topics include interaction of radiation with living systems; fundamentals of optical and electron microscopy; imaging via X-rays, magnetic resonance and ultrasound; and electrical properties of organs and cells. Prerequisite: Physics 117A–118A or Physics 197–198.

Credit 3 units. Arch: NSM Art: NSM BU: SCI EN: BME T, TU

L31 Physics 352 Physics of Biomolecules

This course emphasizes the application of physical laws and concepts in understanding biomolecules and their interactions, and in developing tools to investigate their biological properties and functionalities. Topics include (1) a general introduction to biomolecules and cells, (2) physics of biopolymers as modeled by stochastic analyses, (3) transport processes in biological systems including diffusion, reaction kinetics and "life at low Reynolds number," and (4) the physics of fluorescence and its contemporary applications to dynamics of biomolecules, such as optical tweezers. Prerequisite: Physics 117–118 or Physics 197–198. Some familiarity with thermodynamics; Chem 111A–112A recommended.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM

L31 Physics 354 Physics of Living Systems

One of the grand challenges in contemporary biophysics is placing our understanding of cellular systems on a firm quantitative footing. How does the collective activity of molecules enable the cell to sense its environment, make decisions, grow and develop? This course, aimed at physical and life science students, will serve as an introduction to the physical principles and mathematical techniques underlying the analysis of systems and synthetic biology. Topics will include modeling gene and signaling networks, the regulation of intracellular structures, and pattern formation in development. Students in this course can expect to learn both analytical and computer simulation approaches to fundamental problems in biology, biophysics, and biotechnology. Graduate students will explore the subject in more depth. Prerequisites: Physics 117A–118A or Physics 197–198 or Math 217 or Math 309, or permission of instructor. Credit 3 units. A&S IQ: NSM Arch: NSM BU: SCI EN: BME T, TU

L31 Physics 355 Physics of Vision

How do the eyes capture an image and convert it to neural messages that ultimately result in visual experience? This lecture and demonstration course covers the physics of how we see. The course is addressed to physics, premedical and

life-sciences students with an interest in biophysics. Topics include physical properties of light, evolution of the eyes, image formation in the eye, image sampling with an array of photoreceptors, transducing light into electrical signals, color coding, retinal organization, computing with nerve cells, compressing the 3-D world into optic nerve signals, inferring the 3-D world from optic nerve signals, biomechanics of eye movement, engineered vision in machines. The functional impact of biophysical mechanisms for visual experience is illustrated with psychophysical demonstrations. Corequisite: Physics 117A, Physics 197 or permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI EN: BME T, SU, TU

L31 Physics 360 Biophysics Laboratory

This laboratory course consists of "table-top" experiments in biological physics that are designed to introduce the student to concepts, methods and biological model systems in biophysics. Most experiments combine experimentation with computer simulations. The list of available experiments includes electrophysiology, human bioelectricity, optical tweezers, ultrasonic imaging, mass spectrometer and viscosity measurements. Prerequisites: prior completion of Physics 117A–118A, Physics 197–198 or permission of instructor.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L31 Physics 400 Physical Science in 12 Problems

Exercises related to general chemistry, classical mechanics, quantum mechanics, statistical mechanics, thermodynamics, and kinetics, will be solved with numerical software. Each exercise will be accompanied by a lecture, a software template solving a problem and a related take-home problem. The software will allow us to focus on, and treat in a transparent fashion, physical problems without the unworldly idealizations and contrivances found in textbooks. Prerequisites: General Chem, concurrent enrollment with Chem 401 and prior or concurrent enrollment in Physics 117A, 197, or 191L.

Same as L07 Chem 400

Credit 1 unit. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L31 Physics 411 Mechanics

Motion of a point particle, rotational motion, oscillation, gravitation and central forces, Lagrangian and Hamiltonian formulation. Prerequisites: Physics 117A–118A or Physics 197–198, Math 217 or permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L31 Physics 421 Electricity and Magnetism

Starting from Coulomb's law, the Biot-Savart law and Faraday's law, the electrical and magnetic fields are defined and applied. Maxwell's equations are derived and their consequences, such as electromagnetic waves and relativity, are explored. Prerequisites: Physics 117A–118A or Physics 197–198, Math 217 or permission of instructor.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM BU: SCI EN: BME T, DU, SU, TU

L31 Physics 422 Electricity and Magnetism II

The second course in a two-part series covering the classical theory of electricity and magnetism leading to the derivation and application of Maxwell's equation. Topics in electrodynamics including Faraday's law, the displacement current and

Maxwell's equations in vacuum and in matter are covered. Electromagnetic waves and radiation, special relativity and relativistic electrodynamics also are discussed. Prerequisite: Physics 421 or permission of instructor. Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM EN: BME T, DU, SU, TU

L31 Physics 427 Introduction to Computational Physics

What does it mean to solve a research problem using a computer? What is the difference between "someone ran a simulation" and an interesting research result? What skills are needed? Familiarity with a programming language is, of course, essential, but that is only the beginning. This course will focus on the methodology of computational research, touching also on topics in numerical analysis, statistics, and visualization. The format will combine lectures and hands-on experience with an emphasis on research-style small-group projects. Prerequisites: Physics 197/198, calculus, and familiarity with a programming language.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L31 Physics 435 Nuclear and Radiochemistry Lab

Application of radiochemical techniques to problems in chemistry, physics, and nuclear medicine. Prerequisites: 3 units of physical chemistry and permission of instructor. One lecture hour and five hours of laboratory a week.

Same as L07 Chem 435

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L31 Physics 436 Introduction to the Atomic Nucleus

Introduction to the production and decay of radioactive nuclides, the structure and properties of nuclei, and the applications of nuclear and radiochemical techniques to current scientific problems. Prerequisites: one year each of chemistry, mathematics and physics.

Same as L07 Chem 436

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L31 Physics 441 Selected Topics in Physics IV

Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L31 Physics 442 Selected Topics in Physics IV

Topics of special interest (e.g., holography, relativity, nuclear power, computer applications in physics, etc.) may be studied under the supervision of a faculty member, variously by lectures, seminars or individual study or research. Students hoping to arrange such a course must prepare a proposal and secure the instructor's consent to undertake direction of the course from a faculty member and finally secure approval of the department chair.

Credit variable, maximum 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L31 Physics 446 Galactic Astrophysics

In these lectures, the focus is on the dynamics and statistical mechanics of a collection of stars, which is treated as a collisionless system. The course begins with a discussion of potential theory and proceeds to discuss the density and phase distributions of stars in star clusters and galaxies, thus leading to an understanding of the equilibria and stability of these systems. Topics such as Chandrasekhar's dynamical friction, galaxy formation, and dark matter will constitute the final topics of discussion.

Credit 3 units. A&S IQ: NSM Arch: NSM BU: SCI

L31 Physics 450 Physics of the Brain

Contents are the same as Physics 350. Also intended for graduate students. Includes a more sophisticated term project than Physics 350. Prerequisites: Physics 117A–118A or Physics 197–198, or permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI EN: BME T, SU, TU

L31 Physics 453 Topics in Theoretical Biophysics

Application of a range of physical models to biological systems. Topics include protein folding, self-assembling molecular systems, and mechanical properties of biological materials. Background material will be provided, but some exposure to statistical mechanics or thermodynamics is necessary. Prerequisite: experience with ordinary differential equations (as in Mathematics 217).

Credit 3 units. A&S IQ: NSM BU: SCI

L31 Physics 454 Physics of Living Systems

Contents are the same as Physics 354. Graduate students will explore the subject in more depth. Prerequisites: Physics 117A–118A or Physics 197–198 or Math 217 or Math 309, or permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM EN: TU

L31 Physics 455 Physics of Vision

Contents are the same as Physics 355. Also intended for graduate students. Includes a more sophisticated term project than Physics 355. Corequisite: Physics 117A , Physics 197 or permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L31 Physics 456 Stellar Astrophysics

The course Stellar Astrophysics discusses the physical processes that play a role inside stars. Relevant physical processes include emissions and absorption processes, radiation transfer, convective transfer, the weak and strong interactions, nuclear processes and nuclear burning, and the thermodynamics of equilibrium and non-equilibrium processes in stellar interiors. Subsequently, these processes are used to explain the structure and evolution of stars of different mass ranges. Finally, the course discusses endpoints of stellar evolution including white dwarfs, neutron stars, black holes, supernova explosions and gamma-ray burst. Prerequisites: Physics 312, Physics 318, or permission of instructor.

Same as L31 Physics 556

Credit 3 units.

L31 Physics 460 X-Ray & Gamma-Ray Astrophysics

Observers started to use X-ray and gamma-rays in the '60s and '70s to explore the cosmos with high-energy photons. The sky looks dramatically different at these energies with bright flares from mass accreting black holes and gamma-ray bursts and large diffuse emission from supernova remnants and cosmic rays interacting with galactic matter and magnetic fields dominating the emission. This course gives a comprehensive overview of the underlying physics and observable phenomenology. Topics covered include the history of X-ray and gamma-ray astronomy, high-energy radiation processes, particle heating and acceleration, accretion physics, blast waves and shocks, black holes, neutron stars, supernova remnants, gamma-ray bursts, and galaxy clusters. Prerequisite: L31 Physics 312.

Credit 3 units. A&S IQ: NSM Arch: NSM

L31 Physics 463 Statistical Mechanics and Thermodynamics

Basic methods of classical and quantum statistical mechanics, thermodynamics and transport theory. Prerequisite: Physics 217 or permission of instructor.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L31 Physics 471 Quantum Mechanics

Origins of quantum theory, wave packets and uncertainty relations, Schroedinger's equation in one dimension, step potentials and harmonic oscillators, eigenfunctions and eigenvalues, Schroedinger's equation in three dimensions, the hydrogen atom, symmetry, spin and the periodic table, approximation methods for time independent problems, quantum statistics. Prerequisite: Math 217, Physics 217, or permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM EN: BME T, SU, TU

L31 Physics 472 Solid State Physics

Crystal structures, binding energies, thermal properties, dielectrics, magnetism, free electron theory of metals, band theory, semiconductors, defects in solids. Prerequisite: Physics 471.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L31 Physics 474 Introduction to Particle Physics

Introduction to the standard model of particle physics, including symmetries, conservation laws, the weak interaction, the strong interaction, quark confinement and some more exotic ideas such as grand unified theories. Prerequisite: Physics 471.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L31 Physics 476 Astrophysics

This Astrophysics course focuses on cosmic rays. Victor Hess discovered in 1912 that ionizing radiation impinges on the top of Earth's atmosphere. Even though physicists have been studying cosmic rays (the ionizing radiation) for more than 100 years now with a fantastic repertoire of experimental and theoretical tools, cosmic rays never stop to surprise us, and cosmic ray physicists are still pushing the frontier of cosmic exploration in many ways. This course gives an introduction into this exciting topic covering historical and recent cosmic ray measurements at all energies, particle and antiparticle observations, and neutrino observations. The presently favored models of cosmic ray acceleration and transport are discussed in detail, and some topics of current interest are highlighted (including the production of particles

and antiparticles by dark matter). The course also covers radio astronomy and highlights the clues about the origin of the cosmic rays that can be obtained from radio observations. Prerequisite: Physics 312 or permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L31 Physics 477 Physics of Finite and Infinite Nuclear Systems

Quantum mechanics of finite and infinite systems of protons and neutrons. Interaction between nucleons. Independent-particle model of nuclei and shell structure. Contrast with atomic shell model. Isospin symmetry. Information from weakly and strongly interacting probes of nuclei. Nuclear decay properties and some historical context. Many-particle description of nuclear systems. Single-particle versus collective phenomena. Properties of excited states. Bulk properties of nuclei. Nuclear and neutron matter. Role of different energy scales in determining nuclear properties: influence of long-range, short-range, and medium-induced interactions. Pairing correlations in nuclear systems. Relevance of nuclear phenomena and experiments for astrophysics and particle physics. Prerequisites: Physics 318 or Physics 471, or permission of instructor

Credit 3 units. A&S IQ: NSM Arch: NSM

L31 Physics 478 From Black Holes to the Big Bang

An introduction to general relativity. The goal is to illustrate important features of general relativity without the full-blown mathematics of Einstein's equations by restricting attention to spherically symmetric spacetimes. Topics include: principle of equivalence; curved spacetime; spherical stars and black holes; the Big Bang model, observational cosmology. Prerequisite: Physics 411 or permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L31 Physics 481 Critical Analysis of Scientific Data

Data science is most commonly associated with topics in computer science. However, efficient algorithms, specific software packages, neural nets, and so on are only tools, and they are easily misused. In a research setting, working with data is primarily an exercise in critical thinking. The purpose of this interactive, hands-on course is to learn from mistakes by making them in a safe environment. After covering reviewing probability theory, Bayesian inference, elements of information theory, and random matrix theory, the course will focus on case studies of real-world biological data, such as quantitative imaging data, next-generation sequencing (metagenomics), and neural recordings. These modules will involve the critical reading of research papers and working through puzzle-based assignments. The primary modules will be supplemented by shorter presentations on topics chosen by students. Fair warning: This is explicitly not a course on "big data" or machine learning, although students may choose to explore some of these topics in their presentations (required for credit). Experience with MatLab or Python strongly encouraged or will need to be acquired during the course. Open to undergraduates with prior programming experience and a quantitative background (Phys 197/198, Math 203 or similar; contact instructor if unsure). Experience with data or statistics not required. Course mimics a research environment, and undergraduates considering an academic research track are especially encouraged.

Credit 3 units. Arch: NSM Art: NSM

L31 Physics 482 Research Seminar

Designed to introduce students to current developments in physics and to research carried out by faculty. Topics vary each year. Each member of the department addresses their particular specialty. Interested undergraduates may take this seminar in their junior or senior year. Must be taken pass/fail.

Credit 1 unit. A&S IQ: NSM Arch: NSM Art: NSM

L31 Physics 499 Honors Program

Prerequisites: junior standing, an average grade of B or better, and permission of the chair of the department. Program and credit to be determined; maximum 6 units.

Credit variable, maximum 3 units. Art: NSM

Political Science

The Department of Political Science offers undergraduates the opportunity to study all aspects of politics using cutting-edge technical and theoretical tools. Our courses are animated by long-standing problems related to the use of power, its rightful exercise by governments and individual actors, and the institutions that affect how that power is exercised. Reflecting the breadth of the discipline, we offer a range of classes, including courses on elections and electoral politics; international political economy; justice and the state; and comparative analyses of political institutions across states.

A major in political science thus exposes students to the primary themes of the discipline: American politics, comparative politics, international politics, judicial politics, political methodology and political theory. A major in political science can prepare students well for professional training and advanced study in law, business, education, journalism, policy analysis, political science, public administration, social work and urban planning. Political science graduates enter careers in business; federal, state and local government; the media; and nonprofit organizations.

Because political science is a broad discipline, students often choose to combine the major with such related fields as African and African-American studies; American culture studies; anthropology; economics; environmental policy; history; international studies; Jewish, Islamic, and Middle Eastern studies; Latin American studies; philosophy; psychology; and women, gender and sexuality studies.

Majors

The Major in Political Science

Total units: Students who major in political science are required to complete 30 graded units (10 courses) in political science with a C or better, distributed as follows:

Required courses:

- **Substantive Introductory Courses:** 6 graded units must come from two introductory courses. (**Note:** Students scoring a 4 or 5 on a relevant AP exam may place out of the associated introductory course and replace it with an upper-level course in a related subfield.)
- **Methodology Course:** 3 graded units must come from Pol Sci 363 Quantitative Political Methodology. All majors are urged to take this course in the fall of their sophomore year. (**Note:** Some statistics courses offered in other departments will allow students to opt out of this class, but those credits **will not** count toward their political science major. These courses include U25 PolSci 323 Introduction to Quantitative Methods [subject to the limit of 6 "outside" credit units], DAT 121 Managerial Statistics II, Math 3200 Elementary to Intermediate Statistics and Data Analysis and ESE 326 Probability and Statistics for Engineering.)

Elective courses:

- **Distribution Requirement:** 18 graded units must come from any six 300- or 400-level classes. Of these 18 units, students must complete at least one 3-unit course in three of the following fields: American politics, comparative politics, international politics, political methodology or political theory. (**Note:** Pol Sci 363 does not count toward this upper-level distribution requirement.)

- **Other courses:** A student's remaining graded units may be earned by any political science course or independent study. However, credits given for writing a senior thesis (detailed in the Senior Thesis section below) do not count toward the major.

Limitations

No more than 6 units from the following may count toward the major: study abroad, summer school, Pol Sci 419 Teaching Practicum in Political Science, transfer credit, and University College.

No more than 6 units from the following may count toward the major: Pol Sci 413 Directed Research, Pol Sci 412 Directed Readings, and independent study.

Additional Information

Concentrations: Political science majors may concentrate in a subfield of political science by taking (as part of their distribution requirement) three upper-level courses in any one of the five subfields (American politics, comparative politics, international politics, political methodology or political theory) and submitting a subfield concentration form. Students may earn concentrations in up to two subfields. The successful completion of a subfield concentration will be listed on the student's transcript.

Senior Thesis: The department encourages serious students to pursue independent research by working toward a senior thesis. Students admitted to this program work closely with a faculty adviser for a full calendar year, beginning at the end of their junior year. Students writing a senior thesis receive 6 units of college credit for two semesters of work by enrolling in Pol Sci 415 Senior Thesis Research; however, this credit does not count toward the completion of the political science major. Although there is no grade-point average requirement for writing a senior thesis, an application is required. For more information, contact the department office. All majors may apply.

To qualify to write a senior thesis, students must do the following:

- Complete Pol Sci 363 Quantitative Political Methodology or its equivalent by the fall of their junior year (all majors are strongly urged to take this course during the fall of their sophomore year).
- Complete Pol Sci 495 Research Design and Methods during the spring semester of their junior year.
- Complete a second methods course appropriate for their thesis by the start of their senior year. (A complete list of courses can be found on the Department of Political Science website (<http://polisci.wustl.edu>); Pol Sci 495 does not count toward this requirement.)

- Complete a subfield concentration (detailed in the Concentrations section above) by the end of the fall of their senior year in the subfield appropriate for their senior thesis. At least two-thirds of the concentration must be completed by the end of their junior year.
- Apply during their junior year for admission into the program.
- Students who wish to study abroad during the spring of their junior year and write a thesis during their senior year must meet with the director of undergraduate study before the start of their junior year.

Senior Honors: To graduate with Latin Honors, students must successfully complete a senior thesis and have a minimum grade-point average of 3.65, as specified by the College of Arts & Sciences.

The Major in Environmental Policy

Required units: 40

Students who major in environmental policy will be required to complete 40 graded units (13 courses), distributed as follows:

- 16 units from required foundation courses
- 9 units from research methods requirements
- 9 units from the list of upper-division courses in political science
- 3 units from a social science breadth requirement
- 3 units from a substantive distribution requirement

At least 24 of the total units must be at the 300 or 400 level.

We also strongly recommend that students complete a capstone experience. Possible options include a senior honors thesis, the environmental law clinic or an appropriate internship. We intend to develop more capstone possibilities in the future.

For additional information about this major, send an email to Sarah Winkler (sarahwinkler@wustl.edu).

Minors

The Minor in Political Science

Units required: 15

Required courses: Students must complete a minimum of 15 graded units of course work with a C or better, including at least 9 advanced units.

Additional Information

No more than 3 units may be counted from among the following: Pol Sci 412 Directed Readings, Pol Sci 413 Directed Research, Pol Sci 419 Teaching Practicum in Political Science, summer school, University College courses, or credits from another institution (including study abroad).

Courses

Visit online course listings to view semester offerings for L32 Pol Sci (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L32&crslvl=1:4>).

L32 Pol Sci 101B American Politics

This course meant to introduce students to the study of American Politics. We will analyze the origins, developments, actors, institutions, and processes of the American political system. In addition to the three branches of government, we will also cover topics such as public opinion, the media, campaigns and elections, political parties, civil rights and liberties, and more. By the end of the class, students should become more careful and insightful consumers of political knowledge.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S UColl: PSA

L32 Pol Sci 1021 The Business of Elections

This course will focus on understanding the primary and presidential elections -- particularly the 2020 election -- through a multidisciplinary approach that primarily involves political science and business. Campaigns are start-ups that rely on strategy, branding, influencing consumers (voters), financing and other concepts to achieve the election of their candidate. At the same time, American politics is highly polarized, with voters who are increasingly hostile to listening to the other side. Given this context, how does a campaign succeed as an entrepreneurial venture? This course will allow students to compare and contrast how different candidates' policies and platforms may affect different constituencies/sectors of the business/labor world as well as the economy, how the media portrays them, and what role they will play in the general election. This course is for first-year (non-transfer) students only. Students who are not first-year students will be automatically unenrolled from this course.

Same as I60 BEYOND 102

Credit 3 units. BU: BA

L32 Pol Sci 102B Introduction to Comparative Politics

One of the primary goals of a course in comparative politics is to familiarize students with a broad array of political systems. The approach taken in this course can best be characterized as the active acquisition and use of a set of tools for looking at the political world. In other words, instead of putting emphasis on what textbook writers think political scientists know, in this course the emphasis is on "how we know what we know" and on building knowledge. This approach equips students with a set of tools to use long after the course is over. These comparative tools are focused on historical, recent and current events, and students are provided the opportunity to delve more deeply into a study of the parts of the world they find most interesting.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA, IS EN: S UColl: PSC

L32 Pol Sci 103B International Politics

This is an introductory survey course. Its goal is to familiarize students with the basic concepts of International Relations (IR) as a subfield of political science and to introduce them to important issues, such as cooperation and conflict, independence, in the era of globalization, human rights and human development, and the environment.

Credit 3 units. A&S IQ: SSC Art: SSC BU: IS EN: S

L32 Pol Sci 1041 First-Year Seminar: Introduction to Political Theory I

Why is democracy a good form of government? What if a benevolent dictator arose who wrote and enforced laws that were just and equitable? What if she honored the sanctity of human life and its flourishing, guaranteed a full range of liberties to her citizens — including political ones, such as the right of free speech and organization (but not including the right to rule)? Given the problems of most living democracies, why wouldn't this be a better regime than a democratic one? And are people really capable of governing themselves anyway? Why should we trust them so? In short, what's so special about "democracy" and its corresponding idol, "public opinion," that people bow to them as hallowed virtues of a good society? In this class we provide a framework in which these and other central questions of political theory have been and can be addressed. This course is designed to introduce students to the main theoretical issues of Western political theory, including but not limited to the following concepts: justice, legitimacy, equality, democracy, liberty, sovereignty and the role of history in the political and social world. In short, the questions are meant to explore the underlying assumptions and themes of contemporary politics and political science research today. The course is designed around the careful reading of primary text materials and engagement with contemporary problems of politics available on the front pages of any daily newspaper. Although designed as a two-semester class, students may enroll in either one or both. In this first semester, we lay out the fundamental themes of political theory in Plato's *Republic* and Aristotle's *Politics* asking, among other things, what justice is and what place democracy has among other forms of government. Passing briefly onto Augustine and Aquinas' struggles with religion and civil society, we emerge in modernity with Machiavelli's *Prince* and question whether the "good" and the "political" are or ought to be different aims. We conclude the semester with the social contract theory of Hobbes and Locke in which political legitimacy is based on the terms familiar to citizens of modernity: the right to rule is somehow related to a citizen's consent to be governed. In the spring semester, we turn to the struggle that modernity and the Enlightenment raised for issues of politics, including that of history, nature, institution building and economics, guided by the texts of Rousseau, Hamilton and Madison, Tocqueville, Mill, Marx, Nietzsche, and Weber.

Credit 3 units. A&S: FYS EN: S

L32 Pol Sci 106 Introduction to Political Theory

This course offers an undergraduate level introduction to the field of political theory. We will focus on three major themes—social justice, power and freedom, and democracy—reading some canonical texts, such as Bentham's Introduction to the Principles of Morals and Legislation and Marx's Capital, but emphasizing contemporary works, such as those of John Rawls, Michael Walzer, Michel Foucault, and Robert Dahl.

Credit 3 units. A&S IQ: SSC Art: FAAM BU: BA EN: S

L32 Pol Sci 2010 Introduction to Environmental Policy

This course provides an introduction to and overview of environmental policy. Subjects covered include the policy process, the behavior of interest groups and political parties, and the actions of policymakers like Congress and the President. We'll also examine issues such as pollution control, climate change, and biodiversity.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 2121 Topics: Sophomore Seminar in Ethnic Violence

This course is intended primarily for first-year and sophomore students. The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S IQ: SSC BU: BA, ETH EN: S

L32 Pol Sci 226 The Immigrant Experience

This course explores the history and politics of immigrant groups in the 19th and 20th century United States. Topics include legislation, patterns of migration, comparisons of different waves of immigration, and changing social attitudes.

Same as L98 AMCS 202

Credit 3 units. A&S IQ: LCD, SSC, SC, SD Arch: SSC Art: SSC BU: BA, HUM EN: S

L32 Pol Sci 227 Just Do It! Skills That Turn Passion Into Policy

The course focuses on skills related to the democratic expression of political rights and responsibilities. The course balances background knowledge of the issues with application. Students explore how to use coalition building and advocacy skills to relate to personal issues to public issues. Students research a current Missouri bill, create a strategic plan for its passage or failure, and prepare to give testimony on such bill in a mock House of Representatives committee hearing. Students also learn about ethical dilemmas in policy and politics and create a plan for turning their passions into policy.

Credit 1 unit. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L32 Pol Sci 240 Jewish Political Thought

This course uses the concepts of political theory to explore the diverse Jewish political tradition. While this tradition includes writing from and about the three historical periods of Jewish self-rule (including the modern state of Israel), most of the Jewish political tradition comes from the understanding of politics as viewed from outsiders to mainstream communities. Additionally, Jewish political thought can be found through a Jewish community's self-understanding based on its interpretation of Jewish text and law by which it bound itself. Because we span over 2,000 years of recorded history, we will not attempt to discern a single "Jewish political thought" but rather look at JPT through the lens of familiar concepts of political theory. The fundamental questions we will explore are the relationship of the Jewish tradition to concepts such as authority, law, consent, sovereignty and justice. We will ask how the Jewish tradition views government and the relationship between the authority of God and the authority of temporal powers. We will explore these questions through a range of materials that include both primary and secondary literature.

Same as L57 RelPol 240

Credit 3 units. A&S IQ: HUM BU: BA EN: H

L32 Pol Sci 2500 Zionism

Zionism is often thought of as a commitment to the principle that the Jewish People, as a distinct "people," has a right to self-determination in its own historical land of the biblical Palestine. Yet the history of the term and the set of ideologies show a much more complex understanding. In this course we trace the emergence of a number of different "Zionisms" that would lead to the creation of the modern state of Israel. And we explore how the political principles at the core of these ideologies have fared

in the 65 years since the founding of the modern Jewish state. The course is at its heart applied political theory: a case study of the way that ideas emerge from historical events, take on a life of their own, and then shape real outcomes in the world. The readings will weave together history, philosophy, literature and government.

Same as L57 RelPol 250

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 258 Law, Politics and Society

This course is an introduction to the functions of law and the legal system in American society. The course material stresses the realities of the operation of the legal system (in contrast to legal mythology), as well as the continuous interaction and feedback between the legal and political systems. There are four specific objectives to the course: (1) to introduce legal concepts and legal theories; (2) to analyze the operation of the appellate courts, with particular emphasis on the U.S. Supreme Court; (3) to analyze the operation of American trial courts, especially juries and the criminal courts; and (4) to examine the linkages between culture and law. Not open to students who have previously taken Pol Sci 358.

Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 260 Game Theory in Science and Culture

Introduces the major intellectual insights of game theory in a nontechnical fashion, and examines the influence game theory has had on geopolitics, social philosophy, psychology, art and the humanities. In addition to covering the basic machinery of the theory, the class participates in numerous illustrative classroom games; examines game theory in film, literature and literary criticism; sees how game theory has contributed to social theory; and learns about the background of game theory and its history and perception as a hoped-for tool in the Cold War. Grades based on problems, short essays, two short essay exams and participation.

Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 3010 Gender, Politics, and Policy in the United States

This course surveys central topics in the study of gender and politics, covering such issues as women's participation in political parties and social movements, women as voters and candidates in political elections, feminism and the state, and gender and international politics. It draws on examples from various world regions and time periods to analyze similarities and differences across cases around the globe.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 3011 Computational Modeling in the Social Sciences

This course introduces students to the theory and practice of computational modeling in social science. Computational modeling allows us to explore topics — including complexity, emergence and dynamics — that are difficult to study using traditional analytic methods. This course covers the theoretical foundations behind computational modeling in addition to offering an introduction to the design and programming of such models.

Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 3012 Advanced Modeling in the Social Sciences

This course explores advanced topics and issues in the building and validation of models in the social sciences. The principal component of the course is the design and development of an individual research project by each student. The conclusion of the course involves a public research symposium with a poster session in which all students present their models and findings to the broader campus community. Prerequisite: Pol Sci 3011 Computational Modeling in Social Science.

Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 3024 International Institutions

This course surveys in historically and theoretically informed fashion the role of various international institutions in international relations. It addresses the fundamental question of the contribution of international institutions to world order. The course first traces the historical evolution of international organizations before turning to international institutions since World War II. It then focuses on the following: the most important regional international organization, the European Union; the most important international organizations dealing with the issues of peace and security, the United Nations and NATO; and the major international economic institutions, the WTO, the IMF and the World Bank. Prerequisite: Pol Sci 103B Introduction to International Politics.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S

L32 Pol Sci 3031 Race and Ethnicity in American Politics

This seminar discusses the continuing importance of race and ethnicity in American politics and the politics of racial minority groups in America. It examines the disadvantage minorities have in the American political structure, including problems with political participation. It examines how the structure and functions of the branches of government and its bureaucracy affect the aspirations of minorities. The role of pressure groups on political structure is discussed. Additional discussion focuses on urban politics and tensions.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 3044 Foundations of American Democracy

Since its founding, the United States of America has been strongly identified with principles of democratic rule. This course provides an introduction to some philosophical and historical foundations of American democracy. Over the course of the semester, we ask what democracy means and what it requires. We examine thinking about political rights and liberty at the American founding. We ask what democratic inclusion and political equality entail. We ask what democracy means, and what it should mean, in the American context, and whether and to what extent American institutions embody democratic ideals. Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3055 The Comparative Study of Legislative Institutions

This course focuses on understanding the variation in legislative institutions around the world.

Credit 3 units. A&S IQ: SSC BU: IS EN: S

L32 Pol Sci 306 American Political Thought

This is a course on American political and constitutional thought. The main theme is the problem of freedom: how it should be understood, and the constitutional and other conditions which sustain it. We also touch on questions of leadership, class and foreign policy as they relate to the main theme. We begin with the political thought of the American colonists, then turn to the Federalist/Anti-Federalist debate on the constitution, and trace these lines of thinking to a point just before the outbreak of the Civil War. Apart from writings of prominent American political thinkers such as Madison, Jefferson, Adams, Hamilton and Calhoun, we also consider the work of the foreign observer of American life and honorary American, Alexis de Tocqueville. Credit 3 units.

L32 Pol Sci 3070 Politics and Policymaking in the American States

The American federal system is often overlooked in discussions about politics in the United States; however, state governments unquestionably touch the lives of Americans every day. As such, an education in American politics is not complete without serious examination of state governments and their political institutions. This course illuminates the importance of the American states in U.S. politics and policymaking by critically examining topics such as intergovernmental relations; the historical evolution of American federalism; the organization and processes associated with state legislative, executive and judicial branches; state elections; political parties; interest groups; and specific state policy areas such as budgeting, welfare, education and the environment. Prerequisite: Pol Sci 101B.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3073 Global War on Terrorism

This course presents an historical assessment of the Global War on Terrorism (GWOT) from the perspective of its major participants: militant Sunni Islamist jihadists, especially the Al-Qaeda network, and the nation-states that oppose them, particularly the United States and its allies. The course then concludes by analyzing the current state and future of Islamist jihad and the GWOT.

Same as L22 History 3073

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H

L32 Pol Sci 3090 Civil War and Peace

This course examines the causes and consequences of intrastate conflict as well as the potential solutions to it, drawing on examples from countries throughout the world, including Bosnia-Herzegovina, India, Iraq, Russia, Rwanda, Spain, etc. We consider many potential causes of intrastate violence, including ethnic and religious identities, economic and security concerns, elite manipulation, and international diffusion. In order to understand the challenges countries face recovering from violence, we subsequently examine different ways in which conflicts are conducted, as well as their consequences, including economic underdevelopment, rape, child soldiers and disease. Finally, using what we have learned about the causes and consequences of conflict, we analyze the utility of different tools for managing intrastate conflict, including, but not limited to, minority representation, consociationalism, decentralization and partition.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, IS EN: S

L32 Pol Sci 3093 Politics of the European Union

This course is designed to introduce undergraduates at the junior and senior level to the history and politics of the European Union (EU) and European integration. In the first part of the course, students will learn about the interplay of theory and practice in the history of European integration. In the second part, they will study the institutions and decision-making processes with reference to the theoretical concepts developed earlier in the course. From there, we will examine some of the key EU policies and their implementation during the third part of the course. In the final two sections of the course, we will look at constitutional politics and some of the more recent policies and developments. Credit 3 units. A&S IQ: LCD, SSC BU: IS EN: S

L32 Pol Sci 3103 Topics

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 316B African-American Politics

This course examines the historical and contemporary efforts by African Americans to gain full inclusion as citizens in the U.S. political system. The course focuses on topics such as the politics of the Civil Rights Movement; African-American political participation; and the tension between racial group politics and class politics.

Same as L90 AFAS 3161

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L32 Pol Sci 3171 Topics in Politics

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S IQ: SSC BU: ETH, IS EN: S

L32 Pol Sci 3180 Democracy: Causes and Consequences

This course examines the major international and domestic causes and consequences of democracy worldwide.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 321 Comparative European Politics

This course is designed to provide students with an introduction to politics in Europe, with a focus on national politics. The course has two main goals. One goal is that students acquire a general understanding of the institutions of democratic governance and how they affect how voters' preferences are translated into government policy. As most European states are variations of parliamentary democracies, we pay particular attention to the connection between voters and policymakers through parliamentary institutions. The second goal is that students achieve a basic understanding of specific political systems in Europe and appreciate current political issues particularly those related to democratic transitions in Eastern Europe. Prerequisites: Pol Sci 102B Intro to Comparative Politics; Pol Sci 363 Quantitative Political Methodology (can be taken concurrently).

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, IS

L32 Pol Sci 3211 Public Opinion and American Democracy

This course is about the salience of public opinion and its influence on American Politics. Topics covered include many of the theories developed to explain how public opinion is formed, if and why it changes, and the relationship between public opinion and the political behavior of citizens and elites. Therefore, the course describes and analyzes many of the factors that influence the formation, structure and variation in public opinion: information processing, education, core values, racial attitudes, political orientation (ideology and party identification), political elites, social groups, the media and religion. Additional topics include presidential approval, congressional approval and the relationship between public opinion and public policy. The course also trains students in several concepts of statistical analysis (assuming no prior knowledge) so that students can use these tools as part of their own research projects. Prerequisite: previous course work in American politics or communications. Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 3240 The Political Economy of Public Goods

This course explores the nature of public goods by investigating the economic and political rationales for providing them. We explore the endogenous creation of public goods, such as the formation of mutually agreed upon constitutions to protect property rights and the exogenous imposition of public goods, such as the regulatory framework that provides clean air. Through the use of efficiency analysis, we explore the costs and benefits to alternative institutional arrangements, such as private property or market exchanges, to the government or voluntary provision of public goods.

Credit 3 units.

L32 Pol Sci 3255 Development of the American Constitution

The U.S. Constitution has been so long maintained because it has adapted to new circumstances. Contrary to common mythology, this adaptation goes far beyond formal amendment and court interpretation. But past performance is no guarantee of future results. The course examines the processes through which American constitutional democracy has developed, considers its successes and failures, and assesses some of its most pressing challenges. In doing so the course treats topics such as: the Electoral College; the justice system; executive powers in war and peace; Congress versus the president; regulation and taxation; civil rights and Reconstructions; amendment politics; and constitutional rhetoric and beliefs.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 326B Latin-American Politics

This course is an introduction to the politics in Latin America, focusing on the trend toward the establishment of democracy. We examine the impact of political culture, economic development, and the legacy of authoritarian regimes on contemporary politics. The course also reviews many of the most pressing challenges confronting governments Latin American governments: the role of the military in politics, the reform of political institutions, threats from radical guerrillas and drug traffickers, debt and economic restructuring, and relations with the United States. Country studies focus on Argentina, Brazil, Chile, Peru, Mexico, and Nicaragua. Prerequisites: 100-level introductory course in Political Science or its equivalent in History or IAS.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S

L32 Pol Sci 327B African Politics

Credit 3 units. A&S IQ: SSC Art: SSC BU: IS EN: S

L32 Pol Sci 3292 Topics in Politics: Modern South Asian Politics

This course focuses on the recent political history and development of South Asia. It begins with a review of the British colonial period and the Independence movement. The remainder of the course examines different political issues in India, Pakistan, Bangladesh and Sri Lanka. Topics include political mobilization; land reform; law and politics; social movements; religious and caste politics; the rise of religious nationalism; and political control of the economy.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS

L32 Pol Sci 3296 Race and Ethnicity in the United States

This course is designed to explore relations within and between the racial and ethnic groups of the United States. Students examine the social, economic, and political similarities and differences of African Americans, Asian-Americans, Latinos, and New Immigrants that distinguish their American experience. Of particular interest are their respective experiences in relation to one another and the majority population for understanding the origins of conflict and unanimity within and between the different groups. Students will pay specific attention to events in Ferguson, Missouri and the tensions between political leaders, policing and minorities more generally, the disproportionate levels of poverty experienced by African Americans and Mexican-Americans, and the vilifying of certain minorities by the majority population.

Same as L98 AMCS 3296

Credit 3 units. A&S IQ: HUM, SD BU: BA, HUM EN: H

L32 Pol Sci 330 Topics in Politics

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3302 Politics and Policies of Immigration in the United States

This class examines the history and politics of American immigration from colonial times to the present. It begins with an overview of the colonial period, then discusses the immigration waves of the 19th and early 20th centuries, and concludes with an examination of current topics and debates about immigration. Issues include racial, ethnic and class relations among groups; changes in immigration policies over time; comparative group experiences; transnational issues in immigration; and the impact of immigration on other American social and political processes and events. This class is a writing-intensive and modified version of Pol Sci 226/AMCS 202. Students who have taken that course should *not* take this course. Because this is a writing-intensive class, we also spend time studying research paper design and writing.

Credit 3 units. A&S IQ: SSC, WI EN: S

L32 Pol Sci 331 Topics in Politics: Theories of Social Justice

This course is intended primarily for sophomores and juniors. The topic varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH, HUM EN: S

L32 Pol Sci 331B Gender and American Politics

This course examines the ways in which issues pertaining to gender are salient in U.S. politics. The course is divided into four parts. First, we examine theoretical approaches to the study of gender and politics, including the use of gender as an analytical category and the relationship between gender, race, ethnicity and power. Second, we study gender-based social movements, including the suffrage and women's rights movements, women's participation in the Civil Rights Movement, the contemporary feminist and anti-feminist movements, the gay rights/queer movement and the women's peace movement. Third, we examine the role of gender in the electoral arena, in terms of how it affects voting, running for office and being in office. Finally, we examine contemporary debates about public policy issues, including the integration of women and gays in the military, sexual harassment, pornography and equal rights.

Credit 3 units. BU: BA, ETH

L32 Pol Sci 332 Topics in Politics

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3321 Topics in Politics: Constitutionalism and Democracy

An introductory analysis of a range of issues related to constitutions and democratic government. The main focus is on such theoretical questions as: Why do societies produce constitutions? Why do subsequent generations abide by them? What is the relationship between constitutional principles and democratic decision making? Who benefits from constitutional constraints?

Credit 3 units. BU: BA

L32 Pol Sci 3323 The Democracy Lab

The U.S. states are often called laboratories of democracy because the lessons learned from an "experiment" in one state or city can inform other governments. This course embraces the idea that we can act as scientists in the laboratories of local government. The course teaches students about research design. We also help them design their own experiments and then give students the opportunity to work with local officials to help design, conduct and analyze an experiment relating to governance.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 3325 Topics in Politics: Constitutional Politics in the United States

The principal purpose of this course is to introduce students to the politics of constitutional interpretation. We first discuss the origins of the Constitution; the structure, operation and work of courts; and judicial decision making. Afterwards, we examine various areas of the law relating to institutional powers and constraints (e.g., federalism, presidential powers, Congressional authority). In so doing, we develop an understanding for the legal doctrine in each area of the law and also examine explanations for the legal change we observe.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 332B Environmental and Energy Issues

This course considers the major issues in these increasingly important areas of public policy. We will discuss the importance of political processes and actors on such phenomenon as pollution, global warming and wilderness protection. This course emphasizes the American experience but also considers international implications. Two lectures and one section meeting each week.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH EN: S

L32 Pol Sci 333 Topics in Politics

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 333B Individual and Community

What social, political, and cultural forces shape the individuality of people and yet make them part of not just one community but many, each of which is greater than the sum of the individuals that comprise it? What role do families and friends fill in this process? Students explore answers to these questions by reading theories and case studies that try to explain the foundations of individuals' sense of self and the interdependence and responsibilities of individuals, families, and communities to one another. Cases students read highlight (1) how family and communal experiences (like school) influence individuals and (2) how virtual (online) and non-virtual communities are structured and sustained as social entities. In addition to readings, the class will rely on guests from the "real world" as well as field trips into virtual and non-virtual communities. AMCS Majors may count this course for Fieldwork credit with permission of instructor; a supplemental assignment might be required.

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 3363 Interchangeables, Influentials, and Essentials

Do you want to know how to obtain power? How to influence the powerful? Or even how to unseat those in power? In this course, we focus on how leaders, of all types, get and keep their jobs. Regardless of setting — democratic or dictatorial (or corporate, for that matter) — it is all about those whom the leader finds to be interchangeable, those the leader finds influential, and those who are essential. Students learn the "Rules to Rule By" and why, when leaders follow them, they often behave badly causing those they govern to suffer.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

Credit 3 units. A&S IQ: SSC Arch: SSC Art: CPSC, SSC BU: BA EN: S

L32 Pol Sci 3400 Social and Political Philosophy

Study of certain fundamental issues concerning government, society and culture. For example: What are the nature and limits of legitimate political authority? Are ordinary human beings capable of governing themselves justly? Do citizens have a duty to obey the state? If so, to what extent, if at all, is that duty grounded in consent or contract? Should the state limit or regulate the personal relationships of citizens, such as marriage, family and sexuality? How should social institutions rectify a history of political or social injustice against oppressed groups? Readings from historical and contemporary sources. Prerequisite: one course in Philosophy at the 100 or 200 level, or permission of the instructor. Priority given to majors in philosophy and PNP.

Same as L30 Phil 340F

Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH, HUM EN: H

L32 Pol Sci 3401 Topics in Political Thought

This course is intended primarily for sophomores and juniors. The topic varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH

L32 Pol Sci 3403 The Politics of Congressional Elections

This course introduces students to the study of American legislative elections. The first part of the course focuses on congressional election campaigns, in which we discuss who runs for office, the incumbency advantage, campaign finance, congressional primaries, electoral competition, voter turnout, and vote choice. The second part of the course examines how electoral factors affect legislative politics, focusing on questions involving representation, accountability and lawmaking. Prerequisite: L32 Pol Sci 101B Intro to American Politics.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 342 The American Presidency

Consideration of part played by the president in American politics and public policy. The powers of the president; the staffing and organization of the executive office; the relations of the president with Congress, the bureaucracy and other participants in American politics; presidential elections. Recommended: Pol Sci 101B.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 3431 Constitutional Law

Introduction to constitutional law and practice in the United States. Emphasis on the role of the U.S. Supreme Court as an interpreter of the Constitution.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 344 Courts and Civil Liberties

This course focuses on constitutional law principles in the Bill of Rights, and examines how Supreme Court decisions influence these principles in everyday life. We explore how the courts, and particularly the Supreme Court, have interpreted these rights in light of changing times and emerging issues. Topics include the First Amendment; free exercise of religion and the establishment clause; freedom of speech, assembly and association; freedom of the press; the Fourth Amendment and the rights of those accused and convicted of crimes; the right to privacy, including reproductive freedom and the right to die; equal protection and civil rights, including race, gender, sexual orientation; immigrants' rights and voting rights; and civil liberties after September 11. Recommended for the Liberal Arts and Business (LAB) Certificate.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, ETH, HUM

L32 Pol Sci 3441 Defendant's Rights

This course explores the operations of the American criminal justice system. Substantial emphasis on the constitutional rights accorded to the criminally accused. Readings consist primarily, but not exclusively, of Supreme Court cases.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, ETH EN: S

L32 Pol Sci 345 The Legislative Process

Structure and behavioral patterns of American legislative bodies. Primary emphasis on the U.S. Congress, with attention to state legislatures for comparative purposes. Representation, internal patterns of influence, and policy-making processes. Prerequisite: junior standing.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3462 The Politics of Privacy in the Digital Age

This course explores the changing nature of privacy in contemporary society.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH EN: S
UColl: PSA, PSC

L32 Pol Sci 349 Politics in Bureaucracies

Focuses on politics and political conflicts involving bureaucratic organizations, primarily but not exclusively those of the federal government. Attention given to the characteristics of bureaucratic organizations and their members; their relations with one another as well as with other participants in policymaking also considered. Major activities within bureaucracies — planning, program development, organizing, budgeting and service delivery — discussed with a view to clarifying their political implications and consequences; problems associated with controlling and changing bureaucracies.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 3507 Legal Conflict in Modern American Society

Thousands of lawsuits are filed daily in the state and federal courts of the United States. The disputes underlying those lawsuits are as messy and complex as the human, commercial, cultural and political dynamics that trigger them, and the legal processes for resolving those disputes are expensive, time-consuming and, for most citizens, seemingly impenetrable. At the same time, law and legal conflict permeate public discourse in the United States to a degree that is unique in the world, even among the community of long-established democracies. The overarching objective of the course is to prepare our undergraduate students to participate constructively in that discourse by providing them with a conceptual framework for understanding both the conduct and resolution of legal conflict by American legal institutions, and the evolution of — and values underlying — the substantive law American courts apply to those conflicts. This is, at core, a course in the kind of legal or litigation "literacy" that should be expected of the graduates of first-tier American universities. Some of the legal controversies that are used to help develop that "literacy" include those surrounding the permissible use of lethal force in self-defense, the constitutionality of affirmative action in university admissions, contracts that are unconscionably one-sided, sexual harassment in the workplace, the duty of landlords to prevent criminal assaults on their tenants, groundwater pollution alleged to cause pediatric cancers, and warrantless searches of cellphone locator data by police.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA

L32 Pol Sci 3551 The Welfare State and Social Policy in America

How can we understand the recent debate about fundamental health care reform? Should social security be partially or wholly privatized? Was the 1996 welfare reform a success? Contemporary political questions frequently focus on the American welfare state and the social policies that compose it. The first half of this course describes the American welfare state broadly construed, places it in a comparative context, and elucidates major political science explanations for the size and scope of American social policy. We touch on several areas of social policy while constructing the generalized lenses through which particular political outcomes can be understood. The second part of the course then focuses on three major aspects of the American welfare state: health care, old age pensions and policies related to work, poverty and inequality.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3552 Political Economy of Democracy

In the past few years, a number of important books have appeared that combine elements of economics reasoning and political science, in an effort to understand the wide variation in economic development in the world. This course deals with the logic apparatus underpinning these books. In addition,

course introduces the student to the theoretical apparatus that can be used to examine democratic institutions in the developed world, and the success or otherwise of moves to democratization in the less-developed world.

Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 3561 Topics in Politics: Understanding Political Protest and Violence

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: IS EN: S

L32 Pol Sci 3575 U.S. Foreign Policy: Theory and Practice

In this class we focus on the procedures and institutions that shape U.S. foreign policy decisions. This is neither a course on international relations theory nor a history of U.S. foreign policy. Rather, this course examines the domestic politics surrounding U.S. foreign policy decisions. How do public opinion, electoral politics, and interest groups shape foreign policy? Which branch controls foreign policy — the president, Congress, the courts? Or is it ultimately the foreign affairs bureaucracy that pulls the strings? We examine these topics through reading and writing assignments, class discussion, and simulations to promote deeper understanding and build practical skills.

Same as L97 IAS 3575

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 358 Law, Politics and Society

This course is an introduction to the functions of law and the legal system in American society. The course material will stress the realities of the operation of the legal system (in contrast to legal mythology) as well as the continuous interaction and feedback between the legal and political systems. There are four specific objectives of this course: (1) to introduce students to legal concepts and legal theories; (2) to analyze the operation of the appellate courts, with particular emphasis on the U.S. Supreme Court; (3) to analyze the operation of American trial courts, especially juries and the criminal courts; and (4) to examine the linkages between culture and law.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 359 The Mathematics of Elections

Voting procedures provide the most common means of aggregating the preferences of individuals into societal outcomes. These procedures play an integral role in our daily lives, from having a show of hands to decide which type of pizza to order for a club meeting, to electing a president. This course examines the effects that different voting procedures have on how groups make decisions. We evaluate electoral systems mathematically, by considering the various properties that procedures may or may not satisfy. A classic example is Arrow's Impossibility Theorem, which tells us that every electoral system must fail to satisfy one or more criteria of fairness or sensibility. In addition to Arrow's claim, we examine other legislative paradoxes and learn why the choice of electoral procedure is critical to our understanding of how "good" and "bad" decisions can be made. We also discuss the comparative properties of electoral systems in operation, such as fairness, proportionality, representativeness and legitimacy.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 3610 Legislative Politics

This course is an introduction to the politics of the U.S. Congress and the federal lawmaking process. We focus on the behavior of individual legislators and the role they play in crafting federal legislation in policy areas such as health care, civil rights and the environment. In general we examine questions such as: Why do legislators behave as they do? Whose interests are being represented?

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 362 Politics and the Theory of Games

This course is intended to cover through analytical discussion and illustrations the basic concepts and major achievements of Game Theory in different subfields of research in the social sciences today. We discuss examples of the usefulness of cooperative and noncooperative game theory to the study of human behavior in general and political science and political economy in particular.

Credit 3 units. A&S IQ: SSC, AN Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 363 Quantitative Political Methodology

This is an introduction to research methodology and quantitative analysis for social scientists. Students are introduced to the logic of social scientific inquiry, and to the basic statistical tools used to study politics. Students learn and apply the following to answer substantive questions: measurement, descriptive analysis, correlation, graphical analysis, hypothesis testing, confidence intervals, analysis of variance and regression analysis. Major components of the course include learning how to collect, manage and analyze data using computer software, and how to effectively communicate to others results from statistical analyses. Students work collaboratively on research projects in which they pose their own questions, design a study, collect and analyze the data, and present their findings in a research paper.

Credit 3 units. A&S IQ: SSC, AN EN: S

L32 Pol Sci 3690 Politics of International Trade

In this course we study the relationship between international trade and domestic politics. We cover the basic models of international trade, the distributional consequences of international trade, the relationship between trade and economic development, an analysis of the trade protectionism (causes and consequences) and an analysis of international organizations related to international trade (special focus on the World Trade Organization). Prerequisite: Pol Sci 103B.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S

L32 Pol Sci 372 Topics in International Politics

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

L32 Pol Sci 373 International Political Economy

Analysis of the interplay of economics and politics in the world arena, focused primarily on the political basis of economic policies in both advanced and less-developed societies. Treating differing perspectives on the international economy, production, trade and finance, and international economic relations. Prerequisite: junior standing or permission of instructor.

Credit 3 units. BU: IS

L32 Pol Sci 374 Contemporary American Foreign Policy

This course surveys post-war American foreign policy in historical perspective. It begins by evaluating the rise of the United States as a world power during the 20th century, its current position of primacy and its consequences in the post-Cold War period, and the distinctive traditions and institutions shaping the making of American foreign policy. It then examines the origins of the strategy of containment in the early Cold War period before considering how these debates animated the changing course of American foreign policy through the various phases of the Cold War conflict. The course concludes by analyzing American foreign policy since the end of the Cold War, up to and including debates about the consequences of September 11, 2001, for the United States' position of primacy, the Bush Doctrine and the American-led intervention in and subsequent occupation of Iraq.

L32 Pol Sci 3782 Topics in Comparative Politics: Terrorism and Political Violence

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 381 The Politics of Electoral Systems

It is impossible to appreciate the variety of electoral systems used to select legislative bodies without taking a comparative perspective. We begin this course with a brief consideration of what goals political founders and reformers are pursuing when they design an electoral system. Then we define the conceptual dimensions along which electoral rules can vary. With these basic concepts in hand, we then study specific national cases to assess the impact of electoral laws on party systems, legislator behavior, and interbranch relations. After completing a series of case studies, we return to a comparative perspective to discuss recent scholarly research in this field. This research conceives of electoral systems as incentive structures for voters, candidates, parties and politicians. To wrap up the course, we return to the question of what founders and reformers can hope to achieve when selecting electoral systems.

Credit 3 units. A&S IQ: SSC, WI BU: BA EN: S

L32 Pol Sci 389 Power, Justice and the City

This course examines normative theoretical questions of power and justice through the lens of the contemporary city, with a particular focus on American urban life. It explores urban political economic problems, questions of racial hierarchy and

racial injustice in the modern metropolis, and the normative and practical dilemmas posed by "privatism" in cities and their suburbs. In addition, the course devotes considerable attention to honing students' writing skills, through class assignments that stress rewriting and revising, and also through four in-class writing workshops devoted to formulating a thesis and making an argument; revising and rewriting; writing with style; and peer consultation.

Credit 3 units. A&S IQ: SSC, SD, WI Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 389A Power, Justice and the City

This course examines normative theoretical questions of power and justice through the lens of the contemporary city, with a particular focus on American urban life. It explores urban political economic problems, questions of racial hierarchy and racial injustice in the modern metropolis, and the normative and practical dilemmas posed by "privatism" in cities and their suburbs.

L32 Pol Sci 391 History of Political Thought I: Justice, Virtue, and the Soul

This course offers a critical introduction to the main issues and debates in western political theory, including but not limited to the topics of justice, legitimacy, equality, democracy, liberty, sovereignty, and the role of history in the political and social world. This course is designed to be the first in a three-semester sequence on the history of political thought, and students are encouraged, but not required, to take the courses in chronological sequence. The first semester begins with ancient Greek political thought, and follows its development up to the early 16th century.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S UColl: ML

L32 Pol Sci 391A Democracy and Citizenship Seminar II

What does it mean to be a citizen in a democratic society? What are the rights of citizenship and what are its responsibilities? How are the answers to these questions different for citizens of the United States of America, with its particular history, values and status in the world? Enrollment in this seminar is limited to freshmen who have been admitted to the Democracy and Citizenship Ampersand Program.

Credit 1 unit.

L32 Pol Sci 392 History of Political Thought II: Legitimacy, Equality, and the Social Contract

Government is often justified as legitimate on the grounds that it is based on the consent of the governed. In History of Political Thought II: Legitimacy, Equality, and the Social Contract, we examine the origins of this view, focusing our attention on canonical works in the social contract tradition, by Thomas Hobbes (1588-1679), John Locke (1632-1704), Jean-Jacques Rousseau (1712-1778), David Hume (1711-1776), and Immanuel Kant (1724-1804). This course is the second in a three-semester sequence on the history of political thought. Students are encouraged but not required to take all three courses. Prerequisite: one previous course in political theory or political philosophy.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 393 History of Political Thought III: Liberty, Democracy and Revolution

How, if at all, should the political institutions of the modern state express and secure the liberty and equality of citizens? What is the political significance of private property? Is world history to be understood as progress toward one best form of government — capitalist democracy, perhaps, or communism? What forces drive history? We address these and other timeless political questions through close reading and rigorous analysis of classic texts in the history of Western political thought. Authors studied include Kant, Hegel, Marx, Tocqueville, John Stuart Mill and Nietzsche. Prerequisite: one previous course in political theory or political philosophy. The course is designed to be the third in a three-semester sequence on the history of political thought, and students are encouraged but not required to take the courses in chronological sequence.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 398 Topics in Politics

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Credit variable, maximum 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 4001 American Democracy and the Policymaking Process

This course is part of the Semester in DC Program.

Credit 3 units. EN: S

L32 Pol Sci 4010 Pluralism, Liberalism and Education

How should liberal democratic states respond to religious and cultural pluralism? In what ways is pluralism different from mere disagreement, and what normative implications does pluralism have for public policy? How can liberal states justify using their coercive power against a background of pluralism and in ways that systematically disadvantage certain religious and cultural groups in society? In particular, what is to be done when religious parents and the liberal state make conflicting judgments about the proper education of children? When should the state defer to parental judgments and what are the grounds for legitimately refusing to do so? Readings are taken from contemporary political philosophy. Prerequisites: Pol Sci 106, Pol Sci 107, Phil 340 or permission of instructor.

Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 4013 Negotiating Major Legislation in Congress

This course examines the outcomes of the legislative process in the United States. The first third of the course examines key concepts and major determinants of the negotiation process: majority rule instability, agenda control, political parties, the amendment process and the uncovered set. The rest of the course examines the negotiations that led to some of the most significant legislation in the past 100 years, from the Federal Reserve Act of 1913 through the Voting Rights Act of 1965 to the immigration bill of 2006. Along with other assignments, each student writes several drafts of a major research project on a major piece of legislation. Each research project examines the amendments offered, the strategic intentions of the amendments' sponsors, the agenda process and the role of party. Prerequisite: Pol Sci 101B.

Credit 3 units. A&S IQ: SSC, WI EN: S

Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 4024 The Meaning of National Security in the 21st Century

The 21st century has brought with it new challenges to national security. Standard assumptions about nations and the borders that separate them have been brought into question, and one of the results of this is that the very meaning of national security is undergoing change. Instead of threats to security coming from outside national boundaries, they now often exist within and across borders. This course focuses on contemporary ideas about these issues. It includes a brief overview of current discussions of national security, but it is primarily devoted to examining the conceptual resources we have for making sense of national security in a new world.

Same as L97 IAS 402

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L32 Pol Sci 4025 Experiments in Politics

This is a lab-style seminar in which we design, field and analyze an experimental study on political attitudes or political behavior. Our ultimate goal is to publish a scholarly article in a peer-reviewed journal in political science. Prerequisite: Pol Sci 363 Quantitative Political Methodology (can be taken concurrently). Credit 3 units.

L32 Pol Sci 4030 Political Theory of Education

This course explores issues of authority, legitimacy, citizenship, freedom and equality through contemporary readings in the political theory of education. What is to be done when parents, citizens and educational experts make conflicting judgments about the proper education of children? When should the state defer to parental judgments and what are the grounds for legitimately refusing to do so? How should public schools aim to equip their students for the responsibilities of citizenship in a diverse liberal democratic state? What do the concepts of equality and equality of opportunity mean in the context of education, and (how) should governments pursue these values through education policy? We explore these issues through contemporary works of political theory as well as through considering a number of important U.S. court cases, including those dealing with the schooling of children from minority religious and cultural groups, affirmative action in university admissions, and school desegregation plans. Prerequisite: one previous course in political theory or political philosophy.

Credit 3 units. A&S IQ: SSC BU: ETH EN: S

L32 Pol Sci 4040 Capstone Seminar in International Politics: Public Policy Responses to Global Poverty

This course is designed for senior political science majors with a background in international politics (refer to prerequisites). In this course we examine the theoretical and empirical literature on the causes of global poverty and evaluate public policy responses from the international community. Topics include: foreign aid (including micro finance), debt relief, trade reform, global health initiatives and private-public partnerships. Students are expected to have a strong theoretical background in the tools and concepts in political science and a strong interest in development topics. As a capstone class, the teaching style focuses on a student-centered classroom, where students

run the class and help moderate discussions with outside speakers. Prerequisites: Pol Sci 103B, one advanced course in international politics, and a second advanced course in either international or comparative politics.

Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 4043 Public Policy Analysis, Assessment and Practical Wisdom

This course provides an introduction to the study, professional practice, ex-ante and ex-post assessment of public policy and the professional practice of public analysis. We rely heavily on David L. Weimer and Aidan R. Vining's text, *Policy Analysis: Concepts and Practice*. This course covers a series of critical concepts in the understanding of practicing, analyzing and assessing public policy.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L32 Pol Sci 405 Topics in Political Thought

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH

L32 Pol Sci 4050 Political Representation

In this class we study the concept of representation. Historically, how has representation been conceived? Conceptually, what should count as political representation, and must it always be democratic? As a normative problem, what should representatives do? And how should institutions be designed to foster these normative ends? Readings provide a broad overview of the subject and address enduring questions, including problems of minority representation, voting rights and redistricting. Prerequisite: Pol Sci 106 or Pol Sci 107.

Credit 3 units. A&S IQ: SSC BU: ETH EN: S

L32 Pol Sci 4053 Citizenship: Historical, Cross-Cultural, and Interdisciplinary Perspectives

Although some have posited that citizenship may become obsolete in an increasingly globalizing and interconnected world, citizenship has never been more relevant. Discussions of migration, statelessness, naturalization policies, borders, and so many other contemporary topics hinge on questions of citizenship. In this course, we will be taking an interdisciplinary approach to the study of citizenship, drawing on a wide range of work from historians, social scientists, journalists, and writers. This is an interdisciplinary and transnational course intended for advanced undergraduate and graduate students. Examples will draw from around the world and from a variety of disciplines. Assigned materials include the work of historians, anthropologists, political scientists, sociologists, and journalists as well as novels, films, and audio and visual sources.

L32 Pol Sci 4070 Global Justice

This course examines contemporary debates and controversies regarding global justice. Seminar discussions are arranged around significant issues in the current literature. For example: What (if anything) do we owe to the distantly needy? Do we have

special obligations to our compatriots? Do political borders have normative significance? And so on. This course is of interest not only to political theorists, but also students in other fields interested in social justice or international relations generally.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L32 Pol Sci 412 Directed Readings

This is a course of readings in political science taken under the direction of an instructor in the department.

Credit variable, maximum 3 units.

L32 Pol Sci 413 Directed Research

Research activities or project in political science done under the direction of an instructor in the department.

Credit variable, maximum 3 units.

L32 Pol Sci 4131 Intolerance and Prejudice

Consideration of selected contemporary topics in social psychology. Participation in a research project of appropriate scope. Prerequisite: Psych 315.

Same as L33 Psych 413

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L32 Pol Sci 414 Directed Fieldwork

This course is a fieldwork project carried out under the direction of an instructor in the department.

Credit variable, maximum 9 units.

L32 Pol Sci 415 Senior Thesis Research

Intensive research. To be conducted under the supervision and guidance of a faculty sponsor of the thesis.

Credit 3 units.

L32 Pol Sci 419 Teaching Practicum in Political Science

This course is an opportunity for undergraduates to assist in course instruction, tutoring and preparation of problems, readings and exam materials with permission and under supervision of instructor. This course counts toward up to 6 hours of credit in an advanced field for the political science major.

Credit variable, maximum 3 units.

L32 Pol Sci 4212 Elections

This course examines how politicians and policies are selected by citizens in democracies. The literature exploring the rules and procedures that govern elections is perhaps the most theoretically and empirically sophisticated body of knowledge in the study of politics. We explore how differences in these institutional rules across a variety of democracies shape the types of strategic choices voters make, the coalitions that legislators form, whose interests are represented, the structure of parties, the career paths of politicians, and the policies that governments pursue. We further investigate how, when and why electoral rules are changed with reference to several recent cases of electoral reform.

Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 4231 Contemporary Issues in Latin America

How do the institutional designs of contemporary democratic governments help us understand the nature and quality of representation? We concentrate on variations in the powers granted presidents by constitutions as well as the institutional determinants of whether executives are likely to find support for their policies in the legislature. In addition, we explore how incentives established by electoral laws influence the priorities of members of congress. Given all these variations in democratic institutional design, can voters go to the polls with the confidence that politicians will implement the economic policies for which their parties have long stood or which they promised in their campaigns?

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS

L32 Pol Sci 4241 Topics in American Politics: Race and Politics

From the moment enslaved Africans were brought to American shores, race and racism has been central to the American political project. In this class we examine how notions of race and racism inform conceptions of citizenship, the allocation of state resources, the development of political parties, and political participation. We also examine the way that race and racism influence public opinion.

Credit 3 units.

L32 Pol Sci 425 Law, Religion, and Politics

What is the role of religious argument in politics and law? What kinds of arguments are advanced, and how do they differ from one another? Are some of these arguments more acceptable than others in a liberal democracy? This course will explore these questions through the work of legal scholars, theologians and political theorists. Our topics include the nature of violence and coercion in the law, constraints on public reason, the relationship between religion and government, and the nature of religious practice and tradition.

Same as L57 RelPol 425

Credit 3 units. A&S IQ: HUM EN: H

L32 Pol Sci 426 Topics in American Politics:

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests. Prerequisite: Pol Sci 101B.

Credit 3 units. A&S IQ: SSC, SD Art: SSC EN: S

L32 Pol Sci 4260 Writing about Civil Rights

The substantive goal of this course is to study the civil rights movement in order to learn more about the role of social movements, federalism, the legislative process, the presidency, political parties and the courts in American politics. This is a writing-intensive seminar, limited to 18 students, each of whom write three essays. Each student submits an early draft of each essay, which is edited and returned to the student for polishing. There are review sessions on grammar, punctuation, word usage and paragraph construction. The readings for the course include some of the best essays on the subject of civil rights by W.E.B. DuBois, Malcolm X, Martin Luther King Jr. and others. Prerequisite: Pol Sci 101B.

Credit 3 units. A&S IQ: SSC, SD, WI EN: S

L32 Pol Sci 428 Topics in Comparative Politics: Politics and Identity

In this course, we will examine the relationship between politics and identity and the consequences for political stability and cohesion as a result of those relationships. We will consider different cases and explanations for the United States and, in comparative perspective, for how identity works with respect to gender, race, ethnicity, class and sexual orientation in the pursuit of political or social goals. How do these different identities impact social and political conflict, local and national cohesiveness, and political participation?

Credit 3 units. A&S IQ: SSC, WI EN: S

L32 Pol Sci 4280 Political Intolerance in World Politics

This course is an investigation into the meaning, causes and consequences of political intolerance. Our goal is to expose students to contemporary research on: a) how political intolerance is conceptualized and understood, especially within the context of theories of democracy; b) how political intolerance can be measured, both at the level of the individual and the institution/society; c) where intolerance originates, both in terms of individual psychology and system-level politics; and d) what consequences flow from intolerance, especially in terms of legal and extra-legal political repression, as well cultural consequences (e.g., a "culture of conformity"). The course makes little distinction between American politics and politics in other parts of the world (although no knowledge of specific non-U.S. systems is required as a prerequisite).

Credit 3 units. A&S IQ: SSC Arch: SSP Art: SSP EN: S

L32 Pol Sci 4281 Comparative Political Parties

An introduction to theories and concepts used in the analysis of political parties in democratic regimes, with emphasis on the classic literature covering West European advanced industrial democracies and the more recent scholarship on Latin American party systems. The course illuminates the complex aims, consequences and characteristics of modern party politics.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L32 Pol Sci 4291 Polarization in American Politics

This course examines the political polarization of the American political parties and explores its effects on the mass public and American democracy more generally. We examine what exactly is polarization, how it is measured, historical changes, potential causes, and its potential effects on the mass public and governance. Prerequisites: L32 Pol Sci 101B Intro to American Politics, L32 Pol Sci 363 Quantitative Political Methodology or equivalent.

Credit 3 units.

L32 Pol Sci 4331 Topics in Politics: The Two Dimensions of Electoral Politics

Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 4373 Immigration, Identity and the Internet

This class examines a critical issue in contemporary societies: How do changes in technology affect the process of immigration and how immigrant identity is shaped?

Credit 3 units. A&S IQ: LCD, SSC, SC, SD, WI Arch: SSC Art: SSC EN: S

L32 Pol Sci 4400 Advanced Social and Political Philosophy

A selective investigation of one or two advanced topics in the philosophical understanding of society, government and culture. Readings may include both historical and contemporary materials. Possible topics include: liberalism, socialism, communitarianism, citizenship, nationalism, cosmopolitanism, social contract theory, anarchism, and the rights of cultural minorities. Prerequisites: one course in philosophy at the 300 level, graduate standing, or permission of the instructor.

Same as L30 Phil 4400

Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L32 Pol Sci 4402 Topics in Political and Social Theory:

Constitutionalism

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 440A Religion, Politics, and the University

This course explores in depth current issues related to pluralism, difference, and belonging in matters pertaining to religion and other important issues, with a particular focus on how these play out in the university context. The instructors, John Inazu and Eboo Patel, are two of the leading national commentators on these issues. Prerequisite: Students enrolling in this class must submit a brief statement of interest (<http://law.wustl.edu/COURSES/INAZU/seminar1/summaries/>) to Professor John Inazu.

Same as L57 RelPol 440

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L32 Pol Sci 4451 Contemporary Politics in India

This seminar examines current topics and controversies in contemporary Indian politics. The course has three main foci: the links between politics and economic liberalization over the past two decades; the links between ascriptive identities such as religion, caste and gender and contemporary political processes, including ethnic and gender quotas; and the changes in party politics at the national and state levels that have accompanied the decline of Congress party dominance. Specific topics include the role of caste and religion in contemporary politics; the rise of state parties and its effects on federal relations; the effects of economic reform and globalization on economy and society; urbanization and migration flows; the rise of modern Hindu nationalism; and the links between collective violence and electoral politics.

Credit 3 units. A&S IQ: LCD, SSC BU: IS EN: S

L32 Pol Sci 4504 Contemporary Democratic Theory

Contemporary debates in democratic theory have produced a number of challenging and provocative accounts of how democratic institutions can and should work. In this course we analyze a number of competing theories of democracy and assess the similarities and differences among them. Although the course focuses primarily on theoretical issues, special attention is given to how empirical research in the social sciences on democratic institutions and procedures informs and clarifies these debates.

Credit 3 units.

L32 Pol Sci 4505 American Political Parties

This seminar introduced students to core literature on political parties with a strong bias toward recent research.

Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 451 Topics in American Politics: Supreme Court

This seminar has two purposes: to introduce students to the state of the art in studies of the Supreme Court and to cover a series of particular topics with emphasis on the major controversies within the field of law and the courts.

Credit 3 units.

L32 Pol Sci 4513 Topics in Politics: Criminal Law and

Criminal Justice: Homicide

Seminar investigates current controversies surrounding the homicide laws. Topics include the definitions of homicide and claims of self-defense, the controversies about admissions of evidence at various stages of prosecution, and the debates about the use of capital punishment (including the capital punishment of youths). Includes general academic readings, readings of recent court opinions, and guest discussants from the legal community.

Credit 3 units. A&S IQ: SSC, WI Art: SSC BU: BA

L32 Pol Sci 4522 Topics in American Politics

This course is intended primarily for sophomores and juniors. The topic varies by semester, dependent on faculty and student interests.

Credit 3 units.

L32 Pol Sci 4551 Seminar in Political Economy

This research seminar introduces the student to recent work on the political economy of democracy. We start with a historical account of the development of democratic institutions in Britain and the United States, and then continue with recent work on modeling elections. We compare elections in countries that make use of proportional electoral systems, such as Israel, with those like the United States and Britain that are highly majoritarian. Finally, we discuss the forces of democratization and globalization. The required work for the seminar is a research paper approximately 20 pages (double-spaced) in length.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L32 Pol Sci 4552 Comparative Political Economy

This seminar introduces the student to aspects of social choice theory, applied to themes to do with the economic origins of democracy, democratization and the stability of social orders. We read and discuss a number of recent books: Acemoglu and Robinson on *Economic Origins*; North, Weingast and Wallis on *Violence and Social Order*; Przeworski on *Democracy and Development*; Ferguson on *Money*; Collier on *Wars, Guns and Votes*. If time permits, we discuss recent work by Stern on the *Economics of Climate Change*. Students are expected to work on two short research papers, either empirically or theoretically based, and make a presentation of their work near the end of the semester.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L32 Pol Sci 4621 Politics and the Theory of Games

This course covers basic primitives and more sophisticated tools of game theory as they are used in contemporary political science. It covers some issues of the forefront of contemporary research in game theory as the central analytical tool in studying the science of politics. The main substantive issues are the emergence of law and order in society, markets vs. political mechanisms, and the distinctive characteristics of parliamentary vs. presidential democratic systems. The course also includes some real case studies, basic experiments and, in general, a lot of fun.

Credit 3 units. A&S IQ: SSC Art: SSC

L32 Pol Sci 4625 Topics in Politics

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L32 Pol Sci 464 Topics in American Politics: The United States in Vietnam: Origins, Developments and Consequences

This course focuses on America's involvement in Vietnam from the era of French colonialism through the collapse of United States intervention. Special attention is given to political, military, economic, and cultural aspects, as well as to international relationships, and the significance of the experience and subsequent developments upon both American and Vietnamese societies.

Same as L22 History 4894

Credit 3 units. A&S IQ: HUM, LCD EN: H

L32 Pol Sci 4646 Democracy: Theory and Practice

What does it mean to govern democratically? Why value democratic government? What role, if any, should notions of rights, representation, and deliberation play in theorizing about and empirical research into problems of democratic governance? What lessons can we learn about democracy from scholars writing in the traditions of feminist theory and critical race theory? What is the relation between democracy and knowledge? Should democracy extend beyond the boundaries that define the nation-state? Should (some aspects of) the economy be democratized? During the fall of 2018, we will have the opportunity to ask these and related questions in the context of the U.S. midterm election. We will engage in debates about contemporary democratic theory while we follow developments in the campaigns leading up to the November election.

Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 4731 Global Political Economy

This course will borrow on the insights of international relations scholarship and economic theory to develop a broad understanding of international economic relations. Specifically, this course attempts to address the following two sets of questions: 1) How do global economic relations fit into the broader category of international relations? How do the existing theories in international relations (liberalism, realism and Marxism) help us understand international economic relations between nation-states? 2) What are the effects of these international economic forces (trade, finance and multinational production) on domestic governments and societies?

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS EN: S

L32 Pol Sci 475 Topics in International Politics

This course is intended primarily for sophomores and juniors. The topic of this course varies by semester, dependent on faculty and student interests.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, IS EN: S

L32 Pol Sci 4761 Politics of International Finance

In this course we examine the complex relationship between international finance, economic development, and domestic politics by drawing on the recent scholarly literature in economics, political science and finance. The focus is on the theoretical literature on both the determinants of international financial flows and its effects on domestic societies. Specifically, we focus on five forms of international finance: (1) international equity markets (stocks), (2) flows of foreign direct investment (multinational corporations), (3) currency markets (with a special focus on currency crisis), (4) international debt and (5) international aid.

Credit 3 units. EN: S

L32 Pol Sci 480 Topics in International Politics: Growth and Development

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L32 Pol Sci 4861 Seminar on American Election and Voting

Survey of major contributions to the study of American elections and voting behavior; patterns of voting through time as well as contemporary cross-sectional patterns.

Credit 3 units.

L32 Pol Sci 489 Politics of Regulation

Events such as the Gulf oil spill and the economic meltdown have dramatized the importance of regulation in the United States, and at the same time called into question the most fundamental beliefs about the nature of the regulatory process. This course reviews the notion of market failure as basic to understanding the rationale for government regulation; it also examines theories of governmental failure as a source of skepticism and concern regarding impediments to effective regulation. Much of the course reviews the development of regulatory machinery in the 20th century. We examine the political forces that have resulted in expansion of the institutions of regulation — interest groups, partisan conflict, legislative negotiation, and executive leadership. We examine these forces in detail in examining the political and legislative response to recent financial and environmental crises.

Credit 3 units. A&S IQ: SSC, WI EN: S

L32 Pol Sci 491 Collection and Analysis of Qualitative Data

This course covers basic techniques for collecting, interpreting and analyzing qualitative data. Students select a research project, collect appropriate qualitative data and conduct a preliminary analysis. Students learn how to gather several types of qualitative data, including participant observation and open- and closed-ended interviews. In addition, they evaluate and analyze primary data collected by others including oral histories, archival records, interview transcripts. We consider the advantages and disadvantages of non-randomly collected data, such as those gathered through ethnographic and archival methods. We assess the utility of building statistical datasets from such data, and students learn the basic techniques of using

computer programs such as Nvivo and Atlas.ti for qualitative data. Biweekly assignments that focus on different aspects of collection and analysis are designed to help students produce a research paper as a final project.

Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 495 Research Design and Methods

This course provides an introduction to qualitative and quantitative research methods in political science. Topics address issues related to theory building as well as theory testing. Technical issues related to these methods are not the focus of this course, as are theoretical issues regarding the advantages and disadvantages of the different approaches. Ultimately, the goal of this course is twofold: (1) to instruct students to critically analyze scholarly articles with particular attention to research design; and (2) to guide students in how to design an original research project. Both the reading assignments, including methodological and applied readings, and the written assignments are directed toward these goals.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L32 Pol Sci 496 Game Theory and Collective Choice

An introduction to models of collective choice important in political science, including game theory, the spatial voting model and axiomatic social choice theory. The course concentrates primarily on noncooperative game theory, whose main topics include: strategic and sequential forms, Nash equilibrium, solution by backward induction, imperfect information, repeated games; and applications to voting, campaigning, public goods, agenda design, bargaining and collective action. With noncooperative games as a foundation, the course then examines cooperative game theory (games in coalition form), voting as a social choice mechanism (including the median voter theorem and global cycling theorems), and social-choice possibility theorems (such as Arrow's Theorem). Prerequisite: Math 131 Calculus I or Pol Sci 5052 Mathematical Modeling, or equivalent.

Credit 3 units. A&S IQ: SSC EN: S

L32 Pol Sci 49PK The Founding Fathers' Government in an Electronic Age

This is a research seminar that examines how Americans sought to translate their notions of government into a realistic set of priorities and a functioning set of public institutions. Extending from 1789 through the 1820s, this course investigates how the federal government came into being, what it did, and who populated the civilian and military rank of American officialdom. This is also a course in digital history. Students create new knowledge through their own contributions to an ongoing digital project that seeks to reconstitute the early federal workforce. In the process, students learn a variety of digital techniques, ranging from encoding languages to electronic systems to software packages.

Same as L22 History 49PK

Credit 3 units.

L32 Pol Sci 5056 Political Borders, Domestic Politics and Patterns of Conflict and Cooperation

Borders are ubiquitous in politics and economics. International borders are what make relations among states international, while sub-state administrative borders are increasingly recognized as central to understanding many aspects of domestic politics. For instance, the status and key characteristics of borders are known to have significant effect on the likelihood and character of militarized conflict among states, the volume of international trade and foreign direct investment, and the propensity for civil conflicts to become "transnational". Furthermore, "informal" political borders, such as states' internal ethnic divisions, have also been found to profoundly influence economic patterns, patterns of political competition, as well as the propensity for states to experience political violence and civil conflict. Despite the ubiquity of borders and their widely recognized importance to politics, there has traditionally been little research directly addressing how and why they shape individual level behavior. Recently, this has changed, as scholars across several literatures in the subfields of international relations, comparative politics and political economy have begun to put greater theoretical and empirical focus on borders and their role in organizing the political and economic behavior of individuals and governments. This course provides a survey of the role of borders in political and economics, drawing from a diverse set of contemporary literatures in political science and economics.

Credit 3 units.

L32 Pol Sci 5092 History of Political Thought II: Legitimacy, Equality and the Social Contract

Government is often justified as legitimate on the grounds that it is based on the consent of the governed. In History of Political Thought II, "Legitimacy, Equality, and the Social Contract," we examine the origins of this view, focusing our attention on canonical works in the social contract tradition, by Thomas Hobbes (1588-1679), John Locke (1632-1704), Jean-Jacques Rousseau (1712-1778), David Hume (1711-1776), and Immanuel Kant (1724-1804). This course is the second in a three-semester sequence on the history of political thought. Students are encouraged but not required to take all three courses. Prerequisite: One previous course in political theory or political philosophy.

Same as L32 Pol Sci 392

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L32 Pol Sci 5442 Political Psychology

Political psychology is a rapidly growing field of research located at the intersection of psychology and political science. Broadly, political psychology helps us understand how individuals think and feel about politics and how these psychological factors shape political behavior. This course is designed to examine the major areas of research on how psychological factors explain important political phenomena, such as political, vote choice, polarization, partisanship, media consumption, political knowledge, political communication, and policy preferences. This course will draw heavily on research in American politics, but it will extend to research across the subfields. Students will design and conduct independent research and engage in assignments geared toward professional development.

Credit 3 units.

L32 Pol Sci 5570 Seminar in Security and Conflict

This course serves as a field seminar for the conflict and security sub-field of International Relations. We cover the theories and approaches central to understanding cutting-edge research in conflict and security, with a focus on the sort of work that is being published in top journals. We will cover topics such as the sources and (sometimes long-term) consequences of interstate conflict and war, key theories and empirical approaches in the fast growing field of civil conflict, as well as topics at the intersection of security and international political economy. This course is intended to serve as a field seminar for students interested in core topics in conflict and security.

Credit 3 units.

L32 Pol Sci 5901 Research Workshop II

The objective of this course is to provide a forum in which students propose, develop, and complete research projects that are marketable to a broad political science audience, and to help students refine their analytical and writing skills. The course is required for students in their 3rd year. The specific goal of the course is for each student to develop a first draft of his/her dissertation prospectus and prepare it for submission to his/her dissertation committee. Participation is an essential component of the seminar. Students are expected to (1) submit and/or present their work based on a schedule that is finalized at the start of the semester, and (2) give written feedback and engage in discussion of the work submitted by their peers every week. Prerequisite: L32 590

Credit 3 units.

Portuguese

Portuguese is the sole official language of seven countries spanning three continents: Angola, Brazil, Cape Verde, Guinea-Bissau, Mozambique, Portugal, and São Tomé and Príncipe. In addition, Portuguese enjoys co-official language status in East Timor, Equatorial Guinea and Macau. It is the sixth most spoken language worldwide and the fifth most spoken on the internet.

Among the countries where Portuguese is an official language, Brazil stands out as a formidable emerging 21st-century economic power. With a population of more than 190 million people, it is one of the 10 largest markets in the world.

Students learning Portuguese are often initially attracted by the array of vibrant Lusophone cultures, but the language is also appealing for pragmatic reasons to increasing numbers of business, economics, political science, anthropology and environmental studies majors. Many students are interested in Latin American Studies or globalization, or they are curious about Brazil's rich natural resources and booming technology industry.

Portuguese is an outstanding supplement to any student's education. For those already fluent in Spanish, Portuguese represents the chance to take a fast-paced course sequence and be fluent more quickly in multiple languages.

At Washington University, Portuguese classes are marked by the same joyful, positive environment that is characteristic of many Lusophone cultures. Outside the classroom, students can improve their fluency at cultural events and Lusophone movie nights, in addition to choosing from study abroad programs affiliated with the university, either for the summer or for an entire semester.

Bem-vindos!

Faculty

For a list of affiliated faculty, please visit the Department of Romance Languages and Literatures faculty (p. 897) page.

Majors

The Department of Romance Languages and Literatures offers two years of intensive course work in Portuguese. Although there is not yet an official major in this area, students can opt to include Portuguese as one of their three languages of concentration in the pursuit of a Romance languages major. For more information about this option, please email Dr. Valéria M. Souza (vsouza@wustl.edu).

Minors

The Department of Romance Languages and Literatures offers course work in Portuguese; however, there is not yet a minor in this area.

Courses

Visit online course listings to view semester offerings for L37 Portug (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L37&crsLvL=1:4>).

L37 Portug 101 Portuguese I

Introduction to Portuguese language. The course emphasizes acquisition of communicative ability. It also covers basic grammar points through reading and writing activities. Classes are taught entirely in Portuguese. No prior experience in the language is required.

Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

L37 Portug 102A Portuguese II

Introduction to Portuguese language. This second course in the Portuguese program emphasizes acquisition of communicative ability. It also covers basic grammar structures through reading and writing activities. Classes are taught entirely in Portuguese. Prerequisite: Portug 101 or permission of instructor.

Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

L37 Portug 103 Portuguese for Spanish Speakers I

Intensive and accelerated course especially designed to take advantage of students' knowledge of Spanish and to promote a more rapid learning of Portuguese. Classes are entirely taught in Portuguese and stress oral communication, basic use of grammar, reading and writing skills. Intermediate online placement exam in Spanish is required.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L37 Portug 104 Portuguese for Spanish Speakers II

This course intends to offer a sequence in the learning process initiated in Portug 103. It is a fast-paced class, designated for Spanish speakers with the objective of improving conversational, writing and reading skills. Prerequisite: Portug 103 or permission of instructor.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L37 Portug 215 Reading and Conversation I

The goal of this course is to review and enhance the content learned at the basic level. Through culturally relevant readings and related conversational activities, students are expected to enrich their vocabulary, gain fluency, and improve both reading comprehension and writing skills. Prerequisites: two college semesters of Portuguese or permission of instructor.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L37 Portug 220 Reading and Conversation II: Intermediate Portuguese

This course is a continuation of Portug 215, therefore an intermediate level in the Portuguese section. Its main goal is to improve students' reading proficiency, as well as to provide a class environment in which conversational skills can be practiced and made into a solid foundation. In addition, the class provides tools to expand vocabulary and promote a cultural understanding of Brazil. Prerequisite: Portug 215 or permission of instructor.

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

Prerequisite: permission of the department.

Credit 3 units.

L37 Portug 400 Independent Study

Credit variable.

Praxis

The Praxis program provides an exciting opportunity to combine the analytical reading, writing and thinking skills of a liberal arts education with the marketable skills required in the 21st century to take students into career paths of their own design.

Eligibility Requirements: The Praxis program is only offered to students in Arts & Sciences. Students may apply after completing the first semester of their first year. Students must fill out an online application (<https://forms.artsci.wustl.edu/praxisapplication/>) for the program and be accepted to enroll in Praxis courses. Applicants are accepted on a rolling basis

throughout the first semester of their junior year if they have maintained a 3.0 grade-point average or higher. After the first semester of junior year, it becomes difficult to complete all Praxis program requirements before graduation.

Faculty: The Arts & Sciences faculty from a wide variety of backgrounds have helped to develop the Praxis program and are eager to teach, monitor and mentor the Praxis students. In addition, leaders in business, nonprofit organizations and government — many of whom discovered the foundation for their success in liberal arts studies — will be lecturers in the signature Praxis courses.

Focused Workforce Curriculum: The Praxis program does more than provide students with the foundation of a liberal arts education: the curriculum is designed specifically to provide students with many additional tools essential for their future in the world of work. In addition to being exposed to the specialized content of a particular field, Praxis students will be acquiring the expertise essential for their first jobs as well as for careers that may not yet exist:

- Analysis of multiple perspectives essential to the increasing globalization of our world
- Critical thinking
- Familiarity with quantitative analysis and methods
- Outstanding writing and speaking skills
- Foreign language literacy and culture
- Team and group work expertise and psychology
- Essential skills in traditional and emerging technology

Internships: The Praxis experience culminates in an internship that is normally taken at the end of the junior year. This allows students to synthesize the tools and theories they have learned and use them in the workplace. Locations for internships may include national and international sites.

Community: The success of our students is central to our program. The academic advisers and all Praxis faculty members assist students with tailoring their education to their own interests and goals. In particular, each student is assigned a faculty mentor who closely monitors that student's progress. The faculty, the staff and all of the Praxis students form a supportive community that stimulates and encourages the highest standards of excellence in the students' studies and in their chosen careers.

The Program

1. **Leadership and group experience** (3 units) (fall of sophomore year)

Required: Praxis 201 Leaders in Context

2. **Information technology skills** (2 units) (fall of sophomore year)

Required: Praxis 207 Fluency in Sociotechnology

3. **Communication skills, both written and oral** (3 units) (spring of sophomore year)

Required: Praxis 285 Communication that Works

4. **Analytic and problem-solving skills** (3 units)

Required: One of the following:

Code	Title	Units
Econ 1011	Introduction to Microeconomics	3
Econ 1021	Introduction to Macroeconomics	3
Phil 100G	Logic and Critical Analysis	3
Undergraduate research experience		3
An analytic or problem-solving course (by petition)		3

5. **Quantitative skills** (3 units)

Required: A course in statistics (select one from below):

Code	Title	Units
Math 1011	Introduction to Statistics	3
Math 2200	Elementary Probability and Statistics	3
Math 3200	Elementary to Intermediate Statistics and Data Analysis	3
Pol Sci 363	Quantitative Political Methodology	3
Psych 300	Introduction to Psychological Statistics	3

6. **International perspective or experience** (3 units)

Required:

The study of any language through the 300 level

or

Study abroad

or

One course in international economics or economic development (must be at the 300 level or higher)

7. **Internship** (3 units)

By allowing students to put into practice the skills and knowledge learned through the Praxis curriculum, the Praxis internship is conducted with the mentorship of a sponsoring Praxis faculty member and usually occurs by the end of the junior year. Students should contact the Praxis internship coordinator and have a faculty mentor in place before beginning the internship. It is not possible to fulfill the internship portion of the Praxis program with an internship that occurred before completing the majority of Praxis requirements. The internship should consist of 135 hours.

Upon completion of the internship experience, there are two options available for students to fulfill the Praxis internship requirement. In conjunction with the approval of the faculty sponsor, the student submits a 10-page paper exploring the relevant issues and questions set by the sponsoring faculty. Depending on the topic, the nature of the internship, and the discretion of the sponsoring faculty, a daily journal may

be submitted in lieu of the 10-page paper. For full details of the requirements of this internship, contact Dean Joy Kiefer (jkiefer@wustl.edu). This step is required for completion of the Praxis program.

Majors

The Praxis program is not a major program. It is designed for students entering their sophomore year, and it is available by application only. Students must apply online (<http://college.artsci.wustl.edu/praxis/>). First-year students may apply to the program after their first semester, and applicants are accepted on a rolling basis through the first semester of their junior year.

Minors

The Praxis program is not a minor program. It is designed for students entering their sophomore year, and it is available by application only. Students must apply online (<http://college.artsci.wustl.edu/praxis/>). First-year students may apply to the program after their first semester, and applicants are accepted on a rolling basis through the first semester of their junior year.

Courses

Visit online course listings to view semester offerings for L62 Praxis (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L62&crslvl=1:4>).

L62 Praxis 201 Leaders in Context

In this course we explore leadership both theoretically and practically. Focus is on understanding the concept of culture and how the cultural context informs a leader's style and effectiveness. This course also is designed to help students develop insights about leadership practice through readings, discussions, conversations with leaders, and group projects based on fieldwork. Students examine a wide variety of leaders and leadership styles in order to better understand how leaders mobilize followers within the constraints of their particular settings. Students also analyze the creation of institutional identity within organizations and corporate culture and explore effective leadership practices within these settings, as well as analyzing some cross-cultural examples of leadership. This course is limited only to students enrolled in the Praxis program.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L62 Praxis 207 Fluency in Sociotechnology

This course analyzes the fundamentals of technology and how that technology affects communication and processes. Students can expect to learn effective strategies for communicating through various platforms and the importance of content delivery in the proper context. Students will also interact with real-world practitioners through a series of guest speakers in addition to the weekly classroom discussion. The semester will culminate in a team-based project that puts students in contact with real nonprofit organizations in the St. Louis area. The students are tasked with applying the information learned in class to real workplace scenarios. This course is limited only to students enrolled in the Praxis program.

Credit 2 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L62 Praxis 285 Communication that Works

This course focuses on the communication forms and skills essential to contemporary living and working. Various forms of writing for different audiences and purposes: business letters, memorandums, proposals, reports, press releases, speeches as well as public speaking are practiced and critiqued. The use of technology common in public speaking is practiced and critiqued. The use of technology common in public presentations is expected. Course reading is supplemented with viewing and listening. Final grade is based on combination of quizzes, writing assignments and demonstration of speaking skills. This course is limited only to students enrolled in the Praxis program.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L62 Praxis 286 Entrepreneurship and the Liberal Arts

It is a little-known truth that more entrepreneurs come out of Arts & Sciences than any other college. This course begins by exploring why this is so, examining in particular the creative and innovative qualities developed in liberal arts that are crucial to the success of the entrepreneur. We then move on to examine entrepreneurs in action, hearing from those in the field and reading of others, learning how the liberal arts proved instrumental in various ways to their development and ultimate success as entrepreneurs.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L62 Praxis 367 Positive Psychology: The Science of Happiness

Reviews the relatively recent development in the field known as "Positive Psychology." Topics may include: happiness and life-satisfaction, positive self-esteem, creativity, caring relationships, love (passionate and otherwise), empathy, optimism, ambition, moral character development, attachment, compassion, forgiveness, helping, work ethics, and successful aging. Designed to take a sampling of those aspects of psychology that emphasize the positive side of human nature. Prerequisites: Psych 100B, junior or senior standing. Same as L33 Psych 367

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

Psychological & Brain Sciences

Psychological & Brain Sciences allows students to examine in depth the study of behavior in the following areas:

- Aging and development
- Biological bases of behavior
- Clinical and abnormal psychology
- Cognition
- Cognitive neuroscience
- Learning and memory
- Personality
- Sensation and perception
- Social interactions

The Department of Psychological & Brain Sciences at Washington University has particular strengths in the following areas:

- Aging
- Behavioral economics
- Human development
- Diversity science
- Cognitive neuroscience
- Emotion
- Judgment and decision making
- Learning and operant conditioning
- Neuropsychology
- Personality and individual differences
- Adult psychopathology
- Sensory processes in vision and audition
- Social theories of self and social processes
- Human emotion

There are also many opportunities for undergraduates in this department:

- Research involvement with faculty members
- Supervised internships with community service agencies
- Practicum in Applied Behavior Analysis: Autism Spectrum Disorder
- Study abroad
- Concentrations within the major
- Senior honors
- Membership in Psi Chi, the national honor society in psychology

Majors

The Major in Psychological & Brain Sciences

The field of psychology encompasses a large and diverse area of study that is empirical, theoretical and practical. As the science concerned with the study of behavior, psychology includes such areas as the biological bases of behavior; brain-behavior interactions; learning; memory; cognition; motivation; emotion; sensation and perception; the study

of social interactions, persuasion and attitudes; aging and development; personality; clinical, abnormal and health psychology; and leisure and work experiences. Psychology is a valuable multipurpose discipline in which to major. It has relevance for those considering careers in law, medicine, the health professions, education and business. In addition, it provides important skills and knowledge for those who may not be planning additional schooling.

Total units required: 34 units, of which at least 25 must be at the 300 level or above

Required courses:

- Psych 100B Introduction to Psychology is a prerequisite for all upper-level courses (300 level and above). Exemption from Psych 100B is possible in the following circumstances:
 - Completion of an equivalent course transferred from another institution, if approved by the director of undergraduate studies.
 - An Advanced Placement (AP) psychology test score of 5, an International Baccalaureate (IB) score of 6 or 7, or a British A-Level grade of A. (**Note:** The AP, IB, or British A-Level earns an exemption from Psych 100B but earns no units of credit toward the major.)
- Psych 300 Introduction to Psychological Statistics
 - Math 2200 or Math 3200 or both Marketing Statistics DAT 120 and DAT 121 may substitute for Psych 300 but earn no units of credit toward the major. No AP math course can substitute for Psych 300.
- Psych 301 Experimental Psychology or Psych 3011 Experimental Psychology

Core requirements: At least one course* from each of the following five categories:

Social/Personality:

Code	Title	Units
Psych 315	Introduction to Social Psychology	3
Psych 353	Psychology of Personality	3
Psych 305	Health Psychology	3
Psych 367	Positive Psychology: The Science of Happiness	3
Psych 395	Prejudice, Stereotyping & Discrimination	3
Psych 396	Psychological Dynamics of Empathy	3
Psych 4099	Human Evolutionary Psychology	3

Abnormal/Affective:

Code	Title	Units
Psych 354	Abnormal Psychology	3
Psych 3195	Abnormal Child Psychology	3
Psych 3501	Psychotherapy: Introduction to Practice and Research	3

Psych 3645	Understanding Emotions	3
Psych 367	Positive Psychology: The Science of Happiness	3
Psych 4765	Inside the Disordered Brain: Biological Bases of the Major Mental Disorders	3

Biological/Neurological Bases of Behavior:

Code	Title	Units
Psych 330	Sensation and Perception	3
Psych 3401	Biological Psychology	3
Psych 345	Genes, Environment, and Human Behavior	3
Psych 3604	Cognitive Neuroscience	3
Psych 374	Drugs, Brain and Behavior	3
Psych 4046	Developmental Neuropsychology (Writing Intensive)	3
Psych 4182	Perception, Thought and Action	3
Psych 4765	Inside the Disordered Brain: Biological Bases of the Major Mental Disorders	3

Behavior and Cognition:

Code	Title	Units
Psych 360	Cognitive Psychology	3
Psych 361	Psychology of Learning	3
Psych 358	Language Acquisition	3
Psych 380	Human Learning and Memory	3
Psych 4099	Human Evolutionary Psychology	3
Psych 433	Psychology of Language	3

Lifespan Development:

Code	Title	Units
Psych 219	The Infant Mind: Sophomore Seminar (this course can fulfill the core area, but units are counted as part of the "6 units rule" described below)	3
Psych 321	Developmental Psychology	3
Psych 325	Psychology of Adolescence	3
Psych 326	Introduction to the Psychology of Aging	3
Psych 358	Language Acquisition	3
Psych 427	Social Gerontology	3
Psych 4046	Developmental Neuropsychology (Writing Intensive)	3

* If a course falls into more than one category, it can only be used to fulfill one of those categories (i.e., no double-counting).

Elective courses: An additional 9 units of course work

6 Units Rule: No more than 6 units from the following course types may be used to satisfy the minimum requirements for the Psychology & Brain Sciences (P&BS) major:

- 100-/200-level courses (other than Psych 100B)
- Psych 333 Independent Study in Psychological & Brain Sciences
- Psych 444C Independent Study for a Concentration in Psychological and Brain Sciences
- Psych 498 Study for Honors and Psych 499 Study for Honors
- Approved University College psychology classes
- Cross-listed courses not home-based in P&BS
- Transfer credits (students transferring from another college should refer to the Transfer Credit section below)

Additional Information

Transfer Credit: If accepted by the College of Arts & Sciences, transfer credits will be evaluated by the director of undergraduate studies in the P&BS department for their applicability toward the major.

Senior Honors: The primary goal of the honors program in P&BS is to provide students who have achieved a superior academic record the opportunity to conduct a comprehensive empirical investigation under the direction of a faculty member.

To be admitted into the honors program, students must meet the following requirements:

- Have overall and P&BS grade-point averages of at least 3.65
- Complete both Psych 300 and Psych 301 (or Psych 3011)
- Have an approved honors research adviser

Concentrations in Psychological & Brain Sciences

To augment the broadly based P&BS major, the department offers concentrations for students who wish to engage more intensively with a specific area within the discipline. The concentrations are meant as an enrichment of the major, but the units for the concentrations may be part of the regular P&BS major requirements.

A concentration requires a minimum of 12 units, which include required and elective courses (one of which must be at the 400 level). In addition, to complete a concentration, students will have to undertake an approved research assistantship (Psych 444C Independent Study for a Concentration in Psychological and Brain Sciences) or an approved internship, practicum or honors thesis.

A concentration will be a valuable experience for students planning on graduate study in psychology or related fields or for those who have a particular interest or want to gain expertise in one of the approved concentrations. Each concentration will have a member of the faculty as the contact person who will meet with and advise students in the concentration.

Courses taken for a concentration may be used to fulfill no more than one of the core categories or distribution requirements of a P&BS major. No more than 3 units of course work taken for a concentration may be applied toward a P&BS major. None of the units for a concentration can be counted for any other major or minor (i.e., there is no double counting). For those pursuing the cognitive neuroscience major, the cognitive neuroscience concentration is not an option.

The Six Concentrations

Cognition in Children

This concentration allows students to acquire deeper knowledge of cognitive and social-cognitive processes that occur during infancy and early childhood. The courses for this concentration consider child development more generally and then explore in more depth the development of cognitive, conceptual, linguistic and social abilities.

Adviser/coordinator: Professor Lori Markson

Course work required:

Code	Title	Units
Psych 321	Developmental Psychology	3

Electives (must include two classes, at least one of which is at the 400 level):

Code	Title	Units
Psych 219	The Infant Mind: Sophomore Seminar	3
Psych 358	Language Acquisition	3
Psych 4046	Developmental Neuropsychology (Writing Intensive)	3
Psych 4591 or Psych 4592	The Development of Social Cognition Development of Social Cognition (Writing Intensive)	3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper

Relevant faculty: Pascal Boyer, Lori Markson, Rebecca Treiman and Desirée White

Cognitive Neuroscience

This concentration allows students to acquire deeper knowledge of the relationship between mind and brain. The courses for the concentration consider the neurobiological basis of psychological function at a more general level and then explore in greater depth specialized topics related to how higher cognitive processes (e.g., memory, attention, perception, emotion) emerge from brain function.

Adviser/coordinator: Professor Todd Braver

Course work required:

Code	Title	Units
Psych 3604	Cognitive Neuroscience	3

Electives (must include two classes, at least one of which is at the 400 level):

Code	Title	Units
Psych 330	Sensation and Perception	3
Psych 3401	Biological Psychology	3
Psych 345	Genes, Environment, and Human Behavior	3
Psych 374	Drugs, Brain and Behavior	3
Psych 4046	Developmental Neuropsychology (Writing Intensive) ((Writing Intensive))	3
Psych 4182	Perception, Thought and Action	3
Psych 4413	Advanced Cognitive Neuroscience (Writing Intensive)	3
Psych 4450	Functional Neuroimaging Methods	3
Psych 4746	Biological Pathways to Psychopathology: From Genes and the Environment to Brain and Behavior	3
Psych 4765	Inside the Disordered Brain: Biological Bases of the Major Mental Disorders	3
Psych 488	The Cognitive Neuroscience of Film	3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper

Relevant faculty: Deanna Barch, Ryan Bogdan, Todd Braver, Ian Dobbins, Denise Head, Wouter Kool, Kathleen McDermott, Desirée White and Jeff Zacks

Reading, Language and Language Acquisition

This concentration provides students with a deep and broad knowledge of linguistic development. The courses take an in-depth look at the development of written and spoken language.

Adviser/coordinator: Professor Rebecca Treiman

Course work required:

Code	Title	Units
Ling 170D	Introduction to Linguistics	3

Electives (must include two classes, at least one of which is at the 400 level):

Code	Title	Units
Psych 234	Introduction to Speech and Hearing Sciences and Disorders	3
Psych 358	Language Acquisition or Psych 358W Language Acquisition	3
Psych 433	Psychology of Language	3
Psych 4351	Reading and Reading Development or Psych 4352 Reading and Reading Development (Writing Intensive)	3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper

Relevant faculty: Rebecca Treiman, David Balota, Lori Markson, Mitchell Sommers and Kristin Van Engen.

Lifespan Development

Many introductory courses in developmental psychology focus on the changes that occur from birth to adolescence. The concentration in lifespan development provides students with an understanding of the cognitive and physiological changes that occur over the lifespan, with a primary focus on older adulthood. A major goal of the concentration is to provide students with an understanding of the similarities and differences in development at different stages of the lifespan.

Adviser/coordinator: Professor Mitchell Sommers

Course work required:

Code	Title	Units
Psych 326 & Psych 427	Introduction to the Psychology of Aging and Social Gerontology	6

Electives (must include one of the following courses):

Code	Title	Units
Psych 321	Developmental Psychology	3
Psych 4301	Contemporary Topics in Cognitive Development	3

Research mentorship or internship experience: Students can complete this aspect of the concentration with either a prior approved research mentorship or an approved internship related to older adults. Successful completion of a paper is required in either case.

Relevant faculty for research mentorship: Mitchell Sommers, David Balota, Brian Carpenter, Sandra Hale, Denise Head and Lori Markson.

Possible internships: Students may work in an assisted-living facility or another community-based program designed to assist older adults. Other internships are available; contact Dr. Denise Head for opportunities.

Experimental Psychopathology

This concentration allows students to acquire more advanced knowledge of the ways in which psychologists study mental disorders. Current research demonstrates the importance of integrating psychological and biological variables to better understand the classification, etiology, and treatment of a wide variety of mental disorders, including schizophrenia, mood disorders, anxiety disorders, substance use disorders and eating disorders. Students who pursue this concentration will develop a broad-based appreciation for conceptual and methodological issues that are central to research in psychopathology.

Adviser/coordinator: Professor Deanna Barch

Course work required:

Code	Title	Units
Psych 354	Abnormal Psychology	3

Electives (must include two classes, at least one of which is at the 400 level):

Code	Title	Units
Psych 345	Genes, Environment, and Human Behavior	3
Psych 374	Drugs, Brain and Behavior	3
Psych 4541	Personality and Psychopathology	3
Psych 4557	Biopsychosocial Aspects of Eating Disorders and Obesity	3
Psych 4746	Biological Pathways to Psychopathology: From Genes and the Environment to Brain and Behavior	3
Psych 4765	Inside the Disordered Brain: Biological Bases of the Major Mental Disorders	3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper

Relevant faculty: Deanna Barch, Ryan Bogdan, Josh Jackson, Tom Oltmanns, Tom Rodebaugh, Renee Thompson and Denise Wilfley

Personality and Individual Differences

This concentration allows students to acquire deeper knowledge of how and why individuals differ from one another and the ways in which individual (e.g., personality) and group (e.g., gender) differences influence behavior, emotion, experience, identity and psychopathology. The core course for the concentration (Psych 353) considers personality more generally. The seminars explore in depth specific aspects of personality and individual differences, including biological bases of individual differences (i.e., genetics), the interpersonal processes associated with personality and personality judgment, individual differences in self and identity, group differences and personality pathology.

Adviser/coordinator: Professor Tammy English

Course work required:

Code	Title	Units
Psych 353	Psychology of Personality	3

Electives (must include two classes, at least one of which is at the 400 level):

Code	Title	Units
Psych 345	Genes, Environment, and Human Behavior	3
Psych 3645	Understanding Emotions	3
Psych 367	Positive Psychology: The Science of Happiness	3
Psych 413	Contemporary Topics in Social Psychology	3
Psych 4541	Personality and Psychopathology	3
Psych 4555	Emotion Regulation	3

Research mentorship: Prior approved research mentorship with a relevant faculty member and successful completion of a research paper

Relevant faculty: Tammy English, Patrick Hill, Josh Jackson, Tom Oltmanns, Michael Strube and Renee Thompson

The Major in Psychological & Brain Sciences: Cognitive Neuroscience

How does the brain think? Cognitive neuroscience refers to the scientific study of the linkage between mental functions and the operation of the brain and nervous system. The goal of cognitive neuroscience is to provide an understanding of psychological processes such as attention, memory, thinking and emotion in terms of physical principles and biological components. At the same time, it aims to provide an understanding of the psychological constraints on how the brain functions, computes and generates behavior. Students who pursue this undergraduate major in cognitive neuroscience will gain a strong foundation in how to study the brain and

mind at various levels of analysis, including cellular biology, brain systems, cognitive and affective function, and neural computation. In addition, they will gain an appreciation of the relationship between healthy cognitive and brain function and its breakdown in various disease states and disorders. The cognitive neuroscience major provides excellent preparation for a career in health and medical professions, scientific research, computer fields, education and law.

Total units required: 36-37 units/12 courses (plus prerequisites)

Prerequisites Outside of Psychological & Brain Sciences (7 units):

Code	Title	Units
Math 132	Calculus II	3
Biol 2960	Principles of Biology I	4
Total Units		7

Note: Each of these prerequisites has its own prerequisites: Math 132 requires Math 131; for Biol 2960, taking Chem 111A and Chem 112A (concurrently) is strongly recommended. These are biology and pre-med prerequisites as well, and they are typically completed during a student's first year. They may alternatively be satisfied through AP credit or any other already-approved mechanism from the respective department or the college.

Core Requirements (19 units):

Code	Title	Units
Psych 100B	Introduction to Psychology	3
Psych 300	Introduction to Psychological Statistics	3
Psych 301 or Psych 3011	Experimental Psychology	4
Psych 3401 or Psych 344	Biological Psychology	3
Psych 360	Principles of the Nervous System	3
Psych 3604	Cognitive Psychology	3
Total Units		19

Note: The first three requirements (i.e., Psych 100B, 300 and 301/3011) are the same as those for the regular P&BS major. L33 Psych 344 is home-based in Biology; students should register under the cross-listed Psych L33 course designation, not L41 Biol 3411.

Exemption from Psych 100B is possible in the following circumstances:

- Completion of an equivalent course transferred from another institution, if approved by the director of undergraduate studies.
- An AP psychology test score of 5, an IB score of 6 or 7, or a British A-Level grade of A. (**Note:** The AP, IB, or British A-Level earns an exemption from Psych 100B but earns no units of credit toward the major.)

Math 2200 or Math 3200 or both Marketing Statistics DAT 120 and DAT 121 may substitute for Psych 300 but earn no units of credit toward the major. No AP math course can substitute for Psych 300.

Additional Biological & Cognitive Distributions (two courses — one each from Distribution A and B lists):

Distribution A eligible courses:

Code	Title	Units
Psych 321	Developmental Psychology	3
Psych 330	Sensation and Perception	3
Psych 361	Psychology of Learning	3
Psych 380	Human Learning and Memory	3
Psych 358	Language Acquisition	3
Psych 4099	Human Evolutionary Psychology	3
Psych 4182	Perception, Thought and Action	3
Psych 433	Psychology of Language	3

Distribution B eligible courses:

Code	Title	Units
Biol 3058	Physiological Control Systems	2
Biol 3151	Endocrinology	3
Biol 328	Principles in Human Physiology	4
Biol 3421	Introduction to Neuroethology	3
Biol 3422	Genes, Brains and Behavior	3
Psych 345	Genes, Environment, and Human Behavior	3
Physics 350	Physics of the Brain	3
Psych 374	Drugs, Brain and Behavior	3

Computation Requirement (one course):

Code	Title	Units
CSE 131	Introduction to Computer Science	3
Psych 4175	Applied Statistical Analysis with R	3
Psych 5007	Statistics and Data Analysis in MATLAB	2

With prior approval, another course involving a significant computational/programming component may be substituted.

Capstone/Depth Requirement (9 units — one course each from Groups A, B, and C):

Note: If a course falls into more than one category, it can only be used to fulfill one of those categories (i.e., no double-counting).

Capstone/Depth A eligible courses:

Code	Title	Units
Psych 4046	Developmental Neuropsychology (Writing Intensive)	3
Psych 4099	Human Evolutionary Psychology	3
Psych 4182	Perception, Thought and Action	3
Psych 433	Psychology of Language	3
Psych 4413	Advanced Cognitive Neuroscience (Writing Intensive)	3
Psych 4450	Functional Neuroimaging Methods	3
Psych 4746	Biological Pathways to Psychopathology: From Genes and the Environment to Brain and Behavior	3
Psych 4765	Inside the Disordered Brain: Biological Bases of the Major Mental Disorders	3
Psych 488	The Cognitive Neuroscience of Film	3

or an appropriate 400-level course from outside of the department, such as the following:

Code	Title	Units
Biol 4030	Biological Clocks	3
Biol 404	Laboratory of Neurophysiology	4
Biol 4580	Principles of Human Anatomy and Development	3
Phil 4212	Philosophy of Neuroscience	3

Capstone/Depth B eligible courses (for capstone research/writing-intensive experience):

Code	Title	Units
Psych 4046	Developmental Neuropsychology (Writing Intensive)	3
Psych 4413	Advanced Cognitive Neuroscience (Writing Intensive)	3
Psych 444B	Independent Study for the Major in Psychological & Brain Sciences: Cognitive Neuroscience	3
Psych 498 & Psych 499	Study for Honors and Study for Honors (Writing Intensive)	6

Capstone/Depth C eligible courses: An additional 3 units from the Capstone/Depth A or B lists or, with prior approval, MBB 300, Psych 333 (all 3 units must be completed in one semester and in one lab to be considered for approval), or Psych 498/Psych 499.

Acceptance Into the Psychological & Brain Sciences: Cognitive Neuroscience Major

Acceptance into the major is contingent upon an application and then approval by the major committee. As part of this application, the student will meet with an appropriate adviser, who will carefully review the requirements and oversee the student's progress. A brief one-page statement from the student about why they feel that the cognitive neuroscience major is appropriate for them will be requested as part of the application.

Washington University students will be considered for admission to the cognitive neuroscience major no sooner than during their third semester (sophomore year). Decisions are based on the student's statement and academic record as well as the interview with the major adviser.

Minors

The Minor in Psychological & Brain Sciences

Units required: 15

Required course:

Code	Title	Units
Psych 100B	Introduction to Psychology	3

Elective courses:

Four additional courses (i.e., a minimum of 12 units of additional course work) in P&BS, all of which must be at the 300 level or above

Additional Information

Students may receive exemption from the Psych 100B requirement only if an AP psychology score of 5, an IB score of 6 or 7, or a British A-Level grade of A is received. For exemption, no credit will be given; therefore, five applicable courses must be completed. No more than 3 units of an approved cross-listed course originating outside of P&BS, an approved psychology course taken in University College, an approved psychology course taken at another university, or an independent study-type course (e.g., Psych 333) may count toward the minor. (Transfer students must complete at least 9 advanced units of home-based P&BS courses at Washington University.)

For those who have a broad or general interest in P&BS, we recommend taking several courses from the five core areas of psychology (i.e., Social/Personality; Abnormal/Affective; Biological/Neurological Bases of Behavior; Behavior and Cognition; and Lifespan Development).

For those students who want to concentrate in a more specialized area, courses can reflect such specialization. For example, a student interested in the helping professions or counseling may wish to select from such courses as Psych 353 Psychology of Personality, Psych 354 Abnormal Psychology, Psych 361 Psychology of Learning and Psych 321 Developmental Psychology. A student wishing to pursue a specialization in experimental psychology/neuroscientific bases of behavior may select from such classes as Psych 3401 Biological Psychology, Psych 361 Psychology of Learning, Psych 330 Sensation and Perception, Psych 360 Cognitive Psychology and Psych 3604 Cognitive Neuroscience and may also consider doing independent study (Psych 333).

Courses

Visit online course listings to view semester offerings for L33 Psych (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L33&crslvl=1:4>).

L33 Psych 100B Introduction to Psychology

A survey and analysis of concepts, theory, and research covering the areas of learning, memory, social, abnormal, clinical, physiological and sensory psychology. This is a general survey course designed to introduce students to the diversity of areas, approaches, and theories that comprise the study of mind and behavior. Psych 100B is required of all majors and is prerequisite to all upper-level courses in Psychology. NOTE: For freshman and sophomore students enrolled in Psych 100B who are interested in exploring controversial issues in Psychology within a seminar format, see Psych 102, First-Year Opportunity: Controversial Issues in Psychology.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 102 First-Year Opportunity: Contemporary Issues in Psychology

This seminar will enable students to explore in greater depth several of the ideas and concepts in contemporary psychology. Open to first-year students and sophomores who are concurrently enrolled in Psych 100B, and first-year students with AP/IB exemption. Sections are limited to 15 students.

Credit 1 unit. A&S: FYO A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 105 First-Year Opportunity: Psychology of Young Adulthood

This course will cover selected topics relevant to the developmental, social, personal, and cognitive issues that young adults confront during their college years. Material will be drawn mainly from the field of psychology, and the emphasis will be on the scientific basis of concepts and on empirically supported strategies for growth and development. The knowledge gained may contribute to academic success, personal development, and a more rewarding social and academic experience over the course of college and beyond. This 1-unit course is only open to first-year students. Credit/no credit only.

Credit 1 unit. A&S: FYO

L33 Psych 107 The Science of #Slaying It! in College

You have spent the last 12 or so years "slaying it" as a student. You likely have developed lots of effective strategies for succeeding in school. Recently, our understanding of what those successful strategies are has greatly expanded. But, how do we know what skills are particularly helpful to do well academically? From psychological research! In this class students will learn about the psychological research that has illuminated which strategies are most helpful when studying, when in the classroom, and when asking for help. We will focus on how to most effectively study but will discuss other strategies as well. Students will also be asked to apply these skills in the other classes that they're taking this semester, with the hope that they develop and refine the skills they already have and continue slaying it as a student. Prerequisite: open only to freshmen and sophomores. Permission of instructor required. Credit/No Credit option only.

Credit 2 units.

L33 Psych 109 First-Year Opportunity: Research in Psychology

Weekly presentations by various members of the psychology faculty; introduces students to research areas and current issues. Attendance at all lectures required. Open to freshmen and sophomores only. Prerequisite: Psych 100B. Credit/no credit only.

Credit 1 unit. A&S: FYO A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 111 First-Year Opportunity: Mindfulness Science & Practice

Mindfulness is a term that is becoming increasingly used in popular culture to refer to a set of skills associated with increased attentional focus, successful stress-management, and improved health, sleep, and emotional well-being. This course will expose students to the various facets of mindfulness from both an applied and scientific perspective, by teaching mindfulness skills through a set of easy-to-learn practices and exercises, and by surveying of empirical research regarding mindfulness effects on cognition, emotion, brain function, and health. The goal of the seminar will be to provide practical skills that can contribute to personal development, emotional well-being, and academic success, while also developing critical thinking skills in learning how to read and evaluate primary scientific literature on mindfulness. Open to freshman only.

Credit 1 unit. A&S: FYO

L33 Psych 185 First-Year Seminar: Race and Racism

This first-year seminar aims to introduce students to theoretical and empirical research on race and racism. It will provide an overview of historical, sociological, political, epidemiological, and especially social psychological perspectives on racial bias. We will examine mechanisms that contribute to prejudice, stereotyping and discrimination. We will review how bias uniquely affects particular groups, including Native, Asian, Latino, white and Black Americans. We end the course with discussions about interracial interactions.

Credit 3 units. A&S: FYS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 212 Study Abroad: Experiences in Psychology

Prerequisite: enrollment in an approved Psychology study abroad program and prior permission of the director of undergraduate studies. Credit to be arranged. Credit/No Credit only. Credit variable, maximum 3 units.

L33 Psych 221 First-Year Seminar: Introduction to Memory Studies

This course focuses on memory not only as an individual phenomenon but also how our memories for historical events can be determined by the groups to which we belong. We will survey such topics as experimental methods and findings in the study of individual memory; questions of accuracy and vividness of memory; false and illusory memories; eyewitness memory reports that are used in trials; methods to greatly enhance learning and memory; and people with extraordinary memories. We then transition to the study of collective memory, or how our memories and identities are shaped by the groups to which we belong. The topics will include transmission of memories and identity through narratives; shared historical memories; battles over how the past is to be remembered; and revision of the memories of the past to meet concerns of the present. We also consider how memory is used in political arguments. Enrollment is restricted to 19 first-year students.

Credit 3 units. A&S: FYS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 225 Internship in Psychology

An opportunity to gain practical, applied experience in a non-academic, community service agency. For description of prerequisites, course goals, agency selection, registration policies, and course requirements, obtain a copy of "Internships in Psychology" available in room 207B in Somers Family Hall or on the P&BS website: <http://psychweb.wustl.edu/undergraduate>. This course can be taken only once, open to junior and senior P&BS majors only. Credit/No Credit only. Permission of Instructor Required.

Credit 3 units.

L33 Psych 235 Practicum in Applied Behavior Analysis: Autism Spectrum Disorder

An opportunity to be trained in applied behavior analytic techniques and to work with a child with autism/pervasive developmental disorder. Training and supervision will be arranged and coordinated by the family of the child and their consultant. To receive credit, students must undertake a year's work with the child, complete the minimum number of hours of training and therapy, and attend regular therapy meetings. In addition, students must meet with the practicum coordinator for discussion of assigned readings and presentations on autism and therapy. Completion of a paper in the second semester also is required. For further information and petition form, pick up the Practicum brochure from the Department. This course can only be taken once for credit. Credit/No Credit only. Enrollment through the practicum coordinator only.

Credit 3 units.

L33 Psych 246 Mindfulness in Psychology and Eastern Philosophies: Sophomore Seminar

This course explores the concept of mindfulness in psychology and in Eastern philosophies. We will discuss the scientific literature on mindfulness, as well as mindfulness as presented by Buddhist scholars. We will engage in several different mindfulness practices throughout the semester. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L33 Psych 261 Applying the Science of Learning

This course is intended to cover the science of human learning, with special focus on areas, theory, and research that have potential to improve how students learn. Thus, the course will provide selective coverage of theoretical and empirical work in the science of learning that can inform and improve student learning. The applicability of these themes to the students in this course will be explicitly developed through students' explicit translation of the experimental findings from the literature to their own learning challenges. The course will be organized around three major integrated goals. First, the relevant basic theory and findings in select topics in the science of learning will be covered. Second, the implications of this work for improving learning outcomes in authentic educational contexts will be considered. Third, together we will develop concrete techniques and examples of how the principles that emerge can be adopted to significantly enhance outcomes of lifelong learning challenges. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 300 Introduction to Psychological Statistics

Descriptive statistics including correlation and regression. Inferential statistics including nonparametric and parametric tests of significance through two-way analysis of variance. Course emphasizes underlying logic and is not primarily mathematical, though knowledge of elementary algebra is essential. Psych 300 is required of all P&BS majors. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L33 Psych 301 Experimental Psychology

This course provides training in the logic and techniques of psychological research so as to provide students with experience in the design of psychology experiments and the interpretation of results. Topics include experimental design and control, library research, quantitative treatment of data, graphical presentation of results, and clarity of scientific writing. Lectures focus on general principles of experimentation, whereas the laboratory sections provide an introduction to a range of psychological phenomena through hands-on experience in experimentation. Each student also completes an independent research project. Declared psychology & brain sciences majors will have priority. Limited to 15 students per section. Prerequisites: Psych 100B and Psych 300.

Credit 4 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L33 Psych 3011 Experimental Psychology

Psych 3011 is limited to students who have not taken Psych 300 and who want to enroll in Psych 300 and Experimental Psychology concurrently. Therefore, students who enroll in Psych 3011 must also register for Psychology 300. Psych 3011 fulfills the Psychology 301 requirement for the major. Topics in the two courses (i.e., Psych 300 and Psych 3011) will be coordinated in order to integrate the concepts from Statistics with those from Experimental Psychology. Experimental Psychology

provides training in the logic and techniques of psychological research so as to provide students with experience in the design of psychology experiments and the interpretation of results. Topics include experimental design and control, library research, quantitative treatment of data, graphical presentation of results, and clarity of scientific writing. Lectures focus on general principles of experimentation, while the laboratory component provides an introduction to a range of psychological phenomena through hands-on experience in experimentation. Each student also completes an independent research project of their own design under supervision of a faculty member. Enrollment limited to 15 students. Declared psychology & brain sciences majors will have priority. Prerequisites: Psych 100B and concurrent enrollment in Psych 300.

Credit 4 units. A&S IQ: NSM Arch: NSM Art: NSM BU: BA, SCI

L33 Psych 304 Educational Psychology

A course in psychological concepts relevant to education. Organized around four basic issues: (1) how humans think and learn; (2) how children, adolescents, and adults differ in their cognitive and moral development; (3) the sense in which motivation and intention explain why people act as they do; and (4) how such key human characteristics as intelligence, motivation, and academic achievement can be measured. Offered fall and spring semesters.

Same as L12 Educ 304

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 315 Introduction to Social Psychology

Introduction to the scientific study of individual behavior in a social context. Topics: person perception; stereotyping and prejudice; attitudes; memory; and political psychology, among other issues. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 321 Developmental Psychology

This course concentrates on the cognitive and social development of the person from conception to adolescence. Topics covered include: infant perception, attachment, cognitive development from Piagetian and information processing perspectives, aggression and biological bases of behavior. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 3211 Music Cognition

An introduction to modern research on music perception and cognition. The course covers four main topics: the perception of key, the psychoacoustics of dissonance, the relationship between attention and musical meter, and the process by which melodies establish, fulfill, and deny expectations. Students read and discuss research from both cognitive science and music theory, in addition to completing several projects.

Same as L27 Music 3221

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: HUM

L33 Psych 325 Psychology of Adolescence

A broad introduction to adolescence as a developmental period of transition and change. The major topics include the fundamental changes of adolescence; the context of adolescence; and processes of psychological development. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 326 Introduction to the Psychology of Aging

Study of the processes of aging in the individual in terms of their behavioral effects. Age changes in biological functions, sensation, perception, intelligence, learning, memory and creativity are studied to understand the capacities and potentials of the mature and older person. Prerequisite: Psych 100B. Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 330 Sensation and Perception

What's involved in seeing and hearing? This course will cover perception from the physical stimuli (light and sound) that impinge upon the sensory receptors through the higher-level percepts that the stimuli generate. Demonstrations and illusions will be used as we learn about the anatomy and physiology of the sensory systems, and study the brain mechanisms that are involved in vision and audition. PREREQ: Psych 100B.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: BA, SCI

L33 Psych 333 Independent Study in Psychological & Brain Sciences

Prerequisites: Psych 100B and permission of a member of the faculty of the department (or other approved supervisor) who agrees to supervise the student's work. Credit to be arranged. A maximum of 6 units may be applied toward the major. The electronic Petition for Supervision of Independent Study form is available online (<http://eyes.wustl.edu/psych333/>). Students will be enrolled only after their form is approved by the faculty supervisor and forwarded to the undergraduate coordinator.

Credit/no credit only.

Credit variable, maximum 3 units.

L33 Psych 3401 Biological Psychology

An introduction to biological mechanisms underlying behavior. Topics include the physiology of nerve cells; anatomy of the nervous system; control of sensory and motor activity, arousal and sleep; motivation; and higher mental processes. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

L33 Psych 344 Principles of the Nervous System

This course will provide a broad introduction to neuroscience, starting at the level of cellular and molecular neuroscience and ultimately ending at systems and theoretical neuroscience, with emphasis on the organization of the mammalian central nervous system. Topics will include neuronal structure, the action potential, information transmission between neurons, sensory/motor systems, emotion, memory, disease, drugs, behavior, and network dynamics. A fundamental goal of this course is to provide students with the ability to approach complex problems using the scientific method and to understand the limits of knowledge. This course will also expose students to some of the neuroscience community at Washington University. Prerequisites: Biol 2960 and Biol 2970 recommended; Biol 3058 recommended or Psych 3401 and permission of the instructor. Same as L41 Biol 3411

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L33 Psych 345 Genes, Environment, and Human Behavior

This class will examine how genetic influences impact various dimensions of human behavior, ranging from traits (e.g., personality) to psychiatric disorders. Topics to be covered include methods used to study genetic influence, how genetic predispositions interact with the environment, and ethical

implications. Modern methods for gene-identification, such as genomewide association studies, polygenic risk scores and epigenetic experiments will be examined in detail. Emphasis will be placed on understanding core concepts (e.g., what is identity-by-descent) as well as application (e.g., calculate heritability, interpretation of results from published studies). Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: SCI EN: S

L33 Psych 3501 Psychotherapy: Introduction to Practice and Research

This is an introductory course in psychotherapy: The treatment of psychological problems through the application of interventions grounded in psychological theory and focusing on behavior or mental processes. Students become familiar with the more popular schools of psychotherapy, including their historical context, characteristic techniques, theoretical underpinnings and current research support. Students also gain an appreciation of the problems and solutions in researching psychotherapy, as well as emerging variations on psychotherapy procedures. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L33 Psych 353 Psychology of Personality

Review of basic theoretical orientations to the understanding of personality and complex human behavior. Overview of related techniques, procedures and findings of personality assessment and personality research. Discussion of critical issues in evaluation of personality theories. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 354 Abnormal Psychology

This is an introductory course in psychopathology or the scientific study of mental health disorders. The course includes definitions, theories and classifications of abnormal behavior. Content focuses on symptoms, classification, prevalence, etiology and treatment of mental health disorders, including mood, anxiety, eating, schizophrenia spectrum, substance use and personality disorders. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 357 Introduction to Clinical Psychology

A survey of clinical psychology. Emphasis is placed on historical and recent developments in the field (e.g., managed care), as well as the consideration of the roles, functions and techniques of clinical psychologists including psychological testing and psychotherapy. Prerequisites: Psych 100B and either Psych 353 or Psych 354.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L33 Psych 358 Language Acquisition

This course examines the development of language skills in children, asking how children so rapidly learn their first language. Topics include; biological bases of language development; development of phonology, syntax, and morphology; language development in atypical populations; childhood bilingualism; and development of written language skills. Prerequisites: Psych 100B and Ling 170D.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 358W Language Acquisition

This course examines the development of language skills in children, asking how children so rapidly learn their first language. Topics include: biological bases of language development; development of phonology, syntax and morphology; language development in atypical populations; childhood bilingualism; and development of written language skills. Prerequisites: Psych 100B and Ling 170D and junior or senior standing. Writing-intensive.

Credit 3 units. A&S IQ: SSC, WI EN: S

L33 Psych 360 Cognitive Psychology

Introduction to the study of thought processing from an information-processing approach. Emphasis will be placed on theoretical models that are grounded in empirical support. Topics include pattern recognition, attention, memory, reasoning, language processes, decision making, and problem solving. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: NSM Arch: SSC Art: NSM BU: BA

L33 Psych 3604 Cognitive Neuroscience

A general introduction to the underlying principles and mechanisms of brain function that give rise to complex human cognitive behavior. Emphasis is placed on how emerging methods and approaches from both neuroscience and cognitive psychology have been integrated to yield new insights into the organization and structure of higher mental processes. Topics include perception, attention, memory, language and executive control. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L33 Psych 361 Psychology of Learning

Basic learning processes in animals, such as conditioning, reinforcement, aversive control, and constraints on learning. Comparisons and interactions between classical and operant conditioning. Consideration given to learning theorists and theories, along with applications from the laboratory to the "real world." Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

L33 Psych 361A Psychology of Learning: Laboratory

This laboratory course is a supplement to the Psych 361 Psychology of Learning class. Students gain firsthand experience, via a virtual rat, of principles and procedures related to the acquisition and maintenance of behavior. Weekly lab meetings introduce Pavlovian and operant principles, which are then implemented as laboratory exercises with the virtual rat. Concurrent enrollment in Psych 361 required.

Credit 1 unit. A&S IQ: NSM

L33 Psych 3645 Understanding Emotions

Emotions both shape and are shaped by our subjective experiences, physiology, behaviors, cognitions, social interactions, and health. Their complexity and significance make the study of emotions particularly exciting and challenging. This course offers an overview of theory and research on emotions with content stretching across psychological disciplines, including personality, social, clinical, developmental, and neuropsychology. Course content will include definitions of emotions, physiological changes associated with emotions, and

individual differences in emotional experience. The course will also examine how culture, cognitions, and relationships affect and are affected by emotions and how emotion is related to physical and mental health. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC BU: BA EN: S

L33 Psych 367 Positive Psychology: The Science of Happiness

Reviews the relatively recent development in the field known as "Positive Psychology." Topics may include: happiness and life-satisfaction, positive self-esteem, creativity, caring relationships, love (passionate and otherwise), empathy, optimism, ambition, moral character development, attachment, compassion, forgiveness, helping, work ethics, and successful aging. Designed to take a sampling of those aspects of psychology that emphasize the positive side of human nature. Prerequisites: Psych 100B, junior or senior standing.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 374 Drugs, Brain and Behavior

This course reviews information pertaining both to medications used to treat psychiatric disorders and to psychoactive drugs of abuse. By learning principles of pharmacology and mechanisms of action of these agents, students develop an enhanced knowledge of the brain mechanisms underlying abnormal human behavior. Prerequisites: Psych 100B and one of the following: Psych 354 or Psych 3401 or Psych 344.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

L33 Psych 380 Human Learning and Memory

A survey of issues related to the encoding, storage and retrieval of information in humans. Topics include memory improvement strategies, people with extraordinary memories, memory illusions and distortions, among other topics. Limited to 25 students.

Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: NSM Art: NSM BU: BA

L33 Psych 3885 The Mental Health Crisis in Higher Education

During the last decade, college campuses have seen unprecedented increases in the proportion of students suffering from mental health problems. Many institutions have responded by increasing the number of mental health counselors available in student health centers, making the accommodations at disability resource centers more robust, and providing safe spaces for students to process incidents and events that have triggered them. Are such interventions improving the well-being of today's students, or might they actually be further encumbering students' psychological health? This discussion-based course will explore arguments made on all sides of this provocative debate and examine research on the nature of today's college students and what resources and services most contribute to their psychological health and well-being. Enrollment is limited to 15 students. Prerequisite: at least 6 units of advanced home-based psychology courses.

Credit 3 units. A&S IQ: SSC EN: S

L33 Psych 395 Prejudice, Stereotyping, & Discrimination

This course will trace prejudice, stereotyping, and discrimination from its ordinary origins in social cognition to its most extreme consequences in war and genocide. Topics include prejudice, the causes of stereotyping and discrimination, the development of prejudice in children, subtle and overt prejudice and

stereotyping, group conflict, the role of social norms, the experience of being a target of discrimination, and interventions to reduce prejudice and discrimination. Areas covered include racism, sexism, ageism, homophobia, ableism, colorism, and religious discrimination. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 396 Psychological Dynamics of Empathy

In this course, we will explore the antecedents and consequences of empathic motivation, defined broadly. Along the way, we consider answers to several interesting questions: Why are some people generally more empathetic than others? Are there cultural differences in levels of this trait? To what extent is empathy an "emotional" or "cognitive" phenomenon? We will also consider the conditions under which empathy is associated with prosocial outcomes (e.g., reducing racial prejudice) but with recognition that empathy has a "darker" side, one that can ironically exacerbate people's preexisting biases. The approach to empathy will be highly interdisciplinary as we consider research and theory within several fields within psychology (e.g., social, personality, cognitive) as well as areas that draw from other scholarly disciplines (e.g. social neuroscience, social anthropology, theology, religious studies). Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L33 Psych 4046 Developmental Neuropsychology (Writing Intensive)

Discussion will focus on early development and disorders affecting the brain, such as cerebral palsy, sickle cell disease, and autism. Writing Intensive. Open only to advanced undergraduates, and declared psychology majors will be given preference. Limited to 15 students. Prerequisites: Psych 100B and one of the following: Psych 321, Psych 360, Psych 3604, Psych 4604, or Psych 3401.

Credit 3 units. A&S IQ: NSM, WI Art: NSM

L33 Psych 4048 Neuropsychology of Dementia

The primary goal of this course is to acquaint students with the basic features of common dementia subtypes, such as Alzheimer's disease, frontotemporal dementias, vascular dementia, Lewy body disease, Huntington's disease and Parkinson's disease. The course will cover the clinical manifestations (cognitive and behavioral symptoms, course, prognosis), neuroanatomical signatures, pathophysiology, intervention and treatment, and current research directions. Students will gain a detailed understanding of the major dementia subtypes as manifestations of underlying brain pathology and anatomical patterns of brain damage. Upon completion of the course, the student should be able to (1) identify and distinguish the most common dementia subtypes based on knowledge of clinical presentation and disease mechanisms; (2) understand how underlying brain changes may be linked to specific clinical manifestations; (3) understand how therapeutic strategies are linked to pathophysiology; (4) engage in scholarly discussion about the topics; and (5) read and critique empirical research papers. Prerequisite: Psych 326 and either Biol 3411, Psych 344, or Psych 3401.

Credit 3 units. A&S IQ: NSM

L33 Psych 4075 Advanced Research Methods & Design

This course is an advanced foray into research design and methods used in psychological science. This course is project-based, writing-intensive, and will be supplemented heavily with readings and discussions of topics of broad importance to psychological research (e.g., reliability, validity, signal detection theory, philosophy of science). These readings will enhance students' abilities to think critically about psychological research design and methods, as both a consumer and creator of psychological research. During the course of the semester they will complete two original research projects (e.g., an observation study and an experimental study). Together with their classmates they will devise research questions, design studies to test their research questions, collect data, and statistically analyze their results. Individually, students will write-up, and then revise, each research project in an APA-style paper. The writing requirements for this course build on the skills students acquired in Experimental Psychology and will further their abilities to communicate scientific ideas more skillfully, clearly and accurately. Prerequisite: L33 Psych 301 or 3011. Credit 3 units. A&S IQ: NSM, WI Arch: NSM Art: NSM BU: BA

L33 Psych 4099 Human Evolutionary Psychology

How did evolution by natural selection shape the way human beings think and behave? Does evolution explain human cooperation and friendship, human morality, reproductive decisions and social interactions? What sex differences in cognition or behavior are caused by evolution? This course introduces the concepts and findings of evolutionary psychology, mostly through reading of primary sources — articles from psychology and biology journals — and discussion and presentation of empirical cases. Prerequisites: at least 6 units of Psychology level 300 or above, or Anthro 3383.

Credit 3 units. A&S IQ: SSC EN: S

L33 Psych 413 Contemporary Topics in Social Psychology

Consideration of selected contemporary topics in social psychology. Participation in a research project of appropriate scope. Prerequisite: Psych 315.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L33 Psych 4175 Applied Statistical Analysis with R

This course is designed to introduce R as both a means of applied statistical analysis as well as a window into data organization and programming. The goal of the course is to teach the tools needed to take a raw dataset and not only perform a statistical test in R, but also to learn how to arrange the dataset to perform a variety of tests, to choose the appropriate test, and to visualize the results. Students will gain practical knowledge of how to use statistics in research. PREREQ: Psych 300; OR graduate standing.

Credit 3 units. A&S IQ: NSM

L33 Psych 4182 Perception, Thought and Action

This course focuses on current topics in visual perception, visual attention, and the control of action. Readings consist of recent journal articles. Class meetings emphasize presentation and discussion of the material in the readings. Limited to 15 students. Prerequisites: Psych 100B and one of the following: Psych 301, Psych 330, Psych 3401, Psych 344, Psych 360, Psych 361, Psych 3604, Psych 380, Psych 433 or Psych 4604.

Credit 3 units. A&S IQ: NSM Art: NSM BU: BA

L33 Psych 4226 The Psychology of Social Stigma

This seminar aims to introduce students to theoretical and empirical social psychological research on prejudice and social stigma. The topics covered will include examinations of why individuals stigmatize by exploring cognitive, evolutionary, self and system justification explanations. The course will examine the effects of stigmatization for low-status groups (stereotype threat, dis-identification, compensation and health outcomes). We will explore the role of stigma in intergroup interactions as well as variations in the experience of stigma. Finally, we will examine high-status groups' perceptions of bias (e.g., perceptions of anti-white discrimination). Prerequisite: Social Psychology (Psych 315) or Prejudice (Psych 395).

Credit 3 units. A&S IQ: SSC, SC Arch: SSC Art: SSC EN: S

L33 Psych 427 Social Gerontology

This course provides an introduction to aging and growing old, from an interdisciplinary perspective. Specific attention is paid to demographics, physical health and illness, mental health, interpersonal relations, work issues, living arrangements, ethics, and death and dying. Prerequisites: junior or senior standing and completion of 6 advanced units in Psych.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4301 Contemporary Topics in Cognitive Development

Cognitive Developmental topics include: Piagetian abilities (e.g., conservation, formal reasoning), basic cognitive abilities (e.g., processing speed), executive functions (e.g., working memory), and other current topics (e.g., processing facial stimuli). Prerequisite: Psych 321 or 360.

Credit 3 units.

L33 Psych 4302 Cognitive Psychology Applied to Education

This course is intended to cover topics in the cognitive psychology of human memory, conceptual learning and comprehension with special focus on areas, theory and research that have potential application to education. Thus, the course provides selective coverage of theoretical and empirical work in cognitive psychology that provides potential to inform and improve educational practice. The applicability of these themes are explicitly developed and evaluated through the primary research literature using educationally oriented experimental paradigms. The course is of interest and benefit to education majors and to psychology majors interested in cognitive psychology and its applications. Prerequisites: junior/senior status; 9 units in psychology and Psych 100B or junior/senior status; 9 units in Education and Psych 100B.

Credit 3 units. A&S IQ: SSC EN: S

L33 Psych 4305 Psychological Science: Fact and Fiction

Skeptical analysis of psychological science as practiced and popularized in the media. Analysis of discrepancies between media and scientific claims regarding areas such as repressed memory, brain imaging, heritability and psychotherapy. Additional examination of scientific career demands such as peer review, journal publication and research funding. These topics are interwoven with a review of common errors in reasoning particularly with respect to probabilistic reasoning and the public misperception of the practice and principles of scientific psychology. Prerequisite: junior or senior standing and completion of 6 advanced units in psychology.

Credit 3 units. A&S IQ: SSC, WI Arch: HUM Art: SSC EN: S

L33 Psych 433 Psychology of Language

This course surveys current research and theory in psycholinguistics, covering the biological bases, cognitive bases and learning of language. We consider studies of normal children and adults, the performance of individuals with various types of language disorders, and computer simulations of language processes. Topics range from the perception and production of speech sounds to the management of conversations. Each student carries out an original research project on some aspect of psycholinguistics. Prerequisites: Ling 170D and Psych 100B. Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4351 Reading and Reading Development

This seminar surveys current research on reading and spelling skills and their development. Students read and discuss journal articles that examine the cognitive and linguistic processes involved in reading, reading disorders, and educational issues. Prerequisites: permission of instructor and previous course work in experimental psychology or psychology of language. Credit 3 units. A&S IQ: SSC EN: S

L33 Psych 4352 Reading and Reading Development (Writing Intensive)

This writing-intensive seminar surveys current research on reading and spelling skills and their development. Students read and discuss articles and chapters that examine the cognitive and linguistic processes involved in reading, reading disorders, and educational issues. Prerequisites: Psych 100B and Ling 170D and junior or senior standing. Credit 3 units. A&S IQ: SD, WI EN: S

L33 Psych 4413 Advanced Cognitive Neuroscience (Writing Intensive)

This course presents an intensive, case-study based approach to the underlying principles and mechanisms of brain function that give rise to complex human cognitive behavior. Emphasis will be placed on understanding and evaluating cutting-edge neuroscience research that has yielded new insights into the organization and structure of higher mental processes. Students will develop critical thinking and writing skills via a strong class participation component and a writing-intensive format. Topics include perception, attention, memory, language, emotion, and executive control. Writing Intensive. Declared psychology majors will be given priority over others to enroll. Prerequisite: Psych 3401, Psych 344/Biol 3411, or Psych 3604. Credit 3 units. A&S IQ: NSM, WI Art: NSM

L33 Psych 444B Independent Study for the Major in Psychological & Brain Sciences: Cognitive Neuroscience

PREREQ: Acceptance into the P&BS Cognitive Neuroscience major. Permission of a member of the faculty of the department (or other approved supervisor) who agrees to supervise the student's work. In addition to the approved research in the area of cognitive neuroscience, an APA-style research paper must be satisfactorily completed to obtain credit. Petition for Supervision of P&BS 444B are available in Somers Family Hall, room 207B. Students will be enrolled only after they have completed the petition and returned it to the Undergraduate Coordinator in Psychology 207B. Open only to P&BS:CN major, by prior approval only.

Credit 3 units. A&S IQ: SSC EN: S

L33 Psych 444C Independent Study for a Concentration in Psychological and Brain Sciences

PREREQ: Acceptance into a Concentration in Psychological and Brain Sciences. Written permission (Petition for Supervision of P&BS 444C) of a member of the faculty of the department (or other approved supervisor) who agrees to supervise the student's work is also required. In addition to the approved research for the concentration, an APA-style research paper must be satisfactorily completed to obtain credit. Petition for Supervision of P&BS 444C are available in Somers Family Hall, room 207B. Students will be enrolled only after they have completed both the Petition for a Concentration in P&BS and the Petition for Supervision of P&BS 444C, and returned them to the Undergraduate Coordinator in 207B. Open only to P&BS majors and by approval. Credit 3 units.

L33 Psych 4450 Functional Neuroimaging Methods

In this course, you will learn neuroimaging methods in the context of accurate, reproducible, and open science. There is no substitute for wrestling with data yourself, and so this is a hands-on course. Students will need to bring a laptop on which to install Matlab and conduct analyses. Some background in neuroimaging or programming will be helpful but is not required. Topics covered include experimental design, accounting for artifacts, single-subject models, and group models. By the end of the course, students will have used a computer script to analyze an fMRI dataset and have a good understanding of preprocessing and statistical analyses in fMRI. Limited to 24 students. Prerequisite: Psych 3604, Psych 4413, or graduate standing.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L33 Psych 4535 Personality Judgment: How We Perceive Ourselves and Others

This course examines how we form judgments of people's personalities. The central question is the accuracy of personality judgments. The readings examine theory and research concerning this topic, and class discussion focuses on critical evaluations of the readings and generation of new research questions. This course examines personality judgment from a scientific perspective and addresses such questions as: How should accuracy be measured? What do you have to know about a person to judge their personality accurately? Does accuracy increase with greater acquaintance? Who makes a good judge of personality? How well do relationship partners know each others' personalities? How is judging our own personality similar to or different from judging others' personalities? How accurate are our perceptions of our own personality? How can the accuracy of personality judgment be improved? Prerequisites: at least 6 units of home-based psychology courses and Psych 353.

Credit 3 units. A&S IQ: SSC EN: S

L33 Psych 4541 Personality and Psychopathology

This course is an advanced seminar in the study of personality disorders. It will cover a range of conceptual and methodological issues involved in scientific efforts to understand ways in which pathological personality features disrupt people's lives. Students will learn about the similarities and distinctions between normal and pathological features of personality as well as the role that personality may play with regard to the causes and treatment of other kinds of mental disorder. A laboratory component of

the class will focus on the development of practical skills in conducting research interviews designed to elicit information about personality and social adjustment. PREREQ: Psych 354, and junior or senior standing.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4555 Emotion Regulation

The purpose of this course is to provide an introduction to the field of emotion regulation. We will discuss theoretical and empirical work on emotion regulation from various areas of psychology, including social, personality, developmental, clinical, and neuroscience. Example topics include definitional issues, goals and strategies, personal and interpersonal consequences, sociocultural influences, lifespan development, health and psychopathology. Prerequisites: Psych 100B and 9 units of advanced home-based psychology courses.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4557 Biopsychosocial Aspects of Eating Disorders and Obesity

This seminar examines the epidemiology, etiology, prevention, and treatment of body image, eating disorders, and obesity. An emphasis will be placed on understanding the characteristic symptoms of excessive dieting, body image disturbance, and binge eating, not only as formal psychiatric syndromes but also as a representation of dysregulatory processes reflecting social-cultural, psychological, and biological disturbances. Students will also learn about the clinical characteristics, medical sequelae, and physical aspects of eating disorders and obesity. Prerequisites: Psych 100B and junior/senior standing plus 6 units of advanced home-based psychology courses.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4591 The Development of Social Cognition

This course explores what is known about the development of social cognition. Our starting point is infants' capacity to navigate the social world, for instance, detecting agents, identifying social partners and learning from those around us. We consider what happens when the human ability to reason about others breaks down (as with autism), and what this can teach us about typical development. Each week we cover one topic and a related set of readings. Class meetings are devoted to active discussion and debate about the content of the readings. Students are required to write a weekly reaction paper to the readings to promote class discussion and give an in-class presentation on a novel research topic at the end of the semester. Graduate students may have additional course requirements. Prerequisites: Psych 100B and one of the following: Psych 315 or Psych 321 or Psych 360.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L33 Psych 4592 Development of Social Cognition (Writing Intensive)

This course explores current issues in social cognitive development. We will examine the critical issues in the field, beginning with the roots of attachment in infancy and the human propensity to connect with others. We will then consider contemporary research concerning infants' ability to navigate the social world. We will also consider what happens when the human capacity to reason about others breaks down, as in autism. Additional topics will include children's reasoning about social groups, the development of bias and prejudice, and aspects of morality. We will look at these issues in the context of innate knowledge and the effects of one's environment on children's development. Each week, we will cover a topic

by reading a background chapter and a set of two journal articles. Class time will be devoted to the active discussion of these readings, with lecture and class activities as needed, to complement the readings and set the stage for class discussion. This is a writing intensive course, so it has a second goal of improving students' writing. There will be several writing assignments of varying length, some of which will receive extensive feedback from the instructor before the student prepares an improved final version. Students will also give two presentations to the class: one that directly addresses writing and another on a research topic of their choice relevant to social cognitive development. Prerequisites: Psych 100B and either Psych 215, Psych 321, or Psych 360.

Credit 3 units. A&S IQ: SSC, WI EN: S

L33 Psych 461 Seminar in Selected Topics in Learning & Memory: Collective Memory

This course provides an overview and analysis of phenomena of people remembering as part of a group — one's country, one's state, one's university, one's family. Collective memories are critical for one's identity, for knowing who we are and how to interpret the world around us. We will consider narcissistic tendencies of group memories in specific contexts (e.g., the Russian vs. American interpretation of world events; views of Trump supporters vs. Clinton supporters on events in the U.S.). The course will range from humanistic, anthropological, psychological, and sociological perspectives on memory. Prerequisites: Psych 100B and a course on human memory or permission of the instructor.

Credit 3 units.

L33 Psych 4615 The Science of Paying Attention

What processes underlie humans' ability to "pay" attention? This course will introduce students to theories of attention and cognitive control. Students will develop an understanding of empirical approaches to studying the control of attention, and examine factors that facilitate and impair humans' ability to pay attention. A final section will examine attention and cognitive control challenges that accompany aging and select psychological disorders such as ADHD, and applications of attention and cognitive control research to the classroom, driving, and other contexts. Prerequisites: Psych 100B and Psych 301.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 462 Psychology of Memory and Cognition

This course will explore the core readings that have shaped the way scientists tackle fundamental aspects of memory and cognition. These include cognitive methods, pattern recognition, attention, working memory, episodic memory, semantic memory, language acquisition and comprehension, decision making, problem solving, and expertise. Each week we will explore at least three "classic" readings on a given topic along with some more recent papers. The goal is to expose students to this foundational literature, and develop a better understanding of the zeitgeist that set the stage for these papers to change how researchers tackled specific problems. Prerequisite: Psych 360 or Psych 380.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4647 Ancient Madness

In this course we will ask what madness meant in Greek and Roman culture. We will find reading strategies that are sensitive both to ancient evidence and to the ethical demands of talking about, evaluating, and categorizing people treated as mad. While we will concentrate on literary (particularly tragic and epic), philosophical, and medical texts, we will also look at visual representations and evidence from ritual and cult. An important part of our project will involve tracing the afterlife of classical ideas: The history of melancholia will ground this aspect of the course. Finally, we will consider how antiquity informs psychoanalysis (*Oedipus*, *Antigone*, *Narcissus*), and how ancient madness might partake in a critique of contemporary understandings of mental illness.

Same as L08 Classics 4647

Credit 3 units. A&S IQ: HUM, LCD EN: H

L33 Psych 4651 History and Modern Systems of Psychology

An introduction to the history of psychology. This course begins with a brief consideration of forces leading to the development of psychology in the mid-1800s. It then examines the birth of modern psychology in Germany and the schools of psychology that emerged early in the 20th century. Newer orientations and ideas are considered in the final segment of the course. We also consider the impact of psychology on American public life during the 20th century. Prerequisite: Psych 100B, junior or senior standing, and 6 units of advanced home-based psychology courses.

Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L33 Psych 4746 Biological Pathways to Psychopathology:

From Genes and the Environment to Brain and Behavior

This seminar will introduce students to methods and recent empirical literature evaluating links between genes, brain and behavior. This research is beginning to illuminate specific biological pathways shaping risk for psychopathology. In particular, the course focuses on the design, analysis and interpretation of multimodal research (e.g., fMRI, PET, EEG, pharmacology, molecular genetics, environmental assessment/manipulation) examining the biological underpinnings of behavior relevant to psychopathology. Primary journal articles, reviews, and book chapters are the readings for this seminar. Prerequisites: Psych 100B and Psych 345 or Psych 3401 or Biol 2970.

Credit 3 units. A&S IQ: NSM Arch: SSC Art: SSC

L33 Psych 4765 Inside the Disordered Brain: Biological Bases of the Major Mental Disorders

How do subtle disturbances in brain circuits lead to abnormal behavior and psychopathology? This course provides students with a working knowledge of our rapidly evolving understanding of brain circuits that create order in our social, emotional, and cognitive worlds and how disorder within these circuits leads to a broad range of psychopathology, including depression, anxiety, phobias, PTSD, OCD, addiction, schizophrenia, psychopathy, and violence. Prerequisites: Psych 100B and either Psych 3401, Psych 354, or a basic biology/neuroscience course.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L33 Psych 488 The Cognitive Neuroscience of Film

To understand complex events in real life depends on perception, action and memory. To understand movies, people probably depend on similar psychological and neural mechanisms. This seminar uses results from psychology and neuroscience to try to better understand the experience of a movie viewer, and uses theory and practice to explore psychological hypotheses about perception. Prerequisite: Psych 360 or Psych 3604 or Psych 4604, or graduate standing in Psychology.

Credit 3 units. A&S IQ: NSM

L33 Psych 494 Behavioral Psychology Readings Group

This weekly journal-style readings class provides the opportunity to read and discuss seminal as well as current papers on the conceptual aspects of behavioral psychology and relevant research. Points of contact among behaviorism, cognitivism, and neuroscience and the natural lines of fracture will be examined. Prerequisites: Psych 100B and either Psych 360, Psych 361, or a philosophy course.

Credit 1 unit. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4971 Undergraduate Teaching

Limited opportunities for outstanding undergraduates to serve as teaching assistants for selected departmental courses. Prerequisites: Psychology & Brain Sciences majors only, junior/senior standing and permission of psych adviser, course instructor and departmental approval. Credit cannot be counted toward fulfilling the requirements for the major or minor in Psychology & Brain Sciences. Credit/no credit only. Enrollment by department only.

Credit 2 units.

L33 Psych 498 Study for Honors

Acceptance into the Honors Program is based on superior performance as evidenced by the student's record in undergraduate course work and the written agreement (Petition for Permission to Enroll) of a member of the faculty of the department (or other approved supervisor) to supervise an Honors project. The student must complete 6 units of Honors work (3 units of Psych 498 and 3 units of Psych 499), submit an acceptable written thesis, and be recommended by the department. Recommendation for an Honors degree is based on the evaluation of the written thesis and the student's overall performance as an undergraduate. Students in the Honors Program meet regularly in the Honors Seminar to discuss their research and become acquainted with the work of the other students. Psych 498 is a writing-intensive course. All students must meet with Dr. Sommers prior to registering. Prerequisite: Psych 301 or equivalent and permission of instructor. Credit 3 units. A&S IQ: SSC, WI Art: SSC EN: S

L33 Psych 499 Study for Honors

Acceptance into the Honors program is based on superior performance as evidenced by the student's record in undergraduate course work; the written agreement (Petition for Permission to Enroll) of a member of the faculty of the department (or another approved supervisor) to supervise an Honors project; and approval of the Honors Coordinator. The student must complete 6 units of Honors work (3 units of Psych 498 and 3 units of Psych 499), submit an acceptable written thesis, and be recommended by the department. Recommendation for an Honors degree will be based on the evaluation of the written thesis and the student's overall

performance as an undergraduate. All students must meet with the Honors Coordinator prior to registering. Students in the Honors Program will meet regularly in the Honors Seminar to discuss their research and become acquainted with the work of the other students. Prerequisite: Psych 498.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S

Religion and Politics

The John C. Danforth Center on Religion and Politics serves as an ideologically neutral venue for fostering rigorous scholarship and informing broad academic and public communities about the intersections of religion and U.S. politics.

The Center's programs include the following:

- Public lectures, conferences and symposia (<http://rap.wustl.edu/events/>) relating to issues at the intersection of religion and U.S. politics
- Research colloquia on American religion, politics and culture, in which scholars and students discuss cutting-edge research
- *Religion & Politics*, an online journal engaging a diverse array of scholars, journalists and public leaders
- New courses (<http://rap.wustl.edu/courses-type/courses/>) on American religion and politics that contribute to an interdisciplinary undergraduate minor in religion and politics for Washington University students

The Center offers a religion and politics minor. This interdisciplinary program combines resources from the Danforth Center on Religion and Politics with relevant offerings from other academic programs, including Religious Studies, Political Science, History, American Culture Studies, African-American Studies, English, and Women, Gender, and Sexuality Studies. Designed to complement and contribute to students' major fields of study, the minor also aims to augment the undergraduate education of those considering postgraduate professional programs in public policy, education, law, medicine or social work. The religion and politics minor provides an opportunity for exploring in sustained ways how religion and politics have intersected with American culture, both in historical and contemporary terms.

As part of the program, students may examine any number of issues, including church-state relations, religion's role in shaping gender and sexuality debates, religion and electoral politics, public conflicts over the nexus of religion and science, religion's entwining with reform movements (from abolition to environmentalism), and the confluences of religion and politics in national vocabularies, media and imagination.

Majors

The Center does not offer a major. Interested students are encouraged to explore the minor in religion and politics. Please refer to the Minors section (p. 866) for more information.

Minors

The Minor in Religion and Politics

Required units: 15 units of course work, including the following:

- **One required course:** Select one course from the following list. This should be completed prior to the second semester of the junior year.

Code	Title	Units
RelPol 201	Religion and American Society	3
RelPol 210	The Good Life Between Religion and Politics	3
RelPol 225	Religion and Politics in American History	3

- 12 additional units, 9 of which must be at the 300 or 400 level and 9 of which, at any level, must be taught by Center faculty.

Required activities:

Attendance at five events sponsored by the Center on Religion and Politics (e.g., lectures, colloquia, lunch discussions, film screenings) is required. Students must inform the director of undergraduate studies of the events they attend so that this information can be recorded.

L57 RelPol 120A Religious Freedom in America

The intersection of religion and law in American society has sparked some of the fiercest cultural engagements in recent memory: Should a for-profit religious corporation have a right not to fund birth control for its employees? Can a public college expel campus religious groups whose membership is not open to all students? May a Muslim in prison grow a beard for religious reasons? Should a cake baker or a florist be permitted to refuse services for a gay wedding? Can a church hire and fire its ministers for any reason? These current debates and the issues that frame them are interwoven in the American story. This course introduces students to the major texts and historical arguments underlying that story. Drawing from the respective expertise of the instructors, the course will expose students to a variety of scholarly methods related to the issue: legal

history and case law, intellectual history and canonical texts, social history and narrative accounts, and political philosophy and contemporary analyses. This course is for first-year (non-transfer) students only.

L57 RelPol 201 Religion and American Society

This course explores religious life in the United States. We will focus our study on groups and movements that highlight distinctive ways of being both "religious" and "American," including the Americanization of global religions in the U.S. context. Major themes will include religious encounter and conflict; secularization, resurgent traditionalism, and new religious establishments; experimentalism, eclecticism, and so-called "spiritual" countercultures; the relationship between religious change and broader social and political currents (including clashes over race, class, gender and sexuality); and the challenges of religious multiplicity in the U.S. Students will: 1) acquire knowledge of the disparate religions practiced in North America during the 20th century and beyond; 2) examine some of the chief conflicts as well as alliances between religion and the American social order in a global context; and 3) develop interpretive tools for understanding religion's present and enduring role in the U.S. and the world.

Credit 3 units. A&S IQ: HUM, SC, SD BU: ETH EN: H

L57 RelPol 203 Religions of St. Louis: The Intersection of Faith and Politics Across the Region

The St. Louis region is home to a diverse array of global religious communities, many with strong political leanings. This course directly introduces students to some of this religious and political variety by coordinating weekly fieldtrips to living institutions and interacting with religious leaders across traditions. In any given semester, our visits may include organizations that identify as Catholic, mainline Protestant, Evangelical, Jewish, Muslim, Hindu, Buddhist, Vedantist, Scientological, progressive Baptist, or secular humanist, among others. We will also visit the International Institute of St. Louis and study the politics of immigration and refugee resettlement that have helped shape the city. Through our visits and conversations, the multiplicity of each religious community will become apparent as we encounter adherents across the political spectrum, embodying different ethnicities and committed to different degrees of "orthodoxy" or traditional belief and practice. Students should emerge from the course able to analyze the complex intersections of religion and politics in the St. Louis metropolitan area, illustrative of the United States as a whole. Note: All required site visits will take place during the regular class time.

Credit 3 units. A&S IQ: HUM, LCD BU: ETH EN: H

L57 RelPol 209 Scriptures and Cultural Traditions:

America's Bible

When we think of the word "scripture" in antiquity, we might think of the texts that have been compiled in the different holy books that we currently have today. Yet the function of "scriptures" within a community, and the status given to different texts treated as "scriptural," has changed in different times and places. In this course, we will consider texts that would eventually come to be part of the Hebrew Bible, New Testament, and the Qu'ran as well as several of the exegetes and reading communities that shaped their various interpretations. We will explore how non-canonical sources played a role in the formation of the various canons we have today, comparing the authoritative status given

to these texts to that given to other works from antiquity, such as the epics of Homer. Special attention will be played to the role of the receiving community in the development of "scripture," and the variety of the contexts in which scripture can function in the construction of and opposition to religious authority.

L57 RelPol 210 The Good Life Between Religion and Politics

What constitutes a life well lived? How do we imagine answers to that question? Who gets to answer that question for us? Do we ask it as an "us" or as an individual? This course considers the way religious and political thought has shaped considerations of the classical ethical question of how we should live and the way that ethics has often served to connect religion and politics in thought and practice. Do we need a religious basis to answer ethical questions, or can we determine how to live without religious sources of authority? Is ethics a project of an individual or of communities? If the latter, are these political communities, religious ones, or something else? On what basis or with what capacities can we imagine new answers to ethical questions, either in community or on our own? We will discuss these questions and more through a consideration of a range of answers to the question of how we should live.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L57 RelPol 215 Performing Religion, Ritualizing Gender

What's the difference between a wink and a blink? What the difference between graduation, a sacrament, and the electric slide? We make fine-grained distinctions every day in our own enactment and interpretation of these different kinds of practices. This class will introduce students to key academic approaches to "ritual," "practice" and "performance," and will ask whether these distinctions are important or arbitrary. Ritual studies (based in religious studies) also happens to center around the very same questions that gave birth to gender and queer studies (is gender a performance?), thus a parallel examination of ritual and performance studies necessarily brings religious identity into conversation with broader questions of identity (gender, race, class).

BA EN: H

L57 RelPol 225 Religion and Politics in American History

The United States has often been imagined as both a deeply Christian nation and a thoroughly secular republic. These competing visions of the nation have created conflict throughout American history and have made the relationship between religion and politics quite contentious. This course surveys the complex entanglements of religion and public life from the colonial era through the contemporary landscape. Topics covered include: religious liberty and toleration, secularization, the rise of African-American churches, the Civil War, national identity and the Protestant establishment, the religious politics of women's rights, religion and the presidency, the Cold War, the religious left and right, and debates over church-state separation.

L57 RelPol 230 Black-Jewish Relations in the United States

The relationship of blacks and Jews in the United States is at once intimate and strained, mutually beneficial and antagonistic. This course examines this uneasy alliance from a number of perspectives including anthropology, politics and identity politics, history, religion and class. Beginning with American anthropology's Jewish founding father, Franz Boas, challenging the concept of race, the course traces the relations of blacks and Jews throughout the 20th century and in our contemporary moment. We will pay particular attention to the civil rights era, which is commonly upheld as the golden age of black-Jewish relations, as well as to this alliance's unraveling in the post-civil rights era. The course then moves to a unit focused on more recent ruptures and collaborations including the 1991 Crown Heights race riots, during which Orthodox Jews clashed with their black neighbors, and Jewish involvement in the Black Lives Matter movement. The course concludes with a unit on identity and identity politics focused on the complexity and fluidity of the categories "white," "black" and "Jewish."

Credit 3 units. A&S IQ: HUM, SC, SD BU: BA EN: H

L57 RelPol 235 Puritans and Revolutionaries: Religion and the Making of America

This course introduces students to the history of religion and politics in America from the English settlements of Virginia and Massachusetts Bay during the early 17th century through the constitutional debates of the 1780s. It pays attention to both formal legal issues regarding religious establishments and wider matters concerning political sentiments and their relationship to religious ideas or values. The course does not advocate a defining argument or single ideological "point"; rather, it facilitates a series of observations of how different positions on the role of religion in early America made sense in their respective historical contexts. Social, political, and intellectual variables made for shifting understandings of what religious ideas mattered to public life in America and how those ideas ought to shape civil affairs.

Credit 3 units. A&S IQ: HUM BU: BA EN: H

L57 RelPol 240 Jewish Political Thought

This course uses the concepts of political theory to explore the diverse Jewish political tradition. While this tradition includes writing from and about the three historical periods of Jewish self-rule (including the modern state of Israel), most of the Jewish political tradition comes from the understanding of politics as viewed from outsiders to mainstream communities. Additionally, Jewish political thought can be found through a Jewish community's self-understanding based on its interpretation of Jewish text and law by which it bound itself. Because we span over 2,000 years of recorded history, we will not attempt to discern a single "Jewish political thought" but rather look at JPT through the lens of familiar concepts of political theory. The fundamental questions we will explore are the relationship of the Jewish tradition to concepts such as authority, law, consent, sovereignty and justice. We will ask how the Jewish tradition views government and the relationship between the authority of God and the authority of temporal powers. We will explore these questions through a range of materials that include both primary and secondary literature.

Credit 3 units. A&S IQ: HUM BU: BA EN: H

L57 RelPol 245 Love and Reason

Love often seems dramatically unreasonable, and reason can seem coldly rational in a way that excludes any emotion, passion, or affiliation even akin to love. The supposed opposition between love and reason has been used by Christian and secular thinkers throughout modernity to organize ways of knowing and judging, and to criticize claims of faith, belief, and desire. But are love and reason really so distinct? What does it mean to say so, and why might someone make this claim? Can love be reasoned, and even reasonable? Can reason be aided by love, and even driven by it? How might different answers to these questions affect our understanding of other possibly unreasoned categories like faith, belief, and piety? This course offers an introduction to modern Christian thought and Western philosophy through these questions and themes.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H

L57 RelPol 250 Zionism

Zionism is often thought of as a commitment to the principle that the Jewish People, as a distinct "people," has a right to self-determination in its own historical land of the biblical Palestine. Yet the history of the term and the set of ideologies show a much more complex understanding. In this course we trace the emergence of a number of different "Zionisms" that would lead to the creation of the modern state of Israel. And we explore how the political principles at the core of these ideologies have fared in the 65 years since the founding of the modern Jewish state. The course is at its heart applied political theory: a case study of the way that ideas emerge from historical events, take on a life of their own, and then shape real outcomes in the world. The readings will weave together history, philosophy, literature and government.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L57 RelPol 255 Religion, Environmentalism, and Politics

This course explores the intersections of anthropology, theology, economic interests, and activism. We will draw on a range of sources including social-scientific theories about religion and ritual, discussions of disenchantment and re-enchantment, and indigenous claims to land. These theoretical frameworks will provide context for discussing contemporary religious responses to ecological disaster, including both environmentalist and anti-environmentalist movements.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: BA EN: H

L57 RelPol 260 Religion in the African-American Experience: A Historical Survey

This course introduces students to important themes in the history of African-American, and thus in American, religious history, among them slavery, emancipation, urbanization, migration, consumer culture, sexuality, politics and media technologies. Primary attention is given to Afro-Protestantism in North America and the cultural, social and religious practices and traditions of these black communities. However, students will also be introduced to specific expressions of religious diversity and varying religious traditions and practices in African-American communities.

Credit 3 units. A&S IQ: HUM, SC, SD BU: ETH EN: H

L57 RelPol 280 African-American Religions

This course is an introduction to African-American religions, and it attends to the changes wrought in indigenous African religions by enslavement, the adoption of Christianity by slaves themselves, the building of African-American denominations, the rise of new black religious movements, and the role of religion in contemporary African-American life. The course begins with a brief introduction to key themes and problems in the study of African-American religions. The second part, which makes up the bulk of the course, moves chronologically and situates African and African-American religions in their shifting cultural and political contexts from the beginning of the European slave trade to the present. We will discuss African-Americans' practice of several religious traditions: indigenous African religions, Islam, Protestant and Catholic Christianity, and new religious movements. The final part of the course focuses on several key issues and debates that are informed by the study of African-American religions and that have important connections with contemporary American life.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, ETH, HUM EN: H

L57 RelPol 285 Islam in America

In this course, we examine the notion of a religiously plural America and analyze Muslims' place within it. We consider the ways that American Muslims both shape and are shaped by U.S. society as both religious actors with autonomy and as a marginalized outgroup. In our approach to understanding Islam in America, we will use the category of race to explore three major themes: (1) the history of Muslims in the United States; (2) the lived experiences of American Muslims, including how they engage sacred texts and rituals; and (3) the phenomenon of Islamophobia.

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, ETH, HUM EN: H

L57 RelPol 290 Islamophobia & U.S. Politics

The presence of Muslim minorities in the West is increasingly divisive across the United States and Europe as political leaders appeal to voters' fear of the "other" to promote Islamophobic agendas that reshape immigration and asylum policies and redefine Western identity as Christian. Politicians further exploit the rise of extremist groups like ISIS to justify anti-Muslim rhetoric and to critique multiculturalism, claiming that Islam and the West are inherently antithetical. In this course, we examine the phenomenon of Islamophobia as a form of anti-Muslim racism. We explore how, although the post-9/11 context gave way to an increase in incidents of anti-Muslim violence, contemporary manifestations of Islamophobia are deeply rooted in state level anti-Black racism from the early 20th century. We also analyze public U.S. debates on the boundaries of freedom of speech and freedom of religion.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

L57 RelPol 305 Between Malcolm X and Martin Luther King, Jr.: Race, Religion, and the Politics of Freedom

This course focuses on the political and spiritual lives of Martin and Malcolm. We will examine their personal biographies, speeches, writings, representations, FBI Files, and legacies as a way to better understand how the intersections of religion, race and politics came to bear upon the freedom struggles of people of color in the U.S. and abroad. The course also takes seriously the evolutions in both Martin and Malcolm's political approaches and intellectual development, focusing

especially on the last years of their respective lives. We will also examine the critical literature that takes on the leadership styles and political philosophies of these communal leaders, as well as the very real opposition and surveillance they faced from state forces like the police and FBI. Students will gain an understanding of what social conditions, religious structures and institutions, and personal experiences led to first the emergence and then the assassinations of these two figures. We will discuss the subtleties of their political analyses, pinpointing the key differences and similarities of their philosophies, approaches and legacies, and we will apply these debates of the mid-20th century to contemporary events and social movements in terms of how their legacies are articulated and what we can learn from them in struggles for justice and recognition in 21st-century America and beyond.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L57 RelPol 3081 City on a Hill: The Concept and Culture of American Exceptionalism

This course examines the concept, history, and culture of American exceptionalism — the idea that America has been specially chosen, or has a special mission to the world. First, we examine the Puritan sermon that politicians quote when they describe America as a "city on a hill." This sermon has been called the "ur-text" of American literature, the foundational document of American culture; learning and drawing from multiple literary methodologies, we will re-investigate what that sermon means and how it came to tell a story about the Puritan origins of American culture — a thesis our class will reassess with the help of modern critics. In the second part of this class, we will broaden our discussion to consider the wider (and newer) meanings of American exceptionalism, theorizing the concept while looking at the way it has been revitalized, redefined and redeployed in recent years. Finally, the course ends with a careful study of American exceptionalism in modern political rhetoric, starting with JFK and proceeding through Reagan to the current day, ending with an analysis of Donald Trump and the rise of "America First." In the end, students will gain a firm grasp of the long history and continuing significance — the pervasive impact — of this concept in American culture.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L57 RelPol 310 Religion and Violence

Is religion intrinsically connected with violence or merely manipulated to justify political positions and incite supporters? How has religion been the motivation and justification behind violent conflict, aggression and persecution? Does religion have a greater power to make war or peace? People have debated these questions for centuries as believers waged war in the name of their god(s). We'll study several critical theories about religion and violence and test them on historical and recent "religious" conflicts. Our investigation will be organized around five types of violence: 1) martyrdom and redemptive suffering, 2) claims on sacred space, 3) the violence of social stratification and "othering," 4) war and 5) apocalyptic and spiritual warfare. Case studies ranging from early Christian martyrs and crusades to attacks on abortion clinics and Tokyo subways will help clarify patterns and types of religious violence.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: FAAM, HUM BU: ETH EN: H

L57 RelPol 315 Virtues, Vices, Values: Regulating Morality in Modern America

This course takes morality and the question of "what's right" seriously as a lens through which to understand and assess modern American history. "Morality" is, of course, a devilishly flexible rhetoric, a language invoked to tell people how to act and how to be good, or, conversely, to criticize and to shame. When the state or a community wants its citizens or members to be "good," it crafts laws and creates customs to encourage or inhibit behaviors. Yet "good" is a contested concept, especially in a diverse, multiracial society. Thus this class examines a) how state and non-state actors, including religious leaders, have attempted to regulate the lived experiences of Americans and b) the conflicts that emerge over what, exactly, is correct, or right, or good for individuals, society, and the state. To what degree does calling something moral or immoral articulate or obstruct policy solutions? What do political coalitions oriented around "values" accomplish? Is it possible to hew to moral frames and remain inclusive and tolerant? Topics may include marriage, abortion, immigration, alcohol, incarceration, disease, money, and medical care.

Credit 3 units. A&S IQ: HUM, SD BU: ETH EN: H

L57 RelPol 321 American Religion, Gender, and Sexuality

Religious beliefs about gender and sexuality have long played a vital role in American politics, vividly evident in debates over such issues as birth control, censorship, pornography, funding for AIDS research, abortion, contraceptive access, abstinence-only sex education, sexual harassment, same-sex marriage, and more. Educated citizens need to understand the impact of these religiously inflected debates on our political culture. This course explores the centrality of sex to religion and politics in the U.S., emphasizing Christianity (both Protestant and Catholic forms) and its weighty social and political role regulating the behavior of women and men, children and teens, as well as its uses in legal and judicial decisions. Alongside scholarly readings in gender and sexuality, we will discuss popular devotional texts — on chastity, marriage, and homosexuality — with a political bent. Students will leave the course able to analyze how religious beliefs about sex shape specific gender norms central to U.S. politics.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: ETH EN: H

L57 RelPol 330 Native American/Euro-American Encounters: Confrontations of Bodies and Beliefs

This course surveys the history and historiography of how Native Americans, Europeans and Euro-Americans reacted and adapted to one another's presence in North America from the 1600s to the mid-1800s, focusing on themes of religion and gender. We will examine the cultural and social implications of encounters between Native peoples, missionaries and other European and Euro-American Protestants and Catholics. We will pay particular attention to how bodies were a venue for encounter — through sexual contact, through the policing of gendered social and economic behaviors, and through religiously-based understandings of women's and men's duties and functions. We will also study how historians know what they know about these encounters, and what materials enable them to answer their historical questions.

Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch: HUM Art: HUM EN: H

L57 RelPol 340 Pilgrims and Seekers: American Spirituality from Transcendentalism to the Present

This seminar focuses on the formation of "spirituality" in American culture from the Transcendentalist world of Ralph Waldo Emerson on through more recent expressions of the "spiritual-but-not-religious" sensibility. How did "spirituality" come to be seen as something positively distinct from "organized religion"? What are the main contours of spiritual seeking in American culture, especially among those who claim no specific religious affiliation? The course also explores the social, political, and cultural consequences of this turn to the spiritual over the religious: for example, the consecration of liberal individualism, the relationship of religious exploration to both environmentalism and consumerism, the politics of cultural appropriation, the negotiation of religious pluralism, and the pursuit of the spiritual in art.

Credit 3 units. A&S IQ: HUM BU: ETH EN: H

L57 RelPol 345 Religion and Race in the United States

Race and ethnicity are central to how religious pluralism is worked out in America. How do the categories of race and religion intersect to produce concepts of a normative American identity? In this course, we examine the construct of race across various American congregational communities in order to understand debates on American identity and belonging. We also explore the idea of an American civil religion, and we engage with the boundaries of inclusion and exclusion of particular religious groups within this category based upon racialized criteria.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, ETH, HUM EN: H

L57 RelPol 354 Christian Theology and Politics in the Modern West

This course engages students in the reading and analysis of influential religious texts from the Western Christian world from the mid-16th century to the present. The course also examines these texts in their historical context, raising questions about the relationship between theology and politics in the West. The course pursues such questions chronologically, with the first weeks devoted to Catholic and Calvinist contests over revelation and political authority during the 16th century to Puritan ruminations during the 17th century on the nature of worldly calling and personal eschatology. The next weeks concern 18th-century views of reason as a critique of traditional Christianity and Protestant responses centered on true virtue as a hedge against worldly loyalties. We then examine 19th-century discussions of the relationship between ethics, tradition, and religious experience. For the 20th century, we discuss texts that address Christian conceptions of redemption to issues of hypernationalism and race. The final weeks are devoted to recent theologies that have to do with the self and one's identity and current political crises. Juniors and seniors only. Sophomores by permission.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H

L57 RelPol 355 The FBI and Religion

This seminar examines the relationship between the Federal Bureau of Investigation (FBI) and religion (i.e., faith communities, clerics, and religious professionals) as a way to study and understand 20th-century religion and politics. The course will investigate the history of the FBI as well as the various ways in which the FBI and religious groups have interacted. The course

will pay particular attention to what the professor calls the four interrelated "modes" of FBI-religious engagement: counter-intelligence and surveillance, coordination and cooperation, censorship and publicity, and consultation.

Credit 3 units. A&S IQ: HUM BU: BA, ETH EN: H

L57 RelPol 357 God in the Courtroom

The U.S. Constitution holds a promise to secure freedom of religion through its First Amendment. Its two religion clauses declare unconstitutional any prohibition on the free exercise of religion and laws respecting the establishment of religion. The consequence is that, whenever a group demands to be recognized as religious and to be granted the right to exercise its religion, a court, a legislature, or an administrative official must determine whether the religious practice in question is legally religious. This means that law plays a uniquely important role in defining religion in the United States. In this seminar, we will explore the relation between law and religion in America. We will study the religion clauses in the First Amendment to the United States Constitution, the histories of their interpretations by American courts in landmark cases, and the ways that religious studies scholars have understood and critiqued these cases.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H

L57 RelPol 360 Religion and the Modern Civil Rights Movement, 1954-1968

The modern Civil Rights Movement is a landmark event in the nation's political, civic, cultural and social history. In many contexts, this movement for and against civil and legal equality took on a religious ethos, with activists, opponents and observers believing that the net result of the marches, demonstrations and legislative rulings would redeem and/or destroy "The Soul of the Nation." This seminar examines the modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement. The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures and communities that were indifferent, combative, instrumental and/or supportive of Civil Rights legislation throughout the mid-20th century.

Credit 3 units. A&S IQ: HUM, SC, SD BU: BA EN: H

L57 RelPol 362 Islam, Gender, Sexuality

The return of white nationalism and misogyny to the public sphere since the 2016 election has reinvigorated the trope of the subjugated Muslim woman as backwards and subservient to her male counterparts. Rather than devote our time to dispel stereotypes, in this course, we address the extent to which Western theories of feminism are useful to account for Muslim women's experiences across historical period and geographical region. By examining discourses of gender and sexuality, the ideals of the feminine and masculine in Islamic scriptures and jurisprudence, and subsequent encounters with Western imperialism, we investigate how gender informs social, political, religious, and family life in Islamic cultures. We employ a chronological approach to these topics, from considering the status of women in seventh-century Arabia to the period of Islamic expansion across Asia, North Africa, and the Iberian Peninsula and then to the colonial period and ending with the contemporary post-9/11 and post-2016 U.S. contexts, wherein debates over the status of Muslim women in society emerged with renewed vigor.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

L57 RelPol 365 Slavery, Sovereignty, Security: American Religions and the Problem of Freedom

The goal of this course is to think critically about freedom as an ideology and institution. What does it mean to be free? What are the relationships among individual liberties, national sovereignty, and civil rights? In what ways has freedom been defined in relation to -- and materially depended on -- unfreedom? At the same time, this course will treat American "religions" in a similar critical fashion: as a historically contingent category that has been forged and inflected within the same context of white Christian settler empire. Religion and freedom have intertwined throughout American history, including in the ideal of religious freedom. Our critical interrogation of freedom should help us think carefully about power, working with but also beyond tropes of domination and resistance.

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, ETH EN: H

L57 RelPol 368 Theories and Methods in the Study of Religion

What is religion, and how can we study it? Do we need an answer to the first question to pursue the second? Why, and toward what ends, might we undertake such study? This course considers these questions through the investigation of significant attempts to study religion over the past century, paying particular attention to the methods, motivations, and aims of these works. Is the study of religion an effort to disprove or debunk it, or perhaps to support it? What would each mean? Is it an effort to describe the indescribable, or perhaps to translate complex beliefs and practices into a language in which they can be discussed by others? Why would such a translation be helpful, and to whom? Is the study of religion an investigation of a social phenomenon, an organization of communities, a specific formation of individuals, or perhaps a psychosis or illusion, evidence of the workings of power on our lives and the difficulty of bearing it? What is at stake in defining religion in these ways, and then in undertaking its study?

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L57 RelPol 370 Religion and the Origins of Capitalism

This course explores the economic, cultural and social history of the origins of Anglo-American capitalism from 1500 to 1800. Throughout we will discuss the worldviews and day-to-day business decisions of the merchants who created England's transatlantic market order and empire. Rather than treat early capitalism only in terms of material or purely economic dynamics, it probes the intellectual constructs that combined with commercial innovations to form capitalism into a social system.

Credit 3 units. A&S IQ: HUM BU: ETH EN: H

L57 RelPol 385 Jesus, Jazz, and Gin: The 1920s and the History of Our Current Times

This course is a historical survey of the dynamic relationship between religion and politics during the 1920s. The 1920s were a tipping point for a great deal of the fundamental issues that shaped the 20th century in the U.S. This course seeks to investigate how religious activism, evangelism, discourse, practice and reinvention contributed to and was shaped by such change.

Credit 3 units. A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA EN: H

L57 RelPol 390 Mormon History in Global Context

The focus of this seminar is Mormonism, meaning, primarily, the Church of Jesus Christ of Latter-day Saints, which is the largest Mormon body. Mormons in the United States have gone from being one of the most intensely persecuted religious groups in the country's history to the fourth largest religious body in the U.S., with a reputation for patriotism and conservative family values. In addition to introducing who the Mormons are, their beliefs and religious practices, this seminar will explore issues raised by Mormonism's move toward the religious mainstream alongside its continuing distinctiveness. These issues include: What is the religious "mainstream" in the U.S.? How did conflicts over Mormonism during the 19th century, especially the conflict over polygamy, help define the limits of religious tolerance in this country? How have LDS teachings about gender and race, or controversies about whether or not Mormons are Christian, positioned and repositioned Mormons within U.S. society?

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: ETH EN: H

L57 RelPol 395 Topics in Religion and Politics

This course explores various topics in Religion and Politics. Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L57 RelPol 407 Solidarity and Silence: Religious Strategies in the Political Sphere

Although political action is often considered a problem of making oneself heard, religious practices of silence, self-effacement and withdrawal from certain worldly struggles have guided many significant political and social movements, particularly forms of nonviolent resistance. This course considers the role of religious thought and practice in such movements in the 20th century. The history of these movements presents an apparent paradox: How can political action emerge from the supposedly "private" realm of religion in the modern era, particularly its most individualistic formations in contemplative and mystical practices? Does the historical role of these practices in the political sphere complicate their portrayal in some scholarship as private, individual and depoliticizing? With these questions animating our investigations, we will consider the work of authors and activists including Leo Tolstoy, Mahatma Gandhi, Dietrich Bonhoeffer, Martin Luther King Jr., Simone Weil, and William Barber, as well as the history of movements associated with their work. Toward the end of the semester, we will turn to contemporary movements against economic inequality, intimate violence, racially motivated violence, and discrimination toward transgender persons to discuss the use of religious strategies or religiously-derived strategies in current political and social activism.

Credit 3 units. A&S IQ: HUM EN: H

L57 RelPol 410 The FBI and Religion

This seminar examines the relationship between the Federal Bureau of Investigation (FBI) and religion (i.e., faith communities, clerics, and religious professionals) as a way to study and understand 20th-century religion and politics. The course will investigate the history of the FBI as well as the various ways in which the FBI and religious groups have interacted. The course

will pay particular attention to what the professor calls the four interrelated "modes" of FBI-religious engagement: counter-intelligence and surveillance, coordination and cooperation, censorship and publicity, and consultation.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

**L57 RelPol 4121 American Religion, Politics, and Culture:
Historical Foundations**

This seminar offers a wide-ranging overview of the leading historical scholarship concerning the busy intersections of American religion and politics. Topics include: church-state relations, religion and foreign policy, religion and social justice, religion and the science wars, the rise of the Religious Right, and the role of religion in public life. Prerequisites: advanced undergraduate or graduate standing in a related field or permission of instructor.

Credit 3 units. A&S IQ: HUM EN: H

**L57 RelPol 4122 American Religion, Politics & Culture:
Commentary from Alexis de Tocqueville to Contemporary
Pundits**

This research-oriented seminar involves in-depth historiographical investigation of leading scholarship at the busy intersections of American religion, politics and culture. The second semester focuses on classic and contemporary commentaries on the American religious and political scene from Alexis de Tocqueville through today's leading pundits. Some sessions will include a visiting scholar engaged in cutting-edge research — a feature that will allow seminar members to work with important scholars from beyond the university. Possible topics include: church-state relations, religion and foreign policy, religion and civil rights, religion and the science wars, the rise of the Religious Right, and the role of religion in national elections. The seminar is taught under the auspices of the John C. Danforth Center on Religion and Politics and is offered in two complementary parts (though enrollment in either one of the two is certainly possible). Its ambition is to build up a community of inquirers engaged in the core questions that animate the Danforth Center. Prerequisites: advanced undergraduate or graduate standing in AMCS, History, or Religious Studies or permission of instructor.

Credit 3 units. A&S IQ: HUM

L57 RelPol 425 Law, Religion, and Politics

What is the role of religious argument in politics and law? What kinds of arguments are advanced, and how do they differ from one another? Are some of these arguments more acceptable than others in a liberal democracy? This course will explore these questions through the work of legal scholars, theologians and political theorists. Our topics include the nature of violence and coercion in the law, constraints on public reason, the relationship between religion and government, and the nature of religious practice and tradition.

Credit 3 units. A&S IQ: HUM EN: H

**L57 RelPol 430 Pilgrims and Seekers: American Spirituality
from Transcendentalism to the Present**

This seminar focuses on the formation of "spirituality" in American culture, from the Transcendentalist world of Ralph Waldo Emerson on through more recent expressions of the "spiritual-but-not-religious" sensibility. How did "spirituality" come to be seen as something positively distinct from "organized religion"? What are the main contours of spiritual seeking in

American culture, especially among those who claim no specific religious affiliation? The course also explores the social, political, and cultural consequences of this turn to the spiritual over the religious: for example, the consecration of liberal individualism, the relationship of religious exploration to both environmentalism and consumerism, the politics of cultural appropriation, the negotiation of religious pluralism, and the pursuit of the spiritual in art.

Credit 3 units. A&S IQ: HUM EN: H

L57 RelPol 440 Religion, Politics, and the University

This course explores in depth current issues related to pluralism, difference, and belonging in matters pertaining to religion and other important issues, with a particular focus on how these play out in the university context. The instructors, John Inazu and Eboo Patel, are two of the leading national commentators on these issues. Prerequisite: Students enrolling in this class must submit a brief statement of interest (<http://law.wustl.edu/COURSES/INAZU/seminar1/summaries/>) to Professor John Inazu.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

**L57 RelPol 4491 American Unbelief from the Enlightenment
to the New Atheism**

This seminar examines American secularism, humanism and atheism from the Enlightenment forward to the present. Topics emphasized include: the relationship between believers and nonbelievers, the civil liberties of atheists, religion in the public schools, social radicalism and women's rights, and the more recent growth of religious disaffiliation and public atheism. The course considers not only the intellectual dimensions of freethinking unbelief but also the broader politics of secularism in a nation routinely imagined as "under God."

Credit 3 units. A&S IQ: HUM Arch: SSP Art: SSP EN: H

L57 RelPol 4564 American Pragmatism

This course examines the history of American pragmatism through three of its primary founders, the philosophers Charles Peirce, William James and John Dewey. It considers pragmatism as a response to the experience of uncertainty brought on by modernity and contextualizes it amid late 19th- and early 20th-century thought and politics, namely, scientific methodology, evolutionary theory, the probabilistic revolution, Transcendentalism, the rise of secularism, slavery, Abolitionism and the Civil War. Major essays by each thinker are read as well as three intellectual biographies and one critical survey.

Same as L22 History 4564

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

**L57 RelPol 480 Readings in African-American Religious
History**

This course is an introduction to the history and variety of African-American religions in the New World diaspora. The approach will be chronological, from the earliest years to the New World to contemporary expressions. We will also explore some of the major historiographical themes that have catalyzed current scholarship, the purpose and effectiveness of black nationalist movements, issues of class and gender, the persistence of African elements of New World religious practice, performance and popular culture.

Credit 3 units. A&S IQ: HUM EN: H

L57 RelPol 485 Christian Nation, Secular Republic

The United States has often been imagined as both a deeply Christian nation and a thoroughly secular republic, and those conjoined framings have created recurrent conflict throughout American history. This seminar is designed to introduce advanced undergraduates and graduate students to current discussions of religion, secularism, and unbelief in American religious and political history. The course also places a complementary emphasis on close readings of crucial primary works, say, about the rise of deistic toleration or the persisting political power of Christianity-in textual particularities. The course takes as its starting point Charles Taylor's monumental account *A Secular Age* and works from there through various episodes of the Enlightenment and its long aftermath.

Credit 3 units. A&S IQ: HUM EN: H

L57 RelPol 495 Religion and the State: Global Mission, Global Empire

This course explores the complex intersections among U.S. political power on a global stage, and religious institutions and identities. Readings and discussions are organized around two very broad questions. First: How has this nation's history been shaped by religious "others" both inside and outside its borders? Second: How have perceptions of those others in turn affected U.S. responses to circumstances of global consequence — including, for example, foreign policy and diplomacy, missionary activity, and economic practices?

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

Religious Studies

If I headed back to college today, I would major in comparative religions rather than political science.

John Kerry, "Religion and Diplomacy" (<http://americanmagazine.org/issue/religion-and-diplomacy/>)

Religion is a major source of inspiration, meaning and controversy in human societies. Fast-moving forces of globalization, migration and technology continue to bring diverse communities into closer proximity, often creating new religious communities in the process. The Religious Studies program at Washington University gives students the opportunity to learn about diverse religions as well as to study past and current events with a critical but open mind.

Religious Studies covers a wide range of subjects. It could include religion and American or international politics, religion and music, unbelief, religion and literature, issues of race or climate change, or scriptural studies. As such, Religious Studies embraces research in all its disciplinary and interdisciplinary complexity. Courses offered by our program are thus taught by faculty from a variety of disciplines and areas, including the Danforth Center on Religion and Politics; Anthropology; Classics; East Asian Languages and Cultures; English; History; Jewish, Islamic, and Middle Eastern Studies; Music; and Political Science.

Pursuing a major in Religious Studies will help students to understand and appreciate the complex ways in which religious traditions inform human thought and behavior. A double major or a minor will also enhance a broad range of studies, from politics and law to business and medicine. If a student is preparing for the advanced academic study of religion, seeking to complement another area of study, or simply feeling the need to acquire a greater knowledge of religions, a major or minor in Religious Studies is excellent preparation for living and working in a pluralistic society and global culture.

Majors

The Major in Religious Studies

Total units required: 30 units; 24 must be at the 300 level or higher

Required courses (6 units):

Code	Title	Units
Re St 102	Thinking About Religion	3
Re St 368	Theories and Methods in the Study of Religion	3
Total Units		6

Senior Capstone Experience (3 units): During their senior year, religious studies majors are required to take Re St 479 Senior Seminar in Religious Studies. Alternatively, students can fulfill the capstone requirement by writing a Senior Honors thesis.

Elective courses (21 units; 18 must be at the 300 level or higher): All majors must take at least seven courses chosen in consultation with their major adviser and that fulfill the following requirements:

- A. Broad coverage of religious traditions: Majors explore various religions by taking at least one course in four different traditions (e.g., Judaism, history of Christianity, Islam, Buddhism, East Asian religions, South Asian religions, religion in the Americas).
- B. Course concentrations: Majors focus their interests on a single religious tradition or theme by creating two course concentrations: a three-course series and a two-course series.

Note: An elective course can count toward the fulfillment of both A and B.

Additional Information

Senior Honors: Qualified majors are encouraged to apply for Senior Honors. Applications are available on the Religious Studies website (<https://religiousstudies.wustl.edu/senior-honors/>) and are due prior to the end of the junior year. Students wishing to pursue this option need to meet the minimum honors requirements stated in this *Bulletin* and to satisfactorily complete, during their last two semesters, Re St 498 Independent Work for Senior Honors I and Re St 499 Independent Work for Senior Honors II. Full guidelines are available on the Religious Studies website.

Transfer Credit: A maximum of 6 units of course work completed elsewhere — whether at another college or university or through a Washington University–approved study abroad program — may be applied toward the major. Credit will be awarded only for those courses that have been approved by the Religious Studies program.

Minors

The Minor in Religious Studies

Total units required: 18 units; 12 must be at the 300 level or higher

Required courses (6 units):

Code	Title	Units
Re St 102	Thinking About Religion	3
Re St 368	Theories and Methods in the Study of Religion	3
Total Units		6

Elective courses (12 units; 9 must be at the 300 level or higher): Students pursuing the minor may choose their electives based on individual interest and in consultation with their minor adviser.

Additional Information

Transfer Credit: A maximum of 3 units of course work completed elsewhere — whether at another college or university or through a Washington University–approved study abroad program — may be applied toward the minor. Credit will be awarded only for those courses that have been approved by the Religious Studies program.

L23 Re St 102 Thinking About Religion

Nearly everyone has had some experience with something they would call "religion," from at least a passing familiarity through the media to a lifetime of active participation in religious communities. But what do we actually mean when we use the word? What is a religion? What does it mean to call something a religion, or "religious"? And what does it mean to study religion, given the slipperiness of the concept itself? This course offers an introduction to the academic study of religion through a consideration of these questions: What is religion, and how can we study it? Do we need an answer to the first question to pursue the second? Why, and toward what ends, might we undertake such study? We will also consider what is at stake in our investigation and inquiry into religion — for the inquirers, for the subjects of inquiry, and for society more broadly — and what kind of lens the study of religion offers us on ourselves, our neighbors, and society, in turn. To these ends, we will discuss major theoretical approaches to the study of religion and significant work on religions and religious phenomena, toward a better understanding of what "religion" might be and how it might be studied today. No prior knowledge or experience of religion, religions, or anything religious is expected or required. This course is required for religious studies majors and minors. Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L23 Re St 1200 Religious Freedom in America

The intersection of religion and law in American society has sparked some of the fiercest cultural engagements in recent memory: Should a for-profit religious corporation have a right not to fund birth control for its employees? Can a public college expel campus religious groups whose membership is not open to all students? May a Muslim in prison grow a beard for religious reasons? Should a cake baker or a florist be permitted to refuse services for a gay wedding? Can a church hire and fire its ministers for any reason? These current debates and the issues that frame them are interwoven in the American story. This course introduces students to the major texts and historical arguments underlying that story. Drawing from the respective expertise of the instructors, the course will expose students to a variety of scholarly methods related to the issue: legal history and case law, intellectual history and canonical texts, social history and narrative accounts, and political philosophy and contemporary analyses. This course is for first-year (non-transfer) students only.

L23 Re St 1550 Temple & Palace in World History:

Approaches to Religion and Politics in the Middle East

This course aims to examine the ways in which temple and palace cooperated with and competed against each other in the Middle East from ancient to the present times. As sites of spiritual and political power, temples and palaces have played a major role in human history. They have been a source of cooperation and conflict by inspiring and regulating the spiritual and social lives of people, including how they enacted laws, developed cultures, established institutions, and interacted with each other as individuals, families and societies. The course will trace how their interactions produced various models of authority, law and social association and how they collectively and separately rationalized social hierarchy and diversity in human societies. Introductory course to the major and minor.

L23 Re St 2030 Arch City Religion: Global Religion & Public Life in St. Louis

The St. Louis region is home to a diverse array of global religious communities, many with strong political leanings. This course directly introduces students to some of this religious and political variety by coordinating weekly fieldtrips to living institutions and interacting with religious leaders across traditions. In any given semester, our visits may include organizations that identify as Catholic, mainline Protestant, Evangelical, Jewish, Muslim, Hindu, Buddhist, Vedantist, Scientological, progressive Baptist, or secular humanist, among others. We will also visit the International Institute of St. Louis and study the politics of immigration and refugee resettlement that have helped shape the city. Through our visits and conversations, the multiplicity of each religious community will become apparent as we encounter adherents across the political spectrum, embodying different

ethnicities and committed to different degrees of "orthodoxy" or traditional belief and practice. Students should emerge from the course able to analyze the complex intersections of religion and politics in the St. Louis metropolitan area, illustrative of the United States as a whole. Note: All required site visits will take place during the regular class time.

L23 Re St 207 Scriptures and Cultural Traditions: Text & Tradition

When we think of the word *scripture* in antiquity, we might think of the texts that have been compiled in the different holy books that we currently have today. Yet the function of "scriptures" within a community and the status given to different texts treated as "scriptural" have changed in different times and places. In this course, we will consider texts that would eventually come to be part of the Hebrew Bible, the New Testament, and the Qu'ran as well as several of the exegetes and reading communities that shaped their various interpretations. We will explore how non-canonical sources played a role in the formation of the various canons we have today, comparing the authoritative status given to these texts to that given to other works from antiquity, such as the epics of Homer. Special attention will be paid to the role of the receiving community in the development of "scripture" and the variety of the contexts in which scripture can function in the construction of and opposition to religious authority.

L23 Re St 208F Introduction to Jewish Civilization: History and Identity

The anthropologist Clifford Geertz once famously invoked Max Weber in writing that "man is an animal suspended in webs of significance he himself has spun. I take culture to be those webs." The main goal of this course — designed as an introduction to Jewish history, culture, and society — is to investigate the "webs of significance" produced by Jewish societies and individuals, in a select number of historical periods, both as responses to historical circumstances and as expressions of Jewish identity. Over the course of the semester, we focus on the following historical settings: seventh-century BCE Judah and the Babylonian exile; pre-Islamic Palestine and Babylonia (the period of the Mishnah and the Talmud); Europe in the period of the Crusades; Islamic and Christian Spain; Europe in the 18th and 19th centuries; North America in the 20th century; and the modern State of Israel. For each period, we investigate the social and political conditions of Jewish life; identify the major texts that Jews possessed, studied, and produced; determine the non-Jewish influences on their attitudes and aspirations; and explore the efforts that Jews made to define what it meant to be part of a Jewish collective.

L23 Re St 210 The Good Life Between Religion and Politics

What constitutes a life well lived? How do we imagine answers to that question? Who gets to answer that question for us? Do we ask it as an "us" or as an individual? This course considers the way religious and political thought has shaped considerations of the classical ethical question of how we should live and the way that ethics has often served to connect religion and politics in thought and practice. Do we need a religious basis to answer ethical questions, or can we determine how to live without religious sources of authority? Is ethics a project of an individual or of communities? If the latter, are these political communities, religious ones, or something else? On what basis or with what capacities can we imagine new answers to ethical questions, either in community or on our own? We will discuss these questions and more through a consideration of a range of answers to the question of how we should live.

L23 Re St 225 Religion and Politics in American History

The United States has often been imagined as both a deeply Christian nation and a thoroughly secular republic. These competing visions of the nation have created conflict throughout American history and have made the relationship between religion and politics quite contentious. This course surveys the complex entanglements of religion and public life from the colonial era through the contemporary landscape. Topics covered include: religious liberty and toleration, secularization, the rise of African-American churches, the Civil War, national identity and the Protestant establishment, the religious politics of women's rights, religion and the presidency, the Cold War, the religious left and right, and debates over church-state separation.

L23 Re St 2300 Black-Jewish Relations in the United States

The relationship of blacks and Jews in the United States is at once intimate and strained, mutually beneficial and antagonistic. This course examines this uneasy alliance from a number of perspectives including anthropology, politics and identity

politics, history, religion and class. Beginning with American anthropology's Jewish founding father, Franz Boas, challenging the concept of race, the course traces the relations of blacks and Jews throughout the 20th century and in our contemporary moment. We will pay particular attention to the civil rights era, which is commonly upheld as the golden age of black-Jewish relations, as well as to this alliance's unraveling in the post-civil rights era. The course then moves to a unit focused on more recent ruptures and collaborations including the 1991 Crown Heights race riots, during which Orthodox Jews clashed with their black neighbors, and Jewish involvement in the Black Lives Matter movement. The course concludes with a unit on identity and identity politics focused on the complexity and fluidity of the categories "white," "black" and "Jewish."

L23 Re St 236F Introduction to East Asian Religions

This introductory course provides a basic, yet systematic, overview of certain major religious traditions that evolved in East Asia, particularly in China and Japan, but also in Korea. We begin with the classical Chinese traditions of Confucianism and Daoism, then turn our attention to Buddhism, which originated in India (ca. 500 BCE) and was later introduced into China (first century CE), Korea (fourth century CE) and Japan (sixth century CE). We then examine the Japanese tradition of Shinto, and focus more specifically upon the development of new Japanese forms of Buddhism. The course ends with a brief look at the coming of some of these religions to the West, and in particular the United States.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU:

ETH EN: H

L23 Re St 2400 Jewish Political Thought

This course uses the concepts of political theory to explore the diverse Jewish political tradition. While this tradition includes writing from and about the three historical periods of Jewish self-rule (including the modern state of Israel), most of the Jewish political tradition comes from the understanding of politics as viewed from outsiders to mainstream communities. Additionally, Jewish political thought can be found through a Jewish community's self-understanding based on its interpretation of Jewish text and law by which it bound itself. Because we span over 2,000 years of recorded history, we will not attempt to discern a single "Jewish political thought" but rather look at JPT through the lens of familiar concepts of political theory. The fundamental questions we will explore are the relationship of the Jewish tradition to concepts such as authority, law, consent, sovereignty and justice. We will ask how the Jewish tradition views government and the relationship between the authority of God and the authority of temporal powers. We will explore these questions through a range of materials that include both primary and secondary literature.

L23 Re St 2450 Love and Reason

Love often seems dramatically unreasonable, and reason can seem coldly rational in a way that excludes any emotion, passion, or affiliation even akin to love. The supposed opposition between love and reason has been used by Christian and secular thinkers throughout modernity to organize ways of knowing and judging, and to criticize claims of faith, belief, and desire. But are love and reason really so distinct? What does it

mean to say so, and why might someone make this claim? Can love be reasoned, and even reasonable? Can reason be aided by love, and even driven by it? How might different answers to these questions affect our understanding of other possibly unreasoned categories like faith, belief, and piety? This course offers an introduction to modern Christian thought and Western philosophy through these questions and themes.

L23 Re St 2500 Zionism

Zionism is often thought of as a commitment to the principle that the Jewish People, as a distinct "people," has a right to self-determination in its own historical land of the biblical Palestine. Yet the history of the term and the set of ideologies show a much more complex understanding. In this course we trace the emergence of a number of different "Zionisms" that would lead to the creation of the modern state of Israel. And we explore how the political principles at the core of these ideologies have fared in the 65 years since the founding of the modern Jewish state. The course is at its heart applied political theory: a case study of the way that ideas emerge from historical events, take on a life of their own, and then shape real outcomes in the world. The readings will weave together history, philosophy, literature and government.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L23 Re St 255 Religion, Environmentalism, and Politics

This course explores the intersections of anthropology, theology, economic interests, and activism. We will draw on a range of sources including social-scientific theories about religion and ritual, discussions of disenchantment and re-enchantment, and indigenous claims to land. These theoretical frameworks will provide context for discussing contemporary religious responses to ecological disaster, including both environmentalist and anti-environmentalist movements.

L23 Re St 2600 Religion in the African-American Experience: A Historical Survey

This course introduces students to important themes in the history of African-American, and thus in American, religious history, among them slavery, emancipation, urbanization, migration, consumer culture, sexuality, politics and media technologies. Primary attention is given to Afro-Protestantism in North America and the cultural, social and religious practices and traditions of these black communities. However, students will also be introduced to specific expressions of religious diversity and varying religious traditions and practices in African-American communities.

Same as L57 RelPol 260

Credit 3 units. A&S IQ: HUM, SC, SD BU: ETH EN: H

L23 Re St 280 African-American Religions

This course is an introduction to African-American religions, and it attends to the changes wrought in indigenous African religions by enslavement, the adoption of Christianity by slaves themselves, the building of African-American denominations, the

rise of new black religious movements, and the role of religion in contemporary African-American life. The course begins with a brief introduction to key themes and problems in the study of African-American religions. The second part, which makes up the bulk of the course, moves chronologically and situates African and African-American religions in their shifting cultural and political contexts from the beginning of the European slave trade to the present. We will discuss African-Americans' practice of several religious traditions: indigenous African religions, Islam, Protestant and Catholic Christianity, and new religious movements. The final part of the course focuses on several key issues and debates that are informed by the study of African-American religions and that have important connections with contemporary American life.

L23 Re St 285 Islam in America

In this course, we examine the notion of a religiously plural America and analyze Muslims' place within it. We consider the ways that American Muslims both shape and are shaped by U.S. society as both religious actors with autonomy and as a marginalized outgroup. In our approach to understanding Islam in America, we will use the category of race to explore three major themes: (1) the history of Muslims in the United States; (2) the lived experiences of American Muslims, including how they engage sacred texts and rituals; and (3) the phenomenon of Islamophobia.

Same as L57 RelPol 285

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, ETH, HUM EN: H

L23 Re St 290 Islamophobia & U.S. Politics

The presence of Muslim minorities in the West is increasingly divisive across the United States and Europe as political leaders appeal to voters' fear of the "other" to promote Islamophobic agendas that reshape immigration and asylum policies and redefine Western identity as Christian. Politicians further exploit the rise of extremist groups like ISIS to justify anti-Muslim rhetoric and to critique multiculturalism, claiming that Islam and the West are inherently antithetical. In this course, we examine the phenomenon of Islamophobia as a form of anti-Muslim racism. We explore how, although the post-9/11 context gave way to an increase in incidents of anti-Muslim violence, contemporary manifestations of Islamophobia are deeply rooted in state level anti-Black racism from the early 20th century. We also analyze public U.S. debates on the boundaries of freedom of speech and freedom of religion.

L23 Re St 300 Introduction to the Hebrew Bible/Old Testament

The Hebrew Bible is the foundational text of Judaism and Christianity. It is a complex compilation of materials, reflecting great diversity in ideology, literary expression, social and political circumstances, and theology. In this course, we shall read a significant amount of the Bible in English translation. We shall study the various approaches that have been taken by scholars in trying to understand the Bible in its historical context. We shall also study how the Bible was traditionally interpreted by Jews and Christians during the last two thousand years.

L23 Re St 303 Daoist Traditions

This course offers an introduction to the history, practices and worldviews that define the Daoist traditions. Through both secondary scholarship and primary texts, we consider the history of Daoism in reference to the continuities and discontinuities of formative concepts, social norms, and religious practices. Our inquiry into this history centers on consideration of the social forces that have driven the development of Daoism from the second century to the modern day. Special consideration is given to specific Daoist groups and their textual and practical traditions: the Celestial Masters (Tianshi), Great Clarity (Taiqing), Upper Clarity (Shangqing), Numinous Treasure (Lingbao), and Complete Perfection (Quanzhen). Throughout the semester we also reflect on certain topics and themes concerning Daoist traditions. These include constructions of identity and community, material culture, the construction of sacred space, and cultivation techniques.

Credit 3 units. A&S IQ: HUM, LCD BU: ETH EN: H

L23 Re St 3030 Love Songs and Laptops: Rediscovering Medieval Music in the Digital Age

Using our laptops as portals into the past, students will gain first-hand experience as historical detectives. In this course, we will explore the world of medieval love — from the chivalrous and courtly to the bodily and obscene — as represented in books of songs from the 15th century. Scrumptiously decorated and preserved, five interrelated songbooks from central France, known as the "Loire Valley Chansonniers" contain the majority of love songs from this period. Working from digitized versions of the songbooks, online editions, and modern audio recordings, we will address the following questions: What do the songbooks tell us about the culture in which they were created? How do the graphic decorations that frame each song interact with its music and lyrics? Lastly, by contextualizing these digital sources with respect to the growing interest in the interface between the humanities and digital technology, we will discuss what we can gain from these developments and what — if anything — we stand to lose. (Ability to read music not required.)

Same as L27 Music 3030

L23 Re St 3031 Christianity in the Modern World

Survey of Christianity since the Reformation. Focus on the divisions in Christianity, its responses to modern science, the rise of capitalism, and European expansion into Africa, Asia, and the Americas. Attention to ecumenism and the contemporary status of Christianity in the world.

Credit 3 units. A&S IQ: HUM BU: ETH EN: H

L23 Re St 3033 Religion and Healing

This course explores the relationship between religion and healing through historical and comparative study of Christian, Jewish and other religious traditions. We will examine how specific religious worldviews influence conceptions of the body and associated healing practices, how states of health and disease are identified and invested with religious significance, and how religious thought contributed to and coexisted alongside the growth of modern Western medicine. While much of the course will draw on specific case studies, students will be encouraged to pursue their own interests in the area of religion and healing through final projects.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

L23 Re St 3044 Humors, Pox, and Plague: Medieval and Early Modern Medicine

This course examines how people thought about, experienced and managed disease in the medieval and early modern periods. Students will consider developments in learned medicine alongside the activities of a diverse range of practitioners — e.g., surgeons, empirics, quacks, midwives, saints, and local healers — involved in the business of curing a wide range of ailments. Significant attention will be paid to the experiences of patients and the social and cultural significance of disease. Major topics include: the rise and fall of humoral medicine; religious explanations of illness; diseases such as leprosy, syphilis and plague; the rise of anatomy; herbs and pharmaceuticals; the experience of childbirth; and the emergence of identifiably "modern" institutions such as hospitals, the medical profession, and public health. The focus will be on Western Europe but we'll also consider developments in the Islamic world and the Americas.

Same as L22 History 3044

L23 Re St 3050 Between Malcolm X and Martin Luther King, Jr.: Race, Religion, and the Politics of Freedom

This course focuses on the political and spiritual lives of Martin and Malcolm. We will examine their personal biographies, speeches, writings, representations, FBI Files, and legacies as a way to better understand how the intersections of religion, race and politics came to bear upon the freedom struggles of people of color in the U.S. and abroad. The course also takes seriously the evolutions in both Martin and Malcolm's political approaches and intellectual development, focusing especially on the last years of their respective lives. We will also examine the critical literature that takes on the leadership styles and political philosophies of these communal leaders, as well as the very real opposition and surveillance they faced from state forces like the police and FBI. Students will gain an

understanding of what social conditions, religious structures and institutions, and personal experiences led to first the emergence and then the assassinations of these two figures. We will discuss the subtleties of their political analyses, pinpointing the key differences and similarities of their philosophies, approaches and legacies, and we will apply these debates of the mid-20th century to contemporary events and social movements in terms of how their legacies are articulated and what we can learn from them in struggles for justice and recognition in 21st-century America and beyond.

L23 Re St 3051 Orthodoxy and Heresy in Early Christianity

From the time Jesus of Nazareth preached in the rural countryside of Judea, his followers interpreted his words differently and wrote varied accounts of what he said and did. As time passed and as Jesus' movement grew into a world religion -- Christianity -- disagreement among Christians only continued to increase, leading to the need to define and enforce correct beliefs and practices to create a Christian "orthodoxy" embodied in the now-familiar institutions of creed, canon, and clergy. Yet in the process of creating an orthodoxy, what was left out? Whose voices were suppressed? Through the careful study of ancient texts that were long-ago deemed heretical and virtually lost until the 20th century, this course examines the wide varieties of Christianity in its nascent years and discusses how the framers of orthodoxy defined themselves against these alternatives.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, HUM EN: H

L23 Re St 3062 Islam, Culture and Society in West Africa

This course will explore the introduction of Islam into West Africa beginning in the 10th Century and explore its expansion and development in the region, placing emphasis on the 19th century to present day. It will focus on the development of West African Muslim cultural, social, religious, and political life, to understand not only how the religion affected societies, but also how West African local societies shaped Islam. The course also aims to introduce students to a critical understanding of Islamic writing in West Africa. It will also examine the organization of Muslim Sufi orders in West Africa through time and space. The course is organized around a series of lectures, readings, as well as print and visual media. For AFAS majors, this course counts as Area Requirement 4.

L23 Re St 3065 Voice, Language and Power: Late Medieval Religious Writing

In the later Middle Ages, there is a flowering throughout Christian Europe of religious writings that offer a new voice in which personal religious experience can be pursued and expressed. Their voices are mainly intended to be communal ones, to be contained within the Church and regulated by it. But in each case the fact that it is a voice may offer a mode of resistance, or of difference. Such writing is often aimed at lay people, sometimes exclusively at women; and sometimes the intended auditors become the authors, and propose a version of religious experience that claims a new and more intimate kind of power for its readers. This course looks at a wide range of such writing in vernacular languages read in translation (English, French

and German), including the work of Meister Eckhart, Marguerite Porete, Margery Kempe, Julian of Norwich, Eleanor Hull, the anonymous writer of *The Cloud of Unknowing* and the perhaps pseudonymous William Langland, author of *Piers Plowman*. Whether such writing seeks to be orthodox or conducive to heresy, it presents a challenge to the power of clergy — a challenge that is written in the vernacular language of lay people, rather than clerical Latin, and in doing so offers distinctively new voices for religious experience. The course will also look at ways in which such work might have been influenced, if only oppositionally or at times indirectly, by contact with Muslim and Jewish writing (including Jewish exegesis of the Psalms).

L23 Re St 3074 Hinduism and the Hindu Right

We are witnessing a global rise in rightwing politics, and India is no exception. In May 2019, Narendra Modi and his "Hindu Nationalist" party were elected to power for a second term. Observers in the United States and Europe may be stunned by what seems to be a new development, but observers in India have been following the rise of the Hindu Right since the early 1990s. In its wake, the Hindu Right has brought violence against minorities; curbs on free speech; and moves toward second-class citizenship for Indian Muslims. This course will track the history of the Hindu Right in India from its 19th-century roots to the present. The struggle to come to grips with the Hindu Right is of immediate political relevance. It also raises big questions about the history of religion and the politics of secularism.

Same as L22 History 3074

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: BA, IS EN: H

L23 Re St 307F Introduction to the New Testament

What can be known — from an historical perspective — about the life and teachings of Jesus and his earliest followers? How did Jesus see himself and how did his followers see him? How did the lives, teachings and deaths of Jesus and his followers come to form the heart of a new movement? If Jesus and the apostles were all Jews, how did Christianity emerge as a distinct "religion"? This course investigates these questions through a focus on the earliest sources for Jesus and his first followers, including and extending beyond the canonical books of the Christian New Testament. Our approach in this course is historical and literary, rather than theological or confessional: We ask what Jesus, his first followers, and their Jewish and "pagan" contemporaries did and believed, and we try to catch glimpses of the worlds in which they lived and the cultures which they took for granted.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM

L23 Re St 3080 City on a Hill: The Concept and Culture of American Exceptionalism

This course examines the concept, history, and culture of American exceptionalism — the idea that America has been specially chosen, or has a special mission to the world. First, we examine the Puritan sermon that politicians quote when they describe America as a "city on a hill." This sermon has been called the "ur-text" of American literature, the foundational document of American culture; learning and drawing from multiple literary methodologies, we will re-investigate what that sermon means and how it came to tell a story about the Puritan origins of American culture — a thesis our class will reassess with the help of modern critics. In the second part of this class, we will broaden our discussion to consider the wider (and newer)

meanings of American exceptionalism, theorizing the concept while looking at the way it has been revitalized, redefined and redeployed in recent years. Finally, the course ends with a careful study of American exceptionalism in modern political rhetoric, starting with JFK and proceeding through Reagan to the current day, ending with an analysis of Donald Trump and the rise of "America First." In the end, students will gain a firm grasp of the long history and continuing significance — the pervasive impact — of this concept in American culture.

L23 Re St 3082 From the Temple to the Talmud: The Emergence of Rabbinic Judaism

This course offers a survey of the historical, literary, social and conceptual development of Rabbinic Judaism from its emergence in late antiquity to the early Middle Ages. The goal of the course is to study Rabbinic Judaism as a dynamic phenomenon — as a constantly developing religious system. Among the topics explored are: How did Judaism evolve from a sacrificial cult to a text-based religion? How did the "Rabbis" emerge as a movement after the destruction of the Second Temple and how could they replace the old priestly elite? How did Rabbinic Judaism develop in its two centers of origin, Palestine (the Land of Israel) and Babylonia (Iraq), to become the dominant form of Judaism under the rule of Islam? How did Jewish ritual and liturgy develop under Rabbinic influence? How were the Rabbis organized and was there diversity within the group? What was the Rabbis' view of women? How did they perceive non-Rabbinic Jews and non-Jews? As Rabbinic Literature is used as the main source to answer these questions, the course provides an introduction to the Mishnah, the Palestinian and Babylonian Talmuds, and the Midrash collections — a literature that defines the character of Judaism down to our own times. All texts are read in translation.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM EN: H

L23 Re St 3091 Confucian Thought

This course is designed to introduce students to the history and teachings of one of the world's major religious traditions: Confucianism. We will examine how Confucianism developed in ancient China and afterwards spread throughout East Asia and beyond. In particular, we will pay attention to the issue of ritual and how Confucians attempted to ritualize social interactions and the world at large. In order to do so, we will engage in the writings of Confucius, Mengzi, and Xunzi, three early Chinese writers whose basic ideas about ritual heavily informed myriad cultural practices that are formative for large portions of East Asia today. Hence, this course on ancient thinkers not only introduces thoughts and practices prevalent throughout premodern China, Japan and Korea. It also functions as a catalyst that helps us understand some of the reasons and motivations behind these communities' recent efforts to renegotiate and question "the colonialist flavor" of human rights and democracy.

Credit 3 units. A&S IQ: HUM, LCD BU: ETH EN: H

L23 Re St 3100 Religion and Violence

Is religion intrinsically connected with violence or merely manipulated to justify political positions and incite supporters? How has religion been the motivation and justification behind violent conflict, aggression and persecution? Does religion have a greater power to make war or peace? People have debated these questions for centuries as believers waged war in the

name of their god(s). We'll study several critical theories about religion and violence and test them on historical and recent "religious" conflicts. Our investigation will be organized around five types of violence: 1) martyrdom and redemptive suffering, 2) claims on sacred space, 3) the violence of social stratification and "othering," 4) war and 5) apocalyptic and spiritual warfare. Case studies ranging from early Christian martyrs and crusades to attacks on abortion clinics and Tokyo subways will help clarify patterns and types of religious violence.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: FAAM, HUM BU: ETH EN: H

L23 Re St 3101 The Problem of Evil: The Holocaust and Other Horrors

The question of how God can allow evil to occur to the righteous or innocent people has been a perennial dilemma in religion and philosophy. We study the classic statement of the problem in the biblical book of Job, the ancient Near Eastern literature on which Job is based, and traditional Jewish and Christian interpretation of Job. We study the major approaches to the problem of evil in Western philosophical and religious thought.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

L23 Re St 3102 Defense Against the Dark Arts: An Anthropological Approach to the Study of Religion and Health

This class is a comparative survey of religion, magic, and witchcraft as they are related to concepts of the body, health, healing and death across cultures. As such, students in this class will be expected to simultaneously learn details from particular magical and healing traditions studied in class, as well as to relate these details to theories about within the discipline of Anthropology (medical, cultural, psychological) and the field of Religious Studies. Special themes addressed in the class are the reasonableness of belief in magic, religion and religious practice as "magical," the body and definitions of health, healing, and illness and disease as symbolically, culturally, even magically constructed and experienced.

L23 Re St 311 Buddhist Traditions

This course examines the historical development of Buddhism from its origins in South Asia in the sixth to fifth century BCE, through the transmission of the teachings and practices to East Asia, Southeast Asia and Tibet, to contemporary transformations of the tradition in the modern West. In the first third of the course, we focus on the biographical and ritual expressions of the historical Buddha's life story, the foundational teachings attributed to the Buddha, and the formation and development of the Buddhist community. In the second third, we examine the rise of the Mahayana, the development of the Mahayana pantheon and rituals, and the spread of Mahayana in East Asia. In the final third, we explore the Theravada tradition in Sri Lanka and Thailand, then Tantric Buddhism in India, Tibet and East Asia. We close the course with an overview of Buddhism in the modern West.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H UColl: CD

L23 Re St 3110 Sacred Architecture of the Indian Subcontinent

The built structure remains the principal visible record of the evolution of a civilization and its culture. Through this interdisciplinary course on culture, design, religion and society, students will be introduced to and gain a deeper insight into the rich diversity of South Asia through the study of the architecture of its significant sacred places. We will take a journey through Hindu, Jain and Buddhist temples; the Islamic mosque; the Sikh gurdwara; the Zoroastrian fire temple; the Jewish synagogue; and the Christian church, tracing the evolution of these places of worship from the Indus Valley civilization to precolonial times. Through visuals, readings, and discussions, students will learn about the different architectural styles and motifs used in sacred buildings and how they came about. We will explore the interrelationships between the design elements through the lens of political, social, religious, regional and technological influences and understand the ways in which evolving design principles reflect these influences over time. At the end of the semester, students will go on a field trip to experience the diverse sacred architecture in the St. Louis region. This course will be of interest to students of languages and cultures, architecture, archeology, art history, history, preservation, religion, and South Asian culture, among others. No prior knowledge of architecture or the history of this region is required.

Same as L73 Hindi 311

L23 Re St 312 South Asian Religious Traditions

In this course we will learn the basic vocabulary (conceptual, ritual, visual) needed to become conversant with the various religious traditions that are important to personal, social, and political life on the Indian subcontinent and beyond. We will first encounter each tradition through narrative, with the support of visual media. We will then explore how contemporary adherents make these traditions meaningful for themselves -- in their everyday lives, in their struggles for social change, and in their political statements and contestations. Students will also become familiar with the analytical categories and methodologies that make up the basic toolkit of the religion scholar. Prior knowledge of India or Pakistan is not required. First year students are welcome to enroll in this course.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H UColl: CD

L23 Re St 313C Islamic History 622-1200

The cultural, intellectual, and political history of the Islamic Middle East, beginning with the prophetic mission of Muhammad and concluding with the Mongol conquests. Topics covered include: the life of Muhammad; the early Muslim conquests; the institution of the caliphate; the translation movement from Greek into Arabic and the emergence of Arabic as a language of learning and artistic expression; the development of new educational, legal and pietistic institutions; changes in agriculture, crafts, commerce and the growth of urban culture; multiculturalism and inter-confessional interaction; and large-scale movements of nomadic peoples.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H

L23 Re St 314C Islamic History 1200-1800

An introduction to Islamic politics and societies from the Mongol conquests to the 13th century to the collapse and weakening of the colossal "gunpowder" empires of the Ottomans, Safavids and Mughals in the early 18th century. Broadly speaking, this course covers the Middle Period (1000-1800) of Islamic history, sandwiched between the Early and High Caliphal periods (600-100) on the one hand and the Modern Period (1800-present) on the other hand. Familiarity with the Early and High Caliphal periods is not assumed. The course is not a "survey" of this period but a series of "windows" that allows students to develop both an in-depth understanding of some key features of Islamic societies and a clear appreciation of the challenges (as well as the rewards!) that await historians of the Middle Period. Particular attention is given to the Mamluk and Ottoman Middle East, Safavid Iran and Mughal India.

Same as L22 History 314C

Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM, IS

L23 Re St 315 Virtues, Vices, Values: Regulating Morality in Modern America

This course takes morality and the question of "what's right" seriously as a lens through which to understand and assess modern American history. "Morality" is, of course, a devilishly flexible rhetoric, a language invoked to tell people how to act and how to be good, or, conversely, to criticize and to shame. When the state or a community wants its citizens or members to be "good," it crafts laws and creates customs to encourage or inhibit behaviors. Yet "good" is a contested concept, especially in a diverse, multiracial society. Thus this class examines a) how state and non-state actors, including religious leaders, have attempted to regulate the lived experiences of Americans and b) the conflicts that emerge over what, exactly, is correct, or right, or good for individuals, society, and the state. To what degree does calling something moral or immoral articulate or obstruct policy solutions? What do political coalitions oriented around "values" accomplish? Is it possible to hew to moral frames and remain inclusive and tolerant? Topics may include marriage, abortion, immigration, alcohol, incarceration, disease, money, and medical care.

L23 Re St 3171 Religion and Culture in South and Southeast Asia

Although it is now common to differentiate between South and Southeast Asia, historically these regions have often been conceptualized as part of a single geographical area. Known as the "(East) Indies", this area is marked by a rich history of (earlier) Hindu and Buddhist influences, as well as (later) Islamic and Christian influences. The present course will take an in-depth look at the four aforementioned religious traditions, and examine how they have shaped local forms of culture in premodern and modern times. Students will be introduced to host of phenomena in South and Southeast Asian societies, including religious worship, education, law, traditional governance, colonial governance, art, architecture, economic production, kinship, gender, and sexuality. Countries to be studied in the course include India, Pakistan, Sri Lanka, Thailand, Myanmar, Indonesia, Malaysia, the Philippines, and Papua New Guinea.

UColl: CD

L23 Re St 3192 Modern South Asia

This course covers the history of the Indian subcontinent in the 19th and 20th centuries. We look closely at a number of issues including colonialism in India; anticolonial movements; the experiences of women; the interplay between religion and national identity; and popular culture in modern India. Political and social history are emphasized equally.

Same as L22 History 3192

Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM, IS EN: H

L23 Re St 321 American Religion and the Politics of Gender and Sexuality

Religious beliefs about gender and sexuality have long played a vital role in American politics, vividly evident in debates over such issues as birth control, censorship, pornography, funding for AIDS research, abortion, contraceptive access, abstinence-only sex education, sexual harassment, same-sex marriage and more. Educated citizens need to understand the impact of these religiously inflected debates on our political culture. This course explores the centrality of sex to religion and politics in the U.S., emphasizing Christianity (both Protestant and Catholic forms) and its weighty social and political role regulating the behavior of women and men, children and teens, as well as its uses in legal and judicial decisions. Alongside scholarly readings in gender and sexuality, we will discuss popular devotional texts — on chastity, marriage and homosexuality — with a political bent. Students will leave the course able to analyze how religious beliefs about sex shape specific gender norms central to U.S. politics.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: ETH EN: H

L23 Re St 323 Jews and Christians in the Premodern World

In modern times, it is common to think of Judaism and Christianity as two distinct, if historically connected, "religions." Increasingly, however, historians of ancient religions have thought more deeply about the implications of taking Christianity and Judaism in antiquity as more fluid and porous than we tend to think of them. In this upper-division course, we will explore the ways in which the boundaries that early Christians attempted to draw between Christianity and Judaism remained unstable and incomplete. While the various efforts to establish early Christian identity led to the production of a variety of hermeneutical representations of the Judaioi, these literary representations nevertheless often reflected, to various degrees, engagement with actual historical Jews/Judeans, who shared political, economic, and intellectual worlds with Christians. We will consider how early Christian discourse about Jews and Judaism informed and was informed by intra-Christian disputes and their negotiations of their relationships with the wider Greco-Roman culture. We will explore how Christian efforts to establish both continuity and difference between Judaism played a role in the construction of "orthodoxy" and "heresy," as well as the way in which Christians re-appropriated Jewish texts, rituals and ideas in their efforts to construct a Christian identity. We will also explore how this continued dynamic of difference and continuity continued into the Middle Ages.

L23 Re St 3262 The Early Medieval World 300-1000

This course begins with the crisis of the Roman Empire in the third century and the conversion of the Emperor Constantine to Christianity in 312. We will study the so-called "barbarian invasions" of the fourth and fifth centuries and the collapse of the Roman Empire in the West. The Roman Empire in the East (commonly known as the Byzantine Empire after the seventh century) survived intact, developing a very different style of Christianity than in the lands of the former Western Empire. In addition to examining Christianization in the deserts of Egypt and the chilly North Sea, we will discuss the phenomenon of Islam in the seventh century (especially after Prophet Muhammad's death in 632) and the Arab conquests of the eastern Mediterranean and north Africa. Prerequisite: sophomore standing or permission of the instructor.

L23 Re St 3277 Philosophy of Religion

This course focuses on debates concerning the existence of God as well as on special issues that arise within religion generally and also on some that arise within specific religious traditions. Topics include: the rationality of religious belief, the problem of evil, the coherence of theism, and the freedom-knowledge problem.

Same as L30 Phil 327

Credit 3 units. A&S IQ: HUM BU: ETH EN: H

L23 Re St 3293 Religion and Society

We take a broad and practice-oriented view of "religion," including uttering spells, sacrificing to a god, healing through spirit possession, as well as praying and reciting scripture. We consider religious practices in small-scale societies as well as those characteristic of forms of Judaism, Islam, Christianity and other broadly based religions. We give special attention to the ways religions shape politics, law, war, as well as everyday life in modern societies.

L23 Re St 3300 Native American/Euro-American Encounters: Confrontations of Bodies and Beliefs

This course surveys the history and historiography of how Native Americans, Europeans and Euro-Americans reacted and adapted to one another's presence in North America from the 1600s to the mid-1800s, focusing on themes of religion and gender. We will examine the cultural and social implications of encounters between Native peoples, missionaries and other European and Euro-American Protestants and Catholics. We will pay particular attention to how bodies were a venue for encounter — through sexual contact, through the policing of gendered social and economic behaviors, and through religiously-based understandings of women's and men's duties and functions. We will also study how historians know what they know about these encounters, and what materials enable them to answer their historical questions.

L23 Re St 334C Crusade, Conflict, and Coexistence: Jews in Christian Europe

This course will investigate some of the major themes in the history of the Jews in Europe, from the Middle Ages to the eve of the French Revolution. Jews constituted a classic, nearly continuous minority in the premodern Christian world — a world that was not known for tolerating dissent. Or was it? One of the main purposes of the course is to investigate the phenomenon of majority/minority relations, to examine the ways in which the Jewish community interacted with and experienced European societies, cultures and politics. We will look at the dynamics of boundary formation and cultural distinctiveness; the limits of religious and social tolerance; the periodic eruption of persecution in its social, political, and religious contexts; and the prospects for Jewish integration into various European societies during the course of the Enlightenment era.

L23 Re St 3354 Vienna, Prague, Budapest: Politics, Culture, and Identity in Central Europe

The term Central Europe evokes the names of Freud and Mahler; Kafka and Kundera; Herzl, Lukács, and Konrád. In politics, it evokes images of revolution and counter-revolution, ethnic nationalism, fascism and communism. Both culture and politics, in fact, were deeply embedded in the structures of empire (in our case, the Habsburg Monarchy) — structures which both balanced and exacerbated ethnic, religious, and social struggles — in modern state formation, and in the emergence of creative and dynamic urban centers, of which Vienna, Budapest and Prague were the most visible. This course seeks to put all of these elements into play — empire, nation, urban space, religion and ethnicity — in order to illustrate what it has meant to be modern, creative, European, nationalist or cosmopolitan since the 19th century. It engages current debates on nationalism and national identity; the viability of empires as supranational constructs; urbanism and modern culture; the place of Jews in the social and cultural fabric of Central Europe; migration; and authoritarian and violent responses to modernity.

L23 Re St 335C Becoming "Modern": Emancipation, Antisemitism, and Nationalism in Modern Jewish History

This course offers a survey of the Jewish experience in the modern world by asking, at the outset, what it means to be — or to become — modern. To answer this question, we look at two broad trends that took shape toward the end of the 18th century — the Enlightenment and the formation of the modern state — and we track changes and developments in Jewish life down to the close of the 20th century with analyses of the (very different) American and Israeli settings. The cultural, social, and political lives of Jews have undergone major transformations and dislocations over this time — from innovation to revolution, exclusion to integration, calamity to triumphs. The themes that we will be exploring in depth include the campaigns for and against Jewish "emancipation;" acculturation and religious reform; traditionalism and modernism in Eastern Europe; the rise of political and racial antisemitism; mass migration and

the formation of American Jewry; varieties of Jewish national politics; Jewish-Gentile relations between the World Wars; the destruction of European Jewry; the emergence of a Jewish nation-state; and Jewish culture and identity since 1945.

L23 Re St 336C History of the Jews in Islamic Lands

This course is a survey of Jewish communities in the Islamic world, their social, cultural, and intellectual life from the rise of Islam to the Imperial Age. Topics include: Muhammad, the Qur'an and the Jews; the legal status of Jews under Islam; the spread of Rabbinic Judaism in the Abbasid empire; the development of new Jewish identities under Islam (Karaites); Jewish traders and scholars in Fatimid Egypt; the flourishing of Jewish civilization in Muslim Spain (al-Andalus); and Sephardi (Spanish) Jews in the Ottoman empire. On this background, we will look closely at some of the major Jewish philosophical and poetical works originating in Islamic lands. Another important source to be studied will be documents from the Cairo Genizah, reflecting social history, the status of women, and other aspects of daily life.

L23 Re St 3401 Pilgrims and Seekers: American Spirituality from the Transcendentalists to the Millennials

This seminar focuses on the formation of "spirituality" in American culture from the Transcendentalist world of Ralph Waldo Emerson on through more recent expressions of the "spiritual-but-not-religious" sensibility. How did "spirituality" come to be seen as something positively distinct from "organized religion"? What are the main contours of spiritual seeking in American culture, especially among those who claim no specific religious affiliation? The course also explores the social, political, and cultural consequences of this turn to the spiritual over the religious: for example, the consecration of liberal individualism, the relationship of religious exploration to both environmentalism and consumerism, the politics of cultural appropriation, the negotiation of religious pluralism, and the pursuit of the spiritual in art.

L23 Re St 3421 Childhood, Culture, and Religion in Medieval Europe and the Mediterranean World

From child saints to child scholars and from child crusaders to child casualties, the experience of childhood varied widely throughout the European Middle Ages. This course will explore how medieval Jews, Christians and Muslims developed some parallel and some very much divergent concepts of childhood, childrearing, and the proper cultural roles for children in their respective societies. Our readings will combine primary and secondary sources from multiple perspectives and multiple regions of Europe and the Mediterranean World, including a few weeks on the history and cultural legacy of the so-called

Children's Crusade of 1312. We will conclude with a brief survey of medieval childhood and its stereotypes as seen through contemporary children's books and TV shows. This course fulfills the Language & Cultural Diversity requirement for Arts & Sciences.

L23 Re St 343C Europe in the Age of the Reformation

How should people act toward each other, toward political authorities and toward their God? Who decided what was the "right" faith: the individual? the family? the state? Could a community survive religious division? What should states do about individuals or communities who refused to conform in matters of religion? With Martin Luther's challenge to the Roman Catholic Church, the debates over these questions transformed European theology, society and politics. In this class we examine the development of Protestant and Radical theology, the Reformers' relations with established political authorities, the response of the Catholic Church, the development of new social and cultural expectations, the control of marginalized religious groups such as Jews, Muslims and Anabaptists, and the experiment of the New World.

L23 Re St 3513 Muhammad in History and Literature

This course intends to examine the life and representations of the Prophet Muhammad from the perspective of multiple spiritual sensibilities as articulated in various literary genres from medieval to modern periods. The course is divided roughly into two parts. One part deals with the history of Muhammad and the related historiographical questions. The second part deals with the representations of Muhammad in juristic, theological, Sufi, etc., literature. Because of the availability of primary sources in English translation, there is a healthy dose of primary source reading and analysis throughout the semester. Those students with advanced Arabic (and Persian and Turkish) skills are encouraged to engage sources in their original language.

L23 Re St 3540 Anthropological and Sociological Study of Muslim Societies

This course introduces students to anthropological and sociological scholarship on Muslim societies. Attention will be given to the broad theoretical and methodological issues which orient such scholarship. These issues include the nature of Muslim religious and cultural traditions, the nature of modernization and rationalization in Muslim societies, and the nature of sociopolitical relations between "Islam" and the "West." The course explores the preceding issues through a series of ethnographic and historical case studies, with a special focus on Muslim communities in the Middle East, Southeast Asia, and Europe. Case studies address a range of specific topics, including religious knowledge and authority, capitalism and economic modernization, religion and politics, gender and sexuality, as well as migration and globalization.

L23 Re St 3542 Christian Theology and Politics in the Modern West

This course engages students in the reading and analysis of influential religious texts from the Western Christian world from the mid-16th century to the present. The course also examines these texts in their historical context, raising questions about the relationship between theology and politics in the West. The course pursues such questions chronologically, with the first weeks devoted to Catholic and Calvinist contests over

revelation and political authority during the 16th century to Puritan ruminations during the 17th century on the nature of worldly calling and personal eschatology. The next weeks concern 18th-century views of reason as a critique of traditional Christianity and Protestant responses centered on true virtue as a hedge against worldly loyalties. We then examine 19th-century discussions of the relationship between ethics, tradition, and religious experience. For the 20th century, we discuss texts that address Christian conceptions of redemption to issues of hypernationalism and race. The final weeks are devoted to recent theologies that have to do with the self and one's identity and current political crises. Juniors and seniors only. Sophomores by permission.

L23 Re St 3554 Revolution with an Accent: The Haitian and French Revolutions, 1770-1805

How can politics enact fundamental changes? What makes those changes a "revolution"? How do we judge the legitimacy of such changes? When these questions arise over the course of ordinary political arguments, the example of the French Revolution often looms large, casting a shadow tinted with blood and Terror. Much less present in the collective political imagination is the Haitian Revolution. These two events are complex and complicated, and are filled with fascinating, chilling, inspired characters, enflamed rhetoric and challenging questions. This course will examine both the unfolding of events and the rise and fall of protagonists within these two Revolutions and will explore the ways that issues such as religion, state finance, loyalty, race, slavery became politicized.

L23 Re St 3571 God in the Courtroom

The U.S. Constitution holds a promise to secure freedom of religion through its First Amendment. Its two religion clauses declare unconstitutional any prohibition on the free exercise of religion and laws respecting the establishment of religion. The consequence is that, whenever a group demands to be recognized as religious and to be granted the right to exercise its religion, a court, a legislature, or an administrative official must determine whether the religious practice in question is legally religious. This means that law plays a uniquely important role in defining religion in the United States. In this seminar, we will explore the relation between law and religion in America. We

will study the religion clauses in the First Amendment to the United States Constitution, the histories of their interpretations by American courts in landmark cases, and the ways that religious studies scholars have understood and critiqued these cases.

L23 Re St 359 Travelers, Tricksters, and Storytellers: Jewish Travel Narratives and Autobiographies

Jewish literature includes a number of highly fascinating travel accounts and autobiographies that are still awaiting their discovery by a broader readership. In this course, we will explore a broad range of texts originating from the Middle Ages to the 19th century. They were written by both Ashkenazi and Sephardi Jews hailing from countries as diverse as Spain, Italy, Germany, and the Ottoman Empire. Among the authors were pilgrims, rabbis, merchants, and one savvy business woman. We will read their works as responses to historical circumstances and as expressions of Jewish identity, in its changing relationship to the Christian or Muslim environment in which the writers lived or traveled. Specifically, we will ask questions such as: How do travel accounts and autobiographies enable their authors and readers to reflect on issues of identity and difference? How do the writers produce representations of an "other," against which and through which they define a particular sense of self? To what extent are these texts reliable accounts of their authors' personal experiences, and where do they serve their own self-fashioning? How do the writers portray Christians, Muslims and Jews from other cultural backgrounds than their own? How do they construe the role of women in a world dominated by men? How do they reflect on history, geography, and other fields of knowledge that were not covered by the traditional Jewish curriculum; and how do they respond to the challenges and opportunities of early modernity? This course is open to students of varying interests, including Jewish, Islamic, or Religious Studies, medieval and early modern history, European or Near Eastern literatures. All texts will be read in English translation.

L23 Re St 3600 Religion and the Modern Civil Rights Movements, 1954-1968

The modern Civil Rights Movement is a landmark event in the nation's political, civic, cultural and social history. In many contexts, this movement for and against civil and legal equality took on a religious ethos, with activists, opponents and observers believing that the net result of the marches, demonstrations and legislative rulings would redeem and/or destroy "The Soul of the Nation." This seminar examines the modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement. The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures and communities that were indifferent, combative, instrumental and/or supportive of Civil Rights legislation throughout the mid-20th century.

L23 Re St 3620 Islam, Gender, Sexuality

The return of white nationalism and misogyny to the public sphere since the 2016 election has reinvigorated the trope of the subjugated Muslim woman as backwards and subservient to her male counterparts. Rather than devote our time to dispel stereotypes, in this course, we address the extent to which Western theories of feminism are useful to account for Muslim women's experiences across historical period and geographical region. By examining discourses of gender and sexuality, the ideals of the feminine and masculine in Islamic scriptures and jurisprudence, and subsequent encounters with Western imperialism, we investigate how gender informs social, political, religious, and family life in Islamic cultures. We employ a chronological approach to these topics, from considering the status of women in seventh-century Arabia to the period of Islamic expansion across Asia, North Africa, and the Iberian Peninsula and then to the colonial period and ending with the contemporary post-9/11 and post-2016 U.S. contexts, wherein debates over the status of Muslim women in society emerged with renewed vigor.

L23 Re St 365 The Bible as Literature

The Bible is one book among many; the Bible is a book like no other; the Bible is not one book but many. The course will debate such positions and the different histories and practices of reading they involve. We shall read extensively in English translations of the Bible, both Jewish and Christian, with emphasis on literary form and ideas. We shall look at the Bible's material forms, and the history of its interpretation and translation. The aim is not to adjudicate its meaning but to explore what over time it has been taken to mean, attempting to locate within the book the potential for different interpretations. The course requires, and should foster, attentive reading, vigorous yet courteous argument, and respect for the readings of others.

L23 Re St 3650 Slavery, Sovereignty, Security: American Religions and the Problem of Freedom

The goal of this course is to think critically about freedom as an ideology and institution. What does it mean to be free? What are the relationships among individual liberties, national sovereignty, and civil rights? In what ways has freedom been defined in relation to -- and materially depended on -- unfreedom? At the same time, this course will treat American "religions" in a similar critical fashion: as a historically contingent category that has been forged and inflected within the same context of white Christian settler empire. Religion and freedom have intertwined throughout American history, including in the ideal of religious freedom. Our critical interrogation of freedom should help us think carefully about power, working with but also beyond tropes of domination and resistance.

L23 Re St 366 Approaches to the Qur'an

The place of the Qur'an in Islamic religion and society. Equal emphasis on text: the Qur'an's history, contents, and literary features; and context: the place of the Qur'an in everyday life, its oral recitation, artistic uses, and scholarly interpretation. Knowledge of Arabic not required.

Credit 3 units. A&S IQ: HUM, LCD BU: ETH

L23 Re St 3660 The Sephardic Experience: 1492 to the Present

This course explores the history and culture of the Sephardic diaspora from the expulsion of Spanish and Portuguese Jewry at the end of the 15th century to the present. We will start with a brief introduction into the history of Iberian Jews prior to 1492, asking how this experience created a distinct subethnic Jewish group: the Sephardim. We will then follow their migratory path to North Africa, Italy, the Ottoman Empire, the Netherlands and the Americas. The questions we will explore include: In what sense did Jews of Iberian heritage form a transnational community? How did they use their religious, cultural, and linguistic ties to advance their commercial interests? How did they transmit and transform aspects of Spanish culture and create a vibrant Ladino literature? How did the Sephardim interact with Ashkenazi, Greek, North African, and other Jewish, Muslim, and Christian communities? How did Jewish emigres from Spain and Portugal become intermediaries between Christian Europe and the Ottoman Empire? What was the role of Sephardim in Europe's transatlantic expansion? How did conversos (converts to Christianity) return to Judaism and continue to grapple with their ambiguous religious identity? How did Ottoman and North African Jews respond to European cultural trends and colonialism and create their own unique forms of modern culture? How did the Holocaust impact Sephardic Jewry? The course will end with a discussion of the Sephardic experience in America and Israel today.

L23 Re St 3670 Gurus, Saints and Scientists: Religion in Modern South Asia

Many long-standing South Asian traditions have been subject to radical reinterpretation, and many new religious movements have arisen, as South Asians have grappled with how to accommodate their traditions of learning and practice to what they have perceived to be the conditions of modern life. In this course we consider some of the factors that have contributed to religious change in South Asia, including British colonialism, sedentarization and globalization, and new discourses of democracy and equality. We consider how new religious organizations were part and parcel with movements for social equality and political recognition; examine the intellectual contributions of major thinkers like Swami Vivekananda, Sayyid Ahmad Khan and Mohandas Gandhi; and explore how Hindu, Islamic and other South Asian traditions were recast in the molds of natural science, social science and world religion.

Credit 3 units. A&S IQ: HUM, LCD BU: ETH EN: H

L23 Re St 368 Theories and Methods in the Study of Religion

What is religion, and how can we study it? Do we need an answer to the first question to pursue the second? Why, and toward what ends, might we undertake such study? This course considers these questions through the investigation of significant attempts to study religion over the past century, paying particular attention to the methods, motivations, and aims of these works. Is the study of religion an effort to disprove or debunk it, or perhaps to support it? What would each mean? Is it an effort to describe the indescribable, or perhaps to translate complex beliefs and practices into a language in which they can be discussed by others? Why would such a translation be helpful, and to whom? Is the study of religion an investigation of a social phenomenon, an organization of communities, a specific formation of individuals, or perhaps a psychosis or illusion, evidence of the workings of power on our lives and the difficulty of bearing it? What is at stake in defining religion in these ways, and then in undertaking its study?

L23 Re St 374 Of Dishes, Taste, and Class: History of Food in the Middle East

When the 13th century author Ibn al-Adim from the city of Aleppo, Syria, titled his book on food *Reaching the Beloved through the Description of Delicious Foods and Perfumes*, he was perhaps not concerned so much with simply how to satisfy hunger. Thinking through the title alone opens a window for us on all sorts of cultural, social, economic, and political questions about food and drink. Our history as humans with food is long and complicated. It extends from seeking basic nutrition to sustain our livelihood to contracting diseases. Food also plays a fundamental role in how humans organize themselves in societies, differentiate socially, culturally, and economically, establish values and norms for religious, cultural, and communal practices, and define identities of race, gender, and class. Food has been one of the most visible signs of social status in any given society and a vital part of many movements of political and social reform and transformation. Food has been a major question in trans-regional, international, and recently global cooperation and conflict as well. This course will cover the history of food and drink in the Middle East to help us understand our complex relation with food and look at our lives from perspectives we intuitively feel or by implication know, but rarely critically and explicitly reflect on. This course does not intend to spoil, so to speak, this undeniably one of the most pleasurable human needs and activities, but rather to make you aware of how food shapes who we are as individuals and societies. We will study the history of food and drink in the Middle East across the centuries until the present time, but be selective in choosing themes, geographic regions, and historical periods to focus on. Course work is geared toward increasing your ability to think about food and drink analytically as a socio-economic and cultural capital, noticeable marker of identity, and indicator of a political position. In a sense we will try to tease out in class why we are what we eat! Please consult the instructor if you have not taken any course in the humanities.

L23 Re St 374C Kings, Priests, Prophets and Rabbis: The Jews in the Ancient World

We trace Israelite and Jewish history from its beginnings in the biblical period (ca. 1200 BCE) through the rise of rabbinic Judaism and Christianity until the birth of Islam (ca. 620 CE). We explore how Israel emerged as a distinct people and why the rise of the imperial powers transformed the political, social and religious institutions of ancient Israel. We illuminate why the religion of the Bible developed into rabbinic Judaism and Christianity and how rabbinic literature and institutions were created.

L23 Re St 3750 In the Beginning: Creation Myths of the Biblical World

This course will study myths and epic literature from the Bible, ancient Egypt, the ancient Near East and ancient Greece about the birth of the gods, the creation of the world and of humanity, and the establishment of societies. These masterpieces of ancient literature recount the deeds of gods and heroes and humanity's eternal struggle to come to terms with the world, supernatural powers, love, lust, and death. This course will examine how each culture borrows traditions and recasts them in a distinct idiom. The course will further examine different approaches to mythology and to the study of ancient cultures and the Bible.

L23 Re St 377 History of Slavery in the Middle East

This course examines slavery and its abolition in the Middle East and North Africa from 600 C.E. to the 20th Century. It addresses slavery as a discourse and a question of political economy. We begin with an overview of slavery in late antiquity to contextualize the evolution of this practice after the rise of Islam in the region. We then examine how it was practiced, imagined, and studied under major empires, such as the Umayyads, the Abbasids, the Fatimids, the Mamluks, the Ottomans, and the Safavids. In addition to examining the Qur'anic discourse and early Islamic practices of slavery, to monitor change over time we address various forms of household, field, and military slavery as well as the remarkable phenomenon of "slave dynasties" following a chronological order. We discuss, through primary sources, theoretical, religious, and moral debates and positions on slavery, including religious scriptures, prophetic traditions, religious law, and a plethora of narratives from a range of genres. We highlight a distinct theme each week to focus on until we conclude our discussion with the abolition of slavery in the 19th and 20th centuries. Topics of discussion include various forms of male and female slavery, Qur'anic and prophetic discourse on slavery, legal and moral views on slavery, slavery as represented in religious literature, political, military, and economic structures of slavery, issues of race and gender as well as slave writings to reflect on the experiences of slavery from within. The goal is to enable students to understand the histories of slavery in the Middle East and eventually compare it to that of other regions and cultures, such as European and Atlantic slavery. No second language required.

L23 Re St 3831 Magicians, Healers and Holy Men

Magic is perhaps not one of the first words one associates with Greco-Roman antiquity. Yet for most individuals living in the ancient Mediterranean, including philosophers, businessmen, and politicians, magic was a part of everyday life. Casting spells, fashioning voodoo dolls, wearing amulets, ingesting potions, and reading the stars are just some of the activities performed by individuals at every level of society. This course examines Greco-Roman, early Christian, and Judaic "magical" practices. Students read spell-books which teach how to read the stars, make people fall in love, bring harm to enemies, lock up success in business, and win fame and the respect of peers. Students also look at what is said, both in antiquity and in contemporary scholarship, about magic and the people who practiced it, which helps illuminate the fascinating relationship between magic, medicine, and religion.

L23 Re St 3900 Mormon History in Global Context

The focus of this seminar is Mormonism, meaning, primarily, the Church of Jesus Christ of Latter-day Saints, which is the largest Mormon body. Mormons in the United States have gone from being one of the most intensely persecuted religious groups in the country's history to the fourth largest religious body in the U.S., with a reputation for patriotism and conservative family values. In addition to introducing who the Mormons are, their beliefs and religious practices, this seminar will explore issues raised by Mormonism's move toward the religious mainstream alongside its continuing distinctiveness. These issues include: What is the religious "mainstream" in the U.S.? How did conflicts over Mormonism during the 19th century, especially the conflict over polygamy, help define the limits of religious tolerance in this country? How have LDS teachings about gender and race, or controversies about whether or not Mormons are Christian, positioned and repositioned Mormons within U.S. society?

L23 Re St 3921 Secular and Religious: A Global History

Recent years have seen a dramatic rethinking of the past in nearly every corner of the world as scholars revisit fundamental questions about the importance of religion for individuals, societies and politics. Is religion as a personal orientation in decline? Is Europe becoming more secular? Is secularism a European invention? Many scholars now argue that "religion"

is a European term that doesn't apply in Asian societies. This course brings together cutting-edge historical scholarship on Europe and Asia in pursuit of a truly global understanding. Countries covered will vary, but may include Britain, France, Turkey, China, Japan, India and Pakistan.

L23 Re St 3977 The Making of the Modern Catholic Church

This course examines the work of three church councils that put their stamp on the Catholic Church at key moments in its history, making it what it is today. The first section is dedicated to the Fourth Lateran Council (1215), which defined the high medieval church as an all-encompassing papal monarchy with broad powers over the lives of all Europeans, Christian and non-Christian alike. In the second section we turn our attention to the Council of Trent (1545-1563), which responded to the threat posed by the Protestant Reformation by reforming the Catholic Church, tightening ecclesiastical discipline, improving clerical education, and defining and defending Catholic doctrine. We conclude with a consideration of the largest church council ever, Vatican II (1962-1965), which reformed the liturgy and redefined the church to meet the challenges of the modern, multicultural, postcolonial world.

L23 Re St 405 Diaspora in Jewish and Islamic Experience

Tensions between center and periphery; migration and rest; power and powerlessness; exile, home, and return are easily found in the historical record of both Jews and Muslims. For Muslims, it can be said that it was the very success of Islam as a world culture, and the establishment of Muslim societies in all corners of the globe, that lay at the root of this unease. But the disruptions of the post-colonial era, the emergence of minority Muslim communities in Europe and North America, and the recent, tragic flow of refugees following the Arab Spring have created a heightened sense of displacement and yearning for many. Of course, the very term "diaspora"-from ancient Greek, meaning dispersion or scattering-has most often been used to describe the Jewish condition in the world. The themes of exile and return, catastrophe and redemption, are already woven into the Hebrew Bible and continued to be central motifs in Rabbinic Judaism in late antiquity and the middle ages. This, despite the fact that more Jews lived outside the borders of Judea than within the country many years before the destruction of Jewish sovereignty at the hands of the Romans. In the twentieth century, European imperialism, nationalisms of various types, revolution, and war-including the Israeli-Palestinian conflict-have done much to underscore the continuing dilemmas of Diaspora and home in both Jewish and Islamic identity. The goal of this course is to offer a comparative, historical perspective on the themes of migration and displacement, center and periphery, home and residence, exile and return, and to give students the opportunity to examine in depth some aspect of the experience of "Diaspora". Note: This course fulfills the capstone requirement for Jewish, Islamic and Middle Eastern Studies. The course also counts as an Advanced Seminar for History. (Students wishing to receive History Advanced Seminar credit should also enroll in L22 491R section 19 for 1 unit.) The course is open to advanced undergraduate and graduate students.

L23 Re St 4060 Convivencia or Reconquista? Muslims, Jews and Christians in Medieval Iberia

Jewish, Islamic, and Middle Eastern Studies senior seminar.

This seminar will provide an opportunity to explore in some depth various facets of the convivencia ("dwelling together"; coexistence) of Muslims, Jews, and Christians in medieval Iberia. While we will pick up the timeline with the emergence of an Ibero-Islamic society in the eighth century CE, the seminar's historical horizon stretches up to the turn of the 15th to the 16th

century, when Spanish Jews and Muslims were equally faced with the choice between exile and conversion to Christianity. Until about the mid-11th century, Muslims dominated most of the Iberian Peninsula. From roughly the mid-11th through 15th centuries, Christians ruled much and eventually all of Spain and Portugal. Through a process termed, from a Christian perspective, as reconquista ('reconquest'), Catholic kingdoms acquired large Muslim enclaves. As borders moved, Jewish communities found themselves under varying Muslim or Christian dominion, or migrated from one realm to the other. Interactions between the three ethno-religious communities occurred throughout, some characterized by mutual respect and shared creativity and others by rivalry and strife. The course focuses on these religious and cultural contacts, placing them in various historical and geographic contexts. It will raise questions concerning the ambiguities of religious change and concerning the interplay of persecution and toleration. Methodologically, the seminar emphasizes the study of primary sources, including documentary, historiographical, literary and poetical texts. In the course of their study, attention will be paid to peculiarities of genre, and difficulties involved in formulating historical assessments. In this sense, we will also aim at developing critical reading skills in relation to secondary literature. Seniors in Jewish, Islamic, and Middle Eastern Studies will be given preference in admission. Advanced students in other fields are asked to contact the instructor prior to enrollment.

L23 Re St 407 Solidarity and Silence: Religious Strategies in the Political Sphere

Although political action is often considered a problem of making oneself heard, religious practices of silence, self-effacement and withdrawal from certain worldly struggles have guided many significant political and social movements, particularly forms of nonviolent resistance. This course considers the role of religious thought and practice in such movements in the 20th century. The history of these movements presents an apparent paradox: How can political action emerge from the supposedly "private" realm of religion in the modern era, particularly its most individualistic formations in contemplative and mystical practices? Does the historical role of these practices in the political sphere complicate their portrayal in some scholarship as private, individual and depoliticizing? With these questions animating our investigations, we will consider the work of authors and activists including Leo Tolstoy, Mahatma Gandhi, Dietrich Bonhoeffer, Martin Luther King Jr., Simone Weil, and William Barber, as well as the history of movements associated with their work. Toward the end of the semester, we will turn to contemporary movements against economic inequality, intimate violence, racially motivated violence, and discrimination toward transgender persons to discuss the use of religious strategies or religiously-derived strategies in current political and social activism. L23 Re St 408 Nuns

Nuns — women vowed to a shared life of poverty, chastity and obedience in a cloistered community — were central figures in medieval and early modern religion and society. This course explores life in the convent, with the distinctive culture that developed among communities of women, and the complex relations between the world of the cloister and the world outside

the cloister. We look at how female celibacy served social and political, as well as religious, interests. We read works by nuns: both willing and unwilling; and works about nuns: nuns behaving well, and nuns behaving scandalously badly; nuns embracing their heavenly spouse, and nuns putting on plays; nuns possessed by the devil, and nuns managing their possessions; nuns as enraptured visionaries, and nuns grappling with the mundane realities of life in a cloistered community. L23 Re St 4118 The Good Cause: Psychological

Anthropology of Moral Crusades

Why do people join moral crusades? These are social movements based on powerful moral institutions, ranging from the abolitionist and suffragette movements to witch hunts, insurgency and ethnic riots. Such movements are extremely diverse, yet their unfolding and the dynamics of recruitment show remarkably common properties. We will examine a series of empirical cases, including recent events, and assess the relevance of models based on individual psychological dynamics, intuitive moral capacities, and human motivation for participation in collective action.

L23 Re St 4122 Islamic Theology

This course explores major themes of early Islamic theology as developed by the Mutazilite, Ash'arite, and Maturidi schools. Some attention is paid to defunct theological systems, the traces of which have remained in the heresiographical literature. Most readings are in primary sources in English translation, though the students are also introduced to some secondary literature on various themes. Some comparative theology with reference to the Judeo-Christian tradition is a regular feature of class discussion. Topics include (but are not limited to): debates over the createdness of the Qur'an; predestination and foreknowledge; God's attributes; the nature of language; the nature of the human soul; and creation and afterlife.

**L23 Re St 4122 American Religion, Politics & Culture:
Commentary from Alexis de Tocqueville to Contemporary
Pundits**

This research-oriented seminar involves in-depth historiographical investigation of leading scholarship at the busy intersections of American religion, politics and culture. The second semester focuses on classic and contemporary commentaries on the American religious and political scene from Alexis de Tocqueville through today's leading pundits. Some sessions will include a visiting scholar engaged in cutting-edge research — a feature that will allow seminar members to work with important scholars from beyond the university. Possible topics include: church-state relations, religion and foreign policy, religion and civil rights, religion and the science wars, the rise of the Religious Right, and the role of religion in national elections. The seminar is taught under the auspices of the John C. Danforth Center on Religion and Politics and is offered in two complementary parts (though enrollment in either one of the two is certainly possible). Its ambition is to build up a community of inquirers engaged in the core questions that animate the Danforth Center. Prerequisites: advanced undergraduate or graduate standing in AMCS, History, or Religious Studies or permission of instructor.

L23 Re St 413 Topics in Islam

Spring 2019 Topic: History of Political Thought-----This course aims to study political thought and practice in Islamic history (ca.8-13th centuries) through a close reading of a selection of primary sources in translation (and in their original language if language proficiency is satisfactory). Particular attention will be given to historical contexts in which thoughts are espoused and texts written. We plan to examine the development of political concepts and themes as articulated in diverse literary genres (legal, theological, political) from the 8th through the 13th century. We hope to engage various theoretical models to analyze the relationship between politics and religion and tease out the role of power in determining socio-political relations, distinctions, and structures. We hope to have a better grasp on the historicity of ideas presented in timeless categories in political discourse. Prereqs: Advanced knowledge of Arabic preferred but not required.

L23 Re St 418 Sexuality and Gender in East Asian Religions

In this course we will explore the role of women in the religious traditions of China, Japan and Korea, with a focus on Buddhism, Daoism, Shamanism, Shinto and the so-called "New Religions." We will begin by considering the images of women (whether mythical or historical) in traditional religious scriptures and historical or literary texts. We will then focus on what we know of the actual experience and practice of various types of religious women — nuns and abbesses, shamans and mediums, hermits and recluses, and ordinary laywomen — both historically and in more recent times. Class materials will include literary and religious texts, historical and ethnological studies, biographies

and memoirs, and occasional videos and films. Prerequisites: This class will be conducted as a seminar, with minimal lectures, substantial reading and writing, and lots of class discussion. For this reason, students who are not either upper-level undergraduates or graduate students, or who have little or no background in East Asian religion or culture, will need to obtain the instructor's permission before enrolling.

Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch: HUM Art: HUM EN: H

L23 Re St 419 Of Zombies, Ghosts, and Ancestors:

Interactions of the Living and the Dead in Chinese Religions
This course introduces a basic aspect of the multifaceted history of Chinese religions, culture and civilization by centering on the practice of taking care of the dead. In particular, we will observe how various religious texts, short stories, and plays from China's earliest times until the 16th century depicted the interactions of the living and the dead. Despite the distinct genres, time periods and topics, one important aspect will regularly appear: Apparently people perceived the boundaries between the living and the dead to be quite porous in premodern China. In other words, the dead seemed to have played as much of a role in society and everyday life as living family members, friends and government officials.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

L23 Re St 4213 Sufism and Islamic Brotherhoods in Africa

Muslim societies are prevalent in Africa — from the Horn, the North, the East to the West, with smaller conclave in Central and South Africa. Islam has played an influential role in these diverse societies, particularly through its Sufi form. Even though Sufism originated in the Arabian Peninsula, it has fit well with African beliefs and cultures. This course aims to explore Sufi beliefs, values and practices in Africa. It reconsiders the academic constructions of "African Islam" by exploring education, intellectual life, economics, gender roles, social inequalities and politics. The goal is to show that Africa is a dynamic part of the Muslim world and not a peripheral one, as it is most often portrayed by the international media or historically, through travelers and colonial accounts. African Muslim brotherhoods have served as political mediators between countries and people (i.e., the role of the Tijaniyya in the diplomatic rivalry between Morocco and Algeria, or its role in reconciliation of clanic rivalries in Sudan). In addition, the course pays attention to hierarchy in particular tariqa. Finally, the course examines how African Sufi orders have shaped their teachings to fit transnational demands over the 20th and 21st century. We explore these issues through readings, current media, lectures and special guest speakers.

**L23 Re St 4225 European Utopian Settlements in the
American Midwest (1814-1864): Diversity and Antislavery**

During the first part of the 19th century a number of utopian visionaries from Europe (Germany, France and England) tried to establish communities in the American Midwest. These colonies were based either on religious or philosophical/social ideals which could be traced back to interpretations of the Old and the New Testament or to Enlightenment principles of freedom and equality that had been propagated during the revolutions in Europe of 1789, 1830 and 1848 which in turn had been influenced by the American war of independence. These groups

showed strong antislavery convictions. The Midwest was chosen since the areas in the vicinity of the confluence of the Mississippi and the Missouri were seen as open to new social experiments. Part of the seminar are field trips to the St. Louis-based Missouri History Library as well as to the St. Louis Public Library and one-day excursions to New Harmony in Indiana, Nauvoo in Illinois, and to small towns in Warren County, Missouri.

L23 Re St 4250 Law, Religion, and Politics

What is the role of religious argument in politics and law? What kinds of arguments are advanced, and how do they differ from one another? Are some of these arguments more acceptable than others in a liberal democracy? This course will explore these questions through the work of legal scholars, theologians and political theorists. Our topics include the nature of violence and coercion in the law, constraints on public reason, the relationship between religion and government, and the nature of religious practice and tradition.

Same as L57 RelPol 425

Credit 3 units. A&S IQ: HUM EN: H

L23 Re St 4300 Pilgrims and Seekers: American Spirituality from Transcendentalism to the Present

This seminar focuses on the formation of "spirituality" in American culture, from the Transcendentalist world of Ralph Waldo Emerson on through more recent expressions of the "spiritual-but-not-religious" sensibility. How did "spirituality" come to be seen as something positively distinct from "organized religion"? What are the main contours of spiritual seeking in American culture, especially among those who claim no specific religious affiliation? The course also explores the social, political, and cultural consequences of this turn to the spiritual over the religious: for example, the consecration of liberal individualism, the relationship of religious exploration to both environmentalism and consumerism, the politics of cultural appropriation, the negotiation of religious pluralism, and the pursuit of the spiritual in art.

Same as L57 RelPol 430

Credit 3 units. A&S IQ: HUM EN: H

L23 Re St 432 Early Christianity and Classical Culture

This course explores the development of Early Christianity from the Apostolic fathers (late first century CE) to Augustine in the fifth century. We will be focused on contextualizing these early Christian communities within the classical Greek and Roman worlds through which they spread, examining their engagement with Greco-Roman models of rhetoric, philosophy and literature. Prerequisites: L23 307F Introduction to the New Testament or previous work in Classical Studies recommended but not required.

Credit 3 units. A&S IQ: HUM EN: H

L23 Re St 4357 The Holocaust in the Sephardic World

The course provides students with a comprehensive understanding of the Holocaust, of its impact on the Sephardic world, of present-day debates on the "globalization" of the Holocaust, and of the ways in which these debates influence contemporary conflicts between Jews, Muslims and Christians in Southern Europe and North Africa. We will turn to the history of these conflicts, and study the Sephardic diaspora by focusing on the consequences that the 1492 expulsion had within the Iberian Peninsula, in Europe, and in the Mediterranean world.

We will study Sephardic communities in Europe and North Africa and their interactions with Christians and Muslims before World War II. Once we have examined the history of the Holocaust and its impact on the Sephardic world in a more general sense, our readings will focus on the different effects of the Holocaust's "long reach" into Southeastern Europe, the Balkans, and North Africa, paying close attention to interactions among Jews, local communities, and the Nazi invaders. Finally, we will address the memory of the Sephardic experience of the Holocaust, and the role of Holocaust commemoration in different parts of the world. We will approach these topics through historiographies, memoirs, novels, maps, poetry and film.

L23 Re St 4366 Europe's New Diversities

Since the late 1980s, three major upheavals have transformed European senses of identity. The demise of the Soviet Union has forced citizens of new "post-socialist" nations to forge new senses of belonging and new strategies of survival. The rise of a new public presence of Islam and the growth of children of Muslim immigrants to adulthood have challenged notions that Europe is a secular or post-Christian space. Finally, the heightened authority of European institutions has challenged the nation-state from above, and the granting of new forms of subnational autonomy to regions and peoples has challenged it from below. The new Europe is increasingly constituted by way of regional identifications, transnational movement(s), and umbrella European legal and political organizations; these new realities occasion new rhetorics of secularism, nationalism, and ethnic loyalties. We examine these forms of diversity, movement, and debate by way of new works in anthropology, sociology and political science.

L23 Re St 4380 Islam, Transnationalism, and the African Diaspora

This course is designed for students who are interested in religion among African immigrants and African diaspora communities living mostly, but not exclusively, in Europe and North America, especially during waves of migration to the Americas. We begin in the days of the transatlantic slave trade, where we examine how interactions, bricolage, and influences of Christianity, Judaism, African indigenous religions, and Islam have impacted the African diaspora living in the Americas. We equally examine how Islam served as a means of resistance to slavery and provided a spiritual connection with the motherland.

L23 Re St 4400 Religion, Politics, and the University

This course explores in depth current issues related to pluralism, difference, and belonging in matters pertaining to religion and other important issues, with a particular focus on how these play out in the university context. The instructors, John Inazu and Eboo Patel, are two of the leading national commentators on these issues. Prerequisite: Students enrolling in this class must submit a brief statement of interest (<http://law.wustl.edu/COURSES/INAZU/seminar1/summaries/>) to Professor John Inazu.

L23 Re St 4401 Topics in Rabbinic Texts

The course aims to introduce students to independent reading of selected rabbinic texts in the original language. We will focus on a number of topics representing the range of rabbinic discussion, including legal, narrative, and ethical issues. At the same time, we will study the necessary linguistic tools for understanding rabbinic texts. Prerequisites: HBRW 385 or HBRW 401 or instructor's permission.

Credit 3 units. A&S IQ: HUM, LCD EN: H

L23 Re St 444 The Mystical Tradition in Judaism

What is Jewish "mysticism"? What is its relationship to the category of "religion"? Is Jewish mysticism just one form of a general phenomenon common to a variety of religious traditions or is it a specific interpretation of biblical, rabbinic, and other Jewish traditions? Taking the above questions as a starting point, this course aims at a systematic and historically contextualized analysis of a broad range of Jewish texts that are commonly classified as "mystical." (All primary texts are read in translation.) At the same time, we explore such overarching themes as: the interplay of esoteric exegesis of the Bible and visionary experiences; the place of traditional Jewish law (halakhah) within mystical thought and practice; the role of gender, sexuality, and the body in Jewish mystical speculation and prayer; the relationship between mysticism and messianism; Ashkenazic and Sephardic traditions and their mutual impact on Jewish mysticism; the "absence of women" from Jewish mystical movements; esoteric traditions of an elite vs. mysticism as a communal endeavor; and the tension between innovation and (the claim to) tradition in the history of Jewish mysticism.

L23 Re St 4491 American Unbelief from the Enlightenment to the New Atheism

This seminar examines American secularism, humanism, and atheism from the Enlightenment forward to the present. Topics emphasized include: the relationship between believers and nonbelievers, the civil liberties of atheists, religion in the public schools, social radicalism and women's rights, and the more recent growth of religious disaffiliation and public atheism. The course considers not only the intellectual dimensions of freethinking unbelief but also the broader politics of secularism in a nation routinely imagined as "under God."

L23 Re St 4711 Topics in Religious Studies: Gender and Religion in China

In this course, we explore the images, roles and experience of women in Chinese religions: Confucianism, Daoism, Buddhism, and so-called "popular" religion. Topics discussed include: gender concepts, norms and roles in each religious tradition; notions of femininity and attitudes toward the female body; biographies of women in Confucian, Daoist, and Buddhist literature; female goddesses and deities; and the place of the Buddhist and Daoist nun and laywoman in Chinese

society. All readings are in English or in English translation. Prerequisite: senior/graduate standing. Students with no previous background in Chinese religion, literature or culture need to obtain instructor's permission before enrolling. Credit 3 units. A&S IQ: HUM, LCD

L23 Re St 479 Senior Seminar in Religious Studies

The topic for this seminar differs every year. Previous topics include Religion and Violence; Governing Religion; Saints and Society; and Religion and the Secular: Struggles over Modernity. The seminar is offered every spring semester and is required of all Religious Studies majors, with the exception of those writing an honors thesis. The class is also open, with the permission of the instructor, to other advanced undergraduates with previous coursework in Religious Studies.

Credit 3 units. A&S IQ: HUM, SD Arch: HUM Art: HUM BU: ETH EN: H

L23 Re St 4790 Advanced Seminar: Empire and Messianism in the Middle East

Senior Seminar: This course looks at imperial politics in its relations to monotheistic messianic movements and ideologies in the Islamic Mediterranean from the late antiquity to the 16th century. Messianic beliefs offered political hope, rallied opposition against the existing rule, defined and ordered lived reality for imperial subjects, presented a political leitmotiv for rulers, and advocated a just sociopolitical order to be realized in the immediate or indefinite future. Thus, this course attempts to see how politics became messianic by its very ability to promise a better future. Despite the chronological scope of the course, we examine only specific ideas, practices and movements as case studies to study in depth various facets of messianic movements and thought in their geographic and historical context. We use primary sources, which are the main methodological focus of the course, and secondary literature. We aim to develop skills in identifying, reading, analyzing and dealing with primary sources in their variety and critically engaging modern scholarship on the political role of Messianism. Students write a term paper and several reports on preassigned readings, and make regular class presentations. Admission preference is given to graduating seniors in JIMES, but the course is open to all advanced students provided that they consult the instructor prior to enrolling. Knowledge of a relevant primary source language is highly desired but not required.

L23 Re St 495 Religion and the State: Global Mission, Global Empire

This course explores the complex intersections among U.S. political power on a global stage, and religious institutions and identities. Readings and discussions are organized around two very broad questions. First: How has this nation's history been shaped by religious "others" both inside and outside its borders? Second: How have perceptions of those others in turn affected U.S. responses to circumstances of global consequence — including, for example, foreign policy and diplomacy, missionary activity, and economic practices?

L23 Re St 498 Independent Work for Senior Honors I

Investigation of a topic, chosen in conjunction with a faculty adviser, on which the student prepares a paper and is examined. Students enroll in L23 Re St 498 in the fall semester and L23 Re St 499 in the spring semester. Prerequisite: admission to the Honors Program.

Credit 3 units.

L23 Re St 499 Independent Work for Senior Honors II

Investigation of a topic, chosen in conjunction with a faculty adviser, on which the student prepares a paper and is examined. Students enroll in L23 Re St 498 in the fall semester and L23 Re St 499 in the spring semester. Prerequisite: admission to the Honors Program.

Credit 3 units.

L23 Re St 4993 Advanced Seminar in History: Women and Religion in Medieval Europe

This course explores the religious experience of women in medieval Europe and attempts a gendered analysis of the Christian Middle Ages. In it, we examine the religious experience of women in a variety of settings — from household to convent. In particular, we try to understand how and why women came to assume public roles of unprecedented prominence in European religious culture between the 12th century and the 16th, even though the institutional church barred them from the priesthood and religious precepts remained a principal source of the ideology of female inferiority.

Same as L22 History 4993

Credit 3 units. A&S IQ: HUM, LCD EN: H

L23 Re St 49CA Advanced Seminar in History: Religion and the Secular: Critical Perspectives from South Asia

A generation ago, scholars and observers around the world felt assured that modernization would bring the quiet retreat of religion from public life. But the theory of secularization now stands debunked by world events, and a host of questions has been reopened. This course provides students with a forum to think through these issues as they prepare research papers on topics of their own choosing.

Same as L22 History 49CA

L23 Re St 49JK Advance Seminar in History: Blood and Sacred Bodies: Ritual Murder and Host Desecration Accusations

This seminar follows the history of the ritual murder and Host desecration accusations from the origins in 12th- and 13th-century Europe to the 20th century. It pays close attention to the social and political functions of the narratives; their symbolic importance in Christianity's salvific drama; attacks on such beliefs from both within and outside the community of the faithful; the suppression and decline of the ritual murder accusation; the integration of Jews into European societies in the 19th century; and the reappearance of the blood libel in the aftermath of emancipation.

Credit 3 units. A&S IQ: HUM, LCD EN: H

Romance Languages and Literatures

Romance Languages and Literatures offers vibrant programs in French, Italian, Portuguese and Spanish. Our language courses have long been popular with undergraduates, including those interested in international travel and those who anticipate a global dimension to their future careers. All of our classes focus on culture writ large: we study great texts, and we do so with an eye toward gender roles, traditions, communities, individual freedom, social obligations and many other topics of critical importance today. We offer concentrations in French, Italian, Spanish, applied linguistics, and introductory Portuguese.

Our undergraduate programs in French, Italian, and Spanish include a compelling series of language, literature, culture, and civilization courses that introduce students to the global Hispanic, Francophone, and Italophone communities. The curriculum affords students the opportunity to become fluent in a foreign language, enrich their historical and cultural understanding, and acquaint themselves with influential intellectual, literary, and artistic traditions.

Students also benefit from linguistic and cultural immersion opportunities through our many summer, semester, and year-long study abroad programs. These programs offer unique possibilities to combine foreign language training with other interests, including participating in business internships in Paris; pursuing fieldwork in Cameroon; or studying art history in Italy, literature in Madrid, or Andean culture in Ecuador. These experiences lead to a variety of career paths, including international law, international business, medicine, journalism, and graduate studies in political science, international relations, history, anthropology, art history, comparative literature, French, and film studies. To prepare our students to take full advantage of such opportunities, our faculty provides an innovative range of courses that combine the study of literature with contemporaneous developments in philosophy, science, music, art, and theory.

For undergraduates interested in cross-language study, we offer two programs. Students may elect to major in Romance languages and literatures. This major requires advanced course work in French, Italian, and Spanish, with one of the three languages as the focus of primary emphasis. Alternatively, students may minor in applied linguistics, studying the theoretical, empirical, and practical foundations of teaching and learning languages. This minor is available to all majors on campus, but it is particularly suited to language majors.

Majors

Prospective Romance languages majors should consult with the director of undergraduate studies of the chosen language as early as possible.

For the French major, please visit the French (p. 515) page.

For the Italian major, please visit the Italian (p. 666) page.

For the Spanish major, please visit the Spanish (p. 911) page.

The Major in Romance Languages and Literatures

Like our other majors, the Romance languages major requires a writing-intensive course and a capstone experience. Further details are available on the department's website (<http://rll.wustl.edu>).

Total units required: A minimum of 42 units at the 300 and 400 level, distributed among French, Italian, and Spanish

Required courses:

- Language I: Courses through the 400 level, including 307 and 308 for French or Italian (302 and 303 for Spanish), two literature surveys (French 325 and French 326; Ital 323W and Ital 324W; or Span 341, Span 342, or Span 343), and two 400-level courses (in Italian, two literature courses; in French, either two literature courses or one literature course and French 411; in Spanish, either two literature courses or one literature and one linguistics course)
- Language II: Courses through the 400 level, including 307 and 308 for French or Italian (302 and 303 for Spanish), at least two literature surveys (French 325 and French 326; Ital 323W and Ital 324W; or Span 341, Span 342, or Span 343), and one 400-level course (in Italian and French, a literature course; in Spanish, either literature or linguistics)
- Language III: Courses through and including one literature survey (French or Italian 307 and 308, or Spanish 302 and 303) plus, depending on the language, French 325 or French 326; Ital 323W or Ital 324W; or Span 341, Span 342, or Span 343)
- One writing-intensive course in either Spanish or Italian or via French 411 (fall only)
- A capstone experience, either by completing Latin honors or by completing a senior undergraduate seminar during the junior or senior year with a grade of B+ or better. We encourage students to consider doing an honors thesis, perhaps combining French and Spanish. The 6 units of 495 (honors) would be above and beyond the requirements listed above for each language.

Students need to take these classes for a letter grade and earn a B- or better, with a B average overall, per departmental requirements of all majors.

Students need approval from directors of undergraduate studies for Italian, French, and Spanish for this major.

Additional Information

Students who plan to teach or pursue graduate study should consider taking a second foreign language, as well as linguistics courses. In all departmental courses for the major, the student must receive a grade of B- or better. Each student's progress toward achieving the objectives of the major will be assessed on a regular basis and by a variety of means. More information is available in the departmental mission statement.

Spanish Honors in Linguistics: To qualify for Spanish Honors in Linguistics in the major by thesis, a student must complete linguistic research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. The honors thesis in linguistics may include scientific experiments conducted in Spanish. The written thesis will include several drafts, all of which will be written in Spanish.

Study Abroad: Students are encouraged to participate in a study abroad program. Programs are available in France, Italy, Spain, Ecuador, Mexico, and Chile.

Senior Honors: Students who have maintained at least a 3.65 overall cumulative grade-point average through the end of the junior year are encouraged to work toward Latin honors (i.e., cum laude, magna cum laude, or summa cum laude). To qualify for Latin honors in the major by thesis, a student must complete special literary research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. To qualify for Latin honors by course work, the student must complete four literature courses at the 400 level (including two in literature before 1800) and present two critical essays written for those courses to be judged by an honors faculty committee. Recommendations for honors are based on performance, the quality of the thesis or critical essays, and the cumulative GPA.

Russian Language and Literature

Students who want to achieve a high level of proficiency in the Russian language and study Russian literature can pursue a minor in Russian language and literature. The program offers elementary through third-year language courses and a number of courses on 19th- and 20th-century Russian literature (in translation) on a wide variety of topics. Students are strongly encouraged to study abroad.

An independent minor, Russian language and literature (<https://artsci.wustl.edu/russian-language-and-literature-minor>) is administered by International and Area Studies (IAS). Students undertaking this minor are encouraged to consider a major in Eurasian studies (p. 652) (through IAS), comparative literature (p. 378) or history (p. 552), all of which can be pursued with a focus on Russia and the former Soviet Union.

Majors

There is no major in Russian language and literature. Students interested in Russian are encouraged to consider a major in Eurasian studies (p. 652), comparative literature (p. 378) or history (p. 552), all of which can be pursued with a focus on Russia and the former Soviet Union.

Minors

The Minor in Russian Language and Literature

Total units required: 20

Prerequisites:

Russ 101D Elementary Russian and Russ 102D Elementary Russian or the equivalent

Requirements:

Code	Title	Units
Russ 211D	Intermediate Russian	4
Russ 212D	Intermediate Russian	4
Russ 322D	Third-Year Russian	3
Russ 324D	Third-Year Russian	3
One 300- or 400-level course in Russian literature		3
One elective course: either another Russian literature course or a Russian subject course taught in such departments as history or political science		3
Total Units		20

Regulations:

- Students can earn up to 6 credits from a semester or summer study abroad program, with the approval of the Russian language and literature adviser.
- All advanced units must be unique to the Russian language and literature minor (i.e., not counted toward any other major or minor).

- Students must earn at least a B- in language courses in order to continue to the next level. They must also maintain at least a B- average in all courses taken to fulfill the minor requirements. Students who do not meet this requirement may either repeat the course or courses in question or earn at least a B- in an approved equivalent course or courses (either during the summer or in a study abroad program).

Additional Information

Study Abroad: Students are strongly encouraged to participate in a Washington University study abroad program in St. Petersburg, Russia. Semester options include both language and area studies programs. Although the summer program is language-focused only, there are programs available for students at any language level, including beginning. The university's programs in St. Petersburg are conducted under the auspices of the Council for International Educational Exchange (CIEE), the longest running such program in Russia. Financial aid may be available for these programs through both Washington University and CIEE.

Courses

Visit online course listings to view semester offerings for L39 Russ (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L39&crslvl=1:4>).

L39 Russ 101D Elementary Russian

Interactive multimedia course designed to emphasize spoken language; includes the very latest video materials geared toward situations in contemporary post-Soviet Russian life. Also provides thorough understanding of fundamental grammar and develops reading and writing skills. Five class hours per week, plus an additional hour for conversation, review and testing. Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

L39 Russ 102D Elementary Russian

Continuation of 101D (Russian 101D or the equivalent is required). Interactive multimedia course designed to emphasize spoken language; includes the very latest video materials geared toward situations in contemporary Russian life. Also provides thorough understanding of fundamental grammar and develops reading and writing skills. Five class hours per week, plus an additional hour for conversation, review, and testing. Prerequisite: Russian 101D. Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

L39 Russ 211D Intermediate Russian

Designed to solidify students' command of Russian grammar and advance conversational, reading and writing skills. Includes video materials produced in Russia and conveying an up-to-the-minute picture of contemporary Russian life. Credit 4 units. A&S IQ: LCD, LS BU: HUM EN: H

L39 Russ 212D Intermediate Russian

Continuation of 211D, completes comprehensive review of Russian grammar and further advances conversational, reading, writing and listening skills. Revised textbook with new audio and video materials that convey an up-to-the-minute picture of contemporary Russian life.

Credit 4 units. A&S IQ: LCD, LS BU: HUM EN: H

L39 Russ 322D Third-Year Russian

Designed to develop students' abilities in the contemporary spoken language. Conversational practice is combined with a review of grammatical concepts. Students also work with newspapers, read literary texts and write compositions.

Prerequisite: Russ 212D or equivalent.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L39 Russ 324D Third-Year Russian

Designed to develop students' abilities in the contemporary spoken language. Conversational practice is combined with a review of grammatical concepts. Students also work with newspapers, read literary texts and write compositions.

Prerequisite: Russ 322D or equivalent.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L39 Russ 332 Russian Theater, Drama and Performance:

From Swan Lake to Punk Prayer

This course explores performance in Russia from the wandering minstrels of medieval times to protest art of the present day. Genres include tragedy and comedy (Griboedov, Pushkin Gogol), drama (Ostrovsky, Turgenev, Chekhov), experimental theater (Stanislavsky, Evreinov, Meyerhold), ballet (Imperial, Soviet, Ballets Russes), opera (Tchaikovsky, Mussorgsky, Shostakovich), and performance art (Futurists, Pussy Riot, Pavlenko). We also consider performativity in rituals, public events, and everyday life. Our discussions center on the analysis of short and full-length plays, critical theory, specific productions and performers, and the role that performance has played in shaping Russian culture. All readings are in English translation. No prerequisites.

Credit 3 units. A&S IQ: HUM, LCD BU: IS EN: H

L39 Russ 350C The 19th-Century Russian Novel (Writing

Intensive)

The 19th-century "realistic" novel elevated Russian literature to world literary significance. In this course we do close readings of three major Russian novels: Alexander Pushkin's *Eugene Onegin*, Fyodor Dostoevsky's *Crime and Punishment* and Lev Tolstoy's *Anna Karenina*. While we consider a variety of formal and thematic concerns, special emphasis is placed on the social context and on questions of Russian cultural identity. Readings and discussions are supplemented by critical articles and film. This is a writing-intensive course: workshops are required. All readings are in English translation. No prerequisites.

Credit 3 units. A&S IQ: HUM, LCD, SD, WI Arch: HUM Art: HUM BU: HUM EN: H

L39 Russ 3559 Socialist and Secular? A Social History of the Soviet Union

This class explores daily life and cultural developments in the Soviet Union, 1917 to 1999. Focusing on the everyday experience of Soviet citizens during these years, students learn about the effects of large-scale social and political transformation

on the private lives of people. To explore daily life in the Soviet Union, this class uses a variety of sources and media, including scholarly analysis, contemporaneous portrayals, literary representations and films. Students receive a foundation in Soviet political, social and cultural history with deeper insights into select aspects of life in Soviet society.

Same as L22 History 3559

Credit 3 units. A&S IQ: HUM, LCD, SD BU: HUM, IS EN: H

L39 Russ 364 Anarchism: History, Theory, and Praxis

This course analyzes the origins, historical trajectories and influence of anarchism from its classical period (1860s-1930s) until the present. It examines the major personalities, complex ideas, vexing controversies and diverse movements associated with anarcho-collectivism, anarcho-communism, individualist anarchism, anarcho-syndicalism, anarchist feminism, green anarchism, lifestyle anarchism and poststructuralist anarchism. In doing so, it explores traditional anarchist concerns with state power, authority, social inequality, capitalism, nationalism, imperialism and militarism. It also analyzes anarchism's conception of individual and collective liberation, mutual aid, workers' organization, internationalism, direct democracy, education, women's emancipation, sexual freedom and social ecology. Special attention is given to past and contemporary globalizing processes and their relation to the dissemination and reception of anarchism in the global South.

L39 Russ 372 Dostoevsky's Novels

In this discussion-based course we focus on two of Dostoevsky's major novels: *Demons* (also translated as *The Possessed and Devils*) and *The Brothers Karamazov*. Our close readings of the novels are enriched by literary theory and primary documents providing socio-historical context. All readings are in English translation. No prerequisites.

L39 Russ 3866 Interrogating "Crime and Punishment"

Whether read as psychological thriller, spiritual journey, or social polemic, Dostoevsky's 1866 novel *Crime and Punishment* has inspired diverse artistic responses around the world. From the 19th century to the present day, writers and filmmakers have revisited (and often subverted) questions that Dostoevsky's novel poses: What internal and external forces cause someone to "step over" into crime? What are the implications of a confession? To what extent can the legal system provide a just punishment? Are forgiveness and redemption possible, or even relevant? What role does grace — or luck — play in the entire process? This course begins with our close reading of Dostoevsky's novel and then moves on to short stories, novels, literary essays and movies that engage in dialogue with the Russian predecessor. A central concern of our intertextual approach is to explore the interplay between specific socio-historical contexts and universal questions. All readings are in English. No prerequisites.

L39 Russ 396 Comintern: The Communist International's Global Impact

The Communist International was the third of the global left-wing organizations aimed to develop communist organizations around the globe to aid the development of a proletarian revolution. Begun in 1919, hosted in Moscow, and closely tied to the developing USSR, the Comintern hosted seven World Congresses and 13 Enlarged Plenums before Stalin dissolved it in 1943. This course examines the history of the nearly 25 years of the Comintern, paying particular attention to engagement with countries outside of the Soviet sphere. Class texts provide a general historical overview and interrogate central ideological arguments/debates across several countries and political systems. Course materials look at the Comintern's engagement with Fascism and the Spanish Civil War, ideas of Nationalism and Internationalism, and Self-Determination in the Colonial World. Class units are designed to highlight regional similarities and differences, taking a global approach to the study of Communism. Students gain an understanding of the global political complexities developing after World War I and leading to World War II. Reflecting on the critique of imperialist capitalism offered by the Comintern, students explore liberation struggles and ideological dictatorships around the globe.

Credit 3 units.

L39 Russ 4869 Reading War and Peace

What is it like to enter into a fictional world for a semester? In this course we read Leo Tolstoy's *War and Peace* in its entirety. Set during the Napoleonic wars (1805-1812), *War and Peace* takes the reader on a panoramic journey from the battlefield to the hay field, from the war room to the ballroom. It is a vivid portrayal of 19th-century Russian society as well as a penetrating examination of the causes and consequences of violence and the nature of love and family dynamics. In our discussions, we explore philosophies of history, issues of social injustice and gender inequality, the psychology of human suffering and joy, questions of literary form and genre, and the very experience of reading a long work of fiction. We begin with a selection of Tolstoy's early works that laid the foundation for *War and Peace* and conclude with a few of Tolstoy's late works that had an enormous influence on, among others, Mahatma Gandhi. Primary texts are supplemented with literary theory and film. All readings are in English.

Sociology

The Department of Sociology strives to understand the origins and reproduction of social inequality, especially as it relates to issues of pressing public concern. Our particular areas of focus include race/ethnicity, gender, the sociology of work and the workplace, immigration, social movements and economic inequality.

Sociological analysis begins from theoretical perspectives that explain how the structures that organize and govern social systems emerge and change. Our curriculum and research emphasize an understanding of social processes that is well grounded in empirical data related to how societies actually function. We also seek to engage with social policies and social institutions to better understand the world in which we live and to help guide social change.

Re-established in 2015 after a hiatus of more than two decades, the department offers undergraduate major and minor programs with wide-ranging course offerings every semester. The curriculum provides students with research tools to examine critical social issues and to apply their understanding of sociology to activities outside of the university.

Majors

The Major in Sociology

The major in sociology provides students with a rigorous understanding of the ways in which social relations and settings shape individual and group experiences and outcomes, with an emphasis on how various forms of inequality are created and propagated through time. Reflecting the diversity of social settings that motivate sociological inquiry, students will enroll in multiple introductory-level courses. We intend that these first courses will help students develop a sociological lens through which they can better understand the baseline determinants of inequality, social order and change. Because the discipline draws on diverse theoretical and methodological tools to engage with these core issues, required course work ensures that students develop expertise in classical and contemporary theoretical concepts as well as both quantitative and qualitative research methods. Upper-level seminars provide majors and minors with an opportunity to apply these substantive, theoretical and methodological perspectives to a focused and deep study of specific sociological topics. The major additionally features a capstone experience, which enables students to deploy sociological tools to undertake original work connected with a research project, internship or honors thesis.

The sections that follow provide a detailed overview of the sociology major, with an emphasis on providing answers to many of the questions likely to arise at each stage as well as serving as a guide to related opportunities available to our majors and minors.

Requirements:

The major requires the successful completion of 10 courses, distributed as specified below. Courses that satisfy major requirements must be completed with a letter grade of C- or better. (Courses taken on a pass/fail basis do not satisfy requirements.)

- a. **Introductory requirement** (6 credits total): Any two 200-level sociology courses (Students may substitute an upper-level sociology course for one of their two introductory courses with the written approval of their major adviser.)
- b. **Theory requirement** (3 credits): SOC 3001 Social Theory
- c. **Methods requirement** (6 credits): SOC 3030 Introduction to Research Methods and SOC 3050 Statistics for Sociology Because SOC 3050 draws on specific sociological applications of statistical analyses, we strongly encourage students to enroll in our department's Statistics for Sociology course. However, with the written approval of their major adviser, students may substitute Math 2200, Math 3200, or

a disciplinary statistics course from another social science for SOC 3050. Majors who receive approval to fulfill this requirement with a course from another department or university are required to take an additional upper-level sociology course in lieu of SOC 3050.

- d. **Upper-level sociology electives** (15 credits): Any five 300- or 400-level seminar courses. An independent learning course (i.e., independent research or an internship) can fulfill one of these five elective course requirements.
- e. **Capstone:** Majors will choose any one of the following options:
- Capstone paper tied to an upper-level course* (1 credit): Students electing this option may align the research paper with any upper-level sociology course taken during or prior to the semester in which they undertake this accompanying capstone paper. Capstone research papers typically are 10 to 15 pages in length and represent some application of course content to a related topic developed by the student in consultation with the instructor. Students interested in this option should register for the section of SOC 4900 Capstone Paper for Sociology Majors assigned to the relevant instructor, who will then do the following: 1) approve the capstone paper topic at the outset of the semester; 2) be available for consultation at all stages of the project; 3) assign a final grade for this 1-credit course; and 4) upon completion of the paper, certify the final product as fulfilling the capstone requirement. Students should schedule a meeting with the relevant instructor at the start of the semester (i.e., prior to the end of the add/drop period) to obtain the required approval for enrollment in SOC 4900 and to discuss the paper.
 - Internship* (2 credits): Students electing to complete a field internship are able, in consultation with their internship adviser, to identify and select a position with an organization of their choosing. For help identifying options in St. Louis, we recommend that students reference the Gephardt Center's internship opportunities listings (<https://gephardtinstitute.wustl.edu/for-students/>) as well as the Career Center's CAREERlink database (<https://careercenter.wustl.edu/tools/careerlink/Pages/Students.aspx>). Over time, our department website will also provide resources for connecting with local organizations in need of student interns with a background in sociology. Capstone internships are intended to integrate and apply the knowledge gained in the classroom to community and organizational settings. As such, students are required to identify a faculty adviser of their choosing to approve and oversee the experience in consultation with the on-site internship manager. (Note that the internship adviser need not be the same as the student's major adviser.)

To receive credit for the internship, students should first obtain approval for the proposed experience in advance of the internship start date from their preferred internship adviser, who will then provide the required permission to enroll in the adviser's assigned section of SOC 4910 Internship in Sociology. Students should complete and file an Internship Learning Agreement (PDF) (<https://wustl.box.com/s/em9gi5qc8arvoel37jjgfwapak42tyk>) with the department no later than two weeks after the first day of the internship. The university stipulates 45 hours of work for each academic credit earned, so students will need to complete at least 90 internship hours — along with a series of reflective assignments arranged in consultation with their adviser — to fulfill the capstone requirement. Although only 2 credit units are required, students can register for up to 3 credit units, which would require a minimum of 135 internship hours to be completed.

- Honors thesis* (6 credits): Students who choose the thesis capstone option can apply 3 of their thesis credits toward their major elective requirement (part d in the list above). This means that, in addition to their thesis project, they would need to complete four (rather than five) additional 300- or 400-level seminar courses. *To be eligible for Latin honors in Sociology, students must complete an honors thesis.* For more information about honors work in the department, please visit our Undergraduate FAQ & Policies page (<https://sociology.wustl.edu/undergraduate-faq-policies/>).
- InVisible St. Louis* (3 credits): This course collaboration between the Sam Fox School of Design & Visual Arts and the Department of Sociology provides a unique, hands-on opportunity to fulfill the Capstone requirement in a formal classroom experience. As the class collectively works with St. Louis community partners to further their missions through student projects, those who enroll will learn about inequalities of power and place within the city and region. Although first-year and sophomore students may enroll in this course, only juniors and seniors will earn Capstone credit for their work.

Minors

The Minor in Sociology

Requirements:

- Introductory requirement** (3 credits total): One 100- or 200-level sociology course
- Theory requirement** (3 credits): SOC 3001 Social Theory (offered every year)

- c. **Methods requirement** (3 credits): Either SOC 3030 Introduction to Research Methods or SOC 3050 Statistics for Sociology
- d. **Additional upper-level sociology electives** (6 credits): Any two 300- or 400- level courses

Courses taken pass/fail and courses in which a student earns less than a C- do not fulfill minor requirements.

Courses

Visit online course listings to view semester offerings for L40 SOC (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L40&crslvl=1:4>).

L40 SOC 106 Social Problems and Social Issues

Exploration and analysis of contemporary American social problems and social issues using sociological tools. The sociological perspective provides the overarching framework for analyses of social issues, along with the application of sociological theory and research. Topics include aging, alcoholism, drug abuse, crime, violence, poverty, discrimination, health care, family, globalization, and environmental degradation. This course will be valuable to students pursuing graduate work and careers in sociology, medicine and health care, social service, and the health professions. The content is also useful for MCAT, LSAT, and GRE preparations.

Credit 3 units. A&S IQ: SSC, SC Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 144 First-Year Seminar: Monumental Anti-Racism

As sources of national memory and identity, public monuments, place names, historical markers, and other elements of commemorative landscapes are potential sites of cultural violence (e.g., alienation, disrespect, and erasure) contributing to broader conflict and inequality; they are therefore important considerations in movements for equal opportunity and justice. Some contend that memory sites are "the new lunch counters," where our racial politics are worked out. This course examines the racial politics of commemorative objects and practices as well as commemorative intervention as a strategy of anti-racist activism. We begin with an historical survey of various ways that racism has been inscribed on the commemorative landscape, and readings in history, political theory, cultural studies, and other fields will be used to gain insight into these contested commemorative objects, their development, and social significance. We then turn to a critical assessment of efforts to remove and recontextualize commemorative objects and to erect new objects commemorating neglected figures and issues. We consider how these reparative efforts relate to what political theorists call "remedies of recognition" and specifically how they might aid in advancing equal opportunity and justice. Through our study and engagement with contested commemorative landscapes (including local, national, and global cases), students will become familiar with the burgeoning interdisciplinary field of memory studies, diverse forms and sites of commemoration, local and global efforts to advance what has been termed "commemorative justice," and the challenges being faced.

L40 SOC 2010 The Roots of Ferguson: Understanding Racial Inequality in the Contemporary U.S.

Overview of sociological understandings of race, with a particular focus on race relations in the contemporary United States. We begin by investigating how sociologists understand racial distinctions, asking: What comprises a racial group? What constitutes a "group" in the social sense? We then shift our attention to patterns of racial inequality in the U.S., investigating the intersection of economic, political, and racial stratification. After analyzing national trends in racial stratification, we narrow the focus to particular regions and metropolitan areas, including St. Louis, to shed light on pressing public concerns such as the interrelationships between race and the criminal justice system. The course ends by looking beyond U.S. borders to compare the way that race is understood in other countries. Are there common patterns of racial classification shared by many societies? What makes the U.S. system of racial stratification distinctive? No prerequisites.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 2020 Order and Change in Society

Identification and analysis of processes that create social order and forces that generate social change. What kinds of structures make social life coherent so that we all can navigate a wide range of social settings? How do societies sometimes mobilize to alter the status quo, and what kinds of barriers limit those efforts to change social systems? This course engages with such core issues through a sociological lens. Specific topics include: the emergence of social roles and status systems; how social networks matter in communities, schools and other groups; and the performance, reproduction and subversion of privilege and inequality. No prerequisites.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 2030 Social Movements

Social movements are collective efforts to produce political, economic and/or cultural change. This course draws on a range of historical and contemporary case studies to analyze such collective actions by interrogating distinctive aspects of movements and their associated campaigns. Key questions include: When and where do movements occur, who participates and why, how do protest strategies and tactics develop, how do police and other movement targets react to challenges to the status quo, and how can we assess the direct and indirect impacts of contention? Introductory level, no prerequisites.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 2110 Social Inequality in America

Americans face different challenges and opportunities that depend on a variety of characteristics, including race, class, gender and sexual orientation. This class examines these intersecting categories from a sociological perspective — not simply as ways to classify people, but as social constructions that help to explain social inequality. We examine these systems in a variety of institutional contexts, such as popular culture, family life, education, the criminal justice system and the labor force. Introductory level, no prerequisites.

Credit 3 units. A&S IQ: SSC, SC, SD BU: BA EN: S

L40 SOC 2510 Sociological Approaches to American Health

Care

Exploration through the sociological lens of how health, illness, and health care delivery in the United States are influenced by the social structure in which they are embedded. With the backdrop of the ongoing crisis of health care in the United States and the controversy surrounding the Affordable Care Act, we focus on the intersection of diversity factors including such as race, social class, gender, sexuality that predict risks in navigating the health care system. Professionals representing a variety of health-oriented settings and serving the needs of a diverse constituency will share their perspectives. No prerequisites.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 2511 Juvenile Justice in the Black Experience

This course examines the socio-legal past, present, and future of American juvenile justice, with a focus on the black American experience. The course is organized in three parts. Part I surveys the late 19th and early 20th century development of the "parental state" including its institutional centerpiece (the juvenile court), and principle legal subjects ("dependents" and "delinquents"), and how these took shape alongside the contemporaneous rise of American Apartheid. Part II examines several key changes and challenges in contemporary juvenile justice, including the transformation of this institution in the wake of the Civil Rights Movement, and the endurance of racialized juvenile social control in the post-Civil Rights period. Finally, Part III considers possible futures of youth justice in the United States and beyond, and practical strategies for achieving equal protection within and beyond law. For AFAS majors, this course counts as Area Requirement 2.

Same as L90 AFAS 251

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 2520 Inequality By Design: Understanding Racial/Ethnic Health Disparities

This course critically examines health status and health care disparities among racial/ethnic minority groups in the United States. The course will utilize sociological, demographic, epidemiological and psychological concepts to introduce students to racial/ethnic health disparities research. Students will have exposure to the descriptive demography and epidemiology of health indicators across population groups as well as to the theories used to understand and explain racial/ethnic health disparities. In particular, the course will examine the ways in which multiple forms of interpersonal and institutional discrimination, neighborhood and community factors, and inequalities in socioeconomic status influence health behaviors, access to health care services, and health status outcomes across racial/ethnic groups. Concepts such as acculturation, patient preferences, provider congruence and cultural competence will also be explored in this course. Finally, students will be challenged to use the theories and frameworks introduced in this course to develop and present policy approaches to address racial/ethnic disparities in health and health care in the United States.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 2530 Punishment and Inequality

This course examines the institutions and policies that shape punishment in the United States, with a particular focus on mass incarceration. The U.S. incarceration rate has more than quadrupled since the early 1970s. Racial and class disparities in imprisonment rates are stark. In this course, we examine how the United States became the world's leader in incarceration and how racial and class disparities in imprisonment became so large. We next investigate the consequences of incarceration, both in terms of its high rates and intense social concentration. We conclude by assessing recent attempts to reform the criminal justice system.

Credit 3 units. A&S IQ: SSC, SC BU: BA EN: S

L40 SOC 2580 Families and Social Inequality

Families have changed dramatically in recent decades in the United States. Dual-earner families, single parents, cohabiting families, and blended families are now common in the contemporary family landscape. The prevalence of increasingly diverse and complex family configurations varies substantially by social class, race and ethnicity, and gender. Men's and women's work and family lives have also become more similar over time, but gender inequalities in child care remain significant. Drawing on insights from sociology, demography, and economics, this course aims to understand the causes and consequences of social inequalities in family life. We focus primarily on the contemporary U.S. context, but we will also explore historical and cross-national variations in families. The course also considers the role of social policy in affecting inequalities.

Credit 3 units. A&S IQ: SSC, SC BU: BA EN: S

L40 SOC 2710 First-Year Seminar: Beyond the Melting Pot: Life in Immigrant America

This course uses a sociological lens to explore contemporary immigration to the United States. The more than 43 million immigrants living in the United States today come from across the globe. Their reasons for migrating to the United States are complex, as are the laws, policies, and social structures they must navigate before and after their arrival. In the first half of the course, we will get to know Mexican immigrants who split their lives between Brooklyn and their small hometown in Mexico, fourth-generation Chinese Americans who are still asked, "Where are you from?", and West Indian immigrants forced to confront a U.S. racial order where they are defined by their Blackness. In the second half of the course, we will learn about Iranian-American youth navigating life in post 9/11 America and the challenges of becoming a young adult when you learn you lack any legal status. Who are these immigrants? Why and how did they come here? How well are they and their children integrating into American society? Reading will be drawn from sociological research that opens windows into the lives of immigrants in America. Students will also conduct their own hands-on research to better understand life in immigrant America.

Credit 3 units. A&S: FYS A&S IQ: LCD, SSC, SC EN: S

L40 SOC 2910 Alternative Facts: An Introduction to the Social Construction of Reality

Introduction to the concept of social construction — the idea that our "objective" reality is shaped by our social positions and through social interactions. Recent political events and social conflicts highlight deep divisions in American society, raising critical questions about the media and objectivity (e.g., alternative facts and "fake" news), networks and segregation

(e.g., who talks to whom), who gets to decide what is viewed as "truth," and the role of researchers and academia in combating (or contributing to) misinformation. This course explores these questions with a sociological lens. We will use foundational sociological theories to learn how to recognize the existence of multiple realities, and consider the implications of social constructionism for key domains of everyday life, American politics, and the production of knowledge. We will also discuss the ways that cutting-edge technological innovations and academic research can — or cannot — help us distinguish facts from "alternative" facts. Introductory level, no prerequisites. Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 3001 Social Theory

Overview of major theoretical frameworks used by sociologists to understand social behavior and group patterns. Explores classical theories, including those developed by Marx, Weber, and Durkheim along with contemporary perspectives such as exchange and feminist theories. Class discussions and writing assignments emphasize application of theory to understand current social experiences and structures. The course has no specific prerequisites, but students should be prepared for intensive study of challenging ideas and the application of these ideas in new contexts relevant to modern society.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 301B Individual and Community

What social, political, and cultural forces shape the individuality of people and yet make them part of not just one community but many, each of which is greater than the sum of the individuals that comprise it? What role do families and friends fill in this process? Students explore answers to these questions by reading theories and case studies that try to explain the foundations of individuals' sense of self and the interdependence and responsibilities of individuals, families, and communities to one another. Cases students read highlight (1) how family and communal experiences (like school) influence individuals and (2) how virtual (online) and non-virtual communities are structured and sustained as social entities. In addition to readings, the class will rely on guests from the "real world" as well as field trips into virtual and non-virtual communities. AMCS Majors may count this course for Fieldwork credit with permission of instructor; a supplemental assignment might be required.

Same as L98 AMCS 301B

Credit 3 units. A&S IQ: SSC, SD BU: BA, ETH, IS EN: S

L40 SOC 3030 Introduction to Research Methods

Overview of research methods commonly used to investigate sociological phenomena including experiments, surveys, ethnographic field research, and analysis of existing data. The course explores general issues in sociological research, such as research design, conceptualization and measurement, reliability, validity, sampling and ethical conduct. We also review applications of research methods in specific sociological studies and analyze how research results are communicated. This is a core course in the study of sociology. It has no specific prerequisites but some familiarity with sociological analysis is recommended.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 3050 Statistics for Sociology

Introduction to descriptive and inferential statistical techniques used in sociological research. Topics addressed include probability distributions, data presentation and visualization, confidence intervals, hypothesis testing, and linear regression. Applications of statistical analysis drawn from sociological research and other social science data sources, such as polling and economic data. Students will use statistical software to complete assignments. Prerequisite: introductory course in sociology or consent of the instructor.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

L40 SOC 3212 The Social Construction of Race

Examination of race, ethnicity and racism from a sociological perspective to understand race as a socially constructed phenomenon manifested in a wide range of social institutions. The course focuses on how race and racism impact contemporary social problems and public policy issues including immigration, affirmative action, education, media representation and work. Application of sociological analysis to understand current race-related events. This course has no specific prerequisites but completion of an introductory course in sociology is recommended before enrollment.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 3310 The New Inequality

Exploration of recent trends of economic inequality in the United States that have reached levels not seen since before the Great Depression. We examine factors that account for the decades-long increase in economic disparities, paying particular attention to patterns in educational attainment, political developments, and the role of technological change. We will also compare recent movements in economic inequality and macroeconomic performance in the U.S. with other advanced industrialized nations. This course has no specific prerequisites but completion of an introductory course in sociology is recommended before enrollment.

Credit 3 units. A&S IQ: SSC, SC, SD, WI Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 3320 Getting Paid: A Sociological Investigation of Wages and Salaries

A Burger King worker in the United States today performs the same duties and requires the same skills as a Burger King worker in Denmark. However, the Denmark worker earns two-and-a-half times as much money. Why? A full-time construction worker in the United States today earns \$10,000 less per year (adjusted for inflation) than a worker with the same job in 1973. Construction work cannot be shipped overseas, so why the decline? What determines our pay? Are we paid fairly? How do we know? This course seeks to answer these questions. We will draw on a range of comparative, historical, and contemporary case studies to explore changes in the ways in which American workers get paid. Key areas of focus include employer strategies to prevent workers from realizing their market value, the role Wall St. plays in influencing pay, and ongoing efforts to measure and reward individual productivity. The ultimate goal of the course is to upset our taken-for-granted assumptions about pay-setting and to provide students with a richer and more complex understanding of the contemporary world of wage and salary determination.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH EN: S

L40 SOC 3350 Poverty and the New American City

Exploration of structural changes that are transforming the American urban landscape, especially for low-income populations. We begin with a review of classic theories of urban poverty and consider their relevance in the modern context. We then analyze key political, economic, demographic and geographic shifts in how urban poverty is organized and reproduced, including gentrification, immigration, social policy reform and the credit crisis. Special attention will be devoted to exploring the social and political implications of changing urban policy approaches, as well as the "suburbanization" of poverty. We will conclude by discussing how urban poverty interfaces with broader social structures, including law, markets and the state. Prerequisite: an introductory course in sociology or consent of the instructor.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU:
BA EN: S

L40 SOC 3410 Gender in Society

Introduction to the sociological study of gender. The primary focus is U.S. society, but we will also discuss gender in an international context. From the moment of birth, boys and girls are treated differently. Gender structures the experiences of people in all major social institutions, including the family, the workplace and schools. We will explore how gender impacts lives and life chances. The central themes of the course are historical changes in gender beliefs and practices; socialization practices that reproduce gender identities; how race/ethnicity, class and sexuality shape the experience of gender; and the relationship between gender, power and social inequality. Prerequisite: introductory course in sociology or consent of the instructor.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU:
BA EN: S

L40 SOC 351 Topics in Sociology

Improving the health of the U.S. population and reducing disparities in health are national priorities. To reach these goals much research has sought to determine the factors that influence health status beyond health care quality and access. This course explores the broad area of study termed the "social determinants of health," while placing special emphasis on the exploration of health disparities in the United States. We will examine the social conditions that relate to the health of populations with particular attention to how patterns of health vary by social class, race/ethnicity and gender. We will also consider mechanisms that produce and maintain these differences. In addition to sociology, we will draw upon the work of multiple disciplines including public health, demography, anthropology, public policy, economics and medicine to understand what makes our populations sick and what might make them better. Prerequisite: introductory course in sociology or consent of the instructor.

Credit 3 units.

L40 SOC 3510 Sick Society: Social Determinants of Health and Health Disparities in the United States

Improving the health of the U.S. population and reducing disparities in health are national priorities. To reach these goals, much research has sought to determine the factors that influence health status beyond health care quality and access. This course explores the broad area of study termed the "social determinants of health" while placing special emphasis on the exploration of health disparities in the United States. We will examine the

social conditions that relate to the health of populations, paying particular attention to how patterns of health vary by social class, race/ethnicity and gender. We will also consider mechanisms that produce and maintain these differences. In addition to sociology, we will draw upon the work of multiple disciplines, including public health, demography, anthropology, public policy, economics, and medicine to understand what makes our populations sick and what might make them better. The class will be taught through an active learning approach, with class discussions, small group work, presentations, and critical writing assignments central to the learning process. Student participation through reading and discussions is essential for both the success of the class and individual student learning. Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU:
BA EN: S

L40 SOC 352 Topics in Sociology: Growing Up Poor Across America — An Application of Sociological Reasoning to Data

Advanced seminar on poverty in America, with a special focus on exploring relevant data. The American Dream is built around the idea that anyone, regardless of his or her origins, can have a fair start in life. Yet recent research shows that the promise of the American Dream is uneven across the nation. Poor children growing up in San Jose, CA are three times more likely to escape poverty than those in Charlotte, NC. What might be driving these geographic differences in opportunities for low-income youth? We will investigate factors that might drive these differences by working with interesting data. We will explore cutting-edge research on poverty and mobility in America to develop our own research questions. We will also develop the computational and statistical skills to put our ideas into practice by learning to manipulate data and make graphs that communicate our findings effectively. The ultimate goal of this course is to learn to connect sociological reasoning and understanding of poverty and inequality with data analysis. Prerequisite: introductory course in sociology or consent of the instructor; Introduction to Research Methods (SOC 3030) and/or an introductory statistics course (SOC 3050 or equivalent) are encouraged.

Credit 3 units. BU: BA

L40 SOC 3550 Sociology of Work

Sociological understanding of work and, in particular, how work reduces or replicates inequality. Classic and contemporary sociological theories of work; how work in the U.S. has changed over time; and how workers are matched to "good" and "bad" jobs. Threaded through the course is the exploration of barriers to racial, gender, and class inclusion and advancement at work. We will explore how organizational structures, policies and practices can increase or decrease those barriers. Prerequisite: introductory course in sociology or consent of the instructor.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU:
BA EN: S

L40 SOC 3660 Social Conflict

Comparative and historical examination of conflict between social groups, including groups defined by race, ethnicity and class. Readings combine classical and contemporary perspectives on collective conflict with in-depth analyses of historical and contemporary episodes. We discuss various ways in which conflicts can manifest, including the formation and hardening of divisive attitudes, discriminatory lawmaking

and criminal justice practices, riots and collective violence, residential segregation, and sustained social movement activity. Prerequisite: introductory course in sociology or consent of the instructor.
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 3710 Sociology of Immigration

A review of theoretical and empirical research on how and why people migrate across international borders, and the consequences of international migration for immigrants and natives in the United States. While immigration is one of the most controversial issues in the contemporary United States, these contentious debates are not new. Americans once voiced the same concerns about the economic and social impact of Southern and Eastern European immigrants that today are aimed at immigrants from Latin America, Asia, Africa and the Caribbean. In this course we will compare historical (1880-1920) and contemporary (1965-present) waves of immigration to the United States. We will explore why and how people migrate, immigrant integration, the impact of immigration on native-born Americans, and how government policies — at the national, state, and local level — shape immigrant assimilation and what it means to be considered truly "American" in a social as well as a legal sense. Prerequisite: completion of an introductory sociology course or consent of the instructor.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 3910 Economic Realities of the American Dream

Exploration of the realities of economic life in the U.S. and how they correspond to the American Dream. Interdisciplinary perspectives from economics, sociology and other areas of social inquiry. Emphasis on the consistency between empirical data and different concepts of the American Dream. Specific topics to include sources of economic growth and changing living standards, unemployment, impact of globalization on U.S. citizens, economic mobility, poverty and inequality, and social justice. Prerequisites: Econ 1011 and Econ 1021, or consent of the instructors.

Same as L11 Econ 348

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 3920 Philanthropy Lab

This course is designed to give students a theoretical and practical understanding of philanthropy today. First, the course will lay out the sociological and historical roots of philanthropy in the United States, including where philanthropic dollars come from, how they are used, and the inherent tension between capitalism and philanthropy. The role of government in funding nonprofits and new philanthropic tools, such as donor-advised funds, will also be reviewed. The course will also look at philanthropy's role in addressing social issues, including new approaches that go beyond simply giving money, such as the growing interest in and need for advocacy among institutional givers. Attendance on the first day is required.

Credit 3 units. A&S IQ: SSC BU: BA, HUM EN: S

L40 SOC 4110 Applied Sociological Research

Advanced seminar that connects sociological reasoning with data analysis. The instructor chooses current issues in modern sociology and identifies relevant data that students use to explore a variety of research questions. The course develops computational and statistical skills to put ideas into practice by

learning to manipulate and analyze data and present results in ways that communicate research findings effectively. Topics vary with the instructor. In Fall 2018, the course begins with the idea of the American Dream, which suggests that anyone, regardless of their origins, has the opportunity to succeed in life. However, recent research shows that the promise of the American Dream is uneven across the nation. For example, poor children growing up in San Jose, CA, are three times more likely to escape poverty than those in Charlotte, NC. What might be driving these geographic differences in opportunities for low-income youth? We will explore cutting-edge research on poverty and mobility in America to develop our own research questions and then work to answer them with original data analysis. Prerequisite: introductory course in sociology or consent of the instructor; Introduction to Research Methods (SOC 3030) and/or an introductory statistics course (SOC 3050 or equivalent) are encouraged.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L40 SOC 4210 Land of Dollars: Race, Money and the Politics of Equity

This course will explore how racialized meanings and structures shape the circulation and accumulation of money throughout the market economy.

Credit 3 units. A&S IQ: SSC, SC BU: BA

L40 SOC 4289 Neighborhoods, Schools, and Social Inequality

A major purpose of the course is to study the research and policy literature related to neighborhoods, schools and the corresponding opportunity structure in urban America. The course will be informed by theoretical models drawn from economics, political science, sociology, anthropology, education and law. A major focus is to gain greater understanding of the experiences and opportunity structure(s) of urban dwellers, in general, and urban youth, in particular. While major emphasis will be placed on data derived from the interface of urban environments and the corresponding institutions within them, the generational experiences of various ethnic groups will complement the course foci.

Same as L12 Educ 4289

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 4510 Race, Ethnicity, and Migration

This course will explore sociological studies and theoretical and empirical analyses of race, ethnicity and migration, with a focus on children of immigrants and later-generation descendants of migrants in the United States. We will compare the experiences and outcomes of various racial and ethnic "groups," including whites/Europeans, Blacks/African-Americans, Latinos/Hispanics, and Asians, exploring how migration processes and patterns shape racial/ethnic group formations and inequalities. Examples of specific topics related to these issues include assimilation, ethnic and racial identities, multiraciality, language, legality, intergroup relations, and education. The course will be taught in a seminar style, with class discussions and participation by all students central to the learning process.

Credit 3 units. A&S IQ: LCD, SSC, SC Arch: SSC Art: SSC BU: BA, IS EN: S

L40 SOC 4601 Historical Racial Violence: Legacies &

Reckonings

There is growing awareness of the legacies of historical racial violence in the United States and a related increase in reckoning efforts. Area histories of enslavement, lynching, and other racial terror and dispossession relate to inequality, conflict, and violence in the same places today. These 'haunting legacies' include heart disease and other health disparity, homicide rates, white supremacist mobilization, and corporal punishment in schools. Meanwhile, many communities and institutions are moving to acknowledge and address legacies of historical racial violence in various ways. This course combines seminar-style readings and writing on legacies of racial violence with a practicum component, where individual students or groups of students will conceptualize and develop interventions intended to clarify and disrupt legacies of racial violence, facilitating contemporary reckoning. The practicum will explore and support a broad range of interventionist efforts, including public policy measures, original research projects, archival development, commemorative efforts, and a related array of mediums, including visual art, design, film, digital projects, and other creative approaches.

Same as L90 AFAS 4601

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L40 SOC 4610 Seminar in Selected Topics in Learning & Memory: Collective Memory

This course provides an overview and analysis of phenomena of people remembering as part of a group — one's country, one's state, one's university, one's family. Collective memories are critical for one's identity, for knowing who we are and how to interpret the world around us. We will consider narcissistic tendencies of group memories in specific contexts (e.g., the Russian vs. American interpretation of world events; views of Trump supporters vs. Clinton supporters on events in the U.S.). The course will range from humanistic, anthropological, psychological, and sociological perspectives on memory. Prerequisites: Psych 100B and a course on human memory or permission of the instructor.

Same as L33 Psych 461

Credit 3 units.

L40 SOC 4810 Global Structures and Problems

This course examines social problems around the world and their relationship to globalization — that is, the increasing connectedness of social and economic life across borders. We will look at a range of problems — such as environmental degradation, labor exploitation, human rights abuses, ethnic conflict, poverty, and inequality — and their links to both personal experiences and larger social structures. The course is premised on the idea that to understand current global social problems, we have to understand the evolution of markets, states, civil society and social movements, gender hierarchies, ethnic categories, and global governance over the past century. Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC, SSP BU: BA, IS EN: S

L40 SOC 4900 Capstone Paper for Sociology Majors

Independent work linked to the material covered by an associated 300- or 400-level class in sociology leading to completion of a research paper. Work is supervised by the faculty member teaching the associated class. Registration may be concurrent with the associated course or after the course

is completed. Successful completion of this paper satisfies the capstone requirement for the sociology major. Students will normally receive 1 credit for this course, but students may register for up to 3 credits with the approval of their faculty supervisor. Open to sociology majors only; register for the section assigned to the faculty supervisor. Prerequisite: approval of faculty supervisor. Credit variable, maximum 3 units.

L40 SOC 4901 Sociology Honors Thesis

Independent work linked to the sociology honors thesis. Successful completion of the thesis paper satisfies the capstone requirement for the sociology major. Open to sociology majors only; register for the section assigned to the faculty supervisor. Prerequisite: 3 credits of Sociology 4900 in the prior semester, with approval by the faculty supervisor to advance the thesis project.

Credit 3 units. A&S IQ: SSC EN: S

L40 SOC 4910 Internship in Sociology

Students may receive up to 3 units of credit for an approved, faculty-sponsored internship that relates to the study and application of sociological material. Credit determined by the number of hours worked. Specific requirements are set by the faculty supervisor in consultation with the supervisor in the organization where the internship work is completed. Students should complete a learning agreement provided by the Career Center. Successful completion of an internship approved by the student's major adviser satisfies the capstone requirement for the sociology major. Open to sociology majors and minors only; register for the section assigned to the faculty supervisor. Prerequisites: completion of the "Learning Agreement" provided by the Career Center and approval of faculty supervisor. Credit variable, maximum 3 units.

L40 SOC 4920 Teaching Practicum in Sociology

Students may receive up to 3 units of credit for work assisting in course instruction, tutoring, and preparation of course materials under the supervision of a faculty member. This course does not fulfill sociology major requirements. Students should register for the section assigned to their faculty supervisor. Credit variable, maximum 3 units.

L40 SOC 4930 InVisible St. Louis: People, Place, and Power in the Divided City

This course approaches the study of segregation and inequality in St. Louis as deeply relational and contextual -- that is, embedded in a particular space and place and constituted through social-political relations. Students will be immersed in the history, theory and contemporary academic debates surrounding inequality, segregation, and social justice initiatives in urban cities across the United States. The course pairs this theoretical base (conceiving of segregation as multifaceted and durable, historical, spatial, and interpersonal) with intensive research experiences drawing on the methodological tools available across sociology, urban design, and architecture (archival research, data collection, mapping, diagramming, interviewing, field observation). Students will initiate collaborative research projects aligning with the needs of local organizations that serve the city's historically disadvantaged populations. Local guest speakers (scholars, community leaders, residents) will enhance students' classroom learning, as will site visits and

other discussion formats. This interdisciplinary course bridges the Department of Sociology and the Sam Fox School of Design and Visual Arts, a collaboration supported by The Divided City initiative.

Same as I50 INTER D 4930

Credit 3 units. A&S IQ: SSC, SC BU: BA EN: S

L40 SOC 4950 Research in Sociology

Independent research on a sociological topic directed by a faculty member from the Department of Sociology. The student and the supervising professor will agree in writing on the course goals, requirements, readings, assignments, meeting schedule, and evaluation criteria. The written agreement must be submitted to the department undergraduate administrator before registration will be authorized. Credit variable; maximum 3 units. May be repeated one time for credit with the approval of the supervising professor.

Credit variable, maximum 3 units.

Spanish

Speaking Spanish is the key to unlocking the cultures, traditions and experiences of 20 different countries throughout the world. From the medieval knights and Don Quixote to the modern novels by prize-winning authors and the world of film, the Spanish faculty of the Department of Romance Languages and Literatures guides Spanish students into the unexpected territories of Europe and Latin America, which are as rich geographically as they are culturally. Students who major and minor in Spanish graduate with top-notch communication skills. Our students speak Spanish and they speak culture, both of which are valuable professional skills today. The exponential growth of the Spanish-speaking population in the United States, the constant presence of Latin America at the top of America's political and business agenda, and the continued lure of Spain as a gateway to Europe and parts of Africa make speaking Spanish and the ability to interpret the cultures of Spanish-speaking countries two of the most profitable and enjoyable skills that one can acquire.

Study abroad opportunities complement our courses in St. Louis, and these include summer programs in Peru and Spain and semester programs in Chile and Spain. In addition, our Spanish program is linked to volunteer opportunities with the Latino community in St. Louis. For more information about the Spanish major and minor (<https://rll.wustl.edu/spanish/>), visit our website.

Majors

The Major in Spanish

Required units: 27-30

The Spanish major requires a minimum of 30 units (or 27 units for second majors) at the 300 level or above, of which 21 units must be taken in residence. Study within Washington University's own programs in Spain or Chile is considered "in residence."

Required Courses

The following courses must be included in the 30 units:

Cultures and Communications in the Spanish-Speaking World

- Span 302 Cultures and Communication in the Spanish-Speaking World (Heritage speakers of Spanish must be certified by the director of undergraduate studies and enroll in Span 3021 Language and Culture for Heritage Speakers of Spanish.)
- Span 303 Cultures and Communication in the Spanish-Speaking World II

For students in the older sequence, Span 307D is equivalent to Span 302, and Span 308E is equivalent to Span 303. Students who completed Span 307D but not Span 308E must take Span 303. Students who completed Span 308E must proceed to the literature surveys.

Span 303 is a prerequisite for any other 300-level literature course in Spanish.

Three Literature Survey Courses (9 units)

Three of the following courses, including one Peninsular and one Spanish-American course:

Code	Title	Units
Span 341	Literary and Cultural Studies in Spanish	3
Span 342	Iberian Literatures and Cultures	3
Span 343	Latin American Literatures and Cultures	3

Study abroad:

Code	Title	Units
Span 354	A View from the Southern Cone: Perspectives on Art, Literature and Culture (Chile)	3
Span 3361	Spanish-American Literature II in Chile/Spain (Spain/Chile)	3

Notes for students considering 400-level courses and study abroad:

- A minimum of two survey courses are prerequisites for all 400-level courses.
- One literature course taken in the Chile or Spain Romance Languages and Literatures semester programs, designated as an acceptable substitute, may be used as one of the three required 300-level survey courses. Students who still must fulfill a survey on campus after returning from study abroad may, with permission of the director of undergraduate studies in Spanish, petition to take an appropriate 400-level seminar in place of the remaining 300-level survey course. Otherwise, students may not take a 400-level course to replace a required 300-level survey course.

One Culture or Linguistics Survey Course (3 units)

Choose one from the following list:

Code	Title	Units
Span 370	Introduction to Hispanic Linguistics	3
Span 380	Topics in Hispanic Cultures	3

Study abroad:

Code	Title	Units
Span 3181	Spanish Culture and Civilization	3
Span 311	Hispanic Culture and Civilization I (summer in Madrid)	3
Span 313	Chilean Contemporary Culture (Chile)	3

Two 400-Level Seminars (6 units)

- Span 405W Major Seminar (selected topics)
- Span 410 Major Seminar (selected topics)
- Another 400-level course taught in Spanish
 - Beginning in the 2016-17 academic year, students may take Span 405W or Span 410 in any combination; Span 405W will fulfill the college's Writing Intensive requirement, for those who need it.
 - When offered, one of the following language seminars may be substituted for one of the two 400-level literature seminars: Span 417 Spanish Phonetics, Phonology and Dialectology or Span 411 Advanced Grammar and Syntax.
 - Span 370 (or consent of the instructor) is a prerequisite for the 400-level linguistics courses taught in Spanish.
- Study abroad:
 - One 400-level seminar taken on campus
 - An approved 400-level course from the Madrid or Chile program (refer to the study abroad guidelines (<https://rll.wustl.edu/study-abroad-opportunities/>) on the Romance Languages and Literatures website)

Elective Courses (two for single majors; one for double majors)

Code	Title	Units
Span 324	Conversation in Cinema (Span 324 is the only University College course that can count as elective credit for the major and minor)	3
Span 331	Hispanic Art/Arte Hispano	3
Span 351	Business Spanish	3
Span 353	Medical Spanish	3
	Any other advanced 300- or 400-level Spanish (L38) class taught by a Romance Languages and Literatures faculty member	

- Only one elective course taught in English may be taken, when available, for the major.

Study abroad:

- Span 322 Advanced Conversation in Spain
- Elective credit from semester programs in Santiago or Madrid
- Elective credit from Petitioned, Organization for Tropical Studies, School for International Training, or Comparative Literature programs (refer to the study abroad guidelines (<https://rll.wustl.edu/study-abroad-opportunities/>) on the Romance Languages and Literatures website)
- Spanish courses completed (and approved) from study abroad programs other than those offered at Washington University may be used for Spanish elective credit only.
- All study abroad credit requires authorization from the director of undergraduate studies.

Other Requirements

Prior to declaring a major, students are required to fill out a questionnaire about their previous preparation and objectives in studying Spanish. As seniors, they may fill out an optional survey about the major. Double-major seniors may elect to do their capstone experience in a 400-level course; single majors must do so. The capstone may be fulfilled through the completion of a 400-level class with a B+ or better or via honors (refer to the honors requirements (<https://rll.wustl.edu/degree-details-and-requirements/>) on the Romance Languages and Literatures website). All qualified majors in the school of Arts & Sciences may elect to meet the requirements for honors. To be eligible to earn honors in Spanish, Spanish must be the student's prime major.

Recommended for prospective teachers:

1. A second language
2. Span 466, Span 467, Span 469, Span 413, Span 417 and Span 411
3. A semester or year in Spain or Chile

Recommended for prospective graduate students:

1. A second language related to the student's area of interest
2. Advanced work in other literatures, literary criticism and theory, and related course work in other literature or film programs
3. A year in Spain or Chile
4. Senior honors by thesis or course work (refer to the honors requirements (<https://rll.wustl.edu/degree-details-and-requirements/>) on the Romance Languages and Literatures website). Students who have maintained a minimum cumulative grade-point average of at least of 3.65 through the end of the junior year are encouraged to work toward Latin honors (i.e., cum laude, magna cum laude, or summa cum laude).

Minors

The Minor in Spanish

Units required: 18

The Spanish minor requires the completion of 18 units, of which 12 must be taken in residence. Students must complete courses with a grade of B- or higher and maintain a B average or better overall in Spanish. Courses taken on a pass/fail basis do not count toward the Spanish minor.

Required Courses

- Span 302 Cultures and Communication in the Spanish-Speaking World (Heritage speakers of Spanish must be certified by the director of undergraduate studies and enroll in Span 3021 Language and Culture for Heritage Speakers of Spanish.)
- Span 303 Cultures and Communication in the Spanish-Speaking World II

Span 303 is a prerequisite for any other 300-level literature course in Spanish.

For students in the older sequence, Span 307D is equivalent to Span 302, and Span 308E is equivalent to Span 303. Students who completed Span 307D but not Span 308E must take Span 303. Students who completed Span 308E must proceed to the literature surveys.

Two Literature and Culture Survey Courses (6 units)

Two of the following courses, including one Peninsular and one Spanish-American course:

Code	Title	Units
Span 341	Literary and Cultural Studies in Spanish	3
Span 342	Iberian Literatures and Cultures	3
Span 343	Latin American Literatures and Cultures	3

Study abroad:

Code	Title	Units
Span 354	A View from the Southern Cone: Perspectives on Art, Literature and Culture	3
Span 3361	Spanish-American Literature II in Chile/Spain	3

Notes for students studying abroad and/or students considering the major in Spanish:

- A minimum of two survey courses are prerequisites for all 400-level courses.
- One literature course taken in the Chile or Spain Romance Languages and Literatures semester programs, designated by the department as an acceptable substitute, may count as one of the required 300-level surveys. Students who return from their study abroad experience needing to complete one outstanding survey may, with permission of the director of undergraduate studies in Spanish, petition to take an appropriate 400-level seminar in place of the remaining 300-level survey course. Students who do not receive approval from the director of undergraduate studies may not take a 400-level course in place of a required 300-level survey course.

One Culture or Linguistics Survey Course (3 units)

One of the following courses:

Code	Title	Units
Span 370	Introduction to Hispanic Linguistics	3
Span 380	Topics in Hispanic Cultures	3

Study abroad:

Code	Title	Units
Span 311	Hispanic Culture and Civilization I	3
Span 3181	Spanish Culture and Civilization	3
Span 313	Chilean Contemporary Culture	3

One Elective Course (3 units)

One of the following courses:

Code	Title	Units
Span 331	Hispanic Art/Arte Hispano	3
Span 351	Business Spanish	3
Span 353	Medical Spanish	3
Any other advanced-level Spanish course offerings either at the 300 or 400 level or an approved study abroad course		

Study abroad:

- Span 322 Advanced Conversation in Spain
- Elective credit from semester programs in Santiago or Madrid
- Elective credit from Petitioned, Organization for Tropical Studies, School for International Training, or Comparative Literature programs (refer to the study abroad guidelines (<https://rlt.wustl.edu/study-abroad-opportunities/>) on the Romance Languages and Literatures website)
- Spanish courses completed (and approved) from study abroad programs other than those at Washington University may be used for Spanish elective credit only.
- All study abroad credit requires authorization by the director of undergraduate studies.

Courses

Visit online course listings to view semester offerings for L38 Span (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L38&crslvl=1:4>).

L38 Span 101 Elementary Spanish I

Beginning language program stressing acquisition of spoken ability together with attention to the development of reading, writing and listening skills. In addition to three hours of class, students complete weekly, assessed independent learning activities with multimedia resources.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L38 Span 102 Elementary Spanish II

Second semester of the beginning language program stressing acquisition of spoken ability together with attention to the development of reading, writing and listening skills. In addition to three hours of class, students complete weekly, assessed independent learning activities with multimedia resources. Prerequisite: Span 101D or placement by examination.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L38 Span 201E Intermediate Spanish I

The first half of a two-semester intermediate-level sequence. Reviews basic knowledge and introduces advanced skills in grammar, reading, writing, culture and vocabulary. Prerequisite: Span102D, or placement by examination.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L38 Span 202 Intermediate Spanish II

The second half of a two-semester intermediate-level sequence. This class continues to review basic knowledge and to introduce advanced skills in grammar, reading, writing, culture and vocabulary. Prerequisite: Span201E or placement by examination.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L38 Span 223 Intermediate Spanish Conversation and Culture

Practice of spoken Spanish and expansion of vocabulary in a wide range of topics. Discussion and role play based on short readings, music and film. Use of the World Wide Web for up-to-date news and culture. Oral presentations and limited writing. Prerequisite: 201D or equivalent. Concurrent enrollment in Span 307D recommended.

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

L38 Span 299 Undergraduate Independent Study

Prerequisites: Span 201D and permission of the department. Credit variable, maximum 3 units.

L38 Span 302 Cultures and Communication in the Spanish-Speaking World

This course is the first part of a two-semester advanced-level sequence. Through the study of a variety of media (i.e., written, visual, aural, and digital), students will develop linguistic and cultural competence and gain a general understanding of contemporary issues of interest in Spain, Latin America, and the United States. Discussion of a wide array of cultural and linguistic materials will serve as the basis for an exploration of the diversity of the Spanish-speaking world. The course focuses primarily on speaking skills. It is designed to prepare students to proceed to higher-level Spanish courses and to build written and oral proficiency. This course replaces Span 307D and is a prerequisite for several study abroad programs. Prerequisite: Span 202 or placement by examination.

Credit 3 units. A&S IQ: LCD, LS EN: H

L38 Span 3021 Language and Culture for Heritage Speakers of Spanish

This course offers an approach to the linguistic and historical study of different cultural productions in various Spanish-speaking communities in the United States and other Spanish-speaking countries. The materials and structure of the course are designed for students whose cultural roots are, to some degree, Latin and who have grown up in Spanish-speaking environments, so course materials focus on autobiography and identity. This course offers students a multidisciplinary way of working at points where linguistic and literary analysis runs parallel to other forms of cultural production and to the historical narrative of Latinx culture in the United States. Prerequisite: placement by examination.

Credit 3 units. A&S IQ: LCD, LS EN: H

L38 Span 303 Cultures and Communication in the Spanish-Speaking World II

This course is the second part of a two-semester advanced-level sequence. Through study of a variety of media (written, visual, aural, and digital), students will develop linguistic and cultural competence and gain a general understanding of contemporary issues of interest in Spain, Latin America, and the

US. Discussion of a wide array of cultural and linguistic materials will serve as the basis for an exploration of the diversity of the Spanish-speaking world. The course focuses primarily on writing skills. It is designed to prepare students to proceed to higher-level Spanish courses and to build written and oral proficiency. Prerequisite: Spanish 302, 3021 or 307D. Direct placement in this course is not allowed without prior completion of 302 or 3021. This course replaces L38 308D and 308E.

Credit 3 units.

L38 Span 308E Advanced Reading and Writing

In depth study of the process of advanced reading and writing designed to prepare the Spanish major for upper-level courses. Literary texts studied as examples of writing styles. Regular compositions. Prerequisite: Span 307D or placement by examination. Conducted in Spanish.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L38 Span 310 Advanced Intermediate Spanish in Spain

Continued study of Spanish grammar and syntax at Washington University's Madrid Carlos III University Program. A course designed for non-native speakers of Spanish, to refine communicative abilities in all four skills. Prerequisite: placement by exam at Carlos III.

Credit variable, maximum 4 units.

L38 Span 311 Hispanic Culture and Civilization I

Study of aspects of the political, social and cultural life of contemporary Spain and Portugal and their historical development. Class discussion; readings with compositions. Conducted in Spanish. May be repeated for credit. Prerequisite: Span 201D.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: BA EN: H

L38 Span 313 Chilean Contemporary Culture

This two-week course provides a panoramic view of Chilean contemporary culture, focusing on the years from 1988 to the present. We examine the representation of current issues in literature, the arts and the media, and study topics such as governmental institutions, the constitution of 1980, the economy, the role of the Catholic Church, public policy concerning culture, etc. The course meets three hours a day, and there are several guest lecturers. Conducted in Spanish. Requirements: two short papers, short reports in class of the news or a cultural activity students have attended, and participation in class discussions. Course includes an all-day cultural excursion on Saturday, which features a visit to one of Neruda's houses, a history museum, etc.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

L38 Span 317 Advanced Spanish Language in Chile/Spain

Continued study of Spanish grammar and syntax at Washington University's program in Chile or Spain. A course designed for non-native speakers of Spanish to refine mastery of difficult uses and structures in all four skills. Prerequisite: placement by exam or program director.

Credit variable, maximum 4 units.

L38 Span 3181 Spanish Culture and Civilization

This course is intended to acquaint students with important aspects of Spanish culture, including history, civilization, society, politics and the arts, dating from the first invasions of the Peninsula to the present. Students gain an awareness of the ethnic, cultural and aesthetic diversity of Spain as a country of multiple autonomous regions, by working with written texts and other media and by visits to various locations. The broader aim of the course is to enable students to engage with and to analyze Spanish culture from an intellectually critical perspective and knowledge of its sociohistorical distinctiveness. Requirements include active participation within all classes and excursions, presentations and various written assignments. This course is taught in Madrid, as part of the Washington University Carlos III Program. Conducted in Spanish.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM BU: IS EN: H

L38 Span 322 Advanced Conversation in Spain

Designed to offer students with advanced skills in Spanish an opportunity to refine their ability to discuss a variety of topics. Various media such as films, television, newspapers and other modes of communication are used for oral presentations and some writing. Prerequisite: Span 301, 307D or 308E, or multiple 300-level courses.

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

L38 Span 331 Hispanic Art/Arte Hispano

This course focuses on the most important movements, artistic expressions and its representatives of the art history of Latin America and Spain. From the Pre-Columbian art of the Mayas, Aztecs and Incas, to the syncretism of Postcolonial Latin American art, the Mexican Muralism and the self-reconstruction portraits of Mexican artist Frida Kahlo to the Chicano Art in the USA. From the Medieval paintings of religious Spain, to the criticism of the Spanish nobility by Diego Velazquez, the Spanish Civil War of Guernica by Pablo Picasso, to the Surrealism of Salvador Dali and Antonio Gaudi. The students visit the St. Louis and the Kemper Art Museums. Prerequisite: Span 308E. May be used for elective credit in the Spanish major or minor. In Spanish.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

L38 Span 3361 Spanish-American Literature II in Chile/Spain

A survey of major Spanish-American literary works from the end of the 19th century to the contemporary period at Washington University's program in Chile or Spain. Prerequisite: Span 308E or the equivalent.

Credit 3 units. Art: HUM

L38 Span 341 Literary and Cultural Studies in Spanish

This course is an introduction to cultural and literary analysis within Iberian and Latin American cultures. The course will be covering a wide variety of materials that span different countries, historical periods, and various cultural and literary forms. The main objective of the course is to introduce students to key historical, geographical and political aspects of these cultures, while at the same time applying different approaches of cultural analysis. The course is structured upon key central concepts as they are particularly related to the cultures of the Iberian Peninsula and Latin America, such as Nation, Colonialism / Postcolonialism; Modernity and Postmodernity; Popular & Visual Media; Gender, Race, Migration and Social Class. The course combines the reading of literary texts, films and other

cultural forms, with the examination of introductory critical works related to the key concepts that will be explored throughout the semester. Prereq: Spanish 308E or Spanish 303, or concurrent enrollment in 308E or 303. Taught in Spanish.

Credit 3 units. A&S IQ: HUM, LCD, LS, SD Arch: HUM Art: HUM BU: IS EN: H

L38 Span 342 Iberian Literatures and Cultures

Which are the cultures that shape what Spain is today? This course explores the diversity of the Iberian Peninsula through its literatures and cultures. As part of both the Mediterranean and Western Europe, the Iberian Peninsula has been shaped through a dynamic of conflict and negotiation between various cultures, languages, and religions. Students will engage themes such as internal colonization, imperialism, multiculturalism, regional identities, nation formation, migration, media and popular culture, modernization, and gender and race relations, as they relate to our understanding of the country today. Focuses may include but are not limited to the following: multiculturalism of the Middle Ages, the Muslim and Jewish presence in Spain, identity narratives and power relations, stage and performance traditions, as well as authors and artists like Cervantes, Galdós, García Lorca, Picasso, Almodóvar. Prereq: Spanish 308E or Spanish 303, or concurrent enrollment in 308E or 303. Taught in Spanish.

Credit 3 units. A&S IQ: HUM, LCD, LS, SD Arch: HUM Art: HUM BU: IS EN: H

L38 Span 343 Latin American Literatures and Cultures

How did Latin America become Latin America? This course explores the different inventions and reinventions of the region through its literatures and cultures. Beginning with the encounter of Europeans with America, students will engage themes like colonization and colonialism, urban and rural cultures, nation formation, modernization, media and popular culture, as well as gender and race relations. Authors studied may include Colón, Sor Juana, Sarmiento, Neruda, Borges, García Márquez, or Morejón. Prereq: Spanish 308E or Spanish 303, or concurrent enrollment in 308E or 303. Taught in Spanish.

Credit 3 units. A&S IQ: HUM, LCD, LS, SD Arch: HUM Art: HUM BU: IS EN: H

L38 Span 351 Business Spanish

Study of language and structures used in conducting business in the Hispanic world. We use actual materials from various businesses — advertising, marketing, real estate, accounting. Particular stress on speaking and writing. Prerequisite: Span 308E or permission of instructor.

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

L38 Span 353 Medical Spanish

Designed for future medical professionals, this course will provide students with a complete vocabulary and cultural sensitivity necessary for treating Spanish-speaking patients. While the main focus is oral/aural, written exams, varied reading and some research are required. Volunteer work recommended for enrolled students. Advanced students will be given priority. Prereq: Span 308E or 303.

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

L38 Span 354 A View from the Southern Cone: Perspectives on Art, Literature and Culture

This course deals with current issues of cultural, social, political and literary importance related to the Southern Cone. We study selected texts from Argentina, Chile and Uruguay as well as contemporary films and drama productions. This course seeks to determine what specifically can be expressed about national identity, globalization and the environment as these countries face the 21st century. Course requirements include four short essays and a final exam. This course is taught in Santiago, Chile, as part of the Washington University Chile Program. May be repeated for credit. Conducted in Spanish.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

L38 Span 355 Spanish for the Social Sciences

This is an advanced Spanish language course designed to develop conversational, writing and listening skills for students in the social sciences. Students will learn and use the language in a content-based format, guided by culturally sensitive readings, discussions and activities. Prerequisite: Spanish 307D. In Spanish.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: HUM EN: S

L38 Span 360 Literature Topics Course in Spain

Taught through the Humanidades program of Carlos III University. Topics vary each semester. May be repeated for credit. Prerequisite: approval of Washington University's Madrid Program director and Carlos III.

Credit variable, maximum 3 units. Art: HUM

L38 Span 3601 Cultural Studies Topics Course in Spain

Taught through the Humanidades program of Carlos III University. Topics vary each semester. May be repeated for credit. Prerequisite: approval of Washington University's Madrid Program director and Carlos III.

Credit variable, maximum 3 units.

L38 Span 370 Introduction to Hispanic Linguistics

An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax) and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages.

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

L38 Span 380 Topics in Hispanic Cultures

This course surveys cultures in specific contexts (Latin America and Spain) and in different historical periods, from the Middle Ages to the present. The course provides students with critical and methodological tools in order to carry out an articulate and informed cultural analysis. Prereq: Span 303; concurrent registration in Span 308E or 303 is recommended. In Spanish. Topics vary from semester to semester. See section description for current offering.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU:
ETH EN: H

L38 Span 400 Intensive Translation for Graduate Students I
Designed to help graduate students in the humanities, social and natural sciences fulfill their PhD language requirement, this is the first part of a two-semester course sequence in reading and translating Spanish. Non-graduate students may enroll with permission of the department. Must be followed by Span 401.
Credit 3 units. A&S IQ: LCD EN: H

L38 Span 401 Intensive Translation for Graduate Students II
Designed to help graduate students in the humanities, social and natural sciences fulfill their PhD language requirement, this is the second part of a two-semester course sequence in reading and translating Spanish. Non-graduate students may enroll with permission of the department. Credit for Span 400 is contingent on completion of Span 401.
Credit 3 units. A&S IQ: LCD EN: H

L38 Span 4013 Second-Language Acquisition and Technology

This seminar for undergraduate and graduate students will transform research and theory about second-language acquisition into practice while focusing on technology-driven applications. The course fosters professional development as participants formulate critical skills for evaluating, creating, and integrating technology into the language classroom and other language learning contexts, including business, engineering, and law. Course formats include readings, discussions, and demonstrations with technologies. The course counts for the minor in applied linguistics, the PhD in applied linguistics, and the graduate certificate in language instruction. This course carries the Social and Behavioral Sciences attribute and can be taken for different majors.

Same as L92 APL 4023

Credit 3 units. A&S IQ: SSC

L38 Span 405W Major Seminar

An undergraduate seminar. Topics vary. This is a writing-intensive course, which requires a minimum of three papers of approximately four to five pages in length, with rewrites; 50 percent of the grade must come from written work. Prerequisites: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. In Spanish.

Credit 3 units. A&S IQ: HUM, LCD, WI Arch: HUM Art: HUM EN: H

L38 Span 410 Major Seminar

An undergraduate seminar. Topics vary. Prerequisites: Span 307D and Span 308E and at least two 300-level literature/culture surveys taught in Spanish. In Spanish.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

L38 Span 411 Advanced Grammar and Syntax

This course presents a detailed study of Spanish syntax. Different theories (including generative theory) as well as the relationship between (morpho) syntax and other linguistic subsystems are considered. Special attention is also given to Spanish/English contrasts of particular interest to language learners and teachers. Prerequisites: 6 units of 300-level Spanish, or permission of instructor.

Credit 3 units. A&S IQ: LCD EN: H

L38 Span 4111 Advanced Grammar and Syntax in Spain

Detailed study of contemporary Spanish syntax. Special attention to fine points of grammar and syntax necessary for communication at the advanced level, taught at Washington University's Carlos III Program in Madrid. Prerequisite: placement by exam.

Credit variable, maximum 4 units.

L38 Span 4112 Bilingual Advanced Grammar and Syntax in Spain

Detailed study of contemporary Spanish syntax for bilingual students, taught at Washington University's Carlos III Program in Madrid. Prerequisite: placement by exam or program director.
Credit 3 units.

L38 Span 413 Linguistics and Language Learning

This course, which is taught in English, is a foundation for students who will work with linguistically and culturally diverse people in the United States and around the world, whether this work is in the courtroom, the hospital, the classroom, the office, or another setting. The course will help to prepare students for the diverse range of 21st-century occupations that have language and linguistics at their center, including machine learning and translation studies. The course uses a survey format and covers both internal and external factors related to language acquisition and language use, such as language and the brain, language aptitude, age, gender, memory, prior knowledge, and so on. Theoretical and research dimensions of both linguistics and foreign-/second-language learning are also treated. Corresponding implications of the readings focus on action, including making decisions about language policies as well as debates around the world that are informed by linguistic and language knowledge. The course is required for the minor in applied linguistics, the PhD in applied linguistics, and the graduate certificate in language instruction. This course carries the Social and Behavioral Sciences attribute and can be taken for different majors, such as International and Area Studies and Educational Studies. Prerequisite: Ling 170 is recommended but not required.

Same as L92 APL 4111

Credit 3 units. A&S IQ: SSC EN: S

L38 Span 416 Introduction to Hispanic Linguistics

An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax), and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional and social varieties of Spanish and situations of Spanish in contact with other languages. Preceptorial for undergraduates only.

Credit 3 units. A&S IQ: LCD EN: H

L38 Span 417 Spanish Phonetics, Phonology and

Dialectology

This course, conducted in Spanish, explores the linguistic varieties of the 21 Spanish-speaking countries from both a historical and a synchronic perspective. The course begins with a traditional look at Spanish phonetics and phonology, with all students memorizing and utilizing the International Phonetic Alphabet. Course readings and discussions extend beyond the descriptive and include a search for the sources of language variation within the Spanish-speaking world. Particular attention is devoted to language contact and bilingualism. Students read in areas such as history, sociolinguistics, dialectology and sociology, as well as traditional linguistic studies, in designing their projects concerning phonetics, phonology and dialect diversification.

Credit 3 units. A&S IQ: LCD BU: IS EN: H

L38 Span 466 Second-Language Acquisition

There are many ways in which a second language can be learned: from infancy as the child of bilingual parents, or later through formal instruction, immersion in a new culture, or in a particular work or social situation. This class is an inquiry into the processes by which acquisition occurs. Topics include the nature of language learning within the scope of other types of human learning; the relationship between first- and second-language acquisition; the role of linguistic, cognitive and sociocultural factors; insights gained from analyzing learners' errors; key concepts such as interlanguage and communicative competence; bilingualism; the optimal age for second-language acquisition; and a critical appraisal of different theories of second-language acquisition. Both theoretical and instructional implications of second-language acquisition research are considered. This course can be used toward certification in TESOL and is a required course for the Graduate Certificate in Language Instruction. Prerequisite: Ling 170D or equivalent is recommended, especially for undergraduates, but is not required.

Same as L44 Ling 466

Credit 3 units. A&S IQ: HUM EN: H

L38 Span 467 Grammar and Vocabulary Acquisition

This course examines theoretical and instructional implications of research on grammar and vocabulary acquisition. Topics include making form-meaning connections during language learning; developmental stages; the role of input and input processing; explicit and implicit methods of grammar instruction; pertinent factors in vocabulary acquisition, such as a learning context and processing resource allocation; and comparisons of incidental and direct vocabulary instruction techniques. Major theories of language acquisition (e.g., nativism, emergentism) are critically examined in light of the research presented, and research findings are applied to instructional practices.

Credit 3 units. A&S IQ: LCD BU: BA EN: H

L38 Span 469 Reading and Writing in a Second Language

This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second-language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students discuss how to bridge research

and practice, and they create reading and writing activities driven by theory and empirical investigations. This course is a required course for the undergraduate minor in Applied Linguistics and an elective for the Graduate Certificate in Language Instruction. Credit 3 units. A&S IQ: HUM, LCD

L38 Span 4691 Second Language Reading and Writing:

Theory, Research and Practice

This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second-language learners involves a number of variables including both cognitive and social factors. Topics discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students discuss how to bridge research and practice, and they create reading and writing activities driven by theory and empirical investigations. This course is a required course for the undergraduate minor in applied linguistics and an elective for the Graduate Certificate in Language Instruction. This course carries the Social and Behavioral Sciences attribute. Credit 3 units. A&S IQ: SSC EN: S

L38 Span 4692 Reading Across Languages and Cultures:

Theory, Research, and Practice

The United Nations has declared that literacy is a fundamental human right. This course, which is taught in English, connects to the mission of UNESCO and examines the wide range of theoretical and research issues -- both historical and current -- related to reading and writing across languages and cultures. Literacy acquisition among second-language learners involves a number of variables, including both cognitive and social factors. Topics to be discussed include universal cognitive operations, individual learner differences, text types and literary forms, literacy and social power, and the extent to which reading and writing are interrelated. Students will discuss how to bridge scientific research in the laboratory to practice, and they will be involved in St. Louis community outreach projects with refugees and immigrants at the International Institute, where they will create and implement reading and writing activities driven by theory and empirical investigations. Students will take the theory and research they learn, and they will help meet the local reading and writing needs of a changing population with a variety of backgrounds, values and educational preparations. The course is required for the minor in applied linguistics, the PhD in applied linguistics, and the graduate certificate in language instruction. This course carries the Social and Behavioral Sciences attribute and can be taken for different majors, such as International and Area Studies and Educational Studies.

Same as L92 APL 4692

Credit 3 units. A&S IQ: SSC EN: S

L38 Span 495 Honors

Students who meet the requirements work closely with a member of the faculty on an individual basis on a project of mutual interest. Emphasis on a tutorial on a regular basis. Prerequisite: permission of director of undergraduate studies. Preregistration not permitted. Credit variable, maximum 3 units.

L38 Span 4951 Honors

Students who meet the requirements work closely with a member of the faculty on an individual basis on a project of mutual interest. Emphasis on a tutorial on a regular basis. Prerequisite: permission of director of undergraduate studies. Preregistration not permitted. Pass/fail.

Credit 3 units. EN: H

Speech and Hearing

The minor in speech and hearing sciences is offered by the Program in Audiology and Communication Sciences (PACS) in the School of Medicine, and it is designed for students interested in exploring topics related to typical and disordered human communication. The required course work provides an overview of the fields of hearing, deafness, language and speech, with opportunities to explore related topics in more depth. This minor is especially valuable for students in fields such as psychological and brain sciences, education, philosophy-neuroscience-psychology (PNP) and linguistics, but it has broad applicability for many fields of study. Courses completed as part of this minor can also be used to fulfill the total unit requirements for graduation and as prerequisites for graduate studies in audiology, deaf education and speech-language pathology; however, the minor may not be used as an Integration in Arts & Sciences Integrated Inquiry (IQ) curriculum and does not otherwise fulfill any Arts & Sciences distribution requirements.

Majors

There is no major in this area. The minor in speech and hearing sciences is offered by the Program in Audiology and Communication Sciences (<http://pacs.wustl.edu/>) at Washington University School of Medicine. The program also offers graduate study in the fields of audiology, deaf education, and speech and hearing sciences, which lead to the following degrees: Doctor of Audiology (AuD), Master of Science in Deaf Education (MSDE), and Doctor of Philosophy (PhD)—Speech and Hearing Sciences.

Minors

The Minor in Speech and Hearing

Total units required: 15

Required course:

- Educ 234 Introduction to Speech and Hearing Disorders

Elective courses:

At least four of the following, totaling at least 12 units:

Code	Title	Units
PACS 401	Anatomy and Physiology of Speech and Hearing	3
PACS 421	Introduction to Electroacoustics	3
PACS 424	Speech and Hearing Sciences	1
PACS 4301	Sign Language I	2
PACS 4302	Sign Language II	2
PACS 434	Typical Language Development	3
PACS 543	Survey of Speech and Language Disorders	2
PACS 544	Clinical Observation and Methods in Speech-Language Pathology	3
PACS 5601	Clinical Audiology I	3
Educ 408	Education and Psychology of Exceptional Children	3
Psych 433	Psychology of Language	3
Ling 170D	Introduction to Linguistics	3
Ling 312	Phonetics	3

Additional Information

Because the minor in speech and hearing sciences is offered by the Program in Audiology and Communication Sciences (PACS) in the School of Medicine, it may not be used as an Integration and does not otherwise fulfill any Arts & Sciences distribution requirements.

This minor is composed of a minimum of 15 units that focus on the study of speech, language and hearing. Of these, at least 9 units must be at the 300 level or higher. Courses to count toward the minor must be approved in advance by the minor adviser, and one or more elective courses must come from M89 PACS.

Additional courses that are not listed here may be allowed, with advance approval of the minor adviser, based on the student's individual areas of interest. Some courses may be subject to instructor approval in advance.

Special notes for students interested in continuing their studies in either the Doctor of Audiology (AuD) or Master of Science in Deaf Education (MSDE) program in PACS: Please consult the minor adviser for information about the appropriate course of study. In such cases, course work should focus on applicable prerequisite courses, required introductory course work that can be waived during graduate enrollment, and other applicable requirements for professional certification. Completing other required course work prior to matriculation in one of the PACS graduate programs may affect a student's full-time status, course of study, tuition, scholarship amount and other aspects of enrollment.

Courses

Visit online course listings to view offerings for M89 PACS (<https://courses.wustl.edu/CourseInfo.aspx?sch=M&dept=M89>).

M89 PACS 401 Anatomy and Physiology of Speech and Hearing

Introduction to anatomy and physiology of the peripheral hearing system and central nervous system, including functional descriptions of the systems and processes underlying speech and hearing function and dysfunction.

Credit variable, maximum 3 units.

M89 PACS 4011 Behavior Management

Introduction to various behavior management systems effective in both individual and group environments. Behavior interventions, classroom management strategies, environmental controls, psychodynamic techniques, and biophysical interventions are discussed, observed, and practiced. Focus is on working with children who are deaf or hard of hearing. Prerequisite: Permission of department required.

Credit 2 units.

M89 PACS 416 Evaluation Techniques for Children Who Are Deaf or Hard of Hearing

A basic introduction to psychometrics with emphasis on the selection, interpretation and evaluation of assessments. Specific techniques for evaluating intellectual, educational, and linguistic abilities and achievement in children who are deaf or hard of hearing, from infancy through adolescence, are discussed and demonstrated. Prerequisite: Permission of department required. Credit 3 units.

M89 PACS 421 Introduction to Electroacoustics

Introduction to the physics of sound. Topics include production, transmission and reception of sound and factors affecting human communication. Includes discussion, lectures, problems and lab. Credit 3 units.

M89 PACS 424 Speech and Hearing Sciences

Surveys a broad array of speech and hearing science topics. Focus is on how speech and hearing science research findings can be applied to the practice of deaf education. Credit 1 unit.

M89 PACS 4301 Sign Language I

Basics of American Sign Language are introduced, including vocabulary, grammatical structure, fingerspelling and cultural information about the deaf community. This is a highly interactive and participatory course. Credit 2 units. EN: H

M89 PACS 4302 Sign Language II

Continues development of American Sign Language with additional vocabulary, emphasis on expressive and receptive abilities, conversational skills, and knowledge of deaf culture. This is a highly interactive and participatory course. Prerequisite: PACS 4301-Sign Language I.

Credit 2 units. EN: H

M89 PACS 434 Typical Language Development

Study of typical language development, including the phonologic, morphologic, semantic, syntactic and metalinguistic aspects. Interactions between linguistic and other areas of child development will be discussed. Contrasts will be explored between typical and atypical child development to shed light on language learning processes. Credit 3 units.

M89 PACS 438 Early Literacy Development of Children Who Are Deaf or Hard of Hearing

Development of early print-recognition, reading and writing of children who are typically hearing and children who are deaf or hard of hearing. Focus is on the years leading up to kindergarten. An overarching theme is the interaction between early language and early literacy development. Evidence-based strategies for differentiated instruction will also be discussed. Permission of department required.

Credit 3 units.

M89 PACS 444 Amplification Systems and Aural Rehabilitation for Children

This course will provide students with a broad understanding of amplification systems and principles and methods of aural rehabilitation as they apply to children who are deaf or hard of hearing. Amplification systems to be covered will include digital hearing aids, cochlear implants and a full range of assistive devices. Aural rehabilitation topics will emphasize patient management and will include communication strategies, conversation styles and speech recognition assessment. Students will be provided with videotapes, live demonstrations and in-class activities. Direct contact with children and technological devices will also be used to support lectures and discussions. Prerequisite: Permission of department required. Credit 2 units.

M89 PACS 4511 Practicum in Deaf Education

Study of typical language development, including the phonologic, morphologic, semantic, syntactic and metalinguistic aspects. Interactions between linguistic and other areas of child development will be discussed. Contrasts will be explored between typical and atypical child development to shed light on language learning processes. Prerequisite: Permission of department required.

Credit 7 units.

M89 PACS 4512 Practicum in Deaf Education

Supervised practicum in education of children who are deaf or hard of hearing. Students will be placed in field experiences (early, mid-level and culminating levels) in a variety of educational settings with a variety of age ranges, using interventions in areas such as language, speech, auditory training, reading, math and other content areas. Prerequisite: Permission of department required.

Credit 7 units.

M89 PACS 4515 Language Instruction for Children Who Are Deaf or Hard of Hearing

Principles and methods of developing competence in spoken English in children who are deaf or hard of hearing, birth to grade 12. Includes presentation of differentiated instructional techniques for teaching a diverse population of children who are deaf or hard of hearing English vocabulary, syntax and pragmatics, as well as techniques for auditory training. Evaluations and data-driven lesson planning/IEP/IFSP development will be discussed, as well as the role of families as engaged, educational partners in spoken language development. Prerequisite: Permission of department required.

Credit 3 units.

M89 PACS 4525 Foundations of Literacy Theory and Instruction

Principles and methods of developing reading and writing competence in children who are typically hearing, with an emphasis on the stages of development and appropriate teaching sequences. Based on this foundation, strategies and methods will be presented for making appropriate differentiated learning adaptations and interventions for reading instruction with students who are deaf or hard of hearing who have language and reading deficits. Additional topics include the use of children's literature in instruction, the intersection of language and reading development, content literacy, and general language arts instruction. Prerequisite: Permission of department required.

Credit 4 units.

M89 PACS 4526 Literacy Lab: A Focus on Typical and Atypical Learners

Emphasizes observation and some practice planning and teaching reading and writing with students who are typical and atypical learners, including children who are deaf or hard of hearing and who struggle to develop appropriate literacy skills. Observations will focus on areas such as how teachers use differentiated learning strategies for diverse learners, the use of children's literature in instruction, the intersection of language and reading development, instruction in content literacy, and general language arts instruction. Prerequisite: Permission of department required.

Credit 2 units.

M89 PACS 454 Mathematics and Content-Area Instruction

for Children Who Are Deaf or Hard of Hearing I

Principles and methods of teaching mathematics to students who are typically hearing and those who are deaf or hard of hearing. Strategies for other content-area instruction (science, social studies), use of instructional technology, and strategies for improving content literacy will also be discussed, with an emphasis on techniques for working with children who are deaf or hard of hearing. Students will practice developing and implementing lesson plans that are aligned to state and national standards. Prerequisite: Permission of department required.

Credit 3 units.

M89 PACS 455 Mathematics and Content-Area Instruction

for Children Who Are Deaf or Hard of Hearing II

A continuation of PACS 454. Principles and methods of teaching mathematics to students who are typically hearing and those who are deaf or hard of hearing. Strategies for other content-area instruction (science, social studies), use of instructional technology, and strategies for improving content literacy will also be discussed, with an emphasis on techniques for working with children who are deaf or hard of hearing. Students will practice developing and implementing lesson plans that are aligned to state and national standards. Prerequisites: PACS 454 and permission of department required.

Credit 3 units.

M89 PACS 457 Counseling Parents of Children Who Are Deaf or Hard of Hearing

Examines the psychological needs of families who have children who are deaf or hard of hearing. The aim of the course is to help teachers of children who are deaf or hard of hearing interact more effectively with parents and caregivers, using a collaborative model that views families as engaged partners in the educational process. Students will develop a repertoire of interviewing and counseling skills, as well as learn about a wealth of resources to share with families. Prerequisite: Permission of department required.

Credit 3 units.

M89 PACS 458 Speech for Children Who Are Deaf or Hard of Hearing

Development, improvement and maintenance of speech skills for children who are deaf or hard of hearing through multisensory approaches. Articulation, voice and rhythm patterns are considered. Lectures, demonstrations and practice. Prerequisite: Permission of department required.

Credit 3 units.

M89 PACS 460 Audiology Staffing

Discussion and presentations of clinical cases and issues related to practice in clinical audiology. Prerequisite: Permission of department required.

Credit 1 unit.

M89 PACS 4611 Practicum in Audiology

Supervised practicum in audiology. Prerequisite: permission of department required.

Credit 1 unit.

M89 PACS 4612 Practicum in Audiology

Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 1 unit.

M89 PACS 4613 Practicum in Audiology

Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 3 units.

M89 PACS 4621 Practicum in Audiology

Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 2 units.

M89 PACS 4622 Practicum in Audiology

Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 2 units.

M89 PACS 4623 Practicum in Audiology

Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 4 units.

M89 PACS 4631 Practicum in Audiology

Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 2 units.

M89 PACS 4632 Practicum in Audiology

Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 2 units.

M89 PACS 4633 Practicum in Audiology

Supervised practicum in audiology. Prerequisite: permission of department required.
Credit 6 units.

M89 PACS 4641 Clinical Externship in Audiology

Clinical externship in audiology (on campus). Prerequisite: permission of department required.
Credit 9 units.

M89 PACS 4642 Clinical Externship in Audiology

Clinical externship in audiology (on campus). Prerequisite: permission of department required.
Credit 9 units.

M89 PACS 4651 Clinical Externship in Audiology

Clinical externship in audiology (off campus). Prerequisite: permission of department required.
Credit 9 units.

M89 PACS 4652 Clinical Externship in Audiology

Clinical externship in audiology (off campus). Prerequisite: permission of department required.
Credit 9 units.

M89 PACS 466 Rehabilitative Audiology

Principles and methods of aural rehabilitation with an emphasis on patient management. Topics include communication strategies and conversation styles, speech recognition assessment and hearing aid service provisions for adults, older persons, children, and family members. Prerequisite: permission of department required.

Credit 3 units.

M89 PACS 468 Pediatric Audiology

Fundamentals of audiologic assessment for infants and children. Behavioral and electrophysiologic procedures, and assessment of auditory processing abilities, are presented. Prerequisite: permission of department required.

Credit 3 units.

M89 PACS 470 Business Practices

Issues relating to establishing a private practice including clinical management, small business and accounting practices, models of private practice, referrals and reimbursement, and managed care. Prerequisite: permission of department required.

Credit 2 units.

M89 PACS 5001 Electrophysiologic Techniques I

Introduces basic concepts in administration and interpretation of physiologic and electrophysiologic measures, with focus on auditory evoked potentials (AEP). Content covers basic instrumentation, parameters and variables affecting the AEP, auditory brainstem response (ABR), middle (MLR) and late (LLR) evoked potentials, auditory steady state response (ASSR) and otoacoustic emissions (OAE). Prerequisite: permission of department required.

Credit 3 units.

M89 PACS 5002 Electrophysiologic Techniques II

Advanced concepts related to the administration and interpretation of physiologic and electrophysiologic measures. Content includes in-depth study of ABR and other auditory evoked potentials, and the clinical application of these for the audiologist. Additional topics include study of electrocochleography (ECochG), P300 auditory responses, and mismatched negativity (MMN). This course will include a thorough study of intraoperative monitoring including neurophysiology and anatomy review, cranial nerve monitoring, spinal cord monitoring, and facial nerve monitoring. Prerequisites: permission of department required.

Credit 1 unit.

M89 PACS 502 Pharmacology

Includes basic information related to medications utilized for treating common hearing/balance disorders. Hearing and balance side effects of medications are discussed, as are ototoxic and preventative mechanisms related to pharmacology. Prerequisites: permission of department required.

Credit 1 unit.

M89 PACS 505 Auditory Neuroscience

Development of an in-depth understanding of issues related to auditory neurophysiology from the auditory nerve to the cortex. Prerequisites: permission of department required.

Credit 2 units.

M89 PACS 506 Genetics in Hearing Loss

Study of the genetic causes of hearing loss and balance disorders, and syndromes affecting the auditory and vestibular systems. Prerequisites: Permission of department required. Credit 1 unit.

M89 PACS 507 Vestibular Disorders

Comprehensive course covering the assessment, diagnosis and treatment of vestibular disorders. Prerequisites: Permission of department required.

Credit variable, maximum 3 units.

M89 PACS 510 Auditory Perception

Study of how the listener perceives parameters of and differences in acoustical stimuli. Perception of the speech stimulus is also studied in detail, both for listeners who are typically-developing and those who are deaf or hard of hearing. Prerequisites: Permission of department required.

Credit 3 units.

M89 PACS 511 Hearing Conservation

This course will cover topics related to hearing conservation, including effects of noise on hearing, environmental noise, classroom acoustics, federal regulations, interactions of noise and other agents, and ototoxicity. Additional topics may vary year-to-year. Prerequisites: Permission of department required. Credit 3 units.

M89 PACS 517 Counseling for Audiology

Examines the relationship between clinician and patient in audiology. Topics include counseling theory and practices, and principles and methods of effective interviewing and counseling across the lifespan. Prerequisites: Permission of department required.

Credit 2 units.

M89 PACS 519 Psychosocial and Educational Foundations of Deafness

Examines psychological, social, educational, legal, historical, and cultural influences related to individuals who are deaf or hard of hearing. Additional topics include IEPs and interprofessional collaboration related to post-high-school transitions. Prerequisite: Permission of department required. Credit 2 units.

M89 PACS 543 Survey of Speech and Language Disorders

Surveys a broad range of speech and language disorders in terms of associated characteristics, assessment techniques and treatment considerations. Prerequisites: Permission of department required.

Credit 2 units.

M89 PACS 544 Clinical Observation and Methods in Speech-Language Pathology

Provides students with an introduction to clinical methods and observation experiences in speech-language pathology. Prerequisites: Permission of department required.

Credit 3 units.

M89 PACS 551 Research Seminar

A seminar of variable topics related to research in speech and hearing sciences. Each semester/section has its own specific area of focus, which may include an investigation of active areas of research, an overview of outcomes-based research and evidence-based practice for students' research projects, or thorough analysis and discussion of a specific area of active research. Refer to section description for information on specific topics by section. Prerequisite: Permission of department required.

Credit variable, maximum 3 units.

M89 PACS 554 Fundamentals of Early Intervention and Child Development

Course provides information about general and exceptional child development, focusing on ages birth through five years. Course also discusses historical and philosophical tenets of early intervention practice, focusing on a collaborative coaching model, which views families as engaged partners in the child's education. Other topics include addressing needs of families from a variety of cultural and economic backgrounds, linking families to resources, and federal laws that govern special education services for children with disabilities including transitions in service provisions for children at the age of 3 years. Prerequisites: Permission of department required.

Credit 1 unit.

M89 PACS 555 Early Intervention: Serving Children Who Are Deaf or Hard of Hearing, Birth to Age 5

This course provides an overview of early childhood development of children who are deaf or hard of hearing, birth to age 5, with particular focus on early speech and language development, intervention strategies, assessment techniques, instructional strategies, and aural rehabilitation. Course discusses the philosophical tenets of early intervention practice, which views families as engaged partners in the child's education, and respects cultural and linguistic diversity. Students will learn about IFSP and IEP development, as well as a variety of resources that can be provided to families. Prerequisite: Permission of department required.

Credit 3 units.

M89 PACS 558 Pre-Service Teacher Preparation

This course is designed to help students in the deaf education teacher training program create a teaching portfolio that reflects their own teaching development. Students will demonstrate their ability to reflect on and critique their own teaching practice, especially in relation to course planning, instructional strategies, differentiated learning, data-based decision making, tiered systems for supporting instruction, and classroom management.

Professional issues, including developing a résumé and conducting interviews, will also be discussed. Prerequisite: permission of department required.

Credit 1 unit.

M89 PACS 5601 Clinical Audiology I

An introduction to the field of clinical audiology. Covers the role of the audiologist in the diagnosis and treatment of hearing disorders; the administration and interpretation of audiologic test results; and amplification systems and assistive devices, such

as DM/FM technology. Additional topics may include relevant calibration and instrumentation requirements, audiology as a career, aural rehabilitation, and legal and ethical issues in the field. Prerequisites: Permission of department required.
Credit 3 units.

M89 PACS 5602 Clinical Audiology II

Covers hearing evaluation and diagnosis in clinical audiology from infancy through adulthood. Topics include auditory processing disorders, functional hearing loss, and other advanced measures. Prerequisites: Permission of department required.
Credit 3 units.

M89 PACS 5651 Hearing Devices in Audiology I

Philosophical issues related to the selection and evaluation of hearing devices, including hearing aids and alternative devices. Means of adjusting hearing devices and measuring their function and benefit are covered.
Credit 4 units.

M89 PACS 5652 Hearing Devices in Audiology II

Advanced issues related to the selection and evaluation of hearing aids. Means of adjusting hearing aids and measuring their function and benefit. Prerequisite: permission of department required.
Credit 3 units.

M89 PACS 5653 Hearing Devices in Audiology III

Course covers a variety of topics related to selection, fitting and rehabilitation of cochlear implant patients. Lectures and practical experience in psychophysical testing, programming of the cochlear implant, and auditory training. Prerequisite: permission of department required.
Credit 3 units.

M89 PACS 569 Hearing Disorders

This course covers the nature and causes of hearing disorders, including outer and middle ear, cochlear, retrocochlear and central nervous system. Prerequisites: Permission of department required.
Credit 2 units.

M89 PACS 570 Independent Study

Students engage in independent work on the Independent Study, which demonstrates advanced critical thinking and writing skills. Prerequisites: Permission of department required.
Credit variable, maximum 6 units.

M89 PACS 5700 Capstone Project

Independent work on the Capstone Project. Prerequisites: Permission of department required.
Credit variable, maximum 6 units.

M89 PACS 5701 Capstone Project Seminar

This weekly, joint meeting is intended to provide extra and preliminary support for initiation of the Capstone Project. Areas will include but are not limited to: journal article critique, scientific writing, overview of research design and methodologies, statistical review, support for graph and table construction, and others. Prerequisites: Permission of department required.

Credit 1 unit.

M89 PACS 574 Statistics and Research Methods

Examines experimental and field research methods as they apply to audiology and communication sciences. Covers such methods as surveys, survey interviews, content analysis, and experimental design. Prerequisites: Permission of department required.
Credit 3 units.

M89 PACS 575 Special Topics

Special topics in speech and hearing sciences, audiology and/or education of the deaf or hard of hearing. Contact the department for more information. Prerequisites: Permission of department required.
Credit variable, maximum 4 units.

M89 PACS 577 Research in Speech and Hearing

Prerequisites: Permission of department required.
Credit variable, maximum 12 units.

M89 PACS 587 Dissertation Research

Prerequisites: Permission of department required.
Credit variable, maximum 12 units.

M89 PACS 597 Mentored Teaching Experience in Speech and Hearing

Mentored teaching experience as a graduate teaching assistant. Under faculty supervision, credit may be earned through instruction of undergraduate or graduate students in courses offered by PACS. (Taken concurrently with LGS 600-48.)
Credit variable, maximum 12 units.

M89 PACS 886 Doctoral Nonresident

This course option is a placeholder that may be used when a doctoral student needs to maintain enrollment but is not registered for any course, teaching, or research hours for the semester. Doctoral students on an approved leave of absence should also be registered under this course option. Prerequisite: permission of department required.

Urban Studies

The interdisciplinary major in urban studies is ideal for students drawn to serious examination of the profound issues confronting urban/metropolitan America. Urban Studies seeks to prepare students — who are indeed our nation's future leaders — for the challenge of solving these issues. We help students to research and investigate such issues as the evolving patterns of metropolitanism and the necessity for central city reconstruction; the problems associated with gentrification, urban sprawl and affordable housing; the crises confronting newly emerging immigrant communities and the social cleavages of urban marginalized communities; unemployment and underemployment; law and justice; HIV/AIDS and issues of public health; the economic underdevelopment of poor communities; race and inequality; the paradox of declining welfare rolls amidst escalating poverty rates; underperforming

urban schools; and the in-migration and out-migration of the city and its schools. All available social indices suggest that such domestic issues in our central cities will only increase in significance during the years ahead. The fact that many of the aforementioned issues are deeply embedded in the cities of the world allows students in the Urban Studies program to focus not just on domestic cities but on global cities as well.

Urban studies is a stand-alone major. Current students in the program are jointly pursuing study in pre-law, pre-medicine, political science, educational studies, environmental studies, economics, international and area studies, philosophy-neuroscience-psychology, architecture and comparative arts, among others. Our purpose is to prepare students to critically engage with the social, political and economic dilemmas facing the world's cities with intellectual rigor, integrity, sensitivity and compassion. The program draws faculty and course work from various academic units, including Arts & Sciences, the Brown School (social work and public health), the School of Law, and the College of Architecture at the Sam Fox School of Design & Visual Arts. To complement our course work, the Urban Studies program accepts internships that are based locally, nationally, or internationally, with appropriate support documents.

Majors

The Major in Urban Studies

Total required units: 33 units, 21 of which must be at the 300 level or above. Of these 21 advanced units, no more than 6 units may be from independent study courses. All courses for the major must be taken for a letter grade, and students must obtain a passing grade of B or better.

Required courses:

- URST 299 The Study of Cities and Metropolitan America
- One introductory course in math or applied statistics
- One 400-level independent study or an internship located locally, nationally, or internationally
- A senior thesis (or senior seminar, if offered)

Elective courses: There are five subject area concentrations in Urban Studies: neighborhoods and community development; urban education; cities of the world; public policy/social policy; and public health. Once a student declares a major in urban studies, they will be assigned a major adviser who will help the student formulate the area concentration.

Because of the nature of the major and the requirements of the nonresidential components, majors are strongly encouraged to declare by their third semester in residency.

Additional Information

Study Abroad: The program offers study abroad opportunities in conjunction with the International Urban Scholars Study Abroad Program through Oxford University, the London School of Economics and Political Science, the University of Cape Town in South Africa, and Fudan University in Shanghai, China.

Senior Honors: Urban studies majors are encouraged to work for Senior Honors, for which they may apply during the junior year. Acceptance into the program is based on the student's previous academic performance and a proposal to a core (not affiliated) faculty member in Urban Studies who agrees to supervise the honors research. The honors candidate must complete honors thesis research, which is evaluated by a three-member faculty committee.

Minors

The Minor in Urban Studies

Total required units: 15

Required course (3 units):

Code	Title	Units
URST 299	The Study of Cities and Metropolitan America	3

Elective courses (12 units):

Students must complete 12 units at the 300 level or above. All courses for the minor must be taken for a letter grade, and students must obtain a passing grade of B- or better. These courses must be home-based in three different departments or programs and may not include courses in the student's major field. A complete list of general courses that count toward the Urban Studies minor is published each semester in WUCRSL. No more than 3 units may be counted from among the following: directed readings, independent study, internships, University College, or credits from another institution, including study abroad.

Additional Information

The minor in Urban Studies facilitates the study of urbanization across the globe from multiple disciplinary perspectives. It is designed to complement any major field of study. Students are encouraged to pursue course work, in companion with their

major field of interest, that is distinctive yet complementary to the study of urbanization, which impacts all fields of inquiry. Courses must be selected in consultation with the program director/adviser in Urban Studies.

Courses

Visit online course listings to view semester offerings for L18 URST (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L18&crslvl=1:4>).

L18 URST 101 First-Year Seminar: Introduction to Urban Studies

This course provides a survey of the field of urban studies, utilizing the City of St. Louis as a field site. The major purpose of the course is to gradually reveal how a city operates internally, and how it operates externally with its sister cities, surrounding metropolitan areas and neighboring states, amidst competing and often contradictory interests. Utilizing historical analysis as a guide, the course briefly revisits the experiences of previous waves of ethnic groups to the St. Louis metropolitan area, as a lens for understanding the current social, political and economic dilemmas that many urban dwellers in St. Louis now face. The course reveals to students the intricacies of social welfare issues and policies among high density populations, in St. Louis, that are homogeneous and heterogeneous, at the same time. Visits and discussions with various governmental and nongovernmental agencies, and how such agencies function or dysfunction for various constituencies allow students to ask crucial questions regarding equality of opportunity in a democratic society. Students also encounter diverse communities and neighborhoods and the intended and unintended consequences of social welfare policies designed to ameliorate urban dilemmas such as poverty and inequality, homelessness, educational underachievement, gentrification, migration and immigration, development, health care, fiscal issues, the informal economy, and issues concerned with crime and social justice, among others. Readings are reinforced and challenged through visits, interactions and observations with broad constituencies and institutions, ranging from city officials to community residents. As such, this course offers a survey discussion of the rich interdisciplinary field of urban studies for those who may be interested in pursuing a standalone major in the field of urban studies.

Credit 3 units. A&S: FYS A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L18 URST 163 Freedom, Citizenship, and the Making of American Culture

This course offers a broad survey of American history from the era before European settlement of North America to the late 20th century. The course explores the emergence and geographic expansion of the United States and addresses changes in what it meant to be an American during the nation's history. Tracing major changes in the nation's economic structures, politics, social order and culture, the course chronicles, among other issues, changes in the meanings of freedom, citizenship and American identity. Introductory course to the major and minor. Same as L22 History 163

Credit 3 units. A&S IQ: HUM, LCD, SD Art: CPSC, HUM BU: HUM EN: H

L18 URST 2020 The Immigrant Experience

This course explores the history and politics of immigrant groups in the 19th and 20th century United States. Topics include legislation, patterns of migration, comparisons of different waves of immigration, and changing social attitudes.

Same as L98 AMCS 202

L18 URST 2091 First-Year Seminar: The City in Early Modern Europe

From the city-states of Renaissance Italy to the 18th-century boomtowns of London and Paris, cities functioned as political, economic, and cultural centers, creating unique opportunities and challenges for their diverse inhabitants. Using a wide variety of primary and secondary sources, this course will examine how men and women, rich and poor, and established citizens and marginal groups tried to understand and manage life in the city. Their conflicting experiences and expectations created not only social and economic unrest but also a resilient social infrastructure, a tradition of popular participation in politics, and a rich legacy of cultural accomplishment. Topics studied include urban political and economic organization; the creation and use of public spaces; religion as a source of community and conflict; and urban crime and public punishment.

Same as L22 History 2091

Credit 3 units. A&S: FYS A&S IQ: HUM, LCD, SD BU: HUM, IS

L18 URST 230 Topics in Urban America: The Sensory Landscape of the American City

This course foregrounds the interpretive and analytical approaches used in the study of American cities. The city is a crucial frame for understanding the nation's cultural, economic, social, political and ecological concerns and evolution. Employing multiple perspectives, we interpret urban space as a product of culture, explore the city's importance in shaping American society, and investigate the ongoing evolution of the built environment. This course lays the basis for interdisciplinary thinking and research in American culture studies. The topic varies by semester. Please consult course listings for a description of the current offering. The course is ideal for AMCS majors and minors, but others are welcome. This course fulfills the introductory course requirement for AMCS students.

Same as L98 AMCS 230

Credit 3 units. BU: BA, HUM

L18 URST 233 Biomedical Ethics

A critical examination, in the light of contemporary moral disagreements and traditional ethical theories, of some of the moral issues arising out of medical practice and experimentation in our society. Issues that might be discussed include euthanasia, genetic engineering, organ transplants, medical malpractice, the allocation of medical resources, and the rights of the patient.

Same as L30 Phil 233F

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

L18 URST 258 Law, Politics and Society

This course is an introduction to the functions of law and the legal system in American society. The course material stresses the realities of the operation of the legal system (in contrast to legal mythology), as well as the continuous interaction and feedback between the legal and political systems. There are four specific objectives to the course: (1) to introduce legal concepts and legal theories; (2) to analyze the operation of the appellate courts, with particular emphasis on the U.S. Supreme Court; (3) to analyze the operation of American trial courts, especially juries and the criminal courts; and (4) to examine the linkages between culture and law. Not open to students who have previously taken Pol Sci 358.

Same as L32 Pol Sci 258

Credit 3 units. A&S IQ: SSC EN: S

L18 URST 298 Practicum in Urban Studies

Practicum with an urban studies-affiliated faculty. All proposals for practicum must be submitted for review and approved by the urban studies adviser. Enrollment by permission of the instructor. Credit variable, maximum 3 units.

L18 URST 299 The Study of Cities and Metropolitan America

This course serves as the introductory course analyzing the forces shaping America's cities and surrounding metropolitan areas. It examines strategies for dealing with many of the profound social issues affecting urban/metropolitan America. Emanating from a historical perspective, it examines the ways in which industrialization and deindustrialization shaped Northern American cities and the consequences of deindustrialization on urban citizenry. It further surveys the demographic and spatial transformation of American cities, examining the consequences of urban transformation on federal, state and local politics on society and on her institutions. Similarly, the course focuses on the origin and societal changes and emerging goals of urban development, gentrification and evolving patterns of metropolitanism and the necessity for central city as well as neighborhood reconstruction. The dynamics of racial residential segregation; crime and punishment; issues of academic achievement and under-achievement; and the social cleavages of urban marginalized communities, family structure, urban homelessness, urban sprawl and health care among others, are viewed from the perspective of social justice by exploring social, political, economic, racial and ethnic factors that impact on access, equity and care. Various theoretical perspectives and philosophies are introduced that have dominated the discourse on race and urban poverty. A field-based component complements the course work, and is designed to build interest, awareness and skills in preparation for outreach to urban communities. Prerequisite: sophomore standing.

L18 URST 303 Independent Study in Urban Studies

Independent study with an urban studies-affiliated faculty. All proposals for practicum must be submitted for review and approved by the urban studies adviser. Enrollment by permission of the instructor.

Credit variable, maximum 3 units. EN: S

L18 URST 304 Educational Psychology

A course in psychological concepts relevant to education. Organized around four basic issues: (1) how humans think and learn; (2) how children, adolescents, and adults differ in their cognitive and moral development; (3) the sense in which motivation and intention explain why people act as they do; and (4) how such key human characteristics as intelligence, motivation, and academic achievement can be measured. Offered fall and spring semesters.

L18 URST 3066 The American City in the 19th and 20th Centuries

This course will explore the cultural, political, and economic history of U.S. cities in the 19th and 20th centuries. The course will focus on New York, Chicago, St. Louis, Los Angeles and Atlanta, although other cities may be included. Students will conduct significant primary research on sections of St. Louis, developing a detailed history of one of the city's neighborhoods. Much of the course readings address broad themes such as immigration, industrialization, deindustrialization, and race and gender relations in American cities.

Same as L22 History 3066

Credit 3 units. A&S IQ: HUM, SD Art: HUM BU: HUM

L18 URST 308 Human Variation

A survey of human biological diversity, considering its adaptive and taxonomic significance from the perspective of origins and distribution of traits and adaptation. Prerequisite: Anthro 150A or introductory biology.

Same as L48 Anthro 307A

L18 URST 3091 Poverty and Social Reform in American History

This course explores the history of dominant ideas about the causes of and solutions to poverty in American society. We will investigate changing economic, cultural, and political conditions that gave rise to new populations of impoverished Americans, and to the expansion or contraction of poverty rates at various times in American history. We will, however, focus primarily on how various social commentators, political activists and reformers defined poverty, explained its causes, and struggled to ameliorate its effects. The course aims to highlight changes in theories and ideas about the relationship between dependence and independence, personal responsibility and social obligation, and the state and the citizen.

Same as L22 History 3091

Credit 3 units. A&S IQ: HUM, SD BU: BA EN: H

L18 URST 313B Education, Childhood, Adolescence and Society

This course examines the social and developmental experiences of children and adolescents at the national and international level. Readings will focus on the development of children and adolescents from historical, sociological, psychological, and political perspectives. Students will examine how both internal and external forces impact the developmental stages of children and adolescents. Students will investigate the issues that impact children and adults such as poverty, war, media, schooling, and changes in family structure. Students will explore some of the issues surrounding the education of children such as the effects of high quality preschool on the lives of children from low income families and the connection between poverty and educational achievement. Students will focus on the efficacy of the "safety nets" that are intended to address issues such as nutrition, health, violence, and abuse. Throughout the course, students will review and critique national and international public policy that is designed to address the needs of children and their families throughout the educational process.

L18 URST 3141 Sociolinguistics, Literacies, Schools, and Communities

Literacy learning and development within a thriving community requires attention to the linguistic, cultural, and economic diversity of students. Within an era of state standardization and accountability, it is imperative to use a systems approach in education that unites homes, schools, and communities. Differentiating instruction to meet the needs of all students, including English Language Learners (ELLs) and other traditionally marginalized groups of students, is essential. This course will introduce students to sociocultural theories of literacy across settings. It will prepare students to analyze how race, ethnicity, class, gender, and language influence the development of literacy skills. We will develop a multifaceted view of literacy that is embedded within culture and acknowledges the influences of social institutions and conditions. Incorporates strategies for individual student needs based on background and prior experiences to deliver differentiated instruction and teaches students to set learning goals.

L18 URST 3211 Introduction to Colonial Latin America until 1825

This course surveys the history of Latin America from the pre-Columbian civilizations through the Iberian exploration and conquest of the Americas until the Wars of Independence (roughly 1400-1815). Stressing the experiences and cultural contributions of Americans, Europeans and Africans, we consider the following topics through primary written documents, firsthand accounts and excellent secondary scholarship, as well as through art, music and architecture: Aztec, Maya, Inca and Iberian civilizations; models of conquest in comparative perspective (Spanish, Portuguese and Amerindian); environmental histories; consolidation of colonialism in labor, tributary and judicial systems; race, ethnicity, slavery, caste and class; religion and the Catholic Church and Inquisition; sugar and mining industries, trade and global economies; urban and rural life; the roles of women, gender and sexuality in the colonies. Geographically, we cover Mexico, the Andes and, to a lesser extent, Brazil, the Southwest, Cuba, and the Southern Cone.

Premodern, Latin America.

L18 URST 3352 China's Urban Experience: Shanghai and Beyond

The course studies the history of Chinese cities from the mid-19th century to the late 20th century. It situates the investigation of urban transformation in two contexts: the domestic context of modern China's reform and revolution; and the global context of the international flow of people, products, capitals and ideas. It chooses a local narrative approach and situates the investigation in one of China's largest, complex, and most dynamic and globalized cities — Shanghai. The experience of the city and its people reveals the creative and controversial ways people redefined, reconfigured and reshaped forces such as imperialism, nationalism, consumerism, authoritarianism, liberalism, communism and capitalism. The course also seeks to go beyond the "Shanghai model" by comparing Shanghai with other Chinese cities. It presents a range of the urban experience in modern China.

L18 URST 3405 For Freedom's Sake: The Civil Rights Movement in America

This course provides an introduction to the period of struggle in American history known as the Civil Rights Movement. Our primary task is to survey the major historical figures, organizations, locations, strategies and ideas that coalesce to make the history of the movement. The course broadly covers the years of the Black Freedom Struggle between 1945 and 1971, with a sharper focus on the pivotal years of 1954-1965. By placing the movement within a broader context, the course seeks to identify the historical developments and social realities that made the movement necessary and possible. The class also looks at the years following the movement, and the general transition from Civil Rights to Black Power.

L18 URST 343 Understanding the Evidence: Provocative Topics of Contemporary Women's Health and Reproduction

Contemporary topics of women's health and reproduction are used as vehicles to introduce the student to the world of evidence-based data acquisition. Selected topics span and cross a multitude of contemporary boundaries. Issues evoke moral, ethical, religious, cultural, political and medical foundations of thought. Students are provided introductory detail to each topic and subsequently embark on an independent critical review of current data and opinion to formulate their own said

notions. Examples of targeted topics for the upcoming semester include, but are not limited to: Abortion, Human Cloning, Genetics, Elective Cesarean Section, Fetal Surgery, Hormone Replacement, Refusal of Medical Care, Medical Reimbursement, Liability Crisis and Gender Bias of Medical Care.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH EN: S

L18 URST 3472 Global Energy and the American Dream

This lecture course explores the historical, cultural and political relationship between America and global energy, focusing on oil, coal, natural gas, biofuels and alternatives. Through case studies at home and abroad, we examine how cultural, environmental, economic and geopolitical processes are entangled with changing patterns of energy-related resource extraction, production, distribution and use. America's changing position as global consumer and dreamer is linked to increasingly violent contests over energy abroad while our fuel-dependent dreams of boundless (oil) power give way to uncertainties and new possibilities of nation, nature and the future. Assuming that technology and markets alone will not save us, what might a culturally, politically and socially minded inquiry contribute to understanding the past and future of global energy and the American dream?

Same as L48 Anthro 3472

L18 URST 348 Economic Realities of the American Dream

Exploration of the realities of economic life in the U.S. and how they correspond to the American Dream. Interdisciplinary perspectives from economics, sociology, and other areas of social inquiry. Emphasis on the consistency between empirical data and different concepts of the American Dream. Specific topics to include sources of economic growth and changing living standards, unemployment, impact of globalization on U.S. citizens, economic mobility, poverty and inequality, and social justice. Prerequisites: Econ 1011 and Econ 1021, or consent of the instructors.

Same as L11 Econ 348

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L18 URST 3551 The Welfare State and Social Policy in America

How can we understand the recent debate about fundamental health care reform? Should social security be partially or wholly privatized? Was the 1996 welfare reform a success? Contemporary political questions frequently focus on the American welfare state and the social policies that compose it. The first half of this course describes the American welfare state broadly construed, places it in a comparative context, and elucidates major political science explanations for the size and scope of American social policy. We touch on several areas of social policy while constructing the generalized lenses through which particular political outcomes can be understood. The second part of the course then focuses on three major aspects of the American welfare state: health care, old age pensions and policies related to work, poverty and inequality.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L18 URST 360 Religion and the Modern Civil Rights Movement, 1954-1968

The modern Civil Rights Movement is a landmark event in the nation's political, civic, cultural and social history. In many contexts, this movement for and against civil and legal equality took on a religious ethos, with activists, opponents and observers believing that the net result of the marches, demonstrations and legislative rulings would redeem and/or destroy "The Soul of the Nation." This seminar examines the modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement. The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures and communities that were indifferent, combative, instrumental and/or supportive of Civil Rights legislation throughout the mid-20th century.

L18 URST 3612 Population and Society

This review of population processes and their social ramifications begins with an introduction to the basic terminology, concepts, and methods of population studies, followed by a survey of human population trends through history. The course then investigates biological and social dimensions of marriage and childbearing, critically examines family planning policies, deals with the social impacts of epidemics and population ageing, and looks at connections between population movements and sociocultural changes. The overall objective of the course is to understand how population processes are not just biological in nature, but are closely related to social, cultural, political, and economic factors.

L18 URST 3613 City of Peace: Baghdad in Medieval Times

The subject of this course is an exploration of the city of Baghdad in medieval times from its foundation in the eighth century to its sack by the Mongols in the 13th. Starting from the background history of its location in Mesopotamia, we study the reasons of its foundation in that location and examine its topography, city planning and layout, institutions, citizens, neighborhoods, markets, libraries and workshops to discuss life in the city. Because Baghdad was the seat of the Abbasid caliphate at the time, we examine its role as the hub of the empire (in politics, administration, economy and literature), and its links to and rivalries with other provincial cities.

L18 URST 3626 Adventures in Nosology: The Nature and Meaning of Disease

What is a "disease" and how do you diagnose one? What are "medicines" and how, when, and for what purpose should they be used? These questions reflect universal human concerns, but the answers given to these questions have varied enormously in different times and places. The course considers the nature of health, illness, disease and its treatment, beginning with a detailed examination of the traditional ethnomedical system of the Hausa people of northern Nigeria. Using this West African medical system as a baseline for comparison, the course then explores the nature of "nosology" (the classification of diseases) and the underlying logic of different therapeutic systems in

different times and cultures, including our own. The course draws on ethnography, the history of medicine, bioethics and human biology to understand how these questions are asked and answered in different societies, times and places.

L18 URST 3670 The Long Civil Rights Movement

The Civil Rights Movement is known as a southern movement, led by church leaders and college students, fought through sit-ins and marches, dealing primarily with non-economic objectives, framed by a black and white paradigm, and limited to a single tumultuous decade. This course seeks to broaden our understanding of the movement geographically, chronologically and thematically. It pays special attention to struggles fought in the North, West and Southwest; it seeks to question binaries constructed around "confrontational" and "accommodationist" leaders; it reveals how Latinos, Native Americans and Asian Americans impacted and were impacted by the movement; and it seeks to link the public memory of this movement with contemporary racial politics.

L18 URST 3755 Disability, Quality of Life & Community Responsibility

The increasing prevalence of disability presents major challenges for American society. Social participation can be a challenge for people with disabilities, while resources to address these needs tend to be limited. This course will begin by critically analyzing concepts of disability, Quality of Life, health and social participation. We will construct a framework for examining social participation and community resources across the lifespan. Public health, educational and environmental theories and methods will be applied to programs and services that aim to enhance quality of life with disabilities. We will analyze ecological approaches to enhancing social participation. Upon completion of this course, students will be equipped to analyze challenges and prioritize resources for individual and population health.

L18 URST 380 Applications in GIS

This introductory course in Geographic Information Systems (GIS) is designed to provide you with the knowledge, skills, and confidence to be an independent user of GIS. The course will use the latest version of ESRI ArcGIS. The course is taught using a combination of lectures, demonstrations, and hands-on, interactive tutorials in the classroom. You will also explore the scientific literature to understand how GIS is being used by various disciplines to address spatial questions. The course takes a multidisciplinary approach that is focused on learning the tools of GIS versus working with data from a particular field. The goal is to establish a solid foundation you can use to address spatial questions that interest you, your mentor, or your employee. The first weeks of the course will provide a broad view of how you can display and query spatial data and produce map products. The remainder of the course will explore the power of GIS with a focus on applying spatial analytical tools to address questions and solve problems. As the semester develops, more tools will be added to your GIS toolbox so that you can complete a final independent project that integrates materials learned during the course with those spatial analyses that interest you the most. Students will have the choice of using a prepared final project, a provided data set, or designing an individualized final project using their own or other available data.

L18 URST 400 Urban Education in Multiracial Societies

This course offers students an analysis of the historical development and contemporary contexts of urban education in English-speaking, multiracial societies. It examines legal decisions, relevant policy decisions, and salient economic determinants that inform urban systems of education in Western societies including, but not limited to, the United States, Canada, Great Britain, and South Africa. The course draws on quantitative, qualitative, and comparative data as an empirical foundation to provide a basis for a cross-cultural understanding of the formalized and uniform system of public

schooling characteristic of education in urban settings. Given the social and material exigencies that shape urban school systems in contemporary societies, special attention is given in this course to the roles of migration, immigration urbanization, criminal justice, industrialism, de-industrialism, and globalization in shaping educational outcomes for diverse students in the aforementioned settings. Prerequisite: junior standing or permission of instructor.

Credit 3 units. A&S IQ: SSC, WI EN: S

L18 URST 403 Directed Study in Urban Studies

Directed study with an urban studies-affiliated faculty. All proposals for practicum must be submitted for review and approved by the urban studies adviser. Enrollment by permission of the instructor.

Credit variable, maximum 3 units.

L18 URST 4033 Video Microanalysis: Methods and Tools

The purpose of this course is to explore video microanalysis as a methodological tool for studying and valuing unconscious aspects of culturally diverse settings. Utilizing a social/cultural theoretical lens, this type of analysis reveals fleeting actions, subtle movements, peripheral events, and nonverbal communication that are not easily identified in real time viewing. Specifically we may look at facial expressions, direction of gaze, hand movements, body position, and use of material resources as micro techniques to expand our capacity to explore minute aspects and alternative interpretations of social interactions.

Same as L12 Educ 4033

Credit 3 units. A&S IQ: SSC, SD Arch: SSC Art: SSC EN: S

L18 URST 404 Directed Readings in Urban Studies

This course consists of readings in urban studies that deal with a range of contemporary issues, focusing on cities and the surrounding metropolitan regions. It can be taken only under the direction of the director of the urban studies program. Prerequisite: permission of instructor. The student must be a declared major in urban studies. Consult program approval form. Credit 3 units.

L18 URST 4041 Islam and Politics

Blending history and ethnography, this course covers politics in the Islamic world in historical and contemporary times. Topics include history of Islam, uniformity and diversity in belief and practice (global patterns, local realities), revolution and social change, women and veiling, and the international dimensions of resurgent Islam. Geographical focus extends from Morocco to Indonesia; discussion of other Muslim communities is included (Bosnia, Chechnya, sub-Saharan Africa, U.S.).

Same as L48 Anthro 4041

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS

L18 URST 406 Sexual Health and the City: A Community-Based Learning Course

In this community-based learning course, students partner with a St. Louis AIDS service organization (ASO) or sexual health agency to explore how the interrelationships among gender, class, race/ethnicity and sexual identity shape sexual health decisions, outcomes and access to services. Students also examine the complex relationship between men's and women's life goals and constraints, on the one hand, and the public health management of sexual health, on the other. In collaboration with their community partner and its clients, students develop a

project that addresses an identified need of the organization and the community it serves. Course readings draw from the fields of anthropology, public health, feminist studies and policy making. Prerequisite: PHealth 4134 The AIDS Epidemic: Inequalities, Ethnography and Ethics or permission from the instructor, which is determined based on past student's experience in the fields of medical anthropology or sexual/reproductive health.

L18 URST 4101 Metropolitan Finance

This course is an interdisciplinary examination of fiscal policies in metropolitan regions and the related public policies that can make them better or worse places for living and working. A particular focus is on the financial structures and arrangements — both public and private — that support or hinder quality of life in urban spaces. Core topics of study include the potential impact of decentralized governments on metropolitan economic development, determination of optimal arrangements for sharing fiscal responsibilities among levels of government, evaluation of local revenue and expenditure decisions, and assessment of prospects and options for intergovernmental fiscal reform. The course is consistent in its approach to policy. Drawing on literature in sociology, education, public finance, community development, political economy and other related fields, the course readings and experiences explore how fiscal policies can and do affect urban dwellers and their well-being. This is a departure from many public finance courses. Such an approach leads to very different questions: How do liquor zoning regulations influence minority and nonminority children in schools? Should whites be paid to move into minority neighborhoods or vice versa? This approach to the study of metropolitan finance puts an emphasis on topics such as child care, public transportation, minimum wage, housing codes, street behavior, homelessness, incarceration, alcohol, sports stadiums, illicit drugs, tax abatements, water service, garbage collection, schools, higher education, sprawl and technological change, with consideration given to political, institutional and cultural factors. Students are required to attend hearings, meetings and other relevant functions associated with the development of public financial policy. Prerequisites: URST 299 and either junior standing or permission of the instructor.

Credit 3 units. A&S IQ: SSC EN: S

L18 URST 4102 Latin America and the Rise of the Global South

The rise of the global south — and the reordering of global geopolitics, economics and cultural imaginaries — is characterized by progressive change and intense conflict. Economic growth coincides with the impacts of global warming, the assault on natural resources, the rise of new consumers

and the entrenchment of deep inequalities. We also see the emergence of cultural and political formations that range from the horrific to the inspiring. Latin America is a central node of the new global south. Here history takes unpredictable turns in the face of declining U.S. hegemony, the economic growth of Brazil, legacies of militarism and political violence, a feverish attack on nature, resurgent economic nationalism, and defiant "anti-globalization" movements. Through close reading of contemporary ethnographies of Latin America we explore emergent cultural and political-economic processes in the region; we consider south-south articulations (theoretical, cultural, political-economic) between Latin America, China, Africa and India; and we reflect on the changing role, meaning and relationships of the United States in the region.

Same as L48 Anthro 4102

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

L18 URST 418 Studying the City: Approaches to Social Research

In this course we explore social science/social scientific research methods. The course is designed primarily for students majoring in urban studies. However, the research skills that students acquire can be applied to any substantive topic in the social sciences. The main goal of this course is that students develop the skills to independently design and execute high-quality social research, regardless of their substantive interests. To develop these skills we read about methods, assess published research from a methodological perspective, and complete original research projects.

Credit 3 units. A&S IQ: SSC EN: S

L18 URST 4261 The Political Economy of Urban Education

Defining a political economy of urban education involves the examination of power and wealth and the manner in which they operate in urban settings. It requires analysis of the larger urban social and economic context and consideration of historical forces that have brought the schools to their present state. In this course, we consider various political and economic factors that have influenced and shaped urban education in the United States, drawing upon the extant literature on urban education and related social science disciplines to characterize and discuss them. A particular focus of this course is on the dynamic interrelationships among the political economy, urban education and social stratification.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L18 URST 4280 History of Urban Schooling in the United States

This reading colloquium examines the history of urban schooling and school policy in the United States. Readings focus on the growing literature in the history of urban schooling and on primary source material. We explore urban schooling in general and we examine particular primary source material as well as particular cities and their school districts. Such districts may include New York, Boston, Chicago, Detroit, St. Louis, Los Angeles, San Francisco, Atlanta and others. The course has two goals: to develop a strong contextual understanding of the conditions of urban schooling, the history of urban school reform, and the debates over the purposes of urban schools; and to examine the ways historians have explored urban schooling in the U.S. Students should expect to read a book a week as well as primary source materials and occasional articles.

Same as L12 Educ 4280

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L18 URST 4289 Neighborhoods, Schools, and Social Inequality

A major purpose of the course is to study the research and policy literature related to neighborhoods, schools and the corresponding opportunity structure in urban America. The course is informed by theoretical models drawn from economics, political science, sociology, anthropology, education and law. A major focus is to gain greater understanding of the experiences and opportunity structure(s) of urban dwellers, in general, and urban youth, in particular. While major emphasis is placed on data derived from the interface of urban environments and the corresponding institutions within them, the generational experiences of various ethnic groups complement the course foci.

L18 URST 4315 Culture, Language and the Education of Black Students

This course examines the communicative patterns of what is called variously African-American language, Pan-African linguistic systems and Ebonics within the context of public school policy and practice. In addition to a review of the structural and pragmatic aspects of black speech, the course highlights relationships between controversies within the linguistic community, contrasting views of speech within black lay communities, public discourse, and educational policy. Students also conduct a field-based research project in accord with their particular interests.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

L18 URST 4361 Culture, Power and the State

This seminar surveys anthropological theory and ethnography of the nation-state. We will discuss how culture and power are interrelated in the formation of state institutions and ideologies, governance and violence, social and spatial inequalities, and citizen identities, daily lives, and movements for change. We'll read key theoretical works (Weber, Marx, Foucault, Gramsci, liberal political theory, feminism, and post-structuralism, among others) and contemporary ethnographies of the state. Anthropology's place in public debates on "culture" and violent crises of the state — from Iraq to the U.S. heartland — will be addressed at the end of the semester.

Same as L48 Anthro 4361

Credit 3 units. A&S IQ: SSC EN: S

L18 URST 4511 Race, Ethnicity, and Culture: Qualitative Inquiry into Urban Education I

Drawing on traditional and recent advances in the field of qualitative studies, this course is the first in a series to examine ethnographic research at the interlocking domains of race, ethnicity, class, gender and culture. The emphasis in this course is on how these concepts are constructed in urban educational institutions. The course includes a field component that involves local elementary and/or middle schools.

Same as L90 AFAS 4511

Credit 3 units. A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA EN: S

L18 URST 4512 Environmental Policy

Course examines the relationship between environmental economics and environmental policy. The course focuses on air pollution, water pollution and hazardous wastes, with some attention given to biodiversity and global climate change. The course examines critically two prescriptions that economics usually endorses: (1) "balancing" of benefits against costs (e.g., benefit-cost analysis) and the use of risk analysis in evaluating policy alternatives; and (2) use of market incentives (e.g., prices, taxes or charges) or "property rights" instead of traditional command-and-control regulations to implement environmental policy. Prerequisite: Econ 1011.

L18 URST 455 Topics in Urban Studies

Prerequisites: URST 299 and senior standing.
Credit 3 units.

L18 URST 4601 Urban Economics

Economic function of the city and the role of the city in a national economy. Local decision-making; financing of local government expenditures. An analysis of selected urban problems, such as causes and effects of housing market segregation; decay and abandonment; landlord-tenant relations; crime; and urban transport systems. Prerequisite: Econ 4011.

Same as L11 Econ 460

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L18 URST 4608 The Education of Black Children and Youth in the United States

This course provides an overview of the education of Black children and youth in the United States. Covering both pre- and post-Brown eras, this course applies a deep reading to the classic works of DuBois and Anderson as well as the more recent works of Kozol, Delpit, and Foster. The social, political, and historical contexts of education, as essential aspects of American and African-American culture and life, are placed in the foreground of course inquiries.

L18 URST 461B Construction and Experience of Black Adolescence

This course examines the construct of black adolescence from the general perspectives of anthropology, sociology and psychology. It begins by studying the construct of black adolescence as an "invention" of the social and behavioral sciences. The course then draws upon narrative data, autobiography, literature and multimedia sources authored by black youth to recast black adolescence as a complex social, psychological, cultural and political phenomenon. This course focuses on the meaning-making experiences of urban-dwelling black adolescents and highlights these relations within the contexts of class, gender, sexuality and education.

L18 URST 4622 Labor and Labor Movements in Global History

Focusing on the period from mid-19th century (industrial revolution) until the present neoliberal capitalist era, this course analyzes working class formation, organization, collective action, and politics on a worldwide scale. It seeks to explore the connections between historical and contemporary workers' movements in the global North and global South, eschewing national perspectives and global/local dichotomies. Special attention is given to Latin American workers and labor movements. In particular, it examines the influence of immigration, the role of export workers, the impact of radical ideologies, the development of labor relations systems, the nature of informal work, and recent struggles for workers' control. The principal aim of this course is to introduce students to the key topics and themes pertaining to global labor history. These themes are varied and complex and range from workers' struggles.

Credit 3 units. A&S IQ: LCD, SSC, SC, SD Arch: SSC Art: SSC EN: S

L18 URST 465A Cities, Race and Development in Latin America

This course offers a multi-disciplinary approach to the study of the Latin American city: its history, development and inherent economic, social, cultural, ethnic, and political tensions. Lectures, readings, and class debates will explore interactions between the materiality and structure of Latin American modern cities and the social and cultural phenomena related to urban life in multicultural societies. Particular attention will be devoted to the effects of internal/external migration, and to the development of public spaces and sites of memory. Patterns of social segregation, marginalization, inequality, and the like, will be analyzed in order to elaborate on the contemporary challenges of the city in a globalized yet traditional world. In addition to the analysis of living, institutional, and commercial spaces, the course will cover social dynamics that break the discipline of the city through different forms of transgression, including crime, informal housing, and underground movements. The goal of the course is to expose students to historical and social developments as exemplified in a variety of urban environments, and to encourage reflection on issues of social justice related to the living conditions of rural, disadvantaged, and indigenous populations. The course will be conducted in English. Mandatory readings will be in English. Additional readings in Spanish will be required for those students fluent in the language. Prereq. None. L18 URST 472 Topics in Growth and Development

This course highlights important empirical facts concerning growth and development in various countries at different development stages. Fundamental growth theory is then provided for explaining these facts systematically and for evaluating the consequences of commonly adopted development policies. Topics vary, but may include population, human capital and labor market development, R&D and innovation, finance and growth, modernization and industrial transformation, world income disparities and poverty problems, institutions and political economy issues, environmental and social factors, and international trade and economic integration. Prerequisites: Econ 4011 and Econ 4021.

L18 URST 476 The City in American Arts and Popular Culture, 1910-1940

From the mid-19th century forward, artists, writers, sociologists, and cultural critics have identified the city as the primary site of a vast array of historical changes associated with modernization. This course will explore the range of cultural responses to the new 20th-century city up to World War II. The American city was seen as both an incubator of difference, and of mass conformity and manipulation; a dynamic space in which to form fluid networks that catalyzed new forms of creativity, and a place of strangers and social alienation. We will trace the history of these polarized responses in the 20th-century arts and literature of the city, looking at the vibrant popular culture of film, vaudeville, and cross-dressing; new aesthetic forms such as collage and expressionism; and new urban subjects. Prerequisites: 300-level course in American 20th-century cultural history, American art, literature, or permission of instructor.

L18 URST 482 Senior Thesis in Urban Studies

This course is required for students to complete the degree requirements in urban studies. Students discuss research methods and make regular research reports both to the instructor and for other students.

Credit 3 units.

L18 URST 4872 Colonial Cities and the Making of Modernity

Massive urban growth has been a central result of the incorporation of many areas — both central and peripheral — into the global economy in the 19th and 20th centuries. Scholars have long theorized urbanization as a key component of modernity, but they have usually done so by looking at urbanization and modernization from the perspective of the West. This course investigates the character of cities in the colony and then uses these empirical and analytical entry points to examine critically some theories of modernity. The geographical focus of the course is primarily on cities in the Middle East, North Africa and South Asia.

L18 URST 4891 Education and Public Policy in the United States

This course takes a triangulated approach to the field of public policy as it relates to education and social problems. First, the course emphasizes theories of public policy that frame the field of policy studies. Major questions extending from this

course feature include: What is public policy, policy behavior, its defining processes/features, and what social function does it serve? Second, the course emphasizes the skills related to the exercise of policy analysis. These skills include the crafting of technical documents within the field of public policy (e.g., a policy brief) and the application of scientific methods to the exploration of social problems/governmental actions. Likely issues related to this course feature include the use of scientific knowledge in political arenas, engagement with stakeholders and the intended/unintended consequences of policy science to political decision-making. Third, this course simulates the policy-making context through students' participation in mock congressional testimonies. These focal areas become central to an understanding of four social concerns: school desegregation following the Brown decisions; affirmative action in higher education; Head Start programs; and/or the ESEA Act of 1965, also known as No Child Left Behind. Educational opportunity, achievement inequality and social change are the primary interests that link these course features.

L18 URST 4991 Senior Honors Thesis in Urban Studies

This course is required for students seeking college honors through urban studies. Students discuss research methods and make regular research reports, both to the instructor and for other students. Prerequisites: satisfactory standing as a candidate for senior honors and permission of thesis director.
Credit 3 units. EN: S

L18 URST 4992 The Business of Us All: In/equality in Practice and Theory

This course uses a transdisciplinary approach to discuss in/equality and its interrelated topics of inequality, inequity and social justice. While the focus is on the U.S. predominantly, lessons learned from our global partners are important components of our discussions. The course will emphasize the implications of our findings for other ethnic/racial minorities around the world. Equality speaks to issues of priority, fairness and impartiality. On the other hand, inequality is defined as marked difference among individuals or groups of individuals in the distribution of social goods. Inequity, which considers bias, discrimination and injustice in distributive systems, pushes the discussion further. As the various forms of social, political and economic inequalities are mutually reinforced, we examine

economic inequality, residential segregation and housing quality; dis/investment in neighborhoods and communities; resource allocation to low income, city and predominantly ethnic minority schools; academic underachievement of minority youth; access to and provision of appropriate health care; curtailment of social welfare programs; the presentation of stereotypical images of persons of color in the media and school curricula; morbidity, mortality, and longevity rates for persons of color; environmental hazards; the surge in incarceration related to substance abuse and escalating criminal prosecution, as well as discriminatory behavior of police and judges. All of the foregoing is made worse by race and gender status variables. Such factors cannot be considered inconsequential to social im/mobility and equality in the larger society. The collateral damage borne by the intergenerational transfer of social im/mobility and in/equality to future generations are integral to course discussions.

Women, Gender, and Sexuality Studies

Faculty and students in the Department of Women, Gender, and Sexuality Studies use an interdisciplinary approach to examine the construction of women, gender, and sexuality throughout the world. The interdisciplinary research and training in our department position our students to be thought leaders and agents in addressing inequality in all of its forms. Our graduates have gone on to work in fields such as business, entertainment, law, medicine and social work. This community of scholars and activists is committed to doing the critical work of reimagining and producing a more inclusive future.

Among the first of its kind in the nation (est. 1972), the Department of Women, Gender, and Sexuality Studies at Washington University has emphasized the importance of gender and sexuality to such disciplines and interdisciplinary programs as philosophy, psychology, history, education, law, architecture, art history and archaeology, anthropology, political science, international studies, American culture studies, and studies in culture and languages.

Women, Gender, and Sexuality Studies students are often leaders in campus organizations that deal with issues concerning women, gender relations, sexuality and health. They also participate in a wide spectrum of cocurricular organizations available to undergraduates, including Students for Choice, Uncle Joe's Peer Counseling, LIVE, Student Forum on Sexuality, SARAH, Pride Alliance WU, and the Representation Project.

Majors

The Major in Women, Gender, and Sexuality Studies

A Bachelor of Arts degree with a major or second major in Women, Gender, and Sexuality Studies (WGSS) requires a total of 27 credits, 21 of which must be taken in courses numbered 300 or higher. At least 18 of the 21 upper-level credits required for the major may only count for the WGSS major and may not be double-counted toward another major. Courses that count for the major should be registered as WGSS courses (i.e., with the WGSS designation, L77). All courses taken for the major must be taken for a grade, and students must earn a grade of C- or higher.

The following six requirements must be fulfilled through WGSS home-based or cross-listed courses taken at Washington University. The theory and methods/service learning requirements must be completed at Washington University. Students requesting an exception and who wish to transfer credits in the theory or methods/service learning category must petition the department chair or the director of undergraduate education, who will consider the request.

The following requirements apply starting with the Class of 2022. Students who declared the WGSS major prior to this time should meet with their advisers regarding the previous requirements.

1. 3 credits of an introductory-level course: WGSS 100B Introduction to Women, Gender, and Sexuality Studies. Students must file a copy of a paper from this course with the WGSS office (McMillan Hall, Room 210).
2. 3 credits of a theory course
3. 3 credits of a feminist research methods course or a service learning course. **Note:** Students who write an honors thesis must take WGSS 417W Feminist Research Methodologies and enroll in WGSS 499 Honors Thesis: Research and Writing to fulfill this requirement. Students who take L77 417W must submit a copy of their final paper from this course to the WGSS office (McMillan Hall, Room 210).
4. 6 credits at the 400 level or an honors thesis. (This requirement applied to students as of fall 2018; for those who declared the major prior to fall 2018, only 3 credits at the 400 level are required.) One of the 3-credit courses must be a home-based WGSS class; the second may be either home-based or cross-listed. Students should consult with their WGSS advisers for approval of their chosen courses and to ensure that one of the courses is home-based.
5. 3 credits of a historical context course. This is a course that is home-based or cross-listed in WGSS that examines gender in a historical context. **Note:** A course that satisfies one of the previous four requirement areas in this list may also fulfill this requirement.
6. 3 credits of an ethnic/global/racial context course. This is a course that is home-based or cross-listed in WGSS that examines gender in an ethnic, global or racial context. **Note:** A course that satisfies one of the first four requirement areas in this list may also fulfill this requirement.

The WGSS program has four areas of focus around which courses are organized:

- Literature/theory/history
- Sexuality/the body/health
- Global and transnational feminist and gender studies
- Critical race in gender and sexuality studies

Students may choose to concentrate in one of these areas or to investigate all four.

We strongly encourage and support students who wish to study abroad and will accept up to 9 credits from approved programs. Please contact Barbara Baumgartner, WGSS Study Abroad Supervisor (bbaumgar@wustl.edu), about this option.

Current students who wish to take courses at other universities during the summer may transfer up to 6 credit units. However, these credits cannot be used to fulfill the introductory, theory, or methods/service learning requirements.

Students transferring to Washington University who wish to complete a major in WGSS may transfer no more than 9 credits of WGSS course work taken elsewhere.

Minors

The Minor in Women, Gender, and Sexuality Studies

Units required: 18 units, 12 of which must be taken in courses numbered 300 or higher. All minor courses must be home-based or cross-listed in Women, Gender, and Sexuality Studies (WGSS). All courses taken for the minor must be taken for a grade, and students must earn a grade of C- or higher.

We strongly encourage and support students who wish to study abroad and will accept up to 6 credits from approved programs. Please contact Barbara Baumgartner, WGSS Study Abroad Supervisor (bbaumgar@wustl.edu), about this option.

Required Courses

Individual programs are designed in consultation with an adviser in light of each student's interests and abilities, major course of study, and plans for the future. All courses must be home-based or cross-listed in WGSS.

Courses

Visit online course listings to view semester offerings for L77 WGSS (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L77&crslvl=1:4>).

L77 WGSS 100B Introduction to Women, Gender, and Sexuality Studies

This course will provide an introduction to the major and concepts in the interdisciplinary field of women, gender and sexuality studies. We will examine the meanings attached to terms such as "man," "woman," "gay," and "sex." Topics discussed may include the history of feminist movements, masculinity, biological frameworks for understanding gender, intimate violence, sexual identities, and intersectionality. Five seats are reserved for Freshmen, Sophomores, 4 seats for Juniors and 5 seats for Seniors in each section. NOTE: Section 1 is reserved for freshmen and sophomore students only.

L77 WGSS 102 Women in Science: An Introduction

Throughout the centuries, women were interested and involved in the sciences. Their scientific contributions, however, have often been overlooked and their abilities questioned. The 2005 proposition by Harvard's President Larry Summers that women's innate differences explain why fewer women succeed in math and science suggests that women continue to face assumptions about their scientific competence. In addition to examining the history of women's participation in science, this class explores the continuing cultural and economic barriers to women interested in science. Starting with a historical overview of women in science, we look at the contributions of women scientists. We review the numbers of women in various fields with good representation, such as biology, and those with few women, such as physics and computer science. Like the prestigious journal *Science*, we also explore whether women do science differently. This course is restricted to Women in Science Ampersand Program participants.

L77 WGSS 103 First-Year Seminar: Sex & Gender in the Gutter: An Introduction to Gender and Sexuality Studies Through Comics

This freshman seminar serves as an introduction to some of the history and concepts important in the field of gender and sexuality studies through graphic storytelling. Topics include the history of feminism in the United States, violence against girls and women, queer theory, intersectionality, and transnational feminism. Please be advised that while we will read comics — most of these texts are not for kids. We discuss traumatic issues and will look at some disturbing images. Please spend some looking at descriptions of the required texts and think about whether or not this class is for you.

L77 WGSS 1135 First-Year Seminar: The World of Cleopatra

Cleopatra, the last queen of ancient Egypt, captivated her contemporaries and has fascinated the Western world ever since her famous suicide by asp in 31 BCE. She was a woman of contrasts: Pharaoh of Egypt and Greco-Macedonian queen; seductive woman and shrewd political strategist; a ruthless monarch using every means available to consolidate her position in the face of the encroaching power of the Roman Empire. Through texts and material culture, the seminar seeks to understand Cleopatra in the context both of her native Egypt and of the wider Mediterranean world. We thus examine the traditions of Pharaonic Egypt; the historical events that brought Egypt under the control of the Macedonian Ptolemies (Cleopatra's dynasty); the wider stage of East-West tension and conquest in which Cleopatra struggled to maintain her power; her relationships (political and personal) with famous men of her day (Caesar, Herod, Mark Antony); her capital city of Alexandria, the largest metropolis of its day; Cleopatra's brilliant court and its luxury arts; and finally the many Cleopatras that have populated art and literature of later times. We emerge with a sense of Cleopatra, both as a unique individual and as a product of her time.

L77 WGSS 205 Introduction to Queer Studies

This course offers an introduction to the topics, questions, and approaches that characterize the rapidly growing field of lesbian/gay/bisexual/trans/queer studies. Using an interdisciplinary approach, we will explore such topics as the relation between gender and sexual identity, the history of same-sex relations, homophobia and heterosexism, queer cultures, and LGBTQ politics, particularly in the United States. Our focus will be on asking whether and how "LGBTQ" functions as a coherent category of analysis or identity, and we will pay particular attention to differences (of race, age, gender, sexual practice, class, national origin, temperament, and so on) that are contained within and that often disrupt that category. This course is not open to students who have taken L77 203 or L77 3031.

Credit 3 units. A&S IQ: HUM, SC, SD Art: HUM BU: BA EN: H

L77 WGSS 206 Sexuality and the State: Introduction to Sexuality Studies

Taking Michel Foucault's idea of biopolitics as a starting point. This course examines the ways in which sexuality has been produced and regulated by the state. Drawing on history, theory, and literature, we will look at contemporary examples of the relationship between the state and sexuality. What assumptions lie behind our ideas of sexuality? How are bodies linked by the prevailing logic of sexuality? How does sexuality inform the way that we see bodies as gendered, raced, or able-bodied. In addition to looking at the relationship between sexuality and capitalism, religion, and nation, this course asks how these ideas are embodied in particular raced and gendered ideologies.

L77 WGSS 207 Constructions of Black Womanhood and Manhood in the Black Community

This course introduces students to everyday and representational experiences of Black women and men. We will explore different understandings of Black gender through engaging scholarly work and creative texts/performances/visual representations. How is the construction of gender informed by race and other categories of difference (e.g., sexuality, class)? How might we gain a better understanding of how gender is (re)constructed within American society? What role does gender play in Black community politics and issues? This course is for first-year and sophomore students only.

L77 WGSS 2118 First-Year Seminar: Angels, Prostitutes and Chicas Modernas: Women in Latin America History

Women have been active players in the construction of Latin American nations. In the last two decades, leading scholars in the field have taken up the challenge of documenting women's participation. This research explosion has produced fruitful results to allow for the development of specialized courses. This course looks at the nation-building process through the lens of Latin American women. Students will examine the expectations, responsibilities and limitations women confronted in their varied roles from the Wars of Independence to the social revolutions and dictatorial regimes of the 20th century. Besides looking at their political and economic lives, students will explore the changing gender roles and relations within marriage and the family, as well as the changing sexual and maternal mores.

L77 WGSS 2250 First-Year Seminar: African-American Women's History: Sexuality, Violence, and the Love of Hip-Hop

Black women, much like their male counterparts, have shaped the contours of African-American history and culture. Still, close study of African-American women's history has burgeoned only within the past few decades as scholars continue to uncover the multifaceted lives of Black women. This course will explore the lived experiences of Black women in North America through a significant focus on the critical themes of violence and sexuality. We will examine African-American women as the perpetrators and the victims of violence, as the objects of sexual surveillance, as well as explore a range of contemporary debates concerning the intersections of race, class and gender, particularly within the evolving hip-hop movement. We will take an interdisciplinary approach through historical narratives, literature, biographies, films and documentaries.

L77 WGSS 240 Not Members of this Club: Women and Slaves in the Greco-Roman World

Both the Athenian Democracy and the Roman Senatorial Oligarchy were societies in which political power was the exclusive property of free, citizen males. With very few exceptions, the astounding accomplishments of those societies were also the creations of free, citizen males. This course examines the lives of two disparate but comparable groups of outsiders within Greek and Roman society. The status, rights and accomplishments of Athenian and Roman women are explored and placed in the context of other premodern societies. Likewise, the institution of slavery in Greece and Rome is explored and compared with other slave-holding societies, ancient and modern.

L77 WGSS 2991 Undergraduate Teaching Assistant

In this course an advanced undergraduate can assist a faculty member in the teaching of an introductory-level Women, Gender, and Sexuality Studies course. Students can enroll in one course only after having obtained permission from a faculty member

who is willing to supervise. Students do not engage in any grading but may serve in a variety of other capacities — as discussion leaders, in providing logistical support, or in otherwise assisting with the transmission of course material.

Credit variable, maximum 3 units. Art: HUM

L77 WGSS 3002 Feminist Fire! Radical Black Women in the 20th Century

Black women have been at the forefront of the Black radical tradition since its inception. Often marginalized in both the scholarship and popular memory, there exist a long unbroken chain of women who have organized around the principles of anti-sexism, anti-racism, and anti-capitalism. Frequently critical of heterosexist projects as well, these women have been the primary force driving the segment of the Black radical tradition that is commonly referred to as Black Feminism. Remaining cognizant of the fact that Black Feminist thought has also flourished as an academic enterprise-complete with its own theoretical interventions (ie. standpoint theory, intersectionality, dissemblance, etc.) and competing scholarly agendas-this course will think through the project of Black Feminism as a social movement driven by activism and vigorous political action for social change. Focusing on grassroots efforts at organizing, movement building, consciousness raising, policy reform, and political mobilization, Feminist Fire will center Black Feminists who explicitly embraced a critical posture towards capitalism as an untenable social order. We will prioritize the life and thought of 20th century women like Claudia Jones, Queen Mother Audley Moore, Frances Beal, Barbara Smith, Audre Lorde, Angela Davis and organizations like the Combahee River Collective, Chicago's Black Women's Committee, and the Third World Women's Alliance. At its core, the course aims to bring the social movement history back into the discourse around Black Feminism.

L77 WGSS 3013 On Love and Intimacy: Theorizing Kinship in the Multiple

Love and intimacy are terms that have a lot of cultural cache. In this course, we analyze the ways in which intimacy has been embedded within certain discourses of privacy, rights and individuality. In addition to the couple form, we examine friendship, celibacy, therapy and relationships people form with

pets and with objects to flesh out intimacy's multiplicities to see how these forces impact these affective tides. This course brings together history, critical theory and film to think through various expressions of intimacy and what it means to relate to the other. Prerequisites: any 100- or 200-level Women, Gender, and Sexuality Studies course or permission from the instructor. Credit 3 units. A&S IQ: HUM, SC, SD Art: HUM BU: BA, ETH EN: H

L77 WGSS 3014 Queering Citizenship

"Queering Citizenship" explores the fundamental question: is queer citizenship possible? The contestation of citizenship in the U.S. and transnationally makes this question unavoidable for queer and feminist scholars. Provincializing European political history and Western liberal democracy, students will use queer theory to consider the costs of exclusion from, as well as inclusion in, citizenship. We will consider how 'queerness' as a concept and queer theory as a method of analysis can inform our understanding of nationalism, democratic formations, citizenship, transnational labor flows, colonialism and capitalism. Students will also get at questions of the cultural specificity of queer's anti-normative critique. Topics of discussion include the ways gender and sexuality constitute the role of the citizen; the relationship between citizenship and labor; how citizenship is "performed"; grassroots organizing through alternative citizenships; the politics of transgender recognition; homonationalism; and queer complicity in settler colonial state violence and the ascendency of global whiteness. We will also examine case studies of queer politics to compare different constructions of gender/sexuality/race across citizenship regimes. By the end of the course, students will be able to evaluate the strengths and weaknesses of citizenship regimes on multiple continents and identify political alternatives to existing, state-centric solutions to violence and marginalization. Pre-Requisite: L77 100B or consent of instructor.

L77 WGSS 301A The Politics of Kanye West: Black Genius and Sonic Aesthetics

As a hip-hop artist Kanye West has had unprecedented impact on the sonic force of music, fashion, politics and videography. Coupling his controversial moments with his corpus of musical texts with special focus on sonic production, this course illuminates "Mr. West" as a case study for interrogating the interplay between fame, gender, sexuality and race. Mostly, we explore how racialized ways of doing iconography, complex ways of seeing, create a distorted or reductive frame through which we see the black and famous. Nonetheless, the course oscillates with entertaining these nuances, while being entertained by the decade-long catalogue of music and visual imagery. Together, we extract the "Politics of Mr. West" in his music and life, while also illuminating the importance of a politics of genius-making in the larger arc of black pop culture tradition.

L77 WGSS 3041 Making Sex and Gender: Understanding the History of the Body

This course provides an overview of the history of the body from antiquity to modern times using an interdisciplinary approach. By exploring selections from medical texts, literature, fashion, art, accounts of "new world" exploration, legal records, self-help books and contemporary media representations of human bodies, we consider the changing historical perception of the body. The intersection of gender, race and class factor significantly in our discussions of how the body has been construed historically and how it is currently being constructed in contemporary American culture. This course also provides an introduction to feminist/gender methodologies that apply to understanding the history of the body. This course is not open to students who have taken WGSS 204. Prerequisite: any 100- or 200-level WGSS course or permission of instructor.

L77 WGSS 308 Masculinities

This course critically examines the subject of masculinity through a number of themes including history, society, politics, race, gender, sexuality, art and popular culture. Interdisciplinary readings are drawn from the fields of sociology, anthropology, literature, history, art history and cultural studies. We will examine the challenges presented to "masculinity" (and a variety of responses) by the late 20th-century emergence of gender studies. Our goal is to come to a working definition of masculinity/ies and gain an understanding of some past, current and possible future masculine behaviors, mythologies, ideologies, experiences and identities. Previous course work in Women, Gender, and Sexuality Studies strongly recommended but not required. *Attendance mandatory first day in order to reserve your class enrollment.*

L77 WGSS 310 From Hysteria to Hysterectomy: Women's Health Care in America

This course examines issues surrounding women's health care in America. While the scope is broad, the major emphasis will be on the 19th and 20th centuries. Through an examination of popular writing, scientific/medical writing, letters, diaries and fiction, we will look at the changing perceptions and conceptions of women's bodies and health in America.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L77 WGSS 3101 An Intellectual History of Sex and Gender

When did sexuality begin? Is it safe to assume that gender constructions are universal and timeless? In this course, we engage with a broad range of readings that serve as primary texts in the history of sexuality and gender. Our aims are threefold: to analyze the literary evidence we have for sexuality and gender identity in Western culture, to survey modern scholarly approaches to those same texts and to consider the ways in which these modern theoretical frameworks have become the most recent set of "primary" texts on sexuality and gender.

L77 WGSS 3103 Sex and Money: Economies of Desire

This interdisciplinary course explores the connections between sexuality and money. First, we investigate the role of money in sexual life that appears to exist outside of the market. How does heterosexuality reproduce capitalism, and are there sexual formations that escape capitalism's reach? Can there be meaningful consent so long as there is rent to pay? How do economics, race, and colonialism shape desire? What is the role of money in dating and marriage, and should these be understood as forms of legalized prostitution, as Marxist feminists and sex workers have long suggested? Next, we turn to sex work to explore how explicit economic exchange shapes sexuality. What power dynamics does money engender, and how do sex workers navigate and subvert them? Is sex work merely an extension of the "work we do as women," as sex worker activists wrote in a 1977 manifesto? Finally, we close with the question of whether women have better sex under socialism. What economic systems make way for sexual liberation, and how might projects for economic justice center demands for better sexual futures?

L77 WGSS 3133 Service Learning: Feminist and Queer Youth Studies

Categorizing life experience into childhood and adolescence is a relatively new construct. The first part of the course will examine how the categories of early childhood and adolescence developed in social and medical discourses. The remainder of the course encourages students to draw connections between Feminist and Queer theoretical scholarship on children, and the practice of designing and implementing programming for children. Students will examine the relationship between the course readings and their experience working with various agencies in St. Louis. Important Note: This is a service-learning class, which means it combines classroom learning with outside work at a community organization. In addition to regular class time, there is a service requirement, which will necessitate an additional 4-5 hours a week. Before beginning community service, students must complete required training

and submit material for a background check. Prerequisite: Introduction to Women, Gender, and Sexuality Studies (L77 100B). CET (<https://gephardtinstitute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.

L77 WGSS 313A Topics in English Literature: Asian American Fictions: Space, Place, & the Makings of Asian America

Called the "Age of Revolution," the Romantic Age of British literature, 1770-1830, witnessed the birth of new lyric forms, the effacement of traditional strictures on style and taste, and produced through poetic voice (and its quaverings and multiplications) what might be called, oversimply, the modern subject. Within a developing discourse of human rights and personal freedom, this growing assertion through poetry of individual expressivity allowed William Blake to construct in a single work a visual and verbal "Jerusalem." It encouraged William Wordsworth to write a pathbreaking investigation of the sources of his own creativity that challenged conventional restraints on what topics can, and cannot, be confessed in poetry. Beginning with these two poets, we consider the historical contexts, and the sometimes competing histories of ideas, that shaped the five major British Romantic poets: Blake, Wordsworth, Samuel Taylor Coleridge, Lord Byron, and John Keats. We follow an anthology for much of the poetry, including the poems and prose of influential contemporaries (female as well as male) who included the political philosopher Edmund Burke and Mary Wollstonecraft. Texts assigned also include Mary Shelley's *Frankenstein* and Byron's *Don Juan*.

L77 WGSS 3141 The Racial and Sexual Politics of Public Health

Race and sexuality have long been concerns of public health. From hygienic campaigns against Mexican immigrants in early-1900s California to the 1991 quarantine of Haitian refugees with HIV at Guantanamo Bay, race and sexuality have proven crucial to how society identifies health and, by extension, determines who is fit to be a citizen. This interdisciplinary course interrogates the intersections of race, sexuality, and medicine, discussing how each domain has been constitutive of the other in the American context. Via feminist and queer theorizing, we will examine the political and economic factors under which diseases, illnesses, and health campaigns have impacted racial and sexual minorities over the last two centuries. An orienting question for the course is the following: How has the state wielded public health as a regulatory site to legitimize perceived racial differences and to regulate ostensible sexual deviations? Through primary and secondary sources, we will likewise explore the various forms of "health activism" undertaken by these very same targeted populations. Themes to be addressed will include the medicalization of racial and sexual difference; activism both in and against health institutions; and the roles of race, class, gender, sexuality, and disability in contemporary health issues. Case studies include the Tuskegee syphilis experiment; the sterilization of black, Mexican, Puerto Rican, and Native American women; the medicalization of homosexuality during the Cold War; and the role of mass incarceration in the diffusion of HIV. At a moment in time when

access to health continues to be shaped by categories of social difference, understanding the role of public health in the normalization and subversion of racial and sexual hierarchies in the West is more pertinent than ever.

Credit 3 units.

L77 WGSS 3152 Sex and Gender in Greco-Roman Antiquity

Ideas about sex and gender have not remained stable over time. The ancient Greeks and Romans had their own ideas — ideas that strike us today as both deeply alien and strikingly familiar. This course will consider questions such as: What constituted "normal" sex for the Greeks and for the Romans? What sex acts did they consider to be problematic or illicit, and why? What traits did the Greeks and Romans associate with masculinity? With femininity? How did society treat those who did not quite fit into those categories? How did peoples of the ancient world respond to same-sex and other-sex relationships, and was there an ancient concept of "sexuality"? How did issues of class, ethnicity and age interact with and shape these concepts? How does an understanding of these issues change the way we think about sex and gender today? We will read an array of ancient texts in translation, consider various theoretical viewpoints, and move toward an understanding of what sex and gender meant in the ancient world.

Same as L08 Classics 3152

Credit 3 units. A&S IQ: HUM, LCD, SC, SD BU: BA EN: H

L77 WGSS 3153 The Women of Greek Tragedy

This course examines the role of women in Athenian drama. Students will read English translations of the works of the three major tragedians -- Aeschylus, Sophocles, and Euripides -- and their near contemporary, the comedian Aristophanes. Direct engagement with ancient texts will encourage students to develop their own interpretations of and written responses to the political, social, and ethical manipulation that these mythological women were compelled to endure and the subtle ways in which they appear to exercise power themselves. Selected scholarly articles and book chapters will help students to contextualize these ancient dramas in their culture of origin. Because such issues continue to preoccupy both sexes today, students will see how Greek tragedy addresses perennial historical and cultural concerns through the examination of adaptations of Greek tragedies ranging from Seneca in ancient Rome to Spike Lee's "Chi-Raq" and Luis Alfaro's "Mojada: A Medea in Los Angeles." The final research paper will encourage students to consider how a specific female character from antiquity is transformed for a "modern" dramatic audience.

Same as L08 Classics 3153

Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L77 WGSS 316 Contemporary Women's Health

We identify and study a broad range of health issues that are either unique to women or of special importance to women. The roles that women play as both providers and consumers of health care in the United States will be examined. The interface of gender, race, and class and their impact on an individual's access to and experience in the health care system will be central concerns. Topics are wide-ranging and include discussions of breast cancer, mental health, cardiovascular disease in women, women and eating (from anorexia to obesity),

reproductive issues (from menstruation to fertility to menopause), as well as the politics of women's health, gender differences in health status, the effect of employment on health, the history of women's health research.

L77 WGSS 3171 Service Learning: Women and Prison

Since President Reagan declared the war on drugs in the 1980s, the numbers of women in prison have increased dramatically. Due to mandatory minimum sentencing requirements and increasingly harsh sentences for non-violent offenses, the U.S. prison population has swelled to unprecedented numbers over the last few decades. While women are the fastest growing population in prison, men still make up the vast majority of prisoners, and the system is largely geared toward men and their needs. In this course, we will explore the historical treatment of and contemporary issues for women and girls who get caught up in the criminal justice system. Through readings, films, reflective writings, and facility tours, we will explore the impact of incarceration on women and their families. While our scope will be national, we will focus on the corrections system in Missouri. Note: This is a service-learning class, which means it combines classroom learning with outside work at a community organization. In addition to regular class time, there is a service requirement, which will necessitate an additional 4-5 hours a week. There are several organizations with which we are partnering, and you will be assigned to one of these groups to work with for the entire semester. Moreover, there is a required all-day field trip on a Friday in January when we will visit the women's prison in Vandalia, Missouri and the men's prison in Bowling Green, Missouri. If you cannot commit to these out-of-class obligations, which are required to pass the course, do not register for the class. Prerequisite: Intro to Women and Gender Studies or Intro to Sexuality Studies. Juniors and seniors only. Credit 4 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L77 WGSS 3172 Queer Histories

Queer history is a profoundly political project. Scholars and activists use queer histories to assert theories of identity formation, build communities and advance a vision of the meanings of sexuality in modern life and the place of queer people in national communities. This history of alternative sexual identities is narrated in a variety of settings — the internet as well as the academy, art and film as well as the streets — and draws upon numerous disciplines, including anthropology, geography, sociology, oral history, fiction and memoir, as well as history. This discussion-based course examines the sites and genres of queer history, with particular attention to moments of contestation and debate about its contours and meanings. Credit 3 units. A&S IQ: HUM, SC, SD BU: BA EN: H

L77 WGSS 3173 Service Learning: Documenting the Queer Past in St. Louis

Around the U.S. and the world, grassroots LGBTQ history projects investigate the queer past as a means of honoring the courage of those who have come before, creating a sense of community today, and understanding the exclusions and divisions that shaped their communities and continue to limit them. In this course, we participate in this national project of history-making by helping to excavate the queer past in the greater St. Louis region. Course readings will focus on the ways that sexual identities and communities in the United

States have been shaped by urban settings since the late 19th century, with particular attention to the ways that race, class and gender have structured queer spaces and communities. In their community service project, students will work with local LGBTQ groups, including the St. Louis LGBT History Project, to research St. Louis's queer past. Each student will also conduct an oral history interview with an LGBTQ community member.

Important Note: This is a service-learning class, which means it combines classroom learning with outside work at a community organization. In addition to regular class time, there is a service requirement, which necessitates an additional 3-5 hours a week. Before beginning community service, students must complete required training. Prerequisite: Introduction to Women, Gender, and Sexuality Studies or Introduction to Queer Studies, or permission of instructor. L77 WGSS 319A The Body in Brazil: Race, Representation, Ontologies

This course is an introduction to various ways of understanding, representing, and performing the body in Brazil. Course materials will draw on insights from anthropology, the medical humanities, and science and technology studies in order to approach the body not just as biological material but also in its social, cultural, and spiritual dimensions. We will cover topics such as the importance of race and ethnicity since the time of colonization, sexualized media representations of gendered bodies, how some bodies are cast as disposable or "out of place" in contexts of social inequality, indigenous ways of viewing the body in relation to the natural and spiritual world, the politics of disability and access, and constructions of the "body politic" in the formation of national identity through ideas such as "antropofagia" (cultural cannibalism). Throughout, we will pay particular attention to how race, gender, sexuality, and disability shape the lived experiences of Brazilians. Topics will include the impact of slavery in the construction of the body in Brazil, the role played by race in the construction of discourses of corporeality, and the development of beauty stereotypes and practices such as the medical industry of plastic surgery, among others. Students will analyze visual materials, ethnographies, historical texts, and internet sources in dialogue with critical theories from the social sciences and humanities, assessing how the body "matters" in a variety of ways that reflect Brazil's cultural diversity while also starkly highlighting its persistent racialized and gendered social inequities. These materials will form the basis of our class discussions and written assignments. The course will be taught in English. Prerequisite: L45 165D, L45 304, or another course on Latin America suggested.

L77 WGSS 3203 Bodies Out of Bounds: Feminist and Queer Disability Studies

For many, "disability" seems like a concept with a relatively stable definition and a fairly straightforward relationship to questions of health and well-being. But in the past few decades, scholars and activists have begun to challenge the notion that disability is a tragedy to be medically prevented or inspirational "overcome." These scholars have instead focused their attention on the social aspects of disability: how it came to be constructed as a category of identity, the physical and institutional barriers that have excluded disabled people from public life, and the distortion of disabled lives within the mainstream representation. More recently, writers have turned their attention to the way disability has been defined through norms of race, gender, and sexuality. These intersections will be the focus of this course. From the diagnoses of hysteria to debates over selective abortion and the recent proliferation of breast cancer memoirs, we will consider how the politics of disability has both complemented and complicated the usual goals of feminism. We will also explore some of the ways that disability studies as a discipline has redefined and in turn been shaped by the fields of queer theory, masculinity studies, and critical race theory. We will consider how deviant genders have been the target of medicalization, the relationship between "corrective surgery" and compulsory gendering, the desexualization and hypersexualization of disabled bodies, and the role that medicine has played in justifying colonial conquest and perpetuating racial inequalities. Prerequisite: any 100- or 200-level Women, Gender, and Sexuality Studies course.

L77 WGSS 3206 Global Gender Issues

This course compares the life experiences of women and men in societies throughout the world. We discuss the evidence regarding the universal subordination of women, and examine explanations that propose to situate women's and men's personality attributes, roles and responsibilities in the biological or cultural domains. In general, through readings, films and lectures, the class provides a cross-cultural perspective on ideas regarding gender and how gendered meanings, practices, performances serve as structuring principles in society.

L77 WGSS 3221 Girls' Media and Popular Culture

This course will analyze girls as cultural consumers, mediated representations, cultural producers, and subjects of social anxiety. Readings will cover a range of media that have historically been associated with girlhood, including not only film, television, and digital media but also dolls, magazines, literature, and music. We will explore what role these media texts and technologies have had in the socialization of girls, the construction of their gendered identities, and the attempts at regulation of their behavior, sexuality, and appearance. Although the course will focus on girlhood media since the 1940s, we will consider how constructions of girlhood identity have changed over time and interrogate how girlhood identity intersects with race, sexuality, and class. The course will examine important debates and tensions arising in relation to girls' media. We will evaluate concerns and moral panics about girls and their relationship to or perceived overinvestment in

media and compare and contrast this with accounts of girls as active media consumers and producers. We will critically analyze how girls have been understood to negotiate agency in relation to commercialized culture -- how they have been represented as wielders of "girl power," as passive or active consumers, as fans, and as media producers themselves. We will also analyze attempts to intervene in girls' media and popular culture and consider how these interventions have attempted to empower, inspire, or regulate girls or how they have worked to reinforce or challenge gendered understandings of childhood.

L77 WGSS 323A Sex Trafficking

Sex trafficking is a complex social problem with multiple contributing factors that are largely rooted in intersecting inequalities. Both in the United States and on a global level, interrelated inequities in gender, sex, sexual orientation, gender identity, power, class, opportunity, education, culture, politics, and race are among the social phenomena that contribute to sex trafficking/CSE victimization. In this course, we will examine the dynamics of sex trafficking on a local and global level from various feminist and political perspectives, with particular attention given to the sexed and gendered social and structural conditions that affect sex trafficking. This course will cover the extent and nature of the problem as well as current debates in the field, including demand, prevalence, experiences of survivors, types of sex trafficking, methods of traffickers, the role of weak social institutions, cultural dynamics, and global power dynamics. The course will also examine international, federal, and state legislation as well as organizational and grassroots efforts to prevent and respond to sex trafficking victimization. The aim of this course is to provide students with a holistic understanding of sex trafficking that is drawn from interdisciplinary sources and a variety of perspectives.

L77 WGSS 3255 Black Masculinities: From Slavery to Hip Hop Dreams

This course investigates and explores how manhood, or masculinity, interacts with ideas of sexuality in public and private life. Together, we look closely at writers who offer cultural and theoretical frameworks to challenge our ideas of what black manhood is and should be, particularly those writers who are bold enough to represent same-sex desire among black men and women. Authors include James Baldwin, Essex Hemphill, Mark Anthony Neal, Mignon Moore, and E. Patrick Johnson.

L77 WGSS 330A Native American/Euro-American Encounters: Confrontations of Bodies and Beliefs

This course surveys the history and historiography of how Native Americans, Europeans and Euro-Americans reacted and adapted to one another's presence in North America from the 1600s to the mid-1800s, focusing on themes of religion and gender. We will examine the cultural and social implications of encounters between Native peoples, missionaries and other European and Euro-American Protestants and Catholics. We will pay particular attention to how bodies were a venue for encounter — through sexual contact, through the policing of gendered social and economic behaviors, and through religiously-based understandings of women's and men's duties and functions. We will also study how historians know what they know about these encounters, and what materials enable them to answer their historical questions.

L77 WGSS 3312 Topics in Politics

Credit 3 units.

L77 WGSS 3313 Topics in Gender & Religion

This course examines the ways in which issues pertaining to gender are salient in U.S. politics. The course is divided into four parts. First, we will examine theoretical approaches to the study of gender and politics, including the use of gender as an analytical category, and the relationship between gender, race, ethnicity and power. Second, we will study gender-based social movements, including the suffrage and woman's rights movements, women's participation in the civil rights movement, the contemporary feminist and anti-feminist movements, the gay rights/queer movement and the women's peace movement. Third, we will examine the role of gender in the electoral arena, in terms of how it affects voting, running for office and being in office. Finally, we will examine contemporary debates about public policy issues, including the integration of women and gays in the military, sexual harassment, pornography and equal rights.

L77 WGSS 335 Feminist Theory

This course begins by examining the 19th- and early 20th-century historical context out of which contemporary feminist theory emerged. We then turn to the 1960s and the emergence of the "Second Wave" of feminism. We focus on some of the major theories that developed during the 1960s, 1970s and 1980s and the conflicts and internal problems these theories generated. We then examine some of the ways these problems were resolved in feminist theory of the 1990s. The last part of the course focuses on topics of concern to contemporary feminists — such as the family, sexuality and globalism — and the contributions feminist theory brings to these topics. Open to graduate students by enrolling in L77 WS 500; contact the Women, Gender, and Sexuality Studies office for details.

L77 WGSS 337 Women's Literature: Before Thelma and Louise: American Women's Adventure Stories

American literature is filled with adventurers and adventure stories. Some of the most exciting tales were written by women. Their adventures include Mary Rowlandson's autobiography of her capture by and life with the Indians, E.D.E.N. Southworth's story of a 19th-century heroine who rescues imprisoned maidens and fights duels, and Octavia Butler's science fiction account of a 20th-century black woman who is transported back through time to an antebellum plantation. Until recently, American women authors and their stories were largely dismissed because they were perceived to focus on domestic concerns, which were seen as narrow and trivial. But the works of many women authors are far different from sentimental domestic fiction. In addition to looking closely at the historical and cultural conditions in which the narratives were written, we examine the ways in which these writers conform to and rebel against cultural prescriptions about femininity. Finally, we read some contemporary and current criticism about these works and American women's writing and discuss the politics of canon formation. Tentative Reading List: Mary Rowlandson, *The Captivity and Restoration of Mrs. Mary Rowlandson* (1682); *The Journal of Madam Knight* (1704); Catharine Maria Sedgwick, *Hope Leslie* (1827); E.D.E.N. Southworth, *The Hidden Hand* (1858); Zora Neale Hurston, *Their Eyes Were Watching God* (1937); Octavia Butler, *Kindred* (1979); Paule Marshall, *Praisesong for the Widow* (1983). Writing-intensive.

L77 WGSS 341 Constructing Masculinities

The course will demonstrate the social construction of masculinities and men's lives in specific social and historical circumstances in Europe and America. Attention to various disciplines' contributions to the study of masculinities.

Prerequisite: either WS100B or WS208B or permission of instructor.

Credit 3 units. BU: BA

L77 WGSS 3410 Gender in Society

Introduction to the sociological study of gender. The primary focus is U.S. society, but we will also discuss gender in an international context. From the moment of birth, boys and girls are treated differently. Gender structures the experiences of people in all major social institutions, including the family, the workplace and schools. We will explore how gender impacts lives and life chances. The central themes of the course are historical changes in gender beliefs and practices; socialization practices that reproduce gender identities; how race/ethnicity, class and sexuality shape the experience of gender; and the relationship between gender, power and social inequality.

Prerequisite: introductory course in sociology or consent of the instructor.

L77 WGSS 3413 Women in Early Modern Europe

From the Renaissance to the Enlightenment, European women experienced tremendous change as Europe witnessed religious upheaval, economic retrenchment, political consolidation, and intellectual revolution. However, many of the core ideas about women's role and status remained remarkably stable during this period, and women continually struggled to create opportunity for themselves. We will examine both the changing and unchanging nature of women's lives through sources such as conduct manuals for women, biographies about women from different economic, social, and religious backgrounds, and the works of female authors.

L77 WGSS 3416 War, Genocide and Gender in Modern Europe

This course explores the way in which gender and gender relations shaped and were shaped by war and genocide in 20th-century Europe. The course approaches the subject from various vantage points, including economic, social and cultural history, and draws on comparisons between different regions. Topics covered will include: new wartime tasks for women; soldiers' treatment of civilians under occupation, including sexual violence; how combatants dealt with fear, injury and the loss of comrades; masculine attributes of soldiers and officers of different nations and in different wartime roles; survival strategies and the relation to expectations with regard to people's (perceived) gender identity; the meanings of patriotism for women and men during war; and gender specific experiences of genocide.

L77 WGSS 345A Sexual Politics in Film Noir and Hardboiled Literature

Emerging in American films most forcefully during the 1940s, film noir is a cycle of films associated with a distinctive visual style and a cynical worldview. In this course, we explore the sexual politics of film noir as a distinctive vision of American sexual relations every bit as identifiable as the form's stylized lighting and circuitous storytelling. We explore how and why sexual paranoia and perversion seem to animate this genre and why these movies continue to influence "neo-noir" filmmaking into the 21st century, even as film noir's representation of gender and sexuality is inseparable from its literary antecedents, most notably, the so-called "hard-boiled" school of writing. We read examples from this literature by Dashiell Hammett, James Cain, Raymond Chandler and Cornell Woolrich, and discuss these novels and short stories in the context of other artistic and cultural influences on gendered power relations and film noir. We also explore the relationship of these films to censorship and to changing post-World War II cultural values. Films screened in complete prints or in excerpts likely include many of the following: *The Maltese Falcon*, *Double Indemnity*, *Murder My Sweet*, *Phantom Lady*, *Strangers on a Train*, *The Big Sleep*, *The Killers*, *Mildred Pierce*, *The High Wall*, *Sudden Fear*, *The Big Combo*, *Laura*, *The Glass Key*, *The Big Heat*, *Kiss Me Deadly*, *The Crimson Kimono*, *Touch of Evil*, *Alphaville*, *Chinatown*, *Taxi Driver*, *Devil in a Blue Dress*, *The Bad Lieutenant* and *Memento*. Required screenings.

L77 WGSS 347 Gender and Citizenship: Writing-Intensive Seminar

In this writing-intensive course we examine how ideas about gender have shaped the ways Americans understand what it means to be a citizen. We focus on a variety of cases in the past and present to explore the means by which women and men have claimed the rights and responsibilities of citizenship. The types of questions that we ask include: What rights or duties devolve from the status of citizen? Who qualifies for citizenship and what qualifies them? What distinct models of citizenship

have been available to Americans? How have individuals used notions of gender identity to make claims to political subjectivity? And finally, how do gendered claims to citizenship intersect or conflict with claims based on race, class, ethnicity or humanity? Prerequisite: previous course work in Women, Gender, and Sexuality Studies or permission of the instructor. Not open to students who have taken WGSS 210. Credit 3 units. BU: BA EN: H

L77 WGSS 354 No Boys Allowed: Girlhood and Programming for Girls in 19th and 20th Centuries, United States

If boys and girls go to school together, why do we find so much sex-segregated extracurricular programming in the United States? Are there benefits? This course seeks to answer these questions by exploring the history of girlhood and girls' programming in the United States in the 19th and 20th centuries. We will explore the movement of girls' organizations from developing out of girls' exclusion from boys' clubs to a gradual emphasis on "empowering" girls. A critical examination of gender, sexuality, race and class will inform course discussions. Credit 3 units. A&S IQ: SSC, SC Arch: SSC Art: SSC BU: BA EN: S

L77 WGSS 3548 Gender, Sexuality & Communism in 20th-Century Europe

This upper-division course examines the role of gender and sexuality for the establishment of communist societies in Europe in 20th century. We will explore to what extent societies built on the communist model succeeded with the achievement of gender equality and allowed for sexual relations liberated from religious or economic constraints. Class materials examine how state socialism shaped gender roles and women's and men's lives differently as well as how gays and lesbians struggled against social taboo and state repression. Students analyze the impact of modernization, industrialization, war and other conflicts on concepts of femininity and masculinity as well as on the regulation of sexuality and family relations in several Eastern European countries. We will place these dynamics within the context of broader political and cultural developments, ending with an analysis of the breakdown of socialism in the early 1990s and its impact on gender relations and the freedom of expression. The course provides students with a basic knowledge of the history of Eastern Europe and of left-wing movements active in the area, emphasizing the effects of communist ideas on women, gender equality, and non-normative sexual orientations.

L77 WGSS 3560 Black Women Writers

When someone says "black woman writer," you may well think of Nobel Prize winner Toni Morrison. But not long ago, to be a black woman writer meant to be considered an aberration. When Thomas Jefferson wrote that Phillis Wheatley's poems were "beneath the dignity of criticism," he could hardly have imagined entire Modern Language Association sessions built around her verse, but such is now the case. In this class we survey the range of Anglophone African-American women authors. Writers likely to be covered include Phillis Wheatley, Harriet Wilson, Nella Larsen, Lorraine Hansberry, Octavia Butler and Rita Dove, among others. Be prepared to read, explore, discuss and debate the specific impact of race and gender on American literature.

L77 WGSS 3561 Law, Gender, & Justice

This course (formerly called "Women and the Law") explores how social constructions of gender, race, class and sexuality have shaped traditional legal reasoning and American legal concepts, including women's legal rights. We will begin by placing our current legal framework, and its gender, race, sexuality, and other societal assumptions, in an historical and Constitutional context. We will then examine many of the questions raised by feminist theory, feminist jurisprudence, and other critical perspectives. For example, is the legal subject gendered male, and, if so, how can advocates (for women and men) use the law to gain greater equality? What paradoxes have emerged in areas such as employment discrimination, family law, or reproductive rights, as women and others have sought liberal equality? What is the equality/difference debate about and why is it important for feminists? How do intersectionality and various schools of feminist thought affect our concepts of discrimination, equality and justice? The course is thematic, but we will spend time on key cases that have influenced law and policy, examining how they affect the everyday lives of women. Over the years, this course has attracted WGSS students and pre-law students. This course is taught by law students under the supervision of a member of the School of Law faculty. *Students who have taken L77 3561 Women and the Law can not take this class.*

L77 WGSS 358 Scribbling Women: 19th-Century American Women Writers

In 1855, Nathaniel Hawthorne wrote to his publisher, William Tichnor, that "America is now wholly given over to a damned mob of scribbling women, and I should have no chance of success while the public taste is occupied with their trash." In this class, we examine works of those scribbling women of the 19th century. We read one of the best-selling novels of the century, one that created a scandal and ruined the author's literary reputation, along with others that have garnered more attention in our time than their own. In addition to focusing on these women writers, we also explore questions about the canon

of American literature: What makes literature "good"? What constitutes American literature? How does an author get in the canon and stay there? Finally, in this writing-intensive course, there are frequent writing assignments and a strong emphasis on the essential writing process of drafting and revising.

Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L77 WGSS 359 Topics in European History: Modern European Women

This course examines the radical transformation in the position and perspective of European women since the 18th century. The primary geographical focus is on Britain, France and Germany. Topics include: changing relations between the sexes; the emergence of mass feminist movements; the rise of the "new woman"; women and war; and the cultural construction and social organization of gender. We will look at the lives of women as nurses, prostitutes, artists, mothers, hysterics, political activists, consumers and factory hands.

L77 WGSS 360 Trans* Studies

Trans* Studies is an interdisciplinary course that was previously named Transgender Studies. The new course title represents the development of the field and the identity in U.S. culture. In this course students engage with the following questions: When and why did the category gender emerge? What is the relationship between sex, sexuality and gender? How have the fields of medicine and psychology dealt with gender? How have approaches to "gender dysphoria" changed over time? Why is LGBT grouped together as a social movement? What are the advantages and disadvantages of this grouping? What are the legal obstacles faced by people who resist normative gender categories? What legal obstacles are faced by people who transition from one sex to another? To what extent do U.S. citizens have autonomy over defining their gender or sex? How are trans people represented in fiction? What does it mean to apply transgender theory to interpret fictional accounts of trans? Any of the following are suitable (but not required) courses to take before enrolling in this class: WGSS 100B, WGSS 105, WGSS 205 or WGSS 3091.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L77 WGSS 361 Women and Social Movements: Gender and Sexuality in U.S. Social Movements

This course examines the history of grassroots activism and political engagement of women in the United States. Looking at social movements organized by women or around issues of gender and sexuality, class texts interrogate women's participation in, and exclusion from, political life. Key movements organizing the course units include, among others: the Temperance Movement, Abolitionist Movements, the Women's Suffrage Movements, Women's Labor Movements, Women's Global Peace Movements, and Recent Immigration Movements. Readings and discussion will pay particular attention to the movements of women of color, as well as the critiques of women of color of dominant women's movements. Course materials will analyze how methods of organizing reflect traditional forms

of "doing politics," and we will also examine strategies and tactics for defining problems and posing solutions particular to women. Prerequisites: any 100- or 200-level Women, Gender, and Sexuality Studies course or permission from the instructor. Credit 3 units. A&S IQ: HUM, SC, SD BU: BA EN: H

L77 WGSS 362A Islam, Gender, Sexuality

The return of white nationalism and misogyny to the public sphere since the 2016 election has reinvigorated the trope of the subjugated Muslim woman as backwards and subservient to her male counterparts. Rather than devote our time to dispel stereotypes, in this course, we address the extent to which Western theories of feminism are useful to account for Muslim women's experiences across historical period and geographical region. By examining discourses of gender and sexuality, the ideals of the feminine and masculine in Islamic scriptures and jurisprudence, and subsequent encounters with Western imperialism, we investigate how gender informs social, political, religious, and family life in Islamic cultures. We employ a chronological approach to these topics, from considering the status of women in seventh-century Arabia to the period of Islamic expansion across Asia, North Africa, and the Iberian Peninsula and then to the colonial period and ending with the contemporary post-9/11 and post-2016 U.S. contexts, wherein debates over the status of Muslim women in society emerged with renewed vigor.

Same as L57 RelPol 362

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

L77 WGSS 364 Gender, War, and Migration

This course will examine the forced transnational migration of war refugees and their resettlement in host societies. A central question that guides this course is: How does war impact and complicate belonging and influence the movement of people across borders and boundaries? With this question in mind, we will explore the dynamic relationships between specific groups of refugees and nation-states, while considering inseparable intersectional configurations of gender, race, sexuality, ethnicity, class, age, and religion as lenses through which to consider ideas of personhood and notions of national belonging. In the first part of the semester we will focus on transnational displacement because of conflict and deterritorialization. We will utilize readings in feminist theory, postcolonial theory, and cultural studies to examine historical processes of dislocation and relocation. The second part of the semester will examine ethnographic case studies of resettled refugees in different sites and their day-to-day practices to understand how displaced people earn a place in host societies. We will also explore how identity categories influence the architecture of personhood in nation-states. Lastly, we will analyze the multilayered ways in which diasporic subjects and nations rearticulate themselves virtually and digitally (via internet and social media). We will combine diverse readings and theoretical engagements, lectures, documentary films, discussion, and class-based activities to interrogate notions of subjectivity, alterity, and belonging across time, place, and space. Prerequisite: L77 100B or consent of instructor.

L77 WGSS 3666 Women and Film

The aim of this course is primarily to familiarize students with the work of prominent women directors over the course of the 20th century, from commercial blockbusters to the radical avant-garde. Approaching the films in chronological order, we consider the specific historical and cultural context of each filmmaker's work. In addition we discuss the films in relation to specific gender and feminist issues such as the status of women's film genres, representations of men and women on screen, and the gender politics of film production. Required screenings.

Same as L53 Film 366

Credit 3 units. A&S IQ: HUM, SD BU: HUM EN: H

L77 WGSS 369A Reading Sex in Premodern England

This course introduces students to the literary representation of gender and sexuality in England from the medieval period to the 18th century. To understand a tradition that addressed the intractable problem of human sexuality in terms very different from ours, we ask: how does premodern culture imagine gendered identities, sexual difference, and erotic desire? How do various contexts — medical, religious, social, private, public — inform the literary representation of gender and sexuality? What are the anatomies and economies of the body, the circuits of physical pleasure, and the disciplines of the self that characterize human sexuality? Students have the opportunity to study romances, saints' lives, mystical writings, diaries, plays, sex guides, novels and scientific treatises. By learning how to "read sex" in premodern literature, students acquire a broad cultural and historical understanding of English sexualities before the descent of modern sensibilities.

L77 WGSS 371 Confronting Capitalism: Feminism, Work and Solidarity

This course explores the relationship between gender, the ideological construction of work and workers, and feminist mobilizations against labor exploitation. To interrogate how conceptions of the "ideal worker" are gendered, sexualized and racialized, we will engage scholarship on affective and emotional labor; domestic and reproductive labor; migrant domestic work; neoliberalism and service economies; feminism and racial capitalism; sex work; disability justice; and feminist anti-work politics. Additionally, we will ask what is "new" about neoliberal capitalism, and how the relationship between citizenship, the state and the "ideal worker" has morphed in distinctly gendered and racialized ways over time. As part of this effort, we will engage feminist political theory that interrogates the relationship between radical democracy, justice and the market, drawing from Marxist feminist, liberal feminist, radical feminist, decolonial feminist and Black feminist thought. In the latter part of the semester we will examine how these various feminist approaches to work have addressed issues such as solidarity and organizing; legalization of sex work; the wages for housework campaign; internationalism; anti-racism and anti-capitalism; labor outsourcing; alternative economies; and U.S. imperialism..Prerequisite: L77 100B.

L77 WGSS 384 Gender & Consumer Culture in U.S. Fiction of the Late 19th and Early 20th Century

The decades between the end of the Civil War and the 1930s saw the rise of a mass consumer culture that would dramatically reshape America. The fiction writers of this period, keen to capture the spirit of the age, helped to create the enduring idea that consumerism and an orientation toward material acquisition are at the heart of gendered concepts of American identity. Their stories documented, and sometimes celebrated, the emergence of recognizable "types" of American womanhood and manhood — such as self-made millionaires, ambitious "working girls," bargain-hunting middle-class housewives, and the commercially minded women and men of the social and intellectual elite.

At the same time, their stories articulated anxieties about U.S. consumer culture and its impact on the world. Students in this course will read, discuss and write about novels and short stories by writers such as Henry James, Mary Wilkins Freeman, Kate Chopin, Theodore Dreiser, Edith Wharton, Nella Larsen, Langston Hughes, and F. Scott Fitzgerald. Students in the course will also examine primary materials such as magazine advertisements, and will read and respond to relevant scholarship on the period. Writing Intensive course.

L77 WGSS 3884 Regulating Reproduction: Morality, Politics and (In)justice

This course centers on the burgeoning corpus of anthropological scholarship on reproduction, with special attention to the regulation of reproductive behaviors and population management in cross-cultural perspective. Anthropologists and feminist scholars have shown how reproduction — which links individual bodies to the body politic — is a privileged site for processes of governance. Scholars have also shown how seemingly personal reproductive choices made in the micro units of families are always bound up with broader, if obscured, economic, national and political projects. In this course, we will cover how diverse entities, including the state, the Church, NGOs and feminist groups, seek to manage reproductive behaviors and politics across the world. We will discuss population control campaigns (such as China's notorious one-child policy) and pronatalist population policies (like those seen in Israel) in order to underscore how the management of fertility becomes a crucial site for nationalist and state-building projects. In this course we examine processes of "reproductive governance" around topics including pregnancy and birth, family planning, abortion and adoption. We also examine how the global proliferation of Assisted Reproductive Technologies (such as in vitro, sonogram, abortifacient pills, amniocentesis) intersects with efforts to govern reproduction. Crucially, we take class and race as key axes through which reproduction is experienced and stratified in diverse contexts. At the end of this course students should have a solid grasp of key topics and themes in the anthropology of reproductive governance, as well as more in-depth knowledge of a particular controversial reproductive issue that they choose to focus on for their final research paper.

L77 WGSS 389A Furies and Die-Hards: Women in Rebellion and War

Furies and Die-Hards: Women in Rebellion and War juxtaposes contemporary social science perspectives on women and war with the history and testimonies of Irish women during the Irish revolutionary period (1898-1922), the Irish Civil War (1922-1923), and the Free State. Under English rule from the 12th-century Norman invasions to the establishment of the Irish Free State and the partition of Northern Ireland in 1922, Ireland presents a compelling historical laboratory to deliberate on the relationship between gender and political conflict. Intentionally transdisciplinary, the course draws from across disciplinary discourses and highlights perspectives across race, gender, class, ethnicity, religion, and sexuality. Topics include political organizing, nationalism, rebellion, radicalization, militarism, terrorism, pacifism, and peacebuilding. Rooted in Cynthia Enloe's enduring question of "Where are the women?" and drawing on sociologist Louise Ryan's landmark essay by the same name, we inquire how and why Irish nationalist women, who were integral to building the revolutionary movement, became "Furies" and "Die-hards" in the eyes of their compatriots when the Free State was established (Bishop Doorley, 1925; President Cosgrave, 1923). Taking advantage of the plethora of archival resources now available through the Irish Decade of Centenaries program, the course incorporates the voices of Irish women through their diaries, military records, letters, interviews, speeches, newspapers, and memoirs.

L77 WGSS 393 Gender Violence

This course explores the issue of violence against women within families, by strangers in the workplace, and within the context of international and domestic political activity. In each area, issues of race, class, culture and sexuality are examined as well as legal, medical and sociological responses. Readings cover current statistical data, research and theory as well as information on the history of the battered women's movement, the rape crisis center movement, violent repression of women's political expressions internationally, and the effect of violence on immigrant and indigenous women in the United States and abroad. Not open to students who have taken U92 (UCollege) WGSS 363.

L77 WGSS 3942 Service Learning: Projects in Domestic Violence

In this course, we explore the links between the theories and practices of Women, Gender, and Sexuality Studies through a combination of research and direct community engagement. Course readings focus on the ways that poverty and violence, along with race and gender expectations, shape the lives of women. A required community service project for this course asks students to examine the relationship between the course readings and the lives of actual women in St. Louis. Over the course of the semester, students design and execute programming for women at a local community agency. This is a writing-intensive course. Students must contact instructor for permission to enroll. CET (<https://gephardtinstiute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.

L77 WGSS 3943 Violence Against Women Court Project

The seminar explores the links between the theories and practices of Women, Gender, and Sexuality Studies through a combination of readings, discussion and direct community engagement. Readings focus on the legal system and the ways domestic violence is confronted and how criminal justice interventions have responded to new theories and research about the nature of intimate partner violence. Particular attention is directed to the ways that issues of race, poverty, parenthood and sexual orientation influence the criminal justice response and shape the lives of abused women. Students participate in a court advocacy program to investigate the important discrepancies between theory and practice in the field. Students are required to take L77 WGSS 393 or have taken L77 WGSS 393 to enroll in the seminar.

Credit 1 unit. A&S IQ: SSC BU: BA EN: S

L77 WGSS 397 History of Sexuality in the United States

Class will survey major themes in the history of sexuality in the U.S., from colonial era to present. Themes include conquest and sexuality; the relationship between sexual ideologies and practices; racial hierarchy and sexuality; the construction of sexual identities and communities; and sexual politics at the end of the century. Prerequisite: none. Previous course work in U.S. history or women's studies helpful. Enrollment limited to 35.

L77 WGSS 39SC Imperialism and Sexuality: India, South

Asia, and the World: Writing-Intensive Seminar

What is the connection between the appropriation of other people's resources and the obsession with sex? Why is "race" essential to the sexual imperatives of imperialism? How has the nexus between "race," sexuality, and imperial entitlement reproduced itself despite the end of formal colonialism? By studying a variety of colonial documents, memoirs produced by colonized subjects, novels, films and scholarship on imperialism, we will seek to understand the history of imperialism's sexual desires and its continuation in our world today.

L77 WGSS 4012 Advanced Queer Theory: The Intimacy of

Precarity

This seminar uses precarity to produce a map of some trends in queer theory today in order to outline the stakes of this current intellectual work and ask how we can use this work to rethink sexuality. In outlining the current stakes of precarity, this seminar focuses on two main threads of queer theory — queer of color critique and public feelings — because both of these spaces have enabled complex theoretical and political discussions centered around precarity and both also introduce historical framings of queer theory. By orienting their contributions to queer studies around precarity, these scholars are asking both how one lives with this condition and what formations of knowledge have produced these conditions of liminality and vulnerability. Overall, this emphasis on precarity has made certain tensions surrounding the place of difference within queer theory visible and highlighted the role of structures, particularly neoliberalism, which is a particular nexus of collusion between the state and formations of capital, over the individual.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L77 WGSS 4014 Feminist and Queer Media Studies

This seminar serves both as an introduction to some of the foundational texts in feminist and queer media studies and a snapshot of recent scholarship in the field.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA EN: H

L77 WGSS 401A Transnational Queer Activism

This course explores the recent emergence of visible movements for sexual and gender minorities across the globe. The course begins with an overview of theories of collective action, putting canonical texts in social movement studies in conversation with postcolonial, queer, and transnational feminist approaches to activism and resistance. The aim is to lay a theoretical foundation for transnational analysis that does not center Western experience. The second part of the course moves through some key issues in LGBTI organizing that are overlooked when focusing on Euro-America, including: the importance of democratic transition for social movements; the prevalence of human rights as frames for sexual rights in the global South; limitations of the term "homophobia" when conceiving of hostility toward sexual minorities cross-culturally; and the role of colonialism and neo-colonialism in the globalization of LGBTI identities. Students will read texts attentive to the specificities of activism and resistance in the global South such as *Out in Africa: LGBT Organizing in Namibia and South Africa*, *Queer Activism in India*, and *Mobilizing Gay Singapore: Rights and Resistance in an Authoritarian State*. Course materials will also include primary source material from translated interviews with Argentine transgender activists the months before the passage of the "Gender Identity Law." Oral presentations will compare a case of LGBTI activism discussed in class to the work done by a St. Louis-based organization. By the end of the course, the students will be able to explain the important ways global Southern LGBTI movements differ from their Northern counterparts, contextualize news reports of events like the passage of the anti-homosexuality bill in Uganda, and craft research contributions based on global Southern case studies. Prerequisite: Introduction to Women, Gender, and Sexuality Studies (L77 100B) or permission of instructor. Credit 3 units. A&S IQ: LCD, SSC, SC, SD Arch: SSC Art: SSC EN: S

L77 WGSS 402 Transnational Reproductive Health Issues:

Meanings, Technologies, Practices

This course covers recent scholarship on gender and reproductive health, including such issues as reproduction and the disciplinary power of the state, contested reproductive relations within families and communities, and the implications of global flows of biotechnology, population and information for reproductive strategies at the local level. We also explore how transnational migration and globalization have shaped reproductive health, the diverse meanings associated with reproductive processes, and decisions concerning reproduction. Reproduction serves as a focus to illuminate the cultural politics of gender, power and sexuality.

L77 WGSS 403 Race, Sex and Sexuality: Concepts of Identity

This course examines changes in the meanings of three concepts of identity — race, sex and sexuality — from the early modern period to the present. The course begins by looking at early modern constructions of these concepts in Western Europe. We then focus on changes occurring during the course of the 18th and 19th centuries in Europe and the United States and at how such changes were similar and different among

these three concepts. We then examine 20th-century challenges to 19th-century constructions. The course concludes by studying the relationship between these challenges and 20th-century identity political movements organized around these concepts. Prerequisite: completion of at least one WGSS course or permission of the instructor.

Credit 3 units. A&S IQ: SSC, SD Art: SSC BU: BA

L77 WGSS 4031 Topics in Gender and Judaism: Gender and Sexuality in Judaism

A critical inquiry into the Jewish sociocultural construction of gender, past and present. Topics include the nature of the Jewish covenantal community and male circumcision as a sign of membership; the matrilineal principle of ancestry; genital emissions and purity; marriage and divorce; and male and female roles, including leadership roles. Documents by and about Jewish women, their daily lives and their sacral lives, are among the materials explored. JINE 208F is recommended.

Credit 3 units.

L77 WGSS 406 Queering Theory: Collaborating, Solidarity, and Working Together

This class aims to use theory to destabilize the concepts of race, sexuality, gender, disability, and academic methodology. This class will submerge you in some of the most influential texts in queer theory. The selected readings range across many disciplines, including biology, philosophy, anthropology, sociology, history, and cultural studies. The core premise of this class is that to queer something is to destabilize it. Therefore, not all of the readings will specifically be about gay, lesbian, bisexual, or transgender people. However, these readings will help any scholar in their future work in queer theory. Prerequisite: any 300-level WGSS class or equivalent or permission from instructor.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L77 WGSS 406A Sexual Health and the City: A Community-Based Learning Course

In this community-based learning course students will partner with a St. Louis AIDS service organization (ASO) or sexual health agency to explore how the interrelationships among gender, class, race/ethnicity, and sexual identity shape sexual health decisions, outcomes, and access to services. Students will also examine the complex relationship between men's and women's life goals and constraints, on the one hand, and the public health management of sexual health, on the other. In collaboration with their community partner and its clients, students will develop a project that addresses an identified need of the organization and the community it serves. Course readings will draw from the fields of anthropology, public health, feminist studies, and policy-making. The prerequisite for the course is L48 4134 (The AIDS Epidemic) or permission from the instructor, which will be determined based on past student's experience in the fields of medical anthropology or sexual/reproductive health.

L77 WGSS 408A Nuns

Nuns — women vowed to a shared life of poverty, chastity and obedience in a cloistered community — were central figures in medieval and early modern religion and society. This course explores life in the convent, with the distinctive culture that developed among communities of women, and the complex relations between the world of the cloister and the world outside the cloister. We look at how female celibacy served social and political, as well as religious, interests. We read works by nuns: both willing and unwilling; and works about nuns: nuns behaving well, and nuns behaving scandalously badly; nuns embracing their heavenly spouse, and nuns putting on plays; nuns possessed by the devil, and nuns managing their possessions; nuns as enraptured visionaries, and nuns grappling with the mundane realities of life in a cloistered community.

L77 WGSS 4102 Everyday Unruliness: Feminist and Queer Resistance

This course is interested in the ways ordinary people break rules, flout norms, and make trouble. We know that resistance manifests in social movements, militant activism, and direct confrontation, but it also comes through quieter acts of unruliness and noncompliance. Looking at power "from below," readings focus on everyday interventions in systems of control. Garment workers threaten "good pay or burn work," queers "fail" at reproductive heterosexuality, and shiftless people steal moments of leisure from a system that wants us either productive or dead. These acts may not be obviously political, but because people at the margins have so often been left outside (and also opt out) of formal politics, subtle resistance is particularly interesting for feminist and queer scholars. Everyday acts do threaten the status quo -- otherwise, why would they be so rigidly policed? But questions remain. Throughout the semester, we will ask the following: What counts as resistance? What are its ethics? When is a bad attitude an act of rebellion, and does it matter if that rebellion is conscious? Does survival constitute resistance for those not meant to survive? On the

other hand, for those subjects whose active engagement sustains the status quo, is withdrawal the more radical choice? Does the refusal of sociality constitute a form of resistance? Or are there ways to forge communities of mutual care that erode the status quo rather than reproduce it? Prerequisite: L77 110B (Intro to Women, Gender, and Sexuality Studies) or permission of instructor.

Credit 3 units. A&S IQ: SSC, SC Arch: SSC Art: SSC EN: S

L77 WGSS 4106 Studies in Gender

Investigation of the constructions of gender in literary and other texts and their sociohistorical contexts. Particular attention to the gendered conditions of writing and reading, engendering of the subject, and indicators of gender. Topics and periods vary from semester to semester and include gender and genre, education, religion, politics, cultural and state institutions, science, sexuality, and human reproduction. Discussion, readings, and papers in German; some theoretical readings in English. May be repeated with different content. Prerequisite: German 302D and German 340C/340D OR German 341/341D OR Ger 342/342D

L77 WGSS 4112 Body and Flesh: Theorizing Embodiment

This seminar explores a wide range of readings on "the body" as a site of theoretical analysis in social scientific and humanistic inquiry. Issues include: How do we think about the body as simultaneously material (flesh and bone) and constructed in and through social and political discourse? How do we think about the relationship between these contingent bodies and subjective experiences of "self" in various contexts? The course focuses upon the different ways in which these questions have been posed and engaged, and the implications of these formulations for the theorizing of human experience. Prerequisite: Anthro 3201 or permission of instructor.

Same as L48 Anthro 4112

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L77 WGSS 4134 The AIDS Epidemic: Inequalities, Ethnography, and Ethics

In the year 2000, HIV became the world's leading infectious cause of adult death, and in the next ten years, AIDS will kill more people than all wars of the twentieth century combined. As the global epidemic rages on, our greatest enemy in combating HIV/AIDS is not knowledge or resources, but global inequalities and the conceptual frameworks with which we understand health, human interaction, and sexuality. This course emphasizes the ethnographic approach for cultural analysis of responses to HIV/AIDS. Students will explore the relationship between local communities and wider historical and economic processes, and theoretical approaches to disease, the body, ethnicity/race, gender, sexuality, risk, addiction, power, and culture. Other topics covered include the cultural construction of AIDS and risk, government responses to HIV/AIDS, origin and transmission debates, ethics and responsibilities, drug testing and marketing, the making of the AIDS industry and "risk" categories, prevention and education strategies, interaction between bio-medicine and alternative healing systems, and medical advances and hopes.

Credit 3 units. A&S IQ: LCD, SSC, SC, SD Arch: SSC Art: SSC BU: IS EN: S

L77 WGSS 414 Gender, Religion, Medicine and Science

Until recently the histories of science, medicine and religion were written by men and for men. These fields did not critically analyze gender or sexuality. Neither masculinity nor femininity were topics of interest in the studies of great scientists or famous theologians. Sexuality in scientific writing and religious thought barely received more than a sentence or two in the writings of historians. What changed? Feminist/Queer theory made us rethink the way we learn about the history of medicine, science and religion. Despite these great strides, we are only beginning to explore the interplay between these fields from a feminist/queer perspective. In other words, while feminist/queer scholars have deepened our understandings of both science and religion, they have only recently begun to examine the relationship between these two fields. This course explores how feminist research has broadened our understanding of the interplay between the authority of religion, science and medicine in historical and contemporary studies. Some of the topics we explore include: conception and gestation, birth control, birthing, sexuality and aging. Prerequisites: Introduction to Women and Gender Studies and at least one 300-level WGSS course that addresses feminist and/or queer theory such as: Masculinities, Making Sex and Gender, Transgender Studies.

Credit 3 units. A&S IQ: HUM, SD EN: H

L77 WGSS 4140 Topics in Feminist Philosophy: Feminist Epistemology and Philosophy of Science

L77 WGSS 416 The Politics of Pleasure

This 400-level seminar interrogates the concept of pleasure. Pleasure occupies a fraught space in feminist and queer theory. This course examines several ways that people have theorized pleasure as a space for politics, a space for conservatism, or a way to think about racialized difference. This course is not interested in defining what pleasure is, but it interrogates what the stakes of talking about pleasure have been within contemporary theory and culture. Beginning with an examination of pleasure in the context of early 20th-century sexology, this course looks at the sex wars of the 1970s, the turn toward pleasure as a space of protest, and ends by thinking of ways to imagine pleasure outside of current paradigms of sexuality. The course takes gender, race and sexuality as central analytic components to understand how pleasure is defined and who has access to it. Either Introduction to Sexuality Studies or Introduction to Women, Gender and Sexuality Studies are prerequisites.

Credit 3 units. A&S IQ: HUM, SC, SD EN: H

L77 WGSS 417W Feminist Research Methodologies

Research is the foundation of academic knowledge and of much knowledge produced outside of the academy in think tanks, nonprofit organizations, social service agencies, corporations, and many other venues of economic and social activity. Informed by theory, and shaped by specific methods, research can and does help to frame problems, contribute to policymaking, and evaluate the effectiveness of policies and programs. Research is employed in a variety of ways in the different disciplines within the academy and within different practices outside of the academy. This course examines the different ways in which research is conducted and examines the reasons for these differences and the ways in which they contribute to or hamper feminist goals. The course also explores the ways in which some research methods are privileged over others in hegemonic understandings of what counts as "research"

and of what counts as "knowledge." The course examines how gender theory and feminist politics shape the kinds of research questions researchers ask, the types of materials and other information researchers use, and the ways researchers define our relationships with our sources of data, evidence and other information. Students are expected to reflect on and engage with feminist approaches to research in this course in order to develop and complete a detailed research proposal. Prerequisite: At least two courses in WGSS, including Introduction to WGSS or Sexuality Studies at the 100 or 200 levels and one 300-level WGSS course, preferably in feminist or queer theory. This class is a writing-intensive course.
Credit 3 units. A&S IQ: SC, SD, WI

L77 WGSS 418C Sexuality and Gender in East Asian Religions

In this course we will explore the role of women in the religious traditions of China, Japan and Korea, with a focus on Buddhism, Daoism, Shamanism, Shinto and the so-called "New Religions." We will begin by considering the images of women (whether mythical or historical) in traditional religious scriptures and historical or literary texts. We will then focus on what we know of the actual experience and practice of various types of religious women — nuns and abbesses, shamans and mediums, hermits and recluses, and ordinary laywomen — both historically and in more recent times. Class materials will include literary and religious texts, historical and ethnological studies, biographies and memoirs, and occasional videos and films. Prerequisites: This class will be conducted as a seminar, with minimal lectures, substantial reading and writing, and lots of class discussion. For this reason, students who are not either upper-level undergraduates or graduate students, or who have little or no background in East Asian religion or culture, will need to obtain the instructor's permission before enrolling.

L77 WGSS 419 Feminist Literary and Cultural Theory

This course is intended to acquaint students with basic ideas and issues raised by a diversity of voices in contemporary feminist and cultural theory. Readings will cover a wide range of approaches and tendencies within feminism, including French feminism, Foucauldian analyses of gender and sexuality, lesbian and queer theories, Third World/postcolonial feminism, and feminism by women of color. Given that feminist theories developed in response to and in dialogue with wider sociopolitical, cultural, and philosophical currents, the course will explore feminist literary and cultural theory in an interdisciplinary context. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Prerequisite: advanced course work in WGSS or in literary theory (300 level and above) or permission of the instructor. Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM EN: H

L77 WGSS 4201 The Novel in the Feminine (Le Roman au Féminin)

Informed through feminist criticism (Beauvoir, Cixous, Kristeva), this course examines the deconstruction of the novel as a traditional genre by 20th-century women writers such as Colette, Nathalie Sarraute, Marguerite Duras, Marguerite Yourcenar, Annie Ernaux and Mariama Bâ. We place special emphasis on the representation of the writing woman in the text itself and

on the issue of "écriture féminine" in its sociocultural context. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates.

Same as L34 French 4201

Credit 3 units. Art: HUM

L77 WGSS 421 From Mammy to the Welfare Queen: African-American Women Theorize Identity

How do representations of identity affect how we see ourselves and the world sees us? African-American women have been particularly concerned with this question, as the stories and pictures circulated about black female identity have had a profound impact on their understandings of themselves and political discourse. In this course we look at how black feminist theorists from a variety of intellectual traditions have explored the impact of theories of identity on our world. We look at their discussions of slavery, colonialism, sexuality, motherhood, citizenship, and what it means to be human.

L77 WGSS 427 Technology and Feminist Practice: Gender Violence Prevention Tools

How can we best use technology, and the tools and insights of the Digital Humanities in particular, to promote effective approaches to addressing gender-based violence? What are the most effective ways to bridge the innovations of the research university with the everyday work of practitioners seeking to prevent violence or intervene in its aftermath? What are the ethics involved in constructing tools for public and professional use? Which interests should govern the choices in content, design and dissemination of information? This course will introduce students to the strategies and challenges of devising technological tools for violence prevention for use beyond the classroom. Class readings and discussions will be supplemented by hands-on project work with Washington University's Gender Violence Database and lab sessions that focus on skill-building in digital project construction. Prerequisite: For undergraduate students, L77 393 01 or previous work experience with the Gender Violence Database. Graduate students by permission of instructor.

L77 WGSS 429 Feminist Political Theory

This course asks how feminist thinkers from various political and intellectual traditions critique, adopt and transform political theories of justice, citizenship, property and the state. To uncover how different feminist theories have been adopted in the struggle for political transformation and social justice, we will pursue two main lines of inquiry. The first asks how feminist thinkers from various traditions critique and engage the history of political thought within the social contract tradition. We will ask, in particular, how gender, race, slavery, colonialism and empire shape conceptions of citizenship and property. We will also examine transnational feminist critiques of the public/private division in the Western political theory canon as it impacts the role of women and the social construction of women's bodies. During the second half of the semester, we will ask how various transnational social movements have engaged and adopted feminist theories in efforts to resist state violence, colonialism, labor exploitation and resource extraction. In following these lines of inquiry we will draw from postcolonial, decolonial, liberal, Black, radical, Marxist and Chicana feminist perspectives. Part of our goal will be to uncover how various feminist theories treat the relationship between politics and embodied experience, how gendered conceptions of family life affect notions of political power and how ideas about sexuality and sexual conquest intersect with empire-building. Prerequisite: L77 100B or consent of instructor.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L77 WGSS 430A Divergent Voices: Italian Women Writers

This course engages the fictional and political works of Italian women writers from the 17th century to the present day. We will read one of the acclaimed Neapolitan novels of Elena Ferrante, who is considered by many to be the most important Italian fiction writer of her generation. We will examine a cloistered Venetian nun's defiant 1654 indictment of the misogynist society that forced her into the convent. We will confront the reality of a woman writer who in 1901 was compelled to choose between her child and her literary career. Among other contemporary writers, we will study the humorous and radical feminist one-acts of playwright Franca Rame. Taught in English. No Final.

L77 WGSS 432 Women Writers of the 20th Century

This course examines select novels, poetry and political writings by such noted authors as Sibilla Aleramo, Dacia Maraini, Luisa Muraro and Anna Banti. Special attention is paid to the historical, political and cultural contexts that influenced authors and their work. Textual and critical analysis focuses on such issues as historical revisionism in women's writing, female subjectivity and the origins and development of contemporary Italian feminist thought and practice. Taught in English.

L77 WGSS 4333 Women of Letters

We investigate the representation of women in 18th-century texts. Why did the novel and epistolary fiction become so closely associated with women as writers, heroines and readers in the course of the century? Why were women considered exemplary and yet, at the same time, a threat? The 18th century saw the last of the salons led by women well-versed in philosophy, literature, art and politics. It saw the reinforcement of the opposition between the public and the private sphere. Woman was the incarnation of the ideal of liberty and yet excluded from the "rights of man." Rousseau praised women's role as nurturers and peacemakers but cast into doubt their capacity for genius. Literary texts that feature women became a sparring ground for two of the century's major literary trends: Sensibilité and Libertinage, for a woman's sensitivity was thought to contain the seeds of virtue and licentiousness. We investigate philosophical discourses on the senses and emotions and political discourses on republican responsibility. We read these texts in conjunction with the literary works of men and women authors, including Prévost, Marivaux, Graffigny, Riccoboni, Diderot, Rousseau, Charrière, Laclos, Sade and Staël. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One hour preceptorial required for undergraduates.

L77 WGSS 436 Black Sexual Politics

Borrowing from Patricia Hill Collins' perspective in *Black Sexual Politics*, this seminar examines the historic and popular understandings of black sexuality and how they maintain color line, as well as threaten to spread what Hill Collins refers to as a "new brand of racism." Particularly, this course engages questions about sexuality that have only begun to be discussed with African-American Studies and the larger public sphere. Taking the intersections of identities very seriously, this course interrogates the ways in which these constructions have affected black women, while also being attentive to how "others" are implicated within discourses of black sexuality. Similarly, we will also engage the various distortions of black men — depictions of the black and masculine as almost always violent, sexually and socially irresponsible, brutish, questionable and unfaithful. Together we will use various critical texts and media to better understand the impact and the importance of visual and material images in the interplay of race, sex and politics in contemporary America.

Credit 3 units. A&S IQ: SSC, SC, SD EN: S

L77 WGSS 437 Transnational Feminisms

This course engages contemporary feminist theories from diverse transnational contexts, as well as the social movements and local resistances they inspire. Through engagement with key works of feminist theory, political manifestos, and creative works of resistance, we will explore how transnational feminist alliances and coalitions have contested and responded to gendered and racialized forms of exploitation, navigating and reshaping territorial and social boundaries. We will engage with debates around the notion of a "global sisterhood"; tensions between universal and local feminist practice; the role of difference, nationality and culture in navigating the possibility of solidarity;

the role of the internet in forging cross-border alliances; human rights-based activism; "women's" work; transgender inclusivity and transfeminisms. Part of our goal will be to ask how feminist theories from diverse geographical locations have influenced the politics of borders, movements for environmental justice, migrations and mobility, resistance to imperialism and the forging of alternative economies. We will also explore the gray areas existing in between binaries such as feminist/anti-feminist; local/global; home/away; global South/North; victim/agent; domination/dependency. Finally, we will ask how processes of knowledge-production take shape within different intellectual and political movements such as postcolonial feminism, decolonial and indigenous feminism, liberal and radical feminism, Marxist feminism and religiously-based feminisms.

L77 WGSS 439 The Arab & Muslim Americas: Feminist Perspectives

Migratory movements from the Middle East and North Africa into the Americas were precipitated by multiple and intersecting factors. This course will examine the historical and contemporary waves of Arab and Muslim migrants and refugees into the Americas from the 19th to the 21st century. It will explore how empire, globalization, and war influenced and continue to influence the flow of people across borders and impact policies and ideas of belonging in receiving nation-states. We will examine Arab and Muslim identity in light of gendered, ethnoreligious, class, and national affiliations and investigate the racialization of Islam and the gendered-Orientalist constructions of Arabs and Muslims in Latin America (Brazil, Mexico, Argentina, Honduras, Cuba) and the U.S. Utilizing interdisciplinary texts in transnational feminist theory, cultural studies, and history, we will trace the ways that specific diasporic subjects have been incorporated into host nation-states and analyze, through a comparative framework, the receptions and rejections of Arabs and Muslims in the U.S. and Latin America.

L77 WGSS 441A Gender Analysis for International Affairs

Although for generations gender was ignored in theory and practice, it is a central but too often obscured dimension of the policy and practice of international affairs, relations, and development. In this transdisciplinary course, students take gender seriously as an analytical category and examine how masculinities, femininities, gender identities, and sexualities shape the construction, implementation, and outcomes of global governance, politics, economics, and interventions. By traversing both macro and micro levels, this course exposes students to diverse voices from around the world, which they utilize to conduct gender analyses of case studies relevant to their interests. Throughout, we will be mindful of (1) how gender functions in tandem with sexuality, class, race, religion, and ethnicity (intersectionality); and (2) how multidimensional identities morph historically, regionally, and culturally. The student builds a gender analysis toolkit and practices what Cynthia Enloe describes as "feminist curiosity," exploring the relationship between gender and power in various aspects of international affairs.

L77 WGSS 4494 Modern Japanese Women Writers

Japanese women have been scripted by Western (male) imagination as gentle, self-effacing creatures. From their (re)emergence in the late 19th century to their dominance in the late 20th, Japanese women writers have presented an image of their countrywomen as anything but demure. Struggling to define their voices against ever-shifting expectations and social contexts, the women they create in their fiction are valiant, if not at times violent. This course examines the various manifestations of the female image in female-authored modern Japanese fiction. Writers to be considered are Higuchi Ichiyo, Hirabayashi Taiko, Uno Chiyo, Enchi Fumiko, Yamada Eimi, and others. A selection of novels and shorter fiction will be available in English translation, and students need not be familiar with Japanese. Prerequisites: 6 units of literature/women's studies and junior standing, or permission of the instructor. Writing Intensive course.

L77 WGSS 4502 Women and the Medieval French Literary Theory

The Middle Ages constitute a beginning — a period when new languages and literatures came into being, along with Romanesque book — illumination and stained glass, Gothic cathedrals, Gregorian chant, Troubadour song, Crusades for the Holy Land and quests for the Holy Grail. Medieval French Literature is therefore a new literature, defining itself against antique models and its own rich multilingual, highly visual and oral culture. This course provides an overview of this diverse and fascinating French literary tradition while focusing on the status of women in the literary production of the Middle Ages. Particular attention is given to women's role in the creation of texts as authors and patrons. We also examine how gender roles are constructed and challenged through the literary representation of female characters. Readings include examples from major genres: Marie de France's *Lais*, Chrétien de Troyes' *Lancelot*, Rutebeuf's *Vie de Sainte Elysabel*, the anonymous *Aucassin et Nicolette*, as well as *Fabliaux*, poetry of the Trouvères and Trouairitz, excerpts of the *Roman de la Rose*, and works by Christine de Pizan. All readings and discussions are in modern French. Prerequisites: French 325 and French 326 or one of these courses and the equivalent Washington University transfer literature course from Toulouse or Paris. One-hour preceptorial for required for undergraduates.

L77 WGSS 457 Gender and Modernity in Latin America

The purpose of this course is to introduce students to the particular forms modernity assumes in Latin American countries and to the ways in which national cultures, identity politics, and gender issues interweave during the 20th-century. The course will discuss three particular articulation of this topic: 1) Gender and the national question in Argentina: Eva Peron; 2) Gender and Visual Arts: Frida Kahlo; and 3) Gender and Ethnicity: Rigoberta Menchu. Through these iconic figures students will be introduced to the specific features that characterized three very different but representative cultural scenarios in Latin America. In each case, the context for the emergence of these highly influential public figures will be studied from historical, social and cultural perspectives. In order to explore the cultural and political significance of Eva Peron, Frida Kahlo and Rigoberta Menchu, the course will utilize literary texts (speeches, letters, diaries, etc.), visual materials (photography, films, and paintings) and critical bibliography.

L77 WGSS 4601 Taboo: Contesting Race, Sexuality and Violence in American Cinema

Pushing the envelope or going too far? What is the boundary between films that challenge us and films that offend us? This is a course about films that crossed that boundary, most often by presenting images of race, sexuality and violence, images that could attract audiences as much as they offended moral guardians and courted legal sanctions. Because they were denied the First Amendment protection of free speech by a 1915 Supreme Court decision, movies more than any prior art form were repeatedly subject to various attempts at regulating content by government at federal, state, and even municipal levels. Trying to stave off government control, Hollywood instituted forms of self-regulation, first in a rigid regime of censorship and subsequently in the Ratings system still in use. Because taboo content often means commercial success, Hollywood could nonetheless produce films that pushed the envelope and occasionally crossed over into more transgressive territory. While control of content is a top-down attempt to impose moral norms and standards of behavior on a diverse audience, it also reflects changing standards of acceptable public discourse. That topics once barred from dramatic representation by the Production Code — miscegenation, homosexuality and "lower forms of sexuality," abortion, drug addiction — could eventually find a place in American movies speaks to changes in the culture at large. In trying to understand these cultural changes, this course explores films that challenged taboos, defied censorship, and caused outrage, ranging from films in the early 20th century that brought on the first attempts to control film content through to films released under the ratings system, which has exerted subtler forms of control. Required screenings.

L77 WGSS 4711 Gender and Religion in China

In this course, we explore the images, roles and experience of women in Chinese religions: Confucianism, Daoism, Buddhism, and so-called "popular" religion. Topics discussed include: gender concepts, norms and roles in each religious tradition; notions of femininity and attitudes toward the female body; biographies of women in Confucian, Daoist, and Buddhist literature; female goddesses and deities; and the place of the Buddhist and Daoist nun and laywoman in Chinese

society. All readings are in English or in English translation. Prerequisite: senior/graduate standing. Students with no previous background in Chinese religion, literature or culture need to obtain instructor's permission before enrolling. Same as L23 Re St 4711 Credit 3 units. A&S IQ: HUM, LCD

L77 WGSS 475 Reformers and Radicals: Feminist Thinking Through History

We focus on feminist thought in Western culture but also examine non-Western ideas about feminisms. We trace the relationship among emergent feminist ideas and such developments as the rise of scientific methodology, Enlightenment thought, revolutionary movements and the gendering of the political subject, colonialism, romanticism, socialism, and global feminisms. Readings are drawn from both primary sources and recent feminist scholarship on the texts under consideration. Note: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Permission of instructor required. Prerequisite: completion of at least one Women, Gender, and Sexuality Studies course or permission of the instructor. Students who have taken L77 475 Intellectual History of Feminism cannot take this class.

L77 WGSS 4755 Queering Sexual Cultures in Africa and the Diaspora

This course examines gender and sexuality in contemporary Africa and the diaspora. We will focus specifically on queerness as a category of analysis and will examine queer identities, practices, communities and cultures in Africa and the African diaspora. In recent years, many African countries have adopted harsh anti-homosexuality laws and much of the political and popular discourse frames expressions of same-sex desire as "un-African." However, there is a long history of non-normative sexualities in Africa, challenging the manner in which the continent is constructed as heterosexual by both local and global forces. Similarly, black communities across the African diaspora have relied on the regulation of gender and sexuality to demarcate the boundaries of blackness, and have traditionally sought belongingness to the nation through compulsory heterosexuality. Many scholars, artists and activists in the African diaspora continue to critique parochial definitions of Africanness and Blackness that rely on the exclusion of queer subjects. By drawing on historical, theoretical and visual texts, we will examine the debates concerning sexuality, citizenship and human rights on the African continent and the diaspora as well as their relationship to global issues around sexual citizenship and human rights. By focusing on the lived experiences of LGBTQ subjects in the African diaspora, we will interrogate the contested relationship between sexuality and politics. This reading-intensive, interdisciplinary course will familiarize students with the debates and issues of Queer African Studies, Black Queer Studies, and Black and African Feminist Thought.

Writing

The English department offers a full range of courses in the writing of poetry, fiction, drama and various forms of nonfiction, as well as advanced courses in expository writing.

An English major with a special interest in writing may complete a major in English literature with a concentration in creative writing. Alternatively, a student may count up to 9 units of upper-division writing courses toward the English major.

The department also offers a minor in writing, which can be combined with any major, including the English major. In this latter case, students are advised to take English and American literature courses (designated L14 E Lit) exclusively for the English major and writing courses (designated L13 Writing) exclusively for the writing minor.

Except where noted, students are expected to receive a grade of C or better in each course.

Majors

Although the English department does not offer a writing major, the department does offer the option of completing an English major with a creative writing concentration. To complete the major, students must take five creative writing courses, including at least three upper-division courses. Students will specialize in one particular genre — poetry, fiction or creative nonfiction — and ultimately take a three-course sequence in that genre (i.e., 200-, 300- and 400-level courses); students will also take at least one course outside of the chosen genre. The concentration will not change the requirements of the English major and thus requires 6 additional credit hours as compared with the regular English major.

Students interested in majoring in English literature with a concentration in creative writing should visit the English (p. 468) page of this *Bulletin* for additional information.

Minors

The Minor in Writing

The writing minor is fulfilled by completing 15 units of writing courses, no more than 6 units of which can be taken at the 200 level. At least one of the five courses elected must be Writing 311 Exposition or Writing 312 Argumentation.

With department approval, up to 6 units of journalism courses in writing or editing offered by University College can be counted toward the minor. An off-campus internship (Writing 298 Journalism: Communications Internship) oriented toward writing may also be counted toward the minor. Regardless of level, at least 9 units counted toward the minor must be completed in regular courses home-based in writing.

For undergraduate scholars in the Howard Nemerov Program, two semesters of the 200-level Nemerov seminar (GeSt 211 Howard Nemerov Seminar I) may count as 3 units of 200-level work toward the writing minor. Two semesters of the 300-level Nemerov seminar may count as 3 units of 300-level work toward the writing minor. A maximum of 6 Howard Nemerov units may count toward the writing minor.

Students who wish to take a writing minor in addition to an English major are advised to take English and American literature courses (L14 E Lit) exclusively for the major and writing courses (L13) exclusively for the minor. (Please note: 100-level L13 classes do not normally count toward the writing minor.) Students who wish to combine writing with their English major are encouraged to consider an English major with a concentration in creative writing (p. 468).

Courses

Courses listed on this page include L13 Writing (p. 964) and L59 CWP (p. 969) (Writing Center). **Please note:** L59 classes and 100-level L13 classes do not normally count toward the writing minor.

Writing

Visit online course listings to view semester offerings for L13 Writing (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L13&crslvl=1:4>).

L13 Writing 103 College Writing: Writing, Literature, and Justice

This class seeks to develop the advanced reading, writing, and research skills that students need in a university setting. It uses classical texts of the western tradition to investigate the question of justice and to develop arguable claims through the careful analysis of evidence. The act of crafting arguments, we

will assume, is implicated in the question of justice because arguments depend on an ethics of persuasion. We will learn how to practice such an ethics as we improve our ability to understand and utilize four crucial aspects of academic writing: evidence, analysis, argument, and research. Mastering these aspects will make us proficient in the difficult art of judgment. It will allow us to make sense of some of the most powerful literary statements about justice, from Sophocles to Shakespeare and Toni Morrison. **THIS COURSE SATISFIES THE FIRST-YEAR WRITING REQUIREMENT FOR ALL DIVISIONS.**

Same as L59 CWP 115

Credit 3 units.

L13 Writing 104 Writing Identity

Who are you? This simple question becomes ever more complicated the more closely you examine it. How should you define yourself? By ancestry, hometown, gender, cultural allegiance, ethnic background, nationality, sexual preference, social class, personal history, fashion sense, career aspirations, taste in music, or by some other category? This class will examine the complexities of identity as they have been expressed in a wide variety of modern literary (and some philosophical) writings, in order to develop the advanced reading, writing, and research skills that students need in a university setting. This course will satisfy the Writing 1 requirement.

Credit 3 units.

L13 Writing 203 The Sentence in English

Though formal knowledge of English grammar is not always necessary for effective writing, learning it can help students understand how sentences are put together, and it can allow them to develop their own writing using a new set of skills. The Reed-Kellogg system of diagramming is a method of learning grammar by creating "pictures," or maps, of sentences. These pictures show the logical relations between words, phrases and clauses, and they illustrate the choices writers are making as they craft individual sentences. Using a recent textbook by Eugene Moutoux, we learn to diagram sentences both famous and ordinary, both contemporary and of historical interest. Our aims are (1) to learn both the "rules" and the peculiarities of English grammar, (2) to understand how the structure of a sentence can influence its meaning, and (3) to use this knowledge productively in crafting and revising our own prose. By the end of the course, students should be able to diagram just about any sentence in English, whatever the genre or time period, including their own. Extensive practice in writing and revising sentences gives students a consciousness of how grammar and syntax influence the meaning and effectiveness of their own writing.

L13 Writing 205 Writing the Visual World

Credit 3 units. A&S IQ: HUM Arch: HUM Art: CPSC, HUM BU: HUM EN: H

L13 Writing 211 Writing 2

This course invites students to pursue a writing project that centers on their own intellectual interests and that complicates their approaches to researched, creative and analytical work. Consult section description for details about specific class emphases. Limit: 12 students. Prerequisite: CWP 100 College Writing 1.

Credit 3 units. A&S IQ: HUM EN: H

L13 Writing 212 Rhetoric and Power

The study of rhetoric, one of the original seven liberal arts, is perhaps more relevant today, in a world where diverse opinions reverberate 24/7 from television and the internet, than in ancient times when rhetors invented arguments to help people choose the best course of action when they disagreed about important political, religious, or social issues. How do we make our voices heard? How can we invent and present compelling written discourse? This course introduces students to common rhetorical principles and to the disciplinary history of rhetoric and compositional studies. Assignments in this class include rhetorical exercise in invention and craft, imitations, and varied compositions, ranging from the personal to critical, from the biographical to argumentative. We examine rhetorical principles (audience, context, kairos, exigency, ethos, pathos, logos, and so forth) that are employed, for example, not only in literary analysis but in law, politics, education and science. We aim for a mastery of craft and a refinement of thought.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 213 The Long Essay

This course is designed for skilled writers who want to bring more complexity and depth to their style and content. Emphasis is on the innovation that can occur when we give sustained interest to our subjects in a long work. The class is particularly well-suited to students who wish to produce extended works of creative nonfiction, honors theses, or artist statements.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L13 Writing 220 Creative Nonfiction Writing I

A course designed to introduce students to the fundamental craft elements involved in writing creative nonfiction. While the course covers the major forms within the genre of creative nonfiction, including literary journalism, biography, profiles, nature writing and travel writing, special emphasis is given to personal essay and memoir. Prerequisite: CWP 100 College Writing I.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 221 Fiction Writing I

A course designed to introduce students to the fundamental craft elements involved in writing fiction. Prerequisite: CWP 100 College Writing I.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 222 Poetry Writing I

A course designed to introduce students to the fundamental craft elements involved in writing poetry. Prerequisite: Writing I.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 224 Playwriting

An introductory course in playwriting. Limited to 8 students.

Prerequisites: CWP 100 College Writing 1 and permission of the instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 298 Journalism: Communications Internship

For students undertaking projects in newspaper or magazine journalism, in radio or television, or in business, government, foundations and the arts. The student must secure permission of the chair of the Undergraduate Committee, file a description of their project with the department and, at the end of the semester, submit a significant portfolio of writing together with an evaluation by the internship supervisor. Up to 3 units acceptable toward the writing minor, but cannot be counted toward the English major or literature minor. Prerequisite: CWP 100 College Writing 1. Must be taken credit/no credit.

Credit variable, maximum 3 units.

L13 Writing 300I Independent Study

This independent study in creative writing is for students who have taken the 200-level introductory course in the genre they want to focus on with the instructor. The whole syllabus should be directed toward developing the student's higher-level skills, among them the capacity to reflect on craft methods. It is strongly recommended that two to four multiple-page written assignments be assigned over the course of the semester.

Credit 3 units.

L13 Writing 305 Modern Humor Writing

This course will analyze and put into practice what makes good humor writing both good and humorous, from subject matter to the mechanics of setting up a punchline, from crafting an unexpected metaphor to perfecting the reversal.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 306W The Long Essay: Researched Writing

Credit 3 units. A&S IQ: HUM, WI BU: HUM EN: H

L13 Writing 307 Writing and Medicine

Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 309 Writing the Natural World

For students interested in the environment and natural sciences. This course brings together essays from a wide range of communities including biology, physics, medicine, environmental studies, creative writing and more. Readings and assignments are intended to enhance students' understanding of the relationship between writing and their experience/knowledge of the natural world. Major assignments allow students to follow, explore and write about their own unique interest in a related subject, and include a personal essay, an expository essay, and a researched argumentative essay, as well as peer review workshops, oral presentations, and revision. Students record and explore their own experiences of nature in short creative assignments that prepare them for the major papers. Prerequisites: CWP 100 College Writing 1 and junior standing. Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 310 Guided Research in Composition: Theory and Pedagogy of One-to-One Writing Instruction

This course teaches theoretical and practical approaches to the tutoring of writing, specifically focusing on tutoring writing within the context of undergraduate courses. Students learn collaborative methods of tutoring writing, explore different approaches to writing comments on student work in various content areas, and examine the connections between writing and thinking. Students analyze their own writing processes and learn how to help others through the writing and revision process. Readings and discussions focus on writing theory and pedagogy, and students practice one-to-one methods in mock conferences and with sample essays. Assignments: two short essays, a longer research paper and presentation, and a journal.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L13 Writing 311 Exposition

This advanced writing course considers style in relationship to audience and purpose, asking the writer to engage more consciously with writing conventions, and to explore strategies appropriate to various writing situations. Prerequisites: CWP 100 College Writing 1 and junior standing. A note for students and advisers: When registering refer to WebSTAC for updated information on section times and available seats.

Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 3111 Exposition (Visual)

This advanced writing course emphasizes writing and visual analysis, asking students to examine important forms of visual media to develop a sophisticated sense of the strategies, techniques and the rhetoric of visual representation. Prerequisites: CWP 100 College Writing 1 and junior standing. Credit 3 units.

L13 Writing 3112 Exposition: Writing and Medicine

For students who have a particular interest in health, illness and medical care. Exposition is a course that considers style in relationship to audience and purpose, asking the writer to engage more consciously with writing conventions, and to explore strategies appropriate to various writing situations, from the more experimental and performative to the more formal and scholarly. The course involves frequent practice in analyzing and critiquing, with special attention to techniques of organization, argument and emphasis. Students in this special section of Exposition read essays, journalism and personal narratives about the experience of physicians and patients in the modern health care system. Students use expository writing to think critically and personally about their own experiences with illness and disease. Pre-medical students might use this opportunity to write and think about the anticipated rewards and challenges of the profession they hope to join.

Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 312 Argumentation

This advanced writing course examines the strategies of argumentation, exploring such elements of argument as the enthymeme, the three appeals, claim types and fallacies. Prerequisites: CWP 100 College Writing 1 and junior standing. A note for students and advisers: When registering refer to WebSTAC for updated information on section times and available seats.

Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 314 Topics in Composition

An advanced writing course focusing on selected topics related to writing. Topics chosen by department/instructor. Consult section description for details about specific class emphases. (Note: In some cases, this course may be cross-listed with other programs/departments and may satisfy the writing-intensive requirement.) Prerequisites: CWP 100 College Writing 1 and junior standing.

Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM EN: H

L13 Writing 320 Creative Nonfiction Writing 2

This course is aimed at undergraduates who have taken Nonfiction Writing 1 and wish to pursue both their development as writers and the study of craft in the context of a more rigorous workshop. Prerequisites: CWP 100 College Writing 1, Writing 220 Creative Nonfiction Writing 1.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 321 Fiction Writing 2

This course is aimed at undergraduates who have taken Fiction Writing 1 and wish to pursue both their development as writers and the study of craft in the context of a more rigorous workshop. Prerequisites: Writing 220, Writing 221.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 321W Mellon Undergraduate Fellows Seminar

Credit 3 units. A&S IQ: HUM, WI EN: H

L13 Writing 322 Poetry Writing 2

This course is aimed at undergraduates who have taken Poetry Writing 1 and wish to pursue both their development as poets and the study of craft in the context of a more rigorous workshop. Prerequisites: Writing 221, Writing 222.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 322W Kling Undergraduate Honors Fellowship Seminar

Credit 3 units. A&S IQ: HUM, WI EN: H

L13 Writing 323 Fiction Writing: The Short-Short, Sudden Fiction, and Microfiction

This course is aimed at undergraduates who have taken Fiction Writing 1 or Poetry Writing 1 and wish to further explore the craft of fiction through the medium of the short-short story. The course focuses on reading, writing and thinking critically about short-shorts.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 324 Fiction Writing: Coming of Age in the Short Story

A fiction writing course that explores coming of age themes.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L13 Writing 325 Poetry Writing: The Poetry of Travel

This course is offered for students who have taken Poetry 1 and are interested in further developing their craft.

Credit 3 units. A&S IQ: HUM EN: H

L13 Writing 326 Fiction Writing: Stories in the Suburbs

In the 1950s, the suburbs were still somewhat of a novelty in American culture — most people still lived in cities and small towns, or on the farm. Back then, Levittowns and the like were embraced with either gee-whiz optimism, or seen as sinister dystopias where youth, ideals and romance went to fester and die. But now that the American mainstream is stucco McMansions, strip malls and big box stores; now that the suburbs have become more ethnically diverse; now that literature is being generated from these places instead of just about them, how have stories set in the 'burbs changed? We read short stories written from the 1950s until the present day exploring this particular setting, and, through a series of exercises, workshops and our own short fiction, we explore the milieu as writers (whether we happen to be from the suburbs or not), always on the lookout for the unexpected in these familiar places.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L13 Writing 327 Creative Nonfiction: Personal Essay and Memoir

This is an intermediate course in writing creative nonfiction, with a concentration on personal essay and memoir. Prerequisite: Writing 220 Creative Nonfiction Writing 1.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 330 Fiction Writing: Fiction and Obsession

Desire is at the heart of fiction, from the forces that drive the decisions characters make to the ways stories work on us as readers.

Credit 3 units. A&S IQ: HUM EN: H

L13 Writing 331 Fiction Writing: Historical Fiction

A literature/creative writing hybrid course, students read a number of contemporary historical fictions and then write one of their own. We consider the ways in which these fictions inhabit, depart from and reflect upon the historiography and history they're built from — upon the indeterminacy of the historical record, and the limits of its reach — but we also discuss fiction's responsibility to historical "facts" and documents, and the relevance of fictions among nonfictions in approaching an event or figure. Prerequisites: CWP 100 College Writing 1, Writing 221 Fiction 1.

Credit 3 units. A&S IQ: HUM EN: H

L13 Writing 351 Introduction to Playwriting

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 352 Introduction to Screenwriting

Writers explore the various elements, structures and styles used in crafting a motion picture screenplay. They experience this process as they conceive, develop and execute the first act of a feature-length script. Writers create a screenplay story, present an outline for class discussion and analysis,

then craft Act One. Writers are encouraged to consult with the instructor at various stages: concept, outline, character and scene development, and dialogue execution. While the students fashion their screenwriting independently, the class also explores the general elements of theme, genre and voice. A more specific examination of mechanics, the nuts and bolts of story construction, plotting, pacing, etc., follows to support the ongoing writing process. In-class exercises aid the writer in sharpening skills and discovering new approaches to form and content. Writers' work is shared and discussed regularly in class. Screening of film scenes and sequences provides students with concrete examples of how dramatic screenwriting evolves once it leaves the writer's hands.

Same as L53 Film 352

L13 Writing 372 Music Journalism

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 373 Cultural Journalism

In the Internet Age, journalism has migrated from traditional, or "legacy" institutions (book publishers, film & television production companies, newspapers) to digital versions of the same thing; however, the craft remains tied to its legacy models. The migration online has endangered certain ecologies of journalistic practice — in particular, arts journalism, especially criticism, the long-form investigative essay, and foreign reporting. The first two of these three fit under what we describe as cultural journalism, and our purpose in this class is to practice what have been cultural journalism's forms, at the same time as we inquire into the modes and genres that are its future.

Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 375 Political Writing

Defined most simply, politics is that which pertains to the "affairs of the polis," one's community. In its real-life context, writing always interacts with a community in some way, engaging a defined audience to produce an intended effect. In this sense, writing always touches the affairs of a polis, and thus, writing is inherently political, regardless of whether the writer considers this during composition. In this class, we will focus on explicitly political writing by writers who are not politicians, that is to say, sanctioned experts in the affairs of the polis. Foregoing public policy memoranda and economic analyses, we will look at how journalists, grassroots organizers, and creative writers have consciously written to intervene in the affairs of their communities despite their outsider status. Using techniques of rhetorical analysis and logical structure, we will examine how these writers crafted works that inspire and move audiences through the conventions of several genres: essay, polemic, journalism and satire.

Credit 3 units. A&S IQ: HUM, SD, WI Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 400I Independent Study

This independent study in creative writing is envisioned as more specialized than a 300-level course, with students intensively investigating a particular topic, theme, craft element, genre, and so on. Students should, along with the instructor, create an intensive reading list in the area of focus and complete a substantial creative project during the semester.

Credit 3 units. BU: SCI

L13 Writing 401 Writing for Children and Young Adults

In this course we examine various genres of writing for young people: poetry, fiction and nonfiction.

Credit 3 units.

L13 Writing 403 Dramaturgy Workshop

A laboratory course that investigates dramaturgy from four vantage points: New Play Dramaturgy, Institutional Dramaturgy, Dramaturgy of Classics, and Dramaturgical Approaches to Nontraditional and Devised Theater. This is a "hands-on" course where student dramaturgs not only pursue the study of dramaturgy, but work actively and collaboratively with playwrights, actors and each other. Prerequisite: Drama 343. Same as L15 Drama 403

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM

L13 Writing 405 Rhetorical Theory: Problems and Methods

Credit 3 units. A&S IQ: HUM BU: HUM

L13 Writing 4131 Topics in Composition

Composition topics course — offerings vary from semester to semester.

Credit 3 units. A&S IQ: HUM EN: H

L13 Writing 417 Prose Style in English: History and Craft

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L13 Writing 420 Advanced Nonfiction

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L13 Writing 421 Advanced Fiction Writing

For qualified students who wish to continue their creative writing and reading through immersion in an intensive fiction workshop. Students wishing to enroll must not only register but also submit a 15-page (double-spaced) fiction sample. The sample must include a cover page with: student's name, the semester they took Fiction Writing 2, and the name of the Fiction Writing 2 instructor. Submit samples to the English Department mailbox of the L13 Writing 421 instructor no later than April 20. No one is officially enrolled in this class until contacted by the instructor. Prerequisites: CWP 100 College Writing 1, Writing 221 Fiction Writing 1, Writing 321 Fiction Writing 2.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L13 Writing 422 Advanced Poetry Writing

For qualified students who wish to continue their creative writing and reading through immersion in an intensive poetry workshop. Students wishing to enroll must not only register but also submit eight poems. The sample must include a cover page with: student's name, the semester he or she took Poetry Writing 2, and the name of the Poetry Writing 2 instructor. Submit

samples to the English Department mailbox of the L13 Writing 421 instructor no later than April 20. No one is officially enrolled in this class until contacted by the instructor. Prerequisites: CWP 100 College Writing 1, Writing 222 Poetry Writing 1, Writing 322 Poetry Writing 2.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L13 Writing 423 Proseminar in Writing: Nonfiction Prose

For students qualified to pursue their own projects in nonfiction prose; criticism by other members of the class and by the instructor. Limit: 12 students. Prerequisite: permission of instructor upon submission of writing samples.

Credit 3 units.

L13 Writing 424 Poetry Tutorial

These credits are available to students who have completed Writing 222 Poetry I and Writing 322 Poetry II. This is an opportunity for students who have already completed Writing 422 Advanced Poetry, or who are not able to take Advanced Poetry because of scheduling conflicts, to meet individually with the instructor to develop a portfolio of poems. During weekly meetings students explore various writing processes and revision techniques. There are directed readings and discussions of selected topics related to contemporary poetry and poetics. Credits may be taken concurrently with Advanced Poetry. Permission of the instructor is required.

Credit 3 units. A&S IQ: HUM EN: H

L13 Writing 431 Craft of Fiction: Experimental Traditions

A literature/creative writing hybrid course; students read a number of contemporary historical fictions — an increasingly important and innovative genre — and then write one of their own.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L13 Writing 432 The Craft of Poetry

This course is for writers who wish to study long-form poetic composition and book arrangement. The major assignment will be to compose a poem or poetic sequence of considerable length. Gwendolyn Brooks ("The Anniad") and Theresa Hak Kyung Cha ("Dictee") will be chief among our guides. We will study how poets arrange their books, and we will also make a brief foray into the material history of the book. Texts by Rosa Alcalá, John Ashbery, Daniel Borzutzky, Barbara Guest, Lyn Hejinian, Lorine Niedecker, Alice Notley, George Oppen, Ed Roberson, Brian Teare, and Simone White will also be included. This course counts toward the creative writing concentration. Prerequisite: L13 322.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L13 Writing 440 Critic as Writer

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L13 Writing 4521 Advanced Screenwriting

This course is intended for students who have already taken Film 352 Introduction to Screenwriting. Building on past writing experiences, students explore the demands of writing feature-length screenplays, adaptations and experimental forms. Particular attention is paid to the task of rewriting.

Same as L53 Film 452

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L13 Writing 4731 Advanced Playwriting

This course explores the tendencies and relationship between each individual student writer and the page. Exercises dispel any lingering doctrine that presupposes a certain style of writing. A large part of the class centers around collaborations. The writers write scenes as a final project for an acting class, and also work with two professional actors in an extended writing project that culminates in a script-in-hand presentation. The informal moments between collaborations look at the process beyond the first draft — i.e., the playground of language, nonverbal options, and the maintaining of "the work" through rewrites, readings, workshops and productions. Prerequisite: Drama 227 Introduction to Playwriting.

Same as L15 Drama 473

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L13 Writing 490 Creative Writing Capstone Seminar

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

Writing Center Courses

Visit online course listings to view semester offerings for L59 CWP (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L59&crslvl=1:4>).

L59 CWP 100 College Writing

This course teaches writing as a way of thinking and learning. Throughout the semester, students will explore writing as a creative and intellectual process. They will learn how to brainstorm, explore, and structure ideas on a page; share their writing and learn how to give and take constructive criticism; and learn how to revise their work, both for issues related to the paper's larger idea, and for issues related to grammar and style. By regularly working their way through the writing process, students will develop the habits and skills that make advanced study possible: paying close attention to the words and ideas of others; coming up with and responding to arguments of others; and refining a lucid style of prose that meets the expectations of the audience and occasion. THIS COURSE SATISFIES THE FIRST-YEAR WRITING REQUIREMENT FOR ALL DIVISIONS.

Credit 3 units.

L59 CWP 1001 Fundamentals of Academic Writing

This course may be required of some students before they take College Writing (L59 111-119) (placement to be determined by the department). Particular attention is paid to reading comprehension, critical thinking, organization of ideas and grammar. In some cases, students may be required to enroll in a one-credit tutorial along with this course.

Credit 3 units. Arch: HUM Art: HUM EN: H

L59 CWP 111 College Writing: Ampersand Ireland

This College Writing course complements the two-semester program exploring the Literary Culture of Modern Ireland. THIS COURSE SATISFIES THE FIRST-YEAR WRITING REQUIREMENT FOR ALL DIVISIONS.

Credit 3 units.

L59 CWP 112 College Writing: Citizen Scientist

Being a citizen of a modern democracy increasingly requires making decisions informed by our understanding of academic debate and scientific consensus. The stakes of these decisions range from the future of a warming planet to the benefits of vaccinations and GMOs to the persistence of racial bias and gender inequality. Even our daily diets are pushed and pulled by competing nutritional studies and their distortions in the media. Negotiating the volume of news and "fake news," the available academic research, and the influence of special interests can be daunting - particularly when we try to reflect on our own blind spots and knowledge gaps. Citizen Scientist uses these and other topics at the intersection of civic responsibility and academic research to introduce students to college writing. With a particular emphasis on climate change as one of our era's defining disconnects between science and public policy, the course will teach students to analyze, research and generate scholarly arguments as they deepen their understanding of the dynamic interaction between public opinion, government policy, political activism, science journalism and the research university. THIS COURSE SATISFIES THE FIRST-YEAR WRITING REQUIREMENT FOR ALL DIVISIONS.

Credit 3 units.

L59 CWP 113 College Writing: Dreams & Nightmares

This course is an opportunity to explore and experiment, to dwell in uncertainty and inquiry, and to entertain confusion before resolution. Whether a student's area of interest is the psychology of dreams, monsters, memory, desire, cognition and neuroscience, or the underbelly of the American Dream, they will find room to interrogate subjects -- both real and imagined -- as well as texts and theories that destabilize categories, embody possibility, and threaten established order. THIS COURSE SATISFIES THE FIRST-YEAR WRITING REQUIREMENT FOR ALL DIVISIONS.

Credit 3 units.

L59 CWP 114 College Writing: Writing Identity

What defines who we are and who we may become? How do class, gender, race, sexuality, and other social forces shape our identities? In what ways are our identities inherent or constructed, claimed or ascribed? In this course, we explore these and similar questions through the work of creative and critical writers, artists, and thinkers. We study key concepts such as double consciousness, intersectionality, and performativity. We consider how social dynamics, power, and privilege affect the language we use and the lives we live. All along, through writing and research assignments and class discussions, we examine and interpret visual, literary, and critical texts in an effort to define, together, what identity is and why it matters. THIS COURSE SATISFIES THE FIRST-YEAR WRITING REQUIREMENT FOR ALL DIVISIONS.

Credit 3 units.

L59 CWP 115 College Writing: Writing, Literature & Justice

This class seeks to develop the advanced reading, writing, and research skills that students need in a university setting. It uses classical texts of the western tradition to investigate the question of justice and to develop arguable claims through the careful analysis of evidence. The act of crafting arguments, we will assume, is implicated in the question of justice because arguments depend on an ethics of persuasion. We will learn how to practice such an ethics as we improve our ability to understand and utilize four crucial aspects of academic writing:

evidence, analysis, argument, and research. Mastering these aspects will make us proficient in the difficult art of judgment. It will allow us to make sense of some of the most powerful literary statements about justice, from Sophocles to Shakespeare and Toni Morrison. **THIS COURSE SATISFIES THE FIRST-YEAR WRITING REQUIREMENT FOR ALL DIVISIONS.**

Credit 3 units.

L59 CWP 116 College Writing: Place & Perspective

Place & Perspective is a writing course featuring readings on the subject of our environments, whether social communities, physical spaces, or even virtual realities. As a class and as individuals, students will be asked to respond to these sources with writing of their own, practicing the academic traditions of interpreting, analyzing, criticizing, and researching. Most importantly, students will have the opportunity to write original works synthesizing and offering new views on what it means to live here in this world, to have a place in an ecosystem or a city, a house or a hospital. We will study our local community, from perspectives in our classroom to the wider conversations across the St. Louis region, as we discover and write about our surroundings. We will foreground diversity in both our in-class conversations as well as through the writers we read, from issues of inequality to concerns of access and the responsibilities of citizens. The course will feature multidisciplinary perspectives in conversations with our faculty as they reflect on their experiences writing within and about places. We will consider how place-based thinking thrives across academic fields, from design thinking in art to systems science in engineering and from environmental policy in business to ethnographic writing in anthropology, to name a few possibilities. **THIS COURSE SATISFIES THE FIRST-YEAR WRITING REQUIREMENT FOR ALL DIVISIONS.**

Credit 3 units.

L59 CWP 117 College Writing: Power & Commodity Culture

What does your steak order have to do with your politics? How might our taste in film relate to our taste in sneakers? How does writing itself contribute to larger media discourse? This course will explore how our choices as consumers, creators, and writers are mediated by broader cultural forces such as film, foodways, music, television, art, and social media. "Commodity culture" refers to what aspects of culture can be evaluated in terms of supposed "worth" or economic value. Here students will think critically, draft, take risks, and revise to present work that has been elevated to college-level writing and argumentation. Readings will explore a range of cultural texts and topics -- whether it's the popularity of Grey Poupon in hip hop or racial tension in the St. Louis restaurant scene, the role of smartphones and social media in the rise of self-branding, or the blurred line between high art and Instagram. As avid readers and writers, we will delve into the details of rhetorical context to approach both published media and our own essays as instances of cultural production. No prior knowledge of foodways, art history, or media studies is necessary for this course, but students should arrive hungry, with an appetite for a nuanced appreciation of how something as seemingly innocuous as cultural output intersects with larger structures of status and power. **THIS COURSE SATISFIES THE FIRST-YEAR WRITING REQUIREMENT FOR ALL DIVISIONS.**

Credit 3 units.

L59 CWP 118 College Writing: Technology and Selfhood

Writing is a technology that allows one to read the thoughts of others across space and time. Our course's theme -- technology -- is the subject matter that we will be reading to hone skills such as analysis, argumentation, and critical thinking. This does not mean that a student must be a budding technologist to succeed in this course, nor will this course seek to transform a student into one. Rather, this course treats "technology" in its broadest sense, from its root in the Greek *technē* (which means "craftsmanship," "craft," "art," or "rhetoric") to its contemporary definition as the realm of knowledge that deals with the mechanical arts and applied sciences. In writing about technology, we will consider perspectives across the university curriculum in order to better comprehend our relationship with our tools and to scrutinize the dynamic interaction, communication, and interdependence of different kinds of tools for various means of communication and representation. We will strive to think critically about ourselves as part of larger communities and systems by attending closely to the ways we communicate with and about others through technologies such as writing, film, and social media. In writing creative, analytical, argumentative, and researched essays, we will address responsible uses of technology and the effects that technologies have on different communities and individuals, and we will try to answer questions like the following: How does technology affect us when we use it? How do technologies intersect and affect one another? What roles does technology play in our everyday lives? What roles do we want it to play in our future? **THIS COURSE SATISFIES THE FIRST-YEAR WRITING REQUIREMENT FOR ALL DIVISIONS.**

Credit 3 units.

L59 CWP 119 College Writing: When I'm 64

Half of the current students' generation will see their hundredth birthdays. This astonishing shift in demographics is one that affects each of us as individuals, as members of families, and as citizens. This writing course takes aging as its theme, sharpening our critical thinking through such practices as analysis, argumentation, and research while asking the following questions: How will we negotiate the changing goals and life circumstances that accompany a century of life? How will new technologies change how we live as individuals and as a society? How will our experiences and those who go before us shift how we imagine the possibilities open to our future selves? We will read essayists, critics, and theorists tackling these problems. In turn, we will engage our new longer future through our own creative and critical responses as well. **THIS COURSE SATISFIES THE FIRST-YEAR WRITING REQUIREMENT FOR ALL DIVISIONS.**

Credit 3 units.

L59 CWP 120 College Writing: Text & Traditions

This course will familiarize students with the modes of analysis, argumentation, and research that occur in scholarly writing and give them the tools and strategies to use those modes to fashion their own critical voice in both collegiate writing and beyond. Over the course of the semester, students will learn to make claims, find evidence, and explain and synthesize that evidence to evolve their claims to more complex critical thinking. They will learn how to explore scholarly conversations and how to enter those conversations as an equal voice while carefully citing the work of others. Students will also learn that all writing is individual and creative and that, to best engage with new

ideas, experimentation is encouraged. This course is linked to the Text & Tradition Focus seminar program. THIS COURSE SATISFIES THE FIRST-YEAR WRITING REQUIREMENT FOR ALL DIVISIONS.

Credit 3 units.

L59 CWP 1511 Critical Reading and Analytical Writing

This course focuses on developing the reading and writing skills needed to excel at the college level. Students apply principles of logical argumentation in order to critically read argumentative writing. They then develop analytical essays in response to these arguments. Students write four main papers of two drafts apiece. At the same time, the course addresses the clarity and accuracy of students' written English through ample written feedback, occasional lessons devoted to language issues common among course participants, and occasional individual tutorial meetings. Placement by examination or permission of the College Writing Program.

Credit 3 units.

L59 CWP 199 Language Support for English Composition

This course is designed to support students who are concurrently enrolled in L59 1001 Fundamentals of Academic Writing. Course activities are tailored to address language issues that arise in students' writing for L59 1001. By raising students' awareness of their individual strengths and weaknesses in written English and by teaching systematic approaches to editing their own writing, this course helps students to build independence in the production of more polished works of academic writing in English.

Credit 1 unit.

L59 CWP 200 Writing Tutorial

A tutorial in writing; may be taken for credit in one of two cases: (1) Students may be required to enroll in the tutorial for concentrated practice in writing fundamentals under the guidance of a tutor in addition to taking CWP 100 College Writing 1. In these cases, satisfying the first-year writing requirement means receiving a satisfactory grade in CWP 100 and receiving a passing grade in the tutorial. Students enroll in CWP 200 for 1 credit hour. Tutorials taken concurrently with CWP 100 must be taken pass/fail. (2) Students may be required to take the tutorial for 3 credit hours after taking CWP 100 in order to satisfy the first-year writing requirement. In this case, the tutorial is taken for credit. Direct all questions to Writing 1 office: 314-935-4899.

Credit 1 unit.

L59 CWP 201 Writing Workshop

An intensive workshop focusing on selected topics related to writing. Topics chosen by the department/instructor. Must be taken for credit. Consult course and section descriptions in online course listings for details about workshop emphases.

L59 CWP 202 The Essay: From Montaigne to The New Yorker

The essay has a storied past and present as well as a variety of purposes. In this course, we trace the history of this form, beginning with those long forgotten and not necessarily identified as essays and moving swiftly to present-day essays. We read works by such authors as Michel de Montaigne, Jonathan Swift, W. E. B. Du Bois, and Virginia Woolf, plus articles in 2020 issues

of *The New Yorker*. We practice brief reflective and long formal essays, including a profile, a reportage, and a film review. By the end of the semester, students will have a good understanding of the essay's history and form and a good sensibility for writing it.

L59 CWP 203 Pump Up the Volume: Collaboration and Cultural Impact Through Podcasting

When you're walking to class or catching a shuttle, what's playing in your earbuds? Music, perhaps. Or maybe you're listening to one of the more than 800,000 podcasts available to stream at any given moment. From tracking the rise and fall of Theranos' founder Elizabeth Holmes to unapologetic musings about life from recovering addict and actor Dax Shepard, podcasts have never been more primed to take our ears, our minds, and our hearts by storm. In this course, students will examine this phenomenon and its value in our global-minded culture and put into practice the storytelling skills we will observe from a collection of podcasts by creating our own podcast episode. Together, we will find out what happens when you fuse creative impulse with rigorous research and let it loose on the airwaves.

Degree Requirements

The faculty of the College of Arts & Sciences believes each student should strive toward breadth and depth of study, as represented in the formal requirements. The faculty also believes that the primary responsibility for the selection of an academic program rests with the student, in consultation with academic advisers. This freedom of choice carries with it a corresponding responsibility for the consequences of such choices, and students are therefore expected to familiarize themselves with and meet the requirements detailed below.

Planning

The degree requirements for the Bachelor of Arts degree in Arts & Sciences are designed to provide students with strong and sustained training in writing and numerical applications; to enable students to construct a coherent program in which courses reinforce each other in challenging and productive ways; and to take advantage of two distinctive features of the academic environment at Washington University: the strong tradition of cooperation among faculty working in different disciplines and the fact that teaching and learning at Washington University draw energies from an environment of vigorous and creative research.

The College of Arts & Sciences regards active student engagement in curricular planning as central to successful student learning. Each semester, students' advisers will help them project a personalized academic plan that responds to what they have already learned about the university, about the structure and aims of intellectual disciplines, and about themselves.

By the end of the sophomore year, students must have declared a major and constructed and nominated a preliminary online curricular plan that will satisfy all the following General Education requirements:

Core Skills

- A. **College Writing (3 units):** Students demonstrate proficiency in reading and writing English and begin to develop mature skills in framing and revising arguments by completing course work determined by the College Writing Program with grades of C- or better. This requirement should be completed during the first year.
- B. **Applied Numeracy (3 units):** Students develop their skills in numerical applications by completing one of an approved list of "AN" courses with a grade of C- or better. Students often find that there is an AN course in their major field of interest. This course may also satisfy other degree requirements.
- C. **Social Contrasts (3 units):** *For students matriculating in 2017 and beyond.* Students take one course with primary emphasis on the formation, maintenance or impact of social categories such as race, ethnicity, gender, class, sexual orientation, religious affiliation, ability status or other categories. This course, which may be taken credit/no credit, must be selected from an approved list of "SC" courses; it may also satisfy other requirements.
- D. **Writing-Intensive Course (3 units):** To consolidate their written communication skills, students must take a writing-intensive course, preferably in their major field. The course, selected from an approved list of "WI" courses, must be completed with a C- or better; it may also satisfy other requirements.

Area Requirements

- A. Students must complete course work in each of the following academic areas:
 1. Humanities (HUM): three courses totaling at least 9 units
 2. Natural Sciences and Mathematics (NSM): three courses totaling at least 9 units
 3. Social Sciences (SSC): three courses totaling at least 9 units
 4. Linguistic and Cultural Diversity (LCD): either three sequenced courses of at least 3 units each in a single foreign language or at least four courses designated "LCD" of at least 3 units eachUp to 12 units of the area requirements may be taken credit/no credit.
- B. To achieve depth and coherence, students must complete three integrations in at least two of the four areas of study (HUM, NSM, SSC, LCD). There are four types of integrations:

- Majors, second majors and minors
- Ampersand programs
- Designated study away programs
- Integrated inquiries

For a detailed list of Integrations, visit the Course Listings website (<https://acadinfo.wustl.edu/CourseListings/IQ/Integrations.aspx>).

The Major

Students must complete a major of no fewer than 18 units of courses numbered 300 or above with grades of C- or better. Degree completion is based on the primary major of record. At least half of the units for the major must be completed in residence. Students are strongly encouraged to complete a capstone experience in their major as a way of culminating their undergraduate education.

For more details regarding majors — including information about second majors, special majors and majors across schools — visit the main Arts & Sciences (p. 160) section of this *Bulletin*. For more information regarding specific departments' major requirements, visit the Majors pages (p. 979) of this *Bulletin*.

Additional Requirements

- A. Students must complete 120 units with at least 30 units in advanced courses (numbered 300 or above). The 30 units in advanced courses may include the number of advanced units required for the major.
- B. Students must have an overall grade-point average of at least 2.0.
- C. Students must earn the final 30 units toward the degree at Washington University while enrolled in the College of Arts & Sciences. Students pursuing 3-2 degrees should follow the requirements laid out by their master's programs.
- D. Students must be recommended by the College of Arts & Sciences to the Board of Trustees.

Regulations

- A. No more than 24 units may be earned using the credit/no credit option, and no more than 12 of the 24 credit/no credit units may be for area distribution requirements.
- B. No more than 15 units of pre-matriculation credit may be counted toward the degree. Pre-matriculation sources include Advanced Placement (AP), International Baccalaureate (IB), British Advanced (A) Levels, and course credit earned by proficiency (i.e., back credit). For the classes matriculating in the fall of 2016 and beyond, pre-matriculation sources also include college courses taken after the sophomore year in high school but not applied toward the high school diploma; for the classes entering prior to fall 2016, such courses may be included only if they were taken after the junior year in high school. Credits earned via

the High School Summer Scholars or High School College Access programs through University College are considered to be pre-matriculation units and are subject to the same regulation.

- C. Students may not earn more than 12 units toward the bachelor's degree in group and/or individual performance courses. Exceptions may be made for students majoring in departments that require a large number of performance courses for the major, such as dance, drama and music.
- D. No more than 12 units of work may be taken outside the College of Arts & Sciences during the first and sophomore years. Thereafter, additional work may be taken with the approval of the adviser, provided that the student earns at least 90 units of credit in Arts & Sciences course work.
- E. No more than 18 units of credit in independent study may be applied to the AB; no more than 6 units of independent study may be attempted in a single semester.
- F. No more than 6 units of internship credit may be applied to the AB; no more than 3 units of internship credit may be attempted in a single semester.
- G. A student may receive no more than a total of two majors and one minor or one major and two minors.

Transfer Students

Transfer students will follow the requirements of the Integrated Inquiry Curriculum, outlined above. Where appropriate, previous course work may be applied to the distribution requirements based on the following guidelines:

- A. Transfer students who have not taken a college writing course at their prior school will take College Writing 1 during their first year at Washington University. Students who have taken such a course may be eligible to submit a writing portfolio to the College Writing Program for evaluation. The program director will review the portfolio to determine if the College Writing 1 requirement has been satisfied or if the student must complete additional writing course work.
- B. The transfer advisers will evaluate a student's transcript on an individual basis. Generally speaking, a student transferring after one year at another school may count the other institution's course work toward the college's area requirements; however, the three required integrations must be completed through courses taken in residence.
- C. Transfer students must be enrolled for at least four consecutive full-time semesters to satisfy the residency requirement. They must complete a minimum number of units at Washington University and a minimum number of units in the College of Arts & Sciences, according to the following table. No more than 3 units per semester may be taken on a credit/no credit basis.

Semester in Residence	A&S Units in Residence	Total WUSTL Units in Residence
7 semesters	78 units	105 units
6 semesters	69 units	90 units
5 semesters	57 units	75 units
4 semesters	45 units	60 units

Finalization of the Transcript

Conferral of the degree finalizes the student's academic record at Washington University. No changes can be made to the student's academic record after May 31 for a spring degree, October 31 for a summer degree, or January 31 for a fall degree. All students are strongly advised to obtain a copy of their final transcript, available for order from the Office of the University Registrar via WebSTAC (<http://webstac.wustl.edu/>).

Academic Honors & Awards

Dean's List: At the end of each semester, in recognition of exceptional scholarship, the college compiles a list of those students whose work has been particularly worthy of commendation. Students will be cited on the Dean's List if they complete a minimum of 14 units of graded work while achieving a grade-point average of 3.6 for the semester. No incomplete or "N" grades may be outstanding as part of the semester record. All work must be completed and grades posted by the first day of the following semester in order to be considered for Dean's List. For spring semester courses, all work must be completed by the beginning of Summer Session II (typically mid-June).

College Honors: Upon assessment by the College Office, the AB with College Honors will be awarded to any student who achieves collegewide academic excellence as measured by a cumulative GPA of 3.6 or better throughout eight semesters and who does not receive Latin Honors.

Latin Honors: To be eligible for Latin Honors, the student must have maintained a 3.65 GPA through the sixth semester and must be accepted for candidacy by the relevant department or program. Latin Honors candidates must enroll in such courses as their department or program may require, satisfactorily complete a significant project appropriate to the nature of the discipline, and pass such written and/or oral examinations as the department or program may set. To earn such honors, candidates must also have maintained the minimum 3.65 GPA through the final semester.

Upon certification by the department that the Honors program has been satisfactorily completed, the student may be awarded the AB cum laude, magna cum laude, or summa cum laude according to the following proportions: The top 15% in overall

GPA of the full cohort of Latin Honors candidates who complete the necessary requirements of their major departments will graduate summa cum laude; the next 35% magna cum laude; and the next 50% cum laude.

To be eligible for Latin Honors, transfer students must have earned a minimum of 48 letter-graded Washington University units prior to the final semester. Grades earned at other institutions do not figure in the calculation of minimum averages required for eligibility for Latin Honors.

Phi Beta Kappa: For more than 200 years, election to Phi Beta Kappa has been a distinctive recognition of intellectual accomplishment in the liberal arts and sciences. The Washington University chapter, Beta of Missouri (established in 1913), strives to enhance worthy intellectual endeavors and to recognize individual achievement.

Candidates for Phi Beta Kappa should have demonstrated both superior scholarship and breadth and depth of interest in the liberal arts. Study of a foreign language and of mathematics, while not required, strongly enhances candidacy. Extensive study in pre-professional fields detracts from candidacy.

Students do not apply for Phi Beta Kappa; rather, each year the Washington University chapter elects students into membership from the College of Arts & Sciences. The chapter also gives the annual Burton M. Wheeler Book Award for distinguished achievement during the first year. Selection committees are composed of Washington University faculty who are members of Phi Beta Kappa.

Departmental Prizes and Awards

Several departments recognize the superior achievement of graduating seniors with election to the honor societies of their major fields. These honor societies include Sigma Gamma Epsilon for earth and planetary sciences students, Omicron Delta Epsilon for economics students, Delta Phi Alpha for German students, Phi Alpha Theta for history students, Sigma Iota Rho for international and area studies students, Pi Mu Epsilon for mathematics students, Mu Phi Epsilon for music students, Pi Sigma Alpha for political science students, and Psi Chi for psychological & brain sciences students.

Departments may recognize work a student has accomplished within the major by awarding the major with highest distinction, high distinction, or distinction.

In a number of academic fields, special recognition is given to students whose accomplishments have been exceptionally noteworthy. The majority of such awards carry modest monetary prizes and include the following, listed alphabetically by department:

- Best essay on any subject related to African-American culture and life in the United States (African and African-American Studies)
- Henry Hampton Prize for Best Civil Rights Essay

- James Baldwin Essay Prize for Best Essay on African-American Culture and Life in the United States
- Julius Nyerere Essay Prize for Best Essay on African Culture and Life
- Louis Lomax Journalism Prize in African and African-American Studies
- Ralph Bunche Prize for Best Political Science Essay about Africans or African Americans
- Sylvia Wynter Essay Prize for Best Essay on African Culture and Life Outside of the United States
- Lynne Cooper Harvey Undergraduate Writing Prize in American Culture Studies
- John W. Bennett Prize to the Outstanding Graduating Senior in Anthropology
- Mark S. Weil Prize for Distinction in Art History and Museum Practice
- Murphy Family Prize for Outstanding Honors Thesis in Art History and Archaeology
- Yale Book Prize for Distinction in Art History and Archaeology
- Harrison D. Stalker Prize in Biology
- Marian Smith Spector Prize for Outstanding Graduate in Biology
- John C. Snowden Prize for Outstanding Senior in Chemistry
- The Hemholtz Award in Chemistry
- The Lipkin Award in Chemistry
- The Wahl Award in Chemistry
- The Weissman Award in Chemistry
- Stanley Spector Memorial Award for Outstanding Paper in East Asian Languages and Cultures
- Ansehl Prize for Excellence in Chinese
- Yukiko Takahashi Prize for Excellence in Japanese
- Carl Conrad Prize for Excellence in Classical Studies
- Eugene Tavener Prize for Excellence in the Study of Classics
- Edward Weltin Award for Excellence in the Study of Ancient History
- Liselotte Dieckmann Prize for Excellence in Comparative Literature
- William H. Matheson Prize for Excellence in Comparative Literature
- A.E. Hotchner Playwriting Competition Award
- Annelise Mertz Memorial Award for Outstanding Achievement in Modern Dance
- Ian D.W. Cramer Prize for Outstanding Achievement in Dance
- John J. Jutkowitz Memorial Prize for Outstanding Contributions in Performing Arts

- Margaret Ewing Memorial Prize for Outstanding Achievement in Acting
- Stephen H. Duncan Prize for Outstanding Achievement in Design and Technical Theatre
- Courtney Werner Memorial Prize for Outstanding Academic Achievement in Earth and Planetary Sciences
- Ernest L. Ohle Jr. Award for Outstanding Potential in Earth and Planetary Sciences
- Margaret E. Bewig Memorial Field Camp Award for Academic Merit in Earth and Planetary Sciences
- Adam Smith Prize for Excellence in Economics
- Hyman P. Minsky Prize for Excellence in Economics
- Olin Prize for Excellence in Economics
- Howard Nemerov Award Prize in Poetry
- James Merrill Prize for Poetry
- Julia Viola McNeely Prize for Poetry
- Norma Lowry Memorial Prize in Poetry
- Roger Conant Hatch Prize for Lyric Poetry
- F. Ward Denys Prize for Critical Prose
- Herbert E. Metz Prize for Literary Criticism
- Leanna Boysko Prize for Best Essay in English Literature
- Admussen Prize for Outstanding Senior Honors Thesis in French
- Cecilia L. Hospes Scholarship for Study Abroad in Germany
- David Bronsen Prize for Excellence in German Studies
- Raoul Wallenberg Prize for Excellence in Swedish Studies
- J. Walter Goldstein Prize for Best Senior Thesis in History
- Rowland T. Berthoff Award in History
- Shirley McDonald Wallace Prize in History
- Madeleine Albright Scholarship for Special Scholarly Achievement in International and Area Studies
- Outstanding Senior Honors Thesis in International and Area Studies
- The International and Area Studies Portfolio Prize
- Stone Prize for Excellence in International Studies Research
- Paul and Silvia Rava Prize for Excellence in Italian Studies
- David and Sarah Visenberg Prize for Outstanding Thesis in Jewish Studies
- Steven S. Schwarzschild Prize for Overall Excellence in Jewish Studies
- Martin Silverstein Award for Outstanding Student in Mathematics/Statistics and Probability
- Putnam Examination Prize for Mathematics
- Ross Middlemiss Prize for Outstanding Mathematics Major
- Antoinette Frances Dames Award for Productive Scholarship in Music
- Clare M. Westmont Award in Music
- The Friends of Music Award

- Lewis B. Hilton Award in Music
- Helen Stenner Memorial Essay Prize in Philosophy
- Nishi Luthra Prize for Outstanding Graduate in Philosophy
- Greg Delos Prize for Undergraduate Research in Physics
- Robert N. Varney Prize for Excellence in Introductory Physics
- Antoinette Frances Dames Prizes for Lower-Division Paper in Political Science
- Antoinette Frances Dames Prizes for Upper-Division Paper in Political Science
- Antoinette Frances Dames Prizes for Best Senior Honors Thesis in Political Science
- Arnold J. Lien Prize for Outstanding Graduate in Political Science
- Grossman-Alexander Prize for Outstanding Graduate in American Politics
- Robert H. Salisbury Prize for Initiative, Leadership, and Service in Political Science
- Todd Lewis Friedman Memorial Prize for Outstanding Work in Comparative or International Politics
- William Benton Parshall Prize for Outstanding Paper on Women in Politics
- Hyman Meltzer Memorial Award for Undergraduate Research in Psychology
- John A. Stern Award for Undergraduate Research in Psychology
- Louis G. Zelson Award for Outstanding Junior in the Spanish Program
- Sherman Eoff Prize for Excellence in Spanish
- Helen Power Women, Gender, and Sexuality Studies Award for Scholarship and Service

Academic Regulations

Attendance

Successful education at the college level depends to a large extent on regular attendance at classes and laboratories. The College of Arts & Sciences has no fixed rules for "cuts" or "excused absences" but leaves to the judgment of each department or instructor the number of absences of any kind a student may have and still expect to pass a course. The faculty expects each instructor to give reasonable consideration to unavoidable absences and to the feasibility of making up missed work. The student is expected to explain to instructors the reasons for such absences and to discuss the possibility of completing missed assignments.

Units and Grades

The grading system used by the College of Arts & Sciences assumes that evaluation is useful to effective learning and that grades provide an indicator of accomplishment to the student, to advisers and the College Office, to graduate and professional schools, and to employers to whom the student chooses to submit them. Grades are symbols of achievement in a particular endeavor and should not be confused either with achievement itself or with personal worth.

Grades are important, particularly for students with pre-professional interests, but the student whose concern for grades is primary may lose sight of the total educational process.

Grade	Points per Unit
A+	4.0
A	4.0
A-	3.7
B+	3.3
B	3.0
B-	2.7
C+	2.3
C	2.0
C-	1.7
D+	1.3
D	1.0
D-	0.7
F	0.0
CR	Credit awarded, work not given finer evaluation
NCR	No credit awarded due to unsatisfactory work
I	Course work incomplete
W	Withdrawal
R	Repeat
L	Successful audit
Z	Unsuccessful audit
N	No grade submitted
S	Satisfactory thesis work
U	Unsatisfactory thesis work

Grades earned in physical education courses are not included when calculating the student's grade-point average.

Auditing a Course

In any semester, a full-time student may register for one course as an auditor, which entitles the student to all of the privileges of a regularly enrolled member of the class; however, courses taken for audit do not earn credits and thus do not count toward the degree. Consult the instructor regarding the requirements of a successful audit, as unsatisfactory performance results in a grade of Z. A successful audit results in a grade of L.

Incomplete Grades

If a student experiences medical or personal problems that make the satisfactory completion of course work difficult or unlikely, they may request a grade of Incomplete (I) from one or more instructors. In such a situation, the student should take the following steps:

1. Meet with the instructor before the final examination or due date for the final paper to discuss the request.
2. If the instructor consents, agree on the work remaining to complete the course and on a date when it will be submitted.

If these steps are not followed, the instructor is under no obligation to award a grade of I. Failure to submit completed work by the last day of classes of the next full semester will result in the I grade being changed automatically to a grade of F. For spring semester courses, this will be the last day of summer classes, typically mid-August.

By action of the faculty of the College of Arts & Sciences and the ArtSci Council, the college limits the number of accrued grades of Incomplete (I). The policy is intended to protect the student from building an overwhelming burden of unfulfilled course work. The regulation reads as follows: "Students who accrue three or more Incompletes will not be permitted to enroll for any subsequent semester until the number is reduced to two or fewer." Should students have too many Incompletes, they will be declared ineligible for subsequent semesters until they have complied with the regulation. Compliance is normally achieved by the posting of grades online, but it also may be achieved by the professor(s) confirming to the College Office that the student has turned in all requisite assignments for the relevant class(es).

Pass/Fail Option

To encourage students to enroll in courses they might not otherwise take, the faculty has established the credit/no credit option under which a student may register for courses and receive a grade of credit (CR) or no credit (NCR). During any semester, a full-time student may enroll in one course under the credit/no credit option. A maximum of 24 units earned under this option may be applied toward the AB degree. Students must designate which course is to be taken under the credit/no credit option each semester at the time of registration. No change into or out of the option may be made after the dates designated in the dates and deadlines calendar, which is published online in the Course Listings (<https://courses.wustl.edu>) each semester.

No more than 12 of the 24 units allowed for the credit/no credit option may be applied to area distribution requirements.

It is the student's responsibility to discuss with the faculty member what constitutes a successful pass/credit in a particular course. Although the pass mark is generally a C-, instructors have the discretion to set the pass mark higher in their individual courses.

The first-year writing course, the writing-intensive course, the applied numeracy course, and courses in the major and minor are excluded from the credit/no credit option. Pre-professional and prospective graduate students should also consider seriously the strong probability that professional schools may seek more definite grades than CR in courses that are required or strongly recommended for admission to professional or graduate study.

A few courses particularly designated by departments may require enrollment on a credit/no credit basis. When so required, students are permitted to elect an additional course to be taken credit/no credit but should consider carefully the consequences of that choice.

Reading Days and Final Examination Period

When registering for classes at Washington University, students commit to all course requirements, including the examination procedures chosen and announced by the course instructor. When selecting courses, students are advised to take note of all final exam information. Students anticipating conflicts in their final examination schedule should seek to resolve them with the relevant instructors before enrolling. Students should not register for courses that result in three or more final examinations on one day. If a student does so, the instructors are not obligated to offer an alternative exam.

Final exam days and times are subject to change. The most current final exam schedule information can be found on the Course Listings (<https://courses.wustl.edu>) website.

Minimum and Maximum Course Loads

The average course load necessary to fulfill the required 120 units for the bachelor's degree in a timely fashion is 15 units — typically five courses — in each semester. Except for students approved for a reduced course load through Disability Resources, students must attempt a minimum of 12 units to be considered full-time. Students may not enroll for more than 21 units without permission and an additional per-unit tuition charge. Any enrollment between 12 and 17 units is considered typical.

Courses in the college that require more preparation and class time than average — for example, foreign languages, mathematics and science — may carry 4 or 5 units of credit. When enrolled in these and other demanding courses, students should consider taking fewer than 15 units of academic work in a particular semester and then balancing such intensive semesters with a modestly increased number of units in subsequent semesters.

Repeating a Course

Students whose performance in a course has not met their expectations are permitted to retake the course, receive a second grade, and have the letter R (denoting the retake) placed next to the grade for the first enrollment. All registrations will show on the transcript; however, only the grade and units of the final enrollment will be used to calculate the GPA.

Note: This procedure is not pedagogically sound and should be avoided in all but serious cases, such as a grade of D in a course required for the major.

Regulations: Although courses initially taken credit/no credit (pass/fail) may be retaken for a letter grade, courses initially taken for a letter grade **must** be retaken for a letter grade. Credit earned in the original enrollment will not be revoked should a failing grade be earned in the second or subsequent enrollments. Except in the case of a retake of an unsuccessful audit, the retake policy will not be invoked if the grade option for any of the enrollments is audit.

Academic Probation and Suspension

Students are expected to maintain the highest level of scholarship during their time at Washington University. At a minimum, students must meet the standards set by the faculty as well as those mandated by the U.S. Department of Education. Those who do not complete at least 12 units or achieve a semester GPA of 2.0 or better for each semester may be placed on probation or, in extreme cases of poor academic performance, may be required to take a break in enrollment. In certain cases, students who have completed at least 12 units and have a semester GPA of at least 2.0 for each semester may still receive an academic warning or be placed on probation if the Committee on Academic Progress identifies areas of significant concern about a student's progress (e.g., failure to complete College Writing 1 or its equivalent by the end of the first year, failure to make demonstrable progress toward an Arts & Sciences major).

Students must be on pace to complete their program by attempting no more than 150% of the credits required. Anytime students fall below completing two-thirds or fewer of the credits they have attempted overall, they are considered to not be achieving satisfactory academic progress (SAP). The college will work with those students to develop a plan to help them achieve an acceptable pace within a set period of semesters. In addition, if it is determined that a student cannot complete their program within the 150% maximum credits, the student may not continue their program of study at Washington University.

In the event of academic probation, the student will be matched with a progress counselor for the following semester. The student must complete an academic agreement with the progress counselor to map out how improvement will be achieved. Failure to attend class or complete work in a timely manner may result in termination of enrollment for that semester.

In order to be eligible for a return to good academic standing, a student on academic action must address the academic concerns identified by the Committee on Academic Progress. Students who fail to adequately address those concerns may be required to take a break in their enrollment. Such students may return to the College of Arts & Sciences only when they demonstrate, under the conditions set for each individual case, a capacity to work productively at the level required by the college curriculum.

Leaves of Absence

Undergraduates in good standing at the completion of a term are eligible to take a leave of absence (LOA) by completing an LOA request. Students on LOA are assured reinstatement for the next two years. Before returning, students are asked to notify the College Office and submit a Reinstatement Form at least six weeks prior to the beginning of the appropriate term. The forms for requesting an LOA and reinstatement are available on the College's Policies & Procedures webpage (<http://artsci.wustl.edu/resources/policies-procedures/>).

A student wishing to take a medical leave of absence (MLOA) must have a recommendation from Habif Health and Wellness Center and a completed MLOA request submitted to the appropriate dean in the College Office. A student wishing to return from an MLOA must have a recommendation from Habif Health and Wellness Center and a completed MLOA reinstatement request submitted to the appropriate dean in the College Office. Upon reviewing the recommendations from Habif Health and Wellness Center and the student's file, the dean in the College Office will decide whether or not to grant the request for the MLOA and/or for re-enrollment. The required forms for an MLOA and reinstatement after an MLOA are available through Habif Health and Wellness Center (<https://shs.wustl.edu/FormsAndResources/Pages/Medical-Leave-of-Absence.aspx>).

Transfer Credit

With preapproval, courses from accredited colleges and universities can be transferred to Washington University and will count toward a student's 120 units required for the Bachelor of Arts degree; such courses may also serve as prerequisites to advanced courses and may count, with prior departmental approval, toward a student's major or minor. They do not, however, substitute in Integrations or count toward other Arts & Sciences distribution requirements. No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or Academic Integrity Policy.

For further information pertaining to transfer credit, matriculating first-year students should visit the Pre-Matriculation Credit (p. 160) section in this *Bulletin*; transfer students should visit the Transfer Students (p. 971) section in this *Bulletin*.

Military Training

Army and Air Force ROTC programs are available at Washington University.

ROTC courses numbered I25 MILS 301C, MILS 302C, MILS 401C and MILS 402C and AFROTC courses numbered I02 MAIR 301, MAIR 302, MAIR 401 and MAIR 402 will be granted full credit toward the AB degree, for a total of 12 units. The courses do not count toward the 90 minimum Arts & Sciences units required for the Bachelor of Arts degree but will instead be categorized in the 30 maximum units that students may earn in courses taken from Olin Business School, the McKelvey School of Engineering, University College, or the Sam Fox School. These courses are letter graded and will count toward the GPA, as do courses from University College and the professional schools listed above.

ROTC courses numbered I25 MILS 101C, MILS 102C, MILS 201C and MILS 202C and AFROTC courses numbered I02 MAIR 101, MAIR 102, MAIR 201 and MAIR 202 will be granted 1 credit each for the Physical Training component, as commensurate with performance courses currently receiving credit toward the Bachelor of Arts degree, including courses listed under L28 Physical Education. Such courses will not count toward the GPA.

University College Courses

Students in the College of Arts & Sciences may enroll in course work offered by University College (<http://ucollege.wustl.edu/>) as long as they do not exceed one course per semester and a maximum total of 24 units. University College courses are subject to the degree requirement that stipulates only 30 units from any of the other schools of the university may be applied to the Bachelor of Arts degree. University College courses do not fulfill distribution requirements and can only count for a major or minor with approval from the relevant department. Students in the College of Arts & Sciences do not receive credit for online courses offered by University College.

Summer School

The Summer School in Arts & Sciences offers courses, programs and institutes for current and visiting students, including pre-college learners. Summer School courses are scheduled over five separate sessions to accommodate a variety of student schedules. For more information, visit the Summer School (<http://summerschool.wustl.edu/>) website or call 314-935-4695.

International Summer Study

Undergraduate university students from around the world join us each year for International Summer Study. Current undergraduate students can participate in our five-week program, during which they will take two courses, attend

social and cultural events, and meet with university deans and directors. For more information, visit the webpage for International Summer Study (<https://summerschool.wustl.edu/international-summer-study/>) or call 314-935-4695.

WUSTL-ALLEX Intensive Chinese and Japanese Language Institutes

Students jump-start their Chinese and Japanese language proficiency in this seven-week, 4-unit program. Small classes are taught by master professors who represent many of the country's preeminent Asian language programs as well as native speakers from China, Taiwan and Japan. With two teachers for every language student, the program features frequent and meaningful cultural exchanges in the target language and teaches students to speak and act in a culturally appropriate way. For more information, visit the webpage for Intensive Chinese & Japanese Institutes (<https://summerschool.wustl.edu/intensive-chinese-japanese-institute/>) or call 314-935-4695.

WUSTL-ALLEX Chinese and Japanese Teacher Training Institute

Postbaccalaureate students from China, Hong Kong, Macau, Korea, Japan and Taiwan study Asian language pedagogy in this seven-week, 4.5-unit program. After learning from master professors, students go on to colleges and universities across the country to launch or enhance Chinese, Korean and Japanese language programs. For more information, visit the webpage for ALLEX Foundation Teacher Trainees (<https://www.allex.org/teacher-training/>) or call 314-935-4695.

Pre-College Programs

Arts & Sciences Pre-College Programs offer a variety of programs for academically advanced middle and high school students. Visit the Pre-College Programs page (p. 982) for more information.

- | | |
|-----------------|---|
| Phone: | 314-935-4695 |
| Email: | summerschool@wustl.edu |
| Website: | https://summerschool.wustl.edu/ |

Pre-College Programs

Arts & Sciences Pre-College Programs offer a variety of programs for academically advanced middle and high school students. In addition to completing course work, high school students participate in specialized seminars, workshops, academic support groups, weekend outings and evening social events. Need-based scholarship assistance is available for all programs. For more information, visit the Pre-College Programs website (<https://precollege.wustl.edu/>) or call 314-935-6834.

High School Summer Scholars Program

Through our residential High School Summer Scholars Program, students have the opportunity to enroll in courses for credit and study alongside undergraduates. Students select from a broad range of stimulating introductory courses in the humanities, mathematics, sciences and social sciences.

High School Summer Institutes

High School Summer Institutes combine the traditional class and lab curriculum with organized field trips, guest lectures and small group activities in order for students to gain valuable academic and career experience. High School Summer Institutes are noncredit, residential programs. Themes may include medicine, leadership, writing, environmental studies, philosophy and more.

High School Summer Academy

Through the residential High School Summer Academy, students enroll in one 3-unit course for credit. In addition to the traditional classroom experience, students will participate in a series of research-focused sessions and off-campus field trips leading to the development of an original research project.

Early College Scholars

The Early College Scholars program allows students to enroll in course work while commuting from home. For students who are not from the St. Louis area, we offer a select number of online courses.

Middle School Summer Challenge

Our Middle School Summer Challenge is designed to expand students' critical thinking skills in an exciting and innovative environment. During this two-week program, students enroll in one morning arts or humanities course and one afternoon STEM course. In addition to completing course work, students participate in a series of leadership and team-building activities to create a well-rounded summer experience. This is a noncredit, commuter program.

Business

About Olin Business School

At Washington University's Olin Business School, students learn to look beyond the bottom line and make thoughtful decisions that benefit business and society. Our global-mindedness — coupled with a values-based, data-driven approach to decision making — prepares students to tackle the greatest challenges of our day and to change the world, for good.

As a leading research-oriented business school, Olin has a network of partners on campus, in the St. Louis community, and around the world. Students are able to apply what they have learned in the classroom to real-world situations through experiential learning opportunities that include student consulting, internships, case competitions, and study abroad programs, among others. Students also develop an entrepreneurial mindset that allows them to act nimbly and quickly in the constantly changing business landscape.

Olin is a welcoming community that allows for a deeper level of interaction, participation and program customization. Students can rely on support from faculty, staff and their peers while feeling accomplished in the rigorous course work.

Bachelor of Science in Business Administration

Olin Business School offers a full-time Bachelor of Science in Business Administration (BSBA) degree program of instruction. Our BSBA students enroll in business courses during their first year, and the curriculum covers the core functional areas of business. At least one major course of study in a field of business is chosen, and at least 40% of the course work must be in non-business fields, from fine arts to science; this allows students to pursue individual careers and ensures a well-rounded educational experience.

Majors

Students in the BSBA program are offered the option to focus their studies in a specific field of business. Although a business student is not required to declare a business major, almost all of our business students earn at least one professional major. A student may pursue one or two majors from the list below:

- Accounting
- Economics and Strategy
- Entrepreneurship
- Finance
- Financial Engineering (offered as a second major option only)

- Health Care Management
- Marketing
- Operations and Supply Chain Management
- Organization and Strategic Management

Specific requirements for each major can be found in the Majors for BSBA Degree Candidates (p. 994) section of this page.

Combined Majors

Business students have the option to major in more than one field of study. BSBA students can earn a total of two majors, either both in business or one in business and one from outside of Olin. For example, a student could earn a BSBA degree with a major in finance and a major in English literature from the College of Arts & Sciences. Students must complete the specific courses required for the second major, but they are not required to complete the general requirements for the second degree. Students should consult with their academic advisers for additional information. Upon completion, the student's transcript would show a BSBA degree along with the earned second major. A diploma is awarded for the degree, with reference to any major(s) appearing on the official transcript.

Minors

Many departments and schools in the university offer minors. Business students also can pursue a minor outside of Olin Business School in any recognized academic discipline offered within the university by satisfactorily completing all of the requirements for both the BSBA degree and the minor. Required courses for a minor outside of the business school may range from 15 to 27 units, depending on the specific regulations of the academic department. A business student who applies for a minor and completes all of the requirements will have the award of the minor noted on the official transcript. A student must be approved for admission to a minor program by the department offering the minor.

Business students typically may not minor in a business subject. However, BSBA students may choose the following minors offered through the Olin Business School:

- Business of Social Impact
- Business of Sports
- Business of Entertainment
- Business of the Arts
- Business Analytics
- International Business

Additional information as well as information for students from other schools of Washington University who wish to pursue business minors can be found in the Minors for Non-BSBA Degree Candidates (p. 1001) section of this page.

Combined Degrees

A student also can earn two undergraduate degrees simultaneously: a BSBA degree and another undergraduate degree offered at the university. The student must be admitted to the other degree-granting program, and they must meet specific degree requirements for both schools. Typically, this option requires additional time to complete all requirements. For example, if a student combines a business degree with a degree from the College of Arts & Sciences, the student must complete a minimum of 150 units between the two disciplines. Of the 150 units, at least 90 units must be from the College of Arts & Sciences, and at least 60 units must be from Olin Business School. Some courses may be used to satisfy both degree requirements simultaneously. Because requirements for a second degree vary from discipline to discipline, students should talk with their primary adviser to plan their program.

Joint Undergraduate and Business Master's Degrees

Bachelor of Science in Business and Computer Science

The Bachelor of Science in Business and Computer Science degree program provides an integrated educational experience that involves both the Olin Business School and the McKelvey School of Engineering. The objectives of this program are to provide students with the fundamental knowledge and perspectives of computer science and business and to expose them to the unique opportunities created by combining these disciplines. As one of the only such joint programs in the country, the Bachelor of Science in Business and Computer Science features unique curricular and cocurricular elements that help to create a distinctive program.

Please visit the Bachelor of Science in Business and Computer Science page (p. 1068) of this *Bulletin* for more information.

Master of Business Administration (MBA)

A special five-year program — often referred to as the 3+2 program — that combines an undergraduate degree with the Master of Business Administration degree is available to a select number of undergraduates. Visit the MBA Joint Degrees (<http://www.olin.wustl.edu/EN-US/academic-programs/full-time-MBA/academics/joint-degrees/Pages/default.aspx>) webpage for more information. Interested candidates should contact the Olin MBA Admissions office during their sophomore year: call 314-935-7301 or email Olin Graduate Admissions (OlinGradAdmissions@wustl.edu).

Specialized Master's Programs

A specialized master's degree is highly concentrated and singular in focus, providing intensive education in one business discipline. Olin Business School offers a variety of specialized master's programs that can be combined with an undergraduate degree. Visit our Specialized Master's Programs (<http://olin.wustl.edu/SMP/>) website for details. Interested candidates should contact the Olin MBA Admissions office during their sophomore year: call 314-935-7301 or email Olin Graduate Admissions (OlinGradAdmissions@wustl.edu).

Special Opportunities

Center for Experiential Learning

The Center for Experiential Learning (CEL) is an educational center at Olin Business School. The CEL facilitates real-world experiential learning opportunities for students via live consulting engagements. Each year, the CEL oversees 120+ student-driven projects with more than 550 Washington University students under the auspices of dozens of expert advisers and faculty. The CEL's partners include startups, nonprofits, multinational enterprises, and NGOs in St. Louis, across the country and around the globe. Visit the Center for Experiential Learning (<http://www.olin.wustl.edu/cel/Pages/default.aspx>) website for more information.

Entrepreneurship

Olin Business School fosters an entrepreneurial spirit in students, encouraging them to pioneer innovation that opens the door to positive, sustainable progress. The Hatchery — a business consulting course — is an example of this, as are the consulting services for entrepreneurs through CEL programs including the Metrics Clinic, CElect entrepreneurial consulting, and Olin's International Impact Initiative, which works with NGOs in developing markets around the globe. In addition, there are many universitywide resources, including the Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship. Please visit the Olin Business School website to learn more about our entrepreneurship opportunities (<https://olin.wustl.edu/EN-US/partners-resources/Entrepreneurship/Pages/default.aspx>).

Independent Study

Independent study under the direction of a faculty member is available on a selective basis. The purpose of independent study is to provide an opportunity for students to pursue subject matter beyond the specific course offerings found in the business school. Projects may be done for 1 to 6 units of credit, but normally no more than 3 units will be granted in any one semester. For more information, please refer to the Olin Business School's *Undergraduate Student Handbook*.

Students may apply a maximum of 6 units of independent study in business and 6 units from outside of Olin toward the 120-unit degree requirement.

Internship for Credit Opportunities

Olin Business School first-year students and sophomores who have a summer internship can enroll in MGT 450A for academic credit. This online course is designed to deepen the overall learning that the student gains from an internship. Students enroll in this 1.5-credit course on a pass/fail basis. Although this course will be listed on a student's academic transcript, it will not count toward the 120 units needed for graduation.

Olin Business School juniors and seniors who have completed the core requirements and one advanced elective in the appropriate major field may apply to receive credit for internship experience. Students must work under the direction of a faculty member to complete an academic paper/project. The Internship Petition Form must be submitted to the student's academic adviser by the end of the second week of the academic semester. A maximum of 6 units of internship course work may be applied toward the BSBA degree.

Study Abroad

Upon graduation, students are working at some of the top institutions across the globe. This is why Olin has chosen to integrate meaningful, purposeful and impactful global experiences into its academics. Having an international experience signals to employers that our students are in possession of valuable traits such as adaptability, comfort in ambiguity, and global leadership. All students have the opportunity to study abroad, providing they meet the eligibility requirements. Detailed information and eligibility requirements for study abroad are available on the Olin Global Programs (<https://olinwustl.campusgroups.com/bsbaglobal/about/>) website or in the BSBA Programs office.

Options include the following:

- Olin International Internship Programs (<https://olin.wustl.edu/EN-US/academic-programs/bs-business-administration/global-programs/Pages/international-internships.aspx>) combine classroom learning with a full-time internship placement of approximately 10 to 12 weeks. Students complete a significant research project in conjunction with the internship experience.
- Olin Semester Study Abroad Opportunities (<https://olin.wustl.edu/EN-US/academic-programs/bs-business-administration/global-programs/Pages/study-abroad.aspx>) are offered across the globe in Asia, Europe and South America. Students choose courses on offer at local universities or study centers in the areas of business, language and general studies. Some programs require intensive language courses, although most are taught in English.

- **Short-Term and Summer Programs** last from two to eight weeks for 3 to 6 credits, including opportunities through the Center for Experiential Learning (<https://olin.wustl.edu/EN-US/partners-resources/Center-for-Experiential-Learning/Pages/default.aspx>) as well as Olin-run programs in Europe and Israel.

A unique aspect of many of our semester programs are the **Academic Study Tours**. Academic Study Tours are a required academic component for several of our study abroad programs, and students earn business credit for this experience. These tours are designed to develop research, analysis and presentation skills in an experiential format to allow students to apply theory, concepts and skills gained at Olin to consulting-type exercises abroad. They also allow students the opportunity to explore the business and culture of the region in which they are studying.

Other Study Abroad Options

Students with second majors outside of business may consider study abroad programs sponsored by Overseas Programs (<http://overseas.wustl.edu/>) in the College of Arts & Sciences to earn credit toward their non-business major.

Student Assistants to Professors

In this challenging program, outstanding students are chosen to assist various professors with their course development work or research efforts. Students may conduct library research, perform computer programming, develop new learning materials for class, assist other students with their writing skills, or tutor in various areas of the curriculum.

Participation as an assistant to a professor is voluntary and may begin as early as the first year. As a participant, students are paid the going rate for undergraduate student assistants. This experience also impresses company recruiters.

Academic Advising

Olin Business School provides students with expert academic advising and support. BSBA Student Services has academic advisers who serve as professional advisers to all undergraduate students on procedural matters, course planning, registration and other academic matters.

Weston Career Center

To provide students with personalized career planning and exploration as well as job search services, Olin Business School operates its own career center in Knight and Bauer Halls. The Weston Career Center (WCC) delivers a variety of career management programs and services to Olin undergraduate and graduate students and alumni. Each student works one-on-one with a dedicated career coach throughout their time at Olin. In addition, students have access to industry specialists who provide insight and direction on specific industries. Other WCC career support includes workshops and professional

development seminars, company information sessions, mock interviews, self-assessments, written and spoken communication coaching, résumé and cover letter writing, and networking — in other words, all of the tools needed for an effective job search.

On-campus interviews take place in the Bauer Hall Interview Suite or the Danforth University Center throughout the academic year. Business students are encouraged to meet with the WCC's staff early in the school year to discuss their career and professional goals. For more information, visit the Weston Career Center website (<http://olincareers.wustl.edu/EN-US/Pages/default.aspx>), or contact the WCC by phone at 314-935-5950 or by email at wcc@olin.wustl.edu.

Faculty

Dean

Mark Taylor (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=mark.p.taylor>)
Donald Danforth Jr. Distinguished Professor of Finance
PhD, Birbeck College, University of London

Endowed Professors

Nicholas S. Argyres (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=argyres>)
Vernon W. and Marion K. Piper Professor of Strategy
PhD, University of California, Berkeley

William P. Bottom (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=bottomb>)
Joyce and Howard Wood Distinguished Professor of Organizational Behavior
PhD, University of Illinois at Urbana-Champaign

J. Stuart Bunderson (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=bunderson>)
George and Carol Bauer Professor of Organizational Ethics and Governance
PhD, University of Minnesota

Siddhartha Chib (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=chib>)
Harry C. Hartkopf Professor of Econometrics and Statistics
PhD, University of California, Santa Barbara

Kurt T. Dirks (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=dirks>)
Bank of America Professor of Managerial Leadership
PhD, University of Minnesota

Philip H. Dybvig (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=dybvig>)
Boatmen's Bancshares Professor of Banking and Finance
PhD, Yale University

Hillary Anger Elfenbein (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=helpenbein>)
John K. Wallace Jr. and Ellen A. Wallace Distinguished Professor
PhD, Harvard University

Richard M. Frankel (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=frankel>)
Beverly and James Hance Professor of Accounting
PhD, Stanford University

Mahendra Gupta (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=m.gupta>)
Geraldine J. and Robert L. Virgil Professor of Accounting and Management
PhD, Stanford University

Barton H. Hamilton (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=hamiltonb>)
Robert Brookings Smith Distinguished Professor of Entrepreneurship
PhD, Stanford University

Ohad Kadan (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=kadan>)
H. Frederick Hagemann, Jr. Professor of Finance
PhD, Hebrew University

Anne Marie Knott (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=knott>)
Robert and Barbara Frick Professor of Business
PhD, University of California, Los Angeles

Panos Kouvelis (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=kouvelis>)
Emerson Professor of Operations and Manufacturing Management
PhD, Stanford University

Hong Liu (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=liuh>)
Fossett Distinguished Professor in Finance
PhD, University of Pennsylvania

Glenn M. MacDonald (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=macdonald>)
John M. Olin Distinguished Professor of Economics and Strategy
PhD, University of Rochester

Judi McLean Parks (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=mcleanparks>)

Reuben C. and Anne Carpenter Taylor Professor of Organizational Behavior
PhD, University of Iowa

Todd T. Milbourn (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=milbourn>)

Hubert C. and Dorothy R. Moog Professor of Finance
PhD, Indiana University

Jackson A. Nickerson (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=nickerson>)

Frahm Family Professor of Organization and Strategy
PhD, University of California, Berkeley

Stephen M. Nowlis (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=nowlis>)
August A. Busch Jr. Distinguished Professor of Marketing
PhD, University of California, Berkeley

Robert A. Pollak (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=pollak>)
Herreich Distinguished Professor of Economics
PhD, Massachusetts Institute of Technology

P.B. (Seethu) Seetharaman (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=seethu>)

W. Patrick McGinnis Professor of Marketing
PhD, Cornell University

Anjan Thakor (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=thakor>)
John E. Simon Professor of Finance
PhD, Northwestern University

Fuqiang Zhang (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=fzhang22>)

Dan Broida Professor of Operations and Manufacturing Management
PhD, University of Pennsylvania

Guofu Zhou (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=zhou>)

Frederick Bierman and James E. Spears Professor of Finance
PhD, Duke University

Professors

Tat Y. Chan (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=chan>)
PhD, Yale University
(Marketing)

Lingxiu Dong (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=dong>)
PhD, Stanford University
(Operations and Manufacturing Management)

Radhakrishnan Gopalan (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=gopalan>)
PhD, University of Michigan
(Finance)

Andrew P. Knight (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=knightap>)
PhD, University of Pennsylvania
(Organizational Behavior)

Robyn LeBoeuf (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=leboeuf>)
PhD, Princeton University
(Marketing)

Xiumin Martin (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=xmartin>)
PhD, University of Missouri-Columbia
(Accounting)

J. Lamar Pierce (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=pierce>)
PhD, University of California, Berkeley
(Strategy)

Stephen Ryan (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=stephen.p.ryan>)
PhD, Duke University
(Economics)

Associate Professors

Mariagiovanna Baccara (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=mbaccara>)
PhD, Princeton University
(Economics)

Markus Baer (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=baer>)
PhD, University of Illinois at Urbana-Champaign
(Organizational Behavior)

Cynthia Cryder (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=cryder>)
PhD, Carnegie Mellon University
(Marketing)

Daniel Elfenbein (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=elfenbein>)
PhD, Harvard University
(Organization and Strategy)

Armando Gomes (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=gomes>)
PhD, Harvard University
(Finance)

Todd Gormley (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=gormley>)
PhD, Massachusetts Institute of Technology
(Finance)

Brett Green (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=b.green>)
PhD, Stanford University
(Economics)

Jared Jennings (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=jaredjennings>)
PhD, University of Washington
(Accounting)

Baojun Jiang (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=baojunjiang>)
PhD, Carnegie Mellon University
(Marketing)

Mark Leary (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=leary>)
PhD, Duke University
(Finance)

Asaf Manela (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=amanela>)
PhD, University of Chicago
(Finance)

Raphael Thomadsen (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=thomadsen>)
PhD, Stanford University
(Marketing)

Elanor Williams (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=elanorwilliams>)
PhD, Cornell University
(Psychology)

Song Yao (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=songyao>)
PhD, Duke University
(Business Administration)

Minyuan Zhao (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=minyuan>)
PhD, New York University
(Economics)

Assistant Professors

Deniz Aydin (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=daydin>)
PhD, Stanford University
(Finance)

Taylor Begley (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=tbegley>)
PhD, University of Michigan
(Finance)

Seth Carnahan (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=seth.carnahan>)
PhD, University of Maryland
(Strategy)

Kimball Chapman ([">http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=kimballchapman](http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=kimballchapman))
PhD, Pennsylvania State University
(Accounting)

Kaitlin Daniels (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=k.daniels>)
PhD, University of Pennsylvania
(Operations Management)

Jennifer Dlugosz (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=jdlugosz>)
PhD, Harvard University
(Finance)

Jason Donaldson (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=j.r.donaldson>)
PhD, London School of Economics
(Finance)

Jacob Feldman (<http://www.olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=jbfeldman>)
PhD, Cornell University
(Operations and Manufacturing Management)

Tarek Ghani (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=tghani>)
PhD, University of California, Berkeley
(Business Administration)

Majors

Majors for BSBA Degree Candidates

In addition to the 42 core professional units required, which are listed on the Degree Requirements (p. 1024) page of this *Bulletin*, a BSBA degree candidate must complete at least 18 professional elective units. Students may apply these professional electives toward a specific professional major. Majors in the business curriculum are offered the option to focus their studies in a specific field of business. All major courses must be taken in residence. Course work from an approved Washington University study abroad program will count as in-residence work. However, only one course per major may be taken through a study abroad experience.

Students may select a major from the following disciplines:

- Accounting (p. 994)
- Economics and Strategy (p. 994)
- Entrepreneurship (p. 995)
- Finance (p. 995)

- Financial Engineering (p. 996)*
- Health Care Management (p. 996)
- Marketing (p. 996)
- Operations and Supply Chain Management (p. 997)
- Organization and Strategic Management (p. 997)

* The financial engineering major is offered to any undergraduate day division student as a second major option only.

Class of 2024 Degree Requirements:

For a comprehensive view of our degree program, please review the requirements on our BSBA website (<http://www.olin.wustl.edu/EN-US/academic-programs/bs-business-administration/academics/Pages/curriculum.aspx>).

The Major in Accounting

Total units required: 15

- Accounting Core: 6 units

Code	Title	Units
ACCT 3610	Intermediate Financial Accounting Theory I	3
ACCT 3620	Intermediate Financial Accounting II	3

- Accounting Electives: 9 units

Code	Title	Units
ACCT 363	Cost Analysis and Control	3
ACCT 365E	Taxation of Business Entities	3
ACCT 400A	Analysis of Financial Institutions & Financial Instruments	1.5
ACCT 400C	Not-For-Profit Accounting	1.5
ACCT 400M	Ethical Decision Making in Accounting I	1.5
ACCT 400N	Ethical Decision Making in Accounting II	1.5
ACCT 464	Auditing	3
ACCT 466	Financial Statement Analysis	3
ACCT 467	Income Tax Fundamentals	3
ACCT 4680	Advanced Financial Accounting Problems	3

The Major in Economics and Strategy

Total units required: 12

- Economics and Strategy Core: 12 units

Code	Title	Units
MEC 370	Game Theory for Business	3
MEC 400K	Research Analysis in Industry	3
MEC 470	Industrial Economics	3
MEC 471	Empirical Techniques for Industry Analysis	3

The Major in Entrepreneurship

Total units required: 15

- Entrepreneurship Core: 6 units

Code	Title	Units
MGT 421	Introduction to Entrepreneurship	3
or MGT 460L	Introduction to Social Entrepreneurship	
MGT 424	Business Planning for New Enterprises (The Hatchery)	3

- Entrepreneurship Electives: 9 units (must select 3 units from each category)

Industry Elective Choices (at least 3 units required):

Code	Title	Units
CSE 131	Introduction to Computer Science	3
Econ 335	Money and Banking	3
FIN 549H	Special Topics: Real Estate Finance	1.5
INTL 320	Business, Innovation and Entrepreneurship in Israel	3
MEC 460	Economics of Entertainment	3
MGT 320	Olin Grand Rounds: The Business and Practice of Medicine	3
MGT 380	Business Strategy	3
MGT 440	Sports Management	1.5

Experiential Elective Choices (at least 3 units required):

Code	Title	Units
B99 INTL 970	Entrepreneurship and Startups in Europe	3
MGT 200C	Venture Creation	3
MGT 401C	CEL Entrepreneurial Consulting Team	3
MGT 401M	Sustainable Development and Conservation Through Entrepreneurial Collaboration: Madagascar	3
MGT 401P	CEL Practicum	3
MGT 401S	Small Business Initiative	3
MGT 401T	Taylor Community Consulting Project	3

Skills Elective Choices (at least 3 units required):

Code	Title	Units
ACCT 466	Financial Statement Analysis	3
CSE 204A	Front-End Web Development	3
CSE 330S	Rapid Prototype Development and Creative Programming	3
CSE 438S	Mobile Application Development	3
FIN 400L	Private Equity — Methods	1.5
FIN 400M	Private Equity — Practice	1.5
MEC 370	Game Theory for Business	3
MEC 470	Industrial Economics	3
MGT 301	Legal Environment of Business Management	3
MKT 378	Marketing Research	3
MKT 400E	Elements of Sales: Tools and Techniques	3
MKT 400I	Business & Marketing Innovation	3
MKT 478	New Product Management	3
MKT 482	Brand Management	3
OB 461	Negotiation	3

The Major in Finance

Total units required: 12

- Finance Core: 9 units

Code	Title	Units
FIN 441	Investments	3
FIN 448	Advanced Financial Management	3
FIN 451	Options, Futures and Derivative Securities	3

- Finance Electives: 3 units

Code	Title	Units
FIN 400I	Mergers & Acquisitions	1.5
FIN 400J	Advanced Valuation	1.5
FIN 400L	Private Equity — Methods	1.5
FIN 400M	Private Equity — Practice	1.5
FIN 400W	Venture Capital Methods	1.5
FIN 420	International Economics and Finance	3
FIN 428	Investments Praxis	3
FIN 443	International Finance	3
FIN 447	Information, Intermediation, and Financial Markets	3
FIN 450F	Financial Technology: Methods and Practice	3
FIN 452	Advanced Derivative Securities	3
FIN 470A	Research Methods in Finance	3

The Major in Financial Engineering

The financial engineering major is offered only as a second major option. Therefore, students in the BSBA program must select another business major in order to be eligible to pursue this major. Students interested in this second major must complete the application and have a 3.3 or higher grade-point average to pursue this second major; this includes the cumulative GPA, the Business GPA, and the Engineering GPA.

Total units required: 30 required units and 18 units of prerequisite course work

- Background Requirements: 18 units

Code	Title	Units
CSE 131	Introduction to Computer Science	3
Math 217	Differential Equations	3
Math 233	Calculus III	3
Math 309	Matrix Algebra	3
MEC 290 or Econ 4011	Microeconomics Intermediate Microeconomic Theory	3
DAT 121 or ESE 326 or Econ 413 or Math 439	Managerial Statistics II Probability and Statistics for Engineering Introduction to Econometrics Linear Statistical Models	3

- Engineering Professional Core Requirements: 15 units

Code	Title	Units
CSE 240	Logic and Discrete Mathematics	3
CSE 247	Data Structures and Algorithms	3
CSE 417T or CSE 427S	Introduction to Machine Learning Cloud Computing with Big Data Applications	3
ESE 403 or ESE 415	Operations Research Optimization	3
ESE 427	Financial Mathematics	3

- Olin Professional Core Requirements: 9 units

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
FIN 340	Capital Markets and Financial Management	3
FIN 441	Investments	3

- Olin Electives: 6 units required

Code	Title	Units
FIN 452	Advanced Derivative Securities	3
B62 FIN 500Q	Quantitative Risk Management	3
B62 FIN 539	Mathematical Finance	1.5
B62 FIN 552	Fixed Income Derivatives	1.5

The Major in Health Care Management

Total units required: 15

- Health Care Management Core: 12 units

Code	Title	Units
MGT 320	Olin Grand Rounds: The Business and Practice of Medicine	3
MGT 321	Health Economics and Policy	3
MGT 322	Health Care Management	3
MGT 420	Research in Health Care Management	3

- Health Care Management Electives: 3 units

Code	Title	Units
Anthro 3283	Introduction to Global Health	3
Anthro 3310	Health, Healing and Ethics: Introduction to Medical Anthropology	3
Anthro 3626	Adventures in Nosology: The Nature and Meaning of Disease	3
Anthro 3263	Bioprospecting	3
Anthro 3875	Pharmaceutical Personhood	3
Anthro 4134	The AIDS Epidemic: Inequalities, Ethnography, and Ethics	3
Anthro 4883	The Political Economy of Health	3
Biol 2010	Ampersand: The Science of Biotechnology	3
Phil 233F	Biomedical Ethics	3
WGSS 310	From Hysteria to Hysterectomy: Women's Health Care in America	3
WGSS 316	Contemporary Women's Health	3

The Major in Marketing

Total units required: 12

- Marketing Core: 3 units

Code	Title	Units
MKT 378	Marketing Research	3

- Marketing Electives: 9 units

Group A Marketing Elective Choices (at least 6 units required):

Code	Title	Units
MKT 377	Consumer Behavior	3
MKT 400G	Digital Marketing and Analytics	3
MKT 470E	Pricing Strategies	3
MKT 400L	Causal Inference	3

MKT 470E	Pricing Strategies	3
MKT 478	New Product Management	3
MKT 480	Marketing Strategy	3
MKT 482	Brand Management	3

Group B Marketing Elective Choices:

Code	Title	Units
MKT 400E	Elements of Sales: Tools and Techniques	3
MKT 400I	Business & Marketing Innovation	3
MKT 400M	Sports Marketing	3
MKT 450F	Luxury Goods and a Dash of Fashion	3
MKT 477	International Marketing	3
or MKT 477S	International Marketing Sydney	
or MKT 477L	International Marketing London	
MKT 481	Advertising and Promotions	3
MKT 465	Retail Management	3

The Major in Operations and Supply Chain Management

Total units required: 12 units

- Group A OSCM Elective Choices (at least 6 units required):

Code	Title	Units
DAT 301E	Data Analytics in Python	3
OSCM 400D	Supply Chain Management	3
OSCM 458	Operations Analytics	3

- Group B OSCM Elective Choices (at least 3 units required):

Code	Title	Units
MGT 380	Business Strategy	3
MGT 460H	Corporate and Global Strategy	3
MKT 378	Marketing Research	3
MKT 465	Retail Management	3

The Major in Organization and Strategic Management

Total units required: 12 units

- Organization & Strategic Management Group A Elective Choices (at least 3 units required):

Code	Title	Units
MGT 450V	Defining Moments: Lessons in Leadership & Character From the Top	1.5
OB 400C	Women in Leadership	1.5
OB 400D	Thinking Creatively and Leading Creative Teams	1.5
OB 461	Negotiation	3
OB 462	Leadership in Organizations	3

- Organization & Strategic Management Group B Elective Choices (at least 3 units required):

Code	Title	Units
MGT 380	Business Strategy	3
MGT 402	Ethical Issues in Managerial Decision Making	1.5
MGT 429E	Management and Corporate Responsibility	1.5
MGT 450R	Business & Government: Understanding and Influencing the Regulatory Environment	1.5
MGT 460G	Critical Thinking and Complex Problem Solving for Business	1.5
MGT 460H	Corporate and Global Strategy	3
INTL 321	Family Business in Europe	3

- Organization & Strategic Management Group C Elective Choices (recommended for HR/HR consulting):

Code	Title	Units
OB 325	Personnel/Human Resources Management	3
OB 400E	Talent Analytics	1.5
OB 400F	People Metrics	1.5

Second Majors for Non-BSBA Candidates

Students in other undergraduate divisions of the university may choose to complete a second major or a minor in a business discipline.

Any non-BSBA degree student may earn a second major in a specific major discipline offered through Olin Business School. This opportunity allows students to combine their academic interests between two schools. If students wish to pursue a second major in business, they are required to follow the degree requirements for their primary school/major along with a set of core business requirements and 12 to 15 units of professional electives.

Core Business Requirements:

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
ACCT 2620	Principles of Managerial Accounting	3
Math 132	Calculus II	3
MGT 100 or MGT 380	Individual in a Managerial Environment Business Strategy	3
MEC 290 or Econ 4011	Microeconomics Intermediate Microeconomic Theory	3
MEC 292 or Econ 1021	Global Economy Introduction to Macroeconomics	3
DAT 120	Managerial Statistics I *	3
DAT 121 or Econ 413	Managerial Statistics II Introduction to Econometrics	3
Math 439 or Math 493	Linear Statistical Models Probability	
Total Units		24

* Second majors may substitute Math 2200, Math 3200, ESE 326 or Pol Sci 363 for DAT 120.

Students may select a second major from the following disciplines:

- Accounting (p. 998)
- Economics and Strategy (p. 998)**
- Entrepreneurship (p. 999)
- Finance (p. 999)
- Health Care Management (p. 1000)
- Marketing (p. 1000)
- Operations and Supply Chain Management (p. 1000)
- Organization and Strategic Management (p. 1001)

Regulations:

1. Second majors are required to complete a minimum of 24 business units through Olin Business School.
2. All courses for any business major must be taken for a grade.
3. Non-BSBA second major and minor students must complete the major courses with a C+ or better in order to progress in and earn the major or minor.
4. All major courses must be taken in residence. Course work from an approved Washington University study abroad program will be considered as satisfying this residency policy. However, second majors may only take one core course and one major course through a study abroad experience.
5. Students may not count one course toward two majors.

6. University College courses will not count toward any business major.
7. Advanced Placement credit for Math 2200 will not serve as a substitute for the DAT 120 requirement. All second majors must complete DAT 120.
8. Students must declare their second major online through WebSTAC by the end of their junior year. To be eligible to declare a second major, students will need to complete Math 132 Calculus II plus two business courses and earn a C+ or better in all three before their declaration will be approved. A second major will not be awarded to a student unless proper declaration is made.
9. ** Economics and strategy majors must take MEC 290, because Econ 1011 will not satisfy the prerequisite requirement for MEC 370.
10. Engineering students who have taken ESE 326 and who are majoring in finance will not be required to take DAT 120 or DAT 121.

Non-BSBA degree students may choose to pursue one major from the areas below:

The Second Major in Accounting

Total units required: 15

- Accounting Core: 6 units

Code	Title	Units
ACCT 3610	Intermediate Financial Accounting Theory I	3
ACCT 3620	Intermediate Financial Accounting II	3

- Accounting Electives: 9 units

Code	Title	Units
ACCT 363	Cost Analysis and Control	3
ACCT 365E	Taxation of Business Entities	3
ACCT 400A	Analysis of Financial Institutions & Financial Instruments	1.5
ACCT 400C	Not-For-Profit Accounting	1.5
ACCT 400M	Ethical Decision Making in Accounting I	1.5
ACCT 400N	Ethical Decision Making in Accounting II	1.5
ACCT 464	Auditing	3
ACCT 466	Financial Statement Analysis	3
ACCT 467	Income Tax Fundamentals	3
ACCT 4680	Advanced Financial Accounting Problems	3

The Second Major in Economics and Strategy

Total units required: 12

- Economics and Strategy Core: 12 units

Code	Title	Units
MEC 370	Game Theory for Business	3
MEC 400K	Research Analysis in Industry	3
MEC 470	Industrial Economics	3
MEC 471	Empirical Techniques for Industry Analysis	3

The Second Major in Entrepreneurship

Total units required: 12

- Entrepreneurship Core: 6 units

Code	Title	Units
MGT 421	Introduction to Entrepreneurship	3
or MGT 460L	Introduction to Social Entrepreneurship	
MGT 424	Business Planning for New Enterprises (The Hatchery)	3

- Entrepreneurship Electives: Choose at least one course from two of the three following tracks for a total of 6 elective units:

Industry Elective Choices:

Code	Title	Units
CSE 131	Introduction to Computer Science	3
Econ 335	Money and Banking	3
FIN 340	Capital Markets and Financial Management	3
INTL 320	Business, Innovation and Entrepreneurship in Israel	3
MEC 460	Economics of Entertainment	3
MGT 320	Olin Grand Rounds: The Business and Practice of Medicine	3
MGT 380	Business Strategy	3
MGT 440	Sports Management	1.5
MKT 370	Principles of Marketing	3

Experiential Elective Choices:

Code	Title	Units
B99 INTL 970	Entrepreneurship and Startups in Europe	3
MGT 200C	Venture Creation	3
MGT 401C	CEL Entrepreneurial Consulting Team	3
MGT 401P	CEL Practicum	3
MGT 401S	Small Business Initiative	3
MGT 401T	Taylor Community Consulting Project	3

Skills Elective Choices:

Code	Title	Units
CSE 204A	Front-End Web Development	3
ACCT 466	Financial Statement Analysis	3
CSE 330S	Rapid Prototype Development and Creative Programming	3
CSE 438S	Mobile Application Development	3
FIN 400L	Private Equity — Methods	1.5
FIN 400M	Private Equity — Practice	1.5
MEC 370	Game Theory for Business	3
MEC 470	Industrial Economics	3
MGT 301	Legal Environment of Business Management	3
MKT 378	Marketing Research	3
MKT 400E	Sales Management	3
MKT 400I	Business & Marketing Innovation	3
MKT 478	New Product Management	3
MKT 482	Brand Management	3
OB 461	Negotiation	3

The Second Major in Finance

Total units required: 15

- Finance Core: 12 units

Code	Title	Units
FIN 340	Capital Markets and Financial Management	3
FIN 441	Investments	3
FIN 448	Advanced Financial Management	3
FIN 451	Options, Futures and Derivative Securities	3

- Finance Electives: 3 units

Code	Title	Units
FIN 400I	Mergers & Acquisitions	1.5
FIN 400J	Advanced Valuation	1.5
FIN 400L	Private Equity — Methods	1.5
FIN 400M	Private Equity — Practice	1.5
FIN 400W	Venture Capital Methods	1.5
FIN 420	International Economics and Finance	3
FIN 428	Investments Praxis	3
FIN 443	International Finance	3
FIN 447	Information, Intermediation, and Financial Markets	3
FIN 450F	Financial Technology: Methods and Practice	3
FIN 452	Advanced Derivative Securities	3
FIN 470A	Research Methods in Finance	3

The Second Major in Health Care Management

Total units required: 15

- Health Care Management Core: 12 units

Code	Title	Units
MGT 320	Olin Grand Rounds: The Business and Practice of Medicine	3
MGT 321	Health Economics and Policy	3
MGT 322	Health Care Management	3
MGT 420	Research in Health Care Management	3

- Health Care Management Electives: 3 units

Code	Title	Units
AMCS 4135	Tobacco: History, Culture, Science, and Policy	3
Anthro 260	Topics in Health and Community	1
Anthro 3263	Bioprospecting	3
Anthro 3283	Introduction to Global Health	3
Anthro 3309	Anthropological Perspectives on Care	3
Anthro 3310	Health, Healing and Ethics: Introduction to Medical Anthropology	3
Anthro 333	Culture and Health	3
Anthro 3621	Anthropology of Human Birth	3
Anthro 3626	Adventures in Nosology: The Nature and Meaning of Disease	3
Anthro 3875	Pharmaceutical Personhood	3
Anthro 4883	The Political Economy of Health	3
Anthro 4134	The AIDS Epidemic: Inequalities, Ethnography, and Ethics	3
Biol 2010	Ampersand: The Science of Biotechnology	3
Biol 3183	History of Genetics in the 20th Century	3
Biol 348	Emerging Infectious Diseases	2
Phil 233F	Biomedical Ethics	3
WGSS 310	From Hysteria to Hysterectomy: Women's Health Care in America	3
WGSS 316	Contemporary Women's Health	3
WGSS 343	Understanding the Evidence: Provocative Topics of Contemporary Women's Health and Reproduction	3

The Second Major in Marketing

Total units required: 15

- Marketing Core: 6 units

Code	Title	Units
MKT 370	Principles of Marketing	3
MKT 378	Marketing Research	3

- Marketing Electives: 9 units

Group A Elective Choices (at least 6 units required):

Code	Title	Units
MKT 377	Consumer Behavior	3
MKT 400G	Digital Marketing and Analytics	3
MKT 400L	Causal Inference	3
MKT 470E	Pricing Strategies	3
MKT 478	New Product Management	3
MKT 480	Marketing Strategy	3
MKT 482	Brand Management	3

Group B Elective Choices:

Code	Title	Units
MKT 400E	Elements of Sales: Tools and Techniques	3
MKT 400I	Business & Marketing Innovation	3
MKT 400M	Sports Marketing	3
MKT 450F	Luxury Goods and a Dash of Fashion	3
MKT 477	International Marketing	3
or MKT 477S	International Marketing Sydney	
or MKT 477L	International Marketing London	
MKT 481	Advertising and Promotions	3
MKT 465	Retail Management	3

The Second Major in Operations and Supply Chain Management

Total units required: 15 units

- OSCM Core: 6 units

Code	Title	Units
DAT 220	Analytics and Modelling for Business Decisions	3
OSCM 356	Operations Management	3

- OSCM Electives: 9 units minimum with at least 6 units from Group A

OSCM Group A Elective Choices (at least 6 units required):

Code	Title	Units
DAT 301E	Data Analytics in Python	3
OSCM 400D	Supply Chain Management	3
OSCM 458	Operations Analytics	3

OSCM Group B Elective Choices:

Code	Title	Units
MGT 380	Business Strategy	3
MGT 460H	Corporate and Global Strategy	3
MKT 378	Marketing Research	3
MKT 465	Retail Management	3

The Second Major in Organization and Strategic Management

Total units required: 15

- Organization and Strategic Management Core Requirement: 3 units

Code	Title	Units
OB 360	Organization Behavior Within the Firm	3

- Organization and Strategic Management Electives: 12 units

Leadership Group A Elective Choices (at least 3 units required):

Code	Title	Units
MGT 450V	Defining Moments: Lessons in Leadership & Character From the Top	1.5
OB 400C	Women in Leadership	1.5
OB 400D	Thinking Creatively and Leading Creative Teams	1.5
OB 461	Negotiation	3
OB 462	Leadership in Organizations	3

Organization and Strategic Management Group B Elective Choices (at least 3 units required):

Code	Title	Units
MGT 380	Business Strategy	3
MGT 402	Ethical Issues in Managerial Decision Making	1.5
MGT 429E	Management and Corporate Responsibility	1.5
MGT 450R	Business & Government: Understanding and Influencing the Regulatory Environment	1.5
MGT 460G	Critical Thinking and Complex Problem Solving for Business	1.5
MGT 460H	Corporate and Global Strategy	3
INTL 321	Family Business in Europe	3

Organization and Strategic Management Group C Elective Choices (recommended for HR/HR consulting):

Code	Title	Units
OB 325	Personnel/Human Resources Management	3
OB 400E	Talent Analytics	1.5
OB 400F	People Metrics	1.5

Minors

Minors for Non-BSBA Degree Candidates

Non-BSBA degree students are eligible to pursue a minor in one of the specific fields of business listed below:

- Accounting (p. 1002)
- Business of Analytics (p. 1002)*
- (p. 1002)Business of the Arts (p. 1003)*
- Business of Entertainment (p. 1003)*
- Business of Social Impact (p. 1004)*
- Business of Sports (p. 1004)*
- Entrepreneurship (p. 1005)
- Finance (p. 1005)
- General Business (p. 1005)
- Health Care Management (p. 1005)
- International Business (p. 1005)*
- Managerial Economics (p. 1006)
- Marketing (p. 1006)
- Operations and Supply Chain Management (p. 1007)
- Organization and Strategic Management (p. 1007)
- Strategy (p. 1007)

* Any undergraduate day division student — including students in the BSBA programs — can earn the business of analytics minor, the business of the arts minor, the business of entertainment minor, the business of social impact minor, the business of sports minor, or the international business minor as part of their undergraduate degree.

Fulfilling the Business Minor

All non-BSBA students pursuing any business minor must do the following:

- Declare their minor online through WebSTAC no later than the end of their sixth semester.
- Non-BSBA second major and minor students must complete the major and minor courses with a C+ or better in order to progress in and earn the major or minor.

3. Satisfy all prerequisites. (It is preferred that prerequisites be completed at Washington University. Courses taken in University College or at another university do not satisfy the requirements for any of the five required courses.) Additional prerequisites may be needed to remain enrolled in certain courses. Please check course listings to ensure all prerequisites are met.
4. Take all 15 units of required courses at Olin Business School. (Non-BSBA students may take one minor course through the overseas study abroad program for each minor.)
5. Take all 15 units of required courses for grades (i.e., no pass/fail).
6. 15 additional units would be required to earn two business minors, as double counting is not allowed.

Prerequisites for the Business Minor

The following prerequisites are required for most minors:

- Math 132 Calculus II
- Math 2200 Elementary Probability and Statistics
 - or Math 3200 Elementary to Intermediate Statistics and Data Analysis
 - or ESE 326 Probability and Statistics for Engineering
 - or Pol Sci 363 Quantitative Political Methodology
 - or DAT 120 Managerial Statistics I*
- Econ 1011 Introduction to Microeconomics, Econ 4011 Intermediate Microeconomic Theory, or MEC 290 Microeconomics**
- DAT 121 is also a prerequisite for minors in business of analytics, finance and general business.
- DAT 220 is also a prerequisite for minors in business of analytics.
- ACCT 2610 is a prerequisite for minors in business of analytics and operations supply chain management.

For the marketing minor, the prerequisites are as follows if the student selects MKT 470N for their core choice:

- Math 131 Calculus I
- Econ 1011 Introduction to Microeconomics or MEC 290 Microeconomics
- Math 2200 Elementary Probability and Statistics
 - or Math 3200 Elementary to Intermediate Statistics and Data Analysis
 - or ESE 326 Probability and Statistics for Engineering
 - or Pol Sci 363 Quantitative Political Methodology
 - or DAT 120 Managerial Statistics I*

* Advanced Placement credit for Math 2200 will satisfy this prerequisite. This exemption applies only to non-BSBA students earning a business minor.

** Minors in managerial economics, business of entertainment, business of analytics, general business, and the strategy minors must take MEC 290, because Econ 1011 is not a prerequisite for the core course requirements for any of these minors.

Engineering students who have taken ESE 326 and who are minoring in finance will not be required to take DAT 120 or DAT 121.

The Minor in Accounting

Total units required: 15

- Required Courses:

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
ACCT 2620	Principles of Managerial Accounting	3
ACCT 3610	Intermediate Financial Accounting Theory I	3
Total Units		9

- Accounting Electives (at least 6 units required):

Code	Title	Units
ACCT 3620	Intermediate Financial Accounting II	3
ACCT 363	Cost Analysis and Control	3
ACCT 365E	Taxation of Business Entities	3
ACCT 400A	Analysis of Financial Institutions & Financial Instruments	1.5
ACCT 400C	Not-For-Profit Accounting	1.5
ACCT 400M	Ethical Decision Making in Accounting I	1.5

Courses

Courses include the following:

- B50 ACCT (Accounting) (p. 1007)
- B52, B62 FIN (Finance) (p. 1009)
- B56 HRM (Human Resources Management) (p. 1011)
- B99 INTL (International Business) (p. 1011)
- B53 MGT (Management) (p. 1012)
- B54 MEC (Managerial Economics) (p. 1018)
- B55 MKT (Marketing) (p. 1019)
- B58 OSCM (Operations and Supply Chain Management) (p. 1022)
- B66 OB (Organizational Behavior) (p. 1022)
- B59 DAT (Data Analytics) (p. 1023)

Accounting

Visit online course listings to view semester offerings for B50 ACCT (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B50&crslvl=1:4>).

B50 ACCT 2610 Principles of Financial Accounting

Provides an overview of the financial accounting reporting process, with a primary focus on the analysis of economic events and their effect on the major financial statements (balance sheet, income statement and statement of cash flows). Prerequisite: second semester freshman standing. Credit 3 units.

B50 ACCT 2620 Principles of Managerial Accounting

Emphasis on the accumulation and analysis of data for internal decision makers. Introduces the vocabulary and mechanics of managerial accounting and accounting techniques used by internal managers in planning, directing, controlling and decision-making activities within their organizations. Prerequisite: ACCT 2610.

Credit 3 units.

B50 ACCT 3610 Intermediate Financial Accounting Theory I

The first of a two-course sequence in corporate financial reporting. Examines the environment of financial accounting, the standards-setting process and the conceptual framework that underlies financial accounting in the United States. Topics: review accounting basics, events and transactions that impact financial statements, comprehension of corporate financial reports, and examination of political and economic factors influencing accounting policy. Prerequisite: ACCT 2610.

Credit 3 units.

B50 ACCT 3620 Intermediate Financial Accounting II

Continuation of ACCT 3610. Focus on the accounting and reporting of various stakeholders' claims against the corporate entity. Claims of shareholders, long-term creditors, employees and governmental bodies are examined. An in-depth understanding of applicable generally accepted accounting principles is developed by examining the strengths and weaknesses of these principles and alternative accounting practices. Prerequisite: ACCT 3610.

Credit 3 units.

B50 ACCT 363 Cost Analysis and Control

This course will focus on the impact of changes in markets, in operations, and in information technology that affect the design of management accounting systems. Emphasis is on the strategic role of cost information in planning and controlling operations. Current thrusts of quality control and customer service in managing operations have placed new demands on management accounting systems beyond the traditional role of product costing for financial reporting. The course objective is to analyze how these new demands can be met through the expansion of the scope of management accounting systems. Prerequisite: ACCT 2620.

Credit 3 units.

B50 ACCT 365E Taxation of Business Entities

This course involves an examination of tax laws at the federal, state, and international levels, with an emphasis on corporate taxpayers and partnerships. A data-driven approach will be used to show how various business transactions affect a business entity's tax liability. Attention will also be given to various ways in which business entities might structure transactions to avoid or reduce tax liability and how the choice of business entity type affects these decisions. Prerequisite: ACCT 2610.

Credit 3 units.

B50 ACCT 400A Analysis of Financial Institutions & Financial Instruments

The main goal of the course is to give you an in-depth understanding of how financial reports provide unusually accurate and detailed (but not perfect) information about the risks and performance of firms in the financial services

industries. These firms' financial statements increasingly are based on fair value accounting and their financial reports typically include extensive risk and estimation sensitivity disclosures. Both fair value accounting and risk and estimation sensitivity disclosures are necessary ingredients for financial reports to convey the risk and performance of financial services firms in today's world of complex, structured, and risk-partitioning financial instruments and transactions. While financial services firms often apply fair value accounting and risk and estimation sensitivity disclosures imperfectly (or worse), careful joint analysis of the information they do provide invariably yields important clues about their risks and performance. Prerequisite: ACCT 3620.

Credit 1.5 units.

B50 ACCT 400C Not-For-Profit Accounting

Students will gain an understanding of the unique facets of not-for-profit accounting, including understanding not-for-profit financial statements, differences in not-for-profit GAAP, and the IRS Form 990. Prerequisite: ACCT 2610.

Credit 1.5 units.

B50 ACCT 400M Ethical Decision Making in Accounting I

This course is designed to help the student understand ethical reasoning and behavior, and it will help them to define their own moral compass using case studies as the primary source of instruction. The primary goal is to make the student a role model for others in ethical behavior. Students will learn not just how to determine the proper ethical choice; more importantly, they will learn how to effectively implement the behavioral changes required to achieve solutions to ethical dilemmas. To quote (while paraphrasing) the authors of the textbook, "We strive in [these courses] not only to educate accounting students to be future leaders in the accounting profession but to stimulate [the student's] ethical perception and cultivate virtue thereby awakening [their] sense of duty and obligation to the public interest." Prerequisite: ACCT 2610.

Credit 1.5 units.

B50 ACCT 400N Ethical Decision Making in Accounting II

This course was designed to help students develop a deeper understanding of ethical behavior, including dealing with fraud in financial statements, legal obligations of auditors, Wall Street expectations and earnings management, and what it takes to be an ethical leader. To quote the author, "...it comes down to one's sense of right and wrong and willingness to voice values to positively impact (the) auditor responsibility." This second segment of Ethical Decision Making in Accounting is offered for the purpose of creating ethical leaders in the accounting and auditing profession, the business community, and society and to instill that sense of right and wrong and the eagerness to put it into action. Prerequisite: ACCT 400M.

Credit 1.5 units.

B50 ACCT 464 Auditing

This course deals with the professional service industry of auditing. The auditing industry provides the service of objectively obtaining, evaluating, and communicating evidence regarding managerial assertions about economic events. Specifically, auditing ascertains the degree of correspondence between managerial assertions and established criteria. The course is organized around the basic categories of: (1) the economic role of external corporate auditing in securities markets, (2) the composition of the firms in the auditing industry, (3) the

regulatory environment of auditing, (4) litigation issues facing the accounting/auditing industry, and (5) the requirements for conducting audits. Topics included in the last area include a consideration of the scope and application of Generally Accepted Auditing Standards (GAAS) and the general technology of auditing which are some general auditing topics typically covered on the CPA exam. Grading is based on homework, a group-based project, and two exams. Prerequisite: ACCT 3620. Credit 3 units.

B50 ACCT 466 Financial Statement Analysis

Designed to enhance students' understanding of the process of evaluating financial statement information. Requires a basic familiarity with financial accounting and the assumptions underlying measurements reported in financial statements, an understanding of the economic and regulatory forces underlying corporate disclosure of financial statement information and their effects on financial statement information, and familiarity with data sources and analytical tools to extract and evaluate this data. Objectives are to develop familiarity with this type of analysis and to gain an appreciation for its limitations. Topics: profitability and risk analysis, credit risk models, forecasting and valuation. Prerequisite: ACCT 3610.

Credit 3 units.

B50 ACCT 467 Income Tax Fundamentals

This course provides an introduction to federal income taxation with primary emphasis on the tax implications of business transactions. The objectives of the course are to develop a basic understanding of federal income tax laws and to provide a framework for integrating income tax planning into the decision-making process. The course is of value to all students who need to recognize the important tax consequences of many common business transactions and is not intended solely for accounting majors or those students interested in becoming tax specialists. Prerequisite: ACCT 2610.

Credit 3 units.

B50 ACCT 4680 Advanced Financial Accounting Problems

Examination of the nature and financial reporting aspects of various business transactions: corporate acquisitions, mergers and the formation of other strategic alliances. Topics: accounting for business combinations and consolidations, joint ventures and foreign currency translation, accounting and financial reporting issues facing government entities. Prerequisite: ACCT 3620. Credit 3 units.

Finance

Visit online course listings to view semester offerings for B52 FIN (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B52&crslvl=1:4>). For B62 FIN (p. 1011), please refer to the course listed below.

B52 FIN 340 Capital Markets and Financial Management

Students will learn how the decisions of a company affect shareholder value and what decisions can increase it. To understand the perspectives of shareholders, we will study basic principles of investing: time value of money, valuation of debt and equity securities, discounted cash flow as a foundation for stock prices, the impact of diversification and leverage on portfolio risk, the relationship between risk and expected return

in securities markets, and capital market efficiency. We will use these principles to analyze capital investment decisions by estimating cash flows and discounting them at the appropriate cost of capital. We will also study how shareholder value is affected by a firm's financing decisions, such as the choice of using debt or equity capital. Prerequisites: Math 132, ACCT 2610, MEC 290 or Econ 1011, QBA 120 and completion or concurrent enrollment in QBA 121.

Credit 3 units. EN: S

B52 FIN 400I Mergers & Acquisitions

This course focuses on identifying ways to increase firm value through mergers and acquisitions (M&A). We will survey the drivers of success and failure in M&A transactions, develop your skills in deal design, explore the deal process, and develop LBO and merger models similar to those used by investment bankers. Other topics addressed in the course are M&A regulation, the sell-side and buy-side M&A process, valuations, takeover strategies and antitakeover defenses, structuring of transactions to minimize tax consequences, the acquisition method of accounting, merger arbitrage, and auction vs negotiation sale processes. Prerequisites: FIN 340 and completion or concurrent enrollment in FIN 448.

Credit 1.5 units.

B52 FIN 400J Advanced Valuation

This course covers advanced topics in valuation. Main topics covered will be the valuation of private firms and young businesses, and the valuation of financial services firms such as banks and insurance companies. The course applies both theory and practical valuation methods through the analysis of cases and real world examples. Prerequisite: FIN 448.

Credit 1.5 units.

B52 FIN 400K Public Equity Investments

This hands-on course provides a learning platform for how to invest in public equities like a bottoms-up, fundamental, buy-side analyst. The course focuses on the process of how many "Tiger Cubs" invest, but will also cover other investing approaches and styles as well. Learning objectives of the course include mastering three-statement modeling; developing the research process for an investment idea in public equities; interactions with real buy-side analysts and portfolio managers on their experience at hedge funds in NYC/SF; and concludes with students pitching an investment idea to a group of buy-side analysts and select number of portfolio managers. Ultimately, this course will provide a solid foundation on which students can successfully build as a buy-side analyst. Students must submit an application for approval to enroll in this course. See Campus Groups for application under Registration. Prerequisites: FIN 448 and instructor approval.

Credit 3 units.

B52 FIN 400L Private Equity — Methods

This course will provide the student with an understanding of the basic terminology, due diligence, and analytical methodologies critical to evaluating private equity investments. The course will also cover the history of private equity and the different roles of private equity, including growth capital, LBO/MBO, roll-up, and so on in the evolution of the firm. Private equity funds in the context of the overall market (i.e., strategic vs. financial acquirers) will be discussed as will be the role of leveraged lending and bank financing of financial sponsors. Private equity

as an investment and its role in portfolio construction will also be analyzed. Finally, the legal structure of private equity funds in the context of firm control and governance will be reviewed. Prerequisite: FIN 448.

Credit 1.5 units.

B52 FIN 400M Private Equity — Practice

This course is the capstone for students interested in pursuing careers in private equity. Students will develop practical skills for investing in private companies. Students will partner with professionals in the St. Louis community to perform various activities, including transaction sourcing, evaluating investment opportunities, and, where appropriate, negotiating, arranging financing, and closing investments. The course also relies heavily on bringing in professionals from the local community to provide real-world perspectives on private equity investing. Prerequisites: FIN 448 and FIN 400L.

Credit 1.5 units.

B52 FIN 400W Venture Capital Methods

Students are exposed to the process of analyzing, valuing and structuring potential equity investments in privately held, entrepreneurial, venture-stage businesses. The goal is to develop critical thinking skills for evaluating potential investments and understanding the dynamics of various risk factors predominant in such investments, including market risk, execution risk and technology risk. The classes will be a combination of individual readings, case learning, presentations and panel discussions by industry experts in addition to experiential learning in a team format. Classes will be case-study driven and will focus on company- and fund-specific situations. Guest lecturers will be used extensively and will provide content that is integral to the course. The final sessions of the class will be conducted as a presentation and analysis of a potential investment. Prerequisite: FIN 340.

Credit 1.5 units.

B52 FIN 420 International Economics and Finance

Analysis of a global financial center and the current financial crisis, its origins and how the global markets are affected. Initially, the course looks at the rise of London (Section 1) or the Asian Markets (Section 2) to become one of the world's financial centers, outlining the historical developments and regulatory changes. Then, it focuses in more details on the role of the government in setting policy which affects financial services domestically and internationally. The course continues to look at specific functional areas — hedge funds, private equity, structures products, liquidity and central banks. The module discusses in different sessions the current financial crises and what role different financial institutions and products played in its development. Prerequisite: admission to either the London Internship Program or the Asia Pacific Internship Program. Credit 3 units.

B52 FIN 428 Investments Praxis

Students serve as managers of a portfolio, the Investment Praxis Fund, which is owned by the university. Students analyze investment opportunities in various industries and present recommendations to the class for possible purchases or sales of stocks, consistent with the style and objectives of the fund. Valuation tools, financial statement analysis and investment techniques are emphasized as part of a thorough analysis. The course focus is on developing and implementing investment ideas. Prerequisite: FIN 448.

Credit 3 units.

B52 FIN 441 Investments

Introduces the theory and practice of investments from the point of view of an investment/portfolio manager. We will begin with a review of asset classes, financial history, and preferences for risk. Next, we will have a brief review of statistics and finance and we will review matrix algebra. We will then apply these tools to examine the trade-off between risk and return and to develop and implement Modern Portfolio Theory. The major topics covered will include the Capital Asset Pricing Model (CAPM), Markowitz optimization, performance evaluation, market efficiency, and Arbitrage Pricing Theory (APT). The last portion of the course will be devoted to fixed income securities including interest rates, bond valuation, and bond immunization. Prerequisites: FIN 340, MATH 132, MEC 290 or ECON 1011, QBA 120 and QBA 121.

Credit 3 units.

B52 FIN 443 International Finance

Provides a framework for making financial decisions in an international context. Topics include: relevant features of financial markets and instruments (such as foreign exchange, currency futures and options, swaps); exchange rates; corporate risk management; international investing and capital budgeting issues. Prerequisite: FIN 340.

Credit 3 units.

B52 FIN 447 Information, Intermediation, and Financial Markets

Examines the organization and function of financial markets from the corporate perspective with an emphasis on investment banking activities. Topics: design, issuance and trading of corporate securities, risk management and corporate control transactions. Develop familiarization with current practices while building a conceptual framework for understanding and anticipating change in the institutions that make up the financial markets. Prerequisite: FIN 340.

Credit 3 units.

B52 FIN 448 Advanced Financial Management

Advanced study of corporate financial management. A major focus is the relationship between the internal decisions of the corporation and the valuation of the firm in the capital market. Topics: capital budgeting systems, capital structure, debt policy, cash and working capital management, short- and long-term financial planning. Prerequisites: FIN 340 and QBA 121.

Credit 3 units.

B52 FIN 450F Financial Technology: Methods and Practice

This course will provide an overview of financial technology and cover specific topics in this area. Topics covered include data-driven credit modeling, cryptocurrencies, digital wallets and block chains, robo advising, high-frequency trading, crowd funding, and peer-to-peer lending. The course will also discuss the regulatory aspects of fintech. The course will cover different methods as well as practical applications. Prerequisite: FIN 340. Credit 3 units.

B52 FIN 451 Options, Futures and Derivative Securities

Examines the theory and practical application of derivative securities such as futures, options and swaps. Central to the theory of derivative security pricing is arbitrage and payoff replication. In practice, derivative securities provide a principal route to manage and, in particular, hedge financial risk. Futures, options and swaps on different types of underlying assets are examined with emphasis on pricing and application. Prerequisite: FIN 340.

Credit 3 units.

B52 FIN 452 Advanced Derivative Securities

This course focuses on implementation of models for pricing and hedging derivative securities in the equity, currency, and fixed-income markets. Students will learn to write programs in a programming environment such as MATLAB to implement the Black-Scholes model, binomial models, Monte-Carlo methods and finite-difference methods. The derivatives studied will include exotic equity and currency derivatives and caps, floors and swaptions. The goals of the course are to learn more about the various instruments that are traded, the various assumptions and methods that may be chosen in modeling them, and the importance of the assumptions in determining the prices and hedges that are chosen. The course will be especially useful to students pursuing careers in sales and trading who will interact with research departments and students pursuing careers in asset management. Prerequisite: FIN 451.

Credit 3 units.

B52 FIN 470A Research Methods in Finance

The course is designed to prepare students for independent research in finance by exploring methods and techniques in a manner that will allow the students to implement them correctly and efficiently. The curriculum will emphasize practical applications of empirical methods used in financial research and how to implement them. Students in the course will learn empirical methods in corporate finance and asset pricing; obtain basic knowledge and familiarity of the databases used in common finance research; get exposure to recent research in finance which applies the methods covered; and learn how to implement the methods covered using relevant programming languages. Note: There will be significant overlap in the course tools used in both MEC 471 and FIN 470A. However, the applications and papers for each class will be entirely different. Prerequisites: QBA 120, QBA 121 and FIN 340.

Credit 3 units.

B62 FIN 549H Special Topics: Real Estate Finance

This course provides a broad introduction to real estate finance and investments. Topics include both equity and debt. We begin with an overview of real estate markets in the United States. On the equity side students will be introduced to the fundamentals of real estate financial analysis, including pro forma analysis and cash flow models, and elements of mortgage financing and taxation. Ownership structures, including individual, corporate, partnerships and REITS will also be covered. On the debt side, we examine a number of financing tools in the context of the evolution of the secondary mortgage market, both residential and commercial. Those wishing to pursue more advanced topics in real estate finance could follow this course with Fixed Income and Mortgage-Backed Securities. Prerequisites: FIN 340 and approval of Graduate Programs Offices for undergraduates. Credit 1.5 units.

Human Resources Management

Visit online course listings to view semester offerings for B56 HRM (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B56&crslvl=1:4>).

B56 HRM 325 Personnel/Human Resources Management

Emphasis on development of attitudes and skills of managers and supervisors in solving human problems and in building and maintaining effective employer-employee relations. Major topic areas include: selection and placement, training, and compensation. Other topics include legal aspects of employment policies, labor relations, and other aspects of human resources management. Prerequisite: junior standing.

Credit 3 units.

International Business

Visit online course listings to view semester offerings for B99 INTL (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B99&crslvl=1:4>).

B99 INTL 300A Planning for International Learning

The primary focus of this course is on preparation for the study abroad/internship experience. Topics include the following: what does a global firm look for in a globally competent recruit; development of goals and objectives for international experience; develop a working knowledge of host country key features such as businesses, culture and politics; overview of logistics for study abroad, including timeline expectations, visa, housing, travel, contact with Olin, and registration for return semester; Career Services resources on how to use study abroad/internship to obtain a summer job/internship. Prerequisite: admission to one of Olin's study abroad or international internship programs or permission of instructor.

Credit 0.5 units.

B99 INTL 300B Applying International Experiences

Focus is on strengthening student experiences while on a study abroad/internship experience. Topics include the following: minimizing impact of culture shock and new academic programming through participation in on-site orientations; maximizing academic advising services while abroad; identifying opportunities to engage with the local culture; connecting student's individual personal and professional goals by revisiting actions and outcomes. Prerequisite: enrolled in current Olin Study Abroad program.

Credit 0.5 units.

B99 INTL 320 Business, Innovation and Entrepreneurship in Israel

Israel is an innovation and entrepreneurial hub with more listings on the NASDAQ than any country other than the US, more patents per capita and more entrepreneurial events occurring in Israel in both the commercial and social arena than anywhere else in the world. Students will learn about the Israel economy,

different industries, Israeli culture and politics along with the critical business challenges and opportunities that face Israel. This course includes a required immersion experience to Israel and contains an additional lab fee for the immersion.

Credit 3 units. EN: S

B99 INTL 321 Family Business in Europe

This course explores and analyzes continuity challenges of family business and their best management practices. The focus of this course is on pragmatic, action-oriented, management; governance; and family business leadership skills. The course addresses the governance and management of established family businesses. It examines succession, values, life cycles, business strategies, conflict resolution, communications, management, philanthropy and other topics that uniquely touch family business governance and management. It will convey the characteristics that differentiate family businesses from other businesses. Attention is devoted to evaluating family firms and their growth options to provide a roadmap for analyzing how family ownership, control, and management affect performances and how family firms can create and ensure more value through generations. Prerequisite: participation in the Business in Europe Study Abroad Program.

Credit 3 units.

B99 INTL 322 Family Business Consulting Project

As part of this module, students will take part in a team consultancy project. In a location in Italy, students will take an integrative and critical approach to applying the perspectives and disciplines covered during the BSBA Business in Europe program, and they will experience a strategic management perspective as it relates to family firms. The purpose of the consultancy project is to give students an opportunity to apply what has been learned in the program (through course lectures, readings, and case discussions) to problems in a real family firm. Teams gather information from people in the family firm through direct contact; they may supplement this information with data from the media, the organization's literature, and other secondary sources. Students should identify a relatively recent problem to analyze (i.e., this should not be an historical account of a problem and the company's solution). Teams should focus their analysis by applying the concepts from the course. While it is acceptable to incorporate several concepts from the course, students should aim for depth rather than breadth regarding the use of course concepts. The goal is to diagnose the mechanisms that are causing the problem or issue of concern in the organization. Initially, students may notice many symptoms (e.g., a crisis after the succession, seemingly an unhealthy family culture, low family member commitment and involvement, governance issues), but the task is to get to the underlying reason for these symptoms. Students should also be aware that sometimes the initial symptoms that we think we see are not what they appear to be. Prerequisite: participation in the Business in Europe Study Abroad Program.

Credit 1.5 units.

B99 INTL 420 Business Research Internship

This is the capstone course for overseas internship programs where students learn to apply rigorous statistical and analytical approaches to research questions in business, but not limited to questions relating to marketing, management, finance and economics, operations and policy. Students identify a research topic and present this topic to faculty supervisors for approval. The goal is to capitalize on the practical knowledge gained while interning abroad and apply that to a research question in the

area in which a student is interning. Students are required to review the current literature on their topic, formulate their own research questions, identify potential data sources they can use to address these questions, and make recommendations to add to the body of knowledge on their chosen subject. Prerequisite: admission to one of Olin's International Internship Programs. Credit 3 units.

Management

Visit online course listings to view semester offerings for B53 MGT (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B53&crsLvI=1:4>).

B53 MGT 100 Individual in a Managerial Environment

An introduction to the foundations of business. The course covers four major themes: (1) how markets work; (2) motivating and managing people; (3) business strategy and firm performance; (4) ethics and corporate social responsibility. In the fall semester, MGT 100 is only open to incoming BSBA freshmen, and students must be concurrently enrolled in MGT 150A. Spring semester enrollments are open to any freshman and sophomore.

Credit 3 units. EN: S

B53 MGT 131E The Business of Elections

This course will focus on understanding the primary and presidential elections -- particularly the 2020 election -- through a multidisciplinary approach that primarily involves political science and business. Campaigns are start-ups that rely on strategy, branding, influencing consumers (voters), financing and other concepts to achieve the election of their candidate. At the same time, American politics is highly polarized, with voters who are increasingly hostile to listening to the other side. Given this context, how does a campaign succeed as an entrepreneurial venture? This course will allow students to compare and contrast how different candidates' policies and platforms may affect different constituencies/sectors of the business/labor world as well as the economy, how the media portrays them, and what role they will play in the general election. This course is for first-year (non-transfer) students only. Students who are not first-year students will be automatically unenrolled from this course.

Same as I60 BEYOND 102

Credit 3 units. BU: BA

B53 MGT 150A Foundations of Business

Provides first-semester business students with an introduction to each of the functional areas of business as well as the entrepreneurial function. As they work to design their own enterprise, students will build skills in teamwork, communication, critical thinking, and an understanding of the complex interplay of business functions. Prerequisites: Fall semester enrollment is only open to incoming business freshmen, and students must be concurrently enrolled in MGT 100.

Credit 2 units.

B53 MGT 160E Morality and Markets

What does it look like to live a moral life in today's market system? We know all too well what it does not look like. The news is filled with moral failures of leaders and executives at top firms. We like to believe that we would behave differently, but what kinds of pressures inform our moral choices? What

pulls us, what pushes us, and what persuades us to act one way rather than another? These are the questions that a course combining business and literature can address in unique ways; the world of fiction helps us to examine the ethical dilemmas of the market we inhabit every day. In this course, we use great books, classics of film and modern television, and the tools of modern psychology and business strategy to think critically about what is entailed in living a moral life in the midst of the modern market. This course is for first-year (non-transfer) students only. Same as I60 BEYOND 161

Credit 3 units. A&S IQ: HUM EN: H

B53 MGT 200A Business Fundamentals for Non-Business Students

This course is intended to help successfully position arts and sciences, engineering, and design majors for careers in organizations such as nonprofits, entrepreneurial ventures, and corporations, among others. Students learn key technical and professional skills that are valued and often required by employers. Topics addressed include working in teams, data-driven decision making, financial and business analysis, concepts for organizational strategy, professional communication, and career strategies. The course uses a combination of lectures, exercises, projects and cases to introduce participants to these topics. The class is designed for Washington University undergraduates in Arts & Sciences, Engineering, and Design and Visual Arts who are preparing for internships or jobs. Recommended for sophomores and juniors. Business students cannot receive credit.

Credit 3 units. EN: S

B53 MGT 200B Global Perspectives

We examine the economic, political, cultural, and social bases of business in Cuba from a global perspective. These bases are explored to understand how business in Cuba is conducted and how it relates to the global economy. We examine these bases in their historical context, in how they relate to current changes in Cuba, and in how they may affect future prospects. The normalization of relations between the United States and Cuba will be studied in terms of its impact on business for U.S. and Cuban firms. An immersion experience covering the topics of the course occurs on a one-week trip to Cuba during spring break. Enrollment limited to 16. Prerequisites: MGT 100 or permission of instructor; online application.

Credit 3 units.

B53 MGT 200C Venture Creation

Venture Creation is designed for students who are interested in exploring the venture creation process, or the undertaking of creating a new business from scratch. The course allows students to experience entrepreneurship in a unique and innovative manner by integrating theory and practice in an interactive learning by doing process. The goal of the course is to assist and support students in the realization of a business vision from inception of an idea to fruition of a company producing value.

Credit 3 units.

B53 MGT 201 Management Communication

Managers who write and speak effectively excel in business leadership. Persuasive and authentic communication is not only useful in advancing a business career; business employers also consider communication skills to be the most important attribute in people they hire. Effective communication involves more than

mastering technical writing and presentation skills. Successful communicators use critical thinking to assess business scenarios and the audience who will hear or read a message; they craft communication in order to attain targeted results. This course gives students the opportunity to become more polished communicators as they work toward the following goals: applying rhetorical principles to management communication; using critical thinking to analyze the audience, the organizational environment and problems before choosing communication strategies; implementing principles of plain language and effective design; collaborating with colleagues to create effective group projects; representing a company or product in a "crisis communication" press conference. Priority for enrollment is given to BSBA students. CET (<https://gephardtinstitute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.

Credit 4 units.

B53 MGT 301 Legal Environment of Business Management

Surveys the various areas of law that make up the legal environment of business. Develops a basic understanding of law as it relates to business, with traditional emphasis on private law and business transactions. This study of the micro law of business reviews the detailed substantive rules in the areas of contracts, sales, product liability, agency, corporations and partnership. In addition, a summary review of contemporary legal problems such as insider trading, discrimination in employment, sexual harassment and ethics may be discussed, if time permits. Case studies are analyzed in order to give the student an understanding of how various laws apply to actual situations.

Prerequisite: sophomore standing.

Credit 3 units.

B53 MGT 308 Introduction to International Business

Focus on the aspects of management of a business enterprise that are necessary to compete in the global marketplace. The course begins with a survey of the environmental context in which international companies operate (economic systems and cultural factors). This is followed by a review of International Trade Theory and Economics. This forms a basis for concentration in the second half of the course on strategies and structure for global operations. The course deals with the situations in Europe, Japan, Latin America and China through case studies and discussion of current topics and their relation to the fundamental aspects of global business management. Prerequisite: junior standing or permission of instructor.

Credit 3 units.

B53 MGT 320 Olin Grand Rounds: The Business and Practice of Medicine

Grand rounds in medical schools are a forum for presenting new and challenging clinical problems and cases. The goal of Olin Grand Rounds is to focus on the challenges and solutions facing the business of medicine. The course therefore provides an introduction to the current issues facing the health care sector that integrates management tools and clinical knowledge. The objective is to provide students new insights into how modern management tools can be combined with scientific and clinical knowledge to manage health care organizations more efficiently and practice medicine more effectively.

Credit 3 units. EN: S

B53 MGT 321 Health Economics and Policy

The basic tenets of health economics are covered. This course places a unique emphasis on incorporating materials from three broad source categories: textbook elements, "lay" press and media, and academic journal publications with the aim to foster application of rigorous, critical thought to media presentations of health care economics and policy issues.

Credit 3 units. EN: S

B53 MGT 322 Health Care Management

The goal of the course is to develop facility in applying basic tenets of general management to actual situations and dilemmas that might be faced by health care managers, consultants, financiers, investors, innovators or providers in the course of their work. Issues addressed include but are not limited to financial issues, management challenges and conduct of operations. The first phase covers the basic background on the structure and financing of the health care industry to include very brief reviews of critical topics such as insurance and government-provided health care. A few basic frameworks are then developed for students to apply to course topics moving forward, such as cost/benefit analysis and evaluation of risk. The remainder of the course involves critical analyses of health care cases involving varied subjects and management challenges. Sessions emphasize student-led discussions.

Credit 3 units. EN: S

B53 MGT 380 Business Strategy

The course adopts the perspective of the general manager -- the individual charged with developing and implementing the long-term strategy of a business. The course develops basic tools and concepts in strategy formulation, including competitive advantage, value creation and capture, industry analysis, capability assessment, competitive positioning, and strategy implementation. The course is designed to develop students' skills in both analyzing observed strategies and in formulating and implementing new ones. Prerequisite: MEC 290 or approved substitution.

Credit 3 units. EN: S

B53 MGT 400S International Business Environment

What is the relationship between the dominance of the financial interests centered in the City of London and the competitive performance of British industry? How does Britain reconcile an advanced capitalist economy alongside a traditional social and political structure? How great is the tension between domestic forces that seek closer economic and political integration with Europe and those pushing for greater engagement with Britain's former English-speaking colonies? Is British foreign policy driven more by economics than national security? This course addresses these and other important questions regarding British political economy by contextualizing current issues within the wider evolution of the country's political, economic and social systems since 1945. Prerequisite: admission to the London Internship Program.

Credit 3 units. BU: IS

B53 MGT 401C CEL Entrepreneurial Consulting Team

The CElect program is a consultative experiential course that provides students with the opportunity to work directly with startup businesses. Early-stage companies provide a unique environment for students to make a meaningful impact on the future trajectory of a growing organization. CElect is an experiential learning course that matches teams of Washington

University students with St. Louis-area startup ventures to perform defined management consulting projects. In addition to the required day-long orientation and concluding sessions taught at the T-Rex incubator downtown, students will work directly with the professor and with their client companies on a consistent (but variable) schedule, depending on various needs over the course of the semester. In addition to being embedded on a project for an early-stage company, students will have the opportunity to engage with other entrepreneurship support organizations, such as local accelerators, venture capital firms, and incubators. Each student is expected to spend 110 hours during the semester working on their project. There is a required orientation session that will be held on the second Friday of the graduate business semester. The class time listed is required time that the students must have available each week. Prerequisite: Application required. Enrollment is limited. Preference on admission will be given to students who have achieved Junior or Senior status.

Credit 3 units.

B53 MGT 401M Sustainable Development and Conservation

Through Entrepreneurial Collaboration: Madagascar

This course focuses on sustainable development in rural subsistence economies, using Madagascar as case study. Students from diverse disciplines are challenged to develop and assess the feasibility of projects that can have positive impact on communities constrained by poverty traps. The span of projects includes topics such as forest conservation and use, nutrition, health, food security, clean water, education, and bottom-up economic growth. Students in humanities, social sciences, business, design, engineering, physical sciences, law, social work, economics, political science, public health and other areas use their different perspectives to search for answers. Teamwork and peer teaching are central to this course. Competitively evaluated projects will be field tested in Madagascar. Student teams travel to Madagascar in May and work with the Missouri Botanical Garden Community Conservation Program to adapt projects to conflicting environmental, cultural, economic, and political factors. Lab fee: Project teams selected to go to Madagascar will be assessed a lab fee at the time that their participation in the trip is confirmed and travel arrangements have been made. The lab fee covers the cost of airfare, in-country transportation, and approximately three weeks of in-country lodging and food. Prerequisite: Students submit their application for consideration to the CEL. Students are notified when the application is available. There is limited enrollment. If accepted, the CEL will formally enroll students in this course. Poster sessions for students taking the trip occur during the following fall term. Students may not withdraw from this course after the third week of February.

Credit 3 units.

B53 MGT 401P CEL Practicum

The CEL Practicum is a consultative experiential course that provides students the opportunity to work directly with established for-profit and non-profit in the form of a comprehensive strategic engagement around some of their most complex problems. Partnering with regional, national, or international business, students work in a four to six person teams on consulting projects, applying insights from their coursework to real-world business problems under direct faculty advising. Each student is expected to spend 150 hours during the semester project. Prerequisite: Application required.

Enrollment is limited. Preference on admission will be giving to students who have participated in MGT 401S (CEL Small Business Initiative) or MGT 401T (formerly known as MGT 460K Taylor Community Consulting Program), but is not required. Credit 3 units.

B53 MGT 401S Small Business Initiative

The CEL Small Business Initiative is a consultative experiential course that partners students with small businesses operating in areas of economic disadvantage. Existing at the intersection of business and policy, the Small Business Initiative provide students the opportunity to directly impact the St. Louis economic infrastructure through direct consultative engagement with clients whose health has downstream implications for the vibrancy of the region. Students work in a four-six person team on consulting projects, applying insights from their coursework to real-world business problems under faculty supervision. While the majority of this course involves working closely with the faculty and the CEL Fellows to serve the client, the class will meet approximately four times throughout the semester during the assigned course time. Each student is expected to spend 150 hours during the semester project. Prerequisite: Application required. Enrollment is limited.

Credit 3 units.

B53 MGT 401T Taylor Community Consulting Project

The CEL's Taylor Community Consulting Program is a consultative experiential course that partners students with local, regional, and national non-profits to support their strategic development. Students work in four-six person teams on consulting projects, applying insights from their course work to real-world business problems under faculty supervision. Each student is expected to spend 150 hours during the semester project. Prerequisite: Enrollment is limited.

Credit 3 units.

B53 MGT 402 Ethical Issues in Managerial Decision Making

This course considers not only what ethical behavior means for a business entity, but how to: (i) balance competing ethical concerns against each other; and (ii) implement and sustain this balance across an organization. Readings and classwork zero in on the issues and situations most likely to put a manager in jail and the company in bankruptcy. Classes include Socratic discussion, simulations, analysis of video clips, and team tasks. The emphasis is on practical frameworks and tools managers can apply in the real world. Prerequisite: senior standing. Credit 1.5 units.

B53 MGT 405A Asian Study Tour

Individual and team research, writing, presentation, and participation in Olin's Asian Study Tour. Includes required attendance and expected professional contributions to all corporate and government visits and briefings and other required individual and group activities. Prerequisite: admission to the Asia Pacific Internship Program.

Credit 1.5 units.

B53 MGT 405S International Business Environment —

Sydney

The aim of this course is to internalize and develop multicultural competency applied within personal, organizational and business contexts. Reaching this goal includes developing personal awareness, understanding of important concepts and developing

multicultural skills. The ability to recognize and overcome common pitfalls that prevent people from operating effectively within, and actually benefiting from, multicultural contexts will be explored. Prerequisite: admission to the Asia Pacific Internship Program.

Credit 3 units.

B53 MGT 418 International Business: A Euro Perspective

Examines the economic and institutional setting of Europe from a general business perspective. The economic and political structures of major countries are studied. The role of the European Economic Community examined as well as that of some major international organizations such as GATT and OECD. The primary emphasis is with countries of western Europe. Other topics: theory of customs, unions, monetary and economic integration, and multicountry policy integration. Opportunities for and problems of doing business in Europe examined from both an overall strategic perspective and from the perspective of the different functional areas. Prerequisite: admission to the London Internship Program.

Credit 3 units. BU: IS

B53 MGT 420 Research in Health Care Management

This is the capstone course for the Health Management major where students learn to apply rigorous statistical and analytical approaches to research questions in health services, but not limited to questions relating to management, finance and economics, operations and policy. Faculty identify several available research project options and present these options in class. The goal is to capitalize on the strength of the university medical school and affiliated medical centers, in addition to capitalizing on existing relationships between Olin and health care firms to identify the student research projects. Students also are encouraged to formulate their own research questions and to identify potential data sources they could use to address these questions, if they so desire. Students work in teams of 3-4, using the approach developed for the Practicum and Hatchery courses.

Credit 3 units.

B53 MGT 421 Introduction to Entrepreneurship

Through case studies, frequent guest speakers, and the professor's own experience, the real world of entrepreneurship will be brought into the classroom to provide a context for students to learn the fundamentals of founding, operating, and exiting a startup business. Students will learn new perspectives that will teach them to think like an entrepreneur. Those who are interested in the general study of entrepreneurship, those who want to be entrepreneurs, and those who would like to leverage entrepreneurial principles in other career paths are all good candidates for the course. This course can only be taken for a grade. Prerequisite: sophomore, junior, or senior standing in any school or college. Students can either enroll in either MGT 421 or MGT 460L. They can't receive credit for both courses.

Credit 3 units. EN: S

B53 MGT 424 Business Planning for New Enterprises (The Hatchery)

In this course, students form teams to pursue their own or an outside entrepreneur's commercial or social venture. The first session will feature a "Team Formation" event where students and community members pitch their ideas and opportunities to the class. During the semester, the teams are supported and advised by the Instructor, Executive Coach, and Mentor(s) as

they research and develop startup plans. Academic deliverables include two presentations to a panel of judges and a complete business plan for commercial ventures or sustainability plan for social ventures. The course is open to students from all disciplines and degree programs. Most of the work will be done outside the classroom with the support of the coaches, mentors, advisors and instructor. Classes will be held once per week for the first half of the semester. Workshops and rehearsals will be required in the second part of the term. Recommended prerequisites: Introduction to Entrepreneurship (MGT 421), Introduction to Social Entrepreneurship (MGT 460L), or Entrepreneurial Engineering (EECE 480). Junior standing or higher expected.

Credit 3 units.

B53 MGT 429E Management and Corporate Responsibility

Our goal is to help managers incorporate "corporate social responsibility" demands into their actions within their firms. Assuming that no managers wish to work at a socially irresponsible company, this requires us to understand precisely what these socially responsible demands entail and how they might run counter to taking actions that increase value for the firm's owners and make the manager. We will take care to rigorously define these socially responsible demands and subject them to philosophical and economic examination so that we can assess and implement them. This inquiry would also require us to understand the public relations and political implications of the outsiders' perceptions about the social responsibility of the actions of the firm and its managers, with an eye toward improving these perceptions and reducing political costs.

Credit 1.5 units.

B53 MGT 440 Sports Management

This course examines business and management issues involved in the sports industry. This industry is very diverse, ranging from global sports events (such as the Olympic Games, World Cup Soccer, etc.) to major national competitions (such as the National Football League, Major League Baseball, etc.). Engaged in this industry are many different players, including franchises, governing leagues, sponsors, media, stadium owners, government, fans, and so forth. This course will take a practical look at the world of sports management and administration, with an eye on extracting key lessons for corporate management and administration.

Credit 1.5 units.

B53 MGT 450A Internship in Business

This is an online course designed to deepen the overall learning students gain from an internship. By completing structured assignments that relate to both the work completed during the internship and to elements of the broad-based Olin business curriculum, the value of the internship will be markedly increased, for both students and employers. Internship in Business is a 1.5-credit pass/fail course for Olin Business School undergraduates. The course, credit, and pass/fail grading are transcript notations, but the hours earned for MGT 450A do not count toward the 120 hours minimum needed for graduation nor does the grade count toward the student's GPA. Students must submit an application for approval to the Weston Career Center. Prerequisite: approval from Weston Career Center.

Credit 1.5 units.

B53 MGT 450G The Business of Sports

This course provides an overview of the major aspects of the sports business industry, including but not limited to the following: (1) the primary revenues and expenditures of pro and college sports; (2) collective bargaining agreements; (3) sports media rights; (4) facility financing; (5) sports sponsorships and athlete endorsements; (6) the role that sports commissions play within communities; and (7) current events that affect the growth and evolution of the sports business industry.

Credit 3 units.

B53 MGT 450R Business & Government: Understanding and Influencing the Regulatory Environment

The United States as well as many of the world's governments has entered a new episode with respect to the interaction of business and government. Now, more than ever, government regulations are attempting to spur job growth and the economy on one hand, but also is intruding into many aspects of business and the markets on the other hand. Business students must not only understand the shifting business government landscape, but also how to engage government officials and legislators to help shape policies that affect their firms and industries. As an introductory course, student will learn from business and government leaders how to interact with and affect the processes of regulation.

Credit 1.5 units.

B53 MGT 450V Defining Moments: Lessons in Leadership & Character From the Top

Most successful leaders can point to a handful of "defining moments" in their careers — key choice points that defined the trajectory of their character, their career, and/or their company. How can aspiring business leaders prepare themselves to face these defining moments with insight and integrity? How do leaders achieve business performance without sacrificing character or integrity? This course examines these questions by learning from notable leaders who exemplify both business excellence and personal character. Top executives from leading companies will sit down with us to talk about their "defining moments" and to engage with us in considering these questions. These conversations will be supplemented with contemporary cases and readings on leadership and character. Prerequisites: senior status or juniors with permission of instructor.

Credit 1.5 units.

B53 MGT 450Z European Study Tour

Individual and team research, writing, presentation and participation in Olin's European Study Tour (EST), including Mock Parliament. Includes required attendance and expected professional contributions to all EST corporate and government visits and briefings and other EST individual and group activities. Prerequisite: admission to one of Olin's European International Programs.

Credit 1.5 units.

B53 MGT 460G Critical Thinking and Complex Problem Solving for Business

The course introduces students to rigorous techniques for critical and strategic thinking, problem formulation and problem solving, advancing their ability to provide valuable advice to organizations and preparing them for management consulting company interviews by exploring methods to engage in case analysis,

various cognitive biases that can emerge as a problem is being formulated and analyzed, such as the use of inappropriate analogies, confirmation bias, self-serving bias, conflation of correlation and causation, etc.

Credit 1.5 units.

B53 MGT 460H Corporate and Global Strategy

Business-level strategy involves a firm's choices regarding how to compete in a particular single industry or market. Corporate strategy, on the other hand, involves choices about which sets of different industries or markets to compete in, and how to do so. It also involves choices about which kinds of activities to undertake within the firm, and which to organize through contracts or alliances with other firms. Global strategy is a particular type of corporate strategy that involves choices about which geographic regions or national markets to compete in and how.

Credit 3 units.

B53 MGT 460I Sports Business Analytics

This course introduces students to business analytics through sports-themed applications, academic research pertaining to sports topics, class readings, and guest lecturers from industry. Objectives for students include: 1) learning estimation and forecasting skills/trends used in sports; and 2) developing critical thinking skills necessary to assist managerial decision making to augment the performance of sports teams, leagues or companies. Prerequisite: MEC 290 or Econ 4011.

Credit 1.5 units.

B53 MGT 460J Legal Issues in Sports

This course introduces the fundamentals of sports law. It teaches the basic tenets of a variety of legal disciplines through the lens of sport. It focuses on legal issues that have a direct relationship to sport with an emphasis on current legal sports issues in the news. In the tort arena, we will explore the potential liability of athletes for reckless violent actions toward their competitors, of sports teams and leagues for failing to adequately protect the health of participants (e.g., concussion lawsuits), of coaches, trainers and medical personnel at all levels for failing to properly train, monitor and assess athletes, of product manufacturers for injuries caused by defective sports equipment, and of teams for injuries to spectators, among other potential liabilities.

Credit 1.5 units.

B53 MGT 460L Introduction to Social Entrepreneurship

The course is designed for students who are interested in how to create positive social change through market based strategies. Social entrepreneurship refers to the practice of combining innovation, resourcefulness and opportunity to address critical social and environmental challenges. Social entrepreneurs focus on transforming systems and practices to enable human potential and to create sustainable systems change. We will learn how social entrepreneurs have responded to social challenges through creating companies. What are the strengths and weaknesses of this approach compared to "traditional" nonprofit management, activism, and SR? Students will learn the basics of entrepreneurship, and focus on ways to understand and define a social problem and test various approaches to work with others on systems change. Students will learn to think like an entrepreneur, looking for opportunities and leverage, to create (social) value without many formal resources. This semester, selected students will also have the opportunity to work closely with community social entrepreneurs shortlisted

from the Social Entrepreneurship and Innovation Competition, to write cases to make their business and impact models clearer and contribute to the knowledge-base of social entrepreneurship. Students may take either MGT 421 or this course.

Credit 3 units. EN: S

B53 MGT 460M Business of Social Impact

This course is designed for students interested in understanding how social change and social impact can be achieved, borrowing tools and approaches from a broad spectrum of disciplines by asking the following questions: What is social impact and what is social change? How has the concept of social impact developed, where did it come from, and how is it useful? How can social impact be meaningfully measured? What examples exist for cooperation and mutual support in the achievement of social impact? What role do for-profit organizations play in creating and promoting social impact? How do CSR, PPP and BOP achieve social impact? The course is based around social impact as a concept, measuring social impact and building institutions, and partnerships around social impact. It will be taught with a practical bent using examples from existing social impact organizations, including those of the professor. Guest speakers will provide case studies of social impact approaches from the local area.

Credit 1.5 units.

B53 MGT 460N Laboratory for Defense and Corporate Cybersecurity Innovation

As a joint entrepreneurial lab between Saint Louis University and Washington University in St. Louis, this non-traditional course focuses on ideating and developing entrepreneurial solutions for real-world problems by applying flipped classroom, experiential, and team-based learning methodologies. Students will be guided by joint instructors with extensive experience in entrepreneurship and the Department of Defense, and they will also have the opportunity to interact with senior executives from corporate America and the Department of Defense. Student-developed viable solutions may be implemented in real application beyond this course. Classes will be held off campus in the CORTEX Innovation Community.

Credit 3 units.

B53 MGT 460O Business of Arts

The intent of the course is to provide students in art-related fields with a skill set enabling them to pursue their artistic vision and ambitions while simultaneously having enough commercial success to make their career viable. Furthermore, the course provides students within business-fields the opportunities to apply their technical skills to unique opportunities within creative fields. The course will be a blend of learning a set of appropriate business skills (organized by activities rather than functions), interaction with people from art businesses, and student/team research and presentations. The content will be geared towards an art business (as opposed to fashion or architecture) with the subfields included in the discussion.

Credit 3 units.

B53 MGT 490 Honors Seminar I

The first of a two-course honors seminar. Students have the opportunity to investigate current issues in business using an interdisciplinary approach to their research. Seminar content varies from year to year. Prerequisites: senior standing and faculty invitation.

Credit 3 units.

B53 MGT 491 Honors Seminar II

The second of a two-course honors seminar. Students have the opportunity to investigate current issues in business utilizing an interdisciplinary approach to their research. Seminar content varies from year to year. Prerequisite: MGT 490.
Credit 3 units.

Managerial Economics

Visit online course listings to view semester offerings for B54 MEC (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B54&crslvl=1:4>).

B54 MEC 290 Microeconomics

Provides a rigorous analysis of the behavior of consumers and firms in competitive and monopoly markets; oligopoly markets are introduced. Consumer topics include preferences and utility, budget constraints, consumer optimal choice and demand curves. Firm topics include technology, cost minimization and profit maximization. The course concludes with price determination in monopoly and competitive markets, and an introduction to oligopoly and game theory. The focus of the course is on microeconomics as a decision-making tool for consumers and managers. Prerequisite: completion of Math 131 or concurrent enrollment in Math 132 or Math 233.

Credit 3 units. EN: S

B54 MEC 292 Global Economy

Introduces the fundamentals of international economic analysis. Provides an economic foundation to the analysis of business decisions and strategies in the global setting. Topics include: introduction to the global economy; comparative advantage as the basis for international trade and sources of comparative advantage; economies of scale and imperfect competition as the basis for international trade; tariffs and other instruments of trade policy; political, legal and institutional factors influencing international trade; balance of payments; exchange rates and the foreign exchange market; international capital flows; national competitive advantage and industrial policies; global economic competition and business strategy. Prerequisites: MEC 290 or Econ 1011, and QBA 120.

Credit 3 units. EN: S

B54 MEC 292C Global Economy — South America

This course introduces the fundamentals of international economic analysis. It provides an economic foundation to the analysis of business decisions and strategies in the global setting. Topics include introduction to the global economy; comparative advantage as the basis for international trade and sources of comparative advantage; economies of scale and imperfect competition as the basis for international trade; tariffs and other instruments of trade policy; political, legal, and institutional factors influencing international trade; balance of payments; exchange rates and the foreign exchange market; international capital flows; national competitive advantage and industrial policies; and global economic competition and business strategy. Prerequisites: MEC 290 or ECON 1011, QBA 120, and admission to the Emerging Economies South American Program.

Credit 3 units.

B54 MEC 292S Global Economy — Australia

Introduces the fundamentals of international economic analysis. Provides an economic foundation to the analysis of business decisions and strategies in the global setting. Topics include introduction to the global economy; comparative advantage as the basis for international trade and sources of comparative advantage; economies of scale and imperfect competition as the basis for international trade; tariffs and other instruments of trade policy; political, legal, and institutional factors that influence international trade; balance of payments; exchange rates and the foreign exchange market; international capital flows; national competitive advantage and industrial policies; and global economic competition and business strategy. Prerequisites: MEC 290 or ECON 1011, QBA 120, and admission to the Asia Pacific Internship Program.

Credit 3 units.

B54 MEC 370 Game Theory for Business

Provides students with a methodological framework to analyze strategic business situations. Building on a background in microeconomics and statistics, this course includes such topics as the following: modeling strategic problems, games with sequential moves, games with simultaneous moves, strategies and the derivation of strategic forms, general classes of games, uncertainty and information, strategy and voting, auctions, bargaining. Prerequisite: MEC 290.

Credit 3 units. EN: S

B54 MEC 370R Game Theory for Business (Paris)

This course provides students with a methodological framework to analyze strategic business situations. Building on a background in microeconomics and statistics, this course includes such topics as the following: modeling strategic problems, games with sequential moves, games with simultaneous moves, strategies and the derivation of strategic forms, general classes of games, uncertainty and information, strategy and voting, auctions, and bargaining. Prerequisite: MEC 290 and participating in the Business in Europe Study Abroad Program.

Credit 3 units.

B54 MEC 391 Economics of Human Resource Management

Key to a firm's success is whether it can develop a firm organization and a human resource management system that reinforce the firm's strategic position. This course covers topics in managing work forces and organizations that are of fundamental importance to all managers, and teaches how organizational design and human resource policies interact with the firm's market strategy and production environment. We look at how management can motivate executive and employee performance, screen and attract appropriate workers, and improve the way information is processed and decisions are made within organizations. This course combines economic analysis with case discussions to address topics including hiring policy, turnover, training, variable pay, promotions, evaluation, job design, teams, worker empowerment, hierarchy, and organizational structure like centralization and decentralization. Prerequisite: MEC 290.

Credit 3 units.

B54 MEC 400K Research Analysis in Industry

Research in Industry Analysis will build on the materials taught in MEC 370 (Game Theory) MEC 470 (Market Competition and Value Appropriate) and MEC 471 (Empirical Techniques in Industry Analysis), integrating them with methods of industry analysis used in practice and applying them to companies.

Prerequisites: MEC 370, MEC 470 and MEC 471.

Credit 3 units.

B54 MEC 460 Economics of Entertainment

This course focuses on the unusual economics of the entertainment industry and the associated management challenges. The sessions cover the basic economics of entertainment, then focus specifically on the music and movie industries, plus one other that varies from year to year. Classes consist of lecture and discussion, as well as speakers from the relevant industries. The primary student deliverable is a 20-minute documentary-style production in which student teams present findings of their research into specific industries within the broader industries studied in class, e.g., rock, classical or rap within music, blockbusters within music, etc. Prerequisite: MEC 290 or Econ 4011.

Credit 3 units.

B54 MEC 470 Industrial Economics

Provides students with frameworks and capabilities for making intelligent decisions in evolving markets. Course begins with general game theory concepts, which form the basis for two main topics: models of competition in markets and value appropriation. Students learn the basic framework and apply it in the context of a detailed industry study. Specific topics may include firm interactions in stable and evolving market environments, industry life cycles, the evolution of new product markets, and strategic decision-making in developing markets. Prerequisite: MEC 370.

Credit 3 units.

B54 MEC 471 Empirical Techniques for Industry Analysis

Students will learn how to use data to answer a wide variety of questions regarding the incentives and behavior that generate market activity. We emphasize inference about the strategic decisions of firms and consumers. Students are introduced to new statistical and econometric tools by examining the application of these tools to current research in economics. Among the topics considered are the empirical implications of: strategic bidding in auctions, price discrimination and dispersion, differences across products, and the internal organization of firms. Prerequisites: MEC 290, QBA 120 and QBA 121.

Credit 3 units. EN: S

B54 MEC 494 Business and the Environment

This course will examine the relationship between environmental economics and environmental policy. The course will focus on air pollution, water pollution, and hazardous wastes, with some attention given to biodiversity and global climate change. The course will critically examine two prescriptions that economics usually endorses: (1) the "balancing" of benefits against costs (e.g., benefit-cost analysis) and the use of risk analysis in evaluating policy alternatives; and (2) the use of market incentives (e.g., prices, taxes, charges) or "property rights" instead of traditional command-and-control regulations to implement environmental policy. Prerequisite: Econ 1011. Same as L11 Econ 451

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA, ETH EN: S

Marketing

Visit online course listings to view semester offerings for B55 MKT (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B55&crsIvl=1:4>).

B55 MKT 370 Principles of Marketing

Marketing is the window to the customer, making the function a critical component of any successful organization. Through a mixture of lectures, case discussions and classroom exercises, this course gives students an overview of the best theories and practices in marketing management today. Specific topics include: how to segment the customer base and choose target markets, how to create perceived value both from an economic and psychological perspective, how to differentiate a product or service from a competitor's offering, how to build and maintain a strong brand, and how to employ different marketing tools such as advertising, pricing, product design, service and location. The class also provides students with some basic tools for evaluating the financial impact of marketing activities. Prerequisites: sophomore standing and MEC 290 or Econ 1011 or MGT 100.

Credit 3 units. EN: S

B55 MKT 377 Consumer Behavior

Psychological, sociological and social psychological principles as they apply to consumer response to product offerings, media communications, personal influence and other environmental factors. Consumer buying behavior is analyzed from theoretical, empirical and applied perspectives. Current applications of concepts employed by marketers are discussed in the context of both consumer and industrial marketing situations. Prerequisite: MKT 370.

Credit 3 units. EN: S

B55 MKT 378 Marketing Research

The four P's of marketing are product, place, price, and promotion. Using these decision variables, firms seek to maximize profits. Making these decisions requires market information. Marketing research is the process of actively collecting, assimilating, and analyzing market information to support management decision making. Teaches the nuts and bolts of market research. Students may not receive credit for both MKT 370N and this course. Prerequisites: MKT 370, QBA 120 and QBA 121 or concurrent enrollment in QBA 121. Credit 3 units.

B55 MKT 400E Elements of Sales: Tools and Techniques

This course will provide students with a thorough understanding of the sales function in a managerial context as well as the process of selling from prospecting through solution selling and account maintenance. Specific topics addressed include sales force structure, salesperson selection, evaluation, and compensation. Students will study sales technique, strategic selling, and key account management. Prerequisite: MKT 370. Credit 3 units.

B55 MKT 400G Digital Marketing and Analytics

The aim of this course is to provide a rigorous and comprehensive introduction to technology and methods of conducting marketing activities online and analyzing the data that inform and result from those activities. Prerequisite: MKT 370 and either QBA 120, Math 2200, Math 3200 or ESE 326. Credit 3 units.

B55 MKT 400I Business & Marketing Innovation

Innovation is a major strategic activity for most firms, as success is vital to face the rapid increase in competition and ever-changing customer demands. However, innovation is risky, and most new solutions fail in the marketplace. Thus, expertise in the development and marketing of new solutions is a critical skill for all managers. This course is about generating innovative opportunities and designing new solutions. The emphasis on solutions rather than the narrower focus on products is intentional, as this course is more about business innovation and somewhat less about new product design specifically; however, new product design will be covered. In addition, while the course does overlap with entrepreneurship, the focus will be on innovation in both small and large companies. The follow-up course will focus more on how to mark an innovation once it is ready to go to market. It will focus on key business and marketing innovations, such as the following. Business innovations: components of a successful innovation strategy and how to manage effectively; approaches and frameworks for uncovering unmet (and future) customer needs; tools to focus on market-creation vs. market-competition; tools and techniques for analyzing the validity and potential of new opportunities; how to forecast new product adoption and diffusion outcomes; how to manage the threat of disruptive innovation; how to design solutions that include functional, social, and emotional components; the attributes of great product and solution design. Marketing innovations: attributes of a successful product launch strategy; customer segmentation and uncovering what "causes" those customers to buy; first mover advantages and disadvantages (when and how to enter new markets); matching innovations with the right monetization strategy; concept and market testing; experimentation methods for developing and launching new solutions (lean start-up); business model innovation and how to compete through business models; innovative branding techniques; data-driven marketing that integrates channels and personalizes the customer experience. Prerequisite: MKT 370.

Credit 3 units.

B55 MKT 400L Causal Inference

This course introduces students to causal inference. Advances in information technology provide an enormous amount of valuable data to business. Good data-driven decision making often goes beyond discovering correlations in the data. Making the right prescriptive decisions often requires managers to tease out the causal relationship(s) between the prescriptions and outcomes of interest. Mastering causal inference is likely to become more rewarding over time as AI continues to complement human judgement with quick data analyses at a low cost. Throughout this course, we will go over many examples of why understanding causal relationships is important. Course goals include the following: 1) identifying proper statistical tools to tease out the deterministic processes that have generated the data in the presence of randomness; 2) identifying alternative data-generating processes that could have generated the same data; 3) understanding that observational data come from agents' decisions and that these decisions could lead to biased

samples; 4) understanding omitted variable bias and reverse causality; 5) designing and implementing various statistical and experimental methods of addressing the basic causal-inference problem using statistical software; 6) digging deeper into the mechanisms (decision trees) that yield the causal relations; and 7) articulating analyses in presentations. Prerequisite: QBA 120. Credit 3 units.

B55 MKT 400M Sports Marketing

In this introduction to sports marketing, students will learn the difference between marketing of sports and marketing through sports. In addition to studying the basics of sports marketing, we will examine the following: (1) the special nature of sports marketing; (2) the sport consumer; (3) the sport product and the key issues in developing a sport product strategy; (4) sport property branding; and (5) sport marketing decision making and ticket pricing. Prerequisite: MKT 370. Credit 3 units.

B55 MKT 430 Strategic European Luxury & Fashion Mgt

The fashion and luxury industries are constantly in evolution. This course, which is grounded in an introduction to the sociocultural and historical studies of fashion in Europe, introduces students to the principal areas of strategic luxury fashion management and considers case studies from diverse European brands. Escalating raw material costs, economic meltdowns, and political instability play havoc. Coupled with the changing nature of the global luxury fashion client and the challenges that the internet has brought to the industry, new strategies are required to meet the demands of this fast-paced industry. This course explores and analyzes the contemporary challenges that the luxury segment of the fashion industry is currently facing and encourages students to meet them head on. The course provides a multidisciplinary approach: a solid business and strategic knowledge combined with exposure to the practical side from the stars of luxury, fashion, and contemporary cultural and art spheres. Students will also have an inspiring opportunity to explore contemporary Italian and French art, architecture and culture and their influence in the world of fashion and luxury. Prerequisites: MKT 370 and admission to the Multi-Country Study Abroad Program in Paris and Rome.

Credit 3 units.

B55 MKT 450F Luxury Goods and a Dash of Fashion

This course focuses on the structure, strategies and business models of the global personal luxury apparel and accessory market. We study brands such as Burberry, Moncler, Louis Vuitton, Chanel and other industry leaders. The course is divided into two major segments. The first part is an on-campus 12-class segment which concludes with a final exam and a team report. The next segment is a spring break field trip to New York where we will visit the headquarters and showrooms of luxury brands and fashion retailers and meet with their executive leadership teams. Students will apply to take the course, and enrollment will be capped at 15 students. Contact instructor or BSBA Office for questions. Prerequisite: completion or concurrent enrollment in MKT 370 and instructor permission.

Credit 3 units.

B55 MKT 465 Retail Management

This course explores the fundamental factors that are critical to the success of most retailers: merchandising, store design and display, personal selling, advertising and promotion, and pricing and location. A wide variety of retailers -- department stores, specialty stores, wholesale clubs, direct marketers, franchisers, food retailers, discounters, and others -- are studied. Through case methodology, the roles that managers play in problem solving and development of strategies are studied. Topics include positioning for success; retailing organizations; retail economics; pricing strategy; and entrepreneurial retailing. Prerequisite: MKT 370.

Credit 3 units.

B55 MKT 470E Pricing Strategies

This course equips students with the concepts, techniques, and latest thinking on assessing and formulating pricing strategies. Through lectures, in-class discussions, case studies, group project/presentations, and pricing simulation games, students learn to use the fundamental analytical tools, theories and conceptual frameworks to formulate proactive pricing strategies improving the firm's profitability. Topics of discussion include incremental contribution analysis, EVC analysis, segmentation and price customization, competitive pricing strategy, pricing innovative products, price promotion, psychological/behavioral issues in pricing, dynamic pricing, pricing and market making on the internet, and pricing of digital products and services.

Prerequisite: MKT 370.

Credit 3 units.

B55 MKT 470N Applied Marketing Research

This course is designed to provide you with an appreciation of the role of marketing research (MR) in the formulation and solution of marketing problems. In this course, you will be developing an understanding of the marketing research process, and understand how to read reports and use output from marketing research to make managerial decisions. While the course will cover the process of engaging in marketing research, the emphasis is on understanding how to interpret output from marketing research so that you can gain greater mileage from marketing research reports that are run for your company, and on understanding what types of information can be collected so you will understand what types of information you can commission once you step into a managerial role. BSBA students can't enroll in this course. Students may not receive credit for both MKT 378 and this course. Prerequisite: MKT 370, Math 131 and Math 2200.

Credit 3 units.

B55 MKT 477 International Marketing

Addresses three fundamental decisions confronting a company whose operations extend beyond the domestic market: (1) choosing which foreign markets to penetrate; (2) determining the mode of market entry; and (3) devising the international marketing plan. Topics include: global marketing planning; environmental and cultural influences on international marketing decisions; organizational and control issues in international marketing decisions; global marketing intelligence; foreign risk and feasibility studies; and issues of ethics in other countries. Prerequisite: MKT 370.

Credit 3 units. EN: S

B55 MKT 477L International Marketing London

Many companies, large & small, prepare a business environmental analysis for each country in which they do business. The analysis assesses the (consumer, industrial or organizational) demand in a particular country for merchandise like the company markets as well as the company's ability & willingness to supply that merchandise to that country. Students will prepare a marketing environmental analysis for some merchandise (either a new or existing service or product) of their choice from a company of their choice in London. Prerequisites: MKT 370 and admission to the London Internship Program. Credit 3 units.

B55 MKT 477S International Marketing Sydney

Many companies, large & small, prepare a business environmental analysis for each country in which they do business. The analysis assesses the (consumer, industrial or organizational) demand in a particular country for merchandise like the company markets as well as the company's ability & willingness to supply that merchandise to that country. Students will prepare a marketing environmental analysis for some merchandise (either a new or existing service or product) of their choice from a company of their choice in Australia. Prerequisites: MKT 370 and admission to the Asia Pacific Internship Program. Credit 3 units.

B55 MKT 478 New Product Management

In a rapidly changing business environment in which product life cycles are shortening and competition is intensifying, creating new products has become the most significant and most risky activity within a firm. This course aims to develop an understanding of the "state-of-the-art" strategies, processes and methods used when developing new products. The course focuses on key new product issues, including the generation and assessment of ideas, value creation in competitive markets, the impact of disruptive technologies on mainstream industries, the diffusion of innovative new products and services, business model innovation, marketing mix decisions for new products (the four Ps), concept and market testing, first mover dis/advantage, and expanding the product portfolio. This is a case-based course, where students participate in a dynamic and interactive group environment to develop the capacity to use the information learned to make informed new product decisions. Prerequisite: Completion of or concurrent enrollment in MKT 378 or MKT 470N.

Credit 3 units.

B55 MKT 480 Marketing Strategy

Successful business plans are dependent on well-defined and carefully crafted marketing strategies. In this course, students will explore the interconnections between business strategy and marketing strategy through a series of lectures, case discussions, and participation in an online marketing simulation exercise. The course also places heavy emphasis on the discussion of topical marketing issues faced by companies in the current environment. Students are required to read the relevant business press and bring real world issues into the class for brainstorming and interactive discussion. Through this process, students will become astute observers of the strategic trends in marketing across a variety of industries. Prerequisite: MKT 370 and completion or concurrent enrollment in QBA 121. Credit 3 units.

B55 MKT 481 Advertising and Promotions

This course focuses on an Integrated Marketing Communications (IMC) approach to advertising and other forms of commercial communications. The purpose is to provide future managers and practitioners with a foundation in communications theory, based on understanding the target's role in the demand chain for goods and services, as well as "hands on" experience in developing marketing communications plans. A practical understanding is provided of each of the range of marketing communications vehicles: consumer and business-to-business advertising, sales promotion/incentives, direct marketing, public relations, events and sponsorships, as well as online/interactive communications. Copy strategy, creative development, media planning, promotion strategy, and the evaluation of these programs are all addressed in this course. Industry experts will give guest lectures. We will have four companies in different industry sectors for which the class will develop marketing communications plans during the course. Prerequisite: MKT 370. Credit 3 units.

B55 MKT 482 Brand Management

A brand is a promise, and this promise is often the most valuable asset of a firm. In this course, students will examine the creation and building of brand equity to create long-term profit for the firm. The course will examine what we know about brand management and brand theory from years of rigorous scientific research in the area. While learning the foundations of brand management, students will develop the skills needed to create a meaningful brand, position a brand, develop brand names and logos, promote a brand, leverage brand equity, extend a brand, and communicate brand meaning via traditional and social media. Students will learn some of the day-to-day skills performed by brand managers and interact with brand managers via guest speakers from top branding firms. Prerequisites: MKT 370 and either completion or concurrent enrollment in MKT 378 or MKT 470N.

Credit 3 units.

Operations and Supply Chain Management

Visit online course listings to view semester offerings for B58 OSCM (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B58&crslvl=1:4>).

B58 OSCM 356 Operations Management

Introduces a variety of common operations issues that are frequently dealt with in both manufacturing and service industries and that affect other functions of the business. Specific topics include: process design and control; quality; waiting line models; inventory systems; and supply chain management. Prerequisites: MEC 290 or Econ 1011 and completion DAT 220 or ESE 403 or ESE 415 or concurrent enrollment in DAT 220 or ESE 403 or ESE 415.

Credit 3 units.

B58 OSCM 400D Supply Chain Management

A supply chain is a network of all firms and relationships that get a product to market, including the original acquisition of raw materials, production of the item at a manufacturing facility, distribution to a retailer, sale of the finished item to the customer, and any installation, repair, or service activities that follow the

sale. How to effectively manage the supply chain is a central issue for all levels of management, regardless of industry. More demanding customers, the internet and digital technology, growing competitive pressures, and globalization create new opportunities and challenges on how supply chains should be configured and managed. Many innovations and new business models have emerged, arising from application of information technology and reconfiguration of the supply chain network. Prerequisite: OSCM 356.

Credit 3 units.

B58 OSCM 458 Operations Analytics

Examines the concepts and techniques essential for effective operations planning and control in various manufacturing and service organizations. The course builds on the knowledge and skills acquired in core operations management and quantitative method courses, and covers key topics including inventory management, linear and nonlinear programming, aggregate planning, Markov chain models. The course introduces students to the major trade-offs and issues in operations planning and control, as well as important tools and techniques available for helping operations managers to make analysis and decisions. Prerequisite: OSCM 356.

Credit 3 units.

Organizational Behavior

Visit online course listings to view semester offerings for B66 OB (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B66&crslvl=1:4>).

B66 OB 360 Organization Behavior Within the Firm

Provides a toolbox of skills that are necessary to be an effective team member and manager. Focuses on behavior at the individual, group, and organizational levels to provide a broad picture of management in organizations. Ongoing themes include motivation, team dynamics, organizational design, and corporate culture. Assignments, experiential exercises, and course materials are designed to build skills in team management, organization, and communication that will be useful for other group assignments as well as work experiences. Prerequisite: MGT 100 or sophomore standing.

Credit 3 units. EN: S

B66 OB 360P Organizational Behavior Within the Firm (Paris)

This course provides a toolbox of skills that are necessary to be an effective team member and manager. It focuses on behavior at the individual, group, and organizational levels to provide a broad picture of management in organizations. Ongoing themes include motivation, team dynamics, organizational design, and corporate culture. Assignments, experiential exercises, and course materials are designed to build skills in team management, organization, and communication that will be useful for other group assignments as well as work experiences. This section is taught in Paris, France. Prerequisite: participation in the Business in Europe Study Abroad Program.

Credit 3 units.

B66 OB 400C Women in Leadership

Using a multifaceted approach to learn about women and leadership. To better prepare students to lead in organizations, we will learn from notable leaders who will share their experiences and advice with the class. These conversations will be supplemented with cases and readings of women leaders pulled from a range of organizations as well as a review the current state of empirical evidence about the status of women as leaders. Finally, there will be time to engage in deep reflection about what students expect from their careers, as well as a chance to consider the pathways they must take to become effective and inclusive leaders in increasingly diverse organizations.

Credit 1.5 units.

B66 OB 400D Thinking Creatively and Leading Creative Teams

This course is designed for students who want to improve their ability to develop creative solutions to tough business problems and to be able to inspire creativity in others. In a world of rapid change and increasing complexity, existing approaches simply won't do it anymore — at least not for long. Thus, the ability not only to update and refresh existing products and services but also to generate ideas for new-to-the-world offerings becomes indispensable. Students who have mastered the skills of creative thinking and doing and can foster those skills in others are therefore in a position to add tremendous value to their firms and, ultimately, to society. This course is designed to help students understand and begin to master those skills.

Prerequisite: OB 360.

Credit 1.5 units.

B66 OB 400E Talent Analytics

Finding, developing, and retaining the best talent has always been the key to sustained success in business. Organizations today have potential access to far more useful information about people than ever before but most struggle to access and use it effectively. In a highly competitive global market, rigorously analyzing data to enable timely, strategic decisions about talent provides a critical edge. In this course you will learn how to use analytics to bring data and rigorous modelling to bear on people-related issues, such as recruiting, performance evaluation, leadership development and succession, job design, and compensation. Together, these can help organizations achieve long range strategic goals, rather than simply serving as an administrative support function. Prerequisites: OB 360 and DAT 200A.

Credit 1.5 units.

B66 OB 400F People Metrics

Since metrics are at the core of people analytics, this course introduces students to the foundations of assessing behavior in organizations using novel measurement approaches and large datasets. Through classroom discussions and real-world applications, this course will enable you to add value to organizations through the development, use, and interpretation of innovative people metrics. Specifically, after taking this course, you will be able to develop a clear and logical conceptual measurement model. A conceptual measurement model is the foundation of creating novel and useful new approaches for assessing intrapersonal characteristics (e.g., personality) and interpersonal behavior (e.g., knowledge sharing, teamwork). Prerequisites: OB 360 and QBA 200A.

Credit 1.5 units.

B66 OB 461 Negotiation

Skillful negotiation is an important aspect of management. Designed to improve a student's skills in analyzing and conducting negotiations in a variety of settings. Topics include two-party bargaining, multiparty bargaining, arbitration and coalition formation. Prerequisite: OB 360.

Credit 3 units.

B66 OB 462 Leadership in Organizations

This course is designed to fulfill three broad objectives for students. The first is to provide a useful overview of the primary leadership perspectives, focusing on how each framework links individual leadership to organizational outcomes. The second objective involves students in self-assessment of strengths and weaknesses in relation to the abilities and skills that are predictive of leadership effectiveness. Third, the course is designed to enable participants to articulate an effective strategic plan for individual leadership development. Course topics include perspectives on individual leadership effectiveness, leadership and motivation, developing subordinates, leading groups and teams, leading the resolution of conflict, and leading organizational change. Prerequisite: sophomore standing.

Credit 3 units.

Data Analytics

Visit online course listings to view semester offerings for B59 DAT (<https://courses.wustl.edu/CourseInfo.aspx?sch=B&dept=B59&crslvl=1:4>).

B59 DAT 120 Managerial Statistics I

The first of a two-course sequence in business applications of statistics, focused on descriptive statistics, probability and distributions, inferential statistics, and linear regression. Approximately, the first quarter of the course is about descriptive statistics and applications of covariance. The second quarter is devoted to probability: basic rules, conditional probabilities, Bayes' theorem, expected values, and probability distributions. This work is followed by an introduction to sampling distributions and inferential statistics. Confidence intervals and hypothesis testing are introduced to make inferences about parameters. The last one-fourth of the course focuses on simple linear regression. Throughout the course, functions, data analysis, VBA, and solver features of Excel are introduced. Prerequisite: completion or concurrent enrollment in MATH 132.

Credit 3 units.

B59 DAT 121 Managerial Statistics II

The second of a two-course sequence in business applications of statistics, focused on forecasting. The course is devoted to the use of linear regression models in business, and ways to deal with problems of collinearity, outliers, non-linear relationships, and heteroscedasticity. Advanced topics including time series regression and logistic models are covered as time permits. There are quizzes and group projects in addition to a midterm and final. Prerequisites: DAT 120 or approved equivalent; MATH 132; and MEC 290 or ECON 1011.

Credit 3 units.

B59 DAT 220 Analytics and Modelling for Business Decisions

The primary goal of this course is to help students become effective problem solvers, smart consumers of data, and intelligent business decision makers in various management situations. The course utilizes structured problem-solving approaches that heavily rely on data for defining the problem, uncovering useful relationships between critical variables and outcomes, defining measures for evaluating alternatives, modeling underlying conceptual relationships, constraining resources, and proposing via a rigorous search process of exploration and exploitation "best fitting and robust" solutions for the given environment and its underlying uncertainties. Applications of those analytic tools will be illustrated using examples from various business functional areas, finance, marketing, operations, economics and strategy. Prerequisites: DAT 120 and completion or concurrent enrollment in DAT 121. Credit 3 units.

B59 DAT 301E Data Analytics in Python

This course is an introduction to data science in Python, which assumes no prior programming experience. The course is broken down into two units. In the first unit, students will be introduced to the basics of Python as a programming language. The second unit of the course is devoted to data analytics; students will use Python to explore and visualize real-world data sets from various industries including finance, sports, and technology. Prerequisite: Sophomore Standing Credit 3 units.

B59 DAT 400A Data Management Tools for Business Decisions

This course prepares students for success in many business analyst roles. The tools covered in this course will prepare students well for roles in finance, accounting, quantitative marketing, information systems, operations, talent analytics, and others. As companies collect more data internally and augment this with external data sources, collecting, maintaining, and organizing data is becoming an essential skill for success in many roles. Developing creative reports and dashboards that are updated in real time are demanded in today's data-driven decision-making environment. While there are a plethora of tools available to support business analysts, this course focuses on VBA in Excel and SQL, two critical tools for reporting and dashboards. Students will also be introduced to Tableau, the state-of-the-art visualization software. These tools are introduced within the broader organizational data environment to provide an understanding of the role of the business analyst within the organization. Companies' data environments traditionally include enterprise resource planning (ERP) systems, customer relationship management (CRM) systems, relational databases, external data sources, data warehouses, and data cubes. Understanding the roles of each component of the data environment enables students to utilize each effectively. Prerequisites: CSE 131 and MGT 100. Corequisite: DAT 220. Credit 3 units.

Degree Requirements

The Bachelor of Science in Business Administration degree is awarded to students by recommendation of the faculty.

Standards established by the faculty for recommendation are as follows:

1. Satisfactory completion of requirements regarding required and elective courses, accumulation of a minimum of 120 units of course work, and satisfactory fulfillment of other requirements established in accordance with the rules and regulations of the Olin Business School.
2. Completion of the last 30 units in residence at Washington University for entering first-year students. Transfer students must complete a minimum of 60 units in residence at Washington University.

General Requirements (a minimum of 48 units)

Each student must complete a minimum of 48 units outside of the Olin School to include the following specific requirements:

- A. **College Writing (3 units):** Students must demonstrate proficiency in reading and writing the English language by satisfactorily completing one College Writing Program themed writing course with a grade of C- or better.
- B. **Calculus (3-6 units):** Students must complete Math 131–Math 132 or other calculus courses approved by the Olin Business School.
- C. **Distribution Requirements (18 units):** Students must complete 3 units of physical and life sciences, 3 units of humanities, 6 units of international studies, 3 units of behavioral analysis, and 3 units of ethics and values. Approved course selections are available in the university's course listings.
- D. **Advanced Electives (12 units):** Students must complete at least 12 graded units of advanced course work. Advanced electives are defined as any course numbered 300 or higher that is offered as any day division course. Advanced electives may also satisfy a distribution requirement.

Professional Requirements (a minimum of 60 units)

A. Core Requirements (42 units):

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
ACCT 2620	Principles of Managerial Accounting	3
MEC 290	Microeconomics	3
MEC 292	Global Economy	3
or Econ 1021	Introduction to Macroeconomics	
MGT 100	Individual in a Managerial Environment *	3

MGT 150A	Foundations of Business	2
MGT 201	Management Communication	4
FIN 340	Capital Markets and Financial Management	3
MKT 370	Principles of Marketing	3
OB 360	Organization Behavior Within the Firm	3
OSCM 356	Operations Management	3
DAT 120	Managerial Statistics I	3
DAT 121	Managerial Statistics II	3
DAT 220	Analytics and Modelling for Business Decisions	3
Total Units		42

* Transfer students entering Olin Business School must take MGT 100 or MGT 380 to satisfy this requirement.

B. Professional Electives (a minimum of 18 units)

Professional electives are non-required business courses offered by the Olin Business School that may or may not lead toward a specific business major. Additional information about the specific requirements for each business major is available on our Majors (p. 994) page.

Electives (units will vary)

Students must take enough electives to earn the minimum of 120 units.

Typical Four-Year Curriculum for a BSBA Student

Typically, students must earn 30 units per year to stay on target with a four-year graduation plan.

120 credits minimum

First Year

Fall	Units	Spring	Units
MGT 100	3	MEC 290	3
Math 131 or higher*	3	DAT 120	3
English Composition**	3	Math 132 or elective	3
MGT 150A	2	Electives	6
Electives	3-6		

Sophomore Year

Fall	Units	Spring	Units
DAT 121	3	DAT 220	3
ACCT 2610	3	Core requirement(s)	3-6
MGT 201	4	Electives	6-9
Core requirement(s)	0-3		
Electives	3-6		

Junior Year

Fall	Units	Spring	Units
Core/ Professional requirements	6-12	Core/ Professional requirements	6-12
Electives	3-9	Electives	3-9

Senior Year

Fall	Units	Spring	Units
Professional electives	6	Professional electives	6
Electives	9	Electives	9

* Students may enroll in a higher level of calculus providing their academic preparation suggests a different level of calculus.

** BSBA students are assigned to enroll in their College Writing Program course in either the fall or spring semester of their first year. Some students may start at a different level of English preparation and may take their writing course as late as sophomore year.

Additional Requirements

- Students must complete a minimum of 120 units, including 48 units outside of the Olin School and 60 units from the Olin School. Students who substitute a non-business course for a business requirement will still be required to enroll in another business course, as a minimum of 60 credits must be earned in Olin Business School.
- Students must earn a minimum 2.0 overall grade-point average and 2.0 GPA in all professional course work taken at Olin Business School.
- Students must earn the final 30 units (60 units for an external transfer) toward the degree at Washington University.
- Students must be recommended by the Olin Business faculty for degree confirmation by the Board of Trustees.

Regulations

- A maximum of 15 units of pre-matriculation credit may be counted toward graduation. Pre-matriculation sources include Advanced Placement (AP), International Baccalaureate (IB), British Advanced (A) Levels and college courses taken after the junior year in high school.

- These units will count toward the 120 credits but will not satisfy any distribution, statistics or advanced education requirements. If a student takes a course in residence in which AP credit has already been awarded, the AP credit will be removed from the student's record.
- B. BSBA students may earn a maximum of two majors to include two professional majors or one professional major and one major outside of Olin Business School.
 - C. BSBA students may earn one or two minors, depending on the number of majors they pursue. The options are two majors and one minor or one major and two minors. Most of our minors are offered outside of Olin Business School.
 - D. Distribution requirements and advanced general electives (12 credits) must be taken for a grade. However, if a student completed a distribution/advanced course on a pass/fail basis prior to transferring to Olin Business School, then this course would count toward that requirement.
 - E. All business courses must be taken for a grade, with the exception of MGT 450A.
 - F. BSBA students may enroll in one physical education course per semester.
 - G. BSBA students may enroll in one pass/fail course each semester. These credits will count only as general education electives.
 - H. BSBA students may enroll in one University College course per semester. However, these credits will not count toward the 120 units needed for their BSBA degree. The grade from this course will not be factored into the GPA.
 - I. Olin Business School does not accept any online course work for transfer credit.
 - J. BSBA students may transfer up to 6 credits per summer toward their BSBA degree requirements.
 - K. BSBA students must complete 54 of the 60 professional units in residence. Course work taken as part of an approved Washington University international program will satisfy this residency policy.
 - L. BSBA students must complete all professional courses for each business major in residence. Course work taken as part of an approved Washington University international program will satisfy this residency policy.
 - M. BSBA students may double count only one course in a business major. For example, if a BSBA student is majoring in both marketing and entrepreneurship, they could not count MKT 378 and MKT 465 toward both majors.
 - N. ROTC units numbered 300 or above will count toward the student's 120 units required for graduation. These credits may count toward the advanced non-business requirements providing the course is taken for a grade.

O. Students are obligated to complete the requirements and adhere to the policies in place at the time of matriculation into the BSBA program. However, faculty has and reserves the right to make changes to degree requirements, policies and procedures — including modifying or adding new requirements, policies and procedures — at any time.

Academic Honors & Awards

Scholars in Business Program: The Scholars in Business program allows alumni, corporations and friends of Olin Business School to provide scholarship funds to students of high academic promise who require financial support to attend the university. Students are considered for this award when they apply for financial aid in the fall of each year. Donors and students meet each other at the annual Scholars in Business dinner.

Dean's List: Dean's List honors are awarded to undergraduates who have completed a minimum of 14 graded units and achieved a semester grade-point average of 3.6 or above. No Incomplete or "N" grades may be outstanding as part of the student's semester record.

Beta Gamma Sigma Honor Society: The top 7% of the junior class and the top 10% of the senior class will be considered for membership in Beta Gamma Sigma, provided that the student's cumulative GPA is in the top 7% or top 10% of their respective graduating class. A student's cumulative GPA will include their course work at Washington University as well as any course work taken out of residence. The student must have completed a minimum of 30 units at Washington University to be eligible.

Latin Honors: Graduating seniors in the top 5% of the class, based on overall university academic records, graduate summa cum laude. Seniors in the top 6% to 15% of the class graduate magna cum laude. These designations are recorded on the official university transcripts. All candidates for the BSBA degree in August, December or May will be considered as one group for purposes of final honors. Honors are determined in May for all graduates.

Honors in Management: The Honors in Management (HIM) Seminar is a two-semester sequence course that gives students the opportunity to work with senior-level faculty in a specialized format. In the fall semester, the HIM course will be team taught with various faculty members. For the spring semester, students will form teams to develop substantial research projects under the direction of one of the participating faculty for the remainder of the academic year. HIM students must successfully complete both MGT 490 and MGT 491 in order to receive the Honors in Management designation at graduation.

Honors Thesis: The Olin BSBA Honors Thesis challenges students to move beyond traditional course work and apply critical thinking skills to an academic business thesis. The Honors Thesis is a two-semester sequence in which the student engages in research and analysis during the first semester; with

successful progress, the student writes, presents and defends their research during the subsequent semester. Students must apply and be approved to participate in this experience. All applicants must be senior BSBA degree students in good standing with a cumulative GPA of 3.7 or above.

Academic Regulations

Attendance

Olin Business School allows each instructor of a course to decide how many absences the student may have and still pass the course. The Olin Business School expects faculty to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their instructors the reasons for any absences and to discuss with them the possibility of making up missed assignments.

Enrollment

BSBA students must be enrolled in a minimum of 12 units to a maximum of 21 units each semester. Olin undergraduates will be assessed a full-time tuition charge for their course of study through eight semesters of enrollment.

Units and Grades

A unit is a measure of quantity given for one hour of lecture or recitation course a week for one semester. A grade point is a measure of the quality of work done in the course. The Olin Business School employs the following grading system for evaluating student performance:

Grade	Points Per Unit
A	4.0
A-	3.7
B+	3.3
B	3.0
B-	2.7
C+	2.3
C	2.0
C-	1.7
D+	1.3
D	1.0
D-	0.7
F	0.0
P#	Pass
F#	Failing
I	Course work incomplete
W	Withdrawal

R	Repeat
L	Successful audit
Z	Unsuccessful audit
N	No grade submitted

Grade points per course are calculated by multiplying the number of units of a course by the grade points earned. A student may retake a course if a higher grade is required or desired. The initial grade received in the course remains on the student's record, along with an R to indicate that the course was repeated. Credit is given only once for taking the course, and only the higher grade is used in computing the student's grade-point average.

Auditing a Course

Students may not audit a business course. However, a student may take nonbusiness courses for audit with the approval of the professor. An audited course does not count toward the student's degree requirements. A grade of L indicates the satisfactory completion of an audit; unsatisfactory completion results in a grade of Z. Fees for auditing a course are assessed at the same rate as for all other courses.

Incomplete Grades

A student may be given an I (incomplete) when extenuating circumstances preclude the satisfactory completion of course work during the semester in which a particular course is taken. While an incomplete grade is sometimes appropriate, a student should make every effort to avoid the accumulation of incomplete grades. Incomplete grades are expected to be finished. Failure to finish an incomplete grade by the following semester will result in a failing grade.

Pass/Fail Option

A student may take a maximum of one course per semester on a pass/fail basis. A grade of P# (pass) indicates that credit has been awarded but the work was not subject to finer evaluation. No required or business course work may be taken on a pass/fail basis. This option is provided so that a student may take nonbusiness courses in subject areas with which they may have little familiarity.

Minimum and Maximum Course Loads

Olin Business School students are required to enroll in a minimum of 12 units to a maximum of 21 units each semester at Washington University. A minimum 2.0 GPA in all course work taken at the university and a 2.0 GPA in all professional course work taken at Olin must be achieved to satisfy BSBA graduation requirements.

Repeating a Course

A student may retake a course if a higher grade is required or desired. The initial grade received in the course remains on the student's record. An R will be placed next to the course with the lower grade to indicate that the course was repeated. Credit is given only once for taking the course, and only the higher grade is used in computing the student's GPA.

Academic Probation and Suspension

Approximately three weeks after the end of a semester, the Academic Review Committee reviews the record of each enrolled student. Students must attain and maintain a minimum 2.0 GPA in professional (business) and general courses to be in good academic standing. Failure to achieve minimum standards may result in the student being placed on academic probation or becoming ineligible for future registration in Olin Business School. Failure on the part of a student to meet the conditions of probation during the following semester may result in dismissal from the school.

Another cause for probationary action or dismissal is failure on the part of a student to complete professional requirements within a reasonable time period. Students who fall behind in completing requirements should make an appointment to see their primary adviser to work out a plan for making up the work at the earliest possible time. Registration is restricted to a maximum of 15 credits for students on academic probation.

Leave of Absence Process

If a student is an undergraduate in good standing at the completion of a term, they are eligible to apply to take a leave of absence from the Olin Business School. The student should first contact their academic adviser to discuss the situation. Students must submit a request for a leave of absence to their four-year academic adviser. A student on an approved leave of absence should submit a Reinstatement Form by March 1 for a fall semester return or October 1 for a spring semester return.

A student wishing to take a medical leave of absence (MLOA) should first talk with a representative from Habif Health and Wellness Center (<http://shs.wustl.edu/>). Then, the student should submit the MLOA petition to Habif Health and Wellness Center. A student's request for an MLOA or for re-enrollment after an approved MLOA will be reviewed by Habif Health and Wellness Center once the recommendations are received. The decision of whether or not to grant the request for an MLOA or re-enrollment will be communicated to the student by the BSBA Programs Office. A student considering an MLOA should first contact Habif Health and Wellness Center to initiate this leave.

In either case, the student must complete the Leave of Absence or the Medical Leave of Absence form and submit it to the appropriate office for consideration. Please see the BSBA Student Handbook for any additional information.

A student who wishes to formally withdraw from the university should meet with their business school adviser to file a Withdrawal Petition. In the event that a student wishes to return after formally withdrawing from Olin, that student must re-apply for admission if they wish to return to the university.

Transfer Credit

Students who are enrolled at Olin and wish to receive transfer credit for course work subsequently taken at another institution must receive approval from their adviser prior to the time the course is to be taken. General guidelines are as follows:

- The institution must meet accreditation requirements.
- No course work may be taken at a two-year institution after a student has accumulated 60 credit hours of work.
- Credit will not be given for course work taken at another institution during a student's last 30 credit hours.
- A catalog description for each course must be submitted with the petition for review.
- No credit will be granted for course work taken online through another university.
- A maximum of 6 units may be taken during a summer program from another university.
- 54 of the 60 professional units must be taken in residence.
- All business major course work must be taken in residence. Although major course work can be taken through an approved study abroad program, only one course will be counted for each business major.
- No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Conduct Code or Academic Integrity policy.

The Olin School expects that all business courses will be taken at Washington University. Under certain circumstances, permission may be granted for a student to take a business course from another university with accreditation from the Association to Advance Collegiate Schools of Business (AACSB) International. For consideration to be given, a syllabus showing the text used must be submitted. However, a BSBA student must still complete 54 of their 60 business units in residence. Any course counting toward a business major must also be taken in residence.

No transfer credit (including course work taken through a Washington University-approved study abroad program) will be accepted with a grade of less than C.

University College Courses

BSBA students may enroll in one University College course per semester. However, these units will not count toward the 120 units needed for the BSBA degree nor toward a student's GPA.

Pre-Matriculation Units

Pre-matriculation units are earned before the student's enrollment at Washington University as a first-year student. These units would include Advanced Placement (AP) examinations, International Baccalaureate (IB) programs, British Advanced (A) Levels, and college credit earned after the student's junior year in high school. These units will be noted on the student's transcript. The maximum number of pre-matriculation units awarded is 15. These pre-matriculation credits will transfer as general elective course work and will not satisfy any distribution requirements. All BSBA students and second majors will be required to take DAT 120 Managerial Statistics I, even when AP credit is earned for Math 2200 Elementary Probability and Statistics.

Administration

Mark Taylor (<https://olin.wustl.edu/EN-US/Faculty-Research/Faculty/Pages/FacultyDetail.aspx?username=mark.p.taylor>)
Dean
PhD, Birbeck College, University of London

Sam Chun, PhD
Assistant Dean and Director of Executive Education

Paula A. Crews, MBA
Associate Dean and Director, Marketing and Communications

Brent Jenson, MBA
Senior Associate Dean of Finance

Steven J. Malter, PhD
Senior Associate Dean of Experiential Learning and Strategic Programs

Jessica R. Martin
Senior Associate Dean — Chief of Staff

Paige E. LaRose, JD

Associate Dean and Director of Undergraduate Programs

Glenn MacDonald, PhD

Director of the Center for Research in Economics and Strategy

Joyce Montgomery, MTh

Associate Dean of Administration

Analisa E. Ortiz, MEd

Assistant Director of Undergraduate Advising and Student Affairs

Elizabeth Shabani, MEd

Director of Global Programs

Lanna K. Skadden, MEd

Assistant Dean of Undergraduate Programs and Academic Affairs

Jessie Vosseller, MS

Assistant Director of Undergraduate Advising and Student Affairs

Jennifer Whitten, MS

Associate Dean and Director of Weston Career Center

Majors (directory)

Below is a list of majors offered by the Olin Business School. Visit Olin's website (<https://olin.wustl.edu/EN-US/academic-programs/bs-business-administration/academics/Pages/default.aspx>) to view more information about a specific major:

- Accounting
- Economics and Strategy
- Entrepreneurship
- Finance
- Financial Engineering*
- Health Care Management
- Marketing
- Operations and Supply Chain Management
- Organization and Strategic Management

* The financial engineering major is offered to any undergraduate day division student as a second major option only.

Minors (directory)

Non-BSBA students are eligible to pursue a minor in one of the specific fields of business listed below. Visit the Olin Business School website (<https://olin.wustl.edu/EN-US/academic-programs/bs-business-administration/academics/Pages/default.aspx>) for more information about a specific minor:

- Accounting
- Business of Analytics*
- Business of the Arts*
- Business of Entertainment*
- Business of Social Impact*
- Business of Sports*
- Entrepreneurship
- Finance
- General Business
- Health Care Management
- International Business*
- Managerial Economics
- Marketing
- Operations and Supply Chain Management
- Organization and Strategic Management
- Strategy

* BSBA students can earn the business of analytics, business of arts, business of entertainment, business of social impact, business of sports, or the international business minor as part of their undergraduate degree.

Engineering

Mission Statement

The mission of the McKelvey School of Engineering at Washington University in St. Louis is to promote independent inquiry in engineering research and education with an emphasis on scientific excellence, innovation and collaboration without boundaries.

WashU Engineers produce new knowledge that changes the world, and our faculty are educating students to explore and create in a world we cannot yet imagine. Through research and education, we are making a positive impact on the local community, the country and the world.

Undergraduate Degree Programs

The McKelvey School of Engineering offers four-year, full-time programs of instruction leading to bachelor of science degrees in the following fields: biomedical engineering, chemical engineering, electrical engineering, environmental engineering, mechanical engineering, and systems science and engineering.

In addition, the Department of Computer Science and Engineering offers bachelor of science degrees in computer engineering, computer science, computer science + math, computer science + economics, and business and computer science. The Bachelor of Science in Business and Computer Science (p. 1068) is an integrated joint-degree program offered through the Olin Business School and the McKelvey School of Engineering. Students in this program will be equipped with the fundamental knowledge and perspectives of computer science and business and will have unique opportunities to converge these two disciplines.

If a student is interested in an academic program broadly based on the engineering sciences, the McKelvey School of Engineering offers the Bachelor of Science (BS) Major in Applied Science degree with several options, including chemical engineering, electrical engineering, mechanical engineering, and systems science & engineering. These degree options provide more flexibility for students who do not intend to become licensed engineers and want to select their course work according to their personal educational objectives. For example, some students use this flexibility to gain technical background and training while pursuing or preparing for professional training in medicine, business or law. Although the flexibility exists to do so, it is not necessary to combine an applied science degree program with another major or degree. Students may also use this added flexibility to achieve a well-rounded undergraduate education by selecting courses from across the university while pursuing a degree in the McKelvey School of Engineering.

BS in Engineering (Individually Designed Major)

The requirements to be admitted to an individually designed major (IDM) are more stringent than those for our other engineering degree programs. The IDM will not be available to students when they first enter Washington University, so it will not be listed on the admissions application as an option.

Students applying for an IDM should meet the following requirements:

- Have already completed at least one semester at Washington University
- Apply before the beginning of the junior year
- Have at least a 3.5 cumulative grade-point average at Washington University and be maintaining good standing in the McKelvey School of Engineering
- Find an Engineering faculty member who will agree to serve as their IDM adviser (The student and adviser will design a plan of study that lists the courses that must be successfully completed to earn the IDM. That plan must include at least 42 engineering units of credit.)
- Satisfy all other general engineering degree requirements
- Present (with the help of their adviser) the plan to a standing engineering committee (normally the Engineering Undergraduate Studies Committee), which will then assess the proposed plan and approve or deny the request

Combined Majors and/or Multiple Degrees

Multiple Majors in Engineering

All undergraduate divisions at Washington University allow students to pursue majors and degrees in more than one division. The following options are available:

Second Degrees

A student in any undergraduate division of the university may be allowed by another division to pursue a second bachelor's degree. For this, the student must satisfactorily complete all of the degree requirements for *both* degrees in order to earn two diplomas. These requirements may include a residency requirement. For engineering majors, this residency requirement is described elsewhere on this page. In addition, the College of Arts & Sciences requires any student earning an AB degree and a bachelor's degree from another division to earn a minimum of 150 total units. If the additional residency and units requirement for a second degree are incompatible with a student's plan, then the student should consider a second major as a more convenient and equally viable alternative.

Second Majors

A student pursuing a bachelor's degree in engineering may also pursue second majors offered by other undergraduate divisions. There are five second majors offered by the McKelvey School of Engineering: computer science, computer science + mathematics, electrical engineering science, financial engineering and systems science. In addition, there are second majors offered by the College of Arts & Sciences and Olin Business School. Students may declare a second major online via WebSTAC (<https://acadinfo.wustl.edu/WebSTAC.asp>) up until the time they have filed an Intent to Graduate. Upon completion of the requirements, the student's transcript will show an engineering degree and all earned second majors. Only one diploma is granted; no reference to the second major is noted on the diploma.

Minors

Undergraduate students are allowed to pursue minors offered by any undergraduate division of the university. A minor usually requires five to six courses. The minor program's home division sets the requirements for admission to and completion of the minor program. Students may declare a minor online via WebSTAC (<https://acadinfo.wustl.edu/WebSTAC.asp>) up until the time they have filed an Intent to Graduate. An engineering student who completes all of the requirements will have the award of the minor noted on the official transcript; no reference to the minor is noted on the diploma.

Residency Rule for Engineering Minors: No more than 6 units of credit transferred from another institution (outside of Washington University) can be used to meet the requirements of any minor offered by the McKelvey School of Engineering. The remaining units (up to the amount required for the minor) must be applicable units from Washington University. The review committee that oversees a minor has the authority to establish a more stringent residency rule.

Bachelor's/Master's Program in Engineering

This program provides students who enter Washington University as undergraduates in day-school programs the opportunity to earn McKelvey School of Engineering master's degrees; this includes Henry Edwin Sever Institute master's degrees. Interested students are encouraged to discuss the program with faculty advisers by the end of their junior year in order to best develop a plan for their master's study.

Students must meet the admission requirements and application deadlines stipulated by McKelvey School of Engineering and the department of interest. A minimum 3.0 GPA is required for admission, but some programs may have higher GPA requirements. Each McKelvey School of Engineering department

has the option to participate as well as to decide which master's programs to offer students. Students must be admitted to a degree program in Engineering at least one semester prior to their anticipated graduation semester.

Scholarship support may be available to students during their master's year of study. Full-time student status is typically required to be eligible for scholarship support. For more information regarding scholarships and financial aid during the final master's year of study, please visit the Bachelor's/Master's Program (<https://engineering.wustl.edu/prospective-students/graduate-admissions/Pages/bs-ms.aspx>) website.

Engineering Undergraduates

The Bachelor's/Master's Program for current McKelvey School of Engineering undergraduate students normally takes one additional year to complete and requires participants to complete at least 150 total units. Up to 6 units of the 150 total units can be used to satisfy requirements for both degrees; however, at least 150 units must still be completed, and all stipulated degree requirements for both programs must be satisfied.

To satisfy residency for both degrees, all participants must complete a minimum of 84 applicable Washington University units, which includes a combination of at least 60 in-residence units counted for the engineering undergraduate degree and at least 30 in-residence units counted for the engineering master's degree, with a total of 6 units from undergraduate course work double-counting toward the requirements for both degrees.

The cumulative GPA used to determine undergraduate final Latin honors will include all undergraduate and graduate course work completed up until the time Latin honors are officially determined. This means that master's courses will also be included in the calculations if a student defers earning the BS degree until the master's degree is also earned.

Non-Engineering Undergraduates

Students from other undergraduate divisions at Washington University are also eligible to participate in the Bachelor's/Master's Program. These students must complete their undergraduate degrees before they are designated as being primary McKelvey School of Engineering master's students. Admitted students may take longer than one year to complete the requirements for a master's degree. Part-time graduate enrollment might be possible with prior permission, but students will be required to maintain satisfactory academic progress (SAP) standards connected to financial aid in order to maintain scholarship and financial aid support. Scholarship support can be applied to "E" courses taken at Washington University during the summer if those courses count toward fulfilling the requirements of the master's degree. Scholarship support used during a summer session will count as one of the total semesters of scholarship support available to the student.

A reasonable number of required prerequisite courses as defined by the department may be taken while the student is admitted to the master's program, but these courses will not be counted toward the McKelvey School of Engineering master's degree if they are courses not normally counted toward its requirements. Prerequisite courses will count in the student's GPA when determining probation/suspension eligibility and SAP standards. Poor performance (i.e., earning less than B- grades) in these courses can be grounds for removal from the program by the department.

A minimum of 24 units of residency counted for the Engineering master's degree is required for all students. When approved by the department, up to 6 units can be used to satisfy requirements for both the non-Engineering undergraduate degree and the Engineering master's degree.

Other Bachelor's/Master's Programs

These programs allow engineering undergraduates to earn master's degrees outside of the McKelvey School of Engineering. Students in these 3/2 programs will pay the standard full-time undergraduate tuition rate for the fourth year, except for those in the MBA program, which charges a premium above the undergraduate tuition rate. Students will receive financial aid for the fourth year based on their eligibility for undergraduate financial aid awards, including Pell grants.

There is no commitment for undergraduate financial aid beyond the fourth year of study; students in 3/2 programs may apply to the professional programs for graduate student financial aid for study in the professional program beyond the fourth year.

This policy applies to the current 3/2 programs involving bachelor's/master's programs in engineering, social work and business and to any future Washington University 3/2 programs.

BS/MBA Program

The McKelvey School of Engineering and the Olin Business School offer a five-year program leading to the Bachelor of Science engineering degree and the Master of Business Administration degree. The purpose of the program is to provide students with the opportunity to develop an educational background particularly in demand by industry.

Students should apply to this joint program by April 1 of their junior year. They must complete the application for admission to the Olin Business School, which is available through the business school. There is no GPA requirement, but students must take the Graduate Management Admission Test (GMAT). Registration materials for the test may be obtained through the business school. Applicants are judged on undergraduate performance, GMAT scores, summer and/or co-op work experience, recommendations and personal interviews.

The BS/MBA student's fourth-year curriculum is composed largely of business courses. The fifth-year curriculum is divided almost evenly between business and engineering courses. Because the merging of the two curricula results in very tight scheduling, it is possible that course overloads may be necessary to complete both programs in 10 semesters. Students are strongly urged to meet with their advisers to plan the remaining years of the program.

Dual Degree Program

The McKelvey School of Engineering offers a dual degree program with numerous affiliated liberal arts colleges and universities (<http://engineering.wustl.edu/prospective-students/dual-degree/Pages/affiliated-schools.aspx>). Qualified students earn both a non-engineering baccalaureate from the first school and a Washington University bachelor's degree in engineering by attending the affiliated institution for three or four years, then completing the program with two years of concentrated engineering study at Washington University.

If students are enrolled at an affiliated institution, they may apply for admission to dual degree study under this program, provided they are recommended by an official representative of their college or university and will receive or have received the non-engineering baccalaureate. For more information, please visit the Dual Degree Program website (<http://engineering.wustl.edu/DualDegreeProgram.aspx>).

Engineering Undergraduate Degree (Undergraduate Two-Year Option)

Students enter as undergraduate students and complete a liberal arts degree from their current school and an engineering undergraduate degree from Washington University. Participants are undergraduate students who commonly follow a 3/2 or a 4/2 schedule, entering Washington University after their junior or senior year. Please note that all students earning an undergraduate engineering degree are required to complete a minimum of 60 course units at Washington University.

Engineering Undergraduate and Graduate Degrees (Graduate Three-Year Option)

Students enter as graduate students and complete both a liberal arts degree from their current school and then an engineering undergraduate degree and engineering master's degree in three years at Washington University. The engineering master's degree and the undergraduate degree can be in different areas. Participants commonly follow a 3/3 or 4/3 schedule, entering Washington University after their junior or senior year. Please note that all students earning both an undergraduate and graduate degree are required to complete a minimum of 84 course units at Washington University. The GRE is not required for admission.

Study Abroad and International Experiences

Students in the McKelvey School of Engineering can study abroad in a number of countries and participate in several global experiences to help broaden their educational experience. These opportunities enable students to become global citizens who are better able to address current issues.

For information about these programs, please visit the McKelvey School of Engineering website (<https://engineering.wustl.edu/current-students/outside-classroom/Pages/study-abroad.aspx>).

Cooperative Education and Internships

The Engineering Cooperative (Co-op) Program is coordinated through the Career Center. It offers students a unique opportunity to gain in-depth engineering experience prior to graduation. Co-op students learn about a field of engineering by working alongside practicing engineers on extensive projects of the sort that are typically undertaken by entry-level engineers. This type of experience gives students a chance to preview a career path and employment options, to gain career clarification, to improve communication and team project skills, and to enhance their marketability with future employers. The cooperative education experience is typically completed over the course of a semester and a summer term, but it may be extended for a maximum of one year with faculty adviser approval.

In addition, the Career Center provides resources for students searching for summer internships and/or part-time fall or spring internships with local companies while enrolled in courses.

For more information about co-ops and internships, please visit the Career Center website (<http://careercenter.wustl.edu/>) or call 314-935-5930.

Pre-Medical Education

The McKelvey School of Engineering makes available, as options within its undergraduate degree programs, curricula that prepare students for entry into medical, dental or veterinary school while they pursue the undergraduate degree.

These curricula were formulated in recognition of the increasing importance in medicine of the methods and subject matter of the basic engineering sciences. The student who successfully completes one of the curricula will be well prepared for the study of medicine and will have, in addition, a solid background in engineering. Moreover, the student who decides not to go on to medical school will have an exceptionally wide selection of options, including not only those commonly open to the graduate in engineering but also those usually undertaken

after graduate study in the life sciences. In accordance with the recommendations of the school's Pre-Medicine Committee, all curricula include — in addition to the normal degree requirements — the following courses:

- **Biology:** Biol 2960, Biol 2970
- **Biochemistry:** Biol 451
- **General Chemistry:** two semesters with lab
- **Organic Chemistry:** two semesters with lab
- **General Physics:** two semesters with lab
- **Psychology:** Psych 100B
- **Social Sciences:** one course related to health care access and disparities

Many medical schools have other assorted prerequisites, which can be found in the AMCAS Instruction Manual. Students may download the manual from the Association of American Medical Colleges (AAMC) website (<http://www.aamc.org/>).

If students are interested in attending medical or dental school, they must consult and register with the Engineering Pre-Medicine Adviser before the end of their sophomore year. Engineering students should contact the pre-medical adviser in Engineering Undergraduate Student Services (<https://engineering.wustl.edu/current-students/student-services/Pages/premedicine.aspx>), Lopata Hall, Room 303.

There is extensive detailed information concerning the Medical College Admission Test, the choice of advanced biology or chemistry courses, and the choice of medical school that should be discussed prior to the beginning of the junior year. Students requesting a cover letter from the Pre-Medicine Committee must complete the Pre-Health Application Institutional Review (PIR) by April of the year in which they apply.

Engineering Summer School

The McKelvey School of Engineering offers a variety of engineering courses each summer. Class times are varied to accommodate both traditional daytime students and those with full- or part-time employment. The engineering summer school calendar comprises one full eight-week evening session as well as several accelerated sessions of shorter duration.

If students are interested in enrolling in an engineering summer course, they can obtain further information in Lopata Hall, Room 303, or by phone at 314-935-6100.

Student Services

Engineering Undergraduate Student Services

Engineering Undergraduate Student Services, which is located in Lopata Hall, Room 303, has three main areas: Admissions, Advising Support, and Registrar. Our admissions officers work closely with the university Admissions Office to provide current and useful information to students and parents who are learning

about our university, our community, and the opportunities available in the McKelvey School of Engineering. The advising staff has a comprehensive knowledge of all campus resources and can help with such items as tutoring, international studies, assistance with the registration process, and general advising. The registrar handles class scheduling, transfer and AP credit, course registration, graduation eligibility, and other student-records-related processes. Engineering Undergraduate Student Services (<https://engineering.wustl.edu/current-students/student-services/Pages/default.aspx>) serves all students, faculty and staff. For an appointment, call 314-935-6100.

Engineering Communication Center

The Engineering Communication Center offers all engineering students, faculty and postdocs free help with their engineering communication needs. The faculty who staff the center work with individuals to define audiences and purposes, develop and organize ideas, create effective graphics and page design, and sharpen self-editing skills. Help is offered for résumés and employment correspondence, proposals, formal reports, lab reports, graduate program application statements, and presentations. For an appointment, call 314-935-4902 or email the Engineering Communication Center (ecc@seas.wustl.edu).

The Career Center

The Career Center helps engineering students prepare for a lifetime of career management by offering innovative approaches to help prepare them for a successful co-op experience, internship and job search. The Career Center offers a variety of services and resources for engineering undergraduate and graduate students.

Whether students are looking for a summer internship, a co-op experience, or a full-time job, the center is here to help. The Career Center offers a breadth of resources, including CareerLink: an online job, co-op and internship database; the Engineering Mentoring Program; ENGroups: Engineering Careers Interest Groups; special events; skill-building workshops; career fairs and on-campus interviews; and résumé referrals for job opportunities.

The Career Center offers one-on-one career guidance to students at any stage of their career-planning process. Students are encouraged to meet with a career adviser early in their academic career and at least once each year to build a relationship. To schedule an advising appointment, please call 314-935-5930, email the Career Center (careers@wustl.edu), or visit the Career Center website (<http://careercenter.wustl.edu/>).

Biomedical Engineering

About Biomedical Engineering

Biomedical engineering is an interdisciplinary field in which the concepts, methods and techniques of engineering are applied to solving problems in biology and medicine. It applies quantitative, analytical and integrative methods from the molecular level to that of the whole organism to further our understanding of basic biological processes and to develop innovative approaches for the prevention, diagnosis and treatment of disease.

A student majoring in biomedical engineering will have the opportunity to participate in the world-class research activities of engineering and medical faculty in biomaterials, imaging, cardiovascular engineering, cell and tissue engineering, molecular cellular and systems engineering, and neural engineering. All students in biomedical engineering are encouraged to join and be active in the Biomedical Engineering Society (<https://www.bmes.org/>).

Mission Statement

Our departmental mission is to serve society as a center for learning and knowledge creation in engineering and science for the purpose of advancing biology and medicine.

Our overall educational objective is to prepare those receiving a bachelor's degree in biomedical engineering for a variety of career paths. To that end, our undergraduate curriculum is designed to provide technical proficiency as well as communication and other professional skills so that our graduates will be able to do the following:

- Pursue careers in the biomedical engineering industry or related fields
- Undertake advanced study (e.g., MS, PhD) in biomedical engineering or a related field in preparation for careers utilizing this further training
- Complete professional degrees (e.g., in medicine, dentistry, law or business) in preparation for careers utilizing those degrees

Academic Programs

The Bachelor of Science in Biomedical Engineering (BS–BME) is designed to prepare graduates for the practice of engineering at a professional level. It is accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>).

The curriculum is structured around a basic core of 80 credits. In addition, a complementary set of courses totaling at least 40 credits completes the degree requirements.

To satisfy ABET (<http://www.abet.org>) requirements, all professional engineering curricula at the baccalaureate level must include the equivalent of one and one-half years of engineering topics, including engineering sciences and engineering design appropriate to biomedical engineering. The BS–BME degree at Washington University requires 47 credits of engineering topics. The basic core curriculum includes 32 engineering topics credits. Therefore, students pursuing a BS–BME degree will need 15 additional engineering topics credits beyond the basic core curriculum. They also may receive up to 6 credits of academic credit for a research or design project by registering for BME 400, BME 400A, BME 400B or BME 400C Independent Study. In addition, their course program must include sufficient laboratory experience to ensure competence in experimental design, data collection and data analysis. For more information regarding engineering topics credit requirements, please refer to the Undergraduate Curriculum (<http://bme.wustl.edu/undergraduate/pages/undergraduate-curriculum.aspx>) webpage.

Bachelor's/Master's (BS/MS) Program in Engineering

The BS/MS program allows current BME undergraduate students to earn a master's degree with only one additional year of study. Interested engineering students should discuss the program with their BME academic and Engineering Undergraduate Student Services advisers by the end of their junior year in order to best develop a plan for their senior year leading into their master's year. With adviser and departmental approval, up to 6 graduate-level credits can be shared between the BS and MS degrees; however, the combined program still requires students to complete a minimum of 150 units in total.

Double Majors

An option available to students majoring in biomedical engineering is the double major, which leads to a second professional BS degree in one of the other engineering disciplines in four years. A BME degree in combination with a professional degree in one of the traditional engineering disciplines can be expected to enhance employment options in industry. Depending upon the second major chosen, total unit requirements may range from 140 to 148 (or less if the student enters with advanced placement credits). Hence, some summer work may be necessary in order to complete a double

major within four academic years. To determine the specific requirements to be satisfied for both degrees, students are urged to consult with an adviser in the second department as early as possible.

Premedical Preparation

Training in BME is also excellent preparation for various professional schools, particularly medical schools. Many students complete their premedical requirements while obtaining their BME degrees. Premedical preparation is not a major; rather, it allows students to fulfill the requirements needed for entry to medical school. Further information can be obtained by visiting the Premedicine (<https://engineering.wustl.edu/current-students/student-services/Pages/premedicine.aspx>) webpage and by contacting the McKelvey School of Engineering's Health Professions Adviser, Ron Laue, at ron.laue@wustl.edu.

Cooperative Experience

Cooperative experience is available to upper-level students at numerous life science/technology companies both in the St. Louis area and nationwide. This experience is particularly valuable for students who wish to enter industry. However, since most companies ask that students spend the equivalent of one semester and a summer participating in these experiences, it may be difficult to complete the degree requirements in eight semesters, unless students enter with sufficient advanced placement credits and/or take summer courses.

Please visit our website for the most current and up-to-date information.

Majors

The Major in Biomedical Engineering

The BS in Biomedical Engineering requires completion of the courses in the Core Curriculum as well as five upper-level Tier courses beyond the Core, as described below. Students must meet all McKelvey School of Engineering and Washington University requirements, including the English proficiency requirement (please refer to the Engineering Degree Requirements (p. 1134) page). They must also satisfy ABET requirements for a professional degree, which require the accrual of 47 engineering topics units over their course work. A list of Topics Units - Engineering Courses (<http://engineering.wustl.edu/current-students/student-services/Pages/default.aspx>) is available on the Engineering Student Services website.

The Basic Core

The Biomedical Engineering Core Curriculum consists of 80 credits, outlined below.

Courses	Units
Physical Sciences	
General Chemistry (Chem 111A, Chem 112A)	6
General Chemistry Laboratory I, II (Chem 151, Chem 152)	4
General Physics (Physics 191, 191L, Physics 192, 192L)	8
	18
Biological Science	
Principles of Biology I (Biol 2960)	4
Physiological Control Systems (Biol 3058)	2
	6
Mathematics	
Calculus II & III (Math 132, Math 233)	6
Differential Equations (Math 217)	3

Engineering Mathematics A & B (ESE 318, ESE 319)	6
Probability and Statistics for Engineering (ESE 326)	3
18	
Engineering Science	
Computer Science (CSE 131)	3
Introduction to Electrical and Electronic Circuits (ESE 230)	4
	7
Biomedical Engineering	
Introduction to Biomedical Engineering (BME 140)	3
Biomechanics (BME 240) and Biomechanics Lab (BME 240L)	4
Quantitative Physiology I, II (BME 301A, BME 301B)	8
Bioengineering Thermodynamics (BME 320B)	3
Transport Phenomena in BME (BME 366)	3
Senior Design A, B (BME 401A, BME 401B)	4
	25
Other	
Engineering Practice and Professional Values (Engr 4501, Engr 4502 and Engr 4503)	3
Technical Writing (Engr 310)	3
	6
Total Basic Core	80

Students must complete **five upper-level Tier engineering courses (15 units), five humanities and social sciences courses (15 units), and three general electives courses (minimum 10 units)** beyond the Core Curriculum to complete the major and to prepare for particular fields of employment or education beyond the baccalaureate degree. At least two of the five Tier electives need to be drawn from the Tier I course list below; the remaining three can be chosen from Tier I or Tier II. Students must complete a minimum of **120 units** to meet the degree requirements.

Tier I

Code	Title	Units
BME 329	Biothermodynamics in Practice	3
BME 459	Intermediate Biomechanics	3
BME 464	Orthopaedic Biomechanics — Cartilage/Tendon *	3
BME 465	Biosolid Mechanics *	3
BME 471	Bioelectric Phenomena	3
BME 4902	Cellular Neurophysiology	3
BME 4904	Interfaces and Attachments in Natural and Engineered Structures	3
BME 494	Ultrasound Imaging	3

BME 523	Biomaterials Science	3
BME 5565	Mechanobiology of Cells and Matrices	3
BME 572	Biological Neural Computation	3
BME 575	Molecular Basis of Bioelectrical Excitation	3
BME 5820	Fundamentals and Applications of Modern Optical Imaging	3
BME 589	Biological Imaging Technology	3
BME 5902	Cellular Neurophysiology	3

* These courses are offered every other year or less.
The most up-to-date Tier lists (<https://bme.wustl.edu/undergraduate/pages/undergraduate-curriculum.aspx>) can be found on the BME website.

Tier II

All upper-level (300-500) engineering and physics courses that carry 3 engineering topics units (with the exception of required courses such as BME 301A, BME 301B, BME 320B, and so on) count as Tier II electives.

Minors

A number of undergraduate engineering students pursue a minor in engineering or in another discipline, such as business. For biomedical engineering (BME) majors, there are four engineering minors that are easily obtainable within the typical four-year BME curriculum. These recommended minors require four or fewer additional courses, most of which count toward the electives within the BME major.

Recommended Engineering Minors for Biomedical Engineering Majors

- Bioinformatics:* Bioinformatics is a joint program of the Department of Computer Science & Engineering in the McKelvey School of Engineering and the Department of Biology in the College of Arts & Sciences. Mindful of the emerging opportunities at the interface of biology and computer science, the departments of Biology and of Computer Science & Engineering are sponsoring a bioinformatics minor that will serve students from both departments as well as other students from the natural sciences and engineering with an interest in this field.
- Computer Science:* Because computing drives innovation in nearly all industries, the Department of Computer Science & Engineering offers a minor in computer science to provide a basic foundation in software and computer science.
- Electrical Engineering:* This program covers classes in several fields of science and engineering by encompassing electronics, solid-state devices, applied electromagnetics, radiofrequency and microwave technology, fiber-optic communication, applied optics, nanophotonics, sensors, and medical and biological imaging technology.

- Mechanical Engineering:* The minor in mechanical engineering complements studies in a field related to mechanical engineering, such as biomedical engineering, electrical engineering, physics, chemistry or architecture. The minor is intended to provide students with a credential that could enhance their opportunities for employment or graduate study.

McKelvey School of Engineering offers additional minors; however, they typically require 15 units or more of course work outside the standard BME curriculum. Students who enter with significant transfer credit and/or advanced placement credit may be able to complete these minors in the standard four years. Otherwise, students will typically require a summer semester or two to complete these minors.

Engineering Minors Requiring Advanced Placement or Summer Effort for Biomedical Engineering Majors

- Aerospace Engineering (p. 1130)
- Energy Engineering (p. 1113)
- Environmental Engineering Science (p. 1112)
- Mechatronics (p. 1132)
- Nanoscale Science & Engineering (p. 1114)
- Robotics (p. 1133)
- Systems Science & Engineering (p. 1098)

Courses

Visit online course listings to view semester offerings for E62 BME (<https://courses.wustl.edu/CourseInfo.aspx?sch=E&dept=E62&crslvl=1:5>).

E62 BME 140 Introduction to Biomedical Engineering

An introduction to the vast and diverse field of biomedical engineering (BME), this very challenging course has two main purposes. One is to teach students — via lectures, reading assignments, homework and exams — to think on their own, to solve problems, and to know how engineering principles are applied to the areas of bioelectricity, biomechanics, biomolecules, biotechnology and bioimaging. The second is to introduce students — via guest lectures by School of Medicine and engineering faculty — to some of the fascinating and challenging ongoing research in these areas. The course is challenging because students at this early stage, by and large, lack the knowledge base to understand either the engineering/biological aspects of the topical areas or the research being presented. Nevertheless, because future success depends on such, emphasis throughout is placed on developing self-learning as well as quantitative and analytical problem-solving skills, but at an appropriate level. By the end of the course, it is hoped that students will have begun to acquire the skills and approaches necessary to succeed in the engineering curriculum as well as a much more in-depth and informed perspective of BME. Corequisites: Phys 197, Chem 111A, and college-level calculus. Credit 3 units. EN: TU

E62 BME 240 Biomechanics

Principles of static equilibrium and solid mechanics applied to the human anatomy and a variety of biological problems. Statics of rigid bodies with applications to the musculoskeletal system. Mechanics of deformable media (stress, strain; stretching, torsion, and bending) with introduction to nonlinear behavior, viscoelasticity, and growth in living tissue. Applications to cells, bone, muscle, arteries, the heart, and the cochlea. Prerequisite: Phys 197.

Credit 3 units. EN: TU

E62 BME 240L Biomechanics Laboratory

This course will consist of hands-on laboratory experiments in topics relevant to bioengineering mechanics such as statics of rigid bodies, viscoelasticity, and stress/strain analysis of biological materials. A focus of the course will be extending fundamental mechanical principles to biological applications through experimentation. The course is designed to follow and enhance the material covered in BME 240. Additionally, students will have the opportunity to design their own experiments, explore topics of special interest, and present their findings. Prerequisites: concurrent or completed BME 240.

Credit 1 unit. EN: TU

E62 BME 301A Quantitative Physiology I

A course (lectures, recitation and supervised laboratory sections) designed to elaborate the physiological background necessary for advanced work in biomedical engineering. A quantitative model-oriented approach to physiological systems is stressed. Topics include bioinstrumentation, eye movement, muscle mechanics, action potentials, sensory systems, neuroprosthetics. Prerequisites: BME 140, CSE 131, ESE 230, Biol 3058 (previously Biol 3050 or 3059), ESE 319, or permission of instructor.

Credit 4 units. EN: TU

E62 BME 301B Quantitative Physiology II

A course (lecture and supervised laboratory sessions) designed to elaborate the physiological background necessary for advanced work in biomedical engineering. A quantitative model-oriented approach to physiological systems is stressed. Topics include electrocardiography; heart contractility and molecular bases; cell signaling, pulse wave propagation in arteries; pulmonary function; renal function; imaging, and systems biology. Immune system; drug delivery. Prerequisites: BME 140, CSE 131, ESE 230, ESE 319, Biol 3058, or permission of instructor.

Credit 4 units. EN: TU

E62 BME 320B Bioengineering Thermodynamics

This course covers the foundations of thermodynamics with strong emphasis on concepts and the translation of concepts. Topics to be covered include the first and second laws of thermodynamics, probabilistic descriptions of entropy, consequences of the first and second laws in ideal and non-ideal single- and multi-component systems, free energies as descriptors of equilibria in laboratory and biological systems, chemical equilibria, phase equilibria, treatment of aqueous solvents and mixtures, colligative properties, thermodynamics of protein folding, and protein binding equilibria. The material, the lectures, and the homework emphasize learning that enables the translation of concepts into mathematical analysis. A strong background in differential calculus of multiple variables and differential equations (Math 217) is required. Emphasis is placed

on regular homework and working in collaborative groups. The main textbook for the course will be "Molecular Driving Forces: Statistical Thermodynamics in Chemistry and Biology," 2nd edition, by Ken A. Dill and Sarina Bromberg and published by Garland Science. The lectures and course notes will also draw on other sources, including the classical book by Herbert Callen. A weekly recitation section, BME 320A, is also offered. Students are strongly urged to attend lectures and the recitation section. Credit 3 units. EN: TU

E62 BME 329 Biothermodynamics in Practice

This course will include hands-on, laboratory experiments in topics relevant to bioengineering thermodynamics, such as heat transfer, relationships involving temperature and pressure, equilibria, mixing, and solution chemistry. A focus of the course will be extending fundamental scientific principles to biological applications. Students will have the opportunity to design their own experiments, explore topics of special interest, and present their findings. Prerequisites: Chem 111A and 151; Physics 117A, 118A or 197, 198.

Credit 3 units. EN: TU

E62 BME 366 Transport Phenomena in Biomedical Engineering

Many processes of importance in biology and medicine involve the transfer of mass, heat or momentum. Through the use of the differential control volume approach, the fundamental transport equations will be derived. Systematic derivation of differential equations appropriate for different types of transport problems will be explored. Solutions of the resulting differential equations for simple chemical/biological systems will then be sought. Macroscopic descriptions of fluid flow will be applied to the design of blood pumps for the heart. Unsteady mass transfer with diffusion, advection and chemical reactions will also be applied to the transport of proteins, metabolites and therapeutics throughout the body. Prerequisites: BME 240, Math 217, ESE 318 and ESE 319, BME 320B.

Credit 3 units. EN: TU

E62 BME 400 Independent Study

Independent investigation on topic of special interest. This course has no engineering topics units. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee.

Credit variable, maximum 6 units.

E62 BME 400A Independent Study

Independent investigation on a topic of special interest. This course has 1 unit of engineering topics. The student and mentor must justify the number of engineering topic units being requested, and the BME Undergraduate Studies Committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee.

Credit 1 unit. EN: TU

E62 BME 400B Independent Study

Independent investigation on a topic of special interest. This course has 2 units of engineering topics. The student and mentor must justify the number of engineering topic units being requested, and the BME Undergraduate Studies Committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee.

Credit 2 units. EN: TU

E62 BME 400C Independent Study

Independent investigation on a topic of special interest. This course has 3 units of engineering topics. The student and mentor must justify the number of engineering topic units being requested, and the BME Undergraduate Studies Committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee.

Credit 3 units. EN: BME T, TU

E62 BME 401A Senior Capstone Design A

A hands-on design experience to provide students practical application of engineering. Working in small teams, students will either meet with possible clients to discern a biomedical problem, or bring an original idea of their own to the class. The students will work on an original design or redesign of a component or system of biomedical engineering significance. The students will be taught how to craft a project scope with the required design specifications. The design experience will require application of knowledge and skills acquired in earlier course work; it will incorporate engineering standards and realistic constraints that include most of the following considerations: economic, environmental, sustainability, manufacturability, ethical, health and safety, FDA, social and political. Students will prepare written reports and present their designs orally to a panel of faculty members and industrial representatives. The final product of BME 401A will be a descriptive paper design of their solution. Prerequisite: BME senior standing.

Credit 2 units. EN: TU

E62 BME 401B Senior Capstone Design B

A hands-on design experience to provide students practical application of engineering. Working in small teams, students will work toward building a prototype of the student design which was a product of 401A. The students will be expected to design a verification and validation plan to test the prototype built. The design experience will require application of knowledge and skills acquired in earlier course work and lab experiences; it will incorporate engineering standards and realistic constraints that include most of the following considerations: economic, environmental, sustainability, manufacturability, ethical, health and safety, FDA, social and political. Students will prepare written reports and present their designs orally to a panel of faculty members and industrial representatives. The final product of BME 401B will be a prototype, and a descriptive paper describing their solution documenting how the prototype satisfies the design specifications, with the validation and verification results. Prerequisites: BME 401A.

Credit 2 units. EN: TU

E62 BME 410 International Community Service Learning

Project

This pass/fail course is a two-week summer international experience in conjunction with the faculty and students of our partner, The Biomedical Engineering Institute of Hong Kong Polytechnic University. Students first attend an orientation at HKPU to learn about functional electrical stimulation (FES) and treating cerebral palsy with orthotic devices. The entire group then goes to a clinic in mainland China where they put into practice what they have learned, the former in patients who have suffered strokes and the latter in children with cerebral palsy — working in teams to diagnose, fit and fabricate orthotic devices. A written summary of the experience is the final product. Academic credits are awarded at the end of the fall semester following the summer experience. Prerequisites: completion of junior year, BME 301A. Enrollment: Students must apply by Feb. 1 each spring. Enrollment is restricted to 10 of the applicants.

Credit 2 units.

E62 BME 432 Physics of Biopolymers and Bioinspired Polymers

This course will cover physics concepts from the statistical physics of polymers and polymer solutions to describe proteins, nucleic acids, and bioinspired polymers. Topics include statistical physics concepts, theoretical and numerical descriptions of polymers, applying these descriptions to biopolymers, the thermodynamics of polymer solutions, concepts of polymer dynamics, descriptions of polymeric materials and advanced topics in phase transitions and molecular design. The material will be fast-paced and involve rigorous mathematical descriptions, experimental design, interpretations of experimental data, and some numerical simulations. The course will be heavy on individual homework and team-based project work. Direct connections between concepts and modern topics in biology and biomaterials will be emphasized. Prerequisites: BME 320B or equivalent and a first course in transport phenomena.

Credit 3 units. EN: TU

E62 BME 442 Biomacromolecules Design and Engineering

Biological macromolecules (i.e., carbohydrates, lipids, proteins, and nucleic acids) are important components of the cell and its supporting matrix that perform a wide array of functions. This course will introduce the principles and recent advances in nucleic acid/gene engineering, protein/peptide engineering, and chemical/enzymatic conjugation technologies; it will also discuss the application of engineered biomacromolecules in clinical therapeutics/diagnostics, biosensing, bioimaging, and biocatalysis. Students will learn material through lectures, reading, homework, scientific publications, and molecular visualization tools. Students will work individually or in pairs/groups to develop and lead discussions on engineering biomacromolecules and molecular characterization techniques. Prerequisites: basic knowledge of genes and cloning.

Credit 3 units. EN: TU

E62 BME 443 Molecular and Cellular Engineering

The ability to engineer biological function at the cellular level holds tremendous potential for both basic and applied science. This course aims to provide knowledge and practical proficiency in the methods available for measuring and controlling the molecular organization of eukaryotic cells. Topics to be covered include genome engineering using viral- and CRISPR-Cas systems; spatial and temporal control of proteins and their

interactions; methods for characterizing and engineering posttranslational modifications; and the relationship between cellular organization and function in migration, immune cell target recognition, and differentiation. Examples from recent scientific literature will provide the foundation for these topics.

Credit 3 units. EN: TU

E62 BME 444 Biomedical Instrumentation

This course will include operational and instrumentation amplifiers for bioelectric event signal conditioning, interfacing and processing; instrumentation noise analysis and filter design; A/D converters and hardware and software principles as related to sampling, storing, processing, and display of biosignals; modeling, analysis, and operation of transducers, sensors, and electrodes, for physiological and imaging systems; and an introduction to ultrasound, X-ray, and optical imaging systems. In addition, students will be involved in three projects of designing and building instrumentation amplifier and filter systems, ultrasound systems, and optical systems. Prerequisites: BME 301A and BME 301B.

Credit 3 units. EN: TU

E62 BME 450 Numerical Methods for Computational Modeling in Biomedicine

Advanced computational methods are required for the creation of biological models. Students will be introduced to the process of model development from beginning to end, which includes model formulation, how to solve and parameterize equations, and how to evaluate model success. To illustrate the potential of these methods, participants will systematically build a model to simulate a "real-life" biological system that is applicable to their research or interest. A mechanistic appreciation of the methods will be gained by programming the methods in a low-level language (C++) in a Linux environment. While extensive programming knowledge is not required, participants are likely to find that some programming background will be helpful. Students enrolled in the 550 graduate class will be required to complete a final project that incorporates the methods taught in class.

Prerequisites: introductory programming course similar to E81 CSE 131.

Credit 3 units. EN: TU

E62 BME 459 Intermediate Biomechanics

This course covers several of the fundamental theories of solid mechanics that are needed to solve problems in biomechanics. The theories of nonlinear elasticity, viscoelasticity, and poroelasticity are applied to a large range of biological tissues including bone, articular cartilage, blood vessels, the heart, skeletal muscle, and red blood cells. Other topics include muscle activation, the biomechanics of development and functional adaptation, and the mechanics of hearing. Prerequisites: BME 240 and ESE 318 and ESE 319 or equivalent, or permission of instructor.

Same as E62 BME 559

Credit 3 units. EN: TU

E62 BME 464 Orthopaedic Biomechanics — Cartilage/Tendon

Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on soft orthopaedic tissues (cartilage, tendon and ligament). Topics include: mechanical properties of cartilage, tendon and ligament; applied viscoelasticity theory for cartilage, tendon and ligament; cartilage, tendon and ligament biology; tendon and ligament

wound healing; osteoarthritis. This class is geared to graduate students and upper-level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisites: BME 240 or equivalent. Note: BME 590Z (BME 463/563) Orthopaedic Biomechanics — Bones and Joints is *not* a prerequisite.

Same as E37 MEMS 5564

Credit 3 units. EN: TU

E62 BME 465 Biosolid Mechanics

Introduction to the mechanical behaviors of biological tissues of musculoskeletal, cardiac and vascular systems. Topics to be covered include static force analysis and nonlinear optimization theory; linearly elastic models for stress-strain analysis and solutions to relevant problems in bioelasticity; models of active structures (e.g., muscles); strain energy methods and nonlinear tissue behaviors; and introductory theory for finite element analysis. Emphasis will be placed on modeling stress-strain relations with relevance to biological tissues. Prerequisites: BME 240 or equivalent and ESE 318 and ESE 319.

Credit 3 units. EN: TU

E62 BME 470 Mathematics of Imaging Science

This course will expose students to a unified treatment of the mathematical properties of images and imaging. This will include an introduction to linear vector space theory, operator theory on Hilbert spaces, and concepts from applied functional analysis. Further, concepts from generalized functions, Fourier analysis, and radon transform will be discussed. These tools will be applied to conduct deterministic analyses of imaging systems that are described as continuous-to-continuous, continuous-to-discrete, and discrete-to-discrete mappings from object properties to image data. In addition, imaging systems will be analyzed in a statistical framework where stochastic models for objects and images will be introduced. Prerequisite: senior standing or permission of instructor.

Same as E62 BME 570

Credit 3 units.

E62 BME 471 Bioelectric Phenomena

This course is a quantitative introduction to the origins of bioelectricity with an emphasis on neural and cardiac electrophysiology. Topics will include electric fields and current flow in volume conductors; cell membrane channels and their role in generating membrane potentials; action potentials and their propagation in myelinated and unmyelinated axons as well as cardiac tissue. Minor topics of discussion will include both skeletal muscle and non-human (e.g. electric fish) sources of bioelectricity.

Credit 3 units. EN: TU

E62 BME 472 Biological Neural Computation

This course considers the computations performed by the biological nervous system with a particular focus on neural circuits and population-level encoding/decoding. Topics include Hodgkin-Huxley equations, phase-plane analysis, reduction of Hodgkin-Huxley equations, models of neural circuits, plasticity and learning, and pattern recognition and machine learning algorithms for analyzing neural data. Note: Graduate students in psychology or neuroscience who are in the cognitive, computational and systems neuroscience curriculum pathway may register in Biol 5657 for 3 credits. For non-BME majors, conceptual understanding and selection/application of right neural data analysis technique are stressed. Hence homework assignments/examinations for the two sections are different,

however all students are required to participate in a semester-long independent project as part of the course. Prerequisites: calculus, differential equations, basic probability and linear algebra. Undergraduates need permission of the instructor. Biol 5657 prerequisites: permission from the instructor.

Same as E62 BME 572

Credit 3 units. EN: TU

E62 BME 4902 Cellular Neurophysiology

This course will examine the biophysical concepts of synaptic function, with focus on the mechanisms of neural signal processing at synapses and elementary circuits. The course combines lectures and discussion sessions of primary research papers. Topics include synaptic and dendritic structure, electrical properties of axons and dendrites, synaptic transmission, rapid and long-term forms of synaptic plasticity, information analysis by synapses and basic neuronal circuits, principles of information coding, mechanisms of learning and memory, function of synapses in sensory systems, and models of synaptic disease states such as Parkinson's and Alzheimer's diseases. In addition, a set of lectures will be devoted to modern electrophysiological and imaging techniques as well as modeling approaches to study synapses and neural circuits. Prerequisite: senior or graduate standing.

Same as E62 BME 5902

Credit 3 units. EN: TU

E62 BME 4904 Interfaces and Attachments in Natural and Engineered Structures

Attachment of dissimilar materials in engineering and surgical practice is a challenge. Bimaterial attachment sites are common locations for injury and mechanical failure. Nature presents several highly effective solutions to the challenge of bimaterial attachment that differ from those found in engineering practice. This course bridges the physiologic, surgical, and engineering approaches to connecting dissimilar materials. Topics in this course are: natural bimaterial attachments; engineering principles underlying attachments; analysis of the biology of attachments in the body; mechanisms by which robust attachments are formed; concepts of attaching dissimilar materials in surgical practice and engineering; and bioengineering approaches to more effectively combine dissimilar materials.

Same as E37 MEMS 5560

Credit 3 units. EN: BME T, TU

E62 BME 494 Ultrasound Imaging

Introduction to basic principles of ultrasound imaging, diagnostic ultrasound imaging systems, clinical applications, and emerging technologies in industry. Prerequisite: ESE 351.

Credit 3 units. EN: TU

E62 BME 501C BME Doctoral Seminar Series

This is a 1-unit credit option for BME students who attend regularly scheduled BME seminars (or approved substitute seminars). A satisfactory grade is obtained by submission of a two-page peer-reviewed paper written by one of the regularly scheduled BME seminar speakers whose seminar the student attended. Papers are to be submitted to the Graduate Student Administrator for review by the Director of Doctoral Studies. Prerequisite: current BME student in the second year or beyond. Credit 1 unit.

E62 BME 506 Seminar in Imaging Science and Engineering

This seminar course consists of a series of tutorial lectures on Imaging Science and Engineering with emphasis on applications of imaging technology. Students are exposed to a variety of imaging applications that vary depending on the semester, but may include multispectral remote sensing, astronomical imaging, microscopic imaging, ultrasound imaging, and tomographic imaging. Guest lecturers come from several parts of the university. This course is required of all students in the Imaging Science and Engineering program; the only requirement is attendance. This course is graded pass/fail. Prerequisite: admission to Imaging Science and Engineering program.

Same as E35 ESE 596

Credit 1 unit.

E62 BME 507 Radiological Physics and Dosimetry

This class is designed to construct a theoretical foundation for ionizing radiation dose calculations and measurements in a medical context and prepare graduate students for proper scientific presentations in the field of x-ray imaging and radiation therapy. Specifically, a student completing this course will be able to do the following: 1. Understand and apply key concepts specific to energy deposition for both ionizing photon interactions and transport in matter and for energetic charged particle interactions and transport in matter. Radiation sources include radioactivity, x-ray tubes, and linear accelerators. 2. Understand the theoretical details of ion-chamber based dosimetry and of both cavity-theory based (TG-21) and Monte-Carlo based (TG-51) clinical protocols. 3. Perform and present real-world style research projects as a group, and present these projects in a typical professional scientific format and style. 4. Achieve an appreciation of the history and potential future developments in ionizing radiation detection and dosimetry. Prerequisites: BS in physics or engineering and instructor approval.

Credit 3 units.

E62 BME 5071 Radiobiology

Effects of ionizing radiations on living cells and organisms, including physical, chemical, and physiological bases of radiation cytotoxicity, mutagenicity and carcinogenesis. Textbook: *Radiobiology for the Radiologist*. Eric Hall and Amato Giaccia. Two lectures per week. Prerequisites: graduate student standing and one year each of biology, physics and organic chemistry, or approval of instructor.

Credit 2 units.

E62 BME 5072 Radiation Therapy Physics

Ionizing radiation use in radiation therapy to cause controlled biological effects in cancer patients. Physics of the interaction of the various radiation modalities with body-equivalent materials, and physical aspects of clinical applications. Lecture and lab. Prerequisites: graduate student standing or permission of instructor.

Credit 3 units.

E62 BME 5073 Radiation Protection and Safety

This course will introduce concepts of radiation protection and safety. The focus will be on how to protect humans and environment from ionizing radiation. Special emphasis will be on radiological protection in clinics. Prerequisite: graduate student standing or permission of the instructor.

Credit 2 units.

E62 BME 523 Biomaterials Science

An understanding of the interactions between biological systems and artificial materials is of vital importance in the design of medical devices. This course will introduce the principles of biomaterials science, unifying knowledge from the fields of biology, materials science, surface science, and colloid science. The course will be taught from the primary scientific literature, focusing on the study of protein/surface interactions and hydrogel materials.

Credit 3 units. EN: TU

E62 BME 524 Tissue Engineering

This course integrates the principles and methods of engineering and life sciences toward the fundamental understanding of normal and pathological mammalian tissues especially as they relate to the development of biological substitutes to restore or improve tissue function. Current concepts and strategies including drug delivery, tissue and cell transplantation, and *in vivo* tissue regeneration will be introduced as well as their respective clinical applications. Prerequisites: BME 366; or MEMS 3410, Biol 2960 and 2970; or permission of the instructor. Credit 3 units. EN: TU

E62 BME 527 Design of Artificial Organs

Medical devices that replace the function of one of the major organs in the body must usually interface with flowing blood. Examples include total artificial hearts, left ventricular assist devices, membrane oxygenators, hemodialysis systems and encapsulated endocrine cells. The design of these devices relies on integration of knowledge from a variety of fields, in particular computational fluid dynamics and blood rheology. We will study the process by which a concept for a device eventually leads to a functioning, blood-contacting medical device, with most of the focus on the design of left ventricular assist devices. Students will learn to use CAD to design blood pumping devices, test their designs via computational fluid dynamics, and 3D print and test their pumps with water. Prerequisites: BME 366 or equivalent course in transport phenomena (including momentum and mass transfer).

Credit 3 units. EN: TU

E62 BME 528 Translational Regenerative Medicine

This course provides students with an opportunity to connect basic research with applications in translation for several tissues/disease models. Course sessions will alternate between literature on basic mechanisms of development/stem cell biology and applications led by researchers or clinicians working in each area. Areas of focus will include cardiovascular development/congenital heart disease and arrhythmia, lung, endocrinology/diabetes, gut/intestinal disorders, musculoskeletal, neural (peripheral and brain), liver, hematology and eye. Emphasis on how discovery can be translated will be a major focus of the course. Students will be expected to review and present on primary literature in the field. Graduate standing is required. Prerequisites: graduate standing Engineering or DBBS. Credit 3 units.

E62 BME 530A Molecular Cell Biology for Engineers

This course is designed for upper level undergraduates and first year graduate students with a background in engineering. This course covers the biology of cells of higher organisms: protein structure and function; cellular membranes and organelles; cell growth and oncogenic transformation; cellular transport, receptors and cell signaling; the cytoskeleton, the

extracellular matrix, and cell movement. Emphasis will be placed on examples relevant to biomedical engineering. In addition to lecture material, an emphasis will be placed on understanding experimental techniques used in cell biology and critical analysis of primary literature. Note this course does not count for engineering topics credits and is meant to fulfill a life science requirement for engineering or physical sciences graduate students. Prereq: Completion of Biol 2960 and 2970 or graduate standing. Credit 3 units.

E62 BME 532 Physics of Biopolymers and Bioinspired Polymers

This course will cover physics concepts from the statistical physics of polymers and polymer solutions to describe proteins, nucleic acids, and bioinspired polymers. Topics include statistical physics concepts, theoretical and numerical descriptions of polymers, applying these descriptions to biopolymers, the thermodynamics of polymer solutions, concepts of polymer dynamics, descriptions of polymeric materials and advanced topics in phase transitions and molecular design. The material will be fast-paced and involve rigorous mathematical descriptions, experimental design, interpretations of experimental data, and some numerical simulations. The course will be heavy on individual homework and team-based project work. Direct connections between concepts and modern topics in biology and biomaterials will be emphasized. Prerequisites: BME 320B or equivalent and a first course in transport phenomena.

Same as E62 BME 432

Credit 3 units. EN: TU

E62 BME 533 Biomedical Signal Processing

Course designed for graduate students with little or no background in signal processing. Continuous-time and discrete-time application of signal processing tools to a variety of biomedical problems. Course topics include review of linear signals and systems theory, frequency transforms, sampling theorem, basis functions, linear filtering, feature extraction, parameter estimation and biological system modeling. Special emphasis will be placed on signal transduction and data acquisition. Additional topics include noise analysis of real-world biosignals, biological system identification, stochastic/chaotic/fractal/nonlinear processes in biological systems. Concepts learned in class will be applied using software tools to 1D biomedical signals such as biological rhythms, chemical concentrations, blood pressure, speech, EMG, ECG, EEG. Prerequisites: graduate standing or consent of instructor. Credit 3 units. EN: TU

E62 BME 537 Computational Molecular Biology

This course is a survey of algorithms and mathematical methods in biological sequence analysis (with a strong emphasis on probabilistic methods) and systems biology. Sequence analysis topics include introduction to probability, probabilistic inference in missing data problems, hidden Markov models (HMMs), profile HMMs, sequence alignment, and identification of transcription-factor binding sites. Systems biology topics include discovery of gene regulatory networks, quantitative modeling of gene regulatory networks, synthetic biology, and (in some years) quantitative modeling of metabolism. Prerequisites: CSE 131 or CSE 501N.

Same as E81 CSE 587A

Credit 3 units. EN: TU

E62 BME 538 Cell Signal Transduction

This course will cover the elements of cell signal transduction important to human development, homeostasis and disease. Lectures will be combined with primary literature review to cover canonical signaling and current topics within the field. Spatial, time and dose-dependent aspects of signaling will be of particular focus. Topics include G protein-coupled receptors, receptor tyrosine kinases, adhesion signaling, the MAPK cascade, lipid signaling, the DNA damage response, and autocrine, paracrine and juxtacrine signaling. Prerequisite: BME 530A or BME 5068.

Credit 3 units.

E62 BME 542 Biomacromolecules Design and Engineering

Biological macromolecules (i.e., carbohydrates, lipids, proteins, and nucleic acids) are important components of the cell and its supporting matrix that perform a wide array of functions. This course will introduce the principles and recent advances in nucleic acid/gene engineering, protein/peptide engineering, and chemical/enzymatic conjugation technologies; it will also discuss the application of engineered biomacromolecules in clinical therapeutics/diagnostics, biosensing, bioimaging, and biocatalysis. Students will learn material through lectures, reading, homework, scientific publications, and molecular visualization tools. Students will work individually or in pairs/groups to develop and lead discussions on engineering biomacromolecules and molecular characterization techniques.

Prerequisites: basic knowledge of genes and cloning.

Same as E62 BME 442

Credit 3 units. EN: TU

E62 BME 543 Molecular and Cellular Engineering

The ability to engineer biological function at the cellular level holds tremendous potential for both basic and applied science. This course aims to provide knowledge and practical proficiency in the methods available for measuring and controlling the molecular organization of eukaryotic cells. Topics to be covered include genome engineering using viral- and CRISPR-Cas systems; spatial and temporal control of proteins and their interactions; methods for characterizing and engineering post-translational modifications; and the relationship between cellular organization and function in migration, immune cell target recognition, and differentiation. Examples from recent scientific literature will provide the foundation for these topics.

Same as E62 BME 443

Credit 3 units. EN: TU

E62 BME 5430 Systems Analysis of Biological Signaling

This course covers biochemical and computational methods of cellular signaling pathway analysis. Topics include kinetics, differential equations, and sensitivity analysis, with emphasis on cellular and molecular vascular signaling in health and disease. Prerequisites: Biol 2960 and Math 217.

Credit 3 units. EN: TU

E62 BME 544 Biomedical Instrumentation

This course will include operational and instrumentation amplifiers for bioelectric event signal conditioning, interfacing and processing; instrumentation noise analysis and filter design; A/D converters and hardware and software principles as related to sampling, storing, processing, and display of biosignals; modeling, analysis, and operation of transducers, sensors, and electrodes, for physiological and imaging systems; and an

introduction to ultrasound, X-ray, and optical imaging systems. In addition, students will be involved in three projects of designing and building instrumentation amplifier and filter systems, ultrasound systems, and optical systems. Prerequisites: BME 301A and BME 301B.

Same as E62 BME 444

Credit 3 units. EN: TU

E62 BME 550 Numerical Methods for Computational Modeling in Biomedicine

Advanced computational methods are required for the creation of biological models. Students will be introduced to the process of model development from beginning to end, which includes model formulation, how to solve and parameterize equations, and how to evaluate model success. To illustrate the potential of these methods, participants will systematically build a model to simulate a "real-life" biological system that is applicable to their research or interest. A mechanistic appreciation of the methods will be gained by programming the methods in a low-level language (C++) in a Linux environment. While extensive programming knowledge is not required, participants are likely to find that some programming background will be helpful. Students enrolled in the 550 graduate class will be required to complete a final project that incorporates the methods taught in class.

Prerequisites: introductory programming course similar to E81 CSE 131.

Same as E62 BME 450

Credit 3 units. EN: TU

E62 BME 5565 Mechanobiology of Cells and Matrices

At the interface of the cell and the extracellular matrix, mechanical forces regulate key cellular and molecular events that profoundly affect aspects of human health and disease. This course offers a detailed review of biomechanical inputs that drive cell behavior in physically diverse matrices. In particular, cytoskeletal force-generation machineries, mechanical roles of cell-cell and cell-matrix adhesions, and regulation of matrix deformations are discussed. Also covered are key methods for mechanical measurements and mathematical modeling of cellular response. Implications of matrix-dependent cell motility in cancer metastasis and embryonic development are discussed.

Prerequisite: graduate standing or permission of the instructor.

Same as E37 MEMS 5565

Credit 3 units. EN: BME T, TU

E62 BME 559 Intermediate Biomechanics

This course covers several of the fundamental theories of solid mechanics that are needed to solve problems in biomechanics. The theories of nonlinear elasticity, viscoelasticity and poroelasticity are applied to a large range of biological tissues including bone, articular cartilage, blood vessels, the heart, skeletal muscle, and red blood cells. Other topics include muscle activation, the biomechanics of development and functional adaptation, and the mechanics of hearing. Prerequisites: BME 240 and ESE 318 and ESE 319 or equivalent, or permission of instructor.

Credit 3 units. EN: TU

E62 BME 562 Mechanics of Growth and Development

This course applies the fundamental principles of solid mechanics to problems involving growth, remodeling and morphogenesis of cells, tissues and organs. Introduction to developmental biology, nonlinear elasticity, viscoelasticity

and active contraction. Particular topics include cellular morphogenetic mechanisms, growth and development of the cardiovascular system, and adaptive remodeling of bone. Prerequisites: BME 240 or MEMS 241 or equivalent. Credit 3 units. EN: BME T, TU

E62 BME 564 Orthopaedic Biomechanics — Cartilage/Tendon

Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on soft orthopaedic tissues (cartilage, tendon and ligament). Topics include: mechanical properties of cartilage, tendon and ligament; applied viscoelasticity theory for cartilage, tendon and ligament; cartilage, tendon and ligament biology; tendon and ligament wound healing; osteoarthritis. This class is geared to graduate students and upper-level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisite: BME 240 or equivalent. Note: BME 590Z (BME 463/563) Orthopaedic Biomechanics — Bones and Joints is *not* a prerequisite.

Same as E37 MEMS 5564

Credit 3 units. EN: TU

E62 BME 565 Biosolid Mechanics

Introduction to the mechanical behaviors of biological tissues of musculoskeletal, cardiac and vascular systems. Topics to be covered include static force analysis and nonlinear optimization theory; linearly elastic models for stress-strain analysis and solutions to relevant problems in bioelasticity; models of active structures (e.g., muscles); strain energy methods and nonlinear tissue behaviors; and introductory theory for finite element analysis. Emphasis will be placed on modeling stress-strain relations with relevance to biological tissues. Prerequisites: BME 240 or equivalent and ESE 318 and ESE 319.

Same as E62 BME 465

Credit 3 units. EN: TU

E62 BME 570 Mathematics of Imaging Science

This course will expose students to a unified treatment of the mathematical properties of images and imaging. This will include an introduction to linear vector space theory, operator theory on Hilbert spaces, and concepts from applied functional analysis. Further, concepts from generalized functions, Fourier analysis, and radon transform will be discussed. These tools will be applied to conduct deterministic analyses of imaging systems that are described as continuous-to-continuous, continuous-to-discrete, and discrete-to-discrete mappings from object properties to image data. In addition, imaging systems will be analyzed in a statistical framework where stochastic models for objects and images will be introduced. Prerequisite: senior standing or permission of instructor.

Credit 3 units.

E62 BME 572 Biological Neural Computation

This course considers the computations performed by the biological nervous system with a particular focus on neural circuits and population-level encoding/decoding. Topics include Hodgkin-Huxley equations; phase-plane analysis; reduction of Hodgkin-Huxley equations; models of neural circuits; plasticity and learning; and pattern recognition and machine learning algorithms for analyzing neural data. Note: Graduate students in psychology or neuroscience who are in the Cognitive, Computational and Systems Neuroscience curriculum pathway may register in Biol 5657 for 3 credits. For non-BME majors, conceptual understanding, and selection/application of right

neural data analysis technique are stressed. Hence homework assignments/examinations for the two sections are different, however all students are required to participate in a semester-long independent project as part of the course. Prerequisites: calculus, differential equations, basic probability and linear algebra. Undergraduates need permission of the instructor. Biol 5657 prerequisites: permission from the instructor.

Credit 3 units. EN: TU

E62 BME 574 Quantitative Bioelectricity and Cardiac Excitation

Action potential generation, action potential propagation, source-field relationships in homogeneous and inhomogeneous media, models of cardiac excitation and arrhythmia, quantitative electrocardiography. Prerequisites: differential equations, Laplace transform, electromagnetic field theory (undergraduate level).

Credit 3 units. EN: TU

E62 BME 575 Molecular Basis of Bioelectrical Excitation

Ion channels are the molecular basis of membrane excitability in all cell types, including neuronal, heart and muscle cells. This course presents the structure and the mechanism of function of ion channels at the molecular level. It introduces the basic principles and methods in the ion channel study as well as the structure-function relation of various types of channels. Exemplary channels that have been best studied are discussed to illustrate the current understanding. Prerequisites: knowledge of differential equations, electrical circuits and chemical kinetics.

Credit 3 units. EN: TU

E62 BME 5771 Biomedical Product Development

Advances in science and technology have opened the health care field to innovation now more than any other time in history. Engineers and inventors can make real and rapid improvements to patient treatments, length of hospital stay, procedure time, cost containment, and accessibility to treatment. However, a successful transition from idea to implementation requires careful market analysis and strategy planning. This course will address the steps in this process, including personal and team strength assessment, medical need validation, brainstorming initial solutions, market analysis, solution evaluation, regulatory, patent and intellectual property concerns, manufacturability, risk assessment and mitigation, and global considerations. Students will be expected to review resource material prior to coming to class in order to facilitate active class discussion and team-based application of the material during class; regular attendance will be key to course success. The course will focus on applying product development techniques to several real unmet medical needs; students will thus perform analysis and create reports and presentations for several different product solutions. Peer and faculty evaluations will provide feedback to improve individual technique. In addition, throughout the semester, local biomedical entrepreneurs will visit to share their expertise and experiences. Prerequisites: graduate or professional student standing or permission of the instructor.

Credit 3 units.

E62 BME 5772 Biomedical Business Development

For medical innovators, a successful translation from product to market will require careful strategy and an understanding of the steps needed to form and fund a biotech business, either as a new startup or as an extension of the product line of an existing company. This course will address the steps in this

process, including intellectual property concerns, R&D, clinical strategy, regulatory issues, quality management, reimbursement, marketing strategy, sales and distribution, operating plans, and approaches to funding. Prerequisites: graduate or professional student standing or permission of the instructor.

Credit 3 units.

E62 BME 5799 Independent Study for Candidates in the Master of Engineering Program

Independent investigation on a topic of special interest. The student and mentor must justify the requested number of units. The MEng program director must approve the requested number of units.

Credit variable, maximum 6 units.

E62 BME 5820 Fundamentals and Applications of Modern Optical Imaging

Analysis, design, and application of modern optical imaging systems, with emphasis on biological imaging. The first part of the course will focus on the physical principles underlying the operation of imaging systems and their mathematical models. Topics include ray optics (speed of light, refractive index, laws of reflection and refraction, plane surfaces, mirrors, lenses, aberrations), wave optics (amplitude and intensity, frequency and wavelength, superposition and interference, interferometry), Fourier optics (space-invariant linear systems, Huygens-Fresnel principle, angular spectrum, Fresnel diffraction, Fraunhofer diffraction, frequency analysis of imaging systems), and light-matter interaction (absorption, scattering, dispersion, fluorescence). The second part of the course will compare modern quantitative imaging technologies, including but not limited to digital holography, computational imaging, and super-resolution microscopy. Students will evaluate and critique recent optical imaging literature. Prerequisites: ESE 318 and ESE 319 or their equivalents; ESE 330 or Physics 421 or equivalent.

Same as E35 ESE 582

Credit 3 units. EN: BME T, TU

E62 BME 589 Biological Imaging Technology

This class develops a fundamental understanding of the physics and mathematical methods that underlie biological imaging and critically examine case studies of seminal biological imaging technology literature. The physics section examines how electromagnetic and acoustic waves interact with tissues and cells, how waves can be used to image the biological structure and function, image formation methods and diffraction limited imaging. The math section examines image decomposition using basis functions (e.g., Fourier transforms), synthesis of measurement data, image analysis for feature extraction, reduction of multidimensional imaging datasets, multivariate regression and statistical image analysis. Original literature on electron, confocal and two photon microscopy, ultrasound, computed tomography, functional and structural magnetic resonance imaging and other emerging imaging technology are critiqued.

Same as E35 ESE 589

Credit 3 units. EN: BME T, TU

E62 BME 5901 Integrative Cardiac Electrophysiology

Quantitative electrophysiology of the heart, integrating from the molecular level (ion channels, regulatory pathways, cell signaling) to the cardiac cell (action potential and calcium transient), multicellular tissue (cell-cell communication) and the whole heart. Prerequisite: permission of instructor.

Credit 3 units. EN: BME T, TU

E62 BME 5902 Cellular Neurophysiology

This course will examine the biophysical concepts of synaptic function, with a focus on the mechanisms of neural signal processing at synapses and elementary circuits. The course combines lectures and discussion sessions of primary research papers. Topics include synaptic and dendritic structure, electrical properties of axons and dendrites, synaptic transmission, rapid and long-term forms of synaptic plasticity, information analysis by synapses and basic neuronal circuits, principles of information coding, mechanisms of learning and memory, function of synapses in sensory systems, and models of synaptic disease states such as Parkinson's and Alzheimer's diseases. In addition, a set of lectures will be devoted to modern electrophysiological and imaging techniques as well as modeling approaches to study synapses and neural circuits. Prerequisite: senior or graduate standing.

Credit 3 units. EN: TU

E62 BME 591 Biomedical Optics I: Principles

This course covers the principles of optical photon transport in biological tissue. This course covers the principles and applications of optical photon transport in biological tissue. Topics include a brief introduction to biomedical optics, single-scatterer theories, Monte Carlo modeling of photon transport, convolution for broad-beam responses, radiative transfer equation, diffusion theory and applications, sensing of optical properties and spectroscopy, and photoacoustic imaging principles and applications. Prerequisite: Differential equations Credit 3 units. EN: TU

E62 BME 5911 Cardiovascular Biophysics Journal Club

This journal club is intended for beginning graduate students, advanced undergraduates and MSTP students with a background in the quantitative sciences (engineering, physics, math, chemistry, etc.). The subjects covered are inherently multidisciplinary. We review landmark and recent publications in quantitative cardiovascular physiology, mathematical modeling of physiologic systems and related topics such as chaos theory and nonlinear dynamics of biological systems. Familiarity with calculus, differential equations and basic engineering/thermodynamic principles is assumed. Knowledge of anatomy/physiology is optional.

Credit 1 unit.

E62 BME 5913 Molecular Systems Biology: Computation & Measurements for Understanding Cell Physiology and Disease

Systems-level measurements of molecules in cells and tissues harbor the promise of identifying the ways in which tissues develop, maintain, age, and become diseased. This class will introduce the systems-level measurement techniques for capturing molecular information and the mathematical and computational methods for harnessing the information from these measurements to improve our understanding of cell physiology and disease. This is a practical class, which involves implementation of the concepts in MATLAB and will be applied to existing, real data from published journal articles. Molecular topics will include gene expression, microRNA, proteins, post-translational modifications, drugs, and splicing. Computational/mathematical topics covered will include statistical inference,

dimensionality reduction techniques, unsupervised and supervised machine learning, and graph-based techniques. Prerequisites: A working knowledge of molecular biology, linear algebra, and statistics is required.

Credit 3 units. EN: TU

E62 BME 594 Ultrasound Imaging

This course will introduce basic principles of ultrasound imaging, diagnostic ultrasound imaging system, clinical applications, and emerging technologies in industry. Prerequisite: ESE 351.

Same as E62 BME 494

Credit 3 units. EN: TU

Computer Science & Engineering

About Computer Science & Engineering

The field of computer science and engineering studies the design, analysis, implementation and application of computation and computer technology. Computing plays an important role in virtually all fields, including science, medicine, music, art, business, law and human communication; hence, the study of computer science and engineering can be interdisciplinary in nature. Whether a student's goal is to become a practitioner or to take a few courses to develop a basic understanding of computing for application to another field, the Department of Computer Science & Engineering at Washington University is committed to helping students gain the background they need.

People are attracted to the study of computing for a variety of reasons. Consequently, the department offers a wide variety of academic programs, including a five-course minor, a second major, five undergraduate degrees, combined undergraduate and graduate programs, and several undergraduate research opportunities. Each academic program can be tailored to a student's individual needs.

The breadth of computer science and engineering may be best understood in terms of the general areas of *applications*, *software systems*, *hardware* and *theory*.

Applications are the ways in which computer technology is applied to solve problems, often in other disciplines. Most applications courses provide background not only in the applications themselves but also in how the applications are designed and implemented. Examples of application areas include artificial intelligence, computer graphics, game design and computational biology.

Software systems are collections of interacting software components that work together to support the needs of computer applications. Courses in this area help students gain a solid understanding of how software systems are designed and implemented. During the process, students develop their own software systems. Examples include operating systems, which

manage computational resources; network protocols, which are responsible for the delivery of information; programming languages, which support the construction of software systems and applications; and compilers, which translate computer programs into executable form.

Hardware is the term used to describe the physical and mechanical components of a computer system. Courses in this area provide background in logic circuits, which carry out basic computations; computer architecture, which defines the organization of functional components in a computer system; and peripheral devices such as disks, robot arms that are controlled by the computer system, and sensor systems that gather the information that computer systems use to interact with the physical world.

Theory is the study of the fundamental capabilities and limitations of computer systems. A knowledge of theory helps students choose among competing design alternatives on the basis of their relative efficiency and helps them to verify that their implementations are correct. Theory courses provide background in algorithms, which describe how a computation is to be carried out; data structures, which specify how information is to be organized within the computer; analytical techniques to characterize the time or space requirements of an algorithm or data structure; and verification techniques to prove that solutions are correct.

A well-rounded study of computing includes training in each of these areas. However, depending on a student's educational goals, the student may prefer to concentrate on certain areas for greater depth of knowledge. To help students balance their elective courses, most upper-level departmental courses are classified into one of the following categories: S for software systems, M for machines (hardware), T for theory, or A for applications. If a student's interests are concentrated in the first two areas, a computer engineering degree might be best. Students are encouraged to meet with a faculty adviser in the Department of Computer Science & Engineering to discuss their options and develop a plan consistent with their goals.

Undergraduate Programs

The Department of Computer Science & Engineering (CSE) offers an array of courses that can be taken as requirements or electives for any of the undergraduate degree programs. We offer a Bachelor of Science in Computer Science (BSCS), a Bachelor of Science in Computer Engineering (BSCoE), a Bachelor of Science in Business and Computer Science (CS +Business), a Bachelor of Science in Computer Science + Mathematics (CS+Math), a Bachelor of Science in Computer Science + Economics (CS+Econ), and a Second Major in Computer Science. In addition to these six programs, CSE offers a pre-medical option and combined undergraduate/graduate programs. As a part of our program, each student is assigned an adviser who can help to design an individualized program, monitor a student's progress, and consult about curriculum and

career options. Additional information can be found on our CSE website (<http://cse.wustl.edu/>), or any of the CSE faculty (<https://cse.wustl.edu/faculty/Pages/default.aspx>) can offer further guidance and information about our programs.

BSCS: The computer science (<https://cse.wustl.edu/undergraduate/programs/Pages/bs-in-computer-science.aspx>) major is designed for students planning a career in computing.

BSCoE: The computer engineering (<https://cse.wustl.edu/undergraduate/programs/Pages/bs-in-computer-engineering.aspx>) major encompasses studies of hardware, software and systems issues that arise in the design, development and application of computer systems.

CS+Business: This joint major (<https://cse.wustl.edu/undergraduate/programs/Pages/bs-business-computer-science.aspx>) provides students with the fundamental knowledge and perspectives of computer science and business and of the unique opportunities created by combining them.

CS+Econ: This applied science major (p. 1067) allows students interested in both economics and computer science to combine these two complementary disciplines efficiently.

CS+Math: This applied science major (<https://cse.wustl.edu/undergraduate/programs/Pages/bs-in-computer-science-math.aspx>) efficiently captures the intersection of the complementary studies of computer science and math.

Second Major in Computer Science: The second major (<https://cse.wustl.edu/undergraduate/programs/Pages/second-major.aspx>) provides an opportunity to combine computer science with another degree program. A second major in computer science can expand a student's career options and enable interdisciplinary study in areas such as cognitive science, computational biology, chemistry, physics, philosophy and linguistics. The second major is also well suited for students planning careers in medicine, law, business, architecture and fine arts.

Pre-Medical Option within Computer Science: Students may pursue a pre-medicine curriculum in conjunction with either the BS degree or the second major in computer science programs. Students interested in the pre-medical option should refer to the McKelvey School of Engineering (p. 1034) *Bulletin* page for details.

Combined Undergraduate and Graduate Study

The Department of Computer Science & Engineering offers in-depth graduate study in many areas. Students entering the graduate programs require a background in computer science fundamentals. Washington University undergraduates seeking admission to the graduate degree program to obtain a master's

degree in computer science or computer engineering do not need to take the Graduate Record Examination (GRE). For more information, contact the department office by email at admissions@cse.wustl.edu or by phone at 314-935-6132.

The Joint Bachelor's/Master's Program

This five-year program that leads to both the bachelor's and master's degrees offers the student an excellent opportunity to combine undergraduate and graduate studies in an integrated curriculum. The combination of the two programs extends the flexibility of the undergraduate curriculum to more advanced studies, thereby enabling students to plan their entire spectrum of computing studies in a more comprehensive educational framework. Consistent with the general requirements (p. 1134) defined by the McKelvey School of Engineering, a minimum of 150 units is required for completion of the bachelor's/master's program. Provided that the 150-unit requirement is satisfied, up to 6 units of course work acceptable for the master's degree can be counted toward both the bachelor's and master's requirements. Students in the bachelor's/master's program can take advantage of the program's flexibility by taking graduate courses toward the graduate degree while still completing the undergraduate degree requirements.

The bachelor's/master's program offers early admission to the graduate programs in computer science and computer engineering and allows a student to complete the master's degree, typically in only one additional year of study (instead of the usual three semesters). Undergraduate financial support is not extended for the additional semesters to complete the master's degree requirements; however, scholarship support based on the student's cumulative grade-point average, calculated at the end of the junior year, will be awarded automatically during the student's final year of study. Students are classified as graduate students during their final year of study, and their tuition charges are at the graduate student rate. For information about scholarship amounts, please visit the Bachelor's/Master's Program in Engineering webpage (<http://engineering.wustl.edu/current-students/student-services/Pages/BS-MS-program.aspx>).

If students plan to apply to this program, it is recommended that they complete at least an undergraduate minor in computer science, three additional computer science courses at the 400 level, and one additional course at the 500 level during their first four years. Fall applications for this program open on June 1. Spring applications open on March 1. Students are encouraged to apply to this program by October 1 of the first semester of their senior year, and a minimum GPA of 3.0 is required of all applicants. Bachelor's/master's applications will be accepted until the last day of classes of the semester prior to the student beginning the graduate program.

BS/MBA Program

The growing importance of computer-based information systems in the business environment has produced a sustained high demand for graduates with master's degrees in business administration and undergraduate majors in computer science and engineering.

Students should apply to this joint program by February 1 of their junior year. The application for admission to Olin Business School (p. 984) is available through the business school. Applicants are judged on undergraduate performance, GMAT scores, summer and/or co-op work experience, recommendations and a personal interview.

Undergraduate Courses

Course requirements for the minor and majors may be fulfilled by CSE 131 Introduction to Computer Science, CSE 132 Introduction to Computer Engineering, CSE 240 Logic and Discrete Mathematics, CSE 247 Data Structures and Algorithms, CSE 347 Analysis of Algorithms, and CSE courses with a letter suffix in any of the following categories: software systems (S), hardware (M), theory (T) and applications (A). In addition, with approval of the instructor, up to 6 units of CSE 400E Independent Study can be used toward the CSE electives of any CSE degree. Other CSE courses provide credit toward graduation but not toward the CSE elective requirements for the second major or the BSCS, BSCoE, CS+Math or CS +Business degrees. Undergraduates are encouraged to consider 500-level courses. If a student is interested in taking a course but is not sure if they have the needed prerequisites, the student should contact the instructor.

Broadening Experiences

If a student wants to become involved in computer science or computer engineering research or to gain experience in industry while they are an undergraduate, there are many opportunities to do so. A few of these are listed below.

Co-op: The Cooperative Education Program allows a student to get valuable experience working in industry while an undergraduate. A co-op experience can give students another perspective on their education and may lead to full-time employment. Numerous companies participate in this program. More information is available from the Engineering Co-op and Internship Program (<https://careercenter.wustl.edu/items/engineering-co-op-program/>) that is part of the Career Center in the Danforth University Center, Suite 110.

Research: Participating in undergraduate research (<https://cse.wustl.edu/undergraduate/Pages/undergraduate-research.aspx>) is a great way to learn more about a specific area. Research projects are available either for pay or for credit through CSE 400E Independent Study.

Study Abroad: Students in the McKelvey School of Engineering can study abroad in a number of countries and participate in several global experiences to help broaden their educational experience. These opportunities will help students become global citizens who are better able to address current issues.

The study of computer science and engineering is especially well suited and popular for study abroad. Students from our department routinely study abroad in Europe, the United Kingdom, Australia, Israel and many other places. Our department works closely with students to identify courses suitable for computer science credit.

For more information about these programs, please visit the McKelvey School of Engineering website (<https://engineering.wustl.edu/our-school/initiatives/Pages/global.aspx>).

Research Opportunities

The Department of Computer Science & Engineering actively promotes a culture of strong undergraduate participation in research. Many undergraduates work in research labs with state-of-the-art equipment that provides them the opportunity to take part in computer science and computer engineering research. Sensor networks, high-speed routers, specialized FPGA hardware, wireless devices, RF tags, digital cameras, robots, large displays and multiprocessors are just a few of the hardware devices undergraduates often use in their projects. Opportunities for exploring modern software development techniques and specialized software systems further enrich the range of research options and help undergraduates sharpen their design and programming skills.

Advanced Placement/Proficiency

Students receiving a 4 or 5 on the AP Computer Science A exam are awarded credit for CSE 131 Introduction to Computer Science. Any student can take the CSE 131 proficiency exam, and a suitable score will waive CSE 131 as a requirement.

Upon request, the computer science department will evaluate a student for proficiency for any of our introductory courses. If a student is determined to be proficient in a given course, that course will be waived (without awarding credit) in the student's degree requirements, and the student will be offered guidance in selecting a more advanced course. Questions should be directed to the associate chair at associatechair@cse.wustl.edu.

Majors

Please visit the following pages for information about computer science and engineering majors:

- Bachelor of Science in Computer Engineering (p. 1065)
- Bachelor of Science in Computer Science (p. 1066)
- Bachelor of Science in Computer Science + Economics (p. 1067)

- Bachelor of Science in Computer Science + Mathematics (p. 1067)
- Bachelor of Science in Business and Computer Science (p. 1068)
- Second Major in Computer Science (p. 1070)
- Second Major in Computer Science + Mathematics

Minors

Please visit the following pages for information about computer science and engineering minors:

- Minor in Computer Science (p. 1071)
- Minor in Bioinformatics (p. 1071)
- Minor in Human-Computer Interaction (p. 1072)

Courses

Visit online course listings to view semester offerings for E81 CSE (<https://courses.wustl.edu/CourseInfo.aspx?sch=E&dept=E81&crslvl=1:5>).

Prerequisites are advisory in our course listings, but students are cautioned against taking a course without the necessary background. Note that if one course mentions another as its prerequisite, the prerequisites of the latter course are implied to be prerequisites of the former course as well. Students in doubt of possessing the necessary background for a course should correspond with the course's instructor.

E81 CSE 131 Introduction to Computer Science

An introduction to software concepts and implementation, emphasizing problem solving through abstraction and decomposition. Introduces processes and algorithms, procedural abstraction, data abstraction, encapsulation and object-oriented programming. Recursion, iteration and simple data structures are covered. Concepts and skills are mastered through programming projects, many of which employ graphics to enhance conceptual understanding. Java, an object-oriented programming language, is the vehicle of exploration. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisites: Comfort with algebra and geometry at the high school level is assumed. Patience, good planning and organization promote success. This course assumes no prior experience with programming.
Credit 3 units. BU: SCI EN: TU

E81 CSE 131R Seminar: Computer Science I

A seminar and discussion session that complements the material studied in CSE 131. Provides background and breadth for the disciplines of computer science and computer engineering. Features guest lectures and highly interactive discussions of diverse computer science topics. Highly recommended for majors and for any student seeking a broader view of computer science or computer engineering. Pass/Fail only.
Credit 1 unit.

E81 CSE 132 Introduction to Computer Engineering

This course introduces students to fundamental concepts in the basic operation of computers, ranging from desktops and servers to microcontrollers and handheld devices. Subjects include digital and analog input/output, sensing the physical world, information representation, basic computer architecture and machine language, time-critical computation, machine-to-machine communication and protocol design. Students will use both desktop systems and handheld microcontrollers for laboratory experiments. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisite: CSE 131.

Credit 3 units. BU: SCI EN: TU

E81 CSE 132R Seminar: Computer Science II

This course is a seminar and discussion session that complements the material studied in CSE 132. It provides background and breadth for the disciplines of computer science and computer engineering, and it features guest lectures and highly interactive discussions of diverse computer science topics. Highly recommended for majors and for any student seeking a broader view of computer science or computer engineering. Credit 1 unit.

E81 CSE 204A Front-End Web Development

This course explores elementary principles for designing, creating, and publishing effective websites and web application front-ends. Topics include page layout concepts, design principles, HTML, CSS, JavaScript, front-end frameworks like Angular and React, and other development tools. Students apply the topics by creating a series of websites that are judged based on their design and implementation. Prerequisite: CSE 131 or equivalent experience.

Credit 3 units. EN: TU

E81 CSE 217A Introduction to Data Science

This course provides an introduction to data science and machine learning, and it focuses on the practical application of models to real-world supervised and unsupervised learning problems. We will discuss methods for linear regression, classification, and clustering and apply them to perform sentiment analysis, implement a recommendation system, and perform image classification or gesture recognition. One of the main objectives of the course is to become familiar with the data science workflow, from posing a problem to understanding and preparing the data, training and evaluating a model, and then presenting and interpreting the results. We will also touch on concepts such as similarity-based learning, feature engineering, data manipulation, and visualization. The course uses Python, which is currently the most popular programming language for data science. Prerequisites: CSE 131, MATH 233, and CSE 247 (can be taken concurrently)

Credit 3 units. EN: TU

E81 CSE 222S Internet of Things

With the advent of the Internet of Things, we can address, control, and interconnect formerly isolated objects to create new and interesting applications. In this course we study fundamental technologies behind Internet-of-Things devices, and Accessories, which include smart watches, health monitors, toys, and appliances. In addition to learning about IoT, students gain hands-on experience developing multi-platform solutions

that control and communicate with Things using via mobile device friendly interfaces. Students apply their knowledge and skill to develop a project of their choosing using topics from the course. Prerequisite: CSE 132 Revision: 2020-02-26 Credit 3 units. EN: TU

E81 CSE 231S Introduction to Parallel and Concurrent Programming

This course explores concepts, techniques, and design approaches for parallel and concurrent programming. We study how to write programs that make use of multiple processors for responsiveness and that share resources reliably and fairly. Parallel programming concepts include task-level, functional, and loop-level parallelism. Concurrent programming concepts include threads, synchronization, and locks. We cover how to adapt algorithms to achieve determinism and avoid data races and deadlock. Concepts and skills are acquired through the design and implementation of software projects. Prerequisite: CSE 131. Credit 3 units. EN: TU

E81 CSE 232 Programming Skills Workshop

This course provides an overview of practical implementation skills. Topics include compilation and linking, memory management, pointers and references, using code libraries, testing and debugging. Prerequisite: CSE 247. Credit 1 unit.

E81 CSE 240 Logic and Discrete Mathematics

Introduces elements of logic and discrete mathematics that allow reasoning about computational structures and processes. Generally, the areas of discrete structures, proof techniques, probability and computational models are covered. Topics typically include propositional and predicate logic; sets, relations, functions and graphs; proof by contradiction, induction and recursion; finite state machines and regular languages; and introduction to discrete probability, expected value and variance. Prerequisite: CSE 131.

Credit 3 units. EN: TU

E81 CSE 247 Data Structures and Algorithms

This course involves the study of fundamental algorithms, data structures, and their effective use in a variety of applications. It emphasizes the importance of data structure choice and implementation for obtaining the most efficient algorithm for solving a given problem. A key component of this course is worst-case asymptotic analysis, which provides a quick and simple method for determining the scalability and effectiveness of an algorithm. Prerequisite: CSE 131 and fluency with summations, derivatives, and proofs by induction. Credit 3 units. EN: TU

E81 CSE 247R Seminar: Data Structures and Algorithms

The content of this seminar will vary by semester, but it will generally complement the material taught in CSE 247 Data Structures and Algorithms. Corequisite: CSE 247. Credit 1 unit. EN: TU

E81 CSE 256A Introduction to Human-Centered Design

This course provides an introduction to human-centered design through a series of small user interface development projects covering usability topics such as efficiency vs. learnability, walk up and use systems, the habit loop, and information foraging.

Projects will begin with reviewing a relevant model of human behavior. Each project will then provide an opportunity to explore how to apply that model in the design of a new user interface. Prerequisite: CSE 131.

Credit 3 units. EN: TU

E81 CSE 260M Introduction to Digital Logic and Computer Design

Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture, hardware description languages, simulation); design of simple processors and memory subsystems; program execution in simple processors; basic techniques for enhancing processor performance; configurable logic devices. Prerequisites: CSE 131.

Credit 3 units. EN: TU

E81 CSE 311A Introduction to Intelligent Agents Using Science Fiction

The course uses science-fiction short stories, tv episodes, and movies to motivate and introduce fundamental principles and techniques in intelligent agent systems. Topics covered may include game theory, decision theory, machine learning, distributed algorithms, and ethics. Prerequisite: CSE 247

Credit 3 units. EN: BME T, TU

E81 CSE 316A Social Network Analysis

This course looks at social networks and markets through the eyes of a computer scientist. We will look at questions including, "Why are acquaintances rather than friends more likely to get us job opportunities?" and, "Why do the rich get richer?" We begin by studying graph theory (allowing us to study the structure) and game theory (allowing us to study the interactions) of social networks and market behavior at the introductory level. Among other topics, we will study auctions, epidemics, and the structure of the internet (including web searches). This course examines the intersection of computer science, economics, sociology, and applied mathematics. Prerequisites: CSE 240 and CSE 247.

Credit 3 units. EN: BME T, TU

E81 CSE 330S Rapid Prototype Development and Creative Programming

This course uses web development as a vehicle for developing skills in rapid prototyping. Students acquire the skills to build a Linux web server in Apache, to write a website from scratch in PHP, to run an SQL database, to perform scripting in Python, to employ various web frameworks, and to develop modern web applications in client-side and server-side JavaScript. The course culminates with a creative project in which students are able to synthesize the course material into a project of their own interest. The course implements an interactive studio format: after the formal presentation of a topic, students develop a related project under the supervision of the instructor. Prerequisite: CSE 131.

Credit 3 units. EN: BME T, TU

E81 CSE 332S Object-Oriented Software Development

Laboratory

Intensive focus on practical aspects of designing, implementing and debugging software, using object-oriented, procedural, and generic programming techniques. The course emphasizes familiarity and proficiency with a wide range of C++ language features through hands-on practice completing studio exercises and lab assignments, supplemented with readings and summary presentations for each session. Prerequisites: CSE 131 and CSE 247

Credit 3 units. EN: BME T, TU

E81 CSE 341T Parallel and Sequential Algorithms

The course aims to teach how to design, analyze and implement parallel algorithms. The emphasis is on teaching fundamental principles and design techniques that easily transfer over to parallel programming. These techniques include divide and conquer, contraction, the greedy method, etc. Prerequisite: CSE 240, 247, Math 310

Credit 3 units. EN: BME T, TU

E81 CSE 347 Analysis of Algorithms

Introduces techniques for the mathematical analysis of algorithms, including randomized algorithms and non-worst-case analyses such as amortized and competitive analysis. Introduces the standard paradigms of divide-and-conquer, greedy, and dynamic programming algorithms, as well as reductions. Also provides an introduction to the study of intractability and techniques to determine when good algorithms cannot be designed. Prerequisites: CSE 240, 247 (or Math 310).

Credit 3 units. EN: BME T, TU

E81 CSE 347R Analysis of Algorithms Recitation

This course is the recitation component of CSE 347. Registration and attendance for 347R is mandatory for students enrolled in 347.

E81 CSE 361S Introduction to Systems Software

Introduction to the hardware and software foundations of computer processing systems. This course provides a programmer's perspective of how computer systems execute programs and store information. The course material aims to enable students to become more effective programmers, especially in dealing with issues of performance, portability and robustness. It also serves as a foundation for other system courses, such as compilers, networks, and operating systems, where a deeper understanding of systems-level issues is required. Topics covered include: machine-level code and its generation by optimizing compilers, performance evaluation and optimization, computer arithmetic, memory organization and management, and supporting concurrent computation.

Prerequisites: CSE 131 and CSE 132

Credit 3 units. EN: BME T, TU

E81 CSE 362M Computer Architecture

This course explores the interaction and design philosophy of hardware and software for digital computer systems. Topics include: processor architecture, instruction set architecture, Assembly Language, memory hierarchy design, I/O considerations, and a comparison of computer architectures.

Prerequisite: CSE 260M.

Credit 3 units. EN: BME T, TU

E81 CSE 365S Elements of Computing Systems

All computers are made up of 0s and 1s. However, the conceptual gap between the 0s and 1s and the day-to-day operation of modern computers is enormously wide. This fast-paced course aims to bridge the divide by starting with simple logic gates and building up the levels of abstraction until one can create games like Tetris. There is no specific programming language requirement, but some experience with programming is needed. Prerequisite: CSE 247.

Credit 3 units. EN: BME T, TU

E81 CSE 400 Independent Study

Investigation of a topic in computer science and engineering of mutual interest to the student and a mentor. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form (<https://cse.wustl.edu/undergraduate/PublishingImages/Pages/undergraduate-research/Independent%20Study%20Form%20400.pdf>) declaring the agreement must be filed in the departmental office. This course carries university credit, but it does not count toward a CSE major or minor. To arrange for CSE major or minor credit for independent study, a student must enroll in CSE 400E instead of CSE 400. Consult also: CSE 400E.

Credit variable, maximum 6 units.

E81 CSE 400E Independent Study

Investigation of a topic in computer science and engineering of mutual interest to the student and a mentor. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement (<https://cse.wustl.edu/undergraduate/PublishingImages/Pages/undergraduate-research/Independent%20Study%20Form%20400.pdf>) must be filed in the departmental office. Credit earned for CSE 400E can be counted toward a student's major or minor program, with the consent of the student's advisor. Consult also: CSE 400.

Credit variable, maximum 6 units.

E81 CSE 411A AI and Society

AI has made increasing inroads in a broad array of applications, many that have socially significant implications. This course will study a number of such applications, focusing on issues such as AI used for social good, fairness and accountability of AI, and potential security implications of AI systems. Prerequisite: CSE 247.

Credit 3 units. EN: TU

E81 CSE 416A Analysis of Network Data

This course examines complex systems through the eyes of a computer scientist. We will use the representative power of graphs to model networks of social, technological, or biological interactions. Network analysis provides many computational, algorithmic, and modeling challenges. We begin by studying graph theory, allowing us to quantify the structure and interactions of social and other networks. We will then explore how to practically analyze network data and how to reason about it through mathematical models of network structure and evolution. We will also investigate algorithms that extract basic properties of networks in order to find communities and infer node properties. Finally, we will study a range of applications including robustness and fragility of networks such as the internet, spreading processes used to study epidemiology or viral marketing, and the ranking of webpages based on the structure of the webgraph. This course combines concepts from computer

science and applied mathematics to study networked systems using data mining. Prerequisites: CSE 247, ESE 326, MATH 309, and programming experience. (Note: We will parse data and analyze networks using Python.)

Credit 3 units. EN: BME T, TU

E81 CSE 417T Introduction to Machine Learning

The field of machine learning is concerned with the question of how to construct computer programs that automatically improve with experience. This course is a broad introduction to machine learning, covering the foundations of supervised learning and important supervised learning algorithms. Topics to be covered are the theory of generalization (including VC-dimension, the bias-variance tradeoff, validation, and regularization) and linear and non-linear learning models (including linear and logistic regression, decision trees, ensemble methods, neural networks, nearest-neighbor methods, and support vector machines).

Prerequisites: CSE 247, ESE 326 (or Math 3200), Math 233, and Math 309 (can be taken concurrently).

Credit 3 units. EN: BME T, TU

E81 CSE 422S Operating Systems Organization

This course involves a hands-on exploration of core OS abstractions, mechanisms and policies in the context of the Linux kernel. Readings, lecture material, studio exercises, and lab assignments are closely integrated in an active-learning environment in which students gain experience and proficiency writing OS code, as well as tracing and evaluating OS operations via user-level programs and kernel-level monitoring tools. Topics include: system calls, interrupt handling, kernel modules, concurrency and synchronization, proportional and priority-based scheduling of processes and threads, I/O facilities, memory management, virtual memory, device management, and file system organization. Prerequisite: CSE 361S.

Credit 3 units. EN: BME T, TU

E81 CSE 425S Programming Systems and Languages

A systematic study of the principles, concepts and mechanisms of computer programming languages: their syntax, semantics and pragmatics; the processing and interpretation of computer programs; programming paradigms; and language design. Illustrative examples are selected from a variety of programming language paradigms. Prerequisites: CSE 332S.

Credit 3 units. EN: BME T, TU

E81 CSE 427S Cloud Computing with Big Data Applications

This course provides a comprehensive introduction to applied parallel computing using the MapReduce programming model facilitating large-scale data management and processing. There will be an emphasis on hands-on experience working with the Hadoop architecture, an open-source software framework written in Java for distributed storage and processing of very large data sets on computer clusters. Further, we will make use of related big data technologies from the Hadoop ecosystem of tools, such as Hive, Impala, and Pig in developing analytics and solving problems faced by enterprises today. Prerequisites: CSE 131, CSE 247, and CSE 330.

Credit 3 units. EN: BME T, TU

E81 CSE 431S Translation of Computer Languages

The theory of language recognition and translation is introduced in support of compiler construction for modern programming languages. Topics include syntactic and semantic analysis, symbol table management, code generation, and runtime libraries. A variety of parsing methods is covered, including top-down and bottom-up. Machine problems culminate in the course project, for which students construct a working compiler. Prerequisites: CSE 240 and CSE 247.

Credit 3 units. EN: BME T, TU

E81 CSE 433R Seminar: Capture The Flag (CTF) Studio

This course provides a collaborative studio space for hands-on practice solving security-relevant puzzles in "Capture The Flag" (CTF) format. Students will engage CTF challenges individually and in teams, and online CTF resources requiring (free) account signup may be used. Students will be encouraged to attempt challenges commensurate with their ability, but no prior CTF experience or security knowledge is assumed. The goal of the course is to build skills in the fundamentals of security analysis, including usage of the Linux command line and console-based security tools, creativity in applying theoretical knowledge to practical challenges, and confidence in approaching under-specified problems. Prerequisite/corequisite: CSE 433S or equivalent.

Credit 1 unit.

E81 CSE 433S Introduction to Computer Security

Secure computing requires the secure design, implementation, and use of systems and algorithms across many areas of computer science. Fundamentals of secure computing such as trust models and cryptography will lay the groundwork for studying key topics in the security of systems, networking, web design, machine learning algorithms, mobile applications, and physical devices. Human factors, privacy, and the law will also be considered. Hands-on practice exploring vulnerabilities and defenses using Linux, C, and Python in studios and lab assignments is a key component of the course. Prerequisites: CSE 247 and either CSE 361 or CSE 332.

Credit 3 units. EN: TU

E81 CSE 434S Reverse Engineering and Malware Analysis

This course will focus on reverse engineering and malware analysis techniques. Reverse engineering -- the process of deconstructing an object to reveal its design and architecture -- is an essential skill in the information security community. Although hackers often use reverse engineering tools to discover and exploit vulnerabilities, security analysts and researchers must use reverse engineering techniques to find what a specific malware does, how it does it, and how it got into the system. In this course, we will explore reverse engineering techniques and tools, focusing on malware analysis. Students will use and write software during in-class studios and homework assignments to illustrate mastery of the material. Prerequisite: CSE 361S.

Credit 3 units. EN: TU

E81 CSE 437R Technical Interviewing

Students will study, give, and receive technical interviews in this seminar course. The focus will be on improving student performance in a technical interview setting, with the goal of making our students as comfortable and agile as possible with technical interviews. Professionals from the local and extended Washington University community will mentor the students in this seminar.

Credit 2 units.

E81 CSE 437S Software Engineering Workshop

An introduction and exploration of concepts and issues related to large-scale software systems development. Areas of exploration include technical complexities, organization issues, and communication techniques for large-scale development. Students participate through teams emulating industrial development. The projects cover the principal system development life-cycle phases from requirements analysis, to software design, and to final implementation. Issues relating to real-time control systems, human factors, reliability, performance, operating costs, maintainability and others are addressed and resolved in a reasonable manner. Prerequisite: junior or senior standing.

Credit 3 units. EN: BME T, TU

E81 CSE 438S Mobile Application Development

Learn how to create iOS apps in the Swift programming language. This course covers a variety of topics in the development of modern mobile applications, with a focus on hands-on projects. Students will create multiple fully-functional apps from scratch. The course emphasizes object-oriented design patterns and real-world development techniques. Time is provided at the end of the course for students to work on a project of their own interest. Prerequisite: CSE 247.

Credit 3 units. EN: BME T, TU

E81 CSE 439S Mobile Application Development II

In this course, students will work in groups to design, develop, test, publish, and market an iOS mobile application. Throughout the semester, students will operate in different roles on a team, serving as lead developer, tester, and project manager. Topics include how to publish a mobile application on an app store, APIs and tools for testing and debugging, and popular cloud-based SDKs used by developers. This course requires completion of the iOS version of CSE 438 Mobile Application Development or the appropriate background knowledge of the iOS platform.

Credit 3 units. EN: TU

E81 CSE 442T Introduction to Cryptography

This course is an introduction to modern cryptography, with an emphasis on its theoretical foundations. Topics will include one-way functions, pseudorandom generators, public key encryption, digital signatures, and zero-knowledge proofs. Prerequisites: CSE 240 and CSE 247.

Credit 3 units. EN: TU

E81 CSE 450A Video Game Programming

This course teaches the core aspects of a video game developer's toolkit. Students work in groups and with a large game software engine to create and playtest a full-featured video game. Students will explore topics around the design of games through analysis of current games. Students have the opportunity to explore additional topics including graphics, artificial intelligence, networking, physics, and user interface design through their game project. Prerequisite: CSE 247.

Credit 3 units. EN: BME T, TU

E81 CSE 451A Video Game Programming II

This course is a continuation of CSE 450A Video Game Programming I. Students will work in groups and with a large game software engine to make a full-featured video game. Students will have the opportunity to work on topics in graphics, artificial intelligence, networking, physics, user interface design, and other topics. Prerequisites: CSE 450A and permission of instructor.

Credit 3 units. EN: TU

E81 CSE 452A Computer Graphics

Introduction to computer graphics. The course covers fundamental concepts, data structures and algorithms related to the construction, display and manipulation of three-dimensional objects. Topics include scan-conversion, basic image processing, transformations, scene graphs, camera projections, local and global rendering, fractals, and parametric curves and surfaces. Students develop interactive graphics programs using C++ language. Prerequisites: CSE 332S and Math 309.

Credit 3 units. EN: BME T, TU

E81 CSE 457A Introduction to Visualization

Disciplines such as medicine, business, science, and government are producing enormous amounts of data with increasing volume and complexity. In this course, students will study the principles for transforming abstract data into useful information visualizations. They will learn about the state of the art in visualization research and development and gain hands-on experience with designing and developing interactive visualization tools for the web. They will also learn how to critique existing visualizations and how to evaluate the systems they build. Topics include design, data mapping, visual perception, and interaction. Prerequisite: CSE 330S.

Credit 3 units. EN: TU

E81 CSE 460T Switching Theory

Advanced topics in switching theory as employed in the synthesis, analysis and design of information processing systems. Combinational techniques: minimization, multiple output networks, state identification and fault detection, hazards, testability and design for test are examined. Sequential techniques: synchronous circuits, machine minimization, optimal state assignment, asynchronous circuits, and built-in self-test techniques. Prerequisite: CSE 260M.

Credit 3 units. EN: BME T, TU

E81 CSE 462M Computer Systems Design

Introduction to modern design practices, including FPGA and PCB design methodologies. Student teams use Xilinx Vivado for HDL-based FPGA design and simulation; they also perform schematic capture, PCB layout, fabrication, and testing of the hardware portion of a selected computation system. The software portion of the project uses Microsoft Visual Studio to develop a user interface and any additional support software required to demonstrate final projects to the faculty during finals week. Prerequisites: CSE 361S and 362M from Washington University in St. Louis or permission of the instructor.

Credit 3 units. EN: TU

E81 CSE 465M Digital Systems Laboratory

Hardware/software co-design; processor interfacing; procedures for reliable digital design, both combinational and sequential; understanding manufacturers' specifications; use of test equipment. Several single-period laboratory exercises, several design projects, and application of microprocessors in digital design. One lecture and one laboratory period a week. Prerequisites: ESE 260.

Same as E35 ESE 465

Credit 3 units. EN: BME T, TU

E81 CSE 467S Embedded Computing Systems

This course introduces the issues, challenges, and methods for designing embedded computing systems -- systems designed to serve a particular application and which incorporate the use of digital processing devices. Examples of embedded systems include PDAs, cellular phones, appliances, game consoles, automobiles, and iPods. Emphasis is given to aspects of design that are distinct to embedded systems. The course examines hardware, software, and system-level design. Hardware topics include microcontrollers, digital signal processors, memory hierarchy, and I/O. Software issues include languages, run-time environments, and program analysis. System-level topics include real-time operating systems, scheduling, power management, and wireless sensor networks. Students will perform a course project on a real wireless sensor network testbed. Prerequisite: CSE 361S.

Credit 3 units. EN: TU

E81 CSE 468T Introduction to Quantum Computing

This course introduces students to quantum computing, which leverages the effects of quantum-mechanical phenomena to solve problems. The course begins with material from physics that demonstrates the presence of quantum effects. Mathematical abstractions of quantum gates are studied with the goal of developing the skills needed to reason about existing quantum circuits and to develop new quantum circuits as required to solve problems. Students will develop a quantum-computer simulator and make use of open simulators as well as actual devices that can realize quantum circuits on the internet. Prerequisites: CSE247, Math 309, and either Math 3200 or ESE 326.

Credit 3 units. EN: TU

E81 CSE 469S Security of the Internet of Things and Embedded System Security

This course presents a deep dive into the emerging world of the "internet of things" from a cybersecurity perspective. With billions of internet-enabled devices projected to impact every nook and cranny of modern existence, the concomitant security challenge portends to become dazzlingly complex. Students will learn the fundamentals of internet of things architecture and operations from a layered perspective and focus on identifying, assessing, and mitigating the threats and vulnerabilities therein. Through a blend of lecture and hands-on studios, students will gain proficiency in the range of approaches, methods, and techniques required to address embedded systems security and secure the internet of things using actual devices from both hardware and software perspectives and across a range of applications.

Credit 3 units. EN: TU

E81 CSE 473S Introduction to Computer Networks

A broad overview of computer networking. Topics include history, protocols, Hyper Text Transfer Protocol (HTTP), File Transfer Protocol (FTP), Simple Mail Transfer Protocol (SMTP), Domain Name System (DNS), peer-to-peer (P2P), transport layer design issues, transport layer protocols, Transmission Control Protocol (TCP), User Datagram Protocol (UDP), TCP congestion control, network layer, Internet Protocol version 4 (IPv4), Internet Control Message Protocol (ICMP), Internet Protocol version 6 (IPv6), routing algorithms, routing protocols, Open Shortest Path First (OSPF), Routing Information Protocol (RIP), Border Gateway Protocol (BGP), datalink layer and local area networks carrier sense multiple access with collision detection (CSMA/CD), Ethernet, virtual local area networks (VLANs), Point-to-Point Protocol (PPP), Multi-Protocol Label Switching, wireless and mobile networks, multimedia networking, security in computer networks, cryptography, and network management. Prerequisite: CSE 247; CSE 132 is suggested but not required.

Credit 3 units. EN: BME T, TU

E81 CSE 497 Senior Project I

Implementation of a substantive project on an individual basis, involving one or more major areas in computer science. Problems pursued under this framework may be predominantly analytical, involving the exploration and extension of theoretical structures, or they may pivot around the design/development of solutions for particular applications drawn from areas throughout the University and/or the community. In either case, the project serves as a focal point for crystallizing the concepts, techniques, and methodologies encountered throughout the curriculum. Students intending to take CSE 497-498 must submit a project proposal form (PDF) (<https://cse.wustl.edu/undergraduate/PublishingImages/Pages/undergraduate-research/Independent%20Study%20Form%20400.pdf>) for approval by the department during the spring semester of the junior year. Prerequisite: senior standing.

Credit 3 units.

E81 CSE 498 Senior Project II

Implementation of a substantive project on an individual basis, involving one or more major areas in computer science. Problems pursued under this framework may be predominantly analytical, involving the exploration and extension of theoretical structures, or they may pivot around the design/development of solutions for particular applications drawn from areas throughout the University and/or the community. In either case, the project serves as a focal point for crystallizing the concepts, techniques, and methodologies encountered throughout the curriculum. Students intending to take CSE 497-498 must submit a project proposal form (PDF) (<https://cse.wustl.edu/undergraduate/PublishingImages/Pages/undergraduate-research/Independent%20Study%20Form%20400.pdf>) for approval by the department during the spring semester of the junior year. Prerequisite: senior standing.

Credit 3 units.

E81 CSE 499 Undergraduate Honors Thesis

Working closely with a faculty member, the student investigates an original idea (algorithm, model technique, etc.), including a study of its possible implications, its potential application and its relationship to previous related work reported in the

literature. Contributions and results from this investigation are synthesized and compiled into a publication-quality research paper presenting the new idea. Prerequisites: a strong academic record and permission of instructor.

Credit 3 units.

E81 CSE 500 Independent Study

Proposal form can be located at <https://cse.wustl.edu/undergraduate/PublishingImages/Pages/undergraduate-research/Independent%20Study%20Form%20400.pdf>
Credit variable, maximum 3 units.

E81 CSE 501N Introduction to Computer Science

An introduction to software concepts and implementation, emphasizing problem solving through abstraction and decomposition. Introduces processes and algorithms, procedural abstraction, data abstraction, encapsulation, and object-oriented programming. Recursion, iteration, and simple data structures are covered. Concepts and skills are mastered through programming projects, many of which employ graphics to enhance conceptual understanding. Java, an object-oriented programming language, is the vehicle of exploration. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisites: Comfort with algebra and geometry at the high school level is assumed. Patience, good planning, and organization will promote success. This course assumes no prior experience with programming.

Same as E81 CSE 131

Credit 3 units. BU: SCI EN: TU

E81 CSE 502N Data Structures and Algorithms

This course involves the study of fundamental algorithms, data structures, and their effective use in a variety of applications. It emphasizes the importance of data structure choice and implementation for obtaining the most efficient algorithm for solving a given problem. A key component of this course is worst-case asymptotic analysis, which provides a quick and simple method for determining the scalability and effectiveness of an algorithm. Prerequisite: CSE 131 and fluency with summations, derivatives, and proofs by induction.

Same as E81 CSE 247

Credit 3 units. EN: TU

E81 CSE 503S Rapid Prototype Development and Creative Programming

This course uses web development as a vehicle for developing skills in rapid prototyping. Students acquire the skills to build a Linux web server in Apache, to write a website from scratch in PHP, to run an SQL database, to perform scripting in Python, to employ various web frameworks, and to develop modern web applications in client-side and server-side JavaScript. The course culminates with a creative project in which students are able to synthesize the course material into a project of their own interest. The course implements an interactive studio format: after the formal presentation of a topic, students develop a related project under the supervision of the instructor. Prerequisite: CSE 131.

Same as E81 CSE 330S

Credit 3 units. EN: BME T, TU

E81 CSE 504N Object-Oriented Software Development

Laboratory

Intensive focus on practical aspects of designing, implementing and debugging software, using object-oriented, procedural, and generic programming techniques. The course emphasizes familiarity and proficiency with a wide range of C++ language features through hands-on practice completing studio exercises and lab assignments, supplemented with readings and summary presentations for each session. Prerequisites: CSE 131 and CSE 247

Same as E81 CSE 332S

Credit 3 units. EN: BME T, TU

E81 CSE 505N Introduction to Digital Logic and Computer Design

Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture, hardware description languages, simulation); design of simple processors and memory subsystems; program execution in simple processors; basic techniques for enhancing processor performance; configurable logic devices. Prerequisite: CSE 131. Same as E81 CSE 260M

Credit 3 units. EN: TU

E81 CSE 507A Technology Entrepreneurship

This is a course for students who plan to be or to work with entrepreneurs. An entrepreneurial mindset is needed to create or grow economically viable enterprises, be they new companies, new groups within companies, or new university laboratories. This course aims to cultivate an entrepreneurial perspective, with particular emphasis on information technology (IT)-related activities. The course is jointly offered for business and CSE students, allowing for acculturation between these disciplines. In addition to an introductory treatment of business and technology fundamentals, course topics will include business ethics, opportunity assessment, team formation, financing, intellectual property, and technology transfer. The course will feature significant participant and guest instruction from experienced practitioners.

Credit 3 units.

E81 CSE 511A Introduction to Artificial Intelligence

The discipline of artificial intelligence (AI) is concerned with building systems that think and act like humans or rationally on some absolute scale. This course is an introduction to the field, with special emphasis on sound modern methods. The topics include knowledge representation, problem solving via search, game playing, logical and probabilistic reasoning, planning, dynamic programming, and reinforcement learning. Programming exercises concretize the key methods. The course targets graduate students and advanced undergraduates. Evaluation is based on written and programming assignments, a midterm exam and a final exam. Prerequisites: CSE 247, ESE 326, Math 233.

Credit 3 units. EN: TU

E81 CSE 513T Theory of Artificial Intelligence and Machine Learning

Mathematical foundations for Artificial Intelligence and Machine Learning. An introduction to the PAC-Semantics ("Probably Approximately Correct") as a common semantics for knowledge obtained from learning and declarative sources, and the computational problems underlying the acquisition and processing of such knowledge. We emphasize the design and analysis of efficient algorithms for these problems, and examine for which representations these problems are known or believed to be tractable. Prerequisite: CSE 347.

Credit 3 units. EN: BME T, TU

E81 CSE 514A Data Mining

With the vast advancement in science and technology, data acquisition in large quantities are routinely done in many fields. Examples of large data include various types of data on the internet, high-throughput sequencing data in biology and medicine, extraterrestrial data from telescopes in astronomy, and images from surveillance camera in security. Mining a large amount of data through data mining has become an effective means to extracting knowledge from data. This course introduces the basic concepts and methods for data mining and provides hands-on experience for processing, analyzing and modeling structured and unstructured data. Homework problems, examines and programming assignments will be administrated throughout the course to enhance the learning. Prerequisites: CSE 247, ESE 326 (or Math 3200), Math 233

Credit 3 units. EN: BME T, TU

E81 CSE 515T Bayesian Methods in Machine Learning

This course will cover machine learning from a Bayesian probabilistic perspective. Bayesian probability allows us to model and reason about all types of uncertainty. The result is a powerful, consistent framework for approaching many problems that arise in machine learning, including parameter estimation, model comparison, and decision making. We will begin with a high-level introduction to Bayesian inference, then proceed to cover more-advanced topics. These will include inference techniques (exact, MAP, sampling methods, the Laplace approximation, etc.), Bayesian decision theory, Bayesian model comparison, Bayesian nonparametrics, and Bayesian optimization. Prerequisites: CSE 417T, ESE 326

Credit 3 units. EN: BME T, TU

E81 CSE 516A Multi-Agent Systems

This course introduces the fundamental techniques and concepts needed to study multi-agent systems, in which multiple autonomous entities with different information sets and goals interact. We will study algorithmic, mathematical, and game-theoretic foundations, and how these foundations can help us understand and design systems ranging from robot teams to online markets to social computing platforms. Topics covered may include game theory, distributed optimization, multi-agent learning and decision-making, preference elicitation and aggregation, mechanism design, and incentives in social computing systems. Prerequisites: CSE 347 (may be taken concurrently), ESE 326 (or Math 3200), and Math 233 or equivalents. Some prior exposure to artificial intelligence, machine learning, game theory, and microeconomics may be helpful, but is not required.

Credit 3 units. EN: BME T, TU

E81 CSE 517A Machine Learning

This course assumes a basic understanding of machine learning and covers advanced topics at the frontier of the field in-depth. Topics to be covered include kernel methods (support vector machines, Gaussian processes), neural networks (deep learning), and unsupervised learning. Depending on developments in the field, the course will also cover some advanced topics, which may include learning from structured data, active learning, and practical machine learning (feature selection, dimensionality reduction). Prerequisites: CSE 417T. Credit 3 units. EN: TU

E81 CSE 518A Human-in-the-Loop Computation

This course is an exploration of the opportunities and challenges of human-in-the-loop computation, an emerging field that examines how humans and computers can work together to solve problems neither can yet solve alone. We will explore ways in which techniques from machine learning, game theory, optimization, online behavioral social science, and human-computer interactions can be used to model and analyze human-in-the-loop systems such as crowdsourcing markets, prediction markets, and user-generated content platforms. We will also look into recent developments in the interactions between humans and AIs, such as learning with the presence of strategic behavior and ethical issues in AI systems. Prerequisites: CSE 247, ESE 326, Math 233, and Math 309.

Credit 3 units. EN: TU

E81 CSE 519T Advanced Machine Learning

This course provides a close look at advanced machine learning algorithms -- their theoretical guarantees (computational learning theory) and tricks to make them work in practice. In addition, this course focuses on more specialized learning settings, including unsupervised learning, semi-supervised learning, domain adaptation, multi-task learning, structured prediction, metric learning and learning of data representations. Learning approaches may include graphical models, non-parametric Bayesian statistics, and technical topics such as sampling, approximate inference and non-linear function optimization. Mathematical maturity and general familiarity of machine learning is required. Prerequisites: CSE 511A, CSE 517A, and CSE 571A

Credit 3 units. EN: TU

E81 CSE 520S Real-Time Systems

This course covers software systems and network technologies for real-time applications such as automobiles, avionics, industrial automation and Internet of Things. Topics include real-time scheduling, real-time operating systems and middleware, Quality of Service, industrial networks and real-time cloud computing. Prerequisite: CSE 361S

Credit 3 units. EN: BME T, TU

E81 CSE 521S Wireless Sensor Networks

Dense collections of smart sensors networked to form self-configuring pervasive computing systems provide a basis for a new computing paradigm that challenges many classical approaches to distributed computing. Naming, wireless networking protocols, data management, and approaches to dependability, real-time, security, and middleware services all fundamentally change when confronted with this new environment. Embedded sensor networks and pervasive computing are among the most exciting research areas with many open research questions. This class will study a large

number of research papers that deal with various aspects of wireless sensor networks. Students will perform a project on a real wireless sensor network comprised of tiny devices each consisted of sensors, a radio transceiver, and a microcontroller.

Prerequisites: CSE 361S.

Credit 3 units. EN: BME T, TU

E81 CSE 522S Advanced Operating Systems

This course offers an in-depth hands-on exploration of core OS abstractions, mechanisms and policies, with an increasing focus on understanding and evaluating their behaviors and interactions. Readings, lecture material, studio exercises, and lab assignments are closely integrated in an active-learning environment in which students gain experience and proficiency writing, tracing, and evaluating user-space and kernel-space code. Topics include: inter-process communication, real-time systems, memory forensics, file-system forensics, timing forensics, process and thread forensics, hypervisor forensics, and managing internal or external causes of anomalous behavior. Prerequisite: CSE 422S.

Credit 3 units. EN: BME T, TU

E81 CSE 523S Systems Security

This course examines the intersection between computer design and information security. While performance and efficiency in digital systems have improved markedly in recent decades, computer security has worsened overall in this time frame. To understand why, we will explore the role that design choices play in the security characteristics of modern computer and network systems. Students will use and write software to illustrate mastery of the material. Projects will include identifying security vulnerabilities, exploiting vulnerabilities, and detecting and defending against exploits. Prerequisite: CSE 361S.

Credit 3 units. EN: BME T, TU

E81 CSE 530S Database Management Systems

A study of data models and the database management systems that support these data models. The design theory for databases is developed and various tools are utilized to apply the theory. General query languages are studied and techniques for query optimization are investigated. Integrity and security requirements are studied in the context of concurrent operations on a database, where the database may be distributed over one or more locations. The unique requirements for engineering design databases, image databases, and long transaction systems are analyzed. Prerequisite: CSE 247.

Credit 3 units.

E81 CSE 532S Advanced Multiparadigm Software Development

Intensive focus on advanced design and implementation of concurrent and distributed system software in C++. Topics covered include concurrency and synchronization features and software architecture patterns. Prerequisites: CSE 332S or graduate standing and strong familiarity with C++; and CSE 422S.

Credit 3 units. EN: BME T, TU

E81 CSE 534A Large-Scale Optimization for Data Science

Large-scale optimization is an essential component of modern data science, artificial intelligence, and machine learning. This graduate-level course rigorously introduces optimization methods that are suitable for large-scale problems arising in

these areas. Students will learn several algorithms suitable for both smooth and nonsmooth optimization, including gradient methods, proximal methods, mirror descent, Nesterov's acceleration, ADMM, quasi-Newton methods, stochastic optimization, variance reduction, and distributed optimization. Throughout the class, we will discuss the efficacy of these methods in concrete data science problems, under appropriate statistical models. Students will be required to program in Python or MATLAB. Prerequisites: CSE 247, Math 309, Math 3200 or ESE 326.

Credit 3 units. EN: TU

E81 CSE 538T Modeling and Performance Evaluation of Computer Systems

Modern computing systems consist of multiple interconnected components that all influence performance. The focus of this course is on developing modeling tools aimed at understanding how to design and provision such systems to meet certain performance or efficiency targets and the trade-offs involved. The course covers Markov chains and their applications to simple queues, and it proceeds to explore more complex systems, including server farms and how to optimize their performance through scheduling and task assignment policies. The course includes a brief review of the necessary probability and mathematical concepts. Prerequisite: ESE 326.

Credit 3 units. EN: BME T, TU

E81 CSE 539S Concepts in Multicore Computing

Nowadays, the vast majority of computer systems are built using multicore processor chips. This fundamental shift in hardware design impacts all areas of computer science - one must write parallel programs in order to unlock the computational power provided by modern hardware. The goal of this course is to study concepts in multicore computing. We will examine the implications of the multicore hardware design, discuss challenges in writing high performance software, and study emerging technologies relevant to developing software for multicore systems. Topics include memory hierarchy, cache coherence protocol, memory models, scheduling, high-level parallel language models, concurrent programming (synchronization and concurrent data structures), algorithms for debugging parallel software, and performance analysis. Prerequisites: CSE 247 and CSE 361S.

Credit 3 units. EN: BME T, TU

E81 CSE 541T Advanced Algorithms

Provides a broad coverage of fundamental algorithm design techniques, with a focus on developing efficient algorithms for solving combinatorial and optimization problems. The topics covered include the review of greedy algorithms, dynamic programming, NP-completeness, approximation algorithms, the use of linear and convex programming for approximation, and online algorithms. Throughout this course, there is an emphasis on correctness proofs and the ability to apply the techniques taught to design efficient algorithms for problems from a wide variety of application areas. Prerequisite: CSE 347.

Credit 3 units. EN: BME T, TU

E81 CSE 543S Advanced Secure Software Engineering

The aim of this course is to provide students with broader and deeper knowledge as well as hands-on experience in understanding security techniques and methods needed in software development. Students complete an independent research project which will involve synthesizing multiple software security techniques and applying them to an actual software program or system.

Credit 3 units. EN: TU

E81 CSE 543T Algorithms for Nonlinear Optimization

The course will provide an in-depth coverage of modern algorithms for the numerical solution of multidimensional optimization problems. Unconstrained optimization techniques including Gradient methods, Newton's methods, Quasi-Newton methods, and conjugate methods will be introduced. The emphasis is on constrained optimization techniques: Lagrange theory, Lagrangian methods, penalty methods, sequential quadratic programming, primal-dual methods, duality theory, nondifferentiable dual methods, and decomposition methods. The course will also discuss applications in engineering systems and use of state-of-the-art computer codes. Special topics may include large-scale systems, parallel optimization, and convex optimization. Prerequisites: Calculus I and Math 309.

Credit 3 units.

E81 CSE 544A Special Topics in Artificial Intelligence

The material for this course varies among offerings, but this course generally covers advanced or specialized topics in artificial intelligence.

Credit 3 units. EN: TU

E81 CSE 544T Special Topics in Computer Science Theory

The material for this course varies among offerings, but this course generally covers advanced or specialized topics in computer science theory.

Credit 3 units. EN: BME T, TU

E81 CSE 546T Computational Geometry

Computational geometry is the algorithmic study of problems that involve geometric shapes such as points, lines, and polygons. Such problems appear in computer graphics, vision, robotics, animation, visualization, molecular biology, and geographic information systems. This course covers data structures that are unique to geometric computing, such as convex hull, Voronoi diagram, Delaunay triangulation, arrangement, range searching, KD-trees, and segment trees. Also covered are algorithms for polygon triangulation, path planning, and the art gallery problem. Prerequisite: CSE 347.

Credit 3 units.

E81 CSE 547T Introduction to Formal Languages and Automata

An introduction to the theory of computation, with emphasis on the relationship between formal models of computation and the computational problems solvable by those models. Specifically, this course covers finite automata and regular languages; Turing machines and computability; and basic measures of computational complexity and the corresponding complexity classes. Prerequisites: CSE 240 and CSE 247.

Credit 3 units.

E81 CSE 549T Theory of Parallel Systems

The course covers various aspects of parallel programming such as algorithms, schedulers and systems from a theoretical perspective. We will cover both classic and recent results in parallel computing. Topics include parallel algorithms and analysis in the work/span model, scheduling algorithms, external memory algorithms and their analysis, cache-coherence protocols, etc. The focus will be on design and analysis.

Prerequisite: CSE 247.

Credit 3 units. EN: BME T, TU

E81 CSE 554A Geometric Computing for Biomedicine

With the advance of imaging technologies deployed in medicine, engineering and science, there is a rapidly increasing amount of spatial data sets (images, volumes, point clouds, etc.) that need to be processed, visualized, and analyzed. This course will focus on a number of geometry-related computing problems that are essential in the knowledge discovery process in various spatial-data-driven biomedical applications. These problems include visualization, segmentation, mesh construction and processing, shape representation and analysis. The course consists of lectures that cover theories and algorithms, and a series of hands-on programming projects using real-world data collected by various imaging techniques (CT, MRI, electron cryo-microscopy, etc.). Prerequisite: CSE332 (or proficiency in programming in C++ or Java or Python) and CSE247.

Credit 3 units. EN: BME T, TU

E81 CSE 555A Computational Photography

Computational Photography describes the convergence of computer graphics, computer vision, and the internet with photography. Its goal is to overcome the limitations of traditional photography using computational techniques to enhance the way we capture, manipulate and interact with visual media. In this course we study many interesting, recent image-based algorithms and implement them to the degree that is possible. Topics may include: cameras and image formation, human visual perception, image processing (filtering, pyramids), image blending and compositing, image retargeting, texture synthesis and transfer, image completion/inpainting, super-resolution, deblurring, denoising, image-based lighting and rendering, high dynamic range, depth and defocus, flash/no flash photography, coded aperture photography, single/multiview reconstruction, photo quality assessment, non photorealistic rendering, modeling and synthesis using internet data, and others. Prerequisites: CSE 452A, CSE 554A, or CSE 559A.

Credit 3 units. EN: BME T, TU

E81 CSE 556A Human-Computer Interaction Methods

An introduction to user centered design processes. The course covers a variety of HCI techniques for use at different stages in the software development cycle, including techniques that can be used with and without users. Students will gain experience using these techniques through in-class exercises and then apply them in greater depth through a semester long interface development project. Students who enroll in this course are expected to be comfortable with building user interfaces in at least one framework and be willing to learn whatever framework is most appropriate for their project. Over the course of the semester, students will be expected to present their interface evaluation results through written reports and in class presentations. Prerequisites: 3xxS or 4xxS.

Credit 3 units. EN: BME T, TU

E81 CSE 557A Advanced Visualization

We are in an era where it is possible to have all of the world's information at our fingertips. However, the more information we can access, the more difficult it is to obtain a holistic view of the data or to determine what's important to make decisions. Computer-based visualization systems provide the opportunity to represent large or complex data visually to aid comprehension and cognition. In this course, we learn about the state-of-the-art in visualization research and gain hands-on experience with the research pipeline. We also learn how to critique existing work and how to formulate and explore sound research questions. We will cover advanced Visualization topics including User Modeling, Adaptation, Personalization, Perception, and Visual Analytics for Non-Experts. Prerequisites: CSE 457A or permission of instructor

Credit 3 units. EN: BME T, TU

E81 CSE 559A Computer Vision

This course introduces the fundamentals of designing computer vision systems: that can "look at" images and videos and reason about the physical objects and scenes they represent. Topics include image restoration and enhancement; estimation of color, shape, geometry, and motion from images; and image segmentation, recognition, and classification. The focus of the course will be on the mathematical tools and intuition underlying algorithms for these tasks: models for the physics and geometry of image formation, and statistical and machine learning-based techniques for inference. Prerequisites: Math 309 or ESE 318 or equivalent; Math 3200 or ESE 326 or equivalent; and CSE 247 or equivalent

Credit 3 units. EN: BME T, TU

E81 CSE 560M Computer Systems Architecture I

An exploration of the central issues in computer architecture: instruction set design, addressing and register set design, control unit design, microprogramming, memory hierarchies (cache and main memories, mass storage, virtual memory), pipelining, and bus organization. The course emphasizes understanding the performance implications of design choices, using architecture modeling and evaluation using VHDL and/or instruction set simulation. Prerequisites: CSE 361S and CSE 260M.

Credit 3 units. EN: BME T, TU

E81 CSE 566S High Performance Computer Systems

Many applications make substantial performance demands upon the computer systems upon which those applications are deployed. In this context, performance is frequently multidimensional, including resource efficiency, power, execution speed (which can be quantified via elapsed run time, data throughput, or latency), and so on. Modern computing platforms exploit parallelism and architectural diversity (e.g., co-processors such as graphics engines and/or reconfigurable logic) to achieve the desired performance goals. This course addresses the practical aspects of achieving high performance on modern computing platforms. This includes questions ranging from how the computing platform is designed to how are applications and algorithms expressed to exploit the platform's properties. Particular attention is given to the role of application development tools. Prerequisite: familiarity with software development in Linux preferred, graduate standing or permission of instructor.

Credit 3 units. EN: BME T, TU

E81 CSE 567M Computer Systems Analysis

A comprehensive course on performance analysis techniques. The topics include common mistakes, selection of techniques and metrics, summarizing measured data, comparing systems using random data, simple linear regression models, other regression models, experimental designs, 2^{**k} experimental designs, factorial designs with replication, fractional factorial designs, one factor experiments, two factor full factorial design w/o replications, two factor full factorial designs with replications, general full factorial designs, introduction to queueing theory, analysis of single queues, queueing networks, operational laws, mean-value analysis, time series analysis, heavy tailed distributions, self-similar processes, long-range dependence, random number generation, analysis of simulation results, and art of data presentation. Prerequisites: CSE 260M.

Credit 3 units. EN: BME T, TU

E81 CSE 569S Advanced IoT, Real-Time, and Embedded Systems Security

The aim of this course is to provide students with knowledge and hands-on experience in understanding the security techniques and methods needed for IoT, real-time, and embedded systems. Students complete an independent research project which will involve synthesizing multiple security techniques and applying them to an actual IoT, real-time, or embedded system or device.

Credit 3 units. EN: TU

E81 CSE 570S Recent Advances in Networking

This course covers the latest advances in networking. The topics include networking trends, data center network topologies, data center Ethernet, carrier IP, Multiprotocol Label Switching (MPLS), carrier Ethernet, virtual bridging, LAN extension and virtualization using Layer 3 protocols, virtual routing protocols, the "internet of things," data link layer and management protocols for the internet of things, networking layer protocols for the internet of things, 6LoWPAN, RPL, messaging protocols for the internet of things, MQTT, OpenFlow, software-defined networking (SDN) network function virtualization (NFV), big data, networking issues for big data, network configuration, and data modeling, NETCONF, YIN, YANG, BEEP, and UML.

Prerequisite: CSE 473S or equivalent.

Credit 3 units. EN: BME T, TU

E81 CSE 571S Network Security

This course covers principles and techniques in securing computer networks. Real world examples will be used to illustrate the rationales behind various security designs. There are three main components in the course, preliminary cryptography, network protocol security and network application security. Topics include IPSec, SSL/TLS, HTTPS, network fingerprinting, network malware, anonymous communication, and blockchain. The class project allows students to take a deep dive into a topic of choice in network security. Prerequisite: CSE 473S.

Credit 3 units. EN: BME T, TU

E81 CSE 574S Wireless and Mobile Networking

First course in wireless networking providing a comprehensive treatment of wireless data and telecommunication networks. Topics include recent trends in wireless and mobile networking, wireless coding and modulation, wireless signal propagation, IEEE 802.11a/b/g/n/ac wireless local area networks, 60 GHz millimeter wave gigabit wireless networks, vehicular wireless networks, white spaces, IEEE 802.22 regional area

networks, Bluetooth and Bluetooth Smart, wireless personal area networks, wireless protocols for the "internet of things," ZigBee, cellular networks: 1G/2G/3G, LTE, LTE-Advanced, and 5G.

Prerequisites: CSE 473S or permission of the instructor.

Credit 3 units. EN: BME T, TU

E81 CSE 581T Approximation Algorithms

Numerous optimization problems are intractable to solve optimally. The intractability of a problem could come from the problem's computational complexity, for instance the problem is NP-Hard, or other computational barriers. To cope with the inability to find an optimal algorithm, one may desire an algorithm that is guaranteed to return a solution that is comparable to the optimum. Such an algorithm is known as an approximation algorithm. Approximation algorithms are a robust way to cope with intractability, and they are widely used in practice or are used to guide the development of practical heuristics. The area of approximation algorithms has developed a vast theory, revealing the underlying structure of problems as well as their different levels of difficulty. The majority of this course will focus on fundamental results and widely applicable algorithmic and analysis techniques for approximation algorithms. Prerequisite: CSE 347.

Credit 3 units. EN: BME T, TU

E81 CSE 584A Algorithms for Biosequence Comparison

This course surveys algorithms for comparing and organizing discrete sequential data, especially nucleic acid and protein sequences. Emphasis is on tools to support search in massive biosequence databases and to perform fundamental comparison tasks such as DNA short-read alignment. Prerequisites: CSE 347 or instructor's permission. These techniques are also of interest for more general string processing and for building and mining textual databases. Algorithms are presented rigorously, including proofs of correctness and running time where feasible. Topics include classical string matching, suffix array string indices, space-efficient string indices, rapid inexact matching by filtering (including BLAST and related tools), and alignment-free algorithms. Students complete written assignments and implement advanced comparison algorithms to address problems in bioinformatics. This course does not require a biology background. Prerequisites: CSE 347 or instructor permission Revised: 2019-02-21

Credit 3 units. EN: BME T, TU

E81 CSE 585T Sparse Modeling for Imaging and Vision

Sparse modeling is at the heart of modern imaging, vision, and machine learning. It is a fascinating new area of research that seeks to develop highly effective data models. The core idea in sparse modeling theory is a novel redundant transform, where the number of transform coefficients is larger compared to the original data dimension. Together with redundancy comes an opportunity of seeking the sparsest possible representation, or the one with the fewest non-zeros. This core idea leads to a series of beautiful theoretical and practical results with many applications such as regression, prediction, restoration, extrapolation, compression, detection, and recognition. In this course, we will explore sparse modeling by covering theoretical as well as algorithmic aspects with applications in computational imaging and computer vision. Prerequisites: ESE 318, Math 233, Math 309, and Math 429, or equivalents. Coding with MATLAB or Python.

Credit 3 units. EN: BME T, TU

E81 CSE 586A Analysis of Imaging Data

This course focuses on an in-depth study of advanced topics and interests in image data analysis. Students will learn about hardcore imaging techniques and gain the mathematical fundamentals needed to build their own models for effective problem solving. Topics of deformable image registration, numerical analysis, probabilistic modeling, data dimensionality reduction, and convolutional neural networks for image segmentation will be covered. The main focus might change from semester to semester. Prerequisites: Math 309, ESE 326, and CSE 247.

Credit 3 units.

E81 CSE 587A Algorithms for Computational Biology

This course is a survey of algorithms and mathematical methods in biological sequence analysis (with a strong emphasis on probabilistic methods) and systems biology. Sequence analysis topics include introduction to probability, probabilistic inference in missing data problems, hidden Markov models (HMMs), profile HMMs, sequence alignment, and identification of transcription-factor binding sites. Systems biology topics include discovery of gene regulatory networks, quantitative modeling of gene regulatory networks, synthetic biology, and (in some years) quantitative modeling of metabolism. Prerequisites: CSE 131 or CSE 501N.

Credit 3 units. EN: TU

E81 CSE 591 Introduction to Graduate Study in CSE

Introduces students to the different areas of research conducted in the department. Provides an introduction to research skills, including literature review, problem formulation, presentation, and research ethics. Lecture and discussion are supplemented by exercises in the different research areas and in critical reading, idea generation, and proposal writing.

Credit 3 units.

E81 CSE 598 Master's Project

Students electing the project option for their master's degree perform their project work under this course. In order to successfully complete this course, students must defend their project before a three-person committee and present a 2-3 page extended abstract. Prerequisite: permission of adviser and submission of a research proposal form.

Credit variable, maximum 6 units.

E81 CSE 599 Master's Research

Students electing the thesis option for their master's degree perform their thesis research under this course. In order to successfully complete a master's thesis, students must enroll in 6 units of this course typically over the course of two consecutive semesters, produce a written thesis, and defend the thesis before a three-person committee. Prerequisite: permission of adviser and submission of a research proposal form.

Credit variable, maximum 6 units.

Bachelor of Science in Computer Engineering

Computer engineering encompasses studies of hardware, software, and systems issues that arise in the design, development, and application of computer systems. Computer engineers are particularly well suited to address the particular challenges that exist as computing systems interact with the real, physical world. This includes sensing, actuation, timing, security, and computing systems with widely varying form factors, ranging from servers to mobile devices to the "internet of things." The degree requires 120 units including core courses, technical electives, a capstone course, and common studies.

The Bachelor of Science in Computer Engineering degree is jointly administered by the Department of Computer Science and Engineering and the Department of Electrical and Systems Engineering.

Students working toward a Bachelor of Science in Computer Engineering degree must meet all requirements for an engineering degree (p. 1134) from the McKelvey School of Engineering. Required courses and technical electives cannot be taken on a pass/fail basis.

- **Core Requirements:**

The following courses are required of all computer engineering students:

Code	Title	Units
ESE 105	Introduction to Electrical and Systems Engineering	3
CSE 131	Introduction to Computer Science	3
CSE 132	Introduction to Computer Engineering	3
ESE 230	Introduction to Electrical and Electronic Circuits	4
ESE 232	Introduction to Electronic Circuits	3
CSE 247	Data Structures and Algorithms	3
CSE 260M	Introduction to Digital Logic and Computer Design	3
or ESE 260	Introduction to Digital Logic and Computer Design	
ESE 326	Probability and Statistics for Engineering	3
CSE 361S	Introduction to Systems Software	3
CSE 362M	Computer Architecture	3
Total Units		31

Each of these core courses must be passed with a grade of C- or better.

- **Technical Elective Requirements:**

At least 21 units of technical electives, drawn from either of the following:

- CSE courses with the suffix S, M, T or A; CSE 347
- ESE courses at the 300 level or higher; ESE 205

The above can include courses at the graduate level; however, they must still meet one of the two criteria above. Up to 6 units of independent study (CSE 400E, CSE 497-CSE 499, ESE 400, ESE 497) can count toward technical electives. There is no limit as to how many independent study courses can count toward the general 120 units.

• Capstone Requirement:

The capstone requirement can be met by taking either CSE 462M or ESE 498.

• Common Studies Requirements:

Code	Title	Units
Math 131	Calculus I	3
Math 132	Calculus II	3
Math 217	Differential Equations	3
Math 233	Calculus III	3
Physics 191	Physics I	3
Physics 191F	Physics I — First-Years Only	
Physics 191U	Physics I — Sophomores, Juniors, and Seniors Only	
Physics 191L	Physics I Laboratory	1
Physics 192	Physics II	3
Physics 192L	Physics II Laboratory	1
Natural sciences elective		3
College Writing		3
Engr 310	Technical Writing	3
Humanities and social sciences electives		18
Total Units		47

Upon completing a course in the calculus sequence (Math 131-Math 132-Math 233) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the mathematics and statistics department's back credit policy (http://college.artsci.wustl.edu/policies/placement_credit/backcredit/).

The natural sciences requirement is for 3 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies or Physics. These courses must be completed with a grade of C- or better.

The College Writing Program, humanities and social sciences requirements are those required of all students in the McKelvey School of Engineering.

Bachelor of Science in Computer Science

The Bachelor of Science in Computer Science (BSCS) is designed for students planning a career in computing. Students working toward a BSCS degree must meet all requirements for an applied science degree (p. 1134) from the McKelvey School of Engineering. In addition, there are the following departmental course requirements:

• Computer Science Core Requirements

Code	Title	Units
CSE 131	Introduction to Computer Science	3
CSE 132	Introduction to Computer Engineering	3
CSE 240	Logic and Discrete Mathematics	3
or Math 310	Foundations for Higher Mathematics	
CSE 247	Data Structures and Algorithms	3
CSE 332S	Object-Oriented Software Development Laboratory	3
CSE 347	Analysis of Algorithms	3
Total Units		18

Each of these core courses must be passed with a grade of C- or better.

• Computer Science Technical Elective Requirements:

In addition to the core courses, at least 24 additional units in computer science or computer science-related courses with an S, M, T or A suffix must be taken, of which at least one must be a systems (S) course and at least one must be a machine (M) or application (A) course. Students may use up to 6 units of approved independent work (CSE 400E, CSE 497, CSE 498, CSE 499) as part of their computer science electives. Such independent work can be classified as S, M, T or A, with approval.

• Math Requirements:

Code	Title	Units
Math 131	Calculus I	3
Math 132	Calculus II	3
Math 233	Calculus III	3
Math 309	Matrix Algebra	3
or ESE 318	Engineering Mathematics A	
ESE 326	Probability and Statistics for Engineering	3
or Math 3200	Elementary to Intermediate Statistics and Data Analysis	

or DAT 120 & DAT 121	Managerial Statistics I and Managerial Statistics II
or Psych 300	Introduction to Psychological Statistics
Total Units	15

Upon completing a course in the calculus sequence (Math 131-Math 132-Math 233) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the mathematics and statistics department's back credit policy (http://college.artsci.wustl.edu/policies/placement_credit/backcredit/).

- **Additional Departmental Requirements:**

Code	Title	Units
Engr 310	Technical Writing	3
One themed writing course from the College Writing Program		3
Humanities and social sciences electives		18
Natural sciences electives		8
Total Units		32

The College Writing Program, humanities and social sciences requirements are those required of all students in the McKelvey School of Engineering. For information about how to fulfill the school's English proficiency requirement, please visit the Degree Requirements page (p. 1135).

The natural sciences requirement is for 8 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies or Physics. The College Writing Program and natural sciences courses must be completed with a grade of C- or better.

All courses taken to meet any of the above requirements (with the exception of the humanities and social sciences electives) cannot be taken on a pass/fail basis.

Bachelor of Science in Computer Science + Economics

The College of Arts & Sciences and McKelvey School of Engineering developed a new major that allows students interested in both economics and computer science to combine these two complementary disciplines efficiently, without having to pursue them as two separate majors.

Course Requirements

Code	Title	Units
Math 131	Calculus I (AP credit may satisfy this requirement)	3
Math 132	Calculus II (AP credit may satisfy this requirement)	3
Math 2200	Elementary Probability and Statistics *	3

or Math 3200	Elementary to Intermediate Statistics and Data Analysis	
or ESE 326	Probability and Statistics for Engineering	
Math 233 or Econ 493	Calculus III Mathematical Economics	1-3
CSE 131	Introduction to Computer Science	3
CSE 247	Data Structures and Algorithms	3
CSE 347	Analysis of Algorithms	3
Econ 1011	Introduction to Microeconomics (AP credit may satisfy this requirement)	3
Econ 1021	Introduction to Macroeconomics (AP credit may satisfy this requirement)	3
Econ 4011	Intermediate Microeconomic Theory	3
Econ 413 or Econ 413W	Introduction to Econometrics Introduction to Econometrics with Writing	3
Total Units		31-33

* Of these options, Math 3200 is the preferred course.

Electives

Six upper-level approved courses from the Department of Economics and Computer Science & Engineering (CSE) are required: three from Economics and three from CSE. Students who satisfied the Econ 1011 and/or Econ 1021 requirements with AP credits can instead take electives in either department and add at most one course from outside of both departments.

Bachelor of Science in Computer Science + Mathematics

The McKelvey School of Engineering and the College of Arts & Sciences developed a new major that efficiently captures the intersection of the complementary studies of computer science and math.

McKelvey Engineering students who declare this major must fulfill the core course requirements listed below and all other requirements for the Applied Science degree (p. 1134) in the McKelvey School of Engineering. They must also complete Engr 310 Technical Writing and 8 units of courses designated as NSM (Natural Sciences & Math) from Anthropology (L48 Anthro), Biology and Biomedical Sciences (L41 Biol), Chemistry (L07 Chem), Earth and Planetary Sciences (L19 EPSc), Physics (L31 Physics) or Environmental Studies (L82 EnSt).

Arts & Sciences students who declare this major must fulfill the distribution requirements and all other requirements for an AB degree (p. 971) in addition to the specific requirements listed below.

Core Course Requirements

Code	Title	Units
Math 131	Calculus I (AP credit may satisfy this requirement)	3
Math 132	Calculus II (AP credit may satisfy this requirement)	3
Math 233	Calculus III	3
CSE 131	Introduction to Computer Science	3
Math 310 or Math 310W	Foundations for Higher Mathematics Foundations for Higher Mathematics with Writing	3
or CSE 240	Logic and Discrete Mathematics	
CSE 247	Data Structures and Algorithms	3
Math 309	Matrix Algebra	3
Math 3200 or ESE 326	Elementary to Intermediate Statistics and Data Analysis Probability and Statistics for Engineering	3
CSE 347	Analysis of Algorithms	3

Electives

Eight upper-level courses from Math or Computer Science & Engineering can be chosen from an approved list (https://docs.google.com/spreadsheets/d/1nVxiw2jVScJ7tpwThw5OQ6vPiljGmyAi19Q37_RBsxQ/edit#gid=0), with the following caveats:

- No fewer than three courses can be chosen from each department.
- Up to two preapproved courses from outside both departments can be selected.

Bachelor of Science in Business and Computer Science

The Bachelor of Science in Business and Computer Science degree program provides an integrated educational experience that involves both the Olin Business School and the McKelvey School of Engineering. The objectives of this program are to provide students with the fundamental knowledge and perspectives of computer science and business and to expose them to the unique opportunities created by combining these disciplines. As one of the only such joint programs in the country, the Bachelor of Science in Business and Computer Science features unique curricular and cocurricular elements that help to create a distinctive program.

General Degree Requirements

- Complete at least 120 applicable units
- Earn at least a C (2.0 cumulative grade-point average) in all applicable courses taken at Washington University
- Earn at least a C (2.0 GPA) in each separate school of study
- Complete a minimum of 60 units at Washington University (at least 30 units must be "B" courses and at least 30 units must be "E" courses taken at Washington University)
- Complete the last 30 units at Washington University

Foundation Course Requirements (31 units)

Code	Title	Units
Math 131	Calculus I (AP credit may satisfy this requirement)	3
Math 132	Calculus II (AP credit may satisfy this requirement)	3
Math 233	Calculus III	3
Math 309	Matrix Algebra (Prerequisite: Math 132)	3
DAT 120 or ESE 326	Managerial Statistics I Probability and Statistics for Engineering	3
DAT 121	Managerial Statistics II	3
MGT 201	Management Communication	4
Engr 310	Technical Writing	3
One College Writing Program course (themed writing course)		3
One Natural Sciences course designated NSM (Natural Sciences and Mathematics)		3
Total Units		31

Upon completing a course in the calculus sequence (Math 131-Math 132-Math 233) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the mathematics and statistics department's back credit policy (http://college.artsci.wustl.edu/policies/placement_credit/backcredit/).

The Natural Sciences requirement is for 3 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies or Physics. These courses must be completed with a grade of C- or better.

The school's English proficiency requirement is satisfied only by a grade of C- or better in one of the themed college writing courses (<https://collegewriting.wustl.edu/themed-course-options/>) developed by the College Writing Program (<https://collegewriting.wustl.edu/>).

Breadth/Free Elective Course Requirements (24 units)

- Humanities and Social Sciences (15 units): Any course with A&S attributes of Humanities (HUM), Language and Cultural Diversity (LCD), or Social and Behavioral Sciences (SSC). These courses must be taken with the credit grade option only (not pass/fail). At least one course must be an ethics course from the list of approved ethics courses (PDF) (http://bulletin.wustl.edu/undergrad/engineering/computerscience/bs-business-computer-science/Ethics_Courses_for_BS_in_Business_and_Computer_Science.pdf).
- Free Electives (9 units): Any course from any day-school division, including prematriculation credit (e.g., AP credit). The free elective courses may be taken with the pass/fail grade option.

Capstone/Integrated Learning Experience Requirements (6 units)

- 6 units of course work jointly approved by the faculty curriculum oversight committees of both Business and Engineering
- Current examples: MGT 401P CEL Practicum, MGT 401S Small Business Initiative, MGT 401M Sustainable Development and Conservation Through Entrepreneurial Collaboration: Madagascar (taken senior year), CSE 437S Software Engineering Workshop

Major Course Requirements (60 units)

- Business Course Requirements (30 units) as listed in the section below
- Computer Science Course Requirements (30 units) as listed in the section below

Business Course Requirements (30 total units)

Choose one of the two clusters below:

Business Analytics Cluster

Business Core Course Requirements (18 units):

Code	Title	Units
MEC 290	Microeconomics (Prerequisite: Math 131)	3
ACCT 2610	Principles of Financial Accounting	3
FIN 340	Capital Markets and Financial Management (Prerequisites: Math 132, ACCT 2610, MEC 290 or ECON 1011, and completion or concurrent enrollment in DAT 121)	3
MKT 370	Principles of Marketing (Prerequisites: Sophomore standing and MEC 290 or ECON 1011 or MGT 100.)	3

OSCM 356	Operations Management (Prerequisites: MEC 290 or ECON 1011 and completion of DAT 220 or ESE 403 or ESE 415.)	3
DAT 220	Analytics and Modelling for Business Decisions (Prerequisites: DAT 120 and completion or concurrent enrollment in DAT 121.)	3
Total Units		18

Electives (choose 12 units):

Code	Title	Units
MEC 471	Empirical Techniques for Industry Analysis (Prerequisites: MEC 290; DAT 120 and DAT 121)	3
FIN 448	Advanced Financial Management (Prerequisite: FIN 340 and DAT 121)	3
FIN 451	Options, Futures and Derivative Securities (Prerequisite: FIN 340)	3
DAT 301E	Data Analytics in Python (Prerequisite: sophomore standing)	3
OSCM 458	Operations Analytics (Prerequisite: OSCM 356)	3
MKT 378	Marketing Research (Prerequisites: MKT 370, DAT 120 and DAT 121)	3
MKT 400G	Digital Marketing and Analytics (Prerequisite: MKT 370 and either DAT 120, Math 2200, Math 3200 or ESE 326)	3

Strategy & Leadership Cluster

Business Core Course Requirements (15 units):

Code	Title	Units
MGT 100	Individual in a Managerial Environment	3
MEC 290	Microeconomics (Prerequisite: Math 131)	3
ACCT 2610	Principles of Financial Accounting	3
FIN 340	Capital Markets and Financial Management (Prerequisites: Math 132, ACCT 2610, MEC 290 and completion or concurrent enrollment in DAT 121)	3
OB 360	Organization Behavior Within the Firm (Prerequisite: MGT 100 or sophomore standing)	3
Total Units		15

Electives (choose 15 units):

Code	Title	Units
OB 400D	Thinking Creatively and Leading Creative Teams (Prerequisite: OB 360)	1.5
MGT 450V	Defining Moments: Lessons in Leadership & Character From the Top (Prerequisite: MEC 290)	1.5
MGT 460H	Corporate and Global Strategy (Prerequisite: MGT 380)	3
OB 462	Leadership in Organizations (Prerequisite: Sophomore standing)	3
MEC 370	Game Theory for Business (Prerequisite: MEC 290)	3
MEC 470	Industrial Economics (Prerequisite: MEC 370)	3
MGT 421 or MGT 460L	Introduction to Entrepreneurship Introduction to Social Entrepreneurship	3

Computer Science Course Requirements (30 total units)

Computer Science Core Course Requirements (9 units):

Code	Title	Units
CSE 131	Introduction to Computer Science	3
CSE 247	Data Structures and Algorithms (Prerequisite: CSE 131 and fluency with summations, derivatives, and proofs by induction)	3
CSE 332S	Object-Oriented Software Development Laboratory (Prerequisite: CSE 247)	3
Total Units		9

Electives (choose 21 units):

Code	Title	Units
Choose seven courses from any CSE courses with an S, M, T, or A suffix. CSE 132, CSE 240 and CSE 347 will count as electives in this category.		

Notes:

Students earning this degree will not be eligible to earn a second undergraduate degree in computer science, a second major in computer science, or a minor in computer science.

Students earning this degree will not be eligible to earn a second undergraduate degree or second major in business. Students are eligible to earn a business minor.

The Second Major in Computer Science

The second major provides an opportunity to combine computer science with another degree program. A second major in computer science can expand a student's career options and enable interdisciplinary study in areas such as cognitive science, computational biology, chemistry, physics, philosophy and linguistics. The second major is also well suited for students planning careers in medicine, law, business, architecture and fine arts. The requirements are as follows. There are no additional distribution or unit requirements for the second major.

- **Computer Science Core Requirements:**

Code	Title	Units
CSE 131	Introduction to Computer Science	3
CSE 132	Introduction to Computer Engineering	3
CSE 240	Logic and Discrete Mathematics or Math 310	3
	Foundations for Higher Mathematics	
CSE 247	Data Structures and Algorithms	3
CSE 332S	Object-Oriented Software Development Laboratory	3
CSE 347	Analysis of Algorithms	3
Total Units		18

Each of these core courses must be passed with a grade of C- or better.

- **Computer Science Technical Elective Requirements:**

In addition to the core courses, students must complete at least 24 additional units in computer science or computer science-related courses with an S, M, T or A suffix; at least one must be a systems (S) course, and at least one must be a machine (M) or application (A) course. Students may use up to 6 units of approved independent work (CSE 400, CSE 497-CSE 499) as part of their computer science electives. Such independent work can be classified as S, M, T or A with approval.

- **Math Requirement:**

Students must take calculus (Math 131) and probability (ESE 326, Math 3200, or the sequence DAT 120-DAT 121).

The Second Major in Computer Science + Mathematics

The McKelvey School of Engineering and the College of Arts & Sciences have developed a new second major that efficiently captures the intersection of the complementary studies of computer science and math.

- **Core Requirements:**

Code	Title	Units
Math 131	Calculus I	3
Math 132	Calculus II	3
CSE 131	Introduction to Computer Science	3
Math 233	Calculus III	3
Math 310 or Math 310W	Foundations for Higher Mathematics Foundations for Higher Mathematics with Writing	3
or CSE 240	Logic and Discrete Mathematics	
CSE 247	Data Structures and Algorithms	3
Math 309	Matrix Algebra	3
Math 3200 or ESE 326	Elementary to Intermediate Statistics and Data Analysis Probability and Statistics for Engineering	3
CSE 347	Analysis of Algorithms	3
Total Units		27

- **Electives:**

Eight upper-level courses from Math or CSE can be chosen from an approved list (https://docs.google.com/spreadsheets/d/1nVxiw2jVScJ7tpwThw5OQ6vPiljGmyAi19Q37_RBsxQ/edit#gid=0), with the following caveats:

1. No fewer than three courses can be chosen from each department.
2. Up to two preapproved courses from outside both departments can be selected.

The Minor in Computer Science

If a student's goal is a basic foundation in computer science for application to another field but they are not planning a career as a practicing computer scientist, the minor in computer science is a good choice. The minor consists of five CSE courses: two core courses and three electives. The core courses provide an introduction to computer science concepts and problem-solving techniques. The electives offer flexibility to integrate computer science studies with a major area. Students select the courses that are most important to them, whether their interests are in fine arts, linguistics, psychology, philosophy, law, business, medicine, the natural sciences or anything else.

Units required: 15

Required courses (6 units):

Code	Title	Units
CSE 131	Introduction to Computer Science	3
CSE 247	Data Structures and Algorithms	3
Total Units		6

Elective courses (9 units):

Any three additional CSE courses selected from CSE 132 Introduction to Computer Engineering, CSE 240 Logic and Discrete Mathematics, CSE 347 Analysis of Algorithms, or any CSE course with a T, S, M or A suffix.

Additional Information

All courses used for the computer science minor must be taken for a grade, and the student must earn a C- or better. Should the student decide to go further in the field, all courses in the computer science minor can be used toward a second major in computer science or a degree in computer science or computer engineering.

The Minor in Bioinformatics

Mindful of the emerging opportunities at the interface of biology and computer science, the Department of Biology and the Department of Computer Science & Engineering have fashioned the minor in bioinformatics. This program serves students from both departments as well as other students from the natural sciences and engineering with an interest in this field.

Units required: 23-24 units, as described below

Core courses:

Code	Title	Units
Biol 2960	Principles of Biology I	4
Biol 2970	Principles of Biology II	4
CSE 131	Introduction to Computer Science	3
CSE 247	Data Structures and Algorithms	3
ESE 326	Probability and Statistics for Engineering	3
or Math 2200	Elementary Probability and Statistics	
or Math 3200	Elementary to Intermediate Statistics and Data Analysis	
or DAT 120 & DAT 121	Managerial Statistics I and Managerial Statistics II	
Total Units		17

Advanced biology elective: Choose one of the following:

Code	Title	Units
Biol 3492	Laboratory Experiments with Eukaryotic Microbes	3
Biol 4181	Population Genetics	3
Biol 4342	Research Explorations in Genomics	4
Biol 437	Laboratory on DNA Manipulation	4
Biol 4525	Structural Bioinformatics of Proteins (Writing Intensive)	4

Computer Science & Engineering elective: Choose one of the following:

Code	Title	Units
CSE 514A	Data Mining	3
CSE 584A	Algorithms for Biosequence Comparison	3
or L41 Biol 5504	Algorithms for Biosequence Comparison	
CSE 587A	Algorithms for Computational Biology	3

Additional Information

It is anticipated that, for those students majoring in biology or computer science & engineering (CSE), some portion of the introductory sequence will overlap with the courses required for the major and that these courses will be applicable to both the major and the minor. Upper-level courses in biology and CSE used to fulfill the minor requirements may not be used to fulfill the requirements of another major or minor in Arts & Sciences. A minimum grade of C- is required for all courses to count toward the minor.

The Minor in Human-Computer Interaction

The human-computer interaction (HCI) minor is designed to give any undergraduate student at Washington University a multidisciplinary understanding of the principles and applications of HCI. This minor will introduce students to the techniques necessary to create effective user interfaces: requirements gathering, ideation, prototyping, visual design and evaluation. Students will explore these ideas in a variety of application contexts.

The HCI minor is intended for students who are interested in the design of user-centered interactive technologies and those desiring jobs that include user interface creation, product design, UX/UI design, app development, virtual and augmented realities, and so on. This minor should appeal to students in the College of Art — particularly designers and computationally intrigued artists — who are interested in gaining a more in-depth knowledge of back-end development skills. It will also be of interest to engineering students looking for more experience with aesthetics and front-end design skills. In addition to being useful for these primary audiences, this minor allows students from other departments on campus to support their studies with a clear track in a hybrid pursuit of design and programming.

Course Work

Students must complete two pillar courses, one integration course and three approved electives. Courses listed below are considered approved elective offerings between the Sam Fox School and the McKelvey School of Engineering.

- Pillar Courses (6 units):

Code	Title	Units
CSE 131	Introduction to Computer Science	3
ART 138S	Visual Principles for the Screen	3

- Integration Courses (3 units):

Code	Title	Units
ART 236A	Interaction Design: Understanding Health and Well-Being	3
CSE 256A	Introduction to Human-Centered Design	3

- Electives (9 units, with at least one course each from CSE and Art/Design):

Code	Title	Units
CSE 204A	Front-End Web Development	3
CSE 330S	Rapid Prototype Development and Creative Programming	3
CSE 457A	Introduction to Visualization	3
CSE 438S	Mobile Application Development	3
CSE 557A	Advanced Visualization	3
CSE 556A	Human-Computer Interaction Methods	3
ART 326H	Special Topics: Interaction Design: Layout Systems	3
Psych 360	Cognitive Psychology	3

Electrical & Systems Engineering

About Electrical & Systems Engineering

The mission of our undergraduate programs is to instill in students the knowledge and perspective — appropriate for both a professional career and the pursuit of advanced degrees — of fields that rely on key electrical engineering and systems principles and practices. Such principles and practices include rigorous quantitative reasoning and robust engineering design. This mission is accomplished by ensuring that students achieve both depth and breadth of knowledge in their studies and by maintaining a high degree of flexibility in the curriculum. Our programs also seek to provide good preparation for life, including the ability to communicate in written and oral forms and a desire to continue learning throughout life. In addition, these programs aim to provide the opportunity and training necessary for students to acquire the skills and attitudes to become leaders.

The department offers courses of study leading to degrees in both electrical engineering and systems science and engineering. Opportunities for study and research currently available in the department include semiconductor theory and devices, optoelectronics, nanophotonics, communication theory and systems, information theory, signal and image

processing, tomographic imaging, linear and nonlinear dynamics and control, robotics, identification and estimation, multisensor fusion and navigation, computational mathematics, optimization, optimal control, autonomous systems, operations research and financial engineering. Students are encouraged to participate in research activities as soon as they have received training in the fundamentals appropriate for a given research area.

Electrical engineering is the profession for those intrigued with electrical phenomena and eager to contribute their skills to a society increasingly dependent on electricity and sophisticated electronic devices. It is a profession of broad scope, with many specialty careers designed for engineers who seek an endless diversity of career paths on the cutting edge of technology. The Institute of Electrical and Electronics Engineers publishes transactions on about 60 different topics, from aerospace and electronic systems to visualization and computer graphics. This is a breadth so great that no single electrical engineering department can hope to span it. Moreover, those fields themselves encompass still more fascinating specialties. We provide the basics; the future is the student's to shape.

Systems science and engineering is based on an approach that views an entire system of components as an entity rather than simply as an assembly of individual parts; each component is designed to fit properly with the other components rather than to function by itself. The engineering and mathematics of systems is a rapidly developing field. It is one of the most modern segments of applied mathematics as well as an engineering discipline. It is concerned with the identification, modeling, analysis, design and control of systems that are potentially as large and complex as the U.S. economy or as precise and vital as a space voyage. Its interests run from fundamental theoretical questions to the implementation of operational systems. It draws on the most modern and advanced areas of mathematics. A very important characteristic of the systems field is that its practitioners must, of necessity, interact within a wide interdisciplinary environment, not only with various engineers and scientists but also with economists, biologists and sociologists. Such interaction is both emphasized and practiced in the programs.

Our Department of Electrical & Systems Engineering offers a challenging basic curriculum, a broadly qualified faculty, and modern facilities so that students can receive a contemporary preparation for a career in electrical or systems engineering.

Undergraduate Degree Programs

The Department of Electrical & Systems Engineering (ESE) offers four undergraduate degree programs: two professional degrees and two applied science degrees. The two professional degrees are the Bachelor of Science in Electrical Engineering (BSEE) and the Bachelor of Science in Systems Science & Engineering (BSSSE). These two programs are accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>). The two applied science degrees are the

Bachelor of Science in Applied Science (Electrical Engineering) and the Bachelor of Science in Applied Science (Systems Science & Engineering). All programs have flexible curricula as well as specific requirements, and students may elect programs of study tailored to individual interests and professional goals.

In the professional BSEE curriculum, there are required courses in electrical circuits, signals and systems, digital systems and electromagnetic fields, along with laboratory and design courses, which provide students with a common core of experience. Subsequently, the student may orient the program toward breadth so that many disciplines within the profession are spanned or toward a specialty with more emphasis on depth in one or more disciplines. Areas of specialization include modern electronics, applied physics, telecommunications, control systems, and signal and image processing.

Students in the professional BSSSE degree program take required courses in engineering mathematics, signals and systems, operations research, and automatic control systems, along with laboratory and design courses. This program emphasizes the importance of real-world applications of systems theory; accordingly, students are required to take a concentration of courses in one of the traditional areas of engineering or science. There are numerous elective courses in control theory and systems, signal processing, optimization, robotics, probability and stochastic processes, and applied mathematics.

Students enrolled in any of the ESE undergraduate degree programs have a variety of opportunities to augment their educational experience at Washington University. Students may participate in the Pre-Medical Engineering program or in the Cooperative Education program. Some students pursue double majors, in which two sets of degree requirements — either within or outside the ESE department — are satisfied concurrently.

Students who seek a broad undergraduate education in electrical engineering or systems science and engineering but who plan on careers outside of engineering may pursue the applied science degrees: Bachelor of Science in Applied Science (Electrical Engineering) and Bachelor of Science in Applied Science (Systems Science & Engineering). These programs of study are appropriate for students planning to enter medical, law or business school and who desire a more technical undergraduate experience than what otherwise may be available to them.

The ESE department also offers a variety of educational opportunities for students enrolled in other departments. These include the second major in systems science and the second major in electrical engineering science, which are open to students inside as well as outside of the McKelvey School of Engineering, such as the College of Arts & Sciences and the School of Business. They also include the minor in applied physics & electrical engineering, the minor in electrical engineering, the minor in energy engineering, the minor in mechatronics, the minor in robotics, and the minor in systems science & engineering.

BS–Master's Programs in Electrical & Systems Engineering

Students enrolled in any of the undergraduate degree programs in the McKelvey School of Engineering may choose to extend their educational experience by enrolling in a five-year BS–Master's program. The Master of Science in Electrical Engineering (MSEE), Master of Science in Systems Science and Mathematics (MSSSM), Master of Control Engineering (MCE), Master of Engineering in Robotics (MER), and Master of Science in Engineering Data Analytics and Statistics (MSDAS) degrees are participating graduate degrees, and these may be combined with any undergraduate degree that provides the appropriate background.

General requirements for the BS–Master's programs include the residency and other applicable requirements of the university and the McKelvey School of Engineering, which are found elsewhere in this *Bulletin*. In summary, students must complete all of the degree requirements for both the undergraduate and graduate degrees (at least 120 units plus 30 units for a total of 150 units), but they are not required to complete all of the undergraduate degree requirements first.

Clifford W. Murphy Professor
PhD, Johns Hopkins University
New frontiers in unconventional analog computing techniques using silicon and hybrid substrates, fundamental limits of energy efficiency, sensing and resolution by exploiting computational and adaptation primitives inherent in the physics of devices

Arye Nehorai (<https://engineering.wustl.edu/faculty/Arye-Nehorai.html>)

Eugene and Martha Lohman Professor of Electrical Engineering
PhD, Stanford University
Statistical signal processing, machine learning, imaging, biomedicine

Joseph A. O'Sullivan (<https://engineering.wustl.edu/faculty/Joseph-OSullivan.html>)

Samuel C. Sachs Professor of Electrical Engineering
Dean, UMSL/WashU Joint Undergraduate Engineering Program
PhD, Notre Dame University
Information theory, statistical signal processing, imaging science with applications in medicine and security, and recognition theory and systems

Lan Yang (<https://engineering.wustl.edu/faculty/Lan-Yang.html>)

Edward H. & Florence G. Skinner Professor of Engineering
PhD, California Institute of Technology
Nano/micro photonics, ultra high-quality optical microcavities, ultra-low-threshold microlasers, nano/micro fabrication, optical sensing, single nanoparticle detection, photonic molecules, photonic materials

Professors

Jr-Shin Li (<https://engineering.wustl.edu/faculty/Jr-Shin-Li.html>)
Professor
PhD, Harvard University
Mathematical control theory, optimization, quantum control, biomedical applications

Neal Patwari (<https://engineering.wustl.edu/faculty/Neal-Patwari.html>)
Professor
PhD, University of Michigan
Intersection of statistical signal processing and wireless networking for improving wireless sensor networking and radiofrequency sensing

Associate Professors

ShiNung Ching (<https://engineering.wustl.edu/faculty/ShiNung-Ching.html>)
Das Family Distinguished Career Development Assistant Professor
PhD, University of Michigan
Systems and control in neural medicine, nonlinear and constrained control, physiologic network dynamics, stochastic control

Jung-Tsung Shen (<https://engineering.wustl.edu/faculty/Jung-Tsung-Shen.html>)
Das Family Distinguished Career Development Assistant Professor
PhD, Massachusetts Institute of Technology
Theoretical and numerical investigations on nanophotonics, optoelectronics, plasmonics, metamaterials

Assistant Professors

Ulugbek Kamilov (<https://engineering.wustl.edu/faculty/Ulugbek-Kamilov.html>)

PhD, École Polytechnique Fédérale de Lausanne, Switzerland
Computational imaging, signal processing, biomedical imaging

Mark Lawrence

PhD, University of Birmingham

Nanophotonics, nonlinear optics, metasurfaces

Matthew D. Lew (<https://engineering.wustl.edu/faculty/Matthew-Lew.html>)

PhD, Stanford University

Microscopy, biophotonics, computational imaging, nano-optics

Chuan Wang (<https://engineering.wustl.edu/faculty/Chuan-Wang.html>)

PhD, University of Southern California

Flexible electronics, stretchable electronics, printed electronics, nanomaterials, nanoelectronics, optoelectronics

Yong Wang (<https://engineering.wustl.edu/faculty/Yong-Wang.html>)

PhD, Washington University in St. Louis

Biomedical engineering, life science, human physiology, magnetic resonance imaging, electrocardiographic imaging

Shen Zeng (<https://engineering.wustl.edu/faculty/Shen-Zeng.html>)

PhD, University of Stuttgart

Systems and control theory, data-based analysis and control of complex dynamical systems, inverse problems, biomedical applications

Xuan "Silvia" Zhang (<https://engineering.wustl.edu/faculty/Xuan-Silvia-Zhang.html>)

PhD, Cornell University

Robotics, cyber-physical systems, hardware security, ubiquitous computing, embedded systems, computer architecture, VLSI, electronic design automation, control optimization, and biomedical devices and instrumentation

Senior Professors

Paul S. Min (<https://engineering.wustl.edu/faculty/Paul-Min.html>)

PhD, University of Michigan

Routing and control of telecommunication networks, fault tolerance and reliability, software systems, network management

Robert E. Morley Jr. (<https://engineering.wustl.edu/faculty/Robert-Morley.html>)

DSc, Washington University in St. Louis

Computer engineering, lower-power VLSI design, computer architecture, signal processing, microprocessors systems design

Hiro Mukai (<https://engineering.wustl.edu/faculty/Hiro-Mukai.html>)

PhD, University of California, Berkeley

Theory and computational methods for optimization, optimal control, systems theory, electric power system operations, differential games

William F. Pickard (<https://engineering.wustl.edu/faculty/William-Pickard.html>)

PhD, Harvard University

Biological transport, electrophysiology, energy engineering

Daniel L. Rode (<https://engineering.wustl.edu/faculty/Daniel-Rode.html>)

PhD, Case Western Reserve University

Optoelectronics and fiber optics, semiconductor materials, light-emitting diodes and lasers, semiconductor processing, electronics

Ervin Y. Rodin (<https://engineering.wustl.edu/faculty/Ervin-Rodin.html>)

PhD, University of Texas at Austin

Optimization, differential games, artificial intelligence, mathematical modeling

Heinz Schaettler (<https://engineering.wustl.edu/faculty/Heinz-Schaettler.html>)

PhD, Rutgers University

Optimal control, nonlinear systems, mathematical models in biomedicine

Barbara A. Shrauner (<https://engineering.wustl.edu/faculty/Barbara-Shrauner.html>)

PhD, Harvard University (Radcliffe)

Plasma processing, semiconductor transport, symmetries of nonlinear differential equations

Donald L. Snyder (<https://engineering.wustl.edu/faculty/Donald-Snyder.html>)

PhD, Massachusetts Institute of Technology

Communication theory, random process theory, signal processing, biomedical engineering, image processing, radar

Barry E. Spielman (<https://engineering.wustl.edu/faculty/Barry-Spielman.html>)

PhD, Syracuse University

High-frequency/high-speed devices, radiofrequency and microwave integrated circuits, computational electromagnetics

Tzyh Jong Tarn (<https://engineering.wustl.edu/faculty/TJ-Tarn.html>)

DSc, Washington University

Quantum mechanical systems, bilinear and nonlinear systems, robotics and automation, life science automation

Professors of Practice

- Dedric Carter (<https://engineering.wustl.edu/faculty/Dedric-Carter.html>)
PhD, Nova Southeastern University
MBA, MIT Sloan School of Management
- Dennis Mell (<https://engineering.wustl.edu/faculty/Dennis-Mell.html>)
MS, University of Missouri-Rolla
Industrial automation, robotics and mechatronics, product design and development with design-for-manufacturability emphasis, prototyping, manufacturing
- Ed Richter (<https://engineering.wustl.edu/faculty/Ed-Richter.html>)
MS, Washington University
Signal processing applications implemented on a variety of platforms, including ASIC, FPGA, DSP, microcontroller and desktop computers
- Jason Trobaugh (<https://engineering.wustl.edu/faculty/Jason-Trobaugh.html>)
DSc, Washington University
Ultrasound imaging, diffuse optical tomography, image-guided therapy, ultrasonic temperature imaging

Teaching Professor

- James Feher (<https://engineering.wustl.edu/faculty/James-Feher.html>)
PhD, Missouri University of Science and Technology
Electrical engineering, computer science, mathematics and physics

Senior Lecturers

- Martha Hasting (<https://engineering.wustl.edu/faculty/Martha-Hasting.html>)
PhD, Saint Louis University
Mathematics education
- Vladimir Kurenok (<https://engineering.wustl.edu/faculty/Vladimir-Kurenok.html>)
PhD, Belarus State University (Minsk, Belarus)
Probability and stochastic processes, stochastic ordinary and partial differential equations, financial mathematics
- Jinsong Zhang (<https://engineering.wustl.edu/faculty/Jinsong-Zhang.html>)
PhD, University of Miami
Modeling and performance analysis of wireless sensor networks, multi-source information fusion, ambiguous and incomplete information processing

Lecturers

- Tsitsi Madziwa-Nussinov (<https://engineering.wustl.edu/faculty/Tsitsi-Nussinov.html>)
PhD, University of California, Los Angeles

Dorothy Wang (<https://engineering.wustl.edu/faculty/Yunjing-Dorothy-Wang.html>)
PhD, Virginia Tech
Fiber optic sensing and practical experience in sensor implementation and field test

Professors Emeriti

- R. Martin Arthur (<https://engineering.wustl.edu/faculty/Martin-Arthur.html>)
Newton R. and Sarah Louisa Glasgow Wilson Professor of Engineering
PhD, University of Pennsylvania
Ultrasonic imaging, electrocardiography

David L. Elliott

PhD, University of California, Los Angeles
Mathematical theory of systems, nonlinear difference, differential equations

Majors

Please visit the following pages for more information about our majors:

- Bachelor of Science in Electrical Engineering (p. 1087)
- Bachelor of Science in Systems Science & Engineering (p. 1089)
- Bachelor of Science in Computer Engineering (p. 1092)
- Bachelor of Science in Applied Science (Electrical Engineering) (p. 1093)
- Bachelor of Science in Applied Science (Systems Science & Engineering) (p. 1093)
- Second Major in Electrical Engineering (p. 1094)
- Second Major in Systems Science & Engineering (p. 1094)
- Second Major in Financial Engineering (p. 1095)

Minors

Please visit the following pages for more information about our minors:

- Minor in Electrical Engineering (p. 1096)
- Minor in Energy Engineering (p. 1096)
- Minor in Mechatronics (p. 1097)
- Minor in Robotics (p. 1097)
- Minor in Systems Science & Engineering (p. 1098)

Courses

Visit online course listings to view semester offerings for E35 ESE (<https://courses.wustl.edu/CourseInfo.aspx?sch=E&dept=E35&crslvl=1:5>).

E35 ESE 103 Introduction to Electrical Engineering

A hands-on introduction to electrical engineering to put the fun into the electrical engineering fundamentals. Experiments are designed to be easy to conduct and understand. Some of the technologies explored are used in a variety of applications including ultrasound imaging, computed tomography, DC motors, analog to digital converters and credit card readers. Students work in groups of two in the newly renovated Urbauer 115 laboratory. Each station is equipped with modern electronic test equipment and a computer with an integrated Data Acquisition system. Using this lab equipment, students design and build solutions to the exercises. The students also learn to program in LabVIEW to control the Data Acquisition system and process the acquired signals. Also, throughout the semester, presentations are given by the ESE faculty about their research.

Credit 1 unit. EN: TU

E35 ESE 105 Introduction to Electrical and Systems Engineering

This course will offer students a rigorous introduction to fundamental mathematical underpinnings of ESE and their relationship to a number of contemporary application areas. Major emphasis will be placed on linear algebra and associated numerical methods, including the use of MATLAB. Topics covered will include vector spaces, linear transformations, matrix manipulations and eigenvalue decomposition. Students will learn how this mathematical theory is enacted in ESE through the completion of four case studies spanning application areas: (i) Dynamical Systems and Control, (ii) Imaging, (iii) Signal Processing, and (iv) Circuits.

Credit 3 units. EN: TU

E35 ESE 205 Introduction to Engineering Design

A hands-on course where students, in groups of two or three, will creatively develop projects and solve problems throughout the semester using tools from electrical and systems engineering. Groups will work under the supervision of an academic team consisting of faculty and higher-level students. Project objectives will be set by the academic team in collaboration with each student group. Evaluation will consider completion of these objectives, as well as the originality and innovation of the projects. Weekly 90 minute lab with academic team required, times TBD. Prerequisite Course(s): CSE131, Phy197 or equivalent.

Credit 3 units. EN: TU

E35 ESE 230 Introduction to Electrical and Electronic Circuits

Electrical energy, current, voltage, and circuit elements. Resistors, Ohm's Law, power and energy, magnetic fields and DC motors. Circuit analysis and Kirchhoff's voltage and current laws. Thevenin and Norton transformations and the superposition theorem. Measuring current, voltage and power using ammeters and voltmeters. Energy and maximum electrical power transfer. Computer simulations of circuits. Reactive circuits, inductors, capacitors, mutual inductance, electrical transformers, energy storage, and energy conservation. RL, RC and RLC circuit transient responses. AC circuits, complex impedance, RMS current and voltage. Electrical signal amplifiers and basic operational amplifier circuits. Inverting, non-inverting, and difference amplifiers. Voltage gain, current gain, input impedance, and output impedance. Weekly laboratory exercises related to the lectures are an essential part of the course. Prerequisite: Phys 198. Corequisite: Math 217.

Credit 4 units. EN: TU

E35 ESE 232 Introduction to Electronic Circuits

Analysis and design of linear and nonlinear electronic circuits. Detailed analysis of operational amplifier circuits, including non-ideal characteristics. Terminal characteristics of active semiconductor devices. Incremental and DC models for diodes, metal-oxide-semiconductor field effect transistors (MOSFETs), and bipolar junction transistors (BJTs). Design and analysis of single- and multi-stage amplifiers. Introduction to CMOS logic as well as static and dynamic memory circuits. Students will be required to design, analyze, build and demonstrate several of the circuits studied, including frequency response analysis and use of simulation tools. Prerequisite: ESE 230.

Credit 3 units. EN: TU

E35 ESE 260 Introduction to Digital Logic and Computer Design

Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture, hardware description languages, simulation); design of simple processors and memory subsystems; program execution in simple processors; basic techniques for enhancing processor performance; configurable logic devices. Prerequisite: CSE 131. Same as E81 CSE 260M

Credit 3 units. EN: TU

E35 ESE 318 Engineering Mathematics A

Laplace transforms; matrix algebra; vector analysis; eigenvalues and eigenvectors; vector differential calculus and vector integral calculus in three dimensions. Prerequisites: Math 233 and Math 217 or their equivalents.

Credit 3 units.

E35 ESE 319 Engineering Mathematics B

Power series and Frobenius series solutions of differential equations; Legendre's equation; Bessel's equation; Fourier series and Fourier transforms; Sturm-Liouville theory; solutions of partial differential equations; wave and heat equations. Prerequisites: Math 233 and Math 217 or their equivalents.

Credit 3 units.

E35 ESE 326 Probability and Statistics for Engineering

Study of probability and statistics together with engineering applications. Probability and statistics: random variables, distribution functions, density functions, expectations, means, variances, combinatorial probability, geometric probability, normal random variables, joint distribution, independence, correlation, conditional probability, Bayes theorem, the law of large numbers, the central limit theorem. Applications: reliability, quality control, acceptance sampling, linear regression, design and analysis of experiments, estimation, hypothesis testing. Examples are taken from engineering applications. Prerequisites: Math 233 or equivalent.

Credit 3 units. EN: TU

E35 ESE 330 Engineering Electromagnetics Principles

Electromagnetic theory as applied to electrical engineering: vector calculus; electrostatics and magnetostatics; Maxwell's equations, including Poynting's theorem and boundary conditions; uniform plane-wave propagation; transmission lines, TEM modes, including treatment of general lossless lines, and pulse propagation; introduction to guided waves; introduction to radiation and scattering concepts. Prerequisites: Physics 198 and ESE 318 En Math A. Corequisite: ESE 319 En Math B. Credit 3 units. EN: BME T, TU

E35 ESE 331 Electronics Laboratory

Laboratory exercises provide students with a combination of hands-on experience in working with a variety of real instruments and in summarizing measurement results in written reports that clearly communicate laboratory results. A sequence of lab experiments provide hands-on experience with grounding and shielding techniques, signal analysis, realistic operational amplifier (op amp) characterization, op amp based active filter design and characterization, measurement of pulses propagating on a transmission line with various terminations, experience with FM modulation using phase locked loops and microwave techniques based on the vector network analyzer (VNA). Students will gain experience working with: sampling oscilloscopes to make measurements in the time and frequency domains, signal generators, digital multimeter and frequency measurements, microwave VNA measurements of directional coupler and antenna scattering parameters, and in creating circuits and making connections on contemporary circuit boards. The course concludes with a hands-on project to design, demonstrate and document the design of an electronic component. Prerequisite: ESE 232

Credit 3 units. EN: BME T, TU

E35 ESE 332 Power, Energy and Polyphase Circuits

Fundamental concepts of power and energy; electrical measurements; physical and electrical arrangement of electrical power systems; polyphase circuit theory and calculations; principal elements of electrical systems such as transformers, rotating machines, control and protective devices, their description and characteristics; elements of industrial power system design. Prerequisite: ESE 230.

Credit 3 units. EN: BME T, TU

E35 ESE 351 Signals and Systems

Introduction to concepts and methodology of linear dynamic systems in relation to discrete- and continuous-time signals. Mathematical modeling. Representation of systems and signals. Fourier, Laplace, and Z-transforms and convolution. Input-output description of linear systems: impulse response, transfer function. Time-domain and frequency-domain system analysis: transient and steady-state responses, system modes, stability, frequency spectra and frequency responses. System design: filter, modulation, sampling theorem. Continuity is emphasized from analysis to synthesis. Use of MATLAB. Prerequisites: Physics 197/198, Math 217, CSE 131, matrix addition and multiplication. Corequisite: ESE 318.

Credit 3 units. EN: BME T, TU

E35 ESE 362 Computer Architecture

This course explores the interaction and design philosophy of hardware and software for digital computer systems. Topics include: Processor architecture, Instruction Set Architecture, Assembly Language, memory hierarchy design, I/O considerations, and a comparison of computer architectures. Prerequisite: CSE 260M. Same as E81 CSE 362M. Credit 3 units. EN: BME T, TU

E35 ESE 400 Independent Study

Opportunities to acquire experience outside the classroom setting and to work closely with individual members of the faculty. A final report must be submitted to the department. Not open to first-year or graduate students. Consult adviser. Hours and credit to be arranged. Credit variable, maximum 3 units.

E35 ESE 401 Fundamentals of Engineering Review

A review and preparation of the most recent NCEES Fundamentals of Engineering (FE) Exam specifications is offered in a classroom setting. Exam strategies will be illustrated using examples. The main topics for the review include engineering mathematics, statics, dynamics, thermodynamics, heat transfer, mechanical design and analysis, material science, and engineering economics. A discussion of the importance and responsibilities of professional engineering licensure along with ethics will be included.

Same as E37 MEMS 4001

Credit 1 unit.

E35 ESE 403 Operations Research

Introduction to the mathematical aspects of various areas of operations research, with additional emphasis on problem formulation. This is a course of broad scope, emphasizing both the fundamental mathematical concepts involved, and also aspects of the translation of real-world problems to an appropriate mathematical model. Subjects to be covered include linear and integer programming, network problems, and dynamic programming. Prerequisites: CSE 131, Math 309, and ESE 326, or permission of instructor.

Credit 3 units. EN: BME T, TU

E35 ESE 404 Applied Operations Research

Application of operations research techniques to real-world problems. Emphasis is given to integer linear programming and computational methods. Real-world examples of integer programs will be studied in areas such as network flow, facility location, partitioning, matching, and transportation. Special emphasis will be placed on techniques used to solve integer programs. Prerequisites: ESE 403 and CSE 131.

Credit 3 units. EN: BME T, TU

E35 ESE 405 Reliability and Quality Control

An integrated analysis of reliability and quality control function in manufacturing. Statistical process control, acceptance sampling, process capability analysis, reliability prediction, design, testing, failure analysis and prevention, maintainability, availability, and safety are discussed and related. Qualitative and quantitative aspects of statistical quality control and reliability are introduced in the context of manufacturing. Prerequisite: ESE 326 or equivalent.

Credit 3 units. EN: BME T, TU

E35 ESE 415 Optimization

This course gives a rigorous and comprehensive introduction of fundamentals of nonlinear optimization theory and computational methods. Topics include unconstrained and constrained optimization, quadratic and convex optimization, numerical optimization methods, optimality conditions, and duality theory. Algorithmic methods include Steepest Descent, Newton's method, Conjugate Gradient methods as well as exact and inexact line search procedures for unconstrained optimization. Constrained optimization methods include penalty and multiplier methods. Applications range from engineering and physics to economics. Moreover, generalized programming, interior point methods, and semi-definite programming will be discussed if time permits. Prerequisites: CSE 131, Math 309 and ESE 318 or permission of instructor.

Credit 3 units. EN: BME T, TU

E35 ESE 425 Random Processes and Kalman Filtering

Probability and random variables; random processes, autocorrelation, power spectral density; transient and steady-state analysis of linear dynamic systems and random inputs, filters, state-space, discretization; optimal estimation; the discrete Kalman filter; linearization and the extended Kalman filter for nonlinear dynamic systems; related MATLAB exercises. Prerequisite: ESE 326 and ESE 351 or equivalent.

Credit 3 units. EN: BME T, TU

E35 ESE 427 Financial Mathematics

This course is a self-contained introduction to financial mathematics at the undergraduate level. Topics to be covered include pricing of the financial instruments such as options, forwards, futures and their derivatives along with basic hedging techniques and portfolio optimization strategies. The emphasis is put on using of discrete, mostly binary models. The general, continuous case including the concepts of Brownian motion, stochastic integral, and stochastic differential equations, is explained from intuitive and practical point of view. Among major results discussed are the Arbitrage Theorem and Black-Scholes differential equations and their solutions. Prerequisites: ESE 318 and ESE 326 or the consent of the instructor.

Credit 3 units. EN: BME T, TU

E35 ESE 429 Basic Principles of Quantum Optics and Quantum Information

This course provides an accessible introduction to quantum optics and quantum engineering for undergraduate students. It will cover the following topics: concept of photons, quantum mechanics for quantum optics, radiative transitions in atoms, lasers, photon statistics (photon counting, sub-/super-Poissonian photon statistics, bunching, anti-bunching, theory of photodetection, shot noise), entanglement, squeezed light, atom-photon interactions, cold atoms, and atoms in cavities. The course will also provide an overview for quantum information processing, including quantum computing, quantum cryptography, and teleportation. Prerequisite: ESE 318 or equivalent.

Credit 3 units. EN: BME T, TU

E35 ESE 431 Introduction to Quantum Electronics

Describing the flow of electrical current in nanodevices involves a lot more than just quantum mechanics; it requires an appreciation of some of the most advanced concepts of non-equilibrium statistical mechanics. In the past decades, electronic devices have been shrinking steadily to nanometer dimensions, and quantum transport has accordingly become increasingly important not only to physicists but also to electrical engineers. Traditionally, these topics are spread out over many physics/chemistry/engineering courses that take many semesters to cover. The main goal of this course is to condense the essential concepts into a one-semester course that is accessible to both senior-level undergraduate and junior-level graduate students. The only background assumed for the students interested in taking this course is knowledge of simple differential equations and matrix algebra as well as familiarity with a modern scientific computing software package (e.g., MATLAB, Mathematica). This course will be accessible to students with diverse backgrounds in electrical engineering, physics, chemistry, biomedical engineering, and mathematics.

Credit 3 units. Art: NSM EN: TU

E35 ESE 433 Radio Frequency and Microwave Technology for Wireless Systems

Focus is on the components and associated techniques employed to implement analog and digital radio frequency (RF) and microwave (MW) transceivers for wireless applications, including: cell phones; pagers; wireless local area networks; global positioning satellite-based devices; and RF identification systems. A brief overview of system-level considerations is provided, including modulation and detection approaches for analog and digital systems; multiple-access techniques and wireless standards; and transceiver architectures. Focus is on RF and MW: transmission lines; filter design; active component modeling; matching and biasing networks; amplifier design; and mixer design. Prerequisite: ESE 330.

Credit 3 units. EN: BME T, TU

E35 ESE 434 Solid-State Power Circuits and Applications

Study of the strategies and applications power control using solid-state semiconductor devices. Survey of generic power electronic converters. Applications to power supplies, motor drives and consumer electronics. Introduction to power diodes, thyristors and MOSFETs. Prerequisites: ESE 232, ESE 351.

Credit 3 units. EN: BME T, TU

E35 ESE 435 Electrical Energy Laboratory

Experimental studies of principles important in modern electrical energy systems. Topics include: AC power measurements, electric lighting, photovoltaic cells and arrays, batteries, DC-DC and DC-AC converters, brushed and brushless DC motors and three-phase circuits. Each experiment requires analysis, simulation with MultiSim, and measurement via LabVIEW and the Elvis II platform. Prerequisites: ESE 230 and 351.

Credit 3 units. EN: BME T, TU

E35 ESE 436 Semiconductor Devices

This course covers the fundamentals of semiconductor physics and operation principles of modern solid-state devices such as homo- or hetero-junction diodes, solar cells, inorganic/organic light-emitting diodes, bipolar junction transistors, and metal-oxide-semiconductor field-effect transistors. These devices form the basis for today's semiconductor and integrated circuit industry. In addition to device physics, semiconductor

device fabrication processes, new materials, and novel device structures will also be briefly introduced. At the end of this course, students will be able to understand the characteristics, operation, limitations and challenges faced by state-of-the-art semiconductor devices. This course will be particularly useful for students who wish to develop careers in the semiconductor industry. Prerequisite: ESE 232.

Credit 3 units. EN: TU

E35 ESE 438 Applied Optics

Topics relevant to the engineering and physics of conventional as well as experimental optical systems and applications explored. Items addressed include geometrical optics, Fourier optics such as diffraction and holography, polarization and optical birefringence such as liquid crystals, and nonlinear optical phenomena and devices. Prerequisite: ESE 330 or equivalent. Credit 3 units. EN: BME T, TU

E35 ESE 439 Introduction to Quantum Communications

This course covers the following topics: quantum optics, single-mode and two-mode quantum systems, nonlinear optics, and quantum systems theory. Specific topics include the following: Dirac notation quantum mechanics; harmonic oscillator quantization; number states, coherent states, and squeezed states; direct, homodyne, and heterodyne detection; linear propagation loss; phase insensitive and phase sensitive amplifiers; entanglement and teleportation; field quantization; quantum photodetection; phase-matched interactions; optical parametric amplifiers; generation of squeezed states, photon-twin beams, non-classical fourth-order interference, and polarization entanglement; optimum binary detection; quantum precision measurements; and quantum cryptography. Prerequisites: ESE 330 or Physics 421; Physics 217 or equivalent.

Credit 3 units. EN: TU

E35 ESE 441 Control Systems

Introduction to the theory and practice of automatic control for dynamical systems. Dynamical systems as models for physical and observed phenomena. Mathematical representation of dynamical systems, such as state-space differential and difference equations, transfer functions, and block diagrams. Analysis of the time evolution of a system in response to control inputs, steady-state and transient responses, equilibrium points and their stability. Control via linear state feedback, and estimation using Luenberger observers. Relating the time response of a system to its frequency response, including Bode and Nyquist plots. Input-output stability and its relation to the stability of equilibrium points. Simple frequency-based controllers, such as PID and lead-lag compensators. Exercise involving the use of MATLAB/Simulink (or equivalent) to simulate and analyze systems. Prerequisites: CSE 131, and either ESE 351 or MEMS 431.

Credit 3 units. EN: BME T, TU

E35 ESE 444 Sensors and Actuators

This course provides engineering students with basic understanding of two of the main components of any modern electrical or electromechanical system: sensors as inputs and actuators as outputs. The covered topics include transfer functions, frequency responses and feedback control; component matching and bandwidth issues; performance specification and analysis; sensors: analog and digital motion sensors, optical sensors, temperature sensors, magnetic and

electromagnetic sensors, acoustic sensors, chemical sensors, radiation sensors, torque, force and tactile sensors; actuators: stepper motors, DC and AC motors, hydraulic actuators, magnet and electromagnetic actuators, acoustic actuators; introduction to interfacing methods: bridge circuits, A/D and D/A converters, and microcontrollers. This course is useful for those students interested in control engineering, robotics and systems engineering. Prerequisites: one of the following four conditions: (1) prerequisite of ESE 230 and corequisite of ESE 351; (2) prerequisites of ESE 230, ESE 318 and MEMS 255 (Mechanics II); (3) prerequisite of ESE 351; or (4) permission of instructor. Credit 3 units. EN: BME T, TU

E35 ESE 446 Robotics: Dynamics and Control

Homogeneous coordinates and transformation matrices. Kinematic equations and the inverse kinematic solutions for manipulators, the manipulator Jacobian and the inverse Jacobian. General model for robot arm dynamics, complete dynamic coefficients for six-link manipulator. Synthesis of manipulation control, motion trajectories, control of single- and multiple-link manipulators, linear optimal regulator. Model reference adaptive control, feedback control law for the perturbation equations along a desired motion trajectory. Design of the control system for robotics. Prerequisites: ESE 351, knowledge of a programming language, and ESE 318; Corequisite: ESE 441.

Credit 3 units. EN: BME T, TU

E35 ESE 447 Robotics Laboratory

Introduces the students to various concepts such as modeling, identification, model validation and control of robotic systems. The course focuses on the implementation of identification and control algorithms on a two-link robotic manipulator (the so-called pendubot) that will be used as an experimental testbed. Topics include: introduction to the mathematical modeling of robotic systems; nonlinear model, linearized model; identification of the linearized model: input-output and state-space techniques; introduction to the identification of the nonlinear model: energy-based techniques; model validation and simulation; stabilization using linear control techniques; a closer look at the dynamics; stabilization using nonlinear control techniques. Prerequisite: ESE 351 or MEMS 431. Corequisites or Prerequisites: ESE 441 and 446.

Credit 3 units. EN: BME T, TU

E35 ESE 448 Systems Engineering Laboratory

Experimental study of real and simulated systems and their control. Identification, input-output analysis, design and implementation of control systems. Noise effects. Design and implementation of control laws for specific engineering problems. Corequisite: ESE 441 and knowledge of a programming language, or permission of instructor.

Credit 3 units. EN: BME T, TU

E35 ESE 449 Digital Process Control Laboratory

Applications of digital control principles to laboratory experiments supported by a networked distributed control system. Lecture material reviews background of real-time programming, data acquisition, process dynamics, and process control. Exercises in data acquisition and feedback control design using simple and advanced control strategies. Experiments in flow, liquid level, temperature, and pressure control. Term project. Prerequisite: ESE 441 or EECE 401 or equivalent. Same as E44 EECE 424

Credit 3 units. EN: BME T, TU

E35 ESE 455 Quantitative Methods for Systems Biology

Application of computational mathematical techniques to problems in contemporary biology. Systems of linear ordinary differential equations in reaction-diffusion systems, hidden Markov models applied to gene discovery in DNA sequence, ordinary differential equation and stochastic models applied to gene regulation networks, negative feedback in transcription and metabolic pathway regulation. Prerequisites: (1) Math 217 Differential Equations and (2) a programming course and familiarity with MATLAB.

Credit 3 units. EN: BME T, TU

E35 ESE 460 Switching Theory

Advanced topics in switching theory as employed in the synthesis, analysis, and design of information processing systems. Combinational techniques: minimization, multiple output networks, state identification and fault detection, hazards, testability and design for test are examined. Sequential techniques: synchronous circuits, machine minimization, optimal state assignment, asynchronous circuits, and built-in self-test techniques. Prerequisite: CSE 260M.

Same as E81 CSE 460T

Credit 3 units. EN: BME T, TU

E35 ESE 461 Design Automation for Integrated Circuit Systems

Integrated circuit systems provide the core technology that power today's most advanced devices and electronics: smart phones, wearable devices, autonomous robots, and cars, aerospace or medical electronics. These systems often consist of silicon microchips made up by billions of transistors and contain various components such as microprocessors, DSPs, hardware accelerators, memories, and I/O interfaces, therefore design automation is critical to tackle the design complexity at the system level. The objectives of this course is to 1) introduce transistor-level analysis of basic digital logic circuits; 2) provide a general understanding of hardware description language (HDL) and design automation tools for very large scale integrated (VLSI) systems; 3) expose students to the design automation techniques used in the best-known academic and commercial systems. Topics covered include device and circuits for digital logic circuits, digital IC design flow, logic synthesis, physical design, circuit simulation and optimization, timing analysis, power delivery network analysis. Assignments include homework, mini-projects, term paper and group project. Prerequisites: ESE 232; ESE 260.

Credit 3 units. EN: BME T, TU

E35 ESE 462 Computer Systems Design

Introduction to modern design practices, including FPGA and PCB design methodologies. Student teams use Xilinx Vivado for HDL-based FPGA design and simulation and do schematic capture, PCB layout, fabrication, and testing of the hardware portion of a selected computation system. The software portion of the project uses Microsoft Visual Studio to develop a user interface and any additional support software required to demonstrate final projects to the faculty during finals week. Prerequisites: CSE 361S and 362M from Washington University in St. Louis or permission of the instructor. Revised: 2019-02-22

Same as E81 CSE 462M

Credit 3 units. EN: TU

E35 ESE 465 Digital Systems Laboratory

Hardware/software co-design; processor interfacing; procedures for reliable digital design, both combinational and sequential; understanding manufacturers' specifications; use of test equipment. Several single-period laboratory exercises, several design projects, and application of microprocessors in digital design. One lecture and one laboratory period a week. Prerequisites: ESE 260.

Credit 3 units. EN: BME T, TU

E35 ESE 471 Communications Theory and Systems

Introduction to the concepts of transmission of information via communication channels. Amplitude and angle modulation for the transmission of continuous-time signals. Analog-to-digital conversion and pulse code modulation. Transmission of digital data. Introduction to random signals and noise and their effects on communication. Optimum detection systems in the presence of noise. Elementary information theory. Overview of various communication technologies such as radio, television, telephone networks, data communication, satellites, optical fiber and cellular radio. Prerequisites: ESE 351 and ESE 326.

Credit 3 units. EN: BME T, TU

E35 ESE 474 Introduction to Wireless Sensor Networks

This is an introductory course on wireless sensor networks for senior undergraduate students. The course uses a combination of lecturing, reading, and discussion of research papers to help each student to understand the characteristics and operations of various wireless sensor networks. Topics covered include sensor network architecture, communication protocols on Medium Access Control and Routing, sensor network operation systems, sensor data aggregation and dissemination, localization and time synchronization, energy management, and target detection and tracking using acoustic sensor networks. Prerequisite: ESE 351 (Signals and Systems).

Credit 3 units. EN: BME T, TU

E35 ESE 482 Digital Signal Processing

Introduction to analysis and synthesis of discrete-time linear time-invariant (LTI) systems. Discrete-time convolution, discrete-time Fourier transform, z-transform, rational function descriptions of discrete-time LTI systems. Sampling, analog-to-digital conversion and digital processing of analog signals. Techniques for the design of finite impulse response (FIR) and infinite impulse response (IIR) digital filters. Hardware implementation of digital filters and finite-register effects. The Discrete Fourier Transform and the Fast Fourier Transform (FFT) algorithms. Prerequisite: ESE 351.

Credit 3 units. EN: BME T, TU

E35 ESE 488 Signals and Communication Laboratory

Laboratory exercises in digital signal processing, data conversion and communications using modern laboratory techniques and apparatus based on National Instruments LabVIEW and ELVIS II workstations. A laboratory course designed to complement the traditional ESE course offerings in signal processing and communication theory. Signals and systems fundamentals: continuous-time and discrete-time linear time-invariant systems, frequency response, oversampled and noise-shaped A/D conversion. Digital signal processing: FIR and IIR digital filter design, application of the Fast Fourier Transform. Communication theory: baseband, digital communication, amplitude modulation, phase modulation, bandpass digital

communication. Laboratory experiments involve analog and digital electronics. Computer workstations and modern computational software used extensively for system simulation and real-time signal processing. Prerequisite: ESE 351. Credit 3 units. EN: BME T, TU

E35 ESE 497 Undergraduate Research

Undergraduate research under the supervision of a faculty member. The scope and depth of the research must be approved by the faculty member prior to enrollment. A written final report and a webpage describing the research are required. Credit variable, maximum 3 units.

E35 ESE 498 Electrical Engineering Capstone Design Projects

Capstone design project supervised by the course instructor. The project must use the theory, techniques, and concepts of the student's major: electrical engineering or systems science & engineering. The solution of a real technological or societal problem is carried through completely, starting from the stage of initial specification, proceeding with the application of engineering methods, and terminating with an actual solution. Collaboration with a client, typically either an engineer or supervisor from local industry or a professor or researcher in university laboratories, is encouraged. A proposal, an interim progress update, and a final report are required, each in the forms of a written document and oral presentation, as well as a webpage on the project. Weekly progress reports and meetings with the instructor are also required. Prerequisite: ESE senior standing and instructor's consent. Note: This course will meet at the scheduled time only during select weeks. If you cannot attend at that time, you may still register for the course.

Credit 3 units. EN: BME T, TU

E35 ESE 499 Systems Science and Engineering Capstone Design Project

Capstone design project supervised by the course instructor. The project must use the theory, techniques, and concepts of the student's major: electrical engineering or systems science & engineering. The solution of a real technological or societal problem is carried through completely, starting from the stage of initial specification, proceeding with the application of engineering methods, and terminating with an actual solution. Collaboration with a client, typically either an engineer or supervisor from local industry or a professor or researcher in university laboratories, is encouraged. A proposal, an interim progress update, and a final report are required, each in the forms of a written document and oral presentation, as well as a webpage on the project. Weekly progress reports and meetings with the instructor are also required. Prerequisite: ESE senior standing and instructor's consent. Note: This course will meet at the scheduled time only during select weeks. If you cannot attend at that time, you may still register for the course.

Credit 3 units. EN: BME T, TU

E35 ESE 500 Independent Study

Opportunities to acquire experience outside the classroom setting and to work closely with individual members of the faculty. A final report must be submitted to the department. Prerequisite: Students must have the ESE Research/Independent Study Registration Form (PDF) (https://ese.wustl.edu/research/areas/Documents/Independent%20Study%20Form_1.pdf) approved by the department.

Credit variable, maximum 3 units.

E35 ESE 501 Mathematics of Modern Engineering I

Matrix algebra: systems of linear equations, vector spaces, linear independence and orthogonality in vector spaces, eigenvectors and eigenvalues; vector calculus: gradient, divergence, curl, line and surface integrals, theorems of Green, Stokes, and Gauss; Elements of Fourier analysis and its applications to solving some classical partial differential equations, heat, wave, and Laplace equation. Prerequisites: ESE 318 and ESE 319 or equivalent or consent of instructor. This course will not count toward the ESE doctoral program.

Credit 3 units. EN: BME T, TU

E35 ESE 502 Mathematics of Modern Engineering II

Fourier series and Fourier integral transforms and their applications to solving some partial differential equations, heat and wave equations; complex analysis and its applications to solving real-valued problems: analytic functions and their role, Laurent series representation, complex-valued line integrals and their evaluation including the residual integration theory, conformal mappings and their applications. Prerequisite: ESE 318 and ESE 319 or equivalent, or consent of instructor. This course will not count toward the ESE doctoral program.

Credit 3 units. EN: BME T, TU

E35 ESE 513 Large-Scale Optimization for Data Science

Large-scale optimization is an essential component of modern data science, artificial intelligence, and machine learning. This graduate-level course rigorously introduces optimization methods that are suitable for large-scale problems arising in these areas. Students will learn several algorithms suitable for both smooth and nonsmooth optimization, including gradient methods, proximal methods, mirror descent, Nesterov's acceleration, ADMM, quasi-Newton methods, stochastic optimization, variance reduction, and distributed optimization. Throughout the class, we will discuss the efficacy of these methods in concrete data science problems, under appropriate statistical models. Students will be required to program in Python or MATLAB. Prerequisites: CSE 247, Math 309, Math 3200 or ESE 326.

Same as E81 CSE 534A

Credit 3 units. EN: TU

E35 ESE 515 Nonlinear Optimization

Nonlinear optimization problems with and without constraints and computational methods for solving them. Optimality conditions, Kuhn-Tucker conditions, Lagrange duality; gradient and Newton's methods; conjugate direction and quasi-Newton methods; primal and penalty methods; Lagrange methods. Use of MATLAB optimization techniques in numerical problems. Prerequisites: CSE 131, Math 309 and ESE 318 or permission of instructor.

Credit 3 units. EN: TU

E35 ESE 516 Optimization in Function Space

Linear vector spaces, normed linear spaces, Lebesgue integrals, the L_p spaces, linear operators, dual space, Hilbert spaces. Projection theorem, Hahn-Banach theorem. Hyperplanes and convex sets, Gateaux and Fréchet differentials, unconstrained minima, adjoint operators, inverse function theorem. Constrained minima, equality constraints, Lagrange multipliers, calculus of variations, Euler-Lagrange equations, positive cones, inequality

constraints. Kuhn-Tucker theorem, optimal control theory, Pontryagin's maximum principle, successive approximation methods, Newton's methods, steepest descent methods, primal-dual methods, penalty function methods, multiplier methods. Prerequisite: Math 4111.

Credit 3 units.

E35 ESE 517 Partial Differential Equations

Linear and nonlinear first order equations. Characteristics. Classification of equations. Theory of the potential linear and nonlinear diffusion theory. Linear and nonlinear wave equations. Initial and boundary value problems. Transform methods. Integral equations in boundary value problems. Prerequisites: ESE 318 and 319 or equivalent or consent of instructor.

Credit 3 units. EN: BME T, TU

E35 ESE 518 Optimization Methods in Control

The course is divided in two parts: convex optimization and optimal control. In the first part we cover applications of Linear Matrix Inequalities and Semi-Definite Programming to control and estimation problems. We also cover Multiparametric Linear Programming and its application to the Model Predictive Control and Estimation of linear systems. In the second part we cover numerical methods to solve optimal control and estimation problems. We cover techniques to discretize optimal control problems, numerical methods to solve them, and their optimality conditions. We apply these results to the Model Predictive Control and Estimation of nonlinear systems. Prerequisites: ESE 551, and ESE 415 or equivalent.

Credit 3 units. EN: TU

E35 ESE 519 Convex Optimization

Concentrates on recognizing and solving convex optimization problems that arise in applications. Convex sets, functions, and optimization problems. Basics of convex analysis. Least-squares, linear and quadratic programs, semidefinite programming, minimax, extremal volume, and other problems. Optimality conditions, duality theory, theorems of alternative, and applications. Interior-point methods. Applications to signal processing, statistics and machine learning, control and mechanical engineering, digital and analog circuit design, and finance. Prerequisites: Math 309 and ESE 415.

Credit 3 units.

E35 ESE 520 Probability and Stochastic Processes

Review of probability theory; models for random signals and noise; calculus of random processes; noise in linear and nonlinear systems; representation of random signals by sampling and orthonormal expansions; Poisson, Gaussian, and Markov processes as models for engineering problems. Prerequisite: ESE 326.

Credit 3 units. EN: BME T, TU

E35 ESE 523 Information Theory

Discrete source and channel model, definition of information rate and channel capacity, coding theorems for sources and channels, encoding and decoding of data for transmission over noisy channels. Corequisite: ESE 520.

Credit 3 units. EN: BME T, TU

E35 ESE 524 Detection and Estimation Theory

Study of detection and estimation of signals in noise. Linear algebra, vector spaces, independence, projections. Data independence, factorization theorem and sufficient statistics. Neyman-Pearson and Bayes detection. Least squares, maximum-likelihood and maximum a posteriori estimation of signal parameters. Conjugate priors, recursive estimation, Wiener and Kalman filters. Prerequisite: ESE 520.

Credit 3 units. EN: BME T, TU

E35 ESE 526 Network Science

This course focuses on fundamental theory, modeling, structure, and analysis methods in network science. The first part of the course includes basic network models and their mathematical principles. Topics include a review of graph theory, random graph models, scale-free network models and dynamic networks. The second part of the course includes structure and analysis methods in network science. Topics include network robustness, community structure, spreading phenomena and clique topology. Applications of the topics covered by this course include social networks, power grid, internet, communications, protein-protein interactions, epidemic control, global trade, neuroscience, etc. Prerequisites: ESE 520 (Probability and Stochastic Processes), Math 429 (Linear Algebra) or equivalent.

Credit 3 units.

E35 ESE 531 Nano and Micro Photonics

This course focuses on fundamental theory, design, and applications of photonic materials and micro/nano photonic devices. It includes review and discussion of light-matter interactions in nano and micro scales, propagation of light in waveguides, nonlinear optical effect and optical properties of nano/micro structures, the device principles of waveguides, filters, photodetectors, modulators and lasers. Prerequisite: ESE 330.

Credit 3 units. EN: BME T, TU

E35 ESE 532 Introduction to Nano-Photonic Devices

Introduction to photon transport in nano-photonic devices. This course focuses on the following topics: light and photons, statistical properties of photon sources, temporal and spatial correlations, light-matter interactions, optical nonlinearity, atoms and quantum dots, single- and two-photon devices, optical devices, and applications of nano-photonic devices in quantum and classical computing and communication. Prerequisites: ESE 330 and Physics 217, or permission of instructor.

Credit 3 units. EN: BME T, TU

E35 ESE 536 Introduction to Quantum Optics

This course covers the following topics: quantum mechanics for quantum optics, radiative transitions in atoms, lasers, photon statistics (photon counting, sub-/super-Poissonian photon statistics, bunching, anti-bunching, theory of photodetection, shot noise), entanglement, squeezed light, atom-photon interactions, cold atoms, abd atoms in cavities. If time permits, the following topics will be selectively covered: quantum computing, quantum cryptography, and teleportation. Prerequisites: ESE 330 and Physics 217 or Physics 421

Credit 3 units. EN: BME T, TU

E35 ESE 538 Advanced Electromagnetic Engineering

The course builds on undergraduate electromagnetics to systematically develop advanced concepts in electromagnetic theory for engineering applications. The following topics are covered: Maxwell's equations; fields and waves in materials; electromagnetic potentials and topics for circuits and systems; transmission-line essentials for digital electronics and for communications; guided wave principles for electronics and optoelectronics; principles of radiation and antennas; and numerical methods for computational electromagnetics.

Credit 3 units.

E35 ESE 543 Control Systems Design by State Space Methods

Advanced design and analysis of control systems by state-space methods: classical control review, Laplace transforms, review of linear algebra (vector space, change of basis, diagonal and Jordan forms), linear dynamic systems (modes, stability, controllability, state feedback, observability, observers, canonical forms, output feedback, separation principle and decoupling), nonlinear dynamic systems (stability, Lyapunov methods). Frequency domain analysis of multivariable control systems. State space control system design methods: state feedback, observer feedback, pole placement, linear optimal control. Design exercises with CAD (computer-aided design) packages for engineering problems. Prerequisite: ESE 351 and ESE 441, or permission of instructor.

Credit 3 units. EN: BME T, TU

E35 ESE 544 Optimization and Optimal Control

Constrained and unconstrained optimization theory. Continuous time as well as discrete-time optimal control theory. Time-optimal control, bang-bang controls and the structure of the reachable set for linear problems. Dynamic programming, the Pontryagin maximum principle, the Hamiltonian-Jacobi-Bellman equation and the Riccati partial differential equation. Existence of classical and viscosity solutions. Application to time optimal control, regulator problems, calculus of variations, optimal filtering and specific problems of engineering interest. Prerequisites: ESE 551, ESE 552.

Credit 3 units. EN: BME T, TU

E35 ESE 545 Stochastic Control

Introduction to the theory of stochastic differential equations based on Wiener processes and Poisson counters, and an introduction to random fields. The formulation and solution of problems in nonlinear estimation theory. The Kalman-Bucy filter and nonlinear analogues. Identification theory. Adaptive systems. Applications. Prerequisites: ESE 520 and ESE 551. Credit 3 units. EN: BME T, TU

E35 ESE 546 Dynamics & Control in Neuroscience & Brain Medicine

This course provides an introduction to systems engineering approaches to modeling, analysis and control of neuronal dynamics at multiple scales. A central motivation is the manipulation of neuronal activity for both scientific and medical applications using emerging neurotechnology and pharmacology. Emphasis is placed on dynamical systems and control theory, including bifurcation and stability analysis of single neuron models and population mean-field models. Synchronization properties of neuronal networks are covered, and methods for control of neuronal activity in both oscillatory

and non-oscillatory dynamical regimes are developed. Statistical models for neuronal activity are also discussed. An overview of signal processing and data analysis methods for neuronal recording modalities is provided toward the development of closed-loop neuronal control paradigms. The final evaluation is based on a project or research survey. Prerequisites: ESE 553 (or equivalent); ESE 520 (or equivalent); ESE 351 (or equivalent).

Credit 3 units. EN: BME T, TU

E35 ESE 547 Robust and Adaptive Control

Graduate-level control system design methods for multi-input multi-output systems. Linear optimal-based methods in robust control, nonlinear model reference adaptive control. These design methods are currently used in most industry control system design problems. These methods are designed, analyzed and simulated using MATLAB. Linear control theory (review), robustness theory (Mu Analysis), optimal control and the robust servomechanism, H-infinity optimal control, robust output feedback controls, Kalman filter theory and design, linear quadratic gaussian with loop transfer recovery, the Loop Transfer Recovery method of Lavretsky, Mu synthesis, Lyapunov theory (review), LaSalle extensions, Barbalat's Lemma, model reference adaptive control, artificial neural networks, online parameter estimation, convergence and persistence of excitation. Prerequisite: ESE 543 or ESE 551 or equivalent. Credit 3 units. EN: BME T, TU

E35 ESE 551 Linear Dynamic Systems I

Input-output and state-space description of linear dynamic systems. Solution of the state equations and the transition matrix. Controllability, observability, realizations, pole-assignment, observers and decoupling of linear dynamic systems. Prerequisite: ESE 351.

Credit 3 units. EN: BME T, TU

E35 ESE 552 Linear Dynamic Systems II

Least squares optimization problems. Riccati equation, terminal regulator and steady-state regulator. Introduction to filtering and stochastic control. Advanced theory of linear dynamic systems. Geometric approach to the structural synthesis of linear multivariable control systems. Disturbance decoupling, system invertibility and decoupling, extended decoupling and the internal model principle. Prerequisite: ESE 551. Credit 3 units. EN: TU

E35 ESE 553 Nonlinear Dynamic Systems

State space and functional analysis approaches to nonlinear systems. Questions of existence, uniqueness and stability; Lyapunov and frequency-domain criteria; w-limits and invariance, center manifold theory and applications to stability, steady-state response and singular perturbations. Poincare-Bendixson theory, the van der Pol oscillator, and the Hopf Bifurcation theorem. Prerequisite: ESE 551. Credit 3 units. EN: TU

E35 ESE 554 Advanced Nonlinear Dynamic Systems

Differentiable manifolds, vector fields, distributions on a manifold, Frobenius' theorem, Lie algebras. Controllability, observability of nonlinear systems, examined from the viewpoint of differential geometry. Transformation to normal forms. Exact

linearization via feedback. Zero dynamics and related properties. Noninteracting control and disturbance decoupling. Controlled invariant distributions. Noninteracting control with internal stability. Prerequisites: ESE 553 and ESE 551.
Credit 3 units.

E35 ESE 557 Hybrid Dynamic Systems

Theory and analysis of hybrid dynamic systems, which is the class of systems whose state is composed by continuous-valued and discrete-valued variables. Discrete-event systems models and language descriptions. Models for hybrid systems. Conditions for existence and uniqueness. Stability and verification of hybrid systems. Optimal control of hybrid systems. Applications to cyber-physical systems and robotics.
Prerequisite: ESE 551.

Credit 3 units. EN: BME T, TU

E35 ESE 560 Computer Systems Architecture I

An exploration of the central issues in computer architecture: instruction set design, addressing and register set design, control unit design, microprogramming, memory hierarchies (cache and main memories, mass storage, virtual memory), pipelining, and bus organization. The course emphasizes understanding the performance implications of design choices, using architecture modeling and evaluation using VHDL and/or instruction set simulation. Prerequisites: CSE 361S and CSE 260M.

Same as E81 CSE 560M

Credit 3 units. EN: BME T, TU

E35 ESE 562 Analog Integrated Circuits

This course focuses on fundamental and advanced topics in analog and mixed-signal VLSI techniques. The first part of the course covers graduate-level materials in the area of analog circuit synthesis and analysis. The second part of the course covers applications of the fundamental techniques for designing analog signal processors and data converters. Several practical aspects of mixed-signal design, simulation and testing are covered in this course. This is a project-oriented course, and it is expected that the students apply the concepts learned in the course to design, simulate and explore different circuit topologies. Prerequisites: CSE 260 and ESE 232.
Credit 3 units.

E35 ESE 566A Modern System-on-Chip Design

The System-on-Chip (SoC) technology is at the core of most electronic systems: smartphones, wearable devices, autonomous robots and cars, and aerospace and medical electronics. In these SoCs, billions of transistors can be integrated on a single silicon chip containing various components, such as microprocessors, DSPs, hardware accelerators, memories, and I/O interfaces. Topics include SoC architectures, design tools, and methods as well as system-level tradeoffs between performance, power consumption, energy efficiency, reliability, and programmability. Students will gain an insight into the early stages of the SoC design process by performing the tasks of developing functional specifications, applying partitions and map functions to hardware and/or software, and then evaluating and validating system performance. Assignments include hands-on design projects. Open to both graduate and senior undergraduate students.
Prerequisite: ESE 461.

Credit 3 units. EN: BME T, TU

E35 ESE 567 Computer Systems Analysis

A comprehensive course on performance analysis techniques. The topics include common mistakes, selection of techniques and metrics, summarizing measured data, comparing systems using random data, simple linear regression models, other regression models, experimental designs, 2^{k-p} experimental designs, factorial designs with replication, fractional factorial designs, one factor experiments, two factor full factorial design w/o replications, two factor full factorial designs with replications, general full factorial designs, introduction to queueing theory, analysis of single queues, queueing networks, operational laws, mean-value analysis, time series analysis, heavy tailed distributions, self-similar processes, long-range dependence, random number generation, analysis of simulation results, and art of data presentation. Prerequisites: CSE 260M.

Same as E81 CSE 567M

Credit 3 units. EN: BME T, TU

E35 ESE 570 Coding Theory

Introduction to the algebra of finite fields. Linear block codes, cyclic codes, BCH and related codes for error detection and correction. Encoder and decoder circuits and algorithms. Spectral descriptions of codes and decoding algorithms. Code performances.

Credit 3 units. EN: TU

E35 ESE 571 Transmission Systems and Multiplexing

Transmission and multiplexing systems are essential to providing efficient point-to-point communication over distance. This course introduces the principles underlying modern analog and digital transmission and multiplexing systems and covers a variety of system examples.

Credit 3 units. EN: TU

E35 ESE 572 Signaling and Control in Communication Networks

The operation of modern communications networks is highly dependent on sophisticated control mechanisms that direct the flow of information through the network and oversee the allocation of resources to meet the communication demands of end users. This course covers the structure and operation of modern signaling systems and addresses the major design trade-offs that center on the competing demands of performance and service flexibility. Specific topics covered include protocols and algorithms for connection establishment and transformation, routing algorithms, overload and failure recovery and networking dimensioning. Case studies provide concrete examples and reveal the key design issues. Prerequisites: graduate standing and permission of instructor.

Credit 3 units. EN: BME T, TU

E35 ESE 575 Fiber-Optic Communications

Introduction to optical communications via glass-fiber media. Pulse-code modulation and digital transmission methods, coding laws, receivers, bit-error rates. Types and properties of optical fibers; attenuation, dispersion, modes, numerical aperture. Light-emitting diodes and semiconductor laser sources; device structure, speed, brightness, modes, electrical properties, optical and spectral characteristics. Prerequisites: ESE 330, ESE 336.
Credit 3 units. EN: BME T, TU

E35 ESE 582 Fundamentals and Applications of Modern Optical Imaging

Analysis, design, and application of modern optical imaging systems with emphasis on biological imaging. The first part of the course will focus on the physical principles underlying the operation of imaging systems and their mathematical models. Topics include ray optics (speed of light, refractive index, laws of reflection and refraction, plane surfaces, mirrors, lenses, aberrations), wave optics (amplitude and intensity, frequency and wavelength, superposition and interference, interferometry), Fourier optics (space-invariant linear systems, Huygens-Fresnel principle, angular spectrum, Fresnel diffraction, Fraunhofer diffraction, frequency analysis of imaging systems), and light-matter interaction (absorption, scattering, dispersion, fluorescence). The second part of the course will compare modern quantitative imaging technologies, including but not limited to digital holography, computational imaging, and super-resolution microscopy. Students will evaluate and critique recent optical imaging literature. Prerequisites: ESE 318 and ESE 319 (or their equivalents); ESE 330 or PHY 421 (or equivalent). Credit 3 units. EN: BME T, TU

E35 ESE 584 Statistical Signal Processing for Sensor Arrays

Methods for signal processing and statistical inference for data acquired by an array of sensors, such as those found in radar, sonar and wireless communications systems. Multivariate statistical theory with emphasis on the complex multivariate normal distribution. Signal estimation and detection in noise with known statistics, signal estimation and detection in noise with unknown statistics, direction finding, spatial spectrum estimation, beam forming, parametric maximum-likelihood techniques. Subspace techniques, including MUSIC and ESPRIT. Performance analysis of various algorithms. Advanced topics may include structured covariance estimation, wide-band array processing, array calibration, array processing with polarization diversity, and space-time adaptive processing (STAP). Prerequisites: ESE 520, ESE 524, linear algebra, computer programming.

Credit 3 units. EN: TU

E35 ESE 585A Sparse Modeling for Imaging and Vision

Sparse modeling is at the heart of modern imaging, vision, and machine learning. It is a fascinating new area of research that seeks to develop highly effective data models. The core idea in sparse modeling theory is a novel redundant transform, where the number of transform coefficients is larger compared to the original data dimension. Together with redundancy comes an opportunity of seeking the sparsest possible representation, or the one with the fewest non-zeros. This core idea leads to a series of beautiful theoretical and practical results with many applications such as regression, prediction, restoration, extrapolation, compression, detection, and recognition. In this course, we will explore sparse modeling by covering theoretical as well as algorithmic aspects with applications in computational imaging and computer vision. Prerequisites: ESE 318, Math 233, Math 309, and Math 429, or equivalents. Coding with MATLAB or Python.

Credit 3 units. EN: BME T, TU

E35 ESE 588 Quantitative Image Processing

Introduction to modeling, processing, manipulation and display of images. Application of two-dimensional linear systems to image processing. Two-dimensional sampling and transform methods. The eye and perception. Image restoration and reconstruction.

Multiresolution processing, noise reduction and compression.

Boundary detection and image segmentation. Case studies in image processing (examples: computer tomography and ultrasonic imaging).

Prerequisites: ESE 326, ESE 482.

Credit 3 units. EN: BME T, TU

E35 ESE 589 Biological Imaging Technology

This class develops a fundamental understanding of the physics and mathematical methods that underlie biological imaging and critically examine case studies of seminal biological imaging technology literature. The physics section examines how electromagnetic and acoustic waves interact with tissues and cells, how waves can be used to image the biological structure and function, image formation methods, and diffraction limited imaging. The math section examines image decomposition using basis functions (e.g., Fourier transforms), synthesis of measurement data, image analysis for feature extraction, reduction of multidimensional imaging datasets, multivariate regression, and statistical image analysis. Original literature on electron, confocal and two photon microscopy, ultrasound, computed tomography, functional and structural magnetic resonance imaging and other emerging imaging technology are critiqued.

Credit 3 units. EN: BME T, TU

E35 ESE 590 Electrical & Systems Engineering Graduate Seminar

This satisfactory/unsatisfactory course is required for the Masters, DSc and PhD degrees in Electrical and Systems Engineering. A satisfactory grade is required for each semester of enrollment and is received by attendance at regularly scheduled ESE seminars. Masters students must attend at least 3 seminars per semester, except for first year Master's students who must attend 4. DSc and PhD students must attend at least 5 seminars per semester, except for first year PhD students who must attend 6. Part-time students are exempt except during their year of residency. Any student under continuing status is also exempt.

E35 ESE 591 Biomedical Optics I: Principles

This course covers the principles of optical photon transport in biological tissue. This course covers the principles and applications of optical photon transport in biological tissue. Topics include a brief introduction to biomedical optics, single-scatterer theories, Monte Carlo modeling of photon transport, convolution for broad-beam responses, radiative transfer equation, diffusion theory and applications, sensing of optical properties and spectroscopy, and photoacoustic imaging principles and applications. Prerequisite: Differential equations Same as E62 BME 591

Credit 3 units. EN: TU

E35 ESE 5932 Computational Methods for Imaging Science

Inverse problems are ubiquitous in science and engineering, and they form the basis for modern imaging methods. This course will introduce students to the mathematical formulation of inverse problems and modern computational methods employed to solve them. Specific topics covered will include regularization theory, compressive sampling, variational calculus, and a survey of relevant numerical optimization methods. The application of these methods to tomographic imaging problems will be addressed in detail. Prerequisite: ESE 5931 or permission of instructor.

Credit 3 units. EN: TU

E35 ESE 5933 Theoretical Imaging Science

Imaging science encompasses the design and optimization of imaging systems to quantitatively measure information of interest. Imaging systems are important in many scientific and medical applications and may be designed for one specific application or for a range of applications. Performance is quantified for any given task through an understanding of the statistical model for the imaging data, the data processing algorithm used, and a measure of accuracy or error. Optimal processing is based on statistical decision theory and estimation theory; performance bounds include the receiver operating characteristic and Cramer-Rao bounds. Bayesian methods often lead to ideal observers. Extensions of methods from finite-dimensional spaces to function space are fundamental for many imaging applications. A variety of methods to assess image quality and resulting imaging system optimization are covered. Prerequisite: permission of instructor.

Credit 3 units. EN: TU

E35 ESE 596 Seminar in Imaging Science and Engineering

This seminar course consists of a series of tutorial lectures on Imaging Science and Engineering with emphasis on applications of imaging technology. Students are exposed to a variety of imaging applications that vary depending on the semester, but may include multispectral remote sensing, astronomical imaging, microscopic imaging, ultrasound imaging and tomographic imaging. Guest lecturers come from several parts of the university. This course is required of all students in the Imaging Science and Engineering program; the only requirement is attendance. This course is graded pass/fail. Prerequisite: admission to Imaging Science and Engineering program. Same as CSE 596 (when offered) and BME 506.

Credit 1 unit.

E35 ESE 599 Master's Research

Prerequisite: Students must have the ESE Research/Independent Study Registration Form (PDF) (https://ese.wustl.edu/research/areas/Documents/Independent%20Study%20Form_1.pdf) approved by the department.

Credit variable, maximum 3 units.

Bachelor of Science in Electrical Engineering

The Bachelor of Science in Electrical Engineering (BSEE) degree program is accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>).

Program Educational Objectives

Within a few years of graduation, BSEE degree program recipients are expected to do the following:

- Our graduates will be engaged as practicing professionals in a broad range of careers in industry or government or will pursue advanced degrees in academic graduate education in engineering or a related field.
- Our graduates will function effectively as members of teams demonstrating sensitivity to professional and societal contexts, integrity and versatility.

Student Outcomes

Graduates of the BSEE program are expected to know or have the following by the time of graduation:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. An ability to communicate effectively with a range of audiences
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

BSEE Degree Requirements

To obtain the BSEE degree, students must complete a minimum of 120 units consistent with the residency and other applicable requirements of Washington University and the McKelvey School of Engineering (p. 1134) and subject to the following program requirements:

1. Common Studies program of the McKelvey School of Engineering: This includes courses in engineering, mathematics, chemistry, humanities, social sciences and technical writing. The required chemistry sequence is Chem 111A–Chem 151, although Chem 111A–Chem 112A–Chem 151–Chem 152 is recommended. Chem 111A is preferred, but Chem 105 will be allowed.
2. Engr 4501 Engineering Ethics and Sustainability (1 unit)

3. Two of the following three computer science courses: CSE 131 Introduction to Computer Science (3 units), CSE 132 Introduction to Computer Engineering (3 units) or CSE 247 Data Structures and Algorithms (3 units)
 4. Engineering and science breadth requirements: 9 units in engineering or science outside of electrical engineering. These units must be taken in the following areas: biomedical engineering, chemical engineering, computer science and engineering, mechanical engineering, systems science and engineering, economics, mathematics, physics, biology, chemistry, earth and planetary sciences, and pre-medicine. These units must be at the 200 level or higher and cannot be used to satisfy the Common Studies requirements (item 1 above) or the computer science requirement (item 3 above). Courses in other fields can be arranged with special departmental approval.
Examples of engineering and science courses are MEMS 255 Dynamics, EECE 210 Introduction to Environmental Engineering, CSE 247 Data Structures and Algorithms, Engr 324 From Concept to Market: The Business of Engineering, BME 240 Biomechanics, Physics 217 Introduction to Quantum Physics, Physics 318 Introduction to Quantum Physics II, MEMS 253 Statics and Mechanics of Materials, Biol 2960 Principles of Biology I, Biol 2970 Principles of Biology II, Chem 261 Organic Chemistry I with Lab and Chem 262 Organic Chemistry II with Lab.
 5. 31 units of required ESE courses:
- | Code | Title | Units |
|-------------|--|-------|
| ESE 105 | Introduction to Electrical and Systems Engineering | 3 |
| ESE 230 | Introduction to Electrical and Electronic Circuits | 4 |
| ESE 232 | Introduction to Electronic Circuits | 3 |
| ESE 260 | Introduction to Digital Logic and Computer Design | 3 |
| ESE 318 | Engineering Mathematics A | 3 |
| ESE 319 | Engineering Mathematics B | 3 |
| ESE 326 | Probability and Statistics for Engineering | 3 |
| ESE 330 | Engineering Electromagnetics Principles | 3 |
| ESE 351 | Signals and Systems | 3 |
| ESE 498 | Electrical Engineering Capstone Design Projects | 3 |
| Total Units | | 31 |
6. Two upper-level laboratory courses (6 units) from the following list: ESE 331, ESE 435, ESE 447, ESE 448, ESE 465 and ESE 488. The selection must contain at least one course from ESE 331, ESE 435, ESE 465 and ESE 488.
 7. 15 units of elective ESE courses in electrical engineering subjects from the following list: ESE 330–399, ESE 400, ESE 405, ESE 415, ESE 425, ESE 429–497 and ESE 503–589. The selection must contain at least two courses from ESE 431, ESE 436, ESE 438, ESE 441, ESE 461, ESE 471 and ESE 482.
 8. The entire course sequence for the BSEE containing engineering topics of at least 45 units. The numbers of engineering topic units assigned to undergraduate courses in the McKelvey School of Engineering vary from none (0) to the number of credits given to the course. For the precise number for each course, please refer to the table of Topics Units — Engineering Courses provided by Engineering Undergraduate Student Services (<http://engineering.wustl.edu/current-students/student-services/Pages/default.aspx>).
 9. Limitations. No more than 3 credits of 500-level courses may be applied toward the EE elective requirement (item 7 above).
 10. Limitations. No more than 6 units of the combined units of ESE 400 Independent Study and ESE 497 Undergraduate Research (including ESE 497A and ESE 497B) may be applied toward the EE elective requirement (item 7 above) of the BSEE degree. The balance of combined units, if there are any left, are allowed as free electives to satisfy the requirement for the total number of units.
 11. The courses taken to satisfy the following BSEE degree requirements must be taken for a letter grade and not on a pass/fail basis: item 5 (required ESE courses), item 6 (laboratory courses) and item 7 (elective ESE courses).

Electrical Engineering Sample Curriculum

Most students acquire more than 120 credit units. For a typical sequence of subjects for the BSEE degree, please refer to the following table:

Course	Fall Units	Spring Units
First Year		
Introduction to Electrical and Systems Engineering (ESE 105)	3	—
Physics I (Physics 191)	3	—
Physics I Laboratory (Physics 191L)	1	—
Introduction to Computer Science (CSE 131)	3	—
Calculus II, III (Math 132, 233)	3	3
Humanities or social science elective	—	3
Physics II (Physics 192)	—	3
Physics II Laboratory (Physics 192L)	—	1
Introduction to Computer Engineering (CSE 132)	—	3

Introduction to Digital Logic and Computer Design (ESE 260)	—	3
	<u>13</u>	<u>16</u>
Second Year		
Differential Equations (Math 217)	3	—
Introduction to Electrical and Electronic Circuits (ESE 230)	4	—
Humanities or social science elective	3	3
General Chemistry I or Introductory General Chemistry I (Chem 111A or Chem 105)	3	—
General Chemistry Laboratory I (Chem 151)	2	—
Introduction to Electronic Circuits (ESE 232)	—	3
Signals and Systems (ESE 351)	—	3
Engineering Mathematics A (ESE 318)	—	3
Engineering Mathematics B (ESE 319)	—	3
	<u>15</u>	<u>15</u>
Third Year		
Probability and Statistics for Engineering (ESE 326)	3	—
Humanities or social sciences elective	3	3
Engineering and science breadth elective	3	—
Engineering Electromagnetics Principles (ESE 330)	3	—
Electrical Engineering electives with engineering topics units	3	6
Electrical Engineering laboratory	—	3
Technical Writing (Engr 310)	—	3
	<u>15</u>	<u>15</u>
Fourth Year		
Free electives	3	6
Humanities or social science elective	3	—
Engineering Ethics and Sustainability (Engr 4501)	1	—
Electrical Engineering electives with engineering topics units	3	3
Engineering and science breadth elective	3	3
Electrical Engineering laboratory	3	—
Electrical Engineering Capstone Design Projects (ESE 498)	—	3
	<u>16</u>	<u>15</u>

For more information about the BS in Electrical Engineering curriculum (<https://ese.wustl.edu/undergraduate/degreeprograms/Pages/electrical-engineering.aspx>), please visit the ESE website.

Bachelor of Science in Systems Science & Engineering

Systems Engineering broadly covers how to integrate different components in engineering systems. Applications range from operations research and mathematical solutions to business problems to control engineering, the basic theory and practice used to control diverse systems such as jet airplanes, electric power grids, or the nation's economy. The Systems Science and Engineering program is ideal for students interested in math, physics and computing; business, finance or financial engineering; or applied mathematics.

The Bachelor of Science in Systems Science & Engineering (BSSSE) program lays the engineering and mathematical foundations for modeling, analyzing and designing complex systems and highlights their applications in contemporary engineering and scientific application domains. Graduates will be competent in employing a versatile, interdisciplinary systems perspective to translate practical problem formulations into mathematical models, recognizing structural commonalities across diverse systems, and solving analysis and design objectives using suitable methods at the core of systems science and engineering. The basic methodological knowledge at the core of systems science includes mathematical competence and knowledge of systems analysis, control, design methods, numerical methods, differential equations, dynamic systems theory, automatic control theory, system stability, estimation, optimization, modeling, identification, simulation and basic computer programming. Graduates will have an engineering outlook and be able to interact fully with other engineers. They will also possess sufficient proficiency in computer use to design algorithms for simulation, estimation, control and optimization.

The Bachelor of Science in Systems Science and Engineering (BSSSE) degree program is accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>).

Program Educational Objectives

Within a few years of graduation, BSSSE degree program recipients are expected to do the following:

- Our graduates will be engaged as practicing professionals in a broad range of careers in industry or government or will pursue advanced degrees in academic graduate education in engineering or a related field.
- Our graduates will function effectively as members of teams demonstrating sensitivity to professional and societal contexts, integrity and versatility.

Student Outcomes

Graduates of the BSSSE program are expected to know or have the following by the time of graduation:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. An ability to communicate effectively with a range of audiences
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

BSSSE Degree Requirements

The course sequence designed to achieve the type of education outlined above requires at least 120 units, satisfies the residency and other applicable requirements of Washington University and the McKelvey School of Engineering (p. 1134), and meets the following program requirements:

1. Common Studies program of the McKelvey School of Engineering: This includes courses in engineering, mathematics, physics, chemistry, humanities, social sciences and technical writing. The required chemistry sequence is Chem 111A-Chem 151 (recommended) or Chem 105-Chem 151.
2. Engr 4501 Engineering Ethics and Sustainability (1 unit)
3. Required courses in systems science and engineering: ESE 105 Introduction to Electrical and Systems Engineering (3 units); ESE 205 Introduction to Engineering Design (3 units); ESE 230 Introduction to Electrical and Electronic Circuits (4 units); ESE 318 Engineering Mathematics A (3 units) and ESE 319 Engineering Mathematics B (3 units); ESE 326 Probability and Statistics for Engineering (3 units); ESE 351 Signals and Systems (3 units); ESE 403 Operations Research (3 units) or ESE 415 Optimization (3

units); ESE 441 Control Systems (3 units); ESE 448 Systems Engineering Laboratory (3 units); and ESE 499 Systems Science and Engineering Capstone Design Project (3 units)

4. Two of the following three computer science courses: CSE 131 Introduction to Computer Science (3 units); CSE 247 Data Structures and Algorithms (3 units); and CSE 132 Introduction to Computer Engineering (3 units). Students are encouraged to take CSE 131 and CSE 247. The other possible sequence is CSE 131 and CSE 132.
5. One of the following two laboratory courses: ESE 447 Robotics Laboratory (3 units) or ESE 488 Signals and Communication Laboratory (3 units)
6. 12 units in elective courses in systems science and engineering are required: ESE 400 through 428; ESE 437; ESE 440 through 459; ESE 470 through 497; ESE 497; ESE 502 through 529; ESE 540 through 559; SWCD 5660 Designing Sustainable Social Policies & Programs: A System Dynamics Approach. Up to 3 units of the following business courses may be part of the 12 units of systems science and engineering electives: OSCM 356 Operations Management, OSCM 458 Operations Analytics, OMM 576 Foundations of Supply Chain Management, and OMM 577 Information Technology and Supply Chain Management.
7. 12 units in engineering concentration outside of systems science and engineering are required. These units must all be taken in one of the following engineering areas: Biomedical Engineering, Chemical Engineering, Computer Science & Engineering, Electrical Engineering (ESE 102; ESE 230 through 239; ESE 260 through 290; ESE 330 through 339; ESE 360 through 390; ESE 429 through 439; ESE 460 through 469; 490 through 496; ESE 498; ESE 530 through 539; ESE 560 through 589), or Mechanical Engineering & Materials Science. Of the 12 units, 9 units must be at the 200 level or higher. Sequences for concentrations in economics, mathematics, physics, pre-medicine and other fields can be arranged with special departmental approval to meet a student's specific needs. When a non-engineering discipline is chosen as the outside concentration, the student needs to pay special attention to the engineering topics unit requirement and make sure that enough engineering content is obtained from the other courses. The use of basic required courses to fulfill the requirement for an outside concentration is not permitted.
8. The entire course sequence for the BSSSE, containing engineering topics of at least 45 units, must be completed. The number of engineering topics units assigned to undergraduate courses in the McKelvey School of Engineering vary from none (0) to the number of credits given to the course. For the precise number for each

- course, please refer to the table of Topics Units — Engineering Courses (<http://engineering.wustl.edu/current-students/student-services/Pages/default.aspx>) provided by Engineering Undergraduate Student Services.
9. Limitations: No more than 6 units of the combined units of ESE 400 Independent Study and ESE 497 Undergraduate Research (including 497A and 497B) may be applied toward the SSE elective requirement (item 6 above) of the BSSSE degree. Any remaining combined units are allowed as free electives to satisfy the requirement for the total number of units.
 10. The courses taken to satisfy the following BSSSE degree requirements must be taken for a letter grade and not on a pass/fail basis: item 3 (required ESE courses), item 5 (elective laboratory course) and item 6 (elective ESE courses).

Systems Science & Engineering Sample Curriculum

The program requirements for the BSSSE allow for a double major with another department. Changes in the program to accommodate such double majors may be made with departmental approval. For a sample program for the BSSSE, please refer to the following table:

Course	Fall Units	Spring Units
First Year		
Calculus II, III (Math 132, 233)	3	3
Physics I (Physics 191)	3	—
Physics I Laboratory (Physics 191L)	1	—
Humanities or social sciences elective	—	6
Introduction to Computer Science (CSE 131)	3	—
Freshman Elective	1	—
Introduction to Electrical and Systems Engineering (ESE 105)	3	—
Physics II (Physics 192), Physics II Lab (Physics 192L)	—	4
Introduction to Engineering Design (ESE 205)	—	3
	14	16
Second Year		
General Chemistry Laboratory I (Chem 151)	2	—
General Chemistry I or Introductory General Chemistry I (Chem 111A or Chem 105)	3	—
Data Structures and Algorithms or Introduction to Computer Engineering (CSE 247 or CSE 132)	3	—

Differential Equations (Math 217)	3	—
Introduction to Electrical and Electronic Circuits (ESE 230)	4	—
Probability and Statistics for Engineering (ESE 326)	—	3
Outside concentration elective	—	3
Signals and Systems (ESE 351)	—	3
Engineering Mathematics A (ESE 318)	—	3
Engineering Mathematics B (ESE 319)	—	3
	15	15
Third Year		
Humanities or social sciences elective	3	3
Operations Research or Optimization (ESE 403 or ESE 415)	3	—
Control Systems (ESE 441)	3	—
Systems science and engineering elective with engineering topics units	3	3
Outside concentration elective	3	3
Robotics Laboratory (ESE 447) an elective lab	—	3
Technical Writing (Engr 310)	—	3
	15	15
Fourth Year		
Systems Science and Engineering Capstone Design Project (ESE 499)	3	—
Engineering Ethics and Sustainability (Engr 4501)	1	—
Systems Engineering Laboratory (ESE 448)	3	—
Systems science and engineering elective with engineering topics units	3	3
Outside concentration elective	3	—
Humanities or social sciences elective	3	3
Free Electives	—	3
Engineering course with engineering topics units	—	6
	16	15

For more information about the BS in Systems Science & Engineering curriculum (<https://ese.wustl.edu/undergraduate-degreeprograms/Pages/systems-science-engineering.aspx>), please visit the ESE website.

Bachelor of Science in Computer Engineering

Computer engineering encompasses studies of hardware, software, and systems issues that arise in the design, development, and application of computer systems. Computer engineers are particularly well suited to address the particular challenges that exist as computing systems interact with the real, physical world. This includes sensing, actuation, timing, security, and computing systems with widely varying form factors, ranging from servers to mobile devices to the "internet of things." The degree requires 120 units including core courses, technical electives, a capstone course, and common studies.

The Bachelor of Science in Computer Engineering degree is jointly administered by the Department of Computer Science and Engineering and the Department of Electrical and Systems Engineering.

Students working toward a Bachelor of Science in Computer Engineering degree must meet all requirements for an engineering degree (p. 1134) from the McKelvey School of Engineering. Required courses and technical electives cannot be taken on a pass/fail basis.

- **Core Requirements:**

The following courses are required of all computer engineering students:

Code	Title	Units
ESE 105	Introduction to Electrical and Systems Engineering	3
CSE 131	Introduction to Computer Science	3
CSE 132	Introduction to Computer Engineering	3
ESE 230	Introduction to Electrical and Electronic Circuits	4
ESE 232	Introduction to Electronic Circuits	3
CSE 247	Data Structures and Algorithms	3
CSE 260M	Introduction to Digital Logic and Computer Design	3
or ESE 260	Introduction to Digital Logic and Computer Design	
ESE 326	Probability and Statistics for Engineering	3
CSE 361S	Introduction to Systems Software	3
CSE 362M	Computer Architecture	3
Total Units		31

Each of these core courses must be passed with a grade of C- or better.

- **Technical Elective Requirements:**

At least 21 units of technical electives, drawn from either of the following:

- CSE courses with the suffix S, M, T or A; CSE 347
- ESE courses at the 300 level or higher; ESE 205

The above can include courses at the graduate level; however, they must still meet one of the two criteria above. Up to 6 units of independent study (CSE 400E, CSE 497-CSE 499, ESE 400, ESE 497) can count toward technical electives. There is no limit as to how many independent study courses can count toward the general 120 units.

- **Capstone Requirement:**

The capstone requirement can be met by taking either CSE 462M or ESE 498.

- **Common Studies Requirements:**

Code	Title	Units
Math 131	Calculus I	3
Math 132	Calculus II	3
Math 217	Differential Equations	3
Math 233	Calculus III	3
Physics 191	Physics I	3
Physics 191F	Physics I — First-Years Only	
Physics 191U	Physics I — Sophomores, Juniors, and Seniors Only	
Physics 191L	Physics I Laboratory	1
Physics 192	Physics II	3
Physics 192L	Physics II Laboratory	1
Natural sciences elective		3
College Writing		3
Engr 310	Technical Writing	3
Humanities and social sciences electives		18
Total Units		47

Upon completing a course in the calculus sequence (Math 131-Math 132-Math 233) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the mathematics and statistics department's back credit policy (http://college.artsci.wustl.edu/policies/placement_credit/backcredit/).

The natural sciences requirement is for 3 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies or Physics. These courses must be completed with a grade of C- or better.

The College Writing Program, humanities and social sciences requirements are those required of all students in the McKelvey School of Engineering.

Bachelor of Science in Applied Science (Electrical Engineering)

Students who do not plan to pursue a career in electrical engineering but who seek a strong foundation in the principles of electrical engineering may choose the Bachelor of Science in Applied Science (Electrical Engineering). The program ensures that the student learns the foundations of electrical engineering through breadth requirements. In addition, there is flexibility in selecting upper-level courses to meet the student's individual objectives. This program also may be attractive for students interested in obtaining multiple degrees, because the requirements are less strict than for the BSEE degree. Historically, students have matched a degree in electrical engineering with degrees in other engineering disciplines, in the natural sciences, in music, in history and in business; other combinations are possible. This also may be an attractive option for students planning graduate studies in a variety of disciplines, including medicine, law or business. This applied science degree is not accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>).

The degree requirements include the residency and general requirements of the university and the McKelvey School of Engineering as well as the following:

Courses	Units
Humanities and social sciences electives	18
Mathematics, science and engineering electives	24
Required courses in electrical engineering (ESE 105, ESE 230, ESE 232, ESE 260, ESE 330 and ESE 351)	19
Computer Science requirement (CSE 131)	3
Upper-level elective courses in electrical engineering (ESE 330–399, ESE 400, ESE 405, ESE 407, ESE 415, ESE 425, ESE 429–499, ESE 503–589)	18
Free electives	38
Total	120

The program must include at least 48 units at the 300 level or higher.

The above program assumes the completion of the following courses:

- Math 132 Calculus II
- Math 233 Calculus III
- Math 217 Differential Equations
- Physics 191 Physics I
- Physics 191L Physics I Laboratory
- Physics 192 Physics II

- Physics 192L Physics II Laboratory
- ESE 318 Engineering Mathematics A
- ESE 319 Engineering Mathematics B
- ESE 326 Probability and Statistics for Engineering

Bachelor of Science in Applied Science (Systems Science & Engineering)

This program provides the student with the opportunity to prepare their academic career with maximum flexibility but also with enough organization to ensure substantive, consistent training in systems science methodology and outlook. This program is recommended if students wish to pursue a program that does not follow conventional lines. It is an especially advantageous degree for a double major in association with mathematics, physics, economics or another engineering discipline. The program can be planned to provide a desirable background for graduate work in biological, medical or management fields. This applied science degree is not accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>).

The degree requirements include the residency and general requirements of the university and the McKelvey School of Engineering as well as the following:

Courses	Units
Humanities and social sciences electives	18
Mathematics, science and engineering electives	24
Required courses: ESE 105, ESE 230, ESE 351, ESE 403 or ESE 415, and ESE 441	15
Computer Science requirement (CSE 131)	3
Systems science and engineering electives (ESE 205, ESE 400–428, ESE 437, ESE 440–459, ESE 470–499, ESE 502–529, ESE 540–559, and SWCD 5660)	18
Free electives	42
Total	120

The program must include at least 48 units at the 300 level or higher.

The above program assumes completion of the following courses:

- Math 132 Calculus II
- Math 233 Calculus III
- Math 217 Differential Equations
- Physics 191 Physics I
- Physics 191L Physics I Laboratory
- Physics 192 Physics II

- Physics 192L Physics II Laboratory
- ESE 318 Engineering Mathematics A
- ESE 319 Engineering Mathematics B
- ESE 326 Probability and Statistics for Engineering

The Second Major in Electrical Engineering

A second major in electrical engineering is ideal for students majoring in many areas, such as mathematics, physics, chemistry and biology. Students in the McKelvey School of Engineering as well as the other undergraduate divisions at Washington University now have the opportunity to pursue a second major in electrical engineering. Students are not allowed to add this second major to either the BS in Electrical Engineering or the BS in Applied Science (Electrical Engineering).

The requirements for a second major in electrical engineering are as follows:

Code	Title	Units
ESE 105	Introduction to Electrical and Systems Engineering	3
ESE 230	Introduction to Electrical and Electronic Circuits	4
ESE 232	Introduction to Electronic Circuits	3
ESE 260	Introduction to Digital Logic and Computer Design	3
ESE 330	Engineering Electromagnetics Principles	3
ESE 351	Signals and Systems	3
CSE 131	Introduction to Computer Science	3

In addition, students must select 18 units of ESE electives from the following list:

- ESE 330 through 399
- ESE 400
- ESE 405
- ESE 407
- ESE 425
- ESE 429 through 499
- ESE 503 through 589

The above program assumes completion of the following courses:

Code	Title	Units
Math 132 & Math 233	Calculus II and Calculus III	6
Math 217	Differential Equations	3
ESE 318	Engineering Mathematics A	3
ESE 319	Engineering Mathematics B	3

ESE 326	Probability and Statistics for Engineering	3
Physics 191 & 191L	Physics I and Physics I Laboratory	4
Physics 192 & 192L	Physics II and Physics II Laboratory	4

Students may petition to substitute electrical-science-oriented courses from other disciplines in Arts & Sciences (e.g., certain courses in physics or applied mathematics) for up to two of the above required courses. Within this second major in electrical engineering, areas of concentration are possible in devices and circuits, applied physics, signals and imaging, and control systems.

For more information, please contact the director of the program, Chuan Wang (<https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=123>).

The Second Major in Systems Science & Engineering

A second major in systems science and engineering is ideal for study in many areas, including physics, chemistry, economics, finance, supply chain management and computational biology. Students in the McKelvey School of Engineering as well as the other undergraduate divisions at Washington University have the opportunity to pursue a second major in systems science and engineering in the Preston M. Green Department of Electrical & Systems Engineering in the McKelvey School of Engineering. Students are not allowed to add this second major to either the BS in SSE or the BS in Applied Science (SSE).

The requirements for a second major in systems science and engineering are as follows:

Code	Title	Units
ESE 105	Introduction to Electrical and Systems Engineering	3
ESE 230	Introduction to Electrical and Electronic Circuits	4
ESE 351	Signals and Systems	3
ESE 403 or ESE 415	Operations Research Optimization	3
ESE 441	Control Systems	3
CSE 131	Introduction to Computer Science	3
Total Units		19

In addition, 18 units of ESE courses in the systems area are to be chosen from the following list:

- ESE 205
- ESE 400 through 428
- ESE 437
- ESE 440 through 459

- ESE 470 through 499
- ESE 502 through 529
- ESE 540 through 559
- SWCD 5660

Students may petition to substitute systems-oriented courses from other disciplines in Arts & Sciences for two of these six courses (for example, courses in computational physics, econometrics or computational mathematics).

The above program assumes completion of the following courses:

Code	Title	Units
Math 132 & Math 233	Calculus II and Calculus III	6
Math 217	Differential Equations	3
ESE 318	Engineering Mathematics A	3
ESE 319	Engineering Mathematics B	3
ESE 326	Probability and Statistics for Engineering	3
Physics 191 & 191L	Physics I and Physics I Laboratory	4
Physics 192 & 192L	Physics II and Physics II Laboratory	4

Within this second major in systems science and engineering, areas of concentration are possible in robotics, control systems and operations research.

For more information, contact the director of the program, Shen Zeng (<https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=121>).

The Second Major in Financial Engineering

A second major in financial engineering is ideal for students who are interested in careers or graduate study in financial engineering, quantitative finance or related fields. This program covers classes in engineering, computer science and business.

Background Course Work: 18 units

Code	Title	Units
CSE 131	Introduction to Computer Science	3
ESE 326	Probability and Statistics for Engineering	3
or DAT 121	Managerial Statistics II	
or Econ 413	Introduction to Econometrics	
or Math 439	Linear Statistical Models	
Math 217	Differential Equations	3
Math 233	Calculus III	3
Math 309	Matrix Algebra	3

or ESE 105	Introduction to Electrical and Systems Engineering	
MEC 290 or Econ 4011	Microeconomics Intermediate Microeconomic Theory	3
Total Units		18

Engineering Professional Core Requirements: 15 units

Code	Title	Units
CSE 240 or Math 310	Logic and Discrete Mathematics Foundations for Higher Mathematics	3
CSE 247	Data Structures and Algorithms	3
CSE 417T or CSE 427S	Introduction to Machine Learning Cloud Computing with Big Data Applications	3
ESE 403 or ESE 415	Operations Research Optimization	3
ESE 427	Financial Mathematics	3
Total Units		15

Olin Professional Core Requirements: 9 units

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
FIN 340	Capital Markets and Financial Management	3
FIN 441	Investments	3
Total Units		9

Olin Elective Courses: 6 units minimum

Code	Title	Units
FIN 452	Advanced Derivative Securities	3
B62 FIN 500Q	Quantitative Risk Management	3
B62 FIN 539	Mathematical Finance	1.5
B62 FIN 552	Fixed Income Derivatives	1.5

Financial Mathematics (ESE 427) is to be taken after Capital Markets and Financial Management (FIN 340) and before the 6 credit units of FIN 500+.

Students interested in this second major must complete the application and have a 3.3 or higher grade-point average to pursue this second major, which includes the cumulative GPA, the Business GPA, and the Engineering GPA. The application may be accessed via WebSTAC (<https://acadinfo.wustl.edu/WSHome/Default.aspx>)/Major Programs when the request for the second major is selected.

For students earning undergraduate degrees from the McKelvey School of Engineering, a maximum of 12 units may be double-counted for this second major and an engineering or computer science undergraduate degree (this does not include the background course work).

For more information, contact the director of the program, Vladimir Kurenok (<https://sites.wustl.edu/vladimirkurenok/>).

The Minor in Electrical Engineering

This minor consists of fundamental courses in core electrical engineering areas of devices and circuits, applied physics, and signals and systems. Elective choices allow further depth in advanced devices, optics, signal processing, and control systems or greater breadth within electrical engineering.

Units required: 16

Required courses:

Code	Title	Units
ESE 230	Introduction to Electrical and Electronic Circuits	4
ESE 330	Engineering Electromagnetics Principles	3
ESE 351	Signals and Systems	3
Total Units		10

Electives: Students must select two electrical engineering elective courses from the following list:

Code	Title	Units
ESE 232	Introduction to Electronic Circuits	3
ESE 260	Introduction to Digital Logic and Computer Design	3
ESE 330–399		
ESE 400	Independent Study	max 3
ESE 405	Reliability and Quality Control	3
ESE 407	Analysis and Simulation of Discrete Event Systems	3
ESE 415	Optimization	3
ESE 425	Random Processes and Kalman Filtering	3
ESE 429–499; ESE 503–589		

For more information, contact the director for the minor, Chuan Wang (<https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=123>).

The Minor in Energy Engineering

Objective: The goal of this minor is to provide students with a course work experience that will enhance their background, knowledge and skills in the topical area of energy engineering. The minor covers classes in several fields of science and

engineering, including the Department of Energy, Environmental & Chemical Engineering; the Department of Electrical & Systems Engineering; and the Department of Mechanical Engineering & Materials Science.

A minor in energy engineering requires the completion of 18 units selected from the following menus. It is open to any undergraduate student pursuing an engineering major, a major in the sciences (biology, chemistry, physics) in Arts & Sciences, or the environmental studies major.

Interested departments should expose students to energy and related concepts in their introductory courses.

Basic and Applied Sciences (fundamental content) (two courses):

Code	Title	Units
EECE 205	Process Analysis and Thermodynamics (fall)	4 or 3
or MEMS 301	Thermodynamics	
EECE 301	Transport Phenomena I: Basics and Fluid Mechanics	3
or MEMS 3410	Fluid Mechanics	
EECE 303	Transport Phenomena III: Energy Transfer Processes (spring)	3
ESE 332	Power, Energy and Polyphase Circuits (spring)	3

Social Science/Policy/Economics Elective (one course):

Code	Title	Units
EnSt 357	Environmental Problem Solving	3
EnSt 451	Environmental Policy (fall)	3
EnSt 350W	Environmental Issues: Writing (spring)	3
EnSt 340	Energy Governance in Israel and the Middle East	3

Electives:

Students choose three courses. One of the courses is required to be chosen from outside of the student's major degree department. A partner department may approve the use of a course listed under basic and applied sciences as an elective.

Code	Title	Units
EECE 311	Green Engineering (fall)	3
EECE 411	International Experience in EECE (summer/fall)	3
EECE 413	Energy Conversion and Storage	3
EECE 512	Combustion Phenomena (fall)	3
EECE 552	Biomass Energy Systems and Engineering (spring)	3
ESE 434	Solid-State Power Circuits and Applications (fall)	3
ESE 435	Electrical Energy Laboratory (spring)	3

MEMS 412	Design of Thermal Systems (spring)	3
MEMS 5420	HVAC Analysis and Design I (fall)	3
MEMS 5421	HVAC Analysis and Design II (spring)	3
MEMS 5422	Solar Energy Thermal Processes (summer)	3
MEMS 5423	Sustainable Environmental Building Systems (fall)	3
MEMS 5705	Wind Energy Systems (spring)	3

Code	Title	Units
MEMS 255	Dynamics	3
MEMS 411	Mechanical Engineering Design Project (mechatronics project)	3
ESE 444	Sensors and Actuators	3
ESE 446	Robotics: Dynamics and Control	3
Total Units		12

Two electives chosen from the following:

Code	Title	Units
MEMS 4301 or ESE 441	Modeling, Simulation and Control Control Systems	3
MEMS 4310	Dynamics and Vibrations	3
ESE 436	Semiconductor Devices	3
ESE 482	Digital Signal Processing	3

Prerequisite:

Code	Title	Units
CSE 131	Introduction to Computer Science (basic programming course)	3

For more information about the minor, contact Dennis Mell (<https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=150>) (ESE) or Jackson Potter (<https://mems.wustl.edu/faculty/Pages/Jackson-Potter.aspx>) (MEMS).

Committee to Oversee Energy Engineering Minor

Pratim Biswas (<https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx>) (EECE, Coordinator); Bruno Sinopoli (<https://engineering.wustl.edu/Profiles/Pages/Bruno-Sinopoli.aspx>) (ESE); David Peters (<https://engineering.wustl.edu/Profiles/Pages/David-Peters.aspx>) (MEMS)

The committee ensures that any course added to the above lists contains a significant amount of energy topics and that the entire program is cohesive.

The Minor in Mechatronics

Advancements in power electronics, electronic sensors, and computer hardware and software have led to an expanding role for "smart" systems, which combine electronic and mechanical components. Automotive examples illustrate this point. The replacement of carburetors by fuel injection systems is almost universal, and hybrid/electric cars are replacing traditional automobiles. Not only are auxiliary devices such as fuel pumps, air bags and air-conditioner compressors driven by electric motors controlled by microprocessors, but fundamental components such as intake and outtake valves soon will be driven in this way. The internal combustion engine itself may be replaced by fuel cells and motors. Medical devices, micro-electromechanical systems, robots, fly-by-wire aircraft and wind turbines also all rely on electronic sensing of mechanical parameters and actuation of motion. These examples suggest strongly that engineers who are adept in the design, analysis and simulation of electromechanical systems will be in demand. The minor in mechatronics is created to encourage our students to study this important subject and provide recognition to those who do so.

This program is primarily designed for students in the ESE and MEMS departments and has been approved by the two departments. It is available for others as well.

The proposed minor program consists of four required courses, two electives and one prerequisite:

Four required courses:

The Minor in Robotics

Robotic systems have a wide range of applications in modern technology and manufacturing. Robots can vary in complexity and use, from the microrobots used for surgical procedures to the moderate-sized robots common in manufacturing and undersea exploration to the macrorobots used for the disposal of nuclear waste and as arms on space-station modules. The program designed for a minor in robotics provides a fundamental understanding of robotic operation and preliminary training in the design and use of robots.

Units required: 18

Prerequisites:

Code	Title	Units
Math 217	Differential Equations	3
Physics 191 & 191L	Physics I and Physics I Laboratory	4
Physics 192 & 192L	Physics II and Physics II Laboratory	4
CSE 131	Introduction to Computer Science	3

Required courses:

Code	Title	Units
MEMS 255	Dynamics	3
ESE 351 or MEMS 4310	Signals and Systems Dynamics and Vibrations	3
ESE 446	Robotics: Dynamics and Control	3
ESE 447	Robotics Laboratory	3
Total Units		12

Two additional courses must be chosen with the approval of the director of the program for a minor in robotics. Suggested courses include the following:

Code	Title	Units
CSE 417T	Introduction to Machine Learning	3
CSE 546T	Computational Geometry	3
ESE 441 or MEMS 4301	Control Systems Modeling, Simulation and Control	3
MEMS 3110	Machine Elements	3

For more information about the minor, contact Dennis Mell (<https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=150>) (ESE) or Jackson Potter (<https://mems.wustl.edu/faculty/Pages/Jackson-Potter.aspx>) (MEMS).

The Minor in Systems Science & Engineering

This minor consists of fundamental courses in control systems and operations research. In the area of control systems, students will be introduced to design techniques for controlling engineering and socioeconomic systems such as airplanes, automobiles, nuclear reactors, ecological systems, communication networks, the nation's economy and biological systems. In the area of operations research, students are introduced to techniques for optimally managing business resources and controlling business networks such as supply chains.

Requirements:

Students who complete 15 units of course work in Systems Science & Engineering at Washington University as specified below may be awarded a minor in systems science & engineering.

The required courses for the minor are as follows:

Code	Title	Units
ESE 351	Signals and Systems	3
ESE 403 or ESE 415	Operations Research Optimization	3
ESE 441	Control Systems	3
Total Units		9

Students must also select 6 units of Systems Science & Engineering electives from the following list:

- ESE 400 through 425
- ESE 440 through 459 (except 449)
- ESE 470 through 499

For more information, contact the director for the minor, Shen Zeng (<https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=121>).

Energy, Environmental & Chemical Engineering

About Energy, Environmental & Chemical Engineering

Our department focuses on environmental engineering, energy systems engineering and chemical engineering. We provide integrated and multidisciplinary programs of scientific education. Our mission is accomplished by instilling a tradition of lifelong learning; offering a curriculum of fundamental education coupled with applications in advanced focal areas and strengthened by our breadth in other disciplinary areas; participating in cutting-edge research with faculty and industrial partners; and providing access to state-of-the-art facilities and instrumentation. Most undergraduate students in the department will pursue the BS in Chemical Engineering degree, accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>), or the BS in Environmental Engineering degree (launched spring 2019). Other students may pursue the BS in Applied Science degree with a major in chemical engineering. The department offers a minor in environmental engineering science, and, in collaboration with other engineering departments, we co-sponsor a minor in energy engineering and a minor in nanoscale science and engineering. Graduate degrees (Master of Engineering, Master of Science and Doctor of Philosophy) in Energy, Environmental & Chemical Engineering are also offered by the department.

Chemical engineers are involved in the transfer of scientific discoveries to modern technologies and novel products that benefit society and minimize the impact on the environment. They deal with multiscale aspects of generating clean energy, producing novel and superior materials, and utilizing the biological revolution to manufacture new products. They are involved in the development and manufacture of consumer products as well as in the design, operation and control of processes in a variety of industries (e.g., petroleum, petrochemical, chemical, consumer products, food, feed, pharmaceuticals). Their broad training in basic sciences (e.g., chemistry, physics, biology, mathematics) coupled with a strong foundation in chemical engineering principles (e.g., thermodynamics, mass and energy balances, transport phenomena, kinetics, separations, reaction engineering, control, product development, process design) makes them invaluable team members and leaders in any engineering enterprise. It

also prepares them well for graduate studies in biochemical, biomedical, chemical, environmental and materials engineering. In addition, the BS in Chemical Engineering is a great starting point for pursuing a degree in business, law or medicine.

Environmental engineers apply scientific and engineering principles to assess, manage and design sustainable systems for the protection of human and ecological health. The designs and technologies that they develop provide safe and sufficient public water supplies, enable effective and efficient treatment and resource recovery from wastewater and other wastes, and control pollutant releases that protect water, soil and air quality. Environmental engineers also seek to understand the effect of technological advances on the environment and to identify opportunities to improve the environmental sustainability of new technologies. Environmental engineers have broad training in basic sciences, mathematics and computational approaches as well as an engineering foundation that includes mass and energy balances, thermodynamics, transport phenomena, and chemical, physical and biological treatment processes. The training of environmental engineers also includes natural science and environmental social science and the humanities. This training prepares environmental engineers to apply technological solutions within specific environmental and societal contexts. Environmental engineering graduates are prepared to enter professional practice and to pursue graduate study in environmental engineering and allied fields.

The curricula are planned to provide students with a strong background in basic engineering concepts while allowing students individual latitude to emphasize study in a specialized area or to obtain added breadth both within and outside of chemical or environmental engineering.

Mission Statement

The mission of the department is to teach energy, environmental and chemical engineering principles and their application in an inspiring learning environment; to prepare students for engineering careers by developing the skills of critical thinking, analysis and communication proficiency; and to instill a sense of professional ethics and societal responsibility.

Advising

The department takes pride in its mentoring of undergraduate students. Each student who declares chemical or environmental engineering as a (potential) major is assigned an academic adviser from the full-time department faculty. Typically, the same adviser follows the student's academic progress and serves as a mentor from the first year through graduation.

Faculty

Chair and Endowed Professor

Pratim Biswas (<https://engineering.wustl.edu/faculty/Pratim-Biswas.html>)

Lucy and Stanley Lopata Professor

PhD, California Institute of Technology

Aerosol science and engineering, air quality and pollution control, nanotechnology, environmentally benign energy production

Endowed Professors

Richard L. Axelbaum (<https://engineering.wustl.edu/faculty/Richard-Axelbaum.html>)

Stifel and Quinette Jens Professor

PhD, University of California, Davis

Combustion, advanced energy systems, clean coal, aerosols, nanoparticle synthesis, rechargeable battery materials, thermal science

Daniel E. Giammar (<https://engineering.wustl.edu/faculty/Daniel-Giammar.html>)

Walter E. Browne Professor of Environmental Engineering

PhD, California Institute of Technology

Aquatic chemistry, environmental engineering, water quality, water treatment

Vijay Ramani (<https://engineering.wustl.edu/faculty/Vijay-Ramani.html>)

Director of Graduate Studies

Roma B. and Raymond H. Wittcoff Distinguished University Professor

PhD, University of Connecticut

Electrochemical engineering, energy conversion

Professors

Zhen (Jason) He (<https://engineering.wustl.edu/faculty/Zhen-Jason-He.html>)

PhD, Washington University

Environmental biotechnology, bioenergy production, biological wastewater treatment, resource recovery, bioelectrochemical systems, sustainable desalination technology, anaerobic digestion, forward osmosis, membrane bioreactors

Young-Shin Jun (<https://engineering.wustl.edu/faculty/Young-Shin-Jun.html>)

PhD, Harvard University

Aquatic processes, molecular issues in chemical kinetics, environmental chemistry, surface/physical chemistry, environmental engineering, biogeochemistry, nanotechnology

Randall Martin (<https://engineering.wustl.edu/faculty/Randall-Martin.html>)

PhD, Harvard University

Characterizing atmospheric composition to inform effective policies surrounding major environmental and public health challenges ranging from air quality to climate change

Palghat A. Ramachandran (<https://engineering.wustl.edu/faculty/Palghat-Ramachandran.html>)

PhD, University of Bombay

Chemical reaction engineering, applied mathematics, process modeling, waste minimization, environmentally benign processing

Yinjie Tang (<https://engineering.wustl.edu/faculty/Yinjie-Tang.html>)

PhD, University of Washington, Seattle

Metabolic engineering, bioremediation

Jay R. Turner (<https://engineering.wustl.edu/faculty/Jay-Turner.html>)

Vice Dean for Education

DSc, Washington University

Air quality planning and management; aerosol science and engineering, green engineering

Jian Wang (<https://engineering.wustl.edu/faculty/Jian-Wang.html>)

PhD, California Institute of Technology

Aerosol properties and processes, nucleation and new particle formation, aerosols in the marine environment, effects of aerosols on cloud microphysical properties and macrophysical struct

Associate Professors

Rajan Chakrabarty (<https://engineering.wustl.edu/faculty/Rajan-Chakrabarty.html>)

PhD, University of Nevada, Reno

Characterizing the radiative properties of carbonaceous aerosols in the atmosphere; and researching gas phase aggregation of aerosols in cluster-dense conditions

Marcus Foston (<https://engineering.wustl.edu/faculty/Marcus-Foston.html>)

PhD, Georgia Institute of Technology

Utilization of biomass resources for fuel and chemical production, renewable synthetic polymers, and development of advanced aerosol instruments

Tae Seok Moon (<https://engineering.wustl.edu/faculty/Tae-Seok-Moon.html>)

PhD, Massachusetts Institute of Technology

Metabolic engineering and synthetic biology

Brent Williams (<https://engineering.wustl.edu/faculty/Brent-Williams.html>)

Raymond R. Tucker Distinguished InCEES Career Development Associate Professor

PhD, University of California, Berkeley

Aerosols, global climate issues, atmospheric sciences

Fuzhong Zhang (<https://engineering.wustl.edu/faculty/Fuzhong-Zhang.html>)

PhD, University of Toronto

Metabolic engineering, protein engineering, synthetic and chemical biology

Assistant Professors

Peng Bai (<https://engineering.wustl.edu/faculty/Peng-Bai.html>)

PhD, Tsinghua University, China

Develop next-generation batteries, probe the in situ electrochemical dynamics of miniature electrodes down to nanoscales, capture the heterogeneous and stochastic nature of advanced electrodes, and identify the theoretical pathways and boundaries for the rational design of materials, electrodes and batteries through physics-based mathematical modeling and simulation

Fangqiong Ling (<https://engineering.wustl.edu/faculty/Fangqiong-Ling.html>)

PhD, University of Illinois at Urbana-Champaign

Microbial ecosystem analysis and modelling, process modelling, machine learning, NextGen sequencing bioinformatics, environmental microbiology, and bioreactor design

Kimberly M. Parker (<https://engineering.wustl.edu/faculty/Kimberly-Parker.html>)

PhD, Stanford University

Investigation of environmental organic chemistry in natural and engineered systems

Elijah Thimsen (<https://engineering.wustl.edu/faculty/Elijah-Thimsen.html>)

PhD, Washington University

Gas-phase synthesis of inorganic nanomaterials for energy applications, and novel plasma synthesis approaches

Research Assistant Professor

Benjamin Kumfer (<https://engineering.wustl.edu/faculty/Benjamin-Kumfer.html>)

DSc, Washington University

Advanced coal technologies, biomass combustion, aerosol processes and health effects of combustion-generated particles

Professor of Practice

John Reardon (<https://engineering.wustl.edu/faculty/John-Reardon.html>)

MS, University of New Mexico

Entrepreneurial engineering

Senior Lecturers

Janie Brennan (<https://engineering.wustl.edu/faculty/Janie-Brennan.html>)
Director of Undergraduate Studies
PhD, Purdue University
Biomaterials, chemical engineering, engineering education

Raymond Ehrhard (<https://engineering.wustl.edu/faculty/Ray-Ehrhard.html>)
BS, Missouri University of Science and Technology
Water and wastewater treatment technologies, process energy management

Lecturers

Trent Silbaugh (<https://engineering.wustl.edu/faculty/Trent-Silbaugh.html>)
PhD, University of Washington
Chemical engineering

Avni Solanki (<https://engineering.wustl.edu/faculty/Avni-Solanki.html>)
PhD, University of Florida
Wastewater, sustainable development, environmental engineering, and engineering education

Environmental informatics, aerosol science and engineering

Majors

Please visit the following pages for information about the energy, environmental and chemical engineering majors:

- Bachelor of Science in Chemical Engineering (p. 1107)
- Bachelor of Science in Environmental Engineering (p. 1109)
- Bachelor of Science in Applied Science (Chemical Engineering) (p. 1111)
- Double Majors and the Pre-Medical Program (p. 1112)

Minors

Please visit the following pages for information about the energy, environmental and chemical engineering minors:

- Minor in Environmental Engineering Science (p. 1112)
- Minor in Energy Engineering (p. 1113)
- Minor in Nanoscale Science & Engineering (p. 1114)

Courses

Visit online course listings to view semester offerings for E44 EECE (<https://courses.wustl.edu/CourseInfo.aspx?sch=E&dept=E44&crslvl=1:5>).

E44 EECE 100 Independent Study

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: freshman standing.
Credit variable, maximum 3 units.

E44 EECE 101 Introduction to Energy, Environmental and Chemical Engineering

Key technical issues that face our society and some of the emerging technologies that hold promise for the future are examined and discussed. Relationship to chemical engineering principles is emphasized.
Credit 3 units. EN: TU

E44 EECE 103 Topics in Energy, Environmental and Chemical Engineering

Key technical issues that face our society and some of the emerging technologies that hold promise for the future are examined and discussed. This course provides a broader context for content delivered in concurrent core chemical and environmental engineering courses.
Credit 1 unit.

E44 EECE 140 To Sustainability and Beyond: People, Planet, Prosperity (P3)

This course combines interdisciplinary instruction with applied project work. Students will be introduced to global concepts in sustainability and examine how they relate to specific issues in the greater St. Louis community, learning what it means to be civic-minded stewards of social and ecological systems. In addition, students will work on developing the critical "soft skills" needed for success on the job, such as effective communication techniques, project management, and leadership. Students will emerge from the course with a systems-level understanding of sustainability, a working knowledge of the fundamentals of community engagement, and an appreciation for values-based civic stewardship. Experience in this course will prepare students for applied project-based work in other courses or internships, regardless of academic discipline. This course is for first-year (non-transfer) students only.

Same as I60 BEYOND 140

Credit 3 units. A&S: FYS A&S IQ: SSC EN: S

E44 EECE 200 Independent Study

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: sophomore standing.

Credit variable, maximum 3 units.

E44 EECE 202 Computational Modeling in Energy, Environmental and Chemical Engineering

Computational tools to solve engineering, design and scientific problems encountered in thermodynamics, transport phenomena, separation processes and reaction kinetics. Introduction to programming skills in MATLAB and use of various MATLAB toolboxes. Theory and application of numerical methods for solution of common problems, including methods for root-finding/optimization, curve fitting (regression, interpolation, and spline), integration, differentiation, and ordinary differential equations and boundary value problems. Illustrative application examples. Prerequisites: CSE 131 and Math 217, or permission of instructor

Credit 3 units. EN: TU

E44 EECE 204 Thermodynamics II in EECE

Molecular motions, kinetic theory of gases, kinetic theory of dense phases, chemical kinetics. Prerequisite: EECE 205 or EECE 201 and EECE 203 or permission of instructor.

Credit 3 units. EN: TU

E44 EECE 205 Process Analysis and Thermodynamics

This course is an introduction to the use of mathematics and methods of engineering in the analysis of chemical and physical processes. It will address the use of balances (e.g., mass, energy, entropy) to describe processes with and without chemical reactions in both transient and steady-state conditions as well as classical thermodynamics focused on processes, first and second laws, and properties of pure substances. Prerequisite: Chem 112A or Chem 106. Corequisite: Math 217 or permission of instructor.

Credit 4 units. EN: TU

E44 EECE 210 Introduction to Environmental Engineering

The objective of this course is to introduce students to the field of environmental engineering. The course will emphasize basic principles of mass and energy conservation which govern physical, chemical and biological processes. Applications include the estimation of contaminant concentrations and the design of environmental controls. Prerequisites: Chem 112A or Chem 106, Math 132, or permission of instructor

Credit 3 units. EN: TU

E44 EECE 300 Independent Study

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: junior standing.

Credit variable, maximum 3 units.

E44 EECE 301 Transport Phenomena I: Basics and Fluid Mechanics

Engineering principles involved in the exchange of heat and matter in chemical processes. Laws governing the flow of liquids and gases in laboratory and plant equipment. Corequisite: ESE 318; Prerequisites: EECE 205 or both EECE 201 and EECE 203, or permission of instructor.

Credit 3 units. EN: BME T, TU

E44 EECE 302 Transport Phenomena II: Mass Transfer

Engineering principles involved in the exchange of heat and matter in chemical processes. Laws governing the flow of liquids and gases in laboratory and plant equipment. Prerequisite: EECE 301

Credit 3 units. EN: BME T, TU

E44 EECE 303 Transport Phenomena III: Energy Transfer Processes

Introductory treatment of the principles of heat transfer by conduction, convection, or radiation. Mathematical analysis of steady and unsteady conduction along with numerical methods. Analytical and semi empirical methods of forced and natural convection systems. Boiling and condensation heat transfer. Radiation between black-body and real surfaces. Radiation network analysis. Corequisite: EECE 302 or equivalent.

Credit 3 units. EN: BME T, TU

E44 EECE 304 Mass Transfer Operations

Stagewise and continuous mass transfer operations, including distillation, gas absorption, humidification, leaching, liquid extraction, and membrane separations. Corequisites: EECE 204, EECE 202, or permission of instructor

Credit 3 units. EN: BME T, TU

E44 EECE 305 Materials Science

Introduces the chemistry and physics of engineering materials. Emphasis on atomic and molecular interpretation of physical and chemical properties, the relationships between physical and chemical properties, and performance of an engineering material. Prerequisite: Math 217, Chem 111A or Chem 105, or permission of instructor.

Credit 3 units. EN: BME T, TU

E44 EECE 306 Biology in EECE

The course provides an introduction to molecular biology, biochemistry, microbiology, and biotechnology. The course focuses on an engineering approach to microbiology and molecular biology. Topics include basics of molecular biology, mathematical analysis of biological systems, genetic engineering, and biotechnological applications. Corequisite: Math 217, or permission of instructor

Credit 3 units. EN: TU

E44 EECE 309 Environmental Engineering Fate and Transport

The objective of this course is to introduce students to the fundamental processes that control contaminant fate and transport in the natural and built environment. The course will highlight mass transport and transformation in surface water, soil and groundwater, and atmosphere. Students will be introduced to environmental transport modeling software to solve applied problems. Prerequisites: EECE 210, EECE 301, or permission of instructor.

Credit 3 units. EN: TU

E44 EECE 311 Green Engineering

Strategies and methods for waste minimization and pollutant emission reduction. Principles of green engineering. Environmental transport and fate modeling. Design of heat and mass exchange networks for energy and waste reduction. Prerequisite: Math 217 or permission of instructor.

Credit 3 units. EN: BME T, TU

E44 EECE 314 Air Quality Engineering with Lab

Introduction to air quality and pollution control. Pollutant emissions, atmospheric chemistry, and fate. Air pollution meteorology and atmospheric dispersion. Application of chemistry, thermodynamics, and fluid mechanics in the selection and design of air pollution control equipment. Labs to measure air quality and demonstrate control principles. Prerequisite: EECE 205 or EECE 201 and EECE 203, or permission of instructor

Credit 4 units. EN: TU

E44 EECE 401 Chemical Process Dynamics and Control

A state-of-the-art industrial virtual plant is used for the development of dynamic simulations, selection of instrumentation, statistical analysis of variability, and implementation of process control to improve process operation and efficiency. Prerequisite: EECE 301, EECE 304, or permission of instructor

Credit 3 units. EN: BME T, TU

E44 EECE 402 ChE Capstone

Application of engineering science and design, fundamentals of process and product development, computational techniques and economic principles to design of chemical and biological processes and procedures. A design project and/or an AIChE national design contest is included. Prerequisites: EECE 304, EECE 401, EECE 403, or permission of instructor.

Credit 3 units. EN: BME T, TU

E44 EECE 403 Chemical Reaction Engineering

Introduction to chemical reaction engineering principles and applications in process and product development. Evaluation of reaction rates from mechanisms and experimental data, quantification of pertinent transport effects and application to reactor and product design. Corequisite: EECE 302 or 307, Prerequisite: EECE 204, or permission of instructor

Credit 3 units. EN: BME T, TU

E44 EECE 405 Unit Operations Laboratory

Laboratory projects focused on the application of chemical engineering principles (transport, thermodynamics, separations, etc.). Student teams design multi-week experiments utilizing unit operations equipment to solve realistic engineering problems. Includes analysis of safety and instrumentation. One laboratory period each week with supplemental lecture sessions. Emphasis on independent learning, teamwork, and technical communication skills. Prerequisites: EECE 301, EECE 304, ESE 326; Corequisite: EECE 307 or EECE 302, EECE 403, or permission of instructor

Credit 4 units. EN: TU

E44 EECE 407 Environmental Biotechnology

This course aims to provide students with a background in current environmental biotechnology and to stimulate ideas about future potential new technologies. Students will gain qualitative and quantitative skills related to bioreactor designs in environmental applications (e.g., activated sludge, anaerobic digester, membrane bioreactors). Special focus will be placed on the application of mathematical models that are currently widely used in wastewater engineering, such as the International Water Association models. Hands-on experience with biological water treatment process modelling will be provided. Finally, students will be encouraged to explore links between environmental biotechnologies and a "one health" approach to public health. Prerequisites: Biol 2960 or EECE 306, ESE 326, EECE 204, EECE 210, or permission of instructor.

Credit 3 units. EN: TU

E44 EECE 411 International Experience in EECE

This course will provide undergraduate students with an international experience related to energy, environmental and/or chemical engineering. The country visited will vary from year to year, with one or more EECE faculty members developing the program in collaboration with McDonnell Global Energy and Environment Partnership (MAGEEP) universities. Example activities include conducting field or laboratory research, attending short courses taught by MAGEEP university faculty members, and visiting attractions relevant to the course focus (e.g., industrial facilities). Students will also gain an understanding of the local culture and history of the country visited. Course content will include a seminar series in the spring semester prior to the international experience, a two- to three-week visit to the location of study, and a follow-up student project and presentations during the fall semester that draw upon the experience. Students will enroll in EECE 411 for the fall semester following the trip.

Credit 3 units. EN: BME T, TU

E44 EECE 412 Sustainability Exchange: Community and University Practicums

The Sustainability Exchange engages interdisciplinary teams of students to tackle real-world energy, environmental, and sustainability problems through an experiential form of education. Students will participate in projects with clients and partners on- or off-campus, developed with and guided by faculty advisors drawn from across the University, ultimately delivering an applicable end-product that explores "wicked" problems requiring innovative methods and solutions. Past projects have included investigating soil impacts of de-icing practices on campus, collecting data on inequitable trash collection in neighborhoods, working with St. Louis City's building division to make buildings more energy efficient, and developing an understanding of how buildings impact birds on campus. Fall 2020 projects may include previously mentioned projects, and may also include helping a municipality develop a sustainability plan, working on sustainable investing practices, mitigating plastic pollution in the Mississippi, and developing composting toilets. The team-based project will be complemented by a seminar that will explore problem solving strategies and methodologies drawn from a wide range of creative practices, including design, engineering, and science, as well as contemporary topics in energy, environment, and sustainability. Students will draw on these topics to influence their projects. The course is designed primarily for undergraduates, with preference given to seniors.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: CPSC, SSC EN: S

E44 EECE 413 Energy Conversion and Storage

This course takes a thermodynamics perspective to analyzing electricity production and distribution systems, which are imperative to modern society. The course contains a hands-on laboratory component. Traditional and advanced heat engine cycles will be discussed. Opportunities and challenges with renewable energy technologies will be covered. Essential to the widespread adoption of renewable electricity sources and also to increasing energy efficiency are smart grid and smart building technologies. The goal is to give the student a quantitative overview while focusing in on the details of a few important technological examples. Prerequisites: E44 203 and E44 301. Credit 3 units. EN: BME T, TU

E44 EECE 414 New Product and Process Development

An overview of product development, innovative solutions to technical problems, designed experimentation, evaluation of abstract data, product design, and the basics of intellectual property. Prerequisites: junior standing and Chem 251, EECE 203 or permission of the instructor.

Credit 3 units. EN: TU

E44 EECE 423 Senior Thesis

Research project to be selected by the student with the permission and recommendation of a faculty supervisor and the approval of the department chair. At conclusion of project, student prepares a report in the form of a senior thesis. Credit variable, maximum 6 units.

E44 EECE 424 Digital Process Control Laboratory

Applications of digital control principles to laboratory experiments supported by a networked distributed control system. Lecture material reviews background of real-time programming, data acquisition, process dynamics, and process control. Exercises in

data acquisition and feedback control design using simple and advanced control strategies. Experiments in flow, liquid level, temperature, and pressure control. Term project. Prerequisite: ESE 441 or EECE 401 or equivalent. Credit 3 units. EN: BME T, TU

E44 EECE 425 Environmental Engineering Laboratory

Laboratory experiments to illustrate the application of engineering fundamentals to environmental systems. Applications of experimental design and data analysis principles. Introduction to relevant analytical instrumentation and laboratory techniques. Laboratory work supported by theoretical analysis and modeling as appropriate. Prerequisite: EECE 210 or EECE 205 (or EECE 201 and EECE 203); Corequisite: ESE 326, or permission of instructor. Credit 3 units. EN: BME T, TU

E44 EECE 480 Entrepreneurial Engineering

Quality education with a background in engineering and science can lead engineers to create innovations with high potential value. Nevertheless, unlocking value from innovation is not an entirely intuitive enterprise, and success is not guaranteed. This course is created to better prepare students for a future of innovation and entrepreneurial success. The course outline comprises three phases of entrepreneurship: the creative phase, the critical phase, and the crusader phase. It endeavors to provide students with useful skills and practical experiences that are relevant to each phase. Each week will include a brief presentation to set the direction, followed by short discussions of the assigned case studies and a review of fundamental principles from the core text. Student teams will regularly present work to the group, create success metrics, and chart progress. The Creative Phase: The class will work in small groups to create a new business concept. Students will learn brainstorming techniques, leadership, teamwork, and business model innovation. With core values set as a foundation, teams will present their proposed business models and rational basis for income forecasting. The Critical Phase: The class will identify and challenge assumptions to assess commercial viability. Students will find third-party market research to size up the opportunity and gather real customer feedback to refine their strategy. Skills gaps will be appreciated and negotiated solutions sought. Financial and growth metrics will be established to measure success, and threats will be faced. Students will present their SWOT analysis (strengths, weaknesses, opportunities, and threats) and link this to their revised strategy (business model). The Crusader Phase: Students will learn what is "acceptable risk" and develop a growth mindset (in contrast with fixed mindset), gain power from emotional intelligence, deal with failures (decide to pivot or punt), and learn the difference between ideation and implementation. Students will make progress and get the word out, and they will prepare a short proposal for grant funding or investment with a suitable income stream. By the end of the semester, students will know how to create business model, how to work with teams, how to assess commercial viability, how to establish a rationale for financial forecast, how to assess skills and resource gaps, how to negotiate to fill in gaps, and how to write high-level proposals. Students will demonstrate their knowledge through written submissions and oral presentations. Credit 3 units.

E44 EECE 500 Independent Study

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: graduate-level standing.
Credit variable, maximum 9 units.

E44 EECE 501 Transport Phenomena in EECE

The aim of the course is for students to develop skills in applying principles of momentum, heat and mass transport in a unified manner to problems encountered in the areas of energy, environmental and chemical processes. A systems approach will be followed so that the general principles can be grasped, and the skills needed to develop mathematical models of seemingly different processes will be emphasized. This provides the students with general tools that they can apply later in their chosen field of research.
Credit 3 units.

E44 EECE 502 Advanced Thermodynamics in EECE

The objective of this course is to understand classical thermodynamics at a deeper level than is reached during typical undergraduate work. Emphasis will be placed on solving problems relevant to chemical engineering materials science.
Prerequisite: E44 203 or equivalent.
Credit 3 units.

E44 EECE 503 Mathematical Methods in EECE

The course will introduce students to mathematical principles essential for graduate study in any engineering discipline. Applied mathematical concepts will be demonstrated by applications to various areas in energy, environmental, biomedical, chemical, mechanical, aerospace, electrical and civil engineering.
Credit 3 units.

E44 EECE 504 Aerosol Science and Technology

Fundamental properties of particulate systems — physics of aerosols, size distributions, mechanics and transport of particles: diffusion, inertia, external force fields. Visibility and light scattering. Aerosol dynamics — coagulation, nucleation, condensation. Applications to engineered systems: nanoparticle synthesis, atmospheric aerosols, combustion aerosols, pharmaceutical aerosols. Prerequisites: EECE 301, ESE 318 and 319.
Credit 3 units. EN: BME T, TU

E44 EECE 505 Aquatic Chemistry

Aquatic chemistry governs aspects of the biogeochemical cycling of trace metals and nutrients, contaminant fate and transport, and the performance of water and wastewater treatment processes. This course examines chemical reactions relevant to natural and engineered aquatic systems. A quantitative approach emphasizes the solution of chemical equilibrium and kinetics problems. Topics covered include chemical equilibrium and kinetics, acid-base equilibria and alkalinity, dissolution and precipitation of solids, complexation of metals, oxidation-reduction processes, and reactions on solid surfaces. A primary objective of the course is to be able to formulate and solve chemical equilibrium problems for complex environmental systems. In addition to solving problems manually to develop

chemical intuition regarding aquatic systems, software applications for solving chemical equilibrium problems are also introduced. Prerequisites: senior or graduate level standing, or permission of instructor
Credit 3 units. EN: BME T, TU

E44 EECE 506 Bioprocess Engineering I: Fundamentals & Applications

The course covers the fundamentals and provides the basic knowledge needed to understand and analyze processes in biotechnology in order to design, develop and operate them efficiently and economically. This knowledge is applied to understand various applications and bioprocesses, such as formation of desirable bio and chemical materials and products, production of bioenergy, food processing and waste treatment. The main objective of the course is to introduce the essential concepts and applications of bioprocessing to students of diverse backgrounds. An additional project is required to obtain graduate credit. Prerequisites: L41 Biol 2960 or equivalent or permission of instructor.
Credit 3 units. EN: BME T, TU

E44 EECE 507 Kinetics and Reaction Engineering Principles

This course is aimed at a modern multiscale treatment of kinetics of chemical and biochemical reactions and the application of these fundamentals to analyze and design reactors. Application of reaction engineering principles in areas related to energy generation, pollution prevention, chemical and biochemical processes will be studied and illustrated with case studies and computer models. Description of the role of mass and heat transport in reacting systems is also provided, with numerous examples.
Credit 3 units.

E44 EECE 508 Research Rotation

First-year doctoral students in EECE should undertake Research Rotation as a requirement prior to choosing a permanent research adviser. The rotation will require the student to work under the guidance of a faculty member.

E44 EECE 509 Seminar in Energy, Environmental, and Chemical Engineering

All graduate students in EECE should attend the Departmental Seminar Series to gain exposure in various diverse fields of research. Students are also expected to participate in journal clubs and other discussion formats to discuss topical research areas. The course is required of all graduate students every semester of residency in the program.
Credit 1 unit.

E44 EECE 510 Advanced Topics in Aerosol Science & Engineering

This course will be focused on the discussion of advanced topics in aerosol science and engineering and their applications in a variety of fields, including materials science, chemical engineering, mechanical engineering, and environmental engineering. Prerequisite: EECE 504.
Credit 3 units. EN: BME T, TU

E44 EECE 512 Combustion Phenomena

This course provides an introduction to fundamental aspects of combustion phenomena, including relevant thermochemistry, fluid mechanics, and transport processes as well as the interactions among them. Emphasis is on elucidation of the physico-chemical processes, problem formulation and analytic techniques. Topics covered include non-premixed and premixed flames, deflagrations and detonations, particle combustion, flame extinction, flame synthesis, pollutant formation and methods of remediation. Contemporary topics associated with combustion are discussed throughout. Prerequisites: graduate standing or permission of instructor.

Credit 3 units. EN: BME T, TU

E44 EECE 514 Atmospheric Science and Climate

This course will cover current research topics in atmospheric chemistry and climate change. Topics include atmospheric composition, chemistry, transport, dynamics, radiation, greenhouse gases, natural and anthropogenic primary pollution sources and secondary aerosol production, and measurement techniques. Focus will be placed on how our atmosphere and climate are altered in a world of changing energy production and land use. Prerequisites: Chemistry 112A, Physics 198, and junior or higher standing.

Credit 3 units. EN: BME T, TU

E44 EECE 516 Measurement Techniques for Particle Characterization

The purpose of this course is to introduce students to the principles and techniques of particle measurement and characterization. Practical applications of particle technology include air pollution measurement, clean manufacturing of semiconductors, air filtration, indoor air quality, particulate emission from combustion sources and so on. The course will focus on the following: (1) integral moment measurement techniques; (2) particle sizing and size distribution measuring techniques; and (3) particle composition measurement techniques. Related issues such as particle sampling and transportation, instrument calibration, and particle standards will also be covered.

Credit 3 units. EN: BME T, TU

E44 EECE 531 Environmental Organic Chemistry

Fundamental, physical-chemical examination of organic molecules (focused on anthropogenic pollutants) in aquatic (environmental) systems. Students learn to calculate and predict chemical properties that are influencing the partitioning of organic chemicals within air, water, sediments and biological systems. This knowledge will be based on understanding intermolecular interactions and thermodynamic principles. Mechanisms of important thermochemical, hydrolytic, redox, and biochemical transformation reactions are also investigated, leading to the development of techniques (such as structure-reactivity relationships) for assessing environmental fate or human exposure potential. Prerequisites: EECE 210 or EECE 205 (or EECE 201 and EECE 203); Chem 261, or permission of instructor

Credit 3 units. EN: BME T, TU

E44 EECE 533 Physical and Chemical Processes for Water Treatment

Water treatment is examined from the perspective of the physical and chemical unit processes used in treatment. The theory and fundamental principles of treatment processes are covered and are followed by the operation of treatment processes. Processes covered include gas transfer, adsorption, precipitation, oxidation-reduction, flocculation, sedimentation, filtration, and membrane processes. Corequisites: EECE 204 and EECE 210 or equivalents, or permission of instructor Credit 3 units. EN: BME T, TU

E44 EECE 534 Environmental Nanochemistry

This course involves the study of nanochemistry at various environmental interfaces, focusing on colloid, nanoparticle, and surface reactions. The course also (1) examines the thermodynamics and kinetics of nanoscale reactions at solid-water interfaces in the presence of inorganic or organic compounds and microorganisms; (2) investigates how nanoscale interfacial reactions affect the fate and transport of contaminants; (3) introduces multidisciplinary techniques for obtaining fundamental information about the structure and reactivity of nanoparticles and thin films and the speciation or chemical form of environmental pollutants at the molecular scale; and (4) explores connections between environmental nanochemistry and environmental kinetic analysis at larger scales. This course will help students attain a better understanding of the relationship between nanoscience/technology and the environment, specifically how nanoscience could potentially lead to better water treatments, more effective contaminated-site remediation, or new energy alternatives.

Credit 3 units. EN: BME T, TU

E44 EECE 535 Environmental Data Science

Many of the grand challenges that we face today require understanding and manipulation of processes at the interface of natural and manmade environments. Oftentimes, such knowledge is acquired through data. Skills to effectively visualize and analyze data and build predictive models are valued across different sectors of the society. This is an application-driven course. Prerequisites: EECE 503 or equivalent, Math 217 or equivalent, EECE 503 or equivalent, and ESE 326 or equivalent; or permission of instructor.

Credit 3 units. EN: TU

E44 EECE 537 Environmental Resource Recovery

This course will focus on key concepts of resource recovery from wastes. Topics include energy, water, nutrient, and value-added compounds. The course will discuss technological advancements, environmental impacts, and techno-economic assessment of environmental resource recovery. The cutting-edge recovery technologies in full-scale applications or laboratory studies will be introduced. Students will be trained for critical thinking and review of literature information, practice technical analysis and writing, and conduct a concept design of recovery systems using the data from local wastewater treatment facilities. The course is valuable as a prerequisite to more advanced research in environmental engineering, as a technical education to stimulate graduate students' interest in environmental sustainability, and as an introduction to environmental constraints that are increasingly important to other engineering disciplines.

Credit 3 units.

E44 EECE 551 Metabolic Engineering and Synthetic Biology

Synthetic Biology is a transformative view of biology from "observation approach" to "synthesis approach." It is new "engineering" discipline and aims to make the engineering of new biological function predictable, safe, and quick. It will pave a wide range of applications to transform our views on production of sustainable energy and renewable chemicals, environmental problems, and human disease treatments. The field intersects with Metabolic Engineering in areas such as the design of novel pathways and genetic circuits for product generation and toxic chemical degradation. In this course, the field and its basis are introduced. First, relevant topics in biology, chemistry, physics, and engineering are covered. Second, students will participate in brain-storming and discussion on new biology-based systems. Last, students will design and present new synthetic biology systems to solve real-world problems. No prerequisite. Both undergrad and graduate students can take this course.

Credit 3 units. EN: BME T, TU

E44 EECE 552 Biomass Energy Systems and Engineering

This course offers background in the organic chemistry, biology and thermodynamics related to understanding the conversion of biomass. In addition includes relevant topics relating to biomass feedstock origin, harvest, transportation, storage, processing and pretreatment along with matters concerning thermo- and bio-chemical conversion technologies required to produce fuels, energy, chemicals, and materials. Also, various issues with respect to biomass characterization, economics and environmental impact will be discussed. The main objective of the course is to introduce concepts central to a large-scale integrated biomass bioconversion system.

Credit 3 units. EN: BME T, TU

E44 EECE 554 Molecular Biochemical Engineering

This course is set for junior-level graduate students to bridge the gap between biochemical engineering theory and academic research in bioengineering. It will cover common molecular biotechnologies (molecular biology, microbiology, recombinant DNA technology, protein expression, etc.), biochemical models (enzyme catalysis, microbial growth, bioreactor, etc.) and bioengineering methodologies (protein engineering, expression control systems, etc.). These theories and technologies will be introduced in a manner closely related to daily academic research or biochemical industry. Areas of application include biofuel and chemical production, drug discovery and biosynthesis, bioremediation, and environmental applications. This course also contains a lab section (~20-30%) that requires students to apply the knowledge learned to design experiments, to learn basic experimental skills, and to solve current research problems. Prerequisites: EECE 101, Bio 2960, Bio 4810.

Credit 3 units. EN: BME T, TU

E44 EECE 572 Advanced Transport Phenomena

Analytical tools in transport phenomena: Scaling, perturbation and stability analysis. Numerical computations of common transport problem with MATLAB tools. Low Reynolds number flows and applications to microhydrodynamics. Turbulent flow analysis and review of recent advances in numerical modeling of turbulent flows. Convective heat and mass transfer in laminar and turbulent flow systems. Introduction to two phase flow and multiphase reactors. Pressure-driven transport and

transport in membranes, electrochemical systems, double layer effects and flow in microfluid devices. Prerequisites: EECE 501 (Transport phenomena) or equivalent senior level courses in fluid mechanics and heat transfer.

Credit 3 units. EN: BME T, TU

E44 EECE 574 Electrochemical Engineering

This course will teach the fundamentals of electrochemistry and the application of the same for analyzing various electrochemical energy sources/devices. The theoretical frameworks of current-potential distributions, electrode kinetics, porous electrode and concentrated solution theory will be presented in the context of modeling, simulation and analysis of electrochemical systems. Applications to batteries, fuel cells, capacitors, and copper deposition will be explored. Pre/corequisites: EECE 501-502 (or equivalent) or permission of instructor.

Credit 3 units.

E44 EECE 576 Chemical Kinetics and Catalysis

This course reflects the fast, contemporary progress being made in decoding kinetic complexity of chemical reactions, in particular heterogeneous catalytic reactions. New approaches to understanding relationships between observed kinetic behaviour and reaction mechanism will be explained. Present theoretical and methodological knowledge will be illustrated by many examples taken from heterogeneous catalysis (complete and partial oxidation), combustion and enzyme processes.

Prerequisite: senior or graduate student standing, or permission of instructor.

Credit 3 units. EN: BME T, TU

E44 EECE 597 EECE Project Management

An introduction to the theory and practice of engineering project management, with an emphasis on projects related to environmental protection and occupational health and safety. Topics include project definition and justification; project evaluation and selection; financial analysis and cost estimation; project planning, including scheduling, resourcing and budgeting; project oversight, auditing and reporting; and effective project closure. Students will be introduced to commonly used project management tools and systems, such as work breakdown structures, network diagrams, Gantt charts, and project management software. Topics will also include project management in different organizational structures and philosophies; creating effective project teams; and managing projects in international settings. Prerequisites: enrolled in MEng program; senior or higher standing.

Credit 3 units.

E44 EECE 599 Master's Research

Credit variable, maximum 9 units.

Bachelor of Science in Chemical Engineering

The Bachelor of Science in Chemical Engineering (BSChE) degree program is designed to provide students with comprehensive training in chemical engineering fundamentals. This degree program is accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>).

The BSChE degree requires the satisfactory completion of a minimum of 126 units as indicated in the BSChE Requirements table below. Of the courses listed in that table, the humanities and social sciences courses (except Engr 450X courses) may be taken pass/fail. A sample year-by-year BSChE curriculum is also shown below.

The program of study consists of 25 units of physical and biological sciences (i.e., biology, chemistry and physics); 24 units of mathematics and engineering computing; 38 units of core chemical engineering courses; 21 units of humanities, social sciences and technical writing; and 18 units of chemical engineering electives. The chemical engineering electives permit students to tailor their studies toward specific goals such as obtaining more depth in a chemical engineering subdiscipline (e.g., materials) or increasing breadth by choosing courses from different subdisciplines. Some of these 18 units may be taken in other engineering departments or in the natural sciences or physical sciences. Students, in collaboration with their advisers, design a course of study (subject to certain requirements) for the chemical engineering electives. Consult the EECE department website (<https://eece.wustl.edu/undergraduate/programs/>) for more details, including the requirements that must be satisfied by these chemical engineering electives.

BSChE Requirements

Total Units Required: 126

Physical Sciences	Units
General Chemistry (Chem 111A or Chem 105, Chem 112A or Chem 106) (111A and 112A recommended)	6
General Chemistry Laboratory (Chem 151, Chem 152)	4
General Physics (Physics 191, Physics 192)	6
Physics Laboratory (Physics 191L, Physics 192L)	2
Organic Chemistry I (Chem 261)	4
Unit Subtotal	22
Biological Science	Units
Biology in EECE (EECE 306) or Principles of Biology I (Biol 2960)	3 or 4
Unit Subtotal	3 or 4
Mathematics & Computing	Units
Calculus II, III (Math 132, Math 233)	6
Differential Equations (Math 217)	3
Engineering Mathematics A, B (ESE 318, ESE 319)	6
Introduction to Computer Science (CSE 131) (with MATLAB extension)	3

Probability and Statistics for Engineering (ESE 326)	3
Computational Modeling in Energy, Environmental and Chemical Engineering (EECE 202)	3
Unit Subtotal	24
Chemical Engineering Core	Units
Introduction to Energy, Environmental and Chemical Engineering (EECE 101)	3
Process Analysis and Thermodynamics (EECE 205)	4
Thermodynamics II in EECE (EECE 204)	3
Transport Phenomena I: Basics and Fluid Mechanics (EECE 301)	3
Transport Phenomena II: Energy and Mass Transfer (EECE 307)	4
Mass Transfer Operations (EECE 304)	3
Materials Science (EECE 305)	3
Chemical Process Dynamics and Control (EECE 401)	3
Chemical Reaction Engineering (EECE 403)	3
Unit Operations Laboratory (EECE 405)	4
Process Design, Economics and Simulation (EECE 2409)	
ChE Capstone (EECE 402)	3
Unit Subtotal	38
Other	Units
Chemical Engineering electives (some of these courses can be taken outside the EECE department)	18
Engineering Ethics and Sustainability (Engr 4501)	1
Engineering Leadership and Team Building (Engr 4502)	1
Conflict Management and Negotiation (Engr 4503)	1
Humanities and social sciences electives	15
Technical Writing (Engr 310)	3
Unit Subtotal	39

BSChE Sample Curriculum

The curriculum is designed to provide opportunities for students to explore areas of interest within chemical engineering. In addition to offering the accredited BS in Chemical Engineering, the department offers students the option to pursue the course of study leading to the BS in Applied Science with a major in chemical engineering.

Course	Fall Units	Spring Units			
First Year					
Physics I, II (Physics 191, 192)	3	3	Humanities/social sciences elective	3	3
Physics I Laboratory (Physics 191L)	1	—	Engineering Leadership and Team Building (Engr 4502)	1	—
General Chemistry I or Introductory	3	—	Mass Transfer Operations (EECE 304)	—	3

Materials Science (EECE 305)	3	—			
Transport Phenomena II: Energy and Mass Transfer (EECE 307)	4	—			
Probability and Statistics for Engineering (ESE 326)	3	—			
ChE elective	3	3			

* Students intending to pursue medical school should take Biol 2960 Principles of Biology I (4 units) in place of EECE 306 Biology in EECE.

Program Educational Objective

The Program Educational Objective for the BSChE degree program is that, within a few years of graduation, graduates will do the following:

1. Engage in professional practice in chemical engineering or their chosen field, and/or
2. Attain advanced knowledge through graduate education or professional training in chemical engineering or their chosen field.

All students will use their knowledge, skills and abilities to serve society and pursue activities that promote professional growth and fulfillment.

Bachelor of Science in Environmental Engineering

The Bachelor of Science in Environmental Engineering (BSEnvE) degree program is designed to provide students with comprehensive training in environmental engineering fundamentals. The program has been designed with the goal of receiving accreditation by the Engineering Accreditation Commission of ABET (<http://www.abet.org>). Accreditation

can be sought once the program has had its first graduates; the program was launched at the start of the 2018-19 spring semester. The EnvE degree requires satisfactory completion of a minimum of 126 units as indicated in the BSEnvE Requirements table below. Of the courses listed in that table, the humanities and social sciences courses (except Engr 450X courses) may be taken pass/fail. A sample year-by-year BSEnvE curriculum is also shown below.

The program of study consists of 26 units of physical and biological sciences (i.e., biology, chemistry and physics); 21 units of mathematics and engineering computing; 43 units of core environmental engineering courses; 21 units of humanities, social sciences and technical writing; and 15 units of environmental engineering and science electives. The environmental engineering electives permit students to tailor their studies toward specific goals. Some of these 15 units may be taken in other engineering departments, and one course is explicitly required to be chosen from a set of natural science options. Students, in collaboration with their advisers, design a course of study (subject to certain requirements) for the environmental engineering and science electives. Consult the EECE department website (<https://eece.wustl.edu/undergraduate/programs/>) for more details, including the requirements that must be satisfied by these environmental engineering and science electives.

Green Engineering (EECE 311)	3	—		

Bachelor of Science in Applied Science (Chemical Engineering)

This degree serves students who wish to be exposed to key chemical engineering principles yet seek a more flexible curriculum. The BS in Applied Science (Chemical Engineering) requires 18 units of 300-level or higher chemical engineering core courses. Consult the EECE department website (<https://eece.wustl.edu/undergraduate/programs/>) for the specific requirements that must be fulfilled to earn this degree.

Double Majors and the Pre-Medical Program

Double Majoring in the EECE Department

The applied science/chemical engineering (BSAS-Che) degree cannot be combined as a double major with either environmental engineering (BSEnvE) or chemical engineering (BSChE). Students may, in principle, double major in both environmental engineering (BSEnvE) and chemical engineering (BSChE), but this is not recommended for logistical and course load reasons. Specifically, during the third and fourth years, each of the two majors will have multiple required courses in the same semester, possibly at conflicting times. For example, both capstone courses would be required.

For students wishing to combine chemical and environmental interests, it is recommended that they major in chemical engineering (BSChE) and minor in environmental engineering science.

Double Majors & Premedicine

Some students may be able to take more than the 126-unit minimum during a four-year program, especially if they have Advanced Placement units. This permits the choice of additional free electives from such areas as biology, computer science, humanities, social sciences or other engineering courses. It also provides an opportunity to pursue a double major. The rules for combining majors in engineering and multiple majors involving other university divisions are described in the Combined Majors and/or Multiple Degrees (p. 1031) section of the McKelvey School of Engineering *Bulletin*.

Traditionally, the department's undergraduate degrees have been popular with students interested in medicine because the curriculum automatically satisfies many of the premedical requirements. Many of the additional needed courses can be taken as electives.

The Minor in Environmental Engineering Science

The EECE department sponsors an undergraduate minor in environmental engineering science. This 21-unit program prepares the student to seek an entry-level position as an environmental engineer, scientist or analyst. The minor also provides a solid foundation for undertaking graduate study in environmental engineering. Visit the EECE department (<https://eece.wustl.edu>) website for more information.

Units required: 21

Required courses:

Select from the following menus:

Introduction¹ (3 units):

Code	Title	Units
EECE 101	Introduction to Energy, Environmental and Chemical Engineering (fall)	3
EECE 210	Introduction to Environmental Engineering (spring)	3

Environmental Chemistry² (3 units):

Code	Title	Units
EECE 505	Aquatic Chemistry (fall)	3
EECE 531	Environmental Organic Chemistry (fall)	3

Environmental Engineering electives² (9 units):

Code	Title	Units
EECE 309	Environmental Engineering Fate and Transport (fall)	3
EECE 311	Green Engineering (fall)	3
EECE 314	Air Quality Engineering with Lab (fall)	4
EECE 407	Environmental Biotechnology (fall)	3
EECE 425	Environmental Engineering Laboratory (spring)	3
EECE 504	Aerosol Science and Technology (fall)	3
EECE 514	Atmospheric Science and Climate (spring)	3
EECE 533	Physical and Chemical Processes for Water Treatment (spring)	3

Additional eligible courses (new courses, special offerings) will be posted on the EECE website as they become available.

Natural Science (3 units):

Code	Title	Units
Biol 381	Introduction to Ecology (spring)	3
EPSc 323	Biogeochemistry (spring)	3
EPSc 386	The Earth's Climate System	3
EPSc 413	Introduction to Soil Science (spring)	3
EPSc 428	Hydrology (fall, most years)	3
EPSc 444	Environmental Geochemistry (fall, even years)	3

Environmental Policy and Social Science (3 units):

Code	Title	Units
EnSt 310	Ecological Economics (fall, spring)	3
EnSt 357	Environmental Problem Solving (spring)	3
Econ 451	Environmental Policy (fall)	3
EnSt 539	Interdisciplinary Environmental Clinic (fall, spring)	3
EnSt 346	Environmental Justice	3

EnSt 452	International Climate Negotiation Seminar	6 max
EnSt 461	Intro to Environmental Law	3
Pol Sci 3752	Topics in American Politics	3

EECE 303	Transport Phenomena III: Energy Transfer Processes (spring)	3
ESE 332	Power, Energy and Polyphase Circuits (spring)	3

- ¹ First-year students potentially interested in majoring in chemical engineering should take EECE 101; all other students working toward the minor in environmental engineering science should take EECE 210.
- ² Students taking both environmental chemistry courses can count one of them toward the environmental engineering electives.

Committee to Oversee Environmental Engineering Science Minor

Daniel Giammar (<https://engineering.wustl.edu/Profiles/Pages/Daniel-Giammar.aspx>) (EECE, Coordinator); Avni Solanki (<https://engineering.wustl.edu/Profiles/Pages/Avni-Solanki.aspx>) (EECE); Brent Williams (<https://engineering.wustl.edu/Profiles/Pages/Brent-Williams.aspx>) (EECE)

The Minor in Energy Engineering

Objective: The goal of this minor is to provide students with a course work experience that will enhance their background, knowledge and skills in the topical area of energy engineering. The minor covers classes in several fields of science and engineering, including the Department of Energy, Environmental & Chemical Engineering; the Department of Electrical & Systems Engineering; and the Department of Mechanical Engineering & Materials Science.

A minor in energy engineering requires the completion of 18 units selected from the following menus. It is open to any undergraduate student pursuing an engineering major, a major in the sciences (biology, chemistry, physics) in Arts & Sciences, or the environmental studies major.

Interested departments should expose students to energy and related concepts in their introductory courses.

Basic and Applied Sciences (fundamental content) (two courses):

Code	Title	Units
EECE 205	Process Analysis and Thermodynamics (fall)	4 or 3
or MEMS 301	Thermodynamics	
EECE 301	Transport Phenomena I: Basics and Fluid Mechanics	3
or MEMS 3410	Fluid Mechanics	

Social Science/Policy/Economics Elective (one course):

Code	Title	Units
EnSt 357	Environmental Problem Solving	3
EnSt 451	Environmental Policy (fall)	3
EnSt 350W	Environmental Issues: Writing (spring)	3
EnSt 340	Energy Governance in Israel and the Middle East	3

Electives:

Students choose three courses. One of the courses is required to be chosen from outside of the student's major degree department. A partner department may approve the use of a course listed under basic and applied sciences as an elective.

Code	Title	Units
EECE 311	Green Engineering (fall)	3
EECE 411	International Experience in EECE (summer/fall)	3
EECE 413	Energy Conversion and Storage	3
EECE 512	Combustion Phenomena (fall)	3
EECE 552	Biomass Energy Systems and Engineering (spring)	3
ESE 434	Solid-State Power Circuits and Applications (fall)	3
ESE 435	Electrical Energy Laboratory (spring)	3
MEMS 412	Design of Thermal Systems (spring)	3
MEMS 5420	HVAC Analysis and Design I (fall)	3
MEMS 5421	HVAC Analysis and Design II (spring)	3
MEMS 5422	Solar Energy Thermal Processes (summer)	3
MEMS 5423	Sustainable Environmental Building Systems (fall)	3
MEMS 5705	Wind Energy Systems (spring)	3

Committee to Oversee Energy Engineering Minor

Pratim Biswas (<https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx>) (EECE, Coordinator); Bruno Sinopoli (<https://engineering.wustl.edu/Profiles/Pages/Bruno-Sinopoli.aspx>) (ESE); David Peters (<https://engineering.wustl.edu/Profiles/Pages/David-Peters.aspx>) (MEMS)

The committee ensures that any course added to the above lists contains a significant amount of energy topics and that the entire program is cohesive.

The Minor in Nanoscale Science & Engineering

Nanotechnology deals with materials, structures and devices with dimensions that are in the 1- to 100-nm length scale. These entities have properties (physical, chemical and biological) that are very different from their bulk counterparts, and they can be tuned to obtain novel and desired functionalities. The goal of this minor is to enhance the student's background, knowledge and skills in the topical area of nanotechnology. The minor includes courses in several fields of science and engineering; it encompasses all of the departments in the McKelvey School of Engineering as well as several departments in Arts & Sciences. It is open to undergraduate students pursuing an engineering degree or a related Arts & Sciences major (e.g., chemistry, physics, biology, environmental studies, pre-med).

The minor in nanoscale science and engineering involves the following components. Starting with courses covering the fundamentals, students gain knowledge in synthesis and applications as well as characterization, structure and modeling. Two additional requirements are the cleanroom lab class (MEMS 5801 Micro-Electro-Mechanical Systems I) and the completion of a faculty-supervised independent study project over the course of at least two semesters. The mix of courses should provide the student with a significant background in nanotechnology, and it should promote independent thinking through the student's work on a research or educational project.

Units required: 18

Required courses: Select from the following menus:

Fundamentals (choose one course):

Code	Title	Units
Biol 4810	General Biochemistry I	3
Chem 401	Physical Chemistry I	3
Chem 465	Solid-State and Materials Chemistry	3
EECE 305	Materials Science	3
MEMS 3601	Materials Engineering	3
MEMS 3610	Materials Science	3
Physics 217	Introduction to Quantum Physics	3
Physics 352	Physics of Biomolecules	3
Physics 472	Solid State Physics	3

Synthesis and Applications (choose one course):

Code	Title	Units
EECE 504	Aerosol Science and Technology	3
EECE 534	Environmental Nanochemistry	3
ESE 436	Semiconductor Devices	3
ESE 438	Applied Optics	3

ESE 532	Introduction to Nano-Photonic Devices	3
MEMS 463	Nanotechnology Concepts and Applications	3
MEMS 5606	Soft Nanomaterials	3

Characterization, Structure and Modeling (choose one course):

Code	Title	Units
Chem 479	Computational Chemistry and Molecular Modeling	3
Chem 543	Physical Properties of Quantum Nanostructures	3
Chem 550	Mass Spectrometry	3
EECE 516	Measurement Techniques for Particle Characterization	3
MEMS 5602	Non-metallics	3
MEMS 5603	Materials Characterization Techniques I	3
MEMS 5604	Materials Characterization Techniques II	3
MEMS 5612	Atomistic Modeling of Materials	3

Cleanroom Laboratory/Theory Class (required):

Code	Title	Units
MEMS 5801	Micro-Electro-Mechanical Systems I	3

Independent Study Project (required):

Students should sign up for at least **two semesters** of independent study and work on a project related to nanotechnology under the supervision of a faculty member. A list of projects with potential faculty mentors will be circulated during the spring semester each year. Before completing the independent study project, students must be registered for the nanoscale science and engineering minor program, and they must have completed at least two of the courses from the above categories. Students can also come up with their own ideas for projects, but these require approval from the Nanoscale Science and Engineering Minor Committee and a faculty mentor.

The courses listed above will count for elective credit for all Engineering majors; however, students should check with their major advisers to confirm this.

Committee to Oversee Nanoscale Science and Engineering Minor

Rohan Mishra (<https://engineering.wustl.edu/Profiles/Pages/Rohan-Mishra.aspx>) (MEMS, Coordinator), Pratim Biswas (<https://engineering.wustl.edu/Profiles/Pages/Pratim-Biswas.aspx>) (EECE)

Visit the EECE website (<https://eece.wustl.edu/undergraduate/programs/Pages/minors.aspx>) for more information.

Mechanical Engineering & Materials Science

About Mechanical Engineering & Materials Science

The Department of Mechanical Engineering & Materials Science (MEMS) offers the Bachelor of Science in Mechanical Engineering (BSME) and the Bachelor of Science in Applied Science (Mechanical Engineering). In addition, minors in aerospace engineering, energy engineering, environmental engineering science, materials science & engineering, nanoscale science & engineering, robotics, mechatronics, and mechanical engineering as well as in related scientific and engineering fields are available to students.

The MEMS curriculum emphasizes the core principles of mechanics (i.e., the study of forces, materials and motion) that underlie mechanical engineering. The common curriculum during the student's early academic development encourages breadth of understanding, interdisciplinary thinking and creativity. During their first, sophomore and early junior years, students are focused on learning fundamental concepts in statics, dynamics, fluid mechanics and thermodynamics. During the junior and senior years, students choose electives that emphasize their specific interests and prepare them for a particular professional or academic career. The undergraduate curriculum for the BSME degree provides MEMS students with a strong base in fundamental mathematics, science and engineering. It exposes the students to diverse applications of mechanics and materials, and it provides them with the flexibility to explore creative ideas through undergraduate research and project-based courses.

Mechanical engineering is critical to a variety of important emerging technologies. Mechanical engineers design and develop artificial organs, prosthetic limbs, robotic devices, adaptive materials, efficient propulsion mechanisms, high-performance aerospace structures, and advanced renewable energy systems. The core concepts of mechanics, thermal systems and materials science are at the heart of these technologies.

Mission Statement

The MEMS faculty is committed to providing the best possible undergraduate mechanical engineering education possible. We strive to nurture the intellectual, professional and personal development of the students, to continually improve the curriculum, to be professionally current, and to maintain state-of-the-art facilities for teaching and learning.

We seek to prepare students for professional practice with a scientifically grounded foundation in the major topics of mechanical engineering: solid mechanics, mechanical design, dynamics and vibrations, systems control, fluid mechanics, thermal science and materials science.

Graduate Programs

The department offers programs for graduate study at both the master's and doctoral levels. All programs are designed to direct advanced study into an area of specialization and original research that includes recent scientific and technological advances.

A graduate degree can provide significant advantages and rewards to a mechanical engineer, including increased income and a wider range of career options. Graduate programs include professional, course-option master's degrees (MS and MEng) as well as research-based master's (MS) and doctoral (PhD) degrees. The undergraduate curriculum provides an excellent foundation for graduate study, and a careful selection of electives during the third and fourth years can facilitate the transition to graduate work. The master's degrees can be pursued on a part-time or full-time basis, whereas the PhD degrees are typically pursued by full-time students.

Courses

Visit online course listings to view semester offerings for E37 MEMS (<https://courses.wustl.edu/CourseInfo.aspx?sch=E&dept=E37&crslvl=1:5>).

E37 MEMS 1001 Machine Shop Practicum

Operation of basic machine tools including: lathe, drill press, grinder and mill. Machine tool use and safety are covered. Student shop privilege requires completion of this practicum. Credit 1 unit. EN: TU

E37 MEMS 101 Introduction to Mechanical Engineering and Mechanical Design

Mechanical engineers face new challenges in the areas of energy, materials and systems. This course introduces students to these areas through team-based, hands-on projects that emphasize engineering design, analysis and measurement skills. The course is strongly recommended for mechanical engineering majors. Students from other disciplines are welcome and encouraged to enroll.

Credit 2 units. EN: TU

E37 MEMS 103 Computer-Aided Design — AutoCAD

AutoCAD is the most used two-dimensional drawing software for architectural and engineering production drawings. Introduction to AutoCAD, title blocks, drawing setup, absolute and relative coordinates, drawing entities, layouts, drafting geometry, dimensioning, plotting drawings to scale, sectional and other special views, isometric pictorial views. Class work involves typical drawings from industry.

Credit 1 unit. EN: TU

E37 MEMS 201 Numerical Methods and Matrix Algebra

This course provides students with computational tools for solving mechanical, structural, and aerospace engineering problems. An introduction to MATLAB will be presented, including data input/output, program flow control, functions and graphics. Topics covered include matrices, determinants, rank, vector spaces, solutions of linear systems, interpolation and curve fitting, numeric differentiation and integration, eigenvalue and initial-value problems, nonlinear equations, and optimization. Each topic will be treated in the context of a typical engineering application. Prerequisite: Math 217.

Credit 3 units. EN: TU

E37 MEMS 202 Computer-Aided Design

An introduction to computer-aided engineering design in the context of mechanical and structural engineering. Students learn the fundamentals of spatial reasoning and graphical representation. Freehand sketching skills, including pictorial and orthographic views, are applied to the design process. Computer modeling techniques provide accuracy, analysis, and visualization tools necessary for the design of structures, devices and machines. Topics include: detailing design for production, fasteners, dimensioning, tolerancing, creation of

part and assembly drawings, computer-aided design, analysis and optimization of parts and assemblies; solid modeling of complex surfaces, assembly modeling, assembly constraints, and interference checking.

Credit 2 units. EN: TU

E37 MEMS 203 Advanced CAD

Computer-aided design, analysis, and optimization of parts and assemblies; solid modeling of complex surfaces, creation of detail drawings, dimensioning and tolerancing; assembly modeling, assembly constraints, interference checking; motion constraints, force and acceleration analysis, thermal analysis; part optimization for weight, strength, and thermal characteristics using SOLIDWORKS software. Prerequisite: MEMS 202 or equivalent.

Credit 3 units. EN: TU

E37 MEMS 205 Mechanics and Materials Science Laboratory

Laboratory experiments and exercises focusing on mechanical properties of engineering materials; metallography; heat treatment; beam deflection; stress and strain measurement; properties and structure of engineering materials; calibration and use of instrumentation; acquisition, processing, and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports; and presentation of data. Prerequisite: MEMS 253. Corequisite: MEMS 3610.

Credit 2 units. EN: TU

E37 MEMS 253 Statics and Mechanics of Materials

Principles of statics, solid mechanics, force systems and equilibrium. Equivalent systems of forces and distributed forces. Applications to trusses, frames, machines, beams, and cables. Mechanics of deformable solids and indeterminate problems. Stress, strain, deflection, yield and failure in beams, columns, and torsion members. Prerequisite: Physics 197. Corequisite: Math 217.

Credit 3 units. EN: TU

E37 MEMS 255 Dynamics

Review of vector algebra and calculus. Kinematics of a particle. Newton's laws and the kinetics of a particle. Work and energy. Impulse and momentum. Kinematics of rigid bodies. General theorems for systems of particles. Kinetics of rigid bodies. The inertia tensor. Computer problems form a significant part of the class. Corequisite: Math 217.

Credit 3 units. EN: TU

E37 MEMS 301 Thermodynamics

This course of classical thermodynamics is oriented toward mechanical engineering applications. It includes properties and states of a substance, processes, cycles, work, heat, and energy. Steady-state and transient analyses utilize the First and Second Laws of Thermodynamics for closed systems and control volumes, as well as the concept of exergy. Prerequisites: Chem 105 or 111A, Math 132, Physics 197.

Credit 3 units. EN: BME T, TU

E37 MEMS 305 Fluid Mechanics and Heat Transfer

Laboratory

Laboratory experiments and exercises focusing on fluid properties, flow phenomena, thermal science and heat transfer phenomena; calibration and use of instrumentation; acquisition, processing, and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports; and presentation of data. Prerequisite: MEMS 3410. Corequisite: MEMS 3420.

Credit 2 units. EN: TU

E37 MEMS 3110 Machine Elements

This course includes weekly lectures and a bi-weekly lab. Lectures introduce the engineering design process, review stresses and failure theories, and present a variety of machine elements (such as bearings, shafts, gears, belts, springs, etc.) and their governing equations. In lab, students use a commercial CAD package (SolidWorks) to create and constrain models of machine assemblies, analyze stresses in machine components, and create animations to demonstrate machine motion. Course material is presented in the context of a semester-long engineering design problem that culminates in a final group project. Student teams generate their own design concept to embody in CAD and characterize it with engineering and analytical models. Prerequisite: MEMS 253. Corequisite: MEMS 3610.

Credit 3 units. EN: BME T, TU

E37 MEMS 312 Multidisciplinary Design & Prototyping

This hands-on course introduces students to the engineering design process and a variety of prototyping tools and techniques (e.g., 3D printing, laser cutting, sculpture, textiles, electronics). Skills are developed through weekly workshops, individual assignments, and a design project performed in multidisciplinary teams. Brief lectures focus on design principles and real-world issues for engineered products. The theme for this semester is "accessible game controllers." The purpose of this project is to create innovative, low-cost and effective devices to meet the needs of more gamers with disabilities. Interested registrants will be waitlisted and asked to submit an application over the summer. This course is open to students from all majors and disciplines.

Credit 3 units. EN: TU

E37 MEMS 3410 Fluid Mechanics

Fundamental concepts of fluids as continua. Topics include: viscosity, flow fields, velocity, vorticity, streamlines, fluid statics, hydrostatic forces, manometers, conservation of mass and momentum, incompressible inviscid flow, dimensional analysis and similitude, flow in pipes and ducts, flow measurement, boundary-layer concepts, flow in open channels. Corequisite: MEMS 255. Prerequisites: Math 233 and Math 217.

Credit 3 units. EN: BME T, TU

E37 MEMS 3420 Heat Transfer

Introductory treatment of the principles of heat transfer by conduction, convection, or radiation; analysis of steady and unsteady conduction with numerical solution methods; analytical and semi-empirical methods of forced and natural convection; boiling and condensation heat transfer; and radiation heat transfer. Prerequisites: MEMS 3410 and MEMS 301, ESE 319, and MEMS 201 or ESE 318.

Credit 3 units. EN: BME T, TU

E37 MEMS 350 Solid Mechanics

A continuation of MEMS 253 containing selected topics in the mechanics of deformable solids, presented at a level intermediate between introductory strength of materials and advanced continuum mechanics. Lectures will discuss elastic and elasto-plastic response, failure criteria, composites, beams, and structural stability as well as provide an introduction of the tensorial formulation of stress and strain and the governing equations of 3D linear elasticity. Mathematical methods from calculus, linear algebra and linear differential equations will be used. Computer problems form a significant part of the class. MEMS 255 not required. Prerequisite: MEMS 253. Corequisite: MEMS 201 or ESE 318.

Credit 3 units. EN: BME T, TU

E37 MEMS 3601 Materials Engineering

The application of fundamental materials science principles in engineering disciplines. Topics include: design of new materials having unique property combinations, selection of materials for use in specific service environment, prediction of materials performance under service conditions, development of processes to produce materials with improved properties, structural and functional use of metals, polymers, ceramics and composites.

Credit 3 units. EN: BME T, TU

E37 MEMS 3610 Materials Science

Introduction to properties, chemistry and physics of engineering materials; conduction, semiconductors, crystalline structures, imperfections, phase diagrams, kinetics, mechanical properties, ceramics, polymers, corrosion, magnetic materials, and thin films; relationship of atomic and molecular structure to physical and chemical properties; selection of materials for engineering applications; relationships between physical properties, chemical properties and performance of engineering materials. Prerequisite: Chem 105 or 111A and 151.

Credit 3 units. EN: BME T, TU

E37 MEMS 400 Independent Study

Independent investigation on topic of special interest. Prerequisites: junior or senior standing and permission of department chair. Students must complete the Independent Study Approval form available in the department office. Credit variable, maximum 3 units.

E37 MEMS 4001 Fundamentals of Engineering Review

A review and preparation of the most recent NCEES Fundamentals of Engineering (FE) Exam specifications is offered in a classroom setting. Exam strategies will be illustrated using examples. The main topics for the review include engineering mathematics, statics, dynamics, thermodynamics, heat transfer, mechanical design and analysis, material science and engineering economics. A discussion of the importance and responsibilities of professional engineering licensure along with ethics will be included.

Credit 1 unit.

E37 MEMS 405 Vibrations and Machine Elements Laboratory

Laboratory experiments and exercises focusing on vibration of mechanical systems; kinematic response, dynamic response, and design of mechanisms and machine components; displacements, velocities, and accelerations in mechanical

systems and components; response to static and dynamic forces; transient and steady state response; design of mechanical components for power transmission; calibration and use of instrumentation; acquisition, processing, and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports and presentation of data. Prerequisite: MEMS 3110. Corequisite: MEMS 4310.

Credit 2 units. EN: TU

E37 MEMS 4050 Vibrations Lab

Laboratory experiments and exercises focusing on vibration of mechanical systems; kinematic and dynamic response; displacements, velocities, and accelerations in mechanical systems and components; response to static and dynamic forces; transient and steady state response; calibration and use of instrumentation; acquisition, processing, and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports and presentation of data. Co-requisite: MEMS 4310

Credit 1 unit. EN: TU

E37 MEMS 4101 Manufacturing Processes

Manufacturing processes and machinery are explained and described. Topics include: analytical tools of machine science, heat transfer, vibrations and control theory are applied to the solution of manufacturing problems, analytical development and application of engineering theory to manufacturing problems, machine tools and automated production equipment.

Credit 3 units. EN: BME T, TU

E37 MEMS 411 Mechanical Engineering Design Project

Student groups work on an open-ended mechanical design problem and finish the semester by presenting a physical prototype and a formal report to an external review board. Groups are guided through the engineering design process by completing a set of project deliverables. The quality of these deliverables provides a basis for evaluation of individual and team performance. This course emphasizes the importance of user-centric design, communication and presentation skill, consideration of real-world constraints, sketching and creativity, prototyping, and data-driven decision making using engineering models and analyses. Prerequisites: MEMS 3110 & MEMS 3420.

Credit 3 units. EN: BME T, TU

E37 MEMS 412 Design of Thermal Systems

Analysis and design of advanced thermo-fluid systems. Student teams participate in the design process, which could involve research, design synthesis, codes, standards, engineering economics, a design project report, and formal presentations. Topics include thermo-fluid systems and components such as power, heating and refrigeration systems; pumps, fans, compressors, combustors, turbines, nozzles, coils, heat exchangers and piping. Prerequisite: MEMS 301 Thermodynamics.

Credit 3 units. EN: BME T, TU

E37 MEMS 424 Introduction to Finite Element Methods in Structural Analysis

Application of finite element methods to beams, frames, trusses and other structural components. Modeling techniques for different types of structural engineering problems. Topics in stress analysis, applied loads, boundary conditions, deflections and internal loads, matrix methods, energy concepts, structural mechanics and the development of finite element modeling methods. Prerequisites: MEMS 253 and MEMS 350.

Credit 3 units. EN: BME T, TU

E37 MEMS 4301 Modeling, Simulation and Control

Introduction to simulation and control concepts. Topics include: block diagram representation of single- and multiloop systems; control system components; transient and steady-state performance; stability analysis; Nyquist, Bode and root locus diagrams; compensation using lead, lag and lead-lag networks; design synthesis by Bode plots and root-locus diagrams; state-variable techniques; state-transition matrix; state-variable feedback. Prerequisites: MEMS 255, ESE 318 and ESE 319. Credit 3 units. EN: BME T, TU

E37 MEMS 4310 Dynamics and Vibrations

Introduction to the analysis of vibrations in single-degree and multidegree of freedom systems; free and forced vibration of multidegree of freedom and distributed parameter mechanical systems and structures; methods of Laplace transform; complex harmonic balance; matrix formulation; Fourier series; and transient response of continuous systems by partial differential equations. Prerequisites: MEMS 255, ESE 319, and MEMS 201 or ESE 318.

Credit 3 units. EN: BME T, TU

E37 MEMS 4401 Combustion and Environment

Introduction to combustion and its application in devices. Topics include: chemical thermodynamics and kinetics; ignition and explosion; deflagration and detonation waves; transport phenomena and the governing equations for heat and mass transfer in chemically reacting flows; laminar and turbulent flame propagation; non-premixed flames; the emission of combustion-generated pollutants and subsequent interaction with the environment; toxic-waste incineration; and practical combustion devices. Prerequisites: MEMS 301, MEMS 342 or equivalent. Credit 3 units. EN: TU

E37 MEMS 463 Nanotechnology Concepts and Applications

The aim of this course is to introduce to students the general meaning, terminology and ideas behind nanotechnology and its potential application in various industries. The topics covered will include nanoparticles (properties, synthesis and applications), carbon nanotubes (properties, synthesis and applications); ordered and disordered nanostructured materials and their applications, quantum wells, wires and dots, catalysis and self-assembly, polymers and biological materials, nanoelectronics and nanophotonics, nanomanufacturing and functional nanodevices, health effects and nanotoxicity, and so on. Prerequisite: none. Students with a background in general physics, chemistry and biology should be able to comprehend the material.

Credit 3 units.

E37 MEMS 500 Independent Study

Independent investigation on topic of special interest. Prerequisites: graduate standing and permission of the department chair. Students must complete the Independent Study Approval Form available in the department office. Credit variable, maximum 3 units.

E37 MEMS 5001 Optimization Methods in Engineering

Analytical methods in design. Topics include: mathematical methods; linear and nonlinear programming; optimality criteria; fully stressed techniques for the design of structures and machine components; topological optimization; search techniques; and genetic algorithms. Prerequisites: calculus and computer programming.

Credit 3 units. EN: BME T, TU

E37 MEMS 501 Graduate Seminar

This is a required pass/fail course for master's and doctoral degrees. A passing grade is required for each semester of full-time enrollment. A passing grade is received by attendance at the weekly seminars.

E37 MEMS 5102 Materials Selection in Design

Analysis of the scientific bases of material behavior in the light of research contributions of the past 20 years. Development of a rational approach to the selection of materials to meet a wide range of design requirements for conventional and advanced applications. Although emphasis is placed on mechanical properties, acoustical, optical, thermal and other properties of interest in design are discussed.

Credit 3 units. EN: BME T, TU

E37 MEMS 5104 CAE-Driven Mechanical Design

An introduction to the use of computer-aided engineering (CAE) tools in the mechanical design process. Topics include: integrating engineering analysis throughout the process; multidisciplinary optimization; and computer-aided design directed toward new manufacturing processes. Students will work with commercial and research software systems to complete several projects. Students should have experience and familiarity with a CAD tool, optimization and the finite element method. Prerequisite: MEMS 202 Computer-Aided Design or equivalent.

Credit 3 units. EN: BME T, TU

E37 MEMS 5301 Nonlinear Vibrations

In this course, students are introduced to concepts in nonlinear dynamics and vibration and application of these concepts to nonlinear engineering problems. Specific topics include: modeling of lumped and continuous nonlinear systems (strings, beams and plates); vibrations of buckled structures; perturbation and other approximate analytical methods; the use and limitations of local linearization; properties of nonlinear behavior, such as dimension and Lyapunov exponents; stability of limit cycles; bifurcations; chaos and chaotic vibrations; experimental methods and data analysis for nonlinear systems. Concepts are reinforced with a number of examples from recently published research. Applications include aeroelastic flutter, impact dynamics, machine-tool vibrations, cardiac arrhythmias and control of chaotic behavior.

Credit 3 units. EN: BME T, TU

E37 MEMS 5302 Theory of Vibrations

Analytical methods in vibrations. Topics include: Duhamel's integral, Laplace and Fourier transforms and Fourier series with applications to transient response, forced response and vibration isolation; Lagrange's equations for linear systems, discrete systems, degrees of freedom, reducible coordinates, holonomic constraints and virtual work; matrix methods and state variable approach with applications to frequencies and modes, stability and dynamic response in terms of real and complex modal expansions, dynamic response of continuous systems by theory of partial differential equations, Rayleigh-Ritz and Galerkin energy methods, finite difference and finite element algorithms.

Credit 3 units. EN: BME T, TU

E37 MEMS 5401 General Thermodynamics

General foundations of thermodynamics valid for small and large systems, and for equilibrium and nonequilibrium states. Topics include: definitions of state, work, energy, entropy, temperature, heat interaction and energy interaction. Applications to simple systems; phase rule; perfect and semi-perfect gas; bulk-flow systems; combustion, energy and entropy balances; availability analysis for thermo-mechanical power generation; and innovative energy-conversion schemes. Prerequisite: graduate standing or permission of instructor.

Credit 3 units. EN: BME T, TU

E37 MEMS 5402 Radiation Heat Transfer

Formulation of the governing equations of radiation heat transfer. Topics include: electromagnetic theory of radiation; properties of ideal and real surfaces; techniques for solutions of heat transfer between gray surfaces; radiation in absorbing, emitting and scattering media.

Credit 3 units. EN: BME T, TU

E37 MEMS 5403 Conduction and Convection Heat Transfer

This course examines heat conduction and convection through various fundamental problems that are constructed from the traditional conservation laws for mass, momentum and energy. Problems include the variable-area fin, the unsteady Dirichlet, Robbins and Rayleigh problems, multidimensional steady conduction, the Couette flow problem, duct convection and boundary layer convection. Though some numerics are discussed, emphasis is on mathematical technique and includes the extended power series method, similarity reduction, separation of variables, integral transforms, and approximate integral methods.

Credit 3 units. EN: BME T, TU

E37 MEMS 5404 Combustion Phenomena

This course provides an introduction to fundamental aspects of combustion phenomena, including relevant thermochemistry, fluid mechanics, and transport processes as well as the interactions among them. Emphasis is on elucidation of the physico-chemical processes, problem formulation and analytic techniques. Topics covered include non-premixed and premixed flames, deflagrations and detonations, particle combustion, flame extinction, flame synthesis, pollutant formation and methods of remediation. Contemporary topics associated with combustion are discussed throughout. Prerequisites: graduate standing or permission of instructor.

Same as E44 EECE 512

Credit 3 units. EN: BME T, TU

E37 MEMS 5410 Fluid Dynamics I

Formulation of the basic concepts and equations governing a Newtonian, viscous, conducting, compressible fluid. Topics include: transport coefficients and the elements of kinetic theory of gases, vorticity, incompressible potential flow; singular solutions; flow over bodies and lifting surfaces; similarity method; viscous flow, boundary layer, low Reynolds number flows, laminar and turbulent flows.

Credit 3 units. EN: BME T, TU

E37 MEMS 5411 Fluid Dynamics II

Governing equations and thermodynamics relations for compressible flow. Topics include: kinetic theory of gases; steady, one-dimensional flows with friction and heat transfer; shock waves; Rankine-Hugoniot relations; oblique shocks; reflections from walls and flow interfaces, expansion waves, Prandtl-Meyer flow, flow in nozzles, diffusers and inlets, two-and three-dimensional flows; perturbation methods; similarity rules; compressible laminar and turbulent boundary layers; acoustic phenomena. Emphasis is relevant to air vehicles.

Credit 3 units. EN: BME T, TU

E37 MEMS 5412 Computational Fluid Dynamics

Computational fluid dynamics relevant to engineering analysis and design. Topics include: fundamentals of finite-difference, finite-volume and finite-element methods; numerical algorithms for parabolic, elliptic and hyperbolic equations; convergence, stability and consistency of numerical algorithms; application of numerical algorithms to selected model equations relevant to fluid flow, grid-generation techniques and convergence acceleration schemes. Prerequisite: senior or graduate standing or permission of the instructor.

Credit 3 units. EN: BME T, TU

E37 MEMS 5413 Advanced Computational Fluid Dynamics

Scope and impact of computational fluid dynamics. Governing equations of fluid mechanics and heat transfer. Three-dimensional grid-generation methods based on differential systems. Numerical methods for Euler and compressible Navier-Stokes equation. Numerical methods for incompressible Navier-Stokes equations. Computation of transonic inviscid and viscous flow past airfoils and wings. Analogy between the equations of computational fluid dynamics, computational electromagnetics, computational aeracoustics and other equations of computational physics. Non-aerospace applications — bio-fluid mechanics, fluid mechanics of buildings, wind and water turbines, and other energy and environment applications. Prerequisite: MEMS 5412 or permission of the instructor.

Credit 3 units. EN: TU

E37 MEMS 5414 Aeroelasticity and Flow-Induced Vibrations

This course deals with the interactions between aerodynamics, dynamics and structures in aerospace systems. Topics covered include unsteady aerodynamics, finite-state aerodynamic models, classical fixed-wing flutter, rotary-wing aeroelasticity and experimental methods in aeroelasticity. Emphasis is given to the prediction of flutter and limit cycles in aeroelastic systems.

Credit 3 units.

E37 MEMS 5420 HVAC Analysis and Design I

Fundamentals of heating, ventilating, and air conditioning — moist air properties, the psychrometric chart, classic moist air processes, design procedures for heating and cooling systems. Design of HVAC systems for indoor environmental comfort, health, and energy efficiency. Heat transfer processes in buildings. Development and application of techniques for analysis of heating and cooling loads in buildings, including the use of commercial software. Course special topics can include LEED rating and certification, cleanrooms, aviation, aerospace, and naval applications, ventilation loads, animal control facilities, building automation control, and on-site campus tours of state-of-the-art building energy and environmental systems.

Credit 3 units. EN: BME T, TU

E37 MEMS 5421 HVAC Analysis and Design II

Fundamentals of heating, ventilating, and air conditioning — energy analysis and building simulation, design procedures for building water piping systems, centrifugal pump performance, design of building air duct systems, fan performance, optimum space air diffuser design for comfort, analysis of humidification and dehumidification systems, and advanced analysis of refrigeration systems. HVAC analytical techniques will include the use of commercial software. Course special topics can include LEED rating and certification, management for energy efficiency, energy auditing calculations, aviation, aerospace, and naval applications, ventilation loads, building automation control, and on-site campus tours of state-of-the-art building energy and environmental systems.

Credit 3 units. EN: BME T, TU

E37 MEMS 5422 Solar Energy Thermal Processes

Fundamentals of radiation heat transfers and solar radiation, including basic terminology, atmospheric scattering and absorption, radiation interactions with surfaces, and selective surfaces. Components, cycles, and materials of concentrating solar power plants, including parabolic trough and solar towers. Overview over thermal storage, other solar thermal technologies and photovoltaics. This course includes a final project. Prerequisite: MEMS 3420 or equivalent.

Credit 3 units. EN: BME T, TU

E37 MEMS 5423 Sustainable Environmental Building Systems

Sustainable design of building lighting and HVAC systems considering performance, life cycle cost and downstream environmental impact. Criteria, codes and standards for comfort, air quality, noise/vibration and illumination. Life cycle and other investment methods to integrate energy consumption/conservation, utility rates, initial cost, system/component longevity, maintenance cost and building productivity. Direct and secondary contributions to acid rain, global warming and ozone depletion.

Credit 3 units. EN: BME T, TU

E37 MEMS 5424 Thermo-Fluid Modeling of Renewable Energy Systems

Overview of sustainable energy systems. Fundamentals of energy conversion. Renewable energy sources and energy conversion from wind, biomass, solar-thermal, geothermal and ocean/waves. Applications to energy storage, fuel cells, green air and ground transportation, energy-efficient buildings. Energy-economics modeling, emissions modeling, global warming and climate change.

Credit 3 units. EN: BME T, TU

E37 MEMS 5425 Thermal Management of Electronics

As the demand for higher performance electronics continues its exponential growth, transistor density doubles every 18 to 24 months. Electronic devices with high transistor density generate heat and thus require thermal management to improve reliability and prevent premature failure. Demanding performance specifications result in increased package density, higher heat loads and novel thermal management technology. This course gives an overview of thermal management for micro/power electronics systems and helps engineers to develop a fundamental understanding of emerging thermal technologies. This course will include the following topics: background of electronics packaging; thermal design of heat sinks; single phase and multiphase flow in thermal systems; two-phase heat exchange devices for portable and high powered electronic systems; computational fluid dynamics for design of thermal systems. Prerequisites: senior or graduate standing.

Credit 3 units. EN: BME T, TU

E37 MEMS 5500 Elasticity

Elastic constitutive relations for isotropic and anisotropic materials. Formulation of boundary-value problems. Application to torsion, flexure, plane stress, plane strain and generalized plane stress problems. Solution of three-dimensional problems in terms of displacement potentials and stress functions. Solution of two-dimensional problems using complex variables and conformal mapping techniques. Variational and minimum theorems.

Credit 3 units. EN: BME T, TU

E37 MEMS 5501 Mechanics of Continua

A broad survey of the general principles governing the mechanics of continuous media. Topics include general vector and tensor analysis, rigid body motions, deformation, stress and strain rate, large deformation theory, conservation laws of physics, constitutive relations, principles of continuum mechanics and thermodynamics, and two-dimensional continua. Prerequisite: ESE 501/502 or instructor's permission.

Credit 3 units. EN: BME T, TU

E37 MEMS 5502 Plates and Shells

Introduction to the linear theory of thin elastic plates and shells. The emphasis is on application and the development of physical intuition. The first part of the course focuses on the analysis of plates under various loading and support conditions. The remainder of the course deals mainly with axisymmetric deformation of shells of revolution. Asymptotic methods are used to solve the governing equations. Applications to pressure vessels, tanks, and domes. Prerequisites: BME 240 or MEMS 253; ESE 318 and ESE 319 or equivalent.

Credit 3 units. EN: BME T, TU

E37 MEMS 5506 Experimental Methods in Solid Mechanics

Current experimental methods to measure mechanical properties of materials are covered. Lectures include theoretical principles, measurement considerations, data acquisition and analysis techniques. Lectures are complemented by laboratory sections using research equipment such as biaxial testing machines, pressure myographs, indentation devices for different scales, and viscometers.

Credit 3 units. EN: BME T, TU

E37 MEMS 5507 Fatigue and Fracture Analysis

The course objective is to demonstrate practical methods for computing fatigue life of metallic structural components. The course covers the three major phases of metal fatigue progression: fatigue crack initiation, crack propagation and fracture. Topics include: stress vs. fatigue life analysis, cumulative fatigue damage, linear elastic fracture mechanics, stress intensity factors, damage tolerance analysis, fracture toughness, critical crack size computation and load history development. The course focus is on application of this technology to design against metal fatigue and to prevent structural failure.

Credit 3 units. EN: BME T, TU

E37 MEMS 5510 Finite Element Analysis

Theory and application of the finite element method. Topics include: basic concepts, generalized formulations, construction of finite element spaces, extensions, shape functions, parametric mappings, numerical integration, mass matrices, stiffness matrices and load vectors, boundary conditions, modeling techniques, computation of stresses, stress resultants and natural frequencies, and control of the errors of approximation. Prerequisite: graduate standing or permission of instructor.

Credit 3 units. EN: TU

E37 MEMS 5515 Numerical Simulation in Solid Mechanics I

Solution of 2D and 3D elasticity problems using the finite element method. Topics include: linear elasticity; laminated material; stress concentration; stress intensity factor; solution verification; J integral; energy release rate; residual stress; multi-body contact; nonlinear elasticity; plasticity; and buckling. Prerequisites: MEMS 424 Finite Elements or MEMS 5704 Aircraft Structures **and** MEMS 5500 Elasticity or MEMS 5501 Mechanics of Continua **and** graduate standing or permission of instructor.

Credit 3 units.

E37 MEMS 5516 Numerical Simulation in Solid Mechanics II

Solution of 2D and 3D elasticity problems using the finite element method. Topics include: laminates and composite materials; nonlinear elasticity; plasticity; incremental theory of plasticity; residual stress; geometric nonlinearity; membrane and bending load coupling; multi-body contact; stress intensity factor; interference fit; and buckling analysis. Prerequisite: graduate standing or permission of instructor.

Credit 3 units.

E37 MEMS 5520 Advanced Analytical Mechanics

Lagrange's equations and their applications to holonomic and nonholonomic systems. Topics include: reduction of degrees of freedom by first integrals, variational principles, Hamilton-Jacobi theory, general transformation theory of dynamics, applications

such as theory of vibrations and stability of motion, and use of mathematical principles to resolve nonlinear problems. Prerequisite: senior or graduate standing or permission of instructor.

Credit 3 units. EN: TU

E37 MEMS 5560 Interfaces and Attachments in Natural and Engineered Structures

Attachment of dissimilar materials in engineering and surgical practice is a challenge. Bimaterial attachment sites are common locations for injury and mechanical failure. Nature presents several highly effective solutions to the challenge of bimaterial attachment that differ from those found in engineering practice. This course bridges the physiologic, surgical and engineering approaches to connecting dissimilar materials. Topics in this course are: natural bimaterial attachments; engineering principles underlying attachments; analysis of the biology of attachments in the body; mechanisms by which robust attachments are formed; concepts of attaching dissimilar materials in surgical practice and engineering; and bioengineering approaches to more effectively combine dissimilar materials.

Credit 3 units. EN: BME T, TU

E37 MEMS 5561 Mechanics of Cell Motility

A detailed review of biomechanical inputs that drive cell motility in diverse extracellular matrices (ECMs). This class discusses cytoskeletal machineries that generate and support forces, mechanical roles of cell-ECM adhesions, and regulation of ECM deformations. Also covered are key methods for cell level mechanical measurements, mathematical modeling of cell motility, and physiological and pathological implications of mechanics-driven cell motility in disease and development.

Credit 3 units.

E37 MEMS 5562 Cardiovascular Mechanics

This course focuses on solid and fluid mechanics in the cardiac and cardiovascular system. Cardiac and cardiovascular physiology and anatomy. Solid mechanics of the heart, heart valves, arteries, veins and microcirculation. Flow through the heart chambers and blood vessels. Prerequisites: graduate standing or permission of instructor.

Credit 3 units. EN: BME T, TU

E37 MEMS 5564 Orthopaedic Biomechanics-Cartilage/Tendon

Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on soft orthopaedic tissues (cartilage, tendon and ligament). Topics include: mechanical properties of cartilage, tendon and ligament; applied viscoelasticity theory for cartilage, tendon and ligament; cartilage, tendon and ligament biology; tendon and ligament wound healing; osteoarthritis. This class is geared to graduate students and upper-level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisites: BME 240 or equivalent. Note: BME 590Z (463/563) Orthopaedic Biomechanics—Bones and Joints is *not* a prerequisite.

Credit 3 units. EN: TU

E37 MEMS 5565 Mechanobiology of Cells and Matrices

At the interface of the cell and the extracellular matrix, mechanical forces regulate key cellular and molecular events that profoundly affect aspects of human health and disease. This course offers a detailed review of biomechanical inputs that drive cell behavior in physically diverse matrices. In particular, cytoskeletal force-generation machineries, mechanical roles of cell-cell and cell-matrix adhesions, and regulation of matrix deformations are discussed. Also covered are key methods for mechanical measurements and mathematical modeling of cellular response. Implications of matrix-dependent cell motility in cancer metastasis and embryonic development are discussed. Prerequisite: graduate standing or permission of the instructor. Credit 3 units. EN: BME T, TU

E37 MEMS 5566 Engineering Mechanobiology

Engineering Mechanobiology is a new paradigm for understanding and manipulating the biological function of plants, animals, and their cells. Mechanical force has emerged as a critical component of all biological systems, providing mechanisms to sculpt plants and animals during morphogenesis, to enable cell migration, polarization, proliferation, and differentiation in response to physical changes in the environment, and to modulate the function of single molecules. This course provides a foundation for understanding these factors across plant and animal cells. The course begins with an introduction to plant and animal cell biology and principles of signaling, then progresses to an overview of the cell wall and ECM and an introduction to the mechanics and statistical mechanics of solid, viscoelastic, and fibrous continua. The course then focuses on the questions of how do cells feel, how do cells converse with the ECM and wall, and how do cells remember? Prerequisites: undergraduate calculus and physics. Credit 3 units. EN: BME T, TU

E37 MEMS 5601 Mechanical Behavior of Materials

A materials science-based study of mechanical behavior of materials with emphasis on mechanical behavior as affected by processes taking place at the microscopic and/or atomic level. The response of solids to external or internal forces as influenced by interatomic bonding, crystal/molecular structure, crystalline/noncrystalline defects and material microstructure are studied. The similarities and differences in the response of different kinds of materials viz., metals and alloys, ceramics, polymers and composites are discussed. Topics covered include physical basis of elastic, visco elastic and plastic deformation of solids; strengthening of crystalline materials; visco elastic deformation of polymers as influenced by molecular structure and morphology of amorphous, crystalline and fibrous polymers; deformation and fracture of composite materials; mechanisms of creep, fracture and fatigue; high strain-rate deformation of crystalline materials; and deformation of noncrystalline materials. Credit 3 units. EN: BME T, TU

E37 MEMS 5602 Non-metallics

Structure, mechanical and physical properties of ceramics and cermets, with particular emphasis on the use of these materials for space, missile, rocket, high-speed aircraft, nuclear and solid-state applications.

Credit 3 units. EN: BME T, TU

E37 MEMS 5603 Materials Characterization Techniques I

An introduction to the basic theory and instrumentation used in transmission electron, scanning electron and optical microscopy. Practical laboratory experience in equipment operations, experimental procedures and material characterization. Credit 3 units. EN: BME T, TU

E37 MEMS 5604 Materials Characterization Techniques II

Introduction to crystallography and elements of X-ray physics. Diffraction theory and application to materials science including following topics: reciprocal lattice concept, crystal-structure analysis, Laue methods, rotating crystal methods, powder method, and laboratory methods of crystal analysis.

Credit 3 units. EN: BME T, TU

E37 MEMS 5605 Mechanical Behavior of Composites

Analysis and mechanics of composite materials. Topics include micromechanics, laminated plate theory, hydrothermal behavior, creep, strength, failure modes, fracture toughness, fatigue, structural response, mechanics of processing, nondestructive evaluation, and test methods. Prerequisite: graduate standing or permission of the instructor.

Credit 3 units. EN: BME T, TU

E37 MEMS 5606 Soft Nanomaterials

Soft nanomaterials, which range from self-assembled monolayers (SAMs) to complex 3D polymer structures, are gaining increased attention owing to their broad-range applications. The course introduces the fundamental aspects of nanotechnology pertained to soft matter. Various aspects related to the design, fabrication, characterization and application of soft nanomaterials are discussed. Topics covered include but are not limited to SAMs, polymer brushes, layer-by-layer assembly, responsive polymers structures (films, capsules), polymer nanocomposites, biomolecules as nanomaterials and soft lithography.

Credit 3 units. EN: BME T, TU

E37 MEMS 5607 Introduction to Polymer Blends and Composites

The course covers topics in multicomponent polymer systems (polymer blends and polymer composites) such as: phase separation and miscibility of polymer blends, surfaces and interfaces in composites, microstructure and mechanical behavior, rubber toughened plastics, thermoplastic elastomers, block copolymers, fiber reinforced and laminated composites, techniques of polymer processing with an emphasis on composites processing, melt processing methods such as injection molding and extrusion, solution processing of thin films, selection of suitable processing methods and materials selection criteria for specific applications. Advanced topics include: nanocomposites such as polymer/CNT composites, bioinspired nanocomposites, and current research challenges. Prerequisite: MEMS 3610 or equivalent or permission of instructor.

Credit 3 units. EN: BME T, TU

E37 MEMS 5608 Introduction to Polymer Science and Engineering

Topics covered in this course are: the concept of long-chain or macromolecules, polymer chain structure and configuration, microstructure and mechanical (rheological) behavior, polymer phase transitions (glass transition, melting, crystallization), physical chemistry of polymer solutions (Flory-Huggins theory,

solubility parameter, thermodynamics of mixing and phase separation), polymer surfaces and interfaces, overview of polymer processing (extrusion, injection molding, film formation, fiber spinning) and modern applications of synthetic and bio-polymers.

Credit 3 units. EN: BME T, TU

E37 MEMS 5610 Quantitative Materials Science & Engineering

This course will cover the mathematical foundation of primary concepts in materials science and engineering. Topics covered include mathematical techniques in materials science and engineering; Fourier series; ordinary and partial differential equations; special functions; matrix algebra; and vector calculus. Each topic will be followed by its application to concepts in thermodynamics; kinetics and phase transformations; structure and properties of hard and soft matter; and characterization techniques. This course is intended especially for students pursuing graduate study in materials science.

Credit 3 units. EN: BME T, TU

E37 MEMS 5612 Atomistic Modeling of Materials

This course will provide a hands-on experience using atomic scale computational methods to model, understand and predict the properties of real materials. It will cover modeling using classical force-fields, quantum-mechanical electronic structure methods such as density functional theory, molecular dynamics simulations, and Monte Carlo methods. The basic background of these methods along with examples of their use for calculating properties of real materials will be covered in the lectures. Atomistic materials modeling codes will be used to calculate various material properties. Prerequisites: MEMS 3610 or equivalent or permission of instructor.

Credit 3 units. EN: BME T, TU

E37 MEMS 5613 Biomaterials Processing

Biomaterials with 3D structures are important for tissue regeneration. The goal of this class is to introduce various types of biomaterials and fabrication approaches to create 3D structures. The relationship between material properties, processing methods, and design will be the primary focus. The topics include degradable biomaterials for scaffold fabrication, processing of tissue engineering scaffolds, processing of tissue engineering hydrogels, processing of drug delivery systems, and scaffold surface modification.

Credit 3 units. EN: TU

E37 MEMS 5614 Polymeric Materials Synthesis and Modification

Polymer is a class of widely used material. Polymer performance is highly dependent on its chemical properties. The goal of this class is to introduce methods for the synthesis and modification of polymers with different chemical properties. The topics include free radical polymerization, reversible addition-fragmentation chain transfer polymerization, atom transfer radical polymerization, step growth polymerization, cationic polymerization, anionic polymerization, ring-opening polymerization, and bulk and surface modification of polymers.

Credit 3 units. EN: TU

E37 MEMS 5615 Metallurgy and Design of Alloys

The design of materials used in critical structures (e.g., airplanes) entails optimizing and balancing multiple properties (e.g., strength, durability, corrosion resistance) to satisfy often conflicting requirements (e.g., better fuel efficiency, lower cost, operation in extreme conditions). Properties of metallic materials are determined by their "microstructure," which in turn is determined by their compositions and processing paths. An understanding of the multivariate relationships among compositions, processing parameters, microstructures, and properties is therefore essential to designing alloys and predicting their behavior in service. This course will discuss these relationships, with emphasis on the hierarchy of microstructural features, how they are achieved by processing, and how they interact to provide desirable property combinations -- essentially the physical metallurgy of alloys. This course will focus on high-performance alloys presently used in airframes as well as alloy design for state-of-the-art processes such as additive manufacturing. Prerequisite: MEMS 3610.

Credit 3 units. EN: TU

E37 MEMS 5700 Aerodynamics

Fundamental concepts of aerodynamics, equations of compressible flows, irrotational flows and potential flow theory, singularity solutions, circulation and vorticity, Kutta-Joukowski theorem, thin airfoil theory, finite wing theory, slender body theory, subsonic compressible flow and Prandtl-Glauert rule, supersonic thin airfoil theory, introduction to performance, basic concepts of airfoil design. Prerequisite: graduate standing or permission of instructor.

Credit 3 units. EN: BME T, TU

E37 MEMS 5701 Aerospace Propulsion

Propeller, jet, ramjet and rocket propulsion. Topics include: fundamentals of propulsion systems, gas turbine engines, thermodynamics and compressible flow, one-dimensional gas dynamics, analysis of engine performance, air breathing propulsion system, the analysis and design of engine components, and the fundamentals of ramjet and rocket propulsion.

Credit 3 units. EN: BME T, TU

E37 MEMS 5703 Analysis of Rotary-Wing Systems

This course introduces the basic physical principles that govern the dynamics and aerodynamics of helicopters, fans and wind turbines. Simplified equations are developed to illustrate these principles, and the student is introduced to the fundamental analysis tools required for their solution. Topics include: harmonic balance, Floquet theory and perturbation methods.

Credit 3 units. EN: BME T, TU

E37 MEMS 5704 Aircraft Structures

Basic elements of the theory of elasticity; application to torsion of prismatic bars with open and closed thin-wall sections; the membrane analogy; the principle of virtual work applied to 2D elasticity problems. Bending, shear and torsion of open and closed thin-wall section beams; principles of stressed skin construction, structural idealization for the stress analysis of wings, ribs and fuselage structures. Margin of safety of fastened connections and fittings. Stability of plates, thin-wall section columns and stiffened panels. Application of the finite element method for the analysis of fastened connections, structural fittings and problems of local stability of aircraft structural components.

Credit 3 units.

E37 MEMS 5705 Wind Energy Systems

A comprehensive introduction to wind energy systems, a practical means of extracting green and sustainable energy. Topics include: a historical perspective of wind turbines; horizontal axis and vertical axis wind turbines; the basic parameters such as power rating and efficiency; the structural components ranging from blade and hub to nacelle and tower; wind turbine aerodynamics, aeroelasticity and control systems; blade fatigue; statistical wind modeling; unsteady airfoil aerodynamics and downstream wake; and environmental considerations such as noise and aesthetics. Prerequisite: senior or graduate standing in engineering or permission of the instructor.

Credit 3 units. EN: BME T, TU

E37 MEMS 5706 Aircraft Performance

This course introduces the principles and applications of aerodynamics to determine the performance of typical jet engine and propeller airplanes. The performance calculations include flight conditions of takeoff, climb, level flight, and landing. The topics covered also include range and endurance computation, turning flight, flight envelope, constraint analysis and design process. The knowledge and skill gained in this course can be readily applied in the preliminary design of an airplane. Prerequisite: senior or graduate standing in engineering, or permission of the instructor.

Credit 3 units. EN: BME T, TU

E37 MEMS 5707 Flight Dynamics

The course objective is to introduce methods for analyzing and simulating flight vehicle dynamics and to assess performance characteristics. Topics will include: aerodynamics, structural dynamics, vehicle forces and moments, vehicle equations of motion, rigid body and flexible body considerations, model linearization, longitudinal and lateral stability, stability and control augmentation, and aircraft handling qualities. The course focus is on the application of flight dynamics principles and MATLAB will be used extensively for modeling and simulation assignments and demonstrations.

Credit 3 units. EN: TU

E37 MEMS 5801 Micro-Electro-Mechanical Systems I

Introduction to MEMS: Microelectromechanical systems (MEMS) are ubiquitous in chemical, biomedical and industrial (e.g., automotive, aerospace, printing) applications. This course covers important topics in MEMS design, micro-/nanofabrication, and their implementation in real-world devices. The course includes discussion of fabrication and measurement technologies (e.g., physical/chemical deposition, lithography, wet/dry etching, and packaging), as well as application of MEMS theory to design/fabrication of devices in a cleanroom. Lectures cover specific processes and how those processes enable the structures needed for accelerometers, gyros, FR filters, digital mirrors, microfluidics, micro total-analysis systems, biomedical implants, etc. The laboratory component allows students to investigate those processes first-hand by fabricating simple MEMS devices. Credit 3 units. EN: BME T, TU

E37 MEMS 5912 Biomechanics Journal Club

This journal club is intended for graduate students and advanced undergraduates with an interest in biomechanics. We review landmark and recent publications in areas such as brain, cardiovascular and orthopedic biomechanics, discussing both experimental and modeling approaches. This course meets once weekly at a time to be arranged.

Credit 1 unit. EN: TU

E37 MEMS 597 MEMS Research Rotation

Independent research project that will be determined jointly by the doctoral student and the instructor. Assignments may include background reading, presentations, experiments, theoretical, and/or modeling work. The goal of the course is for the doctoral student to learn the background, principles and techniques associated with research topics of interest and to determine a mutual fit for the student's eventual doctoral thesis laboratory.

Credit 3 units.

E37 MEMS 598 Energy Analysis and Design Project

The Energy Analysis and Design Project is designed to provide mechanical engineering skills in energy applications, renewable energy, and technologies related to energy which can involve heat transfer, thermodynamics, and fluid mechanics. The project topic can be chosen by the student or can be developed by both the student and faculty sponsor. The subsequent research and analysis, conducted under the guidance and direction of the faculty sponsor, results in a final project report that is approved by the faculty sponsor. The course is normally completed over one or two semesters. Recent projects have included: Energy Modeling and Efficiency Improvements: A Comparison of TRACE 700 and eQuest, Analysis of Hydroelectric Power, Optimization of Residential Solar Thermal Heating in the United States, Analysis of Ocean Thermal Energy Conversion Systems, Laboratory Plug Load Analysis and Case Study, Modeling and Optimizing Hydronic Radiant Heating and Cooling Systems using Comsol Multiphysics, CFD Analysis in HVAC Applications, Energy Analysis of Waste Disposal Methods, CFD Analysis of Containment Solutions for Data Center Cooling, Energy Recovery Ventilation, Comparative Study of Green Building Rating Systems, Grid Energy Storage, Protection of Permafrost Under the Qinghai-Tibet Railway by Heat Pipe Technology, Investing in Residential Solar Photovoltaic Systems, How Piping Layout Effects Energy Usage, and Comparison of Building Energy Savings Between China and the United States.

Credit variable, maximum 6 units.

E37 MEMS 599 Master's Research

Credit variable, maximum 6 units.

Bachelor of Science in Mechanical Engineering

The mission of the undergraduate program in mechanical engineering is to prepare students within the broad and evolving field of mechanical engineering. The program instills in students a capacity for creative design through critical and analytical thought. The Bachelor of Science in Mechanical Engineering (BSME) is the first step toward a career in industry, academia or government; it encourages a commitment to independent

lifelong learning and professional development. In addition to their technical studies, students learn to communicate their ideas clearly and to conduct themselves in an ethical and socially responsible manner.

Program Educational Objectives

Program educational objectives are broad statements that describe what graduates are expected to attain within a few years of graduation. These objectives are based on the needs of the program's constituencies.

Within a few years of graduation, graduates of the BSME program are expected to do the following:

- Engage in professional practice and/or advanced study
- Further their knowledge and skills through education and/or professional development
- Serve society by using and communicating their knowledge and values

Student Outcomes

The Mechanical Engineering program has the following student outcomes that describe what students are expected to know and be able to do by the time of graduation. These relate to the knowledge, skills and behaviors that students acquire as they progress through the program.

The student outcomes of the BSME program are as follows:

- An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
- An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
- An ability to communicate effectively with a range of audiences
- An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts
- An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
- An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
- An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Curriculum

The curriculum is a four-year program leading to the first professional degree, the BSME, which is accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>). The curriculum prepares the student for professional practice or postgraduate education in a broad spectrum of mechanical and other engineering or professional fields. It provides critical knowledge in solid mechanics, fluid mechanics, thermodynamics and heat transfer, materials science, dynamics and control, and design. It includes 34 units of mathematics and basic sciences, 58 units of engineering topics, and 28 units of general education for a total degree requirement of 120 units. The general education requirement includes 18 units of social science and humanities.

Core courses must be taken for credit (i.e., for a grade). The social science and humanities courses may be taken on a pass/fail basis. The undergraduate program provides the necessary foundations in these areas and the opportunity to specialize in topics of particular interest. Specialization is accomplished via the judicious choice of engineering electives taken as 300-, 400- or 500-level courses approved by the student's adviser. At the end of the four-year program, the student is ready to go on to graduate education or into research or professional practice.

Basic Core Courses

Humanities, Social Sciences and Writing

Code	Title	Units
Humanities and social sciences (refer to McKelvey School of Engineering degree requirements for details)		18
Engr 310	Technical Writing	3
Total Units		21

Mathematics and Computation

Code	Title	Units
Math 132	Calculus II	3
Math 233	Calculus III	3
Math 217	Differential Equations	3
ESE 318 or MEMS 201	Engineering Mathematics A Numerical Methods and Matrix Algebra	3
ESE 319	Engineering Mathematics B	3
ESE 326	Probability and Statistics for Engineering	3
CSE 131	Introduction to Computer Science	3
Total Units		21

Physical Sciences

Code	Title	Units
Chem 111A or Chem 105	General Chemistry I Introductory General Chemistry I	3
Chem 151	General Chemistry Laboratory I	2
Physics 191	Physics I	3
Physics 191L	Physics I Laboratory	1
Physics 192	Physics II	3
Physics 192L	Physics II Laboratory	1
Physical or Life Science (200 level or above natural science course in Biology, Chemistry, Physics, Earth and Planetary Science, or Environmental Studies)		3
Total Units		16

Mechanical Engineering

Code	Title	Units
MEMS 1001	Machine Shop Practicum	1
MEMS 101	Introduction to Mechanical Engineering and Mechanical Design	2
MEMS 202	Computer-Aided Design	2
MEMS 205	Mechanics and Materials Science Laboratory	2
MEMS 253	Statics and Mechanics of Materials	3
MEMS 255	Dynamics	3
MEMS 301	Thermodynamics	3
MEMS 305	Fluid Mechanics and Heat Transfer Laboratory	2
MEMS 3110	Machine Elements	3
MEMS 3410	Fluid Mechanics	3
MEMS 3420	Heat Transfer	3
MEMS 350	Solid Mechanics	3
MEMS 3610	Materials Science	3
MEMS 405	Vibrations and Machine Elements Laboratory	2
MEMS 411	Mechanical Engineering Design Project	3
MEMS 412	Design of Thermal Systems	3
MEMS 4301	Modeling, Simulation and Control	3
MEMS 4310	Dynamics and Vibrations	3
ESE 230	Introduction to Electrical and Electronic Circuits	4
MEMS senior electives		9
Other courses		4
Total Units		64

Bachelor of Science in Applied Science (Mechanical Engineering)

The Bachelor of Science in Applied Science (Mechanical Engineering) program provides substantive and consistent training in mechanical engineering with maximum flexibility. This program is advantageous if a student wishes to pursue a more flexible program than the accredited Bachelor of Science in Mechanical Engineering (BSME) degree program.

Students who do not desire to become licensed engineers but who seek to acquire analytical engineering thinking skills may choose to pursue this program. The added degree flexibility allows these students to pursue additional second majors and/or minors and to increase their ability to participate in programs such as study abroad. It is especially suitable for a double major in combination with mathematics, physics, chemistry, biology, economics or another engineering discipline. The program can be planned to provide a background for graduate work in biological, medical or management fields. The Bachelor of Science in Applied Science is a nonprofessional degree; it is not accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>).

The degree requirements include the residency and general requirements of the university and the school. The Bachelor of Science in Applied Science (Mechanical Engineering) degree requirements are as follows:

- Complete a total of at least 120 applicable units
- Complete a minimum of 60 units at Washington University
- Complete at least 42 units at the 300 level or higher
- Complete at least 48 units in mathematics, natural science and engineering
- Complete at least 30 units of mechanical engineering (MEMS) courses
- Satisfy the McKelvey School of Engineering English composition requirement
- Satisfy the McKelvey School of Engineering humanities and social sciences requirement
- Satisfy the residency requirement of 30 units of 200-level or higher engineering courses
- Earn at least a 2.0 cumulative grade-point average in all applicable courses taken at Washington University
- Earn at least a 2.0 cumulative GPA in all engineering courses

Pre-Medical Option

Research and practice in the biological and medical sciences increasingly involves advanced technology, including mechanical engineering. For those interested in a career in medicine, the pre-medical option in MEMS makes it possible to obtain an

accredited Bachelor of Science while simultaneously meeting the admission requirements of most medical and dental schools. The program also provides a foundation for graduate study and research in biomedical engineering. The essential requirements of the pre-medical option are two semesters of general biology (Biol 2960, Biol 2970); two semesters of general chemistry with a laboratory; two semesters of organic chemistry with a laboratory (Chem 111A, Chem 151, Chem 112A, Chem 152, Chem 261, Chem 262); and one semester of biochemistry (Biol 451). Psychology (Psych 100B) and sociology are highly recommended. One semester of organic chemistry may be counted as an upper-level MEMS elective; the student must take 6 units of other upper-level mechanical engineering electives to complete the 9-unit requirement. The pre-medical option is easier for those who have a high school background in biology or who, by reason of advanced placement in math/science, have reduced requirements in the Common Studies portion of the curriculum. For additional information about the pre-medical option, please refer to the Pre-Medical Education (p. 1034) section of this *Bulletin*, which is located in the introduction to the McKelvey School of Engineering's Undergraduate Programs. Interested individuals may also contact the pre-health adviser, Ron Laue, at ron.laue@wustl.edu for additional information.

The Minor in Aerospace Engineering

Whether students are intent on a career in aviation or simply enthusiastic about space and flight, a minor in aerospace engineering can satisfy their scientific curiosity, prepare them for a job, or uncover opportunities for technical contributions. The minor in aerospace engineering is available to all undergraduates, but it is most attractive to those pursuing a degree in mechanical engineering. The minor in aerospace engineering requires a minimum of 15 units of courses selected from the list below; it is possible to earn the minor without increasing the number of units (120) required for the Bachelor of Science in Mechanical Engineering (BSME).

Aerospace engineering deals with the analysis, design and performance of flight vehicles such as transport and military aircraft, helicopters, missiles and launch vehicles, and spacecraft. Students learn about aerospace engineering by taking courses in aerodynamics, aircraft flight dynamics and control, aerospace propulsion, aerospace structures and aerospace vehicle design. Students may also have the opportunity to gain experience in aerospace engineering design through collaborative programs with local companies such as Boeing. Aerospace engineers from industry teach courses as adjunct instructors at Washington University, and many Washington University faculty members have extensive aerospace industry experience.

Units required: 15

Required courses (6 units):

Code	Title	Units
MEMS 4301 or ESE 441	Modeling, Simulation and Control Control Systems	3
MEMS 5700	Aerodynamics	3
Total Units		6

Core courses (3-6 units):

Code	Title	Units
MEMS 5701	Aerospace Propulsion	3
MEMS 5704	Aircraft Structures	3

Electives (3-6 units):

Any course from the aerospace MS concentration list (<https://mems.wustl.edu/graduate/programs/Pages/MS-In-Aerospace-Engineering.aspx>) (found on the MS in Aerospace Engineering webpage) can be used as an aerospace minor elective.

To find out more about this minor, contact the department chair or the adviser for the minor in aerospace engineering or visit the Minors webpage (<http://mems.wustl.edu/undergraduate/programs/Pages/minors.aspx#aerospace>).

The Minor in Materials Science & Engineering

Materials science and engineering (MSE) is an interdisciplinary field that applies the fundamental knowledge of the physical sciences to create engineering innovations. In general, the term *engineering* refers to actively designing a system for a given application; MSE enables the design of systems from the atoms up. MSE focuses on the interrelationship between a material's structure (from the subatomic level to the macro scale) and the properties or behaviors that the material exhibits. Materials synthesis and processing techniques enable engineers to control and change the material structure in order to obtain the desired properties. Understanding the structure–properties–processing relationship requires a fundamental knowledge of the underlying chemistry and physics; this is key to obtaining materials with the desired performance for engineering applications in a wide variety of fields, from computing to medicine to energy.

The minor in MSE builds upon the fundamental insights into material structure and properties gained through required introductory courses in chemistry and materials science. Students then select at least two courses from specialization "pick lists" to gain depth in a particular application area. A free elective provides the opportunity to gain additional depth in the fundamentals or exposure to another application area.

Students will be approved for the minor after discussing appropriate course selection with the adviser for the minor. Some courses have prerequisites.

Requirements

Units required: 17

Courses	Units
Three required courses	8
Two courses from specialization "pick lists"	6
One free elective	3
Total	17

Required courses*:

Code	Title	Units
Chem 111A or Chem 105	General Chemistry I Introductory General Chemistry I	3
Chem 151	General Chemistry Laboratory I	2
MEMS 3610 or EECE 305	Materials Science Materials Science	3
Total Units		8

* Students majoring in geology, geophysics, geochemistry or environmental earth science may substitute EPSc 352 Earth Materials for the required combination of Chem 111A and Chem 151. In this case, EPSc 352 may not be used to fulfill the specialization pick list or free elective requirements.

Specialization "Pick Lists"

Students should select at least two courses from any one of the following categories.

Structural Materials:

Code	Title	Units
MEMS 3601	Materials Engineering	3
MEMS 5506	Experimental Methods in Solid Mechanics	3
MEMS 5507	Fatigue and Fracture Analysis	3
MEMS 5560/ BME 4904	Interfaces and Attachments in Natural and Engineered Structures	3
MEMS 5601	Mechanical Behavior of Materials	3
MEMS 5602	Non-metallics	3
MEMS 5605	Mechanical Behavior of Composites	3
MEMS 5612	Atomistic Modeling of Materials	3
MEMS 5615	Metallurgy and Design of Alloys	3

Electronic/Optical Materials:

Code	Title	Units
L07 Chem 542	Special Topics in Inorganic Chemistry (The Chemistry of Energy Storage)	3
L07 Chem 543	Physical Properties of Quantum Nanostructures	3
ESE 436	Semiconductor Devices	3
ESE 531	Nano and Micro Photonics	3

ESE 536	Introduction to Quantum Optics	3
MEMS 463	Nanotechnology Concepts and Applications	3
Physics 472	Solid State Physics	3

Biomaterials/Soft Materials:

Code	Title	Units
BME 432/	Physics of Biopolymers and Bioinspired Polymers	3
BME 532	Biomaterials Science	3
BME 523	Interfaces and Attachments in Natural and Engineered Structures	3
MEMS 5606	Soft Nanomaterials	3
MEMS 5607	Introduction to Polymer Blends and Composites	3
MEMS 5608	Introduction to Polymer Science and Engineering	3
MEMS 5613	Biomaterials Processing	3
MEMS 5614	Polymeric Materials Synthesis and Modification	3

Materials for Energy and Environmental Technologies:

Code	Title	Units
L07 Chem 542	Special Topics in Inorganic Chemistry (The Chemistry of Energy Storage)	3
EECE 504	Aerosol Science and Technology	3
EECE 505	Aquatic Chemistry	3

Natural Materials:

Code	Title	Units
EPSc 336	Minerals and Rocks in the Environment	3
EPSc 352	Earth Materials	5

Free Electives

To complete the minor, students may select one additional course from the categories above or from the list of courses below:

Code	Title	Units
Chem 465	Solid-State and Materials Chemistry	3
MEMS 4101	Manufacturing Processes	3
MEMS 5102	Materials Selection in Design	3
MEMS 5603	Materials Characterization Techniques I	3
MEMS 5604	Materials Characterization Techniques II	3
MEMS 5610	Quantitative Materials Science & Engineering	3
MEMS 5612	Atomistic Modeling of Materials	3

MEMS 5801	Micro-Electro-Mechanical Systems I	3
Physics 217	Introduction to Quantum Physics	3
Physics 318	Introduction to Quantum Physics II	3
L31 Physics 537	Kinetics of Materials	3

For more information, email Professor Katharine Flores (floresk@wustl.edu), adviser for the minor in materials science and engineering (MEMS).

The Minor in Mechanical Engineering

The minor in mechanical engineering complements a major in a field related to mechanical engineering, such as biomedical engineering, electrical engineering, physics, chemistry or architecture. The minor is intended to provide students with a credential that could enhance their opportunities for employment or graduate study. Completion of the minor demonstrates that the student has pursued a structured program approved by the faculty of the Department of Mechanical Engineering & Materials Science.

Students pursuing the minor in mechanical engineering must complete a total of 18 units of course work as described below. Courses selected for the minor program may count toward program requirements of the student's major. The subjects selected for a minor in mechanical engineering are expected to constitute a coherent program within the field of mechanical engineering. Courses taken under the pass/fail grading option cannot be used for a minor program.

Required courses:

Code	Title	Units
MEMS 253 or BME 240	Statics and Mechanics of Materials Biomechanics	3
MEMS 255 or Physics 411	Dynamics Mechanics	3
MEMS 350	Solid Mechanics	3
Total Units		9

Three electives from the following list:

Code	Title	Units
MEMS 301 or BME 320B	Thermodynamics Bioengineering Thermodynamics	3
MEMS 3110	Machine Elements	3
MEMS 3410	Fluid Mechanics	3
MEMS 3610	Materials Science	3
MEMS 4310	Dynamics and Vibrations	3

To find out more about this minor, contact the department chair or the adviser for the minor in mechanical engineering or visit the Minors webpage (<http://mems.wustl.edu/undergraduate/programs/Pages/minors.aspx#mechanical>).

The Minor in Mechatronics

Advancements in power electronics, electronic sensors, and computer hardware and software have led to an expanding role for "smart" systems, which combine electronic and mechanical components. Automotive examples illustrate this point. The replacement of carburetors by fuel injection systems is almost universal, and hybrid/electric cars are replacing traditional automobiles. Not only are auxiliary devices such as fuel pumps, air bags and air-conditioner compressors driven by electric motors controlled by microprocessors, but fundamental components such as intake and outtake valves soon will be driven in this way. The internal combustion engine itself may be replaced by fuel cells and motors. Medical devices, micro-electromechanical systems, robots, fly-by-wire aircraft and wind turbines also all rely on electronic sensing of mechanical parameters and actuation of motion. These examples suggest strongly that engineers who are adept in the design, analysis and simulation of electromechanical systems will be in demand. The minor in mechatronics is created to encourage our students to study this important subject and provide recognition to those who do so.

This program is primarily designed for students in the ESE and MEMS departments and has been approved by the two departments. It is available for others as well.

The proposed minor program consists of four required courses, two electives and one prerequisite:

Four required courses:

Code	Title	Units
MEMS 255	Dynamics	3
MEMS 411	Mechanical Engineering Design Project (mechatronics project)	3
ESE 444	Sensors and Actuators	3
ESE 446	Robotics: Dynamics and Control	3
Total Units		12

Two electives chosen from the following:

Code	Title	Units
MEMS 4301 or ESE 441	Modeling, Simulation and Control Control Systems	3
MEMS 4310	Dynamics and Vibrations	3
ESE 436	Semiconductor Devices	3
ESE 482	Digital Signal Processing	3

Prerequisite:

Code	Title	Units
CSE 131	Introduction to Computer Science (basic programming course)	3

For more information about the minor, contact Dennis Mell (<https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=150>) (ESE) or Jackson Potter (<https://mems.wustl.edu/faculty/Pages/Jackson-Potter.aspx>) (MEMS).

The Minor in Robotics

Robotic systems have a wide range of applications in modern technology and manufacturing. Robots can vary in complexity and use, from the microrobots used for surgical procedures to the moderate-sized robots common in manufacturing and undersea exploration to the macrorobots used for the disposal of nuclear waste and as arms on space-station modules. The program designed for a minor in robotics provides a fundamental understanding of robotic operation and preliminary training in the design and use of robots.

Units required: 18

Prerequisites:

Code	Title	Units
Math 217	Differential Equations	3
Physics 191 & 191L	Physics I and Physics I Laboratory	4
Physics 192 & 192L	Physics II and Physics II Laboratory	4
CSE 131	Introduction to Computer Science	3

Required courses:

Code	Title	Units
MEMS 255	Dynamics	3
ESE 351 or MEMS 4310	Signals and Systems Dynamics and Vibrations	3
ESE 446	Robotics: Dynamics and Control	3
ESE 447	Robotics Laboratory	3
Total Units		12

Two additional courses must be chosen with the approval of the director of the program for a minor in robotics. Suggested courses include the following:

Code	Title	Units
CSE 417T	Introduction to Machine Learning	3
CSE 546T	Computational Geometry	3
ESE 441 or MEMS 4301	Control Systems Modeling, Simulation and Control	3
MEMS 3110	Machine Elements	3

For more information about the minor, contact Dennis Mell (<https://ese.wustl.edu/faculty/Pages/faculty.aspx?bio=150>) (ESE) or Jackson Potter (<https://mems.wustl.edu/faculty/Pages/Jackson-Potter.aspx>) (MEMS).

University of Missouri-St. Louis/ Washington University Joint Undergraduate Engineering Program

In 1993, Washington University and the University of Missouri-St. Louis held the first classes in the Joint Undergraduate Engineering Program. This partnership — the first of its kind in the United States — offers University of Missouri-St. Louis students the opportunity to benefit from the engineering program at Washington University and its century-long tradition of excellence. Effective in October 1999, the three bachelor's degrees (civil, electrical and mechanical engineering) offered in our joint program were accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>). In addition to being the first undergraduate engineering degrees offered in a public/private partnership, these are also the first such degrees to receive ABET accreditation.

The courses are organized for both full-time students and part-time students with daytime commitments who need to attend classes in the evening. Students who enter the program take about half of their course work — mathematics, physics, chemistry, humanities and social sciences — on the campus of the University of Missouri-St. Louis. The remaining half of the degree program, which consists of upper-level engineering courses and laboratories, is taken on the Washington University campus. Students may choose civil, electrical or mechanical engineering. Students receive their undergraduate engineering degrees from the University of Missouri.

For information about this program, please contact the University of Missouri-St. Louis Joint Undergraduate Engineering Program at 314-516-6800 or the Washington University McKelvey School of Engineering at 314-935-6510.

Faculty

Faculty Members at University of Missouri-St. Louis

Dean

Joseph A. O'Sullivan

Samuel C. Sachs Professor of Electrical Engineering

PhD, University of Notre Dame

Associate Dean

Haiyan Cai

PhD, University of Maryland

Associate Director of Advising and Student Services

Mary E. McManus

MEd, University of Missouri-St. Louis

Degree Requirements

Undergraduate Bachelor of Science (BS) degrees awarded by the McKelvey School of Engineering include several categories as listed below.

Engineering degrees include the following:

- BS in Biomedical Engineering
- BS in Chemical Engineering
- BS in Computer Engineering
- BS in Electrical Engineering
- BS in Environmental Engineering
- BS in Mechanical Engineering
- BS in Systems Science & Engineering

Computer science degrees include the following:

- BS in Computer Science
- BS in Computer Science + Mathematics
- BS in Computer Science + Economics

Applied science degrees include the following:

- BS Major in Applied Science (Chemical Engineering)
- BS Major in Applied Science (Electrical Engineering)
- BS Major in Applied Science (Mechanical Engineering)
- BS Major in Applied Science (Systems Science & Engineering)

Joint degrees with other undergraduate divisions on campus include the following:

- BS in Business and Computer Science

Engineering Bachelor of Science Degrees

To earn the BS in Biomedical Engineering, BS in Chemical Engineering, BS in Computer Engineering, BS in Electrical Engineering, BS in Environmental Engineering, BS in Mechanical Engineering, or BS in Systems Science & Engineering, a student must satisfy all of the following general distribution requirements:

1. Complete the engineering Common Studies courses outlined below:

- a. Calculus (Math 131, Math 132, Math 217 and Math 233)
- b. Physics I (Physics 191) and Physics II (Physics 192)
- c. Chemistry (Chem 111A or Chem 105 and Chem 151)

Note 1: Some programs also require Chem 112A or Chem 106 and Chem 152.

Note 2: The BS in Computer Engineering program permits alternate science courses to satisfy this requirement.

Note 3: Chem 111A is required for Biomedical Engineering students; Chem 151 is required with Chem 111A and Chem 105.

- d. Technical Writing (Engr 310)

2. Satisfy the specific degree requirements of one of the engineering degree programs, as outlined in other sections of this *Bulletin*.

3. Satisfy the requirements listed under All Undergraduate Degrees below.

Computer Science and Applied Science Bachelor of Science Degrees

To earn the BS in Applied Science (Chemical Engineering), BS in Applied Science (Electrical Engineering), BS in Applied Science (Mechanical Engineering), BS in Applied Science (Systems Science & Engineering), BS in Computer Science, BS in Computer Science + Mathematics, or BS in Computer Science + Economics, a student must satisfy all of the following general distribution requirements:

- 1. Complete at least 120 applicable units.
- 2. Complete at least 48 units of the 120 in mathematics, natural sciences and engineering.
- 3. Complete at least 42 units of the total 120 units at the 300 level or higher.
- 4. Satisfy the specific degree requirements of one of the applied science degree programs, as outlined in other sections of this *Bulletin*.
- 5. Satisfy the requirements outlined under All Undergraduate Degrees below.

Note: Diplomas for applied science degrees state "Bachelor of Science" and do not indicate the major on the diploma. The major (e.g., Chemical Engineering) is posted on the official transcript.

All Undergraduate Degrees

To earn any undergraduate degree in the McKelvey School of Engineering, a student must accomplish all of the following:

1. Earn at least a C (2.0) cumulative grade-point average in all applicable courses taken at Washington University.
2. Earn at least the minimum total number of units specified for the particular degree. All degrees require students to complete at least 120 applicable units.
3. Earn at least a C (2.0) GPA in all engineering courses taken.
4. Satisfy all of the following residency requirements:
 - a. Complete a minimum of 30 units of 200-level or higher courses from the school while matriculated at Washington University in a degree program. An engineering course transferring from an exchange program sanctioned by the McKelvey School of Engineering may be counted as a school equivalent course for the purpose of satisfying this requirement.
 - b. Complete a minimum of 60 units at Washington University while matriculated at Washington University in a degree program. Exchange program courses sanctioned by the school may be counted toward this requirement.
 - c. For students who pursue multiple engineering BS degrees, for each additional BS degree from the school, students must complete an additional 15 resident units of 200-level or higher courses from the school, which are in addition to the 30 units of 200-level or higher engineering courses that are listed in 4a above. No more than two BS degrees from the McKelvey School of Engineering may be earned by the same student.
5. Complete the English proficiency requirement as well as the humanities and social sciences requirement of the McKelvey School of Engineering.

English Proficiency Requirement

Every student must demonstrate proficiency in the reading and writing of the English language. First-year engineering students are given an opportunity to take a writing placement exam during the summer before they arrive to campus. Proficiency can be demonstrated by satisfactory performance on this writing placement exam administered by the McKelvey School of Engineering. Waivers of the English proficiency requirement via the writing placement exam do not carry degree credit.

Students who do not demonstrate satisfactory proficiency via the writing placement exam are required to enroll in a course or sequence of courses specified by the test's administrator. The school's English proficiency requirement is then satisfied

only by a grade of C- or better in one of the themed college writing courses (<https://collegewriting.wustl.edu/themed-course-options/>) developed by the College Writing Program (<https://collegewriting.wustl.edu/>).

Before enrolling in one of the College Writing Program themed courses, some students may be required to complete CWP 1511 Critical Reading and Analytical Writing, CWP 1001 Fundamentals of Academic Writing or CWP 200 Writing Tutorial.

Courses taken at other institutions to satisfy the English proficiency requirement must be approved by the school's English proficiency coordinator. If the course is so approved, the student must pass with a grade of C- or better.

Humanities and Social Sciences Requirement

To earn any bachelor's degree from the McKelvey School of Engineering, students must complete the school's humanities and social sciences requirement:

1. Minimum units: At least 18 units of humanities and social sciences courses must be completed with passing grades. Humanities and social sciences courses (other than transfer courses) may be taken for pass/fail credit.
2. Breadth: At least 6 units of the 18 must be in the humanities, and at least 6 units must be in the social sciences.
3. Upper-level courses: At least 3 units of the 18 units completed must be from one or more courses numbered 300 or higher.

Washington University courses labeled with the EN:H or EN:S attribute in the semester course listings will count, respectively, toward the humanities or social sciences requirement for engineering degrees. As a convenience, preapproved listings of humanities and social sciences courses are provided for Architecture (<http://registrar.seas.wustl.edu/EVALS/evals.asp?school=WASHINGTON%20UNIV-DESIGN%20AND%20VISUAL%20ARTS-ARCHITECTURE>) and Business (<http://registrar.seas.wustl.edu/EVALS/evals.asp?school=WASHINGTON%20UNIV-OLIN%20COURSES%20Reviewed-H/SS/EN%20Topics>). In general, most art courses (F10 and F20) will count toward the engineering school's humanities requirement, even if they do not have the specific EN:H designation. Some upper-level art courses are open only to students with an open art program.

Transfer courses must be approved through Engineering Undergraduate Student Services as acceptable transfer credit (<http://engineering.wustl.edu/current-students/student-services/Pages/transfer-course-credit.aspx>) and as applicable humanities or social sciences courses. All transfer courses must be taken for credit (i.e., not pass/fail), and students must earn a C- or better in transfer courses for the credit to transfer to the school. Grades do not transfer.

Advanced Placement (AP) credit and International Baccalaureate (IB) credit approved through Engineering Undergraduate Student Services may be used to satisfy all or part of the breadth requirement (i.e., the humanities 6-unit requirement and/or the social science 6-unit requirement); however, AP and IB credit may not be used to satisfy the 18 minimum units needed to satisfy the school's overall humanities and social sciences requirement. Students may individually petition Engineering Undergraduate Student Services to have their AP or IB credit counted toward the humanities 6-unit requirement and/or the social sciences 6-unit requirement. Petitions will be reviewed to determine if they conform to guidelines established for awarding humanities and social sciences credit. Guidelines are approved by the Engineering Undergraduate Studies Committee.

Engineering Topics Units

Bachelor's degree programs accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>) require that the program require a minimum of 45 units of engineering topics. A course carrying engineering topics units will be marked in the Course Listings (<https://courses.wustl.edu/Semester/Listing.aspx>) with the EN:TU attribute.

Engineering Topics/Design Component

Engineering design is the process of devising a system, component or process to meet desired needs. It is a decision-making process (often iterative) in which basic sciences, mathematics and engineering sciences are applied to convert resources optimally to meet a stated objective. Among the fundamental elements of the design process are the establishment of objectives and criteria, synthesis, analysis, construction, testing and evaluation. The engineering design component of a curriculum must include most of the following features: development of student creativity, use of open-ended problems, development and use of modern design theory and methodology, formulation of design problem statements and specifications, consideration of alternative solutions, feasibility considerations, production processes, concurrent engineering design and detailed system descriptions. Further, it is essential to include a variety of realistic constraints, such as economic factors, safety, reliability, aesthetics, ethics and social impact.

Engineering Topics/Science Component

The engineering sciences have their roots in mathematics and basic sciences but carry knowledge further toward creative application. These studies provide a bridge between mathematics and basic sciences on the one hand and engineering practice on the other. Such subjects include mechanics, thermodynamics, electrical and electronic circuits, materials science, transport phenomena and computer science (other than computer programming skills), along with other subjects, depending on the discipline. Although it is recognized that some subject areas may be taught from the standpoint of either basic sciences or engineering sciences, the ultimate

determination of the engineering science content is based on the extent to which there is extension of knowledge toward creative application. In order to promote breadth, the curriculum must include at least one engineering course outside of the major disciplinary area.

ABET Mathematics and Basic Science Requirement

Bachelor degree programs accredited by the Engineering Accreditation Commission of ABET (<http://www.abet.org>) require that the program require a minimum of 30 units of college-level mathematics and basic sciences (some with experimental experience) appropriate to the discipline. The basic sciences are defined as biology, chemistry and physics.

Applicable Undergraduate Engineering Degree Requirements

Undergraduate engineering students are required to satisfy the engineering degree requirements that are published in the online undergraduate Bulletin (p. 6) in effect at the time they first enroll at the university as degree-seeking undergraduate students.

Undergraduate engineering students must complete all undergraduate degree requirements and graduate within 10 consecutive years of enrolling as degree-seeking undergraduate students at the university.

A student who does not graduate within 10 consecutive years will be required to satisfy the degree requirements that are in the most recently published online undergraduate *Bulletin* and to retake courses identified by the chair of the department in which the student is seeking the degree.

- When a student wishes to return to complete course work and earn a degree after the 10-year time period has passed, the most recent online undergraduate *Bulletin* is defined as the catalog in effect when the student re-enrolls in the McKelvey School of Engineering as an undergraduate student seeking a degree.
- When a student has left the university and wishes to complete course work at another university to then transfer back and graduate from the McKelvey School of Engineering and when more than 10 years have elapsed since the student was first enrolled as an undergraduate engineering degree-seeking student, the most recent online undergraduate *Bulletin* is defined as the catalog in effect when the student files an intent to graduate for an engineering undergraduate degree. The course work that the student intends to complete and transfer back to the McKelvey School of Engineering must be approved by the school before the student enrolls in the course work.

Academic Honors & Awards

Dean's List: The Dean's list is composed of first-year, sophomore, junior and senior engineering students who, for the preceding semester, have achieved a 3.6 or higher grade-point average based on a minimum of 12 units of applicable courses taken for letter grades (i.e., not pass/fail or audit). An appropriate entry is added to their official transcripts.

No "I" (incomplete) or "N" (no grade reported) grades may be a part of the semester's record. For a student to be eligible for the fall Dean's list, all final grades must be posted by the first day of the spring semester. For the spring semester, all final grades must be posted by the beginning of Summer Session II for a student to be considered. There is no Dean's list for summer terms.

Latin Honors: For students graduating with undergraduate engineering degrees, Latin honors from the school will be awarded based on the cumulative Washington University GPA. In June, the GPA cutoffs used to select Latin honors for the upcoming year will be assigned by calculating cumulative averages from the three most recent graduation years. For the upcoming graduating class, the three-year average of the top 10% will determine which students are awarded summa cum laude; the three-year average of the next top 10% will determine which students are awarded magna cum laude; and the three-year average of the next top 10% will determine which students are awarded cum laude. Latin honors will be awarded to students whose cumulative GPAs at the time of graduation meet the predefined three-year average GPA cutoffs, which are determined during June of the prior year.

Valedictorians: Valedictorians are selected from graduating seniors who entered as first-years (i.e., not transfer students). Candidates must have earned a 4.0 cumulative GPA at Washington University with no repeated courses (i.e., students who have not taken advantage of the retake policy).

Academic Policies

Attendance

Each professor in the McKelvey School of Engineering decides how many absences a student may have and still pass the course. Professors are expected to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their professors the reasons for any absences and to discuss with them the possibility of making up missed assignments.

Units and Grades

A credit unit is the equivalent of one recitation or lecture hour a week for one semester or one laboratory of two and one-half hours a week for one semester. A student's work is rated in terms of the following system of grades and grade points:

Grade	Points per Unit
A or A+	4.0
A-	3.7
B+	3.3
B	3.0
B-	2.7
C+	2.3
C	2.0
C-	1.7
D+	1.3
D	1.0
D-	0.7
F	0.0
P#	Pass
F#	Failing
S	Satisfactory
U	Unsatisfactory
I	Course work incomplete
X	No final exam taken
W	Withdrawal
WLA	Withdraw leave of absence
R	Retaken course
L	Successful audit
Z	Unsuccessful audit
N	No grade submitted

Auditing a Course

A student may register for some courses as an auditor. The criteria for a successful audit are determined by the course instructor, and the student should work with the instructor to ensure that these criteria are understood. Generally speaking, the completion of homework and the taking of exams are not required. The grade L signifies a successful audit, and the grade Z signifies an unsuccessful audit. Neither grade affects a student's grade-point average, nor do the course's units contribute to the student's total cumulative degree-seeking units. Audit courses do not count toward any degree; however, audit units do count toward full-time status determination and tuition. Class attendance is normally required to earn a grade of L; unsatisfactory attendance will result in a grade of Z. Computer science courses do not allow students with auditor status.

Incomplete Grades

The grade I (incomplete) indicates that the work of a student has been generally acceptable but that extenuating circumstances led to certain requirements not having been met. The grade of X is recorded when a student is absent from a midterm or final examination because of illness or other unavoidable reason, provided the work has been otherwise satisfactory.

Grades of X and I must be removed no later than the close of the next full semester a student is in residence. On failure to make up an X or I grade, the student will not receive credit for the course, and the grade will be changed to F unless the student has been explicitly excused by the associate dean.

A student should **not** re-enroll in a class to complete an I grade. Enrolling in the class a second time invokes the Course Retake Policy (p. 1138).

Course Retake Policy

If an engineering student repeats a course at Washington University, only the second grade is included in the calculation of the GPA. Both enrollments and grades are shown on the student's official transcript. The symbol R next to the first enrollment's grade indicates that the course was later retaken. Credit toward the degree is allowed for the latest enrollment only.

If an engineering student repeats a course elsewhere (i.e., as a preapproved transfer course from another university), the student must take the course for credit and earn a C- or better for the units to transfer to Washington University. After an official transcript showing the final grade for the repeated course is received, the symbol R next to the first enrollment's grade indicates that the course was later retaken. The original grade will no longer figure into the student's GPA, nor will the transfer course grade figure into the GPA. The grade for the transfer course does not display on the student's Washington University record, but the units for the transfer course will count toward the degree program.

Course Descriptions

The McKelvey School of Engineering is subdivided into five academic departments: Biomedical Engineering (E62); Computer Science & Engineering (E81); Electrical & Systems Engineering (E35); Energy, Environmental & Chemical Engineering (E44); and Mechanical Engineering & Materials Science (E37). Each department may offer courses leading to one or more bachelor's, master's or doctoral degrees.

The courses of instruction are numbered according to the following system:

- 100 to 199 are primarily for first-year students.
- 200 to 299 are primarily for sophomores.
- 300 to 399 are primarily for juniors.
- 400 to 499 are primarily for juniors and seniors, although certain courses may carry graduate credit.
- 500 and above are offered to graduate students and to juniors and seniors who have met all stated requirements. If there are no stated requirements, juniors and seniors should obtain permission of the instructor.

One unit of credit is given for each hour of lecture, and one unit is given for each two and one-half hours of laboratory. Each course description shows the course's credit. A table of all engineering courses (PDF) (https://engineering.wustl.edu/current-students/student-services/Documents/Engineering_Course_Attributes_Feb%202028_2017.pdf) and, for each course, the division of its topics units is available and frequently updated on the school's website.

Definition of Class Levels

For classification purposes, a student's undergraduate class level is defined according to the year in which they intend to graduate.

Pass/Fail Option

All undergraduate engineering students are eligible to register each semester for up to 6 units with the pass/fail option, for up to a maximum of 18 units attempted. Some departments require students to take certain courses pass/fail; credits in these courses do not count toward either the semester limit of 6 units or the cumulative limit of 18 units. Other than these courses, **only elective courses may be taken with this option**, including courses in other divisions of the university but that are still contingent upon and subject to departmental requirements. Humanities, social sciences and some technical electives specifically allowed by individual engineering programs, as well as some engineering courses (both undergraduate and graduate that are not specifically required for the student's major program), may be taken with the pass/fail option. Some programs do not allow any courses (either required or elective) to be taken with the pass/fail option. Graduate courses taken on a pass/fail basis cannot be transferred later for credit toward a graduate degree.

Changes from the regular grade basis to pass/fail or vice versa may not be made after the last dates specified in the current Course Listings (<https://courses.wustl.edu/Semester/Listing.aspx>). The normal regulations for withdrawal or change to auditor status also apply to pass/fail courses.

It is the student's responsibility to discuss with the faculty member what constitutes a pass in a particular course. Although the general pass mark is a C-, instructors have the discretion to set the pass mark higher in their course(s).

A final grade of P# (pass) will earn degree credit where applicable. A final grade of F# (fail) will not earn degree credit. Neither P# nor F# will affect the GPA.

Academic Probation and Suspension

McKelvey Engineering students are expected to maintain a high level of scholarship during their time at Washington University. At a minimum, students must meet the standards set by the faculty as well as those mandated by the U.S. Department of Education (see section on Satisfactory Academic Progress (p. 1140)). A student whose work falls below minimum standards is placed on academic probation and is classified as not being in good academic standing. If a student on probation does not improve their academic record, probation is followed by suspension.

At the close of each semester, each student's semester GPA is computed as the total grade points earned during the semester divided by the total credit units attempted. At the same time, the cumulative GPA is computed as the quotient of the cumulative total of grade points divided by the cumulative total of credit units attempted. The computations are made on the basis of the grade-point scale indicated in the section on Units and Grades (p. 1137). Courses taken on a pass/fail basis are not included in these calculations. Each student's semester and cumulative GPAs are then reviewed along with other probation and suspension criteria.

Students eligible for first or second probation are notified, and their record is updated accordingly. Students eligible for suspension are notified. If the student chooses not to appeal or appeals and the appeal is denied, then the student is suspended, and their record is updated accordingly. The student's parents are also notified of any academic probation or suspension action.

Academic Probation

Academic probation represents a warning that the school has concerns with a student's progress. Students placed on academic probation may continue their enrollment, but they are required to meet with their advisers to discuss what they might do to improve their grades and make progress toward the degree. Academic probation cannot be appealed.

Criteria. Academic probation takes place if any one of the following occurs: 1) a student has a semester GPA below 2.0; 2) a student has a cumulative GPA below 2.0; 3) a student has three incomplete ("I") grades at the end of a semester; or 4) a student drops below full-time student status without adviser preapproval. Students placed on probation due to three or more incomplete ("I") grades may request to have the probation removed from their records after all of the incomplete grades are replaced with letter grades.

The first time a student qualifies for probation, they are placed on First Academic Probation. The second time a student qualifies for probation (nonsequentially), they are placed on Second Academic Probation. Special Academic Probation means that a student was eligible for suspension but was not suspended. A student placed on academic probation is not in good academic standing.

A student placed on academic probation may have a hold placed on their record and must complete the steps below.

1. Within two weeks of receiving a probation notification, the student must schedule a meeting with their four-year adviser in Engineering Undergraduate Student Services (Lopata Hall, Room 303). The meeting must take place before the end of first week of classes for the upcoming semester.
2. The student must prepare a written statement with two sections. In the first section, the student will provide a clear explanation of the circumstances that affected their performance the previous semester. In the second section, the student will describe a plan to improve their academic performance moving ahead. The written statement should be sent to the four-year adviser in advance of the scheduled meeting.
3. The student must meet with the four-year adviser at the scheduled date and time. The meeting is designed for the student and adviser to determine what might help the student to be more successful. The four-year adviser may recommend that routine meetings take place throughout the semester.

Academic Suspension

Academic suspension represents being dismissed from the school. Students placed on academic suspension are not eligible to enroll or continue their degree programs; however, suspended students may apply for re-enrollment at a future time. Students placed on academic suspension are not allowed to enroll in any division at Washington University. A student placed on academic suspension is not in good academic standing.

Academic suspension is not viewed as a punitive action. Rather, it is an academic pause applied when it is clear that something is interfering with a student's ability to complete degree requirements. It is not in a student's best interest to continue unless they are able to make changes that will allow them to make successful academic progress toward graduation.

Criteria. Academic suspension takes place if any one of the following occurs: 1) the student becomes eligible for academic probation for a third time; 2) the student becomes eligible for academic probation two semesters in a row (i.e., two consecutive enrolled semesters); 3) the student fails the same course twice; or 4) the student was enrolled in credit courses and earns no degree credit at the end of a semester.

If a suspended student would like to return to the university at a future time, the student must apply for reinstatement to the McKelvey School of Engineering. To apply for re-enrollment, the student will need to demonstrate the capacity to work productively at the level required by the school's curriculum. They must have successfully completed challenging full-time course work at a different institution (generally, for at least one year), have been employed in a full-time position (generally, for at least one year), or a combination of the two (i.e., they have been both in school and working). There is no guarantee that a student who has been suspended will be allowed to return.

Appeal of Academic Suspension

A student who wishes to appeal their suspension should present a written appeal statement setting forth reasons why they believe the situation should be reconsidered. This statement should be addressed to the Undergraduate Academic Standards Committee and forwarded via the associate dean (Lopata Hall, Room 303). In this statement, the student must explain why the unsatisfactory academic performance occurred and, if they are allowed to return, what they would do differently.

The student must then attend an appeal hearing. The student's academic record, written appeal, and any other factors the student may wish to discuss are considered by the committee. Immediately after the appeal hearing, the student is informed of the committee's decision. The committee's decision is final (no other appeals are possible). If the appeal is successful, the student is placed on Special Academic Probation and allowed to enroll in classes. If the appeal is unsuccessful, the student's programs of study will be closed, and the student will be dropped from any course registrations for the next semester. Suspended students may apply for re-enrollment at a future time.

Dual-Degree Students

A student who enters as a Dual-Degree 3-Year Option (3/3) student pursues a McKelvey undergraduate degree for two years and then a McKelvey master's degree the third year. While pursuing the undergraduate degree during the first two years, undergraduate probation and suspension rules are applied to the student. McKelvey graduate probation and suspension rules are applied during the third year, when the student is pursuing the master's degree.

Satisfactory Academic Progress and Title IV Financial Aid

Federal regulations require that students receiving federal Title IV financial aid maintain satisfactory academic progress. Satisfactory academic progress is evaluated annually at the end of the spring semester. In order to be considered to be maintaining satisfactory academic progress and thus be eligible for federal financial aid, a student must maintain minimum requirements for cumulative GPA (2.0) and pace (credit earned for at least 67% of the credits attempted). The degree must

also be completed within the maximum time frame allowed for the program (no more than 180 credits). Students who are not maintaining progress will be notified by Engineering Undergraduate Student Services and, barring an approved appeal, are ineligible for aid for future semesters.

Additional information about Satisfactory Academic Progress (<https://sfs.wustl.edu/resources/Pages/Satisfactory-Academic-Progress.aspx>) is available from Student Financial Services.

Full-Time and Part-Time Enrollment

Undergraduate degree programs are full-time programs. All students designated with full-time status will automatically be charged full-time tuition. Undergraduate engineering students must take a minimum of 12 units of credit to be considered full-time. Students may not enroll in more than 21 units without special permission. An additional per-unit tuition charge will be assessed for any units over the 21-unit limit.

Part-time enrollment is not allowed unless serious documented health problems prevent a student from being enrolled full-time. Part-time students take 1 to 11 units and are charged for part-time tuition, along with the standard undergraduate fees. Scholarship support is not normally available for part-time students. Part-time enrollment and partial tuition charges are allowed for seniors who must enroll for an extra semester. For students who enroll as first-year students, this status is allowed after their eighth semester. For dual-degree students, part-time status is allowed after the fourth semester. (Note: Summer semesters are not counted as academic semesters.)

Special note to senior-level undergraduate students: Senior-level students (those in their eighth semester) will automatically be designated as having full-time enrollment status if they are taking 6 or more units; students are charged full tuition if enrolled in 6 to 21 units.

Leaves of Absence

Engineering students may petition to take a leave of absence. For a leave of absence, students in good standing are assured re-enrollment within the next two years. Before returning, the student is to notify the McKelvey School of Engineering and submit a reinstatement form at least six weeks prior to the beginning of the appropriate term. A student wishing to take a medical leave of absence must have a recommendation for the medical leave of absence from Habif Health and Wellness Center submitted to the appropriate dean in the McKelvey School of Engineering prior to leaving and prior to re-enrollment. The dean will decide whether or not to grant the request for the medical leave of absence and re-enrollment upon reviewing the recommendations from the Habif Health and Wellness Center and the student's file.

Transfer Credit

A student must get prior approval before taking a course at another university. After completing the course, the student must have an official copy of the transcript sent to the McKelvey School of Engineering for evaluation. If the credit is accepted, the course will appear on the transcript with the units but not the grade. Only units of credit for courses with a grade of C- or better will transfer. No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Conduct Code or the Academic Integrity policy. The transfer course approval process (<http://engineering.wustl.edu/current-students/student-services/Pages/transfer-course-credit.aspx>) is outlined on the McKelvey School of Engineering website.

Transfer credit is never accepted for online courses.

University College Courses

Engineering students may receive credit for a limited number of University College courses that have been approved by the Engineering Undergraduate Studies Committee. The approved courses listed below will display on official transcripts and the course units will count toward engineering degree requirements, but the grade will not be calculated in the students' GPAs. Approved courses must be taken for a letter grade, and students must earn a minimum grade of C- for the course units to count toward engineering degree requirements.

Current approved courses, which may be needed by students seeking admission into medical school, include the following:

- U29 Bio 322 Introduction to Anatomy and Physiology I (With Lab)
- U29 Bio 323 Introduction to Anatomy and Physiology II (With Lab)
- U29 Bio 406 Introduction to Biochemistry
- U29 Bio 4170 Endocrine Physiology
- U29 Bio 4241 Immunology

Eligibility to Enroll in Other University College Courses

University College courses that do not appear on the approved list above may be taken under certain circumstances. The courses will display on official transcripts, but the units will not count toward engineering degree requirements, and the grade will not be calculated in the students' GPAs. Eligibility is restricted as outlined below:

1. First-year students may take U03 GS 125 College Success Seminar, but the course will not count toward engineering degree requirements.
2. Undergraduate engineering students may enroll in University College biology courses (U29), but only the above-listed courses will count toward engineering degree requirements.

3. Undergraduate engineering students in their final year of study may enroll in one University College course each semester. Again, these courses will not count toward engineering degree requirements.

Exceptions

Exceptions to the above rules may exist for a student's declared degree program when working toward a non-Engineering minor or a joint-degree program.

Military Training

Army and Air Force ROTC programs are available at Washington University.

A student in the McKelvey School of Engineering who takes an ROTC course will have the course name, number, credit units and grade entered on their official transcript. If the course is numbered 100 through 299, the course's units and grade will not apply toward the student's degree requirements; if the course is numbered 300 through 499 and the grade is D- or better, the course's units will apply toward the student's degree requirements (as a free elective), and the grade will be counted in the student's cumulative and semester GPAs. Credit may be awarded for no more than one course per semester, for a maximum of 16 units.

Course descriptions for Air Force ROTC and Army ROTC (p. 1150) can be found in the appropriate sections of this *Bulletin*.

Sever Institute Courses

Typically, Sever Institute "T" courses taken by engineering undergraduate students will not count toward graduation requirements. Students should speak with their 4-year adviser if they have questions about a specific "T" course. Grades for "T" courses will not be calculated into students' GPAs.

Online Courses

Online courses taken by engineering undergraduate students will not count toward graduation requirements. Exceptions include only those courses with "E" course numbers offered by McKelvey.

Majors (directory)

Below is a list of majors offered by the McKelvey School of Engineering. Visit the following sections of this *Bulletin* for more information about a specific major. Students must log into WebSTAC (<https://acadinfo.wustl.edu/WebSTAC.asp>) and select the Major Programs link under Academics to switch their major program within Engineering or to declare a second major or minor online.

- Applied Science (Chemical Engineering) (p. 1111)
- Applied Science (Electrical Engineering) (p. 1093)
- Applied Science (Mechanical Engineering) (p. 1129)
- Applied Science (Systems Science & Engineering) (p. 1093)
- Biomedical Engineering (p. 1038)
- Business and Computer Science (p. 1068)
- Chemical Engineering (p. 1107)
- Computer Engineering (p. 1065)
- Computer Science (p. 1066)
- Computer Science + Economics (p. 1067)
- Computer Science + Math (p. 1067)
- Electrical Engineering (p. 1087)
- Environmental Engineering (p. 1109)
- Individually Designed Major (p.)
- Mechanical Engineering (p. 1127)
- Systems Science & Engineering (p. 1089)
- Second Major in Computer Science (p. 1070)
- Second Major in Computer Science + Mathematics (p. 1070)
- Second Major in Electrical Engineering (p. 1094)
- Second Major in Financial Engineering (p. 1095)
- Second Major in Systems Science & Engineering (p. 1094)

Minors (directory)

Residency Rule for Engineering Minors

No more than 6 units of credit transferred from another institution (outside Washington University) can be used to meet the requirements of any minor offered by the McKelvey School of Engineering. The remaining units (up to the amount required for the minor) must be applicable units from Washington University taken for a letter grade. Classes taken with the pass/fail grade option do not meet requirements unless specifically allowed. The review committee that oversees a minor has the authority to establish a more stringent residency rule.

Minors

Below is a list of minors offered by the McKelvey School of Engineering. Visit the following sections of this *Bulletin* for more information about a specific minor. Students must log into WebSTAC (<https://acadinfo.wustl.edu/WebSTAC.asp>) and select the Major Programs link under Academics to declare a minor online.

- Aerospace Engineering (p. 1130)

- Robotics (p. 1097)
- Systems Science & Engineering (p. 1098)

Beyond Boundaries Program

Students accepted into the Beyond Boundaries Program will have opportunities to explore topics — from climate change to aging to creativity — from multiple disciplinary perspectives. This two-year program, with the option to continue for two more years, equips students to make a difference in a complicated world. By allowing students to enter Washington University unaffiliated with any one school (for their first year), the program allows them to address challenges that do not reside within the territory of a single discipline.

Beyond Boundaries is a framework of classes and resources that allows students to understand issues in an interdisciplinary way. Faculty from the School of Medicine, Olin Business School, Brown School, School of Law, McKelvey School of Engineering, Sam Fox School of Design & Visual Arts, and Arts & Sciences collaborate in the Beyond Boundaries Program to produce an interdisciplinary curriculum rich with possibilities for students with interests that do not fit within the confines of traditional subject matter.

Beyond Boundaries aims to bring a student's different interests into conversation with each other in order to approach the big social and intellectual problems of tomorrow. This is a different approach than having two majors, which indicates an interest in two separate fields of study. Many students in the program may have two majors, but this is not a requirement of the program.

Requirements

Beyond Boundaries spans the first two years of a student's time at Washington University, with the option to continue into the third and fourth years. At the beginning of their second year, Beyond Boundaries students matriculate into their chosen school and declare a major during the spring semester.

- Students who participate in both the first and second years of the Beyond Boundaries Program will receive a milestone notation on their transcripts.
- Students who complete years three and four of the program, regardless of whether they entered during their first or third year, will receive a milestone notation on their transcripts.
- Those who complete all four years of the program will receive an Interdisciplinary Certificate upon graduation.

The required curriculum (p. 1143) of year one includes College Writing, multiple Beyond Boundaries courses (p. 1144), and a first-year 1-credit seminar (fall and spring semesters, Beyond Boundaries students only). During year one and two

(and beyond if applicable), program students also have the opportunity to participate in a variety of lectures, seminars and community-building events that count toward program requirements.

Students participating in Beyond Boundaries can still complete their graduation requirements in four years.

Who Should Apply

Students who are talented, self-initiated and self-motivated and who wish to pursue their own broad interdisciplinary interests through a unique education experience that requires collaboration across academic disciplines and perspectives should consider applying to this program (<https://beyondboundaries.wustl.edu/apply/>).

Who Should Not Apply

Students interested in pursuing degrees in biomedical engineering, chemical engineering, and environmental engineering may not be able to participate in the program due to specific track-based requirements.

These students are invited to apply for year three of the Beyond Boundaries Program, which spans the student's third and fourth years and includes a fourth-year capstone experience.

Contact:	Simone Picker
Phone:	314-935-8874
Email:	simonepicker@wustl.edu
Website:	http://beyondboundaries.wustl.edu

Curriculum

Year One (11 required credits)

Year one requirements include an introductory sequence that teaches writing, the framework of interdisciplinary study, and collaborative problem-solving as well as multiple Beyond Boundaries courses.

Fall Semester:

- Beyond Boundaries seminar (1 credit, Beyond Boundaries students only)
- Beyond Boundaries course (3 credits)
- College Writing (3 credits)

Spring Semester:

- Beyond Boundaries seminar (1 credit, Beyond Boundaries students only)
- Beyond Boundaries course (3 credits)

Year Two (point-based system)

During their second year, students will matriculate into their chosen school and declare a major in the spring, as is typical of undergraduate students. Beyond Boundaries students will take a majority of their classes within their academic division during their second year, but they will also be involved in the second year of the program, which involves a less-structured curriculum to ensure that they are able to fulfill their major and school-specific requirements.

Components of year two will include several selections from the following options:

- Interdisciplinary courses (within the student's chosen school)
- Weekend topic-based problem-solving seminars
- Co-curricular service opportunities
- Lecture series (university-wide offerings that include prominent scholars, businesspersons and advocates)
- Spring-break opportunities
- Networking and community-building events
- Discussion participation (as part of interdisciplinary lectures on campus)

These various opportunities are designed to allow students the flexibility to achieve their academic and co-curricular goals outside of the program while keeping them connected to the program community.

Students who complete years one and two of the Beyond Boundaries Program receive a milestone notation on their transcript. Students may opt to continue this program into their third and fourth years.

Students accepted into the Beyond Boundaries Program prior to matriculation at Washington University can automatically continue into years three and four of the program.

Year Three (point-based system)

Year three will also be open to incoming third-year students who did not start their time at Washington University as a part of the Beyond Boundaries Program. These students must apply to join the program at this point, and they will be selected for participation based on their demonstrated interest in interdisciplinary study and problem-solving.

Year three is flexible, and it is similar to year two with its requirement-based system. Students can fulfill these requirements through a combination of multiple selections from the following options:

- Upper-level interdisciplinary course work
- Select courses in the graduate and professional schools
- Co-curricular service and community-building activities
- Meaningful study-abroad opportunities

The program offers students exposure to information about career and educational paths that they may be interested in pursuing after graduation.

Year Four

Year four of the Beyond Boundaries Program involves an interdisciplinary or collaborative capstone project that will be co-advised by two faculty members. This allows students to offer multidisciplinary perspectives on their work and to benefit from close faculty mentorship.

Courses

Year One Courses for Beyond Boundaries Students

Beyond Boundaries Seminar (2 credits total)

This course, led by Beyond Boundaries Program Director Rob Morgan, is 1-credit, pass/fail and offered during both the fall and spring semesters of the first year.

I60 BEYOND 100 Beyond Boundaries Seminar

This course will cover selected relevant topics, including interdisciplinary projects and lectures, collaboration, ideation exercises, and college student development. It is an interactive seminar in which each program participant will participate in prototyping futures, mind-mapping, salon-type discussions, dialogue, reflection and related activities. There will be opportunities to meet and hear from faculty representing all seven schools at Washington University. The knowledge gained is designed to contribute to academic success, personal development, and a more rewarding social and academic experience over the course of the college experience. This course is required for all first-year students in the Beyond Boundaries program and open only to first-year students in the Beyond Boundaries program.

Credit 1 unit. A&S: FYBB

College Writing (3 credits)

During the fall semester of the first year, Beyond Boundaries program students will take a 3-unit common College Writing course (a requirement for most first year students at Washington University). This course will focus on basic writing skills and communication across disciplines, and it will meet three days per week. The course will be taught by a faculty member of the program in sections of 12 students. It will include various contributions from faculty in other departments and from across divisions through lecture series, class visits, panels and interviews. The courses will be grouped into eight themes — Citizen Scientist, Dreams & Nightmares, Writing Identity, Literature & Justice, Place & Perspective, Power & Commodity Culture, Writing Technology, and When I'm 64 — into which students will self-select.

Beyond Boundaries Courses (3 credits each semester for 6 credits total)

In addition to the 5-credit introductory series listed above, first-year students in the Beyond Boundaries Program will be required to complete two Beyond Boundaries courses (one in the fall and one in the spring).

Beyond Boundaries courses, which are funded by the Office of the Provost, are designed to prepare students for a rapidly evolving world characterized by social, political, scientific and economic problems that cannot be solved using knowledge from a single discipline. These courses are team-taught by faculty from different schools across Washington University, and they offer a window into how scholars from different disciplines approach big, critical topics like our aging population, the nature of creativity, the phenomenon of climate change and the evolving art of medicine.

These courses will offer students in the Beyond Boundaries program tangible examples from interdisciplinary approaches to these topics, including those of faculty from across schools participating in collaborative exploration. Some courses within the different schools that have been predesignated by the faculty lead team as meeting the requirements of interdisciplinary courses may also count toward this requirement during the spring semester.

I60 BEYOND 101 Earth's Future: Causes and Consequences of Global Climate Change

Earth's Future: Causes and Consequences of Global Climate Change examines the following: 1) the physical basis for climate change; 2) how climates are changing and how we know and assess that climates are changing; and 3) the effects of climate change on natural and human systems. The course is team-taught and will involve participation by scholars across the university with expertise in specific subjects. This is a broad introductory course for first-year students, and it presumes no special subject matter knowledge on the part of the student. This course is for first-year (non-transfer) students only.

Credit 3 units. A&S: FYBB A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

I60 BEYOND 102 The Business of Elections

This course will focus on understanding the primary and presidential elections -- particularly the 2020 election -- through a multidisciplinary approach that primarily involves political science and business. Campaigns are start-ups that rely on strategy, branding, influencing consumers (voters), financing and other concepts to achieve the election of their candidate. At the same time, American politics is highly polarized, with voters who are increasingly hostile to listening to the other side. Given this context, how does a campaign succeed as an entrepreneurial venture? This course will allow students to compare and contrast how different candidates' policies and platforms may affect different constituencies/sectors of the business/labor world as well as the economy, how the media portrays them, and what role they will play in the general election. This course is for first-year (non-transfer) students only. Students who are not first-year students will be automatically unenrolled from this course.

Credit 3 units. BU: BA

I60 BEYOND 105 The Endgame of Entrepreneurship:

Leveraging Capitalism for Good

Historically, profit has been a key driver of human behavior. In this course, students will learn to take advantage of the profit-seeking motive of capitalism while also learning from the mistakes and unintended consequences capitalism has caused throughout history. Students will apply these learnings toward profit-seeking solutions for the United Nations' Sustainable Development Goals, which are global challenges that call us to work together with boldness and urgency. We will explore how skills from entrepreneurship and venture creation can be used to improve water, climate, education and gender equality globally and here in St. Louis. In interdisciplinary teams, students will learn how to define a problem; listen to customers, competitors and collaborators; create value; measure impact; and communicate their vision. Bold entrepreneurial spirit and skills learned in this class will guide students in their further WashU studies and beyond. This course is for first-year (non-transfer) students only.

Credit 3 units.

I60 BEYOND 120 Religious Freedom in America

The intersection of religion and law in American society has sparked some of the fiercest cultural engagements in recent memory: Should a for-profit religious corporation have a right not to fund birth control for its employees? Can a public college expel campus religious groups whose membership is not open to all students? May a Muslim in prison grow a beard for religious reasons? Should a cake baker or a florist be permitted to refuse services for a gay wedding? Can a church hire and fire its ministers for any reason? These current debates and the issues that frame them are interwoven in the American story. This course introduces students to the major texts and historical arguments underlying that story. Drawing from the respective expertise of the instructors, the course will expose students to a variety of scholarly methods related to the issue: legal history and case law, intellectual history and canonical texts, social history and narrative accounts, and political philosophy and contemporary analyses. This course is for first-year (non-transfer) students only.

Credit 3 units. EN: H

I60 BEYOND 123 When I'm Sixty-Four: Transforming Your Future

Whether you know it or not, you are living in the midst of a revolution that is going to change your personal and professional lives. Although old age may seem a long way off, you will likely live to age 80 or beyond, with a 50% chance of seeing your 100th birthday. The demographic revolution you are going to live through will change the health care you receive, the house you live in, the car you drive, the jobs you do, and the relationships you have. This course will give you a competitive edge in understanding how you can harness what is happening to shape your career and lifestyle. In this course, you will be introduced to leaders and ideas from many fields -- medicine, engineering, architecture, public health, social work, law, business, art, and psychology -- focused on the issues of our aging society. There will also be opportunities to tailor the class to your interests through events on and off campus, including movies, lectures, performances, field trips, and community projects. Each week,

we will gather for lectures and also break into small groups for discussion. This course will set you on a path to lead the aging revolution and transform the society of tomorrow. This course is for first-year (non-transfer) students only.

Credit 3 units. A&S: FYBB A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

I60 BEYOND 130 The Art of Medicine

This interdisciplinary, cross-school course at the intersection of history and the visual arts offers students a singular encounter with the Western medical tradition. In tandem with the history of medicine, from ancient plagues to modern germ theory, this course examines the capacity of the arts to frame medical practice and to raise questions about and influence perceptions -- both positively and negatively -- of medical advancements. Core faculty come from the Sam Fox School of Design & Visual Arts and the College of Arts & Sciences, and collaborating faculty include biomedical ethicists, artists, medical practitioners, and public health leaders. This course is for first-year (non-transfer) students only.

Credit 3 units. A&S: FYBB A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

I60 BEYOND 140 To Sustainability and Beyond: People, Planet, Prosperity (P3)

This course combines interdisciplinary instruction with applied project work. Students will be introduced to global concepts in sustainability and examine how they relate to specific issues in the greater St. Louis community, learning what it means to be civic-minded stewards of social and ecological systems. In addition, students will work on developing the critical "soft skills" needed for success on the job, such as effective communication techniques, project management, and leadership. Students will emerge from the course with a systems-level understanding of sustainability, a working knowledge of the fundamentals of community engagement, and an appreciation for values-based civic stewardship. Experience in this course will prepare students for applied project-based work in other courses or internships, regardless of academic discipline. This course is for first-year (non-transfer) students only.

Credit 3 units. A&S: FYS A&S IQ: SSC EN: S

I60 BEYOND 160 Gender, Youth, and Global Health

Through in-depth case studies, this course provides an introduction to gender-specific issues in the context of childhood and adolescence, poverty, and global health. Students will learn to identify how gender and gender differences affect conditions of life in the areas of reproductive health, nutrition, conflict, access to healthcare, and the social determinants of health, especially for young people. Students will learn to analyze health conditions and disparities in relation to both the micro dynamics of local worlds and the macro dynamics of large-scale social forces in the postcolonial global field. In addition, students will come to understand the current challenges that global health practitioners and institutions confront in achieving gender equity and the current efforts toward closing the gap. These learning objectives will be achieved using lectures as well as discussion-based sessions and Skype-based interactions with NGOs and experts who are currently working in the field. This course is for first-year (non-transfer) students only.

Credit 3 units. A&S: FYBB, FYS A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA, IS EN: S

I60 BEYOND 161 Morality and Markets

What does it look like to live a moral life in today's market system? We know all too well what it does not look like. The news is filled with moral failures of leaders and executives at top firms. We like to believe that we would behave differently, but what kinds of pressures inform our moral choices? What pulls us, what pushes us, and what persuades us to act one way rather than another? These are the questions that a course combining business and literature can address in unique ways; the world of fiction helps us to examine the ethical dilemmas of the market we inhabit every day. In this course, we use great books, classics of film and modern television, and the tools of modern psychology and business strategy to think critically about what is entailed in living a moral life in the midst of the modern market. This course is for first-year (non-transfer) students only. Credit 3 units. A&S IQ: HUM EN: H

I60 BEYOND 175 Designing Creativity: Innovation Across Disciplines

From "a-ha!" epiphanies to slow-developing discoveries, the creative process has been employed by innovators and artists in virtually every corner of the globe for centuries. This course will explore the study and practice of the creative process across many disciplines, with input from prominent thinkers and practitioners in the areas of medicine, neuroscience, law, engineering, architecture, human-centered design, business, stage design, and the performing arts. The course will also incorporate the practice of design thinking and creativity techniques via a lab component that will allow students to explore the development of innovative ideas in collaborative teams followed by project presentations to core faculty and classmates. This course is for first-year (non-transfer) students only.

Credit 3 units. A&S: FYBB A&S IQ: HUM Arch: HUM Art: FADM, HUM BU: HUM EN: H

Interdisciplinary Opportunities

Washington University offers courses through interdisciplinary programs that include studies in a variety of disciplines that cross traditional academic boundaries and support academic areas outside of the schools.

- Courses in the Gephardt Institute for Civic and Community Engagement (p. 1147) are all cross-listed with specific schools and departments.
- A limited opportunity for some Washington University students to enroll in courses at Saint Louis University and the University of Missouri-St. Louis is available through the Inter-University Exchange Program (p. 1148).
- ROTC (p. 1149) courses are offered in conjunction with the U.S. Air Force and U.S. Army.
- The Skandalaris Center (p. 1152) offers cocurricular programming and practical, hands-on training and funding opportunities to students and faculty in all disciplines and schools.

Gephardt Institute for Civic and Community Engagement

Community-Engaged Teaching is embraced by schools and departments across Washington University and used in many of our courses.

Sometimes referred to as *service-learning*, the experiences offered by these courses provide assignments and targeted learning activities in a community context. They integrate classroom theory with practice in the real world.

We have identified more than 80 undergraduate- and graduate-level courses for academic year 2019-20 that are enhanced by community-engaged teaching and learning at Washington University. These courses enable students of all disciplines, from business to art, to engage communities through service, projects and observation.

To nurture growth in this area, the Gephardt Institute for Civic and Community Engagement offers technical assistance, community partnership facilitation, and course-based funding opportunities through the Civic Engagement Fund.

Inter-University Exchange Program

The Inter-University Exchange (IE) program between Washington University, Saint Louis University (SLU) and the University of Missouri-St. Louis (UMSL) began in 1976 as an exchange agreement encouraging greater inter-institutional cooperation at the graduate level. Over time, this program has evolved to include undergraduate education. The basic provisions of the original agreement are still in place today, and participation continues to be at the discretion of each academic department or unit.

At Washington University, there are several schools that **do not participate** in this program (i.e., degree-seeking students in these schools are not eligible to participate in the IE program, and courses offered in these schools are not open to SLU and UMSL students attending Washington University through the IE program). They are the School of Law, the School of Medicine, University College and the Summer School. The Washington University schools that are open to participation in the IE program may have specific limitations or requirements for participation; details are available in those offices.

The following provisions apply to all course work taken by Washington University students attending SLU or UMSL through the IE program:

- Such courses can be used for the fulfillment of degree or major requirements. (Students should consult with their dean's office for information about how IE course work will count toward their grade-point average, units and major requirements.)
- Such courses are not regularly offered at Washington University.
- Registration for such courses requires preliminary approval of the student's major/department adviser, the student's division office or dean, and the academic department of the host university.
- Students at the host institution have first claim on course enrollment (i.e., a desired course at SLU or UMSL may be fully subscribed and unable to accept Washington University students).

- Academic credit earned in such courses will be considered as resident credit, not transfer credit.
- Tuition for such courses will be paid to Washington University at the prevailing Washington University rates; there is no additional tuition cost to the student who enrolls in IE course work on another campus. However, students are responsible for any and all fees charged by the host school.
- Library privileges attendant on enrolling in a course on a host campus will be made available in the manner prescribed by the host campus.

Instructions

Washington University students must be enrolled full-time in order to participate in the IE program and have no holds, financial or otherwise, on their academic record at Washington University or at the host institution.

1. The student must complete the IE program application form. Forms are available from the Office of the University Registrar and on its website ([link below](#)).
2. The student must provide all information requested in the top portion of the form and indicate the course in which they wish to enroll.
3. The student must obtain the approval signature of the professor teaching the class or the department chair at SLU or UMSL, preferably in person.
4. The student also must obtain the approval signatures of their major adviser at Washington University and the appropriate individual in their dean's office.
5. Completed forms must be submitted to the Office of the University Registrar in the Women's Building a minimum of one week before the start of the term.

Course enrollment is handled administratively by the registrars of the home and host institutions. Washington University students registered for IE course work will see these courses on their class schedule and academic record at WebSTAC under departments I97 (SLU) and I98 (UMSL). Final grades are recorded when received from the host institution. The student does not need to obtain an official transcript from SLU or UMSL to receive academic credit for IE course work at Washington University.

Contact: Office of the University Registrar
Phone: 314-935-5959
Email: registrar@wustl.edu
Website: <http://registrar.wustl.edu/student-records/registration/the-inter-university-exchange-program> (<http://registrar.wustl.edu/student-records/registration/the-inter-university-exchange-program/>)

Reserve Officers Training Corps (ROTC)

The number of ROTC credits that may be counted toward graduation requirements depends on the student's program of study. ROTC students should consult with their academic adviser to determine if or how ROTC course work will satisfy their graduation requirements.

For more information about specific schools, please visit the following pages:

- Undergraduate Arts & Sciences Academic Regulations (p. 978)
- Undergraduate Business Degree Requirements (p. 1024)
- Undergraduate Engineering Academic Policies (p. 1141)

Russell T. Montante
Lieutenant Colonel, U.S.A.F.

Military Aerospace Science. Our Core Values: Integrity First, Service Before Self, Excellence In All We Do. Air Force operations are currently conducted in the technologically demanding environments of air, space and cyberspace.

Air Force ROTC (AFROTC) is an officer development program, producing the leaders of tomorrow's Air Force. The program's purpose is to train and develop outstanding college students to earn commissions as U.S. Air Force Officers. Numerous Washington University students have participated in AFROTC and gone on to distinguish themselves as Air Force aviators, engineers, lawyers, physicians and astronauts.

In AFROTC, Washington University students have the opportunity to be challenged within a unique leadership environment, with the potential to earn a commission as a second lieutenant. Participation in AFROTC is available to undergraduate and graduate Washington University students and will not obligate a student to serve in the U.S. Air Force.

AFROTC attracts the very best and brightest college students. The categorization of officer candidates within AFROTC is based on competitive selection criteria.

For more information, contact AFROTC:

For AFROTC scholarship information, refer to the Scholarship Funds (p. 33) section of this *Bulletin*.

Army ROTC

Military Science. The Army ROTC program is designed to develop leaders for life. In doing so, it develops leadership, management and training skills, regardless of a student's career plans. Those who successfully complete the program earn commissions and serve as second lieutenants in the U.S. Army, Army Reserve or Army National Guard.

All students are eligible to participate in Army ROTC courses. Introductory courses are designed to develop a student's confidence, self-esteem and motivation. The intent is to develop and refine the student's leadership traits and skills to ensure their future success in military and nonmilitary environments. Instruction also includes the role of the military in national defense strategy. The number of ROTC credits that may be counted toward graduation requirements depends upon the student's program of study. ROTC students should consult with their academic adviser to determine if or how ROTC course work satisfies graduation requirements. Once a student accepts a scholarship or enters the advanced ROTC courses (300 and 400 levels), they incur a military obligation.

For more information, contact the Military Science Department, Washington University in St. Louis, 700 Rosedale Ave., Suite 1120, St. Louis, MO 63112; call 314-935-5521; visit the Washington University Army ROTC website (<http://rotc.wustl.edu>); or email Lee Rodriguez (lee.e.rodriguez@wustl.edu), the Army ROTC Scholarships and Enrollment Officer.

For Army ROTC scholarship information, refer to the Financial Support section (p. 33) of this *Bulletin*.

- Army ROTC (p. 1151)

Air Force ROTC — Aerospace Studies

Visit online course listings to view semester offerings for I02 MAIR (<https://courses.wustl.edu/CourseInfo.aspx?sch=I&dept=I02&crslvl=1:4>).

I02 MAIR 101 Heritage and Values of the United States Air Force I

A survey course designed to introduce students to the U.S. Air Force and Air Force Reserve Officer Training Corps. Featured topics include: mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer opportunities, group leadership problems, and an introduction to communication skills. Leadership Laboratory is mandatory for AFROTC cadets, and it complements this course by providing students with followership experiences

and prepares them for Field Training. Classroom activity, one hour per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 101 through MAIR 202) are basic courses designed to acquaint students with the U.S. Air Force and the opportunities available as an officer.

I02 MAIR 102 Foundations of the United States Air Force II

A survey course designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps. Featured topics include: mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer opportunities, group leadership problems, and an introduction to communication skills. Leadership Laboratory is mandatory for Air Force ROTC cadets, and it complements this course by providing students with followership experiences and prepares them for field training. Classroom activity, one hour per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 101 through MAIR 202) are basic courses designed to acquaint students with the United States Air Force and the opportunities available as an officer.

I02 MAIR 201 Team and Leadership Fundamentals

A survey course concerned with the beginnings of manned flight and the development of aerospace power in the United States, including the employment of air power in WWI, WWII, Korea, Vietnam, the Gulf War and the peaceful employment of U.S. air power in civic actions, scientific missions and support of space exploration. Leadership Laboratory is mandatory for Air Force ROTC cadets and it complements this course by providing cadets with their first opportunity for applied leadership experiences and prepares them for Field Training. Classroom activity, one hour per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 101 through MAIR 202) are basic courses designed to acquaint students with the United States Air Force and the opportunities available as an officer.

I02 MAIR 202 Evolution of USAF Air and Space Power II

A survey course concerned with the beginnings of manned flight and the development of aerospace power in the United States, including the employment of air power in WWI, WWII, Korea, Vietnam, the Gulf War and the peaceful employment of U.S. air power in civic actions, scientific missions and support of space exploration. Leadership Laboratory is mandatory for Air Force ROTC cadets and it complements this course by providing them with their first opportunity for applied leadership experiences and prepares them for Field Training. Classroom activity, one hour per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 101 through MAIR 202) are basic courses designed to acquaint cadets with the United States Air Force and the opportunities available as an officer.

I02 MAIR 301 Air Force Leadership Studies, Principles of Leadership and Management I

This course is a study in the anatomy of leadership, the need for quality and management leadership, the role of discipline in leadership situations and the variables affecting leadership. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical application of the concepts. Cadets deal with actual problems and complete projects associated with planning and managing the Leadership Laboratory. A mandatory Leadership Laboratory complements this course by providing advanced leadership experiences in officer-type activities, giving

cadets opportunities to apply leadership and management principles of this course. Classroom activity, three hours per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 301 through MAIR 402) are advanced courses designed to improve communication and management skills required of Air Force officers.

I02 MAIR 302 Air Force Leadership Studies, Principles of Leadership and Management II

This course continues the study in the anatomy of leadership, the need for quality and management leadership, the role of discipline in leadership situations and the variables affecting leadership. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical application of the concepts. Cadets deal with actual problems and complete projects associated with planning and managing the Leadership Laboratory. A mandatory Leadership Laboratory complements this course by providing advanced leadership experiences in officer-type activities, giving cadets opportunities to apply leadership and management principles of this course. Classroom activity, three hours per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 301 through MAIR 402) are advanced courses designed to improve communication and management skills required of Air Force officers.

I02 MAIR 401 National Security Studies and Preparation for Active Duty I

Cadets learn about the role of the professional military leader in a democratic society; societal attitudes toward the armed forces; the requisites for maintaining adequate national defense structure; the impact of technological and international developments on strategic preparedness and the overall policy-making process; and military law. In addition, cadets study topics that prepare them for their first active-duty assignment as officers in the Air Force. A mandatory Leadership Laboratory complements this course. Leadership Laboratory provides advanced leadership experiences and gives cadets opportunities to develop and apply fundamental leadership and management skills while planning and conducting corps activities. Classroom activity three hours per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 301 through MAIR 402) are advanced courses designed to improve communication and management skills required of Air Force officers.

I02 MAIR 402 National Security Studies and Preparation for Active Duty II

Cadets learn about the role of the professional military leader in a democratic society; societal attitudes toward the armed forces; the requisites for maintaining adequate national defense structure; the impact of technological and international developments on strategic preparedness and the overall policy-making process; and military law. In addition, cadets study topics that prepare them for their first active-duty assignment as officers in the Air Force. A mandatory Leadership Laboratory complements this course. Leadership Laboratory provides advanced leadership experiences and gives cadets opportunities to develop and apply fundamental leadership and management skills while planning and conducting corps activities. Classroom activity three hours per week; Leadership Laboratory two hours per week. Aerospace Studies courses (MAIR 301 through MAIR 402) are advanced courses designed to improve communication and management skills required of Air Force officers.

EN: S

Army ROTC

Visit online course listings to view semester offerings for I25 MILS (<https://courses.wustl.edu/CourseInfo.aspx?sch=I&dept=I25&crslvl=1:4>).

I25 MILS 101C Introduction to Leadership I

Students examine the challenges and competencies that are critical for effective leadership. Students learn how the personal development of life skills such as cultural understanding, goal setting, time management, mental/physical resiliency, and stress management relate to leadership, officership, and the U.S. Army profession. MILS 101C is open to all students, and enrollment does not require a commitment to join the U.S. Army. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 2 units display on their transcripts; however, the units will not count toward their degree program.

Credit 2 units.

I25 MILS 102C Introduction to Leadership II

Students investigate leadership fundamentals such as problem solving, listening, presenting briefs, providing feedback, and using effective writing skills. Students explore dimensions of leadership attributes and core leader competencies in the context of practical, hands-on, and interactive exercises. Students also learn fundamental military concepts and explore the Army's leadership philosophy. Aspects of personal motivation and team building are practiced by planning, executing and assessing team exercises. MILS 102C is open to all students, and enrollment does not require a commitment to join the U.S. Army. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 2 units display on their transcripts; however, the units will not count toward their degree program.

Credit 2 units.

I25 MILS 201C Innovative Team Leadership

Students explore the dimensions of creative and innovative tactical leadership strategies and styles by examining team dynamics and leadership theories. The course continues to build on developing knowledge of leadership attributes and core leader competencies through the understanding of Army rank, structure and duties as well as broadening knowledge of land navigation and squad tactics. Enrollment in MILS 201C does not require a commitment to join the U.S. Army. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program.

Credit 3 units.

I25 MILS 202C Foundations of Tactical Leadership

Students develop greater self-awareness as they assess their leadership styles and practice communication and team building skills. Students examine and practice the challenges of leading teams in complex operational environments, and study dimensions of terrain analysis, patrolling, and operation orders. Further study of the theoretical basis of the Army Leadership Requirements Model explores the dynamics of adaptive leadership in the context of military operations. Case studies give insight into the importance and practice of teamwork and

tactics in real-world scenarios. Enrollment in MILS 202C does not require a commitment to join the U.S. Army. Engineering students may petition Engineering Student Services (Lopata Hall, Room 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program. Credit 3 units.

I25 MILS 301C Adaptive Team Leadership

This is an academically challenging course where students will study, practice, and apply the fundamentals of leadership, Army values and ethics, and small unit tactics using the service learning model in leadership labs and assigned leadership roles. Cadets receive systematic and specific feedback on their leadership attributes and actions. Based on such feedback, as well as their own self-evaluations, cadets continue to develop their leadership and critical thinking abilities as well as their physical fitness and ability to manage stress. At the conclusion of this course students will be capable of planning, coordinating, navigating, motivating and leading a squad in the execution of tactical missions during classroom practical exercises, leadership labs, and during military situational training exercises in field environments. Prerequisite for this course is the successful completion of MILS 101C through 202C; or attendance at the Army ROTC Basic Camp. Engineering students may petition Engineering Student Services (Lopata Hall 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program.

Credit 3 units.

I25 MILS 302C Applied Team Leadership

Students will continue to learn and apply the fundamentals of Army leadership, officership, Army values and ethics as they hone their leadership abilities in a variety of environments including classroom instruction, leadership labs, and assigned leadership roles while utilizing the service learning model. At the conclusion of this course, students will be capable of planning, coordinating, navigating, motivating and leading a platoon in the execution of tactical missions during classroom practical exercises, leadership labs, and during military situational training exercises in field environments. Successful completion of MILS 302C will help prepare students for success at the Army ROTC Advanced Camp which cadets will attend during the summer at Fort Knox, Kentucky. Cadets will receive systematic and specific feedback on their leadership attributes, values and core leader competencies from instructors, other ROTC cadre, and senior cadets. Prerequisite for this course is the successful completion of MILS 301C. Engineering students may petition Engineering Student Services (Lopata Hall 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program.

Credit 3 units.

I25 MILS 401C Adaptive Leadership

The MILS 401C course transitions the focus of student learning from being trained, mentored and evaluated as a military science 3 cadet to learning how to train, mentor and evaluate underclass cadets. This course focuses on practical application using the service learning model to gain knowledge of adaptive leadership. Students are assigned key battalion leadership roles and are responsible for the daily operation, assessment, and development of the cadet battalion. Throughout the semester, students will learn the duties and responsibilities of an Army staff officer, apply the principles of training and management, utilize the military decision making process, design and employ a comprehensive fitness program, mentor underclass cadets, and

use effective verbal and written communication. Students will study ethics, the law of war, risk management, counseling, and the Army officer's role in the Uniform Code of Military Justice. Cadets will also learn about the special trust reposed to Army Officers by the U.S. Constitution — a special confidence given to no other civilian profession. Prerequisite for this course is the successful completion of the ROTC Advanced Camp or permission of the professor of military science. Engineering students may petition Engineering Student Services (Lopata Hall 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program.

Credit 3 units.

I25 MILS 402C Leadership in a Complex World

This course builds on the lessons of MILS 401C. Students will continue to use the service learning model to gain leadership experience and knowledge while serving in assigned key battalion leadership roles and will be responsible for the daily operation and development of the cadet battalion. MILS 402C explores the dynamics of leading soldiers in full spectrum operations in the current operating environment. Students examine military customs and courtesies, military law, principles of war, and rules of engagement in a complex environment against an adaptive enemy. Students will also explore aspects of interacting with non-government organizations, civilians on the battlefield, and host nation support. Military science 4 cadets will develop and present a battle analysis and participate in a Staff Ride to Pilot Knob, an historic military site. The course also places significant emphasis on preparing cadets for their first unit of assignment. It uses case studies and exercise scenarios to prepare cadets to face the complex ethical and practical demands of leading as commissioned officers in the United States Army. Prerequisite for this course is the successful completion of MILS 401C or permission of the professor of military science. Engineering students may petition Engineering Student Services (Lopata Hall 303) to have 3 units display on their transcripts; however, the units will not count toward their degree program.

Credit 3 units. EN: S

I25 MILS 403 Advanced Military Science

A practical application of adaptive leadership. Throughout the semester, students are assigned the duties and responsibilities of an Army staff officer and must apply the fundamentals of principles of training, training management, the Army writing style, and the military decision making to weekly training meetings. During weekly training meetings, students will plan, execute, and assess ROTC training and recruiting events.

Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship

The Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship (<http://skandalaris.wustl.edu/>) is the place on campus *Where Creative Minds Connect*.

Mission

The Skandalaris Center aims to inspire and develop **creativity, innovation, and entrepreneurship** at Washington University in St. Louis.

Who We Serve

We work with the best and brightest at WashU — the change-makers, thought leaders, and visionaries — to solve the world's problems and meet local needs through innovation and entrepreneurship. As an interdisciplinary center, our initiatives serve students, faculty, staff, and alumni from all levels and disciplines.

Our Initiatives

Our initiatives are divided into four parts:

1. Create (p. 1153)
2. Innovate (p. 1153)
3. Launch (p. 1153)
4. Learn (p. 1154)

Create

We believe everyone can be creative. The following programs are designed to give the WashU community hands-on experiences and the creative means to solve problems.

- **Make It Take It**

These monthly maker events at the Skandalaris Center are designed to promote creativity at any age and within any discipline, because anyone can be creative.

- **Entrepreneurial Student Advisory Committee (ESAC)**

This committee provides an opportunity for students to have a say in the events and programs offered by the Skandalaris Center.

- **Creator's Gallery (<https://skandalaris.wustl.edu/sc-programs/creatorsgallery/>)**

This annual interdisciplinary exhibition allows creators of all types, disciplines, and ages to display their creative works of all mediums.

Innovate

Innovation is the backbone of entrepreneurship. The following programs offer opportunities to develop and share new ideas while connecting with other innovators.

- **IdeaBounce (<https://skandalaris.wustl.edu/sc-programs/ideabounce/>)[®]**

IdeaBounce[®] is both an online platform and an event for sharing venture ideas and making connections. This is an opportunity for participants to pitch their ideas (no matter how "fresh"), get feedback on them, and make connections. In-person events happen around twice per semester.

- **Student Groups (<https://skandalaris.wustl.edu/sc-programs/student-groups/>)**

There are many organizations that allow students to gain experience and make valuable interdisciplinary connections in the areas of creativity, innovation, and entrepreneurship.

- **Workshops (<https://sc.wustl.edu/events/>)**

The Skandalaris Center offers free, noncredit workshops designed to encourage creativity, innovation, and entrepreneurship.

Launch

Good ideas are one opportunity away from success. We developed the following programs and competitions to help innovators and entrepreneurs access the resources they need to take their ideas to the next level.

- **Student Entrepreneurial Program (StEP) (<https://skandalaris.wustl.edu/sc-programs/step/>)**

StEP provides a unique opportunity for students to own and operate a business on campus that serves the WashU community. Student owners can supplement the valuable business and entrepreneurial skills they learn in the classroom while gaining real-world experience as they manage and lead their own businesses.

- **Global Impact Award (GIA) (<https://skandalaris.wustl.edu/sc-programs/global-impact-award/>)**

The GIA awards WashU-affiliated ventures with inventions, products, ideas, and business models that will have a broad and lasting impact on society.

- **Who Can Apply:** WashU students, postdocs, residents, and alumni who have graduated within the last 10 years

- **Award:** Up to \$50,000

- **Skandalaris Venture Competition (SVC) (<https://skandalaris.wustl.edu/sc-programs/svc/>)**

The SVC provides expert mentorship to new ventures and startups to ready them for commercializing their ideas, launching, and pitching to investors. Teams will develop materials focused on explaining the ideas that they are working on to a broad audience.

- **Who Can Apply:** Current Washington University students with an early-stage venture or idea

- **Award:** Up to \$22,500

- **LEAP (Leadership and Entrepreneurial Acceleration Program)**

LEAP is a hybrid virtual incubator and gap funding program designed to tackle opportunities in university technology commercialization, illuminate investment risk, and rapidly accelerate the development of validated projects.

- **Who Can Apply:** Any person or team with WashU intellectual property

- **Award:** Up to \$50,000

- **Simon Initiative**

The Simon Initiative is a multistage collaborative initiative to expand diversity and interdisciplinary approaches to entrepreneurship.

- Resources (<https://skandalaris.wustl.edu/resources/>)
The Skandalaris Center, Washington University, and external services and resources are available to support innovators and entrepreneurs.

Learn

Knowledge and skills are key to innovation and entrepreneurship. Our center offers the following events and opportunities to help our community learn the ins and outs of innovation and entrepreneurship.

- The Hatchery (<https://skandalaris.wustl.edu/sc-programs/hatchery/>)
The Hatchery is a course offered by Olin Business School that allows student teams to pursue their own business ideas or to support community entrepreneurs. Students form teams around a commercial or social venture idea proposed by a student or community entrepreneur. The deliverables for the course include two presentations to a panel of judges and a complete business plan; these are similar to the deliverables in the Skandalaris Center's business plan competitions and can be a valuable first step toward competitions and funding for a new venture.
- Skandalaris Internship Program (SKIP) (<https://skandalaris.wustl.edu/sc-programs/internship/>)
SKIP is a paid 10-week summer internship and intensive introduction to St. Louis and the world of startups. Students work at their internships for most of the week; on Wednesday afternoons, they participate in special programs such as tours of entrepreneurial areas/neighborhoods, networking events, and panel discussions.
- Innovation Conversations (<https://skandalaris.wustl.edu/sc-programs/innovation-conversations/>)
These interactive discussions showcase different topics and industries with a variety of creators, innovators, and entrepreneurs.
- St. Louis Entrepreneurial Fellowship (<https://skandalaris.wustl.edu/sc-programs/fellowship/>)
This year-long program gives WashU students a chance to explore entrepreneurship at WashU and in St. Louis. The experience includes a spring semester seminar that explores innovation and entrepreneurship, a 10-week paid summer internship at a St. Louis startup, a fall semester capstone project, professional development opportunities, and programs and events to engage with entrepreneurs, founders, and innovators.
- Washington University in St. Louis Entrepreneurship Courses (<https://skandalaris.wustl.edu/sc-programs/entrepreneurship-courses/>)
Courses in entrepreneurship offered across the university are available to students at all levels and in all disciplines.

- Honors in Innovation & Entrepreneurship (<https://skandalaris.wustl.edu/sc-programs/honors-in-innovation-and-entrepreneurship/>)

Students who have shown exemplary involvement in innovation and entrepreneurship during their time at Washington University are recognized through this program. Honors are earned by accumulating points through a combination of curricular and cocurricular activities.

- PhD Citation in Entrepreneurship (<https://skandalaris.wustl.edu/sc-programs/entrepreneurship-citation/>)
This program provides opportunities for PhD students who are interested in developing skills and experiences in the areas of entrepreneurship and innovation.

Learn More

Please contact the Skandalaris Center (<https://skandalaris.wustl.edu/get-connected/>) to sign up for our newsletter and for additional information about all programs.
