About This Bulletin

The *Undergraduate Bulletin* is the catalog of undergraduate courses and degrees of Washington University in St. Louis. The catalog includes programs, degree requirements, courses that may be offered and course descriptions, pertinent university policies and faculty for students earning a degree through one of the four undergraduate schools: College of Arts & Sciences; Olin Business School; Sam Fox School of Design & Visual Arts (College of Architecture, College of Art); and McKelvey School of Engineering.

The *University College Bulletin* is the catalog of University College, the professional and continuing education division of Arts & Sciences at Washington University in St. Louis. The catalog includes programs, degree requirements, course descriptions and pertinent university policies for students earning a degree through University College.

The 2022-23 *Bulletin* is entirely online but may be downloaded in PDF format for printing. Individual pages as well as information from individual tabs may be downloaded in PDF format using the PDF icon in the top right corner of each page. To download the full PDF, please choose from the following:

- *Undergraduate Bulletin* (PDF) — *Coming soon*
- *University College Bulletin* (undergraduate & graduate) (PDF) — *Coming soon*

The degree requirements and policies listed in the 2022-23 *Bulletin* apply to students entering Washington University during the 2022-23 academic year. For more information, please visit the Catalog Editions (p. 12) page.

Every effort is made to ensure that the information, applicable key policies and other materials presented in the *Bulletin* are accurate and correct as of the date of publication (July 1, 2022). To view a list of changes that have taken place after that date, visit the Program & Policy Updates page (<http://bulletin.wustl.edu/about/updates/>). Please note that the *Bulletin* highlights key university policies applicable to its students. Not all applicable university and departmental policies are included here.

Washington University reserves the right to make changes at any time without prior notice to the *Bulletin* and to university policies. Therefore, the electronic version of the *Bulletin* as published online is considered the official, governing document, and it may change from time to time without notice.

The next edition of the *Bulletin* will be published on July 5, 2023. In the interim, semester course offerings will be found in Washington University's Course Listings (<https://courses.wustl.edu/Semester/Listing.aspx>); these are usually available at the end of September for the upcoming spring semester, in early February for the upcoming summer semester, and in late February for the upcoming fall semester. Midyear

changes to current courses (titles, descriptions, and credit units) are not reflected in this *Bulletin* and will only appear in the Course Listings. For more information about determining the appropriate edition of the Bulletin to consult, please visit the Catalog Editions page (p. 12) in the About This Bulletin section (<http://bulletin.wustl.edu/about/>).

For the most current information about registration and available courses, visit WebSTAC (<https://acadinfo.wustl.edu>) and Course Listings (<https://courses.wustl.edu/Semester/Listing.aspx>), respectively. Please email the Bulletin editor, Jennifer Gann, (jennifer.gann@wustl.edu) with any questions concerning the *Bulletin*.

More information may be found on the following websites:

- College of Arts & Sciences (<https://arts.wustl.edu/>)
- Olin Business School (<http://olin.wustl.edu>)
- Sam Fox School of Design & Visual Arts (<http://samfoxschool.wustl.edu>) (Colleges of Architecture and Art)
- McKelvey School of Engineering (<http://engineering.wustl.edu>)
- University College (<http://ucollege.wustl.edu>)

Bulletin Policies

Changes to the Bulletin

Every effort is made to ensure that the information, policies and other materials presented in the *Bulletin* are accurate and correct as of the date of publication. For more information about the content review process for the Bulletin, please visit the Catalog Editions page (p. 12).

The *Bulletin* for the upcoming academic year is published annually on July 1, and certain post-publication changes may be made until October 1. To view a list of changes that have taken place after the July 1 publication date, please visit the Program & Policy Updates page (<http://bulletin.wustl.edu/about/updates/>).

Washington University reserves the right to make changes at any time without prior notice. Therefore, the electronic version of the *Bulletin* and the policies set forth therein may change from time to time without notice. The governing document at any given time is the then-current version of the *Bulletin*, as published online, and then-currently applicable policies and information are those contained in that *Bulletin*.

Discontinued Programs

Periodically, Washington University schools will change their program offerings. If a program is no longer accepting applicants, we will note this in the *Bulletin*, and soon after the program will be removed from the *Bulletin*. Students who are actively enrolled in these programs will be held to the requirements and policies published in the *Bulletin* from their year of matriculation. If a student has not been continuously enrolled in such a program and now wishes to inquire whether a discontinued program can still be completed, they should contact the relevant department or school to determine whether this opportunity is available.

Year of Matriculation

Students who attend Washington University are held to the policies in place as published in the *Bulletin* during their year of matriculation. For more information, please visit the Catalog Editions page (p. 12).

Course Numbering

Courses at Washington University are coded by department and include a three- or four-digit number that generally means the following, although students should check with the school or department offering the courses to be certain:

- 100 to 199 are primarily for first-year students;
- 200 to 299 are primarily for sophomores;
- 300 to 399 are primarily for juniors;
- 400 to 499 are primarily for juniors and seniors, although certain courses may carry graduate credit; and
- 500 and above are offered to graduate students and to juniors and seniors who have met all stated requirements. (If there are no stated requirements, juniors and seniors should obtain permission of the instructor.)

For example: Course L07 105 is an introductory course offered by the Department of Chemistry (L07).

The presence of a course in this *Bulletin* signifies that it is part of the curriculum currently offered and may be scheduled for registration. Enrollment requirements are determined by term.

Curriculum Designators

The designators shown below are used in Washington University's course descriptions and listed here alphabetically by code. The primary fields covered in each section are also listed.

A (Architecture)

Code	Name
A46 ARCH	Architecture
A48 LAND	Landscape Architecture
A49 MUD	Urban Design
AS1 MedSoc	Medicine and Society
AS2 PCS	Process Control Systems
AS3 UMSLEN	UMSL Joint Engineering Program

B (Business)

Code	Name
B50 ACCT	Accounting
B51 ADMN	Administration
B52 FIN	Finance
B53 MGT	Management
B54 MEC	Managerial Economics
B55 MKT	Marketing
B56 OB	Organizational Behavior
B57 SCOT	Supply Chain, Operations, and Technology
B59 DAT	Data Analytics
B60 ACCT	Graduate Accounting
B62 FIN	Graduate Finance
B63 MGT	Graduate Management
B64 MEC	Graduate Managerial Economics
B65 MKT	Graduate Marketing
B66 OB	Graduate Organizational Behavior

B67 SCOT	Graduate Supply Chain, Operations, and Technology
B69 DAT	Graduate Data Analytics
B90 BEE	Brookings Executive Education
B99 INTL	International Studies

E (Engineering)

Code	Name
E35 ESE	Electrical & Systems Engineering
E37 MEMS	Mechanical Engineering & Materials Science
E44 EECE	Energy, Environmental & Chemical Engineering
E60 Engr	General Engineering
E62 BME	Biomedical Engineering
E81 CSE	Computer Science & Engineering

F (Art)

Code	Name
F00 Art	Art
F10 ART	Art (Core and Major Studio Courses)
F20 ART	Art (Elective Studio Courses)

I (Interdisciplinary Programs)

Code	Name
I02 MAIR	Military Aerospace Science
I25 MILS	Military Science
I50 INTER	Interdisciplinary Studies
I52 IMSE	Institute of Materials Science & Engineering
I53 DCDS	Division of Computational and Data Sciences
I60	Beyond Boundaries
BEYOND	

L (Arts & Sciences)

Code	Name
L01 Art-Arch	Art History and Archaeology
L03 East Asia	East Asian Studies
L04 Chinese	Chinese
L05 Japan	Japanese
L07 Chem	Chemistry
L08 Classics	Classics
L09 Greek	Greek
L10 Latin	Latin
L11 Econ	Economics
L12 Educ	Education

L13 Writing	Writing
L14 E Lit	English Literature
L15 Drama	Drama
L16 Comp Lit	Comparative Literature
L18 URST	Urban Studies
L19 EPSc	Earth and Planetary Sciences
L21 German	Germanic Languages and Literatures
L22 History	History
L23 Re St	Religious Studies
L24 Math	Mathematics and Statistics
L27 Music	Music
L28 P.E.	Physical Education
L29 Dance	Dance
L30 Phil	Philosophy
L31 Physics	Physics
L32 Pol Sci	Political Science
L33 Psych	Psychological & Brain Sciences
L34 French	French
L36 Ital	Italian
L37 Portug	Portuguese
L38 Span	Spanish
L39 Russ	Russian
L40 SOC	Sociology
L41 Biol	Biology and Biomedical Sciences
L43 GeSt	General Studies
L44 Ling	Linguistics
L45 LatAm	Latin American Studies
L46 AAS	Asian American Studies
L48 Anthro	Anthropology
L49 Arab	Arabic
L50 Pol Econ	Political Economics
L51 Korean	Korean
L52 ARC	Archaeology
L53 Film	Film and Media Studies
L56 CFH	Center for the Humanities
L57 RelPol	Center on Religion and Politics
L59 CWP	College Writing Program
L61 FYP	First-Year Programs
L62 Praxis	Praxis
L63 IPMS	Movement Science
L64 PNP	Philosophy-Neuroscience-Psychology
L66 ChSt	Children's Studies
L73 Hindi	Hindi

L74 HBRW	Hebrew
L75 JIMES	Jewish, Islamic, and Middle Eastern Studies
L77 WGSS	Women, Gender, and Sexuality Studies
L78 RoLit	Romance Languages and Literatures
L79 EuSt	European Studies
L81 EALC	East Asian Languages & Cultures
L82 EnSt	Environmental Studies
L83 Russ St	Russian Studies
L84 Lw St	Legal Studies
L85 MedH	Medical Humanities
L86 PBPM	Biological & Physical Sciences for PBPM Study
L88 NrsSci	Nursing Science
L89 Sphr	Speech and Hearing
L90 AFAS	African and African-American Studies
L92 APL	Applied Linguistics
L93 IPH	Interdisciplinary Project in the Humanities
L97 GS	Global Studies
L98 AMCS	American Culture Studies
L99 OSP	Overseas Programs
LGS GSAS	The Graduate School

M (Medicine)

Code	Name
M01 OT	Occupational Therapy Program
M02 PhysTher	Physical Therapy Program-Grad
M04 FYSelect	First-Year Selectives
M05 Neurosci	Neuroscience
M10 Anesth	Anesthesiology
M15 Biochem	Biochemistry and Molecular Biophysics
M17 CLNV	Clinical Investigation
M18 BMI	Biomedical Informatics
M19 PHS	Population Health Sciences
M20 Genetics	Genetics
M21 MSB	Biostatistics and Genetic Epidemiology
M25 Medicine	Internal Medicine
M26 FamMed	Family Medicine
M27 EMED	Emergency Medicine
M30 MolMB	Molecular Microbiology
M35 Neurol	Neurology

M40 NeurSurg	Neurological Surgery
M45 ObGyn	Obstetrics and Gynecology
M50 Ophth	Ophthalmology and Visual Sciences
M55 Oto	Otolaryngology
M60 Path	Pathology
M65 Peds	Pediatrics
M70 MolBio/Pha	Molecular Biology and Pharmacology
M75 CellBio	Cell Biology and Physiology
M79 HealthAdm	Health Administration Program
M80 Interdis	Interdisciplinary
M81 Gateway	Gateway Curriculum
M85 Psych	Psychiatry
M88 AHBR	Applied Health Behavior Research
M89 PACS	Audiology and Communication Sciences
M90 Radiol	Radiology
M91 MedPhys	Medical Physics
M92 RadOnc	Radiation Oncology
M95 Surgery	Surgery
M96 Ortho	Orthopedic Surgery
M99 Ind Stdy	Independent Study

S (Social Work and Public Health)

Code	Name
S15 SWCR	Core
S20 SWHS	History & Professional Theme
S30 SWDP	Direct Practice
S31 SWDP	Direct Practice
S40 SWSP	Social Policy
S48 SWSP	Social Policy
S49 SCWK	Social Work
S50 SWSA	Social Administration
S55 MPH	Public Health
S60 SWCD	Community Development
S65 SWCD	Community Development
S70 SWPR	Practicum

S80 SCWK	Social Work
S81 SKILL	Skill Labs
S90 SWDT	Doctoral
S91 PSTM	Post-Master Certificate

T (Engineering - Joint Program & Sever Institute)

Code	Name
T11 JCS	Joint Introduction to Computing
T40 SYSIN	Systems Integration
T54 PRJM	Project Management
T55 ETEM	Engineering Management
T60 GSever	General Professional Education
T64 CNST	Construction Management
T71	Health Care Operations
HLTHCARE	
T81 INFO	Information Management
T83 CYBER	Cybersecurity Management
T93 CSM	Cybersecurity Management (Online)

U (University College)

Code	Name
U02	Classics
Classics	
U03 GS	General Studies
U05 Chem	Chemistry

XCORE	
X20 XELEC	Design & Visual Arts - Elective

Catalog Editions

The courses and policies listed in this *Bulletin* are subject to change at any time through normal approval channels within Washington University. New courses, changes to existing course work and new policies are initiated by the appropriate institutional departments, committees or administrators. Academic policy revisions are generally implemented in the next academic year following notification thereof. Washington University publishes a new edition of the *Bulletin* each July, and its contents apply to the subsequent fall, spring, and summer terms. Occasionally a policy or requirement must be changed and implemented during the same academic year (e.g., in the case of relevant external requirements such as state regulations). All changes must be approved by college or school personnel who oversee academic curriculum and policies.

Washington University students must complete the graduation requirements in effect during the term that they matriculated into their program of study as published in the edition of the *Bulletin* from that academic year. Undergraduates who initially enroll in a summer term to pursue a special program follow requirements for the subsequent fall term. Students will need to check their school's processes to potentially change applicable catalog years or alter their degree requirements.

Students should review specific Washington University and individual school policies related to transfer credit, changing programs, leaves of absence, and military service.

Prior Bulletins

To find program details, course descriptions, and relevant policies, choose the year of enrollment below to find the available *Bulletins*. If the required year is not shown or the school's *Bulletin* is not available, please email the Office of the University Registrar (registrar@wustl.edu) with specifics of the needed information.

About Washington University in St. Louis

Who We Are Today

Washington University in St. Louis — a medium-sized, independent university — is dedicated to challenging its faculty and students alike to seek new knowledge and greater understanding of an ever-changing, multicultural world. The university is counted among the world's leaders in teaching and research, and it draws students from all 50 states, the District of Columbia, Guam, Puerto Rico and the Virgin Islands. Students and faculty come from more than 100 countries around the world.

The university offers more than 250 programs and 5,500 courses leading to associate, bachelor's, master's, and doctoral degrees in a broad spectrum of traditional and interdisciplinary fields, with additional opportunities for minor concentrations and individualized programs. For more information about the university, please visit the University Facts (<http://wustl.edu/about/facts/>) page of our website.

Enrollment by School

For enrollment information (<https://wustl.edu/about/university-facts/#students>), please visit the University Facts page of our website.

Our Mission Statement

The mission of Washington University in St. Louis is to act in service of truth through the formation of leaders, the discovery of knowledge and the treatment of patients for the betterment of our region, our nation and our world.

At WashU, we generate, disseminate, and apply knowledge. We foster freedom of inquiry and expression of ideas in our research, teaching and learning.

We aim to create an environment that encourages and supports wide-ranging exploration at the frontier of discovery by embracing diverse perspectives from individuals of all identities and backgrounds. We promote higher education and rigorous research as a fundamental component of an open, vibrant society. We strive to enhance the lives and livelihoods not only of our students, patients, and employees but also of the people of the greater St. Louis community and beyond. We do so by addressing scientific, social, economic, medical, and other challenges in the local, national, and international realms.

Our goals are:

- to foster excellence and creativity in our teaching, research, scholarship, patient care and service
- to welcome students, faculty and staff from all backgrounds to create an inclusive, equitable community that is nurturing and intellectually rigorous
- to cultivate in students habits of lifelong learning and critical and ethical thinking, thereby enabling them to be productive members and leaders of a global society
- to contribute positively to our home community of St. Louis, and to effect meaningful, constructive change in our world

To this end we intend:

- to hold ourselves to the highest standards of excellence
- to educate aspiring leaders of great ability from diverse backgrounds
- to encourage faculty and students to be innovative, bold, independent, critical thinkers
- to build an inclusive, equitable, respectful, ethically-principled environment for living, teaching, learning and working for the present and future generations
- to focus on meaningful and measurable outcomes for all of our endeavors

Mission statement approved by the Faculty Senate Council in April 2021 and approved by the Board of Trustees on October 1, 2021.

Trustees & Administration

Board of Trustees

Washington University's Board of Trustees is the chief governing body of Washington University in St. Louis. Please visit the Board of Trustees website (<http://boardoftrustees.wustl.edu>) for more information.

University Administration

In 1871, Washington University co-founder and then-Chancellor William Greenleaf Eliot sought a gift from Hudson E. Bridge, a charter member of the university's Board of Directors, to endow the chancellorship. Soon after this endowment was received, the position was renamed the "Hudson E. Bridge Chancellorship."

The officers of the university administration are currently led by Chancellor Andrew D. Martin. University leadership (<https://wustl.edu/about/leadership/>) is detailed on the Washington University website.

Academic Calendar

The academic calendar of Washington University in St. Louis is designed to provide an optimal amount of classroom instruction and examination within a manageable time frame, facilitating our educational mission to promote learning among both students

and faculty. Individual schools — particularly our graduate and professional schools — may have varying calendars due to the nature of particular fields of study. Please refer to each school's website for more information.

Fall Semester 2022

College of Arts & Sciences, McKelvey School of Engineering, Olin Business School, Sam Fox School of Design & Visual Arts, and University College

Date	Day	Description
August 29	Monday	First day of classes
September 5	Monday	Labor Day (no classes)
October 8-11	Saturday-Tuesday	Fall Break (no classes)
November 23-27	Wednesday-Sunday	Thanksgiving Break (no classes)
December 9	Friday	Last day of classes
December 12-21	Monday-Wednesday	Reading and finals

Spring Semester 2023

College of Arts & Sciences, McKelvey School of Engineering, Olin Business School, Sam Fox School of Design & Visual Arts, and University College

Date	Day	Description
January 17	Tuesday	First day of classes
March 12-18	Sunday-Saturday	Spring Break (no classes)
April 28	Friday	Last day of classes
May 1-10	Monday-Wednesday	Reading and finals

Commencement Ceremonies

Date	Day	Description
May 15	Monday	Class of 2023 Commencement

Summer Semester 2023

Date	Day	Description
May 22	Monday	First Summer Session begins
May 29	Monday	Memorial Day (no classes)
July 4	Tuesday	Independence Day (no classes)
August 17	Thursday	Last Summer Session ends

Washington University recognizes the individual student's choice in observing religious holidays that occur during periods when classes are scheduled. Students are encouraged to arrange with their instructors to make up work missed as a result of religious observance, and instructors are asked to make every reasonable effort to accommodate such requests.

Campus Resources

Student Support Services

The Learning Center. The Learning Center is located on the lower level of the Mallinckrodt Center, and it is the hub of academic support at Washington University in St. Louis. We provide undergraduate students with assistance in a variety of forms. Most services are free, and each year more than 2,000 students participate in one or more of our programs. For more information, visit the Learning Center website (<https://ctl.wustl.edu/learningcenter/>) or call 314-935-5970. There are three types of services housed within the Learning Center:

- **Academic Mentoring Programs** offer academic support in partnership with the academic departments in a variety of forms. Academic mentoring programs are designed to support students in their course work by helping them develop the lifelong skill of "learning how to learn" and by stimulating their independent thinking. Programs include course-specific weekly structured study groups facilitated by highly trained peer leaders as well as course-specific weekly walk-in sessions facilitated by academic mentors in locations, at times and in formats convenient for the students. The Learning Center also offers individual consulting/coaching for academic skills such as time management, study skills, note taking, accessing resources and so on. Other services include fee-based graduate and professional school entrance preparation courses.
- **Disability Resources** supports students with disabilities by fostering and facilitating an equal access environment for the Washington University community of learners. Disability Resources partners with faculty and staff to facilitate academic and housing accommodations for students with disabilities on the Danforth Campus. Students enrolled in the School of Medicine should contact their program's director. Please visit the Disability Resources website (<https://students.wustl.edu/disability-resources/>) or contact the Learning Center at 314-935-5970 for more information.
- **TRIO: Student Support Services** is a federally funded program that provides customized services for undergraduate students who are low income, who are the first in their family to go to college, and/or who have a documented disability. Services include academic coaching, academic peer mentoring, cultural and leadership programs, summer internship assistance and post-graduation advising. First-year and transfer students are considered for selection during the summer before they enter their first semester.

Eligible students are encouraged to apply when they are notified, because space in this program is limited. For more information, visit the TRIO Program website (<https://students.wustl.edu/trio-program/>).

Medical Student Support Services. For information about Medical Student Support Services, please visit the School of Medicine website (<https://medicine.wustl.edu>).

Office for International Students and Scholars. If a student is joining the university from a country other than the United States, this office can assist that individual through their orientation programs, issue certificates of eligibility (visa documents), and provide visa and immigration information. In addition, the office provides personal and cross-cultural counseling and arranges social, cultural and recreational activities that foster international understanding on campus.

The Office for International Students and Scholars is located on the Danforth Campus in the Danforth University Center at 6475 Forsyth Boulevard, Room 330. The office can be found on the Medical Campus in the Mid Campus Center (MCC Building) at 4590 Children's Place, Room 2043. For more information, visit the Office for International Students and Scholars website (<https://students.wustl.edu/international-students-scholars/>) or call 314-935-5910.

Office of Military and Veteran Services. This office serves as the university's focal point for military and veteran matters, including transitioning military-connected students into higher education, providing and connecting students with programs and services, and partnering across campus and in the community. Services include advising current and prospective students on how to navigate the university and maximize Department of Defense and Veterans Affairs (VA) educational benefits, transition support, Veteran Ally training for faculty and staff, veteran-unique programming, and connecting students to campus and community resources. Military-connected students include veterans, military service members, spouses, dependent children, caregivers, survivors and Reserve Officer Training Corp cadets. There are two university policies that apply to students who still serve in the Armed Forces and students who use VA educational benefits:

- The Policy on Military Absences, Refunds and Readmissions (<https://veterans.wustl.edu/policies/policy-for-military-students/>) applies to students serving in the U.S. Armed Forces and their family members when military service forces them to be absent or withdraw from a course of study.
- The Policy on Protections for VA Educational Benefit Users (<https://veterans.wustl.edu/policies/policy-for-va-students/>) applies to students using VA education benefits when payments to the institution and the individual are delayed through no fault of the student.

The Office of Military and Veteran Services is located in Umrath Hall on the Danforth Campus. Please visit the Military and Veteran Services website (<https://veterans.wustl.edu/>) or send an email to veterans@wustl.edu for more information.

Relationship and Sexual Violence Prevention (RSVP) Center.

The RSVP Center offers free and confidential services including 24/7 crisis intervention, counseling services, resources, support and prevention education for all students on the Danforth Campus. The RSVP Center operates from a public health model and uses trauma-informed practices to address the prevalent issues of relationship and sexual violence. By providing support for affected students, it is our goal to foster post-traumatic growth and resilience and to help ensure academic retention and success. Our prevention efforts call for community engagement to engender an intolerance of violence and an active stance toward challenging cultural injustices that perpetuate such issues. Learn more at the RSVP Center website (<https://students.wustl.edu/relationship-sexual-violence-prevention-center/>).

WashU Cares. WashU Cares assists the university with handling situations involving the safety and well-being of Danforth Campus students. WashU Cares is committed to fostering student success and campus safety through a proactive, collaborative and systematic approach to the identification of, intervention with and support of students of concern while empowering all university community members to create a culture of caring. If there is a concern about the physical or mental well-being of a student, please visit the WashU Cares website (<https://students.wustl.edu/washu-cares/>) to file a report.

The Writing Center. The Writing Center — a free service — offers writing advice to all Washington University undergraduate and graduate students. Tutors will read and discuss any kind of work in progress, including student papers, senior theses, application materials, dissertations and oral presentations. The Writing Center staff is trained to work with students at any stage of the writing process, including brainstorming, developing and clarifying an argument, organizing evidence, and improving style. Rather than editing or proofreading, tutors will emphasize the process of revision and teach students how to edit their own work.

The Writing Center is located in Mallinckrodt Center on the lower level. Appointments (<http://writingcenter.wustl.edu>) are preferred and can be made online, but walk-ins will be accepted if tutors are available.

Student Health Services, Danforth Campus

The Habib Health and Wellness Center provides medical and mental health care and health promotion for undergraduate and graduate students on the Danforth Campus. Habib staff members include licensed professionals in Medical Services, Mental Health Services and Health Promotion Services. Please

visit Habif in the lower level of Dardick House on the South 40 or the Habif Health and Wellness Center website (<https://students.wustl.edu/habif-health-wellness-center/>) for more information about Habif's services and staff members.

Hours:

Monday, Tuesday, Thursday, and Friday: 8 a.m.-5 p.m.

Wednesday: 10 a.m.-5 p.m.

Saturday, Sunday, and university holidays: Closed

For after-hours care, students should access TimelyCare (<https://students.wustl.edu/timelycare/>).

Medical Services staff members provide care for the evaluation and treatment of an illness or injury, preventive health care and health education, immunizations, nutrition counseling, and travel medicine and sexual health services. Habif Health and Wellness Center providers are participating members of the Washington University in St. Louis Physician's Network. Any condition requiring specialized medical services will be referred to an appropriate specialist. Habif accepts most health insurance plans and will be able to bill the plan according to plan benefits. The student health insurance plan requires a referral for medical care any time care is not provided at Habif (except in an emergency). Call 314-935-6666 or visit the Habif website to schedule an appointment (<https://students.wustl.edu/habif-health-wellness-center/>).

Appointments are also available for the assessment, treatment, and referral of students who are struggling with substance abuse.

Quadrangle Pharmacy, located in the Habif Health and Wellness Center, is available to all Washington University students and their dependents. The pharmacy accepts most prescription insurance plans; students should check with the pharmacist to see if their prescription plan is accepted at the pharmacy.

The Habif Health and Wellness Center lab provides full laboratory services. Approximately 20 tests can be performed in the lab. The remainder of all testing that is ordered by Habif is completed by LabCorp. LabCorp serves as Habif's reference lab, and it is a preferred provider on the student health insurance plan. This lab can perform any test ordered by Habif providers or outside providers.

All incoming students must provide proof of immunization for measles, mumps, and rubella (i.e., two vaccinations after the age of one year old; a titer may be provided in lieu of the immunizations). Proof of receiving a meningococcal vaccine is required for all incoming undergraduate students. A PPD skin test in the past six months is required for students entering the university from certain countries; this list of countries may be found on the Habif website. It is also recommended that, during the five years before beginning their studies at Washington University, all students will have received the tetanus diphtheria immunization, the hepatitis A vaccine series, the hepatitis B vaccine series, and the varicella vaccine. Medical history

forms (<https://students.wustl.edu/habif-health-wellness-center/>) are available online. Failure to complete the required forms will delay a student's registration and prevent their entrance into housing assignments. Please visit the Habif website for complete information about requirements and deadlines (<https://students.wustl.edu/habif-health-wellness-center/>).

Mental Health Services staff members work with students to resolve personal and interpersonal difficulties, including conflicts with or worry about friends or family, concerns about eating or drinking patterns, and feelings of anxiety and depression. Staff members help each person figure out their own situation. Services include individual, group and couples counseling; crisis counseling; psychiatric consultation; and referral for off-campus counseling. Visit the Habif website to schedule an appointment (<https://students.wustl.edu/habif-health-wellness-center/>), or call 314-935-6666 during business hours.

Health Promotion Services staff and Peer Health Educators provide free programs and risk reduction information related to stress, sleep, sexual health, alcohol/other drugs, and community care. For more information, visit the Zenker Wellness Suite in Sumers Recreation Center to learn about the programs on campus led by student peer health educators. For information, visit the Health and Wellness Digital Library (<https://students.wustl.edu/health-wellness-digital-library/>), follow Habif on Instagram (<https://www.instagram.com/>) (@washu_habif), or email wellness@wustl.edu.

In 2018, this department launched the **WashU Recovery Group** to provide an opportunity for students in recovery from substance use to connect with other students with similar experiences. The group provides local resources, support, meetings and activities. Members have 24/7 access to a private facility to study, meet and socialize (*in-person services will resume as COVID-19 pandemic restrictions allow*). The group is not a recovery program; it is a confidential resource that students can add to their support system. For more information, send an email to recovery@wustl.edu.

Important Information About Health Insurance, Danforth Campus

Washington University has a student health fee that was designed to improve the health and wellness of the entire Washington University community. This fee supports health and wellness services and programs on campus. In addition, all full-time, degree-seeking Washington University students are automatically enrolled in the Student Health Insurance Plan upon completion of registration, with an additional health insurance fee applied to their student account. Students may opt out of this coverage and receive a refund of the health insurance fee if they provide proof of existing comprehensive insurance coverage that meets all university requirements. Information concerning opting out of the student health insurance plan (<https://students.wustl.edu/habif-health-wellness-center/>) can be found online after June 1 of each year. All students must request

to opt out by September 5 of every year in which they wish to be removed from the Student Health Insurance Plan. Habib provides billing services to many of the major insurance companies in the United States. Specific fees and copays apply to students using Medical Services and Mental Health Services; these fees may be billable to the students' insurance plans. More information is available on the Habib Health and Wellness Center website (<https://students.wustl.edu/habif-health-wellness-center/>).

Student Health Services, Medical Campus

For information about student health services on the Medical Campus, please visit the Student & Occupational Health Services page (<https://wusmhealth.wustl.edu/students/>) of the School of Medicine website.

Campus Security

The Washington University campus is among the most attractive in the nation, and it enjoys a safe and relaxed atmosphere. Personal safety and the security of personal property while on campus is a shared responsibility. Washington University has made safety and security a priority through our commitment to a full-time professional police department, the use of closed-circuit television, card access, good lighting, shuttle services, emergency telephones, and ongoing educational safety awareness programs. The vast majority of crimes that occur on college campuses are crimes of opportunity, which can be prevented.

The best protection against crime is an informed and alert campus community. Washington University has developed several programs to help make everyone's experiences here safe and secure. An extensive network of emergency telephones — including more than 200 "blue light" telephones — is connected directly to the University Police Department and can alert the police to a person's exact location. In addition to the regular shuttle service, an evening walking escort service and a mobile Campus Circulator shuttle are available on the Danforth Campus.

The Campus2Home shuttle will provide a safe ride home for those living in four designated areas off campus — Skinker-DeBaliviere, Loop South, north of the Loop, and just south of the campus — from 7:00 p.m. to 4:00 a.m. seven days a week. The shuttle leaves from the Mallinckrodt Bus Plaza and Forsyth/Goldfarb Hall Center every 15 minutes from 7:00 p.m. to 1:00 a.m. and at the top (:00) and bottom (:30) of the hour from 1:00 a.m. to 4:00 a.m. The shuttle takes passengers directly to the front doors of their buildings. Shuttle drivers will then wait and watch to make sure passengers get into their buildings safely. Community members can track the shuttle in real time using the WUSTL Mobile App. The app can be downloaded free of charge from the Apple iTunes Store or the Google Play Store.

The University Police Department is a full-service organization staffed by certified police officers who patrol the campus 24 hours a day throughout the entire year. The department offers a variety of crime prevention programs, including a high-security bicycle lock program, free personal-safety whistles, computer security tags, personal safety classes for women and men, and security surveys. Community members are encouraged to download and install the WashU Safe personal safety app on their phones; this app allows users to call for help during emergencies, to use Friend Walk to track their walks on and off campus, and to access many additional safety features. For more information about these programs, visit the Washington University Police Department website (<https://police.wustl.edu/>).

In compliance with the Campus Crime Awareness and Security Act of 1990, Washington University publishes an annual report (<http://police.wustl.edu/clery-reports-logs/>) entitled *Safety & Security: Guide for Students, Faculty, and Staff — Annual Campus Security and Fire Safety Reports and Drug & Alcohol Abuse Prevention Program*. This report is available to all current and prospective students on the Danforth Campus and to university employees on the Danforth, North and West campuses. To request a hard copy, contact the Washington University Police Department, CB 1038, One Brookings Drive, St. Louis, MO 63130-4899, 314-935-9011.

For information regarding protective services at the School of Medicine, please visit the Campus Safety page (<https://facilities.med.wustl.edu/security-new/>) of the Washington University Operations & Facilities Management Department.

University Policies

Washington University has various policies and procedures that govern our faculty, staff and students. Highlighted below are several key policies of the university. Web links to key policies and procedures are available on the Office of the University Registrar website (<http://registrar.wustl.edu>) and on the university's Compliance and Policies page (<http://wustl.edu/policies/>). Please note that the policies identified on these websites and in this *Bulletin* do not represent an entire repository of university policies, as schools, offices and departments may implement policies that are not listed. In addition, policies may be amended throughout the year.

Nondiscrimination Statement

Washington University encourages and gives full consideration to all applicants for admission, financial aid and employment. The university does not discriminate in access to, treatment during, or employment in its programs and activities on the basis of race, color, age, religion, sex, sexual orientation, gender identity or expression, national origin, veteran status, disability or genetic information.

Policy on Discrimination and Harassment

Washington University is committed to having a positive learning and working environment for its students, faculty and staff. University policy prohibits discrimination on the basis of race, color, age, religion, sex, sexual orientation, gender identity or expression, national origin, veteran status, disability or genetic information. Harassment based on any of these classifications is a form of discrimination; it violates university policy and will not be tolerated. In some circumstances, such discriminatory harassment may also violate federal, state or local law. A copy of the Policy on Discrimination and Harassment (<http://hr.wustl.edu/policies/Pages/DiscriminationAndHarassment.aspx>) is available on the Human Resources website.

Sexual Harassment

Sexual harassment is a form of discrimination that violates university policy and will not be tolerated. It is also illegal under state and federal law. Title IX of the Education Amendments of 1972 prohibits discrimination based on sex (including sexual harassment and sexual violence) in the university's educational programs and activities. Title IX also prohibits retaliation for asserting claims of sex discrimination. The university has designated the Title IX Coordinator identified below to coordinate its compliance with and response to inquiries concerning Title IX.

For more information or to report a violation under the Policy on Discrimination and Harassment, please contact the following individuals:

Discrimination and Harassment Response Coordinator

Apryle Cotton, Assistant Vice Chancellor for Human Resources
Section 504 Coordinator
Phone: 314-362-6774
apryle.cotton@wustl.edu

Title IX Coordinator

Jessica Kennedy, Director of Title IX Office
Title IX Coordinator
Phone: 314-935-3118
jwkennedy@wustl.edu

You may also submit inquiries or a complaint regarding civil rights to the United States Department of Education's Office of Civil Rights at 400 Maryland Avenue, SW, Washington, DC 20202-1100; by visiting the U.S. Department of Education website (<https://www.ed.gov/>); or by calling 800-421-3481.

Student Health

Drug and Alcohol Policy

Washington University is committed to maintaining a safe and healthy environment for members of the university community by promoting a drug-free environment as well as one free of the abuse of alcohol. Violations of the Washington University Drug and Alcohol Policy (<https://hr.wustl.edu/items/drug-and-alcohol-policy/>) or the Alcohol Policy for Graduate Student Organizations (<https://sites.wustl.edu/prograds/university-wide-graduate-student-group-handbook/alcohol-policy-for-graduate-student-organizations/>) will be handled according to existing policies and procedures concerning the conduct of faculty, staff and students. This policy is adopted in accordance with the Drug-Free Workplace Act and the Drug-Free Schools and Communities Act.

Tobacco-Free Policy

Washington University is committed to providing a healthy, comfortable and productive work and learning environment for all students, faculty and staff. Research shows that tobacco use in general, including smoking and breathing secondhand smoke, constitutes a significant health hazard. The university strictly prohibits all smoking and other uses of tobacco products within all university buildings and on university property, at all times. A copy of our complete Tobacco-Free Policy (<https://hr.wustl.edu/items/tobacco-free-policy/>) is available on the Human Resources website.

Medical Examinations

Entering students must provide medical information to the Habif Health and Wellness Center. This will include the completion of a health history and a record of all current immunizations.

If students fail to comply with these requirements prior to registration, they will be required to obtain vaccinations for measles, mumps and rubella at the Habif Health and Wellness Center, if there is no evidence of immunity. In addition, undergraduate students will be required to obtain meningitis vaccinations. Students will be assessed the cost of the vaccinations. Students will be unable to complete registration for classes until all health requirements have been satisfied.

Noncompliant students may be barred from classes and from all university facilities, including housing units, if in the judgment of the university their continued presence would pose a health risk to themselves or to the university community.

Medical and immunization information is to be given via the Habif Health and Wellness Center (<https://students.wustl.edu/habif-health-wellness-center/>) website. All students who have completed the registration process should access the website and create a student profile by using their WUSTL Key. Creating a student profile enables a student to securely access the

medical history form. Students should fill out the form and follow the instructions for transmitting it to the Habib Health and Wellness Center. Student information is treated securely and confidentially.

Student Conduct

The Student Conduct Code sets forth community standards and expectations for Washington University students. These community standards and expectations are intended to foster an environment conducive to learning and inquiry. Freedom of thought and expression is essential to the university's academic mission.

Disciplinary proceedings are meant to be informal, fair and expeditious. Charges of non-serious misconduct are generally heard by the student conduct officer. With limited exceptions, serious or repeated allegations are heard by the campuswide Student Conduct Board or the University Sexual Assault Investigation Board where applicable.

Complaints against students that include allegations of sexual assault or certain complaints that include allegations of sexual harassment in violation of the Student Conduct Code are governed by the procedures found in the University Sexual Assault Investigation Board Policy (<https://wustl.edu/about/compliance-policies/governance/usaib-procedures-complaints-sexual-assault-filed-students/>), which is available online or in hard copy from the Title IX coordinator or the director of Student Conduct and Community Standards.

Students may be accountable to both governmental authorities and to the university for acts that constitute violations of law and the Student Conduct Code.

For a complete copy of the Student Conduct Code (<https://wustl.edu/about/compliance-policies/academic-policies/university-student-judicial-code/>), visit the university website.

Undergraduate Student Academic Integrity Policy

Effective learning, teaching and research all depend upon the ability of members of the academic community to trust one another and to trust the integrity of work that is submitted for academic credit or conducted in the wider arena of scholarly research. Such an atmosphere of mutual trust fosters the free exchange of ideas and enables all members of the community to achieve their highest potential.

In all academic work, the ideas and contributions of others must be appropriately acknowledged, and work that is presented as original must be, in fact, original. Faculty, students and administrative staff all share the responsibility of ensuring the honesty and fairness of the intellectual environment at Washington University.

Scope and Purpose

This statement on academic integrity applies to all undergraduate students at Washington University. Graduate students are governed by policies in each graduate school or division. All students are expected to adhere to the highest standards of behavior. The purpose of the statement is twofold:

1. To clarify the university's expectations with regard to undergraduate students' academic behavior; and
2. To provide specific examples of dishonest conduct. The examples are only illustrative, *not* exhaustive.

Violations of This Policy Include but Are Not Limited to the Following:

1. Plagiarism

Plagiarism consists of taking someone else's ideas, words or other types of work product and presenting them as one's own. To avoid plagiarism, students are expected to be attentive to proper methods of documentation and acknowledgment. To avoid even the suspicion of plagiarism, a student must always do the following:

- Enclose every quotation in quotation marks and acknowledge its source.
- Cite the source of every summary, paraphrase, abstraction or adaptation of material originally prepared by another person and any factual data that is not considered common knowledge. Include the name of author, title of work, publication information and page reference.
- Acknowledge material obtained from lectures, interviews or other oral communication by citing the source (i.e., the name of the speaker, the occasion, the place and the date).
- Cite material from the internet as if it were from a traditionally published source. Follow the citation style or requirements of the instructor for whom the work is produced.

2. Cheating on an Examination

A student must not receive or provide any unauthorized assistance on an examination. During an examination, a student may use only materials authorized by the faculty.

3. Copying or Collaborating on Assignments Without Permission

When a student submits work with their name on it, this is a written statement that credit for the work belongs to that student alone. If the work was a product of collaboration, each student is expected to clearly acknowledge in writing all persons who contributed to its completion.

Unless the instructor explicitly states otherwise, it is dishonest to collaborate with others when completing any assignment or test, performing laboratory experiments, writing and/or documenting computer programs, writing papers or reports, or completing problem sets.

If the instructor allows group work in some circumstances but not others, it is the student's responsibility to understand the degree of acceptable collaboration for each assignment and to ask for clarification, if necessary.

To avoid cheating or unauthorized collaboration, a student should never do any of the following:

- Use, copy or paraphrase the results of another person's work and represent that work as one's own, regardless of the circumstances.
- Refer to, study from or copy archival files (e.g., old tests, homework, solutions manuals, backfiles) that were not approved by the instructor.
- Copy another's work or permit another student to copy one's work.
- Submit work as a collaborative effort if they did not contribute a fair share of the effort.

4. Fabrication or Falsification of Data or Records

It is dishonest to fabricate or falsify data in laboratory experiments, research papers or reports or in any other circumstances; to fabricate source material in a bibliography or "works cited" list; or to provide false information on a résumé or other document in connection with academic efforts. It is also dishonest to take data developed by someone else and present them as one's own. Examples of falsification include the following:

- Altering information on any exam, problem set or class assignment being submitted for a re-grade.
- Altering, omitting or inventing laboratory data to submit as one's own findings. This includes copying laboratory data from another student to present as one's own; modifying data in a write-up; and providing data to another student to submit as one's own.

5. Other Forms of Deceit, Dishonesty or Inappropriate Conduct

Under no circumstances is it acceptable for a student to do any of the following:

- Submit the same work, or essentially the same work, for more than one course without explicitly obtaining permission from all instructors. A student must disclose when a paper or project builds on work completed earlier in their academic career.
- Request an academic benefit based on false information or deception. This includes requesting an extension of time, a better grade or a recommendation from an instructor.

- Make any changes (including adding material or erasing material) on any test paper, problem set or class assignment being submitted for a re-grade.
- Willfully damage the efforts or work of other students.
- Steal, deface or damage academic facilities or materials.
- Collaborate with other students planning or engaging in any form of academic misconduct.
- Submit any academic work under someone else's name other than one's own. This includes but is not limited to sitting for another person's exam; both parties will be held responsible.
- Engage in any other form of academic misconduct not covered here.

This list is not intended to be exhaustive. To seek clarification, students should ask the professor or the assistant in instruction for guidance.

Reporting Misconduct

Faculty Responsibility

Faculty and instructors are strongly encouraged to report incidents of student academic misconduct to the academic integrity officer in their school or college in a timely manner so that the incident may be handled fairly and consistently across schools and departments. Assistants in instruction are expected to report instances of student misconduct to their supervising instructors. Faculty members are expected to respond to student concerns about academic dishonesty in their courses.

Student Responsibility

If a student observes others violating this policy, the student is strongly encouraged to report the misconduct to the instructor, to seek advice from the academic integrity officer of the school or college that offers the course in question, or to address the student(s) directly.

Exam Proctor Responsibility

Exam proctors are expected to report incidents of suspected student misconduct to the course instructor and/or the Disability Resource Center, if applicable.

Procedure

Jurisdiction

This policy covers all undergraduate students, regardless of their college of enrollment. Cases will be heard by school-specific committees according to the school in which the class is listed rather than the school in which the student is enrolled. All violations and sanctions will be reported to the student's college of enrollment.

Administrative Procedures

Individual undergraduate colleges and schools may design specific procedures to resolve allegations of academic misconduct by students in courses offered by that school, so long as the procedures are consistent with this policy and with the Student Conduct Code.

Student Rights and Responsibilities in a Hearing

A student accused of an academic integrity violation — whether by a professor, an assistant in instruction, an academic integrity officer or another student — is entitled to do the following:

- Review the written evidence in support of the charge
- Ask any questions
- Offer an explanation as to what occurred
- Present any material that would cast doubt on the correctness of the charge
- Receive a determination of the validity of the charge without reference to any past record of misconduct

When responding to a charge of academic misconduct, a student may do the following:

- Deny the charges and request a hearing in front of the appropriate academic integrity officer or committee
- Admit the charges and request a hearing to determine sanction(s)
- Admit the charges and accept the imposition of sanctions without a hearing
- Request a leave of absence from the university (however, the academic integrity matter must be resolved prior to re-enrollment)
- Request to withdraw permanently from the university with a transcript notation that there is an unresolved academic integrity matter pending

A student has the following responsibilities with regard to resolving the charge of academic misconduct:

- Admit or deny the charge. This will determine the course of action to be pursued.
- Provide truthful information regarding the charges. It is a Student Conduct Code violation to provide false information to the university or anyone acting on its behalf.

Sanctions

If Found *Not* in Violation of the Academic Integrity Policy

If the charges of academic misconduct are not proven, no record of the allegation will appear on the student's transcript.

If Found in Violation of the Academic Integrity Policy

If, after a hearing, a student is found to have acted dishonestly or if a student has admitted to the charges prior to a hearing, the school's academic integrity officer or committee may impose sanctions, including but not limited to the following:

- Issue a formal written reprimand
- Impose educational sanctions, such as completing a workshop on plagiarism or academic ethics
- Recommend to the instructor that the student fail the assignment (a given grade is ultimately the prerogative of the instructor)
- Recommend to the instructor that the student fail the course
- Recommend to the instructor that the student receive a course grade penalty less severe than failure of the course
- Place the student on disciplinary probation for a specified period of time or until defined conditions are met. The probation will be noted on the student's transcript and internal record while it is in force.
- In cases serious enough to warrant suspension or expulsion from the university, refer the matter to the Student Conduct Board for consideration.

Additional educational sanctions may be imposed. This list is not intended to be exhaustive.

Withdrawing from the course will not prevent the academic integrity officer or hearing panel from adjudicating the case, imposing sanctions or recommending grade penalties, including a failing grade in the course.

A copy of the sanction letter will be placed in the student's academic file.

Appeals

If a student believes the academic integrity officer or the committee did not conduct a fair hearing or if a student believes the sanction imposed for misconduct is excessive, they may appeal to the Student Conduct Board within 14 days of the original decision. Appeals are governed by Section VII C of the Student Conduct Code.

Records

Administrative Record-Keeping Responsibilities

It is the responsibility of the academic integrity officer in each school to keep accurate, confidential records concerning academic integrity violations. When a student has been found to have acted dishonestly, a letter summarizing the allegation, the outcome and the sanction shall be placed in the student's official file in the office of the school or college in which the student is enrolled.

In addition, each school's academic integrity officer shall make a report of the outcome of every formal accusation of student academic misconduct to the director of Student Conduct and Community Standards, who shall maintain a record of each incident.

Multiple Offenses

When a student is formally accused of academic misconduct and a hearing is to be held by an academic integrity officer, a committee, or the Office of Student Conduct and Community Standards, the person in charge of administering the hearing shall query the Office of Student Conduct and Community Standards about the student(s) accused of misconduct. The director shall provide any information in the records concerning that student to the integrity officer. Such information will be used in determining sanctions *only* if the student is found to have acted dishonestly in the present case. Evidence of past misconduct may not be used to resolve the issue of whether a student has acted dishonestly in a subsequent case.

Reports to Faculty and Student Body

School and college academic integrity officers are encouraged to make periodic (at least annual) reports to the students and faculty of their school concerning accusations of academic misconduct and the outcomes, without disclosing specific information that would allow identification of the student(s) involved.

Graduate Student Academic Integrity Policies

For graduate student academic integrity policies, please refer to each individual graduate school.

Statement of Intent to Graduate

Students are required to file an Intent to Graduate via WebSTAC (<https://acadinfo.wustl.edu/>) prior to the semester in which they intend to graduate. Additional information is available from school dean's offices and the Office of the University Registrar (<http://registrar.wustl.edu>).

Student Academic Records and Transcripts

Under the Family Educational Rights and Privacy Act of 1974 (FERPA) — Title 20 of the United States Code, Section 1232g, as amended — current and former students of the university have certain rights with regard to their educational records. Washington University's FERPA policy is available via the Office of the University Registrar's website (<http://registrar.wustl.edu>).

All current and former students may request official Washington University transcripts from the Office of the University Registrar via either WebSTAC (if they remember their WUSTL Key) or Parchment (if they do not have or cannot remember their

WUSTL Key). Students may print unofficial transcripts for their personal use from WebSTAC. Instructions and additional information are available on the Office of the University Registrar's website (<http://registrar.wustl.edu>).

Washington University does not release nor certify copies of transcripts or other academic documents received from other schools or institutions. This includes test score reports and transcripts submitted to Washington University for purposes of admission or evaluation of transfer credit.

Undergraduate Study

Class Size

Nearly three-fourths of Washington University's undergraduate classes range from one to 24 students. We believe smaller classes help students learn more through stimulating group discussion. Class size also depends on the department and pedagogy, with class sizes generally being larger in the earlier stages of the curriculum and becoming smaller as students progress in their chosen fields.

Average Class Sizes by Level

Class Size	L-100	L-200	L-300	L-400
1-10	167	85	126	129
11-24	268	142	250	156
25-39	38	41	52	46
40-64	45	26	48	30
65-100	16	14	23	10
101-200	19	11	5	3
Over 200	7	3	1	1
Total	560	322	505	375

Teaching and Learning at Washington University: A Statement of Best Practices and Expectations

*Undergraduate Council November 10, 1999,
Teaching Subcommittee of the Undergraduate Council,
Walter Chan and Robert E. Hegel, Co-Chairs.*

*Amended by the Teaching Learning Subcommittee of the
Undergraduate Council on January 27, 2010, and October 30,
2015.*

*Amended statements endorsed by the Undergraduate Council
on February 2, 2010, and November 2, 2015.*

All members of the Washington University community share responsibility for creating an atmosphere conducive to learning. A collaborative learning environment involves the active participation of both instructors and students in the classroom and in activities outside the classroom. This environment requires:

- best efforts on the part of both faculty and students to enhance the learning experience for the benefit of all persons involved;
- recognizing that everyone present plays an important role; that all participants in the learning experience deserve respect for what they contribute; and that both faculty and students be sensitive to the importance of the others in this process;
- an atmosphere that embraces multiple identities in the classroom by demonstrating mutual respect for all persons regardless of political, racial, ethnic, religious, gender, sexual orientation, age, disability, socioeconomic or veteran status.

In response to changing classroom dynamics, we, the Undergraduate Council, make the following recommendations:

Expectations and responsibilities of the faculty

The faculty member is involved in several major roles, including those of teacher, scholar-researcher, and citizen in the university. For the unimpeded performance of these functions, the faculty member is guaranteed academic freedom. At the same time, the faculty member has clear responsibilities to the students and to the institution, particularly in the faculty member's role as teacher. Instructors should provide the basic outlines for the learning experience and provide guidance as appropriate, generally in the form of a handout or easily accessible electronic document. Such guidance should normally involve:

- presenting a syllabus that:
 - identifies the goals of the course and its prerequisites, a schedule of major assignments and examinations, and explicit criteria for how student work will be evaluated;
 - articulates ground rules for classroom interaction and consequences for infringement (How much active participation is expected of the student? Is attendance required? Is it acceptable to eat during class? What are the guidelines for collaboration inside and outside of the classroom?);
 - establishes behavior expectations for the class, including respecting every member, listening and engaging;
 - makes clear expectations for technology use during class;
 - includes links to information about inclusion and diversity, bias reporting, and accommodations based upon sexual assault and mental health;
- reminding students of and upholding the university's standards for academic integrity;
- bringing new perspectives and insights to assigned readings and other text materials;
- conducting classroom and one-on-one interactions in keeping with the university's guidelines on diversity and inclusion;

- regularly meeting and punctuality in starting and dismissing class;
- prompt and responsible grading (including midterms), with evaluative comments and opportunities for students to discuss their grades with the faculty member;
- adherence to the announced office-hour schedule and offering as many avenues as possible for contact, including by online venue, telephone or email;
- using appropriate, relevant technology both inside and outside of the classroom to enhance communication between faculty and students;
- uploading course materials and sending emails or other notifications in a timely manner;
- overseeing assistants in instruction (AIs), including the training of AIs; providing definitions of grading expectations as per the University Code of Conduct; providing detailed rubrics for grading evaluations, case studies and projects; and ensuring a faculty review in the event students contest their grade and petition for regrading, especially to ensure grading uniformity;
- regular communication between two or more professors when they share in the teaching process of a one-semester course, including agreement about responsibilities, assignments given to students, and due dates expected;
- facilitation of and reflection on student evaluations of the faculty member's teaching methods and materials, including midsemester evaluations, as a means of creating an atmosphere of shared responsibility within the classroom;
- regular communication with students regarding progress in the course, ways to improve, and grading structure;
- avoiding prohibitive costs when ordering textbooks and other course materials; making electronic texts available;
- adhering to the published final examination schedule to avoid interfering with students' preparation for other classes;
- showing up to all of the classes and giving students the full number of contact hours they deserve each semester.

Expectations and responsibilities of the students

Students must take responsibility for their own learning. Students also share with the instructor the responsibility for providing an environment conducive to learning. Students should personally:

- actively engage in learning the material and with the process of education, including meeting with the instructor and/or AI when requested to or when necessary;
 - use the course materials, faculty expertise, and expectations for learning to build their own knowledge and skills;
- attend all classes, both lecture and discussion sessions, and participate in class discussions; leave class only for emergencies; use online resources for augmentation and review, not as a substitute for class;
- be punctual in completing assignments;

- behave in the classroom in a manner that demonstrates respect for all students and faculty and follows university guidelines for diversity and inclusion;
- adhere to the instructor's expectations for the use of technology during class, including laptops, tablets and phones;
- share responsibility for the flow of information concerning a course by regularly checking the course webpage, online discussion groups and university email;
- be familiar with and adhere to matters of academic integrity as identified by their instructors and their school within the university;
- participate in objective and constructive evaluations of the instructor, course content according to the syllabus, and required textbooks/materials to clarify opportunities and strengths that will help the instructor to improve the course in subsequent semesters;
- conform to the ground rules of the course as defined in the syllabus.

Learning outside the classroom

Students and instructors should consult at the beginning of the semester about the content and expectations regarding independent study, supervised internships, supervised research, fieldwork, and international learning.

Students and instructors should familiarize themselves with division/department/program policies regarding independent studies and internship opportunities.

Special student concerns

Students should take the initiative to inform the faculty of anticipated absences prior to the scheduled event and discuss special arrangements to compensate for missed instruction. Should the absence be emergent or unanticipated, it is the student's responsibility to inform the faculty in a timely manner to minimize the disruption of class progression as a whole. Students should recognize that the collective needs of the faculty and other students in a course may outweigh individual priorities. Faculty should be sensitive to individual student needs for special arrangements:

- to accommodate disabilities, illnesses, family emergencies, or academic or professional opportunities that interfere with usual class attendance or performance;
- to provide accommodations when students miss class because of religious holidays.

Responsibilities of the university administration

For its part, the university administration must:

- continue to provide facilities and ensure adequate classroom and laboratory space that is stocked with sufficient, appropriate equipment;
- give priority to supporting both faculty and students in teaching and learning;
- provide opportunities for professional, student, and leadership development in both teaching and learning;
- be responsive when normal communications between faculty and students break down by providing a process for discussion and negotiation;
- facilitate communication among various constituents of the university;
- facilitate the flow of visitors to the classroom by providing faculty with ample notice.

Where to get help

For instructors: The departmental chair or associate chair, the Teaching Center, colleagues, and the relevant dean's office offer very useful advice on teaching techniques, materials and methods.

For students: The instructor, the AIs, and the Learning Center (<https://learningcenter.wustl.edu/>) can be counted on for guidance on best learning techniques and practices. The Writing Center (<http://writingcenter.wustl.edu>) can be a very helpful resource for all levels of written assignments from concept identification and document structuring through final paper editing.

Should a student concern occur, the general process of communication and request for assistance, guidance, and problem resolution is as follows:

1. Raise the concern with the faculty member.
2. If resolution has not been achieved, raise the concern with the associate chair or department chair.
3. If resolution has not been achieved, raise the concern with the student's advisor(s).

Concerns and/or disagreements that have not been resolved by this process can be addressed to the faculty-student mediator.

If the student has a concern related to discrimination or harassment, the University Policy on Discrimination and Harassment (<http://hr.wustl.edu/policies/Pages/DiscriminationAndHarassment.aspx>) provides additional information about resources and options.

10/30/2015*

**This document shall be reviewed every five years.*

Admission Procedures

First-Year Admission

The undergraduate admissions committee reviews each application in a holistic and individualized manner, with a goal of getting to know each student through the application process. Some of the things assessed during this process include the following:

- Academic potential and preparation
- Personal characteristics and qualities
- Accomplishments and involvement

Admission to Washington University is both selective and competitive. The university receives applications from far more students than it is able to admit each year. Students who come to Washington University have challenged themselves academically and personally during their high school years and are required to have earned a high school diploma or its equivalent, including home-schooled students and students holding a GED. Most applicants take advantage of honors, Advanced Placement and International Baccalaureate, and/or Dual Enrollment courses, if offered by their high schools. The admissions review takes each applicant's individual context, circumstances, and opportunities into account.

Most candidates' transcripts include the following:

- Four years of English
- Four years of mathematics; calculus is strongly recommended for majors in Architecture, Business, and Engineering; science majors in Arts & Sciences; and those who intend to pursue a pre-medicine path
- Three to four years of history or social science
- At least two years of the same foreign language since ninth grade
- Three to four years of laboratory science; chemistry and physics are strongly recommended for Engineering majors and for those who plan to do course work in the sciences and/or pre-medicine

Important components of a student's application also include the following:

- The student's academic performance (transcript), including course selection, grades, and class rank, if provided by the secondary school
- Counselor and teacher recommendations

- Essays
- Extracurricular and community involvement, including positive impacts on home and community
- Standardized testing, if provided (see below)

Standardized Testing

WashU has extended its test optional policy for applicants for admission through the fall semester in 2024. Applicants have the option of whether to submit standardized test scores. Students who are unable to or who elect not to submit their test scores will have the requirement automatically waived and will not be penalized. For those who do submit test scores, either SAT or ACT scores are acceptable, and neither the writing section nor SAT Subject Tests are required. Test results from any of the student's high school years are acceptable and we consider only the highest individual scores, whenever they occurred. Students may also submit additional testing (such as SAT Subject Tests, AP or IB exam scores, or other forms of testing) in addition to, or in lieu of, the SAT or ACT.

Applying for Admission

For a student's application file to be complete, we must receive the following materials by the deadline for the decision plan selected:

- Common Application or Coalition Application
- Nonrefundable \$75 fee or a simple fee-waiver request
- All required additional materials as outlined in the Office of Undergraduate Admissions guidelines, including a teacher recommendation, a school report, and official transcripts

Washington University also accepts applications through the QuestBridge Match process.

Decision Plans

Washington University offers two binding Early Decision options (Early Decision I, with a deadline of November 1 and notification by December 16, and Early Decision II, with a deadline of January 4 and notification by February 17) and Regular Decision, with a deadline of January 4 and notification by April 1 each year.

If Washington University is a student's first choice, we encourage the student to consider applying under an Early Decision plan. Applying Early Decision signifies a binding commitment that the student will attend Washington University if admitted. This option requires the applicant to submit a nonrefundable enrollment deposit within two weeks of receiving notification of admission. If admitted, the student must withdraw applications at other schools. A student may apply to only one school through a binding Early Decision plan.

Selecting a Division

We encourage students to think about where their interests may lie at the time they apply in terms of a major and a degree path to pursue. Applicants must select one of the academic divisions (Architecture, Art, Arts & Sciences, Business, or Engineering) or the Beyond Boundaries program as the primary point of interest. This allows us to assess proper preparation in the application review process and to provide effective academic advising from the start to help students realize their goals. Once admitted to a division, a student must spend at least one full semester in that division before requesting a change to another undergraduate division at Washington University. Students wishing to switch undergraduate divisions after the first semester do so by meeting with their dean's office. (Note: Olin Business School considers transfer requests after the first year.)

If English Is Not the Student's Primary Language

International applicants for whom English is a second language are required to demonstrate evidence of English language proficiency by submitting results from the TOEFL (<http://www.ets.org/toefl/>) (Test of English as a Foreign Language), IELTS (<http://www.ielts.org/>) (International English Language Testing System), or Duolingo English Test (<https://englishtest.duolingo.com/applicants/>). Applicants may also seek a waiver, based upon specific circumstances. Students should refer to the Office of Undergraduate Admissions for additional guidance.

Portfolios

In addition to the application materials referenced above, applicants to the College of Art are required to submit a portfolio of their work and applicants to the College of Architecture are encouraged to do so. All College of Art students will be considered for the Conway or Proetz Scholarship in art; Architecture students who submit portfolios will be considered for the Fitzgibbon Scholarship.

Applicants should submit their portfolios through SlideRoom and should include 12 to 15 pieces of recent work, which may include drawings, two- and three-dimensional pieces, and photographs. (If an applicant is submitting an architecture portfolio, they should not include CAD drawings or examples of their drafting skills.) The applicant may include additional information about each piece, such as the title, medium, dimensions and date completed.

Deferred Enrollment

Admitted students who have submitted their enrollment materials but wish to begin their studies at a later date may request to defer enrollment at Washington University for a period of one year, with extension possible for an additional year depending on

individual circumstances. Requests to defer enrollment ("take a gap year") are reviewed individually on a case-by-case basis and must be received by the Office of Undergraduate Admissions by May 15.

Deferred enrollment is designed for students who wish to engage in a substantive personal growth experience before enrolling or students completing compulsory national service and/or a religious commitment. Students who have deferred enrollment should not enroll as a full-time student at another institution. If a student pursues any course work during deferred enrollment, any courses taken during the deferred period are typically not accepted for credit. Final decisions about the transferability of any credit lies with the dean's office in each division.

Students interested in deferring enrollment should contact the Office of Undergraduate Admissions for important deadlines and procedures. Note: students deferring enrollment must reapply for financial assistance during the application cycle immediately preceding the date of desired entry.

Please visit the Admissions website (<https://admissions.wustl.edu/common-questions/>) for more information.

Statement of Admissions Conduct

Washington University in St. Louis is committed to the highest ethical and professional standards of conduct as an integral part of its mission, the promotion of learning. To achieve this goal, the university relies on each community member's ethical behavior, honesty, integrity and good judgment. Each community member should demonstrate respect for the rights of others. Each community member is accountable for his/her actions. Therefore, an offer of admission and a student's enrollment at the university are contingent upon the accurate and complete representation of information within the application for admission, as well as successful completion of their current studies. Applicants are obligated to notify the university of any changes in the information provided or responses submitted as part of their application. Washington University in St. Louis reserves the right to rescind an offer of admission or revoke a student's enrollment at any time if we receive information that, in our sole judgment and discretion, indicates that the information provided in the application is inaccurate or misleading or if new information leads the university to determine that a student is no longer a positive presence for study or participation in our community.

Transfer Admission

Transfer admission to Washington University is selective; the university receives more applications each year than it has space to admit. Washington University only accepts applications for transfer admission for entry in the fall semester.

An applicant should apply as a transfer student if they meet all of the following requirements:

1. The applicant has finished secondary school and completed some college study.
2. The applicant would like to be considered for admission with advanced standing (as a second-year or third-year student) at Washington University.
3. The applicant is interested in enrolling full-time in an undergraduate degree program with a specific academic focus.
4. The applicant has never attended any of Washington University's full-time, degree-granting schools.

For information about transfer application deadlines (<https://admissions.wustl.edu/how-to-apply/application-deadlines/>), please visit the Admissions website.

Preparation for Transfer

Transfer applicants are reviewed for their preparation to successfully enroll in their division of interest. Available space in each division varies every year. Generally speaking, strong applicants will have achieved at least a B+ average from a two- or four-year college in courses across a broad academic curriculum.

Some academic divisions require specific academic achievement and the completion of specific course work. For example, students with interests in business must demonstrate strong performance in math course work, including calculus, and students interested in engineering or the physical or biological sciences must demonstrate strong performance in science and mathematics course work, including calculus. Applicants are advised to review the suggested guidelines and specific course work needed for their intended area of study or intended professional pathway (e.g., pre-med); this is available on the Admissions website (<https://admissions.wustl.edu/how-to-apply/admission-requirements/>).

Additionally, transfer applicants must have left their current institution and all previous institutions in good standing and be eligible to return. If an applicant has been away from a formal academic setting for more than two years, we require the applicant to complete at least one year (30 units) of work at another college or university before applying for transfer admission.

Due to the very limited number of transfer spaces available, transfer applicants are ineligible to request deferred enrollment from one year to the next.

For additional admissions information on how to apply as a transfer applicant, please visit the Admissions website (<https://admissions.wustl.edu/how-to-apply/admission-requirements/>).

To apply as a transfer applicant, applicants must submit their high school transcript(s), their application, official transcripts of all previous college work, a Transfer Academic Evaluation (letter of recommendation), a Transfer Registrar Report (College Report), and the nonrefundable \$75 application fee (or fee

waiver) to the Office of Undergraduate Admissions. Admissions has extended its test optional policy for transfer applicants enrolling through the fall of 2024; applicants have the option of whether to submit standardized testing, such as the SAT or ACT.

Detailed information about applying for financial aid is available on the Student Financial Services website (<https://financialaid.wustl.edu/applying-for-aid/>) and in this *Bulletin*.

Transfer admission information for individual schools is listed as follows.

Transferring into Arts & Sciences

Each year, a number of students from other colleges and universities transfer into the College of Arts & Sciences. Upon their admission, the transfer student advisor reviews and evaluates their previous academic work. Full credit is normally granted for courses taken at accredited institutions, provided that the university offers comparable courses and that the student has completed the courses with a grade of C or better.

Please note: With the exception of course work taken during the 2020-21 academic year, online course work will not be considered for transfer credit. In addition, transfer credit may be counted where applicable and upon approval toward major or minor requirements. Transfer students must be enrolled for at least four consecutive full-time semesters, excluding summer terms, to satisfy the residency requirement. They must complete a minimum number of units at Washington University and a minimum number of units in the College of Arts & Sciences, in accordance with the table found under the heading "Transfer Students" on the Arts & Sciences Degree Requirements (p. 1100) page of this *Bulletin*.

All transfer students are assigned an academic advisor. When they declare a major, they also meet with an advisor in the major department. The full range of curricular opportunities offered through the college is open to transfer students when prerequisites are satisfied. An applicant should direct specific questions about transfer credit and course sequences at Washington University to the College of Arts & Sciences.

Transferring into Architecture

Places for transfer students are extremely limited and require strong performance in an arts and sciences curriculum, preferably with preparation in the visual arts. Placement into the design studio sequence is determined by a portfolio review and an evaluation of prior course work. To assist with appropriate placement, an interview with the associate dean of students, while not required, is strongly recommended. The applicant should bring a transcript to the meeting. The applicant's previous work should parallel as closely as possible the course work outlined on the Architecture Degree Requirements (p. 94) page.

Transfer applicants to the College of Architecture are **required** to submit a portfolio consisting of 12 to 15 pieces of recent work for review by the faculty through SlideRoom on the Common Application. This should include examples of work that indicate the applicant's technical and conceptual level of accomplishment. Some drawing should be from direct observation. If possible, applicants should submit examples of work in different media to demonstrate a range of art and design experiences.

Transferring into Art

The number of studio art credits that a transfer applicant has already earned, in combination with an evaluation of the applicant's portfolio, determines the level at which the student is admitted. As much as possible, the studio art courses taken at other institutions should correspond with the program at Washington University as outlined on the Art Degree Requirements (p. 186) page. To assist with appropriate placement, an interview with the associate dean of students, while not required, is strongly recommended. The applicant should bring a transcript to the meeting.

Transfer applicants to the College of Art are **required** to submit a portfolio through SlideRoom on the Common Application for faculty review. The portfolio should consist of 12 to 15 pieces of recent work and show a variety of art experiences, including drawings, work utilizing design principles, and some work in color. Applicants should include examples of work from basic drawing and design classes that indicate their technical and conceptual level of accomplishment, and some drawing should be from direct observation. If possible, applicants should submit examples of work in different media to demonstrate a range of art and design experiences. If applying to the second- or third-year level, some of the work should be in the area of the applicant's intended major.

Transferring into Business

The Olin Business School offers transfer enrollment during the fall semester. The strongest candidates for admission are able to demonstrate solid academic performance at a two- or four-year college that mirrors most of the academic requirements that our students complete during their first or second year of study. For a sophomore-level transfer candidate, this would include Calculus II at the college level. For a junior-level transfer candidate, this would include financial accounting, microeconomics, and perhaps macroeconomics and managerial accounting. All transfers to the Olin Business School must have completed an equivalent to Calculus II at the college level. Students who are admitted to the Olin Business School should expect a written course evaluation from the transfer student advisor within two weeks of receiving their offer of admission; this letter will indicate the courses that will be accepted by the business school. A maximum of 60 credits will be accepted toward our undergraduate degree. Students must earn at least a C grade in the course for the units to transfer to Washington

University. Typically, courses taken online are not accepted as transfer credit. However, online courses taken during the beginning of the COVID-19 pandemic (Spring 2020 and Summer 2020) will be transferable. Grades will not transfer to Washington University.

All transfer students are assigned an academic advisor. Transfer students must be enrolled for at least four consecutive full-time semesters to satisfy the residency requirement.

Please refer to the Degree Requirements (p. 1156) for the Bachelor of Science in Business Administration degree.

Transferring into Engineering

Applicants may apply for admission if they have completed a minimum of one year of college work elsewhere; however, the McKelvey School of Engineering does not accept transfer students who have already completed a bachelor's degree. The transfer applicant must demonstrate academic achievement (i.e., a grade average of B+ or better), with strength in mathematics (calculus) and science (chemistry/physics). Transfer applicants to the McKelvey School of Engineering should have completed one semester of an English composition course, two semesters of calculus-based physics, and sufficient calculus (typically three semesters) to be prepared for differential equations. Applicants interested in biomedical engineering should also have completed at least one semester of chemistry with lab and an introductory biology sequence that includes cellular, molecular and developmental biology as well as genetics. Applicants interested in chemical or environmental engineering should have completed at least one biology course and sufficient chemistry to be ready to take organic chemistry. After completing the application process, an evaluation of the applicant's record will be made to determine the transfer of college credit. Grades earned do not transfer, but the applicant must earn a letter grade of C- or better for the course credit to transfer. Courses taken on a pass/fail basis do not transfer.

To be recommended for any bachelor's degree, a transfer applicant must satisfy applicable requirements of the McKelvey School of Engineering as shown in the Degree Requirements (p. 1280) section of this *Bulletin*. Please note that all students earning an undergraduate engineering degree are required to complete a minimum of 60 course units at Washington University.

Pre-Matriculation Credit Units

Pre-matriculation credit units are earned before an applicant's enrollment at Washington University as a first-year student and can be applied toward a Washington University degree. A maximum of 15 units of pre-matriculation credit may be counted toward an undergraduate degree; these units of credit will count toward graduation but will not count toward the distribution requirements/meet general education requirements.* Sources for pre-matriculation credit units include Advanced Placement (AP) examinations, International Baccalaureate (IB)

courses, British Advanced (A) Levels, course credit earned by proficiency (e.g., Back Credit), and college credit earned after the student's sophomore year in high school. Credits earned via Arts & Sciences Pre-College Programs are considered to be pre-matriculation credit units and are subject to the same regulations. A transcript notation is made of all pre-matriculation credit units earned before enrollment in Washington University.

- *
 - A student in the **College of Arts & Sciences** may apply a maximum of 15 units of pre-matriculation credit toward any undergraduate degree; these units of credit will count toward graduation but will not count toward the distribution requirements. A transcript notation is made of all pre-matriculation credit units earned before enrollment in Washington University.
 - A student in the **Olin Business School** may apply a maximum of 15 units of pre-matriculation credit toward the Bachelor of Science in Business Administration undergraduate degree; these units of credit will count toward graduation but will not count toward the distribution requirements. A transcript notation is made of all pre-matriculation credit units earned before enrollment in Washington University.
 - A student in the **McKelvey School of Engineering** may apply a maximum of 15 units of pre-matriculation credit toward any undergraduate degree. A transcript notation is made of all pre-matriculation credit units earned before enrollment in Washington University.
 - A student in the **College of Art** may apply a maximum of 15 units of pre-matriculation credit toward an undergraduate degree; these units of credit will count toward graduation but will not count toward the distribution requirements. A transcript notation is made of all pre-matriculation credit units earned before enrollment in Washington University.
 - A student in the **College of Architecture** may apply a maximum of 15 units of pre-matriculation credit toward an undergraduate degree; these units of credit will count toward graduation but will not count toward the distribution requirements. A transcript notation is made of all pre-matriculation credit units earned before enrollment in Washington University.

Students who wish to receive pre-matriculation credit from their College Board AP examinations, International Baccalaureate courses, and British A-Level examinations should submit their official score reports to Washington University. All appropriate test scores will have course equivalents assigned to them and will be noted on the transcript. However, a maximum of 15 units of pre-matriculation credit will be awarded, provided credit has

not been already designated as the result of college course work having been transferred as well. If a student takes a course in residence for which they have already received AP/IB/A-Level credit, the AP/IB/A-Level credit will be removed automatically.

College Courses Prior to Washington University

A maximum of 15 units of pre-matriculation credit may be awarded for college courses completed at another college or university prior to matriculation, provided no other pre-matriculation credits have been awarded. In the College of Arts & Sciences, Sam Fox School of Design and Visual Arts, Olin Business School, and McKelvey School of Engineering, college courses completed at another college or university prior to matriculation must meet the following standards:

1. Taken after the sophomore year in high school
2. Taken at a fully accredited college or university
3. Taught on a college or university campus
4. Taught by a college or university faculty member
5. Enrolled in primarily by matriculated college students (i.e., high school graduates)
6. Not listed on the high school transcript, did not count toward the high school diploma/graduation requirements, and was not part of a high school/college dual credit program

Students in the **College of Arts & Sciences** who would like to apply to receive pre-matriculation credit for college courses completed at another college or university prior to matriculation should visit the College of Arts & Sciences website (<https://arts.wustl.edu/resources/policies-procedures/>).

Students in the **Olin Business School** who would like to apply to receive pre-matriculation credit for college courses completed at another college or university prior to matriculation should contact the Olin Business School (<https://olin.wustl.edu/EN-US/academic-programs/bs-business-administration/Pages/contact-us.aspx>).

Students in the **Sam Fox School of Design and Visual Arts** who would like to apply to receive pre-matriculation credit for college courses completed at another college or university prior to matriculation should visit the Sam Fox School website (<https://insidesamfox.wustl.edu/students/advising/policies/>) or contact the Sam Fox School registrar (samfoxregistrar@email.wustl.edu).

Students in the **McKelvey School of Engineering** who would like to apply to receive pre-matriculation credit for college courses completed at another college or university prior to matriculation should contact the McKelvey School of Engineering (<https://engineering.wustl.edu/offices-services/student-services/undergraduate-student-services/transfer-course-credit.html>) or email their questions about the transfer course equivalency review process to EUSS@wustl.edu.

Secondary School Course Work

Washington University does not recognize credit for courses taken in secondary schools (high schools) and taught by secondary (high school) instructors, even when offered under the aegis of a university. The university accepts credit for courses taken at a college or university and taught by faculty of a college or university, provided the course has not been credited toward the high school diploma.

Proficiency and Placement Examinations

Superior results on proficiency and placement examinations allow students to enter advanced courses at the beginning of their college career, to fulfill some requirements for a major or a minor by examination rather than by course work, and to earn credit toward their degree. Students will have all accepted pre-matriculation credit noted on their transcript so they may go directly into advanced courses.

Four types of examinations are recognized:

- 1. Washington University Placement Examinations.** Placement examinations (<https://artsci.wustl.edu/registration-101/#generic-article>) are administered by various departments and have different requirements for advanced course placement.
- 2. International Baccalaureate.** Students who have earned the International Baccalaureate diploma or who have successfully passed examinations in the program should consult a dean in their undergraduate division of the university about advanced course placement and credit. These scores may be used for placement or granting of degree credit, according to the recommendations of the various departments. Subsidiary-level scores are not recognized.
- 3. Advanced (A) Levels (A-Levels).** These grades may be used for placement or granting of degree credit, according to the recommendations of the various departments.
- 4. Advanced Placement (AP) Examinations.** These are used for placement, partial fulfillment of major or minor requirements, and the granting of degree credit, according to the recommendations of the various departments. Examinations are given by the College Board in May of each year for secondary school (high school) students who have been enrolled in college-level courses in the same subject or subjects of the exam. For the most current policy information, visit the College of Arts & Sciences Advanced Placement webpage (<https://artsci.wustl.edu/resources/ap-credit/>). Students who wish to receive pre-matriculation credit for their AP test scores must have their AP test scores sent to Washington University by contacting the College Board at www.collegeboard.org (<http://www.collegeboard.org/>) or 1-888-225-5427 (College Code 6929).

SAT Subject Tests: These examinations in modern languages are administered by the College Board. They are required for study in certain languages.

College Level Examination Program (CLEP): These scores are not accepted for credit or placement.

Back Credit Policy

East Asian Languages

Credit is typically awarded for completing the following courses with a grade of B- or better. Native speakers are not eligible for back credit, so evidence of secondary or post-secondary study of the language is required.

Chinese

Chinese 211 = 3 units for Chinese 102D
Chinese 360 = 3 units for Chinese 102D and 3 units for Chinese 212

Japanese

Japan 213 = 3 units for Japan 104D
Japan 412 = 3 units for Japan 104D and 3 units for Japan 214

Korean

Korean 217 = 3 units for Korean 118D
Korean 417 = 3 units for Korean 118D and 3 units for Korean 218

French (L34)

Credit is awarded for the following courses with a grade of B or better. Native speakers are not eligible for back credit, so evidence of secondary or postsecondary study of the language is required. No back credit is awarded for 102 or 301.

French 201D = 3 units for French 102D
French 307D = 3 units for French 201D and 3 units for French 102D
French 308D = 3 units for French 307D and 3 units for French 201D (credit awarded for placement, completion of the course is not required)

Germanic Languages and Literatures (L21)

Students receive the following back credit after successfully completing these courses with a grade of B- or better.

German 201D = 3 units for German 102D
German 202D = 3 units for German 102D and 3 units for German 201D
German 301D = 3 units for German 102D and 3 units for German 201D
German 302D = 3 units for German 102D and 3 units for German 201D

For students who started German at WashU prior to fall 2021:

German 210D = 3 units for German 102D

German 301D = 3 units for German 102D and 3 units for German 210D
German 302D = 3 units for German 102D and 3 units for German 210D

Greek (L09)

Students may be awarded 3 units of credit for Greek 101D upon completion of Greek 210. Students may be awarded 3 units of credit for Greek 101D and 3 units of credit for Greek 102D upon completion of Greek 317C or Greek 318C with a grade of B or better. Placement at the appropriate level is determined by departmental examination.

Italian (L36)

Credit is awarded for the following courses with a grade of B or better. Native speakers are not eligible for back credit, so evidence of secondary or postsecondary study of the language is required. No back credit is awarded for Ital 102 or Ital 301.

Ital 201D = 3 units for Ital 102D

Ital 307D = 3 units for Ital 201D and 3 units for Ital 102D

Ital 308D = 3 units for Ital 307D and 3 units for Ital 201D (credit awarded for placement; completion of the course is not required)

Jewish, Islamic, and Middle Eastern Languages

Credit is typically awarded for completing the following courses with a grade of B- or better. Native speakers are not eligible for back credit, so evidence of secondary or postsecondary study of the language is required.

Arabic

Arab 207D or Arab 208D = 3 units for Arab 108D

Arab 307D or Arab 308D = 3 units for Arab 207D and 3 units for Arab 208D

Arab 3075 or Arab 3085 = 3 units for Arab 207D and 3 units for Arab 208D

Arab 407 or Arab 408 = 3 units for Arab 3075 and 3 units for Arab 3085

Hebrew

HBRW 213D or HBRW 214D = 3 units for HBRW 106D

HBRW 320D or HBRW 322D = 3 units for HBRW 213D and 3 units for HBRW 214D

HBRW 384 or HBRW 385D = 3 units for HBRW 213D and 3 units for HBRW 214D

HBRW 4010 or HBRW 401W or HBRW 402 = 3 units for HBRW 320D and 3 units for HBRW 322D

Hindi

Hindi 201 or Hindi 202 = 3 units for Hindi 112D

Hindi 301 or Hindi 302 = 3 units for Hindi 201 and 3 units for Hindi 202

Urdu

Hindi 232 or Hindi 232A = 3 units for Hindi 151

Hindi 250 or Hindi 251 = 3 units for Hindi 151

Hindi 305 or Hindi 306 = 3 units for Hindi 250 and 3 units for Hindi 251

Latin (L10)

Students may be awarded 4 units of credit for Latin 101D and 4 units of credit for Latin 102D upon completion of Latin 301, Latin 3161, Latin 3171 or Latin 3181 with a grade of B or better. Placement in the appropriate course is determined by examination.

Mathematics (L24)

If students complete one of the following courses with a grade of C+ or better at Washington University, then they are eligible for back credit. Credit is not awarded twice for transfer or AP scores.

Math 132 = 3 units for Math 131

Math 233 = 3 units for Math 131 and 3 units for Math 132

All other courses = no credit

Russian (L39)

Students can receive back credit for up to 6 credits contingent upon successful completion (B or better) of the next level.

Native speakers are not eligible for back credit, so evidence of secondary or postsecondary study of the language is required.

Russ 322D or Russ 324D = 3 units for Russ 211D and 3 units for Russ 212D

Russ 211D or Russ 212D = 3 units for Russ 102D

Spanish (L38)

Credit is awarded for the following courses with a grade of B or better. Native speakers are not eligible for back credit, so evidence of secondary or postsecondary study of the language is required. No back credit is awarded for Span 101 or Span 223.

Span 201E = 3 units for Span 102D

Span 202 = 3 units for Span 201E and 3 units for Span 102D

Span 302* = 3 units for Span 202 and 3 units for Span 201E

Span 308E = 3 units for Span 302* and 3 units for Span 202 (credit awarded for placement; completion of the course is not required)

* Back credit for Span 302 can only be used for elective credit; it cannot be used toward a Spanish major or minor.

International Baccalaureate Policy

Biology (L41)

Grade 7, 6: 6 units of credit for Biol 100A (elective credit). Students who plan to major in Biology or who are pre-med normally will enroll in Biol 2960 during the spring of their first year and Biol 2970 during the fall of sophomore year.

Grade 5, 4, 3, 2, 1: No credit given.

Business/Organization

No credit given.

Chemistry (L07)

Those students who receive a 6 or 7 on the IB test in Chemistry will receive 3 units each of Chem 103 and Chem 104. Receipt of these credits has no bearing on the fulfillment of chemistry requirements for pre-medicine or any science major and cannot be used to satisfy prerequisites for Organic Chemistry. All students who wish to pursue a major or a pre-professional preparatory curriculum requiring general chemistry must take Chem 111A and Chem 112A and the associated labs, Chem 151 and Chem 152. Students who wish to exempt either the first or second semester of general chemistry, including the labs, must pass a placement exam administered by the Department of Chemistry during the first week of classes in the fall.

Grade 7, 6: 6 units of credit: 3 units each of Chem 103 and Chem 104. These units do not replace Chem 111A or Chem 112A. Chem 112A must be completed prior to registration in Chem 261 or Chem 401 or any advanced courses in Chemistry.

Grade 5, 4, 3, 2, 1: No credit given.

Classical Greek (L09)

No credit awarded. Placement is determined by departmental examination. Students who place into Greek 317C or higher may be awarded 6 units of back credit upon completion of a Greek course at the 300 level or higher with a grade of B or better. Students who place into Greek 210 may be awarded 3 units of back credit upon completion of Greek 210 with a grade of B or better.

Computer Science (E81)

No credit awarded, but a student can take the CSE 131 placement exam (<https://cse.wustl.edu/academics/placement-exam.html>). Contact the CSE office at 314-935-6160 for more information.

Economics (L11)

Grade 7: 3 units of undergraduate general degree credit, contingent upon completion of Econ 4011 with a grade of B or better. The credit will not count toward the economics major/minor. Placement into any economics course is permitted (assuming other prerequisites are met); however, bypassing introductory courses may be disadvantageous, and students are strongly encouraged to consult with the department's academic coordinator. Bypassing Econ 1011 and/or Econ 1021 requires the completion of additional economics elective credit for the major/minor.

Grade 6, 5, 4, 3, 2, 1: No credit given. Not recommended to bypass Econ 1011 or Econ 1021.

English Literature (L14) and Writing (L13)

Grade 7: 3 units of elective credit (L13 0001) contingent upon completing L59 111-120, L59 100 or L13 103 with a grade of B or better. Please note that no credit is given for writing or literature courses.

Grade 6, 5, 4, 3, 2, 1: No credit given.

French (L34)

No credit awarded. Students will need to take the departmental placement exam. Students who place into and complete higher-level courses can earn up to 6 units of back credit for preceding courses.

Geography

No credit awarded.

German A1, German B (Modern Foreign Languages) (L21)

Students should take the departmental placement exam. Students who place into and complete these courses with a B- or better will receive the following credit:

German 201D = 3 units for German 102D

German 202D = 3 units for German 102D and 3 units for German 201D

German 301D = 3 units for German 102D and 3 units for German 201D

German 302D = 3 units for German 102D and 3 units for German 201D

Greek (L09)

Students may be awarded 6 units of back credit upon completion of a Greek course at the 300 level or above with a grade of A or better. Placement at the appropriate level is determined by departmental examination.

History (L22)

American History: No credit awarded.

European History: No credit awarded.

African History: No credit awarded.

Islamic World History: No credit awarded.

South and Southeast Asia History: No credit awarded.

South Asia and Middle East History: No credit awarded.

Italian (L36)

No credit awarded. Students will need to take the departmental placement exam. Students who place into and complete higher-level courses can earn up to 6 units of back credit for preceding courses.

Latin (L10)

Students who place into Latin 301 or above may be awarded 4 units of back credit for Latin 101D and 4 units of back credit for Latin 102D upon completion of the course with a grade of B or better. Placement at the appropriate level is determined by departmental examination.

Mathematics (L24)

Mathematics HL:

Grade 7, 6: 3 units of credit for Math 131.

Grade 5, 4, 3, 2, 1: No credit awarded.

Music (L27)

Grade 7, 6: 3 units of elective credit for students who do not major or minor in music.

Grade 5, 4, 3, 2, 1: No credit awarded.

Norwegian

No credit awarded.

Philosophy (L30)

Grade 7, 6: 3 units of credit for Phil 125C.

Grade 5, 4, 3, 2, 1: No credit awarded.

Physics (L31)

Physics HL: Grade 7: 6 units of credit for Physics 113A and 114A.

Grade 6, 5: 3 units of credit for Physics 113A.

Grade 4, 3, 2, 1: No credit awarded.

Physics EE: No credit awarded.

Psychological & Brain Sciences (L33)

Grade 7, 6: Waives the Psych 100B Introduction to Psychology requirement, but no college credit is awarded.

Social Anthropology (L48)

Credit is evaluated on an individual basis by the anthropology department.

Spanish (L38)

No credit awarded. Students will need to take the departmental placement exam. Students who place into and complete higher-level courses can earn up to 6 units of back credit for preceding courses.

Visual/Studio Arts (F20)

Grade 7: 3 units of elective credit.

Grade 6, 5, 4, 3, 2, 1: No credit given.

A-Level Tests Policy

Accounting (B50)

Advanced Level grades of A, B, C & D to be awarded 3 units of accounting elective credit (B50 0001).

Biology (L41)

Grades of A or B to be awarded 3 units of credit equivalent to Biol 100A.

Business Studies (B53)

Advanced Level grades of A, B, C & D to be awarded 3 units of management elective credit (B53 0001).

Chemistry (L07)

A grade of A to be awarded 3 units each for the following courses: Chem 103 and Chem 104. A grade of B to be awarded 3 units for the following course: Chem 103.

Computer Science (E81)

No credit given but a student can take the CSE 131 placement exam (<https://cse.wustl.edu/academics/placement-exam.html>). Contact the CSE office at 314-935-6160 for more information.

Economics (L11)

3 units of undergraduate general degree credit for students with a grade (on the A-level exam) of A, contingent upon completion of Econ 4011 with a grade of B or better. The credit will not count toward the economics major/minor. Placement into any economics course is permitted (assuming other prerequisites are met); however, bypassing introductory courses may be disadvantageous, and students are strongly encouraged to consult with the department's academic coordinator. Bypassing Econ 1011 and/or Econ 1021 requires the completion of additional economics elective credit for the major/minor.

French (L34)

A grade of A to be awarded 3 units for French 102D and 3 units of French 201D, with 3 additional units to be awarded contingent upon successful completion of a 300-level course (other than conversation). A grade of B to be awarded 3 units upon successful completion of a 300-level course.

German (L21)

Students should take the departmental placement exam. Students who place into and complete these courses with a B- or better will receive the following credit:

German 201D = 3 units for German 102D

German 202D = 3 units for German 102D and 3 units for German 201D

German 301D = 3 units for German 102D and 3 units for German 201D

German 302D = 3 units for German 102D and 3 units for German 201D

Greek (L09)

Students may be awarded 6 units of back credit upon completion of a Greek course at the 300 level or above with the grade of a B or better or 3 units of back credit upon completion of Greek 210 with a grade of B or better. Placement at the appropriate level is determined by departmental examination.

History (L22)

Grades of A or B to be awarded 3 units of elective credit.

Latin (L10)

Students who place into Latin 301 or above may be awarded 4 units of back credit for 101D and 4 units of back credit for 102D upon completion of the course with a grade of a B or better. Placement at the appropriate level is determined by departmental examination.

Mathematics (L24)

Advanced Level grades of A and B will be awarded 3 units of credit for Math 131 automatically. An Advanced Level grade of C will only receive credit for Math 131 upon successful completion of Math 132 with a grade of C+ or better at Washington University.

Mathematics (Further) (L24)

Advanced Level grades of A and B will be awarded 6 units of credit for Math 131 and Math 132 automatically. An Advanced Level grade of C will only receive credit for Math 131–132 upon successful completion of Math 233 with a grade of C+ or better at Washington University (or credit for Math 131 will be given for completion of Math 132); this course essentially covers all of the material in Math 131–132 together with some extra physics and probability statistics.

Music (L27)

A grade of A to be awarded 3 units each for the following courses: Music 121C and Music 122C.

Physics (L31)

A grade of A on the physics A-level exam will earn 3 units of credit for Physics 113A and 3 units of credit for Physics 114A. A grade of B on the physics A-level exam will earn 3 units of credit for Physics 113A.

Psychological & Brain Sciences (L33)

A grade of A waives the Psych 100B Introduction to Psychology requirement, but no college credit is awarded.

Spanish (L38)

Credit is awarded for the following courses with a grade of a B or better. Native speakers are not eligible for back credit, or secondary or postsecondary study of the language is required. No back credit is awarded for Span 101 or Span 223.

Span 201E = 3 units for Span 102D

Span 202 = 3 units for Span 201E and 3 units for Span 102D

Span 302 = 3 units for Span 202 and 3 units for Span 201E

Span 308E = 3 units for Span 302* and 3 units for Span 202 (credit awarded for placement, completion of the course is not required)

* Back credit for Span 302 can only be used for elective credit; it cannot be used toward a Spanish major or minor.

Writing (L13)

No credit or placement given.

Advanced Placement Policy

Art History (L01) — Test: AHS

Grade 5, 4: 3 units of elective credit (Art-Arch 0001) contingent upon the completion of a 300- or 400-level Art History course with a grade of B or better. Students in the Sam Fox School must complete Art-Arch 113.

Grade 3, 2, 1: No credit given.

Biology (L41) — Test: BIO

Grade 5, 4: 6 units of credit for Biol 100A (elective credit). Students who plan to major in Biology or who are pre-medicine normally will enroll in Biol 2960 in the spring of freshman year and Biol 2970 in the fall of sophomore year.

Grade 3, 2, 1: No credit given.

Chemistry (L07) — Test: CHE

Those students who receive a 5 on the AP test in Chemistry will receive 3 units each of Chem 103 and Chem 104. Those students who receive a 4 will receive 3 units of Chem 103. Receipt of these credits has no bearing on the fulfillment of chemistry requirements for pre-medicine or any science major and cannot be used to satisfy prerequisites for Organic Chemistry. All students who wish to pursue a Chemistry major must take Chem 111A and Chem 112A and the associated labs, Chem 151 and Chem 152. Students who wish to pursue another major or a pre-professional preparatory curriculum requiring general chemistry must take either Chem 105 and Chem 106 or Chem 111A and 112A (specific requirements defined by the major program) and the associated labs, Chem 151 and Chem 152. Students who wish to exempt either the first or second semester of general chemistry, including the labs, must pass a placement exam administered by the Department of Chemistry during the first week of classes in the fall.

Grade 5: 6 units of credit: 3 units each of Chem 103 and Chem 104. These units do not replace Chem 105/106 or Chem 111A/112A. Chem 106 or Chem 112A must be completed prior to registration in Chem 261 or Chem 401 or any advanced courses in Chemistry.

Grade 4: 3 units of Chem 103. These units do not replace Chem 105/106 or Chem 111A/112A.

Grade 3, 2, 1: No credit given.

Computer Science (E81) — A Test

Grade 5, 4: 3 units of general elective credit for E81 CSE 131. Students who want to confirm their skills can take the online placement exam (<https://cse.wustl.edu/academics/placement-exam.html>).

Grade 3, 2, 1: No credit or placement given, but a student can take the online placement exam (<https://cse.wustl.edu/academics/placement-exam.html>) and receive "proficiency" credit if a passing score is achieved.

Computer Science (E81) — AP Computer Science Principles/Test CSP

Grade 5, 4: 3 units of general elective credit for E81 CSE 013. Students who want to confirm their skills can take the online placement exam (<https://cse.wustl.edu/academics/placement-exam.html>).

Grade 3, 2, 1: No credit given. Students who want to confirm their skills can take the online placement exam (<https://cse.wustl.edu/academics/placement-exam.html>).

Economics–Micro (L11) — Test: EMI

Grade 5: 3 units of undergraduate general degree credit (L11 0001), contingent upon completion of Econ 4011 with a grade of B or better. The credit will not count toward the economics major/minor. Placement into any economics course having an Econ 1011 prerequisite is permitted; however, bypassing introductory courses may be disadvantageous, and students are encouraged to consult with the department's academic coordinator. Bypassing Econ 1011 requires the completion of additional economics elective credit for the major/minor.

Grade 4, 3, 2, 1: No credit given. Not recommended to bypass Econ 1011.

Economics–Macro (L11) — Test: EMA

Grade 5: 3 units of undergraduate general degree credit (L11 0001), contingent upon completion of Econ 4021 with a grade of B or better. The credit will not count toward the economics major/minor. Placement into any economics course having an Econ 1021 prerequisite is permitted (assuming other prerequisites are met); however, bypassing introductory courses may be disadvantageous, and students are encouraged to consult with the department's academic coordinator. Bypassing Econ 1021 requires the completion of additional economics elective credit for the major/minor.

Grade 4, 3, 2, 1: No credit given. Not recommended to bypass Econ 1021.

English: Language and Composition (L13) or Literature and Composition (L14) — Test: ENG

Grade 5: 3 credits of elective credit (L13 0001) contingent upon completing L59 111-120, L59 100 or L13 Writing 103 with a grade of B or better.

Grade 4, 3, 2, 1: No credit given.

Environmental Science (L81)

No credit or placement given.

French Language (L34) — Test: LNF

To receive Advanced Placement credit in French for a score of 3 or 4, the student must complete a 300-level course with a grade of B or better.

Grade 5: 3 units of credit for French 102D and 3 units of credit for French 201D. Students may enroll in a 300-level course conducted in the language.

Grade 4: Automatically grants 3 credits for French 102D, and gives another 3 extra credits for French 201D contingent upon satisfactory completion of a 300-level course with a B or better — other than conversation — conducted in the language.

Grade 3: 3 units of credit for French 102D and 3 units of credit for French 201D, contingent upon completion of a 300-level course with a grade of B or better — other than conversation — conducted in the language.

Grade 2, 1: No credit given.

French Literature (L34) — Test: LNF

To receive Advanced Placement credit in French for a score of 3 or 4, students must complete a 300-level course with a grade of B or better.

Grade 5: 3 units of credit for French 102D and 3 units of credit for French 201D. Students may enroll in a 300-level course conducted in the language.

Grade 4: Automatically grants 3 credits for French 102D, and gives another 3 extra credits for French 201D contingent upon satisfactory completion of a 300-level course with a B or better — other than conversation — conducted in the language.

Grade 3: 6 units of credit equivalent to French 102D and French 201D, contingent upon completion of a 300-level course with a grade of B or better — other than conversation — conducted in the language.

Grade 2, 1: No credit given.

German (L21) — Test: LNG

Grade 5: 3 units of credit for German 102D and 3 units for German 201D; students may enroll in German 202D.

Grade 4: 3 units of credit for German 102D; an additional 3 units of credit for German 201D* awarded upon satisfactory completion of German 202D (B- or better).

Grade 3: 3 units of credit for German 102D* and 3 units for German 201D, awarded upon satisfactory completion of German 202D (B- or better).

Grade 2, 1: No credit given. Students should take the departmental placement exam.

* Students may receive this credit only if they start their language study with German 202D.

History (L22)

American History — Test: HSA (A grade of 5 on the AP exam can fulfill Introductory course requirements for the history major and minor.)

Grade 5: 3 units of credit for History 163.

Grade 4: 3 units of elective credit for History 0001.

Grade 3, 2, 1: No credit given.

European History — Test: HSE (A grade of 5 on the AP exam can fulfill Introductory course requirements for the history major and minor.)

Grade 5: 3 units of credit for History 102.

Grade 4: 3 units of elective credit for History 0001.

Grade 3, 2, 1: No credit given.

World History: Modern — Test: HSW (A grade of 5 on the AP exam can fulfill Introductory course requirements for the history major and minor.)

Grade 5: 3 units of credit for History 164.

Grade 4: 3 units of elective credit for History 0001.

Grade 3, 2, 1: No credit given.

Latin (L10) — Test: LNL

Grade 5, 4: 3 units of credit for Latin 101D and 3 units of credit for Latin 102D upon completion of Latin 301, Latin 3161, Latin 3171, or Latin 3181 with a grade of B or better. Placement at the appropriate level is determined by departmental examination.

Grade 3, 2, 1: No credit or placement given. Placement at the appropriate level is determined by departmental examination.

Mathematics (L24) — Test: MAB

The mathematics and statistics department gives a placement exam, which is available online and also during the fall orientation period. We ask that all entering students planning to enroll in a calculus course (except those with an AP score of 4 or 5) take the placement exam available on Canvas. Only an AP score of 5 receives automatic credit.

Grade 5: 3 units of credit for Math 131. The student will be placed into Math 132.

Grade 4: The student will be placed into Math 132. Students can still obtain credit for Math 131 by successfully completing Math 132 (see the Back Credit policy). Students should contact their major program about the program's specific requirements.

Grade 3: Students with scores of less than 4 should consult with their advisors about placement based on the Mathematics and Statistics Department Placement Test, their SAT scores, and their high school record. It will be helpful to the advisor if the student brings the title and the author's name of the calculus book used in high school and a photocopy of its table of contents, indicating which chapters were covered.

Grade 2, 1: Students will be placed into Math 131.

Mathematics (L24) — Test: MBC

The mathematics and statistics department gives a placement exam, which is available online and also during the fall orientation period. We ask that all entering students planning to enroll in a calculus course (except those with an AP score of 4 or 5) take the placement exam available on Canvas. Only an AP score of 5 receives automatic credit.

Grade 5: 3 units of credit for Math 131 and 3 units of credit for Math 132. The student will be placed into Math 233. **Note:** An AB Subscore of 5 will earn 3 units of credit for Math 131.

Grade 4: The student will be placed into Math 233. Students can still obtain credit for Math 132 by successfully completing Math 233 (see the Back Credit policy). Students should contact their major program about the program's specific requirements for math waivers.

Grade 3: Students with scores of less than 4 should consult with their advisors about placement based on the Mathematics and Statistics Department Placement Test, their SAT scores, and their high school record. It will be helpful to the advisor if the student brings the title and the author's name of the calculus book used in high school and a photocopy of its table of contents, indicating which chapters were covered.

Grade 2, 1: Students will be placed into Math 132.

Note: Any student entering the Calculus 131–132–233 sequence can receive AP credit for earlier courses in this sequence by successful completion of the next course in the sequence with a grade of C+ or better at Washington University. In all cases, this assumes that the student does not already have credit for the preceding courses (e.g., by transfer from another college or university).

Music Literature/Listening (L27) — Test: MUL

Grade 5: 3 units of elective credit for Music 0001.

Grade 4: 3 units of elective credit for Music 0001.

Grade 3, 2, 1: No credit given.

Music Theory (L27) — Test: MUT

Grade 5: 3 units of elective credit for Music 0001.

Grade 4: 3 units of elective credit for Music 0001.

Grade 3, 2, 1: No credit given.

Physics (L31)

Physics 1 Test — Test: P1

Grade 5: 3 units of elective credit for Physics 113A. This corresponds to the first semester in a two-semester, algebra-based introductory physics sequence. Students who require calculus-based physics for course or major requirements should enroll in Physics 191 and Physics 191L in the fall semester.

Grade 4, 3, 2, 1: No credit or placement given.

Physics 2 Test — Test: P2

Grade 5: 3 units of elective credit for Physics 114A. This corresponds to the second semester in a two-semester, algebra-based introductory physics sequence. Students who require calculus-based physics for course or major requirements should enroll in Physics 192 and Physics 192L in the spring semester. Students may not enroll in Physics 192 without first taking Physics 191.

Grade 4, 3, 2, 1: No credit or placement given.

C Test (Mechanics) — Test: PCM

Grade 5: 4 total units of credit for Physics 191 (3 credits) and Physics 191L (1 credit). This corresponds to the first semester in a two-semester, calculus-based introductory physics sequence. Students may enroll in Physics 192 and Physics 192L, the second semester of this introductory calculus-based physics sequence, in the spring semester. Physics majors and students interested in an advanced treatment of introductory physics should enroll in Physics 193 and Physics 191L in the fall semester, followed by Physics 194 and Physics 192L in the spring.

Grade 4: 3 units of elective credit for Physics 113A. This corresponds to the first semester in a two-semester, algebra-based introductory physics sequence. Students who require calculus-based physics for course or major requirements should enroll in Physics 191 and Physics 191L in the fall semester.

Grade 3, 2, 1: No credit given.

C Test (Electricity and Magnetism) — Test: PCE

Grade 5: 4 total units of credit for Physics 192 (3 credits) and Physics 192L (1 credit). This corresponds to the second semester in a two-semester, calculus-based introductory physics sequence. Students who require

calculus-based physics for course or major requirements should enroll in Physics 193 and Physics 191L in the fall semester, followed by Physics 194 and Physics 192L in the spring.

Grade 4: 3 units of elective credit for Physics 114A.

This corresponds to the second semester in a two-semester, algebra-based introductory physics sequence. Students who require calculus-based physics for course or major requirements should enroll in Physics 191 and Physics 191L in the fall semester.

Grade 3, 2, 1: No credit given.

Political Science (L32)

American Politics — Test: POA

Grade 5, 4: 3 units of undergraduate credit for Pol Sci 0001, contingent upon completion of an advanced (300-/400-level) course in American politics with a grade of C or better. The credit will not count toward the political science major/minor, but it waives the Pol Sci 101B requirement.

Grade 3, 2, 1: No credit given.

Comparative Politics — Test: POC

Grade 5, 4: 3 units of undergraduate credit for Pol Sci 0002, contingent upon completion of an advanced (300-/400-level) course in comparative politics with a grade of C or better. The credit will not count toward the political science major/minor, but it waives the Pol Sci 102B requirement.

Grade 3, 2, 1: No credit given.

Psychological & Brain Sciences (L33)

Grade 5: Waives the Psych 100B Introduction to Psychology requirement, but no college credit is awarded.

Grade 4, 3, 2, 1: No credit or placement given.

Spanish Language (L38) — Test: LNS

No credit awarded. All students wishing to enroll in Spanish must take the online placement exam. Course placement is decided solely on the basis of this exam and not by AP scores. Students who place into and complete higher-level courses can earn up to 6 units of back credit for preceding courses.

Spanish Literature (L38) — Test: LNS

No credit awarded. All students wishing to enroll in Spanish must take the online placement exam. Course placement is decided solely on the basis of this exam and not by AP scores. Students who place into and complete higher-level courses can earn up to 6 units of back credit for preceding courses.

Statistics (L24) — Test: STA

Grade 5: Students with a 5 on the AP Statistics Exam will receive 3 units of credit for Math 2200.

Grade 4, 3, 2, 1: No credit given.

2D Art and Design (F20) — Test: A2D

Grade 5: 3 units of elective credit for Fine Arts 0001.

Grade 4, 3, 2, 1: No credit given.

3D Art and Design (F20) — Test: A3D

Grade 5: 3 units of elective credit for Fine Arts 0001.

Grade 4, 3, 2, 1: No credit given.

Drawing (F20) — Test: DRW

Grade 5: 3 units of elective credit for Fine Arts 0001.

Grade 4, 3, 2, 1: No credit given.

Financial Support

Washington University is committed to continuing to find new ways to provide students the resources they need to engage fully in academic and campus life. Student Financial Services has worked to create a variety of special programs (<https://financialaid.wustl.edu/how-aid-works/affordability/>) to ensure access and affordability for students regardless of their ability to pay tuition and fees.

Washington University bases most financial assistance on a careful assessment of financial need. The university also offers a limited number of academic scholarships and fellowships awarded based primarily on academic achievement and outstanding promise for excellence at WashU. Other financing options and innovative plans — such as the university's Partners in Education with Parents program (<https://financialaid.wustl.edu/payment-financing/partners-in-education-with-parents-pep-2/>) and the Installment Payment Plan (<https://financialaid.wustl.edu/payment-financing/installment-payment-plan/>) (the monthly payment plan administered by CASHNet) — assist students and families with financing the university's costs.

Eligible Washington University undergraduate students receive need-based financial assistance, which is offered in combinations of scholarships, grants, federal student loans, and part-time on-campus employment.

Applicants' financial circumstances are considered individually during the financial assistance process. When evaluating the extent of each applicant's need, the university considers many factors besides family income, such as the number of people in the family, the number of children in college at the same time, and special financial circumstances.

The university strives to make attendance a financial reality for qualified students, even when financial need is great. Information about application procedures may be obtained from Student Financial Services (<https://financialaid.wustl.edu/>).

Veterans. Washington University is committed to ensuring the success of all military-connected students in their pursuit of attitudes, skills, and habits of lifelong learning and leadership. For more information about how we support veterans, military service members, spouses, dependent children, caregivers, survivors, and ROTC Cadets, visit the Office of Military & Veteran Services (<https://veterans.wustl.edu/>). Specific information about benefits (<https://veterans.wustl.edu/students/va-educational-benefits/>) is available.

Scholarship Funds

Many generous Washington University donors provide scholarship funds to assist deserving students who need financial support to attend WashU. These scholarships are included in financial assistance awards. In addition, all applicants for admission are jointly considered for scholarships offered

by academic divisions based on merit and financial need. Our Signature Scholars Programs — Danforth, Ervin, and Rodriguez — are awarded through a special application process. Signature Scholarships are awarded based primarily on merit, with consideration for financial need. For scholarship information (<https://admissions.wustl.edu/cost-aid/scholarships/>), please visit the Admissions website.

Army ROTC Scholarships

High school seniors can apply for four-year Army Reserve Officers' Training Corps (ROTC) scholarships. Current students can apply for three- and two-year scholarships. Students pursuing a graduate or advanced degree can compete for a two-year scholarship. Army ROTC scholarships are awarded based on merit, and they cover the full amount of tuition and mandatory fees. Army ROTC scholarships also include support for textbook purchases once per semester and a monthly subsistence allowance during the period that the student is in school on scholarship status. Some students who receive Army ROTC scholarships also receive stipends from the university toward room and board. The source of the student's stipend will be the university, the federal or state government, or other scholarships, depending on the student's eligibility for financial assistance. For more information, contact the Military Science Department, Washington University in St. Louis, 700 Rosedale Ave., Suite 1120, St. Louis, MO 63112; call 314-935-5521; or visit the Washington University Army ROTC website (<http://rotc.wustl.edu>). The Four-Year Scholarship application may be submitted through the Army ROTC National Headquarters website (<http://www.goarmy.com/rotc/>).

Air Force ROTC Scholarships

High school seniors may compete for three- or four-year Air Force ROTC (AFROTC) scholarships, which cover up to full tuition at Washington University, plus a monthly stipend and allowance for books. The In-College Scholarship Program (ICSP) requirements vary from year to year and require at least one semester of AFROTC participation prior to application. Extensive information and the electronic application portal can be found on the AFROTC website (<http://www.afrotc.com>). Some students who receive AFROTC scholarships also receive stipends from the university for room and board. The source of the student's stipend will be the university, the federal or state government, or other scholarships, depending on the student's eligibility for financial assistance.

Different types of AFROTC merit-based scholarships are available to students studying at Washington University. However, a scholarship is not required to join AFROTC or to successfully begin a career as an Air Force officer. For scholarship details, contact AFROTC Detachment 207 at 314-977-8311 or afrotc@slu.edu.

Corporation Awards to Children of Employees

A number of companies have scholarship programs open to the children of their employees. Inquiries about such plans should be made through the parents' employers.

Loans

Washington University participates in federal student and parent loan programs. These loans provide reasonable interest rates and long-term repayment schedules.

Partners in Education with Parents (PEP)

Partners in Education with Parents (PEP) (<https://financialaid.wustl.edu/payment-financing/partners-in-education-with-parents-pep-2/>) is an innovative multiple-option program financed and operated by Washington University to help parents and families pay university charges for tuition, fees, room and board.

PEP continues Washington University's commitment to a partnership with the families of our students. This partnership includes a variety of choices to make the family contribution as affordable as possible. Families may choose the Multiyear Option, Prepayment Option, Combination Option or Annual Option.

The PEP Multiyear Option allows families to borrow one initial amount at the start of the entering year to cover all or part of four years of tuition, fees, room and board charges. This option freezes the charges covered by PEP at the entering-year rate based on the percentage of costs covered by the PEP (participation rate). Families can benefit from the competitive fixed interest rate and take up to 10 years to repay. There is no penalty for prepayment.

The PEP program also offers the choice to prepay, without borrowing from Washington University, all or part of the tuition, fees, room and board charges for all four undergraduate years at the entering-year rate. This Prepayment Option assures families that the prepaid portion of college expenses is covered and will not be subject to later increases in university costs.

Families can also choose the Combination Option, which allows them to prepay a portion of the charges and then borrow the rest from Washington University. This combination works well for families who may have saved for a portion or most of their student's college expenses and who want to take advantage of the benefit of increasing their participation rate by using PEP to finance the remaining charges.

If the family prefers to borrow for college costs one year at a time, then the PEP Annual Option might be their best choice. Each year, the family can borrow an amount up to or equal to that year's tuition, fees, room and board charges and take up to 10 years to repay. There is no penalty for prepayment, and they can benefit from the competitive fixed interest rate.

Financing under the Multiyear, Combination or Annual Options requires no security or collateral from participants. A prospective participant must have a good credit rating and provide evidence of being able to meet the required monthly payments to be approved for a loan.

More information about Partners in Education with Parents is available by contacting Student & Parent Loan Programs, Attn: PEP, Washington University in St. Louis, MSC 1041-105-05, One Brookings Drive, St. Louis, MO 63130-4899; calling 314-935-4139 or 800-468-0569; faxing 314-696-0563; emailing pepfinancial@wustl.edu; or visiting the Partners in Education with Parents website (<https://financialaid.wustl.edu/payment-financing/partners-in-education-with-parents-pep-2/>).

Installment Payment Plan (Monthly Payment Plan)

The monthly payment plan (<https://financialaid.wustl.edu/payment-financing/installment-payment-plan/>), which is administered by CASHNet, provides for the payment of the total annual university charges — tuition, fees, room and board — in monthly installments. Information about this plan is provided to all admitted students or may be obtained directly from Student Financial Services. For details, visit the Student Financial Services website (<https://financialaid.wustl.edu/>).

Federal Work-Study

If students apply for financial assistance, they are considered for the Federal Work-Study Program. Students who participate in this program work an average of 10 to 12 hours per week on campus and typically earn up to \$2,500 over the course of the academic year. Money earned through Federal Work-Study is paid directly to the student, typically through biweekly direct deposit; it is not applied to the student's university account.

Academic Load Status for Financial Aid, Immigration and Enrollment Verification

Status	Enrolled Units of Credit
Full-time	12+
Three-quarter-time	11.99-9
Half-time	8.99-6
Less than half-time	<6

Tuition & Fees

Tuition

Tuition is the major source of income to support the cost of undergraduate education. Most of the remaining cost is generously funded by gifts from the university's alumni and friends and from income from the university's endowment.

In setting the tuition rate, our emphasis is on being able to hire a high-caliber faculty and to offer extensive opportunities to our students. For the 2022-23 academic year, the tuition rate also reflects, among other things, the cost of comprehensive measures we are taking that are necessary to enhance the safety of all members of our community.

Tuition for the 2022-23 academic year is \$29,710 per semester for full-time study. Full-time study is considered to be 12 to 18 units. If students enroll in more than 21 units per semester, they will pay additional tuition of \$2,476 for each credit unit beyond the 21. Students may be eligible to pay the per-credit tuition rate for enrollment below 12 units if they are approved for a reduced course load, either by their school upon confirmation they are in their ninth semester and poised to complete degree requirements, or by Disability Resources.

If the public health situation changes such that the university must suspend in-person classes, instruction will be provided remotely or through other alternative means, and there will be no tuition refunds based on that transition. If a student chooses to withdraw, entitlement to a partial refund will be determined in accordance with normal refund policies.

First-year, first-semester students may register over the summer or after beginning orientation programs closer to the start of the fall semester. For all subsequent semesters, continuing students have the chance to register in spring for the following fall semester and in fall for the following spring semester. Students will typically be billed for tuition in July for the fall semester and in December for the spring semester. Students must pay tuition by the date specified on the bill or they will incur a late fee.

If a student cannot afford to pay the full tuition bill, they should explore the university's extensive financial assistance opportunities, which are described in the Financial Support (p. 45) section of this *Bulletin*.

Many families prefer to pay educational expenses on a monthly basis. The Installment Payment Plan (<https://financialaid.wustl.edu/payment-financing/installment-payment-plan/>) allows students and families to spread all or part of the academic year's expenses over equal monthly payments. The Washington University Partners in Education with Parents (PEP) ([https://financialaid.wustl.edu/payment-financing/partners-in-](https://financialaid.wustl.edu/payment-financing/partners-in-education-with-parents-pep-2/)

[education-with-parents-pep-2/](https://financialaid.wustl.edu/payment-financing/partners-in-education-with-parents-pep-2/)) plan offers monthly payment options over a period as long as 10 years at a competitive, fixed interest rate. The PEP plan is described in the Financial Support (p. 45) section of this *Bulletin*.

A student's family should begin planning for educational costs as soon as possible following the decision to enroll. It is important to allow sufficient time to complete financial arrangements prior to registration.

Fees

Student Activities: The mandatory student activities fee is 1% of tuition; for the 2022-23 academic year, it is \$297 per semester. This special fee may vary from year to year. Information about the fee may be obtained from the Department of Campus Life (<https://campuslife.wustl.edu/>).

Student Health and Wellness: Washington University has a student health and wellness fee designed to improve the health and wellness of the entire Washington University community. The fee of \$288 is billed to the student tuition statement each semester. In addition, to protect the health of our entire community, the university requires all full-time degree-seeking students to have health insurance. Students either must purchase the Washington University Student Health Insurance Plan or prove that they have adequate coverage through another plan. The cost of the Washington University Student Health Insurance Plan, as well as instructions for obtaining a waiver through proof of adequate coverage, will be provided to enrolled students.

Late Registration: Students may register for classes through the add/drop period. Students in University College programs who register after that period will incur a flat late fee of \$50.

Returned Checks: The university assesses a service charge for handling and processing returned checks.

Enrollment Deposit

First-year, transfer and exchange students are required to pay a deposit upon admission to Washington University. The enrollment deposit is nonrefundable. The enrollment deposit will be used to cover costs associated with "Bear Beginnings," the new student orientation program, and an additional orientation program for international students.

- \$500 for domestic first-year students
- \$750 for international first-year students
- \$250 for domestic transfer students
- \$500 for international transfer students
- \$500 for exchange students

Leaves and Withdrawals from the University and Refunds

The College of Arts & Sciences, the Olin Business School, the Sam Fox School of Design & Visual Arts, and the McKelvey School of Engineering follow a standard refund schedule, listed below, when students request a leave of absence or to withdraw from the university after classes have begun in a given semester. Students must notify their school in writing to request a leave or withdrawal, according to the appropriate school-based process (see the school sections of this *Bulletin* for details).

Tuition Refund Schedule (as of Fall 2021)

Withdrawal Date	Refund
1st or 2nd week of classes	100%
3rd or 4th week of classes	80%
5th or 6th week of classes	60%
7th or 8th week of classes	50%
9th or 10th week of classes	40%
After 10th week of classes	0%

Refunds are calculated based on the date the student notifies the university of withdrawal.

Students who wish to take a medical leave of absence should start that process with the Habif Health and Wellness Center (<https://students.wustl.edu/medical-leave-absence/>). Schools will refund tuition according to the tuition refund schedule. They may take into account the date at which the student was no longer able to participate in course activities; for instance, the schools will routinely base a refund on the date of hospitalization if that is the point from which the student was no longer able to attend class.

If a Federal Title IV aid recipient takes a leave or withdraws from school before the end of the academic semester, Washington University must refund (send loan funds back to the lender) the unearned (amount of time in the academic semester that the student did not attend) amount of Title IV funds. Unearned Title IV funds will be returned to the Title IV program. Students will be responsible for any disbursed but unearned portion of their Title IV funds.

Changes in Fees

The university reserves the right to change the fees stated or to establish additional fees at any time without prior written notice. When fee changes or additions are made, they become effective with the next payment due.

Nonpayment of Fees

Nonpayment of tuition or other charges due to the university or otherwise affecting the university will prohibit the student from receiving certain services. Students with outstanding financial obligations to the university will not be allowed to register or obtain transcripts or official verification of enrollment.

Architecture

Sam Fox School of Design & Visual Arts

The Sam Fox School of Design & Visual Arts (<http://samfoxschool.wustl.edu>) is a unique collaboration in architecture, art, and design education, linking professional studio programs with one of the country's finest university art museums in the context of an internationally recognized research university.

The Sam Fox School is composed of the College of Architecture, the Graduate School of Architecture & Urban Design, the College of Art, the Graduate School of Art, and the Mildred Lane Kemper Art Museum (<http://www.kemperartmuseum.wustl.edu/>).

Architecture

Throughout history, architects have played a leading role in forming the environment and in interpreting the aspirations of societies in all parts of the world. As a practical and useful art, architecture embraces aesthetic, ethical, social and technical responsibilities. Architecture responds to the way people live and, in turn, influences their lives.

Students considering an architectural education and architecture as a potential career express an excitement about design and building as well as a commitment to the environment. If students plan to study architecture, they should have artistic ability and a good academic base. Personal interests in such areas as drawing, painting, photography, sculpture, building and the environment suggest a possible aptitude for architecture.

Architecture reflects culture; architects must know their culture deeply. To gain an understanding of all aspects of architecture and to develop the attitudes and skills necessary to deal with them, students must have a broad liberal arts education. This base of cultural understanding and critical thinking is combined with a curriculum that focuses intensely on the study of architecture.

Architecture is an absorbing, fascinating profession. Choosing architecture as a professional career requires a major educational commitment at the undergraduate level as well as further study in a professional degree program. With a professional degree in architecture, a graduate may choose to work in small or large architectural firms, in academia, in community or governmental organizations, with development teams, and in a variety of related fields.

Architecture at Washington University

Washington University established the Department of Architecture as part of the School of Engineering and Architecture in 1902. The School of Architecture became an independent division of the university in 1910. In 2005, as part of the formation of the Sam Fox School of Design & Visual Arts, the School of Architecture was reorganized as the College of Architecture and the Graduate School of Architecture & Urban Design.

In 1932, Givens Hall was constructed to house the school as a result of a generous gift in memory of Joseph W. and Kate Abbey Givens.

In 1967, the School of Architecture became one of the first schools in the United States to offer a pioneering six-year joint-degree program (Bachelor of Arts and Master of Architecture).

Our four-year undergraduate degree programs emphasize the development of both making and digital skills, which help students to become more creative thinkers and designers. All architecture students take similar courses during their first three years; courses taken during the fourth year will differ depending on each student's choice of program.

The **Bachelor of Science in Architecture** entails a more intensive study of architecture during the senior year. Students will take a senior-level design studio focused on advanced building design along with structures courses, architectural history/theory courses that emphasize urban design issues, and technology courses in environmental systems or landscape architecture.

The **Bachelor of Arts in Architecture** offers greater flexibility. Its strong, adaptable undergraduate curriculum prepares students for graduate study in architecture, usually for three years. During their senior year, students may choose to take additional architecture design studios, or they may pursue courses in other areas of interest.

These undergraduate degree programs offer students the opportunity to gradually focus their undergraduate studies within the college and allow them to make an incremental commitment to a career in architecture. Both programs prepare students to move on to a master's degree, putting them on track for teaching and leadership positions in architecture and other related fields.

The College of Architecture faculty are nationally and internationally renowned practitioners and researchers who are committed to students' undergraduate experience. As academic advisors, they work with the director and the undergraduate chair to help students build an individualized curriculum, select specific courses, and chart plans for their future careers.

Majors

Architecture is interdisciplinary in nature, drawing from various bases of knowledge and requiring collaboration with other fields. Our program balances architectural education with a strong liberal arts base. Students can take classes in any field that interests them — art, engineering, computer science, psychology, literature, business, and more — allowing them to develop their abilities to think, communicate, and work across disciplinary lines.

We offer two degree tracks that allow students to individualize their educational experience. Students on both tracks may pursue minors, second majors, and dual degrees. While the BS in Architecture is an optimal springboard to graduate school, both tracks prepare students to move on to master's degrees, positioning them for teaching and leadership positions in architecture and other related fields.

The Major in Architecture

Bachelor of Arts in Architecture Degree

The **Bachelor of Arts in Architecture** is a more flexible course of study that allows students to take additional architecture design studios or to pursue courses in other areas of interest across the University.

For additional information about current requirements, please visit the Degree Requirements (p. 94) page.

Bachelor of Science in Architecture Degree

The **Bachelor of Science in Architecture** offers a more intensive study of architecture during the senior year. Students will take upper-level design studios focused on advanced building design, along with structures courses, architectural history/theory courses that emphasize urban design issues, and technology courses in environmental systems or landscape architecture.

For additional information about current requirements, please visit the Degree Requirements (p. 94) page.

Year-by-Year Plans for Both Degrees

All architecture students take similar courses during their first three years; courses during the fourth year will differ depending on the student's choice of degree track.

First Year

- Beginning design studios, with exploration of materials, media, and geometry
- Interdisciplinary drawing course
- Design of a small building
- Introduction to digital technology
- Additional course work in the liberal arts

Second Year

- Design studios focused on the relationship of architecture to the landscape and to the urban environment
- Interdisciplinary elective studies between art, architecture, and design
- Architectural history courses
- Additional course work in the liberal arts

Third Year

- Intensified design studios exploring building assemblies, structure, landscape, and sustainability
- Building systems course
- Architectural theory course
- Additional course work in the liberal arts

Fourth Year

For the Bachelor of Arts in Architecture

- Student-directed capstone project
- Ultimate flexibility to complete a second major or an additional minor or to explore other areas of interest
- Option to take additional architecture course work, including the student's choice of studios and theory classes

For the Bachelor of Science in Architecture

- Continue in-depth study of architecture through design studios
- Structures courses
- Architectural history and theory course work, with an emphasis on urban design issues
- Technology courses in environmental systems or landscape architecture

Minors

The Minor in Architectural History and Theory

Minor advisor: TBD

The minor in architectural history and theory is open to all students at Washington University in St. Louis, regardless of major. It explores the broader cultural context of the discipline of architecture. Students learn about historical and contemporary issues in architecture around the world. Students interested in the minor should contact the designated minor advisor.

Units required: 18,* including the following:

Required courses:

9 units of architectural history survey:

Code	Title	Units
ARCH 3280	Architectural History I: Antiquity to Baroque	3
ARCH 3284	Architectural History II: Architecture Since 1880	3
ARCH 4288	Architectural History III: Advanced Theory	3

3 units of methodology:

Code	Title	Units
ARCH 601	Theories & Methods of Historical Research	3
or		
Other methodology-based courses approved by the minor advisor		3

Elective courses:

6 units of architectural history and theory electives (at the 300 level or above) as approved by the minor advisor

* 12 units must be in the minor only and cannot be double-counted toward another major or minor.

The Minor in Architecture

Minor advisor: Catalina Freixas (freixas@wustl.edu)

The minor in architecture is open to students at Washington University in St. Louis who are not majoring in architecture. It introduces students to the fundamentals of architecture and develops an appreciation for buildings, cities and environments and their role in society. It includes foundational course work, such as Architecture for Non-Architects, a course that provides an overview of the discipline by highlighting contemporary issues of architecture worldwide with a focus on introductory methods of design and representation. Students interested in the minor should contact the minor advisor.

Units required: 15,* including the following:

Required courses:

3 units of design chosen from the following (if more than 3 units are taken, the extra units will be counted in the elective category):

Code	Title	Units
ARCH 144	Architecture for Non-Architects	3
ARCH 111B	Introduction to Design Processes I	4.5
Disegno: Encounters in Public Space (Florence, Italy)		6

3 units of history chosen from the following (if more than 3 units are taken, the extra units will be counted in the elective category):

Code	Title	Units
ARCH 3280	Architectural History I: Antiquity to Baroque	3
ARCH 3284	Architectural History II: Architecture Since 1880	3
ARCH 3823	15th- & 16th-Century Florence, Rome & Venice: Rethinking Renaissance Visual Culture	3
or		
Other architectural history courses approved by the minor advisor		

Elective courses:

9 units of elective course work in architecture (A46), including design, history/theory, technology, fabrication, sustainability, social issues or other topics:

Code	Title	Units
ARCH 112B	Introduction to Design Processes II	4.5
ARCH 209	Design Process	3
ARCH 307X	Community Building	3
ARCH 405D	Furniture Design	3
ARCH 409E	Architectural Sketching	3
ARCH 457B	Segregation by Design: A Historical Analysis of the Impact of Planning and Policy in St. Louis	3

* 12 units must be in the minor only and cannot be double-counted toward another major or minor.

The Minor in Landscape Architecture

Minor advisor: Eric Ellingsen (eric.ellingsen@wustl.edu) @wustl.edu (jacqueline.margetts@wustl.edu)

The minor in landscape architecture introduces foundational aspects in the practice and scholarship of the built environment. The discipline of landscape architecture thrives in diversity, embracing the nuances and complexities of physical, biological and climatological systems.

The minor exposes students in any major to a range of design scales from the urban environment to the garden, with a focus on public space, infrastructure and new and old media. Courses introduce how the design of landscape affects the social, cultural and ecological dimensions of the world. History and theory complement science and the arts to equip students with the tools, knowledge and innovative skills to enrich any major. Interested students should contact the minor advisor.

Units required: 18,* including the following:

Required courses:

6 units of design:

Code	Title	Units
ARCH 144	Architecture for Non-Architects	3
ARCH 312	Architectural Design II	6
or ARCH 412	Architectural Design IV	

3 units of landscape history:

Code	Title	Units
LAND 571	Landscape History II: Prehistory to 1850	3
or		
LAND 574A	Modern and Contemporary Landscape Architecture	3

3 units of ecological systems:

Code	Title	Units
LAND 551A	Landscape Ecology	3
or		
Other ecological systems courses as approved by the minor advisor		

Elective courses:

6 units chosen from the following:

Code	Title	Units
LAND 423D	Videography for Designers	3
LAND 483A	Emergence in Landscape Architecture	3
LAND 524F	Critical Spatial Practice: Art / Architecture / Landscape / Urbanism	3
LAND 529G	The Unruly City	3
LAND 553	Integrated Planting Design	3
LAND 560A	Trees, Soils, & Systems: Introduction to Arboriculture	3
LAND 565	Landscape Technology	3
or		
Other elective courses in landscape architecture as approved by the minor advisor		
or		
Any 300-level or above L82 Environmental Studies course approved by the minor advisor		

* 12 units must be in the minor only and cannot be double-counted toward another major or minor.

The Minor in Urban Design

Minor advisor: Petra Kempf (petra.kempf@wustl.edu)

The minor in urban design provides a platform for students in all majors to explore issues related to the urban condition. Within this framework, students explore urbanization processes in the context of design application and tools, critical and urban issues, urban history, theory and its application towards real-world scenarios.

Aging infrastructure networks; pressures on access to education; over-extended healthcare systems; the loss of other public investments; false securities in the housing market; spatial exclusion based on class, race and gender; the dispossession of local inhabitants from common resources or food supply interruptions; the vulnerability and degradation of the environment; and wasteful forms of consumerism for the sake of capital accumulation all seem to be thriving themes in and around urbanization today.

Over the last three decades, the field of urban studies has received overwhelming attention from design disciplines as well as others outside the world of design. This has led to an outpouring of scholarly and political discourse challenging the image, as well as the perception of, what is considered urban today.

Units required: 18,* including the following:

Required courses:

3 units of foundations:

Code	Title	Units
ARCH 307X	Community Building	3
or		
ARCH 421W	Designing the Modern City	3

3 units of design studio:

Architecture for Non-Architects (ARCH 144, 3 units)/ARCH 312 Architectural Design II (6 units)/Architectural Design IV (ARCH 412, 6 units) urban design and landscape systems focused options studio (6 units)

6 units of advanced urban design electives:

Students may choose two A49 Urban Design courses at the 300-level or above. Options vary each semester. The minor advisor can help determine courses that best meet the student's area of interest.

3 units of advanced coursework chosen from the following:

Code	Title	Units
ARCH 656	Metropolitan Urbanism	3
MUD 652H	Metropolitan Development: What's in a Plan?	3
MUD 658	Metropolitan Sustainability	3

* 12 units must be in the minor only and cannot be double-counted toward another major or minor.

Additional Information

In the event that a required course is not offered in a given semester or if a student has irreconcilable scheduling conflicts with their required major courses or other minor courses, an appropriate alternate course may be substituted with approval from the minor advisor.

Students declare an architecture minor by using the university's online registration system (WebSTAC (<https://acadinfo.wustl.edu/WSHome/Default.aspx>)).

Students must receive a grade of C- or better in all courses to earn minor credit.

Students should check the current course listings (<https://courses.wustl.edu/Semester/Listing.aspx>) carefully to verify their eligibility to enroll in courses that have specific prerequisites.

Courses

- **A46 ARCH (p. 60):** Architecture
- **A48 LAND (p. 90):** Landscape Architecture

Architecture

Visit online course listings to view semester offerings for A46 ARCH (<https://courses.wustl.edu/CourseInfo.aspx?sch=A&dept=A46&crslvl=1:4>).

A46 ARCH 108A You Are Here: Engaging St. Louis's Racial History Through Site + Story

By acknowledging the pressures and pains of our political moment -- a time of crisis for many in our city and nation, but also a long-awaited reckoning with issues of social justice -- this course engages the complex history of race and racial injustice in St. Louis through site- and story-based exploration. It offers an opportunity to learn about the city's landscape, history, systems, culture, form and identity while wrestling with fundamental questions of power, positionality and perspective. "You Are Here" references orientation, discovery, otherness and place, and it serves as a provocation for reconsidering how designers, artists and architects engage St. Louis. This course may count toward the minor in Creative Practice for Social Change if bundled with "Engaging Community: Understanding the Basics." Priority will be given to first-year Sam Fox students.
Same as F20 ART 108A
Credit 1.5 units. Art: CPSC EN: H

A46 ARCH 111 Introduction to Design Processes I

This introductory architectural design studio engages the basic principles of architectural context, composition and experience. Through various fieldwork strategies, students explore architectural context through observation, analysis and invention. The site-specific design processes bridge two-dimensional and three-dimensional work, including drawing, drafting and making. The experiential qualities of architecture are introduced through basic considerations of scale and human interaction. The course work includes studio work, lectures, presentations by students, readings, writing assignments and field trips.
Credit 3 units.

A46 ARCH 111B Introduction to Design Processes I

This introductory architectural design studio engages the basic principles of architectural context, composition and experience. Through various field/work strategies, students explore architectural context through observation, analysis and invention. The site-specific design processes bridge two-dimensional and three-dimensional work, including drawing, drafting and making. The experiential qualities of architecture are introduced through basic considerations of scale and human interaction. The course work includes studio, work, lectures, presentations by students, readings, writing assignments and field trips.
Credit 4.5 units.

A46 ARCH 112 Introduction to Design Processes II

This core design studio engages the basic principles of architectural design through iterative processes of drawing and making, using a variety of tools, media and processes. The course work includes studio work, lectures, student presentations, and local field trips. Pre-/Corequisite: Arch 111 (with a grade of C- or better).
Credit 3 units.

A46 ARCH 112B Introduction to Design Processes II

This introductory design studio course engages the basic principles of architectural context, composition and experience. Using the theme of Drawing and Observing, the studio integrates design and drawing to challenge the students to observe the world more carefully, creating narrative drawings that serve as a foundation for design proposals. Throughout the semester, students will engage various design processes -- including freehand drawing, collage, orthogonal projection and model making -- that will serve as a window into the field of architecture. The projects include design proposals for small structures in public spaces, such as pavilions or urban furniture, which emphasize the experiential qualities of architecture and the basic considerations of building scale, human interaction, inhabitation and empathy. Using observation, analysis and invention, the class sessions alternate between drawing and making, constantly bridging two-dimensional and three-dimensional work. Course work includes drawings, models, and drawing in studio and on-site.
Credit 4.5 units.

A46 ARCH 144 Architecture for Non-Architects

Architecture for Non-Architects introduces non-architecture students to the process through which architects think about, view and produce the built environment. This new course is meant to serve as an alternative to the traditional studio instruction in the major, thus allowing students who are curious about architecture to experience it without the demands and commitment of major courses. If a student decides to transfer into the architecture major later on, they will meet with the architecture minor lead advisor to jointly propose a planned course of study that addresses any missing credits and foundational skills required for successful completion of the architecture major. This foundational course proposes a combination of readings, class discussions and research that will be used to inform the design process. Field trips will initiate students into the act of seeing by challenging them to observe, interpret and critically engage with the built environment ("the site") and those who are affected by it ("the stakeholders") in specific scalar and temporal contexts.
Credit 3 units. EN: H

A46 ARCH 183 Practices in Architecture, Landscape Architecture and Urban Design

This course offers first-year students in the College of Architecture an introduction to the subjects, theories, and methodologies of the disciplines of architecture, landscape architecture, and urban design. Examples drawn from a range of both historical periods and contemporary practice highlight distinct processes of thinking and working in each discipline as well as areas of intersection and overlap.
Credit 1 unit.

A46 ARCH 183A Practices in Architecture + Art + Design

This course offers first-year students in the College of Architecture an introduction to the subjects, theories, and methodologies of the disciplines of art, design, architecture, landscape architecture, and urban studies. Examples drawn from a range of historical periods as well as contemporary practice highlight distinct processes of thinking and working in each discipline, as well as areas of intersection and overlap.

Credit 1 unit.

A46 ARCH 183B Practices in Architecture + Art + Design

This course offers first-year students in the College of Architecture an introduction to the subjects, theories, and methodologies of the disciplines of art, design, architecture, landscape architecture, and urban studies. Examples drawn from a range of both historical periods and contemporary practice highlight distinct processes of thinking and working in each discipline as well as areas of intersection and overlap.

Credit 1 unit.

A46 ARCH 184 Practices in Architecture, Landscape Architecture and Urban Design

This course offers first-year students in the College of Architecture an introduction to the subjects, theories, and methodologies of the disciplines of architecture, landscape architecture, and urban design. Examples drawn from a range of historical periods as well as from contemporary practice highlight distinct processes of thinking and working in each discipline while at the same time highlighting areas of intersection and overlap.

Credit 1 unit.

A46 ARCH 204 Fundamentals of Design II

This course offers studio exercises that emphasize three-dimensional design issues: problem solving, materials, structure, fracture, spatial relationships and systematic processes of design. 20 studio hours per week.

Credit 4 units.

A46 ARCH 209 Design Process

Open to Engineering, Arts & Sciences, Business, and Art students at all levels. This studio course will engage students in the process of design with an emphasis on creative thinking. Course content relates directly to the interests of engineers, arts & science, business and art students who wish to problem solve about positively shaping the texture and quality of the built world. A series of 2D & 3D hands-on problem-solving projects introduce students to design concepts as they apply to site (eco-systems and outdoor places), to humanistic place making (personal and small public spaces), to structure & materials (intuitive exploration of structural principles through model building), to environmental issues (effects of climate, light, topography, context and sensible use of natural resources). No technical knowledge or special drawing/model-making skills are required. There will be informal group and individual discussions of each person's stages in inquiry. The investigations will take the form of study models made of recycled materials. Guest lecturers will participate throughout the semester. The concluding project for the semester will allow each student to work with their unique academic and personal interests, utilizing the process of lateral thinking. Course fee is applied to cost for mandatory fingerprint background check.

Credit 3 units. Art: CPSC EN: H

A46 ARCH 211B Introduction to Design Processes III

Introduction to Design Processes III engages design through the lens of perception by investigating the relationship between materiality and inhabitable space situated in a natural context. Prerequisites: successful completion of Arch 111 and Arch 112 with a grade of C- or better or successful completion of Arch 210 with a grade of C- or better.

Credit 4.5 units.

A46 ARCH 211C Introduction to Design Processes III

Introduction to Design Processes III engages design through the lens of perception by investigating the relationship between materiality and inhabitable space situated in a natural context. Prerequisites: successful completion of Arch 111 and Arch 112 with a grade of C- or better or successful completion of Arch 210 with a grade of C- or better.

Credit 6 units.

A46 ARCH 212B Introduction to Design Processes IV

Studio course that initiates architectural and building issues such as building analysis, structure, organizational systems, and programming. Prerequisite: successful completion of Arch 211B with a grade of C- or better.

Credit 4.5 units.

A46 ARCH 212C Introduction to Design Processes IV

Studio which initiates architectural and building issues such as: building analysis, structure, organizational systems, and programming. Prerequisites: successful completion of Arch 211C with a grade of C- or better.

Credit 6 units.

A46 ARCH 241 Community Dynamics

This course builds on the investigations of A46 307X and concentrates on the economic, political and social dynamics shaping neighborhoods. To ground discussions in reality, the class immerses itself in the urban laboratory of St. Louis while relating local issues to broader trends. A survey of the paradigms of American urban design and planning will provide an overview of the creative strategies (and ongoing contradictions) of redevelopment in the 21st century. Students will be exposed to a range of research methods for understanding the deep, relational, political and legalistic dynamics that shape communities.

Credit 3 units. Art: CPSC

A46 ARCH 243 Design as Export

This course introduces students to the contemporary global characteristics of design in the late 20th and 21st centuries. The marketing, fabrication, distribution and consumption of design are global, yet the cultural and formal identities of most design products are national and regional. How do traditions of design and quality based on centuries of a national and regional design culture react and adapt to a global market? What is the culture of design? What is design identity? Italian design will be the primary focus of this course, followed by Japanese and Asian design and manufacturing. Case studies will include examples of industrial design, fashion design, communication design and automobile design. The course will also include presentations by design curators and representatives of various international design companies. This course will count as a foundational seminar for the Global Certificate Program.

Credit 3 units.

A46 ARCH 2647 Italian Language (Florence)

This course covers Italian grammar and conversation for study abroad students in Florence. Taught entirely in Italian. There is an emphasis on class participation accompanied by readings and writings. The student develops facility speaking the language on an everyday basis.

Same as F20 ART 2647

Credit 3 units.

A46 ARCH 2661 Semester Abroad Program Seminar

This course will prepare students participating in the Sam Fox School's Semester Abroad Programs. The seminar will meet eight times over the course of the semester. Attendance is mandatory for students going abroad. Prerequisite: College of Art and College of Architecture students selected for the Sam Fox School Abroad Programs.

Same as F20 ART 2661

Credit 1 unit. EN: H

A46 ARCH 275 Service Learning Course: Environmental Issues

This service learning experience allows Washington University students to bring their knowledge and creativity about the many subjects they are studying to students at the Compton-Drew Middle School, which is adjacent to the Science Center in the City of St. Louis. This course is for Arts & Sciences students of differing majors and minors, business students, architecture and art students, and engineering students from all engineering departments. During the first third of the semester, students will do the following: 1) begin learning the creative process of lateral thinking (synthesizing many variables, working in cycles); 2) work with a teammate to experiment with the design of two- and three-dimensional hands-on problem-solving workshops about exciting environmental issues for small groups of students at Compton-Drew Middle School; 3) devise investigations for the workshops about environmental issues embracing the sciences, the humanities, and the community; and 4) work with the professor (both individually and with their team) as well as faculty from a specific discipline to prepare their evolving curricular plan. During the last two thirds of the semester, students will be on site during the Compton-Drew school day (once a week for an hour and a half) to teach small-group workshops for some of the sixth- and seventh-grade students. This course is open to first-year students, sophomores, and juniors.

Credit 2 units.

A46 ARCH 300A Design Foundations Studio

This is an intensive three-week course that sets students up to enter the first of a two-semester studio sequence. The first-year sequence introduces students to architectural design, focusing on conceptual, theoretical, and tectonic principles. Enrollment is open to first-semester MArch 3 students only.

Credit 3 units.

A46 ARCH 303B Design Drawing

Drawing is a fundamental act that is intrinsic to who we are as visual designers, visual thinkers, visual learners, visual problem solvers, and visual communicators. We drew even before we could write. It is an integral part of a design process and foundational to how we navigate the digital world. This course will explore all these aspects of drawing and its role in

today's culture. It is a hands-on course that allows students to explore and experiment with a variety of representational media, including freehand drawing, rendering, and digital drawing. An emphasis will be put on drawing as a way of searching for and discovering design solutions. The majority of the drawings produced will not be ends in themselves as finished products; rather, drawing will serve as a process-driven medium for exploring new ideas and design solutions.

Credit 3 units.

A46 ARCH 303C Unveiling the Detail: A Lesson in Forensic Drawing & Discovery

This course will explore architectural detailing from the quotidian to the sublime to posit architectural design intent. Through fieldwork and research, students will study the role of architectural detailing in the configuration and execution of architectural space making. Students will be asked to carefully observe their own constructed environment and architectural precedents to understand the truth and fiction in construction. This course seeks to help students understand the role of the architectural detail in articulating and reinforcing architectural concepts. It will strengthen the student's understanding of material properties, opportunities and limitations, construction sequencing, and design execution. Students will gain a new appreciation for the exquisitely executed architectural detail and strengthen the skill to anticipate and navigate detailing challenges in their own design work. Students will be asked to explore architectural details through various drawing methods, modeling, and modes of representation. This course is open to architecture students at all levels with an interest in drawing and realizing architecture as a constructed practice.

Credit 1.5 units.

A46 ARCH 304 Shared Ecologies and Design

This interdisciplinary course will introduce biological, social and cultural ecology concepts to proactively address current stressors that impact and are being impacted by design and the built environment. These effects and affects range from (but are not limited to) climate change science; racial and social justice impacts; sustainability, resiliency and adaptation-design strategies; systems-based and multi-scalar understandings; and interrelational human and non-human environments bound in both acting and being acted upon locally and globally.

Same as A48 LAND 304

Credit 3 units.

A46 ARCH 307X Community Building

This course looks at the intersection of the built fabric and the social fabric. Using St. Louis as the starting point, this course takes students out of the classroom and into a variety of neighborhoods -- old, new, affluent, poor -- to look at the built environment in a variety of contexts and through a variety of lenses. Almost every week for the first half of the semester, students visit a different area of the city, with each trip highlighting some theme or issue related to the built environment. These include topics such as architecture, planning, American history, investment and disinvestment, community character and values, race, transportation, immigrant communities, and future visions. Running parallel to this, students will be involved in an ongoing relationship with one particular struggling neighborhood, in which students will attend community meetings and get to know and become involved with the people of the community in a variety of ways. Students learn to look below the surface and beyond the single obvious story

for multiple stories to discover complexity, contradictions and paradoxes. They also come to consider the complex ways in which architecture and the built environment can affect or be affected by a host of other disciplines. College of Architecture and College of Art sophomores, juniors, and seniors have priority. This course fulfills the Sam Fox Commons requirement. Credit 3 units. Art: CPSC

A46 ARCH 308B Engaging Community: Understanding the Basics

What does it mean to engage in community as a creative practitioner? Community engagement must be grounded in authentic relationship building and an ability to understand and act within the historic context and systems that impact communities. We will practice the skills of listening, observation, reflection, and improvisation. We will cultivate mindsets that focus on community assets and self-determination. Workshops will teach facilitation and power analysis, with the intention of upending the power dynamics between community and creators. This course pairs with "Engaging St. Louis: Sites, Stories, and the Struggle for Racial Justice" [working title]. It may count toward the minor in Creative Practice for Social Change if bundled with "You Are Here: St. Louis' Racial History Through Sites and Stories."

Same as F20 ART 308B

Credit 1.5 units. Art: CPSC

A46 ARCH 308X Community Building North

This course addresses the complex economic, political and racial landscape of north St. Louis County focused on Ferguson, Missouri, as the embodiment of problems and conflicts endemic to urban communities across the country. The events following Michael Brown's shooting death on August 9, 2014, have revealed deep divisions in the St. Louis metropolitan area. Our multidisciplinary approach will be evident as we investigate the intersecting, compounding roles of social and economic inequities, racial disparities, white flight, public safety, housing, and economic development as we grapple with legitimate, thoughtful ways of making positive change. We'll learn how to listen to, understand, and address conflicting voices. Readings, speakers, site visits, films, and other materials will be combined with discussion, writing, and socially conscious engagement as we seek to understand the many faces of Ferguson while following contemporary developments as they occur. Professor Robert Hansman acts as advisor and guide. The interdisciplinary course he developed over many years, "Community Building/ Building Community," provides the intellectual, ethical, and spiritual bases for the course. This course offers fresh perspectives and provides unique opportunities for community engagement for students who have previously taken Community Building; however that course is not a prerequisite. Projects develop collaboratively and organically between students, faculty, and community partners working to find common values and beliefs upon which to build concrete, meaningful action. CET (<https://gephardtinstitute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.

A46 ARCH 315B Historic Preservation, Memory and Community

Whose history is significant enough to be worth preserving in physical form? Who gets to decide, and how? Does the choice to preserve buildings, landscapes and places belong to government, experts or ordinary people? How does the condition of the built environment impact community identity, structure and success? This place-based course in historic preservation pursues these questions in St. Louis' historically Black neighborhood The Ville, where deep historic significance meets a built environment conditioned by population loss, disinvestment and demolition. The course explores the practice of historic preservation as something far from neutral; rather it is viewed as a creative, productive endeavor that mediates between community values, official policies and expert assertion. Critical readings in preservation and public history will accompany case studies, community engagement and practical understanding.

Credit 3 units. Arch: GAUI, UI

A46 ARCH 316F Re-Discover the Child

It is said that, at this time in history, the entire country must make a commitment to improve the positive possibilities of education. We must work to lift people who are underserved; we must expand the range of abilities for those who are caught in only one kind of training; and we must each learn to be creative thinkers contributing our abilities to many sectors of our society. In this course, we will expand our views about learning by experimenting with the creative process of lateral thinking. We will learn about learning by meeting with some brilliant people at the university and in the St. Louis community who are exceptional in the scholarly, professional, and civic engagement work they are accomplishing. We will learn about learning by working in teams to develop exciting curriculum (based on the knowledge and passion students bring from their academic studies and interests) for middle-school students from economically disadvantaged urban families. Each week, we will learn about learning by giving two- or three-dimensional hands-on problem-solving workshops for middle school students at the Compton-Drew Middle school, which is adjacent to the Science Center in the City of St. Louis. Student teammates will implement the workshops they create throughout the semester for a group of six to eight Compton-Drew middle-school students. In this course, we celebrate the choices of studies we each pursue,

and we expand our experience in learning from each other's knowledge bases and from each person's particular problem-solving creativity. This course seeks students from all disciplines and schools during any year of study.

Credit 3 units. Art: CPSC

A46 ARCH 316T Printmaking for Architecture and Art Students

This course will focus on monotype mixed media printmaking using both a press and digital print processes. The course is designed to be responsive to current issues with a focus on contemporary printmaking practices and various ideas about dissemination in the age of social media. The course will include an examination of historical examples of diverse global practices; prints made in periods of uncertainty, disruption, war, and disaster; and speculative projects by architects such as Superstudio, Zaha Hadid Architects and Archigram. Students will be expected to create a series of work with a conceptual framework developing a personal visual language.

A46 ARCH 317 Architectural Design I (MArch 3)

The first of a three-semester sequence that introduces students to architectural design, focusing on conceptual, theoretical, and tectonic principles. For first-semester MArch 3 students only.

Credit 6 units.

A46 ARCH 317A Architectural Design I (MArch 3)

The first of a two-semester sequence that introduces students to architectural design, focusing on conceptual, theoretical, and tectonic principles. Enrollment is open to first-semester MArch 3 students only.

Credit 9 units.

A46 ARCH 317M Architecture Through the Photographic Lens

Same as F20 117M, F20 217M, and F20 417M; juniors (only) register for F20 317M. Photography offers ways of seeing and representing the world around us. This course provides technical and conceptual frameworks for understanding architectural space as seen through the camera. Topics include the building as site, landscape as context, and the architectural model as a representation tool. Students are introduced to a wide range of artists and architects, which helps them to build a unique camera language to support their individual projects. Students will learn DSLR camera basics, fundamentals of Photoshop, digital printing techniques, and studio lighting for documenting architectural models. The course assumes no prior experience with digital imaging technologies or materials. Digital camera required.

Same as F20 ART 317M

Credit 3 units. Art: FAAM

A46 ARCH 318 Architectural Design II (MArch 3)

The second of a three-semester sequence of design studios. This course continues the examination of issues raised in Arch 317. For second-semester MArch 3 students only.

Credit 6 units.

A46 ARCH 318A Architectural Design II (MArch 3)

The second of a three-semester sequence of core design studios, which continues the examination of issues raised in ARCH 317. Enrollment is open to second-semester MArch 3 students only.

Credit 9 units.

A46 ARCH 323A Architectural Representation I (MArch 3)

This course examines the history/theory and practice of representation, specifically the systems of drawing used in architecture. The objective is to develop the requisite discipline, accuracy, and visual intelligence to conceptualize and generate a relationship between space and form. The course focuses on two concurrent tasks: first to outline and analyze the historical development of representational logics and their impact on architectural ideation, and second to explain the codification and usage of specific geometries, including orthographic and isometric projection, central and parallel perspective, and architectural axonometric. We will see that, rather than a translation of reality, representation operates between perception and cognition as a transcription of reality and is thus a powerful instrument in the design and making of architecture. The relationship between the drawing forms and the tools used to produce them are brought into focus as manual, digital, photographic and physical applications driven by drawing intentions. The course is organized as a lecture/lab with emphasis on practice of manual and photographic applications.

Credit 3 units.

A46 ARCH 323B Architectural Representation II (MArch 3)

The course examines the history/theory and practice of representation, specifically the systems of drawing used in architecture. The objective is to develop the requisite discipline, accuracy and visual intelligence to conceptualize and generate a relationship between space and form. The course focuses on two concurrent tasks: first, to outline and analyze the historical development of representational logics and their impact on architectural ideation, and second, to explain the codification and usage of specific geometries, including orthographic and isometric projection, central and parallel perspective, and architectural axonometric. We see that, rather than a translation of reality, representation operates between perception and cognition as a transcription of reality and is a powerful instrument in the design and making of architecture. The relationship between the drawing forms and the tools used to produce them are brought into focus as manual, digital, photographic and physical applications driven by drawing intentions. This course is organized as a lecture/lab with emphasis on the practice of digital media and physical modeling. Emphasis is on participation and excessive absences are noted. Please note: The second half of the semester focuses on computing, for which each student is required to have a laptop computer.

Credit 3 units.

A46 ARCH 326G Digital Fabrications

This course will focus on fabrications both real and virtual. The ubiquity of computers in design, studio art, communications, construction and fabrication demand that professionals become comfortable with their use. It is also important in a group of ever-specializing fields that one knows how to translate between different software and output platforms. This comfort and the ability to translate between platforms allow contemporary artists and designers to fabricate with ever-increasing freedom and precision. This course will introduce students to 3D software with a focus on 2D, 3D, and physical output. Through a series of projects, students will learn to generate work directly from the computer and translate it into different types of output. Starting from first principles, this course will cover the basics from interface to output for each platform used. This course will also familiarize students with a range of CNC technology and other digital output for both small- and large-scale fabrication. The course will be broken into three projects. In the first project, students will focus on computer-generated geometry and control systems. In the second part, students will generate physical output and line drawings. The final project will focus on rendering, context and cinematic effects. The software covered in this course includes, but is not limited to: Rhinoceros 3D, Maya, Illustrator, Photoshop. Additionally, students will use the 3D printer, laser cutter, and/or other digital output tools. Credit 3 units.

A46 ARCH 326J Digital Representations

Digital Representations introduces students to digital modeling and fabrication, parametric workflow, and various 2D and physical output techniques. Starting from first principles, this course begins with the basics from interface to output for each platform used, developing skills in digital modeling and physical output and serving as a prerequisite for more advanced courses in design scripting and digital fabrication. Students complete a semester-long project divided into three assignments, beginning with developing a detailed digital model of a formal precedent, which introduces students to basic skills in modeling with nurbs, subdivision surfaces, and meshes. Continuing to develop a clear diagrammatic organization and hierarchy, students expand the characteristics of their original formal precedent using Grasshopper to create a set of dynamic, flexible behaviors. Drawing upon their initial understanding and analysis of organizational systems within their formal object, students transfer their observations into the construction of a spatial parametric model that has potential to serve structure, fabrication methods, and material assembly. Finally, students develop their digital model into a geometrically rationalized material system that draws upon their initial precedent, producing a physical model, renderings, and 2D drawings presented in the format of a final review. Credit 3 units.

A46 ARCH 326K Digital Evolutions: Parametric Design for a Fabricated Species

Digital Evolutions will introduce digital modeling, parametric workflow, and fabrication techniques in a variety of two and three-dimensional media to document the imagined development of a hypothetical animal species. As a prerequisite for more advanced courses in design scripting and digital fabrication, this course will introduce each technique at a foundational level giving every student a new arsenal of digital tools with which they can act as evolution's (intelligent) designer. Students will begin with an analysis of drawings by Ernst Haeckel (1843-1919), a German biologist, naturalist, philosopher, and

artist who promoted and popularized Charles Darwin's work in Germany, but whose own alternative theories of evolution have subsequently been discredited. Students will use Grasshopper and associated plug-ins to exploit the powerful flexibility of parametric design to iteratively adapt these studies to various imagined environmental conditions. Working in pairs, students will crossbreed their species, synthesizing ideas concerning skin, support systems, pattern, and kinetics, finally modeling this fictitious entity with a geometrically rationalized material system—a fabricated fabrication.

Credit 3 units. Arch: HUM Art: FADM

A46 ARCH 326L Anxious Vision: Real Time and the Architecture of Video Games

What can architects learn from examining the visual structures of 3D video games? How have they influenced the culture of architectural representation? Why should the gaming perspective view and level structure be considered essential elements for contemporary architectural theory? How is video game theory instrumentalized in the creation of architecture? To begin, video game engines are becoming ubiquitous features in architectural rendering culture. Platforms like Unreal, Unity, and Twinmotion offer designers tools to create environments that can be explored and interacted with in real time by the user-client. Although 3D modeling, rendering, and animation platforms have been commonplace in architecture schools and experimental studios since the 1990s, accessible, interactive, real-time rendering platforms are a more recent and less studied phenomenon. The architecture of level design and the companion art of worldbuilding constitute a new representational paradigm. In this seminar, we will examine the spatial structures of contemporary gaming titles and explore a series of historical and theoretical texts from Video Game Studies. The final assignment will be project-based and designed using the Unreal Engine. Credit 3 units.

A46 ARCH 327X Color Systems

This course is a sustained investigation of color. Students study how color is affected by light, by space, by arrangement, by culture, and by commerce. The course aims to deepen the understanding of color's complexity and pervasiveness as a fundamental element of shared visual culture. The course develops both technical and conceptual skills to aid in visual translation. In addition to color-specific inquiry, a goal is to expand ideas of research and enable students to integrate various methods of acquiring knowledge into their art and design practice. Throughout the course, students discuss various processes of making/constructing, the connection between color/form/concept, and strategies for idea generation and brainstorming. The course allows for much individual freedom and flexibility within varying project parameters. College of Architecture and College of Art sophomores, juniors, and seniors have priority. Fulfills Sam Fox Commons requirement. Prerequisite: Drawing I, Communication Design I, or 2D Design, or permission of instructor.

Same as X10 XCORE 327X

Credit 3 units. Art: FADM EN: H

A46 ARCH 3280 Architectural History I: Antiquity to Baroque

This lecture course will introduce major historical narratives, themes, sites, and architects from ancient Greece to the end of the Baroque period. We will take an extended look at the dawn of the modern period during the 15th and 16th centuries through a global perspective, turning eastward from Renaissance Europe

to the Ottoman, Mughal, Chinese, and Japanese empires. The great chronological and geographic span of this course will be pulled together around the themes of classicism and its subsequent reinterpretations as well as the pursuit of the tectonic ideal. Our aim is to recognize how these ideological pursuits of modern architecture evolved out of longer historical processes. We will also pay close attention to major sites of landscape and urban-scale work. Requirements will include a mid-term exam, a final exam, and a series of short papers.
Credit 3 units.

A46 ARCH 3284 Architectural History II: Architecture Since 1880

An introductory survey of the history and theory of architecture and urbanism in the context of the rapidly changing technological and social circumstances of the past 120 years. In addition to tracing the usual history of modern architecture, this course also emphasizes understanding of the formal, philosophical, social, technical and economic background of other important architectural directions in a global context. Topics range from architects' responses to new conditions in the rapidly developing cities of the later 19th century, through early 20th-century theories of perception and social engagement, to recent efforts to find new bases for architectural interventions in the contemporary metropolis.
Credit 3 units. Arch: HT EN: H

A46 ARCH 330A Special Topics

The subject of this seminar varies from semester to semester.
Credit 3 units.

A46 ARCH 331A Experimental Formwork

Our perception of concrete is typically determined by the mold that gives it its shape and not the material itself. Given the fluidity of the material in its plastic state, the desired morphology and configuration once cured relies on its molding possibilities. During this seminar students will explore the essence of mold making, its possibilities and limitations as containers of a fluid material that will determine its final shape and surface quality. Starting from an understanding of standard molding procedures, students will explore a wide range of non-conventional formwork techniques such as flexible fabric, pneumatic, 3d printing, dynamic casting, rotoforming and others. Students will produce physical molds and cast prototypes in concrete or other materials through a process of experimentation and discovery. The ultimate goal of this course is to use formwork as an active and accessible design tool and fertile ground for innovation. Particular emphasis will be on discovering relationships between material properties and production methods as a way of finding systematic approaches that can lead to making prototypes combining digital and/or analog tools. Students are expected to develop creative processes that can be applicable to unprecedented and novel casting techniques and potentially to manufacturing methods of actual building components. The course is structured around an initial lecture about mold making precedents and possibilities, specific readings, a short research on traditional and other current -non-traditional- mold techniques and hands-on work. Students will work individually to fabricate small mold prototypes (6" x 6" x 6"), cast concrete or other fluid materials readily available to perform tests and produce accurate representation of the outcomes and its process. The course is open to undergraduate and graduate students.
Credit 1.5 units.

A46 ARCH 332A 1 House

In this seminar, students will research and develop designs for a completely off-the-grid "small" house in Boquete, Panama, for Kaylee and Jordan of the Nomadic Movement YouTube channel. With input from Kaylee, Jordan, and their crew, students will research traditional sustainable building practices in Panama and develop schematic designs for a small house to be built by them on their property in Boquete, with construction beginning in May 2021. The course will include instruction in residential design, structure, and materials and methods of construction. A subtext of the course will be entrepreneurship and beginning one's practice as an architect. To this end, students will be asked to write a prospectus for their architectural practice, including naming, branding, and producing their first YouTube video.
Credit 3 units.

A46 ARCH 333 Case Studies in 20th-Century Architecture

Through a series of analytical, critical and interpretative studies of singular works of architecture in the 20th century, this course focuses on the manifold processes and contexts of their production. Each work is examined as a physical and cultural artifact with precise formal, intellectual and ideological intentions and meanings. The architectural object, understood as a synthesis of multiple criteria and frameworks, is explored from its conception through its realization based on certain principles (fundamental precepts of the discipline of architecture) and a broad range of concepts (abstract ideas understood as the products of speculative and reflective thought).
Credit 3 units. Arch: GARW

A46 ARCH 333A Matsumoto Modern

Between 1948-1961, the Japanese American architect George Matsumoto designed more than 30 award-winning residences in North Carolina. The houses -- demonstration homes for General Electric and Westinghouse, vacation houses sponsored by Women's Day and the Douglas Fir Plywood Association, and homes for clients interested in new ideas in architecture -- served as prototypes for domestic living inspired by postwar logics of mass production. The experimental homes provided opportunities to challenge norms and amplify particular design aspects through focused investigations of the potential of new materials, innovative construction systems, or provocative formal capabilities. Like the more well-known Art and Architecture magazine's Case Study House Program on the West Coast, Matsumoto's houses aspired to be functional, beautiful, and affordable while providing a model for modern American domesticity. Students in the course will undertake archival research for selected George Matsumoto-designed modern homes throughout the semester. Course work will include experimental, analytical drawings; archival research and writing; museum-level physical models; and other representations of residential work by Matsumoto. The resulting work is anticipated to be included in a future publication, an exhibition, and as a featured part of the larger research project Beauty in Enormous Bleakness: The Interned Generation of Japanese American Designers, which aspires to "tell an urgently needed new chapter in design and architectural history that acknowledges the signal contributions of Japanese Americans to post-war culture and cultural life."
Credit 3 units. Arch: CAST, GACS

A46 ARCH 336D Biomimicry: A Biokinetic Approach to Sustain(Able) Design

There is a conceptual similarity between the way an organism and a building engage their respective environments. A biological system responds to the unique condition of its ecosystem; architecture responds to the unique conditions of the site. Building on this principle are the fields of biomimicry, the study of design and process in nature, and biokinetics, the study of movement within organisms, and their ability to address architectural problems with elegant, technologically advanced, sustainable solutions. Biomimicry: A Biokinetic Approach to Sustain(Able) Design focuses on kinetics as an essential element of biomimicry in the context of architecture and employs the study of the kinetic aspects of biological systems — structure, function and movement — to inform the design and engineering of buildings. A systematic approach to researching and translating the kinetic function of organisms leads to a successful bridging of biological and architectural concepts. Credit 3 units.

A46 ARCH 336E Biomimicry, Teleology and Organic Architecture

This seminar is intended to develop an understanding of the history and evolution of biomimicry as a significant design tool from the emergence of biology as a science in the early 19th century to the present. Biology was the first discipline to confront the problem of teleology, of design in nature. For the past 100 years, biological references and ideas are present in the work of architects and in the writings of architectural theorists. Biomimicry, a term coined by Janine Benyus, has developed into a new discipline that studies well-adapted organisms' designs and processes and then imitates life's genius to design human applications, aiming at a sustainable development. The intent of this seminar is to establish a systematic approach to research and analysis of the history and theory of this biological analogy and its influence on the history of environmental architecture, as seen through the lens of biomimicry. In addition to a historical analysis, students analyze case studies that exemplify the relationship of architecture to biology, focusing not only on built work, but on the writings and the designer's positions in terms of this relationship. Classes consist of a combination of formal lectures and facilitated discussion periods. In addition, each student chooses a particular architect and, through research and analysis, assesses the influence of biomimicry in their work and presents these results in a paper that includes a critical analysis and a proposal on how to advance the architect's work to the highest level of biomimicry. Credit 3 units.

A46 ARCH 336F How to Improve Lives for People in Developing Countries

Washington University students from all disciplines will explore solutions to improving healthcare, education, food supply, and infrastructure for people living in Mali, Liberia, and the United States. Students in this course will work in collaboration with an architectural design studio; Washington University students will design a small rural hospital for rural Mali and Liberia and urban Mali and Liberia. The course will also foster an exchange of both ideas and information regarding the culture, customs, religion, craft, language, and history of Mali and Liberia. Each Thursday, WashU students from different fields of study will apply their discipline to the goal of designing and teaching hands-on problem solving projects for students at the University City Middle School. The theme for each project will be proposals

for improving the lives of people living in Mali and Liberia. Gay Lorberbaum, with advising from University City administrators, will work individually with each WashU student and each WashU team to develop 3D hands-on problem solving curriculum for the University City Middle School students. Credit 3 units.

A46 ARCH 337N In Detail: Observation, Drawing, & Discovery

This course explores architectural detailing from the quotidian to the sublime to posit architectural design intent. Through fieldwork and research, students will study the role of architectural detailing in the configuration and execution of architectural space making. Students will be asked to carefully observe their own constructed environment and architectural precedents to understand the truth and fiction in construction. This course seeks to help students understand the role of architectural detail in articulating and reinforcing architectural concepts. It will strengthen students' understanding of material properties, opportunities and limitations, construction sequencing, and design execution. Students will gain a new appreciation for the exquisitely executed architectural detail and strengthen the skill to anticipate and navigate detailing challenges in their own design work. Students will be asked to explore architectural details through various drawing methods, modeling, and modes of representation. This course is open to architecture students at all levels with an interest in drawing and realizing architecture as a constructed practice. Credit 3 units.

A46 ARCH 339 Concepts and Principles of Architecture I

This weekly seminar course addresses issues of Western architectural thought through a focused series of readings and discussions. The necessity and role of architectural theory in general is examined. Issues of tectonics, historicism, typology, regionalism, modernism, postmodernism and other critical frameworks for the consideration of architecture are thematic subjects of discussion. Selected readings include Vitruvius, Alberti, Laugier, Semper, Ruskin, Le Corbusier, Gropius, Kahn, Rossi, Venturi, Eisenman, Libeskind and Koolhaas. Weekly reading assignments, attendance, participation, one summary and discussion introduction based on a reading topic, final paper. Required for first-semester MArch 3 students. Fulfills history/theory elective for MArch 2 students. Credit 3 units. Arch: CAST, GACS

A46 ARCH 343A Design As Export

This course introduces students to the contemporary global characteristics of design in the late 20th and 21st century. The marketing, fabrication, distribution and consumption of design is global, yet the cultural and formal identity of most design products are national and regional. How do traditions of design and quality based on centuries of a national and regional design culture react and adapt to a global market? What is the culture of design? What is design identity? Italian design is the primary focus of this course, followed by Japanese and Asian design and manufacturing. Case studies include examples of industrial design, fashion design, communication design and automobile design. The course also includes presentations by design curators and representatives of various international design companies. Credit 3 units.

A46 ARCH 343X Digital Filmmaking: City Stories

Digital Filmmaking: City Stories is a cross-university video art course for students interested in making short films through a transdisciplinary and time-based storytelling in both narrative and non-narrative formats. Whether documentary or abstract, individually produced or collaborative, all projects in this course have a required social and urban engagement component. In this course, the City becomes a laboratory for experimentation and contribution. Students meaningfully engage St. Louis, and their projects address sites of concern to explore the complex fabric of the city by way of framing and poetic juxtaposition. City Stories merges several arts and humanities disciplines, including experimental cinema and documentary journalism, and creates an opportunity for empathic listening and inquiry as students discover stories built from collective as well as individual memories.

Credit 3 units. EN: H

A46 ARCH 345A The Corner Problem

The corner problem is a classic architectural challenge of how a material, pattern or system turns a corner. In particular, the class will focus on facades that include sun shading elements, thus increasing the thickness of the assembly. Turning a corner sounds benign until you consider that all materials have thickness, and then the problem reveals itself. This too often results in an oversimplification and thus reduction of the design intent. This course will focus on designing custom facade systems using advanced digital modeling techniques and testing through physical prototypes. Knowledge of material systems and modeling techniques will be supplemented through discussions with industry leaders in facade design and fabrication.

Credit 1.5 units.

A46 ARCH 346X Shopping

This seminar examines shopping as a social and cultural construct that operates at several levels in relation to art, architecture, and urban planning. Shopping is the fundamental activity of the capitalist marketplace. It is also inextricably linked with major aspects of public and foreign policy, where national consumerism is closely linked to global tourism and it is at the core of economic development. Shopping is as well a

common denominator of popular culture, frequently satirized in contemporary art, film, and literature. Participants in the seminar will read selections from various writings about shopping and the marketplace. We will also view several films examining the shopping environment in narratives of power and desire.

Prerequisite is completion of Sam Fox foundations year. Open to sophomores and above.

Same as X10 XCORE 346X

Credit 3 units. Art: CPSC

A46 ARCH 348A Body as Site: Jewelry Design as Architecture

In this course, students will undertake a 3D printing and casting process to realize an architecturally conceived set of jewelry in metal and create drawings and renderings of this set. Often, metal 3D printed parts are used as industrial components and engineered mechanical parts. This project will reverse that to create delicate objects that engage with skin. Students will create a parure (a set of related pieces of jewelry) that will examine the human body as an architectural site and test the potential of metal 3D printing in architecture. We will use Autodesk Maya to create hyper-articulated surfaces and employ lost wax and lost plastic metal casting, consequently blurring the line between traditional and contemporary techniques. As a result, we will not simply conceive of a project and outsource its production. Instead, we will use the foundry to provide firsthand experience with material processes. The set of pieces will share characteristics of form and geometry as well as tactics of physical interconnection with the human body, adjusting through site-specific responses to finger, wrist, neck, ear, or head. In addition to a set of renderings and drawings, students will produce wax hand-carved models and 3D-printed plastic objects for lost plastic casting. For artifacts that require fine detail, students will outsource their projects to wax 3D-printing and casting facilities. (Outsourcing for a typical ring costs approximately \$15 in steel and \$35 in silver. Total course costs are estimated to be \$100.)

Credit 1.5 units.

A46 ARCH 348B Furniture

This seminar will explore the work of the Italian architect Enzo Mari, with a focus on his *autoprogettazione?* furniture and book project of 1974. The book offers free designs of furniture that can be built with only a few tools, simple materials, and basic skills, such as measuring, cutting, and hammering. In 2015, Mari granted the Berlin-based CUCULA: Refugees Company for Crafts and Design the rights to redesign and sell the furniture. Students will take up this charge and redesign the furniture from *autoprogettazione?* again, with each student building a redesigned chair. Please note that this seminar will require students to acquire the following tools: a measuring tape, a hammer, a hand saw, and a hand drill and bits (approximate cost of \$75.00 new, \$25.00 if the student is resourceful). (The professor will contact the student in 25 years and ask if they still have the tools.)

Credit 1.5 units.

A46 ARCH 350 Service Learning Course: Environmental Issues

This service learning experience allows Washington University students to bring their knowledge and creativity about the many subjects they are studying to students at the Compton-Drew Middle School, adjacent to the Science Center, in the City of St. Louis. This course is for arts and sciences students of differing

majors and minors, business, architecture and art students, and engineering students from all engineering departments. In the first third of the semester, students will: 1) begin learning the creative process of lateral thinking (synthesizing many variables, working in cycles); 2) work with a teammate to experiment with the design of 2D and 3D hands-on problem-solving workshops about exciting environmental issues, for small groups of students at Compton-Drew Middle School; 3) devise investigations for the workshops about environmental issues embracing the sciences, the humanities and the community; 4) work with the professor individually and in their team, as well as seek advice of faculty from a specific discipline throughout the semester in the preparation of their evolving curricular plan. During the last two-thirds of the semester, Washington University students will be on-site during the Compton-Drew school day, once a week on each Monday from 12:00 to 1:30 p.m. to teach small group workshops for some of the sixth- and seventh-grade students. There will also be a one-hour class meeting on Wednesday at a time to be finalized later. CET (<https://gephardt.institute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.

Credit 3 units. Art: CPSC

A46 ARCH 355 Interdisciplinary Ecosystems Principles Integration

The mission of this interdisciplinary seminar class is to "advance interrelationships of ecological and human systems toward creating healthy, resilient, and biodiverse urban environments" and will bring together experts and students in ecology, urban design, architecture/landscape architecture, economics, social work, and engineering, drawing from inside and outside the Washington University community.

Credit 1 unit. Art: CPSC

A46 ARCH 355A Carbon Neutrality in Architectural Design

Team WashU aims to create a solar home to educate the public on a state-of-the-art, carbon-neutral, adaptive healing space for occupational therapy services using innovative interior, architectural, and system design to meet the users' physical, social, and emotional challenges. The study will focus on design, materials, and renewable energy by illuminating the role of carbon in the built environment, and it will help students understand the principles and application of carbon assessment methods and Life Cycle Analytical (LCA) tools. Students will integrate carbon-neutral design principles into design, fabrication, and construction processes, testing the limits of conventional sustainable design practices and developing new strategies for designing carbon-neutral buildings. Students will work individually to create preliminary design schematics (and their associated structural morphologies, enclosure systems, and MEP systems). They will be fused around a single design strategy developed as a group design project, analyzed for its environmental impact and carbon footprint, and finally built by the student team. The course encourages students to participate in the fabrication and construction process developed as collaborative research, design, and construction effort and support professional consultants or manufacturing partners.

Credit 3 units. Art: CPSC

A46 ARCH 362A Materials of Memory: Designing a Pavilion for Peace Park

In *Wounded Cities* (2012), Karen E. Till writes, "Artistic interventions advance the difficult 'work' of memory in wounded cities marked by particularly violent and difficult pasts. Such projects also may offer possibilities of place-based mourning and care work across generations that build self-worth, collective security, and social capacity." In this course, architecture students will work alongside art students enrolled in a parallel seminar to develop integrated designs for an open air pavilion, a bus shelter, and educational signage for North St. Louis's Peace Park. This seminar is the current phase of an ongoing collaborative between Washington University and the College Hill Community to find tangible actions that can address past injustices, respect memories of the neighborhood, begin a process of healing in the present, and build infrastructure for the future. Students will conduct "memory work" by collecting narratives from local residents, exploring the recent and distant history of the site, and examining past placemaking projects that have successfully utilized memory work to create healing spaces. This foundational work will be used as the basis for the design and construction of large operational presentation models to be placed on display for the local residents. This collaborative process will continue after this semester and will result in a built project by the end of the summer of 2023.

Credit 3 units.

A46 ARCH 376 Design Thinking for Science, Engineering, Business and the Liberal Arts

This introductory course outlines strategies and methodologies drawn from a wide range of creative design practices, including architecture, landscape architecture, urban design, industrial design and others. The course explores how these ideas and techniques are similar to practices in science, engineering, business and the liberal arts and how they might be applicable to multidisciplinary problem solving. Topics include perception, representation, technology, group intelligence, bio-mimicry and context-based learning, among others. Emphasis is given to the intersection of design thinking with environmental problems and the relationship between design thinking and innovation. The course includes lectures, guest lectures with case studies, and design projects. Open to all undergraduate students.

Credit 1 unit. EN: H

A46 ARCH 3823 15th- & 16th-Century Florence, Rome & Venice: Rethinking Renaissance Visual Culture

The Early Renaissance — also known as the quattrocento — usually denotes the period from circa 1400 to circa 1500. In those 100 years, Italy, particularly Florence, witnessed an extraordinary coming together of artistic talent, a passionate interest in the art and culture of Greek and Roman antiquity, a fierce sense of civic pride and an optimistic belief in the classical concept of "Man as the measure of all things." This course examines the principal artists who contributed to this cultural revolution. In order to take full advantage of the special experience of studying the renaissance in the very city of its birth, the stress is mainly, although not exclusively, on Florentine artists who include sculptors such as Donatello, Verrocchio, and Michelangelo; painters such as Giotto, Masaccio, Uccello, Botticelli, Leonardo, and Raphael; and architects such as Brunelleschi and Alberti up to Sangallo.

Same as F20 ART 3823

Credit 3 units. Arch: HT, RW Art: AH

A46 ARCH 3824 The Italian Renaissance in the City of Florence

This course encompasses the Renaissance from Giotto through the High Renaissance. Students examine first-hand the works they are studying. Included are field trips to Rome and Venice. Same as F20 ART 3824
Credit 3 units. Art: AH EN: H

A46 ARCH 3825 Florence as a Cultural Artifact: The History of Architecture as the History of the City

This course combines seminar and workshop activities aiming at the understanding of the rich urban and architectural history of Florence, the place of students' work and temporary living during the study abroad program. These activities will be in dialogue with the design studio and art history courses. The intellectual framework of the course is informed by Giulio Carlo Argan's seminal work "La storia dell'arte come storia della città" ("The history of art as the history of the city," Einaudi, 1983), presenting the city as a complex time-space phenomenology of cultural artifacts. While Florence is well known for its cultural contribution to Western cultural history during the 1400s and 1500s, little is known about the full span of its millennial history, including its contemporary developments. The seminar activities will cover such aspects through readings and lecture-cum-sketching urban and architectural documentation tours in the first part of the semester, leading to the development of individual artists' book projects to be completed in the second part of the semester for the program's semester exhibition.
Credit 3 units.

A46 ARCH 382S Special Topics: Franco Albini and Carlo Scarpa (Study Abroad)

A history/theory seminar course examining the works of the Italian architects Franco Albini (b. 1905, Robbiate [Milan] - 1977) and Carlo Scarpa (b. 1906, Venice - 1978), as well as "the school of Florence," a group of modern architects who worked primarily in and around Florence, Italy, including Leonardo Savioli (b. 1917, Florence - 1982), Giovanni Michelucci (b. 1899, Pistoia - 1990) and Leonardo Ricci (b. 1918, Rome - 1994). Introductory lectures by the professors will be followed by student research and case studies of selected buildings and projects. Students will participate in field trips conducted by the professors to buildings and sites in and around Florence (works of Savioli, Ricci, Michelucci and Scarpa). A field trip to Milan in the first half of the semester will include visits to the Franco Albini Foundation with a lecture by the architect Marco Albini, as well as several exhibition installations designed by Albini, and his contemporaries Belgiojoso, Peresutti and Rogers. A field trip to Venice, Vicenza and Verona in the second half of the semester will include visits to projects designed by Scarpa, including the Olivetti Showroom, Querini Stampalia, Correr Museum, Castelvecchio Museum, and the Banca Popolare di Verona. Students will analyze and present buildings and installations employing varying methods of analysis, both graphic and photographic.
Credit 3 units. Arch: HT

A46 ARCH 385B Beyond Words, Beyond Images: Representation After History

The seminar focuses on art in the public domain and examines contemporary practices that engage public memory and the metacity. Prompting students to consider their own practice in the context of public space, this seminar offers examples of projects that contribute to the global cultural and political

discourse. Weekly illustrated lectures, readings, writing assignments, screenings, discussions, and individual research lead toward the final term paper. Individual studio consultations serve as a platform for the discussion of student's evolving practice, which culminates in a final project in a medium of choice. MFA VA students and graduate students in architecture are especially welcome.
Credit 3 units.

A46 ARCH 386X Public Practice

With architecture, art and design students in mind, Public Practice is a design-build course focused on the development, presentation, and actualization of commissioned works within the public realm. Through an iterative process of concept development, material exploration, and panel reviews, students will learn how to develop, propose and execute a viable public piece. Individual and/or group proposals will be presented before a selection committee in consideration toward a public art/design commission. Selected projects will be realized within specified sites in the community of University City, MO. Students will have hands-on experiences with construction processes, meeting structural requirements and codes, site development, and project installation, which will prepare them for a creative life situated firmly within a discourse of Public Space. Open to MFA, graduate architecture students, BFA and undergraduate architecture students with junior-level standing. Minors and others eligible with consent of instructor.
Same as X10 XCORE 386X
Credit 3 units.

A46 ARCH 388A Architecture Portfolio Design

Architecture portfolios play an essential role in framing and presenting work in both academic and professional contexts. More importantly, through the reflective act of re-presenting images and texts, students can begin to define their positions in the field and direct the course of their careers as architects. Architecture Portfolio Design facilitates the production and development of a comprehensive portfolio and covers the essential concepts and techniques at play in contemporary portfolio production. Over the course of 8-weeks, we will do the following: 1) perform close analyses of groundbreaking architectural publication designs; 2) assemble, organize, and evaluate portfolio image and text content; 3) profile the key academic institutions and employers with which students are most interested in engaging; 4) define the target audience to better frame content for that audience; 5) review portfolio organization as well as page layout and hierarchy of image and text; 6) perform an intensive review of student written project descriptions and related captions; 7) review tactics of digital display and physical distribution; 8) invite widely published architects and graphic designers in the Sam Fox School to portfolio reviews; 9) invite a panel of students that have prepared successful portfolios to present and share strategies; and 10) tangentially address curriculum vitae, work samples, web and social media accounts, reference letter requests, essays, and letters of intent.
Credit 1.5 units.

A46 ARCH 396B Making Things That Function

Heidegger identified "things" as what objects become once they cease to perform their function in society. In this course, we seize that moment of dysfunction as a point for creative intervention. Students will design and make functional objects that engage the body with intention. The meaning of function will be debated so that students develop a definition based on

their own values. Highly exaggerated, specific, or experimental works will be encouraged. Techniques for metal fabrication, simple woodworking, and mold-making will be taught in class, as needed. No previous experience is necessary. This course will benefit designers, artists, architects, and engineers, and it will explore the intersections of design and making among these fields. Prerequisite: 3D Design, Architecture 111 studio, or permission of instructor.

Same as F20 ART 396B

Credit 3 units. Art: FAAM, FADM

A46 ARCH 400A Design Foundations Studio

This is an intensive three-week program that introduces incoming students to the pedagogy around thinking and making through an introductory studio exercise. Enrollment is open to first-semester MArch 2 students only.

Credit 3 units.

A46 ARCH 401B Color in Architecture, Design and Art

This seminar introduces students to aspects of color in architecture, design and art and deals primarily with 19th- and 21st-century theories and projects. Student work includes readings and discussions, case studies and experiments in color application. Research includes case study architectural examples by Rietveld, Herzog & De Meuron, Luis Barragan, SANAA and others; readings on color theory by architects Alberti, Fernand Leger, Koolhaas, Le Corbusier; artists Mondrian, Josef Albers, Richard Paul Lohse, Ad Reinhardt, Barnett Newman, Donald Judd; philosophers Goethe, Wittgenstein, Barthes; psychologists Carl Jung; and designers Irma Boom, Ettore Sottsass, Bruno Munari and Konstantin Grcic. Resources will include the collections of the Mildred Lane Kemper Art Museum and the Saint Louis Art Museum.

Credit 3 units.

A46 ARCH 402A Measured Representation

This course proposes to investigate and create a series of measured drawings. The drawings, as architectural objects, configure architectural knowledge, perception and vision. We will begin by studying precedent drawings in relation to each architect's theoretical framework, project description and technique. The range of works will relate different types of construction (perspectives, axonometrics, diagrams, ideagrams, assemblages, montages, descriptive geometry, and mapping) with integral and symbiotic theoretical agendas. Each student will learn the techniques of representation in their case study and from this example construct an interpretation of a specified site in this language. With a collection of theoretical frameworks and workshops on various techniques, the class will qualify a series of sites through drawing/interpreting the shadows present. Shadows may be thought of as reductions of the real object — in this sense, the drawings will act as abstractions or reductions that promote vision. Instead of simply discussing qualities of space, narratives of metaphor, intangible phenomena, implications of constructed geometry, this architectural research project attempts to propose methods of seeing such that the representation may play a more active role in the shaping of design. This course centers on the creation of imaginative processes of representation.

Credit 3 units.

A46 ARCH 404 Advancing Integrated Sustainability

Do you want to work differently? Toward more effective outcomes? This course is a call to students from all disciplines with the conviction that it is necessary for us to work together while contributing from our specific fields of study to find solutions to challenges in our built environment. Students apply the knowledge base they acquire in this course to formulating ideas for actual community projects in St. Louis. Students learn to integrate and apply a holistic range of social, economic and technical systems inspired and optimized by models in the natural world. A foundation in natural and biomimetic systems is overlaid with analysis of corporate mission, principles and triple bottom-line thinking in order to learn how to build defensible, value-based arguments for implementation of sustainable systems. With the expressed intent of achieving net positive outcomes in the built environment, the following topics are addressed: brownfield property reuse; storm/wastewater management; urban heat island management; air quality; potable water issues and opportunities; material cycles and flows including embedded energy, emissions, toxicity, virgin vs. recycled content and waste diversion; energy efficiency and renewable energy opportunities; transportation, accessibility and mobility choices; vernacular and cultural expression; local and healthy food availability; fitness advocacy and other health issues; education; public outreach and transparency; governance; and the economics of these systems. Lectures, case studies, readings and class discussions support application exercises and experimental projects to propose ideas for improving the built environment at multiple scales. Assignments are reviewed often to assist each student's learning and questions. Complementing leading-edge theory with practical outcomes are provided with the intention that students develop valuable skills to be incorporated in their other academic projects. Please visit <http://samfoxschool.wustl.edu> for work samples and student manifestos from previous classes.

Credit 3 units.

A46 ARCH 404C Topics in Architectural Entrepreneurship

Entrepreneurship has become a very important issue for businesses small and large. What can the profession of architecture learn from these ideas? This course, offered in partnership with the Skandalaris Center for Entrepreneurial Studies, offers students a chance to gain exposure to the entrepreneurial ideas that are innovating the architectural community, and begin to foster a mindset of architectural entrepreneurship that has the potential to be widely beneficial to the profession. Each week the course welcomes a guest speaker who, as the owner of a firm or innovator of a new business proposal in the design field, provides case studies to show students what type of entrepreneurial ideas are shifting the architectural discipline. From sustainability, to urbanization and localism, to emerging global growth engines, and the future structure of the architectural network, each lecturer brings new insight to what it is to be an architectural entrepreneur.

Credit 3 units.

A46 ARCH 404D For Purpose: Art & Design as an Ethics-Based Model of Entrepreneurship

Working from the premise that art and design have the ability to enrich and transform lives and communities in a tangible way, students redefine social, environmental and cultural problems as opportunities. Students are encouraged to bring ideas that have the potential to address these problems through the creative processes of art and design. Students work in teams to develop a proposal for a project, product, or service-based organization

with the potential to address a specific issue. Students draw lessons from researching established individuals, companies and not-for-profit organizations that are involved in the production of culturally significant, creative work that also supports a larger social mission, and students apply this research to their own proposal. Each proposal is developed into a business/sustainability plan that demonstrates the value of the proposal and explains the resources required to meet specific goals. This course introduces students to the uncertainty that is inherent in the entrepreneurial process. Students work to develop skills to evaluate ideas in relation to their personal values, the idea's ability to address a specific problem, and the resources required to implement a sustainable solution. The process helps students to navigate the uncertainty and assess the risk associated with implementing their proposal through morphing the idea concept, seeking advice, and building a coalition of stakeholders. This course is open to disciplines outside of architecture. Students in Art, Social Work and Engineering are encouraged to register. Credit 3 units.

A46 ARCH 404E Design: Urban Ecosystem Principles Integration

In today's world, our discipline has grand challenges whose solutions often lay in other realms. How will students train themselves to leverage the interdisciplinary partnerships required to innovatively solve and evolve in a rapidly changing world? The mission of this interdisciplinary course is to "advance the interrelationships of ecological and human systems toward creating a healthy, resilient, and biodiverse urban environment" and brings together experts and students in ecology, urban design, architecture/landscape architecture, economics, social work and engineering, drawing from inside and outside the Washington University community. Building from our knowledge of ecosystem principles and function, a diverse group of leaders in their fields provides lectures, readings, and student project leadership to understand and test Healthy Urban Ecosystems Principles among human and ecological (nonhuman) systems and the range of sociopolitical processes entailed with their implementation. Class content is developed by Washington University leaders in their disciplines as well as external organizations such as the Missouri Botanical Garden, the Field Museum in Chicago, and others. This course builds upon a 1-unit fall seminar (not a prerequisite) that introduces challenges and solutions to achieving healthy urban ecosystems, and provides students an opportunity to more deeply engage and manipulate the interrelationships of symbiotic urban systems and apply those concepts in multidisciplinary project applications. Projects leverage student-defined challenges in the evolving laboratory of urban St. Louis using Healthy Urban Ecosystems Principles to develop multidisciplinary integrated solutions to challenges encountered in urban areas such as climate change and resilience, security of ecosystem services, social inequity, economic strife, and community vitality. Students present their work in a public forum at semester's end. CET (<https://gephardtinstitute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.

Same as I50 INTER D 406

Credit 3 units. A&S IQ: SSC Arch: SSP EN: S

A46 ARCH 405D Furniture Design

The course focuses on the design of tables using wood as the primary material in response to "rational and irrational strategies" (systematic and emotional). Each student designs, develops and builds prototypes of two tables using the same material. One table is the product of a systematic analysis of

material qualities, production procedures and other constructivist principles. The other table is the product of more explicitly intuitive, emotional and interpretive responses to the nature of the material and its production. Course limited to 10 students. Credit 3 units.

A46 ARCH 405H Sustainability Exchange: Community and University Practicums

The Sustainability Exchange engages interdisciplinary teams of students to tackle real-world energy, environmental, and sustainability problems through an experiential form of education. Students participate in projects with on- or off-campus clients developed with and guided by faculty advisors from across the University. Teams deliver to their clients an end-product that explores "wicked" problems requiring innovative methods and solutions. Past projects have included investigating soil impacts of de-icing practices on campus, collecting data on inequitable trash collection in neighborhoods, working with St. Louis City's building division to make buildings more energy efficient, developing an understanding of how buildings impact birds on campus, and analyzing the performance and viability of sustainable investments. Upcoming projects are still being finalized and may include mitigating plastic pollution in the Mississippi, creating and publishing an illustrated book on the social, cultural, and ecological importance of Forest Park, and assisting with the planning and development of a rain-scaping proposal for a St. Louis City neighborhood. Team-based projects are complemented by seminars that explore problem solving strategies and methodologies drawn from a wide range of creative practices, including design, engineering, and science, as well as contemporary topics in energy, environment, and sustainability. Students will draw on these topics to influence their projects. The course is designed primarily for undergraduates, with preference given to seniors. Same as I50 INTER D 405

Credit 3 units. A&S IQ: SSC Arch: SSC Art: CPSC, SSC EN: S

A46 ARCH 407A Digital and Analog Fabrication

Digital and Analog Fabrication (Aperture Systems) explores contemporary fabrication methods for architectural design. We will develop and employ digital and manual fabrication techniques, including casting, thermoforming, 3D printing, laser-cutting, and CNC milling, for a semester-long design project. Students will have opportunities to work with a variety of tools in the shops and digital laboratories to develop a full-scale kinetic prototype of/for a door/window/portal/aperture system. No previous fabrication experience or expertise is required. Credit 3 units.

A46 ARCH 407B Dynamic Materialism and Urbanism

Dynamic Materialism and Urbanism is a course developed for students who are interested in emerging technologies and digital production. The course develops and tests experimental design processes in architecture and digital media by enhancing 3D technologies, and it allows each student to adopt abstract thinking and making processes. This course develops digital design skills with the conceptual understanding of the transformative awareness of the artistic production of computational processes, which can inspire new forms of architectural conditions. The current developments in digital technology allow mathematical expressions to transform complex generative systems, which have shifted the formal discourse of architecture. The new digitally based techniques are being invented to inform creative processes in

architecture through the manipulations of complex geometrical and topological forms. This course will focus on developing new techniques that translate these mathematical developments into diagrammatic design strategies. The generative modeling techniques will be deployed by the students for this investigation. Students will develop a complex set of massing strategies with conceptual development for defining and inventing dynamic-based architectural proposals within an urban context. Through digital modeling and mutating architectural strategies, each student will develop a transformational condition of a new emerging design. The new architectural forms are to be modeled through CAD/CAM (laser cutting) and rapid prototyping (3D printing) for physical outputs.
Credit 3 units.

A46 ARCH 408A Digital Visualization Workshop: 2D Representation

This workshop is an introduction to basic AutoCAD drawing layout and organization with printing process. The workshop introduces students to importing and exporting into other graphic software (Photoshop and Illustrator) allowing a basic understanding of resolution and line types with articulated graphic awareness to develop complex 2D drawing capabilities. Required for all 317-level MArch 3 students, who are given priority in enrolling. Open to all other architecture students as space allows.
Credit 1 unit.

A46 ARCH 408B Digital Visualization Workshop: Advanced 3D Modeling

This course develops digital design skills using the t-spline plug-in for Rhinoceros. As the field of architecture begins to incorporate evermore complex forms and formal strategies, it is necessary for designers to have the ability to work efficiently with advanced modeling software. This allows the development of clean, fluid forms that can be manipulated and transformed as part of the design process, not merely as an output. The course breaks down into four three-hour sessions in which students will have three assignments designed to give a basic understanding of the t-spline plug-in, as well as to show how this type of form manipulation applies to the field of architecture. This course is required for all students in the core graduate program during 318 studio semester.
Credit 1 unit.

A46 ARCH 408C Digital Visualization Workshop: Advanced Rendering

This workshop is an introduction to complex digital rendering in Rhino 4.0 with plug-ins Flamingo, VRay, Maxwell and Fry Rendering Engines. These skills are needed for sophisticated rendering outputs for more hyper-real visualization. The workshop introduces students to material, lighting, camera and global illumination processes. This workshop is required for all MArch students at the 419 level, who are given priority for registration in this course. Open to other upper-level undergraduate and graduate architecture students as space allows.
Credit 1 unit.

A46 ARCH 408D BIM 101 Workshop

The future of the design and construction industry is going to be driven by the use of technology. The best example emerging today is the use of three-dimensional, intelligent design information, commonly referred to as Building Information Modeling (BIM). BIM is expected to drive the AEC industry toward a "model-based" process and gradually move the industry away from a "2D-based" process. The BIM 101 workshop is for future designers who recognize that this future is coming and who are looking for a way to begin preparing themselves in order to be ready when it arrives. We will explore how BIM is being used today and learn the basics of one of the leading BIM tools, Autodesk Revit Architecture 2009. This workshop is intended for senior undergraduate students and graduate students at the 500 level and above.
Credit 1 unit.

A46 ARCH 408J Performance Enhancing

The term "performance" has many meanings that are either quantitative, qualitative, or both simultaneously through a range of design professions. The suggested goal of performance is an optimistic enhancement to a designed entity or idea and holds the potential to be highly provocative relative to the method it is deployed when arguing for a particular design procedure or effect. The double entendre suggested by the term performance relates to both how the system technologically improves a functional aspect along with a more theatrical act of performing. Design in both architecture and fashion relies on both interpretations to create a multidimensional discourse necessary to advance conceptual design investigation. The seminar class explores issues of performance of complex surfaces at the scale of the human body. The class consists of lectures, discussions, readings, physical material manipulation, and 3D digital modeling and digital fabrication. The use of Rhino (with T-splines and/or Grasshopper) or Maya is deployed for the digital design of the skin systems. Material systems are explored initially through manual experimentation and then combined with the digital investigation for the final digital fabrication using tools such as 3D printing, lasercutting, CNC milling, and thermoforming, resulting in a final garment for the human body. The class is offered to both fashion and architecture students and the investigations occur in teams of two where ideally one from each discipline is represented.
Credit 3 units.

A46 ARCH 408M Atmospheric Animations

This course explores the capacity of modifying perception, as a way of thinking and making in design process. We recognize the ambient complex environment base on the concept of each element in space as a figure of motion, being sensitive to a specific period of time. Each student begins with selecting a certain way of observing, and developing a method to document and analyze a piece of dynamic perception which is then re-constructed through drawings or models, primarily focusing on one aspect of the experience, such as material performance, light reflections, air flow, etc. Final part of the project is representing the synthetic perception, by creating the atmospheric imagery in motion. Students are introduced to various techniques of recording ocular perceptions with the aid of digital tools, 2D representation, 3D modeling and animation rendering throughout the course, both as general workshops and individual project basis.
Credit 3 units.

A46 ARCH 408N Mapping Complex Spatial Sequences

New methods of spatial practice have changed the way architects and designers work. As designers, we are no longer tied to static, projection-based drawings as a means to develop and represent our ideas. Time-based digital imaging allows us to simultaneously examine the narrative, formal, experiential and spatial aspects of a particular place. Students will map a site through digital photography focusing on a specific spatial sequence much like how a director would set up a scene, moving fluidly from one space to another. During the first half of the semester, this spatial sequence will be used to create a drawing of the entire site as one multilayered composite image with particular attention to the interaction of time, space and movement. The site will then be reconstructed digitally through models or drawings, using the composite drawing as base. Finally, relationships between the drawing and model will be outlined resulting in a more complete experiential spatial sequence.

Credit 3 units.

A46 ARCH 408P Building Performance for a Solar Powered House

We will study the state of the art of building integrated solar systems, and design such a system for a house and assess its performance using computational tools. Topics include the fundamentals of solar energy systems, energy management, and its implications to design, either passive or active approach. The course involves building performance simulations using Ecotect, Energy+, HERS and other tools. Students will use simulation data to study the relation between design and its performance. The course will consist of lectures, review, and student projects. The course will be parallel with several Engineering courses, including ESE 437: Sustainable Energy Systems, and EECE 428: Sustainability Exchange. Projects will involve teamwork with Engineering students of different backgrounds. The course will contribute to Team WUSTL solar decathlon with the following features: energy efficiency: passive design; high performance enclosure; net-zero energy: renewable energy; heat recovery; sustainability: water recycle; carbon neutral; lean construction; resilience: prefabricated house to mitigate natural disasters; Smartness: advanced sensors network; energy management; data visualization; human-centered living adaptability: flexible space; human comfort and perception controls to operate the house to improve productivity and health; an interdisciplinary effort for renewable energy and sustainable buildings.

Credit 3 units.

A46 ARCH 408Q Fabricated Drawings

The course will focus on digital fabrication tools, techniques and image theory to uncover new methods of producing physical images. Images are built in a myriad of methods including physical media or from data. Physical images, as defined in the context of this seminar, will transcend a 2D limitation to develop thickness. The increase to 2.5D or 3D opens opportunities to investigate the use of digital fabrication tools to construct images. In particular, the class will focus on the way information technology continues to have a profound effect on the way we perceive our built environment and the way we represent it. The images that surround us are becoming increasingly easy to generate through information technology. Access to technology both in terms of digital design and output affords the opportunity to reconceive the nature of images. Images are developed through analog, digital or hybrid processes. Their generation is a collaborative interaction between intuition and information processes through clearly defined rules. The

scientific theoretician, Peter Galison, discusses the tension between intuition and information on the nature of images in the arts and sciences. Images reveal the intricacy of relations and knowledge, but they are simultaneous deceptive because they bypass the mathematics of pure science. The tension in the arts tends to be between the intuitive, interpretive ability of images as representation versus the image as evidence of a computation-based process. Architectural theoretician Mark Linder talks about how images in architecture are moving away from representations of something else toward a more literal and non-idealized result of a procedure. The image is literally the process of making visible the end result of an operation. Therefore, images are the evidence of the process by which they were generated. As such, the class will develop innovative processes for our digital fabrication equipment to construct images. The projects will develop new methods to use the CNC mill, laser cutters, knife plotter and 3D printer. New tools may need to be developed and built to enable the image fabrication process. In parallel with technological development is material experimentation. Students will be highly encouraged to test new materials to program their behavior and interaction with technology.

Credit 3 units.

A46 ARCH 409C Watercolor Painting for Architects, Urban Designers and Landscape Architects

This class will introduce students to different techniques of watercolor painting. The class will focus on teaching students the basics of material selection (paint colors, brushes, various papers), proper paint blending/mixing techniques, creation of unique color palettes, and both smooth wash techniques and painterly brush effects. Students will learn to render site plans of their own project work. There will also be an optional afternoon of pure sketching with paint. One objective is to teach students the methods to create beautiful renderings so that they may chose to apply the techniques to their final studio illustrative work (at the discretion of the student). Grades will be based upon class participation, effort, and final watercolors. Fulfills Analog elective requirement.

Credit 3 units.

A46 ARCH 409E Architectural Sketching

An introduction to architectural sketching — a graphic communication skill that architects and designers use to analyze and document their environments, and to visualize design thinking and creative process. Many class sessions will meet on site, drawing directly from observation. The first part of the semester will focus on fundamentals of sketching through the study of existing buildings, their contexts, and interiors. Students will expand and refine their observation skills as they use the architectural sketch as a mode of research — exploring elements of architecture: form, material, light; and the relationships between building and context, and building and interior. The second part of the semester will expand to include the architectural sketch as language. Students will learn to use the architectural sketch to explore, confront, develop, and translate abstract ideas into visual narrative, creating a record of design thinking and creative process. Students will be registered for the course from the waitlist by the Registrar's Office. Priority will be given to undergraduate students. Prerequisite: Drawing I or graduate architecture standing.

Credit 3 units.

A46 ARCH 4102 Lively City: Behavioral Studies & Public Space Design

Working in small groups, students will acquire new perspectives and skills that put people and their needs at the heart of the creative process of re-imagining and transforming cities. Livability, lively cities, public life, and other concepts describing inviting, vibrant, and stimulating urban environments are frequently communicated in new visions for the future of cities today, but they are the most often unrealized components of design projects. This focus on "urban life" is a direct reaction to the urban realities created in the 20th century, where increases in our standards of living and the associated city building processes have created areas in which large and increasing numbers of people have become isolated from each other, both socially and geographically. Despite our new awareness for the need to plan for a shared and intensified urban life in sustainable cities, we continue to have difficulty understanding exactly what this "urban life" is, how much of it we truly want and need, and how we can reconcile the often conflicting and simultaneous needs of people for privacy and social stimulation. Open to all graduate students. Master of Urban Design students receive priority. The completion of both the Informal Cities (fall semester) and Lively City (spring semester) masterclasses may fulfill the Urban Issues elective requirement for MArch students. Same as A49 MUD 4102
Credit 2 units.

A46 ARCH 411 Architectural Design III

Prerequisite: satisfactory completion of Arch 312.
Credit 6 units.

A46 ARCH 411A Architectural Design III (Study Abroad)

Prerequisite: satisfactory completion of Arch 311 for Bachelor of Design students. Satisfactory completion of Arch 312 for Bachelor of Science students. Twelve hours of studio work a week.
Credit 6 units.

A46 ARCH 412 Architectural Design IV

Prerequisite: satisfactory completion of Arch 411.
Credit 6 units.

A46 ARCH 414A Digital Ceramics

The production of ceramic building materials spans from individually constructed and handcrafted to industrial and mass produced. Some of the earliest examples of permanent structures include clay-based building components. At the turn of the century, the Hydraulic Press Brick Company in St. Louis was the most innovative brick company in world, producing 100 million bricks per year by 1900. The abundance of clay and the affordability of bricks contributed to the longevity of building stock, where even modest homes had ornamental bricks, corbeling, recesses, and extensions. Historically, fired clay building components were valued for their strength, modularity, fire resistance, raw material availability, and aesthetics. Ceramic building units are pervasive in their use in the built environment, but they have been underappreciated in contemporary architecture practice. Digital Ceramics examines new possibilities for masonry and ceramics in architecture through computational design and digital fabrication. Algorithmic design techniques, digital fabrication, and ceramic research will be merged for the design and production of nonstandard ceramic components in aggregated assemblies. Readings, tutorials, and guest lectures throughout the course will focus on innovations

in digital technology, digital fabrication, advanced geometry, and material practices. Student work will include the creation of 3D-printed and/or CNC-produced molds and slip-cast ceramic components. Additional course work will include drying and firing clay components, staining and glazing techniques, and clay body research. Students will also be introduced to ceramic 3D printing during the course. Digital Ceramics confronts the seemingly disparate modes of physical making and digital form-giving with the introduction of a new material system that expands the aesthetic and performative potential of aggregated enclosure assemblies. In recent digital discourse, we have seen the ability for endless variation and customization through the use of parametric design software. This course intends to underscore a thoughtful consideration of the relationship between technology and adaptability. Through material behavior and calibrated irregularities, we have the capacity to make each component unique. Experience with digital modeling (Rhino) and digital fabrication is strongly encouraged.
Credit 3 units.

A46 ARCH 418A Design Culture

This course will provide an overview of historical and contemporary design issues, including (but not limited to) graphic design, communication design, industrial design, furniture design, film, and animation. Lectures, films, and readings will deepen students' knowledge of how different design practices complement and enrich architecture and broaden their understanding of how history, philosophy, and technology have shaped different design movements.
Credit 1.5 units.

A46 ARCH 419 Architectural Design III (MArch 3)

The third of a three-semester sequence of design studios. Continues examination of issues raised in ARCH 317 and ARCH 318.
Credit 6 units.

A46 ARCH 420E The Persistence of the Beaux Arts

This seminar will investigate the neoclassical style associated with the École des Beaux Arts in Paris (est. 1819), which was characterized by symmetry, grid-based plans, privileging of the plan in design, the systematic organization of rooms, urban monuments, relief sculpture, statues on buildings, and other attributes. We will compile a database of projects; explore the nearby traces of the Louisiana Purchase Exposition of 1904 in Forest Park and on the Danforth Campus; and use resources in the Steedman Collection in the St. Louis Central Library and the Missouri Historical Society as well as on campus. An optional longer-distance field trip will be considered. Association of the Beaux Arts style with utopian societies, nationalist politics, colonial expansion, and enslavement practices as well as with science, health and hygiene, and international relations will be examined. Taking the analytical research of Colin Rowe and Kenneth Frampton as models, students will enrich their understanding of Beaux Arts architecture through comparative analyses, seeking connections between its buildings and examples from Ancient Egypt, Classical Greece, and the Renaissance as well as from the modern, postmodern, and contemporary periods. Final projects may use drawing, rendering, photogrammetry, or video, along with a written research paper. Prerequisite: Architectural History II. A few spaces will be reserved for undergraduate students.
Credit 3 units. Arch: GARW, RW

A46 ARCH 421U Urbanism: Chicago

This design research seminar focuses on the urban infrastructure and associated buildings of central Chicago, in and around the areas near the Loop. The Chicago metropolitan area is the third largest in the United States, and from 1870 until the 1950s, Chicago was America's "second city," surpassed in size only by New York City. It remains the densest and most "urban" of the cities of the Midwest, with many examples of complex interconnections between rail lines, highways, and various kinds of pedestrian-oriented urban environments. This seminar combines historical and field research on some of the many architectural urban design interventions in Chicago. Students choose among several topic areas to produce detailed drawings and digital models of specific urban interventions. There will likely be a publication of the work. Topic areas for digital documentation include the pedestrian relationships between transit lines and various buildings and urban complexes, including the large Millennium Park environments. This seminar includes the large Illinois Central railway lines adjacent to Lake Michigan, and Wacker Drive, a 1920s underground limited access highway along the Chicago River, and other projects. Fulfills History/Theory and Urban Issues elective requirement. Credit 3 units.

A46 ARCH 421V Unbuilt Sert

This design research seminar will focus on the digital simulation of the unbuilt architectural design projects of Josep Lluís Sert (1901-83). This spring we will document and analyze Sert's drawings for St. Botolph's Chapel (1963) designed for the Boston Government Center complex with the goal of virtually "building" it. Sert practiced in Barcelona in the 1930s during the era of the Spanish Republic and later in the U.S. as both architect and planner. He was the President of CIAM (International Congresses of Modern Architecture) from 1947-56, and Dean of the Harvard Graduate School of Design from 1953-69 where he developed urban design as a discipline and academic program. The chapel was an effort to combine elements of Catalan modern architecture with his concept of a modern "New Monumentality" suitable to the postwar world. The seminar will also visit several of Sert's major built projects in the Boston area, and will include presentations by Dean Emeritus Edward Baum, who was job captain on the St. Botolph's chapel project with the Sert, Jackson firm. Students will work in teams to produce detailed digital models of the project to simulate the "built" chapel inside and out. Publication of the work is anticipated. Credit 3 units. Arch: GACS

A46 ARCH 421W Designing the Modern City

This course, which is based on the textbook *Designing the Modern City: Urbanism Since 1850*, is a lecture course that examines designers' efforts to shape modern cities. Topics covered include the technical and social changes in mid-19th century industrial cities, notably London, Paris, and Barcelona, as well as varied efforts to shape urban extensions and central new interventions elsewhere. These include reform housing efforts for the working class in 19th-century London and New York, *Städtebau* (city building) in German-speaking environments, the Garden City Movement, the American City Beautiful movement, "town planning" in Britain, and "urbanisme" in France (the source of the contemporary term "urbanism"). Less well-known topics that will also be addressed are urban modernization in East Asia before 1940 and suburban planning in the United States, including Frank Lloyd Wright's Broadacre City. The book also addresses social change and modern urbanism in Europe in the 1920s, including the emergence

of CIAM (International Congresses for Modern Architecture), which met from 1928 to 1956; the political, technological and urban transformations of World War II; the expansion of racially segregated decentralization in the United States; and some European and Latin American postwar urbanism. It also addresses urbanistic aspects of postwar architectural culture, including critiques of modernist planning by Jane Jacobs and others and more recent responses to the ongoing challenges posed by efforts to create organized self-build settlements and to make more ecologically sustainable cities. Credit 3 units. Arch: GAMUD, GARW, GAUI, RW, UI

A46 ARCH 421X Modern St. Louis, 1940 to 1974: Art, Architecture and Social Change

This seminar addresses the research question, "How did modern art and architecture become such a major aspect of St. Louis's cultural life in the middle decades of the 20th century?" Offered in preparation for a fall 2022 exhibition on this topic at the Kemper Museum, the seminar will research this question, both by presenting notable works of modern architecture that were built here and by examining art collecting and philanthropy here during this time period, where new and more socially inclusive values then associated with modern art had a significant impact on changing both the political and artistic culture of this large metro region. Architectural works to be researched include the works of Harris Armstrong; Cloethiel Woodard Smith (a Washington University architecture alumna); Samuel Marx; Frederick Dunn; Eric Mendelsohn; Eero Saarinen; Dan Kiley; Joseph Murphy and Eugene Mackey, Jr; George Hellmuth, Minoru Yamasaki and Gyo Obata; and Charles E. Fleming. Prerequisites: Architectural History I & II or equivalent. Credit 3 units. Arch: GARW, RW

A46 ARCH 421Z The Chicago Skyscraper

This seminar will consider a set of projects by Burnham and Root, Holabird and Roche, Wm. Le Baron Jenney, Louis Sullivan, and others. A central example will be the Monadnock Building, with its two sections by Burnham and Root (1891) and Holabird and Roche (1893). As one of the main lines of inquiry, we will define the skyscraper type, evaluate examples through comparative study, and unfold "intersectional" aspects of the buildings with respect to race, gender, and labor. Special attention will be paid to symbolism and the relationship between structure, tectonics, and ornament programs. Circumstances permitting, the seminar will apply photogrammetric techniques to the documentation and study of architectural details, entailing a field trip. Space will be reserved for undergraduate students. Prerequisite: Architectural History I or II. Credit 3 units. Arch: GARW, RW

A46 ARCH 422H Urban Topographies

This digital seminar introduces students to the basics of geospatial modeling at both regional and local scales, with an emphasis on the creative application of GIS data toward design thinking, site analysis, and speculative urban design. The course explores the potential for GIS data as more than just for inventory and mapping, but also as an invaluable creative design tool. A series of digital workshops will touch on a range of cross-platform workflows, from digital cartography to parametric modeling to 3D animation. Tying this together will be a speculative urban landscape project that the students will model and visualize utilizing the software introduced. This year's iteration will lean more toward an experimental and explorative use of GIS for design, art and visualization. This course is

intended to give students the flexibility to approach the syllabus as an independent study or as a supplement to their studio work. Software that will be covered includes ArcGIS, Autodesk Infraworks, 3DSMax and Grasshopper.

Credit 3 units. Arch: ECOL

A46 ARCH 422J Confronting Urbanization: The Interactive Tissue of Urban Life

This course invites architecture and urban design students to explore the urban condition through the lenses of its interactive tissue -- a tissue that includes smartphones, the World Wide Web, credit cards, highway systems, airports, sidewalks, and indoor plumbing. Within this frame of reference, students are encouraged to investigate, unearth, and document with surgical precision the emergent interrelationships between actors, the agency through which actors engage with the interactive tissue, and the ways in which these actors and relationships shape and influence one another. With the understanding that ideas are generated through speculation, projection, and experimentation, we will use the third dimension as a point of departure toward the fourth dimension of time, and we will aspire to the fifth dimension of lived experience. It is most welcomed that students bring their curiosity to the course, that they are interested in being investigative, and that they are open to various mediums ranging from reading theories of urbanization, drawing, and experimenting with physical/interactive objects to using projection as a tool to document their research in both analog and digital formats. The final product of this course will be a presentation during which students will present their research through multiple media outlets, which may include drawings, installation work, or moving images.

Same as A49 MUD 422J

Credit 3 units. Arch: GAMUD, GAUI, UI Art: CPSC

A46 ARCH 423 History of Landscape Architecture

This seminar reviews the history of gardening in the Western tradition from the Renaissance to the present and in the Chinese and Japanese traditions. Park-making, neighborhood design, and the rise of landscape architecture as a profession receive attention, including several classes held at notable St. Louis examples. Course requirements include readings, a design or research project, and a final exam. Fulfills History/Theory elective.

Credit 3 units.

A46 ARCH 423D Videography for Designers

This seminar course examines the practice of capturing, producing and analyzing moving images as a method of inquiry for design. We focus on the analytical and communicative qualities of time-based media (recorded sequences, video, slideshows, animation, simulation, remote sensing, etc.) as a human-landscape intermediary that has the ability to alter understanding and evaluation of the environment. We explore techniques from a range of disciplines — art, design, sociology, anthropology, etc. The course meets weekly for brief lectures/presentations to direct our inquiries, discussion of foundational readings and ideas, media workshops, screenings, local field trips, and/or student presentations of work. Throughout the semester, students generate brief, exploratory work that focuses on methods and techniques, and a larger, final project that engages the themes of the course. Open to all graduate and upper-level undergraduate students, a goal of the course is to

blur boundaries between art and design, and to capitalize on their various approaches. No experience with video, animation, or other software is required — only the desire to explore and incorporate time-based methods into individual processes.

Same as A48 LAND 423D

Credit 3 units.

A46 ARCH 423E Cinematic Landscapes: The Making Of

Watch movies. Talk about movies. Analyze the making of movies. Make a movie. Climate-themed movies. Post-apocalyptic movies. Meet in technology. Learn to scientifically use drones. Learn to scientifically use LIDAR. Use these tools in your climate-themed movie. Sculpt stories in time, supported by sound. This course will focus on the analysis of landscapes and cities as portrayed by popular cinema. How eidetic portrayals of nature and cities are circulated by popular cinema. Stories through which the values, common referents, public concepts, and memes of a culture materialize through the construction of movies. Interior to the semester there is an interdisciplinary workshop. Four-day fieldwork with Geology Assistant Professor Alex Bradley. Map and produce digital representations at 2-cm resolution of a mountainside scoured by a burst reservoir. This class is divided into three parts: watch, learn, and make. Watch: Each week, students will be asked to watch one movie and one director's commentary, often referred to in the "bonus features" as "the making of." Learn: Students will study the methods and techniques used to create settings, props, and storyboards in the service of a sound vision. Make: Students will synthesize digital and analogue time-based media tools (sound and video) to make a movie thematically based on climate change.

Same as A48 LAND 423E

Credit 3 units.

A46 ARCH 424L The Chinese City in Historical Perspective

This seminar examines the development of urban centers in China through history. The city is approached from formal, territorial, political, and socio-economic perspectives, situated in the broader landscape of cultural and environmental changes. Key themes are continuity and change, citizenship and public life, urban form and structural transformations, and infrastructure and the hinterland. The course begins with archaeological and textual origins of the earliest cities and ends with the staggering growth and globalization of Chinese cities today.

Credit 3 units.

A46 ARCH 427H The Crystal Palace

The seminar will seek a thorough acquaintance with the Crystal Palace, the structure that housed the Great Exhibition of 1851 in London. We will follow a timeline from the building's origins in theories of art and society to its design and construction at Hyde Park, its opening, its exhibits, its wide publication in the media, its catastrophic fire, its reconstruction on a new site, and its final demise in 1936. We will examine the building's structure and details and the extent to which project and building served to plan parts of the city and inaugurated a new type of space for the public display of objects. Looking at authors of this project, including Joseph Paxton and Owen Jones, we will explore the implied relationships between architecture and landscape and between architecture and the decorative arts, including the unsteady beginnings of design for mass production. We will revisit debates this building provoked concerning the nature of ornament and the very definition of architecture. In reviewing the building and its contents, we will ask questions about antiquarianism and the return of the temple as a symbol; about natural histories, techniques of inventory, and the context

of the British Empire; and about the role the Crystal Palace has played in narratives of the history of modern architecture. Readings will include selections from Paxton, Jones, Ruskin, Semper, Pevsner, Hegel, Benjamin, Tafuri, Said, Ranciere, and others.

Credit 3 units. Arch: GARW, RW

A46 ARCH 4280 Architectural History I: Antiquity to Baroque

This lecture course will introduce major historical narratives, themes, sites, and architects from ancient Greece to the end of the Baroque period. We will take an extended look at the dawn of the modern period during the 15th and 16th centuries through a global perspective, turning eastward from Renaissance Europe to the Ottoman, Mughal, Chinese, and Japanese empires. The great chronological and geographic span of this course will be pulled together around the themes of classicism and its subsequent reinterpretations as well as the pursuit of the tectonic ideal. Our aim is to recognize how these ideological pursuits of modern architecture evolved out of longer historical processes. We will also pay close attention to major sites of landscape and urban-scale work. Requirements will include a mid-term exam, a final exam, and a series of short papers.

Same as A46 ARCH 3280

Credit 3 units.

A46 ARCH 4284 Architectural History II: Architecture Since 1880

This course is an introductory survey of the history and theory of architecture and urbanism in the context of the rapidly changing technological and social circumstances of the last 120 years. In addition to tracing the usual history of modern architecture, this course also emphasizes understanding of the formal, philosophical, social, technical, and economic backgrounds of other important architectural directions in a global context. Topics range from architects' responses to new conditions in the rapidly developing cities of the later 19th century through early 20th-century theories of perception and social engagement to recent efforts to find new bases for architectural interventions in the contemporary metropolis.

Same as A46 ARCH 3284

Credit 3 units. Arch: HT EN: H

A46 ARCH 4288 Architectural History III: Advanced Theory

The third survey class focuses on architectural history and theory after modernism. It examines the rise of architectural theory as a field of inquiry and its links to both critical social theory — including the Frankfurt School — and to contemporary traits of philosophical postmodernity. From the contextual questions of meaning and memory to the examination of post-structuralism, cultural theory and identity politics — including race, gender and ethnicity — the course uses primary textual sources to illuminate drawings, buildings and ideas that defined this seminal moment in architectural history. While the course closely examines this time period of intense search for a new visual language, it also probes contemporary complexities of architecture's continued search for visual and social purpose in an increasingly interconnected world.

Credit 3 units. Arch: GARW, RW

A46 ARCH 428U American Architecture and Urbanism

This seminar will focus on new ways of thinking about American architecture and urbanism in the 20th century. It is part of an effort to offer new conceptual frameworks to understand American architecture within its larger context of social, political,

and urbanistic change. Unlike an architectural history survey course, it will not only focus on the canonical works of well-known designers such as Ludwig Mies van der Rohe and Louis Kahn, but it will also situate architecture within the various new social, spatial, technological, and legislative directions that have shaped American metropolitan areas since then. Students will present selected readings and pursue individual research projects for this course.

Credit 3 units. Arch: GARW, RW

A46 ARCH 430A Special Topics: Building Visits (Barcelona)

In this 3-credit seminar, students will experience first-hand a careful selection of exemplary contemporary architecture conceived through environmental and social considerations. The seminar is divided into two parts; the first is based on case-studies, and the second is a Spring break architecture travel. The first part consists of a series of lectures delivered by prominent guest practitioners on a single work (in or near Barcelona), followed by a visit with the architect to the building. Through on-site drawing analysis and other exercises, students will unfold the diverse design logics embedded in the building (urban, landscape, energy, material, tectonic and social) to grasp the work holistically. The Spring Break trip will similarly engage with exemplary built works and offices outside of Spain and within Europe. (The exact travel location will be determined according to regional covid restrictions at the time of travel.)

Credit 3 units. Art: CPSC

A46 ARCH 430B Special Topics: Smart Residential Retrofit (Barcelona)

In the debate on climate change and still immersed in the effects left by the global pandemic of covid19, cities have a key role in defining possible and accurate solutions. This seminar aims to familiarize students with urban concepts and themes, such as urban fabric, public space, buildability, scale, paths and streets, mixed-use, density, mobility flows, zoning, urban renewal, gentrification, etc., and provide them with basic tools to describe, analyze and articulate proposals in urban contexts. Through field visits, theoretical sessions, debates, and practical exercises, the spectrum of urban issues and themes will be examined with Barcelona as an example and a living laboratory.

Credit 3 units.

A46 ARCH 430C Special Topics: Pyrocene

In the last five years, cataclysmic wildfires have raged globally, burning hotter, faster, larger, and longer in California, Australia, the Amazon, and beyond. A firestorm of images -- frantic smartphone footage, smoldering drone shots, panoramas of orange haze -- has ushered a vision of an apocalyptic "new normal" into public consciousness. In 2015, the scholar Steven Pyne coined the term "Pyrocene" to describe our current "age of fire," defined not only by the accelerated burning of living landscapes but also "lithic" ones, in which the spectacle of the fire crisis can only be understood in relation to deeper climatic and cultural transformations produced by fossil fuel combustion. This interdisciplinary seminar will explore avenues for architectural and cultural practice in the Pyrocene, which some scholars have called the "arts of living on a damaged planet." Approaching wildfire as a phenomenon at the intersection of landscape and urbanization, the course will center design disciplines but also develop robust connections to political ecology, eco-aesthetic art, decolonial anthropology, eco-poetic literature, and ecologically oriented philosophy. Drawing

from readings and case studies in various fields, students will experimentally develop projects that traverse diverse critical frameworks for understanding, shaping, inhabiting, and tending contemporary fire landscapes.

Same as A48 LAND 430C
Credit 3 units.

A46 ARCH 430D Special Topics

Special Topics electives vary each semester.
Credit 3 units. Arch: NSM EN: H

A46 ARCH 430F Special Topic: Laboratory for Suburbia

During the past five years, America's suburbanized landscape has emerged as a site of urgent electoral, cultural, and spatial contestation; it is arguably the defining geography of the national political moment. The fields of design and art, however, have largely failed to engage this critical space, remaining focused instead on prestigious cosmopolitan destinations and distressed inner-city communities. This interdisciplinary course will ask students to step into this gap, exploring and proposing new forms of critical suburban practice. This course is interdisciplinary, and students with interests in visual art, architecture, urban design, art history, public art, planning, performance, urban history, American Studies, and anthropology are especially encouraged to enroll. For the course's final project, students will draw from research and fieldwork to produce propositions for interventionist art or design projects in St. Louis. Final projects can include "paper architecture" renderings, sculptural maquettes, video works, performances, curatorial projects, or scholarly papers that point toward new models for critical and visionary suburban practice.
Credit 3 units.

A46 ARCH 430G Special Topics: What Does the Museum Look Like?

The museum as an architectural typology and emblematic cultural device is currently undergoing an intense transformation. This seminar aims to shed light onto this typology and the role that museum architecture has as a mechanism to activate present-day communities. A research will be conducted through this type of contemporary culture condenser, having in mind digitalization and globalization. It will also take into account the idea that a museum is not only a display or receptacle dedicated to established areas or disciplines such as the arts, science, sports and industry, among others. The research methodology will consist in the analysis and deployment of seminal and particular study cases to then revise and propose alternatives for the evolution of the museum as an architectural device for contemporary culture. The course will address and discuss different topics such as the idea of destabilizing the museum as an institution, dealing with conflict as a positive, alternative way to generate content, and thinking about this typology as a place dedicated mostly to positive interaction, discussion, service and exchange within the community. In order to compare and get a global perception of this particular museum constellation, specific graphic standards will be used to represent the analysis and deployment of the study cases. Such analyses, as well as the results of the discussions and pieces of work produced during the seminar, will be compiled into a small publication.
Credit 3 units.

A46 ARCH 430J Special Topics in History & Theory:

Documenting Le Corbusier

This design research seminar will focus on the digital and physical modeling of some of the architectural design projects of the French-Swiss architect Le Corbusier (1887-1965). Students will work in teams to produce drawings and physical models of built projects such as the monastery of La Tourette (1953), and unbuilt designs such as the League of Nations headquarters (1926). Students will work individually and in teams. Exhibition and partial publication of the work is anticipated.
Credit 3 units. Arch: CAST, GACS

A46 ARCH 430K Special Topics in History & Theory:

Reflexivity and Triangulation in Architectural Research

This course will introduce students to architectural research methods where triangulation and reflexivity will be applied to a specific neighborhood in St. Louis to respond to architecture racism and urban inequalities. The primary purpose of the course is for the students to examine mitigation strategies through enhanced analytical techniques. Using the neighborhood plan produced in the Segregation by Design seminar, students are asked to generate a more robust analysis of the findings by employing different triangulating types to increase confidence in the research data, reveal unique findings that might be not present if only one method was previously used, challenge or integrate theories, and clarify the understanding of the problem by offering other perspectives. The information will be compiled into the book Segregation by Design as part of the conclusion and will be presented to neighborhood stakeholders.
Credit 3 units. Arch: CAST, GACS

A46 ARCH 430M Special Topics in History & Theory: Hidden in Plain Sight: How to Read a Building

This seminar is an exploration of the importance of autonomy, formal analysis, and the rigorous use of architecture's unique language in the service of an idea, all unrelated to "style." The aim here is to demonstrate that, in the best of architecture — particularly in the Great (Canonical) Works — there is an "intention" that can be "read" in the buildings. These readings demonstrate a recurring methodology that can represent a rigorous, timeless, and comprehensive approach to understanding meaning in architecture from antiquity to the present. These intentions, which can be expressed as diagrams, are hidden in plain sight. They are not, in this context, diagrams of information that simply depict program, geometry, structure, circulation, and so on. The course will be comprised of lectures, reading assignments, in-class discussions, and drawing exercises. The lectures will introduce specific examples of the language of architecture. Using this language, students will analyze individual structures and compare buildings side by side. These comparisons will include buildings that come from different historical periods and that look nothing alike but that will be found to share the same basic diagram, as well as buildings that appear to resemble each other but that are fundamentally different. The goal is to learn to read buildings, to see in a deeper way, and to use that skill to analyze, refine, and correct one's own work.

Credit 3 units. Arch: GARW, RW

A46 ARCH 430N Special Topics in History & Theory:**Learning From Pruitt-Igoe**

This seminar examines the design and adaptation of ordinary inhabitation, taking as its starting point the Pruitt-Igoe housing project in St. Louis. Did this housing project succeed or fail as architecture? This question may have been asked for the wrong reasons. We will examine whether Pruitt-Igoe fulfilled the United States government's goal of creating modern, effective mass housing for working-class Americans. The path to an answer will examine the tangle of architectural modernism (and its critics), vernacular architecture, U.S. housing policies, and ideological shifts within architecture itself. The seminar will investigate the career of architect Minoru Yamasaki, precedent tenement housing forms, and other social mass housing projects in the United States and Europe. Ultimately, students will complete research on whether or not it is possible to (re)claim Pruitt-Igoe as a successful architectural endeavor by understanding what housing forms it was intended to replace and what has come after.

Credit 3 units. Arch: GARW, RW

A46 ARCH 430O Special Topics in History & Theory: The Crystal Palace

The seminar will seek a thorough acquaintance with the Crystal Palace, the structure that housed the Great Exhibition of 1851 in London. We will follow a timeline from the building's origins in theories of art and society to its design and construction at Hyde Park, its opening, its exhibits, its wide publication in the media, and its catastrophic fire, reconstruction on a new site, and final demise in 1936. We will examine the building's structure and details and the extent to which project and building served to plan parts of the city and inaugurated a new type of space for the public display of objects. Looking at authors of this project, including Joseph Paxton and Owen Jones, we will explore the implied relationships between architecture and landscape and between architecture and the decorative arts, including the unsteady beginnings of design for mass production. We will revisit debates this building provoked concerning the nature of ornament and the very definition of architecture. In reviewing the building and its contents, we will ask questions about antiquarianism and the return of the temple as a symbol; about natural histories, techniques of inventory, and the context of the British Empire; and about the role the Crystal Palace has played in narratives of the history of modern architecture. Readings will include selections from Paxton, Jones, Ruskin, Semper, Pevsner, Hegel, Benjamin, Tafuri, Said, Rancière, and others.

Credit 3 units. Arch: GAHT, RW

A46 ARCH 431A Architecture in the Age of Identity: Race, Gender, Ethnicity and Their Discontents

Identity is both an individual and social category. It is deeply personal, woven with memories, feelings and emotions, but also collective, informed by history, society and culture. Consequently, this gap between individual self-expression and societal conformity remains one of the fundamental tensions of human existence, but also a source of inspiration and imagination in our rapidly changing world. Categories such as race, gender, class and ethnicity—as well as their intersections and overlaps—remain dynamic. They constantly evolve, responding to the changing socio-economic context and engaging an ever-expanding array of cultural production—from literature and film to philosophy and sociology. This course expands the conversation even further, examining the

relationship between design and identity in architecture, with a particular emphasis on architectural education. Covering a range of case studies that emerged after World War I, the course moves freely across various divides—between North-South and East-West, between socialism and capitalism—examining the representation of identity through a variety of architectural media, including drawings, texts and buildings. The course probes architecture schools and practices as both disciplinary enterprises and as hubs of identity formation, suggesting the capacity of equity and representation to serve as agents of both political and architectural emancipation. The course content includes lectures, discussions and presentations, as well as reading and research. The course is open to both undergraduate and graduate students and it has no pre-requisites.

Credit 1.5 units. Art: CPSC

A46 ARCH 431B Modern Architecture, Race, and Ethnicity

This course will review the issues mentioned in the title as represented in recent literature and historical examples, focusing mainly on the urban context but more on architecture than urbanism. Themes will include the history and theory of architecture; architecture as art and as service; architecture and social class; and technology and intersectionality. An emphasis will be placed on information literacy, including the use and management of primary and secondary sources, accessed digitally. Assignments will include a series of short papers and a final paper. Space will be reserved for undergraduates. Prerequisite: Architectural History II or equivalent.

Credit 3 units. Arch: GARW, RW Art: CPSC

A46 ARCH 434Y Precarious Structures: Composition/Anti-Composition

This design seminar will explore the construction of architectural compositions as time-based events using motion graphics, physics engines and scale models. Design exercises will be supplemented by readings and lectures that track intersections between abstract painting, color theory, choreography, video game physics, and architectural space. The suite of digital videos and models generated during the course of the workshop will make an argument for animation software as an architectural-form-generation technique. This workshop is designed as a visual-studies-focused exploration of material assemblages. In his recent text entitled "Bad New Days: Art, Criticism, Emergency," theorist Hal Foster analyzes contemporary visual artists like Thomas Hirschhorn and suggests the term "precarity" to describe one of the major emerging themes in post-2001 art; this is a meta-category that he puts forward alongside the abject, mimetic, archival and postcritical. These terms, Foster suggests, might replace the postmodernist overprivileging of images and language. Following the work Foster highlights in his text, we will engage with what sculptor Robert Morris calls "anti-form": the material and optical territory of the formless (all that is horizontal, unconstructed, and otherwise base). It is without doubt that the specters of postminimalism -- Alice Aycock, Robert Morris, Eva Hesse and Mary Miss, for example -- loom large in contemporary aesthetic research. This pervasive (if underarticulated) interest in base materialism, elemental tectonics, and provisional structures owes much to the antiformal revisions of minimalism that these artists celebrate in their work (so many piles, ruins, stacks, stick-frame forts, huts, and shelters). Can architecture revitalize these types and add elements (spatial, economic, political and technological complexity) to the sculptural articulation of precarity? Can we

design with formal provisionality at the forefront? Requirements: Beginners with no background in the following platforms are welcome. However, some familiarity with Rhino 3D, the Maya platform, and processing will be helpful. Credit 3 units.

A46 ARCH 435E Furnish It, With Pieces

Public space is a key constituent that determines the character of a neighborhood and a city. It is embedded in the urban fabric and it can mediate the relationship between people and their particular surrounding landscape. Urban furniture and hardscape can play an important role in offering a wide range of uses for public spaces. The design of such pieces affects the way people live and experience a particular environment. The ultimate goal of this course is to design, fabricate and install a set of repeatable units to equip a vacant urban lot in order to offer opportunities for social interaction. The seminar focuses on the in-depth understanding and development of ideas based on the technical, experiential and aesthetic exploration of one material: concrete, into one specific application: urban furniture. This seminar builds up on the scope of the Creative Activity Research Grant awarded by the Sam Fox School of Design & Visual Arts where five porous concrete pavers were designed for a vacant plot in North St. Louis. The challenges are to adapt the given pavers to a new site condition and to propose new urban furniture made out of concrete. It involves the construction of pieces able to equip a gathering space as well as sidewalks that can offer local residents the opportunity to interact with others. This provides not only aesthetic appeal to the residents and visitors, but also allows the possibility of implementing an actual project in an abandon plot in Old North. We will enrich the community with a wide range of training opportunities as each step in the process of making the plaza is used for teaching purposes, from making pavers and other pieces, to salvaging, reusing or repurposing recycled material. Students are asked to design and build concrete urban furniture necessary for the gathering area. The pieces can encompass a wide range of uses: chairs and benches, tables, raised beds, planters, litter bins, modular fencing and mobility-related pieces such as bike racks, bollards and car stoppers. This is an opportunity for hands-on experience. These pieces have to consider the limitations of the material in terms of strength, weight, size, etc.; learning about the material itself as well as the act of construction, assemblage and mass production, which includes methods and technology, ranging from tools to molds. The formwork for the concrete pieces will be built through a process of CNC milling and rubber molds or vacuum formed plastic. The challenges are to define environmentally sensitive strategies for problem solving, conceptual development and poetic expression at both levels of the design process, conceptual and real. Sustainable principles such as the use of recycled materials as an aggregate in the concrete mix are an important consideration. Construction is the ultimate goal of this class. We work in collaboration with Anova, a local manufacturing company dedicated to the design and production of site furnishings. Anova provides some materials and brings their expertise to the project. Credit 3 units.

A46 ARCH 435F Precast Concrete Enclosures

In contemporary construction practice, building enclosures are sophisticated assemblies conceived through complex processes that merge design, science, technology and craft. The outermost layer of the exterior wall is the most exposed to natural forces and therefore it needs careful attention as it must work effectively over the lifetime of the building. The

primary goal of this fabrication seminar is the construction of full-scale mockup pieces that function as part of real building envelopes; this is an opportunity for hands-on experience. Students will design, develop and build enclosures out of different types of precast high-performance concrete assemblies as critical components of building envelopes. The course will be developed in partnership with Gate Precast, a leader company in the precast concrete industry. Supported by a grant from the PCI Foundation, students will have a budget of \$12,500 to design and prototype precast mockups of building envelopes. Students will start by conducting research and analyzing historic and contemporary buildings, focusing on their skin properties and configurations. Then, they will proceed to identify specific environmental condition(s) and develop an enclosure as a response to such condition(s), advancing the design through detail drawings and study models, culminating in a full-scale mockup mold. Construction of the molds will be done at Washington University's facilities combining digital and analog methods of fabrication, including CNC milling, laser cutters, 3D printers, and vacuum-formed plastic, among other methods; a fully equipped wood shop is also available. Once the molds are finalized, they will be transported to Gate's architectural plant in Ashland City, TN, for reinforcing and concrete casting; this project will culminate in the demolding of full-scale precast mockup pieces. Students will tour the facility and participate in the entire fabrication process, including mold preparation, reinforcing, casting, demolding, handling and finishing of the final panels.

Credit 3 units.

A46 ARCH 4362 Advanced Grasshopper

With a base knowledge of the Rhino+Grasshopper interface, this class will focus on developing an entirely scripted building system. Each student will be given a set of initial parameters (building volume, square footage, percent of transparent/opaque facade, required programmatic elements/size, etc.). They will begin by selecting a formal precedent that will help them determine a structural system. Within this framework, students will develop an algorithmic logic to organize program and then articulate a responsive skin. The goal of this exercise will be to develop understanding of the potential use of scripting in design. Scripting allows the designer to transform their design dynamically as the parameters change or update. The final output of this class will be detailed, annotated drawings of each student's structural system as well as a 1/4" scale model of a small portion of their design utilizing available tools in the FabLab such as 3D printing and CNC routing. Students taking this course must have working knowledge of Grasshopper. This class is an advanced class exploring design through generative modeling.

Credit 3 units.

A46 ARCH 436A Information Modeling and Technology

This foundation-level course will introduce students to the digital tools of Geographic Information System (GIS), Building Information Modeling (BIM), and Building Performance Analysis (BPA). Its goal is to equip the student with the ability to gather information, analyze it, and make decisions within the information-rich environment of architectural design and construction. Students will develop an understanding of these three seemingly distinct approaches and their role in preserving the quality and quantity of accumulated information for "upstream" use. The topics addressed in the course will be further developed in more advanced courses during subsequent semesters. The introduction of information-gathering principles

within GIS will expose students to the wealth of information, such as maps and census data, that is already available, as well as methods of turning raw data into analytical material for use in their design work. This segment of the course not only provides a foundation to ArcGIS, but also leads toward use of this information within applications like Revit Architecture. Creating and managing an information pool of digital GIS and design and construction data and making it available throughout the lifecycle of a project is commonly referred to as BIM. In the second part of this course, we will explore how BIM is being utilized today and learn the basics of one of the leading BIM-compliant applications, Autodesk Revit Architecture 2010. During the third part of this course, students will be introduced to BPA, a process that embodies a holistic approach toward the integration of sustainability and design. By understanding when and how to apply sets of analytical exercises via applications like Ecotact Analysis within the context of Information Modeling, students will develop an understanding of how design decisions have a profound and lasting impact on the overall building sustainability and performance.

Credit 3 units.

A46 ARCH 436B BIM in Practice

Building Information Modeling (BIM) is a developing method of creating, sharing and managing project data through a visualized 3D or 4D model. While it continues to deliver on an initial promise to increase design consistency and efficiency while minimizing errors, the focus of attention is shifting to the use of BIM to facilitate integrated methods of project delivery. The course explores the use of the BIM platform and the development of data exchange methods in architectural design through a case study and subsequent design project. Students are provided instruction in Revit covering the creation, management and extraction of data from a model, but also look at the technology more broadly, discussing the changes advanced by the deployment of BIM processes in practice.

Credit 3 units.

A46 ARCH 436D Advanced BIM in Practice

While the adoption of BIM continues to grow across the industry, criticism of its effectiveness as a design tool remains. The foundation of BIM, the creation and management of geometric objects with associated non-geometric data, is often at odds with established methodologies of design. Current practice typically manages this schism by separating design from the use of BIM for documentation and construction. The class will seek to develop methods of design within a BIM environment, not through the translation or reshaping of traditional techniques, but through the design of a methodology that seeks to capitalize on what BIM enables: direct, digital collaboration and the facile management of large data sets. This is not an introductory class. Basic knowledge in Revit (or an alternative BIM software) is required. Skill in other parametric and 3D modeling software as well as a basic knowledge of Grasshopper or other algorithmic processes is strongly preferred. Students will investigate and design digital processes using a short design brief to enable the investigation.

Credit 3 units.

A46 ARCH 436E Technology + Tectonic

Beginning with a rigorous study of three-dimensional grid systems, students will work in pairs to develop conceptual proposals for site-specific hanging installation. Students will examine materiality, grid distortions, and spatial qualities, as well as interactions with natural light and human input. The ideas

generated in this course have the potential to directly affect an architectural installation the following semester. Students enrolling in the course should have completed at least one digital seminar as a prerequisite.

Credit 3 units.

A46 ARCH 436F Designing with Grasshopper

The best way to learn how to design with Grasshopper is to use it. Each student will be guided through five different projects incorporating computational design logic throughout. The outputs of this course will be published on Instagram (@wustlhopper) and/or reddit (r/generative). The course will build in complexity as it progresses through Grasshopper methods and plugins. At the end of the course, each student will have completed a 2D patterning project going from Rhino to Illustrator/Photoshop, another 2D patterning project animated in Grasshopper through Photoshop, a 3D patterning project animated in Grasshopper through Photoshop, a simulated interaction using Kangaroo and animated, and a fully rendered looping model incorporating all of the lessons from throughout the course.

Credit 3 units.

A46 ARCH 438 Environmental Systems I

Environmental Systems I is the foundation course in the architectural technology sequence. This course addresses the relationship between buildings and an expanded idea of context, including ideas of environment, landform, energy, material and space. The class places an emphasis on each student developing their own attitude toward architectural sustainability, its role within the design process, and its relationship to architectural form. The class is organized around the themes of climate, site and energy. The theme of climate addresses macro- and micro-climates, and the roles they have in developing architectural form through "passive" strategies. The theme of site expands the idea of the architectural project to examine landform, position, access and region. The theme of energy looks at architecture as both embodied energy and a consumer of energy, to understand how the architect helps to control and direct these flows at macro and micro levels. Two goals for the class are to provide students with ways of thinking about and of working with issues of sustainability, which can inform their design practice, and to equip them with the basic knowledge needed to continue within the technology sequence.

Credit 3 units.

A46 ARCH 4381 Environmental Systems I: Site Planning

Environmental Systems I, site planning module, addresses the relationship between buildings and an expanded idea of context, including environmental, material and spatial realms. The class places an emphasis on each student developing their own attitude toward architectural sustainability, its role within the design process, and its relationship to architectural form. The theme of site expands the idea of the architectural project to examine landform, position, foundation, access and region. Two goals for the class are, first, to provide students with ways of thinking about and of working with issues of sustainability, which can inform their design practice, and second to equip students with the basic knowledge needed to continue within the technology sequence. Only students who have received a partial waiver for A46 438 Environmental Systems I may register for this course.

Credit 1 unit.

A46 ARCH 438C Expanding Skin

In the 1957 text "The Pliable Plane: Textiles in Architecture," Anni Albers wrote, "if we think of clothing as a secondary skin we might enlarge on this thought and realize that the enclosure of walls in a way is a third covering, that our habitation is another 'habit'." In this text, Albers proposed the concept of skin as an inhabitable layer, first as a covering for the body and then as an expanded layer of enclosure. This course will explore Albers' concept of a second skin by developing new strategies for constructing complex surfaces at the scale of the human body, particularly in the context of digital fabrication and computational design. Emphasis will be placed on assemblies that yield innovative visual or tactile effects while also engaging specific material performance. How can we design with a focus on performative pattern that can enclose the body and its structural and geometric complexities? How can we conceive of patterns that are not disrupted by these complexities but rather enhanced by them? The course will consist of lectures, readings and seminar discussions, tutorials, iterative material investigations, 3D digital modeling, and digital fabrication. Student projects will focus on the design of inhabitable, layered constructions while engaging constructive techniques from both the fashion and architectural disciplines. Rhino (with Grasshopper), Maya or Z Brush will be utilized for the initial digital investigations. Students will experiment with materials and develop innovative construction methods that engage digital fabrication tools such as the 3D printer, laser cutter, and CNC mill for the production of a second skin in the form of a garment for the human body. Credit 3 units.

A46 ARCH 439 Environmental Systems II

We as architects have to analyze and address complex issues and relationships, synthesize them, and then make them manifest through clear design strategies. Building systems must reconcile solar heat gain, glare control, daylight levels, thermal insulation, ventilation, acoustics, air quality, structure and fabrication — all in relation to the scale and comfort of the human body. The development of environmental systems into a clear, comprehensive, and elegant design solution cannot be an afterthought; it must be a synthesized and integral part of the design process, with a clear strategy that operates at multiple scales. Building upon the passive strategies explored in Environmental Systems I, this course will lay the foundation for the integration of active environmental systems with enclosure, space, and the requirements for human occupation. This will be done through the study of climate, air, temperature, water, light, sound and energy. Each topic will be assessed against problems, principles, possibilities and potential. This course focuses on how important it is to consider active systems as part of an integrated design strategy addressing both *form* and *performance* throughout the design process. Prerequisites: Environmental Systems I & Building Systems I. Credit 3 units.

A46 ARCH 439I Environmental Systems II: Acoustics

The Acoustics Workshop is designed for students that have been partially waived from Environmental Systems II with the exception of the acoustics portion. The workshop joins the Environmental Systems II class for only the lectures on the topic of acoustics. The class will cover the design of acoustic environments starting from the physics of sound, the design room acoustics, identifying noises sources, and investigating methods for noise mitigation. Credit 1 unit.

A46 ARCH 439H Environmental Systems II (Mumbai)

We as architects have to analyze and address complex issues and relationships, synthesize them, and then make them manifest through clear design strategies. Building systems must reconcile solar heat gain, glare control, daylight levels, thermal insulation, ventilation, acoustics, air quality, structure and fabrication — all in relation to the scale and comfort of the human body. The development of environmental systems into a clear, comprehensive, and elegant design solution cannot be an afterthought; it must be a synthesized and integral part of the design process, with a clear strategy that operates at multiple scales. Building upon the passive strategies explored in Environmental Systems I, this course will lay the foundation for the integration of active environmental systems with enclosure, space, and the requirements for human occupation. This will be done through the study of climate, air, temperature, water, light, sound and energy. Each topic will be assessed against problems, principles, possibilities and potential. This course focuses on how important it is to consider active systems as part of an integrated design strategy addressing both *form* and *performance* throughout the design process. Prerequisites: Environmental Systems I & Building Systems I. Credit 3 units.

A46 ARCH 445 Building Systems

Building Systems will examine the performance and properties of building materials, both traditional and new, through an analysis of assemblies and related systems. Investigations of wood, masonry, steel and concrete and the integration of relevant building systems will provide the fundamental structure for the course. All systems will be investigated relative to their architectural purpose, impact on the environment, relationship to culture/context, technical principles and will also consider manufacturing, construction, our profession and the society in which we practice. Moreover, the course will also examine the performance characteristics of contemporary enclosure technology and explore the impact these technologies are having on design thinking. Although we will focus primarily on the aforementioned topics, we will also identify and consider the impact of other parameters on design and performance such as building codes, role of the profession, health and life safety, systems integration, sustainability and industry standards. The course strives to provide students with a sound familiarity and understanding of traditional building systems in wood, steel and concrete; as well as the skills necessary to represent these systems. The course also seeks to expose students to the material and poetic potential of these technologies related to the making of architectural environments. Credit 3 units.

A46 ARCH 447A Structures I

Statics and strength of materials through beam and column theory. Loads are defined and states of stress are identified and analyzed. The context of structural behavior is identified and optimal structural behavior and material efficiency structural design is reviewed. Form-active, bulk-active and vector-active structural options are explored relative to the transference of load along the length of structural members. The course applies structural theory to the analysis and design of structural members — beams, trusses, arches and columns. Credit 3 units.

A46 ARCH 448A Structures II

Continuation of Arch 447A with consideration of the effects of forces on structural members of various materials. Introduction to the design of structural members in steel, reinforced concrete and wood. Prerequisite: Arch 447A.
Credit 3 units.

A46 ARCH 451C Documenting Le Corbusier

This design research seminar will focus on the digital and physical modeling of some of the architectural design projects of the French-Swiss architect Le Corbusier (1887-1965). Students will work in teams to produce drawings and physical models of built projects such as the monastery of La Tourette (1953) as well as unbuilt designs such as the League of Nations headquarters (1926). Students will work individually and in teams. Exhibition and partial publication of the work is anticipated.
Credit 3 units. Arch: CAST, GACS

A46 ARCH 452K The Ambiguity of Scale: Japan's**Landscape Tradition**

Modernist architects in Japan, particularly those associated with the Metabolist Movement, often used the term "niwa," literally gardens, to describe their urban design projects. The city, land, and sea were both the setting and the object of design interventions. This course will examine the Japanese landscape tradition from antiquity to the 21st century. The approach will be interdisciplinary, using literature, art, religion, economics, and technology to inform us of how earth, water, air, winds, plantings, views, and architecture were seen and imagined in Japan during successive historical periods. We will look at the cyclical reconstruction of Ise Shrine that took place in 2013, canonical Zen gardens from Japan's early modern period, the advent of modernist landscape principles and techniques in the 20th century, as well as the influence of garden aesthetics on the development of architecture and urban design over time. This course is open to qualified undergraduates. It is also offered as a Methods seminar for undergraduates in the Architectural History minor and fulfills the History and Theory requirement for Master of Architecture students. The maximum enrollment for this course will be 12.
Credit 3 units.

A46 ARCH 452L The Japanese House

This seminar examines the Japanese house as a modernist idea as it evolved over the course of the 20th century, both within Japan and internationally. The single-family, "tofu-cutter" house came to define Japan's suburban, industrialized landscape in the postwar era, but the type historically emerged out of a certain modernist imagination of Japan's premodern architecture, as architects and critics such as Bruno Taut and Arthur Drexler projected their specific readings of shoin and minka architecture onto a mandate for contemporary practice. The seminar will investigate major strains of domestic architectural design in postwar Japan, paying particular attention to the formalist exercises of Shinohara Kazuo and technology-driven designs of Ikebe Kiyoshi. More contemporary pursuits by SANAA and Atelier Bow-Wow in materiality, transparency, smallness and urban complexities will also be covered. This course satisfies the History/Theory elective requirement.
Credit 3 units.

A46 ARCH 453A Aviation & Architecture: Air Terminal Design and Emergence of Airport Cities

As seaports and train stations were once hubs of commerce and trade, airports serve as vital engines to today's economy, linking cities and regions to the globalized economic landscape. Surrounding airports, entire cities are emerging both organically and in planned developments, building upon the business related to air travel with office parks, conference centers, hotels, entertainment districts and retail. This seminar will be structured in three parts. In the first part, we will examine the fundamentals of transportation architecture and the way air terminal design has developed. Starting as simple structures on an airfield in the 1920s, airports were designed as heroic modern structures from the 1940s to 1980s, ubiquitous terminals in the 1980s thru early 2000s, and most recently as regionally expressive terminals in the 21st century. Students will research, analyze and present case studies, mapping an understanding of the basic architectural components of air terminal design. In the second part, we will explore the rise of airport cities. Students will work in teams of two to research and analyze the planning, governance, impact and growth of airport cities. Sites we will study include developments around Singapore's Changi, Amsterdam's Schiphol, London's Heathrow, Paris' Charles de Gaulle, and Chicago's O'Hare. The third part of the seminar will allow students to select a topic of special interest that spans the scale of terminal design and airport cities. Students will initiate independent research to deliver a final paper and presentation on the topic of their choice related to aviation, transportation architecture and planning. Seminars will be supplemented with guest lectures and will be highly conversational. We will explore opportunities for site visits to both airports and airport cities.
Credit 3 units. Arch: GACS, HT

A46 ARCH 453B Art and Architecture

From Ancient Greece to the Renaissance, architecture, painting, and sculpture were regarded as the principal fine arts. In later years, the visual arts were relegated to a separate sphere, independent from buildings and removed from the expediences of use; however, these positions are perennially contested. How have the distinct positions of art and architecture in private and public spaces been articulated -- and unmade and reworked -- around imperatives such as education, economy, equity, or environment? When has the tension between art and architecture been a problem or a source of inspiration and origin of form? This seminar looks at selected models and the situations, ideologies, and concerns that attended or motivated them. Examples will be drawn from Ancient and Classical periods to the present.
Credit 3 units. Arch: GARW, HT

A46 ARCH 454B Civic Buildings and Perimeter Architecture in the St. Louis Park System: A Study on Fairground Park

This seminar is a design research course examining the Saint Louis park system's complexity from an architectural and identity lens, primarily focused on built works inside the parks and their perimeter architecture. A comparative analysis will focus on Fairground Park at its center. This course provides an overview of the park's social and political history, from the early 20th century to present-day planning. With more than 100 parks in the city, students will work through comparative analyses to study interior and perimeter architecture: civic buildings, housing, infrastructure, and memorials. The architectural and social narratives result in unique community identities and the persistent challenge of disinvestment in under-resourced neighborhoods. Because these parks are anchor points in the

city, the course will also consider park-based connective routes to other primary urban hubs. This research project will enhance students' understanding of the civic and social domain while they explore typology and case-study analysis techniques. In particular, students will investigate Fairground Park in North St. Louis as a central focus, including the perimeter bounding this 132-acre urban park. Fairground Park was founded in 1908 as a city park after it was previously sited as the St. Louis Agricultural and Mechanical Fairgrounds, where it hosted the St. Louis Exposition from 1856 to 1902. Attention shifted to Forest Park in 1904, when it became a focal point of the city as the location of the World's Fair, with designs from the same landscape architect, George Kissler. Located near Fairground, College Hill, and O'Fallon, Fairground Park sits within predominantly black communities with high land vacancy percentages. The park itself was a historic racial conflict location, eventually leading to the desegregation of public pools following an injunction against St. Louis by George W. Draper II, an African-American lawyer and civil rights leader who filed suit in 1950. Fairground Park and its surrounding neighborhoods are locations of historical neglect and segregation. A comparative analysis will identify contributing factors of disinvestment to later engage in productive conversations about the park's future. Credit 3 units. Art: CPSC

A46 ARCH 455A Urban Books

Since the beginning of the 20th century, art, architecture, and urbanism together have investigated the production of images that shape the symbolic dimension of our experience of large cities. The main goal of this course is to critically embrace this tradition through the format of the artist's book. St. Louis is the focus for our observations because it is familiar to our everyday lives and also because it provides key situations for understanding contemporary forms of urbanity and how urban space is produced and imagined. The course bridges the curricular structures of art and architecture by enhancing the collaboration between the practical and scholarly work developed in both schools, with additional support from Special Collections at Olin Library. It combines the reading, lecture, and discussion format of a seminar with the skill building and creative exploration of a studio. This course is divided into three progressive phases of development: The first consists of weekly readings, discussion, and responses in the form of artist's books. The second phase focuses on the Derive with physical activities and assignments based on interacting directly with the urban environment. The third phase focuses on individual research, documentation, and final book design and production. Same as X10 XCORE 336

Credit 3 units. Arch: GAUI, UI Art: CPSC, FADM EN: H

A46 ARCH 455D Community Design Sprints

In this course, students will provide scoping, phasing, programming, and conceptual design for small-scale yet pressing St. Louis needs through selected projects for community members and small organizations. Students will work directly with a local organization over 7 weeks in to clarify and move forward a community project; students will learn community engagement, facilitation, and communication skills, as well as practicing research, representation, and design skills. Open to upper-level undergraduate students and graduate students of all levels.

Credit 1.5 units. Art: CPSC

A46 ARCH 456B Way Beyond Bigness...or Toward a Watershed Architecture

2015 marked the 10- and 20-year anniversaries of two seminal events that have challenged architects' relationships to large scale, complex societal issues: 1) the publishing of *S,M,L,XL* in October 1995 that featured Rem Koolhaas' manifesto of "Bigness" and 2) the landfall of Hurricane Katrina just outside of New Orleans in August 2005 that catapulted fields of design into an unprecedented post-disaster context. Students will reconcile these two disciplinary jolts by understanding these seemingly incongruous snapshots of history as jumping off points for new modes for architectural activism and opportunism. Students will design a manifesto, in newspaper format, for a future-based discipline of architecture that sails uncharted realms that are "Way Beyond Bigness." This will require the simultaneous submersion and assertion of architecture within other disciplines; the formulation of alternate modes of representations for emerging practice-based models; the blurring of academic and professional agendas in the urgency of activism; and the integration of multiple scales, interest groups and agendas in ridiculously complex and antagonistic situations. Underpinning Bigness and Hurricane Katrina will be additional case studies, guest lectures and field trips that cover: CIAM and the emergence of urban design; Koolhaas' thesis and OMA's early practice; mega-scale urban renewal projects in St. Louis; contemporary investigations into territorial scales of design; and multiple scales of contemporary, integrated Water-based designs, post-Katrina efforts and beyond. This course fulfills the History/Theory Case Studies elective requirement.

Credit 3 units. Arch: GACS, GARW, HT

A46 ARCH 457B Segregation by Design: A Historical Analysis of the Impact of Planning and Policy in St. Louis

This transdisciplinary seminar, bridging humanities and architecture, introduces students to research, theories and debates currently being conducted on issues of segregation, urban policy and sustainability. By placing these debates in a historical and local context students will discover how policy and decisions are entrenched with racial, cultural, physical and socioeconomic segregation, and create the spatial transformation of America's divided cities. Students will learn to evaluate and analyze policy and planning through the framework of Triple Bottom Line Sustainability to understand the physical manifestation of segregation during growth and decline. CET (<https://gephardt.institute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.

Credit 3 units. Arch: CAST, GACS Art: CPSC EN: S

A46 ARCH 457C Radical Mapping

Maps are instruments of power. We have seen this, for example, in the racially motivated "redlined" maps that legitimized urban clearings of entire neighborhoods in American cities during the 1930s. However, maps are also instruments of resistance, for visualizing lived experiences, and for critiquing political systems and relationships of power. Maps are tools for pinpointing accountability. This course will introduce students to the agency and potential of maps and mapping, which is a skillset that all designers need in the face of our current moment of social and environmental justice collapse -- a moment that has long been occurring. The course will cover interdisciplinary theories of mapping, critical cartography, and visualizing power as students build an "atlas of spatial politics" centered on Ferguson, Missouri, and the surrounding St. Louis region. This atlas will

build on a body of work already underway that together is likely to culminate in a publication. An introduction to GIS software and data sources will be provided, and basic knowledge of Adobe Illustrator drawing software is necessary.

Credit 3 units. Arch: GAMUD, GAUI, UI Art: CPSC

A46 ARCH 462H Information Modeling for Sustainable Design

This course will focus on the principles of sustainable design as examined through Building Performance Analysis (BPA) and applied Building Information Modeling (BIM) methodology. The foundation for this course will be an introduction to BIM and BPA and the significance of both for the future of sustainable architectural design practice supported by analytical modeling. This emphasis on the suitability of building modeling for analytical purposes and on the interpretation of such data will provide the basic knowledge necessary for the second phase of this course, in which students will use a previous or current studio project for an in-depth study of their building's performance in the context of its chosen site. Exploring the interaction between the simulated environment (climate, isolation) and the virtual building with its physical characteristics (materials, assemblies, passive design strategies, heat transfer, daylighting, embedded energy), we will attempt to confirm and test the principles of sustainable design at the schematic level of project development. The model analyzed by each team will provide sufficient comparative information for a design approach whose desired goal is carbon neutrality in the lifecycle of the building. Students will be encouraged to investigate the suitability of analytical modeling software, in the context of critical design methodology. Prerequisites for this course are a basic understanding of BIM methodology and insight into sustainable design practices. Fulfills Digital elective requirement. Credit 3 units.

A46 ARCH 462M Pattern Recognition

Interrogates a recent history of architecture replete with pattern. Case studies of patterning in contemporary projects are undertaken through the production of analytical, computational models to reveal an underlying logic of performance and construction. In parallel, the course presents a theoretical survey of related issues in art, psychology, computation and ecology. In this context, pattern is understood as a performative expression of an ecological system, distinct from historical issues of ornament and representations. Informed by the analysis, students then digitally produce an original pattern, both graphically operative and spatially materialized. Credit 3 units.

A46 ARCH 462N Constructing Ideas

Constructing Ideas is about creating design concepts and transforming these into built architecture. We will learn how conscious imagination and coherent interventions lead us to ideal realities. This class examines the design and construction process as academic research. We consider the practice of making architecture as a synthesis of analysis, interpretation and transformation. Studies will teach us how a building idea influences its construction and how the knowledge about construction can become the starting-point of an idea. Interrogating design problems and investigating existing typologies as a methodology will lead us to specific answers. We will explore conceptual-artist practices and examine their strategies, learning to lead with intent, play with parameters and question the givens. From there, we will look at examples

of Swiss architecture whose early integration of construction in the design process has a long tradition. One could say that the bearing itself gets designed in Switzerland. We will consider invisible structures and material specificity. Learning this language gives us the ability to transform our ideas into specific architectural expressions and precisely tailored solutions. The form of the seminar is experimental. We consider our meetings to be spatial and contextual interventions, precisely designed like architecture. Sessions will vary, from a lecture to an exhibition, talks, a dinner — the goal is to be very conscious about what we are doing. This process is going to be documented through the whole semester. Each student will create his own design thesis and realize an installation that reflects it. The results will be exhibited and presented to the public.

Credit 3 units.

A46 ARCH 463B Emergent Urbanisms

This course surveys emergent models of urbanization in globalizing cities that thus far defy categorization or exist peripherally in studies of urban form. The goal of the course is to equip students with the theoretical and historical background, the analytical tactics, and the critical awareness necessary to reposition themselves as designers in these increasingly challenging contexts. Through case study examples and supporting readings, the course deciphers the formal, social and environmental effects of particular processes defining new urban spatial configurations in city-regions around the globe. Most of these processes are driven by discourses of "efficiency," such that urban forms are increasingly inflected by economic operating systems, as they are subsequently detached from traditional concerns of livability and public interest. Emerging urban assemblages include: massive manufacturing warehouse landscapes or logistical distribution centers and "aerotropolis" transit hubs as well as those spaces left behind by regional restructuring: de-urbanizing (or deliberately erased) environments that contradictorily "enable growth" in other areas (or over the same areas); and the informal settlements that emerge more spontaneously on the margins of mainstream urban policy. Students use their understanding of these spatial and logistical configurations to project creative models for re-direction or engagement. Sources and analytical tactics are drawn from across fields including design, sociology, geography and history. Fulfills Urban Issues elective requirement, MUD-Track elective requirement.

Same as A49 MUD 463B

Credit 3 units.

A46 ARCH 463C Invisible Cities

This graduate and advanced undergraduate seminar takes as a point of departure the famous 1972 Italo Calvino text that reframes a single city (Venice) as multiple cities, told through a sequence of discrete narratives and descriptions. Each of Calvino's invisible "cities" reflect different emotional and physical environments and possibilities — or impossibilities — for their inhabitants, yet are all still connected through an overarching narrative. Invisible Cities, the course, builds on this premise that a city is not a one-size-fits-all experience (nor a monolithic construct with a uniform constituency), but instead is composed of radically different environments all selectively accessed, depending on one's positionality or relationship to urban redevelopment processes. In places like St. Louis — but in fact in all American cities — residents live out different urban realities or imaginaries, with unequal access to the same services, provisions and processes. A highly visible instance of this occurs along Delmar Blvd in St. Louis where two contrasting

lived experiences play out in neighborhoods across from each other on the north-south divide. However, this class posits that much less visible instances of the duplicitous city also exist, in spaces not geographically divided, but (more insidiously) overlaid. The course will focus on this conceptualization of inequality where both privileged and underserved populations co-exist in much more intertwined ways. Within any given block, neighbors live according to different opportunities, for education, health access, police services, or routes to property acquisition and financing. These are the invisible, spatially simultaneous cities; the urban realities that are much harder to see — at least to those who do not live those realities on a day-to-day basis. Like in Calvino's world, urban and lived space is endlessly continuous and accessible for some; for others it is fragmented, even disorienting or opaque. This course will examine, frame, collect and document the various manifestations of invisibility together with the political instruments and policies that produce — and reproduce — it. We will use the St. Louis region as our primary focus, with comparisons to other sites. Our studies will involve a close re/reading of many of the mechanisms of daily governance and urban design such as policies, planning tools, legal, financial and real estate protocols and of course design decisions and processes; i.e., the apparatuses of urban redevelopment that exist right before our eyes. The seminar welcomes both graduate students and advanced undergraduate students from across disciplines. Support for Invisible Cities is provided by the Washington University in St. Louis Ferguson Academic Seed Grant Program granted through the Offices of the Chancellor and Provost and the Olin Business School. Fulfills Urban Issues and MUD Track elective requirement. Credit 3 units. Arch: GAMUD, GAUI, UI

A46 ARCH 463D City Life and Urban Worlds: An Introduction to the Urban Humanities

The urban humanities is an inter-/anti-disciplinary project that brings together theory, practice, and methods from fields in architecture, urban design, and the humanities to interrogate the urban condition. In this core course, we will delve into key theorists, texts, and methods that inform the urban humanities through seminars, site visits, and design projects. We will debate emerging perspectives in critical urban theory and then explore the applicability of these positions in St. Louis through mapping, street ethnography, and subtraction. In addition, this seminar is designed to introduce urban scholars from across the humanities and design fields to each other. Participants will be encouraged to experiment, trade, and engage in dialogue across their fields. What, we will ask, is the status of the urban commons in an era of enclosures and privatization? What can postapocalyptic cyberpunk from Lagos teach us about "smart cities"? How do built environments get their politics? Can these politics be redirected or subverted?

Same as A49 MUD 463D

Credit 3 units. Arch: GAMUD, GAUI, UI Art: CPSC

A46 ARCH 464A Architecture and Photography

Seminar deals with issues raised by use of photography by architects, historians and critics. Seminar confronts the assumption that our knowledge of notable buildings and architectural space is based primarily on the photographic image. Photographs are tacitly accepted as objective facts, and the pervasiveness of photography in magazines, books and exhibits as substitute for direct experiences is rarely questioned. Goal of seminar: to foster a healthy skepticism of photographs, and to investigate the role of photography as a means of record and convey complex spatial conditions by

the ordering conventions of the frame. While not technical, the course introduces students to technical aspects of photography that are particularly relevant to architectural photography: parallax, lighting, lens distortion, depth of field, format and grain, cropping, photomontage and point of view. Fulfills history/theory requirement.

Credit 3 units.

A46 ARCH 465C Art, Design and Entrepreneurship: Creative Placemaking Beyond The City

This course invites students from diverse areas of interest to engage with the cultural landscape of Marion County and Hannibal, Missouri — a region that, through the work of Mark Twain, popularly epitomizes both rural life and the allure of the Mississippi River. While a quarter of a million tourists visit this area each year to follow in Tom Sawyer's footsteps, the work of local artists, designers and entrepreneurs are innovating the narrative of this place and opening up room for consideration of African-American experience, local food systems, and the complex series of social and economic connections within life along the Mississippi. This course puts that spirit of collaboration and imagination in the hands of students, challenging them to think beyond the borders of their disciplines to create projects that present new connections between place, community and culture to both rural and urban audiences. The National Endowment for the Arts defines creative placemaking as an opportunity when "public, private, not-for-profit, and community sectors partner to strategically shape the physical and social character of a neighborhood, town, tribe, city, or region around arts and cultural activities." Through fieldwork, research and idea-creation, students collaborate with mentors on the ground to create locally appropriate projects that address questions of culture and design in the region. Occasional off-campus visits are joined in the classroom to a wide range of readings, case studies, and webstreamed conversations with national leaders across fields. The course concludes with small teams designing a specific plan, event, or project that could later be implemented in the community.

Credit 3 units.

A46 ARCH 467A Disappearing Act

What does erasure make, and how might we reconstitute what has been lost? This seminar will explore the architecture of ghosts: things thought to be lost or destroyed, or which can no longer be accessed. This representation-forward class will test a range of drawing and making techniques in various media and scale to foster a dialog about what drawing misses and the presences and absences of the built environment. We will frame our work and ideas in architectural discourses of subtraction, palimpsest, and productive removal. Our work will capture the dynamism and logic of the built environment.

Credit 3 units.

A46 ARCH 470G Edges of Privacy

In collective housing, interactions between neighbors occur in often tight spaces of shared access. In hallways, walkways, stairs, and landings, proximity to the private spaces of the dwelling is extreme. Many architects have been experimenting with open-walkway access type in collective housing beyond an economical means of circulation. Buildings that use open-walkways—which in colder climates can be glazed—often provide energy savings, as they allow for the cross-ventilation of units and can serve as climatic buffers and passive heat sources. Additionally, these spaces offer potential scenarios

of both conviviality and conflict, a contrasting condition to be reconciled through design to create housing for diverse groups of people. In this seminar, students will explore selected historic and contemporary housing examples with open access walkways—both successes and failures—in Europe and Latin America. Through lectures, research, analysis, discussions, and rigorous redrawing of selected buildings, students will examine—organizationally, spatially, and socially—the modes of interaction afforded by design and the potential for this access type. The seminar is part of the ongoing research project "Edges of Privacy. Open Access Walkways in Collective Housing" and the work may result in a publication and exhibition. It is open to undergraduate juniors and seniors and graduate students who have completed the core sequence.

Credit 3 units.

A46 ARCH 471A Continuity and Transformation

Throughout history and across cultures, certain ideas, concepts and organizational strategies have persisted in architecture, despite advances in social ideals and technological capabilities. The seminar explores the phenomenon of this continuity with the goal of uncovering the manner in which these ideas and strategies are transformed. Whether classified by use, characteristic form or compositional device, the continuity of these notions is clearly traceable as a body of knowledge waiting to be revealed, understood, assessed and, when valid, built upon. The transformation of ideas and strategies is one of the most fundamental activities of the designer, but relies on careful study. We discover evidence of this phenomenon in vernacular architecture, patterns of settlement and habitation, and in the work on many of our most influential practitioners, such as Le Corbusier, Kahn, Moneo and Zumthor, as well as in the realm of painting and sculpture including Cubism, Suprematism and Expressionism.

Credit 3 units.

A46 ARCH 472 Sustainable Development

This seminar is an introduction to the basics of small- to medium-scale development. It will begin with a series of introductory lectures covering the principles and tools of development, such as creating a project performance, basic tax credits, TIFs, and financial structuring of a project; exploring methods of implementing sustainable practices and designs into development-driven projects through marketability, cost-savings, tax credits and other incentives; and investigating the process of real estate development through the use of sustainable ideas and practices in buildings. It will continue with a series of case studies in which the class will examine models of existing developers in terms of these base elements. Finally, students will be asked to develop a project in order to understand the architect-client relationship and how to stimulate recognition of the value and importance of sustainable design in real estate development.

Credit 3 units.

A46 ARCH 475D Landscapes Through Time: The History of St. Louis' Built Environment

From the Mississippian mound builders to the urban conditions of the present day, this course will investigate the different approaches of various cultures to creating built environments that meet the needs of their time in terms of landscapes and structures. Using the City of St. Louis as an example, the course will examine the layout and infrastructure of the city at various periods, discussing the effects of technological changes in the

creation of structures, improvements to transportation, facilitation of trade and the effects of these forces on the cultural and built landscape of the city. Each class session will discuss the structures and landscapes that defined individual eras in the history of the city, and the ways in which these were successful or unsuccessful. This course fulfills the History/Theory elective requirement.

Credit 3 units. Arch: CAST, GACS

A46 ARCH 475E History of the Modern Art Museum

This seminar explores the development of the modern art museum as an architectural type, measured against evolving nature of display objects, curatorial practices, and demands of the viewing public. Since the consolidation of the type in the early 19th century, the art museum has been the primary site where the symbiotic trajectories between artistic and architectural development have played out. Also to be examined is the importation of this program into non-Western countries, which responded with their own canons and classifications of fine art. The course ends with recent case studies where architecture has made new, often aggressive, commentaries on objects it is designed to display. The course is open to graduate students and advanced undergraduate architectural history minors. Fulfills History/Theory elective requirement.

Credit 3 units. Arch: GARW, HT

A46 ARCH 478B Modern Architecture in St. Louis, 1930s-70s

This seminar will examine postwar modern art and architecture in St. Louis within the changing design and social contexts of the postwar era, which included massive spatial and racial transformations. Using artworks, photographs, films, and architectural drawings and models, this course will bring together design and social documentation to understand this remarkable creative and conflicted period in St. Louis's history. Michael Willis, FAIA, will also give several lectures and lead two tours. Students will present selected readings and pursue individual research projects for this course. Prerequisite: A46 4284 or equivalent course taken elsewhere.

Credit 3 units. Arch: GARW, RW Art: CPSC

A46 ARCH 484B Notations on Florentine Architecture

This seminar proposes a historical survey of significant buildings and urban spaces in Florence through the graphic documentation and spatial analysis of selected sites and buildings from antiquity to the Renaissance and to modernism. The general framework of our analysis is to understand the relationship between the historic development of the city and its most symbolic architecture. This approach is based on the work of Italian scholars, such as Giulio Carlo Argan, who define the history of architecture as the history of the city. The course is methodically divided into two blocks of exercises. In the first part of the semester, we focus on readings, site visits, sketches, analytical drawings and photos, as well as the mapping of the urban development of Florence. In the second part of the semester, students focus on the tectonic study of specific buildings through the construction of representational and experimental models. Each student's individual work contributes to a collective 2D and 3D final project to be presented as an exhibition in the Florence Studio during the spring and to be shown at the College of Architecture in the fall.

Credit 3 units.

A46 ARCH 486A NOMA National Design Competition

This course allows students to work collaboratively to develop a comprehensive body of work (including presentation boards, physical models, and animated digital graphics) in response to the National Organization of Minority Architects' (NOMA) Barbara G. Laurie Annual Student Design Competition. Students work in pairs to develop thorough schematic-level solutions. After the midterm review, the class selects the strongest overall team project and uses that as a basis to develop highly detailed plans, elevations, sections, details, 3D views (animation optional), cultural, sustainable, and accessibility design concepts. Not only does this activity culminate into a final review, but students submit and formally present their design solution at the annual NOMA (<http://www.noma.net/>) Conference. CET (<https://gephardtstitute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.
Credit 3 units. Art: CPSC

A46 ARCH 488 Architecture Service Learning Practicum

The Sam Fox School of Design & Visual Arts, the College of Architecture, and the Graduate School of Architecture & Urban Design are giving a problem-solving studio workshop about architecture, community, and the environment. Fourth-through 10th-grade students from schools in the St. Louis Public School District will do 2D and 3D hands-on problem-solving projects, use the libraries and computer labs on campus, and be introduced to the field of architecture through lectures and discussions about design projects they will undertake. Washington University graduate and undergraduate students in architecture will participate in the important responsibility of being teaching assistants.
Credit 1 unit.

A46 ARCH 490 Architecture Service Learning Practicum

The Sam Fox School of Design and Visual Arts, College of Architecture and Graduate School of Architecture & Landscape Architecture & Urban Design, give a problem-solving studio workshop about architecture, community and the environment. Fourth through 10th grade students from schools in the St. Louis Public School District do 2D and 3D hands-on problem solving projects, use the libraries and computer labs on campus, and are introduced to the field of architecture through lectures and discussions about design projects they undertake. Architecture faculty member Gay Lorberbaum leads the curriculum. Washington University graduate and undergraduate students in architecture participate in the important responsibility of being teaching assistants. CET (<https://gephardtstitute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.
Credit 2 units. Art: CPSC

A46 ARCH 490A Explore & Contribute: Collaboration

Between Washington University & Henry Elementary School
Principal Esperanza Veal of Henry Elementary School is creating a remarkable place for her students who live in the neighborhood of the Cochran Gardens Federal Housing Project in downtown St. Louis. Principal Veal is clear in her conviction to provide each of her students with both literal and academic nourishment, and is working unceasingly to make the Henry School a safe and creative oasis for children ages pre-school through grade six. Her goal is to have the Henry Elementary School students explore sustainable ways to live during the 21st century. To this end, we will emphasize ecological sustainability, environmental health, personal responsibility, leadership and a comprehensive, high quality academic program. With an emphasis on the

environmental sciences, energy alternatives and conservation, recycling, organic gardening and the food sciences, and the emerging "green" economy, students will focus on developing the math, science, writing, and hands-on skills that will make them successful leaders to make a difference in improving the environment for humanity. This course invites undergraduate and graduate students from different fields of study to apply their discipline to the goal of designing and teaching hands-on problem-solving projects for students at the Henry Elementary St. Louis Public School, located across the street from Cochran Gardens Housing, at 1220 N. 10th Street. Gay Lorberbaum, with advising from Principal Veal, will work individually with each Washington University student to develop the right fit between the creative contribution each Washington University student wants to offer and the vision Principal Veal has for each age group of students at Henry Elementary School. Students enrolled in this course will work on-site at Henry Elementary School during the scheduled meeting times. The will be an additional meeting on campus for one hour on Wednesdays at a time to be determined later by the enrolled students. CET (<https://gephardtstitute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.
Credit 3 units. Art: CPSC

A46 ARCH 4930 In/Visible St. Louis: People, Place, and Power in the Divided City

This course approaches the study of segregation and inequality in St. Louis as deeply relational and contextual -- that is, embedded in a particular space and place and constituted through social-political relations. Students will be immersed in the history, theory and contemporary academic debates surrounding inequality, segregation, and social justice initiatives in urban cities across the United States. The course pairs this theoretical base (conceiving of segregation as multifaceted and durable, historical, spatial, and interpersonal) with intensive research experiences drawing on the methodological tools available across sociology, urban design, and architecture (archival research, data collection, mapping, diagramming, interviewing, field observation). Students will initiate collaborative research projects aligning with the needs of local organizations that serve the city's historically disadvantaged populations. Local guest speakers (scholars, community leaders, residents) will enhance students' classroom learning, as will site visits and other discussion formats. This interdisciplinary course bridges the Department of Sociology and the Sam Fox School of Design and Visual Arts, a collaboration supported by The Divided City initiative.

Same as I50 INTER D 4930

Credit 3 units. A&S IQ: SSC, SC BU: BA EN: S

A46 ARCH 499 Senior Capstone in Architecture

The Senior Capstone in Architecture allows undergraduate students in their final semester of study to pursue individual research projects. All students will participate in shared discussions and presentations, as well as pursue a highly individualized line of research inquiry that potentially starts where a former project left off, supplementing current or previous course work, or investigating a previously unexplored route. The course will culminate in a presentation and defense of a well-articulated and developed research project.

Credit 3 units.

Landscape Architecture

Visit online course listings to view semester offerings for A48 LAND (<https://courses.wustl.edu/CourseInfo.aspx?sch=A&dept=A48&crslvl=1:4>).

A48 LAND 304 Shared Ecologies and Design

This interdisciplinary course will introduce biological, social and cultural ecology concepts to proactively address current stressors that impact and are being impacted by design and the built environment. These effects and affects range from (but are not limited to) climate change science; racial and social justice impacts; sustainability, resiliency and adaptation-design strategies; systems-based and multi-scalar understandings; and interrelational human and non-human environments bound in both acting and being acted upon locally and globally. Credit 3 units.

A48 LAND 315B Historic Preservation, Memory and Community

Whose history is significant enough to be worth preserving in physical form? Who gets to decide, and how? Does the choice to preserve buildings, landscapes and places belong to government, experts or ordinary people? How does the condition of the built environment impact community identity, structure and success? This place-based course in historic preservation pursues these questions in St. Louis' historically Black neighborhood The Ville, where deep historic significance meets a built environment conditioned by population loss, disinvestment and demolition. The course explores the practice of historic preservation as something far from neutral but rather considers it as a creative, productive endeavor that mediates between community values, official policies and expert assertion. Critical readings in preservation and public history will accompany case studies, community engagement and practical understanding. Credit 3 units. Arch: GAUI, UI

A48 LAND 401 Landscape Architecture Design Studio I

This core studio explores design principles common to architecture and landscape architecture as well as their own specificity. A series of problems focuses on the relation of component to space through conceptual, analytical, formal and perceptual investigations. Credit 6 units.

A48 LAND 402 Landscape Architecture Design Studio II

In this core studio course, students develop a spatial understanding of landscape architecture through a series of exercises of varying scale and complexity. Building design skills incrementally, students acquire facility with the manipulation of ground plane and the elaboration of vegetation and material strategies at both site and urban scales. The studio fosters an appreciation of landscape architecture as a systemic construct with formal, ecological and social implications. Credit 6 units.

A48 LAND 421 Landscape Representation I: Hand Drafting, Drawing and Sketching

The beginning course in the representation sequence introduces students to freehand and mechanical representation as a means for developing and communicating design ideas. Students build a basic understanding of orthographic drawing typologies and traditional drawing materials. Emphasis is placed on development of observational skills, building a design vocabulary, basic drawing skills, and the techniques of landscape architecture and architectural representation. Credit 3 units.

A48 LAND 423D Videography for Designers

This seminar course examines the practice of capturing, producing and analyzing moving images as a method of inquiry for design. We focus on the analytical and communicative qualities of time-based media (recorded sequences, video, slideshows, animation, simulation, remote sensing, etc.) as a human-landscape intermediary that has the ability to alter understanding and evaluation of the environment. We explore techniques from a range of disciplines — art, design, sociology, anthropology, etc. The course meets weekly for brief lectures/presentations to direct our inquiries, discussion of foundational readings and ideas, media workshops, screenings, local field trips, and/or student presentations of work. Throughout the semester, students generate brief, exploratory work that focuses on methods and techniques, and a larger, final project that engages the themes of the course. Open to all graduate and upper-level undergraduate students, a goal of the course is to blur boundaries between art and design, and to capitalize on their various approaches. No experience with video, animation or other software is required — only the desire to explore and incorporate time-based methods into individual processes. Credit 3 units.

A48 LAND 423E Cinematic Landscapes: The Making Of

Watch movies. Talk about movies. Analyze the making of movies. Make a movie. Climate-themed movies. Post-apocalyptic movies. Meet in technology. Learn to scientifically use drones. Learn to scientifically use LIDAR. Use these tools in your climate-themed movie. Sculpt stories in time, supported by sound. This course will focus on the analysis of landscapes and cities as portrayed by popular cinema. How eidetic portrayals of nature and cities are circulated by popular cinema. Stories through which the values, common referents, public concepts, and memes of a culture materialize through the construction of movies. Interior to the semester there is an interdisciplinary workshop. Four-day fieldwork with Geology Assistant Professor Alex Bradley. Map and produce digital representations at 2-cm resolution of a mountainside scoured by a burst reservoir. This class is divided into three parts: watch, learn, and make. Watch: Each week, students will be asked to watch one movie and one director's commentary, often referred to in the "bonus features" as "the making of." Learn: Students will study the methods and techniques used to create settings, props, and storyboards in the service of a sound vision. Make: Students will synthesize digital and analogue time-based media tools (sound and video) to make a movie thematically based on climate change. Credit 3 units.

A48 LAND 430C Special Topics: Pyrocene

In the last five years, cataclysmic wildfires have raged globally, burning hotter, faster, larger, and longer in California, Australia, the Amazon, and beyond. A firestorm of images -- frantic smartphone footage, smoldering drone shots, panoramas of orange haze -- has ushered a vision of an apocalyptic "new normal" into public consciousness. In 2015, the scholar Steven Pyne coined the term "Pyrocene" to describe our current "age of fire," defined not only by the accelerated burning of living landscapes but also "lithic" ones, in which the spectacle of the fire crisis can only be understood in relation to deeper climatic and cultural transformations produced by fossil fuel combustion. This interdisciplinary seminar will explore avenues for architectural and cultural practice in the Pyrocene, which some scholars have called the "arts of living on a damaged planet." Approaching wildfire as a phenomenon at the intersection of landscape and urbanization, the course will center design disciplines but also develop robust connections to political ecology, eco-aesthetic art, decolonial anthropology, eco-poetic literature, and ecologically oriented philosophy. Drawing from readings and case studies in various fields, students will experimentally develop projects that traverse diverse critical frameworks for understanding, shaping, inhabiting, and tending contemporary fire landscapes.

Credit 3 units.

A48 LAND 430E Special Topics: Solar Decathlon Landscape Strategy

A solar decathlon house is currently being designed and constructed by Sam Fox architecture students for entry into the 2017 competition to be held in Denver, Colorado. This summer landscape architecture studio will develop the design and construction drawings for the high-performance landscape system that sustains the house. It will provide energy, light, water and food.

Credit 3 units.

A48 LAND 452K The Ambiguity of Scale: Japan's Landscape Tradition

Modernist architects in Japan, particularly those associated with the Metabolist Movement, often used the term "niwa," literally gardens, to describe their urban design projects. The city, land, and sea were both the setting and the object of design interventions. This course will examine the Japanese landscape tradition from antiquity to the 21st century. The approach will be interdisciplinary, using literature, art, religion, economics, and technology to inform us of how earth, water, air, winds, plantings, views, and architecture were seen and imagined in Japan during successive historical periods. We will look at the cyclical reconstruction of Ise Shrine that took place in 2013, canonical Zen gardens from Japan's early modern period, the advent of modernist landscape principles and techniques in the 20th century, as well as the influence of garden aesthetics on the development of architecture and urban design over time. This course is open to qualified undergraduates. It is also offered as a Methods seminar for undergraduates in the Architectural History minor and fulfills the History and Theory requirement for Master of Architecture students. The maximum enrollment for this course will be 12.

Same as A46 ARCH 452k

Credit 3 units.

A48 LAND 453 Advanced Planting Design

This course focuses on both the cultural, environmental, scientific and the technical aspects of planting design. The course is taught in three modular sessions: horticulture and the science of plants; typologies and design such as bosque, grove, glade, allée, meadow, wetlands, hedgerow, etc., and their origins in productive landscapes, application to contemporary landscape architecture; and the practical hands-on experience in the field with both design documentation to installation techniques. The course offers several field trips to experience urban revitalization, various design typologies, sustainable land use, reclamation and restoration.

Credit 3 units.

A48 LAND 480B Mapping the Metropolitan Mississippi

This seminar explores the relationship of city to river through reading, recording and mapping. Students document their research, create proposals and develop simulations and/or prototypes for a site on the St. Louis riverfront. Methods of inquiry combine hand-recording, photography, GIS techniques and DIY devices. The course alternates discussion sessions, field research and lab. Open to all graduate students; undergraduates require the instructor's approval.

Credit 3 units.

A48 LAND 483A Emergence in Landscape Architecture

This course investigates the roles of emergence theory in landscape architectural discourse. For the purposes of the course, emergence is considered as the development of new and/or different conditions as a result of disturbance. Disturbance can take many forms, and the phenomena that are subject to disturbance are many and varied. Landscapes are continually disturbed by social, economic and physical irruptions, but cognitive structures, perceptual frameworks and cultural values are also subject to turbulence that, as with landscape disturbance, often leads to innovation, novelty and resilience. The course explains what emergence theory is, where it comes from, how it relates to environmental design in general, and how it has — or could — change the way we design human and nonhuman inhabitations. Through readings, presentations and discussions, students are able to connect the rise of emergence theory in cultures of contemporary thought to its application in practice. The main theme of the course is the potential for emergence theory to enable us to relate qualitatively different modes of existence (human; nonhuman) to each other and through the connections thus established improve the lifeworlds of all. The structure of the course is based around ten key concepts of emergence, as follows: open systems, situation, initial conditions, assemblage, nature cultures, difference, field theories, disturbance, morphogenesis, formless. Each student investigates one of these concepts and presents their findings to the class.

About Us

The Sam Fox School of Design & Visual Arts (<http://www.samfoxschool.wustl.edu>) is a unique collaboration in architecture, art and design education that links professional studio programs with one of the country's finest university art museums in the context of an internationally recognized research university.

Composed of the College of Architecture, the Graduate School of Architecture & Urban Design, the College of Art, the Graduate School of Art and the Mildred Lane Kemper Art Museum (<http://www.kemperartmuseum.wustl.edu/>), the Sam Fox School is an inspiring place for learning, making, and creative research. Its six-building complex features numerous exhibition and maker spaces (<https://samfoxschool.wustl.edu/places/facilities/>), a dedicated art and architecture library, and a world-class art museum. Students have unparalleled resources that support a positive creative culture.

The **College of Art**, founded in 1879, was the first professional, university-affiliated art school in the United States. In the 1940s, its broad-based core program helped set the standards for the bachelor of fine arts degree. Faculty over the years have included Max Beckmann, Philip Guston and other internationally known artists.

The **College of Architecture**, established in 1910, was one of eight founding members of the Association of Collegiate Schools of Architecture. In 1962, Architecture launched one of the nation's first Master of Urban Design programs. Four winners of the Pritzker Prize, considered architecture's highest honor, have taught at the school.

The **Mildred Lane Kemper Art Museum** dates back to 1881, making it the first art museum west of the Mississippi River. The collection has historically focused on contemporary work. Today, the Kemper Art Museum holds roughly 3,500 important paintings, sculptures, photographs and installations by 19th-, 20th- and 21st-century American and European artists, along with significant antiquities and a large number of prints and drawings.

Additional collaborative opportunities are provided by the Department of Art History and Archaeology (<https://arthistory.wustl.edu/>) in Arts & Sciences, the Kenneth and Nancy Kranzberg Art & Architecture Library (<https://library.wustl.edu/locations/artarch/>), and the D.B. Dowd Modern Graphic History Library (<https://library.wustl.edu/collecting-area/mghl/>).

Inquiry, Creativity and Synthesis

The Sam Fox School offers rigorous art, design and architecture education at both the undergraduate and graduate levels, within the unique context of an independent, nationally prominent research university.

The student body is composed of approximately 300 undergraduate and 40 graduate students in Art as well as 200 undergraduate and 225 graduate students in Architecture. In all, they represent 18 countries, 43 states, the District of Columbia, and Puerto Rico. Roughly 30% of undergraduates pursue combined studies with another university area.

Both core and advanced studios integrate contemporary theory and practice. Among the innovative programs offered are the following:

- Multidisciplinary courses are co-taught by Art, Architecture, and Art History and Archaeology faculty. Recent seminars have explored the history of illustrated entertainment, combined urban theory with book design and production, and crafted a variety of online publications. Courses in exhibition studies are being offered, and a new program of exhibition studies is under development.
- International studios in Barcelona, Berlin, Buenos Aires and Florence are taught by Washington University faculty and offer a range of distinctive programs in art and architecture.
- Sam Fox School faculty, students, and staff work with individuals, organizations, governments, and communities — especially in St. Louis — through research, teaching and practice. This includes community-engaged teaching, service programs, research projects, and additional types of socially engaged practice (<https://samfoxschool.wustl.edu/collaborations/socially-engaged-practice/>).

Uniting Creativity and Scholarship

The Sam Fox School boasts a unique combination of academic and intellectual resources.

The Architecture faculty includes practicing architects, urban designers and landscape architects as well as eminent architectural theorists and historians and a select number of international visitors. The resident, full-time faculty members have won national and regional awards for design excellence and planning, including more than two dozen from the American Institute of Architects (<https://www.aia.org/>) alone.

Art's full-time faculty members include prominent painters, sculptors, printmakers and mixed-media artists as well as leading illustrators, graphic designers, fashion designers and photographers. Design faculty have won numerous professional honors, and fine art faculty have been featured in more than 100 solo exhibitions and 300 group shows on five continents.

The nationally recognized Kemper Art Museum (<https://www.kemperartmuseum.wustl.edu/>) maintains a vital program of exhibitions, publications and educational events. Major thematic shows are drawn from institutions and private collections around the world, highlighting nationally and internationally emerging

artists. The acclaimed permanent collection includes key works by modern and contemporary artists, from Henri Matisse, Pablo Picasso and Jackson Pollock to Christian Boltanski, Candida Hofer and Olafur Eliasson.

Public events include concerts, film screenings, lectures and discussions with distinguished visitors, and museum tours led by student docents. The museum also provides workspace for faculty- and student-curated exhibitions (usually relating to Sam Fox School curriculum). Courses in Art History and Archaeology further complement the critical and practical study of exhibitions while facilitating student involvement in professional curatorial projects.

A Comprehensive Campus

The Sam Fox School is housed in a comprehensive, six-building campus for design and the visual arts located on the eastern portion of the Danforth Campus. Conceived around a central courtyard, it both reflects and updates Washington University's original campus plan, which was developed in 1895 by Frederick Law Olmsted, the founder of American landscape architecture.

Designed by the internationally acclaimed architecture firm KieranTimberlake, Anabeth and John Weil Hall (<https://samfoxschool.wustl.edu/places/our-campus/>) houses state-of-the-art graduate studios, classrooms and digital fabrication spaces. With its abundant natural light and flexible, loft-style studios and workspaces, Weil Hall is a locus for teaching, study, creation and critique. The William A. Bernoudy Architecture Studio — along with studios for graduate architecture, landscape architecture, urban design, illustration & visual culture, and visual art — houses programs for the Graduate School of Architecture & Urban Design (<https://samfoxschool.wustl.edu/academics/college-of-architecture/>) and the Graduate School of Art. Over the last decade, both graduate schools, which include the nationally ranked Master of Architecture and Master of Fine Arts in Visual Art (<https://samfoxschool.wustl.edu/academics/college-of-art/mfa-in-visual-art/>) programs, have doubled in size. The Roxanne H. Frank Design Studio houses the Graduate School of Art's Master of Fine Arts in Illustration & Visual Culture (<https://samfoxschool.wustl.edu/academics/college-of-art/mfa-in-illustration-and-visual-culture/>).

Another component of Weil Hall — the luminous, two-story Kuehner Family Court — features a living green wall, skylights, and glass walls that allow for visual connectivity between studio spaces, providing students with a feeling of simultaneity and participation in a larger community. As the conceptual heart of the building, the Caleres Digital Fabrication Studio allows students and faculty across programs to execute complex projects using state-of-the-art tools. Other notable spaces include the Ralph J. Nagel Dean's Suite and Weil Hall Commons, which includes a commissioned mural wall that features new works by alumni each year.

Earl E. and Myrtle E. Walker Hall brings together the undergraduate sculpture and painting areas. The sculpture area includes undergraduate studios, a wood shop, a metal shop, an installation room, and a faculty office, all on the ground level and first floor. The undergraduate painting studios are on the second floor.

William K. Bixby Hall, completed in 1926, has grown and changed to meet the needs of the students, faculty and administration of the College & Graduate School of Art. The building currently houses teaching and studio spaces for first-year art and design students, the undergraduate fashion design and printmaking majors, and the Nancy Spirtas Kranzberg Studio for the Illustrated Book (<https://samfoxschool.wustl.edu/places/facilities/15-nancy-spietas-kranzberg-studio-for-the-illustrated-book/>). The Dubinsky Printmaking Studio, a state-of-the-art facility, is located on the first floor beside Island Press (<https://islandpress.samfoxschool.wustl.edu/>), a research-based printmaking workshop that creates and publishes innovative prints and multiples by many of today's most influential artists. On the ground floor, an administrative suite is home to student services, financial services, and the director of Art.

Joseph B. Givens Hall has been architecture's home since 1932. It features a variety of studio spaces, including large drafting rooms with 15-foot ceilings, large windows, and skylit ateliers. The building's compact and elegant Beaux-Arts design has at its heart a grand central stair often used for socializing and informal meetings. Givens Hall also houses a lecture hall, review spaces, classrooms and the office of the director of Architecture.

Mark C. Steinberg Hall, completed in 1960, was the first commission by Fumihiko Maki, then an architecture professor at Washington University. Formerly home to the Gallery of Art, the Department of Art History & Archaeology in Arts & Sciences, and the Art & Architecture Library, Steinberg Hall now houses Career Services and the undergraduate communication design and photography majors on the lower level; public spaces such as Steinberg Hall Gallery and Etta Eisman Steinberg Auditorium on the main level; and architecture and communication design studios on the upper level.

The Mildred Lane Kemper Art Museum (<http://www.kemperartmuseum.wustl.edu/>), completed in 2006, is another commission by Maki. The elegant, 65,000-square-foot limestone-clad structure — a gathering point for scholars and the general public — includes more than 10,000 square feet of exhibition space, art storage facilities, and the Florence Steinberg Weil Sculpture Garden. The museum also houses the Kenneth and Nancy Kranzberg Art & Architecture Library and the Department of Art History & Archaeology (<https://arthistory.wustl.edu/>).

Lecture Series

The Sam Fox School invites distinguished academics and professionals to lecture (<https://samfoxschool.wustl.edu/calendar/series/2-public-lecture-series/>), attend critiques and visit major studios.

Email: samfoxschool@wustl.edu

Website: <http://www.samfoxschool.wustl.edu>

Degree Requirements

Undergraduate Degree Programs

The College of Architecture offers course work leading to two undergraduate degrees: the Bachelor of Science in Architecture and the Bachelor of Arts in Architecture. The requirements for both degrees are the same through the junior year. Students choose which degree program they wish to pursue. Further information about the particular requirements and curricular structures of the undergraduate degree programs is listed below.

Students in the College of Architecture select, in consultation with their advisors, a course of study that satisfies the formal degree requirements, addresses their interests, and best meets their overall goals.

Students begin with a design studio and take required courses in the College of Arts & Sciences in addition to electives across the university.

For the Bachelor of Science degree, students continue to study architecture in depth through the senior year. For those in the Bachelor of Arts program, the fourth year offers the flexibility of studying outside of architecture or pursuing other electives.

Continuing for Graduate Study Years

Students receiving the Bachelor of Science in Architecture degree can apply to two-year Master of Architecture programs. Students receiving the Bachelor of Arts degree with a major in architecture usually apply to three-year Master of Architecture programs. Please visit the Graduate School of Architecture & Urban Design (<http://bulletin.wustl.edu/grad/architecture/>) section of this *Bulletin* for more information.

College of Architecture Requirements

Students must fulfill the following degree requirements:

Academic Requirements

1. Writing: Every student must demonstrate proficiency in reading and writing the English language and must begin to develop mature skills in framing and revising arguments by completing course work as determined by the College Writing Program, with a grade of C- or better. Transfer

students must fulfill the writing requirement by taking an approved writing course or by review of a writing portfolio. For more information, visit the College Writing Program website (<https://collegewriting.wustl.edu/>).

2. Math 131 Calculus I (Natural Sciences/Math) with a C- or better
3. Physics 191U Physics I — Sophomores, Juniors, and Seniors Only (Natural Sciences/Math) with a C- or better
4. Humanities (3 units): Humanities courses examine the human condition as it has been documented and expressed in both past and contemporary times. This area includes courses from literature (both in English and other languages), Classics, History, Philosophy and Religious Studies, as well as some courses in the creative arts such as Dance, Drama, Music and Writing. Courses designated "Arch HUM" fulfill the humanities requirement.
5. Social and Behavioral Sciences (3 units): These courses use qualitative and quantitative observation to explore the social environment, relationships with society and forms of human behavior. This area includes courses from Anthropology, Economics, Education, International and Area Studies, Political Science and Psychological & Brain Sciences as well as courses from other areas, including interdisciplinary studies. Courses designated "Arch SSC" fulfill the social and behavioral sciences requirement.
6. Art History (Art-Arch 113 History of Western Art, Architecture & Design) with a C- or better; may be taken pass/fail
7. Art History (Art-Arch 215 Introduction to Modern Art, Architecture and Design) with a C- or better; may not be taken pass/fail

Major Required Courses: Bachelor of Science in Architecture

Code	Title	Units
ARCH 183	Practices in Architecture, Landscape Architecture and Urban Design	1
ARCH 184	Practices in Architecture, Landscape Architecture and Urban Design	1
ARCH 111B	Introduction to Design Processes I	4.5
ARCH 112B	Introduction to Design Processes II	4.5
ARCH 211C	Introduction to Design Processes III	6
ARCH 212C	Introduction to Design Processes IV	6
ARCH 311	Architectural Design I	6
ARCH 312	Architectural Design II	6
ARCH 411	Architectural Design III	6
ARCH 412	Architectural Design IV	6
ARCH 3280	Architectural History I: Antiquity to Baroque	3
ARCH 3284	Architectural History II: Architecture Since 1880	3
ARCH 438	Environmental Systems I	3

ARCH 445	Building Systems	3
ARCH 447A	Structures I	3
ARCH 448A	Structures II	3
	History/theory research and writing elective	3
	Architecture electives at 300 level or above	6
	Electives*	27
Total Units		101

* A maximum of 15 non-Washington University units (including Advanced Placement, International Baccalaureate, and transfer credit) is permitted. A maximum of 9 units may be applied to physical education, lessons and/or independent studies. No units in University College are accepted.

Major Required Courses: Bachelor of Arts in Architecture

Code	Title	Units
ARCH 183	Practices in Architecture, Landscape Architecture and Urban Design	1
ARCH 184	Practices in Architecture, Landscape Architecture and Urban Design	1
ARCH 111B	Introduction to Design Processes I	4.5
ARCH 112B	Introduction to Design Processes II	4.5
ARCH 211C	Introduction to Design Processes III	6
ARCH 212C	Introduction to Design Processes IV	6
ARCH 311	Architectural Design I	6
ARCH 312	Architectural Design II	6
ARCH 3280	Architectural History I: Antiquity to Baroque	3
ARCH 3284	Architectural History II: Architecture Since 1880	3
ARCH 445	Building Systems	3
ARCH 499	Senior Capstone in Architecture	3
	History/theory research and writing elective	3
	Architecture electives at 300 level or above	6
	Electives*	45
Total Units		101

* A maximum of 15 non-Washington University units (including Advanced Placement, International Baccalaureate, and transfer credit) is permitted. A maximum of 9 units may be applied to physical education, lessons and/or independent studies. No units in University College are accepted.

Additional Requirements

If a student plans to enter the architectural design sequence ARCH 311–ARCH 312 in the fall of the junior year, the student must complete 60 units of academic work by the end of the sophomore year.

Each undergraduate student must successfully complete 122 units and at least 30 units in advanced courses (numbered 300, 400 or 500). The 30 units in advanced courses may include the minimum number of advanced units required by the major areas of concentration. Courses required for the major (refer to the College of Architecture Requirements) must be passed with a C- or better.

Each student must spend at least three semesters in full-time residence (at least 12 units per semester) at Washington University. Unless excused by the director of the College of Architecture, the student must earn the last 30 units at Washington University. The director of the College of Architecture may waive the full-time residence requirement for students who are employed full-time and who have completed at least two years of college.

Regulations

A. Students may take one *non-required* course on a pass/fail basis each semester.

B. Students may enroll for credit in only one supervised performance course during any semester. Students may earn a maximum of 9 units toward the degree in supervised performance and/or in group or individual performance courses, internships, and independent studies combined.

Combined Studies

Washington University offers students the option to study across disciplines and to take advantage of the wide range of courses available. Students may choose to major in architecture and minor in another subject in architecture or to major in architecture and choose a minor or second major in an area from a different undergraduate school.

Academic Honors & Awards

Dean's List: In recognition of exceptional scholarship, first-year, sophomore, junior and senior art/design students who have earned at least 14 credit units under the letter grade option (excludes courses taken pass/fail or audit) and earned a semester grade-point average of 3.5 or higher during a semester will be cited on the Dean's List.

Latin Honors: Graduating Bachelor of Science or Bachelor of Arts in Architecture degree students may also be considered for Latin Honors (cum laude, magna cum laude or summa cum laude) as determined by academic performance.

Special Awards, Medals and Prizes

American Institute of Architects Henry Adams Medal. Each year, the American Institute of Architects (AIA) Henry Adams Medal is awarded to a member of the graduating class in recognition of scholastic achievement, character and promise of professional ability. The graduate student so honored receives an engraved medal.

Association of Licensed Architects Design Award. The Association of Licensed Architects (ALA) presents this award to acknowledge a student, chosen by the director of Architecture, who has exhibited exemplary achievement throughout their academic tenure.

Betty Lou Custer Award. The St. Louis Chapter of the AIA presents a book award in memory of Betty Lou Custer, the longstanding executive director to the chapter, in recognition of her service to the profession of architecture. The book is awarded to an outstanding undergraduate student who has contributed service to the College of Architecture.

Bronze Alpha Rho Chi Medal. Alpha Rho Chi, a national social fraternity in architecture, awards a medal to a graduating sixth-year student who has shown an ability for leadership, performed willing service for the Graduate School of Architecture & Urban Design, and demonstrated promise of real professional merit.

Degree Project Book Award. Each Degree Project faculty selects one student that is recognized for achievement in the studio.

Excellence in Craft Award. This award is given to a member of the graduating class, either undergraduate or graduate, to recognize outstanding achievement in craft.

Faculty Book Awards. These awards are given for recognized achievement in individual programs as voted on by the faculty.

Frederick Widmann Prize. In honor of Frederick Widmann, architect and philanthropist, one graduating member from both the undergraduate and graduate classes is selected based on merit in design.

Hugh Ferriss Award for Architectural Drawing. This award honors Hugh Ferriss (Washington University in St. Louis class of 1911 and Honorable Master of Architecture in 1928), a distinguished architect and renderer. A book award is given to a graduating student, either undergraduate or graduate, who has excelled in architectural drawing in any medium.

James Walter Fitzgibbon Prize. Mrs. James Fitzgibbon and friends of the family established a fund to honor Professor Fitzgibbon's memory and to recall his long and distinguished service on the faculty of Architecture. The annual income from this fund provides for the Fitzgibbon Prize, given to a 300- to 600-level student who has the winning solution to a one-day sketch problem.

Sophomore Book Prize. This award is presented to an outstanding sophomore who has completed the basic design sequence within the college. It is given in honor of Leslie J. Laskey, professor emeritus, whose inspired teaching formed the basis of the basic design program and whose influence is carried on in the lives and work of the students who studied with him.

William Tao Prize. Established by William K.Y. Tao (PE, alumnus, emeritus trustee and affiliate professor at Washington University), the William Tao Prize provides an award to a graduating graduate student who has demonstrated excellence in the understanding and application of building systems in architecture, including illumination, electrical and mechanical engineering, and energy-efficient design.

Scholarship Funds

Scholarships with Applications

St. Louis Chapter American Institute of Architects

Scholarship Fund. This scholarship is awarded to students from the St. Louis metropolitan area who have completed the first two years of their architectural studies. Inquiries should be addressed to the St. Louis Chapter AIA, 911 Washington Ave., #100, St. Louis, MO 63101. Separate application is required.

The James W. Fitzgibbon Scholarship in Architecture. This scholarship is awarded to support four years of study leading to either undergraduate architecture degree. The Fitzgibbon Scholar is selected in recognition of outstanding academic performance and promise in the field of architecture. The scholarship is in the amount of full tuition, and it is renewable for a total of four years of undergraduate study.

Competition is national in scope, with finalists invited each year to visit the College of Architecture at the college's expense. At this time, one student is chosen to receive the full-tuition scholarship, and the other finalists are awarded partial scholarships. These are renewable for each year of undergraduate study, assuming continued academic and design excellence.

To be eligible, an applicant must be a high school senior who meets the following criteria:

1. They have a strong high school transcript.
2. Their SAT or ACT scores are in the upper range. (These tests are optional for 2022 and 2023.)

To enter the competition, the applicant must follow the usual admission application procedures by completing a Washington University first-year application and sending a digital portfolio of artwork. Portfolios should be submitted through Slideroom.

Scholars in Architecture

The Scholars in Architecture program provides named scholarship funds that have been donated to the university by individuals or companies specifically for this purpose. Selection is based on financial need and academic achievement. There is no application process. The total amount of the student's financial assistance package does not change.

Policies

Enrollment Status

Definitions of *full-time study*, *half-time study*, and so on are based on federal regulations. Enrollment status impacts eligibility for campus services as well as Washington University's reporting obligations. Alignment with policies in financial aid, international student services, student health insurance, VA benefits and athletics is critical.

Washington University's definition for full-time undergraduate study is at least 12 credit-bearing units (semester hours) per term. Units taken under the audit grade option do not factor into enrollment status calculations, so they cannot count toward the 12 units required for full-time enrollment.

Sam Fox School of Design & Visual Arts Grievance Procedures

The dynamic and creative studio culture at the heart of the Sam Fox School strives to be safe and inclusive for all members of our community. Our faculty, staff, and students join together in their commitment to creating learning environments of mutuality and respect. When concerns or disagreements arise about conduct, grading, or other matters in the Colleges of Art and Architecture, policies exist for pursuing proper resolution.

Grade Dispute Policy

The Sam Fox School aims to provide each student with a fair assessment of their academic work and studio. Students have the right to dispute their overall course grade (not individual assignments) if they believe that grade does not accurately reflect the quality of their work. A grade dispute must be submitted to the faculty member who assigned the grade within 30 days of receipt of the grade. The Sam Fox School stresses that every effort to resolve such a dispute be made by the faculty and student involved. A student's eligibility for advancement in sequential course work requires timely resolution of the grade dispute. If the student is a graduation candidate, the dispute process must comply with the Intent to Graduate submission deadlines set forth by the Office of the University Registrar or else the degree conferral will be delayed by one semester or until resolved.

In general, the dispute process will occur and be resolved as follows:

1. The student presents their question about the grade in writing to the faculty member and clearly states the reasons for questioning the grade.
2. The faculty member and the student review the grading procedures as stated in syllabus and discuss the determining factors of the student's grade.
3. If the case is not resolved between the student and the faculty member, the student may put forth their complaint in writing with supporting evidence to the chair of the academic program, with a copy given to the faculty member involved with the dispute. The student should provide the course syllabus and all of the materials relevant to the assigned grade within two weeks of the complaint. If a conflict of interest exists between the student and the chair (e.g., the chair is teaching the course), the case will be referred to another chair in the Sam Fox School or to the director of the college.
4. The chair of the academic program will review the materials. The chair will resolve the dispute by working with the faculty member and the student to arrive at a determination.

Integrity and Ethical Conduct

Washington University and the Sam Fox School of Design & Visual Arts are committed to the highest ethical and professional standards of conduct and consider these to be integral to their mission of the promotion of learning. To maintain these standards, the university relies on each community member's ethical behavior, honesty, integrity, and good judgment. Each community member should demonstrate respect for the rights of others, and each community member is accountable for their own actions. Washington University policies state that members of the university community can expect to be free from discrimination and harassment. Students, faculty, staff, and outside organizations working on campus are required to abide by specific policies prohibiting harassment, which are posted on the Compliance and Policies (<https://wustl.edu/about/compliance-policies/>) page of the university's website. Should a situation arise in which a member of our community believes they have cause to file a grievance, there are two categories of grievance to consider: academic and non-academic. Academic grievances can either be when a student challenges a course grade or when a fellow student or faculty member feels a matter of academic integrity is at issue. Student grievances filed to challenge a grade that the student feels has been given incorrectly must follow the procedures outlined in the Grade Dispute Policy above.

Academic integrity grievances are made when a faculty member or fellow student feels a student has compromised the environment of honesty and ethics in the school. Academic integrity infractions follow the procedures laid out in the Sam Fox School and University policies (<https://samfoxschool.wustl.edu/resources-and-opportunities/?filter=46#main>) and are managed

in the Sam Fox School by the Academic Integrity Officer. Please refer to Washington University's Academic Integrity Statement (<https://studentconduct.wustl.edu/academic-integrity/>) for additional information.

Non-Academic Concerns

If a member of our academic community feels that the ethical and safe environment of the classroom has been compromised, for whatever reason, they may seek guidance through the school's Faculty-Student Mediator. Students may also consult Washington University's Grievance Policy and Procedures for Allegations by Undergraduate Students Against Faculty (<https://wustl.edu/about/compliance-policies/governance/grievance-policy-allegations-undergraduate-students-against-faculty/>). In addition, University Resources available for support include the following:

- Title IX (<https://titleix.wustl.edu/>) (for issues related to discrimination, sexual harassment, and sexual violence)
- Mental health concerns (<https://shs.wustl.edu/MentalHealth/Pages/default.aspx>) (Habif Health and Wellness Center)
- Drug and alcohol concerns (<https://shs.wustl.edu/HealthAndWellness/HealthTopics/Pages/SubstanceAbuse.aspx>) (Habif Health and Wellness Center)
- Immediate physical/mental health concerns (<https://police.wustl.edu/Pages/Home.aspx>) (Washington University Police Department)
- Center for Diversity & Inclusion (<https://diversityinclusion.wustl.edu/brss/>) (for issues related to bias, prejudice, or discrimination)

Academic Integrity

Students and members of the faculty of the university have an obligation to uphold the highest standards of scholarship. Plagiarism and other forms of cheating will not be tolerated. When a student has violated the integrity of the academic community, an instructor may recommend that the student be brought before the Committee on Academic Integrity. A list of university policies can be found on the website of the University Registrar (<http://registrar.wustl.edu/university-policy-information/>).

Attendance

Regular attendance at all classes and studio meetings is expected. If, in the opinion of the instructor, any student has accumulated absences to such an extent as to preclude the possibility of satisfying the course requirements, the student's registration in that course will be canceled, subject to the approval of the director.

Prerequisites

Students enrolling in architecture courses without the prerequisites must seek permission from the instructor; registration without this permission does not guarantee enrollment in the course.

Units and Grades

A unit is the amount of credit given for one hour of lecture or up to three hours of studio work per week for one semester.

Pluses and minuses are used. Each grade earned for a course taken for credit receives a specified number of grade points, and these points are affected by plus and minus grades as well. Symbols used for both options have the following meanings:

Grade	Meaning	Points per Unit
A		4.0
A-		3.7
B+		3.3
B		3.0
B-		2.7
C+		2.3
C		2.0
C-		1.7
D+		1.3
D		1.0
D-		0.7
F		0.0
P#	Pass	
F#	Fail	
I	Course work incomplete*	
W	Withdraw	
WLA	Withdraw (medical leave)	
R	Repeat	
L	Successful audit	
Z	Unsuccessful audit	
N	No grade submitted	

* This grade signifies that the student has not completed part of the work for a semester (exclusive of examinations) but has satisfactorily completed the rest of the work. A student must remove a grade of I as discussed in "Incomplete Grades" below.

The WLA grade is only for undergraduate students who withdraw from all semester course work with an approved medical leave of absence.

Undergraduate students in architecture must complete all required courses with a grade of C- or better and must have a minimum 2.70 cumulative grade-point average to be eligible for graduation.

In addition to grading under either the regular grade option or the pass/fail option, instructors teaching architectural design courses complete an evaluation form for each student; a copy is made available to the student, and the original is filed in the student's folder in Givens Hall.

Auditing a Course

With prior approval from their academic advisor, students may audit an elective course if the instructor allows.

Pass/Fail Option

Students may take one *non-required* course on a pass/fail basis each semester.

Incomplete Grades

Students who, following the last day for withdrawal from courses, experience medical or personal problems that make satisfactory completion of course work unlikely may request a grade of I (incomplete). Students in this situation must take the following steps:

1. Contact the instructor before the final review or exam to discuss the request.
2. If the instructor consents, complete an Incomplete Grade Petition signed by both the instructor and the student.
3. Return the signed petition to the Sam Fox School Registrar's Office for final approval.

The instructor is under no obligation to award a grade of I (incomplete). Once approval is granted, incomplete marks in all architectural design courses from the 100 level through the 600 level must be removed by the first day of classes of the following semester. Failure to remove the I (incomplete) grades will prevent the student from continuing in another architectural design course.

In all other courses, the grade of I (incomplete) must be removed no later than the last day of classes of the next full semester. Upon failure to make up an incomplete grade within the next semester, the student will automatically receive an F in the course unless explicitly excused by the director of architecture. An F grade that is so received may not be changed. Students will not be allowed to continue in courses that require prerequisites if the prerequisite has a grade of I (incomplete). A student who carries more than 9 units of with grades of I (incomplete) may be declared ineligible to re-enroll.

F grades for a semester may be changed only through the last day of classes of the following semester and then only in extraordinary circumstances. The director will approve no changes of F grades after this time.

Repeating a Course

When a student retakes a course in which a passing grade has been received, both enrollments will show on the transcript. If the second grade is equivalent to or better than the first grade, the first grade will be administratively changed to R to indicate the re-enrollment. If the second grade is lower, both grades will stand. Credit toward the degree will be allowed for only one enrollment. This policy only applies to courses taken at Washington University.

Independent Study

Opportunities for independent study are available to undergraduate students. Registration in an independent study requires the student to submit a written proposal and obtain the approval of the sponsoring faculty, advisor, and program chair. An independent study proposal sheet approved by a faculty sponsor must be submitted to the director of architecture at the time of registration. Approved proposals must be submitted to the Sam Fox School Registrar's Office by the semester course add deadline. Proposals received after the deadline will not be considered.

A maximum of 3 units for juniors and seniors and of 1 unit for first-year students and sophomores can be taken per semester. Independent study cannot replace architectural design studios or other required courses. Most proposals granted receive 1 unit.

Study Abroad

Students have an opportunity to study in Florence, Italy, for a semester or over the summer term. These programs are based on a directed curriculum of urban and building analysis and appreciation. For more information, visit the International Programs page (<https://samfoxschool.wustl.edu/academics/international-programs/>) on the Sam Fox School website.

Architecture students are eligible to participate in the university's study abroad programs (<https://overseas.wustl.edu/study-abroad/>).

Summer School

The College of Architecture offers a limited number of courses during the summer.

Minimum and Maximum Loads

First-year and sophomore undergraduates will normally enroll in 15 to 16 units each semester, although enrollment in up to 18.5 units is possible without obtaining the permission of the undergraduate program chair. Juniors and seniors in the architecture degree programs are strongly recommended to enroll in no more than 16.5 units each semester in order to maintain focus on the design studio and major requirements.

Each semester, a changing selection of 1-credit workshops in materials and graphic techniques is offered. Students are encouraged to enroll in these workshops (if prerequisites are met) as a supplement to their general curriculum. No more than one workshop is permitted in any given semester, and no more than three total may be taken throughout a student's program of study without special permission of the director.

An enrollment above 21 units will be charged at the established university rate per hour for the additional credits and must be approved by the director or undergraduate program chair.

Full-time students must be registered for a minimum of 12 units. Partial load enrollment is possible when circumstances warrant it and requires the permission of the director.

Refer to the section of this *Bulletin* that covers tuition and fees (p. 47) for both the annual tuition rate and the per-credit-unit breakdown applicable to the College of Architecture.

Students are expected to proceed at a pace that enables them to finish their degree within the appropriate time limit. For undergraduates, this is usually eight semesters. Exceptions to these minimum standards may be granted only with the written consent of an academic advisor, the associate dean of students, or the director.

Advanced Placement Credit

A maximum of 15 units of pre-matriculation or non-Washington University transfer credit may be counted toward an undergraduate degree.

Transfer Credit

Architecture students must complete the required Calculus I and Physics courses at Washington University with a grade of C- or better unless the student has received Advanced Placement (AP) or International Baccalaureate (IB) credit for these courses. A student wishing to transfer credit for courses completed at another institution must bring a full catalog description of the course(s) to the Sam Fox School Registrar's Office for preapproval. Upon receipt of an official transcript indicating a grade of C or better, courses will be considered for transfer. Grades for transfer courses will not appear on the student's Washington University record and will not figure into the student's GPA. College courses taken to earn credit for high school graduation will not be considered for transfer. Washington University does not transfer credits for courses taken online. No transfer credit will be awarded for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or Academic Integrity Policy.

Interdivision Transfer Policy: Transferring Into the College of Architecture

Undergraduate students enrolled in the College of Arts & Sciences, McKelvey School of Engineering, Olin Business School, or the College of Art may apply to transfer into the College of Architecture. Transfer requests must be made in WebSTAC by the last of final exams of the semester before the effective semester. It is strongly recommended that students meet with a four-year advisor in the Sam Fox School prior to registration to ensure that they know what classes to take the following semester and are given waitlist priority. Otherwise, enrollment in the required studios for the semester of entry may not be possible. All Washington University students must spend their first semester in the academic division that admitted them.

Minimum Criteria

The following requirements must be met for an internal transfer into the College of Architecture:

1. Achieve a cumulative GPA of 3.0 or higher. Students with GPAs below 3.0 are required to meet in person with the chair of undergraduate architecture for an interview and academic record review.
2. Present an academic record that supports the conclusion that the student will be able to complete a Bachelor of Science in Architecture or Bachelor of Arts in Architecture degree in a typical time frame. Depending on the student's level at the time of transfer, additional semesters and/or preapproved summer school may be required.
3. Be in good academic standing.

A portfolio of creative work is not required, but students are invited to bring visual examples of their work when they meet with the associate dean of students in the Sam Fox School (details below).

Each application is evaluated on a case-by-case basis. Meeting these requirements does not guarantee admission into the College of Architecture.

To Begin the Transfer Process

1. Log into WebSTAC and select "Change WU School" under the "Academics" tab.
2. Meet with the associate dean of students in the Sam Fox School for an interview and optional portfolio review. Contact information for the associate dean is provided during the transfer request process in WebSTAC.
3. Complete an exit interview or exit survey with the academic division that is being left.

Satisfactory Academic Progress, Good Standing, Probation and Suspension

Students are expected to proceed at a pace that enables them to finish their degree within an appropriate amount of time. For undergraduates, this is usually eight semesters.

The minimum GPA requirements needed to maintain eligibility for Satisfactory Academic Progress are dictated by the specific program of study. In each case, per the requirements of 34 C.F.R. 668.34(a)(4)(ii), the federal student aid program requires a minimum of a C average to maintain eligibility for aid, but an individual degree or certificate program may have a higher minimum GPA for federal Satisfactory Academic Progress.

A student whose semester GPA is below 2.0 (a grade of C) or who falls below a pace of $66\frac{2}{3}\%$ (for the number of credits earned divided by the number of credits attempted) will be placed on academic probation. If, after the following semester, the semester GPA is still below 2.0 or the if pace is below $66\frac{2}{3}\%$, the student may be ineligible for normal advancement or may be suspended. Although the College of Architecture desires to give all students the opportunity to prove themselves, it is not in the best interest of either the students or the college to permit students to continue indefinitely in educational programs in which they are not producing satisfactory results.

Probation serves as a warning that, unless the quality of work improves, the student may be subject to suspension because of academic deficiency. A student suspended for academic deficiency will not be eligible for readmission until they have demonstrated, under the conditions set for each individual case, their ability to do satisfactory work.

A student will be removed from academic probation when their cumulative GPA is above 2.0 and they are meeting the pace of $66\frac{2}{3}\%$ for satisfactory academic progress.

In support of the student, the Sam Fox School Registrar's Office will work with the student to develop a plan for success. To succeed, the student must understand the causes of their current situation, identify what needs to change, and implement and review the plan. The student is required to meet regularly with the associate dean of students to review progress. Failure to make these meetings will result in a hold being placed on the student's record.

First Academic Probation: The first time a student qualifies for probation, they are placed on academic probation. Students placed on first academic probation are sent a letter informing them of this action.

Second Academic Probation: The second time a student qualifies for probation, they are placed on second academic probation. Students placed on second academic probation are sent a letter informing them of this action. A copy of this letter is sent to the parent(s)/legal guardian(s).

Special Academic Probation: A student is placed on special academic probation when their earned semester pace or GPA is below the terms of satisfactory academic progress because of outstanding or incomplete grades. Once all grades are received, the student's record is reviewed to determine satisfactory or probationary status.

Academic Suspension: The third time a student qualifies for probation, they will be suspended. A letter is sent to the student and their parent(s)/legal guardian(s) informing them of this action. The student is not allowed to enroll in any classes at Washington University while suspended, including University College. If the suspended student would like to return to the university in the future, they must petition and be approved for reinstatement. If the student fails to achieve and maintain satisfactory academic progress after reinstatement, they will be dismissed.

The third time a student qualifies for probation, they will be suspended. A letter is sent to the student and their parent(s)/legal guardian(s) informing them of this action. The student is not allowed to enroll in any classes at Washington University while suspended, including classes offered by University College. If the suspended student would like to return to the university in the future, they must apply and be approved for reinstatement. If the student fails to achieve and maintain satisfactory academic progress after reinstatement, they will be dismissed.

A student who wishes to appeal their suspension must present a written appeal within 48 hours of receiving notification stating the reason(s) why they believe their situation should be reconsidered. This statement must be sent as outlined in the notice of suspension. In this statement, the student must explain why the unsatisfactory academic performance occurred and, if they are allowed to return, what they would do differently.

The student must then attend an appeal hearing. The student's academic record, written appeal, and any other factors the student may wish to discuss are considered by a faculty committee. After the appeal hearing, the student is informed of the committee's decision within 48 hours. Actions may include academic probation, a required leave of absence for one or two semesters, suspension, or termination from the program. Should the student wish to appeal, a written request must be sent within 48 hours of receiving the committee's decision to the director of the student's academic division. If appealing the director's decision, the dean of the Sam Fox School makes the final determination.

If the appeal is successful, the student is placed on Special Academic Probation and allowed to enroll in classes. If the appeal is unsuccessful, the student's programs of study will be closed and their classes dropped for the following semester. Suspended students may apply for re-enrollment at a future time, although there is no guarantee that they will be allowed to return.

No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or Academic Integrity Policy.

Leave of Absence

A student may request a voluntary leave of absence for one or two semesters when individual professional, medical, or personal circumstances warrant it. Petitions are reviewed and approved by the Sam Fox School Registrar's Office. Any requests extending beyond one year will be reviewed on a case-by-case basis. In addition to a written petition, the student requesting a medical leave of absence must submit a letter of verification from Habif Health and Wellness Center (<https://students.wustl.edu/habif-health-wellness-center/>).

A student returning from a leave of absence must submit a written letter stating their intention to re-enroll by July 1 (if returning in the fall semester) or December 1 (if returning in the spring semester). In the case of a medical leave of absence, a letter of clearance is required from Habif Health and Wellness Center before the student will be permitted to re-enroll.

International students requesting a leave of absence must contact their advisor at the Office for International Students and Scholars (<https://students.wustl.edu/international-students-scholars/>) to discuss how the leave might affect their visa status.

Students who are on a leave of absence for medical, mental health, academic, family, personal, or any other reason are not eligible to participate in a registered student group, hold a student group leadership position, or attend/plan a student-group-sponsored event as a representative of said student group. Depending on the type of leave and any corresponding policy restrictions, students on a leave of absence may or may not be able to attend campus-wide events as a guest of a current Washington University student.

Financial Obligations

Students are responsible for fulfilling their financial obligations to the university. If a student account becomes overdue, a late payment fee will be assessed, and a hold will be placed on the account. Students with a poor payment history may be restricted from utilizing certain payment options or receiving tuition remission until course credit has been earned. Non-payment of tuition and other expenses due to the university will be cause for exclusion from class or refusal of graduation, further registration, or transfer credit. In addition, students are

liable for any costs associated with the collection of their unpaid bills, including but not limited to collection agency costs, court costs, and legal fees. Past due amounts can also be reported to a credit bureau.

Withdrawals and Refunds

A written request for a refund must be submitted to the Sam Fox School Registrar's Office for consideration. Approval is required to officially withdraw from the university. Tuition adjustments will be processed based on information received, and refund checks will be issued only after the fourth week of classes. Material fees for architecture courses will not be refunded after the course drop period for the semester. For any student whose medical condition makes attendance for the balance of the semester impossible or medically inadvisable, the university will make a pro rata refund of tuition as of the date of withdrawal when that date occurs prior to the twelfth week of classes, provided that the condition is verified by the Habib Health and Wellness Center or a private physician. The date of withdrawal may correspond to the date of hospitalization or the date on which the medical condition was determined.

Withdrawal Date	Refund
Within 1st or 2nd week of classes	100%
Within 3rd or 4th week of classes	80%
Within 5th or 6th week of classes	60%
Within 7th or 8th week of classes	50%
Within 9th or 10th week of classes	40%
After 10th week of classes	0%

Summer Withdrawals and Refunds

The Sam Fox School reserves the right to cancel a course if it has not enrolled a minimum of eight students before the first day of class. If a course is canceled, all enrolled students will be notified and dropped from the class, and they will not be charged tuition and fees.

If a course is not canceled, a student may be released from their obligation to pay full tuition and fees by canceling their registration according to the schedule below:

Withdrawal Date	Refund
Prior to the first class meeting	100% + fees
Prior to 15% of published meeting dates	100%
Prior to 30% of published meeting dates	80%
Prior to 45% of published meeting dates	60%
Prior to 60% of published meeting dates	40%
After 61% of published meeting dates	No refund

Requests for refunds must be made in writing to the Sam Fox School Registrar's Office.

Students may drop a summer course without penalty through the 80% tuition refund deadline and withdraw from a course through the 40% tuition refund deadline.

Intent to Graduate

Every candidate for a degree is required to file an Intent to Graduate in WebSTAC in order to participate in commencement. The deadlines for filing are listed in WebSTAC.

Retention of Student Work

The College of Architecture and the Graduate School of Architecture & Urban Design reserve the right to retain any student work submitted for course credit. Normally this work will be returned to the student at the end of the semester, except for that work which has been retained for publications, exhibitions, or accreditation reviews. It is highly recommended that students photographically reproduce or electronically store their work to keep a record.

Art

Sam Fox School of Design & Visual Arts

The Sam Fox School of Design & Visual Arts (<http://samfoxschool.wustl.edu>) is a unique collaboration in architecture, art, and design education, linking professional studio programs with one of the country's finest university art museums in the context of an internationally recognized research university.

The Sam Fox School is composed of the College of Architecture, the Graduate School of Architecture & Urban Design, the College of Art, the Graduate School of Art, and the Mildred Lane Kemper Art Museum (<http://www.kemperartmuseum.wustl.edu/>).

A Professional Art and Design College Within a University

The College of Art offers students the opportunity to study art or design while taking both required and elective courses through other schools and divisions of the university. The College of Art, which has its own faculty and facilities, has been a degree-conferring division of Washington University since 1879.

Undergraduate students at the College of Art have a wide variety of options from which to choose to meet their individual needs and satisfy their interests. The curriculum has been designed around the philosophy that the study of art has no natural boundaries; all human experience — intellectual, technological and social — can at some point become part of the purposes of an artist or designer. College of Art courses provide a structural base upon which students are able to build.

Students in the College of Art at Washington University may choose to pursue a Bachelor of Fine Arts (BFA) degree or a Bachelor of Arts (BA) degree. BFA students can major in communication design, fashion design or art. BFA Art has optional concentrations in painting, photography, printmaking, sculpture and time-based + media art. BA students can major in art or design. BA Design has optional concentrations in communication and fashion.

Undergraduate students in Architecture, Arts & Sciences, Business and Engineering can add a dual degree, second major or minor in art or design to their existing degree path. These opportunities help students foster creativity, expand horizons and explore opportunities for careers in art and design.

Our diverse student body is composed of young people who have records of high achievement in both art or design and in academics. Because the College of Art provides such a comprehensive learning environment, it is an excellent place for a student to mature as an artist or designer.

Facilities

The Sam Fox School is comprised of six buildings (<https://samfoxschool.wustl.edu/places/our-campus/>) located on the east end of the Danforth Campus. Studios, classrooms and maker spaces are located in William K. Bixby Hall, Joseph B. Givens Hall, Mark C. Steinberg Hall, Earl E. and Myrtle E. Walker Hall, and Anabeth and John Weil Hall. In addition, the Mildred Lane Kemper Art Museum (<http://www.kemperartmuseum.wustl.edu/>) includes more than 10,000 square feet of exhibition space, the Florence Steinberg Weil Sculpture Garden, the Kenneth and Nancy Kranzberg Art & Architecture Library (<https://library.wustl.edu/units/artarch/>), and the Department of Art History & Archaeology in the College of Arts & Sciences (http://arthistory.artsci.wustl.edu/?_ga=2.196967721.427621618.1580917661-454456421.1510527571).

In addition, the D.B. Dowd Modern Graphic History Library (<https://library.wustl.edu/collecting-area/mghl/>) — a division of Washington University Libraries' Special Collections — is a preeminent site for studying the history and culture of American illustration, and it is comprised of original art and printed material from many fields of popular American pictorial graphic culture. The collection focuses on 20th-century illustration, and it includes artists' working materials and sketches as well as original artwork from books, magazines, and advertising.

Majors

Bachelor of Fine Arts

First-year students take Drawing, 2D Design, 3D Design, Digital Studio, and Practices in Architecture + Art + Design I.

Second-year studio courses introduce students to the different areas of focus.

A student's last two years include intense study in their chosen focus area and a capstone experience. The capstone studio brings together all seniors in the studio areas and separately in the communication design and fashion areas for critical dialogue beyond disciplinary boundaries to guide preparation for a culminating BFA exhibition.

Throughout the studio courses and the final capstone, the BFA degree places an emphasis on developing a portfolio that displays the student's mastery of art and design skills. Graduates are prepared to pursue careers as artists, illustrators and designers.

For specific degree requirements, visit the Degree Requirements (p. 186) page for the College of Art.

Bachelor of Arts

First-year students take Digital Studio and two additional foundation courses that may include Drawing, 2D Design, 3D Design, and so on. Upper-level studio courses and Sam Fox electives introduce students to different areas of focus.

With fewer required courses and no capstone studio, this degree provides an opportunity for students to explore art and design in the context of a rigorous liberal arts education. The BA program is ideal for students who are interested in studying art and design as a cultural phenomena, as a practice for strategic thinking, or as preparation for a career alongside artists and designers. Working within and between traditional disciplines, students will explore how ideas can shape materials and how materiality can shape ideas.

For specific degree requirements, visit the Degree Requirements (p. 186) page for the College of Art.

The Majors in Art & Design

BFA majors are offered in the following areas:

- Art (<https://samfoxschool.wustl.edu/academics/college-of-art/bfa-ba-in-studio-art-and-design/studio-art/>) — with these optional concentrations:
 - Painting (<https://samfoxschool.wustl.edu/academics/college-of-art/bfa-ba-in-studio-art-and-design/studio-art/>)
 - Photography (<https://samfoxschool.wustl.edu/academics/college-of-art/bfa-ba-in-studio-art-and-design/studio-art/>)
 - Printmaking (<https://samfoxschool.wustl.edu/academics/college-of-art/bfa-ba-in-studio-art-and-design/studio-art/>)
 - Sculpture (<https://samfoxschool.wustl.edu/academics/college-of-art/bfa-ba-in-studio-art-and-design/studio-art/>)
 - Time-Based + Media Art (<https://samfoxschool.wustl.edu/academics/college-of-art/bfa-ba-in-studio-art-and-design/studio-art/>)
- Communication Design (<https://samfoxschool.wustl.edu/academics/college-of-art/bfa-ba-in-studio-art-and-design/communication-design/>)
- Fashion Design (<https://samfoxschool.wustl.edu/academics/college-of-art/bfa-ba-in-studio-art-and-design/fashion-design/>)

BA majors are offered in the following areas:

- Art (<https://samfoxschool.wustl.edu/academics/college-of-art/bfa-ba-in-studio-art-and-design/studio-art/>)
- Design (<https://samfoxschool.wustl.edu/academics/college-of-art/bfa-ba-in-studio-art-and-design/>) — with these optional concentrations:
 - Fashion
 - Communication

Second Majors in Art & Design

A student pursuing a bachelor's degree in Architecture, Arts & Sciences, Business or Engineering may also pursue a second major (<https://samfoxschool.wustl.edu/academics/college-of-art/second-majors-in-studio-art-and-design/>) in the College of Art. Second majors are offered in art and design. The design program has optional concentrations in fashion and communication. Any student in good academic standing may declare a second major using WebSTAC. Upon completion of the requirements, the student's transcript will show the second major along with their earned degree. Only one diploma is granted; no reference to the second major is noted on the diploma.

Second Major in Art

Required	Units
Art/Design Foundation	
Select two from Drawing, 2D Design or 3D Design	6

Major Area Requirements	
Digital Studio	3
Sophomore Material and Culture Studios	6
Junior Art Practice Studios	6
Methods & Contexts I (must be taken in the fall with concurrent enrollment in at least one Art Practice Studio)	3
Total	18

Architecture, Art or Design electives or menu of approved courses	12
Total Credit Units Required	36

Sophomore Art Material and Culture Studios (choose two):

- Painting Studio: Material and Culture
- Photography Studio: Material and Culture
- Printmaking Studio: Material and Culture
- Sculpture Studio: Material and Culture
- Time-Based Media: Material and Culture

Junior Art Practice Studios (choose two):

- Drawing: Art Practice
- Painting: Art Practice
- Photography: Art Practice
- Printmaking: Art Practice
- Sculpture: Art Practice
- Time-Based Media: Art Practice

Second Major in Design: No Concentration

Required	Units
Art/Design Foundation	
Select two from Drawing, 2D Design, 3D Design or Design Across Disciplines	6

Major Area Requirements	
Digital Studio	3
Sophomore Design Material and Culture Studios	6
Junior Design Practice Studios	9
Total	18

Architecture, Art or Design electives or menu of other options	12
Total Credit Units Required	36

Sophomore Design Material and Culture Studios (choose two):

- Introduction to Fashion Design
- Fashion Illustration
- Textile Design
- Typography I
- Word & Image I

Junior Design Practice Studios (choose three):

- Fashion History and Research
- 300-Level Fashion Design Major Elective
- Patternmaking and Production
- Typography II
- Word & Image II

Second Major in Design: Communication Concentration

Required	Units
Art/Design Foundation	
Select two from Drawing, 2D Design, 3D Design or Design Across Disciplines	6

Major Area Requirements	
Digital Studio	3
Sophomore Design Material and Culture Studios	6
Junior Design Practice Studios	9
Total	18

Architecture, Art or Design electives or menu of other options	12
Total Credit Units Required	36

Sophomore Design Material and Culture Studios:

- Typography I
- Word & Image I

Junior Design Practice Studios (choose two):

- Interaction Foundations
- Typography II
- Word & Image II

Plus one 300-Level Communication Design Major Elective

Second Major in Design: Fashion Concentration

Required	Units
Art/Design Foundation	
Select two from Drawing, 2D Design, 3D Design or Design Across Disciplines	6

Major Area Requirements	
Digital Studio	3
Sophomore Design Material and Culture Studios	6
Junior Design Practice Studios	9
Total	18

Architecture, Art or Design electives or menu of other options	12
Total Credit Units Required	36

Sophomore Design Material and Culture Studios:

- Introduction to Fashion Design
- Fashion Illustration or Textile Design

Junior Design Practice Studios:

- Fashion History and Research
- Patternmaking and Production
- 300-Level Fashion Design Major Elective

Second Majors and Minors Outside the College of Art

Students may earn a second major or minor in the College of Arts & Sciences, the Olin Business School, or the McKelvey School of Engineering, or they may earn a minor in the College of Architecture while completing the requirements for the BFA or BA degree. Students who choose this path will graduate with their chosen art or design degree and major (BFA or BA) alongside the additional major or minor.

Students must successfully complete all of the degree requirements for the College of Art and all of the requirements for the second major or minor.

The second major or minor option can be completed within four years if careful planning begins during the first year. If a student is interested in these options, they should consult with the associate dean of students in the College of Art.

Art Education

Students who wish to teach art at the elementary and secondary levels may obtain Missouri state certification by taking additional units of required education courses offered by the university's Department of Education in the College of Arts & Sciences. These courses may be taken as academic electives within the BFA or BA program. For more information, visit the Department of Education's Teacher Certification page (<https://education.wustl.edu/teacher-certification/>).

Minors

A minor requires a total of 15 or 18 units from approved courses with a grade of C- or better. Visit the Sam Fox School website (<https://samfoxschool.wustl.edu/academics/college-of-art/minors/>) for specific requirements.

Minors are offered in the following areas:

- Art
- Design
- Creative Practice for Social Change
- Human-Computer Interaction

The Minor in Art (15 units) allows students to select courses from across the art curriculum. Each student may choose to select a narrow or wide-ranging set of courses based on their interests and goals. For students earning degrees in the College of Art, the minor is available to non-art majors only. Courses designated "Art FAAM" fulfill this requirement.

The Minor in Design (15 units) allows students to select courses from across communication design and fashion design on the basis of their interests and goals. For students earning degrees in the College of Art, the minor is available to non-design majors only. Courses designated "Art FADM" fulfill this requirement.

The Minor in Creative Practice for Social Change (<https://samfoxschool.wustl.edu/collaborations/socially-engaged-practice/minor-in-creative-practice-for-social-change/>) (15 units) allows students to apply creative practices from art, design and architecture to address systemic economic, environmental, and social challenges. The course Design in Social Systems (3 units) is required; students must take four additional 3-unit courses from a preselected menu of course work (12 units). At least 12 of the 15 units must be applied exclusively to the minor and cannot be double-counted toward another major or minor. No more than 3 units may be taken outside of the Sam Fox School. Courses designated "Art CPSC" fulfill this requirement.

The Minor in Human-Computer Interaction (<http://www.hci-washu.site/>) (18 units) is a collaboration between the College of Art and the McKelvey School of Engineering (<https://engineering.wustl.edu/>), with a mix of required and optional courses in each school. Students are able to gain a multidisciplinary understanding of the principles and applications of human-computer interaction, and they are introduced to the techniques and processes necessary to create effective user interfaces. Starting with the Class of 2024, students will be permitted to count only one course toward the human-computer interaction minor that is also counting for another major or minor.

Courses

- **F10 Art (p. 109):** Art foundation and major studio courses
- **F20 Art (p. 137):** Art elective courses

College of Art majors have enrollment priority in F10 and F20 courses. Elective (F20) courses may be offered at the 100 to 400 levels; students must enroll as applicable: 100-level courses are for first-year students, 200-level courses are for sophomores, 300-level courses are for juniors, and 400-level courses are for seniors.

F10 Art

Visit online course listings to view semester offerings for F10 ART (<https://courses.wustl.edu/CourseInfo.aspx?sch=F&dept=F10&crslvl=1:4>).

F10 ART 101A Drawing

An introductory course that teaches the student to recognize and manipulate fundamental elements of composition, line, form, space, modeling and color. Students will explore drawing as a diverse and multi-faceted activity. Working from both observation and imagination, emphasis will be placed on making work through a range of drawing methodologies. Students work in a variety of media. Demonstrations and illustrated lectures supplement studio sessions and outside projects.

Credit 3 units. Art: FAAM, FADM EN: H

F10 ART 102A Drawing

This is an introductory course that teaches the student to recognize and manipulate fundamental elements of composition, line, form, space, modeling and color. Students will explore drawing as a diverse and multifaceted activity. Working from both observation and imagination, emphasis will be placed on making work through a range of drawing methodologies. Students work in a variety of media. Demonstrations and illustrated lectures supplement studio sessions and outside projects.

Credit 3 units. Art: FAAM, FADM EN: H

F10 ART 105 2D Design

An introduction to basic design principles and their application on a two-dimensional surface. Investigation of the functions and properties of the formal elements and their organization through the use of relational schemes. Includes an introduction to color and basic color theory. Problems stress systematic approach to visual communication.

Credit 3 units. Art: FAAM, FADM EN: H

F10 ART 106 2D Design

An introduction to basic design principles and their application on a two-dimensional surface. Investigation of the functions and properties of the formal elements and their organization through the use of relational schemes. Includes an introduction to color and basic color theory. Problems stress systematic approach to visual communication.

Credit 3 units. Art: FAAM, FADM EN: H

F10 ART 107 3D Design

An introduction to basic design principles and their application to three-dimensional form and real space and time. The design vocabulary is broadened through exercises that deal with mass, volume, weight, gravity and movement. Students learn to use hand and power tools.

Credit 3 units. Art: FAAM, FADM EN: H

F10 ART 108 3D Design

An introduction to basic design principles and their application to three-dimensional form and real space and time. The design vocabulary is broadened through exercises that deal with mass, volume, weight, gravity and movement. Students learn to use hand and power tools.

Credit 3 units. Art: FAAM, FADM EN: H

F10 ART 136A Design Across Disciplines

The field of design is shifting from disciplines based on the items they produce (e.g., graphics, apparel, built environments) toward the design of strategies that may incorporate many designed elements. This requires a more cross-disciplinary approach, across both academic disciplines at large as well as disciplines of design. This course introduces students to core skills of strategic design through individual and group projects, readings, discussion and journaling. Students explore systems thinking, strategic framing, iteration and collaboration. We will discuss how designed things affect and are affected by the social systems around them.

Credit 3 units. Art: FADM EN: H

F10 ART 143 Digital Studio

This course provides a robust introduction to creating in a digital landscape. Students learn how to solve visual problems using a range of digital tools. Projects explore ideas of visual narrative, two dimensional relationships, and motion using relevant digital imaging and graphics software. The course contextualizes these tools and associated techniques within a historical frame and considers the broader social impact. Students pursuing the BFA, BA in Art or Design, or second major in Art or Design must complete Digital Studio (F10 143 in the fall or F10 144 in the spring).

Credit 3 units. Art: FAAM, FADM EN: H

F10 ART 144 Digital Studio

This course provides a robust introduction to creating in a digital landscape. Students learn how to solve visual problems using a range of digital tools. Projects explore ideas of visual narrative, two-dimensional relationships, and motion using relevant digital imaging and graphics software. The course contextualizes these tools and associated techniques within a historical frame and considers their broader social impact. Students pursuing the BFA, BA in Art or Design, or second major in Art or Design must complete Digital Studio--F10 143 in the fall or F10 144 in the spring.

Credit 3 units. Art: FAAM, FADM EN: H

F10 ART 183A Practices in Architecture + Art + Design

This course offers first-year students in the College of Art an introduction to the subjects, theories, and methodologies of the disciplines of art and design. Examples drawn from a range of historical periods as well as contemporary practice highlight distinct processes of thinking and working in each discipline, as well as areas of intersection and overlap.

Credit 1 unit.

F10 ART 183B Practices in Art + Design

This course offers students an introduction to the programs, people, and resources of the College of Art and the Sam Fox School. Weekly presentations by faculty and staff, current and past students, and practitioners in the field will introduce students to some of the many possible paths of study in art and design and deepen students' knowledge of the Sam Fox School's major creative and intellectual pursuits and their areas of influence and intersection. The course also includes practical resources to help students flourish in their studies.

Credit 1 unit. EN: H

F10 ART 213A Sculpture Studio: Material and Culture

This is the first course in the sequence for those pursuing a BFA in Art with a concentration in sculpture and is open to those pursuing a BA in Art, second major in art, and others as space permits. It introduces students to the materials, processes, and concepts specific to sculpture. Students develop an understanding of, and dexterity with, multiple materials and modes of production ranging from additive, assembled, molded, modeled, to subtractive or carved. This course promotes independent working and problem solving in regard to content and intention. Students engage in discourse about their work through critical analysis and explorations of historical and cultural precedent. This course involves lectures, material and process demonstrations, and assigned readings along with creative and technical explorations. Students pursuing the sculpture concentration must complete either F10 213A (fall) or 214A (spring).

Credit 3 units. Art: FAAM EN: H

F10 ART 214A Sculpture Studio: Material and Culture

This is the first course in the sequence for those pursuing a BFA in Art with a concentration in sculpture and is open to those pursuing a BA in Art, second major in art, and others as space permits. It introduces students to the materials, processes, and concepts specific to sculpture. Students develop an understanding of, and dexterity with, multiple materials and modes of production ranging from additive, assembled, molded, modeled, to subtractive or carved. This course promotes independent working and problem solving in regard to content and intention. Students engage in discourse about their work

through critical analysis and explorations of historical and cultural precedent. This course involves lectures, material and process demonstrations, and assigned readings along with creative and technical explorations. Students pursuing the sculpture concentration must complete either F10 213A (fall) or 214A (spring).

Credit 3 units. Art: FAAM EN: H

F10 ART 215A Printmaking Studio: Material and Culture

This is the first course in the sequence for those pursuing a BFA in Art Printmaking Concentration. It is open to students pursuing a BA in Art or a Second Major in Art and to others as space permits. The course introduces printmaking as a dialogue between material and cultural histories, personal experience, tradition, and contemporary practice. Relief, intaglio, digital, and planographic processes are introduced alongside theoretical frameworks that help guide students through directed and self-determined projects. The resulting work will generate critical evaluations of form, content, and intention. In addition to studio production, this course includes lectures, readings, and discussions. Prerequisite: Drawing or 2D Design.

Credit 3 units. Art: FAAM EN: H

F10 ART 216A Printmaking Studio: Material and Culture

This is the first course in the sequence for those pursuing a BFA in Art with a concentration in printmaking and is open to those pursuing a BA in Art, second major in art, and others as space permits. It introduces printmaking as a dialogue between material and cultural histories, personal experience, tradition, and contemporary practice. Relief, intaglio, digital, and planographic processes are introduced alongside theoretical frameworks that help guide students through directed and self-determined projects. The resulting work will generate critical evaluations of form, content and intention. In addition to studio production, this course includes lectures, readings and discussions. Students pursuing the printmaking concentration must complete either F10 215A (fall) or 216A (spring).

Credit 3 units. Art: FAAM EN: H

F10 ART 217B Photography Studio: Material and Culture

This is the first course in the sequence for those pursuing a BFA in Art with a concentration in photography and is open to those pursuing a BA in Art, second major in art, and others as space permits. It introduces photography as a dialogue between material and cultural histories, personal experience, tradition, and contemporary practice. Students gain full manual control of the digital camera apparatus, learn how to import and edit raw images, and print according to fine art professional standards. The resulting work will foster critical evaluations of form, content and intention. In addition to studio production, this course includes lectures, readings and discussions. Student must provide a fully manual digital camera capable of capturing RAW images. Students pursuing the photography concentration must complete either F10 217B (fall) or 218B (spring).

Credit 3 units. Art: FAAM EN: H

F10 ART 218B Photography Studio: Material and Culture

This is the first course in the sequence for those pursuing a BFA in Art with a concentration in photography and is open to those pursuing a BA in Art, second major in art, and others as space permits. It introduces photography as a dialogue between material and cultural histories, personal experience, tradition, and contemporary practice. Students gain full manual control of the digital camera apparatus, learn how to import and

edit raw images, and print according to fine art professional standards. The resulting work will foster critical evaluations of form, content and intention. In addition to studio production, this course includes lectures, readings and discussions. Student must provide a fully manual digital camera capable of capturing RAW images. Students pursuing the photography concentration must complete either F10 217B (fall) or 218B (spring). Credit 3 units. Art: FAAM EN: H

F10 ART 221A Painting Studio: Material and Culture

This is the first course in the sequence for those pursuing a BFA in Art Painting Concentration. It is open to students pursuing a BA in Art or a Second Major in Art and to others as space permits. The course introduces painting as a dialogue between material and cultural histories, personal experience, tradition, and contemporary practice. Students employ a variety of oil- and water-based media in this concept-driven approach to new and established methodologies. The resulting work will generate critical evaluations of form, content, and intention. In addition to studio production, this course includes lectures, readings, and discussions. Prerequisite: Drawing or 2D Design. Credit 3 units. Art: FAAM EN: H

F10 ART 222A Painting Studio: Material and Culture

This is the first course in the sequence for those pursuing a BFA in Art with a concentration in painting and is open to those pursuing a BA in Art, second major in art, and others as space permits. It introduces painting as a dialogue between material and cultural histories, personal experience, tradition, and contemporary practice. Students employ a variety of oil and water-based media in this concept-driven approach to new and established methodologies. The resulting work will generate critical evaluations of form, content and intention. In addition to studio production, this course includes lectures, readings and discussions. Students pursuing the painting concentration must complete either F10 221A (fall) or 222A (spring). Credit 3 units. Art: FAAM EN: H

F10 ART 229A Time-Based Media Arts Studio: Material and Culture

Introduction to Time & Media Arts is a Time-Based + Media Art area Material & Culture course designed to prepare students to take Art Practice courses in the area. Introduction to Time + Media Arts supports the production of time-based and media artworks and provides an overview of the last 50 years of the history of contemporary art practices that are time-based and use a variety of analog and digital tools, including video art, sound art, performance art and media art. Students in this course create several projects in video, sound, performance and other media of their choice. Technical and conceptual instruction accompanies this production-intensive studio course. Visiting artists, lectures by the instructor, class critiques, interdisciplinary collaborations, and select short readings accompany the course. Prerequisite: F10 143 or F10 144. Credit 3 units. Art: FAAM

F10 ART 231 Introduction to Fashion Design: Materials, Volume & the Body

A structured discourse on fashion designers of the 20th and 21st centuries for study of the body as site and inspiration for apparel design. Class discussions and projects will engage concept, materials and process. Through exploration of shapes, forms and their role in the development of three-dimensional ideas, the student learns the fundamentals of fashion design. Required for

students pursuing the BFA major in fashion design, BA major in design: fashion concentration, and second-major in design: fashion concentration. This course is open to non-majors and minors as space permits.

Credit 3 units. Art: FADM EN: H

F10 ART 234 Fashion Illustration: Visualizing Apparel

A foundation experience in basic strategies for communication garment design ideas and information. Recognition and practice of conventions for presenting the figure in design will be the focus of the course. Additionally, simple garment silhouettes and textile types will be explored for illustration practice. Digital media as it is used in style presentation and technical communication of design will be introduced and implemented through a variety of exercises. Final presentation will be a design presentation that is supported by spectrum of material covered in course. Laptop computer with Adobe Illustrator and Photoshop required. Required in the sophomore year for students pursuing the BFA major in fashion design. The course is a major option for students pursuing the BA major in design, the BA major in design: fashion concentration, the second-major in design, and the second-major in design: fashion concentration. Credit 3 units. Art: FADM EN: H

F10 ART 236 Textile Design

A survey of all types of materials used as 21st-century textiles, Textile Design introduces the student to the ways that textiles function as a basic building material. Students will study, test, and manipulate textiles to gain understanding of appropriate and viable choices for end use. Class activities include field trips, application of a variety of textile techniques for surface design, manipulation and finishing of various fabrics. Students may draw upon design problems from their specific area of study to realize a final project. Required in the sophomore year for students pursuing the BFA major in fashion design. The course is a major option for students pursuing the BA major in design, the BA major in design: fashion concentration, the second-major in design, and the second-major in design: fashion concentration. Credit 3 units. Art: FADM EN: H

F10 ART 237C Typography I

This course introduces the language and standards of typography. Through a series of exercises and projects, students explore type as a vehicle for conveying information and as an expressive and interpretive tool. Students pursuing the BFA Major in Communication Design should plan to take this course in the spring in combination with Word & Image I. The fall offering is for students pursuing the BA Major in Design: Communication Concentration or the Second Major in Design: Communication Concentration. This course is an option for the Second Major in Design: No Concentration. Prerequisite: Digital Studio.

Credit 3 units. Art: FADM

F10 ART 238B Word and Image I

This course centers on the creation of word-image relationships. It focuses on intensive visual methodology and clear communication. Students make illustrations, explore typography, and bring visual elements together into a unified whole. Projects take the form of posters, image sets, books, icons, maps, labels, infographics, etc. As the course progresses, students work to narrow their focus within the field of visual communications by selecting particular projects from a suite of offerings. Required in the sophomore year for students pursuing the BFA major

in communication design. This course is required for students pursuing the BA major in design: communication concentration or the second-major in design: communication concentration. This course is a major option for the second-major in design. Credit 3 units. Art: FADM EN: H

F10 ART 238C Typography I

This course introduces the language and standards of typography. Through a series of exercises and projects, students explore type as a vehicle for conveying information and as an expressive and interpretive tool. Required in the sophomore year for students pursuing the BFA major in communication design. This course is required for students pursuing the BA major in design: communication concentration or the second-major in design: communication concentration. This course is a major option for the second-major in design. Credit 3 units. Art: FADM EN: H

F10 ART 241 Digital Studio

This course introduces students to basic digital tools to aid in conceptual and technical development of artwork. Students become familiar with pixel, vector, and moving-image software within a context of visual thinking and artmaking. Students pursuing the BFA, BA in Art or Design, or second-major in art or design must complete either Digital Studio (F10 143, 241 or 242) or Digital Design (F10 243). Credit 3 units. Art: FAAM, FADM EN: H

F10 ART 242 Digital Studio

This course introduces students to basic digital tools to aid in conceptual and technical development of artwork. Students become familiar with pixel, vector, and moving-image software within a context of visual thinking and art-making. Students pursuing the BFA, BA in Art or Design, or 2nd-major in Art or Design must complete either Digital Studio (F10 143, 241 or 242) or Digital Design (F10 243). Credit 3 units. Art: FAAM, FADM EN: H

F10 ART 243 Digital Design

Students are introduced to digital tools in the context of applied design thinking for graphic design, surface design, and image-making. Students pursue projects using Adobe Photoshop, Adobe Illustrator, and Adobe InDesign. This course engages software learning in the service of design thinking. Students pursuing the BFA, BA in Art or Design, or 2nd-major in Art or Design must complete either Digital Studio (F10 143, 241 or 242) or Digital Design (F10 243). Credit 3 units. Art: FAAM, FADM EN: H

F10 ART 283 Typography and Letterform: The Design of Language

This course presents an investigation of the formal qualities of familiar objects: in this case, letters. This is an introductory course in design methodologies using letterforms as our area of exploration. Students explore the design strategies required to make individual forms into a family of types through exercises in tracing, drawing, letterpress printing, and collage. Particular emphasis will be devoted to the concept of modularity, including an assignment to design and print a modular typeface. This course may be counted as a sophomore BFA in Communication Design major elective, and it is open to non-majors and minors as space permits. Credit 3 units. Art: FADM EN: H

F10 ART 292A Visualizing Literature: Texture/Structure

This course challenges students to function as reader-designers to develop new relationships between the written word and the seen word. Drawing on literary works, students learn visual methods to amplify the power of words, express personal perspectives, and visualize narrative structures in fiction and nonfiction. Three distinct projects present tools to generate visual and typographic material, including digital composition software and letterpress. Students may work on laptop computers or tablets, as needed. This course is ideal for students pursuing work in any field to learn about the visual display of language. No prerequisites or previous experience required. Credit 3 units.

F10 ART 295 Pictures for Communication

Students investigate the realm of functional pictures through pictograms, comic strips, visual metaphors and narratives. Each project focuses on a particular aspect of conceptual and formal clarity. Significant attention is paid to aesthetics. Students use a variety of media, including the Adobe suite. This course may be counted as a sophomore BFA in Communication Design major elective, and it is open to non-majors and minors as space permits. Credit 3 units. Art: FADM EN: H

F10 ART 297A Image and Meaning

This course explores the use of digital imagery in contemporary design practice through a range of analog and digital experimentation. Using a variety of methods from basic printmaking to emerging technologies, students will complete a series of image-making investigations. The study of both hand and computer-based approaches provides an opportunity to work beyond the constraints of the screen and build an understanding of how imagery can be used to enhance visuals, communicate ideas and convey meaning. No prerequisites. This course may be counted as a sophomore BFA in Communication Design major elective. This course is open to non-majors and minors as space permits. Credit 3 units. Art: FADM

F10 ART 297B Image Making for Graphic Design

This course explores the use of photographic imagery in contemporary design practice through a range of analog and digital experimentation. Using a variety of methods, students will complete a series of image making investigations. The study of both hand and computer based approaches provides an opportunity to work beyond the constraints of the screen and build an understanding of how imagery can be used to enhance visuals, communicate ideas and convey meaning. This course also explores the use of digital imaging applications. Topics such as image correction and manipulation, resolution and color and production practices will be covered. Students will become familiar with the tools and creative capabilities of the software. This class will utilize lecture, demonstration, discussion, and hands-on learning assignments. No prerequisites. This course may be counted as a sophomore BFA in Communication Design major elective. This course is open to non-majors and minors as space permits. Credit 3 units. Art: FADM

F10 ART 301A Drawing: Art Practice (Conceptual Methods in Drawing)

Drawing is a communicative device; it is a primary means of conceptual strategy leading to effective visual exploration and expression, from thought to form. This studio course looks at the practice of drawing in the context of language, scientific paradigms, complementary and alternative art forms, socio-political theory and history as they relate to visual culture and invention. Lectures, critical readings, and analysis of historical and contemporary modes of drawing support students in their course work. Projects in this course may consider mapping, language systems, formulaic constructions, material essentialism, physiologic/kinesthetic approaches, and performative aspects of drawing.

Credit 3 units. Art: FAAM EN: H

F10 ART 302B Drawing: Art Practice (Conceptual Methods in Drawing)

Drawing is a communicative device; it is a primary means of conceptual strategy leading to effective visual exploration and expression, from thought to form. This studio course looks at the practice of drawing in the context of language, scientific paradigms, complementary and alternative art forms, socio-political theory and history as they relate to visual culture and invention. Lectures, critical readings, and analysis of historical and contemporary modes of drawing support students in their course work. Projects in this course may consider mapping, language systems, formulaic constructions, material essentialism, physiologic/kinesthetic approaches, and performative aspects of drawing.

Credit 3 units. Art: CDES, FAAM

F10 ART 302D Drawing: Art Practice (Collage: History and Practice in Contemporary Art)

This course will examine the role of collage in contemporary studio practice. Students will be required to assemble an archive of images from various sources, found and self-generated, to produce a body of work based on a specific theme. Readings and discussion related to the course will examine the evolution of collage and its present status and application within contemporary studio practice.

Credit 3 units. Art: CDES, FAAM EN: H

F10 ART 311D Painting: Art Practice (Narrative Systems: The Frame, The Grid, The Screen)

This studio course focuses on various narrative strategies in relation to painting's mythology and its function in contemporary culture. Topics to include narrativity, the politics of lens and screen, invented fictions, social vs. virtual spaces, and site specificity. Instruction will encompass technical, conceptual and creative skills for taking an individually conceived project from idea to fruition. Students will be encouraged to consider traditional and alternative forms of painting as well as digital imaging, installation, net art, etc. Lectures, critical essays, and analysis of historical precedents and contemporary practitioners will support students in their course work.

Credit 3 units. Art: FAAM EN: H

F10 ART 311F Painting: Art Practice (Language of Abstraction)

This course examines strategies of abstraction and nonobjective image-making that originate in the painting studio, including those that are driven by concept, material, space, and/or process. Readings and discussions will examine the evolution and history of abstraction and its present applications within a contemporary studio practice. The course will engage students in both assigned and self-directed work that will enable them to experiment with a broad visual vocabulary while understanding the relationship between form and content.

Credit 3 units. Art: CDES, FAAM

F10 ART 311G Painting: Art Practice (Place and Space)

This course examines ideas of place and space — both observed and invented — established through the surface and materiality of paintings. Students develop a unique body of work through shared exploration of painting processes and materials, along with independent research. Critical assessment of work is complemented by faculty and peer discussions, readings, written critical analysis and field study.

Credit 3 units. Art: CDES, FAAM

F10 ART 311J Painting: Art Practice (Figure Structure)

This rigorous painting/drawing course explores new representations of the figure through its structure and contemporary contexts. Initial research involves anatomy lectures and extensive sketchbook activities that provide a vehicle for discovering the figure's architecture, mechanics and proportions. Students develop an independent body of work accessing visual data from a variety of sources (paintings, photography, sculpture, memory, model sessions), with the goal of developing expressive qualities with image-making. Lectures, presentations, critical readings, and the analysis of historical and contemporary figurative works support students in their investigations. Required for the BFA in Art painting concentration. Prerequisite: Painting Studio: Material and Culture. Open to BFA and BA students who have taken the prerequisite and others, including art minors and MFA students, with permission of the instructor.

Credit 3 units.

F10 ART 311K Painting: Art Practice (Expanded Painting)

This advanced studio course examines the expanded practice of painting in the contemporary studio. Students are required to produce a self-generated body of work, exploring painting via the incorporation of such things as new technologies, other visual disciplines, site-specificity, etc. Readings and discussion related to the course will examine the history and evolution of the painting practice and its present status and application within contemporary art production. Prerequisite: Painting Studio: Material and Culture. Open to BFA students who have taken the prerequisite, and others, including minors and MFA students, with consent of instructor.

Credit 3 units.

F10 ART 312E Painting: Art Practice (Place and Space)

This course examines ideas of place and space — both observed and invented — established through the surface and materiality of paintings. Students develop a unique body of work through shared exploration of painting processes and materials, along with independent research. Critical assessment of work is complemented by faculty and peer discussions, readings, written critical analysis and field study.

Credit 3 units. Art: FAAM EN: H

F10 ART 312F Painting: Art Practice (Language of Abstraction)

This course examines strategies of abstraction and non-objective image-making that originate in the painting studio, including those that are driven by concept, material, space and/or process. Readings and discussion will examine the evolution and history of abstraction and its present applications within a contemporary studio practice. The course will engage students in both assigned and self-directed work that will enable them to experiment with a broad visual vocabulary while understanding the relationship between form and content.

Credit 3 units. Art: FAAM

F10 ART 312G Painting: Art Practice (Body Image)

This is a rigorous painting/drawing studio course investigating various methods of pictorial construction (historical, contemporary) and the role of figuration in contemporary art practice. Students will be required to produce an independent body of work based on a theme and generated from a variety of references (imagination, life, photography, painting, film, etc.). Discussions to include contemporary notions of identity structures, social and gender politics. Lectures, critical readings and the analysis of historical and contemporary modes of figural representation will support students in their investigations.

Credit 3 units. Art: CDES, FAAM

F10 ART 312H Painting: Art Practice (Place and Space)

This course examines ideas of place and space -- both observed and invented -- established through the surface and materiality of paintings. Students develop a unique body of work through shared exploration of painting processes and materials, along with independent research. Critical assessment of work is complemented by faculty and peer discussions, readings, written critical analysis and field study.

Credit 3 units. Art: CDES, FAAM

F10 ART 313 Art Practice: Sculpture (Iterative Systems)

This course investigates iterative approaches to making as a means to generate multiple works and ideas simultaneously. Activities such as mold-making and nontraditional drawing will be explored along with other process-based methods of capturing thoughtful gestures. Through readings and discussions, students will engage with historical precedents and contemporary principles that support the creation of self-directed work informed by the iterative mindset. Required for the BFA in Art sculpture concentration. Prerequisite: Sculpture Studio: Material and Culture. Open to BFA students who have taken the prerequisite and others, including art minors and MFA students, with permission of the instructor.

Credit 3 units.

F10 ART 3137 Art Practice

Credit 3 units.

F10 ART 313M Sculpture: Art Practice (Sculptural Bodies)

This course investigates the sociopolitical issues of the body, the figure, and their potential in contemporary art practice. The term "body" is used as an organism, in an expansive way, to investigate the metaphorical, physical, emotional, cultural, and spiritual bodies. A variety of media and methods are explored,

with an emphasis on three-dimensional work and object-based performance. Lectures, demonstrations, and readings contextualize the potential of sculptural systems to constitute the meaning of a contemporary body.

Credit 3 units. Art: CDES, FAAM

F10 ART 313P Sculpture: Art Practice (Iterative Systems)

This course investigates iterative approaches to making as a means to generate multiple works and ideas simultaneously. Activities such as mold-making and nontraditional drawing will be explored along with other process-based methods of capturing thoughtful gestures. Through readings and discussions, students will engage with historical precedents and contemporary principles that support the creation of self-directed work informed by the iterative mindset. Required for the BFA in Art sculpture concentration. Prerequisite: Sculpture Studio: Material and Culture. Open to BFA and BA students who have taken the prerequisite and others, including art minors and MFA students, with the permission of the instructor.

Credit 3 units.

F10 ART 314J Sculpture: Art Practice (Material as Metaphor)

All materials carry meaning. This course familiarizes students with the histories and fabrication processes intrinsic to sculpture. The course uses demonstrations and hands-on experiences -- primarily but not exclusively with metal and woodworking processes -- to show how such materials inform a studio practice. Lectures and techniques contextualize an understanding of preformed and found materials as formal and conceptual components that result in a final work of art. In a critical environment, students formulate their own material language and defend their art practice and creative decisions.

Credit 3 units. Art: CDES, FAAM EN: H

F10 ART 314K Sculpture: Art Practice (Symbiosis)

This course explores numerous scenarios that create different levels of sculptural interactivity from low to high tech. Students construct devices ranging from simple mechanisms to large-scale installations fostering physical, analogue or digital interaction between the viewer and the sculptural environment. Viewer-activated systems create multiple interactive platforms, initiating a responsive relationship between the sculpture and the viewer. Lectures, demonstrations and readings devise a broad understanding of the histories and potentials of symbiotic relationships between a work of art and its audience.

Credit 3 units. Art: CDES, FAAM EN: H

F10 ART 314N Sculpture: Art Practice (Itinerant Artworks)

Who said you can't take it with you? Itinerant Artworks is a course in which students create work in any medium that is built for travel (not speed) and that can be set up, knocked down, or installed in a variety of locations at a moment's notice. Students will document their work at a range of sites throughout St. Louis. For the final project, the class will stage an "off the grid" outdoor exhibition in Forest Park. Typically, artworks are either site-specific or are agnostic to their placement and location. Itinerant Artworks proposes a third model, where an artwork can be mobile, responsive, and highly adaptable to various environments or sites. Itinerant Artworks is intended to be a response to the current condition for making and viewing art. Despite the unpredictable and ever-changing circumstances of this moment, you can take it with you.

Credit 3 units.

F10 ART 315B Printmaking: Art Practice (Propaganda to Decoration)

This course uses the print multiple as a starting point to explore a continuum that runs from propaganda to decoration. The fundamental attributes of the multiple, including its accessibility and repeatability, arc from private to public and from political to aesthetic. Reproduction, distribution, urban communication, social space, intervention and site specificity are explored through course lectures, readings, and discussions. Collaboration, exchange, and relational practices provide frameworks for self-directed projects using traditional and alternative techniques in print media, including lithography, screen printing, stencils, and photocopy. This course is required for the BFA in Art Printmaking Concentration. Prerequisite: Printmaking Studio: Material and Culture. This course is open to BFA and BA students who have taken the prerequisite and to other students, including minors and MFA students, with the consent of the instructor.

Credit 3 units. Art: FAAM EN: H

F10 ART 315H Printmaking: Art Practice (Feedback Loop: Process and Print)

This course focuses on variability, mutability, repeatability and play within the process of printmaking, using etching, collagraph, monotype and digital methods. The course explores practices and contexts in printmaking as a contemporary art form and promotes advanced conceptual and technical development through creative practice, readings, discussions and critiques. Projects are self-directed and based on course topics that engage different approaches to process-based work, ranging from the improvisational to the systematic. Emphasis is placed on the shift from object to process, from the single manifestation to the series, from fixed to flux and back again.

Credit 3 units. Art: CDES, FAAM

F10 ART 316F Printmaking: Art Practice (The Printed Image)

This course explores the printed image as storyteller, educator, political tool, and narrative. Historical precedents and contemporary examples of political prints, graphic novels, posters, and narrative suites are examined as possible models for self-directed projects. Readings and discussions include strategies for drawing and appropriating imagery. Students will have the opportunity to produce a thematically unified body of work while gaining technical expertise in woodcut, etching and lithography.

Credit 3 units. Art: CDES, FAAM EN: H

F10 ART 316G Printmaking: Art Practice (Extra-Dimensional Printmaking)

Pushing the boundaries of printmaking, prints move beyond the wall and into sculpture, installation, and time-based work. Relief, silkscreen, and intaglio processes are explored, with an emphasis on print as theatre, object, and immersive environment. Through readings and discussions, students will engage with historical precedents and contemporary principles that support the creation of self-directed work that is extra-dimensional in physical and conceptual scope.

Credit 3 units. Art: CDES, FAAM

F10 ART 316H Printmaking: Art Practice (Feedback Loop: Process and Print)

This course focuses on variability, mutability, repeatability and play within the process of printmaking, using etching, collagraph, monotype and digital methods. The course explores practices and contexts in printmaking as a contemporary art form and promotes advanced conceptual and technical development through creative practice, readings, discussions and critiques. Projects are self-directed and based on course topics that engage different approaches to process-based work, ranging from the improvisational to the systematic. Emphasis is placed on the shift from object to process, from the single manifestation to the series, from fixed to flux and back again. Required for a concentration in printmaking. Prereq: Required for a concentration in printmaking. Prereq: Printmaking Studio: Material Culture (F10 215A or 216A). Open to BFA students who have taken the prerequisite and others, including minors, with consent of instructor.

Credit 3 units. Art: CDES, FAAM

F10 ART 317H Photography: Art Practice (Methods of Distribution)

One of the most effective aspects of the photographic image today is its speed. The way that physical and virtual images are presented and distributed has changed significantly since the initial branding of photography as the medium of reproducibility. This class focuses on photography-based uses of the image through various distribution formats like the book, the poster, the newspaper, television, web, design, film, apparel, architecture, music, etc. The students make, read, look, listen, and experience 20th- and 21st-century photography practitioners who engage a range of disciplines and methods of distribution as they try to synthesize methods/models of their own. Rigorous student project critiques are complemented with discussions, writing assignments, and readings on media theory and contemporary uses of photography outside of the traditional exhibition-based contexts.

Credit 3 units. Art: CDES, FAAM EN: H

F10 ART 317L Photography: Art Practice (Constellations, Sequences, Series)

Series are the prevalent method for exhibiting photographic images. Through assignment-based and self-generated projects, students discover how photographic series are conceptualized, structured and sequenced. Special attention is given to the material meaning embedded in print size, order and spatial placement. The course provides in-depth coverage of image capture through medium-format analog and full-frame digital systems as well as intermediate digital editing and printing techniques. Students also explore various documentary and set-up strategies through narrative and non-narrative photographic approaches. Through a rigorous critique structure, course readings and critical writing, students engage the historical discourse surrounding the series as a tool for artistic expression.

Credit 3 units. Art: CDES, FAAM

F10 ART 317O Photography: Art Practice (Studio Location and Lighting)

Same as F10 417O. Juniors (only) register for F10 317O. This studio course introduces techniques and strategies for using artificial light sources to interpret subject matter, build narratives, and develop creative environments. Studio sessions will cover the use of continuous lighting systems, strobes, and hot shoe flashes. Course lectures will address principles

of light, expanded applications of studio lighting, and editing strategies. Class projects will challenge students to apply lighting techniques in studio and on-location settings. Field trips will provide opportunities to work in a variety of built and natural environments and in conjunction with partner organizations. Credit 3 units. Art: CDES

F10 ART 317R Art Practice: Photography (Black-and-White Master Printing)

This course offers an introduction to black and white master printing techniques for analog and digital outputs. The first part of the course will focus on advanced darkroom techniques, as well as the use of developers, papers, and toners. The second part of the course will cover advanced digital b/w strategies, including quadtone RIPs, specialty papers, and Photoshop workflows. In addition to technical demonstrations, course lectures will look at the role master printers have played in the history of photography. Visits to the Mildred Lane Kemper Art Museum and The St. Louis Art Museum print rooms will complement lectures and activities. All students will develop a portfolio of personally-driven work in black and white. Required for the BFA in Art Photography Concentration. Prereq: Photography Studio: Material and Culture. Open to BFA and BA students who have taken the prerequisite, and others, including minors and MFA students, with consent of instructor. Credit 3 units.

F10 ART 317T Photo: Art Practice (Picturing Place)

Working with photography and taking inspiration from geography, environmental studies, urban design, and cultural anthropology, this studio course explores how relationships to place are constructed. It considers how a "sense of place" has been understood over time and across cultures and how photography can help shape new narratives of belonging. The course builds knowledge through readings, discussion, guided assignments, and personal projects. Prerequisites: Digital Photography, Photography Studio: Material & Culture, or permission of instructor. Credit 3 units.

F10 ART 318J Photography: Art Practice (Slow Image: Large Format Photography)

This course provides an in-depth study of the large format analog camera and its unique formal position. Using the 4"x5" format, students examine this slow, high fidelity photographic medium both technically and conceptually. Students employ a comprehensive photographic process, including loading sheet film, applying the zone system, scanning large format film, editing digital images, and creating large format digital inkjet prints. Class activities include rigorous student project critiques, as well as reading and discussion elements focusing on the history of large format and its contemporary descendants in the Dusseldorf School, abstract photography and installation art contexts. Class participants investigate the role of high fidelity images. Assignments may address portraiture, still life, interior and exterior architecture, landscape, and abstract photography. Large format 4"x5" cameras will be available for use. Credit 3 units. Art: CDES, FAAM EN: H

F10 ART 318K Photography: Art Practice (Documentary Photography & Social Practice)

This course focuses on the various philosophical, aesthetic and technical approaches to photographing the contemporary, human-altered landscape and the communities we live in. Through slide lectures, field trips, in-depth critique and supervised lab work, students are expected to increase their awareness of how their own personal responses relate to those of other photographers with the same contemporary issues of documentary photography. A project-based seminar focusing on objectivity of the photographic document. Material and camera format open.

Credit 3 units. Art: CDES, CPSC, FAAM EN: H

F10 ART 318P Photography: Art Practice (Art, Environment, Culture & Image)

The medium of photography offers multiple ways to engage with critical social, political and environmental issues. Throughout this course, a wide range of photographic tools and modes of production will be explored, including digital and film-based materials and a variety of printing techniques. The course will also consider the integration of alternative methods of lens-based communication and working to construct images within relevant contexts of meaning. Through presentations and readings, students will be introduced to a range of contemporary artists working with essential topics such as climate change, ecological sustainability, energy production and extraction, and the human body and technology. Students will work to build a final and self-directed project identified through their ongoing research and image production. Required for the BFA in Art photography concentration. Prerequisite: Photography Studio: Material and Culture.

Credit 3 units. Art: CDES, FAAM

F10 ART 318Q Photography: Art Practice (A Sense of Place or Understanding Place Through Photography)

This course explores the concept of "place" and the cultural implications that accompany the definitions of "place." Working with photography and taking inspiration from the fields of geography, environmental studies, urban design and cultural anthropology, this course considers how a relationship to place is constructed. We will also consider displacements throughout history and value systems embedded in the construction of a sense of place. Is one's relationship to place personal? Is it collective, is it cultural, is it rooted in the surrounding environment? What are the marks that define a sense of place, and is there residue or lingering evidence that can be perceived? The medium of photography has unique capacities to address these questions. This studio course builds knowledge through photographic practice with accompanying readings, seminar discussion and guided assignments. Students will participate in an active process of exploring diverse concepts of place in relationship to the built environment. Students will be introduced to a range of ways of making and thinking about the subject of place, including looking at place as site, as geography, as memory, as non-place, as urban space, as rural space, as community, and as ecological site. No formal photographic training is necessary. Students will be introduced to the basics of camera operation, Photoshop and Lightroom software for editing and the fundamentals of digital print output for fine art printing will be covered.

Credit 3 units. Art: CDES, FAAM

F10 ART 318R Photography: Art Practice (Documentary Photography in the 21st Century)

This praxis-based course explores the evolution of documentary practice in photography from the 1930s until the present-day. Lectures, readings, and film screenings will introduce students to the history, problems, and promises of documentary photography, as conceived by photographers, critics, and art historians. Studio and critique sessions will assist students in developing a personal documentary project and attaining new visual strategies for engaging a photographic form that originates from the entanglements of life. Course will also discuss documentary photo books, and strategies for editing a documentary series for book production. Students will have the option of producing a photobook.

Credit 3 units. Art: CDES, FAAM

F10 ART 323D Sustainable Textile and Fashion Design

Typically textile design and garment production occur in a collaborative setting and often across a global span of locales. In this course students learn essential information about sustainable textiles and fashion, engage in research, and collaborate to design and promote sustainable products or services. Required for junior fashion majors, open to sophomore-senior nonmajors.

Credit 3 units. Art: FADM

F10 ART 323F Fashion Design: Collaboration Studio

This is a university collaboration course that involves Fashion Design, Occupational Therapy, Mechanical Engineering and Business working together to develop design proposals and prototypes for specific customer profiles. Teams of students from different majors will design for various community and industry partners. They will work to solve an apparel or accessory design problem with innovative new concepts. The team will consider the person's lifestyle and occupation as well as environmental factors that influence a design's functionality. A client-centered approach is used. Students will be evaluated on how well the design proposal meets the expressed aesthetic and functional needs of the client. Prerequisite: Introduction to Fashion Design.

Credit 3 units. Art: CDES, FADM

F10 ART 323H Fibers in Art (Florence)

This course is designed to guide the students through a range of approaches to textile and fiber-based practices. The course embraces technological and antiquated techniques both within and beyond the field of art and engages artisan-inspired practices as content that fosters the questioning of socially assigned gender roles, craft and art distinctions and the exploration of functionality. Basic weaving, knitting, braiding and sewing are explored against the backdrop of fiber's history as art. Prerequisite: none.

Credit 3 units.

F10 ART 323I Patternmaking (Florence)

In this patternmaking course, students will start with basic patterns, including darts and princess line variations, and learn how to manipulate them in relation to the fundamental rules of patternmaking. Patternmaking allows the designer to manipulate already existing patterns efficiently and create new configurations with custom measurements. There will be two basic projects during the semester: the skirt, with variations such as A-shape, gathered, with yoke, and the bodice, working with darts and princess line variations, and in the last half of the

course students will learn about collars, sleeves and pants. By understanding pattern construction students will be able to gain a wider understanding of the possibilities and limits of a fashion designer.

Credit 3 units.

F10 ART 323J Special Topics in Fashion Design: Fiber Manipulation

Exploration of fiber techniques and their application in design and art. Students will study a spectrum of fiber and textile treatments such as surface design, shibori, wax resist, digital design, needle applications, heat applications and a variety of three-dimensional structuring strategies. Projects will integrate techniques into appropriate design strategy for the fine arts or design. This class is part of the BFA in Fashion, and is open to non-BFA students across the university. No prerequisites.

Counts toward design minor.

Credit 3 units. Art: CDES, FADM

F10 ART 323K Knitwear Design and Production

This course will address the topic of knitwear design and production. Students will learn knitting fundamentals by hand, manual machine, and computer-driven machine. Building on technical and design knowledge gained throughout the course, students will design and realize three-dimensional objects. These objects could be fashion apparel or art. Some production will be done by the student, and some will be done in collaboration with a local knitwear company.

Credit 3 units.

F10 ART 323N Fiber Manipulation

This course explores fiber techniques and their application in design and art. Students will study a spectrum of fiber and textile treatments such as surface design, shibori, wax resist, digital design, needle applications, heat applications, and a variety of three-dimensional structuring strategies. Projects will integrate techniques into appropriate design strategy for the fine arts or design. This course is part of the BFA in Fashion, and it is also open to non-BFA students across the university. No prerequisites. Counts toward the design minor.

Credit 3 units. Art: CDES, FADM

F10 ART 324A Patternmaking and Production

An introduction to flat pattern drafting. Principles will be applied to various components of garment creation. Construction techniques and industrial methods explored within specific structural design problems. Students will undertake realization of garment from sketch to pattern draft and finally construction of muslin (toile). This course is to be taught using the Imperial measurement system. Open to sophomore through graduate-level students across the university. Required for sophomore and junior majors in fashion.

Credit 3 units. Art: CDES, FADM EN: H

F10 ART 324E Fashion History and Research

This seminar studies the cultural and social influences to comprehend how these impact the evolution of fashion and are expressed in clothing at various junctures in history. Review of general academic research methods will be covered as well as research methods and strategies of particular significance to fashion design. Course work will focus on using research as an avenue to original and effective design concepts. Required for

students pursuing the BFA major in Fashion Design or the BA major in Design: Fashion Concentration, or the second-major in Design: Fashion Concentration. The course is a major option for students pursuing the BA major in Design.

Credit 3 units. Art: CDES, FADM EN: H

F10 ART 324J Two-Dimensional Fashion Design-Foundation

Review and practice of applicable material from Visualizing Apparel course for presenting the figure in garment design. Students will explore a variety of media for expressive fashion communication and learn to combine page elements with compelling design strategies. Research and study of landmark and innovative illustrators will be conducted as well as application of their ideas in practice. Additionally, the course will cover incorporation of technical drawings, text, and textile swatches with illustration style to convey design vision for fashion presentation. Prerequisites: Introduction to Fashion: Materials, Volume and the Body, Fashion Illustration: Visualizing Apparel, Fashion History and Research, Textile Design, Patternmaking and Production. Required for juniors in the BFA Major in Fashion Design. Required Equipment: Mac Computer, CS5 or newer, Wacom Tablet and pen.

Credit 3 units. Art: CDES, FADM EN: H

F10 ART 324K Three-Dimensional Fashion Design-Foundation

Study of fundamental apparel design issues. Students will begin with basic draping methods and explore evolution and craft, decoration, and adornment for apparel. Research for class exercises will be based upon the most elementary forms of historical and contemporary dress. Prerequisites: Introduction to Fashion: Materials, Volume and the Body, Fashion Illustration: Visualizing Apparel, Fashion History and Research, Textile Design, Patternmaking and Production. Required for juniors in the BFA Major in Fashion Design.

Credit 3 units. Art: CDES, FADM EN: H

F10 ART 324L Digital Fashion and Textile Design

This course involves the review and practice of material from Visualizing Apparel. It is an in-depth exploration of vector-based illustration for garment and textile schematics. The course will also cover the establishment of strategies for designing apparel, wovens, knits, prints and patterns using universal and industry software. Required for juniors in the BFA Major in Fashion Design. Required equipment: Mac Computer, CS5 or newer, and Wacom Tablet and pen.

Credit 3 units. Art: CDES, FADM EN: H

F10 ART 326D Special Topics: Relational, Conditional, and Process-Oriented Design

This course encourages students to explore the spatial and experiential potential of designing frameworks to navigate complex archives of online content. In addition to expanding their code-based skills, students will push the boundary of traditional online activity to create immersive and experimental experiences in the browser. Through a series of informational and spatial challenges, students will conduct research into contemporary theory and practice of designing interactive platforms and develop dynamic solutions for online frameworks, which exploit and challenge traditional user expectations. Projects, experiments and research will be supplemented by group readings, class discussions, and individual artist/designer case studies. This course is open to junior and senior

communication design majors. Juniors register for F10 Art 326D; seniors for F10 Art 426D. Counts toward design minor if space is available. Prerequisite: Interaction Foundations (F10 337) or demonstrably comparable HTML/CSS skills.

Credit 3 units. Art: CDES, FADM EN: H

F10 ART 326H Special Topics: Interaction Design: Layout Systems

Learn and apply techniques and tools for creating advanced HTML/CSS layouts. Explore responsive design (layouts that adapt to available screen width), grid systems, layout frameworks, and templating systems. Refine HTML and CSS skills, and learn best practices for common layout challenges. Become familiar with potential pitfalls designers face when planning for screens and variable content. Develop strategies for communicating design decisions for dynamic layouts. Expect to create mockups, wireframes, and finished HTML layouts that are portfolio-ready. This course is open to junior and senior communication design majors. Juniors register for F10 Art 326H; seniors for F10 Art 426H. Counts toward design minor if space is available. Prerequisite: Interaction Foundations (F10 337) or demonstrably comparable HTML/CSS skills.

Credit 3 units. Art: CDES, FADM EN: H

F10 ART 328D Illustrating for Licensed Products

In this studio course, students will research, concept and create images that are appropriate for application to products in the licensing field. Students will work toward developing icons/motifs, a mainstay in licensing, through deepening their skill sets in shape based illustration, design elements of composition and hierarchy and thoughtfully considered color. Class content will include the development of collections and images, patterns, and exploration of the visual content, artists, audiences, and trends in a fluid marketplace. Projects for this course will be drawn from the gift and home decor markets, fabric design and stationery products. This course is appropriate for juniors and seniors in the communication design major.

Credit 3 units. Art: CDES, FADM EN: H

F10 ART 328E Illustration Concepts & Media

Advanced projects in applied illustration and the first step in development of a professional portfolio. The class will explore creating images with smart and concise ideas across a spectrum of media. Students will be instructed on a range of illustration media to create visual solutions under rigorous deadlines. The projects will cover the range of editorial and conceptual image-making in the professional world today including portraiture, multiple images, responding to text and specific time and media restrictions. Prerequisite: Word and Image II. This course is open to juniors and seniors in the communication design major.

Credit 3 units.

F10 ART 328F Storytelling Across Multiple Media

This interdisciplinary course addresses how the elements of a single visual and textual narrative are distributed across multiple traditional and digital media platforms to form a unified and cohesive entertainment or branding experience. Assignments will challenge students to examine the specific attributes of each medium to determine its role in the greater experience. Students will work in small teams to coordinate and execute media integration per their individual disciplines, skill sets and areas of interest. Students will learn how storytelling across multiple media can expand the market for an intellectual property, provide

various points of entry for different audience segments, and heighten audience participation, interaction, understanding and engagement in the content. Prerequisites: Word + Image II or Type II.

Credit 3 units. Art: CDES, FADM EN: H

F10 ART 328G Branding & Identity

Students will learn about brands: 1) as identity; a shorthand for a company or product, 2) as an image; where an individual perceives a brand as representing a particular reality, and 3) as a relationship; where an individual reflects an experience through a product or service. To learn from their research, students will concept, design and implement a brand, challenging them to realize the full breadth of a brand's reach. Prerequisites: Word + Image II or Type II.

Credit 3 units. Art: CDES, FADM

F10 ART 329C Time-Based Media: Art Practice (Mediated Performance)

This course explores the body as a time-based medium and a vehicle of expression that interacts with cinematic and sound technologies, undergoing gradual semantic, virtual and visceral transformations. Students create performance-based video and sound works that are mediated with electronic/digital technology and performed or screened in public. Collaborative, individual political and poetic actions and happenings are encouraged. Students focus on the production of conceptually rigorous and technically convincing work that embodies their performative, experimental and individually designed ideas. Projects are informed by readings in media theory, writing assignments, and active participation in critiques of works by contemporary media artists.

Credit 3 units. Art: FAAM EN: H

F10 ART 329D Multimedia Design: Time / Sound / Space

This course is a studio exploration of the intersections of graphic design, experiential design, motion graphics, video, and sound. As technology advances, the line between digital and physical spaces is increasingly blurred. Through experimentation, students will investigate these spaces in multiple dimensions. In this course, students consider how experiences can be translated into time-based media. Students will make multimedia projects that orient, educate or delight an audience. Using both digital and analog methodologies, students will capture, generate, and manipulate audiovisual material. Multi-week projects will be accompanied by workshops, exercises, and lectures with professional examples. Prerequisite: Word and Image 2 or permission of instructor.

Credit 3 units. Art: FADM

F10 ART 329G Time-Based Media: Art Practice (Sound Environments)

Sound Environments explores sound and musical composition in digital format, functioning as a sculptural, spatial, psychological and architectural intervention. The course offers an introduction to current sound art practices and examines how sound projects are capable of altering our sense of space and time. Sonic Space necessarily touches upon experimental music and installation art as closely related to sound art. The course introduces students to basic methods of sound recording and editing software and hardware with a goal of composing sound

works for space and for headphones. Readings pertaining to current developments in contemporary experimental music and sound art as well as regular writing assignments accompany the course.

Credit 3 units. Art: CDES, FAAM

F10 ART 329L Time-Based Media: Art Practice (Expanded Cinema)

By focusing on experimental approaches to digital filmmaking, this course offers opportunities for independent producers that arise from hybrid media interests. The course encourages and supports a variety of cinematic concepts, from non-narrative to documentary and activist approaches. Instruction will encompass technical, conceptual, and creative skills for taking an individually conceived project from idea to fruition.

Credit 3 units. Art: CDES, FAAM, FADM

F10 ART 330D Multimedia Design: Time/Sound/Space

A studio exploration of the intersections of graphic design, experiential design, motion graphics, video, and sound. As technology advances, the line between digital and physical spaces is increasingly blurred. Through experimentation, students will investigate these spaces in multiple dimensions. In this course, students consider how experiences can be translated into a time-based media. Students will make multimedia projects that orient, educate or delight an audience. Using both digital and analog methodologies, students will capture, generate, and manipulate audiovisual material. Multi-week projects will be accompanied by workshops, exercises, and lectures with professional examples. Prerequisite: Word and Image 2 or permission of instructor.

Credit 3 units. Art: CDES, FADM

F10 ART 330I Time-Based Media: Art Practice (New Media in Art)

Exploring the intersection of art and technology, the course focuses on the phenomenon of time as an artistic medium and as the subject of work. Through the production of time-based works in a virtual realm, students learn about compositional choices, narrative and non-narrative strategies, and ethical and political responsibilities that artists and artist collectives face in the 21st century. Students gain exposure to selected software as it pertains to their individually designed projects. Readings, writing assignments and an active participation in critiques of works by contemporary new media artists will be part of this seminar.

Credit 3 units. Art: CDES, FAAM

F10 ART 330L Time-Based Media: Art Practice (Expanded Cinema)

By focusing on experimental approaches to digital filmmaking, this course offers opportunities for independent producers arising from hybrid media interests. Expanded Cinema encourages and supports a variety of cinematic concepts, from non-narrative to documentary and activist approaches. Instruction will encompass technical, conceptual and creative skills for taking an individually conceived project from idea to fruition.

Credit 3 units. Art: CDES EN: H

F10 ART 330M Time-Based Media: Art Practice (Animation for Buildings)

In this art production course, students will create projection-mapped animations that will transform three-dimensional structures such as building exteriors and installation spaces. Through lectures, readings and discussion students will also be introduced to fundamental considerations that inform projection mapping-based creative work such as site-specificity and the impact of advertising on the perception of public space. This course will also explore technical skills for using popular 2D animation and projection mapping software.

Credit 3 units. Art: CDES, FAAM

F10 ART 332A Interaction Design: User-Centered Applications

This course is a hands-on application of interaction design for digital media (primarily browser-based). We will explore how user-interaction adds bi-directionality to communication, examine the intricacies of seemingly simple digital interactions, and familiarize ourselves with the attributes of digital device as "canvas." We will work both independently and collaboratively to design interactive solutions for a selection of communication challenges. Our focus will be to learn by doing: first-hand experience gained while undertaking real-world projects will provide the context and framework for discussion and instruction. Project work will likely be (but not required to be) accomplished with tools available in the Adobe Creative Suite: Adobe Dreamweaver, Adobe Illustrator, and Adobe Photoshop. Web browsers on both desktop computers and mobile devices will also be used extensively. No prerequisites. This course is appropriate for seniors in the communication design major.

Credit 3 units. Art: CDES, FADM

F10 ART 332E Panel By Panel: Narrative Comics

Comics are a medium with a long history. The desire to tell a story through a sequence of images has existed since humans began drawing and documenting. This course teaches students to create comics, with both fiction and nonfiction narratives. Students will be introduced to historic and contemporary examples of comics over the course of the semester. Through assignments and in-class workshops, students will learn the basics of making comics, including panel transitions, the relationship between words and pictures, pitching a concept, breaking a plot down into a script, production. Assignments will span a range of narrative lengths; exploration of digital and print formats is encouraged.

Credit 3 units. Art: CDES, FADM

F10 ART 332F Design as a Catalyst for Change

With a whirlwind of social and cultural transitions emerging across the world, design is being used to address and disrupt, and prevent social challenges that arise — including topics like natural disasters and global water crises to political corruption, increased social injustices, gender inequality, and racial inequity. Designers can serve numerous roles in driving impactful engagement of these issues; their skills are often required to expand beyond artifact-based studio practices to instill greater benefit to their end users, communities, and society at-large. In this course, students will learn and practice skills of community-based social impact design. The focus of this course will emphasize "the work behind the work," as students learn how matters of empathy, equity, privilege, relationship building, and justice integrate into the communications design process when working with(in) communities. As students identify and select

a social cause on which to focus, they will develop a series of print and digital works that communicate their chosen issue, pitch proposed design interventions, and visualize collaborative implementation processes. Learning modules will feature weekly readings, direct engagement with social design practitioners, design charrettes, and on-site learning, allowing students to gain greater depth and perspectives for harnessing design as a catalyst for change.

Credit 3 units. Art: CDES, CPSC, FADM

F10 ART 332G Design & Research

"Design research" can have many meanings: learning about user needs in order to improve the design of our tools and services; designing things that enable us to learn about people and our relationship with the world around us; or even researching the process and meaning of design as a practice. This course will combine studio- and seminar-style learning to broadly explore three modes of design research: exploratory, learning about people's needs in order to frame a design brief; evaluative, using sketches and prototypes to learn about and improve an idea; and speculative, creating artifacts from fictional societies in order to question our basic structures and systems. Each component will involve readings, lectures, case studies, written reflections and exercises to be applied to an ongoing team project, enabling students to think critically about each practice while experimenting with its methods. Throughout, students will present their findings, translating research into design briefs and calls for action.

Credit 3 units. Art: CDES, CPSC, FADM

F10 ART 332H Alternative Displays

This course explores display-based interactions that are functionally unique in order to create more relevant information and experiences. Emerging technologies such as e-paper and fabrics are colliding with the internet of things and flexible screen interfaces where smart displays go beyond phones and computers. Students will consider display applications in multiple settings, functions, and scales from small devices to larger environments. Projects will be entrepreneurial and experimental with an applied perspective to explore real world challenges and opportunities. Final projects may include the intersection of 3D objects with 2D screens that interact with other devices, systems and users. All project will be presented as refined prototypes with functional coding optional.

Credit 3 units. Art: CDES, FADM

F10 ART 332I Interaction: Non-Linear Narrative

This is an advanced interaction major elective exploring the experiential and occupiable nature of the internet. Through studio projects, reading discussions, workshops, and exercises students will explore the theoretical premise that defines the physical reality of internet, investigate the structural hierarchy of how it works, and investigate new ways of developing/working with databases and navigating through complex content. Work in this course could be browser-based but may also have physical components including artifacts, books, and exhibitions.

Credit 3 units. Art: CDES, FADM

F10 ART 332J UX Research Methods for Design

User experience research can make or break a design. It is an essential way to better understand whether and how a given design meets intended needs and outcomes. This studio course explores the foundations of user research appropriate for digital and analog products. Through projects, discussions,

and readings, students will build an understanding of the role of research in interface design. Students will practice research methods including interviews, surveys, contextual inquiry, peer analysis, and heat mapping. Students will create artifacts that contextualize research within the broader UX design process, including personas, journey maps, user flows, and low-fidelity prototypes. Prerequisite: Interaction Foundations, CS 131, or permission of instructor.

Credit 3 units. Art: CDES, FADM EN: H

F10 ART 334A Advanced Drawing: Affective Stills and the Moving Image

Thiws is an open-ended advanced drawing course that will focus on expanded definitions and mark-making practices. This course will explore, contextualize and analyze a wide variety of drawing methods that relate to image making, spatial and situated practices, and ephemeral, time-based media. Through projects, readings, lectures and individual research, students will gain a broader understanding of drawing and its various definitions and approaches in addition to its rich set of histories and contemporary applications. This course will be peppered with lively discussions, field trips, and lectures by artists, architects, and designers. Self-directed projects will be reviewed and discussed critically and aesthetically in relation to the intent of the artist. A highly experimental and even collaborative approach to drawing will be strongly encouraged. Prerequisite: F10 101A or F10 102A.

Credit 3 units.

F10 ART 336A Visual Journalism and Reportage Drawing

This course combines studio practice, work in the field, subject reporting and nonfiction writing to explore a rich tradition that dates to the mid-19th century. The "special artists" who reported on the American Civil War, the urban observers of the Ashcan School and the "New Journalism" illustrators of the 1950s, 60s and 70s brought vision and force to their work as reporters. Today, the reportage tradition is being re-invigorated in online outlets and periodicals. Students will produce a series of works documenting observations of contemporary people, sites and events, culminating in a zine designed for print and/or a digital slideshow with supporting text. This course will provide plentiful drawing experience. Supplemented by historical material in the collections of the Modern Graphic History Library. This course is appropriate for juniors in the communication design major. (Students with an interest in visual journalism grounded in street photography and visually engaged writers may be admitted to the course by permission of instructor.)

Credit 3 units. Art: CDES, FADM

F10 ART 336B Advanced Interaction Design

This course emphasizes immersive and multisensory user experiences in complex structural applications for a range of devices and contexts. Students will creatively apply advanced concepts in html, css, and javascript in the development of delightful and adaptable user experiences. Through studio projects, critiques, readings, discussions, and lectures, students will build on foundational knowledge in creative coding. They will explore new tools, languages, and processes as well as enhanced forms of user research, usability testing, and experience architecture. Prerequisites: Interaction Foundations, CS 131, or by permission from the instructor

Credit 3 units. Art: CDES, FADM

F10 ART 336M Special Topics in Communication Design: Illustration for Creative Practice

This course is about transforming creative impulse into a controlled professional practice. In the first half of the course, students will investigate current illustration trends and their applications in the marketplace. We will apply these findings to assignments while considering experimentation, relevance and form. The second half of the course will consist of iterative drawing assignments. Students will focus on cohesion within large bodies of work as well as the ability to bring images to finish with varying time constraints.

Credit 3 units. EN: H

F10 ART 336N Environmental Design

This course offers an introduction to the process and problem-solving methods required to conceptualize and develop an environmental graphics project. Students will gain an understanding of the relationship between a concept on screen and that idea realized at full scale and its impact in the built environment. Scale drawing, architectural documents, fabrication methods and materials will all be explored. Projects will include wayfinding and ADA signage, exhibit design and architectural graphics. Students will communicate their concepts through sketches, computer drawings, models and mock-ups.

Credit 3 units. Art: CDES, FADM

F10 ART 336P Conditional Design

New technology changes the way we receive, consume, and interact with information. Making work that can adapt to its context, environment, and user's preferences is a vital skill for artists and designers. This studio course explores the design and development of adaptive design systems to generate customizable and variable outputs. Through projects, readings, presentations, and discussions, students explore the use of procedural process, logic, and variable input to generate forms and experiences in both physical and digital space. Projects will cover traditional and digital mediums ranging from generative books and posters to interactive websites and performative experiences. Prerequisite: Communication Design: Interaction Foundations or Introduction to Computer Science.

Credit 3 units. Art: CDES, FADM

F10 ART 336Q Illustration as Practice

This major studio elective focuses on the professional practice of conceptual illustration while enabling students to cultivate individual voice. We practice the methodology of creating visual metaphors, visualizing concise ideas, and working under short deadlines. Projects in this course cover a range of image making in the professional illustration world today, including editorial, portraiture, lettering, and lifestyle, as well as art direction. Students continue to develop their portfolio in the context of these projects and to learn about best practices in communication, pricing, and workflow. Students will be assessed on their projects in a final critique. Prerequisites: Word & Image II and Typography II.

Credit 3 units. Art: CDES, FADM

F10 ART 336R Typeface Design

Typeface design deals with language, culture, technology, visual perception, and systems design. Students will explore these areas in addition to the basics of typeface design. They will define clear purposes and outcomes for their work including research, designing letterforms and spacing, and creating functional fonts with professional software. The course

introduces concepts, technologies, and current issues in the field. We will focus on text and display typefaces for the Latin script; however, we will introduce a range of historical models and explore the cultural impacts typefaces can have. Software used is Mac only, lab computers will be available if student does not have access to a Mac laptop. Prerequisites: Digital Studio and Type 1

Credit 3 units. Art: CDES, FADM

F10 ART 337E Communication Design: Word & Image II

This course continues Word & Image I (F10 238B), presenting design and illustration projects simultaneously. It focuses on methodologies for a range of problems. It emphasizes the development of content, illustration, typography, sequential narrative and information design. Students are expected to become self-directed about their synthesis of word and image and to select an area of emphasis within design and illustration for deeper study.

Credit 3 units. Art: FADM EN: H

F10 ART 337F Communication Design: Typography II

This course builds on the typographic principles introduced in Typography I (F10 238C). Students generate typographic systems and expressions relevant to professional practice.

Credit 3 units. Art: FADM EN: H

F10 ART 337I Communication Design: Interaction Foundations

This course is a hands-on application of interaction design for digital media (primarily browser-based). Participants will learn and apply the fundamentals of HTML and CSS, explore how user interaction adds bidirectionality to communication, examine the intricacies of seemingly simple digital interactions, and become familiar with the attributes of digital device as "canvas." Students will work both independently and collaboratively to design interactive solutions for a selection of communication challenges. This course is required for junior BFA in Communication Design majors, and it is open to students outside of the Communication Design major as space permits.

Credit 3 units. Art: FADM EN: H

F10 ART 337M Communication Design: Visual Voice

Design is a powerful tool that creates meaningful dialogue between the work and its intended audience. This exchange can profoundly impact our culture and society. This course explores the methods used by designers to create visual messages that inspire ideas, elicit emotions and encourage actions. Through class discussion and course readings we will examine the role and responsibility of the designer within our society. Students will create work that integrates their individual perspective and personal experiences supported by research, writing and design applications.

Credit 3 units.

F10 ART 337Q Motion Graphics for Designers

This course offers a route to learning theories, techniques and principles of motion graphics that builds on the fundamentals of graphic design. Areas of focus will include careful deployment and control of image, color, text, tone, pacing and editing. Students will capture, generate and manipulate audiovisual material. Various tools and methodologies for making time-

based media will be introduced, such as animation, creative coding, filmmaking and sound editing. Experimentation is encouraged. Prerequisites: Word and Image 1 or Typography 1, or by permission of the instructor.

Credit 3 units.

F10 ART 338H Communication Design: Interaction Design II

The class will explore designing usable, useful, and desirable relationships and interactions between people and the digital products and services they use. Students are introduced to human-centered research methods in the context of designing screen-based experiences. Small ethnographic field projects build to inform the basis for idea generation and prototyping concepts. Students then synthesize insights to design a digital solution. The class has a series of smaller exercises that build to two larger design projects with an overarching theme of public health or sustainability. Graphic design and typographic fundamentals will be addressed throughout in the context of interaction. Class time will be mixture of lectures, in class exercises, and studio based work. Students will need a laptop with Adobe Illustrator, InDesign and Photoshop and moderate experience with these programs.

Credit 3 units. EN: H

F10 ART 338I Communication Design: Interaction Foundations

This course is a hands-on application of interaction design for digital media (primarily browser-based). Participants will learn and apply the fundamentals of HTML and CSS, explore how user-interaction adds bidirectionality to communication, examine the intricacies of seemingly simple digital interactions, and become familiar with the attributes of digital device as "canvas." Students will work both independently and collaboratively to design interactive solutions for a selection of communication challenges.

Credit 3 units. Art: CDES, FADM EN: H

F10 ART 338J Communication Design: Illustration Projects

In Illustration Projects, students will confront three substantial projects of complex visual research and problem-solving, and communicate their results through beautifully made images. Each project will begin with provided story data, ranging from business-oriented to literary to mechanical, then move through rigorous stages of editing, storytelling, style development, execution and refinement. Early projects will emphasize traditional techniques of image-making; later projects will involve more digital manipulation. Students will need a laptop with Adobe Creative Suite installed as well as traditional art-making supplies along the way.

Credit 3 units. EN: H

F10 ART 338L Communication Design: Experimental Typography

In this studio course, students will learn to challenge typography's role as a tool for communication through alternative methods in mark-making and redefining what or how it is communicated. The course will introduce material exploration, emerging software/technology, and sensory/spatial considerations while challenging the purpose of type. It will be organized into multiple units, each with a different opportunity for the student to explore new methods. Students will apply their own areas of disciplinary expertise to the final project. Students will need a laptop and may need to acquire inexpensive or free

software. This course is appropriate for juniors through graduate students with or without visual training who are interested in typography, communication, visual expression, and computer programming.

Credit 3 units. EN: H

F10 ART 338Q Type in Action: Multimedia Typography

Typography is a medium that can carry meaningful and complex communicative weight, and it affords designers with endless opportunities to engage others and to invite interpretation. In this form-making course rooted in typography, students will seek to manipulate and enact letterforms to create projects that communicate narrative in new and inventive ways -- breaking rules, scaling things up, using a range of materials, and making things move. Projects will span a range of formats, with the course serving as a catalyst for investigation of the myriad ways that letterforms, typography, and language can function as a provocative, interaction, platform, installation, image, and more. An openness to materiality, play, and experimentation is essential. Prerequisites: Digital Design, Typography I+II, or permission of instructor.

Credit 3 units. Art: CDES, FADM EN: H

F10 ART 338V The Narrative Image: Form/Structure/Function

All human cultures tell stories, and these narratives fulfill multiple roles in establishing meaning for a society. This course will examine the ways that a visual narrative can be approached. How can an image-based story be structured? What roles can point of view play? What are stylistic tropes for narratives? How can ideas be implied? In what ways can we refresh and retell well-known narratives? Students may elect to work in multiple media and in single or sequential narratives. A self-directed final project will be required.

Credit 3 units. Art: CDES, FADM

F10 ART 338W Illustration for Games

How must a drawing be constructed, both formally and narratively, to function inside of a game? This course, which is intended for image-makers, will concentrate on the assets and aesthetics of game design. Students will engage the subjects of character development, 8-bit graphics, user interface, simple animations, and background design. Beginning with foundational questions of how and why we play games, students will create their own images, which will be built upon exploratory research into existing games and frameworks. Prerequisites: Word & Image 1 & 2, Digital Studio.

Credit 3 units. Art: CDES, FADM

F10 ART 338X Semiotics Studio: Designing Signs and Symbols

This course is about shaping meaning. Students learn the fundamentals of semiotic theory and its application to design practice. Students create signs and symbols for public spaces as well as experimental readings and social interventions. Through exercises, projects, and class discussions, students explore the world of meaning-making, including categories of signs, the possibilities of interpretation, and how signs work to normalize cultural practices and perceptions of truth. Prerequisite: Communication Design: Word & Image II or permission of instructor.

Credit 3 units. Art: CDES, FADM

F10 ART 338Y Programming Design

In what unconscious ways do your design tools influence your work? Would your work look different if you made all of the tools used to create it? What will design look like when machine learning automates many design tasks? How will you adapt when your software changes? What does design look like when you are building systems to create outcomes? How do you design for different contexts at the same time from the same content? What would computer-aided design iteration look like? These are all questions that students may confront in their careers as designers. This course will explore these questions through in-class demos, solo and group projects, readings, and talks from practitioners in the field. The class will teach students the Python programming language, which will be used in the free DrawBot application for MacOS and with the PageBot code library to create design applications and tools. Students will learn how to think systematically about design, how to work in teams, rapid iteration using the computer, sketching, the design of software applications, how to translate digital experiences to analog (and vice versa), and how to learn from failure. The course assumes no prior experience with programming and no knowledge of Python. Open to junior and senior students, with preference given to communication design majors and minors. This course is experimental and team-driven. Students must be fundamentally curious and willing community participants who are capable of self-learning and tolerant of failure. Prerequisites: Word & Image 1, Typography 1, and Digital Studio.

Credit 3 units. Art: CDES, FADM

F10 ART 338Z Global Topics in Visual Communication

In this course, students will explore visual communication in diverse historical and contemporary contexts. Students will work with internationally based faculty in short modules in which lectures and prompts will highlight the unique qualities of cities and cultures around the world. Students will reflect on the specificity of place in ongoing sketchbook prompts. For each module, students will make a short publication that synthesizes the content of that module with their own developing studio interests. Prerequisite: Word & Image II or Type II.

Credit 3 units. Art: CDES, FAAM, FADM

F10 ART 371C Printing Propaganda: The Letterpress Poster

This course takes as its focus the poster and its powerful call to action. Students will research the history of propaganda posters made by both, governments and their critics, including first-hand use of the World War I poster collection in Olin Library, and will develop understanding of the rich ground created by the mix of text and image. With this historical and theoretical perspective, students will embark on printing a series of posters in the Book Studio utilizing the larger letterpresses and the unique collection of wood types. A variety of printing strategies will be explored including monoprint, photopolymer plate, pronto plate, stencil, and alternative letterpress print techniques. Skills will be developed in the fundamentals of large format typography, copywriting, photography, illustration, and printing.

Credit 3 units. Art: CDES, FADM

F10 ART 372B Content to Cover: the Design of Books

This studio course considers the design and poetics of books in their totality. Projects provide the opportunity for rigorous engagement with book pacing and sequence, page composition, typographic detail, images, and construction. Assignments invite students to interrogate the book form and explore its materiality and object quality. Coursework will deepen skills in typography

and image making by exploring layered production methods in the book studio using the letterpress and other tools. The class will address print production and binding options in industry and bookbinding techniques and include visits to two campus library special collections. Relevant readings will guide students in building a critical design vocabulary. Prerequisites: Word and Image 1 or Typography 1, or by permission of the instructor. Credit 3 units. EN: H

F10 ART 372C Printing Propaganda: The Letterpress Poster

This course takes as its focus the poster and its powerful call to action. Students will research the history of propaganda posters made by both governments and their critics via the the World War I poster collection in Olin Library. They will also develop an understanding of the rich ground created by the mix of text and image. With this historical and theoretical perspective, students will embark on printing a series of posters in the Book Studio using the larger letterpresses and the unique collection of wood types. A variety of printing strategies will be explored, including monoprint, photopolymer plate, pronto plate, stencil, and alternative letterpress print techniques. Skills will be developed in the fundamentals of large format typography, copywriting, photography, illustration, and printing. Credit 3 units. Art: CDES, FADM

F10 ART 381B The Book as Lens: Photography and Books

This course will examine the function of the photograph in the sequential book format, with an emphasis on narrative development. The semester work will include researching historical photo books; experimentation with found photography; making an original photo series; alternative book structures; designing pages with photos and text; and alternative printmaking techniques on a wide variety of materials. This course is for designers, photographers, and anyone interested in the way photo books function. Credit 3 units. Art: CDES, FADM EN: H

F10 ART 3822 Art Practices: Present/Past/Past/Present (Florence)

The city of Florence today serves as a living, breathing museum that offers a glimpse into the materials and methods of its past, while offering a fertile ground for contemporary art practices that focus on critical investigation. In this course, students will engage a diverse set of art practices that operate between past and present, between the technical and conceptual, exploring the relationship between the Renaissance's reinterpretation of classicism and its revolutionary spirit that sparked innovation in the arts, sciences and society in general. Six hundred plus years later, students will examine artistic/visual conventions of the Renaissance and re-contextualize them to 21st-century ideas and issues. The course will make use of these myriad opportunities through field trips or site visits, lectures, technical demonstrations and readings that will supplement these investigations. This course may be applicable toward an area discipline art concentration with approval and final portfolio review by faculty in the discipline of concentration. Credit 3 units. EN: H

F10 ART 3825 Art Studio (Florence)

Art Practice and Methods & Contexts are linked pedagogically and conceptually in the Sam Fox curriculum. In Florence, the two courses will be merged into a broader 6-credit art studio course. The city of Florence today serves as a living, breathing museum that offers a glimpse into the materials and methods of its past,

while offering a fertile ground for contemporary art practices that focus on critical investigation. In this course, students will engage a diverse set of art practices that operate between past and present, between the technical and conceptual, exploring the relationship between the Renaissance's reinterpretation of classicism and its revolutionary spirit that sparked innovation in the arts, sciences and society in general. Six hundred plus years later, students will examine artistic/visual conventions of the Renaissance and re-contextualize them to 21st-century ideas and issues. Students will also integrate and synthesize knowledge resulting from "Art Practice." Supported by lectures, discussions and critiques, the course will foster a creative environment and critical discourse surrounding artistic practices. Students are guided through the art-making process, from conceptualization to resolution, emphasizing experimentation with various methods of production and distribution. Students will be challenged to contextualize their own artistic interests within the contemporary art field by promoting critical analysis skills necessary for initiating, interpreting and evaluating artistic production. The course will make use of these myriad opportunities through field trips or site visits, lectures, technical demonstrations and readings that will supplement these investigations. Credit 6 units.

F10 ART 3829 Advanced Studio Practices (Florence, Italy)

In this advanced studio art course, students focus on learning what it means to be a contemporary artist. All art media may be used throughout the semester, though students may choose to concentrate on one medium if that is their chosen pathway. Professors introduce prompts to students as a means to encourage them to think conceptually about their work. Practitioners will ultimately be required to push their artwork to a high degree of resolution by assessing and contextually clarifying how their work addresses the contemporary artistic landscape. Studio work is augmented by readings meant to provide further investigative material in relation to cultural production. At the end of the semester, students are expected to have an understanding of what it means to be a working studio artist and to take this knowledge with them into the real world. Credit 3 units.

F10 ART 3830 Strategies: Working on Site (Florence)

Sketchbook in hand, how does one respond to the overwhelming complexity of a specific environment? There are multiple correct answers to this question. Many possible answers will be explored through specific exercises and open-ended assignments. Much of the studio's class time will be spent on location, exploring interior and exterior environments, and the transitional spaces between them. A specific sketchbook, purchased in Florence, will be required. Students will be able to work in a wide variety of media, including photography and digital.

Credit 3 units. Art: CDES

F10 ART 3832 Communication Design: Mapping the Unfamiliar (Florence)

This studio course with lectures will focus on creating both informational and narrative-driven explorations of place through the form of the map. The first half of the semester will introduce the map as an instrument for way finding and data visualization. Students will learn to negotiate various levels of information in two-dimensional design while crafting clear and compelling stories involving location, points-of-interest, and time. Students

will also begin documenting their own experience navigating Italy as a means of incorporating personal perspective into more psychogeographic-based mapping studies that traverse the idea of familiarity. The second half of the semester will further develop students' potential to interpret their surroundings through the exploration of nonlinear storytelling and pictorial representation of cartographic data-points.

Credit 3 units.

F10 ART 3834 Making Meaning (Florence)

As students transition into a new culture and environment, there lies an opportunity to acutely examine shifts in behavior, emotion, expectation and perspective — both within themselves as well as amongst their classmates. This shared (yet diverse) experience makes for a great opportunity to flex their empathy muscles. To better understand this, each student will be "the designer" as well as "the audience," investigating ways to help each other live in a new culture.

Credit 3 units. Art: CDES

F10 ART 3836 Methods: Verbal to Visual (Florence)

Do different types of text and their meanings require different approaches for image making? Maybe. A variety of different texts will be assigned, each accompanied by a different image-making methodology. There will also be a variety of applications for the resulting images. Students will be able to explore a wide range of media and image making. The goal is to assist students in understanding and developing their own approaches to this complex process.

Credit 3 units. Art: CDES EN: H

F10 ART 3838 Experimental Typography (Florence)

Spanning the spectrum between the informational and the poetic, type design and typography work is a medium unto itself, as one might view painting and sculpture. In this course, we will engage closely, experimentally, and rigorously with typography as medium. This course is a space for experimentation, research, and invention. Building on the fundamentals of typography, course work will set varied scenarios for the rigorous exploration of typography as form, emphasizing generative processes. Projects will engage with materiality, format, scale, motion, hybridity, legibility, and expression.

Credit 3 units. Art: CDES EN: H

F10 ART 3840 Branding & Identity (Florence)

Students will learn about brands: 1) as identity; a shorthand for a company or product, 2) as an image; where an individual perceives a brand as representing a particular reality, and 3) as a relationship; where an individual reflects an experience through a product or service. To learn from their research, students will concept, design, and implement a brand, challenging them to realize the full breadth of a brand's reach.

Credit 3 units. Art: CDES EN: H

F10 ART 3842 Patternmaking and Production

An introduction to flat pattern drafting. Principles will be applied to various components of garment creation. Construction techniques and industrial methods explored within specific structural design problems. Students will undertake realization of garment from sketch to pattern draft and finally construction of muslin (toile). This course is to be taught using the Imperial measurement system. This course will be offered in Florence, Italy.

Credit 3 units. EN: H

F10 ART 3844 Fashion History & Research

The study of cultural and social influences to comprehend how these influence the evolution of fashion and are expressed in clothing at various junctures in history. Review of general academic research methods will be covered as well as research methods and strategies of particular significance to fashion design. Course work will focus on using research as an avenue to original and effective design concepts. This course will be offered in Florence, Italy.

Credit 3 units. EN: H

F10 ART 3845 Sustainable Fashion and Ethical Clothing

This course focuses on the study and understanding of sustainable clothing and its influence in today's fashion industry and modern life. Ethical fashion refers to the use of fabrics derived from eco-friendly resources, and the study of how these fabrics are made. Being "green" in fashion today means reducing the amount of clothing discarded to landfills, and decreasing the environmental impact of agro-chemicals in producing conventional fiber. Special emphasis will be placed on the vintage phenomenon and on recycling as fundamental parts of this complex subject. The course will analyze the impact of the reduction of raw materials and virgin resources, as it relates to fitting in the context of a more powerful globalized fashion industry as these two worlds often collide. The course will also look at how sustainability in the clothing industry can provide a new market for additional job opportunities. This course will be taught in Florence, open to fashion majors.

Credit 3 units.

F10 ART 391 Methods and Contexts I

This course integrates and synthesizes knowledge resulting from Art Practice and related courses. Supported by lectures, class discussions, and student critiques, this course fosters a creative environment and critical discourse surrounding artistic practices. Students are guided through the art-making process, from conceptualization to resolution, with an emphasis on experimentation with various methods of production and distribution. The goal of this course is to help students contextualize their own artistic interests within the contemporary art field by promoting the critical analysis skills necessary for initiating, interpreting, and evaluating artistic production. This course is required for juniors pursuing a BFA, BA, or Second Major in Art. Corequisite: Concurrent enrollment in at least one Art Practice course.

Credit 3 units. EN: H

F10 ART 392 Methods and Contexts II

Required for BFA in Art majors. This team-taught course expands on methodologies encountered in Methods and Contexts I and related courses. Students are encouraged to take charge of their artistic process through faculty-supported and self-directed creative investigation. Through lectures, class discussions and critiques, students critically engage the evolving manner in which visual culture is produced and distributed. Students learn how to best present their work and incorporate discourse inherent to and generated by their practice. The goal of this course is to ensure a strong Capstone experience by helping students develop their artistic position within the public realm and contemporary contexts.

Credit 3 units. EN: H

F10 ART 402B Drawing: Art Practice (Conceptual Methods in Drawing)

Drawing is a communicative device; it is a primary means of conceptual strategy leading to effective visual exploration and expression, from thought to form. This studio course looks at the practice of drawing in the context of language, scientific paradigms, complementary and alternative art forms, socio-political theory and history as they relate to visual culture and invention. Lectures, critical readings, and analysis of historical and contemporary modes of drawing support students in their course work. Projects in this course may consider mapping, language systems, formulaic constructions, material essentialism, physiologic/kinesthetic approaches, and performative aspects of drawing.

Same as F10 ART 302B

Credit 3 units. Art: CDES, FAAM

F10 ART 402D Drawing: Art Practice (Collage: History and Practice in Contemporary Art)

This course will examine the role of collage in contemporary studio practice. Students will be required to assemble an archive of images from various sources, found and self-generated, to produce a body of work based on a specific theme. Readings and discussion related to the course will examine the evolution of collage and its present status and application within contemporary studio practice.

Credit 3 units. Art: CDES, FAAM EN: H

F10 ART 411D Painting: Art Practice (Special Topics: Narrative Systems: The Frame, The Grid, The Screen)

This studio course focuses on various narrative strategies in relation to painting's mythology and its function in contemporary culture. Topics to include narrativity, the politics of lens and screen, invented fictions, social vs. virtual spaces, and site specificity. Instruction will encompass technical, conceptual and creative skills for taking an individually conceived project from idea to fruition. Students will be encouraged to consider traditional and alternative forms of painting as well as digital imaging, installation, net art, etc... Lectures, critical essays, and analysis of historical precedents and contemporary practitioners will support students in their course work.

Credit 3 units.

F10 ART 411F Painting: Art Practice (Language of Abstraction)

This course examines strategies of abstraction and nonobjective image-making that originate in the painting studio, including those that are driven by concept, material, space and/or process. Readings and discussions will examine the evolution and history of abstraction and its present applications within a contemporary studio practice. The course will engage students in both assigned and self-directed work that will enable them to experiment with a broad visual vocabulary while understanding the relationship between form and content.

Same as F10 ART 311F

Credit 3 units. Art: CDES, FAAM

F10 ART 411G Painting: Art Practice (Place and Space)

This course examines ideas of place and space — both observed and invented — established through the surface and materiality of paintings. Students develop a unique body of work through shared exploration of painting processes and materials,

along with independent research. Critical assessment of work is complemented by faculty and peer discussions, readings, written critical analysis and field study. Required for a concentration in painting.

Credit 3 units.

F10 ART 411J Painting: Art Practice (Figure Structure)

This rigorous painting/drawing course explores new representations of the figure through its structure and contemporary contexts. Initial research involves anatomy lectures and extensive sketchbook activities that provide a vehicle for discovering the figure's architecture, mechanics and proportions. Students develop an independent body of work accessing visual data from a variety of sources (paintings, photography, sculpture, memory, model sessions), with the goal of developing expressive qualities with image-making. Lectures, presentations, critical readings, and the analysis of historical and contemporary figurative works support students in their investigations. Required for the BFA in Art painting concentration. Prerequisite: Painting Studio: Material and Culture. Open to BFA and BA students who have taken the prerequisite and others, including art minors and MFA students, with permission of the instructor.

Same as F10 ART 311J

Credit 3 units.

F10 ART 411K Painting: Art Practice (Expanded Painting)

This advanced studio course examines the expanded practice of painting in the contemporary studio. Students are required to produce a self-generated body of work, exploring painting via the incorporation of such things as new technologies, other visual disciplines, site-specificity, etc. Readings and discussion related to the course will examine the history and evolution of the painting practice and its present status and application within contemporary art production. Prerequisite: Painting Studio: Material and Culture. Open to BFA students who have taken the prerequisite, and others, including minors and MFA students, with consent of instructor.

Same as F10 ART 311K

Credit 3 units.

F10 ART 412E Painting: Art Practice (Place and Space)

This course examines ideas of place and space — both observed and invented — established through the surface and materiality of paintings. Students develop a unique body of work through shared exploration of painting processes and materials, along with independent research. Critical assessment of work is complemented by faculty and peer discussions, readings, written critical analysis and field study.

Credit 3 units.

F10 ART 412F Painting: Art Practice (Language of Abstraction)

This course examines strategies of abstraction and non-objective image making that originate in the painting studio, including those that are driven by concept, material, space and/or process. Readings and discussion will examine the evolution and history of abstraction and its present applications within a contemporary studio practice. The course will engage students in both assigned and self-directed work that will enable them to experiment with a broad visual vocabulary while understanding the relationship between form and content.

Credit 3 units. Art: FAAM

F10 ART 412G Painting: Art Practice (Body Image)

This is a rigorous painting/drawing studio course investigating various methods of pictorial construction (historical, contemporary) and the role of figuration in contemporary art practice. Students will be required to produce an independent body of work based on a theme and generated from a variety of references (imagination, life, photography, painting, film, etc.) Discussions to include contemporary notions of identity structures, social and gender politics. Lectures, critical readings and the analysis of historical and contemporary modes of figural representation will support students in their investigations. Credit 3 units.

F10 ART 412H Painting: Art Practice (Place and Space)

This course examines ideas of place and space -- both observed and invented -- established through the surface and materiality of paintings. Students develop a unique body of work through shared exploration of painting processes and materials, along with independent research. Critical assessment of work is complemented by faculty and peer discussions, readings, written critical analysis and field study.

Same as F10 ART 312H

Credit 3 units. Art: CDES, FAAM

F10 ART 413M Sculpture: Art Practice (Sculptural Bodies)

This course investigates the sociopolitical issues of the body, the figure, and their potential in contemporary art practice. The term "body" is used as an organism, in an expansive way, to investigate the metaphorical, physical, emotional, cultural, and spiritual bodies. A variety of media and methods are explored, with an emphasis on three-dimensional work and object-based performance. Lectures, demonstrations, and readings contextualize the potential of sculptural systems to constitute the meaning of a contemporary body.

Same as F10 ART 313M

Credit 3 units. Art: CDES, FAAM

F10 ART 413P Sculpture: Art Practice (Iterative Systems)

This course investigates iterative approaches to making as a means to generate multiple works and ideas simultaneously. Activities such as mold-making and nontraditional drawing will be explored along with other process-based methods of capturing thoughtful gestures. Through readings and discussions, students will engage with historical precedents and contemporary principles that support the creation of self-directed work informed by the iterative mindset. Required for the BFA in Art sculpture concentration. Prerequisite: Sculpture Studio: Material and Culture. Open to BFA and BA students who have taken the prerequisite and others, including art minors and MFA students, with the permission of the instructor.

Same as F10 ART 313P

Credit 3 units.

F10 ART 414J Sculpture: Art Practice (Material as Metaphor)

All materials carry meaning. This course familiarizes students with the histories and fabrication processes intrinsic to sculpture. The course uses demonstrations and hands-on experiences -- primarily but not exclusively with metal and woodworking processes -- to show how such materials inform a studio practice. Lectures and techniques contextualize an

understanding of preformed and found materials as formal and conceptual components that result in a final work of art. In a critical environment, students formulate their own material language and defend their art practice and creative decisions.

Same as F10 ART 314J

Credit 3 units. Art: CDES, FAAM EN: H

F10 ART 414K Sculpture: Art Practice (Symbiosis)

This course explores numerous scenarios that create different levels of sculptural interactivity from low to high tech. Students construct devices ranging from simple mechanisms to large-scale installations fostering physical, analogue or digital interaction between the viewer and the sculptural environment. Viewer-activated systems create multiple interactive platforms, initiating a responsive relationship between the sculpture and the viewer. Lectures, demonstrations and readings devise a broad understanding of the histories and potentials of symbiotic relationships between a work of art and its audience.

Credit 3 units. Art: CDES, FAAM EN: H

F10 ART 414N Sculpture: Art Practice (Itinerant Artworks)

Who said you can't take it with you? Itinerant Artworks is a course in which students create work in any medium that is built for travel (not speed) and that can be set up, knocked down, or installed in a variety of locations at a moment's notice. Students will document their work at a range of sites throughout St. Louis. For the final project, the class will stage an "off the grid" outdoor exhibition in Forest Park. Typically, artworks are either site-specific or are agnostic to their placement and location. Itinerant Artworks proposes a third model, where an artwork can be mobile, responsive, and highly adaptable to various environments or sites. Itinerant Artworks is intended to be a response to the current condition for making and viewing art. Despite the unpredictable and ever-changing circumstances of this moment, you can take it with you.

Same as F10 ART 314N

Credit 3 units.

F10 ART 415B Printmaking: Art Practice (Propaganda to Decoration)

This course uses the print multiple as a starting point to explore a continuum that runs from propaganda to decoration. The fundamental attributes of the multiple, including its accessibility and repeatability, arc from private to public and from political to aesthetic. Reproduction, distribution, urban communication, social space, intervention and site specificity are explored through course lectures, readings, and discussions. Collaboration, exchange, and relational practices provide frameworks for self-directed projects using traditional and alternative techniques in print media, including lithography, screen printing, stencils, and photocopy. This course is required for the BFA in Art Printmaking Concentration. Prerequisite: Printmaking Studio: Material and Culture. This course is open to BFA and BA students who have taken the prerequisite and to other students, including minors and MFA students, with the consent of the instructor.

Same as F10 ART 315B

Credit 3 units. Art: FAAM EN: H

F10 ART 415H Printmaking: Art Practice (Feedback Loop: Process and Print)

This course focuses on variability, mutability, repeatability and play within the process of printmaking, using etching, collagraph, monotype and digital methods. The course explores practices and contexts in printmaking as a contemporary art form and promotes advanced conceptual and technical development through creative practice, readings, discussions and critiques. Projects are self-directed and based on course topics that engage different approaches to process-based work, ranging from the improvisational to the systematic. Emphasis is placed on the shift from object to process, from the single manifestation to the series, from fixed to flux and back again.

Credit 3 units.

F10 ART 416G Printmaking: Art Practice (Extra-Dimensional Printmaking)

Pushing the boundaries of printmaking, prints move beyond the wall and into sculpture, installation, and time-based work. Relief, silkscreen, and intaglio processes are explored, with an emphasis on print as theatre, object, and immersive environment. Through readings and discussions, students will engage with historical precedents and contemporary principles that support the creation of self-directed work that is extra-dimensional in physical and conceptual scope.

Same as F10 ART 316G

Credit 3 units. Art: CDES, FAAM

F10 ART 416H Printmaking: Art Practice (Feedback Loop: Process and Print)

This course focuses on variability, mutability, repeatability and play within the process of printmaking, using etching, collagraph, monotype and digital methods. The course explores practices and contexts in printmaking as a contemporary art form and promotes advanced conceptual and technical development through creative practice, readings, discussions and critiques. Projects are self-directed and based on course topics that engage different approaches to process-based work, ranging from the improvisational to the systematic. Emphasis is placed on the shift from object to process, from the single manifestation to the series, from fixed to flux and back again. Required for a concentration in printmaking. Prereq: Required for a concentration in printmaking. Prereq: Printmaking Studio: Material Culture (F10 215A or 216A). Open to BFA students who have taken the prerequisite and others, including minors, with consent of instructor.

Same as F10 ART 316H

Credit 3 units. Art: CDES, FAAM

F10 ART 417H Photography: Art Practice (Methods of Distribution)

One of the most effective aspects of the photographic image today is its speed. The way that physical and virtual images are presented and distributed has changed significantly since the initial branding of photography as the medium of reproducibility. This class focuses on photography-based uses of the image through various distribution formats like the book, the poster, the newspaper, television, web, design, film, apparel, architecture, music, etc. The students make, read, look, listen, and experience 20th- and 21st-century photography practitioners who engage a range of disciplines and methods of distribution as they try to synthesize methods/models of their own. Rigorous student

project critiques are complemented with discussions, writing assignments, and readings on media theory and contemporary uses of photography outside of the traditional exhibition-based contexts.

Credit 3 units.

F10 ART 417L Photography: Art Practice (Constellations, Sequences, Series)

Series are the prevalent method for exhibiting photographic images. Through assignment-based and self-generated projects, students discover how photographic series are conceptualized, structured and sequenced. Special attention is given to the material meaning embedded in print size, order and spatial placement. The course provides in-depth coverage of image capture through medium-format analog and full-frame digital systems as well as intermediate digital editing and printing techniques. Students also explore various documentary and set-up strategies through narrative and non-narrative photographic approaches. Through a rigorous critique structure, course readings and critical writing, students engage the historical discourse surrounding the series as a tool for artistic expression.

Credit 3 units.

F10 ART 417O Photography: Art Practice (Studio Location and Lighting)

Same as F10 417O; juniors (only) register for F10 317O.

This studio course introduces techniques and strategies for using artificial light sources to interpret subject matter, build narratives, and develop creative environments. Studio sessions will cover the use of continuous lighting systems, strobes, and hot shoe flashes. Course lectures will address principles of light, expanded applications of studio lighting, and editing strategies. Class projects will challenge students to apply lighting techniques in studio and on-location settings. Field trips will provide opportunities to work in a variety of built and natural environments and in conjunction with partner organizations. Same as F10 ART 317O

Credit 3 units. Art: CDES

F10 ART 417R Art Practice: Photography (Black-and-White Master Printing)

This course offers an introduction to black and white master printing techniques for analog and digital outputs. The first part of the course will focus on advanced darkroom techniques, as well as the use of developers, papers, and toners. The second part of the course will cover advanced digital b/w strategies, including quadtone RIPs, specialty papers, and Photoshop workflows. In addition to technical demonstrations, course lectures will look at the role master printers have played in the history of photography. Visits to the Mildred Lane Kemper Art Museum and The St. Louis Art Museum print rooms will compliment lectures and activities. All students will develop a portfolio of personally-driven work in black and white. Required for the BFA in Art Photography Concentration. Prereq: Photography Studio: Material and Culture. Open to BFA and BA students who have taken the prerequisite, and others, including minors and MFA students, with consent of instructor.

Same as F10 ART 317R

Credit 3 units.

F10 ART 417T Photo: Art Practice (Picturing Place)

Working with photography and taking inspiration from geography, environmental studies, urban design, and cultural anthropology, this studio course explores how relationships to place are constructed. It considers how a "sense of place" has been understood over time and across cultures and how photography can help shape new narratives of belonging. The course builds knowledge through readings, discussion, guided assignments, and personal projects. Prerequisites: Digital Photography, Photography Studio: Material & Culture, or permission of instructor. Same as F10 ART 317T. Credit 3 units.

F10 ART 418J Photography: Art Practice (Slow Image: Large Format Photography)

This course provides an in-depth study of the large format analog camera and its unique formal position. Using the 4"x5" format, students examine this slow, high fidelity photographic medium both technically and conceptually. Students employ a comprehensive photographic process, including loading sheet film, applying the zone system, scanning large format film, editing digital images, and creating large format digital inkjet prints. Class activities include rigorous student project critiques, as well as reading and discussion elements focusing on the history of large format and its contemporary descendants in the Dusseldorf School, abstract photography and installation art contexts. Class participants investigate the role of high fidelity images. Assignments may address portraiture, still life, interior and exterior architecture, landscape, and abstract photography. Large format 4"x5" cameras will be available for use. Credit 3 units.

F10 ART 418K Photography: Art Practice (Documentary Photography & Social Practice)

This course focuses on the various philosophical, aesthetic and technical approaches to photographing the contemporary, human-altered landscape and the communities we live in. Through slide lectures, field trips, in-depth critique and supervised lab work, students are expected to increase their awareness of how their own personal responses relate to those of other photographers with the same contemporary issues of documentary photography. A project-based seminar focusing on objectivity of the photographic document. Material and camera format open. Credit 3 units. Art: CDES, CPSC, FAAM EN: H

F10 ART 418P Photography: Art Practice (Art, Environment, Culture & Image)

The medium of photography offers multiple ways to engage with critical social, political and environmental issues. Throughout this course, a wide range of photographic tools and modes of production will be explored, including digital and film-based materials and a variety of printing techniques. The course will also consider the integration of alternative methods of lens-based communication and working to construct images within relevant contexts of meaning. Through presentations and readings, students will be introduced to a range of contemporary artists working with essential topics such as climate change, ecological sustainability, energy production and extraction, and the human body and technology. Students will work to build a

final and self-directed project identified through their ongoing research and image production. Required for the BFA in Art photography concentration. Prerequisite: Photography Studio: Material and Culture.

Same as F10 ART 318P

Credit 3 units. Art: CDES, FAAM

F10 ART 418Q Photography: Art Practice (A Sense of Place or Understanding Place Through Photography)

This course explores the concept of "place" and the cultural implications that accompany the definitions of "place." Working with photography and taking inspiration from the fields of geography, environmental studies, urban design and cultural anthropology, this course considers how a relationship to place is constructed. We will also consider displacements throughout history and value systems embedded in the construction of a sense of place. Is one's relationship to place personal? Is it collective, is it cultural, is it rooted in the surrounding environment? What are the marks that define a sense of place, and is there residue or lingering evidence that can be perceived? The medium of photography has unique capacities to address these questions. This studio course builds knowledge through photographic practice with accompanying readings, seminar discussion and guided assignments. Students will participate in an active process of exploring diverse concepts of place in relationship to the built environment. Students will be introduced to a range of ways of making and thinking about the subject of place, including looking at place as site, as geography, as memory, as non-place, as urban space, as rural space, as community, and as ecological site. No formal photographic training is necessary. Students will be introduced to the basics of camera operation, Photoshop and Lightroom software for editing and the fundamentals of digital print output for fine art printing will be covered.

Same as F10 ART 318Q

Credit 3 units. Art: CDES, FAAM

F10 ART 418R Photography: Art Practice (Documentary Photography in the 21st Century)

This praxis-based course explores the evolution of documentary practice in photography from the 1930s until the present-day. Lectures, readings, and film screenings will introduce students to the history, problems, and promises of documentary photography, as conceived by photographers, critics, and art historians. Studio and critique sessions will assist students in developing a personal documentary project and attaining new visual strategies for engaging a photographic form that originates from the entanglements of life. Course will also discuss documentary photo books, and strategies for editing a documentary series for book production. Students will have the option of producing a photobook.

Same as F10 ART 318R

Credit 3 units. Art: CDES, FAAM

F10 ART 423A Capstone 1: Fashion Design (Pre-Collection Studio)

Same as ART 123A, ART 223A, ART 323A. Seniors only register for ART 423A. Introductory study of textiles, beginning with study of the basic fibers used in textile production, through weaving, knitting, dyeing, printing and finishing. Class format includes lectures, field trips, garment study and a variety of creative projects that replicate current textile production techniques such as weaving, silkscreen, dyeing and printing. Credit 3 units.

F10 ART 423B Apparel Strategy

The study and analysis of the apparel collection and its functional components in an effort to merchandise ideas for groups, seasonal deliveries, and lines. Thoughtful synthesis of the spectrum of knowledge and skills acquired through prior fashion design course work. Development of design and marketing strategies for specific customer profiles and specialty markets. Open to senior fashion design majors only. Credit 3 units.

F10 ART 423D Digital Lab

This lab, offered concurrent with preliminary study for creation of both 3D and 2D culminating work by senior majors. Resolution of technical drawing, and digital illustration problems addressed. Additionally patternmaking and digital skills enhanced as appropriate. Only seniors in Fashion Design may enroll. Credit 1.5 units.

F10 ART 423E Patternmaking Lab

This lab is offered concurrent with the preliminary study for the creation of both 3D and 2D culminating work by senior majors. Resolution of patternmaking problems are addressed, and patternmaking skills are enhanced as appropriate. Open to senior fashion design majors only. Credit 1.5 units.

F10 ART 423G Advanced Patternmaking

This lab is offered concurrent with the preliminary study for the creation of both 3D and 2D culminating work by senior majors. The resolution of patternmaking problems is addressed, and patternmaking skills are enhanced as appropriate. Open to senior Fashion Design majors only. Credit 3 units.

F10 ART 424A Capstone Studio 2 (Collection Studio)

In conjunction with Fashion Studio B, students create the culminating work of their study in fashion through realization of signature collection and portfolio documentation of collection. This studio will be undertaken with tutorials and guidance on tailoring, dressmaking, presentation and documentation. Enrollment required of and limited to senior fashion design majors. Credit 3 units. EN: H

F10 ART 424B Professional Practices: Portfolio Development

Students will work toward establishment of necessary construction, crafts skills, and signature illustration style required for completion of capstone project. Each student will draw together and organize evidence of vision and skill into a coherent presentation representative of their abilities as an emerging design professional. Work from this course will be submitted for outside professional review. Enrollment required of and limited to senior fashion design majors. Credit 3 units. EN: H

F10 ART 424E Patternmaking Lab

This lab is offered concurrent with the preliminary study for the creation of both 3D and 2D culminating work by senior majors. Resolution of patternmaking problems are addressed, and patternmaking skills are enhanced as appropriate. Open to senior fashion design majors only. Credit 1.5 units.

F10 ART 424M Digital Lab

This lab, offered concurrent with preliminary study for creation of both 3D and 2D culminating work by senior majors. Resolution of technical drawing and digital illustration problems addressed. Additionally, patternmaking and digital skills enhanced as appropriate. Only seniors in the fashion major may enroll. Credit 1.5 units. Art: FADM

F10 ART 426D Special Topics: Relational, Conditional, and Process-Oriented Design

This course encourages students to explore the spatial and experiential potential of designing frameworks to navigate complex archives of online content. In addition to expanding their code-based skills, students will push the boundary of traditional online activity to create immersive and experimental experiences in the browser. Through a series of informational and spatial challenges, students will conduct research into contemporary theory and practice of designing interactive platforms and develop dynamic solutions for online frameworks, which exploit and challenge traditional user expectations. Projects, experiments and research will be supplemented by group readings, class discussions, and individual artist/designer case studies. This course is open to junior and senior communication design majors. Juniors register for F10 Art 326D; seniors for F10 Art 426D. Counts toward design minor if space is available. Prerequisite: Interaction Foundations (F10 337) or demonstrably comparable HTML/CSS skills. Same as F10 ART 326D. Credit 3 units. Art: CDES, FADM EN: H

F10 ART 426H Special Topics: Interaction Design: Layout Systems

Learn and apply techniques and tools for creating advanced HTML/CSS layouts. Explore responsive design (layouts that adapt to available screen width), grid systems, layout frameworks and templating systems. Refine HTML and CSS skills, and learn best practices for common layout challenges. Become familiar with potential pitfalls designers face when planning for screens and variable content. Develop strategies for communicating design decisions for dynamic layouts. Expect to create mockups, wireframes, and finished HTML layouts that are portfolio-ready. This course is open to junior and senior communication design majors. Juniors register for F10 Art 326H; seniors for F10 Art 426H. Counts toward design minor if space is available. Prerequisite: Interaction Foundations (F10 337) or demonstrably comparable HTML/CSS skills. Same as F10 ART 326H. Credit 3 units. Art: CDES, FADM EN: H

F10 ART 428D Illustrating for Licensed Products

In this studio course, students will research, concept and create images that are appropriate for application to products in the licensing field. Students will work toward developing icons/motifs, a mainstay in licensing, through deepening their skill sets in shape based illustration, design elements of composition and

hierarchy and thoughtfully considered color. Class content will include the development of collections and images, patterns, and exploration of the visual content, artists, audiences, and trends in a fluid marketplace. Projects for this course will be drawn from the gift and home decor markets, fabric design and stationery products. This course is appropriate for juniors and seniors in the communication design major.

Same as F10 ART 328D

Credit 3 units. Art: CDES, FADM EN: H

F10 ART 428E Illustration Concepts & Media

Advanced projects in applied illustration and the first step in development of a professional portfolio. The class will explore creating images with smart and concise ideas across a spectrum of media. Students will be instructed on a range of illustration media to create visual solutions under rigorous deadlines. The projects will cover the range of editorial and conceptual image making in the professional world today including portraiture, multiple images, responding to text and specific time and media restrictions. Prerequisite: Word and Image II. This course is open to juniors and seniors in the communication design major.

Same as F10 ART 328E

Credit 3 units.

F10 ART 428F Storytelling Across Multiple Media

This interdisciplinary course addresses how the elements of a single visual and textual narrative are distributed across multiple traditional and digital media platforms to form a unified and cohesive entertainment or branding experience. Assignments will challenge students to examine the specific attributes of each medium to determine its role in the greater experience. Students will work in small teams to coordinate and execute media integration per their individual disciplines, skill sets and areas of interest. Students will learn how storytelling across multiple media can expand the market for an intellectual property, provide various points of entry for different audience segments, and heighten audience participation, interaction, understanding and engagement in the content. Prerequisites: Word + Image II or Type II.

Same as F10 ART 328F

Credit 3 units. Art: CDES, FADM EN: H

F10 ART 428G Branding & Identity

Students will learn about brands: 1) as identity; a shorthand for a company or product, 2) as an image; where an individual perceives a brand as representing a particular reality, and 3) as a relationship; where an individual reflects an experience through a product or service. To learn from their research, students will concept, design, and implement a brand, challenging them to realize the full breadth of a brand's reach. Prerequisites: Word + Image II or Type II.

Same as F10 ART 328G

Credit 3 units. Art: CDES, FADM

F10 ART 429D Multimedia Design: Time / Sound / Space

This course is a studio exploration of the intersections of graphic design, experiential design, motion graphics, video, and sound. As technology advances, the line between digital and physical spaces is increasingly blurred. Through experimentation, students will investigate these spaces in multiple dimensions. In this course, students consider how experiences can be translated into time-based media. Students will make multimedia projects that orient, educate or delight an audience. Using both digital and analog methodologies, students will capture,

generate, and manipulate audiovisual material. Multi-week projects will be accompanied by workshops, exercises, and lectures with professional examples. Prerequisite: Word and Image 2 or permission of instructor.

Same as F10 ART 329D

Credit 3 units. Art: FADM

F10 ART 429G Time-Based Media: Art Practice (Sound Environments)

Sound Environments explores sound and musical composition in digital format, functioning as a sculptural, spatial, psychological and architectural intervention. The course offers an introduction to current sound art practices and examines how sound projects are capable of altering our sense of space and time. Sonic Space necessarily touches upon experimental music and installation art as closely related to sound art. The course introduces students to basic methods of sound recording and editing software and hardware with a goal of composing sound works for space and for headphones. Readings pertaining to current developments in contemporary experimental music and sound art as well as regular writing assignments accompany the course.

Same as F10 ART 329G

Credit 3 units. Art: CDES, FAAM

F10 ART 429L Time Based Media: Art Practice (Expanded Cinema)

By focusing on experimental approaches to digital filmmaking, this course offers opportunities for independent producers that arise from hybrid media interests. The course encourages and supports a variety of cinematic concepts, from non-narrative to documentary and activist approaches. Instruction will encompass technical, conceptual, and creative skills for taking an individually conceived project from idea to fruition.

Same as F10 ART 329L

Credit 3 units. Art: CDES, FAAM, FADM

F10 ART 430D Multimedia Design: Time/Sound/Space

A studio exploration of the intersections of graphic design, experiential design, motion graphics, video, and sound. As technology advances, the line between digital and physical spaces is increasingly blurred. Through experimentation, students will investigate these spaces in multiple dimensions. In this course, students consider how experiences can be translated into a time-based media. Students will make multimedia projects that orient, educate or delight an audience. Using both digital and analog methodologies, students will capture, generate, and manipulate audiovisual material. Multi-week projects will be accompanied by workshops, exercises, and lectures with professional examples. Prerequisite: Word and Image 2 or permission of instructor.

Same as F10 ART 330D

Credit 3 units. Art: CDES, FADM

F10 ART 430I Time-Based Media: Art Practice (New Media in Art)

Exploring the intersection of art and technology, the course focuses on the phenomenon of time as an artistic medium and as the subject of work. Through the production of time-based works in a virtual realm, students learn about compositional choices, narrative and non-narrative strategies, and ethical and political responsibilities that artists and artist collectives face in the 21st century. Students gain exposure to selected software

as it pertains to their individually designed projects. Readings, writing assignments and an active participation in critiques of works by contemporary new media artists will be part of this seminar. Prerequisite: Digital Design or Digital Studio. Open to BFA students who have taken the prerequisite, and others, including minors and MFA students, with consent of instructor. Credit 3 units. Art: FAAM

F10 ART 430L Time Based Media: Art Practice (Expanded Cinema)

By focusing on experimental approaches to digital filmmaking, this course offers opportunities for independent producers arising from hybrid media interests. Expanded Cinema encourages and supports a variety of cinematic concepts, from non-narrative to documentary and activist approaches. Instruction will encompass technical, conceptual and creative skills for taking an individually conceived project from idea to fruition.

Same as F10 ART 330L

Credit 3 units. Art: CDES EN: H

F10 ART 430M Time-Based Media: Art Practice (Animation for Buildings)

In this art production course, students will create projection-mapped animations that will transform three-dimensional structures such as building exteriors and installation spaces. Through lectures, readings and discussion students will also be introduced to fundamental considerations that inform projection mapping-based creative work such as site-specificity and the impact of advertising on the perception of public space. This course will also explore technical skills for using popular 2D animation and projection mapping software.

Same as F10 ART 330M

Credit 3 units. Art: CDES, FAAM

F10 ART 432A Interaction Design: User-Centered Applications

This course is a hands-on application of interaction design for digital media (primarily browser-based). We will explore how user-interaction adds bidirectionality to communication, examine the intricacies of seemingly simple digital interactions, and familiarize ourselves with the attributes of digital device as "canvas." We will work both independently and collaboratively to design interactive solutions for a selection of communication challenges. Our focus will be to learn by doing: first-hand experience gained while undertaking real-world projects will provide the context and framework for discussion and instruction. Project work will likely be (but not required to be) accomplished with tools available in the Adobe Creative Suite: Adobe Dreamweaver, Adobe Illustrator, and Adobe Photoshop. Web browsers on both desktop computers and mobile devices will also be used extensively. No prerequisites. This course is appropriate for seniors in the communication design major.

Same as F10 ART 332A

Credit 3 units. Art: CDES, FADM

F10 ART 432B Advertising Processes

This studio course explores the strategic and conceptual processes that lead to execution of innovative advertising campaigns across mass and alternative media. A concise historical overview of advertising and its role in American society and culture creates a context for three applied assignments in key product, service and public service categories. Emphasis is placed on the processes of strategic development and

documentation followed by an exploration of a range of solutions to marketing and branding problems and opportunities. Students develop skills in persuasive messaging that include art and creative direction, copywriting, creative team building, and visual and oral presentation of concepts. The course culminates with the execution of selected concepts in printed, electronic and/or audio forms.

Credit 3 units.

F10 ART 432E Panel By Panel: Narrative Comics

Comics are a medium with a long history. The desire to tell a story through a sequence of images has existed since humans began drawing and documenting. This course teaches students to create comics, with both fiction and nonfiction narratives. Students will be introduced to historic and contemporary examples of comics over the course of the semester. Through assignments and in-class workshops, students will learn the basics of making comics, including panel transitions, the relationship between words and pictures, pitching a concept, breaking a plot down into a script, production. Assignments will span a range of narrative lengths; exploration of digital and print formats is encouraged.

Same as F10 ART 332E

Credit 3 units. Art: CDES, FADM

F10 ART 432F Design as a Catalyst for Change

With a whirlwind of social and cultural transitions emerging across the world, design is being used to address and disrupt, and prevent social challenges that arise-including topics like natural disasters and global water crises to political corruption, increased social injustices, gender inequality, and racial inequity. Designers can serve numerous roles in driving impactful engagement of these issues; their skills are often required to expand beyond artifact-based studio practices to instill greater benefit to their end users, communities, and society at-large. In this course, students will learn and practice skills of community-based social impact design. The focus of this course will emphasize "the work behind the work," as students learn how matters of empathy, equity, privilege, relationship building, and justice integrate into the communications design process when working with(in) communities. As students identify and select a social cause on which to focus, they will develop a series of print and digital works that communicate their chosen issue, pitch proposed design interventions, and visualize collaborative implementation processes. Learning modules will feature weekly readings, direct engagement with social design practitioners, design charrettes, and on-site learning, allowing students to gain greater depth and perspectives for harnessing design as a catalyst for change.

Same as F10 ART 332F

Credit 3 units. Art: CDES, CPSC, FADM

F10 ART 432G Design & Research

"Design research" can have many meanings: learning about user needs in order to improve the design of our tools and services; designing things that enable us to learn about people and our relationship with the world around us; or even researching the process and meaning of design as a practice. This course will combine studio- and seminar-style learning to broadly explore three modes of design research: exploratory, learning about people's needs in order to frame a design brief; evaluative, using sketches and prototypes to learn about and improve an idea; and speculative, creating artifacts from fictional societies in order to question our basic structures and systems. Each component will involve readings, lectures, case studies, written

reflections and exercises to be applied to an ongoing team project, enabling students to think critically about each practice while experimenting with its methods. Throughout, students will present their findings, translating research into design briefs and calls for action.

Same as F10 ART 332G

Credit 3 units. Art: CDES, CPSC, FADM

F10 ART 432H Alternative Displays

This course explores display-based interactions that are functionally unique in order to create more relevant information and experiences. Emerging technologies such as e-paper and fabrics are colliding with the internet of things and flexible screen interfaces where smart displays go beyond phones and computers. Students will consider display applications in multiple settings, functions, and scales from small devices to larger environments. Projects will be entrepreneurial and experimental with an applied perspective to explore real world challenges and opportunities. Final projects may include the intersection of 3D objects with 2D screens that interact with other devices, systems and users. All project will be presented as refined prototypes with functional coding optional.

Same as F10 ART 332H

Credit 3 units. Art: CDES, FADM

F10 ART 432I Interaction: Non-Linear Narrative

This is an advanced interaction major elective exploring the experiential and occupiable nature of the internet. Through studio projects, reading discussions, workshops, and exercises students will explore the theoretical premise that defines the physical reality of internet, investigate the structural hierarchy of how it works, and investigate new ways of developing/working with databases and navigating through complex content. Work in this course could be browser-based but may also have physical components including artifacts, books, and exhibitions.

Same as F10 ART 332I

Credit 3 units. Art: CDES, FADM

F10 ART 432J UX Research Methods of Design

User experience research can make or break a design. It is an essential way to better understand whether and how a given design meets intended needs and outcomes. This studio course explores the foundations of user research appropriate for digital and analog products. Through projects, discussions, and readings, students will build an understanding of the role of research in interface design. Students will practice research methods including interviews, surveys, contextual inquiry, peer analysis, and heat mapping. Students will create artifacts that contextualize research within the broader UX design process, including personas, journey maps, user flows, and low-fidelity prototypes. Prerequisite: Interaction Foundations, CS 131, or permission of instructor.

Same as F10 ART 332J

Credit 3 units. Art: CDES, FADM EN: H

F10 ART 433C Capstone in Design 1: Research Methods (Form and Function)

This course explores the development of compelling and refined visual vocabularies to respond to a wide variety of narrative and interactive contexts. Students hone their methods for brainstorming and visual iteration with emphasis on composition, type, color, and word and image relationships. An expansive approach making to visual work is then linked to a set of ideas about design function and user response, ultimately providing

students with tools to develop wide-ranging design artifacts that perform specific kinds of "work." Some projects are done in collaborative groups; all projects have components that students create individually. Artifacts may include books, maps, apps and presentations. Senior BFA in Communication Design majors only.

Credit 3 units. Art: CDES

F10 ART 433D Capstone in Design 1: Research Methods (Form and Interaction)

This course helps students to develop and refine methodologies for making strong and varied visual work in the context of interactive products. Specific deliverables may include apps, websites, presentations, and user research studies. Senior BFA in Communication Design majors only.

Credit 3 units. Art: CDES

F10 ART 433E Capstone in Illustration 1: Research Methods Image and Story

Required for senior majors in communication design with an emphasis in illustration. An advanced course in image-making for functional contexts. Students develop projects, which isolate issues of approach, production, distribution and market in the landscape of illustration and cartooning today. Targeted research questions are posed in response to individual student work. Successful completion of the course requires the development of and commitment to an aesthetic and creative position within the fields of illustration and cartooning. Readings address the history and culture of illustration, comics and animation. The course anticipates the work of Capstone Studio 2. Senior BFA in Communication Design majors only.

Credit 3 units. Art: CDES

F10 ART 433J Interaction Design: Advanced Applications

This course allows students to hone and apply visual skills to interaction projects, with some emphasis on technical development. Specific deliverables may include websites across platforms, apps, and other digital applications.

Credit 3 units.

F10 ART 433K The Illustrator's Sketchbook

The sketchbook has long been seen as the artist's personal playground. In this course, students will be making images that explore concepts and visual narratives — but the raw materials for these illustrations will come from exploration inside the pages of their sketchbook. This course will develop a discipline of daily drawing. In addition to sketchbook work, project assignments will include both conceptual and applied projects like illustrated book jackets and short stories. Significant time will be spent in media exploration, development of technique and professional practices.

Credit 3 units. Art: CDES

F10 ART 433L Applied Illustration

This course will explore drawing and conceptual development in the landscape of professional picture-making and illustration. Using the lens of an applied professional process, students will make work that explores and establishes an artistic viewpoint. Focused research, idea development, formal experimentation, and class critique are vital to these goals. Using this contextual practice, students will advance toward the development of an

individual voice. This course is applicable to anticipated career directions in image making, illustration, comics, picture books and visual storytelling. Prerequisite: Communication Design: Word & Image II or permission of instructor.

Credit 3 units. Art: CDES, FADM

F10 ART 434A Senior Design Capstone: Narrative Design

Students will select a subject and create a narrative book, magazine, zine, or screen-based work. Students will conduct subject research, develop content, write copy, pursue visual investigation, sequence audience interaction, and take the project to final execution. The course will emphasize coherent organization, clear communication, typographic refinement and the successful integration of word and image. Semester culminates in formal presentation and professional project review. Senior BFA in Communication Design majors only.

Credit 3 units. Art: CDES

F10 ART 434B Senior Illustration Capstone: Visual Stories

Students will spend the semester creating a long-form visual story. The source material for this story should be an existing story, song, legend, myth, historical event, book or other documented text. Using both nonfiction and fiction source materials, students will produce a single narrative in the form of an illustrated book, graphic novel/mini-comic or digital experience. The project will be expansive and cover a large range of professional practices, from visual conceptual development to final execution. Senior BFA in Communication Design majors only.

Credit 3 units. Art: CDES

F10 ART 434F Senior Design Capstone II: Interaction

This course is intended for students interested in developing an interactive capstone project. Students will select a subject and create a narrative website, app, screen-based work. Students will conduct subject research, develop content, write copy, pursue visual investigation, sequence audience interaction, and take the project to final execution. The course will emphasize coherent organization, clear communication, typographic refinement and the successful execution of interactive and experiential storytelling. Semester culminates in formal presentation and professional project review. Senior BFA in Communication Design majors only.

Credit 3 units. Art: CDES EN: H

F10 ART 435M Special Topics in Communication Design: Design for Social Impact

Designers are capable of creating transformative social change by engaging in socially conscious design practices. Throughout this course, consequently, students will learn how to utilize appropriate design research methods and tools to prioritize the needs of the end users and their local contexts. Students will conduct design research, analyze data, and discover innovative solutions to issues in the community while also working collaboratively. CET (<https://gephardt.institute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.

Credit 3 units. Art: CDES, CPSC

F10 ART 435N Big and Graphic: Making Posters with Type and Image

The poster is one of the most exciting and storied vehicles for messages and ideas. For hundreds of years, designers, illustrators, and artists have used the poster to awaken ideas, send messages, promote events, advertise products, and inspire action. In this course, students explore many different forms of large-format poster design, using both created images and expressive/experimental typography. Digital and non-digital techniques will be investigated. Each student will be able to frame course projects around their given areas of interest: design, typography, illustration, or a vibrant blend.

Credit 3 units. Art: CDES

F10 ART 435P Design for Social Impact

Designers are capable of creating transformative social change by engaging in socially conscious design practices. Throughout this course, consequently, students will learn how to utilize appropriate design research methods and tools to prioritize the needs of the end users and their local contexts. Students will conduct design research, analyze data, and discover innovative solutions to issues in the community while also working collaboratively. College of Art majors with senior standing only.

Credit 3 units. Art: CDES, FADM

F10 ART 435V Capstone in Design 1: Visual Voice

Design is a powerful tool that creates meaningful dialogue between the work and its intended audience. This exchange can profoundly impact our culture and society. This course explores the methods used by designers to create visual messages that inspire ideas, elicit emotions and encourage actions. Through class discussion and course readings we will examine the role and responsibility of the designer within our society. Students will create work that integrates their individual perspective and personal experiences supported by research, writing and design applications. Senior BFA in Communication Design majors only.

Credit 3 units. Art: CDES

F10 ART 436A Visual Journalism and Reportage Drawing

This course combines studio practice, work in the field, subject reporting and nonfiction writing to explore a rich tradition that dates to the mid-19th century. The "special artists" who reported on the American Civil War, the urban observers of the Ashcan School, and the "New Journalism" illustrators of the 1950s, '60s and '70s brought vision and force to their work as reporters. Today, the reportage tradition is being reinvigorated in online outlets and periodicals. Students produce a series of works documenting observations of contemporary people, sites and events, culminating in a zine designed for print and/or a digital slideshow with supporting text. This course provides plentiful drawing experience. Supplemented by historical material in the collections of the Modern Graphic History Library. This course is appropriate for juniors in the communication design major. (Students with an interest in visual journalism grounded in street photography and visually engaged writers may be admitted to the course by permission of instructor.) CET (<https://gephardt.institute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.

Same as F10 ART 336A

Credit 3 units. Art: CDES, FADM

F10 ART 436B Advanced Interaction Design

This course emphasizes immersive and multisensory user experiences in complex structural applications for a range of devices and contexts. Students will creatively apply advanced concepts in html, css, and javascript in the development of delightful and adaptable user experiences. Through studio projects, critiques, readings, discussions, and lectures, students will build on foundational knowledge in creative coding. They will explore new tools, languages, and processes as well as enhanced forms of user research, usability testing, and experience architecture. Prerequisites: Interaction Foundations, CS 131, or by permission from the instructor

Same as F10 ART 336B

Credit 3 units. Art: CDES, FADM

F10 ART 436N Environmental Design

This course offers an introduction to the process and problem-solving methods required to conceptualize and develop an environmental graphics project. Students will gain an understanding of the relationship between a concept on screen and that idea realized at full scale and its impact in the built environment. Scale drawing, architectural documents, fabrication methods and materials will all be explored. Projects will include wayfinding and ADA signage, exhibit design and architectural graphics. Students will communicate their concepts through sketches, computer drawings, models and mock-ups.

Same as F10 ART 336N

Credit 3 units. Art: CDES

F10 ART 436P Conditional Design

New technology changes the way we receive, consume, and interact with information. Making work that can adapt to its context, environment, and user's preferences is a vital skill for artists and designers. This studio course explores the design and development of adaptive design systems to generate customizable and variable outputs. Through projects, readings, presentations, and discussions, students explore the use of procedural process, logic, and variable input to generate forms and experiences in both physical and digital space. Projects will cover traditional and digital mediums ranging from generative books and posters to interactive websites and performative experiences. Prerequisite: Communication Design: Interaction Foundations or Introduction to Computer Science.

Same as F10 ART 336P

Credit 3 units. Art: CDES, FADM

F10 ART 436Q Illustration as Practice

This major studio elective focuses on the professional practice of conceptual illustration while enabling students to cultivate individual voice. We practice the methodology of creating visual metaphors, visualizing concise ideas, and working under short deadlines. Projects in this course cover a range of image making in the professional illustration world today, including editorial, portraiture, lettering, and lifestyle, as well as art direction. Students continue to develop their portfolio in the context of these projects and to learn about best practices in communication, pricing, and workflow. Students will be assessed on their projects in a final critique. Prerequisites: Word & Image II and Typography II.

Same as F10 ART 336Q

Credit 3 units. Art: CDES, FADM

F10 ART 436R Typeface Design

Typeface design deals with language, culture, technology, visual perception, and systems design. Students will explore these areas in addition to the basics of typeface design.

They will define clear purposes and outcomes for their work including research, designing letterforms and spacing, and creating functional fonts with professional software. The course introduces concepts, technologies, and current issues in the field. We will focus on text and display typefaces for the Latin script; however, we will introduce a range of historical models and explore the cultural impacts typefaces can have. Software used is Mac only, lab computers will be available if student does not have access to a Mac laptop. Prerequisites: Digital Studio and Type 1

Same as F10 ART 336R

Credit 3 units. Art: CDES, FADM

F10 ART 437M Communication Design: Visual Voice

Design is a powerful tool that creates meaningful dialogue between the work and its intended audience. This exchange can profoundly affect our culture and society. This course explores the methods used by designers to create visual messages that inspire ideas, elicit emotions, and encourage actions. Through class discussion and course readings, we will examine the role and responsibility of the designer within our society. Students will create work that integrates their individual perspective and personal experiences supported by research, writing, and design applications.

Credit 3 units. Art: CDES, FADM

F10 ART 437N Type as Image: Experiments on Press

Working in the Kranzberg Studio for the Illustrated Book, students will use printing to explore the expressive possibilities of typography both as language and as image/illustration. Graphic shape, line, tone, color and type can all be used as raw materials in the construction of messages, stories and ideas. In this course, students will respond to prompts and create self-generated expressive and experimental projects that explore the language of design in a tactile form. Students will be introduced to both basic and advanced typographic knowledge as they ground their work in the visual expression of language. Prerequisite: Communication Design: Word & Image II.

Credit 3 units. Art: CDES, FADM

F10 ART 437Q Semiotics Studio: Designing Signs and Symbols

This course is about shaping meaning. Students learn the fundamentals of semiotic theory and its application to design practice. Students create signs and symbols for public spaces as well as experimental readings and social interventions. Through exercises, projects, and class discussions, students explore the world of meaning-making including: categories of signs, the possibilities of interpretation, and how signs work to normalize cultural practices and perceptions of truth. Prereq: Communication Design: Word & Image II

Credit 3 units. Art: CDES, FADM

F10 ART 4380 Voice

Propaganda and persuasion use different means to influence our perception of causes or positions. This course explores the strategies and tactics used by visual communicators to create work that convinces viewers to buy, believe, act, etc. These messages profoundly influence our culture and society. With this in mind, course reading and class discussion provide a platform

for debate and discussion of the role the designer plays and the attendant responsibility. Students create work that integrates research, writing and design. All projects present a specific point of view on topics that are relevant to them. Prerequisite: Type 2. This course is appropriate for juniors in the communication design major.
Credit 3 units.

F10 ART 438Q Type in Action: Multimedia Typography

Typography is a medium that can carry meaningful and complex communicative weight, and it affords designers with endless opportunities to engage others and to invite interpretation. In this form-making course rooted in typography, students will seek to manipulate and enact letterforms to create projects that communicate narrative in new and inventive ways -- breaking rules, scaling things up, using a range of materials, and making things move. Projects will span a range of formats, with the course serving as a catalyst for investigation of the myriad ways that letterforms, typography, and language can function as a provocative, interaction, platform, installation, image, and more. An openness to materiality, play, and experimentation is essential. Prerequisites: Digital Design, Typography I+II, or permission of instructor.
Same as F10 ART 338Q
Credit 3 units. Art: CDES, FADM EN: H

F10 ART 438V The Narrative Image: Form/Structure/Function

All human cultures tell stories, and these narratives fulfill multiple roles in establishing meaning for a society. This course will examine the ways that a visual narrative can be approached. How can an image-based story be structured? What roles can point of view play? What are stylistic tropes for narratives? How can ideas be implied? In what ways can we refresh and retell well-known narratives? Students may elect to work in multiple media and in single or sequential narratives. A self-directed final project will be required.
Same as F10 ART 338V
Credit 3 units. Art: CDES, FADM

F10 ART 438W Illustration for Games

How must a drawing be constructed, both formally and narratively, to function inside of a game? This course, which is intended for image-makers, will concentrate on the assets and aesthetics of game design. Students will engage the subjects of character development, 8-bit graphics, user interface, simple animations, and background design. Beginning with foundational questions of how and why we play games, students will create their own images, which will be built upon exploratory research into existing games and frameworks. Prerequisites: Word & Image 1 & 2, Digital Studio.
Same as F10 ART 338W
Credit 3 units. Art: CDES, FADM

F10 ART 438X Semiotics Studio: Designing Signs and Symbols

This course is about shaping meaning. Students learn the fundamentals of semiotic theory and its application to design practice. Students create signs and symbols for public spaces as well as experimental readings and social interventions. Through exercises, projects, and class discussions, students explore the world of meaning-making, including categories

of signs, the possibilities of interpretation, and how signs work to normalize cultural practices and perceptions of truth. Prerequisite: Communication Design: Word & Image II or permission of instructor.
Same as F10 ART 338X
Credit 3 units. Art: CDES, FADM

F10 ART 438Y Programming Design

In what unconscious ways do your design tools influence your work? Would your work look different if you made all of the tools used to create it? What will design look like when machine learning automates many design tasks? How will you adapt when your software changes? What does design look like when you are building systems to create outcomes? How do you design for different contexts at the same time from the same content? What would computer-aided design iteration look like? These are all questions that students may confront in their careers as designers. This course will explore these questions through in-class demos, solo and group projects, readings, and talks from practitioners in the field. The class will teach students the Python programming language, which will be used in the free DrawBot application for MacOS and with the PageBot code library to create design applications and tools. Students will learn how to think systematically about design, how to work in teams, rapid iteration using the computer, sketching, the design of software applications, how to translate digital experiences to analog (and vice versa), and how to learn from failure. The course assumes no prior experience with programming and no knowledge of Python. Open to junior and senior students, with preference given to communication design majors and minors. This course is experimental and team-driven. Students must be fundamentally curious and willing community participants who are capable of self-learning and tolerant of failure. Prerequisites: Word & Image 1, Typography 1, and Digital Studio.
Same as F10 ART 338Y
Credit 3 units. Art: CDES, FADM

F10 ART 461 Capstone Studio I

Required for majors in painting, photography, printmaking, and sculpture, beginning with the class of 2015. This is an advanced course in studio art conceptualization and production. Students develop creative concepts, objects and gestures; successful completion of the course entails the development of, and commitment to, an artistic position, evidenced by studio production, presentation and writing. Responsibilities include preparation of drawings, models, maquettes, and other documentation. This course anticipates the work of Capstone Studio II, which culminates in a senior exhibition. This course includes practice, critique, and occasional museum/gallery visits. Senior BFA in Art majors only.
Credit 3 units.

F10 ART 462 Capstone Studio II

Continuation of Capstone Studio I. Required for majors in painting, photography, printmaking, and sculpture, beginning with the class of 2015. Course participants design, prepare, and complete a body of materially and conceptually resolved work for the spring Capstone exhibition. The course fosters an intellectual dialogue among seniors making the transition from studio to artist. Completion of a body of work is accompanied by intensive critical analysis of the ideas and methods from which it arises. Course includes practice, critique, and occasional museum/gallery visits. Senior BFA in Art majors only.
Credit 3 units. Art: FAAM EN: H

F10 ART 471C Printing Propaganda: The Letterpress Poster

This course takes as its focus the poster and its powerful call to action. Students will research the history of propaganda posters made by both, governments and their critics, including first-hand use of the World War I poster collection in Olin Library, and will develop understanding of the rich ground created by the mix of text and image. With this historical and theoretical perspective, students will embark on printing a series of posters in the Book Studio utilizing the larger letterpresses and the unique collection of wood types. A variety of printing strategies will be explored including monoprint, photopolymer plate, pronto plate, stencil, and alternative letterpress print techniques. Skills will be developed in the fundamentals of large format typography, copywriting, photography, illustration, and printing.

Credit 3 units. Art: CDES

F10 ART 472B Content to Cover: the Design of Books

This studio course considers the design of books in their totality, from the smallest typographic details of text pages, to designing the page grid, and the selection of images, type, materials, and color of the binding and cover. Students will produce two books from texts assigned to them. The first will be a text-based book of prose; the second, larger project, will include body text, images, captions, footnotes. Beginning with a thorough discussion of the landscape of the two-page spread, students will complete a short research project based upon a complex illustrated book in the library. Discussion of print production and binding options in industry will be enhanced by a visit to a local offset printer and to Olin Library Special Collections. Students will deepen their skill base in typographic applications, the use of InDesign as a multipage document tool, a range of imaging techniques offered in the Book Studio, and bookbinding technique, as well as building their design criticism vocabulary.

Credit 3 units. Art: CDES

F10 ART 472C Printing Propaganda: The Letterpress Poster

This course takes as its focus the poster and its powerful call to action. Students will research the history of propaganda posters made by both governments and their critics via the the World War I poster collection in Olin Library. They will also develop an understanding of the rich ground created by the mix of text and image. With this historical and theoretical perspective, students will embark on printing a series of posters in the Book Studio using the larger letterpresses and the unique collection of wood types. A variety of printing strategies will be explored, including monoprint, photopolymer plate, pronto plate, stencil, and alternative letterpress print techniques. Skills will be developed in the fundamentals of large format typography, copywriting, photography, illustration, and printing.

Same as F10 ART 372C

Credit 3 units. Art: CDES, FADM

F10 ART 481B The Book as Lens: Photography and Books

This course will examine the function of the photograph in the sequential book format, with an emphasis on narrative development. The semester work will include researching historical photo books; experimentation with found photography; making an original photo series; alternative book structures; designing pages with photos and text; and alternative printmaking techniques on a wide variety of materials. This course is for designers, photographers, and anyone interested in the way photo books function.

Credit 3 units. Art: CDES EN: H

F20 Art

F20 ART 108A You Are Here: Engaging St. Louis's Racial History Through Site + Story

By acknowledging the pressures and pains of our political moment -- a time of crisis for many in our city and nation, but also a long-awaited reckoning with issues of social justice -- this course engages the complex history of race and racial injustice in St. Louis through site- and story-based exploration. It offers an opportunity to learn about the city's landscape, history, systems, culture, form and identity while wrestling with fundamental questions of power, positionality and perspective. "You Are Here" references orientation, discovery, otherness and place, and it serves as a provocation for reconsidering how designers, artists and architects engage St. Louis. This course may count toward the minor in Creative Practice for Social Change if bundled with "Engaging Community: Understanding the Basics." Priority will be given to first-year Sam Fox students.

Credit 1.5 units. Art: CPSC EN: H

F20 ART 108B Engaging Community: Understanding the Basics

What does it mean to engage in community as a creative practitioner? Community engagement must be grounded in authentic relationship building and an ability to understand and act within the historic context and systems that impact communities. We will practice the skills of listening, observation, reflection, and improvisation. We will cultivate mindsets that focus on community assets and self-determination. Workshops will teach facilitation and power analysis, with the intention of upending the power dynamics between community and creators. This course pairs with "Engaging St. Louis: Sites, Stories, and the Struggle for Racial Justice" [working title]. It may count toward the minor in Creative Practice for Social Change if bundled with "You Are Here: St. Louis' Racial History Through Sites and Stories."

Same as F20 ART 308B

Credit 1.5 units. Art: CPSC

F20 ART 111 Painting

Same as F20 211, 311, 411. First-year students (only) register for F20 111. Introduction to painting processes and materials. While there is emphasis on oil painting, students are also introduced to watercolor and acrylic paints and a wide variety of painting surfaces. Subject matter is varied, beginning with still-life material and ending with direct painting from the model. Technical skills and content are dealt with at the individual student's level.

Credit 3 units. Art: FAAM EN: H

F20 ART 111T The Poetics of Image-Making: People, Place & Space

This painting elective course examines the poetics of image-making, with a focus on the representation of people, place, and space, both observed and invented. Students learn the practice of painting and develop works through fundamental exercises as well as through the shared exploration of painting

processes. Work outside of class for the beginner is project-based; advanced students produce an independent body of work. Critical assessment of work is complemented by faculty and peer discussions, readings, and field study. Required text: "The Poetics of Space" by Gaston Bachelard.
Credit 3 units. Art: FAAM

F20 ART 112 Painting

Same as F20 212, 312, 412. First-year students (only) register for F20 112. This course is an introduction to oil painting with an emphasis on the principles of color, construction and paint handling. Students will explore the possibilities of representational painting as applied to still-life, interiors, landscape and the human figure. The course is designed especially for beginning painters but can accommodate painters at all levels of proficiency.
Credit 3 units. Art: FAAM EN: H

F20 ART 112P Painting: The Painted Figure

This studio course is an introduction to the practice of painting, with an emphasis on the pictorial representation of the human figure. Instruction will encompass a range of technical, conceptual and creative skills to be used for developing projects. In-class projects will include working from the live model. Students will be encouraged to consider traditional and alternative forms of painting. Lectures, critical essays, and analysis of historical precedents and contemporary practitioners will support students in their course work. No prerequisites.
Same as F20 ART 312P
Credit 3 units. Art: FAAM EN: H

F20 ART 113F Sculpture: Foundry

Same as F20 213F, 313F, 413F - First-year students (only) register for F20 113F. The focus of this course is to introduce students to the basic principles of bronze and aluminum casting according to the lost wax method. Students will learn mold making, direct organic burnout, ceramic shell investment, metal chasing, and patination in order to create finished sculpture. In addition to metal casting, students will use other materials such as plaster, resin, steel, wood, rubber, plastic, and foam to create a mixed media project that explores a specific idea or theme. Additional work outside the regularly scheduled class time is required.
Credit 3 units. Art: FAAM EN: H

F20 ART 113G Sculpture: Wood

Same as F20 213G, 313G, 413G - First-year students (only) register for F20 113G. The focus of this course is to introduce students to the basic principles of wood sculpture with an emphasis on furniture making.
Credit 3 units. Art: FAAM EN: H

F20 ART 113I Sculpture: Metal Fabrication

Same as F20 113I, F20 213I, and F20 413I; juniors (only) register for F20 313I. Metal is the backbone of our modern world, and it is a viable medium for self-expression. It can be employed as structure or as surface, it can be plastically deformed to create compound shapes, and it can be connected to most any other material. Students will explore the creative potential of this material in the fabrication of sculptural forms. Students learn to weld using both gas and electric arc machines as well as the safe operation of drilling, grinding, and finishing tools.
Same as F20 ART 313I

Credit 3 units. Art: FAAM EN: H

F20 ART 113Q Compositions in Clay

In this course, students will broaden their understanding of clay as a viable medium of visual expression and three-dimensional exploration. Students will learn basic hand-building techniques to create sculptural constructions, discover the practical applications of wheel throwing through form and function, and explore ceramic tools and equipment to create installation projects. Each student's skill level will be considered, and projects will be adjusted accordingly. Emphasis will be placed on critical assessment and articulation of material.
Same as F20 ART 313Q
Credit 3 units. Art: FAAM

F20 ART 114F Sculpture: Foundry

Same as F20 114F, 214F, 414F - Sophomores (only) register for F20 114F. The focus of this course is to introduce students to the basic principles of bronze and aluminum casting according to the lost wax method. Students will learn mold making, direct organic burnout, ceramic shell investment, metal chasing, and patination in order to create finished sculpture. In addition to metal casting, students will use other materials such as plaster, resin, steel, wood, rubber, plastic, and foam to create a mixed media project that explores a specific idea or theme. Additional work outside the regularly scheduled class time is required.

F20 ART 114G Sculpture: Wood

Same as F20 214G, 314G, 414G - First-year students (only) register for F20 114G. The focus of this course is to introduce students to the basic principles of wood sculpture with an emphasis on furniture making.
Credit 3 units. EN: H

F20 ART 114H Sculpture: Blacksmithing

Same as F20 114H, 214H, 413H - Juniors (only) register for F20 314H. This course is an introduction to Blacksmithing materials, tools, and techniques. Students will explore the fundamental techniques of hand-forged metal. Metal can be manipulated as a plastic material and offers enormous possibilities for three-dimensional form. In this class we will explore these possibilities and expand our sculptural vocabulary.
Same as F20 ART 314H
Credit 3 units. Art: FAAM EN: H

F20 ART 114I Sculpture: Metal Fabrication

Same as F20 114I, 214I, 413I - Juniors (only) register for F20 314I. Metal is the backbone of our modern world and a viable medium for self-expression. It can be employed as structure or as surface, it can be plastically deformed to create compound shapes or it can be connected to most any other material. Students will explore the creative potential of this material in the fabrication of sculptural forms. Students learn to weld using both gas and electric arc machines as well as the safe operation of drilling, grinding and finishing tools.

F20 ART 115 Printmaking

Same as F20 115, F20 215, and F20 415; juniors (only) register for F20 315. This course is a survey of printmaking that covers basic processes in intaglio, lithography, relief, and monotype. Emphasis is on mixed media and experimentation with a foundation in traditional, historical, and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests. Same as F20 ART 315
Credit 3 units. Art: FAAM EN: H

F20 ART 115F Printmaking: Call and Response

In music, a call and response is a succession of two distinct phrases usually written in different parts of the music, where the second phrase is heard as a direct commentary on or in response to the first. Printmaking: Call and Response is a survey of printmaking with a foundation in traditional, historical and philosophical aspects of printmaking that covers basic processes in intaglio, lithography, relief and monotype. Students are encouraged to work in response to the history of the print with an emphasis on mixed media and experimentation. This class counts for the minor in art.
Credit 3 units. Art: FAAM

F20 ART 116 Printmaking

Same as F20 116, F20 216, and F20 416; juniors (only) register for F20 316. This course is a survey of printmaking that covers basic processes in intaglio, lithography, relief, and monotype. Emphasis is on mixed media and experimentation with a foundation in traditional, historical, and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests. Same as F20 ART 316
Credit 3 units. Art: FAAM EN: H

F20 ART 116T Printmaking for Architecture and Art Students

This course will focus on monotype mixed media printmaking using both a press and digital print processes. The course is designed to be responsive to current issues with a focus on contemporary printmaking practices and various ideas about dissemination in the age of social media. The course will include an examination of historical examples of diverse global practices; prints made in periods of uncertainty, disruption, war, and disaster; and speculative projects by architects such as Superstudio, Zaha Hadid Architects and Archigram. Students will be expected to create a series of work with a conceptual framework developing a personal visual language. Same as F20 ART 316T
Credit 3 units. Art: FAAM EN: H

F20 ART 116U Printmaking: Print Installation, Multiples, and Site Specificity

This course explores a range of basic techniques-silkscreen, block printing, and risograph, for example-to create immersive installations. Students will orient their site-sensitive investigations to place through history, context, and materials. Conventional and unconventional installation spaces will be used, both on campus and off, to experiment. The course will introduce planning techniques and approaches to site analysis. Students will be encouraged to incorporate other media within their installations, especially as they relate to other coursework they

are currently taking within or outside of studio art. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests. This class counts toward the Minor in Art. No prerequisites
Same as F20 ART 316U
Credit 3 units. Art: FAAM

F20 ART 117M Architecture Through the Photographic Lens

Same as F20 117M, F20 217M, and F20 417M; juniors (only) register for F20 317M. Photography offers ways of seeing and representing the world around us. This course provides technical and conceptual frameworks for understanding architectural space as seen through the camera. Topics include the building as site, landscape as context, and the architectural model as a representation tool. Students are introduced to a wide range of artists and architects, which helps them to build a unique camera language to support their individual projects. Students will learn DSLR camera basics, fundamentals of Photoshop, digital printing techniques, and studio lighting for documenting architectural models. The course assumes no prior experience with digital imaging technologies or materials. Digital camera required. Same as F20 ART 317M
Credit 3 units. Art: FAAM

F20 ART 117N Contemporary Portraiture

Same as F20 117N, F20 217N, and F20 417N; juniors (only) register for F20 317N. Historically, portraits were painted of the royal or wealthy to document an accurate likeness and to display status and power. However, with the advent of photography, artists were freed to develop interpretations in style, process, and medium. With subjects such as family, friends, strangers, celebrities, and the self, the portrait has been used to reflect culture, identity, and the relationship between the artist and the sitter. Issues of race, sexuality, gender, vanity, and status continue to be relevant to contemporary practice. This is primarily a drawing class; students combine the study of contemporary portrait artists with a studio practice that encourages the development of a unique voice. Students consider how pose, gesture, lighting, and other factors work together to support their intentions. Initial assignment prompts progress to guided independent pursuits. Students will be encouraged to experiment with image, materials, and processes. Live models will be used as well as other source material. Same as F20 ART 317N
Credit 3 units. Art: FAAM

F20 ART 117T Discourses in Contemporary Photography

This seminar course explores dialogs animating contemporary fine art photography from the 1960s to the present. Course lectures will be organized thematically around key ideas informing contemporary photography practice, including, but not limited to: changing technologies, surveillance, performance, social engagement, gender, race, and sexuality. Students will respond to lectures and class discussions through research presentations, visual assignments, and written responses. Same as F20 ART 317T
Credit 3 units. Art: FAAM

F20 ART 1184 Digital Photo II/Digital Imaging

Only undergraduates register for F20 1184. Graduate students register for F20 4184. This course will address the use of technology and pixel-based software for generating, manipulating, and compositing still digital images. The course

will examine the visual language and poetics of additive lens-based images while providing students with knowledge of software tools, input devices, production techniques, color management strategies, and output devices.

Credit 3 units. Art: FAAM EN: H

F20 ART 1185 Kinetic Image/Digital Video

Only undergraduates register for F20 1185. Graduate students register for F20 4185. This introductory level course will address the use of digital technology and software for capturing, editing, and producing moving images. The course will examine the visual language and poetics of moving images while providing students with foundation knowledge of camera operations, production storyboarding, software tools, and presentation strategies. The course assumes no prior knowledge or experience with kinetic imaging technologies or software.

Credit 3 units. Art: FAAM EN: H

F20 ART 1186 Black-and-White Photography

Only graduate students register for F20 4186. Undergraduate students register for F20 1186. This course provides an introduction to the fundamentals of black and white photography. There is emphasis on the control of film, paper, and black-and-white photographic processes in the classical fine arts tradition. Topics may include portrait, landscape, street photography, the figure, and contemporary issues in photography.

Same as F20 ART 4186

Credit 3 units. Art: FAAM EN: H

F20 ART 1187 Black-and-White Photography II

Only undergraduates register for F20 1187. Graduate students register for F20 4187. Course adds to the experience of F20 1186 Black-and-White Photography. Students investigate phenomena relative to the camera and photography. Students develop the vision necessary to take intelligent and articulate photographs, as well as establish the notion of high craft in terms of the negative and the print. Topics may include portrait, landscape, street photography, the figure, and the photo story.

Credit 3 units. Art: FAAM

F20 ART 119 Ceramics

Same as F20 219, 319, 419 - First-year students (only) register for F20 119. An introduction to the design and making of functional pottery as well as sculptural objects. Students learn basic forming processes of the wheel, coil and slab construction. While the emphasis is on high-fired stoneware, students will be introduced to Raku and soda firing. Content and advanced processes and skills are encouraged according to the individual's level.

Credit 3 units. Art: FAAM EN: H

F20 ART 120 Ceramics

Same as F20 120, F20 220, and F20 420; juniors (only) register for F20 320. This course is an introduction to the design and making of functional pottery as well as sculptural objects. Students learn basic forming processes of wheel, coil, and slab construction. Although the emphasis is on high-fired stoneware, students will be introduced to raku and soda firing. Content and advanced processes and skills are encouraged according to the individual student's level.

Same as F20 ART 320

Credit 3 units. Art: FAAM EN: H

F20 ART 120J Ceramics: Introduction to Hand-Building

This course introduces students to a wide range of ceramic hand-building techniques such as coiling, pinching and slab building. While establishing a strong foundation of skills, students will also gain a deeper understanding of clay as a means for expression of thoughts and ideas. Throughout the course, students will be encouraged to explore and develop their own personal language within the medium.

Same as F20 ART 320J

Credit 3 units. Art: FAAM

F20 ART 120K Ceramics: Molds and Multiples

This course explores the fundamentals of mold-making for ceramics. A variety of techniques from ancient to present day methods will be employed. Students will examine various implementations of molds and their ensuing possibilities, whether for artistic or design-oriented work. Students will produce individual serial projects in which they incorporate the principals of duplication and copy.

Same as F20 ART 320K

Credit 3 units. Art: FAAM

F20 ART 120L Ceramics: Processes and Practices

This course is a spectrum of ceramic processes using clay, plaster, and glazes to understand and explore techniques of making. Use clay to learn hand-building processes such as soft slab and hard slab, coil building, and hollow-out method to explore material differences of making forms. Glaze properties and chemistry will lightly be explored to understand the different stages of clay to ceramic and the firing processes in oxidation and reduction. Emphasis will be placed on mold-making for exploring repetition, scale, and balance with units to comprehend structure and multiples of building components in clay. Discussion and presentations will focus on the history and traditions of ceramics, contrasted with contemporary making in clay. Each student's skill level will be considered and projects will be adjusted accordingly. Emphasis will be placed on critical assessment and articulation of material.

Credit 3 units. Art: FAAM

F20 ART 125 St. Louis and the Documentary Image

From magazines to maps to documentary movies and TV, we look to pictures to tell us the truth. But no image is ever completely objective; every visual reflection of the real world is mediated by technology, culture, politics, and memory. How do we-as viewers, as creators, as people-sort out the complicated claims pictures make on the world around us? Drawing on collaborations between four areas in two schools-Visual Arts, English, American Culture Studies, Film and Media Studies-this class will introduce students to theories and practices of visual nonfiction within the city of Saint Louis. Through immersive, site-specific course units focused on a variety of approaches to visual nonfiction in different media, students will engage with the tumultuous history, material culture, and landscapes of St. Louis. The course will introduce first-year students both to their city and their university, preparing them to explore existing coursework in Arts & Sciences and the Sam Fox School. This course is for first-year (non-transfer) students only. Students who are not first year students will be unenrolled from this course.

Same as I60 BEYOND 125

F20 ART 125I Making Comics

Same as F20 125I, 225I, 425I - Juniors (only) register for F20 325I. From hieroglyphics to newspapers, drawn pictures in sequence have told stories for thousands of years. This course is an introduction to writing and drawing short form comics. In readings and discussion, students will explore a wide variety of genres and visual approaches to comics. Through exercises and assignments students will learn how to make clear and evocative comics. All skill levels of drawing experience are acceptable. Same as F20 ART 325I
Credit 3 units. Art: FADM

F20 ART 127A History of Photography

Same as F20 227A, 327A, 427A - First-year students (only) register for F20 127A. Survey of the history of photography and a look at the medium from the camera obscura to contemporary developments. Social and technological developments examined in terms of their influences on the medium.
Credit 3 units. Art: FAAM EN: H

F20 ART 128A History of Photography

Same as F20 228A, 328A, 428A - First-year students (only) register for F20 128A. survey of the history of photography and a look at the medium from the camera obscura to contemporary developments. Social and technological developments examined in terms of their influence on the medium.
Credit 3 units. Art: FAAM EN: H

F20 ART 128C Documentary Film

This course investigates techniques of powerful nonfiction filmic storytelling that symbiotically merges visual and literary narrative devices. We will explore the organic process of research, interaction and craft to construct three short films. Students will be encouraged to go beyond apparent subject matter to inquire into deeper/underlying content that touches on timelessness and global/human topics. Within set parameters, students choose their own filmic topics and structures. Graduate and undergraduate students can form teams or work independently as their own producer, writer, director, cinematographer, editor and sound recordist. No previous experience required. Same as F20 ART 328C
Credit 3 units. Art: FAAM

F20 ART 128D Experimental Photography: Cameraless to Polaroid, Form to Content

These days, everyone is a photographer, right? But how does that image snapped with your smartphone arrive on your screen? As technology marches forward, we have images literally at our fingertips, yet the actual process of producing the picture is, ironically, more elusive. In this course, we will dive into experimental processes and examine how physically making the picture can affect the content of that picture. As you craft images, ideas become tied to process and suggest new directions, strategies and subjects. We will begin with cameraless techniques, such as the photogram and cyanotype; we will investigate the principle of the camera obscura; we will test out rudimentary cameras such as the pinhole and disposable models; and we will experiment with printing techniques such as Polaroid and Xerox transfer, examining artists using these various techniques along the way. As we move through the semester, students will learn the various ways that light can create images, and they will begin to find their own particular voice within these mechanizations and create original work.

Same as F20 ART 328D
Credit 3 units. Art: FAAM

F20 ART 128X Color Systems

This course is a sustained investigation of color. Students study how color is affected by light, by space, by arrangement, by culture, and by commerce. The course aims to deepen the understanding of color's complexity and pervasiveness as a fundamental element of shared visual culture. The course develops both technical and conceptual skills to aid in visual translation. In addition to color-specific inquiry, another goal of this course is to expand ideas of research and enable students to integrate various methods of acquiring knowledge into their art and design practice. Throughout the course, students discuss various processes of making/constructing, the connection between color/form/concept, and strategies for idea generation and brainstorming. The course allows for much individual freedom and flexibility within varying project parameters. Same as F20 ART 328X
Credit 3 units. Art: FAAM, FADM

F20 ART 130B The Art of Medicine

This interdisciplinary, cross-school course at the intersection of history, visual culture and the visual arts includes a roster of notable speakers and offers students a singular encounter with western medicine from ancient times to the present day. In tandem with the history of medicine, the course examines the capacity of the arts to frame medical practice and to raise questions and influence perceptions, both positively and negatively, of medical advancements. This course is for first-year (non-transfer) students only. Same as I60 BEYOND 130

F20 ART 133 Basic Illustration

Same as F20 233, 333, 433 - First-year students (only) register for F20 133. An introduction to concepts, media techniques, and problem-solving approaches within contemporary illustration. Emphasis on individual solutions to the problems presented. Students can work by hand or on the computer. Traditional drawing skills not required.
Credit 3 units. Art: FADM EN: H

F20 ART 134 Basic Illustration

Same as F20 134, 234, 434. Juniors (only) register for F20 334. An introduction to the concepts, media and problem-solving methods of contemporary illustration. Projects involve image development for applications such as book illustration, iconic/logo illustration, product development and information graphics. Students can work by hand or on the computer. Traditional drawing skills not required. Same as F20 ART 334
Credit 3 units. Art: FADM EN: H

F20 ART 134A Advanced Drawing: Affective Stills and the Moving Image

Marked is an open-ended advanced drawing course that will focus on expanded definitions and mark-making practices. This course will explore, contextualize and analyze a wide variety of drawing methods that relate to image-making, spatial and situated practices, and ephemeral, time-based media. Through projects, readings, lectures and individual research,

students will gain a broader understanding of drawing and its various definitions and approaches in addition to its rich set of histories and contemporary applications. This course will be peppered with lively discussions, field trips, and lectures by artists, architects, and designers. Self-directed projects will be reviewed and discussed critically and aesthetically in relation to the intent of the artist. A highly experimental and even collaborative approach to drawing will be strongly encouraged. Prerequisite: Drawing (F10 101A or 102A).

Same as F20 ART 334A
Credit 3 units. Art: FAAM

F20 ART 135G The Licensed Image: Development and Distribution

Same as F20 135G, 235G, 435G - Juniors (only) register for F20 335G. An introduction to the concept and image development, design, market distribution and methodology for creating licensed products. Projects will involve product idea development, market and the development of image-driven products using images and design. Traditional drawing skills not required. Students can work by hand or on the computer. Ideal course for students whose work focuses on images and those interested in developing visual products, including business students.

Same as F20 ART 335G
Credit 3 units. Art: FADM EN: H

F20 ART 135I Communication Design I

Same as F20 135I, 235I, 435I - Juniors (only) register for F20 335I. An introduction to the field of communication design, combining principles from the fields of graphic design, advertising and illustration/image construction. Through studio exercises and lectures, students will be exposed to the broad range of conceptual, aesthetic and strategic issues inherent to the field. Additionally, the similarities, differences and points of overlap within the three areas will be discussed. An excellent introduction to the subject as a tool for business and marketing.

Same as F20 ART 335I
Credit 3 units. Art: FADM EN: H

F20 ART 135J Introduction to Animating in Three Dimensions

Same as F20 235J, 335J, 435J - First-year students (only) register for F20 135J. This course explores 3D animation in the short film format. Students move from an overview of the process and visual vocabulary of animation to defining filmic ideas, the visual gag, and character-driven content. Cinematic shot design, timing, character design, and sound design are studied for determining the most effective means of communicating desired content. Hand-drawn sketches are imported into a 3D animation program as the basis to model and animate characters, create settings, and add special effects. An animated sequence is produced to show evidence of personal inquiry and level of expertise. Prerequisites: F10 101 (Drawing) or equivalent or permission of instructor.

Credit 3 units. Art: FADM EN: H

F20 ART 135K Animated Worlds

This course explores traditional and experimental 3D animation in a short film format. Beginning students will learn polygon and NURBS modeling, texturing, lighting, rigging props, and characters in Maya. A storyboard, animatic and final rendered short will be developed for two major projects. Advanced skill sets include development, character design, 3D modeling,

rigging, visual effects, sound, and rendering. No prerequisites or previous experience required. This course can be taken multiple times at either the beginner or advanced level, and it is open to students of all levels across the university. Graduate and advanced students can build independent projects with permission of the instructor.

Same as F20 ART 335K
Credit 3 units. Art: FADM

F20 ART 135O Drawing as Thinking

Same as F20 235O, 335O, 435O. First-year students (only) register for F20 135O. This studio course explores symbolic drawing as a practical tool for learning and communication, used as it has been for millennia for the acquisition and transmission of knowledge, for idea generation and formation, and for visual storytelling. Students will observe and describe phenomena, conceive systems, construct diagrams, design processes, and convey instructions, all using drawing as an aid to discovery, thought and communication. Tools and media may include pencils, brushes, wooden sticks, markers, painter's tape, laser pointers, and amateur surveying software, etc. In some cases, digital tools will be used to produce and present student projects. The course will include relevant readings and discussions. Throughout we will distinguish between symbolic uses of drawing and illusionistic ones, focusing on the former.

Credit 3 units.

F20 ART 136I Advertising I

Same as F20 136I, F20 236I, and F20 436I; juniors (only) register for F20 336I. This hybrid studio/lecture course introduces students to the field of advertising by defining its role in American culture and economy and by engaging students, hands-on, in the processes of professional practice. The course consists of presentation and discussion of contemporary work, and it provides students with opportunities to create advertising campaigns across broad product and service categories and a range of media. Major emphasis is placed upon the creative disciplines of advertising design and copywriting. Experience in copywriting and design is not necessary.

Same as F20 ART 336I
Credit 3 units. Art: FADM EN: H

F20 ART 136J Advertising II

Same as F20 136J, 236J, 436J. Juniors (only) register for F20 336J. F20 ART 136K Advertising in the Digital Age

Same as F20 136K, F20 236K, and F20 436K; juniors (only) register for F20 336K. This course examines advertising as a powerful force in contemporary culture, and it explores the increasing ways consumers experience branded communication through digital technologies. We will identify and study "game changing" developments in advertising communications; changing dynamics in audience behavior, including the ability

to "opt out"; and the advertising industry's adaptation to digital technologies. Finally, we'll speculate on the future of advertising in an era of mobile computing. Advertising in the Digital Age builds on The History of Advertising. It is recommended, but not required, that students have completed the first course before enrolling in this one.

Same as F20 ART 3363

Credit 3 units. Art: FADM

F20 ART 1364 Advertising in the Digital Age

Same as F20 2364, 3364, 4364. First-year students (only) register for F20 1364. This course examines advertising as a powerful force in contemporary culture, and explores the increasing ways consumers experience branded communication through digital technologies. We will identify and study "game changing" developments in advertising communications; changing dynamics in audience behavior — including the ability to "opt out"; the advertising industry's adaptation to digital technologies; and finally we'll speculate on the future of advertising in an era of mobile computing. F20 ART 136G The Licensed Image: Development and Distribution

Same as F20 236G, 336G, 436G. First-year students (only) register for F20 136G. An introduction to the concept and image development, design, market distribution and methodology for creating licensed products. Projects will involve product idea development, market and the development of image-driven products using images and design. Traditional drawing skills not required. Students can work by hand or on the computer. Ideal course for students whose work focuses on images and those interested in developing visual products, including business students.

Credit 3 units. Art: FADM EN: H

F20 ART 136I Communication Design I

Same as F20 136I, F20 236I, and F20 436I; juniors (only) register for F20 336I. Students are introduced to the fundamentals of communication design. Through studio exercises and lectures, students are exposed to a broad range of conceptual, aesthetic, and strategic issues in the field. The course explores principles of two-dimensional design, typography, and the relationship of text and image for the purposes of persuading and informing. Students will learn a design methodology for illuminating and solving problems and receive baseline training in the Adobe Suite. Upon completion of this course, students will be able to design basic projects and have criteria to provide an informed evaluation of the effectiveness of a given design. It provides an introduction to design as a tool for business and marketing.

F20 ART 136J Introduction to Animating in Three Dimensions

Same as F20 236J, 336J, 436J. First-year students (only) register for F20 136J. This course explores 3D animation in the short film format. Students move from an overview of the process and visual vocabulary of animation to defining filmic ideas, the visual gag, and character-driven content. Cinematic shot design, timing, character design, and sound design are studied for determining the most effective means of communicating desired content. Hand-drawn sketches are imported into a 3D animation program as the basis to model and animate characters, create settings, and add special effects. An animated sequence is produced to show evidence of personal inquiry and level of expertise. Prerequisites: Drawing or equivalent or permission of instructor.

Credit 3 units. Art: FADM EN: H

F20 ART 136K Communication Design II

Same as F20 236K, 336K, 436K. First-year students (only) register for F20 136K. Building on the fundamentals of Communication Design I, this course will offer students the opportunity solve more complex visual communication problems. Information design (explanatory graphs and charts), multipage sequences (book/magazine design) and persuasion (advertising/propaganda) will be some of the topics covered. Various methodologies for defining problems, generating ideas, exploring possible visual solutions and evaluating work-in-progress and finished designs from the previous course, will be reinforced. This course will introduce students to a range of media, including digital and alternative forms. Emphasis will be placed on finding visually compelling solutions, no matter the media. The computer will be used as a tool to assemble and refine. Students will be encouraged to use online tutorials to augment in class instruction. Prerequisite: Communication Design I.

Credit 3 units. Art: FADM EN: H

F20 ART 136L Animated Worlds

This course explores traditional and experimental 3D animation in a short film format. Beginning students will learn polygon and NURBS modeling, texturing, lighting, rigging props, and characters in Maya. A storyboard, animatic and final rendered short will be developed for two major projects. Advanced skill sets include development, character design, 3D modeling, rigging, visual effects, sound, and rendering. No prerequisites or previous experience required. This course can be taken

multiple times at either the beginner or advanced level, and it is open to students of all levels across the university. Graduate and advanced students can build independent projects with permission of the instructor.

Same as F20 ART 336L
Credit 3 units. Art: FADM

F20 ART 137A Illustration Entrepreneur

In this course, students will create images appropriate for surface design application to products. Students will work toward developing icons and motifs using shape-based illustration, design, composition, hierarchy and thoughtfully considered color. Exploration will include visual content, artists, audiences, and trends in a fluid marketplace. Projects for this course will be in the applied context of gift and home decor markets, fabric design, stationery products, and toys. All skill levels of drawing and digital proficiency are welcome. This course is appropriate for art students whose work focuses on images/packages, design minors, and non-Sam Fox students interested in developing visual products.

Same as F20 ART 337A
Credit 3 units. Art: FADM

F20 ART 137T Visual Principles for the Screen

The demand for graphic literacy in contemporary culture is only increasing, redefining our need to understand how design functions and why. How can products and communication be crafted with the user in mind? How can design facilitate seamless, intuitive digital experiences? This studio course will address considerations for web, mobile, and other screen-based applications, including hierarchy, typography, iconography, layout, color, and image. This course is ideal for students seeking to learn fundamental graphic design and messaging principles and who want to produce robust, researched website and mobile application prototypes. Studio work will be supplemented by supporting lectures and readings. Lab optional.

Same as F20 ART 337T
Credit 3 units. Art: FADM EN: H

F20 ART 138B Illustration Entrepreneur

In this course, students will create images appropriate for surface design application to products. Students will work toward developing icons and motifs using shape-based illustration, design, composition, hierarchy and thoughtfully considered color. Exploration will include visual content, artists, audiences, and trends in a fluid marketplace. Projects for this course will be in the applied context of gift and home decor markets, fabric design, stationery products, and toys. All skill levels of drawing and digital proficiency are welcome. This course is appropriate for art students whose work focuses on images/packages, design minors, and non-Sam Fox students interested in developing visual products.

Credit 3 units. Art: FADM

F20 ART 138J Advanced Animation

Same as F20 138J, F20 238J, and F20 438J; juniors (only) register for F20 338J. This course focuses on completing a short animated film as a group project using a workflow similar to that used in the animated feature film industry. The class will first develop a story. Individuals will then be assigned tasks according to strong areas of interest to create a storyboard and an animatic. Key moments will be identified to be animated first. After a plan is agreed on, students will be able to choose to

work in various parts of the pipeline, including character design; layout and set design; 3D modeling; rigging; animation; textures; special effects; sound; rendering; and editing. Finally, all of these parts are put together as a short. This is an advanced course that assumes some student experience with Maya or a similar 3D program; it is best suited for those who have already developed skills in any form of animation. Prerequisite: Introduction to Animating in Three Dimensions or permission of instructor.

Same as F20 ART 338J
Credit 3 units. Art: FADM EN: H

F20 ART 138S Visual Principles for the Screen

The demand for graphic literacy in contemporary culture is only increasing, redefining our need to understand how design functions and why. How can products and communication be crafted with the user in mind? How can design facilitate seamless, intuitive digital experiences? This studio course will address considerations for web, mobile, and other screen-based applications, including hierarchy, typography, iconography, layout, color, and image. This course is ideal for students seeking to learn fundamental graphic design and messaging principles and who want to produce robust, researched website and mobile application prototypes. Studio work will be supplemented by supporting lectures and readings.

F20 ART 143B Fiber Manipulation

Same as F20 243B, 343B and 443B - First-year students (only) register for F20 143B. Exploration of fiber techniques and their application in design and art. Students will study a spectrum of fiber and textile treatments such as surface design, shibouri, wax resist, digital design, needle applications, heat applications and a variety of three-dimensional structuring strategies. Projects will integrate techniques into appropriate design strategy for the fine arts or design.

Credit 3 units. Art: FADM

F20 ART 147T Artist's Book

This course will examine the role of the book as an artifact of material culture. We will investigate definitions of the artist's book and current uses of the book form as metaphor in contemporary art. We will look at the work of artists such as Anselm Kiefer, Ann Hamilton, Rachel Whiteread, Kiki Smith, William Kentridge, Sophie Calle, Dieter Rot, and many others. In addition, we will look at the role of artist's books and publications in many 20th-century artistic movements. Course projects will center around the exploration of various types of editioned artworks, such as artist's multiples, mail art, zines, and more.

Same as F20 ART 347T
Credit 3 units.

F20 ART 162 Why Art Matters

This lecture and discussion course will examine how art, which productively utilizes ambiguity and discontinuity, is a distinctive form of expression and communication. Functioning not as a bearer of meaning but rather as a shaper of meaningful questions, art invites interpretation and introspection. As such, art -- which often functions to rekindle perception and give rise to new ways of thinking about and being in the world -- empowers individual thought, encourages empathy, and celebrates the diversity of ideas and opinions that are vital to conditions of freedom. With this in mind, multimedia lectures will explore the

perspectives of contemporary artists (e.g., James Turrell, Cerith Wyn Evans, Wangechi Mutu), psychologists (e.g., Winnicott, Frankl, Freud), philosophers (e.g., Heidegger, Bataille, Merleau-Ponty), linguists (e.g., Lacan, Pierce, Saussure), sociologists, cognitive scientists, cultural theorists and others. In addition, readings, discussions, in-class group interpretations and written critical analysis will provide students with the tools required to understand how art, which is a distinctive form of expression and communication, matters; it matters, as Bill O'Brien argues, because it teaches us how we matter.

Same as F20 ART 362

Credit 3 units. Art: VC EN: H

F20 ART 1713 Introduction to Book Binding

Same as F20 1713, F20 2713, and F20 4713; juniors (only) register for F20 3713. This course will serve as an introduction to the book as an artifact of material culture. A variety of traditional and non-traditional book structures will be explored. Students will learn from historical approaches to constructing the codex form, including the single-signature pamphlet, the multi-signature case binding, the coptic, and the medieval long stitch. Students will learn Japanese binding and its many variations. Several contemporary variations will be introduced, including the tunnel, the flag book, the accordion, and the carousel. Students will explore the visual book using found imagery and photocopy transfers, and they will produce a variety of decorated papers to be used in their bindings.

Credit 3 units. Art: FADM EN: H

F20 ART 178 Contemporary Discourses: Art + Feminism

This course investigates the impact of feminism on contemporary art, focusing on artwork produced between the 1960s and the present day. Through an examination of global practices in a wide range of media, including artworks in the university's Kemper Museum collection, students will delve into innovative aesthetic strategies that criticize assumptions of gender, race and social class and consider the intricate tie between the identity of the author and the content of the work. This course is taught by a practicing artist, who together with the students will uncover historical developments and epic omissions. This is a lecture course with a discussion component. Requirements include participation in weekly discussion sections, regular response papers, and a final written curatorial project. No prerequisites in Art or Art History required.

Same as F20 ART 378

Credit 3 units. Art: CPSC, FAAM, VC EN: H

F20 ART 201E Anatomy Figure Structure

This rigorous drawing course explores traditional and new representations of the figure through the study of its structure and contemporary contexts. Research involves basic anatomy lectures and sketchbook activities that provide a vehicle for discovering the figure's architecture, mechanics and proportions. Art production is based on in-class and outside projects. Lectures, presentations, critical readings and the analysis of historical and contemporary figurative works support students in their investigations. Prerequisites: Drawing (F10 101A or F10 102A).

Same as F20 ART 301E

Credit variable, maximum 3 units. Art: FAAM

F20 ART 208B Engaging Community: Understanding the Basics

What does it mean to engage in community as a creative practitioner? Community engagement must be grounded in authentic relationship building and an ability to understand and act within the historic context and systems that impact communities. We will practice the skills of listening, observation, reflection, and improvisation. We will cultivate mindsets that focus on community assets and self-determination. Workshops will teach facilitation and power analysis, with the intention of upending the power dynamics between community and creators. This course pairs with "Engaging St. Louis: Sites, Stories, and the Struggle for Racial Justice" [working title]. It may count toward the minor in Creative Practice for Social Change if bundled with "You Are Here: St. Louis' Racial History Through Sites and Stories."

Same as F20 ART 308B

Credit 1.5 units. Art: CPSC

F20 ART 209B Eco-Art

Eco-Art explores the intersection of art, ecology and ethics. Though the movement is broad and growing, eco-art re-visions our relationship with the natural world by informing, challenging, inventing, and reclaiming. This studio-based course introduces various artistic practices and working methodologies related to environmental art, exploring "green" methodologies, repurposed objects, land art, ecoventions, social sculpture, and community activism. The course is organized around art historical precedents, and it is supported by critical essays and examples of contemporary practice, including discussion of eco-design and sustainable architecture. Projects are open to multidimensional solutions in a wide variety of media.

Same as F20 ART 309B

Credit 3 units. Art: CPSC

F20 ART 211 Painting

Same as F20 111, 311, 411. Sophomores (only) register for F20 211. Introduction to painting processes and materials. While there is emphasis on oil painting, students are also introduced to watercolor and acrylic paints and a wide variety of painting surfaces. Subject matter is varied, beginning with still-life material and ending with direct painting from the model. Technical skills and content are dealt with at the individual student's level.

Credit 3 units. Art: FAAM EN: H

F20 ART 211T The Poetics of Image-Making: People, Place & Space

This painting elective course examines the poetics of image-making, with a focus on the representation of people, place, and space, both observed and invented. Students learn the practice of painting and develop works through fundamental exercises as well as through the shared exploration of painting processes. Work outside of class for the beginner is project-based; advanced students produce an independent body of work. Critical assessment of work is complemented by faculty and peer discussions, readings, and field study. Required text: "The Poetics of Space" by Gaston Bachelard.

Credit 3 units. Art: FAAM

F20 ART 211U The Language of Moving Images

This course will examine the language of moving images, which includes -- among other elements -- shot construction, sequencing, duration, sound integration, scale, and situational contexts. Through screenings, readings, lectures, discussions and critiques, students will develop the skills required to interpret moving images and to think about their productions, which may utilize forms other than video or film and include installation components. This course is not focused on technical approaches, and students' creative work will be driven by individual concerns and may be accompanied by written analysis. Prerequisite: Digital Studio/Digital Design. Same as F20 ART 311U
Credit 3 units.

F20 ART 212 Painting

Same as F20 112, 312, 412. Sophomores (only) register for F20 212. This course is an introduction to oil painting with an emphasis on the principles of color, construction and paint handling. Students will explore the possibilities of representational painting as applied to still-life, interiors, landscape and the human figure. The course is designed especially for beginning painters but can accommodate painters at all levels of proficiency.
Credit 3 units. Art: FAAM EN: H

F20 ART 212P Painting: The Painted Figure

This studio course is an introduction to the practice of painting, with an emphasis on the pictorial representation of the human figure. Instruction will encompass a range of technical, conceptual and creative skills to be used for developing projects. In-class projects will include working from the live model. Students will be encouraged to consider traditional and alternative forms of painting. Lectures, critical essays, and analysis of historical precedents and contemporary practitioners will support students in their course work. No prerequisites. Same as F20 ART 312P
Credit 3 units. Art: FAAM EN: H

F20 ART 213F Sculpture: Foundry

Same as F20 113F, 313F, 413F - Sophomores (only) register for F20 213F. The focus of this course is to introduce students to the basic principles of bronze and aluminum casting according to the lost wax method. Students will learn mold making, direct organic burnout, ceramic shell investment, metal chasing, and patination in order to create finished sculpture. In addition to metal casting, students will use other material such as plaster, resin, steel, wood, rubber, plastic, and foam to create a mixed media project that explores a specific idea or theme. Additional work outside the regularly scheduled class time is required.
Credit 3 units. Art: FAAM EN: H

F20 ART 213G Sculpture: Wood

Same as F20 113G, 313G, 413G - Sophomores (only) register for F20 213G. The focus of this course is to introduce students to the basic principles of wood sculpture with an emphasis on furniture making.
Credit 3 units. Art: FAAM EN: H

F20 ART 213H Sculpture: Blacksmithing

Same as F20 113H, F20 213H, and F20 413H; juniors (only) register for F20 313H. This course is an introduction to blacksmithing materials, tools, and techniques. Students will explore the fundamental techniques of hand-forged metal. Metal can be manipulated as a plastic material, and it offers enormous possibilities for three-dimensional form. In this course, we will explore these possibilities and expand our sculptural vocabulary. Same as F20 ART 313H
Credit 3 units. Art: FAAM EN: H

F20 ART 213I Sculpture: Metal Fabrication

Same as F20 113I, F20 213I, and F20 413I; juniors (only) register for F20 313I. Metal is the backbone of our modern world, and it is a viable medium for self-expression. It can be employed as structure or as surface, it can be plastically deformed to create compound shapes, and it can be connected to most any other material. Students will explore the creative potential of this material in the fabrication of sculptural forms. Students learn to weld using both gas and electric arc machines as well as the safe operation of drilling, grinding, and finishing tools. Same as F20 ART 313I
Credit 3 units. Art: FAAM EN: H

F20 ART 213J Digital Fabrication for Object Making

This course explores the potential of digital tools in the creation of tangible objects. We will focus on "component manufacture" as a means of sculptural production, i.e., creating linkages, universal fittings, and adaptors that connect disparate materials. Toys, mechanical systems, and construction products will be researched as a point of inspiration. Students will be introduced to various modeling software such as Rhino, AutoCAD, and SolidWorks and explore the potential of these platforms to design 3-dimensional forms. A variety of output tools will be used but we will focus primarily on the planning for and use of laser cutters, 3D printers, and CNC routers. We will develop, design, and manufacture components that, when combined with readily available materials, can be used to create sculptural forms. This class will use iterative processes that move between digital and analog model-making and sketching. Students will be introduced to the concept of kitbashing, and the modification of salvaged and found parts. This course introduces these concepts to artists, designers, engineers, and anyone interested in exploring the possibilities of digital fabrication tools towards the creation of sculpture. No prerequisites. Same as F20 ART 313J
Credit 3 units. Art: FAAM, FADM

F20 ART 213Q Compositions in Clay

In this course, students will broaden their understanding of clay as a viable medium of visual expression and three-dimensional exploration. Students will learn basic hand-building techniques to create sculptural constructions, discover the practical applications of wheel throwing through form and function, and explore ceramic tools and equipment to create installation projects. Each student's skill level will be considered, and projects will be adjusted accordingly. Emphasis will be placed on critical assessment and articulation of material. Same as F20 ART 313Q
Credit 3 units. Art: FAAM

F20 ART 214F Sculpture: Foundry

Same as F20 114F, F20 214F, and F20 414F; sophomores (only) register for F20 114F. The focus of this course is on introducing students to the basic principles of bronze and aluminum casting according to the lost wax method. Students will learn mold making, direct organic burnout, ceramic shell investment, metal chasing, and patination in order to create finished sculpture. Students will also use other materials such as plaster, resin, steel, wood, rubber, plastic, and foam to create a mixed media project that explores a specific idea or theme. Additional work outside of the regularly scheduled class time is required.

Same as F20 ART 314F

Credit 3 units. Art: FAAM EN: H

F20 ART 214G Sculpture: Wood

Same as F20 114G, 314G, 414G - Sophomores (only) register for F20 214G. The focus of this course is to introduce students to the basic principles of wood sculpture with an emphasis on furniture making.

Credit 3 units. EN: H

F20 ART 214H Sculpture: Blacksmithing

Same as F20 114H, 214H, 413H - Juniors (only) register for F20 314H. This course is an introduction to Blacksmithing materials, tools, and techniques. Students will explore the fundamental techniques of hand-forged metal. Metal can be manipulated as a plastic material and offers enormous possibilities for three-dimensional form. In this class we will explore these possibilities and expand our sculptural vocabulary.

Same as F20 ART 314H

Credit 3 units. Art: FAAM EN: H

F20 ART 214I Sculpture: Metal Fabrication

Same as F20 114I, F20 214I, and F20 413I; juniors (only) register for F20 314I. Metal is the backbone of our modern world and a viable medium for self-expression. It can be employed as structure or as surface, it can be plastically deformed to create compound shapes, and it can be connected to almost any other material. Students will explore the creative potential of metal in the fabrication of sculptural forms. Students learn to weld using both gas and electric arc machines, and they will also learn to safely operate drilling, grinding, and finishing tools.

F20 ART 215 Printmaking

Same as F20 115, F20 215, and F20 415; juniors (only) register for F20 315. This course is a survey of printmaking that covers basic processes in intaglio, lithography, relief, and monotype. Emphasis is on mixed media and experimentation with a foundation in traditional, historical, and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.

Same as F20 ART 315

Credit 3 units. Art: FAAM EN: H

F20 ART 215F Printmaking: Call and Response

In music, the term "call and response" refers to a succession of two distinct phrases, usually written in different parts of the music, where the second phrase is heard as a direct commentary on or a response to the first. This course is a survey of printmaking with a foundation in traditional, historical, and philosophical aspects of printmaking. It will cover basic processes in intaglio, lithography, relief and monotype. Students are encouraged to work in response to the history of the print, with an emphasis on mixed media and experimentation. This course counts toward the minor in art.

Credit 3 units.

F20 ART 215T Printmaking: Contemporary Processes

This course is designed to give a broad introduction to contemporary processes and approaches in printmaking, including digital technology. Emphasis will be on image development through the manipulation and combination of techniques to create one of a kind prints and variable editions. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.

Same as F20 ART 315T

Credit 3 units.

F20 ART 216 Printmaking

Same as F20 116, F20 216, and F20 416; juniors (only) register for F20 316. This course is a survey of printmaking that covers basic processes in intaglio, lithography, relief, and monotype. Emphasis is on mixed media and experimentation with a foundation in traditional, historical, and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.

Same as F20 ART 316

Credit 3 units. Art: FAAM EN: H

F20 ART 216T Printmaking for Architecture and Art Students

This course will focus on monotype mixed media printmaking using both a press and digital print processes. The course is designed to be responsive to current issues with a focus on contemporary printmaking practices and various ideas about dissemination in the age of social media. The course will include an examination of historical examples of diverse global practices; prints made in periods of uncertainty, disruption, war, and disaster; and speculative

projects by architects such as Superstudio, Zaha Hadid Architects and Archigram. Students will be expected to create a series of work with a conceptual framework developing a personal visual language.

Same as F20 ART 316T

Credit 3 units. Art: FAAM EN: H

F20 ART 216U Printmaking: Print Installation, Multiples, and Site Specificity

This course explores a range of basic techniques—silkscreen, block printing, and risograph, for example—to create immersive installations. Students will orient their site-sensitive investigations to place through history, context, and materials. Conventional and unconventional installation spaces will be used, both on campus and off, to experiment. The course will introduce planning techniques and approaches to site analysis. Students will be encouraged to incorporate other media within their installations, especially as they relate to other coursework they are currently taking within or outside of studio art. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests. This class counts toward the Minor in Art. No prerequisites

Same as F20 ART 316U

Credit 3 units. Art: FAAM

F20 ART 217M Architecture Through the Photographic Lens

Same as F20 117M, F20 217M, and F20 417M; juniors (only) register for F20 317M. Photography offers ways of seeing and representing the world around us. This course provides technical and conceptual frameworks for understanding architectural space as seen through the camera. Topics include the building as site, landscape as context, and the architectural model as a representation tool. Students are introduced to a wide range of artists and architects, which helps them to build a unique camera language to support their individual projects. Students will learn DSLR camera basics, fundamentals of Photoshop, digital printing techniques, and studio lighting for documenting architectural models. The course assumes no prior experience with digital imaging technologies or materials. Digital camera required.

Same as F20 ART 317M

Credit 3 units. Art: FAAM

F20 ART 217N Contemporary Portraiture

Same as F20 117N, F20 217N, and F20 417N; juniors (only) register for F20 317N. Historically, portraits were painted of the royal or wealthy to document an accurate likeness and to display status and power. However, with the advent of photography, artists were freed to develop interpretations in style, process, and medium. With subjects such as family, friends, strangers, celebrities, and the self, the portrait has been used to reflect culture, identity, and the relationship between the artist and the sitter. Issues of race, sexuality, gender, vanity, and status continue to be relevant to contemporary practice. This is primarily a drawing class; students combine the study of contemporary portrait artists with a studio practice that encourages the development of a unique voice. Students consider how pose, gesture, lighting, and other factors work together to support their intentions. Initial assignment prompts progress to guided independent pursuits. Students will be encouraged to experiment with image, materials, and processes. Live models will be used as well as other source material.

Same as F20 ART 317N

Credit 3 units. Art: FAAM

F20 ART 217O Drone Photography

This combination studio and discussion-based course examines the use of small unmanned aerial systems (sUAS) — otherwise known as *drones* — as a photographic medium. Studio sessions will introduce students to sUAS operation, various editing platforms, and output strategies. Lecture and discussion sessions will examine FAA regulations, the ethical implications of sUAS use by visual artists, and the rise of sUAS in the visual arts within the context of the history of aerial photography. All students will produce a body of work using drone capture as the primary medium. In order to ensure equal access to sUAS, students will be required to meet outside of class sessions.

Credit 3 units. Art: FAAM

F20 ART 217P Drone Photography

This combination studio and discussion-based course examines the use of small unmanned aerial systems (sUAS) — otherwise known as *drones* — as a photographic medium. Studio sessions will introduce students to sUAS operation, various editing platforms, and output strategies. Lecture and discussion sessions will examine FAA regulations, the ethical implications of sUAS use by visual artists, and the rise of sUAS in the visual arts within the context of the history of aerial photography. All students will produce a body of work using drone capture as the primary medium. In order to ensure equal access to sUAS, students will be required to meet outside of class sessions.

Credit 3 units. Art: CPSC, FAAM EN: H

F20 ART 217Q Context, Curation, Communication: Seriality in the Photographic Image

Series and sequences are the prevalent method for exhibiting photographic images. Through assignment-based and self-generated projects, students discover how photographic series are conceptualized, structured, and sequenced. Special attention is given to the material meaning embedded in print size, order, and spatial placement. The course provides in-depth coverage of image capture through medium-format analog and full-frame digital systems as well as intermediate digital editing and printing techniques. Students also explore various documentary and setup strategies through narrative and non-narrative photographic approaches. Through a rigorous critique structure, course readings, and critical writing, students engage the historical discourse surrounding the series as a tool for artistic expression.

Credit 3 units.

F20 ART 217T Discourses in Contemporary Photography

This seminar course explores dialogs animating contemporary fine art photography from the 1960s to the present. Course lectures will be organized thematically around key ideas informing contemporary photography practice, including, but not limited to: changing technologies, surveillance, performance, social engagement, gender, race, and sexuality. Students will respond to lectures and class discussions through research presentations, visual assignments, and written responses.

Same as F20 ART 317T

Credit 3 units. Art: FAAM

F20 ART 219 Ceramics

Same as F20 119, 319, 419 - Sophomores (only) register for F20 219. An introduction to the design and making of functional pottery as well as sculptural objects. Students learn basic forming processes of the wheel, coil and slab construction. While the emphasis is on high-fired stoneware, students will be introduced to Raku and soda firing. Content and advanced processes and skills are encouraged according to the individual's level.

Credit 3 units. Art: FAAM EN: H

F20 ART 220 Ceramics

Same as F20 120, F20 220, and F20 420; juniors (only) register for F20 320. This course is an introduction to the design and making of functional pottery as well as sculptural objects. Students learn basic forming processes of wheel, coil, and slab construction. Although the emphasis is on high-fired stoneware, students will be introduced to raku and soda firing. Content and advanced processes and skills are encouraged according to the individual student's level.

Same as F20 ART 320

Credit 3 units. Art: FAAM EN: H

F20 ART 220J Ceramics: Introduction to Hand-Building

This course introduces students to a wide range of ceramic hand-building techniques such as coiling, pinching and slab building. While establishing a strong foundation of skills, students will also gain a deeper understanding of clay as a means for expression of thoughts and ideas. Throughout the course, students will be encouraged to explore and develop their own personal language within the medium.

Same as F20 ART 320J

Credit 3 units. Art: FAAM

F20 ART 220K Ceramics: Molds and Multiples

This course explores the fundamentals of mold-making for ceramics. A variety of techniques from ancient to present day methods will be employed. Students will examine various implementations of molds and their ensuing possibilities, whether for artistic or design-oriented work. Students will produce individual serial projects in which they incorporate the principals of duplication and copy.

Same as F20 ART 320K

Credit 3 units. Art: FAAM

F20 ART 220L Ceramics: Processes and Practices

This course is a spectrum of ceramic processes using clay, plaster, and glazes to understand and explore techniques of making. Use clay to learn hand-building processes such as soft slab and hard slab, coil building, and hollow-out method to explore material differences of making forms. Glaze properties and chemistry will lightly be explored to understand the different stages of clay to ceramic and the firing processes in oxidation and reduction. Emphasis will be placed on mold-making for exploring repetition, scale, and balance with units to comprehend structure and multiples of building components in clay. Discussion and presentations will focus on the history and traditions of ceramics, contrasted with contemporary making in clay. Each student's skill level will be considered and projects will be adjusted accordingly. Emphasis will be placed on critical assessment and articulation of material.

Same as F20 ART 320L

F20 ART 223F Special Topics in Fashion Design (Fashion Design: Collaboration Studio)

Same as F20 323F, F20 423F - Sophomores (only) register for F20 223F. University collaboration course with Fashion Design, Occupational Therapy, Mechanical Engineering and Business to develop design proposals and prototypes for specific customer profiles. Teams of students from different majors will design for various community and industry partners. They will work to solve an apparel or accessory design problem with innovative new concepts. The team will consider the person's lifestyle, occupation, and environmental factors that influence a design's functionality. A client-centered approach is used. Students will be evaluated on how well the design proposal meets the expressed aesthetic and functional needs of the client. Prerequisites: Introduction to Fashion Design.

Credit 3 units. Art: CPSC, FADM EN: H

F20 ART 223K Business of Fashion

This seminar course is an academic analysis of the business of fashion that focuses on the following: marketing fashion products, consumer behavior, brand development, markets, promotion/distribution, and attention to emerging technologies. Students will study fashion merchandising and product development, including seasonal deliveries, line development, basic costing practices, and retail math. Case studies will engage students in current fashion business practices. Open to all students.

Credit 3 units. Art: FADM

F20 ART 223L Special Topics in Fashion Design: Fashion and Race

Same as F20 323L, 423L - Sophomores (only) register for F20 223L. Is the fashion industry racist? This seminar course unpacks this contemporary inquiry by decentralizing fashion history to take a critical look at how racial identities are formed and performed, how historical stereotypes are perpetuated, and how theories of representation can be situated within the system of fashion. Students will use theoretical texts on race and representation to read contemporary media surrounding fashion and race (editorials, articles, social media), as well as gain an introduction to recently published research by scholars engaging fashion and race. Not only will students walk away with a richer understanding of how to critically think through race in fashion, but also how doing so gives us a new approach to think through race within a larger system.

Credit 3 units. Art: CPSC, FADM

F20 ART 225I Making Comics

Same as F20 125I, 225I, 425I - Juniors (only) register for F20 325I. From hieroglyphics to newspapers, drawn pictures in sequence have told stories for thousands of years. This course is an introduction to writing and drawing short form comics. In readings and discussion, students will explore a wide variety of genres and visual approaches to comics. Through exercises and assignments students will learn how to make clear and evocative comics. All skill levels of drawing experience are acceptable.

Same as F20 ART 325I

Credit 3 units. Art: FADM

F20 ART 225J Sculpting Realities

This course investigates new digital technologies -- particularly mixed, augmented, and virtual reality -- through the consideration of one critical question: "What does it mean to be real?" Students will learn the basics for making works of art, design, and architecture in alternative realities through 3D scanning, 3D modeling, and immersive world building. In addition to tutorials and multidisciplinary collaborative studio projects, students will investigate issues of reality and the use of alternative reality tools through readings, discussions, presentations, and other dialogues. The semester will culminate in a final project that translates a physical experience or artifact into a digital one.

Same as F20 ART 325J

Credit 3 units. Art: FADM

F20 ART 227A History of Photography

Same as F20 127A, 327A, F20 427A - Sophomores (only) register for F20 227A. Survey of the history of photography and a look at the medium from the camera obscura to contemporary developments. Social and technological developments examined in terms of their influence on the medium.

Credit 3 units. Art: FAAM EN: H

F20 ART 228A History of Photography

Same as F20 128A, 328A, F20 428A - Sophomores (only) register for F20 228A. Survey of the history of photography and a look at the medium from the camera obscura to contemporary developments. Social and technological developments examined in terms of their influence on the medium.

Credit 3 units. Art: FAAM EN: H

F20 ART 228C Documentary Film

This course investigates techniques of powerful nonfiction filmic storytelling that symbiotically merges visual and literary narrative devices. We will explore the organic process of research, interaction and craft to construct three short films. Students will be encouraged to go beyond apparent subject matter to inquire into deeper/underlying content that touches on timelessness and global/human topics. Within set parameters, students choose their own filmic topics and structures. Graduate and undergraduate students can form teams or work independently as their own producer, writer, director, cinematographer, editor and sound recordist. No previous experience required.

Same as F20 ART 328C

Credit 3 units. Art: FAAM

F20 ART 228D Experimental Photography: Cameraless to Polaroid, Form to Content

These days, everyone is a photographer, right? But how does that image snapped with your smartphone arrive on your screen? As technology marches forward, we have images literally at our fingertips, yet the actual process of producing the picture is, ironically, more elusive. In this course, we will dive into experimental processes and examine how physically making the picture can affect the content of that picture. As you craft images, ideas become tied to process and suggest new directions, strategies and subjects. We will begin with cameraless techniques, such as the photogram and cyanotype; we will investigate the principle of the camera obscura; we will test out rudimentary cameras such as the pinhole and disposable models; and we will experiment with printing techniques such as Polaroid and Xerox transfer, examining artists using these various techniques along the way. As we

move through the semester, students will learn the various ways that light can create images, and they will begin to find their own particular voice within these mechanizations and create original work.

Same as F20 ART 328D

Credit 3 units. Art: FAAM

F20 ART 228E Making Documentaries in the Time of Covid

Documentary video is a powerful tool to spotlight the frustrations and triumphs of our daily lives. Unlike fiction films, the inquiry and the questions that start the process of making a documentary end up as an adventure and often the film itself. Many filmmakers discover unexpected answers, reveal hidden histories, humanize previously one-dimensional characters, and spotlight even more in-depth questions. The global pandemic offers a unique opportunity to create videos that acknowledge this moment, with the potential to become a significant part of an international conversation. Even beginning filmmakers can give voice to issues that will be included in the historical record. Students will learn about or improve their cinematic aesthetics and professional video editing skills by making three short videos.

Same as F20 ART 328E

Credit 3 units. Art: CPSC, FAAM

F20 ART 228X Color Systems

This course is a sustained investigation of color. Students study how color is affected by light, by space, by arrangement, by culture, and by commerce. The course aims to deepen the understanding of color's complexity and pervasiveness as a fundamental element of shared visual culture. The course develops both technical and conceptual skills to aid in visual translation. In addition to color-specific inquiry, another goal of this course is to expand ideas of research and enable students to integrate various methods of acquiring knowledge into their art and design practice. Throughout the course, students discuss various processes of making/constructing, the connection between color/form/concept, and strategies for idea generation and brainstorming. The course allows for much individual freedom and flexibility within varying project parameters.

Same as F20 ART 328X

Credit 3 units. Art: FAAM, FADM

F20 ART 229G Visualizing Otherness: Race, Gender and Class

The thematic focus of this studio is "the other". As we witness a global uprising and comprehensive public dialogue in response to police violence against African-Americans and the systemic racism that pervades American culture, students explore the artist's place in the power dynamics of mobilizing, re-contextualizing, and retelling stories that push against narrow, established norms. Otherness is not only linked with race, it is also deeply entrenched in sexism, xenophobia, transphobia, and classism. This course uses video and performance as platforms of artistic expression to engage with and move the dialogue forward. Class time will be divided between lectures, presentations, group discussions, and producing artwork. No prerequisites.

Same as F20 ART 329G

Credit 3 units. Art: CPSC, FAAM

F20 ART 233 Basic Illustration

Same as F20 133, 333, 433 - Sophomores (only) register for F20 233. An introduction to concepts, media techniques, and problem-solving approaches within contemporary illustration. Emphasis on individual solutions to the problems presented. Students can work by hand or on the computer. Traditional drawing skills not required.

Credit 3 units. Art: FADM EN: H

F20 ART 234 Basic Illustration

Same as F20 134, 234, 434. Juniors (only) register for F20 334. An introduction to the concepts, media and problem-solving methods of contemporary illustration. Projects involve image development for applications such as book illustration, iconic/logo illustration, product development and information graphics. Students can work by hand or on the computer. Traditional drawing skills not required.

Same as F20 ART 334

Credit 3 units. Art: FADM EN: H

F20 ART 234A Advanced Drawing: Affective Stills and the Moving Image

Marked is an open-ended advanced drawing course that will focus on expanded definitions and mark-making practices. This course will explore, contextualize and analyze a wide variety of drawing methods that relate to image-making, spatial and situated practices, and ephemeral, time-based media. Through projects, readings, lectures and individual research, students will gain a broader understanding of drawing and its various definitions and approaches in addition to its rich set of histories and contemporary applications. This course will be peppered with lively discussions, field trips, and lectures by artists, architects, and designers. Self-directed projects will be reviewed and discussed critically and aesthetically in relation to the intent of the artist. A highly experimental and even collaborative approach to drawing will be strongly encouraged. Prerequisite: Drawing (F10 101A or 102A).

Same as F20 ART 334A

Credit 3 units. Art: FAAM

F20 ART 235G The Licensed Image: Development and Distribution

Same as F20 135G, 235G, 435G - Juniors (only) register for F20 335G. An introduction to the concept and image development, design, market distribution and methodology for creating licensed products. Projects will involve product idea development, market and the development of image-driven products using images and design. Traditional drawing skills not required. Students can work by hand or on the computer. Ideal course for students whose work focuses on images and those interested in developing visual products, including business students.

Same as F20 ART 335G

Credit 3 units. Art: FADM EN: H

F20 ART 235J Introduction to Animating in Three Dimensions

Same as F20 135G, 335G, 435G. Sophomores (only) register for F20 235G. This course explores 3D animation in the short film format. Students move from an overview of the process and visual vocabulary of animation to defining filmic ideas, the visual gag, and character-driven content. Cinematic shot design, timing, character design, and sound design are studied for

determining the most effective means of communicating desired content. Hand-drawn sketches are imported into a 3D animation program as the basis to model and animate characters, create settings, and add special effects. An animated sequence is produced to show evidence of personal inquiry and level of expertise. Prerequisites: Drawing or equivalent or permission of instructor.

Credit 3 units. Art: FADM EN: H

F20 ART 235K Animated Worlds

This course explores traditional and experimental 3D animation in a short film format. Beginning students will learn polygon and NURBS modeling, texturing, lighting, rigging props, and characters in Maya. A storyboard, animatic and final rendered short will be developed for two major projects. Advanced skill sets include development, character design, 3D modeling, rigging, visual effects, sound, and rendering. No prerequisites or previous experience required. This course can be taken multiple times at either the beginner or advanced level, and it is open to students of all levels across the university. Graduate and advanced students can build independent projects with permission of the instructor.

Same as F20 ART 335K

Credit 3 units. Art: FADM

F20 ART 235O Drawing as Thinking

Same as F20 125O, 325O, 425O - Sophomores (only) register for F20 225O. This studio course explores symbolic drawing as a practical tool for learning and communication, used as it has been for millennia for the acquisition and transmission of knowledge, for idea generation and formation, and for visual storytelling. Students will observe and describe phenomena, conceive systems, construct diagrams, design processes, and convey instructions, all using drawing as an aid to discovery, thought and communication. Tools and media may include pencils, brushes, wooden sticks, markers, painter's tape, laser pointers, and amateur surveying software, etc. In some cases, digital tools will be used to produce and present student projects. The course will include relevant readings and discussions. Throughout we will distinguish between symbolic uses of drawing and illusionistic ones, focusing on the former.

Credit 3 units.

F20 ART 235P Design in Social Systems

This multidisciplinary seminar course will cover historical and contemporary contexts of socially engaged work within art and design disciplines. Students will explore various processes that artists and designers use to address, influence, and inspire change around systemic social issues. In addition, through in-class collaborative workshops, students will apply a "systems thinking approach" to a select number of real-world social issues in order to gain a better understanding of how these issues are shaped by policies and individual experiences. This course will also include a final group project completed in partnership with a local community-based organization in which students will apply creative-problem solving processes, such as human-centered design, equity-centered design, design activism, and social justice to arrive at collective impact. Models of social change from other disciplines -- such as social entrepreneurship and innovation, non-profit models, and public-interest design -- will be featured through guest lectures, field trips to community-based organizations, case studies, readings and written reflections.

Credit 3 units.

F20 ART 2361 Advertising I

Same as F20 1361, F20 2361, and F20 4361; juniors (only) register for F20 3361. This hybrid studio/lecture course introduces students to the field of advertising by defining its role in American culture and economy and by engaging students, hands-on, in the processes of professional practice. The course consists of presentation and discussion of contemporary work, and it provides students with opportunities to create advertising campaigns across broad product and service categories and a range of media. Major emphasis is placed upon the creative disciplines of advertising design and copywriting. Experience in copywriting and design is not necessary.

Same as F20 ART 3361

Credit 3 units. Art: FADM EN: H

F20 ART 2362 Advertising II

Same as F20 1362, F20 2362, and F20 4362; juniors (only) register for F20 3362. This studio course introduces students to the field of advertising by defining its role in American culture and the economy and by engaging students, hands-on, in the processes of professional practice. The course consists of the presentation and discussion of contemporary work, and it provides students with opportunities to create advertising campaigns across broad product and service categories and a range of media. Major emphasis is placed upon the creative disciplines of advertising design and copywriting.

F20 ART 2363 Advertising in the Digital Age

Same as F20 1363, F20 2363, and F20 4363; juniors (only) register for F20 3363. This course examines advertising as a powerful force in contemporary culture, and it explores the increasing ways consumers experience branded communication through digital technologies. We will identify and study "game changing" developments in advertising communications; changing dynamics in audience behavior, including the ability to "opt out"; and the advertising industry's adaptation to digital technologies. In addition, we will speculate on the future of advertising in the era of mobile computing. This course builds on The History of Advertising; it is recommended (but not required) that students complete the first course before enrolling in this one.

Same as F20 ART 3363

Credit 3 units. Art: FADM

F20 ART 2364 Advertising in the Digital Age

Same as F20 1364, 3364, 4364. Sophomores (only) register for F20 2364. This course examines advertising as a powerful force in contemporary culture, and explores the increasing ways consumers experience branded communication through digital technologies. We will identify and study "game changing" developments in advertising communications; changing dynamics in audience behavior — including the ability to "opt out"; the advertising industry's adaptation to digital technologies; and finally we'll speculate on the future of advertising in an era of mobile computing. Advertising in the Digital Age builds on The History of Advertising. It is recommended, but not required, that students have completed the first course before enrolling in this one.

Credit 3 units. Art: FADM EN: H

F20 ART 2365 History of Advertising

Same as F20 1365, F20 3365, F20 4365. Sophomores (only) register for F20 2365. The historical, cultural and technological development of advertising in America from the colonial period to the present. This lecture course examines, through various media forms, key advertisements and campaigns, the creatives who made them, the technologies used to create them and changes in our culture that advertising both influences and reflects. Grading is based on midterm and final exams as well as optional, extra-credit five page essays. No prerequisites. This course counts in the communication design minor.

Credit 3 units. Art: FADM

F20 ART 2366 History of Advertising

Same as F20 1366, F20 2366, and F20 4366; juniors (only) register for F20 3366. This course presents the historical, cultural, and technological development of advertising in America from the colonial period to the present. It examines, through various media forms, key advertisements and campaigns, the creatives who made them, the technologies used to create them, and the changes in our culture that advertising both influences and reflects. Grading is based on mid-term and final exams as well as on optional, extra-credit, five-page essays.

Same as F20 ART 3366

Credit 3 units. Art: FADM EN: H

F20 ART 236A Interaction Design: Understanding Health and Well-Being

Same as F20 236A and F20 436A; juniors (only) register for F20 336A. Through a blend of presentations from practitioners, classroom lectures, readings, discussions, and hands-on exercises, this course will engage principles and methods of interaction design within the context of health challenges. Broadly defined, interaction design is the practice of designing products, environments, systems, and services with a focus on behavior and user experience. We will take on an in-depth challenge in the area of health and well-being and work in cross-disciplinary design teams with an external partner organization. Students will gain experience in planning and executing a human-centered design process that features research, ideation, synthesis, concept development, prototypes, and a final presentation, which may include visual design, animation, and sound. Students will work in teams to develop several intermediate project deliverables, such as prototypes and sketches. No prior course work is necessary, although experience with Adobe Photoshop, Illustrator, and InDesign is helpful.

Same as F20 ART 336A

Credit 3 units. Art: CPSC, FADM EN: H

F20 ART 236G The Licensed Image: Development and Distribution

Same as F20 136G, 336G, 436G. Sophomores (only) register for F20 236G. An introduction to the concept and image development, design, market distribution and methodology for creating licensed products. Projects will involve product idea development, market and the development of image-driven products using images and design. Traditional drawing skills not required. Students can work by hand or on the computer. Ideal course for students whose work focuses on images and those interested in developing visual products, including business students.

Credit 3 units. Art: FADM EN: H

F20 ART 236I Communication Design I

Same as F20 136I, 236I, 436I. Juniors (only) register for F20 236I. Students are introduced to the fundamentals of communication design. Through studio exercises and lectures, students are exposed to a broad range of conceptual, aesthetic and strategic issues in the field. The course explores principles of two-dimensional design, typography, and the relationship of text and image in order to persuade and inform. It helps students to learn a design methodology for illuminating and solving problems and provides baseline training in the Adobe Suite. Upon completion of this course, students will be able to design basic projects and have criteria to provide an informed evaluation of the effectiveness of a given design. It provides an introduction to design as a tool for business and marketing. Same as F20 ART 336I

Credit 3 units. Art: FADM EN: H

F20 ART 236J Introduction to Animating in Three Dimensions

Same as F20 136J, 336J, 436J. Sophomores (only) register for F20 236J. This course explores 3D animation in the short film format. Students move from an overview of the process and visual vocabulary of animation to defining filmic ideas, the visual gag, and character-driven content. Cinematic shot design, timing, character design, and sound design are studied for determining the most effective means of communicating desired content. Hand-drawn sketches are imported into a 3D animation program as the basis to model and animate characters, create settings, and add special effects. An animated sequence is produced to show evidence of personal inquiry and level of expertise. Prerequisites: Drawing or equivalent or permission of instructor.

Credit 3 units. Art: FADM EN: H

F20 ART 236K Communication Design II

Same as F20 136K, 336K, 436K. Sophomores (only) register for F20 236K. Building on the fundamentals of Communication Design I, this course will offer students the opportunity to solve more complex visual communication problems. Information design (explanatory graphs and charts), multipage sequences (book/magazine design) and persuasion (advertising/propaganda) will be some of the topics covered. Various methodologies for defining problems, generating ideas, exploring possible visual solutions and evaluating work-in-progress and finished designs from the previous course, will be reinforced. This course will introduce students to a range of media, including digital and alternative forms. Emphasis will be placed on finding visually compelling solutions, no matter the media. The computer will be used as a tool to assemble and refine. Students will be encouraged to use online tutorials to augment in class instruction. Prerequisite: Communication Design I.

Credit 3 units. Art: FADM EN: H

F20 ART 236L Animated Worlds

This course explores traditional and experimental 3D animation in a short film format. Beginning students will learn polygon and NURBS modeling, texturing, lighting, rigging props, and characters in Maya. A storyboard, animatic and final rendered short will be developed for two major projects. Advanced skill sets include development, character design, 3D modeling, rigging, visual effects, sound, and rendering. No prerequisites or previous experience required. This course can be taken

multiple times at either the beginner or advanced level, and it is open to students of all levels across the university. Graduate and advanced students can build independent projects with permission of the instructor.

Same as F20 ART 336L

Credit 3 units. Art: CPSC

F20 ART 237A Illustration Entrepreneur

In this course, students will create images appropriate for surface design application to products. Students will work toward developing icons and motifs using shape-based illustration, design, composition, hierarchy and thoughtfully considered color. Exploration will include visual content, artists, audiences, and trends in a fluid marketplace. Projects for this course will be in the applied context of gift and home decor markets, fabric design, stationery products, and toys. All skill levels of drawing and digital proficiency are welcome. This course is appropriate for art students whose work focuses on images/packages, design minors, and non-Sam Fox students interested in developing visual products.

Same as F20 ART 337A

Credit 3 units. Art: FADM

F20 ART 237T Visual Principles for the Screen

The demand for graphic literacy in contemporary culture is only increasing, redefining our need to understand how design functions and why. How can products and communication be crafted with the user in mind? How can design facilitate seamless, intuitive digital experiences? This studio course will address considerations for web, mobile, and other screen-based applications, including hierarchy, typography, iconography, layout, color, and image. This course is ideal for students seeking to learn fundamental graphic design and messaging principles and who want to produce robust, researched website and mobile application prototypes. Studio work will be supplemented by supporting lectures and readings. Lab optional. Same as F20 ART 337T

Credit 3 units. Art: FADM EN: H

F20 ART 238A Enchanted Objects: Material Culture

Some objects are "magical," possessing a kind of allure that leads us to spend money we don't have, collect obsessively, or behave differently. Other objects are "dangerous" and "taboo," inspiring disturbing thoughts and actions. This course considers our complex relationship to things and explores their powers of enchantment, which cannot be separated from their status as commodities or what Marx called crystallized labor and creative energy. What gives objects potency, value, and significance? What social-psychological and political purposes and what regimes of commodification and power do they serve? We will engage in discussion and object studies and draw upon work from many fields, both creative and scholarly.

Same as F20 ART 338A

Credit 3 units. Art: VC EN: H

F20 ART 238B Illustration Entrepreneur

In this course, students will create images appropriate for surface design application to products. Students will work toward developing icons and motifs using shape-based illustration, design, composition, hierarchy and thoughtfully considered color. Exploration will include visual content, artists, audiences, and trends in a fluid marketplace. Projects for this course will be in the applied context of gift and home decor markets, fabric design, stationery products, and toys. All skill levels of drawing and digital proficiency are welcome. This course is appropriate for art students whose work focuses on images/packages, design minors, and non-Sam Fox students interested in developing visual products.

Credit 3 units. Art: FADM

F20 ART 238J Advanced Animation

Same as F20 138J, F20 238J, and F20 438J; juniors (only) register for F20 338J. This course focuses on completing a short animated film as a group project using a workflow similar to that used in the animated feature film industry. The class will first develop a story. Individuals will then be assigned tasks according to strong areas of interest to create a storyboard and an animatic. Key moments will be identified to be animated first. After a plan is agreed on, students will be able to choose to work in various parts of the pipeline, including character design; layout and set design; 3D modeling; rigging; animation; textures; special effects; sound; rendering; and editing. Finally, all of these parts are put together as a short. This is an advanced course that assumes some student experience with Maya or a similar 3D program; it is best suited for those who have already developed skills in any form of animation. Prerequisite: Introduction to Animating in Three Dimensions or permission of instructor.

Same as F20 ART 338J

Credit 3 units. Art: FADM EN: H

F20 ART 238S Visual Principles for the Screen

The demand for graphic literacy in contemporary culture is only increasing, redefining our need to understand how design functions and why. How can products and communication be crafted with the user in mind? How can design facilitate seamless, intuitive digital experiences? This studio course will address considerations for web, mobile, and other screen-based applications, including hierarchy, typography, iconography, layout, color, and image. This course is ideal for students

seeking to learn fundamental graphic design and messaging principles and who want to produce robust, researched website and mobile application prototypes. Studio work will be supplemented by supporting lectures and readings.

Same as F20 ART 338S

Credit 3 units. EN: H

F20 ART 238T Transdisciplinary Design

The field of design is shifting from disciplines based on the items they produce (e.g., graphics, apparel, built environments) toward the design of strategies and systems that incorporate many designed elements. This requires a more cross-disciplinary approach, both across academic disciplines at large and across disciplines of design. This course will introduce students to core skills of strategic design through individual and group projects, readings, discussion, and journaling. Students will explore systems thinking, strategic framing, iteration, and collaboration. The class will discuss how designed things affect and are affected by the social systems around them.

Same as F20 ART 338T

Credit 3 units.

F20 ART 239I Radical Design: Making Civic Experiences

Same as F20 339I and 439I. Sophomores (only) register for F20 239I. As we innovate rapidly in technology and communication, the economic and political structures that govern us have become largely assumed and unchallenged. This course explores the daily objects, interactions, and spaces that make up these large systems (like a police ticket or the layout of a courtroom), and it experiments with how redesigning these elements can help us question the status quo. Building on diverse political mindsets and current trends, we will imagine fictional worlds and craft the objects, procedures, and interactions that inhabit them. Along the way, we will discuss the value of designing for fundamental change alongside more incremental reform. Required class time will also include at least one additional in-class studio hour per week, to be determined based on students' schedules.

Credit 3 units. Art: CPSC, FADM EN: H

F20 ART 241E Digital Game Design

Designing a digital game that is both entertaining and usable requires understanding principles of user interface, game theory, and visual design. In this course, students will be introduced to basic game design strategy and practice in the development of their own game projects. Using both paper and the digital screen as canvases for design, students will explore gameplay iterations and create visual components. No prior experience in visual design, coding, or digital games is necessary.

Credit 3 units. Art: FADM

F20 ART 244A Animation Tools and Methods

This course introduces a range of digital and analog production techniques for the practice of animation. It will also present fundamental concepts and issues that define this creative form. Prerequisite: Digital Studio or permission of instructor.

Same as F20 ART 344A

Credit 3 units. Art: FAAM, FADM

F20 ART 247T Artist's Book

This course will examine the role of the book as an artifact of material culture. We will investigate definitions of the artist's book and current uses of the book form as metaphor in contemporary art. We will look at the work of artists such as Anselm Kiefer, Ann Hamilton, Rachel Whiteread, Kiki Smith, William Kentridge, Sophie Calle, Dieter Rot, and many others. In addition, we will look at the role of artist's books and publications in many 20th-century artistic movements. Course projects will center around the exploration of various types of editioned artworks, such as artist's multiples, mail art, zines, and more.

Same as F20 ART 347T

Credit 3 units.

F20 ART 251A Sound Environments

This course explores sound and musical composition in a digital format, functioning as a sculptural, spatial, psychological, and architectural intervention. The course offers an introduction to current sound art practices and examines how sound projects are capable of altering our sense of space and time. Sonic space necessarily touches upon experimental music and installation art as closely related to sound art. The course introduces students to basic methods of sound recording and editing software and hardware, with the goal of composing sound works for space and for headphones. Readings pertaining to current developments in contemporary experimental music and sound art as well as regular writing assignments accompany the course.

Same as F20 ART 351A

Credit 3 units. Art: FAAM EN: H

F20 ART 252B Performing Solitude

Performing Solitude is a new elective studio with elements of a seminar, and it is open to students from across campus and suited most for upper-level undergraduates and graduate students in art, architecture, performing arts, music, and film & media studies departments. Performing Solitude invites students who are interested in creating interdisciplinary works that merge performance art with other forms of expression, including visual, digital, acoustic, textual and cinematic. Working with their own performing selves as a material in their art -- and with domestic or landscape space -- students will be invited to reconsider what performance art means in the age of a post-global, post-pandemic and post-digital universe in which the biological environment, including nature and their own bodies as part of it, continues to enact gestures and make aesthetic statements set against global histories. This studio incorporates elements of a seminar by way of discussing histories of performance art, performativity, and ritual as well as by supporting individually guided research and collaboration. During the semester, students will create two major performance-based works that incorporate other media of choice, such as film, music, text, or installation. Student work will be documented and demonstrable in their portfolios. Several smaller improvised or in-class assignments will lead toward a final project accompanied by an artist text. Readings, lectures and invited guests will accompany this studio.

Same as F20 ART 352B

Credit 3 units. Art: FAAM

F20 ART 262 Why Art Matters

This lecture and discussion course will examine how art, which productively utilizes ambiguity and discontinuity, is a distinctive form of expression and communication. Functioning not as a bearer of meaning but rather as a shaper of meaningful

questions, art invites interpretation and introspection. As such, art -- which often functions to rekindle perception and give rise to new ways of thinking about and being in the world -- empowers individual thought, encourages empathy, and celebrates the diversity of ideas and opinions that are vital to conditions of freedom. With this in mind, multimedia lectures will explore the perspectives of contemporary artists (e.g., James Turrell, Cerith Wyn Evans, Wangechi Mutu), psychologists (e.g., Winnicott, Frankl, Freud), philosophers (e.g., Heidegger, Bataille, Merleau-Ponty), linguists (e.g., Lacan, Pierce, Saussure), sociologists, cognitive scientists, cultural theorists and others. In addition, readings, discussions, in-class group interpretations and written critical analysis will provide students with the tools required to understand how art, which is a distinctive form of expression and communication, matters; it matters, as Bill O' Brien argues, because it teaches us how we matter.

Same as F20 ART 362

F20 ART 2647 Italian Language (Florence)

This course covers Italian grammar and conversation for study abroad students in Florence. Taught entirely in Italian. There is an emphasis on class participation accompanied by readings and writings. The student develops facility speaking the language on an everyday basis.

Credit 3 units.

F20 ART 2648 Italian Language

This course covers Italian grammar and conversation for study abroad students in Florence. Taught entirely in Italian. There is an emphasis on class participation accompanied by readings and writings. The student develops facility speaking the language on an everyday basis.

Credit 3 units. EN: H

F20 ART 2661 Semester Abroad Program Seminar

This course prepares students participating in the Sam Fox School's Semester Abroad Programs. The seminar meets eight times over the course of the semester. Attendance is mandatory for students going abroad. Prerequisite: College of Art and College of Architecture students selected for the Sam Fox School Abroad Programs.

Credit 1 unit. EN: H

F20 ART 2662 Semester Abroad Program Seminar

This course prepares students participating in the College of Art's Semester Abroad Program in Florence, Italy. The seminar meets eight times over the course of the semester. Attendance is required. Prerequisite: students selected for the Semester Abroad Program only.

Credit 1 unit. EN: H

F20 ART 2713 Introduction to Book Binding

Same as F20 1713, F20 2713, and F20 4713; juniors (only) register for F20 3713. This course will serve as an introduction to the book as an artifact of material culture. A variety of traditional and non-traditional book structures will be explored. Students will learn from historical approaches to constructing the codex form, including the single-signature pamphlet, the multi-signature case binding, the coptic, and the medieval long stitch. Students will learn Japanese binding and its many variations. Several contemporary variations will be introduced, including the tunnel,

the flag book, the accordion, and the carousel. Students will explore the visual book using found imagery and photocopy transfers, and they will produce a variety of decorated papers to be used in their bindings.

Same as F20 ART 3713

Credit 3 units. Art: FADM EN: H

F20 ART 278 Contemporary Discourses: Art + Feminism

This course investigates the impact of feminism on contemporary art, focusing on artwork produced between the 1960s and the present day. Through an examination of global practices in a wide range of media, including artworks in the university's Kemper Museum collection, students will delve into innovative aesthetic strategies that criticize assumptions of gender, race and social class and consider the intricate tie between the identity of the author and the content of the work. This course is taught by a practicing artist, who together with the students will uncover historical developments and epic omissions. This is a lecture course with a discussion component. Requirements include participation in weekly discussion sections, regular response papers, and a final written curatorial project. No prerequisites in Art or Art History required.

Same as F20 ART 378

Credit 3 units. Art: CPSC, FAAM, VC EN: H

F20 ART 2783 Special Topics in Visual Culture: Introduction to Illustration Studies

How have knowledge, opinion, and feeling been communicated visually from the advent of automated printing presses to the invention of the internet, and to what effect? Using concepts in visual studies and communication studies, this course explores the histories of primarily American visual-verbal texts to investigate how minds and hands conceived, produced, distributed, and consumed illustrated print media in the 19th and 20th centuries. Beginning with the neurological basis of vision, we will examine ways culture affects perception, how print technologies shape content, how word and image rhetorically shape beliefs, how power relations imbue images and publishing, and the ways counterculture forms such as caricature and posters can be used to intervene socially. Students will conduct original research using University Libraries Special Collections to hone their ability to write convincingly and professionally about imagery.

Credit 3 units. Art: FADM, VC

F20 ART 287A Social Practice Art

Social Practice Art (SPA) is a course for artists, designers, architects and landscape architects. This studio course takes an interdisciplinary approach to establishing how social interaction and discourse can be tools for social transformation. SPA involves works that may use audience, collaboration, participation, ephemera, and activism as a medium that emphasizes the aesthetic of co-creation. Through readings, mindfulness exercises, field trips, and studio assignments, students will develop and implement their own social practice project.

Same as F20 ART 387A

Credit 3 units.

F20 ART 292A Visualizing Literature: Texture/Structure

This course challenges students to function as reader-designers to develop new relationships between the written word and the seen word. Drawing on literary works, students learn visual methods to amplify the power of words, express personal

perspectives, and visualize narrative structures in fiction and nonfiction. Three distinct projects present tools to generate visual and typographic material, including digital composition software and letterpress. Students may work on laptop computers or tablets, as needed. This course is ideal for students pursuing work in any field to learn about the visual display of language. No prerequisites or previous experience required.

Credit 3 units. Art: FADM

F20 ART 294A Research Methods in Studio Art

Research Methods is an inquiry into research-based studio practices. In this course, students explore what research-based studio practices are. How do artists conduct research? What research methods can be adopted by artists to generate and gather ideas? Can methods come from disciplines outside the arts and how is research embedded in an artwork? This course proposes research-based studio practices as a means for artists to extend their ideas. It is a praxis course that acts as both a query into the research methodologies used by contemporary artists and a laboratory for students to integrate their studio-based practices with coursework in other disciplines. This class recognizes that there is no single standard for what constitutes research-based practice and, accordingly, it will explore both established and unconventional strategies for creating artworks. Students will use case studies of artists who use research as a basis of their studio practice and generate a semester-long, individual project that mines the information, methods, techniques, or discoveries of another discipline they have engaged at Washington University. Consequently, students should concurrently be enrolled in a course in another discipline on campus.

Credit 3 units. Art: FAAM

F20 ART 301E Anatomy Figure Structure

This rigorous drawing course explores traditional and new representations of the figure through the study of its structure and contemporary contexts. Research involves basic anatomy lectures and sketchbook activities that provide a vehicle for discovering the figure's architecture, mechanics and proportions. Art production is based on in-class and outside projects. Lectures, presentations, critical readings and the analysis of historical and contemporary figurative works support students in their investigations. Prerequisites: Drawing (F10 101A or F10 102A).

Credit variable, maximum 3 units. Art: FAAM

F20 ART 302 Drawing

An advanced drawing course for third- and fourth-year students. Individualized instruction allows students to explore various media and stylistic approaches in both figurative and nonfigurative modes.

Credit 3 units. Art: FAAM EN: H

F20 ART 303B Collage: History & Practice in Contemporary Art

This course examines the role of collage in contemporary studio practice. Students are required to assemble an archive of images from various sources, both found and self-generated, to produce work based on specific themes. This course integrates collage practice with other visual disciplines. Readings and discussion related to the course examine the evolution of collage and its present status and application within contemporary art production.

Credit 3 units.

F20 ART 304B Collage: History & Practice in Contemporary Art

This course examines the role of collage in contemporary studio practice. Students are required to assemble an archive of images from various sources, both found and self-generated, to produce work based on specific themes. This course integrates collage practice with other visual disciplines. Readings and discussion related to the course examine the evolution of collage and its present status and application within contemporary art production.

Credit 3 units. Art: FAAM

F20 ART 307X Community Building

This course looks at the intersection of the built fabric and the social fabric. Using St. Louis as the starting point, this course takes students out of the classroom and into a variety of neighborhoods — old, new, affluent, poor — to look at the built environment in a variety of contexts and through a variety of lenses. Almost every week for the first half of the semester, students visit a different area (or areas), each trip highlighting some theme or issue related to the built environment (architecture, planning, American history, investment and disinvestment, community character and values, race, transportation, immigrant communities, future visions, etc.). Running parallel to this, students are involved in an ongoing relationship with one particular struggling neighborhood, in which students attend community meetings and get to know and become involved with the people in the community in a variety of ways. Students learn to look below the surface, beyond the single obvious story, for multiple stories, discovering their complexity, contradictions and paradoxes. They also come to consider the complex ways in which architecture and the built environment can affect or be affected by a host of other disciplines. College of Architecture and College of Art sophomores, juniors, and seniors have priority. Fulfills Sam Fox Commons requirement.

Same as X10 XCORE 307X

Credit 3 units. Art: CPSC EN: H

F20 ART 308A You Are Here: Engaging St. Louis's Racial History Through Site + Story

By acknowledging the pressures and pains of our political moment -- a time of crisis for many in our city and nation, but also a long-awaited reckoning with issues of social justice -- this course engages the complex history of race and racial injustice in St. Louis through site- and story-based exploration. It offers an opportunity to learn about the city's landscape, history, systems, culture, form and identity while wrestling with fundamental questions of power, positionality and perspective. "You Are Here" references orientation, discovery, otherness and place, and it serves as a provocation for reconsidering how designers, artists and architects engage St. Louis. This course may count toward the minor in Creative Practice for Social Change if bundled with "Engaging Community: Understanding the Basics." Priority will be given to first-year Sam Fox students.

Credit 1.5 units. Art: CPSC

F20 ART 308B Engaging Community: Understanding the Basics

What does it mean to engage in community as a creative practitioner? Community engagement must be grounded in authentic relationship building and an ability to understand and act within the historic context and systems that impact

communities. We will practice the skills of listening, observation, reflection, and improvisation. We will cultivate mindsets that focus on community assets and self-determination. Workshops will teach facilitation and power analysis, with the intention of upending the power dynamics between community and creators. This course pairs with "Engaging St. Louis: Sites, Stories, and the Struggle for Racial Justice" [working title]. It may count toward the minor in Creative Practice for Social Change if bundled with "You Are Here: St. Louis' Racial History Through Sites and Stories."

Credit 1.5 units. Art: CPSC

F20 ART 308X Community Building North

This course addresses the complex economic, political and racial landscape of north St. Louis County focused on Ferguson, Missouri, as the embodiment of problems and conflicts endemic to urban communities across the country. The events following Michael Brown's shooting death on August 9, 2014, have revealed deep divisions in the St. Louis metropolitan area. Our multidisciplinary approach will be evident as we investigate the intersecting, compounding roles of social and economic inequities, racial disparities, white flight, public safety, housing, and economic development as we grapple with legitimate, thoughtful ways of making positive change. We will learn how to listen to, understand, and address conflicting voices. Readings, speakers, site visits, films, and other materials will be combined with discussion, writing, and socially conscious engagement as we seek to understand the many faces of Ferguson while following contemporary developments as they occur. Professor Robert Hansman acts as advisor and guide. The interdisciplinary course he developed over many years, "Community Building/Building Community," provides the intellectual, ethical, and spiritual bases for the course. This course offers fresh perspectives and provides unique opportunities for community engagement for students who have previously taken Community Building; however that course is not a prerequisite. Projects develop collaboratively and organically between students, faculty, and community partners working to find common values and beliefs upon which to build concrete, meaningful action.

Same as X10 XCORE 308X

Credit 3 units.

F20 ART 309B Eco-Art

Eco-Art explores the intersection of art, ecology and ethics. Though the movement is broad and growing, eco-art re-envisions our relationship with the natural world by informing, challenging, inventing, and reclaiming. This studio-based course introduces various artistic practices and working methodologies related to environmental art, exploring "green" methodologies, repurposed objects, land art, ecoventions, social sculpture, and community activism. The course is organized around art historical precedents, and it is supported by critical essays and examples of contemporary practice, including discussion of eco-design and sustainable architecture. Projects are open to multidimensional solutions in a wide variety of media.

Credit 3 units. Art: CPSC

F20 ART 311 Painting

Same as F20 111, 211, 411. Juniors (only) register for F20 311. Introduction to painting processes and materials. While there is emphasis on oil painting, students are also introduced to watercolor and acrylic paints and a wide variety of painting

surfaces. Subject matter is varied, beginning with still-life material and ending with direct painting from the model. Technical skills and content are dealt with at the individual student's level.

Credit 3 units. Art: FAAM EN: H

F20 ART 311T The Poetics of Image-Making: People, Place & Space

This painting elective course examines the poetics of image-making, with a focus on the representation of people, place, and space, both observed and invented. Students learn the practice of painting and develop works through fundamental exercises as well as through the shared exploration of painting processes. Work outside of class for the beginner is project-based; advanced students produce an independent body of work. Critical assessment of work is complemented by faculty and peer discussions, readings, and field study. Required text: "The Poetics of Space" by Gaston Bachelard.

Credit 3 units. Art: FAAM

F20 ART 311U The Language of Moving Images

This course will examine the language of moving images, which includes -- among other elements -- shot construction, sequencing, duration, sound integration, scale, and situational contexts. Through screenings, readings, lectures, discussions and critiques, students will develop the skills required to interpret moving images and to think about their productions, which may utilize forms other than video or film and include installation components. This course is not focused on technical approaches, and students' creative work will be driven by individual concerns and may be accompanied by written analysis. Prerequisite: Digital Studio/Digital Design.

Credit 3 units.

F20 ART 312 Painting

Same as F20 112, 212, 412. Juniors (only) register for F20 312. This course is an introduction to oil painting with an emphasis on the principles of color, construction and paint handling. Students will explore the possibilities of representational painting as applied to still-life, interiors, landscape and the human figure. The course is designed especially for beginning painters but can accommodate painters at all levels of proficiency.

Credit 3 units. Art: FAAM EN: H

F20 ART 312P Painting: The Painted Figure

This studio course is an introduction to the practice of painting, with an emphasis on the pictorial representation of the human figure. Instruction will encompass a range of technical, conceptual and creative skills to be used for developing projects. In-class projects will include working from the live model. Students will be encouraged to consider traditional and alternative forms of painting. Lectures, critical essays, and analysis of historical precedents and contemporary practitioners will support students in their course work. No prerequisites.

Credit 3 units. Art: FAAM EN: H

F20 ART 313F Sculpture: Foundry

Same as F20 113F, 213F, 413F - Juniors (only) register for F20 313F. The focus of this course is to introduce students to the basic principles of bronze and aluminum casting according to the lost wax method. Students will learn mold making, direct organic burnout, ceramic shell investment, metal chasing, and patination in order to create finished sculpture. In addition to metal casting,

students will use other materials such as plaster, resin, steel, wood, rubber, plastic, and foam to create a mixed media project that explores a specific idea or theme. Additional work outside the regularly scheduled class time is required.

Credit 3 units. Art: FAAM EN: H

F20 ART 313G Sculpture: Wood

Same as F20 113G, 213G, 413G - Juniors (only) register for F20 313G. The focus of this course is to introduce students to the basic principles of wood sculpture with an emphasis on furniture making.

Credit 3 units. Art: FAAM EN: H

F20 ART 313H Sculpture: Blacksmithing

Same as F20 113H, 213H, 413H - Juniors (only) register for F20 313H. This course is an introduction to blacksmithing materials, tools, and techniques. Students will explore the fundamental techniques of hand-forged metal. Metal can be manipulated as a plastic material and offers enormous possibilities for three-dimensional form. In this class we will explore these possibilities and expand our sculptural vocabulary.

Credit 3 units. Art: FAAM EN: H

F20 ART 313I Sculpture: Metal Fabrication

Same as F20 113I, F20 213I, and F20 413I; juniors (only) register for F20 313I. Metal is the backbone of our modern world, and it is a viable medium for self-expression. It can be employed as structure or as surface, it can be plastically deformed to create compound shapes, and it can be connected to most any other material. Students will explore the creative potential of this material in the fabrication of sculptural forms. Students learn to weld using both gas and electric arc machines as well as the safe operation of drilling, grinding, and finishing tools.

Credit 3 units. Art: FAAM EN: H

F20 ART 313J Digital Fabrication for Object Making

This course explores the potential of digital tools in the creation of tangible objects. We will focus on "component manufacture" as a means of sculptural production, i.e., creating linkages, universal fittings, and adaptors that connect disparate materials. Toys, mechanical systems, and construction products will be researched as a point of inspiration. Students will be introduced to various modeling software such as Rhino, AutoCAD, and SolidWorks and explore the potential of these platforms to design 3-dimensional forms. A variety of output tools will be used but we will focus primarily on the planning for and use of laser cutters, 3D printers, and CNC routers. We will develop, design, and manufacture components that, when combined with readily available materials, can be used to create sculptural forms. This class will use iterative processes that move between digital and analog model-making and sketching. Students will be introduced to the concept of kitbashing, and the modification of salvaged and found parts. This course introduces these concepts to artists, designers, engineers, and anyone interested in exploring the possibilities of digital fabrication tools towards the creation of sculpture. No prerequisites.

Credit 3 units. Art: FAAM, FADM

F20 ART 313P Compositions in Clay

In this course, students will broaden their understanding of clay as a viable medium of visual expression and three-dimensional exploration. Students will learn basic hand-building techniques to create sculptural constructions, discover the practical

applications of wheel throwing through form and function, and explore ceramic tools and equipment to create installation projects. Each student's skill level will be considered, and projects will be adjusted accordingly. Emphasis will be placed on critical assessment and articulation of material.
Credit 3 units.

F20 ART 313Q Compositions in Clay

In this course, students will broaden their understanding of clay as a viable medium of visual expression and three-dimensional exploration. Students will learn basic hand-building techniques to create sculptural constructions, discover the practical applications of wheel throwing through form and function, and explore ceramic tools and equipment to create installation projects. Each student's skill level will be considered, and projects will be adjusted accordingly. Emphasis will be placed on critical assessment and articulation of material.
Credit 3 units. Art: FAAM

F20 ART 314F Sculpture: Foundry

Same as F20 114F, 214F, 414F - Juniors (only) register for F20 314F. The focus of this course is to introduce students to the basic principles of bronze and aluminum casting according to the lost wax method. Students will learn mold making, direct organic burnout, ceramic shell investment, metal chasing, and patination in order to create finished sculpture. In addition to metal casting, students will use other materials such as plaster, resin, steel, wood, rubber, plastic, and foam to create a mixed media project that explores a specific idea or theme. Additional work outside the regularly scheduled class time is required.
Credit 3 units. Art: FAAM EN: H

This course introduces these concepts to artists, designers, engineers, and anyone interested in exploring the possibilities of digital fabrication tools toward the creation of sculpture.
Credit 3 units. Art: FAAM

F20 ART 314N Sculpture: Art Practice (Itinerant Artworks)

Who said you can't take it with you? Itinerant Artworks is a course in which students create work in any medium that is built for travel (not speed) and that can be set up, knocked down, or installed in a variety of locations at a moment's notice. Students will document their work at a range of sites throughout St. Louis. For the final project, the class will stage an "off the grid" outdoor exhibition in Forrest Park. Typically, artworks are either site-specific or are agnostic to their placement and location. Itinerant Artworks proposes a third model, where an artwork can be mobile, responsive, and highly adaptable to various environments or sites. Itinerant Artworks is intended to be a response to the current condition for making and viewing art. Despite the unpredictable and ever-changing circumstances of this moment, you can take it with you.
Credit 3 units.

F20 ART 314R Digital Fabrication for Object Makers

This course explores the potential of digital tools in the creation of tangible objects. We will focus on "component manufacture" as a means of sculptural production, i.e., creating linkages, universal fittings, and adaptors that connect disparate materials. Toys, mechanical systems, and construction products will be researched as a point of inspiration. Students will be introduced to various modeling software such as Rhino, AutoCAD, and SolidWorks and explore the potential of these platforms to design 3-dimensional forms. This class will use iterative processes that move between digital and analog model-making and sketching. Students will be introduced to the concept of kitbashing, and the modification of salvaged and found parts. This course introduces these concepts to artists, designers, engineers, and anyone interested in exploring the possibilities of digital fabrication tools towards the creation of sculpture. No prerequisites.
Credit 3 units. Art: FAAM, FADM

F20 ART 315 Printmaking

Same as F20 115, F20 215, and F20 415; juniors (only) register for F20 315. This course is a survey of printmaking that covers basic processes in intaglio, lithography, relief, and monotype. Emphasis is on mixed media and experimentation with a foundation in traditional, historical, and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.

Credit 3 units. Art: FAAM EN: H

F20 ART 315F Printmaking: Call and Response

In music, a call and response is a succession of two distinct phrases usually written in different parts of the music, where the second phrase is heard as a direct commentary on or in response to the first. Printmaking: Call and Response is a survey of printmaking with a foundation in traditional, historical, and philosophical aspects of printmaking. It will cover basic processes in intaglio, lithography, relief, and monotype. Students are encouraged to work in response to the history of the print, with an emphasis on mixed media and experimentation. This class counts for the minor in art.

Credit 3 units.

F20 ART 315T Printmaking: Contemporary Processes

This course is designed to give a broad introduction to contemporary processes and approaches in printmaking, including digital technology. Emphasis will be on image development through the manipulation and combination of techniques to create one of a kind prints and variable editions. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.

Credit 3 units.

F20 ART 316 Printmaking

Same as F20 116, F20 216, and F20 416; juniors (only) register for F20 316. This course is a survey of printmaking that covers basic processes in intaglio, lithography, relief, and monotype. Emphasis is on mixed media and experimentation with a foundation in traditional, historical, and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.

Credit 3 units. Art: FAAM EN: H

F20 ART 316T Printmaking for Architecture and Art Students

This course will focus on monotype mixed media printmaking using both a press and digital print processes. The course is designed to be responsive to current issues with a focus on contemporary printmaking practices and various ideas about dissemination in the age of social media. The course will include an examination of historical examples of diverse global practices; prints made in periods of uncertainty, disruption, war, and disaster; and speculative projects by architects such as Superstudio, Zaha Hadid Architects and Archigram. Students will be expected to create a series of work with a conceptual framework developing a personal visual language.

Credit 3 units. Art: FAAM EN: H

F20 ART 316U Printmaking: Print Installation, Multiples, and Site Specificity

This course explores a range of basic techniques—silkscreen, block printing, and risograph, for example—to create immersive installations. Students will orient their site-sensitive investigations to place through history, context, and materials. Conventional and unconventional installation spaces will be used, both on campus and off, to experiment. The course will introduce planning techniques and approaches to site analysis. Students will be encouraged to incorporate other media within their installations, especially as they relate to other coursework they are currently taking within or outside of studio art. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests. This class counts toward the Minor in Art. No prerequisites

Credit 3 units. Art: FAAM

F20 ART 317M Architecture Through the Photographic Lens

Same as F20 117M, F20 217M, and F20 417M; juniors (only) register for F20 317M. Photography offers ways of seeing and representing the world around us. This course provides technical and conceptual frameworks for understanding architectural space as seen through the camera. Topics include the building as site, landscape as context, and the architectural model as a representation tool. Students are introduced to a wide range of artists and architects, which helps them to build a unique camera language to support their individual projects. Students will learn DSLR camera basics, fundamentals of Photoshop, digital printing techniques, and studio lighting for documenting architectural models. The course assumes no prior experience with digital imaging technologies or materials. Digital camera required.

Credit 3 units. Art: FAAM

F20 ART 317N Contemporary Portraiture

Same as F20 117N, F20 217N, and F20 417N; juniors (only) register for F20 317N. Historically, portraits were painted of the royal or wealthy to document an accurate likeness and to display status and power. However, with the advent of photography, artists were freed to develop interpretations in style, process, and medium. With subjects such as family, friends, strangers, celebrities, and the self, the portrait has been used to reflect culture, identity, and the relationship between the artist and the sitter. Issues of race, sexuality, gender, vanity, and status continue to be relevant to contemporary practice. This is primarily a drawing class; students combine the study of contemporary portrait artists with a studio practice that encourages the development of a unique voice. Students consider how pose, gesture, lighting, and other factors work together to support their intentions. Initial assignment prompts progress to guided independent pursuits. Students will be encouraged to experiment with image, materials, and processes. Live models will be used as well as other source material.

Credit 3 units. Art: FAAM

F20 ART 317O Drone Photography

This combination studio and discussion-based course examines the use of small unmanned aerial systems (sUAS) — otherwise known as *drones* — as a photographic medium. Studio sessions will introduce students to sUAS operation, various editing platforms, and output strategies. Lecture and discussion sessions will examine FAA regulations, the ethical implications of sUAS use by visual artists, and the rise of sUAS in the visual

arts within the context of the history of aerial photography. All students will produce a body of work using drone capture as the primary medium. In order to ensure equal access to sUAS, students will be required to meet outside of class sessions. Credit 3 units.

F20 ART 317P Drone Photography

This combination studio and discussion-based course examines the use of small unmanned aerial systems (sUAS) — otherwise known as *drones* — as a photographic medium. Studio sessions will introduce students to sUAS operation, various editing platforms, and output strategies. Lecture and discussion sessions will examine FAA regulations, the ethical implications of sUAS use by visual artists, and the rise of sUAS in the visual arts within the context of the history of aerial photography. All students will produce a body of work using drone capture as the primary medium. In order to ensure equal access to sUAS, students will be required to meet outside of class sessions. Credit 3 units. Art: CPSC, FAAM EN: H

F20 ART 317Q Context, Curation, Communication: Seriality in the Photographic Image

Series and sequences are the prevalent method for exhibiting photographic images. Through assignment-based and self-generated projects, students discover how photographic series are conceptualized, structured, and sequenced. Special attention is given to the material meaning embedded in print size, order, and spatial placement. The course provides in-depth coverage of image capture through medium-format analog and full-frame digital systems as well as intermediate digital editing and printing techniques. Students also explore various documentary and setup strategies through narrative and non-narrative photographic approaches. Through a rigorous critique structure, course readings, and critical writing, students engage the historical discourse surrounding the series as a tool for artistic expression. Credit 3 units.

F20 ART 317T Discourses in Contemporary Photography

This seminar course explores dialogs animating contemporary fine art photography from the 1960s to the present. Course lectures will be organized thematically around key ideas informing contemporary photography practice, including, but not limited to: changing technologies, surveillance, performance, social engagement, gender, race, and sexuality. Students will respond to lectures and class discussions through research presentations, visual assignments, and written responses. Credit 3 units. Art: FAAM

F20 ART 3183 Photography III

This class is designed for the student who is seeking to explore advanced issues in photography using a broad range of photographic practices and media. In addition to further mastering of technique and craft, students will, through readings and class discussion, place their work within a context of contemporary issues in photographic image making, theory and criticism. Credit 3 units. EN: H

F20 ART 3184 Photography III

This class is designed for the student who is seeking to explore advanced issues in photography using a broad range of photographic practices and media. In addition to further mastering of technique and craft, students, through readings and class discussion, place their work within a context of contemporary issues in photographic image making, theory and criticism.

Credit 3 units. EN: H

F20 ART 319 Ceramics

Same as F20 119, 219, 419 - Juniors (only) register for F20 319. An introduction to the design and making of functional pottery as well as sculptural objects. Students learn basic forming processes of the wheel, coil and slab construction. While the emphasis is on high-fired stoneware, students will be introduced to Raku and soda firing. Content and advanced processes and skills are encouraged according to the individual's level.

Credit 3 units. Art: FAAM EN: H

F20 ART 319J Structural Ceramics

This course is designed for advancing study in 3D practices within clay processes and in sculpture. Several techniques in clay will be explored, and hand-building will be emphasized. Methods of creating will include coiling, slab building, casting, and subtractive modeling. In this course, we will understand and research clay as a material that engages in structure and introduces new sculptural ideas that define scale, balance, form, and so on. Surface design with cold finishes and glazes, firing processes, and mold making will be explored as means of building and finishing content. Discussions and presentations will focus on the history and contemporary traditions of ceramic structures and sculptures. Emphasis will be placed on the critical assessment and articulation of material.

Credit 3 units. Art: FAAM

F20 ART 320 Ceramics

Same as F20 120, F20 220, and F20 420; juniors (only) register for F20 320. This course is an introduction to the design and making of functional pottery as well as sculptural objects. Students learn basic forming processes of wheel, coil, and slab construction. Although the emphasis is on high-fired stoneware, students will be introduced to raku and soda firing. Content and advanced processes and skills are encouraged according to the individual student's level.

Credit 3 units. Art: FAAM EN: H

F20 ART 320J Ceramics: Introduction to Hand-Building

This course introduces students to a wide range of ceramic hand-building techniques such as coiling, pinching and slab building. While establishing a strong foundation of skills, students will also gain a deeper understanding of clay as a means for expression of thoughts and ideas. Throughout the course, students will be encouraged to explore and develop their own personal language within the medium.

Credit 3 units. Art: FAAM

F20 ART 320K Ceramics: Molds and Multiples

This course explores the fundamentals of mold-making for ceramics. A variety of techniques from ancient to present day methods will be employed. Students will examine various implementations of molds and their ensuing possibilities, whether for artistic or design-oriented work. Students will produce individual serial projects in which they incorporate the principals of duplication and copy.

Credit 3 units. Art: FAAM

F20 ART 320L Ceramics: Processes and Practices

This course is a spectrum of ceramic processes using clay, plaster, and glazes to understand and explore techniques of making. Use clay to learn hand-building processes such as soft slab and hard slab, coil building, and hollow-out method to explore material differences of making forms. Glaze properties and chemistry will lightly be explored to understand the different stages of clay to ceramic and the firing processes in oxidation and reduction. Emphasis will be placed on mold-making for exploring repetition, scale, and balance with units to comprehend structure and multiples of building components in clay. Discussion and presentations will focus on the history and traditions of ceramics, contrasted with contemporary making in clay. Each student's skill level will be considered and projects will be adjusted accordingly. Emphasis will be placed on critical assessment and articulation of material.

Credit 3 units. Art: FAAM

F20 ART 323F Special Topics in Fashion Design (Fashion Design: Collaboration Studio)

Same as F20 123F, 223F, 423F - Juniors (only) register for F20 323F. University collaboration course with Fashion Design, Occupational Therapy, Mechanical Engineering and Business to develop design proposals and prototypes for specific customer profiles. Teams of students from different majors will design for various community and industry partners. They will work to solve an apparel or accessory design problem with innovative new concepts. The team will consider the person's lifestyle, occupation, and environmental factors that influence a design's functionality. A client-centered approach is used. Students will be evaluated on how well the design proposal meets the expressed aesthetic and functional needs of the client. Prerequisite: Introduction to Fashion Design. CET (<https://gephardt.institute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.

Credit 3 units. Art: CPSC, FADM EN: H

F20 ART 323L Special Topics in Fashion Design: Fashion and Race

Same as F20 123L, 223L, 423L - Juniors (only) register for F20 323L. Is the fashion industry racist? This seminar course unpacks this contemporary inquiry by decentralizing fashion history to take a critical look at how racial identities are formed and performed, how historical stereotypes are perpetuated, and how theories of representation can be situated within the system of fashion. Students will use theoretical texts on race and representation to read contemporary media surrounding fashion and race (editorials, articles, social media), as well as gain an introduction to recently published research by scholars engaging fashion and race. Not only will students walk away with a richer understanding of how to critically think through race in fashion, but also how doing so gives us a new approach to think through race within a larger system.

Credit 3 units. Art: CPSC, FADM

F20 ART 324J Fashion Promotion and Exhibition

Fashion styling, marketing, and public relations techniques are engaged to develop and execute a promotion and exhibition plan for fashion products. Emphasis is on creativity and innovation, particularly by harnessing technology, to enhance contemporary fashion promotion and exhibition. Students plan and execute the annual Fashion Design Show, highlighting the fashion design Senior Capstone collections. In-class discussions, lectures, guest speakers, and active planning are accompanied by readings, video analyses, and on-site production work.

Credit 3 units. Art: FADM EN: H

F20 ART 324K Experimental Fashion Design

This course introduces students to an experimental and conceptual approach to textile and fashion design. Students will explore a variety of media for the expressive communication of surface and structural design. The course addresses the relationship, crossover and theories of fashion design and art. Studio work will be informed through research, experimentation and prototype development.

Credit 3 units. Art: FADM

F20 ART 325I Making Comics

Same as F20 125I, 225I, 425I - Juniors (only) register for F20 325I. From hieroglyphics to newspapers, drawn pictures in sequence have told stories for thousands of years. This course is an introduction to writing and drawing short form comics. In readings and discussion, students will explore a wide variety of genres and visual approaches to comics. Through exercises and assignments students will learn how to make clear and evocative comics. All skill levels of drawing experience are acceptable.

Credit 3 units. Art: FADM

F20 ART 325J Sculpting Realities

This course investigates new digital technologies -- particularly mixed, augmented, and virtual reality -- through the consideration of one critical question: "What does it mean to be real?" Students will learn the basics for making works of art, design, and architecture in alternative realities through 3D scanning, 3D modeling, and immersive world building. In addition to tutorials and multidisciplinary collaborative studio projects, students will investigate issues of reality and the use of alternative reality tools through readings, discussions, presentations, and other dialogues. The semester will culminate in a final project that translates a physical experience or artifact into a digital one.

Credit 3 units. Art: FADM

F20 ART 326J Design Within Context: Scroll to Screen

This course traces the history of graphic design from the origins of ancient writing systems to the turn of this century, with content that is organized both chronologically and thematically. We will examine the work and methodologies of design movements and participants, and we will critically consider the reciprocal relationship with cultural shifts, sociopolitical factors, and technologies. Focus will lie heavily upon Western European tradition in the 20th century. This course counts toward the degree program as an Art History/Visual Culture elective, and and it also counts toward the design minor.

Credit 3 units. Art: FADM, VC

F20 ART 327A History of Photography

Same as F20 127A, 227A, 427A - Juniors (only) register for F20 327A. Survey of the history of photography and a look at the medium from the camera obscura to contemporary developments. Social and technological developments examined in terms of their influence on the medium.

Credit 3 units. Art: FAAM EN: H

F20 ART 327X Color Systems

This course is a sustained investigation of color. Students study how color is affected by light, by space, by arrangement, by culture, and by commerce. The course aims to deepen the student's understanding of color's complexity and pervasiveness as a fundamental element of shared visual culture. The course develops both technical and conceptual skills to aid in visual translation. In addition to color-specific inquiry, the goals of the course are to expand students' ideas of research and to enable students to integrate various methods of acquiring knowledge into their art and design practice. Throughout the course, students discuss various processes of making/constructing, the connection between color/form/concept, and strategies for idea generation and brainstorming. The course allows for much individual freedom and flexibility within varying project parameters. College of Architecture and College of Art sophomores, juniors, and seniors have priority.

Credit 3 units. Art: FADM EN: H

F20 ART 3285 The Italian Renaissance in the City of Florence

This course encompasses the Renaissance from Giotto through the High Renaissance. Students will be able to examine first-hand the works they are studying. Included are field trips to Rome and Venice. Prerequisite: College of Architecture and College of Art juniors in the study abroad program in Florence, Italy.

Credit 3 units.

F20 ART 328A History of Photography

Same as F20 128A, 228A, 428A - Juniors (only) register for F20 328A. Survey of the history of photography and a look at the medium from the camera obscura to contemporary developments. Social and technological developments examined in terms of their influence on the medium.

Credit 3 units. Art: FAAM EN: H

F20 ART 328C Documentary Film

This course investigates techniques of powerful nonfiction filmic storytelling that symbiotically merges visual and literary narrative devices. We will explore the organic process of research, interaction and craft to construct three short films. Students will be encouraged to go beyond apparent subject matter to inquire into deeper/underlying content that touches on timelessness and global/human topics. Within set parameters, students choose their own filmic topics and structures. Graduate and undergraduate students can form teams or work independently as their own producer, writer, director, cinematographer, editor and sound recordist. No previous experience required.

Credit 3 units. Art: FAAM

F20 ART 328D Experimental Photography: Cameraless to Polaroid, Form to Content

These days, everyone is a photographer, right? But how does that image snapped with your smartphone arrive on your screen? As technology marches forward, we have images literally at our fingertips, yet the actual process of producing the picture is, ironically, more elusive. In this course, we will dive into experimental processes and examine how physically making the picture can affect the content of that picture. As you craft images, ideas become tied to process and suggest new directions, strategies and subjects. We will begin with cameraless techniques, such as the photogram and cyanotype; we will investigate the principle of the camera obscura; we will test out rudimentary cameras such as the pinhole and disposable models; and we will experiment with printing techniques such as Polaroid and Xerox transfer, examining artists using these various techniques along the way. As we move through the semester, students will learn the various ways that light can create images, and they will begin to find their own particular voice within these mechanizations and create original work.

Credit 3 units. Art: FAAM

F20 ART 328E Making Documentaries in the Time of Covid

Documentary video is a powerful tool to spotlight the frustrations and triumphs of our daily lives. Unlike fiction films, the inquiry and the questions that start the process of making a documentary end up as an adventure and often the film itself. Many filmmakers discover unexpected answers, reveal hidden histories, humanize previously one-dimensional characters, and spotlight even more in-depth questions. The global pandemic offers a unique opportunity to create videos that acknowledge this moment, with the potential to become a significant part of an international conversation. Even beginning filmmakers can give voice to issues that will be included in the historical record. Students will learn about or improve their cinematic aesthetics and professional video editing skills by making three short videos.

Credit 3 units. Art: CPSC, FAAM

F20 ART 328X Color Systems

This course is a sustained investigation of color. Students study how color is affected by light, by space, by arrangement, by culture, and by commerce. The course aims to deepen the understanding of color's complexity and pervasiveness as a fundamental element of shared visual culture. The course develops both technical and conceptual skills to aid in visual translation. In addition to color-specific inquiry, another goal of this course is to expand ideas of research and enable students to integrate various methods of acquiring knowledge into their art and design practice. Throughout the course, students discuss various processes of making/constructing, the connection between color/form/concept, and strategies for idea generation and brainstorming. The course allows for much individual freedom and flexibility within varying project parameters.

Credit 3 units. Art: FAAM, FADM

F20 ART 329G Visualizing Otherness: Race, Gender and Class

The thematic focus of this studio is "the other". As we witness a global uprising and comprehensive public dialogue in response to police violence against African-Americans and the systemic racism that pervades American culture, students explore the artist's place in the power dynamics of mobilizing, re-

contextualizing, and retelling stories that push against narrow, established norms. Otherness is not only linked with race, it is also deeply entrenched in sexism, xenophobia, transphobia, and classism. This course uses video and performance as platforms of artistic expression to engage with and move the dialogue forward. Class time will be divided between lectures, presentations, group discussions, and producing artwork. No prerequisites.

Credit 3 units. Art: CPSC, FAAM

F20 ART 331A Visualizing the Data of Place

What makes a place a place? This course explores physical and human aspects of place through the lens of data visualization. Studio and writing projects challenge students to consider the places that mean the most to them, and how corresponding data can be visualized to tell meaningful stories. Depending on student interest, particular topics could include topography, climate, color, water levels, green space, economic equity, and public infrastructure. Readings are in cartography, information design, and site-specific history. The course's 3-5 projects span print and digital delivery. Open to any university student, sophomore and above, interested in the display of data for impact.

Credit 3 units.

F20 ART 333 Basic Illustration

Same as F20 133, 233, 433 - Juniors (only) register for F20 333. An introduction to concepts, media techniques, and problem-solving approaches within contemporary illustration. Emphasis on individual solutions to the problems presented. Students can work by hand or on the computer. Traditional drawing skills not required.

Credit 3 units. Art: FADM EN: H

F20 ART 334 Basic Illustration

Same as F20 134, 234, 434. Juniors (only) register for F20 334. An introduction to the concepts, media and problem-solving methods of contemporary illustration. Projects involve image development for applications such as book illustration, iconic/logo illustration, product development and information graphics. Students can work by hand or on the computer. Traditional drawing skills not required.

Credit 3 units. Art: FADM EN: H

F20 ART 334A Advanced Drawing: Affective Stills and the Moving Image

Marked is an open-ended advanced drawing course that will focus on expanded definitions and mark-making practices. This course will explore, contextualize and analyze a wide variety of drawing methods that relate to image-making, spatial and situated practices, and ephemeral, time-based media. Through projects, readings, lectures and individual research, students will gain a broader understanding of drawing and its various definitions and approaches in addition to its rich set of histories and contemporary applications. This course will be peppered with lively discussions, field trips, and lectures by artists, architects, and designers. Self-directed projects will be reviewed and discussed critically and aesthetically in relation to the intent of the artist. A highly experimental and even collaborative approach to drawing will be strongly encouraged. Prerequisite: Drawing (F10 101A or 102A).

Credit 3 units. Art: FAAM

F20 ART 335A Interaction Design: Applications for Public Health

Through a blend of presentations from practitioners, classroom lectures, readings, discussions, and hands-on exercises, this course will engage principles and methods of interaction design within the context of health challenges. Broadly defined, interaction design is the practice of designing products, environments, systems, and services with a focus on behavior and user experience. We will take on an in-depth challenge in an area such as transportation or community health resources and work in cross-disciplinary design teams with an external partner organization. Students will gain experience in planning and executing a human-centered design process featuring research, ideation, synthesis, concept development, prototypes, and a final presentation, which may include visual design, animation, and sound. Students will work in teams to develop several intermediate project deliverables, such as prototypes and sketches. No prior course work is necessary, although experience with Adobe Photoshop, Illustrator, and InDesign is helpful.

Credit 3 units. EN: H

F20 ART 335G The Licensed Image: Development and Distribution

Same as F20 135G, 235G, 435G - Juniors (only) register for F20 335G. An introduction to the concept and image development, design, market distribution and methodology for creating licensed products. Projects will involve product idea development, market and the development of image-driven products using images and design. Traditional drawing skills not required. Students can work by hand or on the computer. Ideal course for students whose work focuses on images and those interested in developing visual products, including business students.

Credit 3 units. Art: FADM EN: H

F20 ART 335I Communication Design I

Same as F20 135I, 235I, 435I - Juniors (only) register for F20 335I. An introduction to the field of communication design, combining principles from the fields of graphic design, advertising and illustration/image construction. Through studio exercises and lectures, students will be exposed to the broad range of conceptual, aesthetic and strategic issues inherent to the field. Additionally, the similarities, differences and points of overlap within the three areas will be discussed. An excellent introduction to the subject as a tool for business and marketing.

Credit 3 units. Art: FADM EN: H

F20 ART 335J Introduction to Animating in Three Dimensions

Same as F20 135J, 235J, 435J - Juniors (only) register for F20 335J. This course explores 3D animation in the short film format. Students move from an overview of the process and visual vocabulary of animation to defining filmic ideas, the visual gag, and character-driven content. Cinematic shot design, timing, character design, and sound design are studied for determining the most effective means of communicating desired content. Hand-drawn sketches are imported into a 3D animation program as the basis to model and animate characters, create settings, and add special effects. An animated sequence is produced to show evidence of personal inquiry and level of expertise. Prerequisites: Drawing or equivalent or permission of instructor.

Credit 3 units. Art: FADM EN: H

F20 ART 335K Animated Worlds

This course explores traditional and experimental 3D animation in a short film format. Beginning students will learn polygon and NURBS modeling, texturing, lighting, rigging props, and characters in Maya. A storyboard, animatic and final rendered short will be developed for two major projects. Advanced skill sets include development, character design, 3D modeling, rigging, visual effects, sound, and rendering. No prerequisites or previous experience required. This course can be taken multiple times at either the beginner or advanced level, and it is open to students of all levels across the university. Graduate and advanced students can build independent projects with permission of the instructor.

Credit 3 units. Art: FADM

F20 ART 335O Drawing as Thinking

Same as F20 235O, 435O. Juniors (only) register for F20 335O. This studio course explores symbolic drawing as a practical tool for learning and communication, used as it has been for millennia for the acquisition and transmission of knowledge, for idea generation and formation, and for visual storytelling. Students will observe and describe phenomena, conceive systems, construct diagrams, design processes, and convey instructions, all using drawing as an aid to discovery, thought and communication. Tools and media may include pencils, brushes, wooden sticks, markers, painter's tape, laser pointers, and amateur surveying software, etc. In some cases, digital tools will be used to produce and present student projects. The course will include relevant readings and discussions. Throughout we will distinguish between symbolic uses of drawing and illusionistic ones, focusing on the former.

Credit 3 units.

F20 ART 335P Special Topics: Structuring Data for Effective Visualization

A primer on techniques for acquiring and structuring data in preparation for visualization. We will discuss common data formats (CSV, XML, and JSON) and how to access and translate from one format to another. Students will gain familiarity with the R language via the RStudio environment, as well as d3.js for interactive web-based visualizations. Students will develop concrete skills in preparing data for exploratory data analysis, as well as documenting workflows for reproducibility.

Credit 1 unit. Art: FADM

F20 ART 3361 Advertising 1

Same as F20 1361, 2361, 4361 - Juniors (only) register for F20 3361. This hybrid studio/lecture course introduces students to the field of advertising by defining its role in American culture and economy and engaging students, hands-on, in the processes of professional practice. The course consists of presentation and discussion of contemporary work, and provides students with opportunities to create advertising campaigns across broad product and service categories and a range of media. Major emphasis is placed upon the creative disciplines of advertising design and copywriting. Experience in copywriting and design is not necessary.

Credit 3 units. Art: FADM EN: H

F20 ART 3362 Advertising I

Same as F20 1362, 2362, 4362. Juniors (only) register for F20 3362. This studio course introduces students to the field of advertising by defining its role in American culture and economy and engaging students, hands-on, in the processes of professional practice. The course consists of presentation and discussion of contemporary work, and provides students with opportunities to create advertising campaigns across broad product and service categories and a range of media. Major emphasis is placed upon the creative disciplines of advertising design and copywriting.

Credit 3 units. Art: FADM EN: H

F20 ART 3363 Advertising in the Digital Age

Same as F20 ART 1363, ART 2363, ART 4363. Juniors (only) register for F20 ART 3363. This course examines advertising as a powerful force in contemporary culture, and explores the increasing ways consumers experience branded communication through digital technologies. We identify and study "game changing" developments in advertising communications; changing dynamics in audience behavior-including the ability to "opt out"; the advertising industry's adaptation to digital technologies; and finally, we speculate on the future of advertising in an era of mobile computing. Advertising in the Digital Age builds on The History of Advertising. It is recommended, but not required, that students have completed the first course before enrolling in this one.

Credit 3 units. Art: FADM

F20 ART 3364 Advertising in the Digital Age

Same as F20 1364, 2364, 4364. Juniors (only) register for F20 3364. This course examines advertising as a powerful force in contemporary culture, and explores the increasing ways consumers experience branded communication through digital technologies. We will identify and study "game changing" developments in advertising communications; changing dynamics in audience behavior — including the ability to "opt out"; the advertising industry's adaptation to digital technologies; and finally we'll speculate on the future of advertising in an era of mobile computing. Advertising in the Digital Age builds on The History of Advertising. It is recommended, but not required, that students have completed the first course before enrolling in this one.

Credit 3 units. Art: FADM EN: H

F20 ART 3365 History of Advertising

Same as F20 1365, 2365, 4365 - Juniors (only) register for F20 3365. The historical, cultural and technological development of advertising in America from the colonial period to the present. This course examines, through various media forms, key advertisements and campaigns, the creatives who made them, the technologies used to create them and changes in our culture that advertising both influences and reflects.

Credit 3 units. Art: FADM

F20 ART 3366 History of Advertising

Same as F20 1366, 2366, 4366 - Juniors (only) register for F20 3366. The historical, cultural and technological development of advertising in America from the colonial period to the present. This lecture course examines, through various media forms, key advertisements and campaigns, the creatives who made them,

the technologies used to create them and changes in our culture that advertising both influences and reflects. Grading is based on midterm and final exams as well as optional, extra-credit five page essays.

Credit 3 units. Art: FADM EN: H

F20 ART 336A Interaction Design: Understanding Health and Well-Being

Same as F20 236A and F20 436A; juniors (only) register for F20 336A. Through a blend of presentations from practitioners, classroom lectures, readings, discussions, and hands-on exercises, this course will engage principles and methods of interaction design within the context of health challenges. Broadly defined, interaction design is the practice of designing products, environments, systems, and services with a focus on behavior and user experience. We will take on an in-depth challenge in the area of health and well-being and work in cross-disciplinary design teams with an external partner organization. Students will gain experience in planning and executing a human-centered design process that features research, ideation, synthesis, concept development, prototypes, and a final presentation, which may include visual design, animation, and sound. Students will work in teams to develop several intermediate project deliverables, such as prototypes and sketches. No prior course work is necessary, although experience with Adobe Photoshop, Illustrator, and InDesign is helpful.

Credit 3 units. Art: CPSC, FADM EN: H

F20 ART 336G The Licensed Image: Development and Distribution

Same as F20 136G, 236G, 436G. Juniors (only) register for F20 336G. An introduction to the concept and image development, design, market distribution and methodology for creating licensed products. Projects will involve product idea development, market and the development of image-driven products using images and design. Traditional drawing skills not required. Students can work by hand or on the computer. Ideal course for students whose work focuses on images and those interested in developing visual products, including business students.

Credit 3 units. Art: FADM EN: H

F20 ART 336I Communication Design I

Same as F20 136I, 236I, 436I. Juniors (only) register for F20 336I. Students are introduced to the fundamentals of communication design. Through studio exercises and lectures, students are exposed to a broad range of conceptual, aesthetic and strategic issues in the field. The course explores principles of two-dimensional design, typography, and the relationship of text and image in order to persuade and inform. It helps students to learn a design methodology for illuminating and solving problems and provides baseline training in the Adobe Suite. Upon completion of this course, students will be able to design basic projects and have criteria to provide an informed evaluation of the effectiveness of a given design. It provides an introduction to design as a tool for business and marketing.

Credit 3 units. Art: FADM EN: H

F20 ART 336J Introduction to Animating in Three**Dimensions**

Same as F20 136J, 236J, 436J. Juniors (only) register for F20 336J. This course explores 3D animation in the short film format. Students move from an overview of the process and visual vocabulary of animation to defining filmic ideas, the visual gag, and character-driven content. Cinematic shot design, timing, character design, and sound design are studied for determining the most effective means of communicating desired content. Hand-drawn sketches are imported into a 3D animation program as the basis to model and animate characters, create settings, and add special effects. An animated sequence is produced to show evidence of personal inquiry and level of expertise. Prerequisites: Drawing or equivalent or permission of instructor.

Credit 3 units. Art: FADM EN: H

F20 ART 336K Communication Design II

Same as F20 136K, 236K, 436K. Juniors (only) register for F20 336K. Building on the fundamentals of Communication Design I, this course will offer students the opportunity solve more complex visual communication problems. Information design (explanatory graphs and charts), multipage sequences (book/magazine design) and persuasion (advertising/propaganda) will be some of the topics covered. Various methodologies for defining problems, generating ideas, exploring possible visual solutions and evaluating work-in-progress and finished designs from the previous course, will be reinforced. This course will introduce students to a range of media, including digital and alternative forms. Emphasis will be placed on finding visually compelling solutions, no matter the media. The computer will be used as a tool to assemble and refine. Students will be encouraged to use online tutorials to augment in-class instruction. Prerequisites: Communication Design I.

Credit 3 units. Art: FADM EN: H

F20 ART 336L Animated Worlds

This course explores traditional and experimental 3D animation in a short film format. Beginning students will learn polygon and NURBS modeling, texturing, lighting, rigging props, and characters in Maya. A storyboard, animatic and final rendered short will be developed for two major projects. Advanced skill sets include development, character design, 3D modeling, rigging, visual effects, sound, and rendering. No prerequisites or previous experience required. This course can be taken multiple times at either the beginner or advanced level, and it is open to students of all levels across the university. Graduate and advanced students can build independent projects with permission of the instructor.

Credit 3 units. Art: FADM

F20 ART 337A Illustration Entrepreneur

In this course, students will create images appropriate for surface design application to products. Students will work toward developing icons and motifs using shape-based illustration, design, composition, hierarchy and thoughtfully considered color. Exploration will include visual content, artists, audiences, and trends in a fluid marketplace. Projects for this course will be in the applied context of gift and home decor markets, fabric design, stationery products, and toys. All skill levels of drawing and digital proficiency are welcome. This course is appropriate for art students whose work focuses on images/packages, design minors, and non-Sam Fox students interested in developing visual products.

Credit 3 units. Art: FADM

F20 ART 337T Visual Principles for the Screen

The demand for graphic literacy in contemporary culture is only increasing, redefining our need to understand how design functions and why. How can products and communication be crafted with the user in mind? How can design facilitate seamless, intuitive digital experiences? This studio course will address considerations for web, mobile, and other screen-based applications, including hierarchy, typography, iconography, layout, color, and image. This course is ideal for students seeking to learn fundamental graphic design and messaging principles and who want to produce robust, researched website and mobile application prototypes. Studio work will be supplemented by supporting lectures and readings. Lab optional. Credit 3 units. Art: FADM EN: H

F20 ART 338A Enchanted Objects: Material Culture

Some objects are "magical," possessing a kind of allure that leads us to spend money we don't have, collect obsessively, or behave differently. Other objects are "dangerous" and "taboo," inspiring disturbing thoughts and actions. This course considers our complex relationship to things and explores their powers of enchantment, which cannot be separated from their status as commodities or what Marx called crystallized labor and creative energy. What gives objects potency, value, and significance? What social-psychological and political purposes and what regimes of commodification and power do they serve? We will engage in discussion and object studies and draw upon work from many fields, both creative and scholarly.

Credit 3 units. Art: VC EN: H

F20 ART 338B Illustration Entrepreneur

In this course, students will create images appropriate for surface design application to products. Students will work toward developing icons and motifs using shape-based illustration, design, composition, hierarchy and thoughtfully considered color. Exploration will include visual content, artists, audiences, and trends in a fluid marketplace. Projects for this course will be in the applied context of gift and home decor markets, fabric design, stationery products, and toys. All skill levels of drawing and digital proficiency are welcome. This course is appropriate for art students whose work focuses on images/packages, design minors, and non-Sam Fox students interested in developing visual products.

Credit 3 units. Art: FADM

F20 ART 338J Advanced Animation

Same as F20 138J, F20 238J, and F20 438J; juniors (only) register for F20 338J. This course focuses on completing a short animated film as a group project using a workflow similar to that used in the animated feature film industry. The class will first develop a story. Individuals will then be assigned tasks according to strong areas of interest to create a storyboard and an animatic. Key moments will be identified to be animated first. After a plan is agreed on, students will be able to choose to work in various parts of the pipeline, including character design; layout and set design; 3D modeling; rigging; animation; textures; special effects; sound; rendering; and editing. Finally, all of these parts are put together as a short. This is an advanced course that assumes some student experience with Maya or a similar 3D program; it is best suited for those who have already developed skills in any form of animation. Prerequisite: Introduction to Animating in Three Dimensions or permission of instructor.

Credit 3 units. Art: FADM EN: H

F20 ART 338S Visual Principles for the Screen

The demand for graphic literacy in contemporary culture is only increasing, redefining our need to understand how design functions and why. How can products and communication be crafted with the user in mind? How can design facilitate seamless, intuitive digital experiences? This studio course will address considerations for web, mobile, and other screen-based applications, including hierarchy, typography, iconography, layout, color, and image. This course is ideal for students seeking to learn fundamental graphic design and messaging principles and who want to produce robust, researched website and mobile application prototypes. Studio work will be supplemented by supporting lectures and readings.

Credit 3 units. EN: H

F20 ART 338T Transdisciplinary Design

The field of design is shifting from disciplines based on the items they produce (e.g., graphics, apparel, built environments) toward the design of strategies and systems that incorporate many designed elements. This requires a more cross-disciplinary approach, both across academic disciplines at large and across disciplines of design. This course will introduce students to core skills of strategic design through individual and group projects, readings, discussion, and journaling. Students will explore systems thinking, strategic framing, iteration, and collaboration. The class will discuss how designed things affect and are affected by the social systems around them.

Credit 3 units.

F20 ART 338Z Global Topics in Visual Communication

In this course, students will explore visual communication in diverse historical and contemporary contexts. Students will work with internationally based faculty in short modules in which lectures and prompts will highlight the unique qualities of cities and cultures around the world. Students will reflect on the specificity of place in ongoing sketchbook prompts. For each module, students will make a short publication that synthesizes the content of that module with their own developing studio interests. Prerequisite: Word & Image II or Type II.

Credit 3 units.

F20 ART 339I Radical Design: Making Civic Experiences

Same as F20 239I and 439I. Juniors (only) register for F20 339I. As we innovate rapidly in technology and communication, the economic and political structures that govern us have become largely assumed and unchallenged. This course explores the daily objects, interactions, and spaces that make up these large systems (like a police ticket or the layout of a courtroom), and it experiments with how redesigning these elements can help us question the status quo. Building on diverse political mindsets and current trends, we will imagine fictional worlds and craft the objects, procedures, and interactions that inhabit them. Along the way, we will discuss the value of designing for fundamental change alongside more incremental reform. Required class time will also include at least one additional in-class studio hour per week, to be determined based on students' schedules. CET (<https://gephardt.institute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.

Credit 3 units. Art: CPSC, FADM EN: H

F20 ART 343X Digital Filmmaking: City Stories

Digital Filmmaking: City Stories is a cross-university video art course for students interested in making short films through a transdisciplinary and time-based storytelling in both narrative and non-narrative formats. Whether documentary or abstract, individually produced or collaborative, all projects in this course have a required social and urban engagement component. In this course, the City becomes a laboratory for experimentation and contribution. Students meaningfully engage St. Louis, and their projects address sites of concern to explore the complex fabric of the city by way of framing and poetic juxtaposition. City Stories merges several arts and humanities disciplines, including experimental cinema and documentary journalism, and create an opportunity for empathic listening and inquiry as students discover stories built from collective as well as individual memories.

Same as X10 XCORE 343
Credit 3 units.

F20 ART 344A Animation Tools and Methods

This course introduces a range of digital and analog production techniques for the practice of animation. It will also present fundamental concepts and issues that define this creative form. Prerequisite: Digital Studio or permission of instructor.

Credit 3 units. Art: FAAM, FADM

F20 ART 344X Digital Filmmaking: City Stories

Digital Filmmaking: City Stories is a cross-university video art course for students interested in making short films through a transdisciplinary and time-based storytelling in both narrative and non-narrative formats. Whether documentary or abstract, individually produced or collaborative, all projects in this course have a required social and urban engagement component. In this course, the City becomes a laboratory for experimentation and contribution. Students meaningfully engage St. Louis, and their projects address sites of concern to explore the complex fabric of the city by way of framing and poetic juxtaposition. City Stories merges several arts and humanities disciplines, including experimental cinema and documentary journalism, and creates an opportunity for empathic listening and inquiry as students discover stories built from collective as well as individual memories. Same as X10 XCORE 344X
Credit 3 units. EN: H

F20 ART 346X Shopping

This seminar examines shopping as a social and cultural construct that operates at several levels in relation to art, architecture, and urban planning. Shopping is the fundamental activity of the capitalist marketplace. It is also inextricably linked with major aspects of public and foreign policy, where national consumerism is closely linked to global tourism and it is at the core of economic development. Shopping is as well a common denominator of popular culture, frequently satirized in contemporary art, film, and literature. Participants in the seminar will read selections from various writings about shopping and the marketplace. We will also view several films examining the shopping environment in narratives of power and desire. Prerequisite is completion of Sam Fox foundations year. Open to sophomores and above.

Same as X10 XCORE 346X
Credit 3 units. Art: CPSC

F20 ART 347T Artist's Book

This course will examine the role of the book as an artifact of material culture. We will investigate definitions of the artist's book and current uses of the book form as metaphor in contemporary art. We will look at the work of artists such as Anselm Kiefer, Ann Hamilton, Rachel Whiteread, Kiki Smith, William Kentridge, Sophie Calle, Dieter Rot, and many others. In addition, we will look at the role of artist's books and publications in many 20th-century artistic movements. Course projects will center around the exploration of various types of editioned artworks, such as artist's multiples, mail art, zines, and more.

Credit 3 units.

F20 ART 351A Sound Environments

This course explores sound and musical composition in a digital format, functioning as a sculptural, spatial, psychological, and architectural intervention. The course offers an introduction to current sound art practices and examines how sound projects are capable of altering our sense of space and time. Sonic space necessarily touches upon experimental music and installation art as closely related to sound art. The course introduces students to basic methods of sound recording and editing software and hardware, with the goal of composing sound works for space and for headphones. Readings pertaining to current developments in contemporary experimental music and sound art as well as regular writing assignments accompany the course.

Credit 3 units. Art: FAAM EN: H

F20 ART 351B FOOD: Performative and Immersive

This studio/seminar course explores food and eating as elements to be considered historically and through the 5 senses. From the dawn of civilization, cultural customs have evolved around food, its production & consumption. Rituals were created to gather people around food & eating. We unpack personal & communal food experiences, consider the environments of those meals, & discover elements of both past & present. By creating immersive experiences, we deconstruct the mechanism of eating, exposing patterns and norms involved. The course culminates in a communal event in which students present their work as immersive installations. No prerequisites, junior or higher standing.

Credit 3 units.

F20 ART 352B Performing Solitude

Performing Solitude is a new elective studio with elements of a seminar, and it is open to students from across campus and suited most for upper-level undergraduates and graduate students in art, architecture, performing arts, music, and film & media studies departments. Performing Solitude invites students who are interested in creating interdisciplinary works that merge performance art with other forms of expression, including visual, digital, acoustic, textual and cinematic. Working with their own performing selves as a material in their art -- and with domestic or landscape space -- students will be invited to reconsider what performance art means in the age of a post-global, post-pandemic and post-digital universe in which the biological environment, including nature and their own bodies as part of it, continues to enact gestures and make aesthetic statements set against global histories. This studio incorporates elements of a seminar by way of discussing histories of performance art, performativity, and ritual as well as by supporting individually guided research and collaboration. During the semester, students will create two major performance-based works that incorporate other media of choice, such as film, music, text, or

installation. Student work will be documented and demonstrable in their portfolios. Several smaller improvised or in-class assignments will lead toward a final project accompanied by an artist text. Readings, lectures and invited guests will accompany this studio.

Credit 3 units. Art: FAAM

F20 ART 354A Special Topics in Visual Culture: The Illustrated Periodical

This seminar course will engage the tradition of illustrated magazines in the United States, beginning with a categorical survey of the first half of the 20th century: slicks, pulps and downmarket rags. We will analyze editorial and advertising content, and confront the periodical as highly visual social text, animated by an implicit contract between publisher and reader. Attention devoted to communities of production and reception, including editors, art directors, illustrators, cartoonists and readers. Students will develop research projects which focus on particular publications, features and people, drawing on the considerable resources of the Modern Graphic History Library. Outside readings and screenings will stimulate and supplement class discussion. Open to students across the university with sophomore to senior standing. Note: counts toward degree as Art History/Visual Culture elective and design minor.

Credit 3 units. Art: VC

F20 ART 354B Special Topics in Visual Culture: Studies in Modern Design from Print to Pixel

This course traces the history of graphic design during the Modern period as a reflection of, and lens onto, cultural shifts and technological innovation. Open to students across the university with sophomore to senior standing. Note: counts toward degree as Art History/Visual Culture elective and design minor.

Credit 3 units. Art: FADM, VC EN: H

F20 ART 358C Documentary Film

This course investigates techniques of powerful nonfiction filmic storytelling that symbiotically merges visual and literary narrative devices. We will explore the organic process of research, interaction and craft to construct three short films. Students will be encouraged to go beyond apparent subject matter to inquire into deeper/underlying content that touches on timelessness and global/human topics. Within set parameters, students choose their own filmic topics and structures. Graduate and undergraduate students can form teams or work independently as their own producer, writer, director, cinematographer, editor and sound recordist. No previous experience required.

Credit 3 units.

F20 ART 362 Why Art Matters

This lecture and discussion course will examine how art, which productively utilizes ambiguity and discontinuity, is a distinctive form of expression and communication. Functioning not as a bearer of meaning but rather as a shaper of meaningful questions, art invites interpretation and introspection. As such, art -- which often functions to rekindle perception and give rise to new ways of thinking about and being in the world -- empowers individual thought, encourages empathy, and celebrates the diversity of ideas and opinions that are vital to conditions of freedom. With this in mind, multimedia lectures will explore the perspectives of contemporary artists (e.g., James Turrell, Cerith Wyn Evans, Wangechi Mutu), psychologists (e.g., Winnicott, Frankl, Freud), philosophers (e.g., Heidegger, Bataille, Merleau-

Ponty), linguists (e.g., Lacan, Pierce, Saussure), sociologists, cognitive scientists, cultural theorists and others. In addition, readings, discussions, in-class group interpretations and written critical analysis will provide students with the tools required to understand how art, which is a distinctive form of expression and communication, matters; it matters, as Bill O' Brien argues, because it teaches us how we matter.

Credit 3 units. Art: VC EN: H

F20 ART 3713 Introduction to Book Binding

Same as F20 1713, F20 2713, and F20 4713; juniors (only) register for F20 3713. This course will serve as an introduction to the book as an artifact of material culture. A variety of traditional and non-traditional book structures will be explored. Students will learn from historical approaches to constructing the codex form, including the single-signature pamphlet, the multi-signature case binding, the coptic, and the medieval long stitch. Students will learn Japanese binding and its many variations. Several contemporary variations will be introduced, including the tunnel, the flag book, the accordion, and the carousel. Students will explore the visual book using found imagery and photocopy transfers, and they will produce a variety of decorated papers to be used in their bindings.

Credit 3 units. Art: FADM EN: H

F20 ART 3714 Introduction to Book Binding

Same as F20 1714, 2714, 4714. Juniors (only) register for F20 3714. This class will serve as an introduction to the book as artifact of material culture. A variety of traditional and nontraditional book structures will be explored. Students will learn from historical approaches to constructing the codex form including the single signature pamphlet, the multi-signature case binding, the coptic, and the medieval long stitch. Students will learn Japanese binding and its many variations. Several contemporary variations will be introduced, including the tunnel, the flag book, the accordion and the carousel. Students will explore the visual book using found imagery and photocopy transfers, and will produce a variety of decorated papers to be used in their bindings.

Credit 3 units. Art: FADM EN: H

F20 ART 378 Contemporary Discourses: Art + Feminism

This course investigates the impact of feminism on contemporary art, focusing on artwork produced between the 1960s and the present day. Through an examination of global practices in a wide range of media, including artworks in the university's Kemper Museum collection, students will delve into innovative aesthetic strategies that criticize assumptions of gender, race and social class and consider the intricate tie between the identity of the author and the content of the work. This course is taught by a practicing artist, who together with the students will uncover historical developments and epic omissions. This is a lecture course with a discussion component. Requirements include participation in weekly discussion sections, regular response papers, and a final written curatorial project. No prerequisites in Art or Art History required.

Credit 3 units. Art: CPSC, FAAM, VC EN: H

F20 ART 3783 Special Topics in Visual Culture: Introduction to Illustration Studies

How have knowledge, opinion, and feeling been communicated visually from the advent of automated printing presses to the invention of the internet, and to what effect? Using concepts in visual studies and communication studies, this course

explores the histories of primarily American visual-verbal texts to investigate how minds and hands conceived, produced, distributed, and consumed illustrated print media in the 19th and 20th centuries. Beginning with the neurological basis of vision, we will examine ways culture affects perception, how print technologies shape content, how word and image rhetorically shape beliefs, how power relations imbue images and publishing, and the ways counterculture forms such as caricature and posters can be used to intervene socially. Students will conduct original research using University Libraries Special Collections to hone their ability to write convincingly and professionally about imagery.
Credit 3 units. Art: FADM, VC

F20 ART 3823 The Italian Renaissance in the City of Florence

The Early Renaissance — also known as the *quattrocento* — usually denotes the period from circa 1400 to circa 1500. During those 100 years, Italy — particularly Florence — witnessed an extraordinary coming together of artistic talent, a passionate interest in the art and culture of Greek and Roman antiquity, a fierce sense of civic pride, and an optimistic belief in the classical concept of "Man as the measure of all things." This course examines the principal artists who contributed to this cultural revolution. In order to take full advantage of the special experience of studying the Renaissance in the very city of its birth, the stress is mainly, although not exclusively, on Florentine artists, including sculptors such as Donatello, Verrocchio, and Michelangelo, painters such as Giotto, Masaccio, Uccello, Botticelli, Leonardo, and Raphael; and architects such as Brunelleschi and Alberti up to Sangalo.
Credit 3 units. Arch: HT, RW Art: AH

F20 ART 3824 The Italian Renaissance in the City of Florence

This course encompasses the Renaissance from Giotto through the High Renaissance. Students will be able to examine first-hand the works they are studying. Included are field trips to Rome and Venice.
Credit 3 units. Art: AH EN: H

F20 ART 3827 Performance Art (Florence)

The course is open to all students, ready to get involved in shared creative experience, to discover new expression, which means — neither dance nor theatre talents nor athletic attitudes are required, but the availability to use body in warming up sessions will be necessary. This studio art course is dedicated to the aesthetics and the practice of performance. Although a studio course, there will be a strong theoretical aspect which aims to outline a historical and cultural framework that shows how performance art was born and traces how we comprehend the practice today. The aim of which is to better understand how this special, all-embracing art language will be understood in the future. Physical activities, along with actions involving individual exploration of public space, are fundamental to the creative process. Performance art needs bodies, it needs space, it needs action, it needs an audience. Students will come away from this course with a strong knowledge of these fundamental ideas.
Credit 3 units.

F20 ART 3843 Filming the Black Freedom Struggle in St. Louis

This inter-disciplinary course introduces students to the history of the Black freedom struggle in St. Louis and to the complex and multiple ways historic narratives are constructed. We will explore the political, economic and cultural history of St. Louisans who challenged racial segregation in housing and work, fought white mobs in city streets, and battled the destruction of Black communities by federal urban renewal and public housing policies. Students, working with a historian and a filmmaker, will research and make a documentary film on a piece of St. Louis' crucial contribution to the Black Freedom Struggle in America. We bring together documentary filmmaking and history research to draw attention to the multiple narratives (many long-neglected) of African American and urban history, and to the multiple approaches to presenting history. CET (<https://gephardtstitute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.
Same as L22 History 3843

F20 ART 385B Beyond Words, Beyond Images: Representation After History

The seminar focuses on art in the public domain and examines contemporary practices that engage public memory and the meta-city. Prompting students to consider their own practice in the context of public space, the seminar offers examples of projects that contribute to global cultural and political discourse. Weekly illustrated lectures, readings, writing assignments, screenings, discussions, and individual research lead toward the final term paper. Individual studio consultations serve as a platform for the discussion of students' evolving practice, leading toward the final project in a medium of choice. MFA VA students and graduate students in architecture are especially welcome. This is an upper-level course open to juniors, seniors, and graduate students only.
Credit 3 units. Art: FAAM, GFAH, VC

F20 ART 385D Art Seminar: Fantastic Voyage and Scales of Wonder

Affective encounters with scale -- encounters that make us aware of our bodies in relationship to the world around us -- occur broadly throughout human experience, from viewing miniature particles through the lens of a microscope to wandering through monumental architectural environments. Undeniably, scale and affect are integral to the lived experience and to the ways in which art, design and the built environment have developed over the past half century. Through lectures, discussions, and critical readings, *Fantastic Voyage and Scales of Wonder* will examine scale as a central theme to explore our encounters with built environments and designed objects alike. Readings and discussions will span media archeology and affect theory. This seminar will also examine the impact of such works as Charles and Ray Eames's 1968 documentary "The Powers of Ten" and the 1966 cult film "Fantastic Voyage" (which inspired Isaac Asimov's science fiction novel of the same name) on art, design and architecture today.
Credit 3 units. Art: FAAM, FADM

F20 ART 386B Beyond Words, Beyond Images:**Representation After History**

The seminar focuses on art in the public domain and examines contemporary practices that engage public memory and the meta-city. Prompting students to consider their own practice in the context of public space, this seminar offers examples of projects contributing to global cultural and political discourse. Weekly illustrated lectures, readings, writing assignments, screenings, discussions, and individual research lead toward the final term paper. Individual studio consultations serve as a platform for the discussion of students' evolving practice, leading toward the final project in a medium of choice. MFA VA candidates and graduate students in architecture are especially welcome.

Credit 3 units.

F20 ART 386X Public Practice

With architecture, art and design students in mind, Public Practice is a design-build course focused on the development, presentation, and actualization of commissioned works within the public realm. Through an iterative process of concept development, material exploration, and panel reviews, students will learn how to develop, propose and execute a viable public piece. Individual and/or group proposals will be presented before a selection committee in consideration toward a public art/design commission. Selected projects will be realized within specified sites in the community of University City, MO. Students will have hands on experiences with construction processes, meeting structural requirements and codes, site development, and project installation, which will prepare them for a creative life situated firmly within a discourse of Public Space. Open to MFA, graduate architecture students, BFA and undergraduate architecture students with junior-level standing. Minors and others eligible with consent of instructor.

Same as X10 XCORE 386X

Credit 3 units.

F20 ART 387A Social Practice Art

Social Practice Art (SPA) is a course for artists, designers, architects and landscape architects. This studio course takes an interdisciplinary approach to establishing how social interaction and discourse can be tools for social transformation. SPA involves works that may use audience, collaboration, participation, ephemera, and activism as a medium that emphasizes the aesthetic of co-creation. Through readings, mindfulness exercises, field trips, and studio assignments, students will develop and implement their own social practice project.

Credit 3 units.

F20 ART 395F Freund Visiting Artist Laboratory

The studio/seminar will be taught by this year's visiting Freund Fellow who will be living in St Louis for the fall semester while preparing their solo exhibition at SLAM scheduled for next year. The class will be constructed and offered by the fellow with specific content details to be advertised later. The class will be a combination studio and seminar around a particular subject. Junior BFA, senior BFA and MFA students are eligible to enroll.

Credit 3 units.

F20 ART 396B Making Things That Function

Heidegger identified "things" as what objects become once they cease to perform their function in society. In this course, we seize that moment of dysfunction as a point for creative intervention. Students will design and make functional objects that engage the body with intention. The meaning of function will be debated so that students develop a definition based on their own values. Highly exaggerated, specific, or experimental works will be encouraged. Techniques for metal fabrication, simple woodworking, and mold-making will be taught in class, as needed. No previous experience is necessary. This course will benefit designers, artists, architects, and engineers, and it will explore the intersections of design and making among these fields. Prerequisite: 3D Design, Architecture 111 studio, or permission of instructor.

Credit 3 units. Art: FAAM, FADM

F20 ART 397A Lost in Space: Media Art and Immersive Environments

The participatory turn in art over the past five and a half decades has produced an array of immersive environments that enhance the viewer's perception of their body and heighten awareness of their bodily relationship to space. A key mechanism in this choreography often involves the optical representation of shadows and mirrors, captivating visual phenomena and/or moving projections. While some produce unique phenomenological experiences, others offer nuanced or explicit sociopolitical meaning. In any case, technology often activates many spatially oriented works, dramatically altering the tenor of the embodied experience while offering new ways for our technologically mediated sensoria to shape our sense of presence within the physical world. This primarily seminar-based course will explore installation art and immersive environments, many of which use evolving technologies or time-based media to affect the viewer's awareness of their bodily existence. Examples will include Olafur Eliasson's "Fog Room" and "Multiple Shadow Room," James Turrell's "Light Reignfall," Yayoi Kusama's "Infinity Mirror Rooms," Anish Kapoor's "Cloud Gate" and "Whirlpool," Jennifer Steinkamp's "Jimmy Carter," Krzysztof Wodiczko's "A House Divided," Cyprien Gaillard's "Nightlife," and Won Ju Lim's "California Dreamin'." This course will also explore how immersive spaces operate on different registers while reinforcing the viewer's recognition of themselves as doppelganger, as hybrid, or as Other. Students will learn how each work in its own way tinkers with the viewer's perception of their own bodily scale and encourages spectacular forms of engagement that reinforce corporeality.

Credit 3 units. Art: FAAM, FADM

F20 ART 401E Anatomy Figure Structure

This rigorous drawing course explores traditional and new representations of the figure through the study of its structure and contemporary contexts. Research involves basic anatomy lectures and sketchbook activities that provide a vehicle for discovering the figure's architecture, mechanics and proportions. Art production is based on in-class and outside projects. Lectures, presentations, critical readings and the analysis of historical and contemporary figurative works support students in their investigations. Prerequisites: Drawing (F10 101A or F10 102A).

Same as F20 ART 301E

Credit variable, maximum 3 units. Art: FAAM

F20 ART 402 Drawing

An advanced drawing course for third- and fourth-year students. Individualized instruction allows students to explore various media and stylistic approaches in both figurative and nonfigurative modes.

Same as F20 ART 302

Credit 3 units. Art: FAAM EN: H

F20 ART 403B Collage: History & Practice in Contemporary Art

This course examines the role of collage in contemporary studio practice. Students are required to assemble an archive of images from various sources, both found and self-generated, to produce work based on specific themes. This course integrates collage practice with other visual disciplines. Readings and discussion related to the course examine the evolution of collage and its present status and application within contemporary art production.

Same as F20 ART 303B

Credit 3 units.

F20 ART 404B Collage: History & Practice in Contemporary Art

This course examines the role of collage in contemporary studio practice. Students are required to assemble an archive of images from various sources, both found and self-generated, to produce work based on specific themes. This course integrates collage practice with other visual disciplines. Readings and discussion related to the course examine the evolution of collage and its present status and application within contemporary art production.

F20 ART 408B Engaging Community: Understanding the Basics

What does it mean to engage in community as a creative practitioner? Community engagement must be grounded in authentic relationship building and an ability to understand and act within the historic context and systems that impact communities. We will practice the skills of listening, observation, reflection, and improvisation. We will cultivate mindsets that focus on community assets and self-determination. Workshops will teach facilitation and power analysis, with the intention of upending the power dynamics between community and creators. This course pairs with "Engaging St. Louis: Sites, Stories, and the Struggle for Racial Justice" [working title]. It may count toward the minor in Creative Practice for Social Change if bundled with "You Are Here: St. Louis' Racial History Through Sites and Stories."

Same as F20 ART 308B

Credit 1.5 units. Art: CPSC

F20 ART 409B Eco-Art

Eco-Art explores the intersection of art, ecology and ethics. Though the movement is broad and growing, eco-art re-envisions our relationship with the natural world by informing, challenging, inventing, and reclaiming. This studio-based course introduces various artistic practices and working methodologies related to environmental art, exploring "green" methodologies, repurposed objects, land art, ecoventions, social sculpture, and community activism. The course is organized around art

historical precedents, and it is supported by critical essays and examples of contemporary practice, including discussion of eco-design and sustainable architecture. Projects are open to multidimensional solutions in a wide variety of media.

Same as F20 ART 309B

Credit 3 units. Art: CPSC

F20 ART 411 Painting

Same as F20 111, 211, 311. Seniors (only) register for F20 411. Introduction to painting processes and materials. While there is emphasis on oil painting, students are also introduced to watercolor and acrylic paints and a wide variety of painting surfaces. Subject matter is varied, beginning with still-life material and ending with direct painting from the model. Technical skills and content are dealt with at the individual student's level.

Credit 3 units. Art: FAAM EN: H

F20 ART 411T The Poetics of Image-Making: People, Place & Space

This painting elective course examines the poetics of image-making, with a focus on the representation of people, place, and space, both observed and invented. Students learn the practice of painting and develop works through fundamental exercises as well as through the shared exploration of painting processes. Work outside of class for the beginner is project-based; advanced students produce an independent body of work. Critical assessment of work is complemented by faculty and peer discussions, readings, and field study. Required text: "The Poetics of Space" by Gaston Bachelard.

Credit 3 units. Art: FAAM

F20 ART 411U The Language of Moving Images

This course will examine the language of moving images, which includes -- among other elements -- shot construction, sequencing, duration, sound integration, scale, and situational contexts. Through screenings, readings, lectures, discussions and critiques, students will develop the skills required to interpret moving images and to think about their productions, which may utilize forms other than video or film and include installation components. This course is not focused on technical approaches, and students' creative work will be driven by individual concerns and may be accompanied by written analysis. Prerequisite: Digital Studio/Digital Design.

Same as F20 ART 311U

Credit 3 units.

F20 ART 412 Painting

Same as F20 112, 212, 312. Seniors (only) register for F20 412. This course is an introduction to oil painting with an emphasis on the principles of color, construction and paint handling. Students will explore the possibilities of representational painting as applied to still-life, interiors, landscape and the human figure.

The course is designed especially for beginning painters but can accommodate painters at all levels of proficiency.

Credit 3 units. Art: FAAM EN: H

F20 ART 412P Painting: The Painted Figure

This studio course is an introduction to the practice of painting, with an emphasis on the pictorial representation of the human figure. Instruction will encompass a range of technical, conceptual and creative skills to be used for developing projects. In-class projects will include working from the live

model. Students will be encouraged to consider traditional and alternative forms of painting. Lectures, critical essays, and analysis of historical precedents and contemporary practitioners will support students in their course work. No prerequisites.

Same as F20 ART 312P

Credit 3 units. Art: FAAM EN: H

F20 ART 413F Sculpture: Foundry

Same as F20 113F, 213F, 313F - Seniors (only) register for F20 413F. The focus of this course is to introduce students to the basic principles of bronze and aluminum casting according to the lost wax method. Students will learn mold making, direct organic burnout, ceramic shell investment, metal chasing, and patination in order to create finished sculpture. In addition to metal casting, students will use other materials such as plaster, resin, steel, wood, rubber, plastic, and foam to create a mixed media project that explores a specific idea or theme. Additional work outside the regularly scheduled class time is required.

School of Art major and non-art students pursuing an art minor will have priority.

Credit 3 units. Art: FAAM EN: H

F20 ART 413G Sculpture: Wood

Same as F20 113G, 213G, 313G - Seniors (only) register for F20 413G. The focus of this course is to introduce students to the basic principles of wood sculpture with an emphasis on furniture making. School of Art majors and non-art students pursuing an art minor will have priority.

Credit 3 units. Art: FAAM EN: H

F20 ART 413H Sculpture: Blacksmithing

Same as F20 113H, F20 213H, and F20 413H; juniors (only) register for F20 313H. This course is an introduction to blacksmithing materials, tools, and techniques. Students will explore the fundamental techniques of hand-forged metal. Metal can be manipulated as a plastic material, and it offers enormous possibilities for three-dimensional form. In this course, we will explore these possibilities and expand our sculptural vocabulary.

Same as F20 ART 313H

Credit 3 units. Art: FAAM EN: H

F20 ART 413I Sculpture: Metal Fabrication

Same as F20 113I, F20 213I, and F20 413I; juniors (only) register for F20 313I. Metal is the backbone of our modern world, and it is a viable medium for self-expression. It can be employed as structure or as surface, it can be plastically deformed to create compound shapes, and it can be connected to most any other material. Students will explore the creative potential of this material in the fabrication of sculptural forms. Students learn to weld using both gas and electric arc machines as well as the safe operation of drilling, grinding, and finishing tools.

Same as F20 ART 313I

Credit 3 units. Art: FAAM EN: H

F20 ART 413J Digital Fabrication for Object Making

This course explores the potential of digital tools in the creation of tangible objects. We will focus on "component manufacture" as a means of sculptural production, i.e., creating linkages, universal fittings, and adaptors that connect disparate materials. Toys, mechanical systems, and construction products will be researched as a point of inspiration. Students will be introduced to various modeling software such as Rhino, AutoCAD, and SolidWorks and explore the potential of these platforms to

design 3-dimensional forms. A variety of output tools will be used but we will focus primarily on the planning for and use of laser cutters, 3D printers, and CNC routers. We will develop, design, and manufacture components that, when combined with readily available materials, can be used to create sculptural forms. This class will use iterative processes that move between digital and analog model-making and sketching. Students will be introduced to the concept of kitbashing, and the modification of salvaged and found parts. This course introduces these concepts to artists, designers, engineers, and anyone interested in exploring the possibilities of digital fabrication tools towards the creation of sculpture. No prerequisites.

Same as F20 ART 313J

Credit 3 units. Art: FAAM, FADM

F20 ART 413Q Compositions in Clay

In this course, students will broaden their understanding of clay as a viable medium of visual expression and three-dimensional exploration. Students will learn basic hand-building techniques to create sculptural constructions, discover the practical applications of wheel throwing through form and function, and explore ceramic tools and equipment to create installation projects. Each student's skill level will be considered, and projects will be adjusted accordingly. Emphasis will be placed on critical assessment and articulation of material.

Same as F20 ART 313Q

Credit 3 units. Art: FAAM

F20 ART 414F Sculpture: Foundry

Same as F20 114F, 214F, 414F - Sophomores (only) register for F20 114F. The focus of this course is to introduce students to the basic principles of bronze and aluminum casting according to the lost wax method. Students will learn mold making, direct organic burnout, ceramic shell investment, metal chasing, and patination in order to create finished sculpture. In addition to metal casting, students will use other materials such as plaster, resin, steel, wood, rubber, plastic, and foam to create a mixed media project that explores a specific idea or theme. Additional work outside the regularly scheduled class time is required.

F20 ART 415 Printmaking

Same as F20 115, F20 215, and F20 415; juniors (only) register for F20 315. This course is a survey of printmaking that covers basic processes in intaglio, lithography, relief, and monotype. Emphasis is on mixed media and experimentation with a foundation in traditional, historical, and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.

Same as F20 ART 315

Credit 3 units. Art: FAAM EN: H

F20 ART 415F Printmaking: Call and Response

In music, a call and response is a succession of two distinct phrases usually written in different parts of the music, where the second phrase is heard as a direct commentary on or in response to the first. Printmaking: Call and Response is a survey of printmaking with a foundation in traditional, historical, and philosophical aspects of printmaking. It will cover basic processes in intaglio, lithography, relief, and monotype. Students are encouraged to work in response to the history of the print, with an emphasis on mixed media and experimentation. This class counts for the minor in art.

Credit 3 units.

F20 ART 415T Printmaking: Contemporary Processes

This course is designed to give a broad introduction to contemporary processes and approaches in printmaking, including digital technology. Emphasis will be on image development through the manipulation and combination of techniques to create one of a kind prints and variable editions. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.

Same as F20 ART 315T

Credit 3 units.

F20 ART 416 Printmaking

Same as F20 116, F20 216, and F20 416; juniors (only) register for F20 316. This course is a survey of printmaking that covers basic processes in intaglio, lithography, relief, and monotype. Emphasis is on mixed media and experimentation with a foundation in traditional, historical, and philosophical aspects of printmaking. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests.

Same as F20 ART 316

Credit 3 units. Art: FAAM EN: H

F20 ART 416T Printmaking for Architecture and Art Students

This course will focus on monotype mixed media printmaking using both a press and digital print processes. The course is designed to be responsive to current issues with a focus on contemporary printmaking practices and various ideas about dissemination in the age of social media.

The course will include an examination of historical examples of diverse global practices; prints made in periods of uncertainty, disruption, war, and disaster; and speculative projects by architects such as Superstudio, Zaha Hadid Architects and Archigram. Students will be expected to create a series of work with a conceptual framework developing a personal visual language.

Same as F20 ART 316T

Credit 3 units. Art: FAAM EN: H

F20 ART 416U Printmaking: Print Installation, Multiples, and Site Specificity

This course explores a range of basic techniques-silkscreen, block printing, and risograph, for example-to create immersive installations. Students will orient their site-sensitive investigations to place through history, context, and materials. Conventional and unconventional installation spaces will be used, both on campus and off, to experiment. The course will introduce planning techniques and approaches to site analysis. Students will be encouraged to incorporate other media within their installations, especially as they relate to other coursework they are currently taking within or outside of studio art. Students are encouraged to work at a level suited to their individual technical skills and conceptual interests. This class counts toward the Minor in Art. No prerequisites

Credit 3 units. Art: FAAM

F20 ART 417M Architecture Through the Photographic Lens

Same as F20 117M, F20 217M, and F20 417M; juniors (only) register for F20 317M. Photography offers ways of seeing and representing the world around us. This course provides technical and conceptual frameworks for understanding architectural space as seen through the camera. Topics include the building as site, landscape as context, and the architectural model as a representation tool. Students are introduced to a wide range

of artists and architects, which helps them to build a unique camera language to support their individual projects. Students will learn DSLR camera basics, fundamentals of Photoshop, digital printing techniques, and studio lighting for documenting architectural models. The course assumes no prior experience with digital imaging technologies or materials. Digital camera required.

Same as F20 ART 317M

Credit 3 units. Art: FAAM

F20 ART 417N Contemporary Portraiture

Same as F20 117N, F20 217N, and F20 417N; juniors (only) register for F20 317N. Historically, portraits were painted of the royal or wealthy to document an accurate likeness and to display status and power. However, with the advent of photography, artists were freed to develop interpretations in style, process, and medium. With subjects such as family, friends, strangers, celebrities, and the self, the portrait has been used to reflect culture, identity, and the relationship between the artist and the sitter. Issues of race, sexuality, gender, vanity, and status continue to be relevant to contemporary practice. This is primarily a drawing class; students combine the study of contemporary portrait artists with a studio practice that encourages the development of a unique voice. Students consider how pose, gesture, lighting, and other factors work together to support their intentions. Initial assignment prompts progress to guided independent pursuits. Students will be encouraged to experiment with image, materials, and processes. Live models will be used as well as other source material.

Same as F20 ART 317N

Credit 3 units. Art: FAAM

F20 ART 417O Drone Photography

This combination studio and discussion-based course examines the use of small unmanned aerial systems (sUAS) — otherwise known as *drones* — as a photographic medium. Studio sessions will introduce students to sUAS operation, various editing platforms, and output strategies. Lecture and discussion sessions will examine FAA regulations, the ethical implications of sUAS use by visual artists, and the rise of sUAS in the visual arts within the context of the history of aerial photography. All students will produce a body of work using drone capture as the primary medium. In order to ensure equal access to sUAS, students will be required to meet outside of class sessions.

Credit 3 units.

F20 ART 417P Drone Photography

This combination studio and discussion-based course examines the use of small unmanned aerial systems (sUAS) — otherwise known as *drones* — as a photographic medium. Studio sessions will introduce students to sUAS operation, various editing platforms, and output strategies. Lecture and discussion sessions will examine FAA regulations, the ethical implications of sUAS use by visual artists, and the rise of sUAS in the visual arts within the context of the history of aerial photography. All students will produce a body of work using drone capture as the primary medium. In order to ensure equal access to sUAS, students will be required to meet outside of class sessions.

Same as F20 ART 317P

Credit 3 units. Art: CPSC, FAAM EN: H

F20 ART 417Q Context, Curation, Communication: Seriality in the Photographic Image

Series and sequences are the prevalent method for exhibiting photographic images. Through assignment-based and self-generated projects, students discover how photographic series are conceptualized, structured, and sequenced. Special attention is given to the material meaning embedded in print size, order, and spatial placement. The course provides in-depth coverage of image capture through medium-format analog and full-frame digital systems as well as intermediate digital editing and printing techniques. Students also explore various documentary and setup strategies through narrative and non-narrative photographic approaches. Through a rigorous critique structure, course readings, and critical writing, students engage the historical discourse surrounding the series as a tool for artistic expression.

Credit 3 units.

F20 ART 417T Discourses in Contemporary Photography

This seminar course explores dialogs animating contemporary fine art photography from the 1960s to the present. Course lectures will be organized thematically around key ideas informing contemporary photography practice, including, but not limited to: changing technologies, surveillance, performance, social engagement, gender, race, and sexuality. Students will respond to lectures and class discussions through research presentations, visual assignments, and written responses.

Same as F20 ART 317T

Credit 3 units. Art: FAAM

F20 ART 4186 Black-and-White Photography

Only graduate students register for F20 4186. Undergraduate students register for F20 1186. This course provides an introduction to the fundamentals of black and white photography. There is emphasis on the control of film, paper, and black-and-white photographic processes in the classical fine arts tradition. Topics may include portrait, landscape, street photography, the figure, and contemporary issues in photography.

Credit 3 units. Art: FAAM EN: H

F20 ART 419 Ceramics

Same as F20 119, 219, 319 - Seniors (only) register for F20 419. An introduction to the design and making of functional pottery as well as sculptural objects. Students learn basic forming processes of the wheel, coil and slab construction. While the emphasis is on high-fired stoneware, students will be introduced to Raku and soda firing. Content and advanced processes and skills are encouraged according to the individual's level.

Credit 3 units. Art: FAAM EN: H

F20 ART 419J Structural Ceramics

This course is designed for advancing study in 3D practices within clay processes and in sculpture. Several techniques in clay will be explored, and hand-building will be emphasized. Methods of creating will include coiling, slab building, casting, and subtractive modeling. In this course, we will understand and research clay as a material that engages in structure and introduces new sculptural ideas that define scale, balance, form, and so on. Surface design with cold finishes and glazes, firing processes, and mold making will be explored as means of building and finishing content. Discussions and presentations will focus on the history and contemporary traditions of ceramic structures and sculptures. Emphasis will be placed on the critical assessment and articulation of material.

Same as F20 ART 319J
Credit 3 units. Art: FAAM

F20 ART 420 Ceramics

Same as F20 120, F20 220, and F20 420; juniors (only) register for F20 320. This course is an introduction to the design and making of functional pottery as well as sculptural objects.

Students learn basic forming processes of wheel, coil, and slab construction. Although the emphasis is on high-fired stoneware, students will be introduced to raku and soda firing. Content and advanced processes and skills are encouraged according to the individual student's level.

Same as F20 ART 320

Credit 3 units. Art: FAAM EN: H

F20 ART 420J Ceramics: Introduction to Hand-Building

This course introduces students to a wide range of ceramic hand-building techniques such as coiling, pinching and slab building. While establishing a strong foundation of skills, students will also gain a deeper understanding of clay as a means for expression of thoughts and ideas. Throughout the course, students will be encouraged to explore and develop their own personal language within the medium.

Same as F20 ART 320J

Credit 3 units. Art: FAAM

F20 ART 420K Ceramics: Molds and Multiples

This course explores the fundamentals of mold-making for ceramics. A variety of techniques from ancient to present day methods will be employed. Students will examine various implementations of molds and their ensuing possibilities, whether for artistic or design-oriented work. Students will produce individual serial projects in which they incorporate the principals of duplication and copy.

Same as F20 ART 320K

Credit 3 units. Art: FAAM

F20 ART 420L Ceramics: Processes and Practices

This course is a spectrum of ceramic processes using clay, plaster, and glazes to understand and explore techniques of making. Use clay to learn hand-building processes such as soft slab and hard slab, coil building, and hollow-out method to explore material differences of making forms. Glaze properties and chemistry will lightly be explored to understand the different stages of clay to ceramic and the firing processes in oxidation and reduction. Emphasis will be placed on mold-making for exploring repetition, scale, and balance with units to comprehend structure and multiples of building components in clay. Discussion and presentations will focus on the history and traditions of ceramics, contrasted with contemporary making in clay. Each student's skill level will be considered and projects will be adjusted accordingly. Emphasis will be placed on critical assessment and articulation of material.

Same as F20 ART 320L

Credit 3 units. Art: FAAM

F20 ART 423F Special Topics in Fashion Design: (Fashion Design: Collaboration Studio)

Same as F20 123F, 223F, 323F - Seniors (only) register for F20 423F. University collaboration course with Fashion Design, Occupational Therapy, Mechanical Engineering and Business to develop design proposals and prototypes for specific customer profiles. Teams of students from different majors will design

for various community and industry partners. They will work to solve an apparel or accessory design problem with innovative new concepts. The team will consider the person's lifestyle, occupation, and environmental factors that influence a design's functionality. A client-centered approach is used. Students will be evaluated on how well the design proposal meets the expressed aesthetic and functional needs of the client. Prerequisite:

Introduction to Fashion Design

Credit 3 units. Art: CPSC, FADM EN: H

F20 ART 423L Special Topics in Fashion Design: Fashion and Race

Same as F20 123L, 223L, 323L - Seniors (only) register for F20 423L. Is the fashion industry racist? This seminar course unpacks this contemporary inquiry by decentralizing fashion history to take a critical look at how racial identities are formed and performed, how historical stereotypes are perpetuated, and how theories of representation can be situated within the system of fashion. Students will use theoretical texts on race and representation to read contemporary media surrounding fashion and race (editorials, articles, social media), as well as gain an introduction to recently published research by scholars engaging fashion and race. Not only will students walk away with a richer understanding of how to critically think through race in fashion, but also how doing so gives us a new approach to think through race within a larger system.

Credit 3 units. Art: CPSC, FADM

F20 ART 425I Making Comics

Same as F20 125I, 225I, 425I - Juniors (only) register for F20 325I. From hieroglyphics to newspapers, drawn pictures in sequence have told stories for thousands of years. This course is an introduction to writing and drawing short form comics. In readings and discussion, students will explore a wide variety of genres and visual approaches to comics. Through exercises and assignments students will learn how to make clear and evocative comics. All skill levels of drawing experience are acceptable.

Same as F20 ART 325I

Credit 3 units. Art: FADM

F20 ART 425J Sculpting Realities

This course investigates new digital technologies -- particularly mixed, augmented, and virtual reality -- through the consideration of one critical question: "What does it mean to be real?" Students will learn the basics for making works of art, design, and architecture in alternative realities through 3D scanning, 3D modeling, and immersive world building. In addition to tutorials and multidisciplinary collaborative studio projects, students will investigate issues of reality and the use of alternative reality tools through readings, discussions, presentations, and other dialogues. The semester will culminate in a final project that translates a physical experience or artifact into a digital one.

Same as F20 ART 325J

Credit 3 units. Art: FADM

F20 ART 426J Design Within Context: Scroll to Screen

This course traces the history of graphic design from the origins of ancient writing systems to the turn of this century, with content that is organized both chronologically and thematically. We will examine the work and methodologies of design movements and participants, and we will critically consider the reciprocal relationship with cultural shifts, sociopolitical factors, and

technologies. Focus will lie heavily upon Western European tradition in the 20th century. This course counts toward the degree program as an Art History/Visual Culture elective, and and it also counts toward the design minor.

Same as F20 ART 326J

Credit 3 units. Art: FADM, VC

F20 ART 427A History of Photography

Same as F20 127A, 227A, 327A - Seniors (only) register for F20 427A. Survey of the history of photography and a look at the medium from the camera obscura to contemporary developments. Social and technological developments examined in terms of their influence on the medium.

Credit 3 units. Art: FAAM EN: H

F20 ART 428A History of Photography

Same as F20 128A, 228A, 328A - Seniors (only) register for F20 428A. Survey of the history of photography and a look at the medium from the camera obscura to contemporary developments. Social and technological developments examined in terms of their influence on the medium.

Credit 3 units. Art: FAAM EN: H

F20 ART 428C Documentary Film

This course investigates techniques of powerful nonfiction filmic storytelling that symbiotically merges visual and literary narrative devices. We will explore the organic process of research, interaction and craft to construct three short films. Students will be encouraged to go beyond apparent subject matter to inquire into deeper/underlying content that touches on timelessness and global/human topics. Within set parameters, students choose their own filmic topics and structures. Graduate and undergraduate students can form teams or work independently as their own producer, writer, director, cinematographer, editor and sound recordist. No previous experience required.

Same as F20 ART 328C

Credit 3 units. Art: FAAM

F20 ART 428D Experimental Photography: Cameraless to Polaroid, Form to Content

These days, everyone is a photographer, right? But how does that image snapped with your smartphone arrive on your screen? As technology marches forward, we have images literally at our fingertips, yet the actual process of producing the picture is, ironically, more elusive. In this course, we will dive into experimental processes and examine how physically making the picture can affect the content of that picture. As you craft images, ideas become tied to process and suggest new directions, strategies and subjects. We will begin with cameraless techniques, such as the photogram and cyanotype; we will investigate the principle of the camera obscura; we will test out rudimentary cameras such as the pinhole and disposable models; and we will experiment with printing techniques such as Polaroid and Xerox transfer, examining artists using these various techniques along the way. As we move through the semester, students will learn the various ways that light can create images, and they will begin to find their own particular voice within these mechanizations and create original work.

Same as F20 ART 328D

Credit 3 units. Art: FAAM

F20 ART 428E Making Documentaries in the Time of Covid

Documentary video is a powerful tool to spotlight the frustrations and triumphs of our daily lives. Unlike fiction films, the inquiry and the questions that start the process of making a documentary end up as an adventure and often the film itself. Many filmmakers discover unexpected answers, reveal hidden histories, humanize previously one-dimensional characters, and spotlight even more in-depth questions. The global pandemic offers a unique opportunity to create videos that acknowledge this moment, with the potential to become a significant part of an international conversation. Even beginning filmmakers can give voice to issues that will be included in the historical record. Students will learn about or improve their cinematic aesthetics and professional video editing skills by making three short videos.

Same as F20 ART 328E

Credit 3 units. Art: CPSC, FAAM

F20 ART 428X Color Systems

This course is a sustained investigation of color. Students study how color is affected by light, by space, by arrangement, by culture, and by commerce. The course aims to deepen the understanding of color's complexity and pervasiveness as a fundamental element of shared visual culture. The course develops both technical and conceptual skills to aid in visual translation. In addition to color-specific inquiry, another goal of this course is to expand ideas of research and enable students to integrate various methods of acquiring knowledge into their art and design practice. Throughout the course, students discuss various processes of making/constructing, the connection between color/form/concept, and strategies for idea generation and brainstorming. The course allows for much individual freedom and flexibility within varying project parameters.

F20 ART 429G Visualizing Otherness: Race, Gender and Class

The thematic focus of this studio is "the other". As we witness a global uprising and comprehensive public dialogue in response to police violence against African-Americans and the systemic racism that pervades American culture, students explore the artist's place in the power dynamics of mobilizing, re-contextualizing, and retelling stories that push against narrow, established norms. Otherness is not only linked with race, it is also deeply entrenched in sexism, xenophobia, transphobia, and classism. This course uses video and performance as platforms of artistic expression to engage with and move the dialogue forward. Class time will be divided between lectures, presentations, group discussions, and producing artwork. No prerequisites.

Same as F20 ART 329G

Credit 3 units. Art: CPSC, FAAM

F20 ART 433 Basic Illustration

Same as F20 133, 233, 333. Seniors (only) register for F20 433. An introduction to the concepts, media and problem-solving methods of contemporary illustration. Projects involve image development for applications such as book illustration, iconic/logo illustration, product development and information graphics. Students can work by hand or on the computer. Traditional drawing skills not required.

Credit 3 units. Art: FADM EN: H

F20 ART 434 Basic Illustration

Same as F20 134, 234, 434. Juniors (only) register for F20 334. An introduction to the concepts, media and problem-solving methods of contemporary illustration. Projects involve image development for applications such as book illustration, iconic/logo illustration, product development and information graphics. Students can work by hand or on the computer. Traditional drawing skills not required.

Same as F20 ART 334

Credit 3 units. Art: FADM EN: H

F20 ART 434A Advanced Drawing: Affective Stills and the Moving Image

Marked is an open-ended advanced drawing course that will focus on expanded definitions and mark-making practices. This course will explore, contextualize and analyze a wide variety of drawing methods that relate to image-making, spatial and situated practices, and ephemeral, time-based media. Through projects, readings, lectures and individual research, students will gain a broader understanding of drawing and its various definitions and approaches in addition to its rich set of histories and contemporary applications. This course will be peppered with lively discussions, field trips, and lectures by artists, architects, and designers. Self-directed projects will be reviewed and discussed critically and aesthetically in relation to the intent of the artist. A highly experimental and even collaborative approach to drawing will be strongly encouraged. Prerequisite: Drawing (F10 101A or 102A).

Same as F20 ART 334A

Credit 3 units. Art: FAAM

F20 ART 435G The Licensed Image: Development and Distribution

Same as F20 135G, 235G, 435G - Juniors (only) register for F20 335G. An introduction to the concept and image development, design, market distribution and methodology for creating licensed products. Projects will involve product idea development, market and the development of image-driven products using images and design. Traditional drawing skills not required. Students can work by hand or on the computer. Ideal course for students whose work focuses on images and those interested in developing visual products, including business students.

Same as F20 ART 335G

Credit 3 units. Art: FADM EN: H

F20 ART 435J Introduction to Animating in Three Dimensions

Same as F20 135J, 235J, 335J - Seniors (only) register for F20 435J. This course explores 3D animation in the short film format. Students move from an overview of the process and visual vocabulary of animation to defining filmic ideas, the visual gag, and character-driven content. Cinematic shot design, timing, character design, and sound design are studied for determining the most effective means of communicating desired content. Hand-drawn sketches are imported into a 3D animation program as the basis to model and animate characters, create settings, and add special effects. An animated sequence is produced to show evidence of personal inquiry and level of expertise. Prerequisites: F10 101 (Drawing) or equivalent or permission of instructor.

Credit 3 units. Art: FADM EN: H

F20 ART 435K Animated Worlds

This course explores traditional and experimental 3D animation in a short film format. Beginning students will learn polygon and NURBS modeling, texturing, lighting, rigging props, and characters in Maya. A storyboard, animatic and final rendered short will be developed for two major projects. Advanced skill sets include development, character design, 3D modeling, rigging, visual effects, sound, and rendering. No prerequisites or previous experience required. This course can be taken multiple times at either the beginner or advanced level, and it is open to students of all levels across the university. Graduate and advanced students can build independent projects with permission of the instructor.

Same as F20 ART 335K

Credit 3 units. Art: FADM

F20 ART 435O Drawing as Thinking

Same as F20 135O, F20 235O, F20 335O. Seniors (only) register for F20 435O. This studio course explores symbolic drawing as a practical tool for learning and communication, used as it has been for millennia for the acquisition and transmission of knowledge, for idea generation and formation, and for visual storytelling. Students will observe and describe phenomena, conceive systems, construct diagrams, design processes, and convey instructions, all using drawing as an aid to discovery, thought and communication. Tools and media may include pencils, brushes, wooden sticks, markers, painter's tape, laser pointers, and amateur surveying software, etc. In some cases, digital tools will be used to produce and present student projects. The course will include relevant readings and discussions. Throughout we will distinguish between symbolic uses of drawing and illusionistic ones, focusing on the former.

Credit 3 units.

F20 ART 435P Structuring Data for Effective Visualization

A primer on techniques for acquiring and structuring data in preparation for visualization. We will discuss common data formats (CSV, XML, and JSON) and how to access and translate from one format to another. Students will gain familiarity with the R language via the RStudio environment, as well as d3.js for interactive web-based visualizations. Students will develop concrete skills in preparing data for exploratory data analysis, as well as documenting workflows for reproducibility.

Credit 1 unit. Art: FADM

F20 ART 436I Advertising I

Same as F20 136I, F20 236I, and F20 436I; juniors (only) register for F20 336I. This hybrid studio/lecture course introduces students to the field of advertising by defining its role in American culture and economy. It engages students, hands-on, in the processes of professional practice. The course consists of presentations and discussions of contemporary work, and it provides students with opportunities to create advertising campaigns across broad product and service categories and across a range of media. Major emphasis is placed on the creative disciplines of advertising design and copywriting. Experience in copywriting and design is not necessary.

Same as F20 ART 336I

Credit 3 units. Art: FADM EN: H

F20 ART 4362 Advertising I

Same as F20 1362, 2362, 4362. Juniors (only) register for F20 3362. This studio course introduces students to the field of advertising by defining its role in American culture and economy and engaging students, hands-on, in the processes of professional practice. The course consists of presentation and discussion of contemporary work, and provides students with opportunities to create advertising campaigns across broad product and service categories and a range of media. Major emphasis is placed upon the creative disciplines of advertising design and copywriting.

Credit 3 units. Art: FADM EN: H

F20 ART 4363 Advertising in the Digital Age

Same as F20 1363, F20 2363, and F20 4363; juniors (only) register for F20 3363. This course examines advertising as a powerful force in contemporary culture, and it explores the increasing ways consumers experience branded communication through digital technologies. We will identify and study "game changing" developments in advertising communications; changing dynamics in audience behavior, including the ability to "opt out"; and the advertising industry's adaptation to digital technologies. Finally, we will speculate on the future of advertising in an era of mobile computing. Advertising in the Digital Age builds on The History of Advertising. It is recommended, but not required, that students have completed the first course before enrolling in this one.

Same as F20 ART 3363

Credit 3 units. Art: FADM

F20 ART 4364 Advertising in the Digital Age

Same as F20 1364, 2364, 3364. Seniors (only) register for F20 4364. This course examines advertising as a powerful force in contemporary culture, and explores the increasing ways consumers experience branded communication through digital technologies. We will identify and study "game changing" developments in advertising communications; changing dynamics in audience behavior — including the ability to "opt out"; the advertising industry's adaptation to digital technologies; and finally we'll speculate on the future of advertising in an era of mobile computing. Advertising in the Digital Age builds on The History of Advertising. It is recommended, but not required, that students have completed the first course before enrolling in this one.

Credit 3 units. Art: FADM EN: H

F20 ART 4365 History of Advertising

Same as F20 1365, 2365, 3365 - Seniors (only) register for F20 4365. The historical, cultural and technological development of advertising in America from the colonial period to the present. This course examines, through various media forms, key advertisements and campaigns, the creatives who made them, the technologies used to create them and changes in our culture that advertising both influences and reflects.

Credit 3 units. Art: FADM

F20 ART 4366 History of Advertising

Same as F20 1366, F20 2366, and F20 4366; juniors (only) register for F20 3366. This course cover the historical, cultural, and technological development of advertising in America from the colonial period to the present. It will examine, through various media forms, key advertisements and campaigns, the creatives

who made them, the technologies used to create them, and the changes in our culture that advertising both influences and reflects. Grading is based on mid-term and final exams as well as optional, extra-credit, five-page essays.

Same as F20 ART 3366

Credit 3 units. Art: FADM EN: H

F20 ART 436A Interaction Design: Understanding Health and Well-Being

Same as F20 236A and F20 436A; juniors (only) register for F20 336A. Through a blend of presentations from practitioners, classroom lectures, readings, discussions, and hands-on exercises, this course will engage principles and methods of interaction design within the context of health challenges. Broadly defined, interaction design is the practice of designing products, environments, systems, and services with a focus on behavior and user experience. We will take on an in-depth challenge in the area of health and well-being and work in cross-disciplinary design teams with an external partner organization. Students will gain experience in planning and executing a human-centered design process that features research, ideation, synthesis, concept development, prototypes, and a final presentation, which may include visual design, animation, and sound. Students will work in teams to develop several intermediate project deliverables, such as prototypes and sketches. No prior course work is necessary, although experience with Adobe Photoshop, Illustrator, and InDesign is helpful.

Same as F20 ART 336A

Credit 3 units. Art: CPSC, FADM EN: H

F20 ART 436G The Licensed Image: Development and Distribution

Same as F20 136G, 236G, 336G. Seniors (only) register for F20 436G. An introduction to the concept and image development, design, market distribution and methodology for creating licensed products. Projects will involve product idea development, market and the development of image-driven products using images and design. Traditional drawing skills not required. Students can work by hand or on the computer. Ideal course for students whose work focuses on images and those interested in developing visual products, including business students.

Credit 3 units. Art: FADM EN: H

F20 ART 436I Communication Design I

Same as F20 136I, 236I, 436I. Juniors (only) register for F20 336I. Students are introduced to the fundamentals of communication design. Through studio exercises and lectures, students are exposed to a broad range of conceptual, aesthetic and strategic issues in the field. The course explores principles of two-dimensional design, typography, and the relationship of text and image in order to persuade and inform. It helps students to learn a design methodology for illuminating and solving problems and provides baseline training in the Adobe Suite. Upon completion of this course, students will be able to design basic projects and have criteria to provide an informed evaluation of the effectiveness of a given design. It provides an introduction to design as a tool for business and marketing.

Same as F20 ART 336I

Credit 3 units. Art: FADM EN: H

F20 ART 436J Introduction to Animating in Three**Dimensions**

Same as F20 136J, 236J, 336J. Seniors (only) register for F20 436J. This course explores 3D animation in the short film format. Students move from an overview of the process and visual vocabulary of animation to defining filmic ideas, the visual gag, and character-driven content. Cinematic shot design, timing, character design, and sound design are studied for determining the most effective means of communicating desired content. Hand-drawn sketches are imported into a 3D animation program as the basis to model and animate characters, create settings, and add special effects. An animated sequence is produced to show evidence of personal inquiry and level of expertise. Prerequisites: Drawing or equivalent or permission of instructor. Credit 3 units. Art: FADM EN: H

F20 ART 436K Communication Design II

Same as F20 136K, 236K, 336K. Seniors (only) register for F20 436K. Building on the fundamentals of Communication Design I, this course will offer students the opportunity solve more complex visual communication problems. Information design (explanatory graphs and charts), multipage sequences (book/magazine design) and persuasion (advertising/propaganda) will be some of the topics covered. Various methodologies for defining problems, generating ideas, exploring possible visual solutions and evaluating work-in-progress and finished designs from the previous course, will be reinforced. This course will introduce students to a range of media, including digital and alternative forms. Emphasis will be placed on finding visually compelling solutions, no matter the media. The computer will be used as a tool to assemble and refine. Students will be encouraged to use online tutorials to augment in-class instruction. Prerequisite: Communication Design I. Credit 3 units. Art: FADM EN: H

F20 ART 436L Animated Worlds

This course explores traditional and experimental 3D animation in a short film format. Beginning students will learn polygon and NURBS modeling, texturing, lighting, rigging props, and characters in Maya. A storyboard, animatic and final rendered short will be developed for two major projects. Advanced skill sets include development, character design, 3D modeling, rigging, visual effects, sound, and rendering. No prerequisites or previous experience required. This course can be taken multiple times at either the beginner or advanced level, and it is open to students of all levels across the university. Graduate and advanced students can build independent projects with permission of the instructor. Same as F20 ART 336L. Credit 3 units. Art: FADM

F20 ART 437A Illustration Entrepreneur

In this course, students will create images appropriate for surface design application to products. Students will work toward developing icons and motifs using shape-based illustration, design, composition, hierarchy and thoughtfully considered color. Exploration will include visual content, artists, audiences, and trends in a fluid marketplace. Projects for this course will be in the applied context of gift and home decor markets, fabric design, stationery products, and toys. All skill levels of drawing and digital proficiency are welcome. This course is appropriate for art students whose work focuses on images/packages, design minors, and non-Sam Fox students interested in developing visual products.

Same as F20 ART 337A

Credit 3 units. Art: FADM

F20 ART 437T Visual Principles for the Screen

The demand for graphic literacy in contemporary culture is only increasing, redefining our need to understand how design functions and why. How can products and communication be crafted with the user in mind? How can design facilitate seamless, intuitive digital experiences? This studio course will address considerations for web, mobile, and other screen-based applications, including hierarchy, typography, iconography, layout, color, and image. This course is ideal for students seeking to learn fundamental graphic design and messaging principles and who want to produce robust, researched website and mobile application prototypes. Studio work will be supplemented by supporting lectures and readings. Lab optional. Same as F20 ART 337T

Credit 3 units. Art: FADM EN: H

F20 ART 438A Enchanted Objects: Material Culture

Some objects are "magical," possessing a kind of allure that leads us to spend money we don't have, collect obsessively, or behave differently. Other objects are "dangerous" and "taboo," inspiring disturbing thoughts and actions. This course considers our complex relationship to things and explores their powers of enchantment, which cannot be separated from their status as commodities or what Marx called crystallized labor and creative energy. What gives objects potency, value, and significance? What social-psychological and political purposes and what regimes of commodification and power do they serve? We will engage in discussion and object studies and draw upon work from many fields, both creative and scholarly.

Same as F20 ART 338A

Credit 3 units. Art: VC EN: H

F20 ART 438B Illustration Entrepreneur

In this course, students will create images appropriate for surface design application to products. Students will work toward developing icons and motifs using shape-based illustration, design, composition, hierarchy and thoughtfully considered color. Exploration will include visual content, artists, audiences, and trends in a fluid marketplace. Projects for this course will be in the applied context of gift and home decor markets, fabric design, stationery products, and toys. All skill levels of drawing and digital proficiency are welcome. This course is appropriate for art students whose work focuses on images/packages, design minors, and non-Sam Fox students interested in developing visual products.

Credit 3 units. Art: FADM

F20 ART 438J Advanced Animation

Same as F20 138J, F20 238J, and F20 438J; juniors (only) register for F20 338J. This course focuses on completing a short animated film as a group project using a workflow similar to that used in the animated feature film industry. The class will first develop a story. Individuals will then be assigned tasks according to strong areas of interest to create a storyboard and an animatic. Key moments will be identified to be animated first. After a plan is agreed on, students will be able to choose to work in various parts of the pipeline, including character design; layout and set design; 3D modeling; rigging; animation; textures; special effects; sound; rendering; and editing. Finally, all of these parts are put together as a short. This is an advanced

course that assumes some student experience with Maya or a similar 3D program; it is best suited for those who have already developed skills in any form of animation. Prerequisite: Introduction to Animating in Three Dimensions or permission of instructor.

Same as F20 ART 338J

Credit 3 units. Art: FADM EN: H

F20 ART 438S Visual Principles for the Screen

The demand for graphic literacy in contemporary culture is only increasing, redefining our need to understand how design functions and why. How can products and communication be crafted with the user in mind? How can design facilitate seamless, intuitive digital experiences? This studio course will address considerations for web, mobile, and other screen-based applications, including hierarchy, typography, iconography, layout, color, and image. This course is ideal for students seeking to learn fundamental graphic design and messaging principles and who want to produce robust, researched website and mobile application prototypes. Studio work will be supplemented by supporting lectures and readings.

Same as F20 ART 338S

Credit 3 units. EN: H

F20 ART 438T Transdisciplinary Design

The field of design is shifting from disciplines based on the items they produce (e.g., graphics, apparel, built environments) toward the design of strategies and systems that incorporate many designed elements. This requires a more cross-disciplinary approach, both across academic disciplines at large and across disciplines of design. This course will introduce students to core skills of strategic design through individual and group projects, readings, discussion, and journaling. Students will explore systems thinking, strategic framing, iteration, and collaboration. The class will discuss how designed things affect and are affected by the social systems around them.

Same as F20 ART 338T

Credit 3 units.

F20 ART 439I Radical Design: Making Civic Experiences

Same as F20 239I, 339I. Seniors (only) register for F20 439I. As we innovate rapidly in technology and communication, the economic and political structures that govern us have become largely assumed and unchallenged. This course explores the daily objects, interactions and spaces that make up these large systems (like a police ticket, or the layout of a courtroom), and experiments with how re-designing these elements can help us question the status quo. Building on diverse political mindsets and current trends, we will imagine fictional worlds, and craft the objects, procedures and interactions that inhabit them. Along the way, we'll discuss the value of designing for fundamental change alongside more incremental reform. Required class time will also include at least one additional in-class studio hour per week, to be determined based on students' schedules.

Credit 3 units. Art: CPSC, FADM EN: H

F20 ART 440A History of Communication Design

Same as F20 340A. Seniors (only) register for F20 440A.

Historical development of communication design based on a survey of significant artists and designers and the ideas, styles, movements, forces and individuals who influenced their work.

Credit 3 units. Art: FADM EN: H

F20 ART 440T Advanced Visual Principles for the Screen

This course explores user-centered interface design for screen-based, interactive experiences. Applying information design principles and programming design strategies, students will create advanced functional prototypes while practicing the UX/UI process, including research, content architecture, wireframing, usability testing, visual design and iterative development. Students will deliver responsive websites and mobile applications, investigate the unique possibilities of mobile devices, and consider alternate digital canvases. The course will emphasize clear organization and communication, typographic refinement and visual execution. Studio work will be supported by lectures and readings. Prerequisites: Visual Principles for the Screen, Word and Image I, or Interaction Foundations, or by permission from the instructor

Credit 3 units. Art: FADM

F20 ART 444A Animation Tools and Methods

This course introduces a range of digital and analog production techniques for the practice of animation. It will also present fundamental concepts and issues that define this creative form. Prerequisite: Digital Studio or permission of instructor.

Same as F20 ART 344A

Credit 3 units. Art: FAAM, FADM

F20 ART 447T Artist's Book

This course will examine the role of the book as an artifact of material culture. We will investigate definitions of the artist's book and current uses of the book form as metaphor in contemporary art. We will look at the work of artists such as Anselm Kiefer, Ann Hamilton, Rachel Whiteread, Kiki Smith, William Kentridge, Sophie Calle, Dieter Rot, and many others. In addition, we will look at the role of artist's books and publications in many 20th-century artistic movements. Course projects will center around the exploration of various types of editioned artworks, such as artist's multiples, mail art, zines, and more.

Same as F20 ART 347T

Credit 3 units.

F20 ART 448I The Illustrated Book: Design and Production

An investigation of text, image, design and production within the broad realm of illustrated books. A series of exploratory exercises in the beginning of the semester yields to a single sustained project proposed and developed by the student. Project emphases may include visual narrative, textual interpretation, creative writing, typography, structure and sequencing, and material investigation. Production methods may include relief and letterpress; engraving and intaglio; offset lithography; and digital, "virtual" media. Certain projects may require a second semester of study to complete.

Credit 3 units. EN: H

F20 ART 451A Sound Environments

This course explores sound and musical composition in a digital format, functioning as a sculptural, spatial, psychological, and architectural intervention. The course offers an introduction to current sound art practices and examines how sound projects are capable of altering our sense of space and time. Sonic space necessarily touches upon experimental music and installation art as closely related to sound art. The course introduces students to basic methods of sound recording and editing software and

hardware, with the goal of composing sound works for space and for headphones. Readings pertaining to current developments in contemporary experimental music and sound art as well as regular writing assignments accompany the course.

Same as F20 ART 351A

Credit 3 units. Art: FAAM EN: H

F20 ART 451B FOOD: Performative and Immersive

This studio/seminar course explores food and eating as elements to be considered historically and through the 5 senses. From the dawn of civilization, cultural customs have evolved around food, its production & consumption. Rituals were created to gather people around food & eating. We unpack personal & communal food experiences, consider the environments of those meals, & discover elements of both past & present. By creating immersive experiences, we deconstruct the mechanism of eating, exposing patterns and norms involved. The course culminates in a communal event in which students present their work as immersive installations. No prerequisites, junior or higher standing.

Same as F20 ART 351B

Credit 3 units.

F20 ART 452B Performing Solitude

Performing Solitude is a new elective studio with elements of a seminar, and it is open to students from across campus and suited most for upper-level undergraduates and graduate students in art, architecture, performing arts, music, and film & media studies departments. Performing Solitude invites students who are interested in creating interdisciplinary works that merge performance art with other forms of expression, including visual, digital, acoustic, textual and cinematic. Working with their own performing selves as a material in their art -- and with domestic or landscape space -- students will be invited to reconsider what performance art means in the age of a post-global, post-pandemic and post-digital universe in which the biological environment, including nature and their own bodies as part of it, continues to enact gestures and make aesthetic statements set against global histories. This studio incorporates elements of a seminar by way of discussing histories of performance art, performativity, and ritual as well as by supporting individually guided research and collaboration. During the semester, students will create two major performance-based works that incorporate other media of choice, such as film, music, text, or installation. Student work will be documented and demonstrable in their portfolios. Several smaller improvised or in-class assignments will lead toward a final project accompanied by an artist text. Readings, lectures and invited guests will accompany this studio.

Same as F20 ART 352B

Credit 3 units. Art: FAAM

F20 ART 454A Special Topics in Visual Culture: The Illustrated Periodical

This seminar course will engage the tradition of illustrated magazines in the United States, beginning with a categorical survey of the first half of the 20th century: slicks, pulps and downmarket rags. We will analyze editorial and advertising content, and confront the periodical as highly visual social text, animated by an implicit contract between publisher and reader. Attention devoted to communities of production and reception, including editors, art directors, illustrators, cartoonists and readers. Students will develop research projects which focus on particular publications, features and people, drawing on the

considerable resources of the Modern Graphic History Library. Outside readings and screenings will stimulate and supplement class discussion. Open to students across the university with sophomore to senior standing. Note: counts toward degree as Art History/Visual Culture elective and design minor.

Same as F20 ART 354A

Credit 3 units. Art: VC

F20 ART 454B Special Topics in Visual Culture: Studies in Modern Design from Print to Pixel

This course traces the history of graphic design during the Modern period as a reflection of, and lens onto, cultural shifts and technological innovation. Open to students across the university with sophomore to senior standing. Note: counts toward degree as Art History/Visual Culture elective and design minor.

Same as F20 ART 354B

Credit 3 units. Art: FADM, VC EN: H

F20 ART 457C Radical Mapping

Maps are instruments of power. We have seen this, for example, in the racially motivated "redlined" maps that legitimized urban clearings of entire neighborhoods in American cities during the 1930s. However, maps are also instruments of resistance, for visualizing lived experiences, and for critiquing political systems and relationships of power. Maps are tools for pinpointing accountability. This course will introduce students to the agency and potential of maps and mapping, which is a skillset that all designers need in the face of our current moment of social and environmental justice collapse -- a moment that has long been occurring. The course will cover interdisciplinary theories of mapping, critical cartography, and visualizing power as students build an "atlas of spatial politics" centered on Ferguson, Missouri, and the surrounding St. Louis region. This atlas will build on a body of work already underway that together is likely to culminate in a publication. An introduction to GIS software and data sources will be provided, and basic knowledge of Adobe Illustrator drawing software is necessary.

Credit 3 units. Arch: GAMUD, GAUI, UI Art: CPSC

F20 ART 462 Why Art Matters

This lecture and discussion course will examine how art, which productively utilizes ambiguity and discontinuity, is a distinctive form of expression and communication. Functioning not as a bearer of meaning but rather as a shaper of meaningful questions, art invites interpretation and introspection. As such, art -- which often functions to rekindle perception and give rise to new ways of thinking about and being in the world -- empowers individual thought, encourages empathy, and celebrates the diversity of ideas and opinions that are vital to conditions of freedom. With this in mind, multimedia lectures will explore the perspectives of contemporary artists (e.g., James Turrell, Cerith Wyn Evans, Wangechi Mutu), psychologists (e.g., Winnicott, Frankl, Freud), philosophers (e.g., Heidegger, Bataille, Merleau-Ponty), linguists (e.g., Lacan, Pierce, Saussure), sociologists, cognitive scientists, cultural theorists and others. In addition, readings, discussions, in-class group interpretations and written critical analysis will provide students with the tools required to understand how art, which is a distinctive form of expression and communication, matters; it matters, as Bill O'Brien argues, because it teaches us how we matter.

Same as F20 ART 362

Credit 3 units. Art: VC EN: H

F20 ART 4664 Study Abroad - Berlin Sommerakademie

This seminar explores the international contemporary art center, Berlin, through artist studio and museum visits and discussions with curators and scholars. This course offers a unique context to explore various modes of cultural production in relation to the material, social and political conditions of the city. Berlin's memorial sites that bore witness to the city's traumatic past during the Third Reich and Cold War division as well as its global presence further provide the opportunity to examine context-driven work. The seminar meets seven or eight times prior to departure and over the course of approximately one month in Berlin and Venice, where the program culminates at the Biennale. This course counts as an elective or toward the 18 units of art history required for the MFA degree.

Same as F20 ART 5664

Credit 3 units. EN: H

F20 ART 4713 Introduction to Book Binding

Same as F20 1713, F20 2713, and F20 4713; juniors (only) register for F20 3713. This course will serve as an introduction to the book as an artifact of material culture. A variety of traditional and non-traditional book structures will be explored. Students will learn from historical approaches to constructing the codex form, including the single-signature pamphlet, the multi-signature case binding, the coptic, and the medieval long stitch. Students will learn Japanese binding and its many variations. Several contemporary variations will be introduced, including the tunnel, the flag book, the accordion, and the carousel. Students will explore the visual book using found imagery and photocopy transfers, and they will produce a variety of decorated papers to be used in their bindings.

Same as F20 ART 3713

F20 ART 478 Contemporary Discourses: Art + Feminism

This course investigates the impact of feminism on contemporary art, focusing on artwork produced between the 1960s and the present day. Through an examination of global practices in a wide range of media, including artworks in the university's Kemper Museum collection, students will delve into innovative aesthetic strategies that criticize assumptions of gender, race and social class and consider the intricate tie between the identity of the author and the content of the work. This course is taught by a practicing artist, who together with the students will uncover historical developments and epic omissions. This is a lecture course with a discussion component. Requirements include participation in weekly discussion sections, regular response papers, and a final written curatorial project. No prerequisites in Art or Art History required.

F20 ART 4783 Special Topics in Visual Culture: Introduction to Illustration Studies

How have knowledge, opinion and feeling been communicated visually from the advent of automated printing presses to the invention of the internet, and to what effect? Using concepts in visual studies and communication studies, this course explores the histories of primarily American visual-verbal texts to investigate how minds and hands conceived, produced, distributed and consumed illustrated print media in the 19th and 20th centuries. Beginning with the neurological basis of vision, we will examine ways culture affects perception,

how print technologies shape content, how word and image rhetorically shape beliefs, how power relations imbue images and publishing, and the ways counterculture forms such as caricature and posters can be used to intervene socially. Students will conduct original research using University Libraries Special Collections to hone their ability to write convincingly and professionally about imagery. No prerequisites; 200 level open to students across the university. Counts toward design minor.

Credit 3 units. Art: FADM, VC

F20 ART 485B Beyond Words, Beyond Images:**Representation After History**

The seminar focuses on art in the public domain and examines contemporary practices that engage public memory and the meta-city. Prompting students to consider their own practice in the context of public space, the seminar offers examples of projects that contribute to global cultural and political discourse. Weekly illustrated lectures, readings, writing assignments, screenings, discussions, and individual research lead toward the final term paper. Individual studio consultations serve as a platform for the discussion of students' evolving practice, leading toward the final project in a medium of choice. MFA VA students and graduate students in architecture are especially welcome. This is an upper-level course open to juniors, seniors, and graduate students only.

F20 ART 485D Art Seminar: Fantastic Voyage and Scales of Wonder

Affective encounters with scale -- encounters that make us aware of our bodies in relationship to the world around us -- occur broadly throughout human experience, from viewing miniature particles through the lens of a microscope to wandering through monumental architectural environments. Undeniably, scale and affect are integral to the lived experience and to the ways in which art, design and the built environment have developed over the past half century. Through lectures, discussions, and critical readings, *Fantastic Voyage and Scales of Wonder* will examine scale as a central theme to explore our encounters with built environments and designed objects alike. Readings and discussions will span media archeology and affect theory. This seminar will also examine the impact of such works as Charles and Ray Eames's 1968 documentary "The Powers of Ten" and the 1966 cult film "Fantastic Voyage" (which inspired Isaac Asimov's science fiction novel of the same name) on art, design and architecture today.

F20 ART 487A Social Practice Art

Social Practice Art (SPA) is a course for artists, designers, architects and landscape architects. This studio course takes an interdisciplinary approach to establishing how social interaction and discourse can be tools for social transformation. SPA involves works that may use audience, collaboration, participation, ephemera, and activism as a medium that emphasizes the aesthetic of co-creation. Through readings, mindfulness exercises, field trips, and studio assignments, students will develop and implement their own social practice project.

F20 ART 495F Freund Visiting Artist Laboratory

The studio/seminar will be taught by this year's visiting Freund Fellow who will be living in St Louis for the fall semester while preparing their solo exhibition at SLAM scheduled for next year. The class will be constructed and offered by the fellow with specific content details to be advertised later. The class will be a combination studio and seminar around a particular subject. Junior BFA, senior BFA and MFA students are eligible to enroll. Same as F20 ART 395F
Credit 3 units.

F20 ART 497A Lost in Space: Media Art and Immersive Environments

The participatory turn in art over the past five and a half decades has produced an array of immersive environments that enhance the viewer's perception of their body and heighten awareness of their bodily relationship to space. A key mechanism in this choreography often involves the optical representation of shadows and mirrors, captivating visual phenomena and/or moving projections. While some produce unique phenomenological experiences, others offer nuanced or explicit sociopolitical meaning. In any case, technology often activates many spatially oriented works, dramatically altering the tenor of the embodied experience while offering new ways for our technologically mediated sensoria to shape our sense of presence within the physical world. This primarily seminar-based course will explore installation art and immersive environments, many of which use evolving technologies or time-based media to affect the viewer's awareness of their bodily existence. Examples will include Olafur Eliasson's "Fog Room" and "Multiple Shadow Room," James Turrell's "Light Reignfall," Yayoi Kusama's "Infinity Mirror Rooms," Anish Kapoor's "Cloud Gate" and "Whirlpool," Jennifer Steinkamp's "Jimmy Carter," Krzysztof Wodiczko's "A House Divided," Cyprien Gaillard's "Nightlife," and Won Ju Lim's "California Dreamin'." This course will also explore how immersive spaces operate on different registers while reinforcing the viewer's recognition of themselves as doppelgänger, as hybrid, or as Other. Students will learn how each work in its own way tinkers with the viewer's perception of their own bodily scale and encourages spectacular forms of engagement that reinforce corporeality.

About Us

The Sam Fox School of Design & Visual Arts (<http://www.samfoxschool.wustl.edu>) is a unique collaboration in architecture, art and design education that links professional studio programs with one of the country's finest university art museums in the context of an internationally recognized research university.

Composed of the College of Architecture, the Graduate School of Architecture & Urban Design, the College of Art, the Graduate School of Art and the Mildred Lane Kemper Art Museum (<http://www.kemperartmuseum.wustl.edu/>), the Sam Fox School is an inspiring place for learning, making, and creative research. Its six-building complex features numerous exhibition and maker spaces (<https://samfoxschool.wustl.edu/places/facilities/>), a dedicated art and architecture library, and a world-class art museum. Students have unparalleled resources that support a positive creative culture.

The **College of Art**, founded in 1879, was the first professional, university-affiliated art school in the United States. In the 1940s, its broad-based core program helped set the standards for the bachelor of fine arts degree. Faculty over the years have included Max Beckmann, Philip Guston and other internationally known artists.

The **College of Architecture**, established in 1910, was one of eight founding members of the Association of Collegiate Schools of Architecture. In 1962, Architecture launched one of the nation's first Master of Urban Design programs. Four winners of the Pritzker Prize, considered architecture's highest honor, have taught at the school.

The **Mildred Lane Kemper Art Museum** dates back to 1881, making it the first art museum west of the Mississippi River. The collection has historically focused on contemporary work. Today, the Kemper Art Museum holds roughly 3,500 important paintings, sculptures, photographs and installations by 19th-, 20th- and 21st-century American and European artists, along with significant antiquities and a large number of prints and drawings.

Additional collaborative opportunities are provided by the Department of Art History and Archaeology (<https://arthistory.wustl.edu/>) in Arts & Sciences, the Kenneth and Nancy Kranzberg Art & Architecture Library (<https://library.wustl.edu/locations/artarch/>), and the D.B. Dowd Modern Graphic History Library (<https://library.wustl.edu/collecting-area/mghl/>).

Inquiry, Creativity and Synthesis

The Sam Fox School offers rigorous art, design and architecture education at both the undergraduate and graduate levels, within the unique context of an independent, nationally prominent research university.

The student body is composed of approximately 300 undergraduate and 40 graduate students in Art as well as 200 undergraduate and 225 graduate students in Architecture. In all, they represent 18 countries, 43 states, the District of Columbia, and Puerto Rico. Roughly 30% of undergraduates pursue combined studies with another university area.

Both core and advanced studios integrate contemporary theory and practice. Among the innovative programs offered are the following:

- Multidisciplinary courses are co-taught by Art, Architecture, and Art History and Archaeology faculty. Recent seminars have explored the history of illustrated entertainment, combined urban theory with book design and production, and crafted a variety of online publications. Courses in exhibition studies are being offered, and a new program of exhibition studies is under development.
- International studios in Barcelona, Berlin, Buenos Aires and Florence are taught by Washington University faculty and offer a range of distinctive programs in art and architecture.

- Sam Fox School faculty, students, and staff work with individuals, organizations, governments, and communities — especially in St. Louis — through research, teaching and practice. This includes community-engaged teaching, service programs, research projects, and additional types of socially engaged practice (<https://samfoxschool.wustl.edu/collaborations/socially-engaged-practice/>).

Uniting Creativity and Scholarship

The Sam Fox School boasts a unique combination of academic and intellectual resources.

The Architecture faculty includes practicing architects, urban designers and landscape architects as well as eminent architectural theorists and historians and a select number of international visitors. The resident, full-time faculty members have won national and regional awards for design excellence and planning, including more than two dozen from the American Institute of Architects (<https://www.aia.org/>) alone.

Art's full-time faculty members include prominent painters, sculptors, printmakers and mixed-media artists as well as leading illustrators, graphic designers, fashion designers and photographers. Design faculty have won numerous professional honors, and fine art faculty have been featured in more than 100 solo exhibitions and 300 group shows on five continents.

The nationally recognized Kemper Art Museum (<https://www.kemperartmuseum.wustl.edu/>) maintains a vital program of exhibitions, publications and educational events. Major thematic shows are drawn from institutions and private collections around the world, highlighting nationally and internationally emerging artists. The acclaimed permanent collection includes key works by modern and contemporary artists, from Henri Matisse, Pablo Picasso and Jackson Pollock to Christian Boltanski, Candida Hofer and Olafur Eliasson.

Public events include concerts, film screenings, lectures and discussions with distinguished visitors, and museum tours led by student docents. The museum also provides workspace for faculty- and student-curated exhibitions (usually relating to Sam Fox School curriculum). Courses in Art History and Archaeology further complement the critical and practical study of exhibitions while facilitating student involvement in professional curatorial projects.

A Comprehensive Campus

The Sam Fox School is housed in a comprehensive, six-building campus for design and the visual arts located on the eastern portion of the Danforth Campus. Conceived around a central courtyard, it both reflects and updates Washington University's original campus plan, which was developed in 1895 by Frederick Law Olmsted, the founder of American landscape architecture.

Designed by the internationally acclaimed architecture firm KieranTimberlake, Anabeth and John Weil Hall (<https://samfoxschool.wustl.edu/places/our-campus/>) houses state-of-the-art graduate studios, classrooms and digital fabrication spaces. With its abundant natural light and flexible, loft-style studios and workspaces, Weil Hall is a locus for teaching, study, creation and critique. The William A. Bernoudy Architecture Studio — along with studios for graduate architecture, landscape architecture, urban design, illustration & visual culture, and visual art — houses programs for the Graduate School of Architecture & Urban Design (<https://samfoxschool.wustl.edu/academics/college-of-architecture/>) and the Graduate School of Art. Over the last decade, both graduate schools, which include the nationally ranked Master of Architecture and Master of Fine Arts in Visual Art (<https://samfoxschool.wustl.edu/academics/college-of-art/mfa-in-visual-art/>) programs, have doubled in size. The Roxanne H. Frank Design Studio houses the Graduate School of Art's Master of Fine Arts in Illustration & Visual Culture (<https://samfoxschool.wustl.edu/academics/college-of-art/mfa-in-illustration-and-visual-culture/>).

Another component of Weil Hall — the luminous, two-story Kuehner Family Court — features a living green wall, skylights, and glass walls that allow for visual connectivity between studio spaces, providing students with a feeling of simultaneity and participation in a larger community. As the conceptual heart of the building, the Caleres Digital Fabrication Studio allows students and faculty across programs to execute complex projects using state-of-the-art tools. Other notable spaces include the Ralph J. Nagel Dean's Suite and Weil Hall Commons, which includes a commissioned mural wall that features new works by alumni each year.

Earl E. and Myrtle E. Walker Hall brings together the undergraduate sculpture and painting areas. The sculpture area includes undergraduate studios, a wood shop, a metal shop, an installation room, and a faculty office, all on the ground level and first floor. The undergraduate painting studios are on the second floor.

William K. Bixby Hall, completed in 1926, has grown and changed to meet the needs of the students, faculty and administration of the College & Graduate School of Art. The building currently houses teaching and studio spaces for first-year art and design students, the undergraduate fashion design and printmaking majors, and the Nancy Spirtas Kranzberg Studio for the Illustrated Book (<https://samfoxschool.wustl.edu/places/facilities/15-nancy-spartas-kranzberg-studio-for-the-illustrated-book/>). The Dubinsky Printmaking Studio, a state-of-the-art facility, is located on the first floor beside Island Press (<https://islandpress.samfoxschool.wustl.edu/>), a research-based printmaking workshop that creates and publishes innovative prints and multiples by many of today's most influential artists. On the ground floor, an administrative suite is home to student services, financial services, and the director of Art.

Joseph B. Givens Hall has been architecture's home since 1932. It features a variety of studio spaces, including large drafting rooms with 15-foot ceilings, large windows, and skylit ateliers. The building's compact and elegant Beaux-Arts design has at its heart a grand central stair often used for socializing and informal meetings. Givens Hall also houses a lecture hall, review spaces, classrooms and the office of the director of Architecture.

Mark C. Steinberg Hall, completed in 1960, was the first commission by Fumihiko Maki, then an architecture professor at Washington University. Formerly home to the Gallery of Art, the Department of Art History & Archaeology in Arts & Sciences, and the Art & Architecture Library, Steinberg Hall now houses Career Services and the undergraduate communication design and photography majors on the lower level; public spaces such as Steinberg Hall Gallery and Etta Eisman Steinberg Auditorium on the main level; and architecture and communication design studios on the upper level.

The Mildred Lane Kemper Art Museum (<http://www.kemperartmuseum.wustl.edu/>), completed in 2006, is another commission by Maki. The elegant, 65,000-square-foot limestone-clad structure — a gathering point for scholars and the general public — includes more than 10,000 square feet of exhibition space, art storage facilities, and the Florence Steinberg Weil Sculpture Garden. The museum also houses the Kenneth and Nancy Kranzberg Art & Architecture Library and the Department of Art History & Archaeology (<https://arthistory.wustl.edu/>).

Lecture Series

The Sam Fox School invites distinguished academics and professionals to lecture (<https://samfoxschool.wustl.edu/calendar/series/2-public-lecture-series/>), attend critiques and visit major studios.

Email:	samfoxschool@wustl.edu
Website:	https://samfoxschool.wustl.edu/academics/college-of-art/

Degree Requirements

To receive a degree from the College of Art, a student must meet the requirements and take academic courses with other undergraduates. Work in art and design can be combined with studies in architecture, business, the humanities, the natural and social sciences and the other arts. Students may take these courses for educational and intellectual enrichment or in direct correlation with their primary interests.

The specified number of units in the areas below are required for the BFA and BA degrees, in addition to major and additional elective requirements. (Specific courses that meet these requirements are listed in the College of Arts & Sciences section.)

Writing: Students must complete a College Writing course with a C- or better during the first year of study. Transfer students must fulfill the writing requirement by taking an approved course or by review of a writing portfolio. For more information, visit the College Writing Program website (<https://collegewriting.wustl.edu/>).

Humanities: Humanities courses examine the human condition as documented and expressed in both past and contemporary times. This area includes courses in literature (both in English and other languages), Classics, History, Philosophy, and Religious Studies, and some courses in creative arts such as Dance, Drama, Music and Writing. Courses designated "Art HUM" fulfill this requirement.

Natural Sciences or Mathematics: These courses help the student understand the natural and physical world using objective and empirical observation and controlled experimentation. This area includes courses in Biology, Chemistry, Environmental Biology or Policy, Earth and Planetary Sciences, Math and Physics, and some courses from departments such as Anthropology and Psychological & Brain Sciences. Courses designated "Art NSM" fulfill this requirement.

Social and Behavioral Sciences: These courses use qualitative and quantitative observation to explore the social environment, relationships with society, and forms of human behavior. This area includes courses in Anthropology, Economics, Education, International and Area Studies, Political Science and Psychological & Brain Sciences, and courses from other areas, including interdisciplinary studies. Courses designated "Art SSC" fulfill this requirement.

Art History and Visual Culture: These courses provide context for art and design studies by examining the cultural and historical impact of artworks and artifacts. The BFA degree requires two one-semester introductory courses (Art-Arch 113 and Art-Arch 215) and three additional courses. The BA degree requires two courses of the student's choice. Courses designated "Art AH" or "Art VC" fulfill this requirement.

Bachelor of Fine Arts Degree

Required	Units
College Writing	3
Humanities	3
Natural sciences or mathematics	3
Social and behavioral sciences	3
History of Western Art, Architecture & Design	3
Introduction to Modern Art, Architecture & Design	3
Additional art history or visual culture	9
Total	27

Art/Design Foundation	
Drawing I	3

2D Design	3
3D Design	3
Digital Studio	3
Practices in Art + Design	1
Total	13

Major Area Requirements	
Sophomore Studios	
Junior and Senior Studios	
Capstone	
Total	39

Architecture, Art or Design electives	12
Courses in Architecture, Art, Design; Arts & Sciences; Business; or Engineering*	30
Total Credit Units Required	121

This curriculum includes the capstone studio for all seniors in the College of Art. The capstone studio brings together all seniors in the studio areas and separately in the communication design and fashion areas for critical dialogue beyond disciplinary boundaries and to guide preparation for each area's culminating BFA exhibition.

* A maximum of 15 non-Washington University units (including Advanced Placement, International Baccalaureate, and transfer credit) is permitted. No more than 9 units may be applied to physical education, lessons, independent study and internships. No units from University College will be accepted.

Bachelor of Arts Degree

Required	Units
College Writing	3
Humanities	3
Natural sciences or mathematics	3
Social and behavioral sciences	3
Art history or visual culture	6
Total	18

Art/Design Foundation	
Select two from Drawing, 2D Design, 3D Design, Design Across Disciplines	6
Digital Studio	3
Total	9

Major Area Requirements	
Sophomore Studios	6
Junior and Senior Studios	9

Architecture, Art or Design electives	12
Total	27

Courses in Architecture, Art, Design; Arts & Sciences; Business; or Engineering*	66
Total Credit Units Required	120

* A maximum of 15 non-Washington University units (including Advanced Placement, International Baccalaureate, and transfer credit) is permitted. No more than 9 units may be applied to physical education, lessons, independent study and internships. No units from University College will be accepted.

Academic Honors & Awards

Dean's List: In recognition of exceptional scholarship, first-year, sophomore, junior and senior art/design students who have earned at least 14 credit units under the letter grade option (excludes courses taken pass/fail or audit) and earned a semester grade-point average of 3.5 or higher during a semester will be cited on the Dean's List.

Latin Honors: Graduating Bachelor of Fine Arts or Bachelor of Arts degree students may also be considered for Latin Honors (cum laude, magna cum laude or summa cum laude) as determined by academic performance.

Prizes and Awards

The Scholars in Art Program provides named scholarship funds that have been donated to the university by individuals or companies specifically for this purpose. Selection is based on financial need and academic achievement. There is no application process.

Academic Scholarships

The College of Art offers one full-tuition and up to five partial-tuition scholarships each year solely on the basis of merit. Applicants for this award may also qualify for scholarship aid based on need and will be considered for this as well. The full-tuition Conway or Proetz Scholarship is awarded to an entering first-year student whose artistic and academic potential is judged outstanding by a faculty selection committee. The scholarship is supported by two endowed funds. The Fred Conway Scholarship was established in memory of a distinguished professor of painting in the College of Art. The Arthur and Esther Proetz Scholarship was established to honor the commitment and dedication to the arts of these two individuals.

Competition is national in scope, with finalists invited each year to visit the College of Art at the college's expense. At this time, one student is chosen to receive the full-tuition scholarship, and the other finalists are awarded partial scholarships. These are renewable for each year of undergraduate study, assuming continued academic and artistic excellence.

To be eligible, an applicant must be a high school senior who meets the following criteria:

1. They have a strong high school transcript.
2. Their SAT or ACT scores are in the upper range. (These tests are optional for 2022 and 2023.)

To enter the competition, the applicant must follow the usual admission application procedures by completing a Washington University first-year application and sending a digital portfolio of artwork. Portfolios should be submitted through Slideroom.

Awards and Prizes

Several awards are made each year to art students who are selected by the faculty. These awards and prizes include the following:

- The Paul Edward Birdsall Award in Visual Communications
- The Susan Sanders Block Silver Ripper Award in Fashion Design
- The Belle Cramer Award in Printmaking
- The Eda L. and Clarence C. Cushing Memorial Prize in Painting
- The Anne Fuller Dillon Prize in Graphic Communications
- The Mary Cowan Harford Award in Watercolor
- The Marsha Hertzman Blasingame Award in Printmaking
- The Morris M. Horwitz Award in Photography
- The Hazel H. Huntsinger Memorial Prize in Painting
- The Caroline Risque Janis Prize in Sculpture
- The Nancy Spirtas Krantzberg Illustrated Book Award
- The John J. and Marjory B. Lewin Photography Prize
- The Peter Marcus Prize in Printmaking
- The Dominic Michael Silver Scissors Designer of the Year Award
- The John T. Milliken Foreign Travel Award
- The Al Parker Award for Excellence in Illustration
- The Jayne Ball Rousseau Memorial Prize in Graphic Communications
- The Margo Trump Memorial Award
- The Jack Unruh Award in Illustration
- The Jeffrey Frank Wacks Scholarship Award
- The Lillie Willemsen Prize

Policies

To receive the Bachelor of Fine Arts or Bachelor of Arts degree, students must meet the requirements of the College of Art and take academic courses with other undergraduates. Work in art and design can be combined with studies in architecture, business, engineering, humanities, natural and social sciences,

and the other arts. Students may take these courses for educational and intellectual enrichment or in direct correlation with their primary interests. Courses in University College do not count toward degree requirements.

Enrollment Status

Definitions of *full-time study*, *half-time study*, and so on are based on federal regulations. Enrollment status impacts eligibility for campus services as well as Washington University's reporting obligations. Alignment with policies in financial aid, international student services, student health insurance, VA benefits and athletics is critical.

Washington University's definition for full-time undergraduate study is at least 12 credit-bearing units (semester hours) per term. Units taken under the audit grade option do not factor into enrollment status calculations, so they cannot count toward the 12 units required for full-time enrollment.

Sam Fox School of Design & Visual Arts Grievance Procedures

The dynamic and creative studio culture at the heart of the Sam Fox School strives to be safe and inclusive for all members of our community. Our faculty, staff, and students join together in their commitment to creating learning environments of mutuality and respect. When concerns or disagreements arise about conduct, grading, or other matters in the Colleges of Art and Architecture, policies exist for pursuing proper resolution.

Grade Dispute Policy

The Sam Fox School aims to provide each student with a fair assessment of their academic work and studio. Students have the right to dispute their overall course grade (not individual assignments) if they believe that grade does not accurately reflect the quality of their work. A grade dispute must be submitted to the faculty member who assigned the grade within 30 days of receipt of the grade. The Sam Fox School stresses that every effort to resolve such a dispute be made by the faculty and student involved. A student's eligibility for advancement in sequential course work requires timely resolution of the grade dispute. If the student is a graduation candidate, the dispute process must comply with the Intent to Graduate submission deadlines set forth by the Office of the University Registrar or else the degree conferral will be delayed by one semester or until resolved.

In general, the dispute process will occur and be resolved as follows:

1. The student presents their question about the grade in writing to the faculty member and clearly states the reasons for questioning the grade.
2. The faculty member and the student review the grading procedures as stated in the syllabus and discuss the determining factors of the student's grade.
3. If the case is not resolved between the student and the faculty member, the student may put forth their complaint in writing with supporting evidence to the chair of the academic program, with a copy given to the faculty member involved with the dispute. The student should provide the course syllabus and all of the materials relevant to the assigned grade within two weeks of the complaint. If a conflict of interest exists between the student and the chair (e.g., the chair is teaching the course), the case will be referred to another chair in the Sam Fox School or to the director of the college.
4. The chair of the academic program will review the materials. The chair will resolve the dispute by working with the faculty member and the student to arrive at a determination.

Integrity and Ethical Conduct

Washington University and the Sam Fox School of Design & Visual Arts are committed to the highest ethical and professional standards of conduct and consider these to be integral to their mission of the promotion of learning. To maintain these standards, the university relies on each community member's ethical behavior, honesty, integrity, and good judgment. Each community member should demonstrate respect for the rights of others, and each community member is accountable for their own actions. Washington University policies state that members of the university community can expect to be free from discrimination and harassment. Students, faculty, staff, and outside organizations working on campus are required to abide by specific policies prohibiting harassment, which are posted on the Compliance and Policies (<https://wustl.edu/about/compliance-policies/>) page of the university's website. Should a situation arise in which a member of our community believes they have cause to file a grievance, there are two categories of grievance to consider: academic and non-academic. Academic grievances can either be when a student challenges a course grade or when a fellow student or faculty member feels a matter of academic integrity is at issue. Student grievances filed to challenge a grade that the student feels has been given incorrectly must follow the procedures outlined in the Grade Dispute Policy above.

Academic integrity grievances are made when a faculty member or fellow student feels a student has compromised the environment of honesty and ethics in the school. Academic integrity infractions follow the procedures laid out in the Sam Fox School and University policies (<https://samfoxschool.wustl.edu/resources-and-opportunities/?filter=46#main>) and are managed in the Sam Fox School by the Academic Integrity Officer. Please refer to Washington University's Academic Integrity Statement (<https://studentconduct.wustl.edu/academic-integrity/>) for additional information.

Non-Academic Concerns

If a member of our academic community feels that the ethical and safe environment of the classroom has been compromised, for whatever reason, they may seek guidance through the school's Faculty-Student Mediator. Students may also consult Washington University's Grievance Policy and Procedures for Allegations by Undergraduate Students Against Faculty (<https://wustl.edu/about/compliance-policies/governance/grievance-policy-allegations-undergraduate-students-against-faculty/>). In addition, University Resources available for support include the following:

- Title IX (<https://titleix.wustl.edu/>) (for issues related to discrimination, sexual harassment, and sexual violence)
- Mental health concerns (<https://shs.wustl.edu/MentalHealth/Pages/default.aspx>) (Habif Health and Wellness Center)
- Drug and alcohol concerns (<https://shs.wustl.edu/HealthAndWellness/HealthTopics/Pages/Substance-Abuse.aspx>) (Habif Health and Wellness Center)
- Immediate physical/mental health concerns (<https://police.wustl.edu/Pages/Home.aspx>) (Washington University Police Department)
- Center for Diversity & Inclusion (<https://diversityinclusion.wustl.edu/brss/>) (for issues related to bias, prejudice, or discrimination)

Academic Integrity

Students and members of the faculty of the university have an obligation to uphold the highest standards of scholarship. Plagiarism and other forms of cheating will not be tolerated. When a student has violated the integrity of the academic community, an instructor may recommend that the student be brought before the Committee on Academic Integrity. A list of university policies can be found on the website of the University Registrar (<https://registrar.wustl.edu/university-policy-information/>).

Attendance

The College of Art allows the instructor of each course to decide how many absences a student may have and still pass the course. Professors are expected to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their faculty the reasons for any absences and to discuss with them the possibility of making up missed assignments.

Prerequisites

Students enrolling in art or design courses without the prerequisites must seek permission from the instructor; registration without this permission does not guarantee enrollment in the course.

Digital Technologies

Technology plays a critical role in the educational experience. The College of Art is committed to the integration of relevant technology into the curriculum. Students are required to have a specified computer and software beginning with the first semester of study. Supplemental purchases (e.g., monitors, scanners, tablets) may be necessary as students advance and declare a major. Information is available on our Digital Technologies webpage (<https://samfoxschool.wustl.edu/resources-and-opportunities/digital-technologies/undergraduate-art-design/>).

Units and Grades

In the College of Art, one semester unit of credit is assigned for every two hours of work completed in class and one hour of work completed outside of class per week for one semester. A student's undergraduate grade-point average is determined by dividing the number of grade points earned by the number of semester units for which grades of A, B, C, D or F have been recorded. Grades of P# and F# received for courses taken on a pass/fail basis are not figured into the GPA. A grade of C- or better must be received in major classes during the second, third and fourth years to count toward degree requirements. Students must maintain a minimum 2.0 cumulative GPA in order to graduate.

A grade point is a measure of quality assigned to units according to the following system:

Grade	Meaning	Points per Unit
A+		4.0
A		4.0
A-		3.7
B+		3.3
B		3.0
B-		2.7
C+		2.3
C		2.0
C-		1.7
D+		1.3
D		1.0
D-		0.7
F		0.0
P#	Pass (P/F option)	
F#	Fail (P/F option)	
I	Course work incomplete	
W	Withdraw (non-leave of absence)	
WLA	Withdraw (leave of absence)	
R	Repeat	

L	Successful audit
Z	Unsuccessful audit
N	No grade submitted
X	Examination not taken

Grades of I, X and N will become grades of F if the deficiency is not made up within the next two semesters of residence. For a course that is repeated, students earn credit and grade points based on the second grade received.

The WLA grade is only for undergraduate students who withdraw from all semester course work with an approved medical leave of absence.

Pass/Fail Option

A student may take one non-art course per semester on a pass/fail basis (exclusive of courses that must be taken pass/fail). Any additional courses taken pass/fail in a given semester will not be counted toward the degree. All courses with an F10 or F20 department number must be taken for credit, unless otherwise noted. Any course taken to fulfill the writing requirement must be taken for credit.

Incomplete Grades

If, following the last day for withdrawal from courses, a student experiences medical or personal problems that make the satisfactory completion of course work unlikely, they may request a grade of I (incomplete) from one or more instructors and should take the following steps:

1. Discuss the request with the instructor before the final critique or portfolio review.
2. With the instructor's consent, complete an Incomplete Grade Petition, which is then signed by both the instructor and the student. The instructor is under no obligation to award a grade of I (incomplete).
3. Return the signed petition to the Sam Fox School Registrar's Office for final approval.

Repeating a Course

When a student retakes a course, both registrations will show on the transcript. If the second grade is equivalent to or better than the first, the first grade may be changed to an R to indicate the retake. If the second grade is lower, both grades will remain on the transcript, with degree credit allowed for only one of the enrollments.

Courses completed at institutions other than Washington University are not applicable under this policy.

Independent Study

Opportunities for independent study are available to undergraduate students. Registration in an independent study requires the student to submit a written proposal and to obtain the approval of the sponsoring faculty and program chair. Approved proposals must be submitted to the Sam Fox School Registrar's Office by the semester course add deadline. Proposals received after the deadline will not be considered.

Study Abroad

The Sam Fox School offers semester or summer study abroad programs (<https://samfoxschool.wustl.edu/academics/international-programs/>) in Florence, Italy. Undergraduate students are also eligible to participate in the university's study abroad programs (<https://overseas.wustl.edu/>).

Minimum and Maximum Loads

Students must enroll in an average of 15 to 16 units each semester to complete degree requirements in eight semesters. It is strongly recommended that students enroll in no more than 18 units each semester in order to focus on studios and required courses.

Full-time enrollment is 12 units. Enrollment below 12 units may be granted only with the consent of the associate dean of students.

Enrollment over 21 units is not allowed.

Advanced Placement Credit

A maximum of 15 units of pre-matriculation or non-Washington University transfer credit may be counted toward an undergraduate degree.

Transfer Credit

A student wishing to transfer credit for courses completed at another institution must bring a full catalog description of the course(s) to the Sam Fox School Registrar's Office for preapproval. Upon receipt of an official transcript indicating a grade of C or better, courses will be considered for transfer. Grades for transfer courses will not appear on the student's Washington University record and will not figure into the student's GPA. College courses taken to earn credit for high school graduation will not be considered for transfer. Washington University does not transfer credits for courses taken online. No transfer credit will be awarded for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or Academic Integrity Policy.

Major Declaration and Transfer

A student declares their major by using the university's online registration system (WebSTAC). A student must declare a major no later than the beginning of the spring semester of the sophomore year. Once a student has declared a major, they must be approved to change to another major. Students requesting to change their major must be in good academic standing. Credit transfers between majors are at the discretion of the program chair.

Interdivision Transfer Policy: Transferring Into the College of Art

Undergraduate students enrolled in the College of Arts & Sciences, McKelvey School of Engineering, Olin Business School, or the College of Architecture may apply to transfer into the College of Art. Transfer requests must be made in WebSTAC by the last day of final exams of the semester before the effective semester. It is strongly recommended that students meet with a four-year advisor in the Sam Fox School prior to registration to ensure that they know what classes to take the following semester and are given waitlist priority. Otherwise, enrollment in the required studios for the semester of entry may not be possible. All Washington University students must spend their first semester in the academic division that admitted them.

Minimum Criteria

The following requirements must be met for an internal (interdivision) transfer into the College of Art:

1. Submit a portfolio of 10 to 20 images of the best and most recent artwork.
2. Achieve a cumulative GPA of 3.0 or higher. Students with GPAs below 3.0 are required to meet in person with the associate dean of students in the Sam Fox School for an interview and academic record review.
3. Present an academic record that supports the conclusion that the student will be able to complete a BFA or BA degree in the College of Art in a typical time frame. Depending on the student's level at the time of transfer, additional semesters and/or preapproved summer school may be required.
4. Be in good academic standing.

Each application is evaluated on a case-by-case basis. Meeting these requirements does not guarantee admission into the College of Art.

Portfolio Requirements

The portfolio should consist of 10 to 20 pieces of artwork such as drawings, paintings, photographs, illustrations, videos, sculptures, storyboards, websites, or other types of relevant work in art and design. Work from any studio courses previously taken in the Sam Fox School must be included in the portfolio. Artwork should be submitted as high-resolution digital images no larger

than 2 MB each. Students should include only one image per file. Detail images or alternate views of work may be included as individual files. Each file should be in .jpg or .jpeg format and labeled using the following format: Lastname Firstname_01.jpg (e.g., Smith John_01.jpg).

The portfolio must also contain a numbered image list that corresponds to the file names. For each piece, students should list the course in which it was made (if applicable), the title/assignment, the media used, the size, and the year of completion. The image list may be a .pdf or .doc file.

The images and image list must be uploaded to a Box folder that the student will be informed how to access.

To Begin the Transfer Process

1. Log into WebSTAC and select "Change WU School" under the "Academics" tab.
2. Upload the portfolio and image list to Box as instructed.
3. Meet with the associate dean of students for an interview and portfolio review. Contact information for the associate dean is provided during the request process in WebSTAC.
4. Complete an exit interview or exit survey with the academic division that is being left.

Second Major Declaration Policy: College of Art

Undergraduate students enrolled in the College of Arts & Sciences, McKelvey School of Engineering, Olin Business School, or the College of Architecture may declare a second major in art or design in the College of Art. Second major declarations must be made in WebSTAC by the last day of final exams of the semester before the effective semester.

Minimum Criteria

The following requirements must be met to pursue a second major in the College of Art:

1. Submit a portfolio of 10 to 20 images of the best and most recent artwork.
2. Achieve a cumulative GPA of 3.0 or higher. Students with GPAs below 3.0 are required to meet in person with the associate dean of students in the Sam Fox School for an interview and academic record review.
3. Present an academic record that supports the conclusion that the student will be able to complete a second major in art or design in a typical time frame.
4. Be in good academic standing.

Each declaration is evaluated on a case-by-case basis. Meeting these requirements does not guarantee acceptance into the second major program.

Portfolio Requirements

The portfolio should consist of 10 to 20 pieces of artwork such as drawings, paintings, photographs, illustrations, videos, sculptures, storyboards, websites, or other types of relevant work in art and design. Work from any studio courses previously taken in the Sam Fox School must be included in the portfolio. Artwork should be submitted as high-resolution digital images no larger than 2 MB each. Students should include only one image per file. Detail images or alternate views of work may be included as individual files. Each file should be in .jpg or .jpeg format and labeled using the following format: Lastname Firstname_01.jpg (e.g., Smith John_01.jpg).

The portfolio must also contain a numbered image list that corresponds to the file names. For each piece, students should list the course in which it was made (if applicable), the title/assignment, the media used, the size, and the year of completion. The image list may be a .pdf or .doc file.

The images and image list must be uploaded to a Box folder that the student will be informed how to access.

To Begin the Declaration Process

1. Log into WebSTAC and select "Major Programs" under the "Academics" tab.
2. Upload the portfolio and image list to Box as instructed.
3. Meet for an interview and portfolio review with the advisor of the declared second major program. Contact information is provided during the declaration process in WebSTAC.

Satisfactory Academic Progress, Good Standing, Probation and Suspension

Students are expected to proceed at a pace that enables them to finish their degree within the appropriate time limit. For degrees in the College of Art, this is usually eight semesters.

The minimum GPA requirements needed to maintain eligibility for Satisfactory Academic Progress are dictated by the specific program of study. In each case, per the requirements of 34 C.F.R. 668.34(a)(4)(ii), the federal student aid program requires a minimum of a C average to maintain eligibility for aid, but an individual degree or certificate program may have a higher minimum GPA for federal Satisfactory Academic Progress.

A student whose semester GPA is below 2.0 (a grade of C) or who falls below a pace of $66\frac{2}{3}\%$ (for the number of credits earned divided by the number of credits attempted) will be placed on academic probation. If, after the following semester, the semester GPA is still below 2.0 or if the pace is still below $66\frac{2}{3}\%$, the student may be ineligible for normal advancement or may be suspended. Although the College of Art desires to

give all students the opportunity to prove themselves, it is not in the best interest of either the students or the college to permit students to continue indefinitely in educational programs in which they are not producing satisfactory results.

Probation serves as a warning that, unless the quality of work improves, the student may be subject to suspension. A student suspended for academic deficiency will not be eligible for readmission until they can demonstrate, under the conditions set for each individual case, their ability to do satisfactory work.

A student will be removed from academic probation when their cumulative GPA is above 2.0 and they are meeting the pace of $66\frac{2}{3}\%$ for satisfactory academic progress.

In support of the student, the Sam Fox School Registrar's Office will work with the student to develop a plan for success. To succeed, the student must understand the cause(s) of their current situation, identify what needs to change, and implement and review a plan. The student is required to meet regularly with the associate dean of students to review progress. Failure to make these meetings will result in a hold being placed on the student's record.

First Academic Probation: The first time a student qualifies for probation, they are placed on academic probation. Students placed on first academic probation are sent a letter informing them of this action.

Second Academic Probation: The second time a student qualifies for probation, they are placed on second academic probation. Students placed on second academic probation are sent a letter informing them of this action. A copy of this letter is sent to the parent(s)/legal guardian(s).

Special Academic Probation: A student is placed on special academic probation when their earned semester pace or GPA is below the terms of satisfactory academic progress because of outstanding or incomplete grades. Once all grades are received, the student's record is reviewed to determine satisfactory or probationary status.

Academic Suspension: The third time a student qualifies for probation, they will be suspended. A letter is sent to the student and their parent(s)/legal guardian(s) informing them of this action. The student is not allowed to enroll in any classes at Washington University while suspended, including University College. If the suspended student would like to return to the university in the future, they must petition and be approved for reinstatement. If the student fails to achieve and maintain satisfactory progress after reinstatement, they will be dismissed.

A student who wishes to appeal their suspension must present a written appeal within 48 hours of receiving notification stating the reason(s) why they believe their situation should be reconsidered. This statement must be sent as outlined in the notice of suspension. In this statement, the student must explain why the unsatisfactory academic performance occurred and, if they are allowed to return, what they would do differently.

The student must then attend an appeal hearing. The student's academic record, written appeal, and any other factors the student may wish to discuss are considered by a faculty committee. After the appeal hearing, the student is informed of the committee's decision within 48 hours. Actions may include academic probation, required leave of absence for one or two semesters, suspension, or termination from the program. Should the student wish to appeal, a written request must be sent within 48 hours of receiving the committee's decision to the director of the student's academic division. If appealing the director's decision, the dean of the Sam Fox School makes the final determination.

If the appeal is successful, the student is placed on Special Academic Probation and allowed to enroll in classes. If the appeal is unsuccessful, the student's programs of study will be closed and their classes dropped for the following semester. Suspended students may apply for re-enrollment at a future time, although there is no guarantee that they will be allowed to return.

Leave of Absence

A student may request a leave of absence for one semester at a time for up to one year. If this is granted, the student may re-enroll at the end of that time without going through further admission or readmission procedures. A Request for Leave of Absence form must be completed before a leave of absence will be granted. In the case of a medical leave of absence, a letter of clearance is required from Habif Health and Wellness Center (<https://shs.wustl.edu/>) before the student will be permitted to re-enroll.

International students requesting a leave of absence must contact their advisor at the Office for International Students and Scholars (OISS) to discuss how the leave might affect their visa status.

Students who are on a leave of absence for medical, mental health, academic, family, personal, or any other reason are not eligible to participate in a registered student group, hold a student group leadership position, or attend/plan a student-group-sponsored event as a representative of said student group. Depending on the type of leave and any corresponding policy restrictions, students on a leave of absence may or may not be able to attend campus-wide events as a guest of a current Washington University student.

Financial Obligations

Students are responsible for fulfilling their financial obligations to the university. If a student account becomes overdue, a late payment fee will be assessed, and a hold will be placed on the account. Students with a poor payment history may be restricted from utilizing certain payment options or receiving tuition remission until course credit has been earned. Non-payment of tuition and other expenses due to the university will be cause for exclusion from class or refusal of graduation, further registration, or transfer credit. In addition, students are liable for any costs associated with the collection of their unpaid bills, including but not limited to collection agency costs, court costs, and legal fees. Past due amounts can also be reported to a credit bureau.

Withdrawals and Refunds

A written request for a refund must be submitted to the Sam Fox School Registrar's Office for consideration. Approval is required to officially withdraw from the university. Tuition adjustments will be processed based on information received, and refund checks will be issued only after the fourth week of classes. Material fees for art courses will not be refunded after the course drop period for the semester. For any student whose medical condition makes attendance for the balance of the semester impossible or medically inadvisable, the university will make a pro rata refund of tuition as of the date of withdrawal when that date occurs prior to the twelfth week of classes, provided that the condition is verified by the Habif Health and Wellness Center or a private physician. The date of withdrawal may correspond to the date of hospitalization or the date on which the medical condition was determined.

Withdrawal Date	Refund
Within 1st or 2nd week of classes	100%
Within 3rd or 4th week of classes	80%
Within 5th or 6th week of classes	60%
Within 7th or 8th week of classes	50%
Within 9th or 10th week of classes	40%
After 10th week of classes	0%

Summer Withdrawals and Refunds

The Sam Fox School reserves the right to cancel a course if it has not enrolled a minimum of eight students before the first day of class. If a course is canceled, all enrolled students will be notified and dropped from the class, and they will not be charged tuition and fees.

If a course is not canceled, a student may be released from their obligation to pay full tuition and fees by canceling their registration according to the schedule below:

Withdrawal Date	Refund
Prior to the first class meeting	100% + fees
Prior to 15% of published meeting dates	100%
Prior to 30% of published meeting dates	80%
Prior to 45% of published meeting dates	60%
Prior to 60% of published meeting dates	40%
After 61% of published meeting dates	No refund

Intent to Graduate

Every candidate for a degree is required to file an Intent to Graduate in WebSTAC in order to participate in commencement. The deadlines for filing are listed in WebSTAC.

Retention of Student Work

The College of Art reserves the right to hold a student's work(s) for exhibition purposes and holds reproduction rights of any work(s) executed in fulfillment of course requirements.

Majors (directory)

Below is a list of majors offered by the College of Art. Visit the Majors section of the College of Art (p. 106) in this *Bulletin* to view more information about a specific major.

Bachelor of Fine Arts (BFA) majors are offered in the following areas:

- Art — with optional concentrations in:
 - Painting
 - Photography
 - Printmaking
 - Sculpture
 - Time-Based + Media Art
- Communication Design
- Fashion Design

Bachelor of Arts (BA) majors are offered in the following areas:

- Art
- Design — with optional concentrations in:
 - Communication
 - Fashion

Minors (directory)

Below is a list of minors offered by the College of Art. Visit the Minors section of the College of Art (p. 108) in this *Bulletin* to view more information about a specific minor.

- Art
- Design
- Creative Practice for Social Change
- Human-Computer Interaction

Visit the Sam Fox School (<https://samfoxschool.wustl.edu/academics/college-of-art/minors/>) website for specific requirements.

Arts & Sciences

The College of Arts & Sciences is the largest undergraduate program at Washington University, offering students the most diverse range of courses in more than 50 different fields, ranging from anthropology and biochemistry to mathematics and performing arts.

The college draws on the rich and varied resources that this distinguished university has to offer: a creative and internationally recognized faculty, a diverse and able student body, a superior library, and excellent opportunities for advanced study and mentored research. As the center of intellectual life on the campus, the College of Arts & Sciences benefits from and contributes to the studies of architecture, art, business, engineering, law, medicine and social work.

Of central importance to the life of the college is the quality of teaching. Undergraduate students have the opportunity to learn from and work beside stimulating teacher-scholars who are leaders in their fields. Our nationally recognized faculty, which numbers more than 600, is made up of artists, biologists, chemists, economists, historians, philosophers and poets, all of whom bring the excitement and diversity of new ideas into the classroom.

Governance

The College of Arts & Sciences is bound by the charter of the university and ultimately responsible to the University Board of Trustees, which delegates to the chancellor the administration of the university. In turn, the chancellor delegates to the deans and faculty of the College of Arts & Sciences the responsibility for the college's internal governance.

Because the college is continually reassessing its objectives and policies, faculty and students alike may take the initiative in proposing changes in curriculum and policies. New programs or proposed modifications are reviewed by committees with members who represent the diverse points of view of the academic community.

By action of the faculty of Arts & Sciences in January 1969 (revised in May 1971), the ArtSci Council shares joint responsibility with the faculty for collegewide degree requirements, the grading system, and those policies that directly affect the lives of students. The ArtSci Council appoints representatives to various standing and ad hoc college committees.

The Curriculum

The College of Arts & Sciences fosters in its students the quintessential qualities of a liberal arts education: a heightened spirit of inquiry, an ability to organize and synthesize information, skills in written and oral expression, and a familiarity with the ways in which thoughtful people discover those commitments

and values that make life worthwhile. By incorporating the college's manifold intellectual resources — people, libraries, laboratories and studios — Arts & Sciences students "learn how to learn," developing both the flexibility and the habits of thought necessary to the ever-evolving worlds of work and global citizenship.

The college's academic program has two principal objectives. First, it provides students with an understanding of the range of human knowledge and attainment by developing an appreciation of the characteristic problems, achievements and limitations of the various fields of human endeavor. The curriculum works to ensure this understanding by requiring a minimum amount of study (9 units/three courses) in each of three broad areas of study — the Humanities; Natural Sciences & Mathematics; and Social & Behavioral Sciences — and three to four courses (9-12 units) in a fourth area, Language & Cultural Diversity. Collectively, these area requirements make up approximately one-third of the units needed to graduate.

Second, the college's academic program gives students the opportunity to study a subject or area in a sustained, intensive way. After a period of initial investigation (typically two to three semesters) during which students explore the richness inherent in the various fields of study, a student declares an area of concentration: the major. The college offers more than 30 traditional subject majors — such as chemistry, English and music — and more than 20 interdisciplinary majors — such as American culture studies; global studies; and women, gender, and sexuality studies. Students also may develop an individualized special major.

In all departments, students are encouraged to proceed as their strengths and interests lead them. Placement examinations are used in many departments to enroll undergraduates in courses at the levels their previous training warrants; in other departments, proficiency examinations are available (visit the Proficiency and Placement Examinations (p. 31) section of this *Bulletin* or the college's placement webpages (http://college.artsci.wustl.edu/policies/placement_credit/)).

The degree requirements and policies in the 2022-23 *Bulletin* apply to students entering Washington University during the 2022-23 academic year. To consult catalogs from prior years, refer to our Prior Bulletins (p. 12).

Academic Advising

To assist students with their undergraduate planning, the college provides a closely coordinated academic advising program. Matriculating students have a specially selected four-year academic advisor with whom they will meet regularly during the first year to help with the transition into the university and to help select courses for the fall and spring semesters. After the first year, students meet each semester with their four-year academic

advisors prior to registration to discuss interests, goals and academic course work. Students are encouraged to consult with their four-year academic advisors any time they need assistance throughout the school year.

Upon declaring a major, students are also assigned a major advisor in the department of their principal area of study. The extent of the advisor's assistance depends on a student's individual needs and wishes. Consultation with a major advisor, in addition to the four-year academic advisor, is required each time a student prepares to register for courses.

Students with problems or questions related to academic issues are invited to visit the College Office at any time. One of the deans is available every day on a walk-in basis to answer questions or to provide references to an appropriate source of help. Important among these sources are individual faculty members with particular specialties who may be able to answer the student's questions. In addition, the Writing Center, the Career Center, Habib Health and Wellness Center, and the Learning Center provide a wide range of services, including individual and group instruction, interest tests and advice, individual sessions with trained counselors about educational and personal challenges, and information about the improvement of learning skills.

Pre-Matriculation Credit

Students may earn pre-matriculation credit for college-level courses completed before enrollment at Washington University as a first-year student. Sources for pre-matriculation credit include Advanced Placement (AP) examinations, International Baccalaureate (IB), British Advanced (A) Levels, course credit earned by proficiency (e.g., back credit), and college credit earned after the sophomore year of high school that was not applied to high school graduation. Although all accepted pre-matriculation work is noted on the transcript so that the student may go directly into advanced courses, the maximum number of pre-matriculation units of credit awarded is 15. Pre-matriculation course work does not fulfill distribution requirements, but it may fulfill requirements for majors and minors. If a student enrolls in and completes a course equivalent to that for which pre-matriculation credit has been granted, the pre-matriculation units for the course in question will be removed from the student's record. For more information, please refer to the Pre-Matriculation Units (p. 34) section on the Admissions Procedures page of this *Bulletin*.

First-Year Academic Programs

First-year students may choose one of the following programs that provides a basic structure for their course selection. Each option provides an effective means of discovering personal and intellectual interests.

Ampersand Programs

Ampersand Programs (p. 272) are multisequence programs of linked seminars designed to bring students with similar intellectual interests into a close mentoring relationship with members of the faculty. Ampersand Programs provide a coherent, group-oriented learning experience, while still allowing time for other electives. Although Ampersand Programs are encouraged, they are not required.

Other First-Year Programs

Students who have already made a firm commitment to a particular discipline in the humanities, natural sciences and social sciences or who are uncertain about what they would like to pursue also have a rich array of academic choices to be made throughout their college careers. The course schedule can be either widely exploratory or oriented toward a particular objective, such as pre-health studies. Students who are still exploring their options are strongly encouraged to consider enrolling in a First-Year Seminar or another first-year opportunity when selecting courses in consultation with their four-year academic advisors. First-Year Seminars are single-semester, small-group courses that enable entering students to work closely with peers and faculty around an exciting topic of inquiry; First-Year Opportunities are single-semester, 1- or 2-unit courses designed to highlight interesting research while complementing other elective course work.

Major Fields of Study

A major consists of both introductory course work and a minimum of 18 advanced (300-level and above) units, all letter-graded and completed with at least a C-. Individual departments may specify additional units or stricter minimum-grade requirements. Students should refer to the department program pages in this *Bulletin* for program-specific requirements.

A student graduating with a Bachelor of Arts (AB) may receive no more than a total of two majors and a minor or one major and two minors.

Major declaration is initiated online through WebSTAC (<https://acadinfo.wustl.edu/WebSTAC.asp>). The relevant department or interdisciplinary committee will receive notification of the student's request to declare the major. The declaration of major will not be processed until the student completes any action required by the department as indicated in the WebSTAC application. When the declaration of major is complete, the new major will appear in the Current Programs section of the student's Major Programs page in WebSTAC, and an advisor for the new major will be assigned by the department.

Second Majors

Students may complete more than one major, including a second major in the College of Art in the Sam Fox School of Design and Visual Arts, in the Olin Business School, or in the McKelvey School of Engineering. A second major is not required to earn the degree.

If a student has two majors, only introductory (100- and 200-level) courses may be counted, when relevant, toward the requirements of both majors. All advanced (300- and 400-level) courses must be unique to each major; in other words, no advanced course may "double-count" for the course work needed to fulfill the minimal requirements for either major. Should both major programs require the same course, a departmentally sanctioned elective must be chosen to replace the course in one of the programs.

Students in business, engineering, architecture or art may choose to pursue a second major in the College of Arts & Sciences. These students will receive one degree, a BS or BFA, with two majors: one in the professional school and one in the College of Arts & Sciences.

Minor Fields of Study

Students who develop a significant interest in one or more fields of study beyond the major may choose to pursue a minor in those fields. A minor is not required to earn the degree. Minors may be fulfilled in an area closely related to the major or, to add more breadth to the student's educational program, in a very different area of study. A minor typically comprises 15 to 21 units of credit, all letter-graded and completed with a grade of C- or better. At least 9 of these units of credit must be at the 300 level or above, and at least half of the courses must be completed in residence at Washington University. Specific course requirements for a minor are determined by each department or program and are detailed in the department program pages in this *Bulletin*.

If a student has a major and a minor or has two minors, only introductory (100- and 200-level) courses may be counted, when relevant, toward the requirements of both programs. All advanced (300- and 400-level) courses must be unique to each program; in other words, no advanced course may "double-count" for the course work needed to fulfill either program's minimal requirements. Should a student's major and minor programs require the same course, a departmentally sanctioned elective must be chosen to replace the course in one of the programs.

In addition to pursuing the broad array of minor programs offered through the college, students may undertake minors in architectural studies or art and business as well as in computer science, electrical engineering and systems engineering in the McKelvey School of Engineering.

Minor declaration is initiated online through WebSTAC (<https://acadinfo.wustl.edu/WebSTAC.asp>). The relevant department or interdisciplinary committee will receive notification of the student's request to declare the minor. The declaration of minor will not be processed until the student completes any action required by the department as indicated in the WebSTAC application. When the declaration of minor is complete, the new minor will appear in the Current Programs section of the student's Major Programs page in WebSTAC.

The Special Major and Special Minor

On some occasions, a student's interests may fall in the intersection of two or more formally organized major programs, in which case a student may propose a special major that brings the related course work together. Students who propose a special major should be prepared to undertake honors-level work, as all special majors must complete a capstone project of 3 to 6 units during the senior year.

Students interested in creating a special major or minor must confer with the dean charged with coordinating this program. After consultation, students must submit to the coordinator a formal proposal that consists of the following: (1) a description of the program of study, including an explanation of the program's integrating idea; (2) a list of courses to be taken; (3) a letter of support from the proposed academic advisor; and (4) a letter of support from a faculty member in a second, related department who has approved the proposal.

A proposal for a special major or minor must be submitted no later than the fifth semester of undergraduate enrollment. The Committee on the Special Major and Minor is responsible for final action on these proposals.

Special Academic Options

Overseas Study Programs

The guiding principle of international study through the College of Arts & Sciences is to encourage students to acquire the broad cultural knowledge, languages and practical skills to enable them to participate fully in a global society.

For information about the 100-plus study abroad programs offered in more than 50 countries, visit the Overseas Programs website (<http://overseas.wustl.edu>) or the webpages of specific departments and programs.

Individual and Group Performance

Opportunities for individual and group performance include participation in various musical organizations sponsored by the Department of Music (e.g., symphony orchestra, wind ensemble, mixed choir) and in courses offered in physical education. To encourage students to pursue such physical, social and creative activities, the college allows up to 12 units of credit toward the

bachelor's degree for the successful completion of enrollment in individual and group performance. Exceptions to the minimums can be made for students majoring in departments that require a large number of performance courses, such as dance, drama and music.

Internships

Students participating in internships that contribute to their academic or professional development may earn credit for those internships. Registration in an internship for credit is conditional upon the satisfactory completion of the Internship Learning Agreement form provided by the College Office and the approval of this completed form by the College Office, the faculty sponsor and the internship sponsor.

Credit awarded for an internship corresponds to the time spent in work activities. The student is expected to work 45 hours of internship experience over a period of six to eight weeks for each unit of credit. Registration for 1 to 3 units of credit is possible.

Students may complete the work for an internship over the summer and receive credit during the subsequent semester. Any internship completed this way, however, must satisfy all requirements stated here. The learning agreement must be submitted and approved prior to the student beginning work at the internship site; therefore, credit cannot be awarded retroactively.

Internship courses are offered for credit/no credit grades only and therefore count toward the maximum of 24 credit/no credit units that may be applied toward graduation requirements. Internships do not count toward the advanced units requirement and may count toward the major only with departmental approval. Students may not receive more than 3 units of internship credit in any semester and may count no more than 6 units of internship credit toward the 120 units required for graduation. (These regulations, along with all others governing the AB degree, are detailed on the Arts & Sciences Academic Regulations page (p. 1103).)

Part-Time Study: Nontraditional Students

The university recognizes that, for certain students with high educational goals, full-time study may not be feasible or appropriate. Employment in demanding positions, extensive family responsibilities or other obligations may prevent an otherwise serious and competent student from completing the bachelor's degree at a rate of 15 units a semester. With their varied experiences outside the university, such students make valuable contributions to the classroom environment as they pursue programs of study suitable to their special circumstances. Please contact University College (<http://bulletin.wustl.edu/undergrad/ucollege/>) at 314-935-6700 for more information about part-time study.

Tuition Reduction

Students who have completed eight full-time semesters, excluding summer terms, in the College of Arts & Sciences and paid full tuition for eight semesters may seek reduced tuition for a ninth or subsequent semester, provided that they have fewer than 12 units to complete. Students must petition the Dean's Office (<http://college.artsci.wustl.edu/contact/>), College of Arts & Sciences, Cupples II Hall, Room 104. Students who successfully petition for tuition adjustment for the ninth or subsequent semester will pay only for the units of credit that they attempt (proportionate to the full-time standard for tuition). Students approved for reduced tuition under this policy will have their term bills adjusted after the semester's add/drop period has concluded.

Army ROTC and Air Force ROTC

Students have the opportunity to participate in either the Air Force ROTC Military Aerospace Science Studies (p. 1297) program or the Army ROTC Military Science (p. 1298) program. Scholarship information for both programs can be found in the Scholarship Funds (p. 45) section of this *Bulletin*. For information about counting ROTC course work toward the degree, refer to the Academic Regulations (p. 1103) page of this *Bulletin*.

Combined Undergraduate Degree Opportunities

Students may work toward the Bachelor of Arts (AB) degree in the College of Arts & Sciences while simultaneously earning another undergraduate degree in business, engineering, architecture or art. Students undertaking such a "dual degree" program must earn 150 units, 90 of which must be in the College of Arts & Sciences; they must also fulfill the requirements for a major in each of the two schools and complete the distribution requirements for both schools. Interested students should contact both a dean in the college and the designated dean in the appropriate professional school as early as possible during their undergraduate careers.

Majors Across Schools

Students may earn an AB degree with a first major in the College of Arts & Sciences and a second major in business or engineering by fulfilling all the distribution requirements for the AB degree and completing the requirements both for the first major in Arts & Sciences and for the second major in business or engineering. With careful planning, this can be accomplished within the 120 units required for the AB degree, although students should keep careful count to ensure that they complete at least 90 units of credit in the College of Arts & Sciences. For further information about second majors in business, visit the Olin Business School website (<http://olin.wustl.edu>); for further information about second majors in

engineering, visit the McKelvey School of Engineering website (<http://engineering.wustl.edu>); and for further information about second majors in art and design, visit the College of Art Bulletin page (p. 107).

The Accelerated AB/AM Program

Exceptional students who bring to the university a definite commitment to a field of study in the College of Arts & Sciences and a demonstrated capacity for intensive work may be able to complete a Master of Arts (AM) degree in a one-year accelerated program after completing the AB degree. This accelerated program, which begins each year in the fall semester, is open exclusively to students who graduated during the immediately preceding December, May or August. Applications may be submitted anytime during the senior year through August 1, and Graduate Record Examination (GRE) scores are not required. The application for admission must be made to the department, which forwards the application and recommendation for admission to the Office of Graduate Studies, Arts & Sciences. Application forms are available on the website of the Office of Graduate Studies, Arts & Sciences (<https://graduateschool.wustl.edu/accelerated-abam-program/>).

Some departments may not participate in this program, and some departments that do not otherwise offer a master's degree may provide this opportunity to Washington University undergraduates. Contact the relevant department for more specific information about its admission policies and requirements. Students admitted to the program will be regular, full-time graduate students enrolled in the College of Arts & Sciences at Washington University.

Most AM degrees in Arts & Sciences require 36 credits. The accelerated program allows Washington University undergraduates to complete a master's degree in one academic year by applying up to five 3-credit courses or four 4-credit courses (a maximum of 16 units), taken as an undergraduate at the 400 level or above, toward the master's degree requirements. For master's programs requiring fewer than 36 units, three courses at the 400 level or above (9-12 units) may be applied toward the AM degree. These undergraduate courses must be in an appropriate discipline, approved by the department, and completed with a grade of B or higher.

The AB and Master's Degrees in the Professional Schools

The College of Arts & Sciences — in conjunction with the Olin Business School, the McKelvey School of Engineering, the Brown School and the Program in Occupational Therapy at the School of Medicine — offers joint (3-2) degree programs. If accepted into a 3-2 degree program, a student may work toward the AB degree during the initial three years at Washington

University and toward the professional degree during the fourth and fifth years. A student electing to do a 3-2 program must complete a combined 150 academic units to earn both the AB degree and the professional degree.

Prior to entry into a 3-2 program, a student in the College of Arts & Sciences must complete the following:

1. At least 90 academic units of course work offered in the College of Arts & Sciences;
2. All distribution requirements;
3. All requirements for an Arts & Sciences major; and
4. At least 18 of the 30 required units in upper-level course work.

A transfer student who seeks the AB degree under this plan must also complete at least four semesters in full-time residence in the College of Arts & Sciences at Washington University.

Thirty units of graduate academic credit taken during the fourth year will complete the 120 academic units required for the AB degree. The professional degree is earned when 150 combined academic units and all degree requirements for the professional school are completed. A student must be recommended by the faculty of the professional school to the dean of the College of Arts & Sciences in order to receive the combined degree.

Students interested in a joint 3-2 degree program should do the following: (1) discuss degree options with a dean in the College of Arts & Sciences and with a dean in the professional school; (2) request the Eligibility Certification Form in the College of Arts & Sciences; and (3) submit the completed Eligibility Certification Form with the application for the 3-2 program to the professional school early in the spring semester of the junior year.

AB joint master's degree students are formally admitted into the graduate program of the professional school for a joint program for the fourth year. For students accepted into 3-2 joint programs, the undergraduate division will remain the primary school for the fourth year; the professional school program will not become primary until after the eighth semester of study as an undergraduate (or after early graduation with a bachelor's degree). In the fifth year, the professional program will become primary.

Students in 3-2 programs will pay the standard full-time undergraduate tuition rate for the fourth year, except for those enrolled in the MBA program, which charges a premium above the undergraduate tuition rate. Students will receive financial aid for the fourth year based upon their eligibility for undergraduate financial aid awards, including Pell Grants.

There is no commitment for undergraduate financial aid beyond the fourth year of study; students in 3-2 programs may apply to the professional programs (Social Work, MBA) for graduate student financial aid for study in the professional program beyond the fourth year.

This policy applies to all Arts & Sciences undergraduates who have completed less than the equivalent of eight semesters of academic work toward their bachelor's degree. If these students enroll in any Washington University graduate or post-baccalaureate degree program to begin course work toward a graduate degree during their fourth year before they have been awarded a Washington University bachelor's degree or completed the equivalent of eight semesters of undergraduate enrollment, they are covered by this policy.

This policy applies to current 3-2 programs involving Washington University bachelor's and master's programs and to any future 3-2 programs.

Olin Business School

A five-year program combining an undergraduate degree and a master's degree is available to a select number of students. (More information about the Olin Business School 3+2 Program is available on the Olin website.)

McKelvey School of Engineering

The combined AB/Master's Program is designed to enable students in the College of Arts & Sciences to pursue a coordinated five-year program of study leading to an AB degree in the College of Arts & Sciences and a master's degree in the McKelvey School of Engineering.

The Brown School Master of Social Work Program

The Social Work 3-2 program (<http://msw.wustl.edu/3-2/>) leads to an AB degree from the College of Arts & Sciences and an MSW degree from the Brown School. Interested students should apply to the Brown School during the first semester of their junior year. Students from all academic disciplines with an interest in social work are encouraged to apply. For more information, please visit the Brown School's 3-2 MSW Program website (<https://brownschool.wustl.edu/Academics/Master-of-Social-Work/Curriculum/Pages/3-2-MSW-Program.aspx>).

The Brown School Master of Public Health Program

The Public Health 3-2 program (<http://mph.wustl.edu/3-2/>) leads to an AB degree from the College of Arts & Sciences and an MPH degree from the Brown School. Interested students should apply to the Brown School during the first semester of their junior year. Students from all academic disciplines with an interest in public health are encouraged to apply. For more information, please visit the Brown School's 3-2 MPH Program website (<https://brownschool.wustl.edu/Academics/Master-of-Public-Health/Curriculum/Pages/3-2-MPH-Program.aspx>).

Undergraduate Pre-Professional Preparation

Students planning to pursue pre-professional studies should refer to the general recommendations given below. For more specific recommendations, visit the appropriate webpages.

Architecture

Please refer to the College of Architecture (p. 54) section in this *Bulletin*.

Business Administration

Students in the College of Arts & Sciences are welcome to consult with the associate dean for the undergraduate program in the Olin Business School concerning any aspect of preparation for careers in business. For more information, visit the Olin Business School website (<http://olin.wustl.edu>).

Law

The two most significant factors law schools use in determining whom to admit for legal study are the undergraduate GPA (taking into consideration the difficulty of courses attempted and the breadth of study) and the score on the Law School Admission Test (LSAT). Admission to law school requires a bachelor's degree.

There is no required set of courses for pre-law study at the undergraduate level. Many law school applicants have majors in economics, English, history, philosophy and political science, but law schools also seek students with undergraduate majors in science, business, engineering and other disciplines. Whatever areas pre-law students choose to emphasize in their undergraduate studies, they should take courses that require significant amounts of writing, that develop analytic thinking skills, that encourage the application of principles or theories to new situations, and that require the original writing and revision of written work in response to comment and critique. It is also important to learn to read and analyze complex written material and to develop sound research skills.

Economics, history, philosophy and political science courses can help students to develop an understanding of the traditions behind and the development of the U.S. legal system. Logic, statistics and accounting courses also provide valuable background for legal study and the practice of law.

The pre-law advisors in the College of Arts & Sciences are available to help students plan a course of study and prepare a strategy for applying for admission to law school. For more information, visit the pre-law website (<https://artsci.wustl.edu/resources/prelaw-advising/>).

Medicine

Pre-medical students in the College of Arts & Sciences of Washington University complete the bachelor's degree before admission to a medical school. In addition to fulfilling the requirements for the AB, pre-medical students must fulfill the entrance requirements of the medical schools to which they plan to apply. Specific requirements, which may vary, are summarized in the *Medical College Admission Requirements* handbook, published annually online by the Association of American Medical Colleges.

Pre-medical students must demonstrate high academic achievement, and they must possess the character, responsibility and level of commitment suitable for a career in medicine. Although requirements for specific medical schools are increasingly varied, most schools have traditionally required at least one year each of English, general biology, inorganic chemistry, organic chemistry and physics, with laboratory components traditionally required for all of the core science courses. In addition, students preparing to take the Medical College Admissions Test (MCAT) should take one semester each of biochemistry, psychology and sociology. Medical schools also encourage applicants to develop a broad intellectual background that includes the humanities, the social and behavioral sciences, and a demonstrated understanding of and appreciation for social and cultural diversity.

Students interested in the health professions may choose a major in any field — in the humanities, the social sciences or the natural sciences — as long as they complete the pre-medical requirements. Any student planning to apply to MD/PhD programs is strongly advised to major in one of the natural sciences and to begin gaining bench research experience no later than the beginning of their sophomore year. Research opportunities are available on the Danforth Campus and at the School of Medicine, and they are open to both science and nonscience majors. Health-related volunteer opportunities are also widely available.

Students who enter the university planning to apply to medical school should, with the aid of their advisors, structure their course of study to include the medical school requirements. There is no one right or best sequence of courses; there are numerous pathways to medical school. Because each student's pathway is different, students interested in a career in the health professions are encouraged to consult the pre-health deans in the college in addition to their academic advisors. Additional information can be found on the pre-health website (<https://prehealth.wustl.edu/>).

Other Health Professions

Students interested in pursuing other careers in the health professions — including dentistry, nursing, occupational therapy, physical therapy, optometry and veterinary medicine — are invited to visit with a specialist advisor from the pre-health advising team. Interested students will find additional information on the pre-health advising (<https://prehealth.wustl.edu/people/>) website.

Summer Session

The Summer Session in Arts & Sciences offers courses for current Washington University students and visiting students, including pre-college learners. Visit the Summer Session page (p. 1109) for more information.

Pre-College Programs

Arts & Sciences Pre-College Programs offer a variety of programs for middle and high school students. Visit the Pre-College Programs page (p. 1110) for more information.

African and African-American Studies

The Department of African and African-American Studies offers opportunities for students to explore the social, political and intellectual history as well as the literature, culture and artistic life of various peoples in the world who are African or of African descent.

The department examines a wide spectrum of experiences and issues and is both multidisciplinary and interdisciplinary in its approach. Courses are offered in the humanities, the social sciences and the performing arts. The department ensures that students are aware of the diversity of the continent of Africa and African peoples and that they understand the distinct perspective and influence of people of African descent on American, Caribbean, and global societies. In addition to

producing majors who graduate with methods for approaching and solving problems both in the context of Black studies and in the world at large, we are equally committed to building a vibrant extracurricular intellectual and social community by sponsoring programs, events and trips to give majors and minors a shared sense of purpose and identity. The major culminates in a Senior Seminar in which students explore a topic of their choice through a capstone project. We encourage students to select a capstone that expands on a topic that they have previously studied in another course or research project.

Students who major in African and African-American Studies are encouraged to design a course of study that focuses on either a particular area of interest or a more comprehensive examination of Black culture and life. Our summer programs in Kenya and Senegal as well as study abroad options in other African countries can further enrich the student experience.

Courses in the program are numbered to assist students with progressing from introductory courses (100 and 200 levels) to intermediate courses (300 level or higher) to advanced courses (400 level).

Departmental Prizes: The program sponsors several academic and service prizes that include monetary awards.

Majors

The Major in African and African-American Studies

Total units required: 31 units

Required courses: 7 units

Code	Title	Units
AFAS 1002	Foundations in African and African-American Studies	1
AFAS 255	Introduction to Africana Studies	3
AFAS 401	Senior Seminar	3
Total Units		7

Elective courses: 24 units at the 300 level or above, at least 6 units of which must be at the 400 level

These elective units must include at least one course from each of four focus areas around which the major is organized: Creativity, Aesthetics, and the Imagination; Social and Historical Configurations (Social and Structural Analysis); Black Gender and Sexuality Studies; and Global Africa and Diaspora Currents. In addition, students should take at least three courses in one of the focus areas.

Students will also take one semester of a foreign language. Wolof and Swahili are strongly encouraged, but other languages will be considered if taken in consultation with the director of undergraduate studies.

Additional Information

Co-Curricular Opportunities for Majors: The program regularly sponsors lectures and events such as plays, film festivals, exhibits, field trips, panels and speakers that focus on contemporary or perennial topics of interest in all areas of the Black experience. In many cases, guest lecturers and artists visit classes and interact directly with students. These program-sponsored events are designed to foster a vibrant social and intellectual community within the program and to give our students a sense of identity and of what it means to be part of the African and African-American Studies community. We encourage our majors to participate in these activities to complement their classroom experiences.

Senior Honors: If a student maintains an overall grade-point average of at least 3.65 and a major GPA of 3.50 by the second semester of their junior year, they may be eligible to complete a Latin honors thesis with a core faculty member in the program in African and African-American Studies. Completed application forms for Latin honors should be submitted to the honors program director as early as possible, preferably before May 1 of the junior year.

Minors

The Minor in African and African-American Studies

Total units required: 19

Required courses: 4 units

Code	Title	Units
AFAS 1002	Foundations in African and African-American Studies	1
AFAS 255	Introduction to Africana Studies	3
Total Units		4

Elective courses: 15 units at the 300 level or above, chosen in consultation with the advisor

Additional Information

Co-Curricular Opportunities for Minors: The program regularly sponsors lectures and events such as plays, film festivals, exhibits, field trips, panels and speakers that focus on contemporary or perennial topics of interest in all areas of the Black experience. In many cases, guest lecturers and artists visit classes and interact directly with students. These program-sponsored events are designed to foster a vibrant social and intellectual community within the program and to give our students a sense of identity and of what it means to be part of the African and African-American Studies community. We encourage our minors to participate in these activities to complement their classroom experiences.

Courses

Visit online course listings to view semester offerings for L90 AFAS (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L90&crslvl=1:4>).

L90 AFAS 1002 Foundations in African and African-American Studies

Designed to introduce the student to issues in African and African-American Studies and how students with AFAS degrees utilize their knowledge in graduate and professional programs or the working world. Particular attention is paid to the discipline of African and African-American studies, which engages with the artistic, cultural, historical, literary and theoretical expressions of the peoples and cultures of Africa and the African diaspora. Faculty members as well as St. Louis professionals give one-hour lectures on their particular disciplinary approach, their research or their professional lives. Students are required to attend three outside lectures or performances. May be taken before declaring major, and may be taken by non-majors. Credit 1 unit. A&S IQ: HUM Arch: HUM Art: CPSC, HUM EN: H

L90 AFAS 1020 First-Year Seminar: Black Lives Matter and Educational Justice for Black Youth

In the wake of the global uprising against racial injustice, this introductory course examines how schools in the United States can create opportunities for Black youth to thrive. We will examine the schooling experiences of Black children and youth amid pervasive anti-blackness, analyze the relevance of educational models for racial justice, and imagine radical ways that P-16 schools might dismantle white supremacy. This course is for first-year, non-transfer students only.

Same as L12 Educ 102C

Credit 3 units. A&S: FYS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L90 AFAS 103D Beginning Swahili I

A beginning language course emphasizing acquisition of reading, writing and conversational skills in Swahili language. Through video and other multimedia presentations, students also are introduced to the culture of Swahili-speaking communities living in more than a dozen African countries. Five hours a week including culture and language laboratory hours. This course is strongly recommended for students participating in the Summer in Kenya Program. CET (<https://gephardt.institute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.

L90 AFAS 1045 Wolof Language and Culture

This course introduces students to Wolof language and culture. Wolof is a West African language spoken in Senegal and the Gambia. It is also spoken on a smaller scale in Mauritania, Mali, French Guinea, and in the migrant communities in the United States and France. This is the first course of a beginning level of a Wolof program. In order to acquire a basic proficiency, students will practice speaking, reading, writing, and listening. Each module will begin with a thematic and practical dialogue from which we can study vocabulary, aspects of grammar, and a cultural lesson. Interactive material including texts, images, videos, films, and audio will be provided. The aim of this course is to provide students with knowledge of the basic structures of the language and the ability to communicate. Students will also learn important aspects of the life and culture of the Wolof. For AFAS majors, this course counts as Area Requirement 4.

Credit 3 units. A&S IQ: LCD BU: HUM EN: H UColl: LA

L90 AFAS 104D Beginning Swahili II

Second-semester Swahili language course emphasizing conversational competence and knowledge of Swahili-speaking cultures of East Africa. In addition to learning grammar and vocabulary sufficient to allow a student to perform basic survival tasks (asking for directions, buying a ticket for travel, checking into a hostel, ordering food) in Swahili, students also are introduced to authentic Swahili texts including plays, short stories and newspapers. Students have an opportunity to practice their acquired language skills by interacting with Swahili-speakers in the St. Louis region. Prerequisite: AFAS 103D. CET (<https://gephardtinstitute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.

Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

L90 AFAS 111 First-Year Seminar: Race and Ethnicity on American Television

This course presents a historical overview of the forms that racial and ethnic representations have taken in American television. The course charts changes in public perception of racial and ethnic difference in the context of sweeping cultural and social transformations. The course examines notions of medium and ponders the implications for these identities of the contemporary practice of "narrowcasting." Required screening.

Same as L53 Film 110

L90 AFAS 144 First-Year Seminar: Monumental Anti-Racism

As sources of national memory and identity, public monuments, place names, historical markers, and other elements of commemorative landscapes are potential sites of cultural violence (e.g., alienation, disrespect, and erasure) contributing to broader conflict and inequality; they are therefore important considerations in movements for equal opportunity and justice. Some contend that memory sites are "the new lunch counters," where our racial politics are worked out. This course examines the racial politics of commemorative objects and practices as well as commemorative intervention as a strategy of anti-racist activism. We begin with an historical survey of various ways that racism has been inscribed on the commemorative landscape, and readings in history, political theory, cultural studies, and other fields will be used to gain insight into these contested commemorative objects, their development, and social

significance. We then turn to a critical assessment of efforts to remove and recontextualize commemorative objects and to erect new objects commemorating neglected figures and issues. We consider how these reparative efforts relate to what political theorists call "remedies of recognition" and specifically how they might aid in advancing equal opportunity and justice. Through our study and engagement with contested commemorative landscapes (including local, national, and global cases), students will become familiar with the burgeoning interdisciplinary field of memory studies, diverse forms and sites of commemoration, local and global efforts to advance what has been termed "commemorative justice," and the challenges being faced.

L90 AFAS 178 First-Year Seminar: Imagining and Creating Africa: Youth, Culture, and Change

The goal of this course is to provide a glimpse into how youth reshape African society. Whether in North Africa with the Arab Spring, in West Africa with university strikes, or in East Africa through a linguistic full bloom, youth have been shaping social responses to societies for a long period. In this course, we will study social structures, including churches, NGOs, and developmental agencies, and we will learn about examples of Muslim youth movements and the global civil society. The course will also explore how youth impact cultural movements in Africa and how they influence the world. In particular, we will examine hip-hop movements, sports, and global youth culture developments that center on fashion, dress, dance, and new technologies. By the end of the course, students will have enriched ideas about youth in Africa and ways to provide more realistic comparisons to their counterparts in the United States. Course is for first-year, non-transfer students only.

Credit 3 units. A&S: FYS A&S IQ: LCD BU: IS EN: H

L90 AFAS 192 First-Year Seminar: Africans Experiences in the Second World War

Most conventional histories of the Second World War pay scant attention to Africa, thereby creating the misconception that the war had little impact on the peoples of the African continent. This introductory seminar restores the experiences of ordinary African women and men to the larger historical narratives of both Africa and World War II. Combining personal memoirs with official primary sources reveals not only how the global conflict influenced African history but also how Africans helped shape the final outcome and consequences of the war. This course is for first-year, non-transfer students only.

L90 AFAS 195 First-Year Seminar: Travel Noire:**Consumption and the Gaze in the Black Travel Movement**

This course explores the growing industry of leisure tourism that caters to Black people. It takes as its premise that tourism is more than just voluntary, recreational travel; it is an encounter shot through with desire, intimacy, and ideology. We approach the tourism encounter from both sides -- the consumer and the consumed -- as we explore various types of tourism from domestic and international tourism to sex tourism and heritage tourism. If tourism is a desire machine, what desires of self and other are reflected in the discourse about travel noire? Who is being consumed and what is being made consumable in

this growing market space? Students will be required to create a travel itinerary based in Missouri during the course and to propose a narrative revision to a local tourism destination. This course is for first-year, non-transfer students only.
Credit 3 units. A&S: FYS A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L90 AFAS 203D Intermediate Swahili III

Enhanced acquisition of language fundamentals acquired in first-year Swahili through performance, reading and writing. Students gain skills performing role-plays such as asking for directions, booking a bus ticket, ordering food in a restaurant, etc. Students read more authentic Swahili texts including plays, short stories, newspapers and poems. Prerequisite: AFAS 103D(Q) –104D(Q) or the equivalent. CET (<https://gephardtinsttute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.
Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L90 AFAS 204D Intermediate Swahili IV

Fourth-semester Swahili language course emphasizes the development of the ability to discuss a wide range of cultural and literary topics with native speakers of the language. These topics are introduced by reading authentic Swahili texts such as plays, novels, poems and newspapers. Students enhance their writing skills and creativity in the language through group-writing projects. Prerequisite: AFAS 103D(Q), 104D(Q) and 203 D(Q). CET (<https://gephardtinsttute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.
Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L90 AFAS 208B African-American Studies: An Introduction

Lectures, readings, films and discussions reflect a range of academic approaches to the study of African-American people. Course materials drawn from literature, history, archeology, sociology and the arts to illustrate the development of an African-American cultural tradition that is rooted in Africa, but created in the Americas. Required for the major.
Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: HUM EN: H

L90 AFAS 209B African Studies: An Introduction

This course introduces students to a variety of approaches to the study of Africa by considering the ways that scholars have understood the African experience. It exposes students to the history, politics, literary and artistic creativity of the continent. Emphasis is placed on the diversity of African societies, both historically and in the present, and explore Africa's place in the wider world. Required for the major.
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

L90 AFAS 242 Afro-Modern Dance (Dunham Technique)

This course introduces students to Katherine Dunham's dance technique, which combines ballet, modern, and Afro-Caribbean dance. Dunham Technique is one of the most important foundations for jazz dance and also shares characteristics with West African Dance and several modern dance techniques. Some lectures and occasional short readings will supplement this studio-based course so that students can learn more about Katherine Dunham (1909-2006), one of the great pioneers of dance in America. The class is open to all levels, although at least one semester of previous dance experience is required. Repeatable one time for credit in subsequent semester.

Same as L29 Dance 240
Credit 2 units.

L90 AFAS 251 Juvenile Justice in the Black Experience

This course examines the sociolegal past, present, and future of American juvenile justice, with a focus on the Black American experience. The course is organized in three parts. Part I surveys the late 19th- and early 20th-century development of the "parental state," including its institutional centerpiece (the juvenile court), its principle legal subjects ("dependents" and "delinquents"), and how these took shape alongside the contemporaneous rise of American Apartheid. Part II examines several key changes and challenges in contemporary juvenile justice, including the transformation of this institution in the wake of the Civil Rights Movement and the endurance of racialized juvenile social control in the post-Civil Rights period. Finally, Part III considers possible futures of youth justice in the United States and beyond as well as practical strategies for achieving equal protection within and beyond the law. For AFAS majors, this course counts as Area Requirement 2.
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L90 AFAS 255 Introduction to Africana Studies

The course provides an overview of the field Africana Studies and provides analysis of the lives and thoughts of people of African ancestry on the African continent and throughout the world. In this course we will also examine the contributions of Africana Studies to other disciplines. The course takes an interdisciplinary approach drawing from history, philosophy, sociology, political studies, literature, and performance studies and will draw examples from Africa, the United States, the Caribbean, Europe and South America. When possible, we will explore diaspora relationships and explore how the African presence has transformed societies throughout the world. This class will focus on both classic texts and modern works that provide an introduction to the dynamics of African-American and African diaspora thought and practice.
Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch: HUM Art: HUM BU: IS EN: H

L90 AFAS 2674 Sophomore Seminar: Slavery and Memory in American Popular Culture

Sophomores receive priority registration. The history of slavery has long created a sense of unease within the consciousness of many Americans. Recognizing this continued reality, this seminar examines how slavery is both remembered and silenced within contemporary popular culture. Although slavery scholarship continues to expand, how do everyday Americans gain access to the history of bondage? Taking an interdisciplinary approach to these intriguing queries, we will examine a range of sources: literature, public history, art/poetry, visual culture, movies and documentaries, as well as contemporary music including reggae and hip-hop. The centerpiece of this course covers North American society, however, in order to offer a critical point of contrast, students will be challenged to explore the varied ways slavery is commemorated in others parts of the African diaspora. Same as L22 History 2674
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: BA, HUM EN: H

L90 AFAS 288 Free the Land: Black Histories of Environmental Racism

Black history is inextricable from the study and discussion of environmental racism and environmental justice in the United States. Environmental racism is defined by Dr. Robert Bullard ("the Father of Environmental Justice") as "any policy, practice or directive that differentially affects or disadvantages (where intended or unintended) individuals, groups or communities based on race." This course expands and illuminates this definition through examinations of watershed moments -- from the Transatlantic Slave Trade to struggles in the Greater St. Louis area today -- in which Black communities bear the deadly brunt of toxic fumes, poisoned groundwater, nuclear waste, perilous disaster work, land theft, and the slow violence of biological extermination. Throughout the semester, we will read scholarly texts, engage primary sources, analyze popular and independent media, and study testimony and self-published materials from Black activists.

Credit 3 units. A&S IQ: SSC, SC BU: BA EN: S

L90 AFAS 3002 Feminist Fire!: Radical Black Women in the 20th Century

Black women have been at the forefront of the Black radical tradition since its inception. Often marginalized in both the scholarship and the popular memory, there exists a long unbroken chain of women who have organized around the principles of anti-sexism, anti-racism, and anti-capitalism. Frequently critical of heterosexist projects as well, these women have been the primary force driving the segment of the Black radical tradition that is commonly referred to as Black Feminism. Remaining cognizant of the fact that Black Feminist thought has also flourished as an academic enterprise -- complete with its own theoretical interventions (e.g., standpoint theory, intersectionality, dissemblance) and competing scholarly agendas -- this course will think through the project of Black Feminism as a social movement driven by activism and vigorous political action for social change. Focusing on grassroots efforts at organizing, movement building, consciousness raising, policy reform, and political mobilization, this course will center Black Feminists who explicitly embraced a critical posture toward capitalism as an untenable social order. We will prioritize the lives and thoughts of 20th-century women like Claudia Jones, Queen Mother Audley Moore, Frances Beal, Barbara Smith, Audre Lorde, and Angela Davis as well as organizations like the Combahee River Collective, the Chicago's Black Women's Committee, and the Third World Women's Alliance. At its core, this course aims to bring the social movement history back into the discourse surrounding Black Feminism.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L90 AFAS 3003 From Shaft to Django: The History of Blaxploitation Film

Hollywood was in steep decline in the late 1960's. On the brink of collapse, the film industry was rescued by an unprecedented boom in films that featured Black casts and targeted Black audiences. Narratives of slick-talking hustlers and afro-sporting femme fatales intent on "sticking it to the man," these would come to be known as Blaxploitation films. This class will historically contextualize and critically examine the Blaxploitation phenomenon of the 1970's. We will explore what led to the emergence of Blaxploitation, the peaks of its popularity, the controversies that surrounded it, its rapid demise, and its lasting influence. Blaxploitation was a brief, bombastic and highly

polarizing era in the history of American film. Heralded by some as a revolution in representations of Black empowerment and by others as pandering to longstanding racial stereotypes. Indeed, its influence on Black culture stretches beyond the 1970's and into cultural realms beyond the silver screen. While this is primarily a film course emphasizing close readings of canonical Blaxploitation cinema, we also will explore: Blaxploitation soundtracks (i.e., Curtis Mayfield and Isaac Hayes), Black Pulp Fiction novels that inspired the films (i.e., Ernest Tidyman and Sam Greenlee), the aesthetics of Blaxploitation promotion via the Black Film Promotional Material Collection located in the Julian Edison Department of Special Collections, and finally we will consider how Blaxploitation aestheticism influenced subsequent cultural movements like the 1990's renaissance in Black film, Hip-Hop and contemporary satire.

L90 AFAS 3031 Music of the African Diaspora

This course explores musical cross-fertilization between the African continent and South America, the Caribbean, and Europe. Beginning with traditional musics from selected regions of the African continent, the course examines the cultural and musical implications of transnational musical flows on peoples of the African diaspora and their multicultural audiences.

Same as L27 Music 3021

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

L90 AFAS 305C Topics on Africa: African Urban Futures

Nearly 50 percent of Africa's population now lives in urban areas. By 2050 this number is expected to triple to 1.23 billion or what will then be 60 percent of the continent's total population. This urban growth is happening alongside rapid economic expansion, technological innovations, and in some cities-political insurrection. Many of these developments are taking place in peripheral urban areas that lack formal planning, basic

infrastructure, and security. Yet, as many theorists point out, the very lack of cohesive planning and stable infrastructure in urban Africa has produced flexible spaces where novel forms of dwelling, work, and leisure are possible. Many residents, often by necessity, rearrange their built environments to make the city function beyond the limits of its original design. In the process, urban dwellers produce new built spaces, aesthetics, and economic practices, calling into question assumptions about what a city is and how it works. What are the implications of Africa's urban revolution for both the people who inhabit these cities and the world at large? How will Africa's urban future shape what some theorists are calling "the African century?" What can contemporary cities across the continent tell us about the future of urban life everywhere? In this seminar, we will explore these questions by surveying a variety of case studies and topics from across the African continent. The purpose in focusing on Africa in general is not to homogenize an incredibly diverse continent, but to make connections across a variety of different contexts in order to explore conceptual debates and assemble a theoretical tool-kit that is useful for grappling with themes that are simultaneously abstract and concrete. For AFAS majors, this course counts as Area Requirement 4. Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S

L90 AFAS 3071 Caribbean Literature in English

Rum! Fun! Beaches! Sun! This is the image of the Caribbean in America today. This course surveys literature and culture from these islands, looking both at and beyond this tourists' paradise. It aims to introduce students to the region's unmistakably vibrant tradition of multicultural mixture, while keeping an eye on the long history of slavery and rebellion out of which the islands' contemporary situation formed. Along the way we encounter a wide variety of texts, from the earliest writing focused on life in urban slums, to the first novel ever to have a Rastafarian as its hero, to more contemporary considerations of the region's uncertain place in a U.S.-dominated world. Toward the end of the course, we also look at important films like *The Harder They Come* as well as discussing the most globally famous cultural product of the contemporary Caribbean: reggae music. The course involves readings from multiple genres and covers authors such as C.L.R. James, Derek Walcott, Jean Rhys, V.S. Naipaul, Jamaica Kincaid, and Caryl Phillips. Same as L14 E Lit 3071
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

L90 AFAS 311 Modern Dance and the African-American Legacy

This course examines the works of several African-American choreographers and their contributions to the field of modern dance in America. These works are considered modern dance classics, and some depict important historical events. Through the medium of dance aided by discussions, videos, and class reading assignments, the choreographers' works are analyzed for form, content, and social relevance. Studio work includes techniques to support learning the repertory. Prerequisite: One to two years of training in modern, jazz, or ballet. Same as L29 Dance 311
Credit 2 units. A&S IQ: HUM, SC, SD Arch: HUM Art: CPSC, HUM EN: H

L90 AFAS 3113 Culture, Politics, and Society in Francophone Africa

France and Africa have a long historical relationship, dating back to the early Euro-Mediterranean empires, the first explorers, long-distance traders, Christian missionaries, colonialists, and today's French West and North African communities. In this course, we delve into this long process of interaction between France and its colonies of Africa. During the first half of the semester, we explore these historical relationships and examine the scientific constructs of race in the 19th and early 20th century. We touch on themes that defined the colonial encounter, including the development of the Four Communes in Senegal, the Negritude movement, and French Islamic policies in Africa. The curriculum for this course includes articles, films, and monographs, to explore these themes and includes writers and social activists living in France and the African diaspora. The second half of the course examines Francophone Africa after independence. Here the course explores the political and cultural (inter) dependence between France and its Francophone African partners. In addition, we examine the challenges of many African states to respond to their citizen's needs, as well as France's changing immigration policies in the 1980s, followed by the devaluation of the West and Central African Franc (CFA). Credit 3 units. A&S IQ: LCD, SSC, SC, SD Arch: SSC Art: SSC BU: IS EN: S

L90 AFAS 3120 African Immigration to the United States of America

The United States of America has historically been known as a "nation of immigrants." However, current rhetoric has brought this notion into question. This country has consistently been a magnet for millions of people from all over the world, and this course seeks broadly to understand recent African immigration. In Black studies, most attention has been paid to the forced migration of the enslaved during the Atlantic Slave trade. Studying 20th and 21st African immigration is key to truly understanding the Black experience in America. According to data from the U.S. Census Bureau, 2.1 million Africans live in America as of 2015. The majority of these migrants are from Sub-Saharan Anglophone Africa (Nigeria, Ghana, Kenya, South Africa), but they are also from war-torn countries such as Ethiopia, Eritrea, and Somalia. The primary focus of this course will be on contemporary African labor immigrants, including skilled professionals, children who arrived in the United States for family reunification, refugees, and winners of the Diversity Visa lottery who are now permanent residents. The migratory flux also includes people who were forced to leave their birth countries for political reasons as well as genocide. Through the class, we will examine the "push and pull" factors of immigration. The second part of the course explores the lived experience of Africans in America, whether they are well educated as compared with other migrant communities or whether they are laborers. We will study the role of remittances, language barriers, paths to naturalization, and job opportunities once Africans reach American soil. Increasingly, repatriation (both voluntarily and forced), xenophobia and Islamophobia are challenges that rock African immigrant communities. Today, many Africans live between two countries: Africa and America. This transnationalism allows them to navigate different lives, stories, identities, and cultures. Several activities are organized in the African local community. There is a large group of Ghanaians, Kenyans, Egyptians, Senegalese, Nigerians,

Ethiopians, and Somalians in St. Louis. We will invite these individuals to the class as guest speakers so that students can fully understand their multiple lives in the St. Louis metropolitan area.

L90 AFAS 3600 Beyond Sea, Sunshine and Soca: A History of the Caribbean

This course examines major themes in the history of the Caribbean from the 15th to the 20th century. The first half of the course will focus on the 15th to the 19th century, exploring issues such as indigenous societies, European encounter and conquest, plantation slavery, the resistance of enslaved Africans and emancipation. The remainder of the course focuses on aspects of the cultural, economic, political and social experiences of Caribbean peoples during the 20th century.

Major areas of inquiry include the labor rebellions of the 1930s,

decolonization, diasporic alliances, Black Power, identity construction and the politics of tourism. While the English-speaking Caribbean constitutes the main focus, references will be made to other areas such as Cuba and Haiti.

HUM, IS EN: H

L90 AFAS 363 Mapping the World of "Black Criminality"

Ideas concerning the evolution of violence, crime, and criminal behavior have been framed around many different groups. Yet, what does a typical criminal look like? How does race — more specifically blackness — alter these conversations, inscribing greater fears about criminal behaviors? This course taps into this reality examining the varied ways people of African descent have been and continue to be particularly imagined as a distinctly criminal population. Taking a dual approach, students will consider the historical roots of the policing of black bodies alongside the social history of black crime while also foregrounding where and how black females fit into these critical conversations of crime and vice. Employing a panoramic approach, students will examine historical narratives, movies and documentaries, literature, popular culture through poetry and contemporary music, as well as the prison industrial complex system. The prerequisite for the course is L90 3880 (Terror and Violence in the Black Atlantic) and/or permission from the instructor, which will be determined based on a student's past experience in courses that explore factors of race and identity. For AFAS majors, this course counts as Area Requirement 2.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L90 AFAS 3644 "Look Here, Karen": The Politics of Black Digital Resistance to White Femininity

In this course, we will explore the ways in which Black online publics use resistance strategies, such as mimetic imagery and racial humor, to call attention to white femininity and its deployment of the police against African Americans. We will trace the relationship between the police state and white femininity through the historical lens of 'innocence' and protection of the U.S. nation as well as the similarities and differences of Black online publics' responses in relation to past resistance strategies. What does it mean to be a 'typical' Karen in Internet culture? What are the aesthetic boundaries of Karens? And, what do digital platforms afford to Black users who make Karens visible? While paying attention to race, gender and class, this course offers students the skills to be able to collect and analyze online data, such as 'Karen' memes, in order to make critical arguments and observations that are grounded in historical accuracy.

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA

L90 AFAS 3651 Black Women Writers

When someone says "Black woman writer," you may well think of Nobel Prize winner Toni Morrison. But not long ago, to be a Black woman writer meant to be considered an aberration. When Thomas Jefferson wrote that Phillis Wheatley's poems were "beneath the dignity of criticism," he could hardly have imagined entire Modern Language Association sessions built around her verse, but such is now the case. In this class we survey the range of Anglophone African-American women authors. Writers

likely to be covered include Phillis Wheatley, Harriet Wilson, Nella Larsen, Lorraine Hansberry, Octavia Butler and Rita Dove, among others. Be prepared to read, explore, discuss and debate the specific impact of race and gender on American literature.

L90 AFAS 3662 Experts, Administrators and Soldiers:

Governance and Development in Post-Colonial Africa

Between 1957 and 1975, one African territory after another made the transition from European colony to independent nation-state. Widespread optimism that these "transfers of power" would bring a new era of prosperity and dignity dissipated quickly as the new nations struggled with political instability, military coups, social unrest, and persistent poverty. Consequently many western observers and development specialists are certain that they have become "failed states" requiring foreign assistance to develop properly. This course challenges these assumptions by tracing the origins of African governance and economic development from their imperial origins into the independence era. By exploring nation building, economic planning, and public administration from the perspective of political elites, foreign experts, and ordinary people, the class takes an intimate look at how colonies became nation-states. These new perspectives offer students a historical grounding in international public administration and development by exploring how imperial ideas and concepts continue to influence contemporary social planning and development policy in both Africa and the wider world.

L90 AFAS 3672 Medicine, Healing and Experimentation in the Contours of Black History

Conversations regarding the history of medicine continue to undergo considerable transformation within academia and the general public. The infamous Tuskegee syphilis experiment serves as a marker in the historical consciousness regarding African Americans and the medical profession. This course taps into this particular evolution, prompting students to broaden their gaze to explore the often delicate relationship of people of African descent within the realm of medicine and healing. Tracing the social nature of these medical interactions from the period of enslavement through the 20th century, we examine the changing patterns of disease and illness, social responses to physical and psychological ailments, and the experimental and exploitative use of black bodies in the field of medicine. As a history course, the focus extends toward the underpinnings of race and gender in the medical treatment allocated across time and space — the U.S., Caribbean and Latin America — to give further insight into the roots of contemporary practice of medicine.

L90 AFAS 368 Emerging Africa: Language, Identity, and Social Change

Beginning with a review of key issues that shape Africa's linguistic history, the course explores linguistic situations in several African countries, including examining the role language plays in constructing identities, maintaining social cohesion, and

empowering marginalized communities. An integral part of the course will be a critical look at the growth and influence of urban slang and pidgins in Kenya, South Africa, Senegal, Zambia, DR Congo, and Cameroon.

L90 AFAS 3838 African-American Poetry from 1950 to the Present

Beginning with the year in which Gwendolyn Brooks became the first African American to win the Pulitzer Prize, we examine the tradition of African-American poetry and the ways in which that tradition is constantly revising itself and being revised from the outside. We focus in particular on the pressures of expectation — in terms of such identity markers as race, gender and sexuality — and how those pressures uniquely and increasingly affect African-American poetry today.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

L90 AFAS 386A Topics in African-American Literature: Rebels, Sheres, and Race Men

In this seminar — for we are fortunate to be an elite group this term — we will focus on the first century of African American prose writers. In genre terms that means we will largely, but not exclusively, read autobiographies and novels. Phillis Wheatley, Frederick Douglass, and Harriet Jacobs are now familiar names in U.S. literature surveys, but others are not yet household names, and in fact may never be. We will survey a core group of texts, available at the Washington University bookstore, but also supplement our readings with materials placed on BlackBoard, via online databases (e.g., materials accessible digitally from the Schomburg Division of the New York Public Library). For AFAS majors, this course counts as Area Requirement 1.

L90 AFAS 388C African-American Literature: African-American Writers Since the Harlem Renaissance

African American literature in the 20th and 21st centuries grew from a renaissance in Harlem into a world-shaping institution. Public enemies and Nobel prize winners; card-carrying Communists, rock-ribbed Republicans, and Black Power nationalists; Broadway playwrights, Book-of-the-Month Club novelists, and a duly elected U.S. president are among the authors we will study with special attention to the intimate link between black writing and black music. Aiming at chronological and stylistic breadth, the syllabus will begin with poet Alice Dunbar Nelson (born 1875) and end with novelist Colson Whitehead (born 1969), with an array of better-known names — W. E. B. Du Bois, Langston Hughes, Claude McKay, Nella Larsen, Zora Neale Hurston, Richard Wright, Ann Petry, Ralph Ellison, James Baldwin, Gwendolyn Brooks, Amiri Baraka, Alice Walker, and Toni Morrison — coming in between. Assignments will consist of two papers, one presentation, and one exam. Prerequisites: none, but related classes such as E Lit 2151 and E Lit 2152 and/or AFAS 255 are suggested. Satisfies the Twentieth Century requirement in English, and/or one 300-level elective requirement in AFAS.

L90 AFAS 39SM WOMEN AND CRIME IN THE EVOLUTION OF AMERICAN HISTORY

Crime happens. Property is damaged and stolen, lives are lost, and law, order, and justice evolves. This course taps into that ongoing reality by centering the herstorical evolution of female crime, highlighting women and girls of many kinds across time and spaces of America. It moves across centuries (through to the contemporary period) probing within and far beyond icons to unveil the gendered nature of crime and moreover to empower students to see and trace everyday female criminality that ignited across racial, ethnic, as well as lines of age in the winding path of American history. While men and boys dominate public and even scholarly expectations of crime and carceral conversations for many, students will leave this course with a far more rigorous understanding of the herstories gained by taking serious the types of crimes that women and girls acted out by exploring: robbery, assault, infanticide, larceny, murder, arson, prostitution, serial killers, and drug-related crimes. As well as going further to probe state and federal power through carceral medicine - showing the interior world of female prisoners, physicians, the movement of females into "asylums" and mental state hospitals, incarceration based on "insanity" while going further to examine births, illnesses, and death of women and teens in jails and prisons. Students will be likewise pushed to engage America's timeline of race, gender, and executions that includes women and girls. Racialized and gendered criminality, law enforcement violence, healthcare and deathcare in prisons are critical public health issues that students can better understand the complicated evolutions by deeply probing the herstorical lives of women, girls, and crime through this course. Students will read, learn, dig up the past, and write to ensure a future of herstory and remembrance.

L90 AFAS 4041 Beginning Graduate-Level Swahili

A beginning language course for graduate students emphasizing acquisition of reading, writing and conversational skills in Swahili language. Through video and other multimedia presentations, students also are introduced to the culture of Swahili-speaking communities living in more than a dozen African countries.

Credit 3 units. A&S IQ: LCD, LS EN: H

L90 AFAS 4042 Beginning Graduate-Level Swahili II

Second-semester graduate-level Swahili language course emphasizing conversational competence and knowledge of Swahili-speaking cultures of East Africa. Introduction to elementary-level Kenyan and Tanzanian Swahili texts, grade school readers, newspapers and government educational material. Prerequisite: AFAS 4041.

Credit 3 units. A&S IQ: LCD, LS EN: H

L90 AFAS 4043 Intermediate Graduate-Level Swahili III

Enhanced acquisition of language fundamentals acquired in first-year graduate-level Swahili through performance, reading and writing. Students gain skills performing role-plays such as asking for directions, booking a bus ticket, ordering food in a restaurant, etc. Students read more authentic Swahili texts including plays, short stories, newspapers and poems. Prerequisite: AFAS 4041, 4042 or permission of instructor.

Credit 3 units. A&S IQ: LCD, LS EN: H

L90 AFAS 409 Gender, Sexuality and Change in Africa

This course considers histories and social constructions of gender and sexuality in sub-Saharan Africa during the colonial and contemporary periods. We examine gender and sexuality both as sets of identities and practices and as part of wider questions of work, domesticity, social control, resistance and meaning. Course materials include ethnographic and historical materials and African novels and films. Prerequisite: graduate students or undergraduates with previous AFAS or upper-level anthropology course.

Credit 3 units. A&S IQ: SSC, SC, SD, WI Arch: SSC Art: SSC EN: S

L90 AFAS 4134 The AIDS Epidemic: Inequalities, Ethnography, and Ethics

In the year 2000, HIV became the world's leading infectious cause of adult death. In the next 10 years, AIDS killed more people than all wars of the 20th century combined. As the global epidemic rages on, our greatest enemy in combating HIV/AIDS is not knowledge or resources but rather global inequalities and the conceptual frameworks with which we understand health, human interaction, and sexuality. This course emphasizes the ethnographic approach for the cultural analysis of responses

to HIV/AIDS. Students will explore the relationships among local communities, wider historical and economic processes, and theoretical approaches to disease, the body, ethnicity/race, gender, sexuality, risk, addiction, power, and culture. Other topics covered include the cultural construction of AIDS and risk, government responses to HIV/AIDS, origin and transmission debates, ethics and responsibilities, drug testing and marketing, the making of the AIDS industry and "risk" categories, prevention and education strategies, interactions between biomedicine and alternative healing systems, and medical advances and hopes. L90 AFAS 417 Topics in African History: Power and Rebellion in 20th-Century Africa

What is violence? Are some forms of violence more acceptable than others? How have Africans from different constituencies thought about the role of violence in colonial and postcolonial societies? How has violence been used to establish power or to dismantle it? This course examines the politics of violence in 20th-century Africa. Pulling examples from across the African continent, it will engage the preceding questions through topics such as colonial state violence, the Italian invasion of Ethiopia, African soldiers in colonial East Africa, the Mau Mau of Kenya, the assassination of Patrice Lumumba, armed struggle in Southern Africa, and the Tanzania-Uganda war. Students must have taken Introduction to Africana Studies and/or a course on Africa. For AFAS majors, this course counts as Area Requirement 4.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: BA EN: H

L90 AFAS 421A From Mammy to the Welfare Queen: African-American Women Theorize Identity

How do representations of identity affect how we see ourselves and the world sees us? African-American women have been particularly concerned with this question, as the stories and pictures circulated about black female identity have had a profound impact on their understandings of themselves and political discourse. In this course we look at how black feminist theorists from a variety of intellectual traditions have explored the impact of theories of identity on our world. We look at their discussions of slavery, colonialism, sexuality, motherhood, citizenship, and what it means to be human.

L90 AFAS 424A Topics in American Literature: Slavery and its Legacies

This course offers an advanced introduction to both the literature and the concept of modernism, the "ism" used to mark the experimental verve of early twentieth-century writing and to grasp its ties to modernity, or the modern social world. As the course title suggests, we will devote most of our time to the career of modernism in the United States, a place imagined as both the modernist nation par excellence and the desert modernism escaped to be born. Three groups of primary texts--

early modernist experiments, 1920s modernist landmarks, and Great Depression revisions--will illuminate the grand ambitions of eccentric literary forms and sequestered avant-garde movements; the public disputes and buried alliances between "high" expatriate and Harlem Renaissance modernisms; and the influential Depression-era reinterpretation of modernism as reactionary self-indulgence. The syllabus will feature fiction, poetry, and drama by old and new literary celebrities: Djuna Barnes, John Dos Passos, T. S. Eliot, F. Scott Fitzgerald, Mike Gold, Ernest Hemingway, Nella Larsen, Meridel LeSueur, Claude McKay, Clifford Odets, Tillie Olsen, Ezra Pound, Jean Toomer, and Richard Wright. A shorter list of critical essays will highlight modernism's tendency to theorize itself while introducing 21st-century perspectives from the "New Modernist Studies." Satisfies the American requirement. For undergraduates, Junior or Senior standing is required.

L90 AFAS 426W Memory for the Future

The year-long Studioloab "Memory for the Future" (M4F) will create spaces and practices of humanities education, practical public history, and collaboration in the spirit of "multidirectional memory." This concept tries to address the interlinked histories and legacies of the Holocaust, slavery, apartheid, and colonialism and create opportunities for dialogue between communities impacted by and implicated in these forms of violence. Our principal aims are to explore, enrich, and sustain the global and local focus of "reparative memorial practices" in St. Louis. Focusing on commemorative efforts through public memorials, monuments and especially museums, M4F will engage survivors, activists, institutional leaders, and scholars (students and faculty) in the development of educational materials, artistic representations, exhibitions, and other approaches to bringing the past into the present. We strive to support the efforts of local and regional initiatives and venues to end racism, antisemitism, and homophobia and their related violence through innovative and inclusive memory work. Alongside classroom-based instruction focusing on discussing scholarship and acquiring practical, curatorial, and pedagogical skills, students will work with area institutions and initiatives to apply their study of multidirectional memory. This practicum is an integral part of the course and requires students to leave campus and regularly work with one of our partners (The Griot Museum of Black History, George B. Vashon Museum, St. Louis Kaplan Feldman Holocaust Museum, The Mildred Lane Kemper Art Museum, Reparative Justice Coalition of St. Louis, St. Louis Community Remembrance Project). Participants of the Studioloab are expected to attend regular weekly meetings and engage in self-directed and collaborative project work. We are also preparing study trips to regional sites of memory and education. The M4F Studioloab will convene at the Lewis Collaborative, a living-learning-commercial space at the west end of the Delmar Loop. All A&S graduate students and advanced undergraduates are invited to participate. Undergraduate enrollment by permission of the instructors. For History majors, this course fulfills the capstone requirement as an Advanced Seminar. As a year-long course, students are expected to enroll in both the fall and spring sections. For more information, please consult <https://www.m4f.community/>

L90 AFAS 4311 Black Experimental Music

Founded on the South Side of Chicago in 1965, the Association for the Advancement of Creative Musicians (AACM) united dozens of African American artists who were interested in experimental approaches to composition and improvisation. Their creative work, often described as black experimental music, would transform black-identified musical styles like jazz as well as white-identified styles of experimental concert music from which African Americans were often excluded-until the AACM intervened. In this course, we will investigate the Association's history by reading and discussing a wide range of texts about the organization, including books and articles written by AACM members themselves. We will also examine a number of important recordings and musical scores created by AACM artists, including Muhal Richard Abrams, Fred Anderson, Anthony Braxton, Joseph Jarman, George Lewis, Nicole Mitchell, Roscoe Mitchell, and Wadada Leo Smith.

L90 AFAS 4377 Performing Ghosts: Blackness, Performance, and Archival Erasure

Taking ghost as apparition, metaphor, an imaginary, and type of possession, this course focuses on the intersections between performance, affect theory, and archival practice to investigate how scholars and artists contend with the psychic and affective terrors against blackness. Part of these terrors, the course asserts, happened and is happening in the realm of the affective, ephemeral, and archival. Moving across theoretical works, literature, and theater, our readings differently query: how can performance enable us to recuperate the lives of those violently erased from the archive? How to imagine embodiment for subjects "tracked" by history, such as black folks whose bodies suggest other forms of pathology, like sexual deviancy, mentally "insanity," and other forms of criminalization? How have attachments to ghosts been used as a methodology to stage and reperform blackness in the past and in the present? And lastly, how can we capture embodiment (or enfleshment) without live bodies? By rethinking "liveness," "absence," "loss," and "remains," the readings and discussions will offer performance as a methodological and analytical infrastructure to conduct historical and/or archival research.

Same as L15 Drama 437

L90 AFAS 4601 Historical Racial Violence: Legacies & Reckonings

There is growing awareness of the legacies of historical racial violence in the United States and a related increase in reckoning efforts. Area histories of enslavement, lynching, and other racial terror and dispossession relate to inequality, conflict, and violence in the same places today. These "haunting legacies" include heart disease and other health disparities, homicide rates, white supremacist mobilization, and corporal punishment

in schools. Meanwhile, many communities and institutions are moving to acknowledge and address legacies of historical racial violence in various ways. This course combines seminar-style readings and writing on legacies of racial violence with a practicum component, where individual students or groups of students will conceptualize and develop interventions intended to clarify and disrupt legacies of racial violence, facilitating contemporary reckoning. The practicum will explore and support a broad range of interventive efforts, including public policy measures, original research projects, archival development, commemorative efforts, and a related array of mediums, including visual art, design, film, digital projects, and other creative approaches.

L90 AFAS 461B Construction and Experience of Black Adolescence

This course examines the construct of Black adolescence from the general perspectives of anthropology, sociology and psychology. It begins by studying the construct of Black adolescence as an "invention" of the social and behavioral sciences. The course then draws upon narrative data, autobiography, literature and multimedia sources authored by black youth to recast Black adolescence as a complex social, psychological, cultural and political phenomenon. This course focuses on the meaning-making experiences of urban-dwelling Black adolescents and highlights these relations within the contexts of class, gender, sexuality and education.

L90 AFAS 470 What is Africanfuturism? 21st Century African Speculative Fiction

This course examines the genealogies, aesthetics, and politics of Africanfuturism, a sub-genre of speculative fiction and African literature. While the term Africanfuturism is recent, coined by Nnedi Okorafor in 2019, there is nothing new about speculative fiction from Africa. Africanfuturism is the aesthetic practice of

producing worlds created by Africans that center (rather than marginalize) Africa and Africans; where Africans are represented as the historical agents who produce their own futures (rather than historical subjects assigned to a "traditional" past); and where technology, science, and philosophy are recognized as indigenous to Africa (rather than imported).

Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM BU: BA, IS

L90 AFAS 474 Black Geographies: Space, Place and Ecologies of Power

From the gardens of enslaved women in 19th century Louisiana to 21st century racial justice marches in St. Louis, this advanced seminar will explore the emerging field of "Black Geographies." We will explore questions such as: How have Black communities been both enclosed and liberated by spatial arrangements of earth, sea, and sky? How do Black Geographies challenge and re-imagine conventions of social and cultural geography? What interventions are cutting-edge interdisciplinary scholars making, and what methods are they using to articulate original research? We will also spend a significant portion of class critically engaging with "Missouri Cartographies" - how historians, sociologists, and designers have depicted Black resistance and unveiled dark stories within and beyond the boundaries of our city. Suggested for undergraduate students who have taken at least one AFAS course. Graduate students may enroll with instructor permission.

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA

L90 AFAS 475 Advanced African History Seminar

This seminar allows students who have completed basic African history course work to explore advanced topics in the field.

Selected topics include: African geography and environmental history, the classical kingdoms of the Sahel, the development of Swahili culture, the trans-Atlantic slave trade, the historical roots of Apartheid, the intellectual and material culture of colonialism, African resistance and adaptation to social change during the colonial era, decolonization, and roots of some of the major problems facing modern Africa.

Credit 3 units. A&S IQ: LCD BU: ETH EN: H

L90 AFAS 4881 Advanced Seminar: Mad: Mental Illness, Power and Resistance in Africa and the Caribbean

This seminar explores the history of mental illness in Africa and the Caribbean during the colonial and postcolonial periods. We will be guided by the following questions: What is mental illness? How do social, cultural and political realities affect how mental illness is defined? Should mental illness always be analyzed within a specific cultural context? How did psychiatry factor into the efforts of European colonizers to maintain social order in their colonies? How have colonized people resisted colonial notions of madness? What is the place of religion in these histories? How did mental institutions change after the end of colonial rule and how was postcolonial Caribbean and African psychiatry harnessed in service of decolonization? The course will pay special attention to how European colonial powers employed similar understandings of blackness across regions as they formulated ideas concerning the black populations they deemed "mad" across Africa and the Caribbean.

Same as L22 History 4881

Credit 3 units. A&S IQ: HUM, LCD EN: H

L90 AFAS 49SA Advanced Seminar: Slavery in America: The Politics of Knowledge Production

This course focuses on the long history of chattel slavery in North America, from origins through emancipation, encompassing Black and Indigenous enslavement. The course foregrounds the struggles over power, over life and death, that were at the heart of slavery's traumatic and grotesquely violent 250-year career in North America, with attention to hemispheric context. At the same time, it highlights the fiercely contested historical battleground where scholars have argued about how to define American slavery — as a system or site of labor, production, and reproduction; law, property, and dispossession; racial and gender domination; sexual violation, rape, and incest; psychological terror and social death; containment and marooning; selfhood and nationality; agency and resistance; anti-colonial and revolutionary liberation and millennial redemption. Finally, it engages the "politics of knowledge production" that have produced the slavery "archive," replete with its annihilating silences, repressions, and erasures, and overdetermined "presences." In the end, the course's overarching question is how the politics of slavery, of its material experiences, interpretations, and archives, have shaped the lives and afterlives of slavery and race, to the present day. Students will conduct original research on topics related to North American slavery in consultation with the instructor that will culminate in a 12-15-page final essay. The course includes attention to the role of slavery in the founding and development of Washington University, and research projects that engage the university's slavery "archive" and questions related to enslavement in the history of the university and/or the history of St. Louis are welcome and will be supported by Olin Library Special Collections and other resources. Modern, U.S. Prerequisite: See History headnote.

American Culture Studies

American Culture Studies (AMCS) is a multidisciplinary program that provides both a broader context for study in different fields and a deeper understanding of American culture in all of its complexities. AMCS students explore culture-related topics and issues that demand multiple perspectives and methodologies. They also consider the mutual relevance of various disciplines to any single object of study in American culture — a place, an event, a work of art, a political institution and so on — while developing the knowledge and skills necessary to study a wide array of cultural objects.

The program offers a major and a minor, coordinating offerings across the disciplines so that students from any field or school can explore an array of ideas and approaches as they complete their course work. Pairing the major with a second major in a complementary discipline is an enriching model of cultural study, and AMCS will work closely with students to ensure that double-majoring works well.

The program offers especially attentive advising, helping students to have a cohesive experience and to pursue their specific interests within a diverse curriculum.

Contact: Karen Skinner, Academic Coordinator
Phone: 314-935-6991
Email: k.skinner@wustl.edu
Website: <http://amcs.wustl.edu>

Faculty

The American Culture Studies program is enriched by its diverse community of faculty, lecturers, students and staff. Please visit our AMCS Directory page (<https://amcs.wustl.edu/people/88/>) for a description and list of our teaching and affiliated faculty and other important members of our community.

Majors

The Major in American Culture Studies

Total units required: 32 credits, 24 of which must be at the 300 level or higher.

Visit our Course Listings (<http://amcs.wustl.edu/listing.php>) webpage for a complete list of courses, by semester, that count toward the AMCS major. For more information about the major — including past examples of projects, leadership opportunities and an FAQ — please visit our AMCS undergraduate (<https://amcs.wustl.edu/undergraduate/>) webpage.

Requirements:

- **Introductory Course** (3 credits) as designated by American Culture Studies: Options for this requirement have recently included AMCS 220 Topics in AMCS: Race and American Popular Music, AMCS 206 "Reading" Culture: The Visible and Invisible: Introduction to American Visual Cultures Studies, and AMCS 202 The Immigrant Experience. Visit our Course Listings (<http://amcs.wustl.edu/listing.php>) webpage for additional offerings by semester.
- **AMCS 375A: Methods and Visions** (3 credits): Visit our Course Listings (<http://amcs.wustl.edu/listing.php>) webpage for the current offering, as the topic varies by semester.
- **Fieldwork Experience** (3 credits): Enrollment in an approved fieldwork course such as AMCS 479: On Location: Exploring America (<https://amcs.wustl.edu/on-location/>) or completion of a field-based independent project under the guidance of AMCS faculty (in most cases under the course number AMCS 298 Directed Fieldwork in American Culture Studies).
- **General Americanist Course Work** (18 credits): Six courses taken in the following groupings:
 - **Prime Concentration Area Course Work** (9 credits): Three courses in a single concentration, at least two of which must be at the 300 level or higher (refer to "Established Concentration Areas" below).

- **Distribution Course Work or a Second Concentration Area** (9 credits): Courses taken in three different disciplines or fields ("Distribution") or three courses in a second concentration area. At least two of these courses must be at the 300 level or higher.
- **Senior Capstone Project** (3 credits): This is a multidisciplinary project that serves as the culmination of the program's course work and past fieldwork study. Proposed during the spring of the junior year, this 3-credit project is granted academic credit in the fall through AMCS 400A AMCS Capstone Workshop I. Students pursuing the Senior Honors Thesis will earn an additional 3 credits in the spring through AMCS 400B AMCS Capstone Workshop II. The capstone requirement may also be fulfilled within the context of an approved upper-level seminar course. For more information about the capstone project and proposal process, including important dates, please visit the AMCS website (<https://amcs.wustl.edu/capstone/>).
- Two 1-credit workshops — AMCS 490A AMCS Portfolio Workshop: Academic Citizenship and AMCS 490B AMCS Portfolio Workshop: Connections and Explorations — taken in the senior fall and spring semesters, respectively (required for the Class of 2022 and beyond).
- At least **two multidisciplinary courses**, taken as part of the above major requirements and designated by AMCS (this does not usually require additional course work). Students are encouraged to take multidisciplinary courses that connect to the subjects or issues in their concentration area. AMCS 375A and the course taken to fulfill the fieldwork requirement may not also count toward the multidisciplinary requirement.

Additional Information

Established Concentration Areas

The following list reflects areas of longstanding student interest. Majors are welcome to propose new concentrations or to tailor an established one to suit their interests. AMCS currently has nine established concentration areas:

- 20th-Century America
- Early America
- The Construction of Race and Ethnicity in American Life
- Policy-Making in American Society
- Popular Culture
- A Sense of Place: Community, Region and Landscape
- Social Thought and Social Problems
- Visual, Material and Digital Cultures in the United States
- War and Peace

AMCS gives majors considerable freedom in defining their course of study, allowing them to learn how cultural study is done in multiple fields and periods even as they define concentration areas in ways that suit their specific

interests. Pairing the AMCS major with a second major in a complementary discipline is an especially enriching model of cultural study, and AMCS will work closely with students to ensure that double-majoring works well.

Study Abroad: Majors intending to study abroad should consult with the AMCS study abroad advisor well in advance to plan a course of study and discuss its impact on their work in the major (including their fieldwork and capstone projects). For further information, please refer to the Frequently Asked Questions (<https://amcs.wustl.edu/amcs-undergraduate-faq/>) on our undergraduate page or review the AMCS approved programs on the Study Abroad (<https://overseas.wustl.edu/study-abroad/>) webpage (by searching for "American Culture Studies" as the "Program Name" in the WUSTL Global Opportunities database (<https://sa.wustl.edu/?FuseAction=Programs.AdvancedSearch>), which can be accessed from the Planning for Study Abroad page (<https://overseas.wustl.edu/plan/>)).

Special Opportunity: Lynne Cooper Harvey Undergraduate Scholars: The Harvey Undergraduate Scholars are vital members of the AMCS community, serving as intellectual leaders and modeling innovative multidisciplinary research. They are asked to share their knowledge with the community in a variety of ways during their time as scholars, including through involvement in a project or initiative that brings them into collaboration with others in the AMCS community. These projects should contribute substantially to the scholars' learning and allow them to actively engage with and bolster all members of the AMCS community. Please visit the Harvey Undergraduate Scholars page (<https://amcs.wustl.edu/lynne-cooper-harvey-undergraduate-scholars/>) for more information.

Senior Honors: Writing an AMCS honors thesis is one way to fulfill the capstone project requirement. It allows students to complete an extended study of a cultural topic with the input of faculty from more than one discipline, and it provides both a support system and an audience of peers for that study. For more information about the honors thesis and capstone project process, including important dates and criteria, please visit our Senior Honors Thesis page (<https://amcs.wustl.edu/major-requirements/#secondary>).

Minors

The Minor in American Culture Studies

Total units required: 15 credits, at least 9 of which must be at the 300 level or higher.

Requirements:

- **Introductory Course** (3 credits) as designated by American Culture Studies: Options for this requirement have recently included AMCS 220 Topics in AMCS: Race and American Popular Music, AMCS 206 "Reading" Culture: The Visible

and Invisible: Introduction to American Visual Cultures Studies, and AMCS 202 The Immigrant Experience. Visit our Course Listings (<http://amcs.wustl.edu/listing.php>) webpage for the full listing by semester.

- **Distribution Course Work** (9 credits): At least three courses on American subjects (two of which must be at the 300 level or higher) either in a single established Concentration Area (<https://amcs.wustl.edu/major-requirements/#primary>) (refer to the list of established concentrations below) or in three distinct disciplines outside the student's major.
- One additional AMCS course (3 credits).
- At least **two multidisciplinary courses**, taken as part of the above minor requirements and designated by AMCS. Minors who opt to do a concentration are encouraged to take at least one multidisciplinary course that connects to the subjects or issues in the chosen concentration area. AMCS 375A: Methods and Visions (a junior-level seminar) is also encouraged and may count as a multidisciplinary course. Visit our Course Listings (<http://amcs.wustl.edu/listing.php>) webpage for a complete list of general and multidisciplinary courses that count toward the AMCS major.
- Only one of the courses taken to complete the minor requirements may be home-based in the same discipline as the student's major(s).

Additional Information

Established Concentration Areas

The following list reflects areas of longstanding student interest. Minors are welcome to propose new concentrations or to tailor an established one to suit their interests. AMCS currently has nine established concentration areas:

- 20th-Century America
- Early America
- The Construction of Race and Ethnicity in American Life
- Policy-Making in American Society
- Popular Culture
- A Sense of Place: Community, Region and Landscape
- Social Thought and Social Problems
- Visual, Material and Digital Cultures in the United States
- War and Peace

Visit our undergraduate AMCS webpage (<https://amcs.wustl.edu/undergraduate/>) for more information about the minor requirements and concentration areas as well as other resources and announcements for AMCS students.

Courses

L98 AMCS 101 Lewis and Clark and the American Challenge

This central multidisciplinary course in the American Culture Studies program is taught by faculty members from the humanities and social sciences, with guest lecturers from the natural sciences. Its focus is the 1804 to 1806 "Voyage of Discovery" led by Meriwether Lewis and William Clark, which will serve as a basis for examining American cultures, past and present. This expedition of more than 7000 miles dramatically altered the nation's identity by expanding its perception of America's enormous human and physical diversity and by forcing Americans to confront the issue of how much difference the United States could contain. Starting with selections from the expedition's journals, the course will introduce the varied and often contradictory ways (then and now) that different disciplines examine a problem: history, literature, art, anthropology, economics, political science, and biology, as well as race and gender perspectives. In this way, the course seeks to investigate how peoples of different perspectives and cultures interact: how they explore the unknown and try to explain it; how they gather and develop "knowledge"; and how they accept or reject information. To draw together these varied strands of inquiry and to expose students to the research process, the lectures will be complemented by weekly small-group discussions, with field trips to sites along the expeditionary route, including those of the upper Missouri River in North Dakota. Students will choose specific questions they wish to investigate; after being organized into research groups of four or five, they will create websites addressing those issues. Students will enroll in a special section of E Comp in addition registering for this core seminar. Credit 3 units. A&S: FYS BU: HUM

L98 AMCS 1012 Introduction to Urban Studies

This course provides a survey of the field of Urban Studies, utilizing the city of St. Louis as a field site. The major purpose of the course is to gradually reveal how a city operates internally, and how it operates externally with its sister cities, surrounding metropolitan areas and neighboring states, amidst competing and often contradictory interests. Utilizing historical analysis as a guide, the course will briefly revisit the experiences of previous waves of ethnic groups to the St. Louis metropolitan area, as a lens for understanding the current social, political and economic dilemmas which many urban dwellers in St. Louis now face. The course will reveal to students the intricacies of social welfare issues and policies among high density populations, in St. Louis, that are homogeneous and heterogeneous, at the same time. Visits and discussions with various governmental and nongovernmental agencies, and how such agencies function or dysfunction for various constituencies allow students to ask crucial questions regarding equality of opportunity in a democratic society. Students will also encounter diverse communities and neighborhoods and the intended and unintended consequences of social welfare policies designed to ameliorate urban dilemmas such as poverty and inequality, homelessness, educational underachievement, gentrification, migration and immigration, development, health care, fiscal issues, the informal economy, and issues concerned with crime and social justice, among others. Readings are reinforced and challenged through visits, interactions and observations with broad constituencies and institutions, ranging from city officials to community residents. As such, this course offers a survey discussion of the rich interdisciplinary field of Urban Studies for those who may be interested in pursuing a stand alone major in the field of Urban Studies. This course is for first-year, non-transfer students only. Same as L18 URST 101

L98 AMCS 101B American Politics

In a polarized era of American politics, it is critical to have a working knowledge of the American political process and the analytical skills with which to interpret contemporary events. This course is designed to accomplish these dual objectives. In the first few weeks of the semester, we will explore both the key principles of social scientific thinking and trace the evolution of the fundamental characteristics of American government. We will use this foundation throughout the remainder of the semester to assess the contemporary challenges to American institutions and the context in which they, and the general public, make decisions. At the end of the semester, students should be able to understand and critically engage with information about American politics, as well as actively engage with the American political system (should they choose to do so).

L98 AMCS 102 First-Year Seminar: Visualizing and Documenting Race, Class and Gender

How do you know someone is a woman or a man, upper or lower class, Hispanic or white? What signals these identities, and what do we associate with them? In this course, we will use photography and narrative accounts to explore intersections of race, class, and gender. Our investigation will cover three broad topics: systems of power, structures of institutions, and performances or displays of identities. Students will be challenged to use their "sociological imagination" and to connect personal problems to public issues, moving beyond commonly held views and using their own lives to advance knowledge. Through photography and weekly reflection pieces, students will learn how to situate their writings within the academic literature, developing skills in articulating arguments, analyzing theory, conducting visual methods, and directing a critical eye upon even the most taken-for-granted social positions: our own, as we discover our place within the Washington University community. Credit 3 units. A&S IQ: SSC, SD EN: S

L98 AMCS 1022 Popular Music in American Culture

American popular music from 1800s to the present, with emphasis on technology, social and political contexts, and popular music as a realm of interracial encounter. Musics covered include early jazz, classic blues, swing, classic pop, rock and roll, soul, disco, hip hop and the changing relationship between popular music, film, and television.

L98 AMCS 102C First Year Seminar: Strengths, Weaknesses, Opportunities, and Threats for 21st Century Education

This first-year seminar will highlight various aspects of critical topics in K-12 education to consider the current strengths, weaknesses, opportunities, and threats in contemporary K-12 education. This will be primarily a discussion-based course covering topics such as (but not limited to) trauma-informed care and school-based mental health, advancing technology, restorative practices, design schools, and equity in education.

The course will provide students with an opportunity to observe a classroom at the P-12 grade level(s) with varied and diverse student populations for the purpose of introduction to and analysis of the culture of schooling and classrooms. Enrollment limited to first-year students.

L98 AMCS 102E First Year Seminar: Black Lives Matter and Educational Justice for Black Youth

In the wake of the global uprising against racial injustice, this introductory course examines how schools in the United States can create opportunities for Black youth to thrive. We will examine the schooling experiences of Black children and youth amid pervasive anti-blackness, analyze the relevance of educational models for racial justice, and imagine radical ways that P-16 schools might dismantle white supremacy. This course is for first-year, non-transfer students only.

L98 AMCS 1101 Ampersand: Examining America: American Dreams: Art, Culture, Performance, and Politics

Does the "American Dream," rooted in Jeffersonian ideals of "life, liberty, and the pursuit of happiness," still hold sway in the American imagination, or have we moved on from its tantalizing promises? To answer this question, this Ampersand course investigates how perceptions, representations, and meanings of the American Dream manifest-or struggle to be realized-in the contemporary United States. As the American Dream relies deeply on the interaction between American culture and performance, we turn to case studies of the arts-theatre, literature, film, and painting-as lenses for understanding the complexities of nation and identity inherent to the American Dream. Utilizing an intimate seminar format to foreground our close reading and discussion of these multimodal texts, this Ampersand course emphasizes both critical thinking and writing. We also consider (and visit) a variety of exciting local theatrical performances and art exhibits, both on and off-campus. In synthesizing our interdisciplinary approach to the American Dream-or is it American Dreams?-the course culminates with a creative project with opportunities for performance during the final week of classes. This course is restricted to first-year students only.

L98 AMCS 111 First-Year Seminar: Race and Ethnicity on American Television

This course presents a historical overview of the forms that racial and ethnic representations have taken in American television. The course charts changes in public perception of racial and ethnic difference in the context of sweeping cultural and social transformations. The course examines notions of medium and and ponders the implications for these identities of the contemporary practice of "narrowcasting." Required screenings.

L98 AMCS 111A First-Year Seminar: The Vietnam Wars

US-centric historical narratives of the Vietnam War obscure the perspectives and lived experiences of the Vietnamese. The social, ethnic, and religious diversity, and the political and gender-related complexities of the Vietnamese are typically neglected. By focusing almost exclusively on Vietnam, US narratives of the war also tend to gloss over the wider regional dimensions of the conflict. In the interest of redressing this imbalance, this course examines the outlook, values, agency, and experiences of northern and southern Vietnamese, as well as rural and urban Cambodians and Laotians. Drawing on a wide range of primary and secondary sources it provides a macro and micro level historical analysis of Vietnam, Cambodia, and Laos from the premodern era until the present. In so doing, it explores the early sociocultural foundations of ancient Southeast Asian civilizations, the impact of Chinese and French colonialism, and Japanese occupation, the rise of Indochinese nationalist and communist revolutionary movements, the process of decolonization, the impact of US military intervention, the rise and fall of the Khmer Rouge, postwar political and economic developments, and the memories and multiple meanings of the Vietnam Wars for Southeast Asians. Course is for first-year, non-transfer students only.

L98 AMCS 112 First-Year Seminar: Race and Ethnicity in American Cinema

From the early documentary roots of cinema through the Civil Rights movement and to the recent democratization of the means of media production, questions of race and ethnicity have proved crucial both to the content of American films and also to the perspective from which they are made. This class looks at the representation of historical moments from the Civil War to Hurricane Katrina, the production of cinematic stereotypes as well as their appropriation for subversive purposes, and the gradual evolution of multiculturalism as a central factor in the stories told and the telling of stories on the American screen. Students use film texts to develop a critical understanding of one of the most important issues in American history. Required screenings.

L98 AMCS 1165 First-Year Seminar: On Broadway - Musicals, Race, Place

The Broadway theatres are closed, but pressure to make these stages more racially and ethnically diverse when they re-open is strong. This course looks at the history of the Broadway theatres and the ways this coveted theatrical real estate in midtown Manhattan has played host to white and non-white performers in the signature American theatrical genre: the musical. Using digital and archival research tools, including an abundance of maps, our study stretches from the creation of the Theatre District at the turn of the 20th century to the present. We will examine groundbreaking and all-too-typical shows -- from "Show Boat" to "Hamilton" -- and look closely for how systemic racism has played out on Broadway stages for Broadway's mostly white audience. We will produce original research and explore digital humanities methods related to questions of racial inequality in commercial popular culture. This course is for first-year, non-transfer students only.

L98 AMCS 1201 First-Year Seminar: Race and Performance

What does it mean to "act Black"? What about "acting Jewish"? This course looks at performances of racial and ethnic identity, mostly in the United States and mostly in the 20th century. We will examine novels (e.g., Nella Larsen's "Passing"), plays (e.g., Anna Deavere Smith's "Fires in the Mirror"), and performances of everyday life (e.g., "Cowboys and Indians") to investigate the performance of race in public. Once we begin to explore the social and cultural performance of race, will it all turn out to be "only" an act?

L98 AMCS 120B Beyond Boundaries: Religious Freedom in America

The intersection of religion and law in American society has sparked some of the fiercest cultural engagements in recent memory: Should a for-profit religious corporation have a right not to fund birth control for its employees? Can a public college expel campus religious groups whose membership is not open to all students? May a Muslim in prison grow a beard for religious reasons? Should a cake baker or a florist be permitted to refuse services for a gay wedding? Can a church hire and fire its ministers for any reason? These current debates and the issues that frame them are interwoven in the American story. This course introduces students to the major texts and historical arguments underlying that story. Drawing from the respective expertise of the instructors, the course will expose students to a variety of scholarly methods related to the issue: legal

history and case law, intellectual history and canonical texts, social history and narrative accounts, and political philosophy and contemporary analyses. This course is for first-year (non-transfer) students only.

L98 AMCS 1212 Ampersand: Pathfinder - A Sense of Place: Discovering Missouri's Natural Heritage

This is the first course in the Pathfinder program, and it will introduce students to their new home for the next four years. This interdisciplinary course will cover Missouri geology, climate, archaeology, and native megafauna. We will explore many of the habitats found in Missouri (prairie, forest, glade, and stream) and the biology of our diverse plant and animal wildlife (arthropods, mollusks, fish, salamanders, lizards, birds, and mammals). This will provide a foundation that will inform the study of ecology, policy and management in other courses. In addition to weekly lectures and discussions, students in this course will visit sites across the state during three weekend camping trips and two one-day trips. Attendance on field trips is an essential component of the course. Course enrollment is open only to students admitted into the Pathfinder Fellowship program.

Same as L61 FYP 121

Credit 3 units. A&S: AMP A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L98 AMCS 122 Ampersand: Pathfinder — A Sense of Place: Discovering the Environment of St. Louis

Students will go exploring in and around St. Louis, where they will learn about the St. Louis backyard and their "home" for the next four years. Through field trips, readings, and discussion, students will see firsthand what challenges face the local environment and the people who live here. They will learn how to examine multiple perspectives, how to think critically, and how to approach problems from an interdisciplinary and holistic approach. They will also learn why it is important to know a community at the local level if to affect change on any level, whether state, national, or international. This course includes several field trips in addition to weekly readings and discussions.

L98 AMCS 125 St. Louis and the Documentary Image

From magazines to maps to documentary movies and TV, we look to pictures to tell us the truth. But no image is ever completely objective; every visual reflection of the real world is mediated by technology, culture, politics, and memory. How do we-as viewers, as creators, as people-sort out the complicated claims pictures make on the world around us? Drawing on collaborations between four areas in two schools-Visual Arts, English, American Culture Studies, Film and Media Studies-this class will introduce students to theories and practices of visual nonfiction within the city of Saint Louis. Through immersive, site-specific course units focused on a variety of approaches to visual nonfiction in different media, students will engage with the tumultuous history, material culture, and landscapes of St. Louis. The course will introduce first-year students both to their city and

their university, preparing them to explore existing coursework in Arts & Sciences and the Sam Fox School. This course is for first-year (non-transfer) students only. Students who are not first year students will be unenrolled from this course.

Same as I60 BEYOND 125

L98 AMCS 130 First-Year Seminar: The Ritual Landscape of Cahokia: Perspectives on the Politics of Religion & Chiefly Power

The purpose of this class is to engage and challenge freshman students in an open discussion about the prehistoric Mississippian community of Cahokia. The focus of this course is two-fold. The first is to study the way in which the archaeological evidence has been interpreted. The second is to examine other perspectives on Cahokia, especially from the Native American descendants who consecrated this landscape nearly a millennium ago. An underlying tenet of this seminar in understanding Cahokia can also be achieved through the traditions and literature of Native Americans. In the end we want to understand the basis for Cahokia's organization as a prehistoric Native American community, and the role that ritual and religion played in the rather dramatic and dynamic history of this community and the surrounding region.

L98 AMCS 135 First-Year Seminar: Chinatown: Migration, Identity, and Space

"Chinatown," as a cultural symbol and a spatial entity, links various topics and studies in this course. Our survey starts with a historical and geographical glimpse of five Chinatowns in the United States through the real-life stories of their residents. This is followed by an in-depth study of Chinese restaurants and food in a global diasporic context using texts, images, and films that reveal how Chinese cuisine is inherited in and adapted to each local culture and society. The seminar culminates in discussions of Chinese migration and settlement, of representations of identity, and of cultural and spatial constructions in particular historical and social contexts. It will also examine the impact of the COVID-19 pandemic on Chinatowns in the United States and elsewhere. The assignments include surveys of Chinese businesses and a debate about whether or not Olive Blvd. constitutes a Chinatown in St. Louis.

L98 AMCS 136A First-Year Seminar: 20,000 Years on Turtle Island: A Deep History of North America

The twin premises of this course are that humans are the subject of history and that history should begin at the beginning. American history courses normally begin with the colonization of the New World by Europeans beginning in the 15th century, sometimes with a cursory chapter dedicated to the 20,000 years of history that came before. This course will invert this structure and place what we normally think of as American history in the context of a much longer story by drawing on sources from many disciplines, including archaeology, ethnography, ecology, geology, linguistics, and oral history. We will focus on contested events or issues, where our sources tell different stories, and we will consider what is at stake for defenders of different narratives.

Throughout the course, we will ask how the lack of written records limits our understanding of North American history, but we will also consider how other sources of evidence about the past can be used to include populations and themes normally underrepresented by textual histories. The goals of this course are as follows: (1) to put recent American history in its proper context; (2) to show how historical narratives are constructed and contested; and (3) to give students tools other than written records with which to construct history. Course is for first-year, non-transfer students only.

L98 AMCS 144 First Year Seminar: Monumental Anti-Racism

As sources of national memory and identity, public monuments, place names, historical markers, and other elements of commemorative landscapes are potential sites of cultural violence (e.g., alienation, disrespect, and erasure) contributing to broader conflict and inequality; they are therefore important considerations in movements for equal opportunity and justice. Some contend that memory sites are "the new lunch counters," where our racial politics are worked out. This course examines the racial politics of commemorative objects and practices as well as commemorative intervention as a strategy of anti-racist activism. We begin with an historical survey of various ways that racism has been inscribed on the commemorative landscape, and readings in history, political theory, cultural studies, and other fields will be used to gain insight into these contested commemorative objects, their development, and social significance. We then turn to a critical assessment of efforts to remove and recontextualize commemorative objects and to erect new objects commemorating neglected figures and issues. We consider how these reparative efforts relate to what political theorists call "remedies of recognition" and specifically how they might aid in advancing equal opportunity and justice. Through our study and engagement with contested commemorative landscapes (including local, national, and global cases), students will become familiar with the burgeoning interdisciplinary field of memory studies, diverse forms and sites of commemoration, local and global efforts to advance what has been termed "commemorative justice," and the challenges being faced.

L98 AMCS 165D Latin America: Nation, Ethnicity and Social Conflict

This class is an interdisciplinary introduction to the academic study of modern and contemporary Latin America. The course focuses on main issues in Latin American politics, history and culture, both in the continent at large and in the specific regions and sub-regions within it. The class will particularly explore topics such as nation creation, national identity, modes of citizenry, the role of race, ethnicity, gender and class in the region's historical development, as well as social and political conflicts, which have defined the region over the centuries. This course is suggested before taking any other upper-level courses on Latin America or going abroad to other countries, and required for all Latin American Studies majors and minors. Through the course, students gain basic bibliographic knowledge and experience with research tools for a comparative study of Latin American politics society and culture. Prereq. None.

L98 AMCS 200A Doctors and Terrorists: The Fictions of South Asian America

South Asians have always played an integral role in the culture, history, and politics of the United States. However, for complex reasons, their presence has either been concealed or dismissed through dangerous stereotypes or, just as inaccurately, excessively celebrated for proving the generosity of American liberalism and multiculturalism. Racially misrecognized, this large and heterogeneous group has nonetheless shaped American categories of race, sexuality, and citizenship in intriguing and powerful ways. South Asian Americans have reached to fiction, music, and popular culture to craft deeply intimate and original assessments of mainstream desires. In doing so, they have sought to resist the dictates of whiteness, to question U.S. imperialism, to garner acceptance and mobility, and to build solidarity with other U.S. minorities. In this course, we learn about the complex history and cultural productions of South Asians in America. How did "South Asia" become a category of identification, and who benefited from that designation? What role have South Asians played in the economic, cultural, and global ascendancy of the United States? How do South Asians connect with and control their countries of origin? Why do

discourses of sex and intimacy rise to the surface in this history, and what is the significance of storytelling in building the archive and questioning the fiction of South Asian America? Course enrollment is limited to first-year and sophomore students.

L98 AMCS 2010 Religion and American Society

This course explores religious life in the United States. We will focus our study on groups and movements that highlight distinctive ways of being both "religious" and "American," including the Americanization of global religions in the U.S. context. Major themes will include religious encounter and conflict; secularization, resurgent traditionalism, and new religious establishments; experimentalism, eclecticism, and so-called "spiritual" countercultures; the relationship between religious change and broader social and political currents (including clashes over race, class, gender, and sexuality); and the challenges of religious multiplicity in the United States. Students will do the following: (1) acquire knowledge of the disparate religions practiced in North America during the 20th century and beyond; (2) examine some of the chief conflicts as well as alliances between religion and the American social order in a global context; and (3) develop interpretive tools for understanding religion's present and enduring role in the United States and the world.

L98 AMCS 2011 The Roots of Ferguson: Understanding Racial Inequality in the Contemporary U.S.

An overview of sociological understandings of race, with a particular focus on race relations in the contemporary United States. The course begins by inquiring how sociologists understand racial distinctions, asking: What comprises a racial group? What constitutes a "group" in the social sense? The course then shifts to explore patterns of racial inequality in the U.S., particularly through investigating the intersections of economic, political, and racial stratification. After analyzing national trends in racial stratification, the course narrows its focus to particular regions and metropolitan areas, including St. Louis, to shed light on pressing public concerns such as the interrelationships between race and the criminal justice system. The course ends by looking beyond U.S. borders to compare the way that race is understood in other countries. Are there common patterns of racial classification shared by many societies? What makes the U.S. system of racial stratification distinctive? No prerequisites.

L98 AMCS 2022 The Essay: From Montaigne to The New Yorker

The essay has a storied past and present as well as a variety of purposes. In this course, we trace the history of this form, beginning with those long forgotten and not necessarily identified as essays and moving swiftly to present-day essays. We read works by such authors as Michel de Montaigne, Jonathan Swift, W. E. B. Du Bois, and Virginia Woolf, plus articles in 2020 issues of *The New Yorker*. We practice brief reflective and long formal essays, including a profile, a reportage, and a film review. By the end of the semester, students will have a good understanding of the essay's history and form and a good sensibility for writing it.

L98 AMCS 2033 Introduction to Education Topics: Contradictions and Controversies in School Choice

Drawing from social scientific perspectives, this course surveys educational research and policy in contemporary U.S. society. It considers the relationship among controversial policy issues (e.g., school choice, public school closure, urban redevelopment) and education. Finally, it examines the implications of recent changes in education for social inequality, mobility, and group relations.

L98 AMCS 203B Introduction to Education: Myths and Mysteries of Memory

In this course, we will learn about the science of memory and how it relates to education, broadly construed, by taking a tour through the many ways in which memory influences everyday life. We will cover topics like how to learn effectively, individual differences in memory ability, the effect of trauma on memory, why people are susceptible to misinformation, and how collective memories shape the way we remember history. In the process of learning about these topics and others, we will critically evaluate widely believed myths about memory, try to explain mysteries of memory, and explore the implications for education in formal and informal contexts. By gaining a better understanding of memory and how it works, you will acquire skills and knowledge that you can apply to your education and life more generally.

L98 AMCS 203C Introduction to Education: Social Inequality, Development, & Early Childhood Education

Education begins long before children are introduced to formal schooling, and factors both internal and external to schools influence children's education. An understanding of the social, political, and economic contexts of families and schools is essential to understanding how social factors impact individuals. Race, class, health, and place exert influence on individual achievement and opportunity throughout the life course. This course will examine such factors as they relate to early developmental outcomes, school readiness skills, later academic achievement, and success in schooling. Course readings and activities will examine the influence of families, neighborhoods, the built environment and health on early childhood development and education and will offer corresponding implications for education policy. This course

will examine the complex ecosystem of neighborhoods and schooling and will offer students a broad overview of these themes as we critically examine inequality and education in the United States.

L98 AMCS 203D Introduction to Education: Immigrants, Refugees, and English Learners in U.S. Schools

What is the distinction between immigrant, refugee, migrant, and newcomer students in schools? How are their needs similar, and how are they different? Although U.S. schools have historically served multilingual children, many have seen an increase in the racial, ethnic, and language backgrounds of the students they designate as English learners (ELs). As such, educators are still coming to understand how to best support this highly diverse group. In addition to clarifying distinctions between EL and student background classifications, this course will examine: federal, state, and local policies impacting immigrant and refugee student integration into schools, how school practices for several kinds of multilingual students vary, and how existing educational structures can better support designated EL students and their families.

L98 AMCS 2052 Conspiracy Theories and Online Hoaxes: The Rhetoric of Disinformation

Why do people believe in conspiracies, and what can we do to quell disinformation? This course will build on foundational information literacy skills by studying conspiracy theories and hoaxes that originate and are circulated online and that are then used for political advantage. Taking a multidisciplinary approach, we will read texts in composition and rhetoric, media studies, philosophy, history, sociology, political science, and psychology to understand how conspiracy theories, hoaxes, and other forms of disinformation are amplified through social media networks and come to be believed by millions. Working with case studies such as QAnon, climate change denial, the anti-vaccination movement, and the Flat Earth Society, this course will explore the rhetoric that convinces people to believe in disinformation and the networks that contribute to its proliferation while also studying ways to combat disinformation, from methods for debunking conspiracy theories and hoaxes to the actions that journalists, educators, and others can take to resist the spread of disinformation.

L98 AMCS 2062 Visualizing the American City

Mound City. Gateway to the West. A "city of neighborhoods." One of the most segregated places in America. A sports town with "the best fans in the world." The heart of the Silicon Prairie. Flyover country. St. Louis has been called all of these things and many more over the past 200 years. Like all cities, its evolving identity has been shaped by stories, ideas, place memories, and local branding efforts that are deeply rooted in the visual imagination -- those "pictures of the mind" that define a distinct sense of place. Such pictures are at once personal and shared. And some -- like aerial photos of the Arch -- become definitive elements of the visual imaginary and are reproduced endlessly, from art galleries to tourist maps to baseball caps. This introductory course explores the visual culture of the American city, seeking to understand its powerful political and social significance at key moments in urban history. We will engage the rich archives of urban life, culture, and economic development associated with Chicago, New York, St. Louis, Detroit, and other cities, working with maps, engravings, photographs, travel guides, souvenirs, billboards, posters, and many other visual technologies, including digital representations and experimental formats. In so doing, we will attend to various historical phenomena -- from world's fairs and urban renewal projects to catastrophic violence and slum clearance to gentrification and social reform, as well as their visual representations -- that have shaped these cities' public lives and identities and contributed to broader urban imaginaries that are still powerfully present today. Students will develop their analysis and writing skills through short artifact readings.

L98 AMCS 2072 The Scholar and Social Change: Writing between Research and Political Urgency

While scholarship has a fraught relationship with timely action, some scholars understand and position their intellectual activities as promoting real-world change to bring about a more equitable and just future: By better understanding a seemingly intractable problem, we should be better able to empower others with actionable knowledge. And by better reflecting on the socio-political role of scholarship, we should be able to bridge the gap between knowledge and action. This composition course is devoted to reflecting on our role as members of both a scholarly community and a system beset by powerful interests working to preserve exploitative practices that degrade our health, our environment, and our dignity. Specifically, "The Scholar and Social Change" develops theoretical models and research strategies to investigate how overlapping histories of systemic oppression affect the production of knowledge and power. In seminar-style class discussion we will connect urgent affairs of the day to academic literature on environmental justice, critical race theory, postcolonialism, intersectionality, corporate disinformation, and neoliberalism. Ungraded research exercises will practice finding and making use of Supreme Court decisions, government research agencies, newspapers, and case studies on St. Louis and Washington University. Readings will include

works by scholars reflecting on political action, modeling social engagement, and holding their own disciplines to account. As we read the authors on the syllabus -- including Naomi Oreskes, Keeanga Yamahtta-Taylor, Julie Sze, Nick Estes, Laura Pulido, Kendall Thomas, Gayatri Spivak, and Judith Butler -- we'll ask how scholarship can be a political vocation and what that may mean for us as writers and researchers. Assessment will include research essays, peer interviews, reflection posts, and oral presentations with graded draft workshops built into the class schedule. Considerable freedom will be given to students to craft their final research project on a topic consistent with the spirit of the class.

L98 AMCS 2118 First-Year Seminar: Angels, Prostitutes and Chicas Modernas: Women in Latin American History

Women have been active players in the construction of Latin American nations. In the last two decades, leading scholars in the field have taken up the challenge of documenting women's participation. This research explosion has produced fruitful results to allow for the development of specialized courses. This course looks at the nation building process through the lens of Latin American women. Students will examine the expectations, responsibilities and limitations women confronted in their varied roles from the Wars of Independence to the social revolutions and dictatorial regimes of the twentieth century. Besides looking at their political and economic lives, students will explore the changing gender roles and relations within marriage and the family, as well as the changing sexual and maternal mores.

L98 AMCS 212 The American Dream: Work, Class, and Culture

Race and gender are widely discussed and their ramifications well studied, but a great silence still surrounds the issue of class in America, which is often called a "classless society" in which those who work hard enough can attain the American dream. With the 20th-century worker and workplace as the focus, students study texts (among them "Rivethed," "China Men," and "Mules and Men"), films ("Modern Times," "Salt of the Earth," and "Saturday Night Fever"), and music (blues, folk, and rock) as a way to consider the changing concepts and valuations of class, the history and culture of working-class America, its portrayal in popular media, and where class-related matters stand today.

Credit variable, maximum 3 units. BU: BA, HUM

L98 AMCS 214B American Art and Material Culture of the Gilded Age

This sophomore seminar explores American art and material culture from the aftermath of the Civil War to the dawn of the 20th century. Readings and classroom discussions consider the interplay between artworks and complex cultural and historical developments of the period, including the rise of international travel and trade, rapid industrialization and urbanization, mass consumerism, growing income inequality, immigration, the crisis of faith, the closing of the West, and the changing status of women and African Americans. Key artists to be considered include James McNeill Whistler, John Singer Sargent, William Merritt Chase, Thomas Eakins, Mary Cassatt, and Henry Ossawa Tanner. We will end the semester with a sustained consideration of the work of Winslow Homer, in which major concerns of the Gilded Age — about truth and falsehood, the boundaries of citizenship, and the power of art — converge.

L98 AMCS 225A Religion and Politics in American Society

The United States has been imagined, by turns, as a deeply Christian nation and a thoroughly secular republic. These competing visions of the nation have created conflict throughout American history and have made the relationship between religion and politics quite contentious. Are there shared national symbols and ideals that have held the country together? Is there a discernible "civil religion" in American public life—a shared faith in freedom, democratic citizenship, and patriotic sacrifice? Or is there instead a set of competing, irreconcilable visions—say, a white Christian nationalism versus a pluralistic cosmopolitanism? This course examines such issues through a range of speeches and addresses by such generative figures as George Washington, Thomas Jefferson, Frederick Douglass, Abraham Lincoln, Elizabeth Cady Stanton, Franklin Delano Roosevelt, John F. Kennedy, Martin Luther King Jr., Ronald Reagan, Barack Obama, and John McCain. Through sustained discussion of their canonical speeches, as well as other monuments, rites, and declarations that have hallowed the nation, the class explores what ideals Americans have held sacred.

L98 AMCS 229 Introduction to AMCS:**#AmericanCultureStudies: Exploring the Field!**

What does it mean to do American culture studies? This course teaches students how to critically analyze U.S. culture and society and introduces them to the history, methodologies, frameworks, and key questions that have shaped and continue to inform this interdisciplinary field. American culture studies is a broad and vast discipline that defies simple summary; it asks probing questions to uplift marginalized voices and experiences as part of an expansive definition of American identity. This course exposes students to practices that constitute American culture studies rather than demarcate a terrain for what it is: historically crossing disciplinary boundaries (arts, humanities, social sciences) and engaging diverse texts (film, literature, historical documents, popular culture, performance, material culture, etc.) American culture studies resists strict definition! In this course students study how knowledge and understandings about society and culture are produced and learn approaches to analyzing, curating and interpreting cultural objects and theorizing cultural phenomena. We examine the concept and idea of "America" in local, regional, national, and international contexts and continuums; we explore the lived experiences of diverse American communities within and across cultural and literal borders. Through a case study approach, the course engages questions related to the construction of ethnic and racial identities in the United States; visual, material, and digital cultures; social thought and social issues; mass media and popular culture; gender and sexuality; citizenship and nationhood; art, literature, and performance; and American imperialism.

L98 AMCS 230 Topics in Urban America

This course foregrounds the interpretive and analytical approaches used in the study of American cities. The city is a crucial frame for understanding the nation's cultural, economic, social, political and ecological concerns and evolution. Employing multiple perspectives, we interpret urban space as a product of culture, explore the city's importance in shaping American society, and investigate the ongoing evolution of the built environment. This course lays the basis for interdisciplinary thinking and research in American culture studies. The topic varies by semester. Please refer to course listings for a description of the current offering. The course is ideal for AMCS majors and minors, but others are welcome. This course fulfills the introductory course requirement for AMCS students.

Credit 3 units. BU: BA, HUM

L98 AMCS 236 Cultural History of the American Teenager

This course explores the recent history of the teenager in the United States, from the rise of teen culture in the 1950s to the current state of adolescence in the new century. Why have so many novels and films memorialized adolescence? How has the period of development been portrayed in books and film? How have depictions and attitudes toward teen culture changed over the past 60 years? In our consideration of teen culture, we take a multidisciplinary approach when tackling a variety of materials -- including historical readings, literary fiction, young adult fiction, comic books, popular films, and popular music -- in an attempt to come to a better understanding of how the notion of the American teenager has evolved over the past sixty years. We begin with J.D. Salinger's classic novel of adolescence alienation, "The Catcher in the Rye," a book that in many ways helped initiate the rise of the youth movement in the 1950s and 1960s. Our readings focus on the middle decades of the 20th century, when teen culture moved to the forefront of American life, but we end the semester by considering how teen life has recently been imagined in such novels as "The Hunger Games." This course also discusses a few films, such as "Rebel Without a Cause" and "American Graffiti," which have helped shape our conception of the American teenager. Ultimately, we question what these depictions of teen culture can tell us about larger trends and concerns in American life. As this course serves as an introduction to American Culture Studies, we will focus on the different methods that we can employ when attempting to interpret and analyze American culture.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L98 AMCS 244 War, Rebellion and the Formation of American Identity, 1754-1865

This course surveys the United States' experiences with rebellion and organized armed conflict from the origins of the American Revolution until the Civil War. Though the class will deal with war, its focus is not on military tactics or the outcome of battles — indeed several of the conflicts it considers were entirely bloodless. Rather, the course utilizes war and rebellion as a prism through which to view the ways in which Americans conceived of themselves. Students address a number of questions such as how and why did people in North America conceive of themselves as distinct from Europeans? Did war lead to more inclusive or exclusive views of who was considered "American?" How did people of different backgrounds view violent conflict? Why did some wars become central to American myth and others largely forgotten? Did war and rebellion promote a newly formed nationalism or did they help lead to sectionalism

and the Civil War? Readings consist of secondary materials from a range of disciplines and primary documents that include novels, speeches, newspaper articles, letters, memoirs, editorial cartoons, and paintings.

Credit 3 units. A&S IQ: HUM EN: H

L98 AMCS 244B Religion and Music in American Culture

In this course, students will examine public discourse on popular music as a way of understanding questions of religious identity and community formation. Through case studies ranging from the Pueblo Indian dance controversy of the 1920s to post-9/11 disputes about the Islamic call to prayer, students will consider how debates over what "counts" as sacred or secular music reveal disputes over notions of religious authority and authenticity in American culture.

L98 AMCS 253 Sports & Society: Histories of American Sports

Commercialized spectator sports are a hugely influential part of American culture, politics, and economics. However, the story of how they got that way is too often assumed to be straightforward and self-evident. In this course, we will complicate such assumptions by examining the complex cultural web of American sports history and exploring the people, power structures, and social contexts in which our athletic games have developed, from the Civil War to the present. We will pay particular attention to matters of gender and race in traversing these histories, and students will be asked to consider the ramifications of sociocultural development in sports for American culture at large (and vice versa). Among the topics in sport that we will consider in detail are amateurism, commercialization, masculinity, mass mediation, and violence. We will analyze particular athletes of significance from the last 150 years, including Jack Johnson, Althea Gibson, Muhammad Ali, Serena Williams, Michael Jordan, and others. At the same time, we will examine the forms of media that shape our narratives and understandings of the competitions we consume. In addition, we will consider transnational competitions like the Olympics, which bring American conflicts over race and gender into a global context. No prior sports knowledge is necessary to enroll in the class. Students put themselves on the waitlist and will be enrolled manually by the registrar. Five seats are reserved for each class year for a total of 20 students. This course is affiliated with "Sports & Society: Culture, Power, and Identity," an American Culture Studies program initiative focused on the intersections of athletics, identity, and social power.

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA EN: H

L98 AMCS 254 Topics in AMCS: A Year in Review: Hindsight is 2020: Piety, Pandemic, and Politics

What was 2020? This course examines a year that will be remembered alongside 2001, 1968, 1945, 1929, 1865, 1800, and 1776 as one of the most consequential in American history and culture. We will consider how the COVID-19 global pandemic, the bitterly contested 2020 Presidential election, and a summer of renewed protest for social justice reverberated through spheres of American arts, culture, education, energy, health care, labor, religion, sports, the university, technology and more. A series of guest experts from Washington University and around the country will provide instruction via lecture once per week, with students sharing their own experiences and analysis in discussion sections during the other weekly course meeting. The course is open to all, but it is geared toward first-year students and sophomores. It fulfills the Intro course requirement

in the AMCS major. This is a variable topics course for courses best suited to the reviewing of a significant year in American Culture Studies. Topics vary by semester, so please see the current course listing.

L98 AMCS 256 Imaging Interdisciplinary: The Interdisciplinary Workshop in American Culture Studies

Why study American culture? In this workshop we explore some of the many answers to this provocative question, as well as some of the objects of study available to us as students of American culture. Intended as a foundation for the American Culture Studies (AMCS) major and minor, the course is practical, exploratory and discussion-oriented. It helps students to get acquainted with AMCS as a community while imagining the types of projects that get done there. Sessions feature guest speakers, field trips to sites of cultural interest, and short readings that introduce different approaches to American culture studies. Students also examine the methods and questions that define their other field(s), and identify topics and fieldwork projects that especially engage them. Along the way, they are mentored by one of the program's Undergraduate Harvey Scholars, and helped to locate themselves in an inter-departmental program that supports a wide range of intellectual pursuits. The final assignment is a contribution to the "anthology project," a student-generated compilation of resources and readings that will be shared with future AMCS students.

Credit variable, maximum 1 units.

L98 AMCS 257 From Champagne to Champlain: French Culture in North America

Taught in English. Following Champlain's founding in 1604 of the first French settlement in Nova Scotia (formerly Acadia), the French began to build what they hoped would be a vast empire, from Quebec to the Gulf of Mexico. Over the next 200 years, French culture and language spread throughout North America and could well have been the dominant one in this country had history moved in different directions. This course examines the history, literature, religion, architecture, music, and cuisine of the vast territory known as "New France." Through use of conventional textual documents, as well as films, slides, CDs, and field trips to Missouri historical sites, it will expose the student to the continuing richness of French culture all around us. Drawing on local resources (e.g., Fort de Chartres, Cahokia Courthouse, and Sainte Genevieve), students will learn about many fundamental connections between America and France. Topics include early explorations, Jesuit missions, literary representations of the New World, colonial architecture, the French and Indian War, the Louisiana Purchase, Cajun and Mississippian culture.

L98 AMCS 2580 Families and Social Inequality

Families have changed dramatically in recent decades in the United States. Dual-earner families, single parents, cohabiting families, and blended families are now common in the contemporary family landscape. The prevalence of increasingly diverse and complex family configurations varies substantially by social class, race and ethnicity, and gender. Men's and women's work and family lives have also become more similar over time, but gender inequalities in child care remain significant. Drawing on insights from sociology, demography, and economics, this course aims to understand the causes and consequences of social inequalities in family life. The course focuses primarily on the contemporary U.S. context, but also explores historical and cross-national variation in families. The course also considers the role of social policy in affecting inequalities. No prerequisites.

L98 AMCS 261 The Cultural Lives of Things: An Introduction to American Material Culture

American culture is so often defined by its obsessive attachment to material things — the iPhones, coffee cups, favorite t-shirts and Harley-Davidson motorcycles that fill our everyday lives. This course will explore our contradictory relationship to such objects — the possessions that serve practical functions and give us a sense of identity, meaning and power, but just as often come to possess or control us. How do things take hold of us? What gives them potency, value, and cultural significance? What psychological, social, economic and political purposes do they serve? Do Americans have a distinct relationship (or a dysfunctional attachment) to their possessions? In answering such questions, we will consider objects of all kinds, from the mundane and utilitarian to the strange, rare and often-fetishized. We will explore their histories, their participation in regimes of commodification and power, their everyday and symbolic functions — in short, the twists and turns of their rich cultural lives. The course will introduce different strategies for interpreting objects as cultural evidence, drawing upon work in anthropology, art history, sociology, literature and museum studies, as well as theorists (Marx, Freud, Baudrillard and others) who have influenced modern conceptions of material life. Students should also look forward to some in-the-field analysis of different historic, museum, and personal objects around St. Louis (field trips!).

L98 AMCS 2651 Urban America

The city is a crucial frame for understanding the nation's cultural, economic, social, political and ecological concerns. This course discusses its importance in shaping American society and considers urban environments as living, breathing, contracting and expanding regions in the landscape. Questions of race, class and gender will be explored in an attempt to understand the current configuration of American cities, and to allow students to engage meaningfully with the continual transformation of urban space. Attention will be paid to the role played by popular imagination in the formation of public policy, civic spatial arrangement, suburban development and urban historical geography.

L98 AMCS 2674 Sophomore Seminar: Slavery and Memory in American Popular Culture

Sophomores receive priority registration. The history of slavery has long created a sense of unease within the consciousness of many Americans. Recognizing this continued reality, this seminar examines how slavery is both remembered and silenced within contemporary popular culture. Although slavery scholarship continues to expand, how do everyday Americans gain access to the history of bondage? Taking an interdisciplinary approach to these intriguing queries, we will examine a range of sources: literature, public history, art/poetry, visual culture, movies and documentaries, as well as contemporary music including reggae and hip-hop. The centerpiece of this course covers North American society; however, in order to offer a critical point of contrast, students will be challenged to explore the varied ways slavery is commemorated in others parts of the African diaspora.

L98 AMCS 270B Sophomore Seminar: U.S.-China Relations: Perceptions and Realities

The United States and China are the two most important global powers today, and the bilateral relationship is one of the most comprehensive, complex, consequential, and competitive major-power relations in the world. The course aims to examine the attitudes, ideas, and values that have shaped the relationship, from the era of colonial expansion in the 1800s to the rise of China as a major political and economic power in the 21st century. Drawing upon visual images, literature, films, policy statements, and other materials, the course will analyze the patterns of perceptions that have informed and shaped the understanding of realities. This course, which uses an interdisciplinary approach, will include discussions and debates from both American and Chinese perspectives.

L98 AMCS 271 The American Musical Theater Songbook

From its birth in vaudeville and musical reviews to current future classics such as "Hamilton," American musical theater has produced a voluminous catalogue of material referred to herein as the "American Musical Theater Songbook." Part survey and part performance, this course will focus on the composers, lyricists, performers and subject matter that have been instrumental in defining musical theater and its role in describing a continually evolving human psychology and sociology. The performance aspect of the course will develop students' existing vocal skills and knowledge of style. As both singing and non-singing students are welcome to participate in the course, adjustments for non-singing students will be accommodated so that they may participate fully in the class. The format of the course will be a seminar of student-generated presentations, discussions, and workshop performances. A sampling of shows from which repertoire will be sourced includes the following: early song-and-dance shows ("Girl Crazy," "Anything Goes," "Kiss Me Kate"); Rodgers and Hammerstein ("Oklahoma!," "Carousel," "South Pacific"); Stephen Sondheim ("Gypsy," "Sweeney Todd," "Sunday in the Park With George"); modern era ("West Side Story," "A Chorus Line," "Cabaret," "Hair," "Pippin"); and contemporary ("In the Heights," "Caroline, or Change," "Kinky Boots," "Dear Evan Hansen," "Hamilton"). This course serves as a prerequisite for L15 372.

L98 AMCS 2710 First-Year Seminar: Beyond the Melting Pot: Life in Immigrant America

This course uses a sociological lens to explore contemporary immigration to the United States. The more than 43 million immigrants living in the United States today come from across the globe. Their reasons for migrating to the United States are complex, as are the laws, policies, and social structures they must navigate before and after their arrival. In the first half of the course, students will get to know Mexican immigrants who split their lives between Brooklyn and their small hometown in Mexico, fourth-generation Chinese Americans who are still asked, "Where are you from?", and West Indian immigrants forced to confront a U.S. racial order where they are defined by their Blackness. In the second half of the course, students will learn about Iranian-American youth navigating life in post-9/11 America and the challenges of becoming a young adult when one learns that they lack any legal status. Who are these immigrants? Why and how did they come here? How well are they and their children integrating into American society? Readings will be drawn from sociological research that opens windows into the lives of immigrants in America. Students will also conduct their own hands-on research to better understand life in immigrant America. No prerequisites. Open to first-year students only.

L98 AMCS 280A African-American Religions

This course is an introduction to African-American religions. This course attends to change wrought in indigenous African religions by enslavement, the adoption of Christianity (and severe critiques of it) by slaves themselves, the building of African-American denominations, the rise of new black religious movements, and the role of religion in contemporary African-

American life. At every stage of the course, religion is discussed with reference to key political developments in broader African-American history African diasporic history. The course proceeds in three parts. The course begins with a brief introduction to key themes and problems in the study of African-American religions. For example, is there such thing as a "black church," and how does the study of African-American religion differ from the study of other religious groups or traditions? The second part, the bulk of the course, moves chronologically and situates African and African-American religions in their shifting cultural and political contexts from the beginning of the European slave trade to the present. We will discuss African-Americans' practice of several religious traditions: creole African religions, Islam, Protestant and Catholic Christianity, and new religious movements. The final part of the course focuses on several key issues and debates that are informed by the study of African-American religions and that have important connections with contemporary American life.

L98 AMCS 288 Muslims in the Media and Popular Culture

In the post-9/11 context of the United States, Muslims have been a constant presence in news media, typically cast in a negative light as political others who are backwards, threatening, and inherently prone to violence. This pattern has long been replicated in films in which Muslims serve as static and dehumanized perpetrators of violence and/or as symbols of a backwards and depraved culture, antithetical to U.S. values and interests. In recent years, however, Muslims have become increasingly visible in the entertainment industry as protagonists and producers of their own media, including G. Willow Wilson's "Ms. Marvel," Hulu's "Ramy," and Netflix's "Man Like Mobeen." This course explores a selection of recent media projects created by Muslim writers, actors, musicians, and comedians. We will be pairing films, television shows, music, and comics with scholarship on Islam and religion in the media to analyze Muslim representation and storytelling in contemporary popular culture. We will evaluate these works on their own terms, noting the ways in which gender and racial hierarchies dictate who gets to represent American Muslims while also assessing how these new media both disrupt and further reify Muslims' construction as religious and political outsiders.

L98 AMCS 2881 Free the Land: Black Histories of Environmental Racism

Black history is inextricable from the study and discussion of environmental racism and environmental justice in the United States. Environmental racism is defined by Dr. Robert Bullard ("the Father of Environmental Justice") as "any policy, practice or directive that differentially affects or disadvantages (where intended or unintended) individuals, groups or communities based on race." This course expands and illuminates this definition through examinations of watershed moments -- from the Transatlantic Slave Trade to struggles in the Greater St. Louis area today -- in which Black communities bear the deadly brunt of toxic fumes, poisoned groundwater, nuclear waste, perilous disaster work, land theft, and the slow violence of

biological extermination. Throughout the semester, we will read scholarly texts, engage primary sources, analyze popular and independent media, and study testimony and self-published materials from Black activists.

Credit 3 units. A&S IQ: SSC, SC BU: BA EN: S

L98 AMCS 290 Islamophobia & U.S. Politics

The presence of Muslim minorities in the West is increasingly divisive as political leaders appeal to voters' fear of the 'Other' to promote Islamophobic agendas that reshape immigration and asylum policies and redefine Western identity as Christian. Politicians further exploit the rise of extremist groups like ISIS to justify anti-Muslim rhetoric and critique multiculturalism, claiming that Islam and the West are inherently antithetical. In this course we examine the phenomenon of Islamophobia as a form of anti-Muslim racism that parallels hostility towards other religious and racial minorities in the US. We explore how while the post-9/11 context gave way to an increase in incidents of anti-Muslim violence, contemporary manifestations of Islamophobia are deeply rooted in state level anti-black racism from the early twentieth century, as well as in anti-Muslim attitudes that date back to the colonial period. By examining academic literature, political speeches, and news media sources, we situate Islamophobia within its historical context and also analyze how US anxieties about Islam and Muslims are not only gendered and racialized, but also exist across the political spectrum.

L98 AMCS 290A Latinx Art

What is Latinx art? This seemingly simple question holds a number of complicated, contradictory answers. Latinx art is art created by (and often for) Latinx communities in the United States, but who determines the scope of representation? Is Jean-Michel Basquiat, the famed Haitian-Puerto Rican-American of 1980s NYC, a Latino artist? How about the Cuban-born Ana Mendieta, who lived and worked primarily in the United States? This course will consider who gets counted as Latinx in the art world and why. Topics covered include the Chicano/ a movement in the 1970s, the Border Art movement in the 1980s and 1990s, the rise of "multiculturalist" rhetoric in the United States, and the contemporary global art market and its relationship to the category "Latinx." We will also consider issues of gender, sexuality and race, as they pertain to Latinx artists. This is an introductory course, and requires no prior knowledge of Art History or Latinx Studies. Prerequisites: none

L98 AMCS 2910 Alternative Facts: An Introduction to the Social Construction of Reality

This course acts as an introduction to the concept of social construction — the idea that an "objective" reality is shaped by one's social positions and through social interactions. Recent political events and social conflicts highlight deep divisions in American society, raising critical questions about the media and objectivity (e.g., alternative facts and "fake" news), networks and segregation (e.g., who talks to whom), who gets to decide what is viewed as "truth," and the role of researchers and academia in combating (or contributing to) misinformation. This course explores these questions through a sociological

lens. Students will use foundational sociological theories to learn how to recognize the existence of multiple realities, and consider the implications of social constructionism for key domains of everyday life, American politics, and the production of knowledge. Students will also evaluate the ways that cutting-edge technological innovations and academic research can — or cannot — help people distinguish facts from "alternative" facts. No prerequisites.

L98 AMCS 297 Undergraduate Internship in American Culture Studies

Students receive credit for a faculty-directed and approved internship. Registration requires completion of the Learning Agreement, which the student obtains from the College Office and which must be filled out and signed by the faculty sponsor and the program prior to beginning internship work. The credit earned should correspond to actual time spent in work activities; for example, eight to 10 hours a week for 13 or 14 weeks to receive 3 units of credit, or 1 or 2 credits for fewer hours or work per week. Students are encouraged to obtain written evaluations of their work for the their academic advisor and career placement file. Prerequisite: Permission of department. Only AMCS majors and minors may enroll.

Credit variable, maximum 3 units.

L98 AMCS 298 Directed Fieldwork in American Culture Studies

Fieldwork under the direction of an AMCS-affiliated faculty. All proposals for study must be submitted for review and approved by the AMCS adviser. Visit the AMCS website for the appropriate form. By permission of instructor.

Credit variable, maximum 3 units.

L98 AMCS 299 The Study of Cities and Metropolitan America

This course serves as the introductory course analyzing the forces shaping America's cities and surrounding metropolitan areas. It examines, as well, strategies for dealing with many of the profound social issues affecting urban/metropolitan America. Emanating from an historical perspective, it examines the ways in which industrialization and deindustrialization shaped Northern American cities and the consequences of deindustrialization on urban citizenry. It further surveys the demographic and spatial transformation of American cities, examining the consequences of urban transformation on federal, state and local politics, on society and on her institutions. Similarly, the course focuses on the origin and societal changes and emerging goals of urban development, gentrification and evolving patterns of metropolitanism and the necessity for central city as well as neighborhood reconstruction. The dynamics of racial residential segregation, crime and punishment, issues of academic achievement and under-achievement, the social cleavages of urban marginalized communities, family structure, urban homelessness, urban sprawl, and health care, among others, are viewed from the perspective of social justice by exploring social, political, economic, racial and ethnic factors that impact on access, equity and care. Various theoretical perspectives and philosophies are introduced that have dominated the discourse on race and urban poverty. A field-based component complements the course work, and is designed to build interest, awareness and skills in preparation for outreach to urban communities. Prerequisite: sophomore standing.

L98 AMCS 3006 Local Archives: Directed Study in St. Louis

Students register for this course for directed study with an AMCS-affiliated faculty member. All proposals for study must be submitted for review and approved by the AMCS advisor. Consult the AMCS academic coordinator for more information. Prerequisite: Permission of instructor.

Credit variable, maximum 3 units.

L98 AMCS 300D From Shaft to Django: The History of Blaxploitation Film

Hollywood was in steep decline in the late 1960's. On the brink of collapse, the film industry was rescued by an unprecedented boom in films that featured Black casts and targeted Black audiences. Narratives of slick-talking hustlers and afro-sporting femme fatales intent on "sticking it to the man," these would come to be known as Blaxploitation films. This class will historically contextualize and critically examine the Blaxploitation phenomenon of the 1970's. We will explore what led to the emergence of Blaxploitation, the peaks of its popularity, the controversies that surrounded it, its rapid demise, and its lasting influence. Blaxploitation was a brief, bombastic and highly polarizing era in the history of American film. Heralded by some as a revolution in representations of Black empowerment and by others as pandering to longstanding racial stereotypes. Indeed, its influence on Black culture stretches beyond the 1970's and into cultural realms beyond the silver screen. While this is primarily a film course emphasizing close readings of canonical Blaxploitation cinema, we also will explore: Blaxploitation soundtracks (i.e., Curtis Mayfield and Isaac Hayes), Black Pulp Fiction novels that inspired the films (i.e., Ernest Tidyman and Sam Greenlee), the aesthetics of Blaxploitation promotion via the Black Film Promotional Material Collection located in the Julian Edison Department of Special Collections, and finally we will consider how Blaxploitation aestheticism influenced subsequent cultural movements like the 1990's renaissance in Black film, Hip-Hop and contemporary satire.

L98 AMCS 3014 American Popular Music and Media

This course considers the history of American popular music as delivered by successive mass media platforms in the industrial and post-industrial eras: from mass-produced sheet music in the mid nineteenth century to digital music and video on the internet. Historical contextualization and in depth analysis of musical scores and various kinds of audio recordings and audiovisual texts will be at the center of the course. Topics to be considered include: the history of sound recording technologies and formats; the role of electronic mass media structures (radio, film, television, the internet); urbanization, national commercial music centers (New York, Hollywood, Nashville), and the importance of regional sounds in a national context; the formation and transformation of select genres (rock, country, various black musics); legal frameworks relating to music as a commodity (copyright, sampling); the impact of visual media on music dissemination, performance, and meanings; and how recorded media of all kinds have transformed the act of listening. Issues of race, gender, sexuality, personal, and national identity will be considered across the course.

L98 AMCS 3015 Topics in Popular Culture: End of the Century: American Culture During the 1990s

Starting with Allan Bloom's *The Closing of the American Mind*, a book that helped re-ignite the Culture Wars, this course considers the debates and problems that pervaded American culture during the 1990s. From the end of the Cold War to the sexual scandals that rocked Bill Clinton's presidency, from the emergence of the internet to the rise of grunge and rap, the 1990s were a time of vast change in American culture. It was a period when we, as a nation, reconsidered the legacy of the 1960s, the Reagan revolution, and the end of the Cold War, a time of economic expansion and cultural tension. In our consideration of the 1990s, we consider a variety of materials — ranging from news reports and political essays, literary fiction (Philip Roth's *The Human Stain* and Jonathan Franzen's *The Corrections*) and popular films (Spike Lee's *Do the Right Thing* and The Cohen brothers' *The Big Lebowski*), to the music of Nirvana and Public Enemy — in an attempt to come to a better understanding of our recent history. By examining a wide variety of texts, we not only explore the cultural and political questions that Americans faced in the years between the fall of the Berlin Wall and the terrorist attacks of September 11, 2001, but also come to a better understanding of how cultural studies can be performed.

L98 AMCS 3018 Race, Ethnicity, and Immigrants' Experiences in Present Day United States

Issues surrounding race, ethnicity, and immigration have become increasingly intertwined politically and publicly in the United States during the first 20 years of the 21st century. This course examines current social and political environments and the circumstances that surround these issues. We begin with a blunt examination of political and social conditions that surround these experiences, continue by considering existing theories that attempt to explain the social and political dynamics that account for current relations, and finish out the course by reading recent studies that address specific facets of race, ethnic, and immigrant circumstances and experiences, including variations in access to equitable education, economic opportunities, political representation, and technological resources.

L98 AMCS 301B Individual and Community

What social, political, and cultural forces shape the individuality of people and yet make them part of not just one community but many, each of which is greater than the sum of the individuals that comprise it? What role do families and friends fill in this process? Students explore answers to these questions by reading theories and case studies that try to explain the foundations of individuals' sense of self and the interdependence and responsibilities of individuals, families, and communities to one another. Cases students read highlight (1) how family and communal experiences (like school) influence individuals and (2) how virtual (online) and non-virtual communities are structured and sustained as social entities. In addition to readings, the class will rely on guests from the "real world" as well as field trips into virtual and non-virtual communities. AMCS Majors may count this course for Fieldwork credit with permission of instructor; a supplemental assignment might be required.

L98 AMCS 3028 Music of the 1960s

The music of the 1960s played a significant and widely noted role in an era of global political and social upheaval. This course surveys a broad range of music produced during the decade, spanning the world but with emphasis on Anglo-American popular music. While a music course traditionally deals with a single genre such as "world music," classical or jazz, this course analyzes several genres together to show how each influenced the others and how all were informed by broader social and cultural concerns. The course thus both familiarizes students with diverse musical traditions and introduces them to a new way of thinking about music and culture. Topics discussed include the transnational music industry; the contested concept of "folk" and "traditional" music; music and political protest; music and migration; and music's relation to ethnic and class identity.

L98 AMCS 304B Survey of Brazilian Cultures: Race, Nation and Society

This course will introduce students to Brazilian culture from the colonial period to the present through literature, art, music, film and other cultural forms. The course gives a historical overview of Brazilian culture and society, exploring major sociohistorical and artistic moments from the colonial, imperial, and republican periods, and their "legacies" or influences on Brazilian society. Students will learn about the Amerindian, European, and African influences of Brazilian culture through the study of representative texts and cultural practices. The course also illustrates Brazil's place within Latin America and the world. The course will seek to deconstruct and expand preconceived notions of Brazil, such as Lusotropicalism and racial democracy. Classes will combine lectures by the instructor, student presentations, collective debates and cooperative learning, and will entail the use of required bibliography and audiovisual materials. Prereq. None.

L98 AMCS 305A Between Malcolm X and Martin Luther King, Jr.: Race, Religion, and the Politics of Freedom

This course focuses on the political and spiritual lives of Martin and Malcolm. We will examine their personal biographies, speeches, writings, representations, FBI files, and legacies as a way to better understand how the intersections of religion, race, and politics came to bear upon the freedom struggles of people of color in the United States and abroad. The course

also takes seriously the evolutions in both Martin and Malcolm's political approaches and intellectual development, focusing especially on the last years of their respective lives. We will also examine the critical literature that takes on the leadership styles and political philosophies of these communal leaders, as well as the very real opposition and surveillance they faced from state forces like the police and the FBI. Students will gain an understanding of what social conditions, religious structures and institutions, and personal experiences led to first the emergence and then the assassinations of these two figures. We will discuss the subtleties of their political analyses, pinpointing the key differences and similarities of their philosophies, approaches, and legacies; we will then apply these debates of the mid-20th century to contemporary events and social movements in terms of how their legacies are articulated and what we can learn from them in struggles for justice and recognition in 21st-century America and beyond.

L98 AMCS 3060 Current Affairs and Critical Issues in American Culture

What's in your newsfeed? Media outlets drive critical conversations and public discourse, and in this course students have the chance to keep up and weigh in. Students read the news and examine current affairs as they unfold week by week, critically analyzing and exploring modes of understanding, historicizing, and contextualizing contemporary issues in American society. The course introduces students to theoretical and conceptual frameworks for this engagement and asks questions such as the following: How are these issues related to the past? How have Americans experienced this issue before, and how is the contemporary context different? We will follow trends in pop culture, technology, politics, and society. Students learn to layer current issues with historical documents, the commentary of public intellectuals and cultural critics, and political, economic, and social policies. The course stresses research analysis, group process, critical thinking, multidisciplinary inquiry, and professional writing and speaking skills.

L98 AMCS 3066 American City in the 19th and 20th Centuries

This course will explore the cultural, political, and economic history of U.S. cities in the 19th and 20th centuries. The course will focus on New York, Chicago, St. Louis, Los Angeles, and Atlanta, although other cities may be included. Students will conduct significant primary research on sections of St. Louis, developing a detailed history of one of the city's neighborhoods. Much of the course readings address broad themes such as immigration, industrialization, deindustrialization, and race and gender relations in American cities.

L98 AMCS 3070 Politics and Policymaking in the American States

The American federal system is often overlooked in discussions about politics in the United States; however, state governments unquestionably touch the lives of Americans everyday. As such, an education in American politics is not complete without serious

examination of state governments and their political institutions. This course illuminates the importance of the American states in U.S. politics and policy making by critically examining topics such as: intergovernmental relations; the historical evolution of American federalism; the organization and processes associated with state legislative, executive and judicial branches; state elections; political parties; interest groups; and specific state policy areas including budgeting, welfare, education and the environment. Prerequisite: Pol Sci 101B.

L98 AMCS 3073 The Global War on Terrorism

This course presents an historical assessment of the Global War on Terrorism (GWOT) from the perspective of its major participants: militant Sunni Islamist jihadists, especially the Al-Qaeda network, and the nation states that oppose them, particularly the United States and its allies. The course then concludes by analyzing the current state and future of Islamist jihad and the GWOT.

L98 AMCS 3075 The American Radical Novel: Literature Versus Inequality

Intended to help students reckon knowledgeably, imaginatively, and articulately with our era of escalating social inequality, this course is a writing-intensive study of representative American radical novels stretching from the 19th-century abolitionism of Harriet Beecher Stowe's "Uncle Tom's Cabin" to the 21st-century dystopianism of Gary Shteyngart's "Super Sad True Love Story." Its main goals are (1) to introduce students to the long history and current significance of efforts to pit American literature against American inequality; and (2) to improve the quality of advanced student writing in the related fields of American Culture Studies and English literature. The first goal is pursued through close analysis of both radical novels and the contemporary political documents that inform them, juxtaposing such texts as Upton Sinclair's "The Jungle" and Karl Marx's "Communist Manifesto," Alice Walker's "Meridian" and Martin Luther King Jr.'s "Nonviolence and Racial Justice." The second goal is pursued through the hands-on analysis of successful rhetorical strategies sampled from The Hodges Harbrace Handbook, and, more importantly, from the scholarly writings of students themselves.

L98 AMCS 3081 City on a Hill: The Concept and Culture of American Exceptionalism

This course examines the concept, history, and culture of American exceptionalism — the idea that America has been specially chosen, or has a special mission to the world. First, we examine the Puritan sermon that politicians quote when they describe America as a "city on a hill." This sermon has been called the "ur-text" of American literature, the foundational document of American culture; learning and drawing from multiple literary methodologies, we will re-investigate what that sermon means and how it came to tell a story about the Puritan origins of American culture — a thesis our class will reassess with the help of modern critics. In the second part of this class, we will broaden our discussion to consider the wider (and newer) meanings of American exceptionalism, theorizing the concept while looking at the way it has been revitalized, redefined and

redeployed in recent years. Finally, the course ends with a careful study of American exceptionalism in modern political rhetoric, starting with JFK and proceeding through Reagan to the current day, ending with an analysis of Donald Trump and the rise of "America First." In the end, students will gain a firm grasp of the long history and continuing significance — the pervasive impact — of this concept in American culture.

L98 AMCS 3086 Living in a Material World

In the months after 9/11, President Bush urged Americans to buy cars and take vacations to show their patriotism and unity and also to send a message to terrorists that "our way of life" could not be stolen. Such calls to consume have often been made in times of crisis, and consumption has long been something of a national pastime (some would say a national pathology!). However, frugality, simple living, and ethical consumerism have also at times been declared American values, and they are now just as likely to be advanced by celebrities, entrepreneurs, or corporations as by political activists. This multidisciplinary course explores our complex and evolving relationship to materialism and materiality, focusing on moments in U.S. history when consumption has been especially consoling or haunting or when it has been aligned with ideas of the public good or social and political change. Along the way, we will study material goods that have been declared symbols of American values (e.g., soap, Tupperware, Harley-Davidson motorcycles, #MAGA hats); influential advertising campaigns and models of "good" and "bad" consumer behavior (e.g., shoplifting, hoarding, "good housekeeping," thrifting); and anti-materialist positions, from Thoreau's "Walden" to the Occupy Movement to today's "off-the-grid" cooperative-living communities. Students will write short analytical response papers, conduct a study of their own consumer practices, and do a final project on a recent "ethical consumption" campaign in historical perspective. This course counts as Multidisciplinary for AMCS students and as Visual Culture for Sam Fox students.

L98 AMCS 3091 Poverty and Social Reform in American History

This course explores the history of dominant ideas about the causes of and solutions to poverty in American society. We will investigate changing economic, cultural, and political conditions that gave rise to new populations of impoverished Americans and to the expansion or contraction of poverty rates at various times in American history. However, we will focus primarily on how various social commentators, political activists, and reformers defined poverty, explained its causes, and struggled to ameliorate its effects. The course aims to highlight changes in theories and ideas about the relationship between dependence and independence, personal responsibility and social obligation, and the state and the citizen.

L98 AMCS 3095 The Incas and Their Ancestors:**Archaeology of the Ancient Andes**

From the hyper-arid desert of the Pacific Coast to the high-mountain plateaus of the Andes more than 12,000 feet above sea level to the lush forested Amazonian lowlands, Western South America presents one of the most diverse natural and cultural environments in the world and one of the few places where social complexity first developed. Beginning with the earliest human occupations in the region more than 12,000 years ago, this course examines how domestication, urbanization, the rise of early states, and major technological inventions changed life in the Andes from small village societies to the largest territorial polity of the Americas - the Inca Empire. Students will become familiar with the major debates in the field of Andean archaeology. Together, we will examine archaeological evidence (architecture, art, ceramics, metals, textiles, plant and animal remains, etc.) from context of everyday life (households, food production, craft production) to the rituals and ceremonies (offerings, tombs) that took place in domestic and public spaces. We will also touch on the role of Andean archaeology in the context of national politics and heritage sustainability.

L98 AMCS 3120 African Immigration to the United States of America

The United States of America has historically been known as a "nation of immigrants." However, current rhetoric has brought this notion into question. This country has consistently been a magnet for millions of people from all over the world, and this course seeks broadly to understand recent African immigration. In Black studies, most attention has been paid to the forced migration of the enslaved during the Atlantic Slave trade. Studying 20th and 21st African immigration is key to truly understanding the Black experience in America. According to data from the U.S. Census Bureau, 2.1 million Africans live in America as of 2015. The majority of these migrants are from Sub-Saharan Anglophone Africa (Nigeria, Ghana, Kenya, South Africa), but they are also from war-torn countries such as Ethiopia, Eritrea, and Somalia. The primary focus of this course will be on contemporary African labor immigrants, including skilled professionals, children who arrived in the United States for family reunification, refugees, and winners of the Diversity Visa lottery who are now permanent residents. The migratory flux also includes people who were forced to leave their birth countries for political reasons as well as genocide.

Through the class, we will examine the "push and pull" factors of immigration. The second part of the course explores the lived experience of Africans in America, whether they are well educated as compared with other migrant communities or whether they are laborers. We will study the role of remittances, language barriers, paths to naturalization, and job opportunities once Africans reach American soil. Increasingly, repatriation (both voluntarily and forced), xenophobia and Islamophobia are challenges that rock African immigrant communities. Today, many Africans live between two countries: Africa and America. This transnationalism allows them to navigate different lives, stories, identities, and cultures. Several activities are organized in the African local community. There is a large group of Ghanaians, Kenyans, Egyptians, Senegalese, Nigerians, Ethiopians, and Somalians in St. Louis. We will invite these individuals to the class as guest speakers so that students can fully understand their multiple lives in the St. Louis metropolitan area.

L98 AMCS 3123 Introduction to Digital Humanities

It is a truism that computers have changed our lives and the way we think and interact. But in fact systematic efforts to apply current technologies to the study of history and culture have been rare. This course will enable students to consider how these technologies might transform the humanities. We will explore the various ways in which ideas and data in the humanities can be represented, analyzed, and communicated. We will also reflect on how the expansion of information technology has transformed and is continuing to transform the humanities, both with regard to their role in the university and in society at large. Readings and classwork will be supplemented by class presentations and a small assigned group project.

L98 AMCS 3130 Education, Childhood, Adolescence and Society

This course examines the social and developmental experiences of children and adolescents at the national and international level. Readings will focus on the development of children and adolescents from historical, sociological, psychological, and political perspectives. Students will examine how both internal and external forces impact the developmental stages of children and adolescents. Students will investigate the issues that impact children and adults such as poverty, war, media, schooling, and changes in family structure. Students will explore some of the issues surrounding the education of children such as the effects of high quality preschool on the lives of children from low income families and the connection between poverty and educational achievement. Students will focus on the efficacy of the "safety nets" that are intended to address issues such as nutrition, health, violence, and abuse. Throughout the course, students will review and critique national and international public policy that is designed to address the needs of children and their families throughout the educational process.

L98 AMCS 3131 Topics in Literature: Asian American Writings: Contesting American Constructions of the Alien Other

Called the "Age of Revolution," the Romantic Age of British literature, 1770-1830, witnessed the birth of new lyric forms, the effacement of traditional strictures on style and taste, and produced through poetic voice (and its quaverings and multiplications) what might be called, over simply, the modern subject. Within a developing discourse of human rights and personal freedom, this growing assertion through poetry of individual expressivity allowed William Blake to construct in a single work a visual and verbal "Jerusalem." It encouraged William Wordsworth to write a pathbreaking investigation of the sources of his own creativity that challenged conventional restraints on what topics can, and cannot, be confessed in poetry. Beginning with these two poets, we will consider the historical contexts, and the sometimes competing histories of ideas, that shaped the five major British Romantic poets: Blake, Wordsworth, Samuel Taylor Coleridge, Lord Byron, and John Keats. We will follow an anthology for much of the poetry, including the poems and prose of influential contemporaries (female as well as male) who included the political philosopher Edmund Burke and Mary Wollstonecraft. Texts also to be assigned will include Mary Shelley's *Frankenstein* and Byron's *Don Juan*.

L98 AMCS 314B Global Circuits: Religion, Race, Empire

This seminar explores how American entanglements of race and religion shape and are part of larger global processes. Over the course of the semester, we will investigate these entanglements through conceptual, historical, and ethnographic questions about and insights into the remapping of religious traditions and communal experiences onto imperial terrain. We will examine this through a range of problem spaces, including colonial rule and racial hierarchies; religious difference and migration; the racialization of religion; diaspora and empire; persecution and power; and global geographies of the War on Terror. This course is not an exhaustive account of the enmeshment of race and religion in the United States or globally. Rather, this course aims to critically unpack formations of religion and race and their contemporary mediation by American geopolitics.

L98 AMCS 314S Sociolinguistics, Literacies, Schools, and Communities

Literacy learning and development within a thriving community require attention to the linguistic, cultural, and economic diversity of students. Within an era of state standardization and accountability, it is imperative to use a systems approach in education that unites homes, schools, and communities. Differentiating instruction to meet the needs of all students, including English language learners and other traditionally marginalized groups of students, is essential. This course will introduce students to sociocultural theories of literacy across settings. It will prepare students to analyze how race, ethnicity, class, gender, and language influence the development of literacy skills. We will develop a multifaceted view of literacy that is embedded within culture and that acknowledges the influences of social institutions and conditions. We will incorporate strategies for individual student needs based on students' backgrounds and prior experiences to deliver differentiated instruction and to teach students to set learning goals. Offered in fall semester only.

L98 AMCS 315B Virtues, Vices, Values: Regulating Morality in Modern America

This course takes morality and the question of "what's right" seriously as a lens through which to understand and assess modern American history. "Morality" is, of course, a devilishly flexible rhetoric, a language invoked to tell people how to act and how to be good, or, conversely, to criticize and to shame. When the state or a community wants its citizens or members

to be "good," it crafts laws and creates customs to encourage or inhibit behaviors. Yet "good" is a contested concept, especially in a diverse, multiracial society. Thus this class examines a) how state and non-state actors, including religious leaders, have attempted to regulate the lived experiences of Americans and b) the conflicts that emerge over what, exactly, is correct, or right, or good for individuals, society, and the state. To what degree does calling something moral or immoral articulate or obstruct policy solutions? What do political coalitions oriented around "values" accomplish? Is it possible to hew to moral frames and remain inclusive and tolerant? Topics may include marriage, abortion, immigration, alcohol, incarceration, disease, money, and medical care.

L98 AMCS 3173 Queer Histories

Queer history is a profoundly political project. Scholars and activists use queer histories to assert theories of identity formation, build communities, and advance a vision of the meanings of sexuality in modern life and the place of queer people in national communities. This history of alternative sexual identities is narrated in a variety of settings — the internet as well as the academy, art and film as well as the streets — and draws upon numerous disciplines, including anthropology, geography, sociology, oral history, fiction and memoir, as well as history. This discussion-based course examines the sites and genres of queer history, with particular attention to moments of contestation and debate about its contours and meanings.

L98 AMCS 317S Community Engaged Learning:**Documenting the Queer Past in St. Louis**

Around the United States and the world, grassroots LGBTQ history projects investigate the queer past as a means of honoring the courage of those who have come before, creating a sense of community today as well as building an understanding of the exclusions and divisions that shaped these communities and that continue to limit them. In this course, we participate in this national project of history-making by helping to excavate the queer past in the greater St. Louis region. Course readings will focus on the ways that sexual identities and communities in the United States have been shaped by urban settings since the late 19th century, with particular attention to the ways that race, class, and gender have structured queer spaces and communities. In their community service project, students will work with local LGBTQ groups, including the St. Louis LGBT History Project, to research St. Louis's queer past. Each student will also conduct an oral history interview with an LGBTQ community member. Note: This is a community-engaged learning class, which means that it combines classroom learning with outside work at a community organization. In addition to regular class time, there is a service requirement, which necessitates an additional three to five hours per week. Before beginning the community service component, students must complete required training. Prerequisite: Introduction to Women, Gender, and Sexuality Studies; Introduction to Queer Studies; or permission of instructor.

L98 AMCS 3192 Surveillance & the City

In 2014, the urban street artist Banksy painted a mural of three government agents flanking a public telephone booth, each using spy gadgets to listen, record, and transmit a copy of the conversation had within. His work reflects the emergent concerns of citizen surveillance in Western democracies and the techno-logics of 21st-century political reality, where persistent monitoring, invisible identification, and data collection are features of both government control and data-driven capitalism. The rise in technological sophistication in both the capture and assessment of data makes adoption at scale by city governments affordable and relatively noncontroversial. But as the surveillance of bodies, habits, associations, and identities becomes more naturalized in the governing and policing institutions of urban areas, legal safeguards lag behind, concepts like privacy and security become fuzzier, and existing inequalities of race and class become hardcoded in the techno-systems supposedly designed as neutral tools. This fieldwork class will explore St. Louis as a landscape of the always observed, from community-level realities to online experiences. Readings and class discussions will be complemented by field trips to sites in the St. Louis region to interrogate the practice of observation in situ among different zip codes and communities where the blanketing presence of surveillance practices and surveillance technology warps a relationship to place; amplifies racial, cultural, and class inequalities and disenfranchisements; consolidates social and political control; and replaces human accountability with the veneer of the objective and rational machine.

L98 AMCS 321B American Religion and the Politics of Gender and Sexuality

Religious beliefs about gender and sexuality have long played a vital role in American politics, vividly evident in debates over such issues as birth control, pornography, funding for AIDS research, abstinence-only sex education, sexual harassment, same-sex marriage, abortion, and more. Educated citizens need to understand the impact of these religiously inflected debates on our political culture. This course explores the centrality of sex to religion and politics in the U.S., emphasizing Christianity (both Protestant and Catholic forms) and its weighty social and political role regulating the behavior of adults and children as well as its uses in legal and judicial decisions. Alongside scholarly readings in gender and sexuality, we will discuss popular devotional texts on gender and sexuality with a political bent. Students will leave the course able to analyze how religious beliefs about sex shape specific gender norms central to U.S. politics and the law.

L98 AMCS 321C Introduction to Colonial Latin America until 1825

This course surveys the history of Latin America from the pre-Columbian civilizations through the Iberian exploration and conquest of the Americas until the Wars of Independence (roughly 1400-1815). Stressing the experiences and cultural contributions of Americans, Europeans, and Africans, we consider the following topics through primary written documents, first-hand accounts, and excellent secondary scholarship, as well as through art, music, and architecture: Aztec, Maya, Inca, and Iberian civilizations; models of conquest in comparative perspective (Spanish, Portuguese, and Amerindian); environmental histories; consolidation of colonialism in labor, tributary, and judicial systems; race, ethnicity, slavery, caste, and class; religion and the Catholic Church and Inquisition; sugar and mining industries, trade, and global economies; urban and rural life; the roles of women, gender, and sexuality in the colonies. Geographically, we will cover Mexico, the Andes, and to a lesser extent, Brazil, the Southwest, Cuba, and the Southern Cone. Pre-modern, Latin America.

L98 AMCS 321D Debating Cultures: Inclusion & Expulsion, Memory, and Erasure in the Hispanic World

In this course, we will analyze and discuss the ways in which the Hispanic world has lived, regulated and represented its great religious and cultural diversity. As we progress in our understanding of these multifaceted and varied responses, we will examine the two most important ethical choices that the Hispanic peoples of both sides of the Atlantic Ocean have had in front of them at different points in time: (1) the choice between inclusion and exclusion; and (2) the concerted decision to either memorialize or forget history and the consequences of having chosen to exclude or include certain individuals, ideas, religions or cultural aspects of society. The consideration of these two choices -- as they appear represented in laws, texts and images -- will help us acquire the ability to better understand the challenges and dilemmas that the various Hispanic peoples have encountered in the past and the decisions they continue to make in the present moment when confronted with diversity. Each module of this course will be anchored by an official document or policy that rubber stamped the decision to include, exclude, remember, or forget those who were different because of their origins, their religion, their language, their way of living, or their political choices. Examples of these laws or decrees are the Capitulations of Granada, the Edict of Expulsion of 1492, the New Laws of the Indies, the laws of land confiscation of the 19th century, the persecutions and censorship of the dictatorial regimes in both Spain and Latin America, and the recent Spanish law for the recovery of historical memory. Also, each module will begin in the past and end in the present, with an exploration of the contemporary consequences of those laws and policies. These diachronic studies will contribute to inform the analysis of both social issues and cultural artifacts, and they will enrich the class presentations and discussions. This course will have a strong, mandatory and graded oral communications component, and it is taught in Spanish. Prerequisite: Span 303 or Span 308E. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

L98 AMCS 321E Debating Cultures: Unveiling the Secrets of Fantasy, Magic, Mystery in Latin America

In this course we will explore a variety of Spanish American discourses (short fiction, essays, films, artwork) built around the unveiling of secrets, mystery, fantasy, and magic through the art of detection, whereby the reader or a viewer becomes engaged in the process of sleuthing, either alone or alongside the fictional figure of a detective. We will explore the creative and versatile ways in which Spanish American writers and artists make use of existing aesthetic paradigms--such as magical realism, literary gothic, fairy tales, science fiction, surrealism, film noir, and detective fiction, among others--as they adapt them to the diverse political, economic and socio-cultural realities of their countries. In many of these discourses, overarching themes of imagination, dreams, madness, criminality, and metaphysical search become intertwined with gendered sensibilities and heterogeneous perspectives profoundly embedded in socio-political realities. Some of the mysteries and crimes that often elude detection and punishment have to do with corruption and state-sanctioned violence, as it happens in the cases of systemic violence in Colombia, of the plight of the "disappeared" persons under the dictatorial regimes of the Southern Cone

(Argentina, Chile), or the systemic corruption surrounding narcotrafficking. Authors to be studied include Borges, Ocampo, Cardenal, Casey, Quiroga, Valenzuela, Cortázar, Rulfo, Paz Soldán, Téllez, García Márquez, Schweblin, Dávila, Vega Serova, Benítez Rojo, Bahr, and Enríquez, among others. This course is conducted in Spanish and has a strong, mandatory and graded oral component. Prereq. Spanish 303 or 308D. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, SC BU: BA

L98 AMCS 3221 Debating Cultures: Media, Materiality and Cultural Production in Greater Mexico and the U.S. -Mexico

This course is an invitation to explore the complex mediatic landscape of Greater Mexico and the U.S.-Mexico borderlands throughout the nineteenth and twentieth century. What did an early Spanish-language press look like in the United States? What are the connections it holds with the United Farm Workers publications later in the twentieth century? How did these publications interact with other platforms, such as Spanish-language radio? What are the political and cultural implications of hearing or seeing in the present-day militarized border zone? These are just some of the questions that we will collectively attempt to answer as we approach the cultural and artistic practices of the region. The course will deal with print, visual and aural culture, and you will have the chance to explore material such as Spanish-language newspapers, border ballads, radio, performance art, digital art and activism, among many others. We will discuss issues like ethnic identity, language, race, citizenship and gender, as they intersect with cultural production and its mediativity. Moreover, you will become familiar with transnational frameworks for the study of culture, critically engaging with the work of border studies exponents such as Gloria Anzaldúa and Ame'rico Paredes. This overarching approximation of the nineteenth and twentieth centuries is meant to encourage a comprehensive understanding of the cultural processes of the borderlands: its fluctuations, as well as the continuities it maintains with present-day border culture.

L98 AMCS 3237 The Art of Popular Song: From Folk and Musical Theatre to Rock and Contemporary A Capella

This course explores the art of songwriting through the lens of American popular music. Students examine landmark songs from multiple eras and create their own original songs in a variety of styles from the precursors of American music to folk, rock, pop, rhythm and blues, Broadway, and a cappella. The course materials include applied popular music theory while examining the musical languages of each genre. Through composing and arranging, listening and analysis, students gain insight into the sonic structure and cultural significance of popular music. The course also responds to students' individual interests and performance backgrounds, offering opportunities to write music for vocal ensembles, singer-songwriter formats, bands and electronic media. Traditional composition and contemporary production practices are examined in detail as students learn to critically listen and find their personal musical styles.

L98 AMCS 3255 Development of the American Constitution

The U.S. Constitution has been so long maintained because it has adapted to new circumstances. Contrary to common mythology, this adaptation goes far beyond formal amendment and court interpretation. But past performance is no guarantee of future results. The course examines the processes through which American constitutional democracy has developed, considers its successes and failures, and assesses some of its most pressing challenges. In doing so the course treats topics such as: the Electoral College; the justice system; executive powers in war and peace; Congress versus the president; regulation and taxation; civil rights and Reconstructions; amendment politics; and constitutional rhetoric and beliefs.

L98 AMCS 325B Cultures of Health in Latin America

This course is a survey of the cultural and political-economic aspects of health, illness, and embodied difference in Latin America. We will approach these themes from an interdisciplinary perspective with an emphasis on anthropology and history, exploring how local, national, regional, and global factors affect health and healthcare and how people experience and respond to them. Topics will include interactions between traditional healing practices and biomedicine; the lasting impacts of eugenic sciences on contemporary ideas about race and disability; the unequal impacts of epidemic disease; Indigenous cosmologies and healing systems; the politics of access to healthcare; the cultural and political specificities of reproductive health; and the intersections of race, gender, ethnicity, class, and bodily capacities in the pursuit of well-being. This course is designed for students of all levels interested in health and/or Latin American cultures. It will be taught in English.

L98 AMCS 327 Public Opinion and American Democracy

This course is about the salience of public opinion and its influence on American Politics. Topics covered include many of the theories developed to explain how public opinion is formed, if and why it changes, and the relationship between public opinion and the political behavior of citizens and elites. Therefore, the course describes and analyzes many of the factors that influence the formation, structure and variation in public opinion: information processing, education, core values, racial attitudes, political orientation (ideology and party identification), political elites, social groups, the media and religion. Additional topics include presidential approval, congressional approval, and the relationship between public opinion and public policy. The course also trains students in several concepts of statistical analysis (assuming no prior knowledge) so that students can use these tools as part of their own research projects. Prerequisites: previous course work in American politics or communications. Same as L32 Pol Sci 3211

L98 AMCS 3270 Comics, Graphic Novels and Sequential Art

This course traces the evolution of comics in the America from the "comic cuts" of the newspapers, through the development of the daily and Sunday strips, into the comic book format, and the emergence of literary graphic novels. While not a uniquely American medium, comics have a specifically American context that intersects with issues of race, class, gender, nationalism, popular culture, consumerism and American identity. Comics have repeatedly been a site of struggle in American culture; examining these struggles illuminates the way Americans have constructed and expressed their view of themselves. The way comics have developed as a medium and art form in this country has specific characteristics that can be studied profitably through the lens of American Culture Studies.

L98 AMCS 3272 The Superhero in American Culture

The superhero is an American cultural figure that enjoys great metaphoric resonance in contemporary America and about contemporary America, much as the Western did during the Cold War. But this metaphoric resonance has existed since the genre came into being with Superman in 1938 as part of the nation's response to modernity, and predates the creation of the genre through the hero figures that contributed tropes to the superhero genre. Through a cultural historical and transmedia approach, this course examines the superhero and the superhero genre as a myth medium and contested site for portraying and shaping ideas about American identity, masculinity, modernism, race, class, gender and humanity. The prehistory of the superhero is examined in 19th- and early 20th-century frontier stories, science fiction and pulp fiction. The definition of the superhero and the genre's evolution in comics, film, television, and fan-produced works are examined, with a focus on how the genre has served and mediated the conflicting needs of creators and audiences.

L98 AMCS 3273 American Graphic Storytelling and Identity

From editorial cartoons presenting African Americans in racist caricature during the Civil War and Reconstruction, to the appearance of the "Yellow Kid" in the comic strip "Hogan's Alley," to graphic narratives that reinforce (or challenge) racial and gender stereotypes in the late 21st, comics in the United States have long been preoccupied with identity. In this course students trace the development of identity as a major preoccupation in the comics medium.

L98 AMCS 3283 Introduction to Global Health

This course provides a general introduction to the field of public health. It examines the philosophy, history, organization, functions, activities, and results of public health research and practice. Case studies include infectious and chronic diseases, mental health, maternal and reproductive health, food safety and nutrition, environmental health, and global public health. Students are encouraged to look at health issues from a systemic and population level perspective, and to think critically about health systems and problems, especially health disparities and health care delivery to diverse populations. No background in anthropology or public health is required.

L98 AMCS 3296 Race & Ethnic Relations in the United States

This course is designed to explore relations within and between the racial and ethnic groups of the United States. Students examine the social, economic, and political similarities and differences of African Americans, Asian-Americans, Latinos, and New Immigrants that distinguish their American experience. Of particular interest are their respective experiences in relation to one another and the majority population for understanding the origins of conflict and unanimity within and between the different groups. Students will pay specific attention to events in Ferguson, Missouri, and the tensions between political leaders, policing and minorities more generally, the disproportionate levels of poverty experienced by African Americans and Mexican-Americans, and the vilifying of certain minorities by the majority population.

L98 AMCS 3303 Politics and Policies of Immigration in the United States

This class examines the history and politics of American immigration from colonial times to the present. It begins with an overview of the colonial period, then discusses the immigration waves of the 19th and early 20th centuries, and concludes with an examination of current topics and debates about immigration. Issues include racial, ethnic and class relations among groups; changes in immigration policies over time; comparative group experiences; transnational issues in immigration; and the impact of immigration on other American social and political processes and events. This class is a writing-intensive and modified version of Pol Sci 226/AMCS 202. Students who have taken that course should *not* take this course. Because this is a writing-intensive class, we also spend time studying research paper design and writing.

L98 AMCS 3304 The Politics of Black Criminality and Popular Protest

This course will explore the meanings and perceptions of Black criminality in modern American culture. It will consider issues of rioting and racial violence; movements ranging from hip-hop to Black power; the crucial matter of police brutality; and cultural associations between criminality and Black masculinity. Our work will be informed by an awareness of the historical interactions between African Americans and legal and other systems of authority: in particular, the ambiguous boundaries of legality under slavery, post-emancipation convict leasing, Jim Crow laws, Black gangs, and the functions of illegal acts in the lives of Black citizens. The course will give special attention to the ways that popular thought, imagination, and culture -- and particularly Black thought and culture -- have addressed crime. How does criminality connect to popular forms of protest, resistance, and discussions about inequality and identity?

L98 AMCS 330A Native American/Euro-American Encounters: Confrontation of Bodies and Beliefs

This course surveys the history and historiography of how Native Americans, Europeans and Euro-Americans reacted and adapted to one another's presence in North America from the 1600s to the mid-1800s, focusing on themes of religion and gender. We will examine the cultural and social implications of encounters between Native peoples, missionaries and other European and Euro-American Protestants and Catholics. We will pay particular attention to how bodies were a venue for encounter — through sexual contact, through the policing of gendered social and economic behaviors, and through religiously-based understandings of women's and men's duties and functions. We will also study how historians know what they know about these encounters, and what materials enable them to answer their historical questions.

L98 AMCS 3312 Gender and American Politics

This course examines the ways in which issues pertaining to gender are salient in U.S. politics. The course is divided into four parts. First, we will examine theoretical approaches to the study of gender and politics, including the use of gender as an analytical category, and the relationship between gender, race, ethnicity and power. Second, we will study gender-based social movements, including the suffrage and woman's rights movements, women's participation in the civil rights movement, the contemporary feminist and anti-feminist movements, the gay rights/queer movement and the women's peace movement. Third, we will examine the role of gender in the electoral arena, in terms of how it affects voting, running for office and being in office. Finally, we will examine contemporary debates about public policy issues, including the integration of women and gays in the military, sexual harassment, pornography and equal rights. L98 AMCS 334R Religion, Race, and Migration: Borders of Difference?

This seminar is an experiment in studying the intersections of religion, race, and migration through the idea of difference. We discuss how particular understandings of religion, race, and migration inform contemporary scholarship and shape national and international legal and governmental practices. Specifically, this course explores how difference-of community, body, and place-produces conditions of possibility. Over the semester, we will investigate various borders of difference, using binaries to guide our analysis. We will examine this through a range of problem spaces including: religion/secularism; race/ethnicity/sect; terrorist/citizen; and refugee/migrant. Ultimately, this course aims to critically unpack the relations of power by which people, places, and ideas are differentially constructed, maintained, and transformed

L98 AMCS 3350 Poverty and the New American City

This course is an exploration of the structural changes that are transforming the American urban landscape, especially for low-income populations. The course begins with a review of classic theories of urban poverty and considers their relevance in the modern context. Students will then analyze key political, economic, demographic, and geographic shifts in how urban poverty is organized and reproduced, including gentrification, immigration, social policy reform, and the credit crisis. Special attention will be devoted to exploring the social and political implications of changing urban policy approaches as well as the "suburbanization" of poverty. The course will conclude by discussing how urban poverty interfaces with broader social structures, including law, markets, and the state. Prerequisite: Successful completion of an introductory sociology course or permission of instructor.

L98 AMCS 3351 The Ancient Maya: Archaeology and History

This course focuses on the ancient Maya civilization because there are many exciting new breakthroughs in the study of the Maya. The Olmec civilization and the civilization of Teotihuacan in the Valley of Mexico will be considered as they related to the rise and development of the Maya civilization. The ancient Maya

were the only Pre-Columbian civilization to leave us a written record that we can use to understand their politics, religion, and history. This course is about Maya ancient history and Maya glyphic texts, combined with the images of Maya life from their many forms of art. The combination of glyphic texts, art, and archaeology now can provide a uniquely detailed reconstruction of ancient history in a New World civilization.

L98 AMCS 336 Topics in AMCS: Archiving St. Louis: The City as the Crossroads of the World

In 1904 a burgeoning St. Louis played host to the centennial commemoration of the Louisiana Purchase and the first Olympiad outside Europe, memorable events for the largest small city of the Midwest aspiring to emulate the cosmopolitan urban hubs of the north and east. The spectacle of the 1904 World's Fair featured hyperbolic optimism about the 20th century and about American identity as an emerging military, intellectual, and industrial-capitalist power. But for all the opulence and promise of world-building a better future, the Fair also highlighted many themes marking a cultural and political transition to the 20th century fraught with racial tension, colonialism and war, economic disparity, technological change, and decay of a "moral public." With the World's Fair serving as a backdrop, we'll explore the St. Louis region of this era from a number of vantage points, including industrialism and manufacturing (read: beers and cars), progressivism in technology and politics, urban planning, neighborhood formations, and racial separation and violence, among others. Our principle resource will be the substantial holdings of the Missouri Historical Society's archives, and we'll work with professional archivists to navigate our region's history and identity through a wide variety of primary materials. Regularizing the experience will help students understand the organizational culture and logistical methodologies of archives (including the principles of collecting, preserving, and accessing) while promoting independent research and generative research questions. This course satisfies the AMCS fieldwork requirement.

L98 AMCS 336C The Cultural History of the American Teenager

This course explores the recent history of the teenager in the United States, from the rise of teen culture in the 1950s to the current state of adolescence in the new century. Why have so many novels and films memorialized adolescence? How has the period of development been portrayed in books and film? How have depictions and attitudes toward teen culture changed over the past 50 years? We begin with J.D. Salinger's classic novel of adolescence alienation, *The Catcher in the Rye*, a book that in many ways helped initiate the rise of the youth movement in the 1950s and '60s. From there, we read a series of novels and historical studies that trace the changes in teen culture that have occurred over the past half century. Our class also considers a few films, such as *Rebel Without a Cause* and

Dazed and Confused, which have helped shape our conception of the American teenager. Ultimately, we question what these depictions of teen culture can tell us about larger trends and concerns in American life. Readings include Judy Blume's *Forever*, Stephanie Meyer's *Twilight*, and Colson Whitehead's *Sag Harbor*.

L98 AMCS 341A Gender in Society

This course acts as an introduction to the sociological study of gender. The primary focus of the course will be on U.S. society, but we will also discuss gender in an international context. From the moment of birth, boys and girls are treated differently. Gender structures the experiences of people in all major social institutions, including the family, the workplace, and schools. Students will explore how gender impacts lives and life chances. The central themes of the course are historical changes in gender beliefs and practices; socialization practices that reproduce gender identities; how race/ethnicity, class, and sexuality shape the experience of gender; and the relationship between gender, power, and social inequality. Prerequisite: Successful completion of an introductory sociology course or permission of instructor.

L98 AMCS 3450 Sexual Politics in Film Noir and Hardboiled Literature

Emerging in American films most forcefully during the 1940s, film noir is a cycle of films associated with a distinctive visual style and a cynical worldview. In this course, we explore the sexual politics of film noir as a distinctive vision of American sexual relations every bit as identifiable as the form's stylized lighting and circuitous storytelling. We explore how and why sexual paranoia and perversion seem to animate this genre and why these movies continue to influence "neo-noir" filmmaking into the 21st century, even as film noir's representation of gender and sexuality is inseparable from its literary antecedents, most notably, the so-called "hard-boiled" school of writing. We read examples from this literature by Dashiell Hammett, James Cain, Raymond Chandler and Cornell Woolrich, and discuss these novels and short stories in the context of other artistic and cultural influences on gendered power relations and film noir. We also explore the relationship of these films to censorship and to changing post-World War II cultural values. Films to be screened in complete prints or in excerpts include many of the following: *The Maltese Falcon*, *Double Indemnity*, *Murder My Sweet*, *Phantom Lady*, *Strangers on a Train*, *The Big Sleep*, *The Killers*, *Mildred Pierce*, *The High Wall*, *Sudden Fear*, *The Big Combo*, *Laura*, *The Glass Key*, *The Big Heat*, *Kiss Me Deadly*, *The Crimson Kimono*, *Touch of Evil*, *Alphaville*, *Chinatown*, *Taxi Driver*, *Devil in a Blue Dress*, *The Bad Lieutenant*, and *Memento*. Required screenings.

L98 AMCS 345A Histories of Intelligence: Topics in Science and Society

The use of data, computing, and quantitative methods has become central to politics, economics, and daily life. This course uses the concept of "intelligence" to survey the history of technoscientific efforts to understand and represent the intersections of minds, machines, and society. The course title has a deliberate double meaning; it is about both the people who seek to study and measure humans and their knowledge capacities as well as the knowledge or information that is increasingly collected, measured, and automated by machines. Organized topically and chronologically, this discussion-based seminar will examine the changing meanings and significance of intelligence, their impact on politics and social organization, and the questions raised about the relationship between specific technologies and specific models of human reasoning. We will consider these questions from diverse perspectives, including race, gender, class, ability, and materiality from the 19th century to the present. Topics covered include histories of artificial intelligence, racial dynamics, meritocracy, informational labor, state secrecy, and the self as data.

L98 AMCS 3463 From Golden Age to Wasteland: U.S. Television in the 1950s and 1960s

How did television become the dominant news and entertainment medium of the second half of the 20th century? How did the medium come to define itself and American identities in the post-WWII era? In an era where various social movements began to lay claim to the cultural center, why did "mad men" eventually give way to magical women and fantastic families? This course examines the cultural, industrial, and

aesthetic changes in U.S. television broadcasting during a time that was crucial to defining its relationship to the public as well as to Hollywood, the government, critics, and American commerce. The class explores the relationships and shifts that made television the U.S.'s most popular consensus medium but one that also would profit by the expression of alternative tastes, politics and identities. Required screenings.

L98 AMCS 3464 Contested Histories and Landscapes:

Western and Indigenous Perceptions of Time and Place

How we conceive of time and place influences the stories we tell about the past, how we form identities in the present, and how we plan for the future in the face of environmental threats like global climate change. The archaeological study of North American Indigenous history has been dominated by Western philosophical thought that takes for granted a particular view of the world, and of being, espoused by the likes of Socrates, Hobbes, Descartes, and Rousseau. Indigenous scholars have critiqued these biases and asked that we recognize ways of perceiving the world that are often fundamentally different than the Euro-American frame of reference. Using archaeological case studies in addition to reading Native American philosophers and intellectuals, we will explore how different ways of understanding the world, and your place in it, influence how we explain the past. We will also consider how these differences play out today regarding issues such as environmental justice, land treaties, tribal sovereignty, and climate change.

L98 AMCS 3470 Gender and Citizenship

In this writing-intensive course we examine how ideas about gender have shaped the ways Americans understand what it means to be a citizen. We focus on a variety of cases in the past and present to explore the means by which women and men have claimed the rights and responsibilities of citizenship. The types of questions that we will ask include: What rights or duties devolve from the status of citizen? Who qualifies for citizenship and what qualifies them? What distinct models of citizenship have been available to Americans? How have individuals used notions of gender identity to make claims to political subjectivity? And finally, how do gendered claims to citizenship intersect or conflict with claims based on race, class, ethnicity, or humanity? PREQ: Previous coursework in Women, Gender, and Sexuality Studies or permission of the instructor. Not open to students who have taken L77 210

L98 AMCS 347A Global Energy and the American Dream

This lecture course explores the historical, cultural and political relationship between America and global energy, focusing on oil, coal, natural gas, biofuels and alternatives. Through case studies at home and abroad, we examine how cultural, environmental, economic and geopolitical processes are entangled with changing patterns of energy-related resource extraction, production, distribution and use. America's changing position as global consumer and dreamer is linked to increasingly violent contests over energy abroad while our fuel-dependent dreams of boundless (oil) power give way to uncertainties and new possibilities of nation, nature, and the future. Assuming that technology and markets alone will not save us, what might a culturally, politically and socially-minded inquiry contribute to understanding the past and future of global energy and the American dream?

L98 AMCS 348A Economic Realities of the American Dream

Exploration of the realities of economic life in the U.S. and how they correspond to the American Dream. Interdisciplinary perspectives from economics, sociology, and other areas of social inquiry. Emphasis on the consistency between empirical data and different concepts of the American Dream. Specific topics to include sources of economic growth and changing living standards, unemployment, impact of globalization on U.S. citizens, economic mobility, poverty and inequality, and social justice. Prerequisites: Econ 1011 and Econ 1021, or consent of the instructors.

L98 AMCS 3490 Media Cultures

This course is an introduction to the interdisciplinary field of cultural and media studies. Through a focus on television and new media, it analyzes current theoretical ideas and debates about culture. Main topics include the relationship between new technologies and everyday life and popular culture; analysis of media messages and images; how media help construct new identities and mark differences between groups; analysis of the globalization of the production and circulation of media culture; the rise of multimedia cultural industries; and the role of the audience. Required screenings.

L98 AMCS 3507 Legal Conflict in Modern American Society

Thousands of lawsuits are filed daily in the state and federal courts of the United States. The disputes underlying those lawsuits are as messy and complex as the human, commercial, cultural and political dynamics that trigger them, and the legal processes for resolving those disputes are expensive, time-consuming and, for most citizens, seemingly impenetrable. At the same time, law and legal conflict permeate public discourse in the United States to a degree that is unique in the world, even among the community of long-established democracies. The overarching objective of the course is to prepare our undergraduate students to participate constructively in that discourse by providing them with a conceptual framework for understanding both the conduct and resolution of legal conflict by American legal institutions, and the evolution of — and values underlying — the substantive law American courts apply to those conflicts. This is, at core, a course in the kind of legal or litigation "literacy" that should be expected of the graduates of first-tier American universities. Some of the legal controversies that are used to help develop that "literacy" include those surrounding the permissible use of lethal force in self-defense, the constitutionality of affirmative action in university admissions, contracts that are unconscionably one-sided, sexual harassment in the workplace, the duty of landlords to prevent criminal assaults on their tenants, groundwater pollution alleged to cause pediatric cancers, and warrantless searches of cellphone locator data by police.

L98 AMCS 351 History of Electronic Media

This course traces the history of electronic media as they have become the dominant source for entertainment and information in contemporary culture, starting with over-the-air broadcasting of radio and television through to cable and the "narrowcasting" achieved by digital technologies. While some attention is paid to other national industries, the chief focus of the course is on electronic media in the United States to determine, in part, the transformative role they have played in the cultural life of the nation. The course explores the relationship of the electronic media industries to the American film industry, determining how their interactions with the film industry helped mutually shape the productions of both film and electronic media. Required screenings.

L98 AMCS 3512 "Model Minority": The Asian American Experience

This course explores the Asian-American experience revolving around the concept of the "model minority." It investigates the historical origins of this idea and reconsiders this concept in sociopolitical discourses as well as in everyday Asian-American lives. Through multidisciplinary inquiries, this course provides a lens into the complexity and heterogeneity of Asian Americans. It situates Asian-American experiences in the broader American -- and, at times, transnational, ethnoracial and sociopolitical -- context. The texts and discussions cover a wide range of topics and pressing issues, such as identity, race, and (pan-)ethnicity; culture and religion; gender and sexuality; masculinity and femininity; and notions of invisibility and marginalization. L98 AMCS 352A The Black Athlete in American Literature: Frederick Douglass to LeBron James

The black athlete is a central figure in American entertainment, and has been since Frederick Douglass decried Christmastime slave games in his Narrative. This course will examine literary depictions of black athletes-in novels, memoirs, essays, and poems-in order to better understand the cultural significance of sportsmen and women in the African American struggle for equality, from abolitionism to the "Black Lives Matter" movement. Students will read works by Douglass, Ralph Ellison, Maya Angelou, and John Edgar Wideman, among others, and examine the lives and athletic pursuits of prominent athletes such as Jackie Robinson, Muhammad Ali, Wilma Rudolph, Michael Jordan, and LeBron James. Popular perceptions of gender and sexuality, in addition to race and racism, will factor into readings, especially as students incorporate secondary sources into their own research.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: HUM EN: H

L98 AMCS 353A Sports & Society: Contemporary Issues in American Sports

Athletes like Colin Kaepernick, Ally Raisman, LeBron James, and Megan Rapinoe leave no doubt: sporting spaces are powerful platforms for political and social activism. In this era of division and social unrest, sports cannot be stuck to. But what to make of the various messages these athletes espouse, and how can we understand the intersectional influence of sporting cultures on American politics, economics, and culture? In this class students will examine major contemporary issues in American sports by examining scholarship, fan behavior, and narratives provided by athletes themselves. Among the topics students will consider are: racism and sexism in coaching, LGBTQ and Trans athlete identity, amateurism and athletic labor, mascots, traumatic brain injuries, and social media.

L98 AMCS 354A Christian Theology and Politics in the Modern West

This course engages students in the reading and analysis of influential religious texts from the Western Christian world from the mid-16th century to the present. The course also examines these texts in their historical context, raising questions about the relationship between theology and politics in the West. The course pursues such questions chronologically, with the first weeks devoted to Catholic and Calvinist contests over revelation and political authority during the 16th century to Puritan ruminations during the 17th century on the nature of worldly calling and personal eschatology. The next weeks concern 18th-century views of reason as a critique of traditional Christianity and Protestant responses centered on true virtue as a hedge against worldly loyalties. We then examine 19th-

century discussions of the relationship between ethics, tradition, and religious experience. For the 20th century, we discuss texts that address Christian conceptions of redemption to issues of hypernationalism and race. The final weeks are devoted to recent theologies that have to do with the self and one's identity and current political crises. Juniors and seniors only. Sophomores by permission.

L98 AMCS 3550 Sociology of Work

This course presents an overview of the sociological understandings of work and, in particular, how work reduces or replicates inequality. This course will cover classic and contemporary sociological theories of work; how work in the United States has changed over time; and how workers are matched to "good" and "bad" jobs. Threaded throughout the course is the exploration of racial, gender, and class barriers to inclusion and advancement at work. Students will explore how organizational structures, policies, and practices can increase or decrease those barriers. Prerequisite: Successful completion of an introductory sociology course or permission of instructor.

L98 AMCS 3551 The Welfare State and Social Policy in America

How can we understand the recent debate about fundamental health care reform? Should social security be partially or wholly privatized? Was the 1996 welfare reform a success? Contemporary political questions frequently focus on the American welfare state and the social policies that comprise it. The first half of this course describes the American welfare state broadly construed, places it in a comparative context, and elucidates major political science explanations for the size and scope of American social policy. We touch on several areas of social policy while constructing the generalized lenses through which particular political outcomes can be understood. The second part of the course then focuses on three major aspects of the American welfare state: health care, old age pensions, and policies related to work, poverty and inequality.

L98 AMCS 355B The FBI and Religion

This seminar examines the relationship between the Federal Bureau of Investigation (FBI) and religion (i.e., faith communities, clerics, and religious professionals) as a way to study and understand 20th-century religion and politics. The course will investigate the history of the FBI as well as the various ways in which the FBI and religious groups have interacted. The course will pay particular attention to what the professor calls the four interrelated "modes" of FBI-religious engagement: counter-intelligence and surveillance, coordination and cooperation, censorship and publicity, and consultation.

L98 AMCS 3561 Law, Gender, & Justice

This course explores how social constructions of gender, race, class, and sexuality have shaped traditional legal reasoning and American legal concepts, including women's legal rights. We will begin by placing our current legal framework, and its gender, race, sexuality, and other societal assumptions, in an historical and Constitutional context. We will then examine many of the questions raised by feminist theory, feminist jurisprudence, and other critical perspectives. For example, is the legal subject gendered male, and, if so, how can advocates (for women and men) use the law to gain greater equality? What paradoxes have emerged in areas such as employment discrimination, family law, or reproductive rights, as women and others have sought liberal equality? What is the equality/difference debate about and why is it important for feminists? How do intersectionality and various schools of feminist thought affect our concepts of discrimination, equality, and justice? The course is thematic, but we will spend time on key cases that have influenced law and policy, examining how they affect the everyday lives of women. Over the years, this course has attracted WGSS students and pre-law students. This course is taught by law students under the supervision of a member of the School of Law faculty.

L98 AMCS 3563 Television Culture and Cult TV: Critical Approaches to Fandom

Why do television series inspire passionate involvement on the part of some viewers? What are the differences among being a viewer, an audience member, and a fan? How can we make scholarly sense of cultural practices such as learning to speak Klingon or building a "repli-car" of the General Lee? Studies of fandom have attempted to answer such questions and continue to explore issues that are crucial to understanding contemporary television culture. The phenomenon of "Cult TV" offers fertile ground for examining the complex dynamics at play among fans, popular culture, the institutions of American media, and individual programs. In its exploration of cult television and fans, this course engages with key issues in contemporary media such as the proliferation of new media technologies and the repurposing of existing media forms, the permeable boundaries between high and low or mass and oppositional culture, and the fragmentation and concentration of media markets. The class combines close textual analysis with studies of fan practices to examine a variety of television programs, from canonical cult texts such as *Star Trek* and *Doctor Who* to "quality" fan favorites such as *Designing Women* and *Cagney & Lacey* to contemporary cult/quality hybrids such as *Lost* and *Heroes*. In mapping out this cultural territory, we develop a set of critical perspectives on audience identities and activities and examine the continuing and conflicted imagination of fans by media producers, distributors, regulators and critics. Required screenings. Prerequisite: Film 220 or Film 350, or consent of instructor.

Credit 3 units. A&S IQ: HUM Art: HUM BU: BA EN: H

L98 AMCS 3570 Quality Television and the "Primetime Novel"

Over the past four decades, the cultural status of television in the United States has been reconfigured and complicated with changes in industrial structures, audience formations, regulatory presumptions, and production techniques and strategies. This

course examines these interrelated forces, particularly as they have fostered a set of programs and practices often hailed as Quality Television. The class surveys the institutional paradigms that gave rise to particular generations of programming celebrated as "quality" and analyze the systems of distinction and cultural value that make the label socially and industrially salient. We critically investigate the role of audiences and the conceptions of viewer choice at play in these developments. In addition, the course analyzes the textual features that have come to signify narrative complexity and aesthetic sophistication. We examine foundational historical examples of this phenomenon from *The Mary Tyler Moore Show* to *Hill Street Blues*, and *Cagney & Lacey* to *Northern Exposure*, as well as more contemporary broadcast and cable fiction such as *LOST*, *The Wire*, and *Mad Men*. In addition, students are expected to watch a complete series, chosen in consultation with the instructor, as part of their final research project. Required screening. Prerequisite: Film Studies 220 or Film Studies 350 or consent of instructor.

L98 AMCS 3575 U.S. Foreign Policy: Theory and Practice

In this course, we will focus on the procedures and institutions that shape U.S. foreign policy decisions. This is neither a course on international relations theory nor a history of U.S. foreign policy. Rather, this course examines the domestic politics surrounding U.S. foreign policy decisions. How do public opinion, electoral politics, and interest groups shape foreign policy? Which branch controls foreign policy -- the president, Congress, the courts? Or is it ultimately the foreign affairs bureaucracy that pulls the strings? We will examine these topics through reading and writing assignments, class discussions, and simulations to promote deeper understanding and to build practical skills.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L98 AMCS 357A God in the Courtroom

The U.S. Constitution holds a promise to secure freedom of religion through its First Amendment. Its two religion clauses declare unconstitutional any prohibition on the free exercise of religion and laws respecting the establishment of religion. The consequence is that, whenever a group demands to be recognized as religious and to be granted the right to exercise its religion, a court, a legislature, or an administrative official must determine whether the religious practice in question is legally religious. This means that law plays a uniquely important role in defining religion in the United States. In this seminar, we will explore the relation between law and religion in America. We will study the religion clauses in the First Amendment to the United States Constitution, the histories of their interpretations by American courts in landmark cases, and the ways that religious studies scholars have understood and critiqued these cases.

L98 AMCS 3580 Combat Movie Music and Sound After Vietnam

This course considers the Hollywood combat movie genre after the Vietnam War (post 1975) by listening closely to how these always noisy films use music and sound effects to tell stories of American manhood and militarism. Centering on an elite group of prestige films — action movies with a message for

adult audiences — the course examines 35 years of Hollywood representations of World War II, the Vietnam War, the Gulf War and post-9/11 wars against terrorism. Close analysis of how combat film directors and composers have used music and sound in conjunction with the cinematic image are set within a larger context of ancillary texts (source materials, soundtrack recordings, published and unpublished scripts), media folios (press kits, reviews, editorials, newspaper and magazine stories and interviews), and scholarly writing from across the disciplines. Films screened include *Apocalypse Now*, *Platoon*, *Hamburger Hill*, *Courage Under Fire*, *Saving Private Ryan*, *The Thin Red Line*, *We Were Soldiers*, *Flags of our Fathers*, *The Hurt Locker* and *Act of Valor*, as well as pre-1975 combat films starring John Wayne. The ability to read music is not required. Required screenings. Prerequisite: none.

L98 AMCS 3581 Scribbling Women: 19th-Century American Women Writers

In 1855, Nathaniel Hawthorne wrote to his publisher, William Tichnor, that "America is now wholly given over to a damned mob of scribbling women and I should have no chance of success while the public taste is occupied with their trash." In this class, we examine works of those scribbling women of the 19th century. We read one of the best-selling novels of the century, one that created a scandal and ruined the author's literary reputation, along with others that have garnered more attention in our time than their own. In addition to focusing on these women writers, we also explore questions about the canon and American literature: What makes literature "good"? What constitutes American literature? How does an author get in the canon and stay there? Finally, in this writing intensive course, there are frequent writing assignments and a strong emphasis on the essential writing process of drafting and revising.

L98 AMCS 358A Conscience & Religion in American Politics

Conscience is as American as apple pie and baseball, but its meaning and implications are deeply contested in American religion and politics. What is conscience? To what extent is conscience laden with theological -- and, more specifically, Christian -- commitments? What role should conscience, whether religious or ethical, play in political life? By considering what conscience means and what vision of politics it implies, we will reflect on what it means to be American: how religion should relate to politics, how individuals should engage with democratic laws and norms, and how religious and political dissenters might oppose American politics. We will focus on key moments in the history of American religion and politics through the lens of conscience, from the Interwar Period, the perceived threat of communism during the Cold War, the Civil Rights Movement, and the Vietnam War to the "culture wars" on abortion, marriage equality, LBGTQ rights, and the death penalty. This course draws on interdisciplinary sources from religious studies, political theory, law, and history in 20th- and 21st-century American politics.

L98 AMCS 359H Hot Takes: Cultural Criticism in the Digital Age

The twenty-first century has seen a new and exciting wave of cultural criticism, and along with it a new wave of public intellectuals. Ta-Nehisi Coates, Roxane Gay, Jia Tolentino, Anne Helen Petersen, Jo Livingstone, Hanif Abdurraqib-at their best, writers like these aspire to the sort of indispensability on political, social, and artistic matters that their forebears like Susan Sontag, Norman Mailer, and James Baldwin had at midcentury. But these voices are unique because they emerged through and alongside a specifically online critical sphere, a space betwixt and between the comments section and the little magazine. This is the space of viral tweets and threads, "hot takes" and "think-pieces." It's a space of potentially greater democratization and diversity even as it is an opportunity for bigots and trolls. These writers are beholden to their networks, but those networks are far wider, more idiosyncratic and inclusive and incendiary-more unstable-than anything buttressing the vaunted public intellectuals of the past. This course examines the cultural critics of the contemporary moment in context of the critical space they opened and now occupy. We'll begin with a quick history of the "public intellectual" from the eighteenth century to the present before we log on. The rise and fall of Gawker, Grantland, and The Awl; The New Republic's controversial digital pivot; the feminist communities of The Hairpin and The Toast; the conservative "intellectual dark web"; the message boards of the early 2000s; the emergence of semi-academic sites like the Los Angeles Review of Books; the blogs and tumblrs and livejournals that nurtured the talents and provocateurs that we now find indispensable or unavoidable. We will dissect their style, understand their theory and practice, engage with their subjects, and investigate the way their writing has intersected with and propelled social media movements like Black Lives Matter, #MeToo, and #OscarsSoWhite. And we will consider the way these critics have influenced the way scholars and students approach the texts and topics we always have.

L98 AMCS 3601 Trans* Studies

This is an interdisciplinary course that was previously named "Transgender Studies"; the new course title represents the development of the field and the identity in U.S. culture. In this course, students will engage with the following questions: When and why did the category of gender emerge? What is the relationship between sex, sexuality, and gender? How have the fields of medicine and psychology dealt with gender? How have approaches to "gender dysphoria" changed over time? Why is LGBT grouped together as a social movement, and what are the advantages and disadvantages of this grouping? What

are the legal obstacles faced by people who resist normative gender categories? What legal obstacles are faced by people who transition from one sex to another? To what extent do U.S. citizens have autonomy over defining their gender or sex? How are trans people represented in fiction? What does it mean to apply transgender theory to interpret fictional accounts of trans individuals? Any of the following are suitable (but not required) courses to take before enrolling in this class: L77 100B, L77 105, L77 205 or L77 3091.

L98 AMCS 3604 Researching Cultures: Making Latin America Popular

"Despacito," futbol, telenovelas: All of these are forms of Latin American popular culture that are increasingly part of our everyday reality here in the United States. All are also inseparable from stories of inequality, ethnic tensions and celebrations, understandings of gender relations, and notions of hope that blend ideas of nation with cultural consumption. While popular culture in Latin America is often considered a contemporary phenomenon linked to the 20th century and the mass production of cultural goods -- film, books, and music -- it has deeper roots. We can trace these back to the 19th century, where people, cultural processes, and phenomena literally began making Latin America popular. This course will survey the emergence and variety of modern popular culture in Latin America, from the 1800s to the present. Readings may include best sellers, gaucho poetry, stories of urban life and folk heroes, and materials engaging themes from dictatorship to contemporary Latinx experiences. We will learn about the intersections between race, nation, and music; explore the emotional and political power of futbol, along with the intense gender divisions it reveals; and delve into the appeal of telenovelas across socioeconomic divides. Historical and anthropological essays will also guide us throughout the semester. This course will have a strong, mandatory and graded written communications component, and it is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts & Sciences students. Prerequisite: Span 303 or Span 308D, and one (or preferably two) of the following: Span 341, Span 342, Span 343, Span 370, Span 380, or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

L98 AMCS 360A Religion and the Modern Civil Rights Movement, 1954-1968

The modern Civil Rights Movement is a landmark event in the nation's political, civic, cultural and social history. In many contexts, this movement for and against civil and legal equality took on a religious ethos, with activists, opponents and observers believing that the net result of the marches, demonstrations and legislative rulings would redeem and/or destroy "The Soul of the Nation." This seminar examines the modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement.

The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures and communities that were indifferent, combative, instrumental and/or supportive of Civil Rights legislation throughout the mid-20th century.

L98 AMCS 3613 Researching Cultures: The Paradoxes of Contemporary Cuba: The Good, the Bad, and the In-Between

In the wake of such momentous events as president Obama's visit to Cuba (March 2016), Fidel Castro's death (November 2017) and the end of Raul Castro's presidency (April 2018), for many Americans the island has advanced from the category of a forbidden and exotic fruit to a full-fledged reality. Now is a good time to ask not only "What is next for Cuba?" but also "What can we learn from Castro's revolutionary experiments"? This course explores from interdisciplinary perspectives the paradoxes of Cuban lives on the island and in the diaspora—the good, the bad and the in-between—along with the intertwined histories of the United States and Cuba. Using a combination of literary texts (Carpentier, Cabrera Infante, Ponte, Bobes, Obejas, Morejón, Padura), films ("Strawberry and Chocolate," "Guantanamo," "The Promise," "The New Art of Making Ruins"), artwork (Mendieta, Bruguera, Garaicoa), political speeches, and unique visual materials compiled by the instructor throughout her many research trips to Cuba, we will look at the island's contemporary reality through the lens of its colonial and postcolonial past.

Topics include ethnic and gender identities, the history of slavery and plantation economy, the "myths" of Che Guevara and Fidel Castro, African-Cuban spirituality, popular music, political oppression and dissent, and the interplay of migration and exile, along with multiple perspectives on everyday life (foreign tourism, food rationing, dual-currency economy, restoration of colonial Cuba). Course description: Havana, education, and healthcare). Due to the interdisciplinary perspectives inherent to this course, students will have an opportunity to engage their knowledge of and interest in disciplines outside the humanities (including but not limited to: public health, law, political science, urban studies, anthropology) in the exploration of Cuba's past, present, and future. This course will have a strong, mandatory and graded written communications component and is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 or 308E, and one (or preferably two) of the following: 341, 342, 343, 370, 380 or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

L98 AMCS 3619 Researching Cultures: Graphic Latin America

This course examines the visual, affective and linguistic registers that graphic novels, comics and illustrations have used in Latin America to represent popular desire, enjoyment and resistance. We will challenge traditional perceptions of graphic formats as "minor literature" and we will delve into the relationship between popular consumption and structural changes in Latin American countries. Some of the questions that would lead the units are: Is there a specific storytelling attached to graphic narratives? What are the cognitive and perceptual challenges that graphic texts pose to the readers? What do we mean when we talk about "Latin America Graphic Fiction"? What does it mean to read "massive texts"? Can reception have a transformative

power in Latin American societies? The genres analyzed include memoirs, political satire, parodies, science fiction and radical zines. This course fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 or 308E, and one (or preferably two) of the following: 341, 342, 343, 370, 380 or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar. In Spanish. 3 units. This course fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 or 308D, and one (or preferably two) of the following: 341, 342, 343, 370, 380 or Debating Cultures. L98 AMCS 3620 Researching Cultures: Politics of Melodrama in Latin American Media: From Serialized Novels to Teleno

This course explores the social and political history of melodrama in Latin America. We will discuss the role that melodrama has had within Latin American media following a long-term chronological approach that begins with nineteenth-century serialized novels (folletín) and ends with recent streaming television. As a language of emotions and familiarity, Latin American melodrama has been a key tool to reflect on the most important social and political issues, from mid-twentieth-century populisms to globalization, from modernization to the human rights abuses of the 1970s' dictatorships. Thus, in this course we will delve into the political power of tears and smiles. The course will address the uses of melodrama in print media, radio, cinema, and television, in order to explore how the melodramatic imagination shaped the experience of modernity in the region and allowed Latin American audiences to deal with issues of class inequality, gender roles, sexuality, national identities, and racism. Course materials may include tango albums, 1940's Argentine and Mexican films, Cuban radionovela *El derecho de nacer*, Manuel Puig's novel *El beso de la mujer araña* [Kiss of the Spider Woman], as well as telenovelas from Colombia, Mexico, and Argentina. As part of the course, students will engage in active research on the interplay of politics and melodrama in contemporary Latin American media. This course fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 or 308E, and one (or preferably two) of the following: 341, 342, 343, 370, 380 or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar. In Spanish. Same as L38 Span 3620

L98 AMCS 3632 Mapping the World of "Black Criminality"

Ideas concerning the evolution of violence, crime, and criminal behavior have been framed around many different groups. Yet, what does a typical criminal look like? How does race — more specifically blackness — alter these conversations, inscribing greater fears about criminal behaviors? This course taps into this reality examining the varied ways people of African descent have been and continue to be particularly imagined as a distinctly criminal population. Taking a dual approach, students will consider the historical roots of the policing of black bodies alongside the social history of black crime while also foregrounding where and how black females fit into these

critical conversations of crime and vice. Employing a panoramic approach, students will examine historical narratives, movies and documentaries, literature, popular culture through poetry and contemporary music, as well as the prison industrial complex system. The prerequisite for the course is L90 3880 (Terror and Violence in the Black Atlantic) and/or permission from the instructor, which will be determined based on a student's past experience in courses that explore factors of race and identity. For AFAS majors, this course counts as Area Requirement 2. Same as L90 AFAS 363

L98 AMCS 3651 Black Women Writers

When someone says "black woman writer," you may well think of Nobel Prize winner Toni Morrison. But not long ago, to be a black woman writer meant to be considered an aberration. When Thomas Jefferson wrote that Phillis Wheatley's poems were "beneath the dignity of criticism," he could hardly have imagined entire Modern Language Association sessions built around her verse, but such is now the case. In this class we survey the range of Anglophone African-American women authors. Writers likely to be covered include Phillis Wheatley, Harriet Wilson, Nella Larsen, Lorraine Hansberry, Octavia Butler and Rita Dove, among others. Be prepared to read, explore, discuss and debate the specific impact of race and gender on American literature. Same as L90 AFAS 3651
Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: HUM EN: H

L98 AMCS 365A Slavery, Sovereignty, Security: American Religions and the Problem of Freedom

The goal of this course is to think critically about freedom as an ideology and institution. What does it mean to be free? What are the relationships among individual liberties, national sovereignty, and civil rights? In what ways has freedom been defined in relation to — and materially depended on — unfreedom? At the same time, this course will treat American "religions" in a similar critical fashion: as a historically contingent category that has been forged and inflected within the same context of white Christian settler empire. Religion and freedom have intertwined throughout American history, including in the ideal of religious freedom. Our critical interrogation of freedom should help us think carefully about power, working with but also beyond tropes of domination and resistance. Same as L57 RelPol 365
Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, ETH EN: H

L98 AMCS 3660 Women and Film

The aim of this course is primarily to familiarize students with the work of prominent women directors over the course of the 20th century, from commercial blockbusters to the radical avant-garde. Approaching the films in chronological order, we consider the specific historical and cultural context of each filmmaker's work. In addition we discuss the films in relation to specific gender and feminist issues such as the status of women's film genres, representations of men and women on screen, and the gender politics of film production. Required screenings. Same as L53 Film 366
Credit 3 units. A&S IQ: HUM, SD BU: HUM EN: H

L98 AMCS 3661 Caste: Sexuality, Race and Globalization

Be it sati or enforced widowhood, arranged or love marriage, the rise of national leaders like Indira Gandhi and Kamala Harris, or the obsession with "fair" skin, caste shapes possibilities and perceptions for billions. In this class we combine a historical understanding of the social caste structure with the insights made by those who have worked to annihilate caste. We will re-visit history with the analytic tools provided by the concepts of compulsory endogamy, "surplus woman," and "brahmanical patriarchy," and we will build an understanding of the enduring yet invisible "sexual-caste" complex. As we will see, caste has always relied on sexual difference, its ever-mutating power enabled by the intersectionalities of race, gender and class. We'll learn how caste adapts to every twist in world history, increasingly taking root outside India and South Asia. We will delve into film and memoir, sources that document the incessant injustices of caste and how they have compounded under globalization. The class will research the exchange of concepts between anti-race and anti-caste activists: how caste has shaped the work of prominent anti-racist intellectuals and activists in the United States such as W.E.B. DuBois and Isabel Wilkerson and in turn, the agenda and creativity of groups such as the Dalit Panthers. Finally, the course will build a practical guide to engaging with and interrupting caste in the context of the contemporary global world today. Waitlists controlled by Department; priority given to WGSS majors. Enrollment cap 15. Same as L77 WGSS 366

L98 AMCS 3671 The Long Civil Rights Movement

The Civil Rights Movement is known as a southern movement, led by church leaders and college students, fought through sit-ins and marches, dealing primarily with non-economic objectives, framed by a black and white paradigm, and limited to a single tumultuous decade. This course seeks to broaden our understanding of the movement geographically, chronologically, and thematically. It pays special attention to struggles fought in the North, West and Southwest; it seeks to question binaries constructed around "confrontational" and "accommodationist" leaders; it reveals how Latinos, Native Americans, and Asian Americans impacted and were impacted by the movement; and it seeks to link the public memory of this movement with contemporary racial politics. Same as L22 History 3670
Credit 3 units. A&S IQ: HUM, SC, SD BU: BA, HUM EN: H

L98 AMCS 367H Medicine, Healing and Experimentation in the Contours of Black History

Conversations regarding the history of medicine continue to undergo considerable transformation within academia and the general public. The infamous Tuskegee syphilis experiment serves as a marker in the historical consciousness regarding African Americans and the medical profession. This course taps into this particular evolution, prompting students to broaden their gaze to explore the often delicate relationship of people of African descent within the realm of medicine and healing. Tracing the social nature of these medical interactions from the period of enslavement through the 20th century, this course examines the changing patterns of disease and illness, social responses to physical and psychological ailments, and the experimental and exploitative use of black bodies in the field of medicine. As a history course, the focus is extended toward

the underpinnings of race and gender in the medical treatment allocated across time and space — the United States, Caribbean and Latin America — to give further insight into the roots of contemporary practice of medicine.

L98 AMCS 3682 The U.S. War in Iraq, 2003-2011

This course presents a historical assessment of the United States' eight year war in Iraq from its inception on March 20, 2003, to the withdrawal of all combat troops on December 15, 2011. Topics to be covered include: the Bush Administration's decision to make Iraq part of the "War on Terror" and the subsequent plan of attack; the combat operations; losing the victory; sectarian violence; torture; the insurgency; battling Al-Qaeda in Iraq; reassessment; the surge; the drawdown; and the end of the war. The course will conclude with an assessment of the war's effectiveness regarding the Global War on Terrorism and U.S. policy in the Middle East.

L98 AMCS 369 American Horrors

Horror movies. Fright films. Scream marathons. Blood and gore fests. Why should we want to look at movies that aim to frighten us? What is the attraction of repulsion? Is there an aesthetics of ugliness? Except for some early prestige literary adaptations like *Dr. Jekyll and Mr. Hyde*, the horror film began as a low class genre, a notch above exploitation movies. In the 1970s-1980s, it became the dominant commercial genre by offering increasingly graphic images of violence and mayhem. The horror film had arrived: lavish budgets, big stars, and dazzling special effects in mainstream major studio films competed with low-budget, no frills productions that helped establish artistically ambitious and quirky filmmakers like George Romero and David Cronenberg. By a chronological survey of the American horror film, this course explores how differing notions of what is terrifying reflect changing cultural values and norms. Throughout, we consider the difficult questions raised by horror's simple aim of scaring its audience. In addition to weekly screenings, work for the course includes analytical and theoretical essays on the horror film. Written analyses of films with a close attention to visual style are required. Prerequisite: Film 220. Required screenings.

L98 AMCS 370 The American West: The Image in History

Examines representations of the American West and of the frontier encounter between Euro-American and Native American cultures, from the early 19th to the early 20th centuries. We consider travel accounts, fiction painting, ledger drawings, photography and film in order to analyze the ways in which historical circumstances have shaped artistic and literary representations. At the same time, we look at how images and texts have shaped formative myths about the West that in turn leave their impact on history.

L98 AMCS 371A Sociology of Immigration

This course reviews theoretical and empirical research on how and why people migrate across international borders, and the consequences of international migration for immigrants and natives in the United States. While immigration is one of the most controversial issues in the contemporary United States, these contentious debates are not new. Americans once voiced the same concerns about the economic and social impact of Southern and Eastern European immigrants that today are aimed at immigrants from Latin America, Asia, Africa, and the Caribbean. In this course, students will compare historical (1880-1920) and contemporary (1965-present) waves of immigration to the United States. In this, students will explore why and how people migrate; immigrant integration; the impact of immigration on native-born Americans; and how government policies — at the national, state, and local level — shape immigrant assimilation and what it means to be considered truly "American" in a social as well as a legal sense. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor.

L98 AMCS 3740 Contemporary American Foreign Policy

This course surveys post-War American foreign policy in historical perspective. It begins by evaluating the rise of the United States as a world power during the 20th century, its current position of primacy and its consequences in the post Cold War period, and the distinctive traditions and institutions shaping the making of American foreign policy. It then examines the origins of the strategy of containment in the early Cold War period before considering how these debates animated the changing course of American foreign policy through the various phases of the Cold War conflict. The course concludes by analyzing American foreign policy since the end of the Cold War, up to and including debates about the consequences of September 11, 2001, for the United States' position of primacy, the Bush Doctrine and the American-led intervention in and subsequent occupation of Iraq.

L98 AMCS 3742 Social Landscapes in a Global View

From the beginning of the human campaign, societies have socialized the spaces and places where they live. This socialization comes in many forms, including the generation of sacred natural places (e.g., Mt. Fuji) to the construction of planned urban settings where culture is writ large in overt and subtle contexts. Over the past two decades or so, anthropologists, archaeologists and geographers have developed a wide body of research concerning these socially constructed and perceived settings — commonly known as "landscapes." This course takes a tour through time and across the globe to trace the formation of diverse social landscapes, starting in prehistoric times and ending in modern times. We cover various urban landscapes, rural landscapes, nomadic landscapes (and others) and the intersection of the natural environment, the built environments and the symbolism that weaves them together. Chronologically, we range from 3000 BCE to 2009 CE and we cover all the continents. This course also traces the intellectual history of the study of landscape as a social phenomenon and investigates the current methods used to recover and describe social landscapes around the world and through time. Join in situating your own social map alongside the most famous and the most obscure landscapes of the world and trace the global currents of your social landscape!

L98 AMCS 3751 Topics in Women's History: Women, Gender, and Sexuality in Postwar America

We will explore the history of the United States since 1945 by focusing on the ways that gender and sexuality have shaped the lives of Americans, particularly the diverse group of women who make up more than half of the nation's population. Topics will include domesticity and the culture of the 1950s; gendering the Cold War; the gender politics of racial liberation; the sexual revolution; second-wave feminism and the transformation of American culture; the New Right's gender politics; and the impact of new conceptions of sexual and gender identity at century's end. Course texts will include scholarly literature, memoirs, novels, and film.

L98 AMCS 3755 Disability, Quality of Life & Community Responsibility

The increasing prevalence of disability presents major challenges for American society. Social participation can be a challenge for people with disabilities, while resources to address these needs tend to be limited. This course will begin by critically analyzing concepts of disability, quality of life, health and social participation. We will construct a framework for examining social participation and community resources across the lifespan. Public health, educational and environmental theories and methods will be applied to programs and services that aim to enhance quality of life with disabilities. We will analyze ecological approaches to enhancing social participation. Upon completion of this course, students will be equipped to analyze challenges and prioritize resources for individual and population health.

L98 AMCS 375B From Vision to Praxis: The Capstone Project Incubator

This course is intended for AMCS juniors following the completion of L98 375A Methods & Visions. After sustained attention on methodological practices in 375A, students will shift focus in 375B toward the fundamentals of developing a senior-year project. Emphasis will be on process and skill enhancement, with areas of concentration including drafting project ideas; identifying animating research questions; enhancing scope and focus; exploring mediums of expression; creating a developmental bibliography; and planning for summer research. Learning modes will include lecture, reading and discussion, and peer workgroups. Assignments will develop formal and informal writing, drafting and rewriting, and scholarly reading. The final product will be two-fold: (1) a polished prospectus outlining project focus, research area, initial scholarship summary, and rationale for medium; and (2) a summer planning document outlining reading and writing goals in preparation for the capstone workshop senior year. Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM

L98 AMCS 375W Political Writing

Defined most simply, politics is that which pertains to the "affairs of the polis," one's community. In its real-life context, writing always interacts with a community in some way, engaging a defined audience to produce an intended effect. In this sense, writing always touches the affairs of a polis, and thus, writing is inherently political, regardless of whether the writer considers this during composition. In this class, we will focus on explicitly political writing by writers who are not politicians, that is to say, sanctioned experts in the affairs of the polis. Foregoing public policy memoranda and economic analyses, we will look at how journalists, grassroots organizers, and creative writers have consciously written to intervene in the affairs of their communities despite their outsider status. Using techniques of rhetorical analysis and logical structure, we will examine how these writers crafted works that inspire and move audiences through the conventions of several genres: essay, polemic, journalism, and satire. Same as L13 Writing 375

L98 AMCS 376 American Modernism, 1900-1940

American modernism: What is it? What is the nature of its encounter with mass culture? What happened to modernism as it migrated from its "high" European origins to its "middlebrow" version in America between the turn of the century and the eve of World War II? What was the rhetoric of modernism in everyday life, and what was its impact on design, photography, and advertising? In addition to the fine arts, we will look at popular media, film, and photography. Lecture/discussion. Prerequisite: L01 215 or permission of instructor. Same as L01 Art-Arch 376

Credit 3 units. A&S IQ: HUM, WI Art: AH, HUM BU: ETH, HUM

L98 AMCS 378S Photography in America

This course will consider the practice and use of photography in America, from its invention up to the present, and it will offer various ways of thinking about the medium and its relation to society and culture. Students will come to understand the ways photographic practices shape public perceptions of national identity, ethnicity and gender, nature, democratic selves, and a host of other concerns. We will discuss famous practitioners

such as Matthew Brady, Jacob Riis, Lewis Hine, Walker Evans, and Robert Frank. We consider not only the social and public uses of the medium (through such episodes as the New Deal/FSA and photojournalism) but also the private explorations of "fine art" photographers and the everyday practices of the snapshot. Prerequisite: One course in Art History at the 100 or 200 level.

Same as L01 Art-Arch 378S

Credit 3 units. A&S IQ: HUM Art: AH, GFAH, HUM BU: HUM EN: H

L98 AMCS 378B Contemporary American Theater

This course is a focused investigation of the aesthetic, political, and urban landscapes of the contemporary American theatre. We will read published and unpublished plays, familiarize ourselves with the country's most important companies, festivals, and institutions, and discuss issues facing the American theatre now. We will explore the role of the arts in urban planning and development, and address the relationship between higher education and arts institutions, paying particular attention to ideas of community engagement and social justice work undertaken by both. Artists to be studied may include Tony Kushner, Suzan-Lori Parks, Caryl Churchill, Brandon Jacobs-Jenkins, Lynn Nottage, Young Jean Lee, and Lin-Manuel Miranda. This course will include a mandatory class trip at the end of March to the Humana Festival of New American Plays in Louisville, Kentucky. Students will prepare for this trip by reading the works of featured playwrights and establishing a research project that will be carried out on-site. Findings from the research project will be presented upon the return to St. Louis. Admission to the course is by instructor permission only; an application form will be sent to all registered students at the conclusion of the registration period. In consultation with and with the permission of the instructor, this course may fulfill the Fieldwork requirement for American Culture Studies majors.

L98 AMCS 379 Banned Books

Why would anyone want to burn a book? Under what circumstances would you support censorship? Several years ago a Russian student was exiled to Siberia for possessing a copy of Emerson's *Essays*; today, school boards in the United States regularly call for the removal of *Huckleberry Finn* and *The Catcher in the Rye* from classrooms and library shelves. Actions like these dramatize the complex interconnections of literature and society, and they raise questions about what we read and the way we read. The course explores these issues by looking closely at several American and translated European texts that have been challenged on moral, sociopolitical or religious grounds to determine what some readers have found so threatening about these works. Possible authors: Goethe, Voltaire, Rousseau, Defoe, Hawthorne, Flaubert, Twain, Chopin, Brecht, Salinger, Aldous Huxley, Ray Bradbury. Brief daily writing assignments. Same as L14 E Lit 381

Credit 3 units. A&S IQ: HUM Art: HUM BU: ETH

L98 AMCS 3822 From McDonald's to K-pop: New Movements in East Asia

This course introduces contemporary East Asian cultures and societies from transregional and transnational perspectives through the lens of consumer and popular cultures. We employ McDonald's as the first case study to look into East Asian responses to Western cultural products and ideas. For K-pop, we examine its emergence and transregional receptions and impact across different regions in East Asia as well as in the U.S. Beginning with these two subjects, our investigation extends to other examples of transregional cultural phenomena such as J-pop, Hello Kitty, e-commerce, and western holidays in East Asia. While focusing on transnational cultural movements originating in or being adapted to the East Asian context, our discussions also reflect on key topics in the study of East Asian cultures such as "face," filial piety, and social networks.

L98 AMCS 3840 Gender & Consumer Culture in U.S. Fiction of the Late 19th and Early 20th Century

The decades between the end of the Civil War and the 1930s saw the rise of a mass consumer culture that would dramatically reshape America. The fiction writers of this period, keen to capture the spirit of the age, helped to create the enduring idea that consumerism and an orientation toward material acquisition are at the heart of gendered concepts of American identity. Their stories documented, and sometimes celebrated, the emergence of recognizable "types" of American womanhood and manhood — such as self-made millionaires, ambitious "working girls," bargain-hunting middle-class housewives, and the commercially minded women and men of the social and intellectual elite.

At the same time, their stories articulated anxieties about U.S. consumer culture and its impact on the world. Students in this course will read, discuss and write about novels and short stories by writers such as Henry James, Mary Wilkins Freeman, Kate Chopin, Theodore Dreiser, Edith Wharton, Nella

Larsen, Langston Hughes and F. Scott Fitzgerald. Students in the course will also examine primary materials such as magazine advertisements, and will read and respond to relevant scholarship on the period. Writing Intensive course.

L98 AMCS 3843 Filming the Black Freedom Struggle in St. Louis

This interdisciplinary course introduces students to the history of the Black freedom struggle in St. Louis and to the complex and multiple ways historic narratives are constructed. We will explore the political, economic and cultural history of St. Louisans who challenged racial segregation in housing and work, fought white mobs in city streets, and battled the destruction of Black communities by federal urban renewal and public housing policies. Students, working with a historian and a filmmaker, will research and make a documentary film on a piece of St. Louis' crucial contribution to the Black Freedom Struggle in America. We bring together documentary filmmaking and history research to draw attention to the multiple narratives (many long-neglected) of African-American and urban history, and to the multiple approaches to presenting history.

L98 AMCS 3860 Sports, Health, and Society

Sports is a lens onto social issues of health, fitness, and the body. Case studies in this course deal with injury and abuse, the role of medicine and pharmaceuticals, corporations and mass media, gendered aggression, doping scandals, disabled athletes, trans athletes, and video games, among other topics. A wide range of sports will be covered, including basketball, American football, college athletics, sumo wrestling, martial arts, ordinary activities like running and exercise, and mass spectacles such as the Olympics. By adopting cross-cultural and intersectional approaches, this course will consider how race, gender, and other social contrasts shape ableisms, body norms, violences, and hard-driving business interests in sports and society.

L98 AMCS 386A Topics in African-American Literature: Rebels, Sheroes, and Race Men

In this seminar — for we are fortunate to be an elite group this term — we will focus on the first century of African American prose writers. In genre terms that means we will largely, but not exclusively, read autobiographies and novels. Phillis Wheatley, Frederick Douglass, and Harriet Jacobs are now familiar names in U.S. literature surveys, but others are not yet household names, and in fact may never be. We will survey a core group of texts, available at the WUSTL bookstore, but also

supplement our readings with materials placed on BlackBoard, via online databases (e.g., materials accessible digitally from the Schomburg Division of the New York Public Library). For AFAS majors, this course counts as Area Requirement 1.

Same as L90 AFAS 386A

L98 AMCS 3870 Science and Society

Encounters with science are ubiquitous in daily life. We read papers hailing scientists' most recent achievements. We adjust our lifestyles to their findings, and we sometimes even allow them to change our beliefs about the world. As students, we learn about the scientific method, run labs, and memorize facts and equations. This course invites students to estrange themselves from these familiar scenes by challenging some assumptions about what science is and how it works. In the course, we launch from the premise that science is itself a cultural activity, permeated by social norms and values. Surveying a rich, cross-disciplinary literature, the course thus aims to unpack the deep imbrications between science, society, technology, economy, and politics from the perspective of the field of science and technology studies.

L98 AMCS 3876 Rejecting Reason: Dada and Surrealism in Europe and the United States

In this multimedia interdisciplinary course, we will consider the history, theory, and practice of Dada and Surrealism, from its Symbolist and Expressionist roots at the end of the 19th century and the beginning of the 20th century through its late expressions in the beat culture and pop art of the 1950s and 1960s. Dada's emergence in Zürich and New York in the midst of World War I set the tone for its stress on irrationality as an oppositional strategy. Surrealist research into the domain of the unconscious continued this extreme challenge to dominant culture but in a revolutionary spirit that proposed new possibilities for personal and collective liberation. The international character of the movements — with substantial cross-transmission between Europe and the United States — will be emphasized. Prerequisites: L01 113, Intro to Western Art; L01 215, Intro to Modern Art; or permission of instructor.

L98 AMCS 3891 Power, Justice, and the City

This course examines normative theoretical questions of power and justice through the lens of the contemporary city, with a particular focus on American urban life. It explores urban political economic problems, questions of racial hierarchy and racial injustice in the modern metropolis, and the normative and practical dilemmas posed by "privatism" in cities and their suburbs. In addition, the course devotes considerable attention to honing students' writing skills, through class assignments

that stress rewriting and revising, and also through four in-class writing workshops devoted to formulating a thesis and making an argument, revising and rewriting, writing with style, and peer consultation.

L98 AMCS 389C For Freedom's Sake: African-American History Since Emancipation

The events that unfolded in Ferguson this past fall revealed the contradictions of a national government that is led by a black president yet also sanctions the susceptibility of its black citizens to police brutality. What has freedom really meant for African Americans since emancipation? This course addresses key events and movements that shaped African Americans' definition and pursuit of freedom and citizenship, emphasizing various strategies, successes, failures, and legacies developed as a result. Key developments will include the Reconstruction, Jim Crow, the Harlem Renaissance, the World Wars, the Civil Rights Movement, and mass incarceration.

L98 AMCS 3900 Mormon History in Global Context

The focus of this seminar is Mormonism, meaning, primarily, the Church of Jesus Christ of Latter-day Saints, which is the largest Mormon body. Mormons in the United States have gone from being one of the most intensely persecuted religious groups in the country's history to the fourth largest religious body in the U.S., with a reputation for patriotism and conservative family values. In addition to introducing who the Mormons are, their beliefs and religious practices, this seminar will explore issues raised by Mormonism's move toward the religious mainstream alongside its continuing distinctiveness. These issues include: What is the religious "mainstream" in the U.S.? How did conflicts over Mormonism during the 19th century, especially the conflict over polygamy, help define the limits of religious tolerance in this country? How have LDS teachings about gender and race, or controversies about whether or not Mormons are Christian, positioned and repositioned Mormons within U.S. society?

L98 AMCS 3950 Topics in Religion and Politics: Islam and Muslims in the United States

For over a quarter-century, journalists have broken story after story about sexually abusive clergy in the U.S., many of them serial abusers of children and adolescents. While most accounts have focused on Catholic priests, many have also emerged of

abusive evangelical and other Protestant ministers. The stories have illuminated how church bureaucrats have consistently protected abusers and subverted the efforts of victims and their families to seek recompense, accountability, and justice. These protections have often succeeded because of churches' political connections to law enforcement and legislators who have helped hide perpetrators and stymie survivors. Together we will analyze this cautionary tale about religion and politics by contextualizing it within the broader history of Christianity in the United States and beyond. Is this a case simply of a few bad apples or of institutional corruption? How has the church's response been shaped by fear of scandal, antipathy toward secularism, and theological teachings on gender and homosexuality? How does sexual abuse fit into the history of the church as a hierarchical institution? What challenges has the crisis posed to people of faith who are committed to the church, and can trust be repaired? Readings include legal case studies, internal church correspondence, victims' statements and criminal justice reports, documentary films and memoirs, and both journalistic and scholarly analysis of the clergy sex abuse crisis in the U.S. church.

L98 AMCS 397 Gender and Sexuality in 1950s America: Writing-Intensive Seminar

Historians have recently begun to reconsider the dominant view of the 1950s as an era characterized by complacency and conformity. In this writing intensive seminar we will use the prism of gender history to gain a more complex understanding of the intricate relationship between conformity and crisis, domesticity and dissent that characterized the 1950s for both women and men.

L98 AMCS 3975 Wolves of Wall Street: American Business and Popular Culture

America's perceptions about Big Business and the Free Enterprise system have evolved and changed over time from the 1920s to the present. During the 1980s, for example, Oliver Stone's *Wall Street* seemed to endorse the notion that "greed is good." Today, however, the topic of rising income inequality has been connected with the collapse of prestigious Wall Street firms, the "housing bubble," a declining middle class, and widespread fear about the future of "The American Dream." This course examines a variety of artistic, ethical and historical perceptions about American Business as depicted in popular culture and the arts over the past hundred years. How have America's foremost artists (among them F. Scott Fitzgerald, Eugene O'Neill, Arthur Miller, Martin Scorsese), dealt with questions of conspicuous consumption, the acquisition of capital for its own sake, and the disparity between rich and poor? We survey several artistic genres and artistic forms, including American tragic works like *The Great Gatsby* and *Death of a Salesman*, to popular musicals such as *How to Succeed in Business without Really Trying* and *The Producers*.

L98 AMCS 39SM WOMEN AND CRIME IN THE EVOLUTION OF AMERICAN HISTORY

Crime happens. Property is damaged and stolen, lives are lost, and law, order, and justice evolves. This course taps into that ongoing reality by centering the herstorical evolution of female crime, highlighting women and girls of many kinds across time and spaces of America. It moves across centuries (through to the contemporary period) probing within and far beyond icons to unveil the gendered nature of crime and moreover to empower students to see and trace everyday female criminality that ignited across racial, ethnic, as well as lines of age in the winding path of American history. While men and boys dominate public and even scholarly expectations of crime and carceral conversations for many, students will leave this course with a far more rigorous understanding of the herstories gained by taking serious the types of crimes that women and girls acted out by exploring: robbery, assault, infanticide, larceny, murder, arson, prostitution, serial killers, and drug-related crimes. As well as going further to probe state and federal power through carceral medicine - showing the interior world of female prisoners, physicians, the movement of females into "asylums" and mental state hospitals, incarceration based on "insanity" while going further to examine births, illnesses, and death of women and teens in jails and prisons. Students will be likewise pushed to engage America's timeline of race, gender, and executions that includes women and girls. Racialized and gendered criminality, law enforcement violence, healthcare and deathcare in prisons are critical public health issues that students can better understand the complicated evolutions by deeply probing the herstorical lives of women, girls, and crime through this course. Students will read, learn, dig up the past, and write to ensure a future of herstory and remembrance.

L98 AMCS 4000 Urban Education in Multiracial Societies

This course offers students an analysis of the historical development and contemporary contexts of urban education in English-speaking, multiracial societies. It examines legal decisions, relevant policy decisions, and salient economic determinants that inform urban systems of education in Western societies including, but not limited to, the United States, Canada, Great Britain, and South Africa. The course draws on quantitative, qualitative, and comparative data as an empirical foundation to provide a basis for a cross-cultural understanding of the formalized and uniform system of public schooling characteristic of education in urban settings. Given the social and material exigencies that shape urban school systems in contemporary societies, special attention is given in this course to the roles of migration, immigration urbanization, criminal justice, industrialism, de-industrialism, and globalization in shaping educational outcomes for diverse students in the aforementioned settings. Prerequisite: junior standing or permission of instructor.

L98 AMCS 400A AMCS Capstone Workshop I

This workshop is required for AMCS majors completing an independent capstone project, whether by means of a 3-credit capstone project, a Latin Honors (6-credit) thesis, or a two-semester (6-credit) non-honors project. In all three cases, the capstone project is intended to serve as the culmination of the major — an opportunity to build on previous work and to engage with the broader field of American Culture Studies while developing a multidisciplinary framework suited to the goals of the project. The workshop is intended to foster intellectual community and provide support during the research and writing process. Students share aspects of their work in large- and small-group settings; discuss methods, models, and challenges of cultural studies; participate in several peer-review workshops; and develop insights and skills directly relevant to their capstone work. Barring circumstances which prevent it, the 3-credit capstone should be completed by the end of the fall semester. Students pursuing a 6-credit project (either a Latin Honors thesis or non-honors project) will continue their work into the following semester by enrolling in L98 4XX. Enrollment by permission of Program pending approval of project proposal, which will be submitted in the spring of junior year. Students seeking to earn Latin Honors in AMCS must meet the university cumulative GPA minimum (3.65) and have permission of their thesis adviser.

Credit 3 units.

L98 AMCS 400B AMCS Capstone Workshop II

This course is required for students planning to complete the Latin Honors thesis or a 6-credit non-honors project through American Culture Studies. It builds on work done in L98 400A AMCS Capstone Workshop I, and it involves periodic workshops and conferences with the instructor and project advisor during the final stages of thesis preparation. Prerequisite: Satisfactory standing as a candidate for a two-semester capstone, including successful completion of L98 400A and permission of the project advisor. Students eligible for Latin Honors must meet the university's minimum grade-point average. Meetings for this course will occur every other week, with the dates and times to be determined based on participants' schedules.

Credit variable, maximum 3 units.

L98 AMCS 401 Race, Sex and Sexuality: Concepts of Identity

This course examines changes in the meanings of three concepts of identity — race, sex and sexuality — from the early modern period to the present. The course begins by looking at early modern constructions of these concepts in Western Europe. We then focus on changes occurring during the course of the 18th and 19th centuries in Europe and the United States

and at how such changes were similar and different among these three concepts. We then examine 20th-century challenges to 19th-century constructions. The course concludes by studying the relationship between these challenges and 20th-century identity political movements organized around these concepts. Prerequisite: completion of at least one WGSS course or permission of the instructor.

L98 AMCS 4010 Pluralism, Liberalism and Education

How should liberal democratic states respond to religious and cultural pluralism? In what ways is pluralism different from mere disagreement, and what normative implications does pluralism have for public policy? How can liberal states justify using their coercive power against a background of pluralism and in ways that systematically disadvantage certain religious and cultural groups in society? In particular, what is to be done when religious parents and the liberal state make conflicting judgments about the proper education of children? When should the state defer to parental judgments and what are the grounds for legitimately refusing to do so? Readings are taken from contemporary political philosophy. Prerequisites: Pol Sci 106, Pol Sci 107, Phil 340 or permission of instructor.

L98 AMCS 402E Higher Education Administration for Social Justice and Equity: Achievable or Only Dreamable?

Higher education has long been the subject of much general public interest and discourse. Understanding the complexity of the system, its history, practices, and expertise will help define whether and how campuses can work toward social justice and equity. In this course, students will study the history, policies, and organizational decisions that underly the current state of higher education in America. These perspectives and theories will be studied with an eye toward social justice and understanding possible changes that may lead toward equity on American college campuses. Through engaged discussions around readings and case studies, students will tackle complex social questions, including: how our college campuses became so complex? Why pervasive social issues, such as system racism, sexism, and classism, continue to exist on our campuses? How and when technology and the SAT/ACT began to rule our lives in college? Perhaps even deeper, students will grapple with finding alternate, more socially just, and equitable alternatives to create more equity on our campuses.

L98 AMCS 403 Culture and History of the Southwestern United States

This course integrates archaeological, historical, and early ethnographic dimensions of American Indian societies in the southwestern United States and northwest Mexico, a region famous for its challenging environment, cultural diversity, and the contributions made by its Native inhabitants. Emphasis is placed on the development of sophisticated desert agriculture and on the rise of regionally integrated cultures including Chaco Canyon and Mesa Verde. The impact of Spanish, Mexican, and American colonization are explored. Ethnographies of Tohono O'odham (Papago), Hopi, Zuni, Rio Grande Pueblo, and Navajo societies are discussed.

L98 AMCS 4030 Political Theory of Education

This course explores issues of authority, legitimacy, citizenship, freedom, and equality through contemporary readings in the political theory of education. What is to be done when parents, citizens, and educational experts make conflicting judgments about the proper education of children? When should the state defer to parental judgments and what are the grounds for legitimately refusing to do so? How should public schools aim to equip their students for the responsibilities of citizenship in a diverse liberal democratic state? What do the concepts of equality and equality of opportunity mean in the context of education, and (how) should governments pursue these values through education policy? We shall explore these issues through contemporary works of political theory as well as through considering a number of important U.S. court cases, including those dealing with the schooling of children from minority religious and cultural groups, affirmative action in university admissions, and school desegregation plans. Prerequisite: one previous course in political theory or political philosophy.

Same as L32 Pol Sci 4030

L98 AMCS 4036 Children of Immigrants: Identity and Acculturation

This seminar takes an interdisciplinary approach to children of immigrants as an analytical subject. The course texts are in sociology, anthropology, and cultural studies, and a significant number of our case studies focus on 1.5- and second-generation Asian Americans and Latinx. Identity and identity politics are main topics; in addition, the course will critically examine theories on acculturation and assimilation. Our discussions cover a wide range of topics from culture, ethnicity, and race, to bilingualism, education, family, school, ethnic community, and youth culture. Students are required to conduct an individual research project among a selected group of children of immigrants.

L98 AMCS 4090 The Modernist Revolution in the Arts

What is/was Modernism? How did this worldwide phenomenon impact the arts in every genre and medium from the turn of the 20th century to the present? Do we still live in the age of Modernism, or should we consider ours a new, Postmodern age? This course examines these and other questions as they relate to the theater, prose, poetry and the visual arts. Our investigation focuses on most of the major literary and artistic movements, including Naturalism, Impressionism, Symbolism,

Surrealism and Expressionism. We examine literary manifestoes that help to illuminate the periods under discussion, as well as look at individual works themselves. Central to our approach in the course is an interdisciplinary perspective. Among the luminaries whose work is considered are Ibsen, Strindberg, Chekhov, Hemingway, Dali, Picasso, Stravinsky, Artaud, Kafka and Beckett.

L98 AMCS 4135 Tobacco: History, Culture, Science, and Policy

Tobacco is the most important public health and medical problem of our time, the leading cause of cancer and other chronic diseases. This course examines tobacco's important role in shaping the modern world and global health over the course of the last five centuries, from indigenous uses of tobacco to plantation slavery to the cigarette boom to the politics of health and smoking in the 21st century. Through in-depth historical and anthropological case studies, tobacco provides a window into trends in government and law, medicine and public health, business and economics, society and culture, including changing social meanings of gender, race, class, sexuality, advertising, consumerism, risk, responsibility and health in the United States and worldwide. This course also introduces students to public health approaches to noncommunicable disease prevention, environmental health, and healthy lifestyle promotion. No background in anthropology or public health is required.

L98 AMCS 415A Senior Seminar on the Presidency: The Trump Administration

This course uses the run-up to the presidential election as a point of departure for considering the current presidency. This is a research seminar that will begin with a series of common readings, after which students will constitute themselves into research teams that will explore the current state of the presidency in broad cultural perspective. 2020 Iteration: In Spring 2020, the course will focus on the election and presidency of Donald Trump as experienced by Washington University in particular and St. Louis in general. Prerequisite: AMCS 115.

Credit 3 units. A&S IQ: HUM, WI Arch: HUM Art: HUM BU: HUM EN: H

L98 AMCS 415B Historic Preservation, Memory and Community

Whose history is significant enough to be worth preserving in physical form? Who gets to decide, and how? Does the choice to preserve buildings, landscapes and places belong to government, experts or ordinary people? How does the condition of the built environment impact community identity, structure and success? This place-based course in historic preservation pursues these questions in St. Louis' historically Black neighborhood The Ville, where deep historic significance meets a built environment conditioned by population loss, disinvestment and demolition. The course explores the practice of historic preservation as something far from neutral, but a creative, productive endeavor that mediates between community values, official policies and expert assertion. Critical readings

in preservation and public history will accompany case studies, community engagement and practical understanding. This course is open to both undergraduates and graduates and will meet together with ARCH 315B.

Same as L56 CFH 415B

L98 AMCS 422A Film Stardom, Performance, and Fan Culture

This course focuses on the Hollywood star system. We will explore stars in relation to celebrity and consumerism, especially how "stardom" is created by a system that seeks to create effects in film viewers whether conceived as audiences, fans or spectators. We will examine the performance element of stardom and its relationship to genre, style, and changing film technology. Also of concern will be how stars and the discursive construction of stardom intersect with gender representation, race, ideology, sexuality, age, disability, nationality, and other points of theoretical interest to and historical inquiry in contemporary film studies. While emphasis will be placed on mainstream commercial U.S. cinema, students are encouraged to pursue questions beyond this framework within their own research. Required screenings.

L98 AMCS 4243 The Plundered Past: Archaeology's Challenges in the Modern World

The public imagination thrills at the fantastic adventures of Indiana Jones and Laura Croft, Tomb Raider; but the reality of modern archaeology is more complex, ethically challenging and interesting than a simple treasure hunt. In the U.S. and Canada, our science museums and museums of anthropology still display artifacts that are regarded as sacred and culturally definitive by Indian nations, although such holdings are now subject to negotiation and repatriation. Art museums in Europe and the U.S. are still stocked with looted ancient masterpieces that are revered as vital heritage by the nations from which they were stolen. We display looted art alongside a much smaller number of legitimately excavated artifacts of masterpiece quality, so it is no surprise that our popular images of archaeologists as avid and undiscerning collectors raise little concern. But modern archaeologists are not extractors of art or even of scientific information, from places as passive and inert as the museums' objects ultimately occupy. Archaeologists work with living people inhabiting societies and states that care deeply about their pasts and the relics of it. They are active agents engaged with many other people in the production of knowledge about the past. In our rapidly shrinking world, educated sensitivity to the many ancient cultural legacies that shape the values of modern global society is more than a moral imperative; it is a basic form of collaboration in the common project of survival. Archaeologists are ethically charged to advance that project through education about the complex contemporary arena of artifacts, sites, and information they occupy.

L98 AMCS 424A Broadcasting Equality: Radio, Television and Social Change in Postwar America

The period between World War II and the 1970s was one of profound cultural, political, and demographic shifts that brought the problems of ethno-religious and racial prejudice to the forefront of U.S. national consciousness. Religious leaders, secular social activists, media industry professionals, and African-American civil rights leaders often worked together to combat intolerance, bigotry and inequality. What did these activists achieve in their attempts to deploy U.S. broadcast media in what they sometimes referred to as "propaganda against prejudice"? How did this activism relate to the institutions of broadcast media, including governmental agencies, national networks and local broadcasters? What was television and radio's impact on the Civil Rights Movement of the 1950s and 1960s? In addressing these questions, we will consider a wide range of media: public service programming as well as commercially produced series, specials, network news and documentaries produced between the 1940s and the 1970s. Programs considered will include *New World A-Coming*, *Amos 'n' Andy*, *American Bandstand*, *NBC White Papers: Sit In*, *Sanford and Son*, *Eyes on the Prize*, and *Soul Train*, among many others. Required screenings.

L98 AMCS 4263 Memory for the Future

The year-long Studiolo "Memory for the Future" (M4F) will create spaces and practices of humanities education, practical public history, and collaboration in the spirit of "multidirectional memory." This concept tries to address the interlinked histories and legacies of the Holocaust, slavery, apartheid, and colonialism and create opportunities for dialogue between communities impacted by and implicated in these forms of violence. Our principal aims are to explore, enrich, and sustain the global and local focus of "reparative memorial practices" in St. Louis. Focusing on commemorative efforts through public memorials, monuments and especially museums, M4F will engage survivors, activists, institutional leaders, and scholars (students and faculty) in the development of educational materials, artistic representations, exhibitions, and other approaches to bringing the past into the present. We strive to support the efforts of local and regional initiatives and venues to end racism, antisemitism, and homophobia and their related violence through innovative and inclusive memory work. Alongside classroom-based instruction focusing on discussing scholarship and acquiring practical, curatorial, and pedagogical skills, students will work with area institutions and initiatives to apply their study of multidirectional memory. This practicum is an integral part of the course and requires students to leave campus and regularly work with one of our partners (The Griot Museum of Black History, George B. Vashon Museum, St. Louis Kaplan Feldman Holocaust Museum, The Mildred Lane Kemper Art Museum, Reparative Justice Coalition of St. Louis, St. Louis Community Remembrance Project). Participants of the Studiolo are expected to attend regular weekly meetings and engage in self-directed and collaborative project work. We are also preparing study trips to regional sites of memory and education. The M4F Studiolo will convene at the Lewis Collaborative, a living-learning-commercial space at the west end of the Delmar Loop. All A&S graduate students and advanced undergraduates are invited to participate. Undergraduate enrollment by permission of the instructors. For History majors, this course fulfills the capstone requirement as an Advanced Seminar. As a year-long course, students are expected to enroll in both the fall and spring sections. L98 AMCS 426A Performing the Political in American Dance

This course is an exploration of the politics of performance and the performance of politics through the lens of American dance in the 20th and 21st centuries. Through readings, screenings, and discussions, we will examine the ways in which American dance developed against and alongside political movements

in the United States, particularly ones concerning nationalism, race, gender, and human rights. We will also investigate how the lens of dance and choreography offers an expansive means to conceptualize political questions of citizenship and social protest, broadening our understanding of embodied performance. Guided by several key philosophical texts, this course will focus on the concepts necessary for examining the convergence of performance and politics (e.g., representation, ritual, spectacle, body, mimesis, propaganda) while also paying special attention to the politics of funding and censorship that has governed the creation and presentation of dance in the United States. No dance experience is necessary.

L98 AMCS 4280 History of Urban Schooling in the United States

More than ever, schooling in urban areas is researched, and it is at the center of debates for improving U.S. schooling. This course, which is framed by contemporary issues, focuses on the history of urban schooling and policy to deepen our understanding of the contemporary landscape. We will focus on particular cities and their school districts; these may include New York, Boston, Chicago, Detroit, St. Louis, Los Angeles, San Francisco, and Atlanta. In this course, students will develop a strong contextual understanding of the conditions of urban schooling; the history of urban school reform; and the debates over the purposes of urban schools, past and present.

L98 AMCS 4283 Topics in Comparative Politics

In this course, we will examine the relationship between politics and identity and the consequences for political stability and cohesion as a result of those relationships. We will consider different cases and explanations for the United States and, in comparative perspective, for how identity works with respect to gender, race, ethnicity, class and sexual orientation in the pursuit of political or social goals. How do these different identities impact social and political conflict, local and national cohesiveness, and political participation?

Same as L32 Pol Sci 428

Credit 3 units. A&S IQ: SSC, WI EN: S

L98 AMCS 4289 Neighborhoods, Schools and Social Inequality

A major purpose of the course is to study the research and policy literature related to neighborhoods, schools and the corresponding opportunity structure in urban America. The course is informed by theoretical models drawn from economics, political science, sociology, anthropology, education and law. A major focus is to gain greater understanding of the experiences and opportunity structure(s) of urban dwellers, in general, and urban youth, in particular. While major emphasis is placed on data derived from the interface of urban environments and the corresponding institutions within them, the generational experiences of various ethnic groups complement the course foci.

L98 AMCS 4292 Topics in Politics: Polarization in American Politics

This course examines the political polarization of the American political parties and explores its effects on the mass public and American democracy more generally. We examine what exactly is polarization, how it is measured, historical changes, potential causes, and its potential effects on the mass public and governance. Prerequisites: Pol Sci 101B Intro to American Politics, Pol Sci 363 Quantitative Political Methodology or equivalent.

Same as L32 Pol Sci 4291

Credit 3 units.

L98 AMCS 4300 Spiritual But Not Religious: The Politics of American Spirituality

What does it mean to claim to be "spiritual but not religious"? What are the social and political consequences of foregrounding spiritual seeking and religious experimentation over the "organized religion" of churches, synagogues, mosques, and temples?? The seminar focuses on a series of debates that have arisen over this "new spirituality" in American culture: the religious blessing of consumer culture, the rise of therapeutic models of meditation and mindfulness, the politics of Euro-American appropriations of Native American and Buddhist religious practices, the negotiation of religious pluralism, and the relationship between spiritual seeking and social justice.

L98 AMCS 4303 Clown Princes

"Dying is easy, comedy is hard," runs an old theatrical adage. Nevertheless, some of the most popular actors in American film have chosen the hard path by typecasting themselves in comedy, playing repeated variations on the same character. "Comedian comedy," representing films that showcase the distinctive skills of great clown-actors, is the central concern of this course. We will analyze how individual comedians rework performance traditions through the distinctive concerns of their time and culture to create idiosyncratic comic personae. We will look at films starring Charles Chaplin, Buster Keaton, Harold Lloyd, Laurel and Hardy, the Marx Brothers, Jack Benny, Peter Sellers, Jim Carey and Eddie Murphy. Work for the course will require reading in comic theory and analytical essays. Required screenings.

L98 AMCS 4311 Black Experimental Music

Founded on the South Side of Chicago in 1965, the Association for the Advancement of Creative Musicians (AACM) united dozens of African American artists who were interested in experimental approaches to composition and improvisation. Their creative work, often described as black experimental music, would transform black-identified musical styles like jazz as well as white-identified styles of experimental concert music from which African Americans were often excluded-until

the AACM intervened. In this course, we will investigate the Association's history by reading and discussing a wide range of texts about the organization, including books and articles written by AACM members themselves. We will also examine a number of important recordings and musical scores created by AACM artists, including Muhal Richard Abrams, Fred Anderson, Anthony Braxton, Joseph Jarman, George Lewis, Nicole Mitchell, Roscoe Mitchell, and Wadada Leo Smith.

L98 AMCS 4370 Music and Performance

In his 1998 book, *Musicking*, Christopher Small asserts that music is not a thing but an activity — something that people do. Starting from this premise, this course explores musical performance as a live event, one in which additional aspects of performance — dramatic enactments, costume, choreography, and stage design — also come into play. While recorded music plays an important role in our investigations, we focus on musical events that take place before and with live audiences. Exploring the choices of performers and the expectations of audience members in settings from gospel churches to Radio City Music Hall, this course moves through a wide variety of musical genres, including cabaret, blues, opera, protest song, musical theater, and rock. We examine artists whose work blurs the line between "music" and "theater," including George Clinton, Taylor Mac, and Gertrude Stein, as well as everyday people, such as the singers of the Civil Rights Movement, who used the power of live musical performance to change the course of human history. We also attend performances around St. Louis, guided by the interests of the class. Students with an interest in music, theater, dance, cultural history, American studies, and African-American studies are especially welcome.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L98 AMCS 4373 Immigration, Identity, and the Internet

This class examines a critical issue in contemporary societies: How do changes in technology affect the process of immigration and how immigrant identity is shaped?

Same as L32 Pol Sci 4373

L98 AMCS 4491 American Unbelief from the Enlightenment to the New Atheism

This seminar examines American secularism, humanism, and atheism from the Enlightenment forward to the present. Topics to be explored include: the tensions between secular and Christian conceptions of the republic, the civil liberties of atheists and nontheists, the battles over religion in the public schools, the culture wars over secular humanism and science, and the contemporary growth of the religiously disaffiliated or religious "nones." The course considers not only the intellectual dimensions of skeptical critiques of religion, but also the underlying politics of secularism (and anti-secularism) in a nation routinely imagined as "under God."

L98 AMCS 4502 Techno-Orientalism: Race, Media & Society

From aliens and coolies, from the "yellow peril" to the "model minority," and from techies to subhuman quants, representations of Asians and Asian Americans have become tethered to the scientific and technological. This course examines the entanglements of race, science, technology, and politics in the Pacific world from the late 19th century to the present. Through the lens of techno-Orientalism — an expansion and inversion of Edward Said's formulation — we consider the historical conditions that have recast the East from an imagined "Orient" suspended in an eternal state of stagnation to a technoscientific "Orient" fetishized as the exotic future.

L98 AMCS 450A AMCS Harvey Scholar Seminar

In this course, AMCS Harvey Scholars examine critical issues in American studies while receiving support and structure for their Harvey projects. Students discuss seminal texts and explore creative, literary and artistic productions and representations of American diversities and social contrasts. Class activities integrate academic journals, media, visual artifacts, and other texts that support students' specific projects while deepening their competencies in the field of American cultural studies. Participation includes attending the monthly AMCS Americanist Forum, which brings together faculty, postdoctoral fellows, graduate students and undergraduates. This course is part of the AMCS Harvey Scholar Fall-Spring seminar sequence, which is designed to support the intellectual and community life of AMCS undergraduates. Permission of the program is required for participation. Students place themselves on the waitlist and will be manually enrolled.

L98 AMCS 4510 American Television Genres

Questions of genre are central to any exploration of television's texts, whether they are being analyzed as craft, commerce, or cultural phenomenon. Genre has been used by critics and historians to ascribe "social functions" to groups of programs and to diagnose cultural preoccupations, while genre has been used industrially to manage expectations among audiences, advertisers, programmers, producers, and creative professionals. Investigating genres ranging from the soap opera to the western, workplace situation comedies to sports, and game shows to cop shows, this course explores the role of genre in the production, distribution and reception of American television. Students gain a critical understanding of genre theory and key arguments about the form and function of television texts and develop a set of tools for analysis of televisual narrative and style, the social uses and meanings of genre, the institutional practices and presumptions of the American television industry, and the persistence of textual forms and audience formations in the face of structural changes such as deregulation, media convergence, and globalization. Required screenings.

Same as L32 Pol Sci 4522

Credit 3 units.

L98 AMCS 454 Environmental Policy

This course examines the relationship between environmental economics and environmental policy. The course focuses on air pollution, water pollution, and hazardous wastes, with some attention given to biodiversity and global climate change. The course examines critically two prescriptions that economics usually endorses: (1) "balancing" of benefits against costs (e.g., benefit-cost analysis) and the use of risk analysis in evaluating policy alternatives; (2) use of market incentives (e.g., prices, taxes or charges) or "property rights" instead of traditional command-and-control regulations to implement environmental policy. Prerequisite: Econ 1011.

Same as L11 Econ 451

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, ETH EN: S

L98 AMCS 4564 American Pragmatism

This course examines the history of American pragmatism through three of its primary founders, the philosophers Charles Peirce, William James and John Dewey. It considers pragmatism as a response to the experience of uncertainty brought on by modernity and contextualizes it amid late 19th- and early 20th-century thought and politics, namely, scientific

methodology, evolutionary theory, the probabilistic revolution, Transcendentalism, the rise of secularism, slavery, Abolitionism and the Civil War. Major essays by each thinker are read as well as three intellectual biographies and one critical survey.

Same as L22 History 4564

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L98 AMCS 457 American Film Genres

By close examination of three or four specific types of film narratives, this course will explore how genre has functioned in the Hollywood mode of production. Students will gain an understanding of genre both as a critical construct as well as a form created by practical economic concerns, a means of creating extratextual communication between film artist/producers and audience/consumers. Genres for study will be chosen from the western, the gangster film, the horror movie, the musical, screwball comedy, science fiction, the family melodrama, the woman's film, and others. In addition to film showings, there will be readings in genre theory as well as genre analyses of individual films. Required screenings Tuesdays at 4 p.m.

Same as L53 Film 450

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L98 AMCS 457A From Vitaphone to YouTube: Popular Music and the Moving Image

This course considers American popular music as represented in audiovisual media from 1926 to the present. The relationship between the popular music industry (a commercial sphere oriented primarily toward the selling of sheet music and audio recordings) and audiovisual technologies (various screens and formats encountered in changing social and commercial contexts) will be explored along two complementary tracks: popular music performers as presented in performance-centered media and popular music as a narrative topic or resource in feature films. Three related analytical frames will shape our discussions: industrial and technological history (the material conditions for the making and distribution of popular music and moving images); the question of "liveness" in recorded audiovisual media; aesthetics of various popular music styles as translated into audiovisual forms and contexts. The course is in seminar format. The ability to read music is not required but students with music reading or transcription skills will be encouraged to draw upon these tools. Prerequisites: graduate status or completion of a 300-level FMS or Music course and permission of the instructor.

L98 AMCS 4607 Historical Racial Violence: Legacies & Reckonings

There is growing awareness of the legacies of historical racial violence in the United States and a related increase in reckoning efforts. Area histories of enslavement, lynching, and other racial terror and dispossession relate to inequality, conflict, and violence in the same places today. These "haunting legacies" include heart disease and other health disparities, homicide rates, white supremacist mobilization, and corporal punishment in schools. Meanwhile, many communities and institutions are moving to acknowledge and address legacies of historical racial violence in various ways. This course combines seminar-style readings and writing on legacies of racial violence with a practicum component, where individual students or groups of students will conceptualize and develop interventions intended to clarify and disrupt legacies of racial violence, facilitating contemporary reckoning. The practicum will explore and support a broad range of interventive efforts, including public policy measures, original research projects, archival development, commemorative efforts, and a related array of mediums, including visual art, design, film, digital projects, and other creative approaches.

L98 AMCS 4621 The Political Economy of Urban Education

Defining a political economy of urban education involves the examination of power and wealth and the manner in which they operate in urban settings. It requires analysis of the larger urban social and economic context and consideration of historical forces that have brought the schools to their present state. In this course, we consider various political and economic factors that have influenced and shaped urban education in the United States, drawing upon the extant literature on urban education and related social science disciplines to characterize and discuss them. A particular focus of this course will be on the dynamic interrelationships among the political economy, urban education, and social stratification.

L98 AMCS 4631 The Binational Condition. The Mexico-US Relationship in Mexican History and Culture

From the 19th century onwards, the relationship between Mexico and the United States has been defined by intense tensions and contradictions. Closely intertwined by geopolitical engagement and integrations, mutual migration flows, and rich cultural exchange, both countries belong to a binational system with few equivalents around the world, which defines the lives of people living across North America. And yet, few people in the United States have access to a clear and rigorous understanding of the Southern neighbor, often leading to conflict at the political and social levels. This class explores this historically, from the early frictions caused by territory and slavery to the binational conditions of the present. The class emphasizes the Mexican perspective of the relationship, often erased in discussions from the U.S. From this perspective, the course will engage critical moments in the history of the relationships, such as the underground railroad to the South, the Mexican American War, the Guadalupe Hidalgo treaty, and the Cold War. The class will also discuss the ways in which Mexico has influenced the United States culturally, from the impact of Mexican post-Revolutionary art in the New Deal to the rise of film directors like Alfonso Cuarón and Guillermo del Toro. Finally, the class will lay out the ways in which Mexicans and scholars of Mexican studies think about questions such as regional development, the border, immigration, and the Drug War. Prereq. L45 165D or prior coursework on Global Studies, Latin American Studies or American Studies. The course covers the seminar requirement for majors and minors in Latin American Studies.

Same as L45 LatAm 4631

L98 AMCS 4633 20th-Century Latin American Revolutions

Latin America was arguably one of the most "revolutionary" regions of the world in the 20th century. It registered four "great revolutions": Mexico 1910, Bolivia 1952, Cuba 1959, and Nicaragua 1979. These social revolutions entailed a substantial, violent, and voluntarist struggle for political power and the overthrow of the established political, economic, social, and cultural orders. In the wake of these successful revolutions, new revolutionary institutions of governance were founded, radical

structural changes were implemented, and a new revolutionary ethos was adopted. With the exception perhaps of the Bolivian Revolution, these revolutions had a profound impact on Latin American and world politics. The primary aim of this course is to analyze and compare the causes, processes, and outcomes of the Mexican, Cuban, and Nicaraguan revolutions. The course also analyzes late 20th century guerrilla movements in El Salvador and Peru.

L98 AMCS 465A Latin American Subcultures

This course has been planned as an introduction to the interconnections between "high" culture, popular culture, and mass culture, with particular emphasis on the formation of urban subcultures in contemporary Latin America. The topic of subculture and counterculture will be analyzed, taking into consideration the influence of factors of class, race, and gender in the construction of alternative cultural identities. Some of the connections to be studied are between political power and cultural resistance, affect, violence, symbolic value, hegemony and marginality. Distinctions will be made between culture, subcultures, traditions, and lifestyles as well as between multiculturalism and interculturality. While the first part of the course will introduce critical concepts, theories, and methodologies, the second half will focus on specific articulations between cultural practices and the domains of belief, sexuality, violence, and social media, including uses of music, video, and films. Students will prepare a final paper on a Latin American subculture of their choice and analyze it using the critical and theoretical tools discussed in class. Prerequisite: L45 165D.

This course fulfills the seminar requirement for Latin American Studies majors and minors.

L98 AMCS 4660 Geographies of Development in Latin America: Critical Perspectives and Contemporary Challenges

This course provides an overview to the geographies of development throughout Latin America. We will begin by examining a variety of theoretical perspectives, definitions and critiques of 'development'. We will highlight the uneven processes of development at multiple, overlapping scales and the power imbalances inherent in much of development discourse. In the second half of the course we will focus our considerations towards specific contemporary trends and development issues, utilizing case studies drawn primarily from Latin America. These themes will include sustainability, NGOs, social movements, social capital, security and conflict, identity, ethnicity and gender issues, participatory development, and micro-credit and conditional cash transfers. Students will acquire the critical theoretical tools to develop their own perspectives on how development geographies play out in Latin America.

L98 AMCS 4671 Constructing the (Racial) Other: From the Colonial Caste System to U.S. Latinos

The goal of this course is to introduce students to categories and concepts related to the questions of race and ethnicity in Latin America, from colonial times to the present. The course also covers U.S. Latinos as a population of Latin American descent that presents particular characteristics connected to the issues of migration, identity politics, reterritorialization, and cultural hybridity. Based on the theoretical and critical study of problems related to colonialism, social classification, miscegenation, whiteness, discrimination, and the like, representative literary and visual materials will be discussed to illustrate the connections between race, social roles, domestic/public spaces, work, democracy and modernization. The issue of race will be analyzed in its multiple articulations to the themes of nationalism, interculturalism, migration, and symbolic representation. This course covers the seminar requirement for Latin American Studies majors. Prerequisite: L45 165D, one other class in Latin American studies, or one class on race studies.

L98 AMCS 4689 American Intellectual History to 1865

This course presents an overview of American intellectual history from the early 17th century and the founding of the first English settlements in North America to the mid-19th century and the American Civil War. We investigate how different thinkers responded to and helped shape key events and processes in colonial and early American history, concentrating in particular on developments in religious, political, social, scientific and educational thought. We cover major topics such as: Puritanism, the Enlightenment, Evangelicalism, Romanticism and the inner Civil War. We address concepts central to the formation of the nation's identity including those of the covenant, republicanism, citizenship, equality, freedom, liberty, natural law, transcendentalism, order, reason, progress and democracy.

Same as L22 History 4689

Credit 3 units. A&S IQ: HUM EN: H

L98 AMCS 470 American Intellectual History Since 1865

This course concentrates on social, cultural, philosophical and political thought since the end of the Civil War, and investigates how American thinkers have responded to the challenge of modernity. After an examination of the end of the old religious order and the revolt against Victorianism, it analyzes the subsequent rise of pragmatism, progressivism, literary modernism, radical liberalism, political realism, protest movements and the New Left, neo-conservatism and the New Right, and the current state of intellectuals in post-9/11 America.

L98 AMCS 472 American Art and Culture, 1945-1960

The rise and "triumph" of Abstract Expressionism has long dominated the story of American art following World War II. This seminar puts Abstract Expressionism into context with parallel developments in the arts, photography and film. Among the topics we consider: the conversation between émigré artists and American culture during and after the war; the emergence of a "noir" aesthetic in film and literature; the early work of Jasper Johns and Robert Rauschenberg and the so-called "aesthetic of indifference" in relation to Abstract Expressionism; artistic collaborations at Black Mountain College; New York school photography and photojournalism; and the cultural impact of the A-bomb. Prerequisites: a 300-level course on 20th-century art, photography or history, or permission of the instructor. Same as L01 Art-Arch 4721

L98 AMCS 474 Americans and Their Presidents

How have Americans understood what it means to be President of the United States? This seminar uses that question as a point of departure for a multidisciplinary cultural approach to the presidency in the United States, examining the shifting roles of the chief executive from George Washington through Barack Obama. In addition to a consideration of the president's political and policy-making roles, this course examines how the lived experiences of presidents have informed the ways Americans have conceived of public and private life within a broader political culture. In the process, this course uses the presidency as a means to explore topics ranging from electioneering to gender, foreign policy to popular media. Readings are drawn from a broad range of fields.

Credit 3 units. A&S IQ: HUM EN: H

L98 AMCS 4744 TransAmerica: The U.S. and Mexico Between the Wars

Many areas of 20th-century U.S. culture between World Wars I and II were inspired by postrevolutionary Mexico. The Mexican Revolution (1910-1917) profoundly reoriented modern Mexico, introducing new cultural and aesthetic forms and historical themes over subsequent decades. Mexican artists contributed to a new national consciousness drawing on indigenous Mexico and on the new politics of workers and peasants, which were given monumental expression in mural painting. The bidirectional exchange between U.S. and Mexican artists was of great importance for the cultural revitalization of the New Deal and after in the United States. Among artists, writers, anthropologists, and tourists, the vogue for things Mexican was fed by many sources, including increasing travel, diplomatic exchange, and a yearning for alternatives to U.S. modernity. This seminar will support travel to Mexico City, funded by the Department of Art History and Archaeology. Students in this course must be graduate students or undergraduate majors or minors in Art History and Archaeology or Latin American Studies. Recommended prerequisite courses include one 300- or 400-level course in 20th-century U.S. art or history or one relevant course in the Latin American Studies program.

L98 AMCS 476 The City in American Arts and Popular Culture, 1900-1940

From the mid-19th century forward, artists, writers, sociologists, and cultural critics have identified the city as the primary site of a vast array of historical changes associated with modernization. This course will explore the range of cultural responses to the new 20th-century city up to World War II. The American city was seen as both an incubator of difference, and of mass conformity and manipulation; a dynamic space in which to form fluid networks that catalyzed new forms of creativity, and a place of strangers and social alienation. We will trace the history of these polarized responses in the 20th-century arts and literature of the city, looking at the vibrant popular culture of film, vaudeville, and cross-dressing; new aesthetic forms such as collage and expressionism; and new urban subjects. Prerequisites: 300-level course in American 20th-century cultural history, American art, literature, or permission of instructor.

L98 AMCS 4774 Art and Culture in '20s and '30s America

Mass consumption and the expansion of mass culture; mechanization; and the birth of a new visual culture that turned on animation, advertising, photography, and film. Taking our cues from the cultural contradictions and historical tensions embedded in F. Scott Fitzgerald's great novel of 1925, and the 2013 film inspired by it, this seminar will trace what many at the time called the "Rediscovery of America" and its tribulations. American artists, writers, and cultural theorists embraced the possibilities and pitfalls of American modernity, the nation's mythic promise and its historical dilemmas in the face of growing commercialization and standardization. This seminar is a interdisciplinary look at the art, visual culture, music, literature, and cultural essays of the 1920s through the lens of nation, race, region, and cultural identity(ies). Prerequisite: 300-level 20th-century American art, history, or literature course, or permission of instructor.

Credit 3 units. A&S IQ: HUM Art: AH EN: H

L98 AMCS 478 Topics in Transmedia Franchises

This variable topics course for advanced undergraduate and graduate students is an interdisciplinary seminar on transmedia franchises. In particular, it is recommended for those seeking to understand transmedia storytelling as an artistic, industrial, and cultural practice. As such, this course will bring into conversation various methodologies and perspectives, including film and media scholarship as well as other fields of study in the humanities and social sciences. The goal of this interdisciplinary approach is to illuminate how transmedia franchises have developed since the early 20th century to become the dominant product of the American -- and, increasingly, global -- cultural industries. Foci of this course may include such topics as individual franchises; global transmedia history; the franchise strategies of individual cultural industries (e.g., the Japanese media mix); or representation within franchise texts, production cultures, and fan communities. This course serves as a capstone for Film & Media Studies majors. Weekly or bi-weekly screenings or hands-on media labs are required.

L98 AMCS 4785 Art and Culture in 1920s America

This interdisciplinary seminar examines the relationship between art and 1920s culture in the United States, including how artists and critics thought about the nature of our cultural heritage (both its rich possibilities and its limitations); the potential of technology and urbanization as well as the threats they pose to older cultural values; the nature of a multicultural society and the contributions of minority traditions to the evolution of American culture; the lure of the Southwest; early criticism of popular media; and the conversation between popular culture and high art. Prerequisite: L01 113 or permission of instructor.

L98 AMCS 480 Education and Public Policy in the United States

This course takes a triangulated approach to the field of public policy as it relates to education and social problems. First, the course emphasizes theories of public policy that frame the field of policy studies. Second, the course emphasizes the skills related to the exercise of policy analysis. Third, this course simulates the policymaking context through students' participation in mock congressional testimonies. Educational opportunity, achievement inequality, and social change will be the primary interests that link these course features.

L98 AMCS 481B Advanced Seminar: New York, New York: The Empire City from Stuyvesant to Trump

This research seminar engages the long history of greater New York City: from the place Native Americans called Manna-hata to the largest city in the United States and the world political, financial, and cultural capital that it is today. The course explores New York City's ambivalent relationship with America, with the world, and with itself. It focuses on matters of power — how, in different moments of the city's history, it was defined, who held it, and how various groups managed to contest for it; matters of exchange and extraction — political, cultural, and economic; and matters of belonging — whether a city of immigrants, exiles and refugees succeeded in becoming a home for the homeless. It pays close attention to both the micro — the street corner and the political ward; the bridge and the tunnel; the gentrifying neighborhood; the mosaic of the city's foodways; the theater, financial, slaughterhouse, brothel, and other districts — and the macro — the banks and the stock exchange; the port and transit authorities; the instrumentalities of knowledge and cultural production in the city's universities, print media, clubs, and salons; the sports empires; and the political machines, organized crime, grassroots labor and political movements, insurgencies, and undergrounds. Above all, the course will foreground the city's massive and unbearable contradictions, as a city of skyscrapers and of basement dives, lures, and snares; as a symbol of the future and freedom bound to traumatic, slave, and unfree pasts; as a symbol of modern independence bound to modern interdependence; and as a place of renaissances and ruinations, where the world either comes together or spectacularly falls apart. Sites of potential investigation, in a list that is suggestive rather than exhaustive, range from the African Burial Ground to the 9/11 Memorial and Museum, from Hamilton to Hamilton, from Boss Tweed to Robert Moses, from the Five Points to Chinatown, from Delmonico's to Sylvia's, from Blackwell's Island Lunatic Asylum to Hart Island Potter's Field, from the African Free School to Ocean Hill-Brownsville, from Marcus Garvey to Amadou Diallo, from

Billie Holiday to Andy Warhol, from James Baldwin's Harlem to Stonewall, from George Steinbrenner to Jerry Seinfeld, from the Gowanus Canal to Estée Lauder, and, in the spirit of the course title, from Stuyvesant to Trump. Students will engage with the history of New York City via two three-page book reviews, a three-page site analysis, and two five-minute oral reports on assigned readings before conducting their own original research in consultation with the instructor that will culminate in a 15-page final essay. Attendance at all classes and participation in class discussions required. This course fulfills the history major capstone requirement as an Advanced Seminar.

Same as L22 History 481B

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L98 AMCS 481W History of Education in United States

Examines education within the context of American social and intellectual history. Using a broad conception of education in the United States and a variety of readings in American culture and social history, the course focuses on such themes as the variety of institutions involved with education, including family, church, community, work place, and cultural agency; the ways relationships among those institutions have changed over time; the means individuals have used to acquire an education; and the values, ideas, and practices that have shaped American educational policy in different periods of our history. NOTE ABOUT ENROLLMENT: All students will be initially waitlisted. Because this is a writing intensive course, enrollment will most likely be 12-15 students. Enrollment preference will be given to students who are majoring/minoring in Educational Studies, Teacher Education, Applied Linguistics, History, American Culture Studies, and Children's Studies and to students needing to complete their Writing Intensive requirement. Instructor will e-mail students about enrollment.

L98 AMCS 487 Topics in American History

This course explores the racial construction of the use of legal and illegal substances in American history from the mid-19th century to the present. We will spend time engaging in a historical analysis of the social, economic, and racial dynamics that defined drug addiction in popular imagination, and examine how these factors contributed to discussions about legality, access to substances, one's ability to be rehabilitated, and criminal status. Regarding criminality we will particularly explore sociological and theoretical perspectives of labeling, habitual and occasional offenders, and moral panic in order to understand how racial minority groups were targeted for different rhetorical, legislative, and economic purposes. One major goal of the course will be to outline the early 20th century beginnings of the war on drugs and connect it to the century long growth of a militarized police system and prison industrial complex. We will secondly work to understand the role of local and national political actors, law enforcement, and the media in manufacturing and maintaining connections between race, crime and drugs. Ultimately, we will use our study of drugs to contextualize 21st-century issues of police violence, increases in homicide in minority communities, mass incarceration, poverty, segregation, and mass movements of protest.

L98 AMCS 490A AMCS Portfolio Workshop: Academic Citizenship

How can students develop a stronger sense of academic identity and purpose? How can research translate into opportunities beyond the classroom, from service to politics? In this workshop AMCS Majors explore these questions while receiving support at a crucial milestone, the Senior Capstone. Through reflection and writing students develop a stronger intellectual identity, and consider how their research prepares them to participate in conversations and activities that transcend scholarship. This participation is a kind of "academic citizenship" with students leveraging their learning to engage intellectual, social, and political life in and beyond campus. Students do this primarily through consideration of their capstone research, happening concurrently in the AMCS Capstone Workshop or in an approved seminar. While encouraging Majors to consider the intersection of their academic and personal goals, the workshop supports research (e.g., guest faculty discuss methodology), gives structure to activities already required for the Major (e.g., the capstone abstract), and builds community (e.g., peer-led discussions). The workshop also provides time and space for students to curate their AMCS portfolio. The Fall Workshop is part of a workshop series designed to help AMCS Majors develop their portfolio and provide additional training and support at particular milestones in the major. The portfolio and accompanying workshops is a response to students' feedback. Graduating seniors said they would have liked more structured time to reflect on their work in the major; they would have liked to document their progress in the program more fully; and they wanted more opportunities to strengthen their class cohort. The Fall Workshop will provide all of those things, while centering students' attention on their growth as scholars and engaged citizens.

Credit 1 unit.

L98 AMCS 490B AMCS Portfolio Workshop: Connections and Explorations

Where have your studies in American Culture taken you? In this one-credit workshop AMCS Majors work with mentors and peers to reflect on their journey through the major, prepare for the public presentation of their capstone research in early April, and prepare for life after college. The course gives AMCS Majors space and time to think more deeply about what they have achieved academically and where their intellectual and personal priorities intersect. We hope it helps AMCS students to discover connections among what they have done and learned in the program and clarifies post-college goals and pursuits. Some of the workshop activities are required for the major (e.g., the capstone presentation). The course provides structure, support, and academic credit for doing them. The workshop is a response to students' feedback: Graduating seniors tell us they would have liked more structured time to reflect on their work in the major; they would have liked to document their progress and growth in the program more fully; and they wanted more opportunities to strengthen their class cohort. The Senior Workshop will foster all of these things, while centering students' attention on the connections among their academic, personal, and career interests.

Credit 1 unit.

L98 AMCS 4926 Contemporary Art of the U.S.-Mexico Border and Beyond

The question of the materiality of borders has attained new urgency with the resurgence of nationalist and anti-globalist movements. Calls for a "big, beautiful wall" on the U.S.-Mexico border are but one striking example of this phenomenon. A wall, a fence, a line, or a zone may focus attention on a narrow space, but it does so at the expense of broader narratives of structural inequality, the lingering violence of colonialism, and the rapid scale of climate change. The simplicity of a barrier is a particularly damaging fiction, one that avoids examinations of the larger forces that divide us. This upper-level and graduate seminar will delve into the history of "border art" as a category — whether public art, sculpture, installation, new media, or performance — using the U.S.-Mexico border as an extended in-depth case study. Analysis will not be limited to this region, as the course encourages a comparative approach that places disparate regions into dialogue with each other. In addition, we will also consider the issue of divides and borders locally, within the St. Louis area and its suburbs. Prerequisites: Intro to Western Art or Intro to Modern Art, plus one 300-level course in Art History.

L98 AMCS 495A Religion and the State: Global Mission, Global Empire

This course explores the complex intersections among U.S. political power on a global stage, and religious institutions and identities. Readings and discussions are organized around two very broad questions. First: How has this nation's history been shaped by religious "others" both inside and outside its borders? Second: How have perceptions of those others in turn affected U.S. responses to circumstances of global consequence — including, for example, foreign policy and diplomacy, missionary activity, and economic practices?

Same as L57 RelPol 495

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L98 AMCS 4982 Public Art: History, Practice, Theory

The course will consider the history and functions of public art, with special attention to public art in St. Louis. We will survey not only the obvious forms of public art in urban sculpture and mural painting but also less traditional intersections of art and public in such sites as the internet. We will also examine the operations of institutions — national and local arts agencies, international exhibitions, nonprofit centers and the like — that foster a public engagement with contemporary art. Finally, we will consider new priorities and projects in public art, especially socially oriented and environmentally sustainable initiatives. Prerequisites: L01 113, Intro to Western Art; or L01 215, Intro to Modern Art; one 300-level course in Art History preferred; or permission of instructor.

Credit 3 units. A&S IQ: HUM Art: AH EN: H

L98 AMCS 4984 The Problem of New World Freedom: The Age of Democratic Revolution in the United States and the Americas

Ever since the improbable alliance of the English pirate and slave trader Sir Francis Drake and the fugitive slave Cimarrons on the Atlantic coast of Panama many centuries ago, the history of freedom in the New World has unfolded in unlikely fits and starts. The course will explore two related conjectures: first, that maroon politics (the often short-lived alliances between slaves, quasi-free blacks and white allies), slave rebellion, provincial secession and civil war were the widespread and normative conditions of post-colonial regimes throughout the New World; and second, that the problem of freedom was especially challenging in a New World environment in which freedom was fleeting and tended to decompose. Special attention will be given to antislavery insurgencies, interracial politics and alliances in the United States and the perspectives on freedom they produced, but the readings will also include materials on debates over freedom in the Caribbean and South America over the course of the long age of democratic revolution, 1760-1888. Same as L22 History 4984

Credit 3 units. A&S IQ: HUM, SD EN: H

L98 AMCS 4992 The Business of Us All: In/equality in Theory and Practice

This course uses a transdisciplinary approach to discuss in/equality and its interrelated topics of inequality, inequity and social justice. While the focus is on the U.S. predominantly, lessons learned from our global partners are important components of our discussions. The course will emphasize the implications of our findings for other ethnic/racial minorities around the world. Equality speaks to issues of priority, fairness and impartiality. On the other hand, inequality is defined as marked difference among individuals or groups of individuals in the distribution of social goods. Inequity, which considers bias, discrimination and injustice in distributive systems, pushes the discussion further. As the various forms of social, political and economic inequalities are mutually reinforced, we examine economic inequality, residential segregation and housing quality; dis/investment in neighborhoods and communities; resource allocation to low income, city and predominantly ethnic minority schools; academic underachievement of minority youth; access to and provision of appropriate health care; curtailment of social welfare programs; the presentation of stereotypical images of persons of color in the media and school curricula; morbidity, mortality, and longevity rates for persons of color; environmental hazards; the surge in incarceration related to substance abuse and escalating criminal prosecution, as well as discriminatory behavior of police and judges. All of the foregoing is made worse by race and gender status variables. Such factors cannot be considered inconsequential to social im/mobility and equality in the larger society. The collateral damage borne by the intergenerational transfer of social im/mobility and in/equality to future generations are integral to course discussions. Same as I50 INTER D 4992

L98 AMCS 4996 Race, Memory, and Performance

This course takes as its starting point the vexing questions of history, memory, and identity that activists, scholars, artists, and others have posed in recent years. What is to be done with the commemorative landscape of monuments and memorials? How do we account for the silences and erasures in archival records? How should histories of racial violence be commemorated?

These are questions that have been taken up in many arenas of civic life, including public art, "living history" tourism, museum studies, and urban planning. They have also been taken up by theater artists and performance artists who use their bodies, narrative, historical fact and, sometimes, fiction to bear witness to the past and to imagine new futures. In this course, we will examine the role of theater and performance in constituting-and challenging-the historically contingent meanings of "race;" we will also explore how performance of history shapes national narratives. Artists to be explored might include Branden Jacobs-Jenkins, Mary Kathryn Nagle, Dread Scott, Quiara Alegria Hudes, Simone Leigh, and Heidi Schreck. Artistic and/or performance experience is not required. Students will have the opportunity to propose their own commemorative projects; together we will explore whether and how performances of the past can do a certain kind of reparative work necessary for a more equitable future.

L98 AMCS 49KK Advanced Seminar: The United States in Afghanistan: Origins, Developments, Consequences

This course offers a historical examination and analysis of America's involvement in Afghanistan from the Cold War through the present, focusing in particular on the US War in Afghanistan from 2001 onward. Special attention will be given to political, military, diplomatic and economic dynamics as well as to international relationships, the experience of war and the subsequent developments upon both American and Afghani societies. Major topics covered include US covert operations against the Soviets in Afghanistan during the 1980s; revolution, civil war and the rise of the Taliban during the 1990s; 9/11 and the War on Terror; national building and stability measures during the early 2000s and subsequent security threats in the form of an insurgency, warlords, drug gangs, criminal networks and the al-Qaeda alliance of terrorist organizations; the key roles played by Pakistan, India, Iran, Russia, China and Central Asian states; the Obama surge and counterinsurgency operations starting in 2009; the soldier's experience, special forces, and covert operations; prisoners, torture and human rights abuses; the end of NATO's mission in 2014 and subsequent developments: the Ghani government, the return of the Taliban, the arrival of ISIS, the peace process, the U.S. drawdown and the elusive quest for peace and stability in Afghanistan. This is a capstone course open to history majors only. This course fulfills the History major capstone requirement as an Advanced Seminar.

L98 AMCS 49PK The Founding Fathers' Government in an Electronic Age

This is a research seminar that examines how Americans sought to translate their notions of government into a realistic set of priorities and a functioning set of public institutions. Extending from 1789 through the 1820s, this course investigates how the federal government came into being, what it did, and who populated the civilian and military rank of American officialdom. This is also a course in digital history. Students create new knowledge through their own contributions to an ongoing digital project that seeks to reconstitute the early federal workforce. In the process, students learn a variety of digital techniques, ranging from encoding languages to electronic systems to software packages.

Credit 3 units. A&S IQ: HUM EN: H

**L98 AMCS 49SA Advanced Seminar: Slavery in America:
The Politics of Knowledge Production**

This course focuses on the long history of chattel slavery in North America, from origins through emancipation, encompassing Black and Indigenous enslavement. The course foregrounds the struggles over power, over life and death, that were at the heart of slavery's traumatic and grotesquely violent 250-year career in North America, with attention to hemispheric context. At the same time, it highlights the fiercely contested historical battleground where scholars have argued about how to define American slavery — as a system or site of labor, production, and reproduction; law, property, and dispossession; racial and gender domination; sexual violation, rape, and incest; psychological terror and social death; containment and marooning; selfhood and nationality; agency and resistance; anti-colonial and revolutionary liberation and millennial redemption. Finally, it engages the "politics of knowledge production" that have produced the slavery "archive," replete with its annihilating silences, repressions, and erasures, and overdetermined "presences." In the end, the course's overarching question is how the politics of slavery, of its material experiences, interpretations, and archives, have shaped the lives and afterlives of slavery and race, to the present day. Students will conduct original research on topics related to North American slavery in consultation with the instructor that will culminate in a 12-15-page final essay. The course includes attention to the role of slavery in the founding and development of Washington University, and research projects that engage the University's slavery "archive" and questions related to enslavement in the history of the University and/or the history of St. Louis are welcome and will be supported by Olin Library Special Collections and other resources. Modern, U.S. PREREQUISITE: SEE HISTORY HEADNOTE.

Ampersand Programs

Ampersand Programs are special multi-semester seminar programs open only to matriculating first-year students. An Ampersand Program combines a coherent, group-oriented learning experience with out-of-classroom activities while still allowing time for electives.

Ampersand Programs change each year and have included such topics as Biotech Explorers Pathway; Democracy and Myth in Ancient Greece; Encountering China; Examining America; Global Citizenship Program; History, Memory & Representation of the Holocaust; Literary Culture of Modern Ireland; Law and Society; Medicine and Society (p. 873); Mind, Brain, Behavior; Pathfinder Fellows in Environmental Leadership; Phage Hunters; (Re)Imaging the Urban; Safe Asylum: Refugee Politics and Pathways; Text and Traditions; The Hallmarks of Cancer and Patient Care; Shakespeare's Globe: All the World's a Stage; Slavery's WashU: The Lives and Afterlives of Slavery at Washington University and in the St. Louis Region, 1853-Present; The History and Culture of the Venetian Republic;

Theater as a Living Art; and Women in Science. Enrollment in each Ampersand Program is limited to ensure closely mentored personalized instruction. All Ampersand Programs constitute integrations and therefore fulfill one of the requirements for the Bachelor of Arts degree. Ampersand Programs are open to all Arts & Sciences students, regardless of their intended majors, and they complement any major or pre-professional curriculum.

L61 FYP 107 Ampersand: A Performative Perspective on Chinese Culture and Identity

This course examines the diversified and rich history of Chinese visual and performance cultures from the Chinese mainland, Taiwan, Hong Kong, and throughout the Chinese diaspora. A collaboration between the East Asian Languages and Cultures and Performing Arts departments, this course explores Chinese cultural narratives in relation to how they have been performed — on stage in traditional forms of dance-drama, on screen in film, and as lived in the practice of everyday life — from the late Imperial period to the present. It includes a practice component that introduces the students to movement disciplines such as Tai' Chi and opera, and it allows students to pursue creative assignments such as interview, stage plays, and filmmaking that demonstrate their developing knowledge of historical and contemporary Chinese culture. Building bridges of understanding between the United States and the Republic of China in Taiwan, the course will culminate in a spring break trip to Taiwan. This course is only for first-year, non-transfer students in the Ampersand: Encountering China program.

L61 FYP 1071 Ampersand: Memory and Memorialization in American Culture

What do Americans remember, and what do we choose to forget? Who decides? And what do our ever-proliferating memorials and at times obsessive acts of memorialization say about us? In this course, we will study cultural memory in the U.S. from the Civil War to September 11 by looking at "official" and "vernacular" forms of memorialization, including monuments, roadside crosses, temporary memorials, reenactments, museum exhibits, etc. We will seek to understand not only what public acts of memorialization look like and who gets to define them, but how memory is contested or reshaped by such practices. Along the way, we will ask how controversies of memory are related to competing ideas of nation, citizenship and patriotism; debates about what happened in the past; problems of cultural representation and identity; and shame and erasure of memory. This exploration will focus on "crises of memory" that have fundamentally altered American practices of remembrance.

Credit 3 units. A&S: AMP A&S IQ: HUM EN: H

L61 FYP 1072 Ampersand: Writing Loss, Legacy, and Memory

This class will involve student writers in acts of remembrance as both a complement to the linked Fall Semesters course "Memory and Memorialization in American Culture" and as an introduction to a central motive of writers in all traditions: art as a means of transcending trauma and loss, large and small. Writing in multiple genres, from essay to poetry, from reportage to memoir, we will explore ways in which writers literally "come to terms" with the past, including idealization, justification, and re-interpretation. The course will stress how individual experience, especially loss, can move from private meaning to public when writers can convey their experience as representative of others. It will also explore the authority one assumes and creates when speaking for others. Travel to sites such as Washington,

D.C., will afford students an additional and exciting means of studying collective memory in a broader context that includes observing the interaction of a present-day audience. In addition to documents from field trips, course texts will include examples from various genres, as well as selected readings from cultural critics and writers about writing.

L61 FYP 108 Ampersand: Constantinople, Queen of Cities: Part I

Constantinople, the capital of the Byzantine Empire (330 to 1453), was among the greatest marvels of the medieval world. Renowned for its wealth and sophistication, the city was one of the largest urban centers in the premodern era and the model that cultures both east and west sought to surpass. In this course, we explore the evidence behind this reputation, studying the architectural, social, and artistic history of the Queen of Cities. Although renamed Istanbul when conquered in 1453 by the Ottomans, its fame did not fade, and some of its most impressive monuments, preserved to this day, stand as witness to the remarkable achievements of Byzantine culture.

L61 FYP 1080 Encountering Chinese Culture: Performing Tradition, Engendering Transformations

This course examines the development of modern Chinese culture and its dynamic relationship with traditions and renovations. During the past century, China has gone through a series of political, cultural, economic, and technological transformations that constantly reshaped the form and content of Chinese culture. Tracing the drastic changes in Chinese language, performance and media forms from the late 19th century to contemporary time, this course guides the student through the pivotal moments in modern Chinese history and analyzes their impacts on literature, drama, dance, film and internet culture. What transformative promise did new media and art forms deliver? How do we make sense of the intricate connection between tradition and renovation? The purpose of this course is to foster an understanding of Chinese culture as a dynamic process of formation rather than a static, homogeneous entity. However, instead of seeing this formation as a linear progression with one form or style replacing the other, we will study how past traditions — both ancient and recently constructed ones — are reconfigured in new cultural representations and practices.

L61 FYP 1081 Ampersand: From Constantinople To Istanbul

This course is a continuation of the Freshman Focus Program, Constantinople, Queen of Cities, and it is limited to those students who are completing the sequence. It is a requirement for students participating in the summer 2010 study trip to Constantinople (Istanbul). This 1-credit course expands upon material covered during the fall semester by considering the post-Byzantine history of Constantinople, both under Ottoman rule and in the modern era. Requirements for this companion course include regular attendance, active participation, and the presentation of two oral reports on site in Istanbul, which will be based on fall and spring semester research projects.

Credit 1 unit. A&S: AMP A&S IQ: HUM EN: H

L61 FYP 110A Ampersand: Examining America: American Dreams: Art, Culture, Performance, and Politics

Rooted in Jeffersonian ideals of "life, liberty and the pursuit of happiness," the notion of the "American Dream" actually has a complicated history, and its meanings are diverse and contested. This Ampersand course investigates how perceptions, representations, and meanings of the American Dream have changed throughout history and how they live on in the contemporary United States. Rather than seeking definitive definitions or answers, we carefully and thoughtfully examine case studies of American culture and the arts -- literature, theatre, film and painting -- as the lens for understanding images of nation and identity. Utilizing an intimate seminar format to facilitate the close reading and discussion of works in various media, this Ampersand course emphasizes both critical thinking and writing; it requires students to execute a creative project of their own making as well. We also visit a variety of exciting performances and exhibits, both on and off campus. Our primary goal is a compelling, interdisciplinary perspective on the American Dream that synthesizes the arts, performance and politics. This course is intended for first-year students; any seats remaining after first-year students enroll are open to other classes.

L61 FYP 116 Ampersand: Geographies of Globalization and Development

This course provides an overview to the geographies of globalization and development in the world today. We begin by engaging with a variety of theoretical perspectives, definitions, and debates in order to establish the foundations upon which students can conceptualize and understand existing patterns of inequality, social injustice, and environmental conflicts. In order to further highlight the different ways in which development and globalization interventions are experienced and contested, in the second half of the course, we will focus our considerations toward specific contemporary issues at the forefront of globalization and development debates, including migration and refugees, urbanization, sustainable development, tourism, and alter-globalization social movements. This course is restricted to first-year students in the Global Citizenship Program.

L61 FYP 117 Amp:Global Population on the Move: Language + Resettlement w/Legal, Healthcare + Educational Systems

Today, the number of displaced people is at its highest: one out of every 113 people on Earth. In this course, we begin with an understanding of what it means to be a refugee, and we discuss readings that lead us to an understanding of the modern refugee as we contextualize the significance of such terms as 'refugee,' 'asylum,' 'sanctuary,' 'non-refoulement,' or 'forced displacement.' With this foundation, we move to the role that language plays with resettlement into society and examine factors in the legal, healthcare and educational systems. We examine global work done through the United Nations Educational, Scientific and Cultural Organization and more, and we concentrate on the current state of refugees and New Americans in St. Louis and the USA. The course fosters critical thinking across academic disciplines, encourages practical implications of research on global citizenship, and includes invited guest lectures by local practitioners and other Washington University scholars. This course is restricted to first-year students in the Global Citizenship

Program. Today, the number of displaced people is at its highest: one out of every 113 people on Earth. L61 FYP 120A Amp: Intro to Study of the Mind-Brain:

Psychological, Biological, & Philosophical Perspectives

This course presents a consideration of three primary areas of research in cognitive science: attention, memory, and language. These topics are used to illustrate the techniques by which mental abilities are investigated and explained in psychology and neuroscience; the focus, in particular, is on the use of reaction time studies, brain imaging, and cell recordings to isolate the basic components that make up complex functions. In addition to the central concepts and theories in each area, the course will address philosophical implications of this research concerning how the mind and brain are related, how the mind-brain encodes or represents information, and the nature of consciousness. There will also be an emphasis on applying these findings to important problems, such as Alzheimer's disease and deficits due to brain damage. The course is taught by three members of the faculty from different disciplines, and it combines a whole-group lecture with small discussion classes. The goal is to give students a good understanding of the interdisciplinary nature of cognitive science and to help them develop the ability to think and write critically about scientific research into the mind-brain. Prerequisite: Admission to the Hewlett Program in the Study of the Mind-Brain.

L61 FYP 121 Ampersand: Pathfinder — A Sense of Place:

Discovering Missouri's Natural Heritage

This is the first course in the Pathfinder program, and it will introduce students to their new home for the next four years. This interdisciplinary course will cover Missouri geology, climate, archaeology, and native megafauna. We will explore many of the habitats found in Missouri (prairie, forest, glade, and stream) and the biology of our diverse plant and animal wildlife (arthropods, mollusks, fish, salamanders, lizards, birds, and mammals). This will provide a foundation that will inform the study of ecology, policy and management in other courses. In addition to weekly lectures and discussions, students in this course will visit sites across the state during three weekend camping trips and two one-day trips. Attendance on field trips is an essential component of the course. Course enrollment is open only to students admitted into the Pathfinder Fellowship program.

Credit 3 units. A&S: AMP A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L61 FYP 122 Ampersand: Pathfinder — A Sense of Place:

Discovering the Environment of St. Louis

Students will go exploring in and around St. Louis, where they will learn about the St. Louis backyard and their "home" for the next four years. Through field trips, readings, and discussion, students will see firsthand what challenges face the local environment and the people who live here. They will learn how to examine multiple perspectives, how to think critically, and how to approach problems from an interdisciplinary and holistic approach. They will also learn why it is important to know a community at the local level if to affect change on any level, whether state, national, or international. This course includes several field trips in addition to weekly readings and discussions.

Credit 3 units. A&S: AMP A&S IQ: NSM BU: SCI

L61 FYP 122A Ampersand: Introduction to the Study of the Mind Brain II

In this course, participants in the Mind, Brain and Behavior Program (formerly known as the Hewlett Mind-Brain program) will continue their exploration of cognitive science. We will explore different frameworks for thinking about how the different branches of cognitive science relate to each other. The course will contain an introduction to relevant topics in the philosophy of science and the philosophy of mind. Prerequisite: MBB/PNP 120. Credit 3 units. A&S: AMP A&S IQ: SSC BU: BA EN: S

L61 FYP 1261 Ampersand: Law and Society

This course considers the basic aspects of the American legal system: its foundations, processes, institutions and rights. We will also study some specific substantive areas of the law. The course consists of two 90-minute Socratic lectures per week. Upon completion of this course, students should have a basic knowledge of the American legal system, which is an important part of a general education. The hope is that such knowledge will enable students to better understand and assess current legal events and to develop an increased interest in those events. This course should also enable students to consider law as a future area of study and career. Interested students may continue their study in the spring semester with an optional 1-credit seminar focusing on contemporary Supreme Court cases. Course is for first-year students in the Law and Society Program only.

Credit 3 units. A&S: AMP A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L61 FYP 141 Ampersand: Medicine and Society

This course provides the basic foundation in medical anthropology and cultural anthropology for students enrolled in the Medicine and Society Program. The purpose of the course is to introduce students to the central themes and theoretical approaches employed by medical anthropologists to study health and illness in cross-cultural perspective. Topical areas include analyses of disease, illness and sickness at micro and macro levels; impact of personal and interpersonal factors on health; health effects of social, political, and economic factors; relationship of anthropology to biological and social science approaches; ecology of health and development; and cross-cultural health studies of language, gender, and race/ethnicity.

Note: Content for this course overlaps with and replaces Anth 160 for students enrolled in the Medicine and Society Program. Open only to students enrolled in the Medicine and Society Program.

Same as L48 Anthro 141

L61 FYP 1503 Ampersand: Workshop for the Global Citizenship Program

This year-long workshop, which is restricted to and required of participants in the Global Citizenship Program (GCP), is a companion to the core GCP fall course. During the first semester, students will analyze their own identities and biases as a basis for learning about other identities, cultures, and worldviews. We will then explore the topics of solidarity, charity, agency, and empowerment in order to better understand how we can contribute to ethical and lasting change as global citizens. This work will prepare students for their second-semester community-based learning project, in which they will partner with a local organization to develop a project together. Contingent on COVID, the second semester will also include a spring break travel portion.

Credit 1 unit. A&S: AMP

L61 FYP 1504 Ampersand: Workshop for the Global Citizenship Program

This workshop, which is restricted to and required of participants in the Global Citizenship Program, is a continuation of the fall L61 FYP 1503 workshop. Using the skills we developed first semester, we will explore tangible ways to practice global citizenship and foster solidarity in the "real world" outside the classroom. Students will partner with a local organization to develop a collaborative community-based learning project. An optional trip during spring break will provide further opportunities for hands-on learning and interaction with organizations and people involved in the themes of the course.

Credit 1 unit. A&S: AMP

L61 FYP 160 Ampersand: Going Dutch: Art, Science, and Discovery in Amsterdam and Beyond

The Netherlands, despite its geographical scale, was once the most powerful and culturally thriving country in Europe. In the 17th century, the great metropolis of Amsterdam and the surrounding cities of Leiden, Delft, and Haarlem burgeoned as sites of global trade, scientific innovation, and unprecedented achievements in art. The paintings of Rembrandt van Rijn, Frans Hals, Johannes Vermeer, and many others embody the fascinating contradictions of a culture caught between Calvinist morals and licentiousness, lucrative commerce and fears of worldly vanity, and botanical learning and the tulip craze. The remarkable invention that characterized the Dutch Golden Age led also to the microscope, the fire engine, modernized anatomical dissection, and even the founding of New York City. This course surveys the history of the 17th-century Netherlands through the lens of its art and intellectual achievements, ultimately reflecting upon its legacy today.

Credit 3 units. A&S: AMP A&S IQ: HUM Arch: HUM Art: HUM EN: H

L61 FYP 1701 Ampersand: The Italian Renaissance I

The Renaissance was one of the most dynamic and influential periods in the history of Western Europe. It is replete with contrasts and contradictions, preserving numerous aspects of medieval thought at the same time as it was developing dramatic new ways of viewing, understanding, and expressing the world. Although these factors affected all of Europe to different degrees, it was in Italy that these trends first appeared and from which they traveled north, east, and west to profoundly influence the entire continent. This course will concentrate on the Italian Renaissance in an effort to gain a panoramic view of its many aspects and the essential characteristics of each subject studied. The fall term will examine geography and political entities; wars and political realignments; forms of government and their rulers; social life; manufacturing, trade and economics; the humanist movement; philosophy; the Catholic Reformation; and the natural sciences and medicine. The spring term will concentrate on the arts: architecture, painting, sculpture, literature, and music. Prerequisite: admission into The Renaissance Focus program. Credit 3 units. A&S: FYS A&S IQ: HUM BU: HUM EN: H

L61 FYP 1702 Ampersand: The Renaissance: An Introduction II

The Renaissance saw a fundamental shift in the character and functions of the arts in western society. This course will examine the basic aesthetics and features of Renaissance literature (poetry, epic poetry, drama), plastic arts (painting, illumination, sculpture, bas-relief), architecture (both sacred and secular) and music (both sacred and secular, including dance). We will be examining the role of perception in the arts, the relationship of that perception to humanistic, religious and political thought, and the various ways in which the arts communicate that relationship. Credit 3 units. A&S: AMP

L61 FYP 1703 Ampersand: The Republic of Venice I

The Venetian Republic survived intact from its beginnings in the 5th century A.D. to the Napoleonic conquest of 1797. This course will introduce students to the unique social, cultural and artistic life of the maritime Republic known as the Serenissima. The fall semester will explore the political, governmental, social, religious and economic foundations of the republic together with its artistic and architectural expressions up to 1520. The spring term consider further social and institutional constructs and will trace the height of Venice's artistic achievements through painting, sculpture, architecture, music and drama, accompanied by the city's gradual economic and political decline to the end of its existence as an independent state in 1797.

Credit 3 units. A&S: AMP A&S IQ: HUM Arch: HUM Art: HUM BU: IS EN: H

L61 FYP 1704 Ampersand: The Republic of Venice II

This course will continue the study of Venetian history and culture, from the mid-16th century to the fall of the Republic to Napoleon in 1797. In addition to studying the political and economic life of the later Republic, we will focus on the impact of various social and cultural issues, such as the Reformation and the Inquisition, early Venetian feminist writers, Carnival and masking, tourism, gambling, courtesans, and the diversity of social life and activities. In the arts, we will consider such subjects as Renaissance and Mannerist architecture; painting by Titian, Tintoretto, Tiepolo, Canaletto and Francesco Guardi; music by Claudio Monteverdi and Antonio Vivaldi; comedies by Carlo Goldoni; and the development of opera theater and the opera business.

Credit 3 units. A&S: AMP A&S IQ: HUM Arch: HUM Art: HUM
BU: IS EN: H

L61 FYP 181P Ampersand: Pathfinder: Environmental Seminar

This course is a survey of pressing environmental issues, both local and global, as well as an introduction to the breadth of environmental work occurring on campus. Credit/no credit only. Credit 1 unit. A&S: AMP

L61 FYP 1910 Ampersand: Phage Hunters

A research-based laboratory class for first years. Students join a national experiment organized by HHMI, with the goal of isolating and characterizing bacteriophage viruses found in the soil in the St. Louis area. Laboratory work includes isolation and purification of your own phage, DNA isolation and restriction mapping, and EM characterization of your phage. Several WU phage are selected for genome sequencing over winter break, and are annotated in the spring in Bio 192, Phage Bioinformatics. Students who successfully isolate and annotate a phage may become co-authors on a scientific paper. Prerequisites: High school courses in biology and chemistry, at least one at the AP or International Baccalaureate level; permission of the instructor. One hour lecture, one hour discussion, and 3 hrs lab per week. Course is for first-year students in the Phage Hunters Program only. Credit 3 units. A&S: AMP A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L61 FYP 1920 Ampersand: Phage Bioinformatics

A research-based laboratory class for first-year students. Students join a national experiment organized by HHMI, with the goal of genomic characterization of a local phage. Laboratory work focuses on learning computer-based tools for genome analysis followed by annotation and comparative analysis of the genome of a phage (bacterial virus) that was isolated fall semester at WU and sequenced over winter break. Prerequisites: high school courses in biology, chemistry, and physics, at least one at the AP or International Baccalaureate level; permission of the instructor. Limited to 40 students; preference given to those completing Biol 191, Phage Hunters. One hour lecture, one hour discussion, and three hours lab per week. Credit 3 units. A&S: AMP A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L61 FYP 200C Ampersand: Sanity and Madness in Literature from Ancient Greece to the Renaissance

We will consider explicit and implicit models of mental life, motivation, and action in works by authors studied in 201C. We will investigate how concepts related to madness are formulated and regulated in these literary texts and in the societies that produce them, and we will read scholarship from the 19th through 21st centuries that has debated the scale and scope of irrationality in ancient, medieval, and early modern cultures. Same as L93 IPH 200C. Credit 3 units. A&S: AMP A&S IQ: HUM BU: BA, HUM EN: H

L61 FYP 201 Ampersand: Nationalism and Identity: The Making of Modern Europe

This course is a reading-and-discussion seminar designed for students interested in an interdisciplinary program in history, literature, and language. It will cover a series of major topics in French and German history, beginning with the French Revolution and culminating in the origins of World War I. The unifying theme will be the concept of the nation and development of nationalism. Major topics will include Napoleon, the revolutions of 1848, and German unification; related topics will include such issues as women and the concept of the nation. The seminar will read texts such as the Abbe Sieyes' "What is the Third Estate?" (in translation) and will review excerpts from such films as Abel Gances's *Napoleon* and Jean Renoir's *La Marseillaise*.

Credit 3 units. A&S: AMP A&S IQ: HUM BU: IS

L61 FYP 201C First-Year Seminar: Classical to Renaissance Literature: Text and Traditions

Students enrolled in this course engage in close and sustained reading of a set of texts that are indispensable for an understanding of the European literary tradition, texts that continue to offer invaluable insights into humanity and the world around us. Homer's *Iliad* is the foundation of our class. We then go on to trace ways in which later poets and dramatists engage the work of predecessors who inspire and challenge them. Readings move from translations of Greek, Latin, and Italian, to poetry and drama composed in English. In addition to Homer, we will read works of Sappho, a Greek tragedian, Plato, Vergil, Ovid, Petrarch, and Shakespeare. Same as L93 IPH 201C. Credit 3 units. A&S: AMP A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

L61 FYP 2010 Ampersand: The Science of Biotechnology

Biotechnology is truly interdisciplinary, incorporating a myriad of pieces from biology, chemistry, engineering, physics, computer sciences, management, public policy, and law that apply the scientific process to societal challenges. This course introduces topics for science and engineering majors with an interest in biotech, and it teaches scientific concepts to business students considering careers in biotech management and entrepreneurship. Students who complete Biol 2010 understand key science concepts, how discoveries lead to applications addressing global challenges, how to effectively use a variety of resources to explore connections between science and biotech business, how to synthesize information from different fields, and how to exhibit strong teamwork skills and communicate information in written and oral forms. This course also provides a gateway for students interested in the two-year Biotech Explorers Program (BEP). The first two weeks of the course introduce students to the history of biotechnology, the BEP, and the use of case studies. The remainder of the course uses a series of four three-week units that combine lecture material, in-class group assignments, and readings to introduce the science and scope of biotechnology. For each unit, student teams also develop short case studies of St. Louis biotech companies and present their findings to the class. A series of site visits introduce students to the vibrant St. Louis biotech community. This course is for students in the Biotech Explorers Program only. Same as L41 Biol 2010. Credit 3 units. A&S: AMP A&S IQ: NSM BU: SCI

L61 FYP 202 Ampersand: French Nationalism 1789-1914:

The Formation of French National Identity

French: Exploration of cultural expressions and depictions of nationalism in France 1789-1914 with emphasis on literary forms — poetry, prose, drama — against the background of social and political change and in particular against the background of Franco-German relations. Will include investigation of the use of gender to construe the nation; founding myths; the roles of men, women, and the family in the nation; importance of language and other ethnic markers; the creation and function of heroes; versions of the past; cultural stereotyping of the French vs. the German, as well as contemporary critiques of nationalism. Taught in English. Course should be enrolled as 3 units, or 4 units with trip. Co-course: Each student should enroll in the level of French language instruction that follows their fall course. Credit variable, maximum 4 units. A&S: AMP A&S IQ: HUM Art: HUM EN: H

L61 FYP 203 Ampersand: German Nationalism 1789-1914:

The Formation of German National Identity

Exploration of cultural expressions and depictions of nationalism in Germany 1789-1914 with emphasis on literary forms — poetry, prose, drama — but including other symbolic modes of expression, against the background of social and political change and in particular against the background of Franco-German relations. Will include investigation of the use of gender to construe the nation; founding myths; the roles of men, women, and the family in the nation; the importance of language and other ethnic markers; the creation and function of heroes; versions of the past; cultural stereotyping of the German vs. the French, as well as contemporary critiques of nationalism. Course should be enrolled as 3 units, or 4 units with trip. Credit variable, maximum 4 units. A&S: AMP A&S IQ: HUM Art: HUM

L61 FYP 203C Ampersand: Early Political Thought: Text and Traditions

A selected survey of the political and moral thought of Europe from the rise of Athenian democracy to the Renaissance, with emphasis on analysis and discussion of writers such as Thucydides, Plato, Aristotle, St. Augustine, Castiglione, and Machiavelli. The course aims to introduce students to basic texts in the intellectual history of Western Europe, understood both as products of a particular time and place and as self-contained arguments that strive to instruct and persuade. The texts are simultaneously used to chart the careers of such fundamental notions as liberty, virtue, and justice. Same as L93 IPH 203C. Credit 3 units. A&S: AMP A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

L61 FYP 208 Ampersand: Global Culture and the Individual: Intercultural Skills for the 21st Century

The emergence of a global society continues to create vast changes in all cultures. How do these changes impact our lives and the way we view ourselves and our place in the world? Students in this seminar will use the study of language, culture, and literature to examine how they, as individuals, relate to self, community, and culture. Students will also learn to apply the skills needed to live and work most effectively within the university community and beyond. Credit 3 units. A&S: AMP A&S IQ: SSC Art: SSC BU: IS EN: S

L61 FYP 2081 Ampersand: Global Culture and the Individual: Intercultural Skills for the 21st Century

During the spring semester, we continue to find ways to practically apply the skills and knowledge gained during the fall semester. The course will be built around projects proposed by students at the end of the fall semester. By the end of the academic year, students will have gained a greater understanding of how they relate to and affect one another within their own immediate environment, their community, their culture, and beyond. The companion course for this seminar continues to be a two-semester language sequence at the student's level of proficiency as determined by a placement test. Credit 3 units. A&S: AMP A&S IQ: SSC Art: SSC EN: S

L61 FYP 209 Ampersand: Wild Ethics and Environmentalism

Fierce political battles are being fought over the preservation of wilderness, partly because wilderness means and has meant so many different things. European settlers saw the New World as a "howling wilderness," redeemable only by human settlement and improvement. To Native Americans this same land was home, not wilderness. As the frontier of settlement moved west, attitudes toward the wild began to change, with Henry David Thoreau stating "In wildness is the preservation of the world." This course will study the changing experiences of wilderness and the wild through history, grappling with insights derived from literature, art, philosophy, and ecology. The Spring semester will include a study of wolf reintroduction in Yellowstone National Park, including a Spring break trip to Yellowstone to study wolves in the wild. Credit 3 units. A&S: AMP A&S IQ: HUM EN: H

L61 FYP 2091 Ampersand: Wild Ethics and Environmentalism

Fierce political battles are being fought over the preservation of wilderness, partly because wilderness means and has meant so many different things. European settlers saw the New World as a "howling wilderness," redeemable only by human settlement and improvement. To Native Americans, this same land was home, not wilderness. As the frontier of settlement moved west, attitudes toward the wild began to change, with Henry David Thoreau stating, "In wildness is the preservation of the world." This course will study the changing experiences of wilderness and the wild through history, grappling with insights derived from literature, art, philosophy, and ecology. The spring semester will include a study of wolf reintroduction in Yellowstone National Park, including a spring break trip to Yellowstone to study wolves in the wild. Credit 3 units. A&S: AMP A&S IQ: HUM EN: H

L61 FYP 215 First-Year Seminar: The Theatre as a Living Art

Moving in and out of practice and theory, this plan interweaves a traditional introductory acting course with discussions of dramatic theory and visits to rehearsals where directors and actors work to shape the play. Must be taken concurrently with Drama 228C. Course is for first-year, non-transfer students only. Credit 3 units. A&S: FYS A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L61 FYP 2151 Ampersand: Theatre Topics Course

Companion course to L61 215. Credit 3 units. A&S: AMP

L61 FYP 216 Ampersand: The Theatre as a Living Art

Continuation of the Theatre as a Living Art. Topic varies by year, please consult course listings for a description of current offering. Prerequisite: admission to the Theatre as a Living Art Ampersand program.

Credit 3 units. A&S: AMP A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L61 FYP 2171 Ampersand: Women in Science

Throughout the centuries, women were interested and involved in the sciences. Their scientific contributions, however, have often been overlooked and their abilities questioned. In this year-long course, we will read biographies of famous women scientists and mathematicians, in addition to scholarly articles, to examine women's involvement in science and mathematics from the 19th century to the present. We will explore the ways in which women have pursued scientific knowledge, look at the cultural factors that affected them, and investigate the impact of scientific theory and social conditions on their opportunities and identities. In addition to reading about women in science, we will hear a variety of women talk about their careers. Faculty from chemistry, biology, engineering, earth and planetary sciences, medicine, physics, medical administration may visit, as well as female scientists who work in industry. This course is restricted to Women in Science participants who must have concurrent enrollment in Introduction to Women, Gender, and Sexuality Studies.

Credit 1.5 units. A&S: AMP A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

L61 FYP 2172 Ampersand: Women in Science:**Contemporary Issues**

Following the history of women in science that we explored in the fall semester, this class will begin a discussion and analysis of current issues in gender and science. We will look at the feminist critique of science and scientific objectivity before turning to women's careers in science. Several questions will be central to our inquiry: Do women "do" science differently? Could alternative science and mathematics education help increase women's representation in fields that continue to be male dominated like physics, engineering, and computer science? How do social expectations of men and women effect career choices and retention? In addition to exploring these issues, we will hear from a number of women scientists. Drawing from both the Danforth and Medical School campuses, our visitors will include faculty members from chemistry, biology, engineering, earth and planetary sciences, medicine, physics, medical administration, among others, who will share their reflections about women and science. This course is restricted to Women in Science Ampersand program participants.

Credit 1.5 units. A&S: AMP A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L61 FYP 221 Ampersand: Law and Society

This course will be a continuation of the seminar Ampersand: Law and Society. The course will apply knowledge learned in the first semester to analyze current and recent Supreme Court cases. Prerequisites: L61 1261 and admission to the Ampersand: Law and Society course.

Credit 3 units. A&S: AMP A&S IQ: SSC Art: SSC BU: BA, HUM EN: S

L61 FYP 2341 Ampersand: Italy's Temples of Knowledge:**The History and Controversies of Museums**

This course will investigate the history of museums in Italy and the political and ethical issues that have developed alongside the institutions themselves to the present day. Our study during the fall semester will unfold chronologically, beginning with such ancient precursors to the modern museum as the Roman House of Pompeii. We will study how the museum in Italy developed from an elite, private space — the Renaissance princely studiolo and curiosity cabinet — for the display to a select audience of individual and family social distinction to a public center for the cultural education of the masses and for the demonstration of state prestige (i.e., the Louvre, the Vatican Museums, and the Fascist Museum of Roman Civilization). We will also visit local art and history museums. The course will culminate at the end of the spring semester with a trip to Italy to tour the sites we have studied throughout the year. This course is restricted to Italy's Temples of Knowledge Focus program participants.

Credit 3 units. A&S: AMP A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

L61 FYP 2242 Ampersand: Migration Policies and Colonialism: Refugee Resettlement and Integration

This course will continue our investigation of the dynamics of migration in the MENA and African countries primarily and re-orient the discussions towards a much-overlooked cause of migration: colonialism. To achieve genuine refugee-/migrant-oriented reform policies, the Global North needs to reconcile with its colonial past. Toward this end, we will highlight how the history of migration is deeply entangled with colonialism. Our readings-based discussions will focus on analyzing how colonial logics continue to shape the dynamics of migration as well as fuel the growing xenophobia and anti-migration rhetoric in the Global North toward intercontinental human mobility. To understand the enduring legacies of colonialism on the contemporary politics of migration, our discussions will argue the premise that colonial histories should be central to migration studies today for there to be real reform in refugee, asylum, and migrant policies. We will explore a wide range of inspiring and challenging perspectives on migration and learn what postcolonial and decolonial scholarships can offer us studying international migration today. We will address these areas through our weekly readings of Migration Studies and Colonialism as a primary source; we will also survey a selection of articles as a secondary source. To supplement the readings, we will watch short documentaries addressing the topic as well as hear from activists, journalists, and specialists in the field. Course is for first-year, non-transfer students only.

Credit 3 units. A&S: AMP A&S IQ: LCD, SSC BU: BA EN: S

L61 FYP 2342 Ampersand: Italy's Temples of Knowledge, Part II

This first-year course has divided its scope over two semesters. In the fall, students study the history of museums; in the spring, students study the ethical, political, cultural, and interpretive issues that surrounded these institutions. Students will also prepare for the spring trip to Italy.

Credit 3 units. A&S: AMP A&S IQ: HUM Arch: HUM Art: HUM BU: BA EN: H

L61 FYP 2351 Ampersand: Moving and Being Moved:**Human Movement in Art, Culture, Sport and Health**

This course will investigate the significance of movement, individually and collectively, in human experience. Movement can signal a wide variety of states of being—gender, age, ethnicity, mental and physical health—in addition to its stylized expressions as social and concert dance. We will use readings, discussions, lectures and correlated movement work to deepen our understanding of what and how movement communicates. The course will be team-taught by members of the dance faculty and guest instructors. Concurrent registration in a dance or somatics course is recommended but not required. This course is restricted to Moving and Being Moved Focus program participants.

Credit 3 units. A&S: AMP A&S IQ: HUM EN: H

L61 FYP 2352 Ampersand: Moving and Being Moved:**Further Explorations**

Continuation of Fall Focus program. Students will continue to explore a broad range of topics. At the same time each student will deepen his or her experience of a specific movement discipline by enrolling in one of the many dance or somatic practices courses offered by Washington University. The weekly seminar meetings will focus on connections between dance and other disciplines: for example, lighting and costume design for dance, arts management, movement and Native American culture, dance and literary theory that treats "the body" metaphorically. However, our weekly meeting will also include time periodically for students to share their experience in their chosen movement centered courses. In-class content will continue to be supplemented by field trips and related practical applications. This course is restricted to Moving and Being Moved Focus program participants.

Credit 2 units. A&S: AMP A&S IQ: HUM EN: H

L61 FYP 2443 First-Year Seminar: The Nuremberg Trials and International Justice

This course is an exercise in understanding how professional historians and the general public discover and use the past. The main goals of this course are to understand the many different methods and standards applied to the past; to understand how and why each generation changes the past as it seeks to make it "usable"; and to develop the skills of exposition and argumentation necessary to describe and analyze complex historical issues and to express critical ideas effectively.

The subject of this inquiry will be the Nuremberg trials — the innovations and critiques around the law and politics of the trials themselves as well as the trials' legacies for ideas about international justice in postwar America and the world. Course is for first-year, non-transfer students only.

Same as L22 History 2443

Credit 3 units. A&S: FYS A&S IQ: HUM BU: HUM, IS EN: H

L61 FYP 2601 Ampersand: The Argentine Experience:**History, Literature, Culture**

How have foreigners viewed Argentina over time? What was the meaning of bloodshed among gauchos? What are the origins of tango? At one point, one-third of Argentina's population consisted of Afro-descendants — what happened to them? This course helps students find answers to such questions and more. We cover the history of Argentina, from Spanish settlement to the present, focusing on the wars of independence, economic growth and urbanization, immigration, gauchos and popular culture, Juan and Evita Peron, the "Dirty War," and the transition

to democracy and neoliberalism. The course complements an offering on Argentine Culture in the spring semester. It will also provide historical background for a field trip by the students to Buenos Aires, Argentina. It covers the history of one of Latin America's largest and most important countries, and it gives students the chance to compare processes of cultural, political, and economic development with the United States and other countries in the Americas. Prerequisite: admission to the Focus Argentina program.

Credit 3 units. A&S: AMP A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

L61 FYP 2602 Ampersand: Buenos Aires and the Construction of Argentine Culture

In this course, we will examine the various expressions of Argentine culture that have given us gauchos, tango, Jorge Luis Borges, and one of the most prolific and honored cinematic traditions of Latin America. In particular, we will explore the ways in which history and culture interact to express the experience of Argentina and Buenos Aires. We will study films, popular music, dance, literature, sport, and theater to gain insight into that experience. This course is part of the Buenos Aires Focus program; it includes a trip to Buenos Aires and is intended to be taken after Focus 2601 Argentina: Past and Present.

Credit 3 units. A&S: AMP A&S IQ: HUM Arch: HUM Art: HUM BU: IS EN: H

L61 FYP 267 Ampersand: Cuban Transitions: From Colonialism to Communism

This course will examine the Cuban experience from its beginnings as a Spanish colony to its independence. We will emphasize happenings in contemporary Cuba and its relations to other countries. Topics to be studied will include the Tainos, slavery, the preeminence of sugar and tobacco as an economic and cultural force, social structures, race, the "Spanish-American war," the press, the military, and education. We will screen documentaries, examine the paintings of Wilfredo Lam and the photographs of Walker Evans, and study the contribution of music to the Cuban ethos. We will concentrate on biographies and documentary films of Che Guevara and Fidel Castro. All topics studied will also be put into contemporary contexts. Completion of the course will require three short papers (four to six pages) and an oral report.

Credit 3 units. A&S: AMP A&S IQ: SSC Arch: SSC Art: SSC BU: IS

L61 FYP 2671 Ampersand: Stranger Than Paradise: Cuban Experience of the Revolution

The word "Cuba" strikes a resonant chord with many of us: a mix of curiosity, anxiety and hope shaped by many years of controversy and stereotyping on the one hand and myth-making on the other. Whether students want to develop an understanding of Cuban literature on and off the island or to learn about the music and dance history that led up to the Buena Vista Social Club phenomenon, this is a seminar worth exploring. Organized chronologically and thematically as a companion course to Cuba: From Colonialism to Communism, this course will cover a comprehensive range of topics related to contemporary Cuba. Faculty with ample first-hand knowledge of Cuba and invited speakers will encourage wide-ranging discussions about the interplay of such issues as the politics of race and sexuality, repression and exile, and censorship and dissent. African cultural heritage and syncretic religious

practices will be presented as both a source of pride for Cubans and a symbol of their unique Caribbean experience. By examining a variety of ideological perspectives in prose fiction, poetry, political speeches, artwork, musical forms, personal testimonies, and film, this seminar will allow students to exchange perceptions across various disciplines, question myths, and erase the distance between theory and context-based critical practice. Prerequisite: Successful completion of the first-semester course Cuba: From Colonialism to Communism. Credit 3 units. A&S: AMP A&S IQ: HUM Arch: HUM Art: HUM BU: IS EN: H

L61 FYP 287 Focus: Writers as Readers Seminar

Participants in this seminar examine how writing serves as a creative response to reading. Just as modern students are students of literature, so, too, were writers in the past students of their literary heritage and of their contemporary literary moment. We will examine how writers -- both poets and novelists -- responded to, elaborated on, rebelled against, and paid homage to their predecessors. Among the writers we will consider are Jane Austen, Henry James, Charles Dickens, Dostoevsky, Tennyson, Keats, Kipling, and Isaac Babel. Credit 3 units. A&S: AMP A&S IQ: HUM Art: HUM

L61 FYP 2201 Ampersand: Urban Crisis and Renewal

This course will explore the profound changes American cities faced in the wake of World War II and into the 21st century. As the postwar economy deindustrialized, manufacturing moved away from the northeast and Midwest, and the suburbs grew. Formerly prosperous urban centers fell into decline, and remaining residents suffered the consequences. In an analysis of the economic, cultural, and spatial transformations of this period, we will engage with the subjects of race, inequality, and civic and corporate attempts to recover urban space with urban renewal programs. We will also spend a significant amount of time engaging the subjects of popular culture and imagination through the reformulation of what it means to be "urban" in the postindustrial period and how the suburbs exist in the greater metropolitan areas of American cities. In addition to selected readings, films, literature, and primary sources will drive seminar-style class discussions.

Credit 3 units. A&S: AMP A&S IQ: HUM Arch: HUM Art: HUM BU: BA, ETH, HUM EN: H

L61 FYP 3001 Ampersand: Research in Mind, Brain, Behavior

An introduction to research for Mind, Brain, and Behavior students. Students work under the supervision of a mentor. Prerequisite: admission to the Mind, Brain and Behavior Program, and permission of the mentor. Credit 3 units. A&S: AMP A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

Anthropology

Anthropology offers the opportunity to study human existence in the present and the past and to explore how and why humans vary in their behaviors, cultures and biology. Students choose to study anthropology because they want to understand some of the most intriguing and troubling issues faced by modern society:

the origin and meaning of ethnic and gender differences; the role of institutions in social, political and economic life; learned vs. innate behavior; the similarities and differences among human societies; and the meaning of religion, community and family.

The Department of Anthropology offers courses in the four subfields of anthropology: archaeology, biological anthropology, sociocultural anthropology and linguistics.

The faculty in the anthropology department are active in research around the world and bring a diversity of experiences to their teaching.

- Faculty research expertise in archaeology includes the origins of food production; the cultures of prehistoric North, Central and South America; African and Central Asian prehistory; environmental archaeology; and geographic information systems (GIS).
- Biological anthropology faculty focus on the evolution of humans; on the normal biological variation in living human populations; and on the ecology, behavior and evolution of nonhuman primates.
- Sociocultural faculty conduct research on a wide range of topics, including states, societies and beliefs; political ecology, demography, fertility and population; sociolinguistics; medical anthropology and public health; bodies, gender and sexuality; science and technology, mind and cognition; and religion and politics.

Majors

The Major in Anthropology

Total units required: 34 units

Required courses: 10 units

Code	Title	Units
Anthro 140	Proseminar	1
Anthro 150A	Introduction to Human Evolution	3
Anthro 160B	Introduction to Cultural Anthropology	3
Anthro 190B	Introduction to Archaeology	3
Total Units		10

Elective courses: 24 advanced units (300 level or higher), of which 9 units must be at the 400 level.

Optional Anthropology Major Track: Global Health and Environment

Anthropology majors may choose an optional track within the major called Global Health and Environment (GHE) if the students' interests lie primarily within this area of anthropology. Students enrolled in the GHE track must complete the anthropology major required courses and the GHE required and elective courses as outlined below.

Total units required: 34 units

Required courses: 16 units

- **Departmental requirements:** 10 units

Code	Title	Units
Anthro 140	Proseminar	1
Anthro 150A	Introduction to Human Evolution	3
Anthro 160B	Introduction to Cultural Anthropology	3
Anthro 190B	Introduction to Archaeology	3
Total Units		10

- **Global Health and Environment Track requirements:** 6 units

Code	Title	Units
Anthro 3283	Introduction to Global Health	3
Anthro 361	Culture and Environment	3
Total Units		6

Elective courses: 18 advanced units (300 level or higher), of which 9 units must be at the 400 level, chosen from the approved list of GHE electives (<https://anthropology.wustl.edu/major-and-minor/#anchor-group-11425>) available on the Anthropology website. GHE electives consist of approved courses listed under the Global Health heading and courses listed under the Environment heading. Students may take no fewer than 6 units from either list, with the remaining 12 units to come from the other list.

Additional Information

- Students should register under the L48 department code for any courses that will count toward the anthropology major.
- Courses taken pass/fail and courses in which a student earns less than a C- do not fulfill the major requirements.
- A maximum of 6 units of course work taken in University College (U69) may be counted toward the major.
- A maximum of 12 units of nontraditional day courses — including University College, study abroad, honors and directed-research courses — may be counted toward the advanced electives in the major. For details, please see below.

Research: Many anthropology courses include research components and final projects. Majors can also take part in research at the beginning, intermediate or advanced level in any subdiscipline and gain credit through approved directed research with faculty who have ongoing research projects. Research opportunities in anthropology labs include projects in archaeology, paleoethnobotany, geoarchaeology, zooarchaeology, genetic studies, GIS, human osteology, human ecology and primate studies. Students may count a maximum of 3 units of directed research credit with any individual faculty member toward the major.

Senior Honors: Anthropology majors in the College of Arts & Sciences who wish to conduct a research project for Latin Honors, who have a minimum grade-point average of 3.65, and who have received the approval of a faculty advisor and the department honors coordinator may be enrolled in the honors program. Latin Honors involves both the demonstration of acquired knowledge (based in part on GPA) and a report on an original research project. Two courses, Anthro 4960 and Anthro 4961, are available to allow students to receive credit for the extra research involved in the honors thesis. Students may count one of these courses toward their 400-level course requirement for the major.

Study Abroad: The department recognizes and accepts courses from a number of semester or year abroad programs. Specific information about study abroad policies (<https://anthropology.wustl.edu/study-abroad-policy/>) is available on the anthropology department website or by consultation with the study abroad coordinator. Students may petition to count up to 9 units of study abroad elective credit toward the general anthropology major or up to 6 units of study abroad elective credit toward the GHE track of the major. Students should contact the anthropology study abroad coordinator to discuss the requirements for study abroad credit and to gain approval for the transfer of credit.

Transfer Credit: Students who wish to transfer credits from other institutions, including those abroad, must have approval from the director of undergraduate studies.

Internships: Anthropology majors can gain pre-professional experience by taking part in supervised internships in businesses, cultural institutions and community agencies. Students must have department approval for an internship and must work with an anthropology faculty sponsor during the fall or spring semester. Internships may only be taken for pass/fail credit and do not count toward the major requirements.

Minors

The Minor in Anthropology

Total units required: 18 units

Required courses: 6 units

Two of the following three courses must be taken, and it is recommended that all three be taken:

Code	Title	Units
Anthro 150A	Introduction to Human Evolution	3
Anthro 160B	Introduction to Cultural Anthropology	3
Anthro 190B	Introduction to Archaeology	3

Elective courses: 12 additional units, at least 9 of which must be at the 300 level or higher.

Optional Anthropology Minor Track: Global Health and Environment

Anthropology minors may choose an optional track called Global Health and Environment (GHE) if the student's interests lie primarily within this area of anthropology. Students in the GHE track of the anthropology minor must take the departmental, track and elective requirements as outlined below.

Total units required: 18 units, 9 of which are required introductory level courses. There are 9 additional elective units as outlined below.

Required courses: 9 units

- **Departmental requirements:** 3 units

Any 100-level introductory anthropology course from the following list:

Code	Title	Units
Anthro 150A	Introduction to Human Evolution	3
Anthro 160B	Introduction to Cultural Anthropology	3
Anthro 190B	Introduction to Archaeology	3

- **Global Health and Environment Track requirements:** 6 units

Code	Title	Units
Anthro 3283	Introduction to Global Health	3
Anthro 361	Culture and Environment	3
Total Units		6

Elective courses: 9 units taken from the approved list of GHE electives (<https://anthropology.wustl.edu/major-and-minor/#anchor-group-11425>) available on the Anthropology website. GHE electives consist of approved courses listed under the Global Health heading and courses listed under the Environment heading. Students may take no fewer than 3 units from either list, with the remaining 6 units to come from the other list.

Additional Information

- Students should register under the L48 department code for any courses that will count toward the minor.
- Courses taken pass/fail and courses in which a student earns less than a C- do not fulfill the minor requirements.

- A maximum of 3 units of course work taken in University College (U69) may be counted toward the minor. Online courses taken through University College do not count toward the minor.
- A maximum of 6 units of nontraditional day courses — including University College, study abroad, honors and directed-research courses — may be counted toward the advanced electives in the minor. For details, please see below.

Research: Many anthropology courses include research components and final projects. Minors can also take part in research at the beginning, intermediate or advanced level in any subdiscipline and gain credit through approved directed research with faculty who have ongoing research projects. Research opportunities in anthropology labs include projects in archaeology, paleoethnobotany, geoarchaeology, zooarchaeology, genetic studies, GIS, human osteology, human ecology and primate studies. Students may earn a maximum of 3 units of credit from directed research under a specific faculty member.

Study Abroad: The department recognizes and accepts courses from a number of semester or year abroad programs. Specific information about study abroad policies (<https://anthropology.wustl.edu/study-abroad-policy/>) is available on the anthropology department website or by consultation with the study abroad coordinator. Students may petition to count up to 6 units of study abroad elective credit toward the general anthropology minor or up to 3 units of study abroad elective credit toward the GHE track of the minor. Students should contact the anthropology study abroad coordinator to discuss the requirements for study abroad credit and to gain approval for the transfer of credit.

Transfer Credit: Students who wish to transfer credits from other institutions, including those abroad, must have approval from the director of undergraduate studies.

Internships: Anthropology minors can gain pre-professional experience by taking part in supervised internships in businesses, cultural institutions and community agencies. Students must have department approval for an internship and must work with an anthropology faculty sponsor during the fall or spring semester. Internships may only be taken for pass/fail credit and do not count toward the minor requirements.

Courses

L48 Anthro 130 First-Year Seminar: The Ritual Landscape of Cahokia: Perspectives on the Politics of Religion & Chiefly Power

The purpose of this class is to engage and challenge first-year students in an open discussion about the prehistoric Mississippian community of Cahokia. The focus of this course is two-fold. The first is to study the way in which the archaeological evidence has been interpreted. The second is to examine other perspectives on Cahokia, especially from the Native American descendants who consecrated this landscape nearly a millennium ago. An underlying tenet of this seminar in understanding Cahokia can also be achieved through the traditions and literature of Native Americans. In the end, we want to understand the basis for Cahokia's organization as a prehistoric Native American community and the role that ritual and religion played in the rather dramatic and dynamic history of this community and the surrounding region.

Credit 3 units. A&S: FYS A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: HUM EN: S

L48 Anthro 132 First-Year Seminar: Past Tense, Future Imperfect: The Rise and Fall of Societies & Global Civilization

The past history of humanity is littered with the stories of societies whose peoples experienced prosperity and florescence followed by decline and catastrophe. In the present, an age of information and rapid change, public intellectuals offer broad and detailed visions of what took place in the past, what is happening now, and what the trends suggest for the future. This course looks at the efforts of two prominent public intellectuals, economist Lester Brown and geographer Jared Diamond. In this course we look at Brown's work in its latest incarnation, Plan B 4.0. We discuss this in light of current events. We then look at Jared Diamond's book "Collapse, How Societies Choose to Fail or Succeed" and critical response to that book by experts. I include a personal perspective as an archaeologist working with the ancient Maya civilization. The Maya are famous for the ninth century AD collapse of their Classic civilization. The readings provide the basis for discussion of the challenges we face in understanding the life histories of societies and discerning what we can conclude about the future from their experiences. This course is available to first year non-transfer students only.

Credit 3 units. A&S: FYS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 136 First-Year Seminar: 20,000 Years on Turtle Island: A Deep History of North America

The twin premises of this course are that humans are the subject of history and that history should begin at the beginning. American history courses normally begin with the colonization of the New World by Europeans beginning in the 15th century, sometimes with a cursory chapter dedicated to the 20,000 years of history that came before. This course will invert this structure and place what we normally think of as American history in the context of a much longer story by drawing on sources from many disciplines, including archaeology, ethnography, ecology, geology, linguistics, and oral history. We will focus on contested events or issues, where our sources tell different stories, and we will consider what is at stake for defenders of different narratives. Throughout the course, we will ask how the lack of written records limits our understanding of North American history, but we will also consider how other sources of evidence about the past can be used to include populations and themes normally underrepresented by textual histories. The goals of this course

are as follows: (1) to put recent American history in its proper context; (2) to show how historical narratives are constructed and contested; and (3) to give students tools other than written records with which to construct history. Course is for first-year, non-transfer students only.

Credit 3 units. A&S: FYS A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA, IS EN: S

L48 Anthro 138 First-Year Seminar: Anthropological Perspectives on COVID-19

This class explores the evolving relationships between humans, animals, and the novel coronavirus that causes COVID-19. In examining COVID-19 and other zoonotic outbreaks, this course emphasizes that a complex mix of ecological, political, economic, and social factors shape infectious disease emergence and epidemiology. Drawing on popular media, medico-scientific scholarship, and ethnographic case studies, we will explore topics including zoonotic "jumping" and bioinsecurity, environmental degradation and animal agriculture, unequal burdens of risk and disease, politics and public health policy debates, and the lived experience of front-line healthcare, illness, and quarantine. In so doing, we consider the role anthropological research and perspectives might play in understanding and ameliorating global health problems in diverse contexts around the world.

Credit 3 units. A&S IQ: LCD, SSC BU: BA, IS EN: S

L48 Anthro 140 Proseminar

This course is designed to introduce the student to current issues in anthropology and to research being carried out by faculty. Topics vary each year. Each departmental member addresses issues in their particular specialty. The course is required of all majors; it may also be taken before declaring the major, and it may be taken by non-majors.

Credit 1 unit. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L48 Anthro 141 Ampersand: Medicine and Society

This course provides the basic foundation in medical anthropology and cultural anthropology for students enrolled in the Medicine and Society Program. The purpose of the course is to introduce students to the central themes and theoretical approaches employed by medical anthropologists to study health and illness in cross-cultural perspective. Topical areas include analyses of disease, illness and sickness at micro and macro levels; impact of personal and interpersonal factors on health; health effects of social, political and economic factors; relationship of anthropology to biological and social science approaches; ecology of health and development; and cross-cultural health studies of language, gender and race/ethnicity. Note: Content for this course overlaps with and replaces Anthro 160 for students enrolled in the Medicine and Society Program. Open only to students enrolled in the Medicine and Society Program. CET (<https://gephardtinstitute.wustl.edu/for-faculty-and-staff/community-engaged-teaching/>) course.

Credit 3 units. A&S: AMP A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 142 Ampersand: Medicine and Society

This course is the required second-semester sequence of the introduction to medical anthropology and cultural anthropology for students enrolled in the Medicine and Society program. The course builds upon material introduced in Anthro 141, and it provides greater ethnographic context for the cross-cultural study

of health and illness. Topical areas include analyses of disease, illness and sickness at micro and macro levels; the impact of personal and interpersonal factors on health; the health effects of social, political, and economic factors; the relationship of anthropology to biological and social sciences approaches; the ecology of health and development; and cross-cultural health studies of language, gender, and race/ethnicity.

Credit 3 units. A&S IQ: LCD, SSC, SC Arch: SSC Art: SSC BU: BA

L48 Anthro 150A Introduction to Human Evolution

A survey of the fossil evidence for human evolution. The course includes discussion of the genetics of human variation and evolution, the study of living non-human primates, and the fossil record and its interpretation. An evolutionary perspective is used in an attempt to understand modern humans from the naturalistic point of view.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L48 Anthro 160B Introduction to Cultural Anthropology

This course introduces the basic concepts, theories, and methods of Cultural Anthropology -- an academic discipline that studies the diversity of human cultures and societies. The purpose is to provide a broad perspective on the types of research that anthropologists undertake, and to engage in a critical dialogue on how the work of anthropologists contributes to understanding the human condition. Introduction to Cultural Anthropology is a portal into more advanced anthropology courses.

Credit 3 units. A&S IQ: LCD, SSC, SC, SD Arch: SSC Art: SSC BU: BA, HUM EN: S UColl: CD

L48 Anthro 170D Introduction to Linguistics

Language is one of the fundamental capacities of the human species, and there are many interesting and meaningful ways in which it can be studied. This course explores the core components of linguistic theory: speech sounds (phonetics and phonology), word formation (morphology), sentence structure (syntax), and meaning (semantics). It also provides an overview of interdisciplinary ideas and research on how language is acquired and processed, its relation to the mind-brain and to society, and the question of whether the essential properties of language can be replicated outside the human mind (specifically, in chimpanzees or computer programs).

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, HUM EN: S

L48 Anthro 174 Medicine East and West: Comparing Health Care in the U.S. and China

This course provides a foundational introduction to comparative health studies by examining the health care systems of the United States and China. Using the tools and interpretive frameworks of the field of medical anthropology, students in this course are exposed to a broad range of topics dealing with health and health care in Eastern and Western contexts. These include the study of medical pluralism, meaning of illness, health care financing, preventive care, political-economic perspectives, and sociobehavioral perspectives on health and wellness. Students taking this class are prepared to understand and address ongoing health care concerns affecting U.S. and Chinese society.

L48 Anthro 180 First Year Seminar: Our Cultures in 3D

Today's digital technologies provide rapidly evolving ways to interact with people, material culture, social landscapes, architecture, and the environment. Virtual reality and 3-D modeling from both terrestrial and drone-based remote sensing, photogrammetry, LiDAR and other applications provide us with unprecedented tools to reconstruct, test, and experience these many aspects of culture and the environment. In some cases, virtual tools also allow us to experience places far away and learn about cultures which are different from our own. In this course we will learn the basics of 3-D modeling and virtual reconstruction, and explore a range of ways 3D modeling is used in Anthropological and environmental applications. In this class you will learn how cutting-edge technologies are used in a variety of sectors related to Anthropology and Archaeology, such as heritage management, environmental assessment, digital museum exhibits, and more. Methodologically you will be given the opportunity - through your own project - to explore how to acquire data using tools such as terrestrial and drone-based photography, how to produce 3-D models with the latest software tools, and how to package these assets for productive and ethical dissemination. In the end, you will work with a teammate to produce 3D models related to a project of your choice, and your learning will be focused via the development of your project. This course is available to first year non-transfer students only. Credit 3 units. A&S: FYS A&S IQ: LCD, SSC BU: HUM

L48 Anthro 190B Introduction to Archaeology

Archaeology plays a critical and unique role in understanding the human past. Through study of the methods and theories of archaeology, and a survey of important firsts in the human past, this course introduces students to the way archaeologists use material culture to reconstruct and understand human behavior. Chronologically ordered case studies from around the globe are used to look at social, ecological and cultural issues facing humans from the earliest times to the present. Students gain practice reconstructing the past through hands-on participation in two one-hour labs focusing on lithics and animal bones. By the end of the course, students are expected to be able to think critically about how the past is presented and why, and the importance of the past as it relates to the present and future. Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 209C World Archaeology: Global Perspectives on the Past

If we carefully peer beneath the earth's surface, we will discover a hidden world that is being rediscovered by archaeologists. A considerable amount of excitement is generated by the discovery of lost civilizations and societies. Archaeologists from every corner of the earth come to Washington University to share their experiences as they use the most sophisticated technology to rediscover those forgotten and sometimes embarrassing aspects of our human past. Same as L52 ARC 200C Credit 3 units. A&S IQ: HUM, LCD Arch: HUM, SSC Art: HUM, SSC BU: IS EN: H

L48 Anthro 212 Archaeological Fantasies and Hoaxes

American popular culture is saturated with pseudoscientific and fictionalized accounts of archaeological discoveries and interpretations. How can students of the past distinguish between fraud, fantasy, hype and valid archaeological research? What potential merit do films, TV-oriented documentaries and historical fiction offer? What role has racism played in attempts to deny indigenous peoples credit for their past achievements? This course looks at the popular culture of archaeology, providing tools for critical evaluation as well as lifetime enjoyment of the field as it is frequently sold to both the informed and the unwary public. Anthropology majors and nonmajors are all welcome, as are sophomores and motivated first-year students who have not yet declared majors. Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 2151 Language, Culture and Society

This course explores the relationships between linguistic practice and other social and cultural processes. Among the topics discussed are language and social identity, language and thought, language and gender, multilingualism and language shift as well as the connections between language and the identity of ethnically or nationally defined communities. The course format alternates between "classic" theoretical readings and ethnographic case studies on the interplay between linguistic practice and ideology as well as cultural and social processes. Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 247 First-Year Seminar

Taught in English. This small-group seminar is devoted to the reading and study of other texts, such as films, paintings, and so on, as well as discussion and writing. Topics vary but have an interdisciplinary focus. Prerequisite: AP in English, French, or History, or permission of instructor. Does not substitute for any other French course. Same as L34 French 247 Credit 3 units. A&S: FYS A&S IQ: HUM, LCD BU: HUM EN: H

L48 Anthro 260 Topics in Health and Community

A survey of current topics in community health and medicine, with an emphasis upon social science approaches to issues affecting medicine and medical care in contemporary U.S. society. Issues include ethical debates in health care delivery, social stratification and health, access to health services, and factors affecting community wellness at local, national, and global levels. Presented as a weekly series of topical presentations by community health experts from the St. Louis area. Required for students enrolled in the Medicine and Society Program, and also open to other interested students. Credit 1 unit. EN: S

L48 Anthro 2653 Health Care Challenges in Modern China

As the most populous country in the world, China has many challenges regarding medicine, health and health care delivery. In this course several major health care challenges facing China are explored. Students have the opportunity to learn not just from published research and class discussion but also from the perspectives of those who spend their lives studying the

social, political, and cultural dynamics of these issues as well as those who devote their careers to the practice of health care in China. Must be enrolled in the study abroad program at Fudan University in Shanghai, China.

Credit 1 unit. A&S IQ: SSC Arch: SSC Art: SSC BU: IS EN: S

L48 Anthro 290 Independent Study

Designed to give undergraduates research experience in the various subdisciplines of anthropology. May be taken more than once for credit. Prerequisite: consent of the faculty member under whom the research will be done.

Credit variable, maximum 3 units.

L48 Anthro 300 Internships in Anthropology

Anthropology majors may acquire professional experience outside the classroom by participating in a faculty-sponsored internship. Before work begins, the student and faculty sponsor must agree on a final written project, which is then approved by the Anthropology Academic Coordinator. Students are evaluated by the faculty sponsor on the basis of the written project and input from the internship supervisor. Course may be taken only one time. Prerequisites: 9 hours of anthropology and permission of department.

Credit 3 units.

L48 Anthro 3006 Global Health and Language

Long before COVID-19, scholars across the globe postulated that language in health care is one of the most significant, and yet underexplored, social determinants of health in underserved linguistic diverse communities. This new course attempts to harmonize work across the disciplines of Global Public Health and Applied Linguistics by analyzing studies that examine language acquisition and language use across contexts with populations that experience serious health disparities- immigrants, refugees, indigenous peoples, racial and ethnic minority groups- and the course offers corresponding implications for health equity. Broadly speaking, this course addresses global health literacy issues, in both spoken and written communications, and its relationship to public health. As part of the seminar, students will apply the theory and research they learn to help meet the local language health needs of a changing population of refugees and immigrants in St. Louis community.

Same as L97 GS 3006

Credit 3 units. A&S IQ: LCD, SSC, SC Arch: SSC Art: SSC BU: BA, ETH, IS

L48 Anthro 302B Peoples and Cultures of the Middle East

This course introduces the cultural diversity and unity of the peoples of the Middle East. The emphasis is on historical and ethnological relationships, social and political structure, religious pluralism and contemporary youth issues. We explore the lived experiences of the peoples in the modern nation-states of Egypt, Lebanon, Syria, Jordan, Israel, the Palestinian Territories, Turkey, Saudi Arabia and the countries of the Arabian Peninsula, Iraq and Iran. We access this material through short stories, poetry, biographies, essays, videos, blogs and political and anthropological reports.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS

L48 Anthro 305 Anthropology of India

An introduction to the societies and cultures of India through its social margins. Our approach will leverage scholarship from many fields, highlighting the strengths and limitations of singular-discipline analyses and universalized histories. Ethnographic narratives will be woven into historical accounts of major cultural shifts. Students will learn to evaluate and apply multivocal perspectives on larger global issues that have transformed India since the end of colonization, including demographic, economic, social, cultural, political, and religious change. Topics will include population and life expectancy, civil society, social-moral relationships, caste and communalism, youth and consumerism, the new urban middle class, environment and health, tourism, public and religious cultures, social activism, politics and law.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S

L48 Anthro 3051 Anthropology of Tibet and the Himalayas

This course is an anthropological and historical examination of Tibetan societies inhabiting the Tibetan Plateau and the highlands of Nepal. In addition to providing basic ethnographic descriptions of Tibetan societies, the course explores the changing nature of relations between Tibet and China, and between Tibet and the West. Guiding concepts include adaptation (both social and ecological), the politics of ethnicity and identity, and processes of culture change.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: IS EN: S

L48 Anthro 3053 Nomadic Strategies and Extreme Ecologies

This course will explore the archaeology and anthropology of nomadic pastoral societies in light of their ecological, political, and cultural strategies and adaptation to extreme environments (deserts, mountains, the Arctic). The aim of this course is to understand both the early development of pastoral ways of life and how nomads have had an essential role in the formation and transfer of culture, language, and power from prehistoric time to the current era.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, IS EN: S

L48 Anthro 3055 Contemporary Chinese Culture and Society

This course provides an introduction to emerging trends in Chinese culture and society. We explore processes of change and continuity in the People's Republic, examining the complexity of social issues and the dynamics of cultural unity and diversity. While we focus on the post-Mao reform era (1978 to the present), we consider how contemporary developments draw upon the legacies of the Maoist revolution as well as the pre-socialist past. The course provides an overview of anthropological approaches to the study of contemporary China, introducing students to key concepts, theories and frameworks integral to the analysis of Chinese culture and society. Readings, lectures and discussions highlight not only macro-level processes of social change and continuity but also the everyday experiences of individuals involved in these processes. We pay particular attention to issues of family life, institutional culture, migration, religion, ethnicity, gender, consumption and globalization.

Credit 3 units. A&S IQ: LCD, SSC, SD Arch: SSC Art: SSC BU: IS EN: S

L48 Anthro 3056 Material Culture in Modern China

In this course, we will explore change and continuity from late imperial to postsocialist China through an analysis of everyday material culture. Drawing upon material objects, historical texts, ethnographic studies and films, we will investigate values, beliefs and attitudes toward the material world in modern Chinese life. Readings, lectures and discussions will focus on how political, ethnic, regional, religious, and gender identities have been constructed and shaped by the use and production of material artifacts ranging from household goods and tomb objects to built forms and bodily dispositions. Case studies include foot-binding, opium use, fashion, tea culture, fast food consumption, sports and nation building, contemporary art markets, the privatization of housing, and worker discipline in transnational factories.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L48 Anthro 3059 New Departures in the Study of Culture, Health, and Medical Practices in Contemporary China

Drawing upon an interdisciplinary approach, this course addresses several major themes with a focus on the dynamics of China's unprecedented health care transformations. Topical issues covered will include: Biocultural Contexts of Disease; the Challenge of Aging in a Gray China; Health Inequalities and Social Stratification; and Values and the Medical Humanities in Public Health.**Students are encouraged to conduct ethnographic field research in a variety of settings including: community health centers, drug stores, city and district hospitals, clinics, public parks, clubs, temples and shrines, tea houses, cafes, restaurants, and school playgrounds and other places of interest. *Must be enrolled in the study abroad program at Fudan University in Shanghai, China.*

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA, IS EN: S

L48 Anthro 306B Africa: Peoples and Cultures

An anthropological survey of Africa from the classic ethnographies to contemporary studies of development. Emphasis on the numerous social and economic changes African peoples have experienced from precolonial times to the present.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: HUM, IS

L48 Anthro 307A Human Variation

A survey of human biological diversity, considering its adaptive and taxonomic significance from the perspective of origins and distribution of traits and adaptation. Prerequisite: Anthro 150A or introductory biology.

Credit 3 units. A&S IQ: NSM, AN, SD Arch: NSM Art: NSM BU: SCI

L48 Anthro 3090 Cultures of Health in Latin America

This course is a survey of the cultural and political-economic aspects of health, illness, and embodied difference in Latin America. We will approach these themes from an interdisciplinary perspective with an emphasis on anthropology and history, exploring how local, national, regional, and global factors affect health and healthcare and how people experience and respond to them. Topics will include interactions between traditional healing practices and biomedicine; the lasting impacts of eugenic sciences on contemporary ideas about race and disability; the unequal impacts of epidemic disease; Indigenous cosmologies and healing systems; the politics of access to

healthcare; the cultural and political specificities of reproductive health; and the intersections of race, gender, ethnicity, class, and bodily capacities in the pursuit of well-being. This course is designed for students of all levels interested in health and/or Latin American cultures. It will be taught in English.

Same as L45 LatAm 325

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: BA, ETH, IS EN: H

L48 Anthro 3092 Indigenous Peoples and Movements in Latin America

This course focuses on the contemporary lives and political struggles of Indigenous Peoples in Latin America, with specific focus on Ecuador, Peru and Bolivia. Through course lectures, ethnographic texts, and four in-depth case studies, we explore how the politics of Indigeneity articulate with political and economic processes including (neo)colonialism, global capitalism, state transformation and social movement struggle. Themes include: demands for territory and autonomy; environmentalism and natural resource exploitation; gender and economic inequality; race, racism and political violence; language and education; and the complexities of building multicultural or "plurinational" democracies.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS

L48 Anthro 3093 Anthropology of Modern Latin America

A survey of current issues in the anthropological study of culture, politics, and change across contemporary Latin American and the Caribbean. Topics include machismo and feminismo, the drug war, race and mestizaje, yuppies and revolutionaries, ethnic movements, pop culture, violence, multinational business, and the cultural politics of U.S.-Latin American relations. Attention will be given to the ways that anthropology is used to understand complex cultural and social processes in a region thoroughly shaped by globalization.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S

L48 Anthro 3095 The Incas and Their Ancestors: The Archaeology of the Ancient Andes

From the hyper-arid desert of the Pacific Coast to the high-mountain plateaus of the Andes more than 12,000 feet above sea level to the lush forested Amazonian lowlands, Western South America presents one of the most diverse natural and cultural environments in the world and one of the few places where social complexity first developed. Beginning with the earliest human occupations in the region more than 12,000 years ago, this course examines how domestication, urbanization, the rise of early states, and major technological inventions changed life in the Andes from small village societies to the largest territorial polity of the Americas: the Inca Empire. Students will become familiar with the major debates in the field of Andean archaeology. Together, we will examine archaeological evidence (e.g., architecture, art, ceramics, metals, textiles, plant and animal remains), from the context of everyday life (e.g., households, food production, craft production) to the rituals and ceremonies (e.g., offerings, tombs) that took place in domestic and public spaces. We will also touch on the role of Andean archaeology in the context of national politics and heritage sustainability.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S

L48 Anthro 3100 Defense Against the Dark Arts: an Anthropological Approach to the Study of Religion and Health

This class is a comparative survey of religion, magic, and witchcraft as they are related to concepts of the body, health, healing and death across cultures. As such, students in this class will be expected to simultaneously learn details from particular magical and healing traditions studied in class, as well as to relate these details to theories about within the discipline of Anthropology (medical, cultural, psychological) and the field of Religious Studies. Special themes addressed in the class are the reasonableness of belief in magic, religion and religious practice as "magical," the body and definitions of health, healing, and illness and disease as symbolically, culturally, even magically constructed and experienced.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA, ETH EN: S

L48 Anthro 3101 Topics in Anthropology: Cyborg Anthropology

Cyborgs are often thought to be the stuff of science fiction, half-human and half-machinic monsters. Yet recent advances in science and technology are increasingly troubling the boundaries of human life. Pacemakers and pig valves enable human hearts to beat. Algorithms seek to help people make better decisions. Computer chips are implanted in pig and human brains. In contemporary America, everyday life is powerfully shaped and altered by technology and biotechnology. Drawing on medical anthropology, feminist/queer science studies, science and technology studies, and disability studies, this course explores how technologies are reshaping and augmenting life, bodies, and performance. We will investigate how these experimental terrains offer many promises while also posing new scientific, social, and ethical conundrums.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: IS EN: S

L48 Anthro 3102 Topics in Anthropology: Blood Feuds and Battlefields: The Archaeology of Warfare

In this course, we will explore the origins, causes, and consequences of warfare in human societies. Our overall aim will be to gain a broad understanding of the range of variation in which warfare and human societies have influenced one another. The bulk of human history falls outside the scope of written records, making archaeology a critical means of understanding our past. Through an examination of diverse case studies, students will gain an understanding of the various forms of violence and warfare carried out among and between human populations, from small-scale "blood feuds" among foraging and early agricultural societies to the large-scale warfare and territorial expansion undertaken by states and empires. Particular attention will be paid to the role of warfare in social and cultural change. We will also explore common themes in the archaeology of warfare, including sacrifice and ritual violence, gender, and the depiction and commemoration of warfare in art, iconography, and monumental architecture. Finally, we will consider how perceptions of past conflicts affect us in the present day by examining the role that they continue to play in the present. Throughout the course, we will remain respectful and mindful of our ethical responsibilities to descendant communities and of the contemporary context for studying violence in the human past.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH, HUM EN: S

L48 Anthro 3103 Topics in Anthropology: Global Mental Health

What does global mental health mean for different actors and stakeholders? This course will examine the history, interventions, and critiques of global mental health. We will explore how diagnosis, distress, and treatment are experienced in different cultural and geographic contexts. Moreover, we will consider how biomedical psychiatry complements and conflicts with other forms of healing expertise. We will also consider mental health disparities, and critically reflect on the successes and challenges of global mental health interventions. This course will draw on materials from different disciplines, including anthropology, public health, psychiatry, social work, long form journalism, and guest speakers to examine topics in global mental health, such gender and sexuality, migration and displacement, environmental determinants and climate change, and global crises like COVID-19. Our course materials will draw on research carried out in a variety of locations, including the United States, India, Iran, Italy, Botswana, Brazil, and Thailand.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S

L48 Anthro 3105 Topics in Anthropology: Social Determinants of Health and Migration

The social determinants of health refer to the conditions in which people live and work that shape their health risks and outcomes. This course will examine how categories (e.g., refugee or undocumented immigrant) may predispose individuals to live and work in unstable and harmful environments. Our course will examine the following questions: How do restrictive immigration policies and policing shape access to primary care? How does documentation status intersect with other experiences of marginalization and other forms of social identification, such as gender and race, to produce unique health risks and outcomes? In this course, we will explore how people who migrate -- due to force or of their own volition, and in a documented or undocumented manner -- may encounter obstacles due to differences in language spoken, insurance coverage, and documentation status when seeking out primary and mental health services as well as healthcare for chronic illnesses. We will draw on ethnographic research, public health reports, long-form journalism, podcasts, and documentaries developed in a variety of geographic settings, including the United States, Germany, Israel, Malawi, and Bangladesh.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, IS EN: S

L48 Anthro 310C Ancient Civilizations of the New World

An examination of the Inca empire in Peru, and the Maya and Aztec empires in Mexico, through the inquiry into the roots, development, form and evolutionary history of pre-Colombian civilization in each region from its earliest times to the rise of the classic kingdoms. Examples of respective artistic accomplishments are presented and discussed.

Credit 3 units. A&S IQ: HUM, LCD Arch: SSC BU: HUM

L48 Anthro 3110 The Anthropology of Magic

Mankind has long attempted to master magic: action(s) intended to invoke and influence suprasensible forces. Many of us still practice magic today, knowingly or unknowingly. Cultural anthropologists and ethnologists provide accounts about the histories of magicians into the present, but ancient material

evidence of magic is also supplied to archaeologists. This course draws from these kinds of sources to appreciate the roles magic plays in past and present cultures. Guided by Anthony Aveni's textbook *Behind the Crystal Ball*, this course highlights how magic inspired innovative concepts and practices, including those that propel modern science today. Using globally diverse case studies, this course provides a conceptual framework for understanding the social roles of magic at different scales and expose magic in political, religious, and scientific contexts. What cultural values are preserved by magical practices? In what ways does magic fulfill societal needs? What legacies does magic leave for our benefit or deficit today? Following a midterm covering essential concepts, students will pursue independent projects that examine the material and ethnohistorical evidence for magic in specific cultural contexts. Fulfilling these requirements, students will learn how to analytically approach "othered" (or exoticized) behaviors as attempts to better understand the social and physical world.

Credit 3 units. A&S IQ: LCD, SSC BU: BA, HUM

L48 Anthro 3122 From Country to Heavy Metal: Ancient Civilizations of the Old World

This course will explore the archaeology of Europe, the Near East and Central Asia from approximately 10,000 years ago to classical times (ending before Ancient Greece). This prehistoric epoch saw major developments among various civilizations of the Old World, such as the introduction of agriculture, animal domestication, the growth of cities, and technological developments such as pottery, metallurgy and horse-riding. A major focus will be the trajectory of cultural innovations of regional populations through time, and the complexity of their social, political and ritual practices. We will also investigate the variation in human adaptive strategies to various environmental and social contexts, from hunter/gatherers to early Neolithic farmers, to the interactions between nomadic populations and larger scale, urban societies in the Bronze and Iron Ages.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S

L48 Anthro 313 Hello, Hello Brazil! Popular Culture, Media, and the Making of a Nation

Our image of Brazil has been deeply shaped by its cultural production, from Tom Jobim and Vinicius de Moraes' ever-popular "Girl from Ipanema" to the spectacular mega-production of Carnival in Rio and from the Afro-Brazilian martial art of capoeira to the international stardom of pop artists like Anitta. This course is an introduction to popular culture in contemporary Brazil. Students will approach the theme through theoretical works that seek to define popular culture, understanding it as a hybrid form of expression that troubles the line between the "traditional" and the mass-produced. This course will examine how the circulation of sounds and images manifests and shapes Brazilian culture historically and in the present. We will also interrogate the different ways in which culture is produced and received, how it circulates in symbolic markets, and how it comes to be both consumed by diverse audiences and utilized in often unexpected ways. The course will cover topics such as the Tropicalia movement, Afro-centric Carnival blocos, street art such as graffiti, baile funk, forró, favela protest theater, telenovelas (soap operas), the popularization of samba, soccer and the World Cup, and Carnival. Students will use an interdisciplinary lens to approach popular culture in Brazil through music lyrics, TV and film, cultural performances, and

graphic novels. These materials will form the basis of our class discussions and written assignments. The course will be taught in English. Prerequisite: L45 165D, L45 304, or another course on Latin America suggested.

Same as L45 LatAm 313

L48 Anthro 3136 The Second Wave of The Pandemic:

Science and Society

The COVID-19 pandemic has severely impacted life around the world and particularly in the United States. New information is released daily to a public that is often unable to interpret its meaning or significance. How are individuals, groups, businesses, and/or governments interpreting this information? What impact does it all have on our lives? This course will be an immersion into the many intersecting aspects of life in a pandemic. Early in the course, we will review safety information and some basics about the virus, including information covered in Anthro 3135 *The Pandemic: Science and Society*. Please note that students do not need to take Anthro 3135 to enroll in this course. At the same time, students who did take Anthro 3135 are encouraged to enroll, as we will cover new information and different topics. Students will hear experts in these areas talk to us about how COVID-19 has changed virtually every aspect of life as we know it, how we can mitigate these effects, and what the future looks like. Throughout the course, students will have the opportunity to hone their skills at communicating the information they learn in the class by discussing with each other and sharing with the public.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA, IS EN: S

L48 Anthro 3148 Caring for Country: Hunter-Gatherer Ecologies

What makes humans special? Is it our use of tools? Language? Culture? Humanity has been defined on the basis of its uniquely well-developed capacities for using technology, language, and culturally encoded knowledge and belief systems. In this course, we will explore a new hypothesis of human exceptionalism: a fundamental tendency to cultivate our lands. Our genius for reshaping ecosystems and incorporating other species into our societies is intimately linked to our technological and communicative skills. We have used these skills to migrate into and reshape every Earthly environment. We have been taught that the beginning of agriculture was the greatest turning point in human history because before this revolution, hunter-gatherers were unable to build cities or spend their time creating technology and art. Some argue that the timing of this revolution - early in some places, late in others - has shaped the current distribution of power and resources. Others have retorted that agriculture was actually bad for humankind -- that farmers work harder and are less healthy than hunter-gatherers. Well over a century of ink has been spilled on the differences between these two groups, and the significance of the transition from one state to the other. But what if hunter-gatherers are a myth? What if European colonists invented them as a moral justification to seize new lands? We will explore the ethnographies, oral and written histories, and archaeologies, of so-called hunter-gatherers around the world, learning about the ways they shaped and tended their homelands using ecological knowledge systems. In this era of human induced environmental change -

from global warming, to mass extinction, to genetic engineering - it is critically important that we throw away 19th century myths and look to our species' true ecological history for the wisdom that will help us meet these challenges.

Credit 3 units. A&S IQ: SSC

L48 Anthro 3149 The Agrarian Ape

What makes humans special? Is it our use of tools, language, or culture? Humanity has been defined on the basis of its uniquely well-developed capacities for using technology, language, and culturally encoded knowledge and belief systems. In this course, we will explore a new hypothesis of human exceptionalism: that we are fundamentally agrarian apes. Our genius for reshaping ecosystems and incorporating other species into our societies is intimately linked to our technological and communicative skills. We have used these skills to migrate into and reshape every Earthly environment. We have been taught that the beginning of agriculture was the greatest turning point in human history because, before this revolution, hunter-gatherers were unable to build cities or spend their time creating technology and art. Some argue that the timing of this revolution -- early in some places, late in others -- has shaped the current distribution of power and resources. Others have retorted that agriculture was actually bad for humankind and that farmers work harder and are less healthy than hunter-gatherers. Well over a century of ink has been spilled on the differences between these two groups and on the significance of the transition from one state to the other. But what if hunter-gatherers are a myth? What if European colonists invented them as a moral justification to seize new lands? We will explore the ethnographies, oral and written histories, and archaeologies of so-called hunter-gatherers around the world, learning about the ways they shaped and tended their homelands using ecological knowledge systems. We will look as far back into the past as we can for traces of the agrarian ape. In this era of human-induced environmental change -- from global warming, to mass extinction, to genetic engineering -- it is critically important that we throw away 19th-century myths and look to our species' true ecological history for the wisdom that will help us meet these challenges.

L48 Anthro 314B Before Columbus: Indigenous Histories of North America before 1492

An archaeological perspective on the deep histories of indigenous peoples in North America. From the initial colonization of the continent 13,000 years ago to European contact in the 16th century, we illuminate the ancestral peoples and places of contemporary indigenous tribes and nations.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 3150 Securing Food: (Pre)Historic Perspectives, Present Challenges, and the Future of Human Subsistence

For the first time in decades, the number of people suffering from hunger worldwide is on the rise. In 2017, the Food and Agriculture Organization of the United Nations warned that mounting pressures on natural resources and climate change have put global food security in jeopardy, calling for necessary "transformative change in agriculture and food systems."

Securing access to food resources has always been critical to the survival of our species. From hunting and gathering to the factory farm, past and present human societies have employed a diverse spectrum of strategies to keep themselves

fed. Some have provided sustenance for millennia, proving their resilience and adapting to climatic and social challenges. Others have emerged more recently, rapidly transforming and interconnecting food systems in unprecedented ways. However, all are the result of long-term and deep-time trajectories shaped by environmental, economic, social, cultural, and political opportunities and needs. Today, we face the legacy of these trajectories in our present struggle to attain and maintain food security for our species. How might an understanding of this legacy and of the context, origins, and effects of food systems in our deep and more recent past inform our understanding and action in the present?

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 3151 Evolution of the Human Diet

Many researchers and health enthusiasts believe that the abandonment of our "Paleolithic" diet and lifestyle with the onset of agriculture some 10,000 years ago has led to a rapid decline in health and perpetuated countless "diseases of civilization." While diet fads come and go, it seems this new enthusiasm for "Paleo diets" is here to stay. But what is a "Paleo diet" anyway? Through a comparative evolutionary and anthropological approach we will examine the diets of extinct hominins, our extant primate relatives, ethnohistoric and contemporary foraging peoples, and even our own dietary habits. We will strive to answer key questions about diets in prehistory and their implications for living people today: How do we know what our ancestors ate? How have dietary hypotheses been used to explain processes in human evolution? How bad is agriculture for global health? What role did certain foods play in shaping our modern physiology? Are we maladapted to our contemporary diets? What does it mean to eat "Paleo"? A mix of discussion and lecture will encourage students to develop their own interests in human evolutionary nutrition.

L48 Anthro 3152 Archaeology of Ancient Egypt

This course will cover major topics in the archaeology of ancient Egypt, incorporating the latest debates and archaeological discoveries. The course will emphasize Egyptian material culture, including settlements, landscapes, cities, tombs, pyramids and temples, in order to model the wider cultural and social development over the past five millennia as well as the place of Egypt, globally. Students will learn to critically approach and assess Egyptian material culture in order to understand the social, historical, and geographical context of ancient Egypt -- one of the most intriguing cultures in human history.

L48 Anthro 3156 Topics in Chinese Social Development at Fudan

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L48 Anthro 3158 South Asian Religious Traditions

In this course, we will learn the basic vocabulary -- conceptual, ritual, and visual -- needed to become conversant with the various religious traditions that are important to personal, social, and political life on the Indian subcontinent and beyond. We will first encounter each tradition through narrative, with the support of visual media. We will then explore how contemporary adherents make these traditions meaningful for themselves: in their everyday lives, in their struggles for social change, and in their political statements and contestations. Students

will also become familiar with the analytical categories and methodologies that make up the basic toolkit of the religion scholar. Prior knowledge of India or Pakistan is not required. First-year students are welcome to enroll in this course.

L48 Anthro 3163 Archaeology of China: Food and People

China is a country with a large population, diverse landscapes, and unique food. This course will explore the origins of Chinese food in the context of the formation of Chinese societies. During the last two decades, the archaeology of China has become a fast moving subject with advances in methods, theories and changes of key perceptions. In this context, the beginning and spread of food production in China has become one of the key questions in current archaeology. We will focus on the process of domestication of plants and animals in various regions of China during the Holocene. We will explore how those processes relate to other sectors of the Old World, such as those of South and Southwest Asia. This course will pursue answers to the following questions: Why the Chinese ways of living and eating are different from those in the West? How production and consumption in China were shaped by food globalization in prehistory?

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS
EN: S

L48 Anthro 318 Gender, Sexuality, and Power in Brazil

This course examines the nexus of gender, sexuality, and power in Brazil through an interdisciplinary lens. We will aim to understand how varying understandings of gender and sexuality have impacted the development of Brazilian society in history and continue to shape contemporary society and politics. We will pay special attention to the ways in which the intersections of race, gender, sexuality, class, ethnicity, and so on impact people's lived experiences and how heteronormativity and homophobia shape current politics. We will take an intersectional feminist approach to analyze topics such as slavery in colonial Brazil, national aspirations to modernity, authoritarian repression and "moral panics," domestic labor, motherhood, sex tourism, Brazilian feminisms, and LGBTQ+ activism. Scholarly work from various fields of study -- with an emphasis on gender studies, history, and anthropology -- will be supplemented by documentaries, film, podcasts, and other media. This is a Writing Intensive and a Social Contrasts class in the IQ curriculum. Prerequisite: L45 165D, or two courses on Latin American or Women and Gender Studies, or permission of instructor. Same as L45 LatAm 318

Credit 3 units. A&S IQ: HUM, LCD, SC, WI Arch: HUM Art: HUM BU: BA, IS

L48 Anthro 3180 Domestication: The Evolution of Our Multispecies Family

This course explores the evolution of the plants, animals, and microbes in human-mediated ecosystems. We call these evolutionary relationships domestication and they are at the heart of humanity's successful adaptation to nearly every ecosystem on Earth. From our millennia-deep friendship with gregarious wolves, to corn's continental conquests, to 'the industrial microbiome,' this course will ask how other species

have evolved in response to human societies, and how societies have been shaped by these relationships. We will primarily draw on concepts and data from anthropology and evolutionary biology to understand the process of domestication.

Credit 3 units. A&S IQ: LCD, SSC BU: BA

L48 Anthro 3181 Humans and Animals

This course uses anthropological and evolutionary data to tell the story of how changing human-animal relations influenced humans over the long term. In this course we explore the history of western conceptual divisions between humans and animals, which contrast with more fluid boundaries in other regions. Subsequent lectures focus on hunting and symbolic relations with wild animals through time, relying on ancient animal bones, ancient art and texts. Current and future human-animal relationships will also be discussed. The goal of this course is to provide an overview of ways that animals have influenced human life in the 21st century. Changing environments and animal behavior form the backdrop to cultural discussions.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 3182 Ancient Africa: Social Mosaics and Environmental Challenges

This class introduces students to the basics of the archaeological record of humans in Africa from 3.6 million years ago to 1000 years ago. The first third of the course focuses on early humans, the origins of meat eating, expansion of diet and cuisine, technical and cultural responses to changing environments. The second section of the course emphasizes African rock art, socioeconomic variability among hunter-gatherers, the origins of African pastoralism, mobile responses to climate change and African contributions to world food supply including domestication of sorghum, also coffee. The last third of the course is devoted to the complex urban societies of ancient Africa, Egypt, Axum, Great Zimbabwe and Jenne Jenne. Course format is lecture and discussion. There are two mid-terms and students are expected to participate in interactive stone tool use, rock art creation and discussion of ethnographic and archaeological data on pastoral decision-making in times of drought and war and of issues surrounding the purchase of African antiquities and conservation of cultural heritage.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS
EN: S

L48 Anthro 319 The Body in Brazil: Race, Representation, Ontologies

This course is an introduction to various ways of understanding, representing, and performing the body in Brazil. Course materials will draw on insights from anthropology, the medical humanities, and science and technology studies in order to approach the body not just as biological material but also in its social, cultural, and spiritual dimensions. We will cover topics such as the importance of race and ethnicity since the time of colonization, sexualized media representations of gendered bodies, how some bodies are cast as disposable or "out of place" in contexts of social inequality, indigenous ways of viewing the body in relation to the natural and spiritual world, the politics of disability and access, and constructions of the "body politic" in the formation of national identity through ideas such as "antropofagia" (cultural cannibalism). Throughout, we will pay particular attention to how race, gender, sexuality, and disability shape the lived experiences of Brazilians. Topics will include the impact of slavery in the construction of the body in Brazil, the role played by race in the construction of discourses

of corporality, and the development of beauty stereotypes and practices such as the medical industry of plastic surgery, among others. Students will analyze visual materials, ethnographies, historical texts, and internet sources in dialogue with critical theories from the social sciences and humanities, assessing how the body "matters" in a variety of ways that reflect Brazil's cultural diversity while also starkly highlighting its persistent racialized and gendered social inequities. These materials will form the basis of our class discussions and written assignments. The course will be taught in English. Prerequisite: L45 165D, L45 304, or another course on Latin America suggested. Same as L45 LatAm 319
Credit 3 units. A&S IQ: HUM, LCD, SC BU: HUM, IS

L48 Anthro 3201 Gender, Culture, and Madness

This course will explore the relationships among gender constructs, cultural values, and definitions of mental health and illness. Understandings of the proper roles, sensibilities, emotions, and dispositions of women and men are often culturally and morally loaded as indicators of the "proper" selves permitted in a given context. Across cultures, then, gender often becomes an expressive idiom for the relative health of the self. Gender identities or presentations that run counter to these conventions are frequently identified as disordered and in need of fixing. In this course, we will take up these issues through three fundamental themes: the social and cultural (re)production of gendered bodies and dispositions; the normalization of these productions and the subsequent location of "madness" in divergent or dissonant experiences of embodiment; and the situation of discourses of "madness" within debates of resistance and conformity, selfhood and agency.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA, ETH EN: S

L48 Anthro 3202 Anthropological Perspectives on Women's Health

The principle goal of this course is to explore the health issues/risks women face around the world. In order to achieve this goal, we will take a life cycle approach beginning with the birth of female babies through adolescence, adulthood, and finally through the aging process. Our perspective will be biocultural, defined as the synergistic interaction between biology and culture. By comparing a diversity of health experiences across cultures, we can carefully examine the ways in which culture constructs perceptions of health and effective delivery of health care. Students will finish the term with a clearer understanding of the biology of life cycle changes, how health inequalities are generated and perpetuated, and how to make more informed decisions about their own health choices. Prerequisite: Anthro 160 or permission of instructor.

Credit 3 units. A&S IQ: LCD, SSC, SD Art: SSC BU: BA EN: S

L48 Anthro 3206 Global Gender Issues

This course compares the life experiences of women and men in societies throughout the world. We discuss the evidence regarding the universal subordination of women, and examine explanations that propose to situate women's and men's personality attributes, roles and responsibilities in the biological or cultural domains. In general, through readings, films and lectures, the class provides a cross-cultural perspective on ideas regarding gender and how gendered meanings, practices and performances serve as structuring principles in society.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, IS EN: S

L48 Anthro 3215 Food, Culture, and Power

What should I eat today? This seemingly simple question transects the fields of health, environmental studies, economics, history, anthropology, religion, and many others. The foods we eat, the way we get them, the way we produce them, and the way in which we eat them speak volumes about our beliefs, our technology, our understanding of how the world works, and our ability to function within it. That is, food is an excellent way to explore culture. No actions are more deserving of critical attention than those that we do regularly, without much critical thought, and most of us eat at least two or three times a day. In this class we explore how this food came to be here, why we like it, and what that says about us. This class is reading and discussion heavy, with a midterm paper based on the readings and a final paper based on a topic of the students' choosing.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L48 Anthro 3255 Urban Anthropology

This course examines the many ways that people around the world make urban life meaningful. We will focus on the intersections among anthropology, urban studies, social theory and human geography to explore the theoretical, social, and methodological approaches to understanding the culture(s) created in cities. Drawing on ethnographic case studies from cities around the world, we will explore issues pertaining to race and ethnicity, gender, youth, poverty, diversity and "super-diversity," gentrification, urbanization, and illusions and realities of modernity.

Credit 3 units. A&S IQ: SSC, SC, SD BU: BA EN: S

L48 Anthro 3261 Inequality, Hierarchy and Difference

This course examines systems of inequality in a variety of world regions and includes analysis of their causes and effects. Economic class, gender, ethnicity and race are among the types of social stratification discussed. Topics might include environmental racism, occupational segregation, political movements, and debates over the differential impact of new technologies such as biotechnology and reproductive technologies on minority populations.

Credit 3 units. A&S IQ: LCD, SSC, SC, SD Art: SSC BU: ETH, IS EN: S

L48 Anthro 3263 Bioprospecting

What do the opium poppy, the white willow tree, the spoiled sweet clover, the Madagascar periwinkle, and the fungus *Penicillium* have in common? Each of these species contains biochemicals that have been tapped to "advance" medicine. Biodiversity prospecting ("bioprospecting") is often understood as the systematic search for biochemical and genetic information in nature in order to develop commercially valuable products for pharmaceutical, agricultural, cosmetic, and other applications. Contemporary medical innovation depends on bioprospecting to remain "cutting edge," but what are the human and ecological costs of this rapidly changing industry? This course explores the social, political, and environmental impacts and ethical implications of the global search for new biological resources. We will study the role of indigenous knowledge, the problem of biopiracy, the politics of intellectual rights, and patenting culture in our quest to understand what is at stake in the regulation, reform, and growth of this problematic indicator of public health, biotechnology, and historical and "modern" medicine in the global economy.

Credit 3 units. A&S IQ: LCD, SSC BU: BA, IS EN: S

L48 Anthro 3264 Anthropological Perspectives on Complementary and Alternative Medicine

Complementary and alternative medicine (CAM) refers to health and healing practices that fall outside the realm of conventional Western medicine. CAM encompasses a wide range of modalities including homeopathy, traditional Chinese medicine, Ayurveda, energy healing, and more. Many of these practices are not clearly compatible with biomedical explanatory models for health and sickness; they are often viewed with skepticism by mainstream medical practitioners. Though the popular media often depicts many CAM practices components of a "wellness culture" that is associated with the wealthy and privileged, many CAM practitioners do not fit this stereotype and primarily work with the poor, people of color, and other minoritized groups. In this class, we will focus on CAM in the Global North with a primary focus on the United States. We will critically assess characterizations of CAM as pseudoscience and explore the epistemological, ethical, and legal tensions between mainstream and non-mainstream medical practices. We will pay particular attention to how these tensions intersect with race, class, and gender. The aim of this class is not to make a value judgement about the validity of CAM, but rather to understand the perspective of those who use CAM in a context that emphasizes Western biomedicine.

Credit 3 units. A&S IQ: LCD, SSC BU: BA

L48 Anthro 3265 Social Determinants of Health and Migration

The social determinants of health refer to the conditions where people live and work that shape health risks and outcomes. This class will examine how categories, such as refugee or undocumented immigrant, may predispose individuals to live and work in unstable and harmful environments. Our course will examine the following questions: How do restrictive immigration policies and policing shape access to primary care? How does documentation status intersect with other experiences of marginalization and other forms of social identification, such as gender and race, to produce unique health risks and outcomes? In this course, we will explore how people who migrate—due to force or of their own volition, and in a documented or undocumented manner—may encounter obstacles due to differences in language spoken, insurance coverage, and documentation status, when seeking out primary and mental health services, as well as healthcare for chronic illnesses. We will draw on ethnographic research, public health reports, long form journalism, podcasts, and documentaries developed in a variety of geographic settings, including the United States, Germany, Israel, Malawi, and Bangladesh.

Credit 3 units. A&S IQ: LCD, SSC BU: BA, ETH

L48 Anthro 327 Humans and Others in Latin America. Natures, Cultures, Environments

What does it mean to inhabit the world with other beings? How are we to cultivate life -- both human and nonhuman -- in toxic environments? What does it mean to be human, and what would it mean to decenter humanity? This course addresses these questions through an exploration of "more-than-human" worlds in Latin America. Students will examine a variety of Latin American thought and practices through the interdisciplinary lens of environmental humanities and social sciences, unsettling presumed boundaries between human and nonhuman, real and imaginary, native and culture. We will engage primarily with ethnographic and other scholarly texts, which will be supplemented by short works of fiction,

documentary film, podcasts, and works of art. In the first part of this course, students will be challenged to think about what defines the limits of the human and engage with the concept of "more-than-human" worlds. We will then examine the dark side of such worlds, namely, the ways in which extractive capitalism and environmental destruction demonstrate the permeability of bodies and comprise a kind of "slow violence" against the most vulnerable communities. In the next unit, students will consider Black and Indigenous ecological knowledge and these communities' struggles to care for their lifeways and the environments that sustain them. In our final section, we will explore multispecies entanglements through Indigenous cosmologies and the nexus of science, history, and art. Students will complete several assignments throughout the semester that have been designed to make them think imaginatively and critically about the course themes, including weekly reading responses and in-class discussion facilitation. The final assignment for this course is a creative independent research project where students will synthesize what they learned over the course of the semester and extend it through independent research. Prerequisite: L45 165D or permission of instructor. Same as L45 LatAm 327

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: BA, ETH, IS

L48 Anthro 3271 Becoming Human: Archaeology of Human Origins

Humanity, before the advent of agriculture and cities, evolved a series of behaviors that enabled them to survive as hunter-gatherers in diverse environments with complex cultural systems. These behaviors included hunting, control of fire, shelters and clothing, elaborate tools of diverse materials, burials, jewelry and representational art. These characteristics emerged over more than 2 million years of the Pleistocene across several species of humans, to coalesce into what we would recognize as modern human foragers 30,000 years ago. This course traces that emergence of what it means to be human, through the Paleolithic archeological record in its context of past environments and past human forms.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L48 Anthro 3280 Anthropology of Infectious Diseases

This course explores the evolving relationship between humans and non-human microbiota. Beginning with the modern era, we will study infectious diseases and the critical contexts (e.g., ecological, political, social, cultural) in which they occur. Case studies will include antibiotic-resistant "superbugs," H1N1 influenza, SARS coronavirus, HIV/AIDS, and global cholera epidemics. Through the study of global infectious disease outbreaks and threats, we will address larger anthropological questions about knowledge, the power of metaphor, the role of institutions, and the health of populations.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 3283 Introduction to Global Health

This course provides a general introduction to the field of public health. It examines the philosophy, history, organization, functions, activities and results of public health research and practice. Case studies include infectious and chronic diseases, mental health, maternal and reproductive health, food safety and nutrition, environmental health, and global public health. Students are encouraged to look at health issues from a

systemic and population level perspective, and to think critically about health systems and problems, especially health disparities and health care delivery to diverse populations. No background in anthropology or public health is required.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA, IS EN: S

L48 Anthro 3284 Public Health Research and Practice

In-depth exploration of current theory and methods involved in public health research and practical applications. Emphasis on fundamentals of epidemiology, which forms the scientific rationale for public health assessment, assurance and policy development. Survey of current public health practice and research areas including biological foundations of public health, social and behavioral interventions, maternal-child health and environmental health. Relationships among public health, medicine, nursing, social work and related disciplines.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L48 Anthro 3293 Religion and Society

We take a broad and practice-oriented view of "religion," including uttering spells, sacrificing to a god, healing through spirit possession, as well as praying and reciting scripture. We consider religious practices in small-scale societies as well as those characteristic of forms of Judaism, Islam, Christianity and other broadly based religions. We give special attention to the ways religions shape politics, law, war, as well as everyday life in modern societies.

Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH EN: S

L48 Anthro 3295 Secular and Religious: A Global History

Recent years have seen a dramatic rethinking of the past in nearly every corner of the world as scholars revisit fundamental questions about the importance of religion for individuals, societies and politics. Is religion as a personal orientation in decline? Is Europe becoming more secular? Is secularism a European invention? Many scholars now argue that "religion" is a European term that doesn't apply in Asian societies. This course brings together cutting-edge historical scholarship on Europe and Asia in pursuit of a truly global understanding. Countries covered will vary but may include Britain, France, Turkey, China, Japan, India and Pakistan.

Same as L22 History 3921

Credit 3 units. A&S IQ: HUM, LCD, SD BU: HUM, IS EN: H

L48 Anthro 330 Experimental Archaeology

Experiments are an extremely important part of the scientific process. Although archaeology is often treated as an historical science, the nature of the material record does provide an opportunity to use experimentation as an important way of interpreting what we excavate. The class will be working with the most tangible materials recovered from archaeological contexts, that is stone and pottery. After reviewing the history of experimentation in archaeological investigations we will turn to the material record. This will be followed in our initial weeks of setting up the experiments and how they will be used to compare with available data sets derived from archaeological contexts. As part of the class we will take several field trips to areas where materials exist in a natural setting. Each class member will select a specific material for the focus of their experiments. In the end students will produce several experiments using different materials, document their experiments in written reports, and finally present their results to the class for discussion and evaluation.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L48 Anthro 3304 Bones to Behavior: Undergraduate Research in the Lab and at the Zoo

We undertake zooarchaeological study of equid skeletons in the zooarchaeology laboratory at Washington University, and in collaboration with the Saint Louis Zoo, participate in a behavioral study of the courtship and breeding behavior of the ancestor of the domestic donkey — the African wild ass. The research questions that we focus on are how the biology and behavior of the African wild ass influenced the domestication of the donkey by prehistoric African herders or ancient Egyptians and how the behavior of the African wild ass continues to affect prospects for conservation of this highly endangered animal. During the first half of the semester, we meet once a week for 2.5 hours in the zooarchaeology laboratory. In the second half of the semester, we no longer meet in the lab, and each student spends two mornings of their choice per week at the Saint Louis Zoo conducting observations of the wild ass. Students may choose two days that fit their schedule. Saturdays and Sundays are included as choices of days. Permission of instructor is required.

Credit 3 units. A&S IQ: NSM Art: NSM BU: BA

L48 Anthro 3305 Bones to Behavior II

In this class, students undertake zooarchaeological research on skeletal material in the zooarchaeology laboratory at Washington University and/or preparation of animal skeletons for comparative study and, in collaboration with the Saint Louis Zoo, participate in behavioral studies of the ancestor of the donkey — the African wild ass. Collections housed in the zooarchaeological laboratory for study include ancient food-remains from African sites. These collections bear on questions regarding cultural and climate change in the Horn of Africa 2,000 to 12,000 years ago and include animals ranging from African antelopes to domestic camels. During the first half of the semester, students meet once a week for 2.5 hours in the zooarchaeological laboratory. In the second half of the semester, we meet twice a week in the laboratory or at the zoo. Location depends on projects selected for study. Permission of instructor is required. May be repeated for credit.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L48 Anthro 3309 Anthropological Perspectives on Care

This course aims to provide an introductory survey of topics and approaches to the anthropology of care. It does so by drawing on a range of ethnographic, theoretical, and cross-disciplinary materials. This will allow us to think through and engage with care in its myriad forms, its presence and absence, its bureaucratization and management, its relation to kinship, relatedness, labor and government. In the first part of the course, we will explore theories of care as moral practice with a feminist lens. In the second part, we will engage this lens with ethnographic materials about care in diverse settings that also shed light on the political, economic, and lived realities of care. These ethnographic and sociological works include explorations of the circulation of care in moral economies and its monetization as paid labor, the politics and "antipolitics" of health care in institutional settings, and the role of care in kinship, household formations, and life course regimes across cultures.

Credit 3 units. A&S IQ: LCD, SSC EN: S

L48 Anthro 3310 Health, Healing and Ethics: Introduction to Medical Anthropology

A cross-cultural exploration of cultures and social organizations of medical systems, the global exportation of biomedicine, and ethical dilemmas associated with medical technologies and global disparities in health.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: ETH EN: S

L48 Anthro 3312 Topics in Islam: Modern Islam

This course presents selected themes in the study of Islam and Islamic culture in social, historical, and political contexts. The specific area of emphasis will be determined by the instructor. Note: L75 5622 is intended for graduate students only.

Same as L75 JIMES 3622

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: IS EN: H UColl: CD

L48 Anthro 3313 Women and Islam

This course is an anthropological study of the position of women in the contemporary Muslim world, with examples drawn primarily from the Middle East but also from Asia, Africa, Europe, and the United States. Students will examine ethnographic, historical, and literary works, including those written by Muslim women. Topics having a major impact on the construction of gender include Islamic belief and ritual, modest dress (veiling), notions of marriage and the family, modernization, nationalism and the nation-state, politics and protest, legal reform, formal education, work, and Westernization. The course includes a visit to a St. Louis mosque, discussions with Muslim women, and films.

Credit 3 units. A&S IQ: LCD, SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 3322 Brave New Crops

This course introduces students to the major issues surrounding the development and use in genetically modified (GM) crops. Its focus is international, but with particular focus on the developing world. A variety of experts, available locally or through the internet, will contribute perspectives. The course also includes field trips.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH

L48 Anthro 333 Culture and Health

This course explores culture and health, with a focus on global health. Assigned readings explore cross-cultural perspectives on health, healing, and the body, as well as important concepts in medical anthropology. Through class discussions and close examination of ethnographies of health and illness, students develop an understanding of how cultural and political-economic forces articulate with the emerging field of global health.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA

L48 Anthro 3331 Anthropology of Clothing and Fashion

This course takes clothing as a starting point for examining broad themes in anthropology, including gender and sexuality, race and the body, history and colonialism. We look at the ritual significance of clothing and other practices of bodily adornment in traditional societies and the role of style in constituting contemporary social movements and identity categories. We investigate the globalization of the apparel industry, from production and circulation to marketing and branding, in

order to understand the relationship between citizenship and consumption, labor and power in the global economy. The course encourages students to reflect on their relationship to the wider society and economy as producers and consumers of material culture through the lens of clothing and fashion.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: CPSC, SSC BU: BA EN: S

L48 Anthro 333B Anthropology of Design: Artifacts, Expertise, and Insurgency

In this course we will explore the deep-seated politics and cultures of design. We will examine a number of case studies from hydraulic engineering in South Africa, gambling programs in Las Vegas, to DIY punk style in Indonesia. In the process we will explore the ways that design offers insight into other domains of social life such as addiction, inequality, statecraft, and urban citizenship.

L48 Anthro 3351 The Ancient Maya: Archaeology and History

This course focuses on the ancient Maya civilization because there are many exciting new breakthroughs in the study of the Maya. The Olmec civilization and the civilization of Teotihuacan in the Valley of Mexico are considered as they related to the rise and development of the Maya civilization. The ancient Maya were the only Pre-Columbian civilization to leave us a written record that we can use to understand their politics, religion and history. This course is about Maya ancient history and Maya glyphic texts, combined with the images of Maya life from their many forms of art. The combination of glyphic texts, art and archaeology now can provide a uniquely detailed reconstruction of ancient history in a New World civilization.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S

L48 Anthro 3354 Ancient Mesoamerica

Mesoamerica encompasses the Pre-Columbian complex societies of Mexico and upper Central America, including Guatemala, Belize, and parts of Honduras and El Salvador. It was an agrarian world of great and enduring cities, far-flung trade networks, transcendent religions, kingdoms and empires. This survey lecture course begins with the pioneering hunters and gatherers, reviews the establishment of farming communities and the first Olmec Formative states, the flowering of highland Mexican Classic Period Teotihuacan and other great cities like Tajin in Veracruz, the dynasties of the lowland Maya and summarizes with the Aztec Empire and the period of the Spanish Conquest. The course touches on the many and diverse other cultures that contributed to this vibrant world.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS
EN: S

L48 Anthro 336B Culture and Identity

Culture and diversity; cultural relativism and its contradictions; custom and habits; the construction and maintenance of norms; communication, symbol, sign and intersubjectivity; symbolic interaction; rhetoric and the definition of social situations; societal means of fabricating distinctions (e.g., race, tribe, ethnic group, nationality, sect group).

ETH EN: S

L48 Anthro 3373 Law and Culture

We live in an age when social policy is increasingly displaced into the realm of law, when justice and equality are matters of courtroom debate rather than public discussion. Legal language has become a key resource in all kinds of struggles over livelihood and ways of life. In this course, we study the cultural dimensions of law and law's changing relationship to state power, the global economy, social movements and everyday life. We approach law as a system of rules, obligations and procedures, but also a cultural practice, moral regime and disciplinary technique. How are relationships between legal, political and economic realms structured and with what consequences? How does law provide tools for both social struggle and social control? What does anthropology contribute to research on these issues? In exploring these questions, we combine readings from classical legal anthropology with recent ethnographic work from around the globe.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: ETH EN: S

L48 Anthro 3383 Cognition and Culture

This course examines the influence of evolved cognitive dispositions (the way natural selection engineered the human mind) on the transmission of cultural knowledge. Dispositions present from early childhood make certain kinds of cultural knowledge particularly easy to acquire and, therefore, culturally stable. We also consider the evidence for differences in cognitive processes triggered by different social environments. Emphasis is on empirical studies and experimental methods in the study of cultural similarity and differences. Prerequisites: Psych 100B, Anthro 160B or permission of instructor.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 3386 Language, Culture and Society

Although this is an introductory course, students who have taken Linguistics 170D Introduction to Linguistics benefit from knowledge of phonology, morphology, syntax and semantics. The primary content of this course explores the relationship between linguistic practice and other social and cultural processes. Anthropological linguistics, including alternative approaches to fieldwork and data collection are introduced, along with various studies of language usage in social and cultural contexts that consider language and thought, language and identity, language and gender, as well as multilingualism and other forms of language contact. The ethnography of speaking and communication are central to this course, as is conversation analyses, which introduces a combination of qualitative and quantitative linguistic research methods.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA

L48 Anthro 3391 Economies as Cultural Systems

Many contemporary approaches to economics downplay or bracket the importance of culture in the workings of economic systems. In this class we focus on approaches to distribution and exchange in which culture and social institutions figure prominently, if not pre-eminently. We sample a diverse array of economies, from gift exchange to the ceremonial destruction of wealth, from Melanesia to Wall Street, in order to evaluate some of the assumptions that undergird market capitalism. These assumptions include the perception of market actors exclusively as calculative, maximizing individuals. Topics covered include the Industrial Revolution; utilitarianism; economic anthropology; the formal vs. substantivist debates; ethnography of finance; and Marxist sociology.

L48 Anthro 341 Health and Wellness in the Community: A Service Learning Seminar

This 4-credit course is designed to be an interactive course whereby students will volunteer with a local/community-based health or health-affiliated organization under the supervision of an anthropology faculty member and explore the anthropological theories and methods of analyzing applied service and research. Students will be expected to be in class with the instructor twice a week for 1.5 hours each time *and* volunteer a minimum of 4-5 hours each week at an approved social service organization, which must be confirmed during first two weeks of the semester. In-class readings and assignments will be topical and relevant to current events, local issues, and the relationships among community and health. Students must have taken L48 141 and L48 142.

L48 Anthro 342 Advanced Seminar in Medicine and Society: Patients, Politics and Policy

This course is designed to build on foundations provided in the First-Year Medicine and Society Seminar. It will interrogate current health-related issues, including gender, sexuality, politics, policy, and economics. We will also explore how these and many other issues, demographics, and so on impact current health- and healing-related decisions and policies. We will read about and unpack contemporary issues in health care (insurance, big pharma, gender and sexuality, race) and have local experts visit to talk about their practical experience with and in health care. Students will be expected to engage with ethnographic, medical, economic, political and sociological material as well as current journalism to interrogate the topic. Prerequisites: Anthro 141 and Anthro 142.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L48 Anthro 3461 Native Americans at Westward Expansion

Issues precipitated by Euro-American contact, colonization and expansion between 1492 and 1810 across Eastern North America, the Plains and the Rocky Mountains. Impacts of exploration and settlement and responses by native peoples: epidemics; population loss; breakdown of Southeastern

chiefdoms; resistance; relocation; and shifts in economic strategies. Perspectives and policies of Native Americans as well as Europeans and non-Indian Americans, including Lewis and Clark.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: HUM

**L48 Anthro 3462 Contested Histories and Landscapes:
Western and Indigenous Perceptions of Time and Place**

How we conceive of time and place influences the stories we tell about the past, how we form identities in the present, and how we plan for the future in the face of environmental threats like global climate change. The archaeological study of North American Indigenous history has been dominated by Western philosophical thought that takes for granted a particular view of the world, and of being, espoused by the likes of Socrates, Hobbes, Descartes, and Rousseau. Indigenous scholars have critiqued these biases and asked that we recognize ways of perceiving the world that are often fundamentally different than the Euro-American frame of reference. Using archaeological case studies in addition to reading Native American philosophers and intellectuals, we will explore how different ways of understanding the world, and your place in it, influence how we explain the past. We will also consider how these differences play out today regarding issues such as environmental justice, land treaties, tribal sovereignty, and climate change.

Credit 3 units. A&S IQ: SSC, SC Arch: SSC Art: SSC BU: BA, ETH

L48 Anthro 3472 Global Energy and the American Dream

This lecture course explores the historical, cultural and political relationship between America and global energy, focusing on oil, coal, natural gas, biofuels and alternatives. Through case studies at home and abroad, we examine how cultural, environmental, economic and geopolitical processes are entangled with changing patterns of energy-related resource extraction, production, distribution and use. America's changing position as global consumer and dreamer is linked to increasingly violent contests over energy abroad while our fuel-dependent dreams of boundless (oil) power give way to uncertainties and new possibilities of nation, nature and the future. Assuming that technology and markets alone will not save us, what might a culturally, politically and socially minded inquiry contribute to understanding the past and future of global energy and the American dream?

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: CPSC, SSC BU: ETH, IS EN: S

L48 Anthro 3476 Archaeologies of Graffiti from Antiquity to the Present

The modern story of graffiti — revolving around social, economic, and political contexts such as bathroom stalls, subways and alleys steeped with urine and trash, decrepit buildings and train cars situated in less reputable areas of cities and towns — lead people to associate it with antisocial behaviors, dissent, and the vandalism of public and private property. However, some people consider graffiti as a legitimate form of art, communication, and a somewhat anonymous expression of current social climates. The disparity between these two perspectives has provided a great deal to study for social scientists. However, a consideration of graffiti's simple definition — words or drawings etched or painted on some surface in a public place — lead us to recognize that feats of graffiti originate way before the inner-city movements of the 1970s. In this class we will draw upon a range of studies from

archaeology, anthropology, sociology, art, and history to broadly explore the creation and meaning of graffiti from antiquity to the present. Our goal is to learn how to examine the form, function, and context of graffiti across cultures and through time, with regard to the circumstances of its creation. In doing so, we aspire to better understand what lies behind the human urge to leave a mark. Prerequisite: Introduction to Archaeology.

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L48 Anthro 347B Ancient Mound Builders of the Mississippi Valley

Study of the peoples in North America who built mounds and other earthen structures beginning more than 4000 years ago; why they erected earthworks; what the structures were used for; how they varied through time and across space; and what significance they had to members of society.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA

L48 Anthro 3481 Writing (Material) Culture

How do we use things to tell stories? How do the things we use shape who we are? The field of material culture studies approaches these questions by examining the role of objects in social life: their importance as material representations of culture and also as agents in its production and reproduction. In this course, we will explore ways to write about material culture, asking how those of us interested in culture (whether as anthropologists, educators, designers, journalists, curators or poets) can most effectively represent and analyze the social role of things through writing. Throughout the semester, students will read different genres of thing-based storytelling: social theory, fiction, archaeological site reports, ethnographies, museum catalogs, and long-form journalism. We will discuss how the authors of these works use things to describe and analyze the relationship between materials and ideas, reality and metaphor, positivism and multivocality, spatiality and temporality, and the politics of curation, commodity chains, ownership, and heritage. Each student will write short pieces in different genres and review the work of peers, and this will culminate in a final portfolio demonstrating the student's ability to practice and assess effective writing about material culture.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH EN: S

L48 Anthro 3521 Anthropology of Human Rights

This course draws on anthropological scholarship to examine doctrines, practices, and institutions associated with international human rights law. Topics to be covered include: (1) colonialism and the history of international human rights law; (2) the complex theoretical issues raised by attempts to define and apply human rights concepts in different cultural contexts; (3) the role of governments, NGOs, and other international institutions in promoting human rights and humanitarianism; (4) key human rights issues such as freedom of religion, cultural rights, women's rights, and economic rights in different cultural contexts.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 3541 Anthropological and Sociological Study of Muslim Societies

This course introduces students to anthropological and sociological scholarship on Muslim societies. Attention will be given to the broad theoretical and methodological issues which orient such scholarship. These issues include the nature of Muslim religious and cultural traditions, the nature of modernization and rationalization in Muslim societies, and

the nature of sociopolitical relations between "Islam" and the "West." The course explores the preceding issues through a series of ethnographic and historical case studies, with a special focus on Muslim communities in the Middle East, Southeast Asia, and Europe. Case studies address a range of specific topics, including religious knowledge and authority, capitalism and economic modernization, religion and politics, gender and sexuality, as well as migration and globalization. Please note: L75 554 is intended for graduate students only.

Credit 3 units. A&S IQ: LCD, SSC, SC, SD Arch: SSC Art: SSC BU: IS EN: S UColl: CD

L48 Anthro 3542 Anthropology of Change: Practicing Applied and Public Anthropology

In this course, students will learn how to use anthropology and ethnographic methods as tools for provoking change. The legitimacy of this "fifth-field" of anthropology has been in contention amongst anthropologists throughout generations. But in the contemporary era of neoliberalism and big-data, social scientists are increasingly examining their ethical duty to their informants — specifically, concerns about maintaining neutrality versus leveraging ethnographic data to improve lives or to make a profit. We will begin with the history of this ethical debate and move into contemporary issues in anthropology for social change and in business anthropology. Topics will include multidisciplinary teamwork, practitioner capacity building, community action programming, policy development and ethical design. This course is designed for upper-level anthropology students but will be particularly useful for those considering combining anthropology as a double-major or minor in a range of applied fields (business, engineering, social work, law, health and medicine). It will prepare students for the practical use of anthropology in consulting firms, research institutes, corporations, NGOs, and federal, state, and local government agencies.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: CPSC, SSC BU: ETH EN: S

L48 Anthro 3582 Anthropology of the Human Face

A survey of the human face, including both an evolutionary perspective on why our faces changed to look the way they do today and a theoretical perspective on how we create and maintain self-image through body modification. Comparative and cross-cultural approaches are used to understand modern human craniofacial and cultural diversity. The course includes discussions of how perceptions of biological variation inform social interactions and of how sociocultural norms pattern body modification, both presently and historically. Most importantly, students learn how information obtained with archaeological, sociocultural, and biological methods is integrated to address anthropological questions.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L48 Anthro 360 Placemaking St. Louis

Where is home? How do you know where you're from? Our points of origin (cultural, linguistic, geographic) often shape our life trajectories by telling us who we are and where we belong. The embodied ways we move through the world and our experiential relationships to particular places (in both the built and natural environments) also influence our sense of shared history and community. At the same time, the asymmetrical acceleration of travel and communication technologies has produced a globalized world that invites us to redefine the

scale and scope of our neighborhoods. With the potential to be everywhere and nowhere at the same time, how do we maintain a sense of place? Anthropologists ask how and why certain places come to hold strong and lasting meaning to people.

Together, we will study localization and placemaking practices through close ethnographic readings and with site visits to marked places, non-places, and contested spaces throughout the St. Louis area. This course explores the creativity and politics of place to ask, anew, what it means to be human in the early 21st century.

Credit 3 units. A&S IQ: SSC Arch: HUM Art: CPSC, HUM BU: BA

L48 Anthro 3602 Environmental Inequality: Toxicity, Health, and Justice

How are the problems of environmental stress, pollution, and degradation unevenly borne? Adopting cross-cultural, biosocial, intersectional, and posthumanist approaches, this course explores how exposures to environmental toxicities and dangers result in and exacerbate health harms, social disparities, and structural violences. A range of historical and contemporary case studies will include plagues, weather, fire, water, waste, minerals, air, etc. Students will not only gain an understanding of these problems and burdens, but also explore the transformative potential in intertwining environmental justice, critical global health, and social justice movements to seek solutions to these vital issues.

Credit 3 units. A&S IQ: SSC BU: BA, ETH, IS

L48 Anthro 3608 Caribbean Island Vulnerabilities: Puerto Rico

Tropical and subtropical islands have long been imagined as a tourist's paradise, replete with the pleasures of sun, surf, sand, and sex. At the same time, long histories of colonization, exploitation, resource extraction, and slavery have produced a very different reality for many residents of islands located in and around the Caribbean Sea. More recently, communities in the Caribbean region have been subject to extreme weather events that bring the current politics of climate change into conversation with centuries-old problems related to economic isolation, infrastructure, human poverty, and ecological vulnerability. This course explores the nature of island disasters, both sudden and slow, by examining ethnographically the global histories that today inform "Caribbeanness" and the politics of everyday island life. We will further analyze the impact of media coverage on North American understandings of the Caribbean through a close examination of Puerto Rico.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA, IS

L48 Anthro 361 Culture and Environment

An introduction to the ecology of human culture, especially how "traditional" cultural ecosystems are organized and how they change with population density. Topics include foragers, extensive and intensive farming, industrial agriculture, the ecology of conflict, and problems in sustainability.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH EN: S

L48 Anthro 3612 Population and Society

This review of population processes and their social ramifications begins with an introduction to the basic terminology, concepts and methods of population studies, followed by a survey of human population trends through history. The course then

investigates biological and social dimensions of marriage and childbearing, critically examines family planning policies, deals with the social impacts of epidemics and population aging, and looks at connections between population movements and sociocultural changes. The overall objective of the course is to understand how population processes are not just biological in nature, but are closely related to social, cultural, political and economic factors.

Credit 3 units. A&S IQ: LCD, SSC, SC Arch: SSC Art: SSC BU: IS EN: S

L48 Anthro 3613 Follow the Thing: Global Commodities & Environment

Who picked your strawberries? Is your produce still "local" if the hands that harvested it traveled thousands of miles to do the job? This course re-examines the root causes of the global and local environmental problems we read about every day, with an emphasis on historical and contemporary drivers of human migration. Topics include the production and consumption of "natural" resources, the politics of migration and agriculture, and the cross-border commodification of human labor and the environment. Anthropology is historically associated with the study of "remote" societies and "exotic" places often imagined as having little everyday connection with the rest of the world. This course will challenge students to reconsider the meanings of "global" and "local" by introducing new social scientific approaches to studying the key problems that have connected (and disconnected) diverse human populations throughout the late 20th and early 21st centuries: growing disparities in material wealth, natural resource depletion, energy overconsumption, inequitable access to care, and beyond.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA, HUM EN: S

L48 Anthro 3615 Environmental Anthropology

This course will provide students with a working knowledge of how the study of humans across space and time has fundamentally impacted the way we understand the idea of nature, the environment and what it means to be human. The course will ground students in both historical and cutting-edge anthropological theories with units on subsistence, transformative nature, imagining wilds in the Anthropocene and pluralizing environmentalisms.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: CPSC, SSC BU: BA EN: S

L48 Anthro 3616 Ecofeminism: Environmental Social Movements and Anthropology

This course provides a survey of environmental social movements around the world and over time, in the process challenging commonly held perceptions about environmentalism and environmental movements. Specifically, it demonstrates that environmental social movements are often as much or more about people, identity and human rights than they are about protecting the environment. In addition to juxtaposing dominant traditions of American environmentalism with environmental movements in other parts of the world, the course focuses in on new and emerging social movements that are often transnational in scope but local in scale. These new movements offer holistic reinterpretations of human-environment relationships, identities and political and economic organization in their attempts to transcend socio-environmental inequalities. Throughout, the

course draws on social scientists' (especially anthropologists') descriptive interpretations and critical theoretical analyses of various environmental social movements and the differences that constitute them.

Credit 3 units. A&S IQ: SSC, SC, SD Art: CPSC, SSC BU: BA EN: S

L48 Anthro 3617 Past and Present Cultural Environments

Human societies are situated within and interact with their ecological and environmental systems. Even social relationships within and between groups imply spatial relationships and geographic orientation, advantages, influence, and limitations. Beyond subsistence, environment and the "natural world" play an integral role in how humans pattern the landscape, structure society, develop their world view, and, in turn, alter and adapt the world in which they live. This course introduces students to anthropological conceptions of human-environmental relationships, past and present. Topics include environmental and landscape archaeology; historical, political, and human behavioral ecology; world view and conceptualizations of nature; human adaptation, resilience theory, and niche construction; anthropological case studies; the intersections of humans, animals, and the environment; and environmental politics.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L48 Anthro 3618 Urban Ecological Anthropology

Anthropology's long history of studying human-environment interactions makes it well-suited to examine the complexities of urban environmental issues. Through ethnographies and other readings, this class introduces students to the ways social structures, power and knowledge contour people's experiences and understandings of nature in an urban environment. Of particular interest are environmental justice issues involving pollution and disasters; the creation of community gardens and other public space; cars and bicycles; and conservation or commercial uses of natural resources nestled in or on the edge of cities. Class discussion includes environmental issues in the St. Louis metropolitan area. No background in anthropology or environmental studies is required.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: CPSC, SSC BU: BA EN: S

L48 Anthro 3619 Dimensions of Waste

Waste is not apolitical. Its conception, creation and management are deeply cultural practices. Students will learn how local stories integrate to larger, cutting-edge research on waste, gleaned from direct, in-person contact with leading waste scholars. Students will have direct contact with renowned experts visiting for the 2017-2018 Mellon Foundation Sawyer Seminar on Wastelands. Course content will draw from core texts in environmental anthropology and ecocritical theory. We will learn to analyze contemporary perspectives on waste by reading scholarly and activist "texts" (publications, author visits, blog posts, etc.) as not only disseminators of facts, but also as cultural artifacts of specific epistemologies of waste. Students' final project will be to produce a mini-documentary or podcast using their own original fieldwork interviews to demonstrate the flows of waste in the local St. Louis community.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: CPSC, SSC BU: BA EN: S

L48 Anthro 362 The Biological Basis of Human Behavior

Infidelity, marriage customs, inner-city violence, infanticide, intelligence. Are the behavioral patterns we see genetically fixed and racially variable? What is the evolutionary and biological basis of human behavior? This course offers a critical evaluation of these from an anthropological perspective.

Credit 3 units. A&S IQ: LCD, NSM, SD Arch: NSM Art: NSM BU: BA

L48 Anthro 3620 Anthropological Perspectives on the Fetus

Where do we come from? How do we get here? When does "life" begin? Is the fetus a "person" or something else? How could we decide? This course integrates biological, medical, philosophical and cross-cultural perspectives to examine how various societies (including our own) understand the nature of the human fetus. The course examines basic human embryology, beliefs about conception and fetal development, ideas about the moral status of the fetus, controversies surrounding prenatal care and antenatal diagnostic testing (including sex selection and genetic screening tests), current controversies about fetal medicine and surgery, and the problem of abortion in cross-cultural perspective.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 3621 Anthropology of Human Birth

This course examines the interaction between human biology and culture in relation to childbirth. Emphasis is placed on understanding the cultural challenges posed by the physiology of human reproduction, the ways various cultures have attempted to meet those challenges, and the resultant consequences that this has had for women's lives. The course draws on material from human anatomy and embryology, paleoanthropology, clinical obstetrics, public health, social anthropology, the history of medicine and contemporary bioethics.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: ETH EN: S

L48 Anthro 3625 The Female Life Cycle in Cross-Cultural Perspective

This course will examine the biology of the female reproductive cycle — menarche, menstruation, and menopause — and its cultural interpretation around the world. Topics covered will include the embryology of human sexual differentiation, the biology of the menstrual cycle and how it influences or is influenced by various disease states, contraception, infertility, cultural taboos and beliefs about menstruation and menopause, etc. The course will utilize materials drawn from human biology, clinical gynecology, ethnography, social anthropology, and the history of medicine and will examine the interplay between female reproductive biology and culture around the world.

Credit 3 units. A&S IQ: LCD, NSM Arch: NSM Art: NSM BU: SCI

L48 Anthro 3626 Adventures in Nosology: The Nature and Meaning of Disease

What is a "disease" and how do you diagnose one? What are "medicines" and how, when, and for what purpose should they be used? These questions reflect universal human concerns, but the answers given to these questions have varied enormously in different times and places. The course considers the nature of health, illness, disease and its treatment, beginning with a detailed examination of the traditional ethnomedical system of the Hausa people of northern Nigeria. Using this West African

medical system as a baseline for comparison, the course then explores the nature of "nosology" (the classification of diseases) and the underlying logic of different therapeutic systems in different times and cultures, including our own. The course draws on ethnography, the history of medicine, bioethics and human biology to understand how these questions are asked and answered in different societies, times and places.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: SCI EN: S

L48 Anthro 3628 The Anthropology of Health Disparities

This course approaches the subjects of race, ethnicity, gender, sexuality and class-related health disparity epidemiologically and anthropologically. Students in this course explore these cultural categories both as factors that contribute to systematic differences in health status and outcomes and as dynamic frameworks through which those systematic differences can be examined and understood. The grounding assumptions of this course are 1) that race, ethnicity, gender, sexuality and class are cultural constructs employed by humans in an effort to account for observed physical, dispositional and behavioral group-level diversity; 2) that disparity, and particularly health disparity, is meaningfully associated with diversity but is not caused by it; and 3) that because humans are the product of two dynamic, complex systems (biology and culture), health disparities are most usefully engaged as conditions of process and interconnectedness.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L48 Anthro 365 Human Growth and Development

This course focuses on the life-history of humans from birth to death. Through a series of lectures we consider how humans grow and change both biologically and psychologically over the course of our lives. Topics include: human growth curves, sex-differences, adolescence and puberty, nutrition, environment, growth disorders, death, and the evolution of human growth.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 3656 Behavioral Ecology of the Great Apes

This course introduces undergraduate students to the behavioral ecology of great apes. Lectures and readings provide an overview of the distribution, feeding ecology, social system and behavior of African and Asian apes. The main objective of this class is to examine variation in behavioral ecology with and between ape species. The comparative content within each lecture gradually increases throughout the course, and students are asked to synthesize this material in their final exam. Readings mainly consist of book chapter assignments from three recent texts on the ecology, behavior and geographic variation observed in great apes.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L48 Anthro 3660 Primate Ecology, Biology, and Behavior

This course will provide a comprehensive overview of the order Primates by investigating behavioral adaptations, life history characteristics, physiology, ecology, geographic distribution, social structure, taxonomy, and evolution. The course will cover all of the primate groups: apes, monkeys, tarsiers, and strepsirrhines (e.g., lemurs). The importance of primate ecology, biology, and behavior to the discipline of anthropology -- particularly how social and environmental factors may have shaped human evolution -- will be discussed. This course will take an evolutionary approach and include the discussion of natural selection and other forces of evolution.

Intended for students who have already taken Anthro 150A and recommended for students who wish to take the more advanced 400-level courses on primates. Prerequisite: Anthro 150A or permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L48 Anthro 3661 Primate Biology

This course takes a multifaceted introductory approach to the primates, the closest relatives of human beings, by investigating anatomy, growth and development, reproduction, behavioral adaptations, ecology, geographic distribution, taxonomy and evolution. Emphasis is placed not only on the apes and monkeys, but also on the lesser-known lemurs, lorises, bushbabies, tarsiers and many others. The importance of primate biology to the discipline of anthropology is discussed. Intended for students who have already taken Anthro 150A and recommended for students who wish to take the more advanced 400-level courses on primates. Prerequisite: Anthro 150A or permission of instructor.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

L48 Anthro 3662 Primate Conservation Biology

This class focuses on the ecological diversity of primates and how these and other traits are related to their present day abundance and distribution. In addition, the biological, abiotic and anthropogenic factors related to extinction risk are examined. It also reviews the endangered species of primates; case histories of conservation programs; and management practices in Asia, Africa, South America and Madagascar. Prerequisite: Anthro 150 or Biol 2970, or permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L48 Anthro 3665 Observing Animal Behavior at the Saint Louis Zoo

This course is an introduction to methods for the collection of behavioral data in studies of animal behavior. Students are trained in the design of research projects and the analysis and interpretation of behavioral data. Students learn how different methods are used to answer specific questions in animal behavior research. Research is conducted at the Saint Louis Zoo.

Credit 3 units. Art: NSM

L48 Anthro 3666 Comparative Primate Socioecology

This course focuses on the interface between the behavior and ecology of nonhuman primates and its applications to primate conservation. We examine how the basic principles of animal ecology can help us understand primate behavior. We look at a wide range of primates from a comparative perspective as we explore primate habitats, diets, life histories and communities, social relationships, and much more. Because most primate species are threatened, endangered or even facing extinction, we also focus on how various aspects of ecology are used in the conservation of primates. We draw heavily on field studies and particular research projects of primates and emphasize their behavior in natural environmental and social settings. The objectives of the course are: 1) to gain an understanding of principles of animal behavior by using primates as a model, 2) to understand variation in behavior and how ecology influences this variation in living primates, 3) to use the comparative approach to better understand why primate societies differ, and 4) to understand how we address and answer questions about primate behavior through field research

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L48 Anthro 367 Paleoanthropology

The prehistoric Pliocene and Pleistocene evidence for human emergence and evolution. The emphasis is on the human fossil record and its interpretation in functional and behavioral terms. This is placed in the context of the Paleolithic archaeological record and issues regarding the biological relationships between various human groups. Prerequisite: Anthro 150 or equivalent.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L48 Anthro 3692 Blood Feuds and Battlefields: The Archaeology of Warfare and Conflict

In this course we will explore the origins, causes and consequences of warfare in human societies. Our overall aim will be to gain a broad understanding of the range of variation in which warfare and human societies have influenced one another. The bulk of human history falls outside the scope of written records making archaeology a critical means of understanding our past. Through an examination of diverse case studies students will gain an understanding of the various forms of violence and warfare carried out among and between human populations from small-scale "blood feuds" among foraging and early agricultural societies to the large-scale warfare and territorial expansion undertaken by states and empires. Particular attention will be paid to the role of warfare in social and cultural change. We will also explore common themes in the archaeology of warfare including sacrifice and ritual violence, gender, and the depiction and commemoration of warfare in art, iconography and monumental architecture. Finally, we will consider how perceptions of past conflicts affect us in the present-day by examining the role that they continue to play in the present. Throughout the course we will remain respectful and mindful of our ethical responsibilities to descendant communities and the contemporary context for studying violence in the human past.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L48 Anthro 3693 Anthropology of Death, Mourning and Burial

This course offers anthropological analysis of death, mourning and burial. It draws on data and theoretical explanations from different sub-disciplines of anthropology (archaeology, cultural anthropology and physical anthropology). In addition to theoretical conceptualization of mortuary practices, specific case studies are used to address a wide range of topics. The course covers cross-cultural comparison of burial among hunter-gatherers, pastoralists and complex societies. Mortuary practices also is conceptualized based on religion and secularity, social organization and biological approaches (eg. paleodiet, paleodemography, disease). Ethical and legal issues of using human remains worldwide also are addressed. This course helps train and stimulate academic enquiry into ancient and modern societal treatment of death around the globe. The time covered in this course ranges from the Lower Palaeolithic to the contemporary world.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

L48 Anthro 372 Geoarchaeology

Geoarchaeology involves the application of analytical techniques, concepts, and field methods from the earth sciences to help solve archaeological problems. Issues explored in this course include human and environmental processes involved in archaeological site formation, the sedimentary context of archaeological remains, soils and sediments relevant to

archaeology, the relationship between past settlement and landscape evolution, paleoclimatic reconstruction, human impacts on the environment, geological sourcing of artifact proveniences, and remote sensing of the physical environment. Several field trips to local archaeological/geological sites provide an opportunity to understand how geoarchaeology is applied to specific research problems.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 373 Introduction to GIS for Anthropologists

The use of GIS is rapidly becoming standard practice in anthropological research. This course will introduce students to the basic theories and techniques of GIS. Topics will include the application of GIS in archaeological surveys and ethnographic research as well as marketing, transportation, demographics, and urban and regional planning. This course will enable students to become familiar not only with GIS software such as ArcGIS but also with the methodologies and tools used to collect and analyze spatial data. Students will gain expertise engaging with data situated across a number of spatial scales, from households, communities, and cities to landscapes, nation-states, and global phenomena.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 374 Social Landscapes in Global View

From the beginning of the human campaign, societies have socialized the spaces and places where they live. This socialization comes in many forms, including the generation of sacred natural places (e.g., Mt. Fuji) to the construction of planned urban settings where culture is writ large in overt and subtle contexts. Over the past two decades or so, anthropologists, archaeologists and geographers have developed a wide body of research concerning these socially constructed and perceived settings — commonly known as "landscapes." This course takes a tour through time and across the globe to trace the formation of diverse social landscapes, starting in prehistoric times and ending in modern times. We cover various urban landscapes, rural landscapes, nomadic landscapes (and others), and the intersection of the natural environment, the built environments and the symbolism that weaves them together. Chronologically, we range from 3000 BCE to 2009 CE and we cover all the continents. This course also traces the intellectual history of the study of landscape as a social phenomenon, and investigates the current methods used to recover and describe social landscapes around the world and through time. Join in situating your own social map alongside the most famous and the most obscure landscapes of the world, and trace the global currents of your social landscape.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA, IS EN: S UColl: CD

L48 Anthro 376 Warriors, Merchants, Monks and Courtesans: Ancient Narratives of Globalization in Google Earth

This introductory seminar-style course examines the history of globalization through the narrative accounts of those who lived along some of the great trade routes of the Old World. Through a combination of in-class discussion and hands-on tutorials and projects in Google Earth, we examine how day-to-day local interactions and the experiences of individuals contributed to broader cultural exchanges and the shaping of ancient cosmopolitan centers. We use a bottom-up approach to understand the process of globalization, and why it is not only

a phenomenon of the modern world. This course covers a large geographic and temporal span, but it is not about memorizing lists of dates and places or putting dots on a map — it is about learning how to interpret multiple strands of knowledge and put them together into a cohesive narrative of history. The course covers four broad anthropological themes related to Old World history and globalization in conjunction with weekly lessons in Google Earth; there are no prerequisites for either. The knowledge and skills gained in the course lead to a final independent research project consisting of a short paper and an interactive digital map that can be shared online through the Google Earth community.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

L48 Anthro 3775 Culture and Society in East Asia

This course presents an overview of cultures and contemporary social/political changes in East Asia. In Western society, East Asia often has been viewed as a place of enduring cultural identities, but it also has been a region of one of the world's most dynamic and rapid transformations. In this course, we examine both the continuity and change of cultural and social patterns in this region. Students compare anthropological and ethnographic studies of the Peoples' Republic of China, Taiwan, South Korea and Japan, supplemented by selected research from sociology, history and political science. The course focuses on specific areas of cultural and social change in each society, including kinship and family; gender; ethnicity; economic and political development; and health and social policy.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L48 Anthro 3775 Ancient Eurasia and the New Silk Roads

This course explores the rise of civilization in the broad region of Eurasia, spanning from the eastern edges of Europe to the western edges of China. The focus of the course is the unique trajectory of civilization that is made evident in the region of Central Eurasia from roughly 6000 BC to the historical era (ca. AD 250). In addition to this ancient focus, the course aims to relate many of the most historically durable characteristics of the region to contemporary developments of the past two or three centuries. Fundamentally, this course asks us to reconceptualize the notion of "civilization" from the perspective of societies whose dominant forms of organization defied typical classifications such as "states" and "empires" and, instead, shaped a wholly different social order over the past 5,000 years or more. This class provides a well-rounded experience of the geography, social organization and social interconnections of one of the most essential and pivotal regions in world history and contemporary political discourse.

Credit 3 units. A&S IQ: LCD, SSC, SD Arch: SSC Art: SSC BU: IS EN: S

L48 Anthro 380 Applications in GIS

This introductory course in Geographic Information Systems (GIS) is designed to provide you with the knowledge, skills, and confidence to be an independent user of GIS. The course will use the latest version of ESRI ArcGIS. The course is taught using a combination of lectures, demonstrations, and hands-on, interactive tutorials in the classroom. You will also explore the scientific literature to understand how GIS is being used by various disciplines to address spatial questions. The course takes a multidisciplinary approach that is focused on learning the tools of GIS versus working with data from a particular field. The goal is to establish a solid foundation you can use to address spatial questions that interest you, your mentor, or your

employee. The first weeks of the course will provide a broad view of how you can display and query spatial data and produce map products. The remainder of the course will explore the power of GIS with a focus on applying spatial analytical tools to address questions and solve problems. As the semester develops, more tools will be added to your GIS toolbox so that you can complete a final independent project that integrates materials learned during the course with those spatial analyses that interest you the most. Students will have the choice of using a prepared final project, a provided data set, or designing an individualized final project using their own or other available data.

Same as L82 EnSt 380

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L48 Anthro 3832 Music and Healing

In this course, we broadly consider issues of music and healing, drawing from the fields of medical ethnomusicology, medical anthropology, music therapy, and psychology. Our case studies are multi-sited, as we interrogate musical healings and healing music from diverse global and historical perspectives. We approach our study of musical practices with the understanding that the social, cultural and political contexts where "music" and "healing" are themselves created inform the sounds of the music and its various — and often conflicting — interpretations and meanings. We read a variety of academic literature and use media texts and listening examples to develop interdisciplinary and cross-cultural analyses of music and healing. Issues of national consciousness, post/colonialism, gender, sexuality, race, ethnicity, class, religion, dis/ability and the role of history/memory remain central to our explorations of music and healing.

Same as L27 Music 3031

Credit 3 units. A&S IQ: LCD Arch: HUM Art: HUM BU: BA EN: H

L48 Anthro 3833 Performance and Healing: The Politics of Health Representation

The purpose of this course is to bridge the disciplines of medical anthropology, global public health, and medical humanities through deep consideration of how variegated knowledge about health, healing and illness is produced and performed in a variety of public forums. Students explore the ways in which knowledge is produced about particular global health topics through representation in text, image, sound, film/television, and live performance art. Using interdisciplinary theory and methods, this course answers the following questions: Why are these representation modalities important, and how do we analyze them in practice? Drawing on the fields of medical anthropology, media studies, global public health, and performance studies, this course elucidates the relationships between knowledge production, representation, discourse, health and power through three case studies. Case study topics include: HIV/AIDS, Heroin Injection Use, and Domestic and Sexual Violence.

Although the course provides an interdisciplinary perspective for understanding and analyzing different ways of representing illness and healing, it is also deeply grounded within the political-economy of health framework of critical medical anthropology.

The following topics are central to our analyses in this class: gender, sexuality, the body, class, ethnicity and language.

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA EN: S

L48 Anthro 3851 History and Theory of Anthropology

This course examines the history of anthropology and the major theoretical frameworks of the field to the present. Key theorists discussed in this class include Geertz, Foucault, Marx, Mead and Weber, as well as the deep roots of anthropology in strands of philosophy and social thought running back centuries. Ethnographic case studies from around the world are read in order to keep the theories palpable and grounded. Key themes discussed in the class include the concept of culture, how and why societies change and evolve, ways that meanings and identities are made, the role of history in the present, diverse forms of power and experience, and issues of diversity amid contemporary global life.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L48 Anthro 3860 Sports, Health, and Society

Sports is a lens onto social issues of health, fitness, and the body. Case studies in this course deal with injury and abuse, the role of medicine and pharmaceuticals, corporations and mass media, gendered aggression, doping scandals, disabled athletes, trans athletes, and video games, among other topics. A wide range of sports will be covered, including basketball, American football, college athletics, sumo wrestling, martial arts, ordinary activities like running and exercise, and mass spectacles such as the Olympics. By adopting cross-cultural and intersectional approaches, this course will consider how race, gender, and other social contrasts shape ableisms, body norms, violence, and hard-driving business interests in sports and society.

Credit 3 units. A&S IQ: SSC, SC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 387 Medical Anthropology

The comparative study of non-Western medical systems, including the definitions of health and disease, the kinds of treatment, and the varieties of practitioners in other cultures (e.g., Navaho, India, China).

Credit 3 units. Art: SSC BU: IS

L48 Anthro 3870 Science and Society

Encounters with science are ubiquitous in daily life. We read papers hailing scientists' most recent achievements. We adjust our lifestyles to their findings, and we sometimes even allow them to change our beliefs about the world. As students, we learn about the scientific method, run labs, and memorize facts and equations. This course invites students to estrange themselves from these familiar scenes by challenging some assumptions about what science is and how it works. In the course, we launch from the premise that science is itself a cultural activity, permeated by social norms and values. Surveying a rich, cross-disciplinary literature, the course thus aims to unpack the deep imbrications between science, society, technology, economy, and politics from the perspective of the field of science and technology studies.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 3874 International Public Health

This course explores current topics in international public health using a case-study-based approach, emphasizing public health issues affecting low- and middle-income countries; introduction to the tools and methods of international public health research and programs; in-depth examination and critique of the roles

of local and national governments, international agencies and third-party donors in international public health work; and the contributions of anthropology to the international public health agenda.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

L48 Anthro 3875 Pharmaceutical Personhood

This course examines sociocultural dimensions of pharmaceutical production and consumption in the contemporary world. Pharmaceuticals have brought remarkable promises. Their consumption also reflects various social inequalities and substantial transformations in human experience that demand critical attention. We examine the history and global reach of the pharmaceutical industry, the content of pharmaceutical advertising, and pharmaceutical use in the treatment of various kinds of illness, including common mental disorders, post-traumatic experience, chronic illness, eating disorders and lifestyle disorders. Case studies are drawn from diverse societies. We also explore various angles of public criticism about the pharmaceutical industry. No background in anthropology is required.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH EN: S

L48 Anthro 3876 Darwin and Doctors: Evolutionary Medicine and Health

Back pain, diabetes, obesity, colds, even morning sickness. These are all common human health problems. But have you ever wondered why we have these and other health conditions? In this class, we will investigate this question - and others - specifically using evolutionary theory to inform current understandings of contemporary health problems.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L48 Anthro 3880 Multispecies Worlds: Animals, Global Health, and Environment

Amid escalating global environmental and health crises that impact all forms of life, this course critically considers the diverse relationships of humans with other forms of life and varied ecological systems. Although anthropology has long studied humans' use of and impact on environments, anthropologists have begun to increase their focus on human-animal cohabitations, engagements, and shared cultures and worlds. This seminar looks at how diverse contemporary contexts -- such as zoos, farms, forests, and laboratories -- involve fascinating human-animal relationships and contentious implications for ethics, health, and ecology. In investigating how animals are central to scientific knowledge production, debates about animal welfare, environmental sustainability issues, companionship and pets, entertainment and sports, and zoonotic disease, we will explore the possibility for more richly understanding the world by fully appreciating species diversity and interconnectivity.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 3882 Psychological Anthropology

The objective of this course is to introduce students to the central topics and methods of psychological anthropology. Psychological anthropology is concerned with the interplay of psychology and culture on both the individual and group levels. We look cross-culturally at such topics as child and adolescent development; religious experience; illness and healing; self and

identity, gender and sexuality; reasoning and symbolism; and psychopathology. This class draws upon a range of sources, including ethnographies, psychoanalytic theory, contemporary critical theory and cross-cultural materials.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 3883 Conspiracies, Cults, and Moral Panics: The Affective Politics of Fear

This course takes an anthropological look at conspiracy theories, cults, and moral panics as manifestations of cultural distress and modes of everyday knowledge and practice. The thread that connects these phenomena is that they are constituted as counterhegemonic pathways to "truths" that the majority of people cannot (or refuse to) see. As such, they serve as provocative lenses on changing understandings of such issues as the relationship between the individual and the modern state, the contours of civil liberties and responsibilities, and the nature and purpose of human existence. Throughout the semester we will explore the evolution and social impact of conspiracies, cults, and moral panics, and examine the historical, cultural, political, and religious dynamics that inform all three using a variety of critical methods. Among other lines of inquiry, we will ask: What is the cultural and psychological work of these phenomena? And what do they suggest about our own experiences—especially of freedom, the exercise of power, and what counts as knowledge?

Credit 3 units. A&S IQ: SSC

L48 Anthro 3884 Regulating Reproduction: Morality, Politics and (In)justice

This course centers on the burgeoning corpus of anthropological scholarship on reproduction, with special attention to the regulation of reproductive behaviors and population management in cross-cultural perspective. Anthropologists and feminist scholars have shown how reproduction — which links individual bodies to the body politic — is a privileged site for processes of governance. Scholars have also shown how seemingly personal reproductive choices made in the micro units of families are always bound up with broader, if obscured, economic, national and political projects. In this course, we will cover how diverse entities, including the state, the Church, NGOs and feminist groups, seek to manage reproductive behaviors and politics across the world. We will discuss population control campaigns (such as China's notorious one-child policy) and pronatalist population policies (like those seen in Israel) in order to underscore how the management of fertility becomes a crucial site for nationalist and state-building projects. In this course we examine processes of "reproductive governance" around topics including pregnancy and birth, family planning, abortion and adoption. We also examine how the global proliferation of Assisted Reproductive Technologies (such as in vitro, sonogram, abortifacient pills, amniocentesis) intersects with efforts to govern reproduction. Crucially, we take class and race as key axes through which reproduction is experienced and stratified in diverse contexts. At the end of this course students should have a solid grasp of key topics and themes in the anthropology of reproductive governance, as well as more in-depth knowledge of a particular controversial reproductive issue that they choose to focus on for their final research paper.

Credit 3 units. A&S IQ: SSC, SC, SD EN: S

L48 Anthro 3885 Global Mental Health

What does global mental health mean for different actors and stakeholders? This course will examine the history, interventions, and critiques of global mental health. We will explore how diagnosis, distress, and treatment are experienced in different cultural and geographic contexts. Moreover, we will consider how biomedical psychiatry complements and conflicts with other forms of healing expertise. We will also consider mental health disparities, and critically reflect on the successes and challenges of global mental health interventions. This course will draw on materials from different disciplines, including anthropology, public health, psychiatry, social work, long form journalism, and guest speakers to examine topics in global mental health, such as gender and sexuality, migration and displacement, environmental determinants and climate change, and global crises like COVID-19. Our course materials will draw on research carried out in a variety of locations, including the United States, India, Iran, Italy, Botswana, Brazil, and Thailand.

Credit 3 units. A&S IQ: LCD, SSC BU: BA, IS

L48 Anthro 3900 Intermediate Directed Research

This course level is typically taken by juniors or seniors during their first semester in the lab, or by advanced freshmen and sophomores. The expectations of a 300-level directed research project will be greater than those of a 200-level directed research. Student participation in research activities should include higher-level participation, including completing literature reviews, running complex assays, or similar work. The student is expected to be proficient in the appropriate research techniques of a lab, familiar with relevant literatures surrounding the project, and capable of working with minimal supervision. There should be some form of final evaluation or project, but an independent research project is not necessary. May be taken for 1-3 credit hours, 1-2 recommended. Students must enroll in a specific section with a faculty member and receive approval from the department.

Credit variable, maximum 3 units.

L48 Anthro 3942 American Indians and American Empire

This course critically explores the past and present struggles of Native Americans against white settler colonialism. We trace connections between U.S. domestic policy and imperialist ideologies, politics, and violent war from the United States to the Philippines to Latin America and the Middle East. By reading work by Native American and non-Native scholars, writers, and activists, we will consider how issues of race, class, gender and sexuality, violence, policing and militarism, nature, education, language, and sovereignty are intertwined with coloniality, forms of anti-colonial resistance, and the making of decolonized futures. Readings will be interdisciplinary, drawing on anthropology, history, politics, and literature. Students will develop research projects through case studies of their choosing.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: BA, IS EN: S

L48 Anthro 397 Proseminar: Issues and Research in Anthropology

Designed to introduce the student to current issues in Anthropology and to research being carried out by faculty. Topics vary each year. Each departmental member addresses issues in their particular specialty. Required of all majors; may be taken before declaring major, and may be taken by nonmajors.

Credit 1 unit. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L48 Anthro 399 Undergraduate Teaching Assistant

Open to advanced undergraduates only. Usual duties of teaching assistant in laboratory or other selected courses. Prerequisite: permission of instructor.

Credit 3 units.

L48 Anthro 3999 Class Mentor

Classroom instructional assistance is provided through mentoring activities assigned by the instructor. This course is limited to advanced undergraduates only. Class mentors will contribute to the student's intellectual development and/or pedagogical design. This is a more rigorous commitment that requires the production of additional course material or responsibilities as compared with L48 Anthro 399 Undergraduate Teaching Assistant. Prerequisite: Permission of instructor.

Credit variable, maximum 3 units.

L48 Anthro 4002 Internship in Interrogating Health, Race and Inequalities

Internship in Interrogating Health, Race and Inequalities is intended for advanced undergraduates who are enrolled in the course Anthro 4003 (Interrogating Health, Race and Inequalities) and who have previous course work in (medical) anthropology, public health, urban policy, or African and African-American Studies. The internship experience is designed to facilitate students' familiarity with research and evaluation strategies that *both* address structural factors shaping health outcomes and are sensitive to community needs and sociocultural contexts. The internship experience contributes to students' in-class understanding of the ways that race as a historically produced social construct interacts with other axes of diversity and social determinants to produce particular health outcomes. Prerequisite: permission of the instructor. Corequisite: Anthro 4003.

Same as IS0 INTER D 4002

Credit 1 unit.

L48 Anthro 4003 Interrogating Health, Race and Inequalities: Public Health, Medical Anthropology and History

Interrogating Health, Race and Inequalities is intended for graduate students in the School of Social Work and in Arts & Sciences as well as advanced undergraduates in Arts & Sciences who have previous course work in medical anthropology, public health or urban policy. The fundamental goal of the course is to demonstrate that health is not merely a medical or biological phenomenon but more importantly the product of social, economic, political and environmental factors. To meet this goal the course is designed to examine the intersection of race/ethnicity and health from multiple analytic approaches and methodologies. Course readings draw from the fields of public health, anthropology, history and policy analysis. Teaching activities include lectures, group projects and presentations, videos, and discussions led by the course instructors. These in-class activities are supplemented with field trips and field-based projects. By the end of the course students are expected to have a strong understanding of race as a historically produced social construct as well as how race interacts with other axes of diversity and social determinants to produce particular health outcomes. Students gain an understanding of the health disparity literature and a solid understanding of multiple and intersecting causes of these disparities.

Same as IS0 INTER D 4001

Credit 3 units.

L48 Anthro 4005 The Evolutionary and Health Impacts of Human Parasite Infection

Are parasites "old friends" or enemies we have been combatting for as long as humans have been around? Throughout our evolutionary history, humans have constantly interacted with parasites and other organisms that make their homes in our bodies. How did these relationships evolve and how does variation in social and economic factors alter human infection risk? Why do some parasite infections cause severe illness while others are often unnoticed? How might an evolutionary understanding of human-parasite relationships help us improve health outcomes? This class will explore these questions and more as we investigate how parasites have affected human evolution and health. Pre-requisites: L48 307A or equivalent highly recommended.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L48 Anthro 401 Evolution of Nonhuman Primates

Discussion and analysis of primate evolution with emphasis on comparative and functional anatomy and primate paleontology. Prerequisite: permission of instructor.

Credit 3 units. A&S IQ: NSM Art: NSM

L48 Anthro 4011 Popular Culture and Consumption in Modern China

This writing-intensive seminar explores transformations in popular culture and everyday life in Chinese society since 1949 through an analytical focus on political economy and material culture. Drawing upon ethnographic texts, films and material artifacts, we investigate how the forces of state control and global capitalism converge to shape consumer desires and everyday habits in contemporary China. Case studies include eating habits, fashion standards, housing trends, entertainment, sports and counterfeit goods. Prerequisite: previous course in China studies (anthropology, economics, history, literature, philosophy or political science) required. Enrollment by instructor approval only.

Credit 3 units. A&S IQ: LCD, SSC, WI Arch: SSC Art: SSC EN: S

L48 Anthro 4022 Transnational Reproductive Health Issues: Meanings, Technologies, Practices

This course covers recent scholarship on gender and reproductive health, including such issues as reproduction and the disciplinary power of the state, contested reproductive relations within families and communities, and the implications of global flows of biotechnology, population and information for reproductive strategies at the local level. We also explore how transnational migration and globalization have shaped reproductive health, the diverse meanings associated with reproductive processes, and decisions concerning reproduction. Reproduction serves as a focus to illuminate the cultural politics of gender, power and sexuality.

Credit 3 units. A&S IQ: LCD, SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 403 Archaeology and Early Ethnography of the Southwest

This course integrates archaeological, historical and early ethnographic dimensions of American Indian societies in the southwestern United States and northwest Mexico, a region famous for its challenging environment, cultural diversity and the

contributions made by its Native inhabitants. Emphasis is placed on the development of sophisticated desert agriculture and on the rise of regionally integrated cultures including Chaco Canyon and Mesa Verde. The impact of Spanish, Mexican and American colonization are explored. Ethnographies of Tohono O'odham (Papago), Hopi, Zuni, Rio Grande Pueblo and Navajo societies are discussed.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

L48 Anthro 4033 Culture, Illness and Healing in Asia

This course examines the place of health, illness and healing in Asian societies. We explore how people experience, narrate and respond to illness and other forms of suffering — including political violence, extreme poverty and health inequalities. In lectures and discussions we discuss major changes that medicine and public health are undergoing and how those changes affect the training of practitioners, health care policy, clinical practice and ethics. The course familiarizes students with key concepts and approaches in medical anthropology by considering case studies from a number of social settings including China, India, Indonesia, Japan, Korea, Taiwan, Tibet, Thailand, Vietnam and Asian immigrants in the United States. We also investigate the sociocultural dimensions of illness and the medicalization of social problems in Asia, examining how gender, ethnicity, socioeconomic status, disability and other forms of social difference affect medical knowledge and disease outcomes. This course is intended for anthropology majors, students considering careers in medicine and public health, and others interested in learning how anthropology can help us understand human suffering and formulate more effective interventions.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L48 Anthro 4041 Islam and Politics

Blending history and ethnography, this course covers politics in the Islamic world in historical and contemporary times. Topics include history of Islam, uniformity and diversity in belief and practice (global patterns, local realities), revolution and social change, women and veiling, and the international dimensions of resurgent Islam. Geographical focus extends from Morocco to Indonesia; discussion of other Muslim communities is included (Bosnia, Chechnya, sub-Saharan Africa, U.S.).

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS

L48 Anthro 4042 Islam Across Cultures

In this seminar, we examine the variety of historical and contemporary ways of interpreting and practicing Islam, with special attention to issues of ritual, law and the state, and gender. Cases are drawn from Asia, Europe, Africa and the Middle East, and students engage in fieldwork or library research projects.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC

L48 Anthro 4052 Citizenship: Historical, Cross-Cultural, and Interdisciplinary Perspectives

Although some have posited that citizenship may become obsolete in an increasingly globalizing and interconnected world, citizenship has never been more relevant. Discussions of migration, statelessness, naturalization policies, borders, and so many other contemporary topics hinge on questions of citizenship. In this course, we will be taking an interdisciplinary approach to the study of citizenship, drawing on a wide range of work from historians, social scientists, journalists, and writers. This is an interdisciplinary and transnational course

intended for advanced undergraduate and graduate students. Examples will draw from around the world and from a variety of disciplines. Assigned materials include the work of historians, anthropologists, political scientists, sociologists, and journalists as well as novels, films, and audio and visual sources. Same as L93 IPH 4052

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: BA EN: H

L48 Anthro 406 Primate Ecology and Social Structure

Survey of the ecology and individual and social behavior, adaptations and interactions of the major groups of primates. Emphasis on studies designed to examine the relationships among ecology, morphophysiology and behavior. Methods used in collecting data on primates in the field. Prerequisite: Anthro 150A or one 100-level biology course.

Credit 3 units. A&S IQ: NSM Art: NSM

L48 Anthro 4082 Origin of Evolutionary Thought

This course provides an in-depth introduction to classic works in evolutionary biology and evolutionary anthropology. Students will read primary as well as some secondary sources and be expected to discuss those materials each week in class. Students should expect a very heavy reading load, and should plan on reading the assignments throughout the week.

Credit 3 units. A&S IQ: NSM

L48 Anthro 4091 Sexuality, Gender and Change in Africa

This course considers histories and social constructions of gender and sexuality in sub-Saharan Africa during the colonial and contemporary periods. We will examine gender and sexuality both as sets of identities and practices and as part of wider questions of work, domesticity, social control, resistance, and meaning. Course materials include ethnographic and historical materials and African novels and films. Prerequisite: graduate students or undergraduates with previous AFAS or upper-level anthropology course.

Same as L90 AFAS 409

Credit 3 units. A&S IQ: SSC, SC, SD, WI Arch: SSC Art: SSC EN: S

L48 Anthro 4100 Topics in Anthropology: COVID-19: What's Next?

This class explores the early stages of the pandemic and uses an anthropological lens to examine both the current state of the pandemic and the lessons learned, while also exploring what might lay in store for us. This course will offer students the opportunity to analyze the personal and societal impacts of the pandemic in terms of health, education, economies, and environments. This course is open to students who took the earlier versions of The Pandemic: Science and Society as well as students who have not previously taken these courses.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L48 Anthro 4102 Latin America and the Rise of the Global South

The rise of the global south — and the reordering of global geopolitics, economics and cultural imaginaries — is characterized by progressive change and intense conflict. Economic growth coincides with the impacts of global warming, the assault on natural resources, the rise of new consumers and the entrenchment of deep inequalities. We also see the

emergence of cultural and political formations that range from the horrific to the inspiring. Latin America is a central node of the new global south. Here history takes unpredictable turns in the face of declining U.S. hegemony, the economic growth of Brazil, legacies of militarism and political violence, a feverish attack on nature, resurgent economic nationalism, and defiant "anti-globalization" movements. Through close reading of contemporary ethnographies of Latin America we explore emergent cultural and political-economic processes in the region; we consider south-south articulations (theoretical, cultural, political-economic) between Latin America, China, Africa and India; and we reflect on the changing role, meaning and relationships of the United States in the region.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

L48 Anthro 4104 Topics in Anthropology: Recent Advances in Archaeological Dating

In this course, we will engage with concepts, methods, and techniques used in the study of archaeological temporalities and chronology building. We will examine recent trends in the literature of archaeological dating which include time perspectivism, unit issues, radiocarbon dating, Bayesian chronological modeling, geochronology, and seriation among others. There will be a particular methodological focus on analyzing radiocarbon datasets using Bayesian interpretive frameworks. Students will become familiar with best practices in radiocarbon dating (from appropriate materials, contexts, interpretation, and presentation) and will gain expertise in using specialized software to conduct Bayesian chronological modeling. Special attention will be paid to how radiocarbon data can be formally integrated with, and interpreted alongside, other archaeological datasets in the context of particular research questions and hypotheses.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 4106 Topics in Anthropology: Biomechanics

Humans, like all organisms, live and evolved in a world that is governed by the rules of physics. Such an engineered world has undoubtedly had a profound impact on the human evolutionary trajectory. Biomechanics is the science of understanding the natural world around us in a mechanistic fashion, and it has become a major pillar in investigating the human form and function. Understanding how humans and our closest relatives behave in and interact with the physical world can lead to novel insights into the evolution of complex traits; such understanding can come from investigating the mechanics of tissues and structures of the human body or understanding the principles of movement and locomotion. Through lectures, discussions, and hands-on experience, this course will explain biomechanical terms and principles to demonstrate how this discipline has contributed to biological anthropology.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L48 Anthro 4107 Topics in Archaeology: Archaeology of the Living World

As anthropologists, archaeologists are familiar with the animate nature of reality as experienced by most people at most times in human history. Guided by such reality, people create material patterns that challenge archaeologists to identify them by attempting to elucidate what the makers might have experienced and intended, not what modern scientists might see through the lens of a clear division between animate and inanimate material. Increasingly, the default position of ignoring this challenge because it is difficult to make convincing arguments

regarding the esoteric knowledge generating patterns in an animate world is no longer acceptable, morally or practically. This course explores some of the work archaeologists are undertaking to advance knowledge of past realities experienced by people generating material records we that can study from the perspective of relations between people and things of a mutually constitutive nature.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L48 Anthro 4108 Topics in Anthropology: Animals Made Us Human

Today, people often see animals as pets -- even members of the family -- or as food. Relationships with wild animals are diminishing in many places as populations move to the cities, and relationships between people and animals vary widely. In this seminar, we use current articles and seminal anthropological and evolutionary literature to examine the ways that changing human-animal relations influenced humans over the long term. Social distances between humans and our nearest relatives have increased over the last 4 million years, with dramatic turning points 12,000 and 300 years ago; however, biological distances are less marked. In this course, we explore a range of key issues through time, starting with the history of Western conceptual divisions between humans and animals, which contrast with more fluid boundaries in other world regions. We will also examine hunting and symbolic relations with wild animals, relying on data from ancient animal bones, art and texts. Domestic animal partnerships are a focus of much of the course, starting with dogs and moving to pigs, sheep and cattle and to transport animals such as donkeys, horses and camelids. Birds -- including chickens, turkeys and ostriches -- may also be a focus of research. We will examine the role of animals in human thought, including religion and folklore, and we will discuss current and future human-animal relationships. One of the goals of the course is to provide an overview of ways that animals have influenced human life, rates, and patterns of change in human society as well as how they will affect long-term perspectives on human life in the 21st century.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 4110 Pushing Daisies: The Anthropology of Death and Dying

This course examines the dying process and the ways humans around the world come to terms with their mortality. We will critically analyze controversial issues regarding brain death, suicide, euthanasia, and organ donation. We will survey funerary traditions from a variety of cultures and compare the social, spiritual, and psychological roles that these rituals play for both the living and the dying. We will examine cultural attitudes toward death and how the denial and awareness of human mortality can shape social practices and institutions. Finally, we will consider issues regarding quality of life, the opportunities and challenges of caregiving, and hospice traditions around the world. This course will include readings and films about individuals and groups, both in the United States and around the world, as well as guest speakers (hospice workers, home aides, organ donation facilitators, counselors) who will talk about issues related to end-of-life health and caretaking issues in and around St Louis.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH EN: S

L48 Anthro 4112 Body and Flesh: Theorizing Embodiment

This seminar explores a wide range of readings on "the body" as a site of theoretical analysis in social scientific and humanistic inquiry. Issues include: How do we think about the body as simultaneously material (flesh and bone) and constructed in and through social and political discourse? How do we think about the relationship between these contingent bodies and subjective experiences of "self" in various contexts? The course focuses upon the different ways in which these questions have been posed and engaged, and the implications of these formulations for the theorizing of human experience. Prerequisite: Anthro 3201 or permission of instructor.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L48 Anthro 4113 Advanced Psychological Anthropology

This seminar examines the intersection of psychological and anthropological theories and methods and their utility in the study of culture and human experience. This course is an in-depth exploration of some of the key theorists and theoretical domains that have defined the field of psychological anthropology and beyond, including Bakhtin, Bateson, Chodorow, D'Andrade, Ewing, Freud, Goffman, Hallowsell, Holland, Irigaray, Kleinman, Kohut, Lacan, Lutz, Rosaldo, Strauss, Sapir, Scheper-Hughes and Vygotsky, among others. By the end of the course, students have a solid grounding in linguistic, psychoanalytic, cognitive, symbolic, developmental, interactionist and critical approaches within psychological anthropology. Prerequisites: at least one of the following: Anthro 3201, Anthro 3882, graduate standing or permission of instructor.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L48 Anthro 4114 Anthropology and Existentialism

This course examines what it means to be human. Drawing on existentialist philosophy and ethnography, this course is about appreciating the richness, the deep emotional tone, and also the dangers of human experience. Case studies look at profound aspects of existence, such as suffering, healing, mercy and hope, across diverse cultures. Specific themes covered include the ordinary life, how we perceive the world around us, the feeling of being at home and senses of place, how we experience pain, what makes our bodies powerful or vulnerable, why things really matter, and how communities cope with trauma and violence. This course is especially relevant for students interested in medical anthropology and social dimensions of health and illness. No background in anthropology or philosophy is required.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: ETH EN: S

L48 Anthro 4115 Anthropology of Deviance

This course provides an anthropological perspective on notions of "deviance" as social, psychological, moral and medical mechanisms of control and regulation. Students learn to critically engage and evaluate dominant etiological theories of deviance, local and global contexts of deviance, and social responses to deviance as cultural processes through which communities make (and unmake) meaningful human relationships. Through academic texts, ethnographic accounts, clinical case materials and firsthand accounts, students explore multiple dimensions of what it means to be "deviant" or "normal" in a given social or cultural context. Sample topics include: historical trajectories of deviance, deviance and criminology, social class and inequality, prison cultures, deviance and resistance, deviant personalities, forensic psychiatry, deviant vs. socially sanctioned violence, and stigma.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC EN: S

L48 Anthro 4116 Anthropology and Experiment

In recent years, many cultural anthropologists have described their work as "experimental." On the surface, the notion of experimentation leads something of a double life. On the one hand, in its ideal form, it stands for rigidly held methodological tenets aimed at answering questions in rigorous ways. This kind of experimentation is the hallmark of "scientific" inquiry. On the other hand, experimentation implies something of openness, of tentative and flexible exploration. Through an examination of works on experiments, as well as purportedly experimental ethnographies, we pursue the question: What is an experimental mode of inquiry in cultural anthropology, and how does it square with the two idealized meanings of experimentation? We examine the links and resonances between different notions of what experiments do, what they describe in terms of both form and method, how they begin and end, how they are assessed as successes or failures, and what sort of knowledge they produce. This course involves reading across cultural anthropology, science studies and the philosophy of science to better understand different approaches to experiments across domains of research and writing. Can we learn something about what anthropologists do in experimental works from the wealth of thoughtful scholarship on experiments in other fields? Is there something common to experimentation in cultural anthropology and experimentation elsewhere in the social sciences and beyond?

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L48 Anthro 4117 Nature/Culture

What do we mean by "nature" or by designating something as "natural"? How do we distinguish nature from culture and where does such a distinction break down, become political or controversial? Is the distinction between nature and culture itself universal, or does it emerge from a particular history and reflect particular preconceptions and understandings? And how do new technologies reconfigure this distinction? In this course, we explore such questions, paying special attention to the ways anthropology, as a discipline, has relied on, reinforced, and legitimated this great divide.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L48 Anthro 4118 The Good Cause: Psychological Anthropology of Moral Crusades

Why do people join moral crusades? These are social movements based on powerful moral institutions, ranging from the abolitionist and suffragette movements to witch hunts, insurgency and ethnic riots. Such movements are extremely diverse, yet their unfolding and the dynamics of recruitment show remarkably common properties. We will examine a series of empirical cases, including recent events, and assess the relevance of models based on individual psychological dynamics, intuitive moral capacities, and human motivation for participation in collective action.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L48 Anthro 4119 Becoming Clinicians and Healers

A great deal of learning in clinical, caring, and healing professions takes place on the job and through interactions with peers and supervisors. To better understand such subtle and hidden forms of learning, we will examine how clinicians- and healers-in-training experience processes of embodiment and

the training of the senses in therapeutic encounters. Pairing theoretical scholarship on apprenticeship, tacit knowledge, and the perfection of one's craft, with rich ethnographic research on training in surgery, psychotherapy, and shamanism, this course will explore the subtle and subjective experiences of learning to become a future therapeutic practitioner.

Credit 3 units. A&S IQ: LCD, SSC BU: BA

L48 Anthro 411W Anthropology and Existentialism — Writing-Intensive Seminar

This course examines what it means to be human. Drawing on existentialist philosophy and ethnography, this course is about appreciating the richness, the deep emotional tone, and also the dangers of human experience. Case studies look at profound aspects of existence, such as suffering, healing, mercy and hope, across diverse cultures. Specific themes covered include the ordinary life, how we perceive the world around us, the feeling of being at home and senses of place, how we experience pain, what makes our bodies powerful or vulnerable, why things really matter, and how communities cope with trauma and violence. This course is especially relevant for students interested in medical anthropology and social dimensions of health and illness. No background in anthropology or philosophy is required. This is the writing-intensive version of Anthro 4114.

Credit 3 units. Art: SSC EN: S

L48 Anthro 4120 Conspiracies, Cults, and Moral Panics: The Affective Politics of Fear

This course takes an anthropological look at conspiracy theories, cults, and moral panics as manifestations of cultural distress and modes of everyday knowledge and practice. The thread that connects these phenomena is that they are constituted as counterhegemonic pathways to "truths" that the majority of people cannot (or refuse to) see. As such, they serve as provocative lenses on changing understandings of such issues as the relationship between the individual and the modern state, the contours of civil liberties and responsibilities, and the nature and purpose of human existence. Throughout the semester we will explore the evolution and social impact of conspiracies, cults, and moral panics, and examine the historical, cultural, political, and religious dynamics that inform all three using a variety of critical methods. Among other lines of inquiry, we will ask: What is the cultural and psychological work of these phenomena? And what do they suggest about our own experiences-especially of freedom, the exercise of power, and what counts as knowledge?

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA

L48 Anthro 4123 Argumentation Through Ethnography

Ethnography is the traditional mainstay of anthropological academic writing. Through ethnography, anthropologists do more than simply describe a culture or a group of people; rather, they organize and present their field materials in particular ways in order to make intellectual, theoretical, and sometimes even political arguments. This seminar will explore the different ways anthropologists have used ethnography to make intellectual claims and frame theoretical or practical arguments. The aim of the course is to help students develop critical reading skills for engaging ethnographic materials as well as to explore the ways in which ethnography, when done well, can be a persuasive and engaging means of academic argumentation. This course is intended as a sequel to Anthro 472. Prerequisite: Anthro 472 or permission of instructor.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L48 Anthro 4124 Language and Politics

Language is a constitutive part of political processes. While many agree that language is used to symbolize or express political action, the main focus of this course is on how linguistic practice and ideology contributes to the creation of political stances, events and spheres. Topics addressed include political rhetoric and ritual, the emergence of public spheres, discrimination, as well as ethnic conflict, nationalism and colonialism.

Credit 3 units. A&S IQ: SSC, SD Art: SSC EN: S

L48 Anthro 4134 The AIDS Epidemic: Inequalities, Ethnography, and Ethics

In the year 2000, HIV became the world's leading infectious cause of adult death. In the next 10 years, AIDS killed more people than all wars of the 20th century combined. As the global epidemic rages on, our greatest enemy in combating HIV/AIDS is not knowledge or resources but rather global inequalities and the conceptual frameworks with which we understand health, human interaction, and sexuality. This course emphasizes the ethnographic approach for the cultural analysis of responses to HIV/AIDS. Students will explore the relationships among local communities, wider historical and economic processes, and theoretical approaches to disease, the body, ethnicity/race, gender, sexuality, risk, addiction, power, and culture. Other topics covered include the cultural construction of AIDS and risk, government responses to HIV/AIDS, origin and transmission debates, ethics and responsibilities, drug testing and marketing, the making of the AIDS industry and "risk" categories, prevention and education strategies, interactions between biomedicine and alternative healing systems, and medical advances and hopes.

Credit 3 units. A&S IQ: LCD, SSC, SC, SD Arch: SSC Art: SSC BU: IS EN: S

L48 Anthro 4135 Tobacco: History, Culture, Science, and Policy

Tobacco is the most important public health and medical problem of our time, the leading cause of cancer and other chronic diseases. This course examines tobacco's important role in shaping the modern world and global health over the course of the last five centuries, from indigenous uses of tobacco to plantation slavery to the cigarette boom to the politics of health and smoking in the 21st century. Through in-depth historical and anthropological case studies, tobacco provides a window into trends in government and law, medicine and public health, business and economics, society and culture, including changing social meanings of gender, race, class, sexuality, advertising, consumerism, risk, responsibility and health in the United States and worldwide. This course also introduces students to public health approaches to noncommunicable disease prevention, environmental health, and healthy lifestyle promotion. No background in anthropology or public health is required.

Credit 3 units. A&S IQ: SSC Art: SSC BU: ETH EN: S

L48 Anthro 419 Primate Behavior

Discussion and analysis of recent research on the social behavior of nonhuman primates. Data from both field and laboratory study. Prerequisite: Anthro 406 or permission of instructor.

Credit 3 units. A&S IQ: NSM Art: NSM BU: BA

L48 Anthro 4191 Primate Cognition

This course investigates historical and current views regarding the cognitive capacities of nonhuman primates, and the extent to which these abilities are shared with humans. Topics for this class include: social cognition, problem-solving, tool use, culture, communication, theory of mind, deception, self-recognition, imitation and numerical cognition. The classes involve discussion and critical evaluation of theory and methods in this challenging and exciting area of primate cognitive research.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L48 Anthro 4194 Primate Ecoimmunology

The ability of an organism to defend itself against infection by viruses, bacteria, and parasites is critical to organismal survival and fitness. The response of the host immune system is vital in this defense, and like any phenotype, we observe variation in immune function between individuals, populations and species. The field of ecoimmunology seeks to characterize and explain how the environment of the organism contributes to this observed variability in the host immune response. In this class, we will examine the evolution and function of the primate immune system, primarily in non-human primates, within the context of the extensive social and ecological variability in the primate order. We will take a broad and integrative approach, synthesizing material from diverse fields including immunology, ecology, physiology, behavior and genetics. Prerequisites: Anthro 150A or Biol 112.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L48 Anthro 4195 Advanced Primate Laboratory Methods

This course provides students with firsthand experience in conducting laboratory work in primatology. This includes laboratory safety, preparing samples, running assays, and analyzing results. Students will learn best practices and the process of validating techniques. In addition to hands-on lab work, students will read peer-reviewed publications that present data generated from the types of techniques we will cover in class. Background reading on all the methods used and learning about the field techniques used to collect the samples will also be required. Students in this course are expected to have sufficient prior experience in a laboratory setting and to already understand the basics of lab work, such as proper pipetting techniques and laboratory safety practices. With these basic skills already obtained, students will be able to focus on more interesting topics, such as hormonal, microbial, and genetic analysis of samples from wild primates. Students will need to make time to conduct laboratory work outside of class time. Each student will coordinate these times with the instructor.

Credit 3 units. A&S IQ: NSM BU: SCI

L48 Anthro 4202 Anthropological Genetics

This course examines the principles of evolutionary genetics as applied to complex characters such as morphology, behavior, life history and disease. Mathematical models of quantitative inheritance and evolution are discussed. Special topics include kin selection, sexual dimorphism and conservation genetics. Prerequisite: Anthro 150A or introductory biology.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L48 Anthro 4211 Ethnobotany

Interrelationships between plants and people, especially in past societies. Recovery and analysis of plant remains from archaeological sites; interpreting subsistence and vegetation changes; medicinal, ritual, and technological uses of plants; plant

domestication and agricultural intensification. Modern efforts to understand and preserve threatened traditional ethnobotanical practices. Prerequisite: Anth 190BP or an introductory botany course, or permission of instructor.

Credit 3 units. A&S IQ: SSC, WI Arch: SSC Art: SSC EN: S

L48 Anthro 4212 Advanced Methods in Paleoethnobotany

Advanced analytical techniques for the study of archaeological plant remains. Tools and methods for micromorphological recognition, including electron microscopy. Photomicroscopy at low magnification, management, tabulation and reporting of data. Prerequisite: Anthro 4211 or permission of instructor.

Credit 3 units. A&S IQ: SSC Art: SSC

L48 Anthro 4214 The Archaeology of Food and Drink

Studies of past human diets have moved beyond analyses of animal bones and seeds to encompass new theoretical goals and innovative analytical techniques. In this seminar-style course, students explore methods of understanding food-related social interactions such as evidence including residues, ancient DNA, isotopes and trace elements, along with more traditional artifacts and archaeobotanical and zooarchaeological remains. By examining case studies from around the world, we evaluate the current state of research attempting to integrate the biological and cultural aspects of eating and drinking.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L48 Anthro 4215 Anthropology of Food

The rising interest in food research crosscuts various academic disciplines. This seminar focuses on aspects of food of particular interest in anthropology. The first two-thirds of the course is reading-intensive and discussion-intensive. Each student writes short review/response papers for major readings. For the final third, we still are reading and discussing, but the reading load is lighter (and we have a field trip) as students devote more time to their research papers. The research paper is a major effort on a topic discussed with and approved by the professor. In most cases it has to deal with cultural and historical aspects of a food, set of foods, form of consumption or aspect of food production. Papers are critiqued, assigned a provisional grade, revised and resubmitted.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L48 Anthro 4240 The Plundered Past: Archaeology's Challenges in the Modern World

The public imagination thrills at the fantastic adventures of Indiana Jones and Laura Croft, Tomb Raider, but the reality of modern archaeology is more complex, ethically challenging and interesting than a simple treasure hunt. In the United States and Canada, our science museums and museums of anthropology still display artifacts that are regarded as sacred and culturally definitive by Indian nations, although such holdings are now subject to negotiation and repatriation. Art museums in Europe and the U.S. still are stocked with looted ancient masterpieces that are revered as vital heritage by the nations from which they were stolen. We display looted art alongside a much smaller number of legitimately excavated artifacts of masterpiece quality, so it is no surprise that our popular images of archaeologists as avid and undiscerning collectors raise little concern. But modern archaeologists are not extractors of art or even of scientific information, from places as passive and inert as the museums' objects ultimately occupy. Archaeologists work with living people inhabiting societies and states that care deeply about their pasts and the relics of it. They are active agents engaged with many

other people in the production of knowledge about the past. In our rapidly shrinking world, educated sensitivity to the many ancient cultural legacies that shape the values of modern global society is more than a moral imperative; it is a basic form of collaboration in the common project of survival. Archaeologists are ethically charged to advance that project through education about the complex contemporary arena of artifacts, sites and information they occupy.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM EN: H

L48 Anthro 4253 Researching Fertility, Mortality and Migration

Students undertake research projects centering on the most fundamental demographic processes — fertility, mortality and migration. The first section covers basic demographic methodology so that students understand how population data is generated and demographic statistics analyzed. Then, course readings include seminal theoretical insights by anthropologists on demographic processes. Meanwhile, students work toward the completion of a term paper in which they are expected to undertake some original research on a topic of their choice (e.g., new reproductive technologies; cross-cultural adoption; ethnicity and migration). Each assignment in this course is a component of the final term paper. Prerequisite: Anthro 3612 Population and Society or permission of instructor.

Credit 3 units. A&S IQ: LCD, SSC, WI Art: SSC EN: S

L48 Anthro 4254 The Anthropology of Maternal Death

No other commonly recorded health indicator shows such great disparities between rich and poor nations as does maternal mortality. More than 500,000 women die each year around the world from complications of pregnancy and childbirth, but 99 percent of these deaths occur in impoverished, non-industrialized countries. This course examines the reasons for this stunning discrepancy, looking at the biological, social, political and economic factors involved in maternal death. The course is conducted as a seminar based on detailed readings of relevant journal articles, group discussion, case studies and class presentations. Prerequisite: Anthro 3621.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L48 Anthro 4264 The Myth of Race

This course describes the history of the myth of race and racism from the Spanish Inquisition to modern times. Since race is not a biological term but a cultural term, it is important for students to understand the origins and connections of ideas of race and racism from its beginnings in western thought to its current usage. The historical and literature connections can be seen throughout the writings and behavior of the Spanish Inquisition, to the Renaissance, through colonization and slavery, to the reconstruction, to the late 19th century, to the early 20th century, to modern times. In fact, the early history of anthropology can be traced through racist history.

Credit 3 units. A&S IQ: SSC, SD EN: S

L48 Anthro 427 Social and Cultural Change

Analysis of political, economic, and social transformations among societies in the developing and developed world. Examples are drawn from many societies throughout the globe.

Credit 3 units. A&S IQ: LCD, SSC, SC, SD BU: IS EN: S

L48 Anthro 4280 Tourism & Sustainability

This course offers an introduction to the political, cultural, and environmental effects of global tourism (with an emphasis on problematic travel trends, such as ecotourism) and sustainable development discourse. Topics include the history of tourism, tourism studies, critiques of authenticity and aesthetics, virtualism, political economy, island studies, political ecology, and critical social theory. Each student prepares a research paper or podcast on a tourism case study. Readings offer anthropological perspectives on the history of tourism; cultures of consumption; problems of authenticity and aesthetics; political economy and ecology; and the challenge of achieving "sustainable" tourism development across diverse natural environments. We will explore tourism as both a cause and effect of globalization (and "localization" movements) by tracking the consumer habits of emerging tourist markets while also considering ethnographic readings of "ecotourism" and the role that nostalgia plays in influencing domestic and international travel patterns. We will further consider tourism as the production and consumption of "tradition," and we will tackle ethically problematic tourist sites.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, ETH, IS EN: S

L48 Anthro 4282 Political Ecology

An exploration of how the interactions between culture and environment are mediated by local, national and global politics. Topics include "overpopulation," agricultural intensification, Green Revolution, biotechnology, corporate agriculture, green movements and organic farming. Each student prepares an in-depth research paper that may be presented to the class. Prerequisites: graduate standing, Anthro 361 or permission of instructor.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L48 Anthro 4285 Environmental Archaeology

This course intends to introduce students to lines of evidence used in the interpretation of past landscapes, to discuss how we can conceptualize changing human ecological relations, and to consider how we can identify the influence that humans have on their environment. Special emphasis is placed on human-animal-plant relations using case studies from around the world. Combining both lecture and seminar sessions, this course aims to ensure that students are aware of several of the basic methods of bioarchaeological and palaeoenvironmental reconstruction as well as the application of these methods to the interpretation of past landscapes and human impacts on them.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L48 Anthro 4286 Original Research in Environmental Anthropology

In this course, we will focus our ethnographic lens on environmental issues in St. Louis. Through readings and original research, this advanced course in anthropology closely engages discussion and debates about methods, ethics and representation in qualitative environmental studies. Students will identify and undertake qualitative, ethnographic research regarding a local environmental issue. The central goal of this class is to provide a forum for students to grapple with the practical and ethical considerations of anthropological research. The class will be segmented into the following three units: ethics in research, data gathering and analysis, and continuing conversations.

Credit 3 units. A&S IQ: SSC EN: S

L48 Anthro 4287 Anthropology of Water

This course examines one of the world's largest risks and grandest challenges: water security. By exploring water flows between cultures and landscapes, students will think critically about the challenges faced in different regions and societies of the world which can exacerbate or ameliorate issues of social justice and equity. Topics include cultural notions and values of water, technologies of water purification and conservation, big dam controversies, water as a "right" or water as a "commodity," and how epistemologies of water can drastically impact people and ecosystems. Texts will mainly be anthropological but will also draw from history, political ecology, geography and development economics. These will underscore the importance of multiple contexts (social, religious, economic, political, cultural) to the understanding of the scale and scope of this major problem.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: HUM, SSC EN: S

L48 Anthro 4288 Being Human: The Food-Energy-Ecosystem-Water Nexus

This course examines a trilogy of resources that are essential to producing human life: food, water and energy. These resources are inextricably linked not only to the most common and necessary of our day-to-day activities, but impact each other in profound ways. Until recently, the study of these resources was fragmented in separate sectors, ultimately leading to lack of institutional coordination, infrastructural lock-in and incomplete modeling systems. These incomplete systems overlook the complex overlaps of natural systems and render sustainability planning more tenuous than it could be. In response, these core resources are being studied together as a "nexus" to enhance synergies and prevent trade-offs across sectors. However, this nexus further requires astute attention to the all too "human" questions of resource use, waste and justice. If water, energy and food security are to be simultaneously achieved, social scientists must be at the forefront, contributing holistic research that brings the human back into socio-natural systems.

Credit 3 units. A&S IQ: SSC Arch: SSP Art: SSP EN: S

L48 Anthro 428W Original Research in Environmental Anthropology

In this course, we will focus our ethnographic lens on environmental issues in St. Louis. Through readings and original research, this advanced course in anthropology closely engages discussion and debates about methods, ethics and representation in qualitative environmental studies. Students will identify and undertake qualitative, ethnographic research regarding a local environmental issue. The central goal of this class is to provide a forum for students to grapple with the practical and ethical considerations of anthropological research. The class will be segmented into the following three units: ethics in research, data gathering and analysis, and continuing conversations.

Credit 3 units. A&S IQ: SSC, WI Arch: SSC Art: CPSC, SSC EN: S

L48 Anthro 4311 Biocultural Perspectives on Obesity and Nutrition

From pink slime to red wine, causes and treatments for obesity are constantly in the headlines. With more than 35 percent of Americans currently obese, this is a tremendous biological and social issue in the United States. Obesity rates also are

increasing globally despite billions of dollars spent on diets and public health interventions. Why is this happening and what can be done to change this? Why are humans fat and prone to obesity? How do we interpret appropriate body size? These are some of the questions we investigate in this class, specifically looking at the important physiological functions of adipose tissue and how both biological and cultural factors shape our perceptions of body image, health and the obesity epidemic. Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L48 Anthro 4312 Environmental Interactions and Human Health

This course examines key issues related to human health through the lens of human lifestyle factors and environmental modification. Students will be asked to move beyond identifying the physical manifestations of poor health to recognizing larger evolutionary, social, and ecological factors that shape disease risk across individuals and communities. Throughout the term, we will explore how interactions between humans and their surroundings (and other organisms) have shaped disease patterns over time. We will also consider how the concepts we discuss relate to contemporary health challenges and how these perspectives can be applied to better address these issues going forward. In this course, human health is viewed as the result of biocultural processes. This course therefore uses an interdisciplinary approach, drawing on the methods, theories, and bodies of knowledge from various scientific disciplines, including evolutionary biology, genetics, parasitology, physiology, ecology, and medicine. Credit 3 units. A&S IQ: SSC BU: BA EN: S

L48 Anthro 4321 History of Biological Anthropology

The history of biological anthropology is traced from Darwin's time to the present. Factors that influenced major theories and subfields of biological anthropology are discussed, along with current directions. Topics will include race, primate and fossil hominin tool use, adaptationism, evolution of the brain, and the human-chimp split, among other issues. Prerequisites: 6 units of coursework in Biological Anthropology or permission of instructor.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L48 Anthro 434 Behavioral Research at the Saint Louis Zoo

Students conduct research at the Saint Louis Zoo. Training in designing of projects and analysis and interpretation of data. May be repeated for credit. Prerequisite: permission of instructor.

Credit 3 units. A&S IQ: NSM, WI Arch: NSM Art: NSM BU: BA

L48 Anthro 4361 Culture, Power and the State

This seminar surveys anthropological theory and ethnography of the nation-state. We will discuss how culture and power are interrelated in the formation of state institutions and ideologies, governance and violence, social and spatial inequalities, and citizen identities, daily lives, and movements for change. We'll read key theoretical works (Weber, Marx, Foucault, Gramsci, liberal political theory, feminism, and post-structuralism, among others) and contemporary ethnographies of the state. Anthropology's place in public debates on "culture" and violent crises of the state — from Iraq to the U.S. heartland — will be addressed at the end of the semester.

Credit 3 units. A&S IQ: SSC EN: S

L48 Anthro 4366 Europe's New Diversities

Since the late 1980s, three major upheavals have transformed European senses of identity. The demise of the Soviet Union has forced citizens of new "post-socialist" nations to forge new senses of belonging and new strategies of survival. The rise of a new public presence of Islam and the growth of children of Muslim immigrants to adulthood have challenged notions that Europe is a secular or post-Christian space. Finally, the heightened authority of European institutions has challenged the nation-state from above, and the granting of new forms of subnational autonomy to regions and peoples has challenged it from below. The new Europe is increasingly constituted by way of regional identifications, transnational movement(s), and umbrella European legal and political organizations; these new realities occasion new rhetorics of secularism, nationalism, and ethnic loyalties. We examine these forms of diversity, movement, and debate by way of new works in anthropology, sociology and political science.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: IS EN: S

L48 Anthro 4367 Culture, Power, Knowledge

We often think of knowledge as universal and objective. But anthropologists have long studied ways in which knowledge varies in different cultural settings. In this course, we ask: What is knowledge, how does it arise, and what does it do? Is there such a thing as universal validity or is knowledge always tied to specific cultural practices? What happens when knowledge travels and how does knowledge figure in relations of power? We approach these questions through works in anthropology, philosophy and science studies.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH EN: S

L48 Anthro 4392 Capitalism and Culture

Capitalism is perhaps the most important historical and social phenomenon in the modern world. In tribal settings and major cities alike, its complex impacts are evident. Through rich case studies of how capitalism touches down in diverse cultures, this course provides an introduction to anthropological perspectives on the economy and economic development. Themes covered include the history of capitalism and globalization, the cultural meanings of class and taste, the relationship between capitalism and popular culture, major artistic responses to capitalism, social movements such as environmentalism, and the field of international development. No background in anthropology or economics is required.

Credit 3 units. A&S IQ: LCD, SSC, SD Art: SSC EN: S

L48 Anthro 4393 The Archaeology of Trade and Exchange

Studies of trade and exchange are fundamental to our past, as cultures in contact result in new imaginings of self, communities, and place in the world. This course engages in archaeological and anthropological discussions about the interconnectedness that results from trade. This seminar concentrates on the discourse of material trade and the mechanisms for exchange, redistribution, dependency and resistance. It also examines the immaterial exchange of ideas, perceptions and values that alter concepts of identity, space and time. Globalization, political economies, and power are also addressed, along with ideas about territory, value, and social and political consequences of trade.

Credit 3 units. A&S IQ: LCD, SSC BU: BA, IS EN: S

L48 Anthro 4394 The Connected World: Social Networks in Anthropology

This course will serve two purposes. The first is to introduce students, via a broad interdisciplinary survey, to applications of social network perspectives and methods in the social sciences, especially anthropology. We will accomplish this via case studies each week that are organized by topic. Throughout the course, students will be introduced to network research across all four subdisciplines of anthropology, including the sociocultural, biological (including primatology and medical anthropology), archaeological, and linguistic subfields as well as the emerging fifth subfield of applied anthropology. The second purpose of this course is to expose students to the tools necessary to conduct network research, including collecting relational data, visualizing and analyzing networks, and interpreting the results of network analyses. This exposure will come from weekly demonstrations of relevant software and analyses by the instructor, with each week covering the most popularly employed tools for analyzing social networks.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, IS EN: S

L48 Anthro 4421 Advanced Seminar in Medicine and Society: Patients, Politics, Policy

This course is designed to build on foundations provided in the First-Year Medicine and Society Seminar. It will interrogate current health-related issues, including gender, sexuality, politics, policy, and economics, and it will also explore how these and many other issues, demographics, and so on impact current health- and healing-related decisions and policies. We will read about and unpack contemporary issues in health care (insurance, big pharma, gender and sexuality, race) and have local experts visit to talk about their practical experience with and in health care. Students will be expected to engage with ethnographic, medical, economic, political and sociological material as well as current journalism to interrogate the topic. Prerequisites: Anthro L48 141 and Anthro L48 142.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 4452 In the Field: Ethnographic and Qualitative Methods

This course provides an introduction to ethnographic and qualitative research. Ethnography is the study of culture and social organization primarily through participant observation and interviewing. Ethnographic research provides descriptive and interpretative analyses of the routine practices of everyday life. Ethnographic accounts represent different ways people live and make sense of their experiences; they describe the types of social organization (e.g., gender relations, class systems, racial divisions, cultural contexts) that, in part, serve to structure or pattern social behavior. Students conduct a small-scale qualitative research project; in the process, they gain skills in various qualitative research methods. This course is suitable for both undergraduate and graduate students. One purpose of the course is to help students plan for subsequent thesis research, independent study projects, or dissertation research.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L48 Anthro 4453 Studying the City: Approaches to Social Research

In this course we will explore social science/social scientific research methods. The course is designed primarily for students majoring in urban studies. However, the research skills that students will acquire can be applied to any substantive topic in the social sciences. The main goal of this course is that students develop the skills to independently design and execute high quality social research, regardless of their substantive interests. To develop these skills we will read about methods, assess published research from a methodological perspective, and complete original research projects.

Same as L18 URST 418

Credit 3 units. A&S IQ: SSC EN: S

L48 Anthro 4454 Cultures of Science and Technology

This seminar explores questions of theory, method and ethics in the anthropology of science and technology. How is biomedicine changing what it is to be human? How can technologies and scientific practices be studied ethnographically? How are the politics of difference linked to the production of scientific knowledge? Through close reading of ethnographic texts and fieldwork experience both on- and offline, we investigate how scientific practice and technological innovation reorganize various aspects of human life on both global and local scales. Topics include the social construction of knowledge, the reproduction of racial categories in genomics, the cultures of cyberspace, the commodification of bodies in medical science, and the ways in which various technoscientific projects reshape natural and political orders in diverse locales.

Credit 3 units. A&S IQ: SSC, WI Art: SSC EN: S

L48 Anthro 4455 Ethnographic Fieldwork: The Politics of Schooling

This is a practice-based course in ethnographic fieldwork. Using a local case study (the cultural politics of schooling), we examine ethnographic fieldwork as an academic instrument and public social action. The course prepares students for independent research in academic or professional fields developing skills in critical thought, thesis and question development, background and internet research, perspective and empathy, social and political-economic analysis, observation, interviewing, oral histories, note-taking, data analysis, cultural interpretation, and writing. Student work contributes to the ongoing "St. Louis Schools' Ethnographic Documentation Project."

Credit 3 units. A&S IQ: SSC Art: CPSC, SSC EN: S

L48 Anthro 4456 Ethnographic Fieldwork: Energy Politics

This is a practice-based course in ethnographic fieldwork that will focus on the politics of fossil fuels and the renewable energy transition in St. Louis and Missouri. We will situate ourselves as anthropologists with an interest in understanding relationships between global warming, the socio-technical arrangements of energy production, circulation, and use in the city and region, public knowledge, health, and social and cultural practices, and the roles and activities of businesses, political institutions, and elected officials. Through case studies we will work to produce critical knowledge aimed at pushing institutions, the city, and the region toward the transition to renewable energy. Our efforts will produce empirical documentation, case studies, and proposals and may include field trips to resource extraction sites and government offices.

Credit 3 units. A&S IQ: SSC Arch: SSP Art: SSP EN: S

L48 Anthro 4480 Anthropology and Creative Writing

Creative writing has much to offer anthropology. This course explores how methods of artistic writing and expression can shape stories and studies of cultural life in the global world. We consider the uses of journalism, fiction, memoir, poetry, and cinema in anthropology's understanding of the richness, the deep emotional tone, and also the dangers of human experience. We look at such issues and themes as the ordinary life and everydayness, coming of age and fitting in, the feeling of being at home and senses of place, narratives of illness and affliction, how people cope with trauma and violence, what makes our bodies powerful or vulnerable, and why things really matter. Although students are actively involved in writing stories, this is not a writing intensive course.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: HUM EN: S

L48 Anthro 4481 Writing Culture

Different ways of writing about people, culture and society in past and present times. Readings include anthropological works as well as works of fiction that represent people and the times, places and circumstances in which they live. Students conduct and write about their own ethnographical observations.

Credit 3 units. A&S IQ: LCD, SSC, WI Arch: SSC Art: SSC EN: S

L48 Anthro 4483 Narrating the Self

A major "chunk" of the data gathered during ethnographic research projects typically consists of stories told by our interlocutors in the field -- our "informants." In everyday usage, stories are usually taken to be extended, heavily plotted, and artfully delivered narratives. In this course, we take a broader, more inclusive approach to storytelling that encompasses everything people tell, in many different narrative formats, about themselves and the world they inhabit. Such stories are of immense value to us; through narrative, people give shape to and make sense of their lives and tell us where they position themselves in the moral order. Furthermore, in and through storytelling, people structure, comment on, and assert agency over their lived experiences and, by doing so, construct a self. The subject of much debate in philosophy, psychology, and the social sciences, the notion of the self is still upheld by many, although currently it often emphasizes the fragmented, locally constructed, and culture-specific nature of the self. One of the concerns in this course, therefore, will be to assess the theoretical value of the notion of the self in narrative analysis and in anthropology as a whole. More generally, this course explores the (micro-)politics of storytelling to understand how storytelling works as the interface between the self and society as well as between the subject and social structure. Issues of agency and structure will often take center stage, and we will see that the form and content of narratives, cultural norms and values, and power relations are mutually constitutive.

Credit 3 units. A&S IQ: HUM BU: BA EN: H

L48 Anthro 4517 Anthropology and Development

What is "development"? Economic progress for all? A slow and gradual "improvement" in the human condition? Helping people with "projects"? Westernization? Modernization? The sorting out of bodies that are useful and can be put to work from those less useful bodies that must be contained, imprisoned or killed? The militarized accumulation of capital? The commodification of labor? The exhaustion of nature? In this advanced seminar we will consider how anthropologists — as writers, analysts, and theorists — have engaged the theories, meanings, practices

and consequences of (sometimes externally directed) economic and political change. We focus on issues of the contemporary moment: oil; urban poverty and inequality (sex work, migration, water, debt, and cash transfer programs); and cultures of militarism. The course is designed to provide a graduate-level introduction to theory and ethnography based on intensive reading, discussion, critique and writing, with revision. It is open to advanced undergraduates and fulfills writing-intensive (WI) requirements, as well as capstone requirements for some majors.

Credit 3 units. A&S IQ: LCD, SSC, SC, SD, WI Arch: SSC Art: SSC BU: ETH EN: S

L48 Anthro 4555 Digital Digging: An Introduction to Archaeological Geophysics

In this class we will be exploring the history, technology, and application of geophysics in archaeology. In doing so, students will be provided with the opportunity to gain hands-on experience collecting, processing, visualizing and interpreting data from a variety of instruments that include ground-penetrating radar (GPR), magnetometry, electromagnetic induction (conductivity), and magnetic susceptibility. Prerequisites: Anthropology 190B

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L48 Anthro 4561 Ceramic Analysis

This course presents the methods, techniques, and models for analyzing archaeological ceramics. Students will learn how ceramic artifacts are used by archaeologists to reconstruct social practices of the past, including economics, politics, religion/ritual, migration, social organization, and so on. Students will be trained in both qualitative and quantitative methods of analyzing ceramics and ceramic assemblages. While these methods are applicable to the archaeology of societies across the world, students will specifically conduct hands-on analyses of archaeological collections from the St. Louis/Midwestern U.S. region. Prerequisite: At least one archaeology course, graduate standing, or permission of instructor.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L48 Anthro 4562 Artifact Analysis: Mississippian Cultures

The purpose of this course is to provide students with an introductory, hands-on experience of the methods employed in the analysis of archaeological materials common to the Mississippian culture. Students conduct class projects based on collections from Cahokia Mounds and the St. Louis region. Prerequisite: Anthro 314 or equivalent, or graduate standing, or permission of instructor.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC EN: S

L48 Anthro 4564 Archaeobotanical Analysis

Advanced laboratory and analytical techniques. Prerequisite: Anthro 4211 or permission of instructor.

Credit 3 units. EN: S

L48 Anthro 4565 Biomolecular Archaeology: Are You What You Eat?

A revolution is underway in archaeology. Working at the cutting edge of isotopic and genetic technologies, researchers have been probing the building blocks of ancient proteins, life-DNA, fats and microfossils to rewrite our understanding of the past. Their discoveries and analyses have helped revise the human genealogical tree and answer such questions as: Are you what you eat? How different are we from the Neanderthals? Who

first domesticated plants and animals? What was life like for our ancestors? In this class, we address those fundamental issues to understanding human nature. Here is science at its most engaging.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L48 Anthro 4581 Principles of Human Anatomy and Development

This course will discuss the anatomy of most of the functional systems of the human body. Topics covered will include the peripheral nervous system, respiration, circulation, the skeletal system, the gastro-intestinal tract, the urogenital system, the male and female reproductive systems, locomotion, manipulation, mastication, vocalization, the visual system, the auditory system and the olfactory system. Selected topics in human embryology will also be introduced. The course provides valuable preparation for any student interested in human biology, anthropology, medicine or the health sciences.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L48 Anthro 4582 Human Life History Theory

Life history theory postulates that organisms must allocate finite time and finite resources between growth, maintenance and reproductive effort. This balance necessitates trade-offs in specific traits related to body size and energy allocation between competing functions across the life of the organism. In this class, we start from this broad theory and look at the specific application of life history theory within anthropology. Humans, in particular, present unique and unusual life history characteristics, which we discuss in depth.

Credit 3 units. A&S IQ: NSM Art: NSM

L48 Anthro 459 Human Osteology

Analysis of skeletal material recovered in human paleontological and archaeological excavations. The development of bone and major diseases that affect skeletal structure. Prerequisite: permission of instructor.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L48 Anthro 4591 Human Functional Morphology

A detailed consideration of the functional correlates of muscle-skeletal form in recent and ancient humans and our close primate relatives as a means for understanding the behaviors responsible for driving the evolution of human anatomy. Emphasis is placed on the structure and development of the bones, joints, and teeth; the soft tissues that impinge upon individual bones; and the biomechanical demands that affect bone and joint structures.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L48 Anthro 4595 Developmental Plasticity and Human Health

A look at how early life — gestation plus infancy and childhood — contributes to the establishment of long-term physiology, variation and individual health from an anthropological perspective. The course includes current disease models of developmental origins, combined with evolutionary and adaptive perspectives on developmental plasticity and the construction of human health.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L48 Anthro 4597 The Archaeology of Life and Death

The study of human remains in archaeological contexts offers us a rich perspective on human life and society in the past. Our bodies are shaped by genetics, environmental factors, subsistence, disease, and physical activities over the life course. At the same time, social organization, inequality and ideologies also shape the human experience; they often become reflected in the built environments of tombs and cemeteries, the grave offerings, and interment styles that surround human remains in archaeological contexts. This course offers an introduction to bioarchaeology and mortuary archaeology as complementary approaches to the study of life in the past. The goal of the course is to understand how activities, norms and beliefs, and environments shaped bodies in life and death, and the different ways in which archaeologists can gain insight into the past through the study of human remains and burials. Course lectures and discussions focus on recent advances in research and ongoing debates in the two fields with examples from prehistory and history around the world, from North and South America, to Europe, Asia and Africa. Although this course will provide a basic overview of human skeletal anatomy, it is strongly recommended that students have taken an introductory course on the subject prior to enrolling in the class.

Credit 3 units. A&S IQ: LCD, SSC EN: S

L48 Anthro 4611 Seminar in Selected Topics in Learning & Memory: Collective Memory

This course provides an overview and analysis of phenomena of people remembering as part of a group -- one's country, one's state, one's university, one's family. Collective memories are critical for one's identity, for knowing who we are and how to interpret the world around us. We will consider narcissistic tendencies of group memories in specific contexts (e.g., the Russian vs. American interpretation of world events; views of Trump supporters vs. Biden supporters on events in the United States). The course will range from humanistic, anthropological, psychological, and sociological perspectives on memory. Prerequisites: Psych 100B and either Psych 221, Psych 360, or Psych 380, or permission of instructor.

Same as L33 Psych 461

Credit 3 units. BU: BA

L48 Anthro 4623 Art and Science of Inferential Statistics

This course examines the historical roots, the scholarly development and the current applications of inferential statistics in a research context. The emphasis is on how social and natural variables are distributed, framing testable research questions, and choosing appropriate statistical tests. This course covers the testing of univariate, bivariate and multivariate hypotheses using parametric, non-parametric and re-sampling methods. Requires students to undertake statistical analyses of their own on real data sets. Familiarity with descriptive statistics is assumed. Designed for graduate students and advanced undergraduates. Permission of instructor is required for undergraduate enrollment.

Credit 3 units. A&S IQ: SSC, AN Art: NSM EN: S

L48 Anthro 4655 New Advances in Archaeology

Archaeological research is moving at an increasingly rapid pace, with advances in archaeological methods and theory propelling new interpretations and understandings of archaeological findings. In this course we focus on contemporary developments in archaeology, with an emphasis on current trends in theory, method and discovery. The objectives of the course are to

place emerging trends in archaeological research in a historical context, to understand new methods and to explore how various theoretical approaches influence the conduct of archaeological research around the globe.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L48 Anthro 4661 Historical Archaeology

This course focuses upon the methods and techniques employed in historical archaeology. We include methods of integration of written records through contextual studies, discussion of specific artifact type identification techniques, and seminar-type treatments of other aspects of the field. The class includes some hands-on lab work, working primarily with materials from the first American fort west of the Mississippi (Fort Belle Fontaine) and two Civil War period mansions. Prerequisite: 3 credits of archaeology or permission of instructor.

Credit 3 units. A&S IQ: HUM, LCD, WI Art: HUM

L48 Anthro 4682 Ethnoarchaeology

Ethnoarchaeologists use studies of aspects of the present to strengthen archaeological interpretation. Since archaeologists do not usually study words, we need to understand relations between human actions and the material record. In this course, we will explore ethnoarchaeological studies of a wide range of topics, from how things are made to what they mean or how we might think differently about the past. Student presentations, class readings, and discussions will examine topics that might include whether reindeer herders think of their animals as domestic or wild; how Australian Aboriginal peoples have or have not used dingoes for hunting; the role of feasts in society; how to make and find beer, ceramics, stone tools, and beads; or how to smelt iron. Ways that the decoration and construction of pots signify ethnic boundaries or what a mother-in-law teaches a new bride have seen famous ethnoarchaeological studies. We can discuss any aspect of archaeology, and we will pick topics that fit student interests and the questions that they would like to pursue in their papers and presentations.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

L48 Anthro 4700 Interdisciplinary Topics: Modeling Cultural Systems

Various interdisciplinary topics are explored that may include around the humanities, social sciences and data sciences. Same as L93 IPH 470

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L48 Anthro 472 Social Theory and Anthropology

A seminar on social theory and its ethnographic implications. Course combines major works of modern social theory, including Marx, Weber and Durkheim, with current work by contemporary anthropologists, such as Clifford Geertz, Eric Wolf, Marshall Sahlins and Fredrik Barth, and ethnographers from related disciplines, such as Pierre Bourdieu and Paul Willis. Prerequisite: previous anthropology course work or permission of instructor.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC EN: S

L48 Anthro 474 National Narratives and Collective Memory

This course examines how national narratives shape the ideas of nation-states about themselves and others. It considers cultural, psychological, and political aspects of narratives used to interpret the past and understand the present. In addition to reviewing conceptual foundations from the humanities and social sciences, particular national narratives are considered as case studies.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L48 Anthro 4761 The Pleistocene Peopling of Eurasia

The paleolithic archaeology, human paleobiology and paleoecology of the geographical expansions and adaptations of Eurasian humans through the Pleistocene. Prerequisite: Anthro 150A or 190B.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC

L48 Anthro 4771 Out of the Wild: Domestication and Socioeconomic Diversity in Africa

The reason for the beginnings and spread of food production during the early Holocene in so many parts of the world is one of the most interesting questions in archaeology. It now seems likely that there are many different pathways to domestication. In Africa, there is a record of up to several million years of human existence as hunter-gatherers before some human populations adopted food production. Domestication of plants and animals about 10,000 years ago resulted in fundamental changes in human societies. It provided the basis for the increase in settlement densities, specialization and social stratification, and general decrease in mobility and dietary diversity characteristic of non-hunter-gatherer societies in the modern world. In this seminar, the class explores the phenomenon of domestication and the spread of food production, surveying the evidence for manipulation and domestication of plant and animal species by prehistoric peoples in Africa. We focus on how and why domestication occurred and factors that influenced its spread; interactions between late hunter-gatherers and early pastoralists; and intersections with complex societies of the Nile. We also look at the contributions of Africa to understanding pathways to food production world wide.

Credit 3 units. A&S IQ: LCD, SSC, WI Arch: SSC Art: SSC EN: S

L48 Anthro 4792 The Many Paths Leading Toward the Creation of the Ancient City

The purpose of this class is to examine the emergence of the Ancient City across the globe. We want to begin with the concepts of urbanism, city and metropolis. These are words whose derivation are to be found in the classical languages of the Mediterranean. Is there any means to reach an understanding of how other civilizations and societies characterized these special places on the landscape? In the past, many scholars have argued that market economies and state-level societies are essential to their existence. Such arguments reflect issues of sustainability in terms of the economy and the effective control of large populations through state-level institutions. While we want to understand the role of the economy and the level(s) of political integration involved in the process of urbanism, are there other cultural institutions such as religion that play a much larger and more significant role? Do these places reflect the "citizens" perception of the cosmos?

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

L48 Anthro 4803 Advanced GIS Modeling and Landscape Analysis

The aim of this course is to learn to analyze archaeological data in terms of its spatial layout, geography, ecology, and temporal dynamics, using Geographic Information Systems and associated computer modeling techniques. A focus is placed on the relationship between natural environments, cultural geography, and the mapping of archaeological landscapes, and on the archaeologist's ability to accurately recover, reconstruct and analyze this relationship in a virtual environment.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L48 Anthro 481 Zooarchaeology

Archaeologists use ancient objects or material culture to study all of the human past, in its length and diversity. To do this, we have to reconstruct human actions from the things people made and used and the impacts that they had on the environment. Since the 1960's archaeologists have turned in an increasingly systematic way to aspects of the way people relate to material culture in the present, as sources for analogies for interpreting aspects of the past. Ethnographic field studies designed with archaeological problems in mind have become more common, and have contributed substantially to archaeological interpretation. Questions such as how archaeological sites form, and interpretation of changing human diets, human adaptations to challenging environments, how people domesticated plants and animals, the nature of human foodways, gender roles, the spread of food production or ritual and burial practices have all been informed by ethnoarchaeological studies. We will look at ethnoarchaeological approaches to the interpretation of many different categories of archaeological data including: lithics, ceramics, house structures, and rock art and discuss a wide variety of archaeological topics to which ethnoarchaeological approaches have been applied. The areas that we focus on will depend on the topics in which the class is most interested.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L48 Anthro 4851 Topics in Jewish Studies: Critical Issues in the Study of Popular Music

Consult course listings for current topic. Prerequisite: permission of instructor.

Same as L75 JIMES 485

Credit 3 units. BU: HUM EN: H

L48 Anthro 4881 Medicine and Anthropology

Explores the fundamental relationship of anthropology to the art and science of medicine. Emphasis on the impact of anthropology on current modes of biomedical research; alternative systems of health and healing; role of anthropologist in biomedicine and public health; critical medical anthropology; anthropology and epidemiology. Prerequisite: junior standing.

Credit 3 units. A&S IQ: SSC Art: SSC

L48 Anthro 4883 The Political Economy of Health

This course reviews social science contributions to understanding health as a function of political and economic influences. Considers the ways in which personal health is affected by macrosocial processes. Examines effects of globalization, international development and political instability on the health of individuals. Examples drawn from the U.S. and international contexts. Prerequisite: junior standing or above.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L48 Anthro 4885 Senior Seminar: Medicine and Society

This course provides a forum for graduating seniors in the Medicine and Society Program to reconvene for a semester of facilitated discussion about issues related to illness, healing and culture. Prerequisites: Students must be seniors in good standing in the Medicine and Society Program.

Credit 1 unit. A&S IQ: SSC EN: S

L48 Anthro 489 Seminar: Pathways to Domestication

Survey of the evidence of the domestication of plants and animals, focusing on processes leading to domestication, and on the recognition of pristine features of domestication in the archaeological record. Prerequisite: one 300- or 400-level course in archaeology.

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L48 Anthro 4892 Hunter-Gatherer Socioeconomic Variation

This class explores the nature and extent of variation in hunter-gatherer socioeconomic systems as documented in the literature on recent hunter-gatherers, and in the archaeological record of the past 20,000 years. We discuss Woodburn's concept of delayed return hunter-gatherers, Testart's writing on hunter-gatherer socioeconomic organization, and archaeological concepts of simple and complex hunter-gatherers. We examine case studies of both delayed and immediate return hunter-gatherers from the Americas, Asia, Africa and Australia and emphasize understanding underlying reasons for differences between groups, and implications of differences for patterns of cultural change, including the adoption of food production.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

L48 Anthro 489W Seminar: Pathways to Domestication

The origins of agriculture led to one of the most important transitions in human history, continuing to fascinate anthropologists and all who depend on farmers for food. We examine evidence for the development and spread of settled and mobile farming systems in diverse regions of the world. We discuss old and new theoretical approaches and apply increasingly sophisticated methods for recovering and interpreting the evidence. Recent research puts us in a better position than ever before to understand the preconditions, processes, and possibly the causes of domestication and the spread of food production. This course is the WI version of Anthro 489 Seminar: Pathways to Domestication.

Credit 3 units. A&S IQ: SSC, WI EN: S

L48 Anthro 490 Advanced Directed Anthropological Research I

Designed to give undergraduates research experience in various subdisciplines of anthropology. May be taken more than once for credit. Prerequisite: permission of faculty member under whom the research will be done.

Credit variable, maximum 3 units. A&S IQ: SSC EN: S

L48 Anthro 491 Advanced Directed Anthropological Research II

Limited to those students who have successfully completed L48-490 and have a qualifying continuing research project. Prerequisite: Anthro 490 and permission of the faculty member who will supervise the continuing research project.

Credit variable, maximum 3 units. A&S IQ: SSC EN: S

L48 Anthro 4911 Methods in Molecular Anthropology

We learn techniques used in molecular genetics and their application to studying the evolution and adaptation of human and nonhuman primates. This course covers DNA extraction from biological materials (e.g., buccal cells from cheek swabs, potentially also fecal samples from the primates at the zoo), primer design and polymerase chain reaction (PCR) to amplify a region of interest (student lead, with guidance) from isolated DNA. Use of gel electrophoresis to visualize and purify PCR products and sequencing reactions to view nucleic acid structure also are conducted. We also have a lecture on introductory bioinformatics. Throughout the course, we discuss the mechanisms underlying these techniques, why they work and how to troubleshoot problems. Students are expected to submit lab reports and to engage in peer review of others' lab reports. Finally, we discuss how molecular methods inform anthropological research. Students are also expected to take online safety training modules through EH&S.

Credit 3 units. A&S IQ: NSM

L48 Anthro 4951 Senior Honors Research

Limited to students who have qualified for the Anthropology honors program and who are conducting research for an honors thesis. Prerequisites: permission of the Anthropology faculty member supervising the honors research, and concurrent filing of notification with the Anthropology senior honors coordinator. Credit variable, maximum 3 units.

L48 Anthro 4960 Senior Honors Research

This course is limited to students who have qualified for the Anthropology honors program and who are conducting research for an honors thesis. Prerequisites: Permission of the Anthropology faculty member supervising the honors research and concurrent filing of notification with the Anthropology senior honors coordinator.

Credit variable, maximum 3 units. A&S IQ: WI

L48 Anthro 4961 Senior Honors Thesis

Limited to students who have qualified for the Anthropology honors program and who are actively engaged in writing a senior honors thesis. Prerequisite: permission of the Anthropology senior honors coordinator.

Credit variable, maximum 3 units.

L48 Anthro 4975 Collecting Cultures: Taste, Passion and the Making of Art Histories

This seminar examines the theory and the cultural history of the collecting of art objects and artifacts from a range of cultures and periods, and it considers how and why both individuals and institutions create collections. What social and psychological factors drive this passion? What are the various cultural, political, and aesthetic priorities that have driven this practice historically? How is cultural patrimony defined, and how do law, the art market, and cross-cultural ethics impact the placement, study, and display of a culture's material heritage? We will build the seminar around the history of collecting in America, with a focus on Midwestern examples and particularly important case studies in St. Louis. We will consider, for example, the significant local collections built by Joseph and Emily Rauh Pulitzer (modern art) and Morton May (modern and Oceanic art), as well as the histories of both modern European and non-Western collections now owned by St. Louis-area museums. This course will be complemented by various local field trips, including to the Saint

Louis Art Museum, the Pulitzer Arts Foundation, the Mildred Lane Kemper Art Museum, and Cahokia Mounds State Historic Site. Prerequisites: L01 113; L01 215; or permission of instructor. One 300-level course in Art History preferred.

Same as L01 Art-Arch 4975

Credit 3 units. A&S IQ: HUM Art: AH EN: H

L48 Anthro 4999 Capstone Experience

The Department of Anthropology offers several options for completing a capstone experience, which is recommended by the College of Arts & Sciences. One option is for students in any 400-level course in the department to secure permission of the instructor to simultaneously enroll in Anthro 4999. The instructor and student develop an individualized plan for expanding the normal content of the selected 400-level course into a capstone experience. Prerequisite: junior or senior standing. Enrollment requires permission of the department and the instructor.

Credit 1 unit.

Applied Linguistics

The minor in Applied Linguistics emphasizes language acquisition and language use in foreign and second-language settings. Applied Linguistics is concerned with increasing the understanding of the role of language in human affairs and thereby with providing the knowledge necessary for those who are responsible for making language-related decisions, whether the need arises in the workplace, the courtroom, the classroom, or the laboratory. Students learn to evaluate theory and research in different areas of the field, including second-language studies and sociolinguistics. Required introductory courses provide the necessary foundation for advanced classes. Courses at all levels include the critical analysis of different theories, conceptual models, and research methodologies. Students of Applied Linguistics may engage in international or domestic studies that involve independent research projects with faculty members from Law, Business, Anthropology, Global Studies, Education and Engineering.

Specifically, the minor in Applied Linguistics at Washington University meets the increasing domestic and international demand for second- and foreign-language specialists. This minor — in combination with a major in Global Studies, language (e.g., Spanish, French, Italian, Chinese, Swahili, German, Japanese), Anthropology, Philosophy–Neuroscience–Psychology (PNP), Psychological & Brain Sciences, or Educational Studies — helps students qualify for positions that may involve linguistically and culturally diverse learners in the United States and around the world. The minor is also suitable for students who wish to pursue graduate studies or advanced degrees in Law, Business, Medicine, Engineering, Applied Linguistics, Global Studies, Psychological & Brain Sciences, Education, and more.

The Applied Linguistics minor is an independent minor administered by Global Studies.

Majors

There is no major in Applied Linguistics.

Minors

The Minor in Applied Linguistics

Units required: 18

This minor is composed of 18 credits that focus on the theoretical, empirical and practical foundations of teaching and learning languages. All participating students must have a declared primary major. Minors must receive a grade of C+ or higher in all Applied Linguistics courses; all courses taken for Applied Linguistics credit must be taken for a letter grade, including language courses.

Required Courses (taught in English unless otherwise indicated):

- The following courses:

Code	Title	Units
APL 4111	Linguistics and Language Learning	3
Ling 170D	Introduction to Linguistics	3

- One of the following courses focused on language acquisition:

Code	Title	Units
APL 4023	Second-Language Acquisition and Technology	3
APL 4692	Reading Across Languages and Cultures: Theory, Research and Practice	3
Ling 466	Second Language Acquisition	3
Span 3202	Debating Cultures: How Spanish Works	3
Span 370	Introduction to Hispanic Linguistics	3
Span 467	Grammar and Vocabulary Acquisition	3

- One of the following courses focused on language use:

Code	Title	Units
AFAS 210	The Linguistic Legacy of the African Slave Trade in Interdisciplinary Perspective	3
Anthro 3386	Language, Culture and Society	3
GS 4036	Children of Immigrants: Identity and Acculturation	3
Ling 263	Linguistics for Legal Purposes	3
Ling 339	Introduction to Sociolinguistics	3
Ling 341	Linguistic Diversity in the United States	3

Elective Courses:

- At least two of the following:

Code	Title	Units
AFAS 368	Emerging Africa: Language, Identity, and Social Change	3
APL 300	Independent Research Study	3
APL 400	Independent Research Study	3
Comp Lit 394	Worldwide Translation: Language, Culture, Technology	3
Educ 304	Educational Psychology	3
Educ 314	Sociolinguistics, Literacies, Schools, and Communities	3
Educ 4014	Urban Education in Multiracial Societies	3
Educ 4055	Central Topics in Psychological Research on Teaching and Learning	3
Educ 4302	Cognitive Psychology Applied to Education	3
Educ 433	Complex Learning in Education	3
Educ 453B	Sociology of Education	3
Educ 481W	History of Education in the United States	3
Educ 5501	Contemporary Issues in the Psychological Science of Learning: Motivation and Emotion	3
E Lit 407	Old English, Introductory	3
E Lit 472	History of the English Language	3
GS 3248	Intercultural Communication	3
GS 3512	"Model Minority": The Asian American Experience	3
Ling 311	Introduction to Semantics	3
Ling 312	Phonetics	3
Psych 315	Introduction to Social Psychology	3
Psych 358	Language Acquisition	3
Psych 4302	Cognitive Psychology Applied to Education	3
Psych 433	Psychology of Language	3
Span 417	Spanish Phonetics, Phonology and Dialectology	3
URST 400	Urban Education in Multiracial Societies	3

Under certain circumstances, students may count toward their minor in Applied Linguistics a limited number of relevant classes not listed above. Such circumstances include study abroad. Students are required to complete both Ling 170 and APL 4111 prior to applying for study abroad. Select study abroad programs are approved for the Applied Linguistics minor. A specific plan of study must be worked out in advance with the advisor in the Applied Linguistics program.

L92 APL 300 Independent Research Study

Prerequisite: permission of the director of the applied linguistics program.

Credit 3 units.

L92 APL 3006 Global Health and Language

Long before COVID-19, scholars across the globe postulated that language in health care is one of the most significant, and yet underexplored, social determinants of health in underserved linguistic diverse communities. This new course attempts to harmonize work across the disciplines of Global Public Health and Applied Linguistics by analyzing studies that examine language acquisition and language use across contexts with populations that experience serious health disparities- immigrants, refugees, indigenous peoples, racial and ethnic minority groups- and the course offers corresponding implications for health equity. Broadly speaking, this course addresses global health literacy issues, in both spoken and written communications, and its relationship to public health. As part of the seminar, students will apply the theory and research they learn to help meet the local language health needs of a changing population of refugees and immigrants in St. Louis community.

Same as L97 GS 3006

Credit 3 units. A&S IQ: LCD, SSC, SC Arch: SSC Art: SSC BU: BA, ETH, IS

L92 APL 304 Educational Psychology

This is a course in psychological concepts relevant to education that is organized around four basic issues: (1) how humans think and learn; (2) how children, adolescents, and adults differ in their cognitive and moral development; (3) the sense in which motivation and intention explain why people act as they do; and (4) how such key human characteristics as intelligence, motivation, and academic achievement can be measured.

Offered fall and spring semesters.

Same as L12 Educ 304

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L92 APL 315 Introduction to Social Psychology

Social psychology is the scientific study of how people think, feel, and act in social situations. This course will cover topics such as the self, conformity, aggression & altruism, prejudice & stereotyping, romantic relationships, person perception, persuasion, and applications to health and law. PREREQ: Psych 100B.

Same as L33 Psych 315

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L92 APL 3202 Debating Cultures: How Spanish Works

This course offers an introduction to the study of the Spanish language as a science. It focuses on the main linguistic subsystems: the sound system (phonetics and phonology), the formation and use of words (morphology), and the formation

and structure of sentences (syntax). When working with each linguistic subsystem, students are provided with opportunities to reflect on and improve their own abilities in Spanish, such as with regard to how mood (indicative versus subjunctive) and aspect (preterit versus imperfect) work in the Spanish verbal system. Similarities and differences between Spanish and other languages, such as English, are highlighted. The course also provides students with an introduction to the history of Spanish in its evolution from Latin as one of many Romance languages (a diachronic view) and an exploration of various regional varieties of Spanish today (a synchronic view). The goals of the course include understanding linguistics and Hispanic linguistics as cognitive sciences; understanding language acquisition and use as neural processes; disentangling linguistic rules and linguistic variation from pedagogical rules and stigmatization; and applying one's knowledge of linguistics in general and Hispanic linguistics in particular to practical issues and challenges. This course will have a strong, mandatory and graded oral communications component, and it is taught in Spanish. Prerequisite: Span 303 or Span 308D. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.
Same as L38 Span 3202
Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: IS EN: H

L92 APL 3248 Intercultural Communication

"Intercultural communication" and "cross-cultural communication" are interchangeable terms in referring to the field of studies covered in this course. We take a critical approach to topics or issues that emerge in intercultural settings, from verbal and non-verbal cues, tastes and smells, and signs and symbols, to perceptions of space, individualism and collectivism, and intercultural encounters in business or medical fields. The readings cover case studies of different world regions across various cultural, linguistic, and ethnic groups. This course aims to provide analytical tools to understand and navigate cultural difference and to develop critical skills of intercultural competence in an increasingly interconnected world.
Same as L97 GS 3248
Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L92 APL 3386 Language, Culture and Society

Although this is an introductory course, students who have taken Linguistics 170D, namely, "Introduction to Linguistics", will benefit from knowledge of phonology, morphology, syntax and semantics. The primary content of this course explores the relationship between linguistic practice and other social and cultural processes. Anthropological linguistics, including alternative approaches to fieldwork and data collection are introduced, along with various studies of language usage in social and cultural contexts that consider language and thought, language and identity, language and gender, as well as multilingualism and other forms of language contact. The ethnography of speaking and communication are central to this course, as is conversation analyses, which will introduce a combination of qualitative and quantitative linguistic research methods.
Same as L48 Anthro 3386
Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L92 APL 3512 "Model Minority": The Asian-American Experience

This course explores the Asian-American experience revolving around the concept of the "model minority." It investigates the historical origins of this idea and reconsiders this concept in sociopolitical discourses as well as in everyday Asian-American lives. Through multidisciplinary inquiries, this course provides a lens into the complexity and heterogeneity of Asian Americans. It situates Asian-American experiences in the broader American -- and, at times, transnational, ethnoracial and sociopolitical -- context. The texts and discussions cover a wide range of topics and pressing issues, such as identity, race, and (pan-)ethnicity; culture and religion; gender and sexuality; masculinity and femininity; and notions of invisibility and marginalization.
Same as L97 GS 3512
Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch: HUM Art: HUM BU: IS EN: H

L92 APL 358 Language Acquisition

This course examines the development of language skills in children, asking how children so rapidly learn their first language. Topics include; biological bases of language development; development of phonology, syntax, and morphology; language development in atypical populations; childhood bilingualism; and development of written language skills. Prerequisite: Psych 100B and Ling 170D.
Same as L33 Psych 358
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L92 APL 370 Introduction to Hispanic Linguistics

An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax), and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional, and social varieties of Spanish and situations of Spanish in contact with other languages.
Same as L38 Span 370
Credit 3 units. A&S IQ: LCD BU: HUM EN: H

L92 APL 400 Independent Research Study

Prerequisite: permission of the director of the applied linguistics program.
Credit 3 units.

L92 APL 4023 Second-Language Acquisition and Technology

This seminar for undergraduate and graduate students will transform research and theory about second-language acquisition into practice while focusing on technology-driven applications. The course fosters professional development as participants formulate critical skills for evaluating, creating, and integrating technology into the language classroom and other language learning contexts, including business, engineering, and law. Course formats include readings, discussions, and demonstrations with technologies. The course counts for the

minor in applied linguistics, the PhD in applied linguistics, and the graduate certificate in language instruction. This course carries the Social and Behavioral Sciences attribute and can be taken for different majors.

Credit 3 units. A&S IQ: SSC

L92 APL 4036 Children of Immigrants: Identity and Acculturation

This seminar takes an interdisciplinary approach to children of immigrants as an analytical subject. The course texts are in sociology, anthropology, and cultural studies, and a significant number of our case studies focus on 1.5- and second-generation Asian Americans and Latinx. Identity and identity politics are main topics; in addition, the course will critically examine theories on acculturation and assimilation. Our discussions cover a wide range of topics from culture, ethnicity, and race, to bilingualism, education, family, school, ethnic community, and youth culture. Students are required to conduct an individual research project among a selected group of children of immigrants.

Same as L97 GS 4036

Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch: HUM Art: HUM BU: HUM EN: H

L92 APL 407 Old English, Introductory

Study of the Anglo-Saxon language and introduction to major prose and short poetry of the period. Prerequisites: junior standing and 6 units of literature.

Same as L14 E Lit 407

Credit 3 units. Art: HUM

L92 APL 4111 Linguistics and Language Learning

This course, taught in English, is a foundation for students who will work with linguistically and culturally diverse people in the USA and around the world, whether this work is in the courtroom, hospital, classroom, office and more. The class will help prepare students for the diverse range of twenty-first century occupations that have language and linguistics at their center, including machine learning and translation studies. The class utilizes a survey format and covers both internal and external factors related to language acquisition and language use, such as language and the brain, language aptitude, age, gender, memory, prior knowledge, etc. Theoretical and research dimensions of both linguistics and foreign / second language learning are treated. Corresponding implications of the readings focus on action- on making decisions for language policies and debates around the world that are informed by linguistic and language knowledge. The course is required for the minor in applied linguistics, the PhD in Applied Linguistics, and the graduate certificate in language instruction. This course carries the Social and Behavioral Sciences attribute and can be taken for different majors such as Global Studies and Educational Studies. Prereq: Ling 170 is recommended but not required.

Credit 3 units. A&S IQ: SSC BU: BA, ETH EN: S

L92 APL 417 Spanish Phonetics, Phonology and Dialectology

This course, conducted in Spanish, explores the linguistic varieties of the 21 Spanish-speaking countries from both a historical and a synchronic perspective. The course begins with a traditional look at Spanish phonetics and phonology, with all students memorizing and utilizing the International Phonetic Alphabet. Course readings and discussions extend beyond the descriptive and include a search for the sources of language

variation within the Spanish speaking world. Particular attention is devoted to language contact and bilingualism. Students will read in areas such as history, sociolinguistics, dialectology, and sociology, as well as traditional linguistic studies, in designing their projects concerning phonetics, phonology and dialect diversification.

Same as L38 Span 417

Credit 3 units. A&S IQ: LCD BU: IS EN: H

L92 APL 4302 Cognitive Psychology Applied to Education

This course is intended to cover topics in the cognitive psychology of human memory, conceptual learning, and comprehension with special focus on areas, theory, and research that have potential application to education. Thus, the course will provide selective coverage of theoretical and empirical work in cognitive psychology that provides potential to inform and improve educational practice. The applicability of these themes will be explicitly developed and evaluated through the primary research literature using educationally oriented experimental paradigms. The course is expected to be of interest and benefit to education majors and to psychology majors interested in cognitive psychology and its applications. PREREQ: Junior/Senior status, 9 units in Psychology and Psych 100B OR Junior/Senior status, 9 units in Education and Psych 100B.

Same as L33 Psych 4302

Credit 3 units. A&S IQ: SSC EN: S

L92 APL 433 Complex Learning in Education

This course will focus on psychological research and theory pertaining to higher-order learning. Each week, we will delve into a different topic, such as memory, transfer of learning, analogical reasoning, conceptual change, metacognition, and problem solving. Prerequisite: Junior standing or L12 304.

Same as L12 Educ 433

Credit 3 units. A&S IQ: SSC BU: BA EN: S

L92 APL 4330 Psychology of Language

This course surveys current research and theory in psycholinguistics, covering the biological bases, cognitive bases, and learning of language. We consider studies of normal children and adults, the performance of individuals with various types of language disorders, and computer simulations of language processes. Topics range from the perception and production of speech sounds to the management of conversations. Each student will carry out an original research project on some aspect of psycholinguistics. Prereq: Ling 170D and Psych 100B

Same as L33 Psych 433

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L92 APL 453 Sociology of Education

This course provides an overview of sociological theory and research on education in contemporary U.S. society. Drawing from sociological perspectives, it covers the implications of schools and schooling for social inequality, mobility, and group relations. It examines major theoretical perspectives on the purpose and social organization of mass education in the United States, and topics related to the organization and function of schools, access to educational resources, and group disparities in school experiences and outcomes.

Same as L12 Educ 453B

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA, ETH EN: S

L92 APL 467 Grammar and Vocabulary Acquisition

This course examines theoretical and instructional implications of research on grammar and vocabulary acquisition. Topics include making form-meaning connections during language learning; developmental stages; the role of input and input processing; explicit and implicit methods of grammar instruction; pertinent factors in vocabulary acquisition, such as a learning context and processing resource allocation; and comparisons of incidental and direct vocabulary instruction techniques. Major theories of language acquisition (e.g., nativism, emergentism) are critically examined in light of the research presented, and research findings are applied to instructional practices.

Same as L38 Span 467

Credit 3 units. A&S IQ: LCD BU: BA EN: H

L92 APL 4692 Reading Across Languages and Cultures: Theory, Research and Practice

The United Nations has declared that literacy is a fundamental human right. This course, which is taught in English, connects to the mission of UNESCO and examines the wide range of theoretical and research issues -- both historical and current -- related to reading and writing across languages and cultures. Literacy acquisition among second-language learners involves a number of variables, including both cognitive and social factors. Topics to be discussed include universal cognitive operations, individual learner differences, text types and literary forms, literacy and social power, and the extent to which reading and writing are interrelated. Students will discuss how to bridge scientific research in the laboratory to practice, and they will be involved in St. Louis community outreach projects with refugees and immigrants at the International Institute, where they will create and implement reading and writing activities driven by theory and empirical investigations. Students will take the theory and research they learn, and they will help meet the local reading and writing needs of a changing population with a variety of backgrounds, values, and educational preparations. The course is required for the minor in applied linguistics, the PhD in applied linguistics, and the graduate certificate in language instruction. This course carries the Social and Behavioral Sciences attribute and can be taken for different majors, such as Global Studies and Educational Studies.

Credit 3 units. A&S IQ: SSC EN: S

L92 APL 472 History of the English Language

Concepts and methods of linguistic study: comparative, historical, and descriptive. Application of methods to selected problems in the history of English. Contrastive analysis of excerpts from Old, Middle, and later English; sounds, meanings, syntax, and styles.

Same as L14 E Lit 472

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L92 APL 481 History of Education in the United States

Examines education within the context of American social and intellectual history. Using a broad conception of education in the United States and a variety of readings in American culture and social history, the course focuses on such themes as the variety of institutions involved with education, including family, church, community, work place, and cultural agency; the ways relationships among those institutions have changed over time; the means individuals have used to acquire an education; and the values, ideas, and practices that have shaped American educational policy in different periods of our history. **NOTE ABOUT ENROLLMENT:** All students will be initially waitlisted.

Because this is a writing intensive course, enrollment will most likely be 12-15 students. Enrollment preference will be given to students who are majoring/minoring in Educational Studies, Teacher Education, Applied Linguistics, History, American Culture Studies, and Children's Studies and to students needing to complete their Writing Intensive requirement. Instructor will e-mail students about enrollment.

Same as L12 Educ 481W

Credit 3 units. A&S IQ: HUM, SC, SD, WI BU: BA, HUM EN: H

L92 APL 5501 Contemporary Issues in the Psychological Science of Learning

The purpose of this course is provide a vehicle for students to explore contemporary issues in the psychological science of learning. The general topic of the course will rotate so that different contemporary issues can be explored from semester to semester. Potential topics include motivation and emotion, error-correction and conceptual change, and higher-order learning. Regardless of the topic, the majority of the course will be structured around discussing primary and secondary research articles. The main product of the course will be a research proposal in which students will identify a question, situate it within existing theory/research, describe the methodology to answer the question, and discuss the predicted results. The goal of the course is to provide students with opportunities to practice evaluating research and theories, designing research, communicating ideas both orally and in writing, and providing constructive criticism. Prerequisite: Graduate standing or permission of the instructor.

Same as L12 Educ 5501

Credit 3 units.

Arabic

The Department of Jewish, Islamic, and Middle Eastern Studies offers a major and a minor in Arabic. As majors in Arabic, students can expect to gain proficiency in the language, study the area's literary and cultural landmarks, and gain familiarity with Middle Eastern history and civilizations.

Language Placement: Placement tests are required for all students entering our language programs. Students may be eligible for up to 6 units of back credit based on advanced placement and successful completion of the recommended course. Native speakers are not eligible for back credit; evidence of secondary or postsecondary study of the language is required. Any units received from back credit cannot be counted toward the major or minor.

Majors

The Major in Arabic

Total units required: 24 advanced, in addition to prerequisites

Prerequisites:

- 100- and 200-level Arabic, by course work or by placement. (A student who skips the first four semesters of Arabic courses by placement must successfully complete Arab 3075 Third-Level Arabic I. Students who complete the third-level language course with a grade of B- or better will receive 6 units of back credit.)

- JIMES 210C Introduction to Islamic Civilization and JIMES 208F Introduction to Jewish Civilization: History and Identity. (Students with substantial prior course work may substitute an additional upper-level course with permission of their advisor and the director of undergraduate studies.)

Requirements:

- 12 credits in 300- and 400-level language courses
- 6 credits in other 300- and 400-level JIMES courses, distributed as the student wishes
- At least 3 credits in 300- and 400-level courses in a JIMES culture other than that of the selected language tradition
- 3 credits in a departmental capstone course to be taken during the senior year. (Students may take this course during their junior year with permission of their advisor and the director of undergraduate studies.)

Additional Information

Students enrolled in preapproved Washington University study abroad programs during the regular academic semester can earn a maximum of 9 credits subject to review by their advisor and the director of undergraduate studies. Summer programs and transfer courses can be granted as many as 6 credits subject to review by the student's advisor and the director of undergraduate studies. A limit of 9 credits in total can be applied to the major, whether the credits are earned in study abroad or summer programs or via transfer credit. For more information about preapproved study abroad programs, please visit the Jewish, Islamic, and Middle Eastern Studies Study Abroad Programs website (<https://jimes.wustl.edu/studyabroad/>).

Students must maintain an average of B in all courses for the major. A grade of B- or higher must be earned in each language course in order to advance to the next level.

No course taken pass/fail can count toward the prerequisites or the major.

A student may request credit for courses taken outside of the department (other than those that are cross-listed) by seeking the permission of the director of undergraduate studies and the department chair.

To be eligible to write a senior thesis, a student must maintain a grade-point average of 3.65 through the sixth semester. Senior thesis writers should sign up for an appropriate 3-credit course during both the fall and spring semesters. (The 6 credits from these courses can be applied to the primary area of study.)

Minors

The Minor in Arabic

The minor in Arabic requires a minimum of 9 units at the 300 level or above and a minimum of 18 total units. The goal of the minor is language proficiency at the 200 level or above. Students placing into Arab 208D Intermediate Arabic II or above must complete two consecutive semesters of language instruction at Washington University to fulfill the language requirement.

Total units required: 18, in addition to prerequisites

Language prerequisites:

- Arab 107D Beginning Arabic I and Arab 108D Beginning Arabic II, by course work or by placement

Language requirements:

- Arab 207D Intermediate Arabic I and Arab 208D Intermediate Arabic II, by course work or
- If placed into Arab 208D Intermediate Arabic II or above, two consecutive semesters of language instruction at Washington University

Required foundational course:

Choose one of the following courses:

- JIMES 210C Introduction to Islamic Civilization
- JIMES 208F Introduction to Jewish Civilization: History and Identity

Electives:

- 9 credits of 300- or 400-level L49 Arabic or L75 JIMES courses, distributed as the student wishes

Additional Information

- **Pass/Fail:** No course taken pass/fail can count toward the minor.
- **Grades:** A grade of B- or higher must be earned in each language course in order to advance to the next level.
- **Study Abroad:** Students enrolled in preapproved Washington University study abroad programs during the regular academic semester, in summer programs, and in transfer courses can earn a maximum of 3 units subject to review by their advisor and the director of undergraduate study.
- **Back Credit:** Any earned back credit does not count toward the total number of units for the Language Requirement. All students are required to take at least one year of language instruction at Washington University.

Courses

Visit online course listings to view semester offerings for L49 Arab (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L49&crslvl=1:4>).

L49 Arab 107D Beginning Arabic I

This introduction to modern Arabic concentrates on rapidly developing basic skills in reading, writing, speaking, and understanding. Students with previous Arabic language background must take a placement examination. Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

L49 Arab 108 Modern Hebrew for Arabic Speakers

Same as L74 HBRW 108
Credit 3 units. A&S IQ: LCD, LS BU: HUM

L49 Arab 108D Beginning Arabic II

Continuation of Beginning Arabic I. There is an emphasis on enhancing skills in the reading, writing, speaking, and aural comprehension of modern Arabic. Prerequisite: Grade of B- or better in L49 107D or placement by examination. Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

L49 Arab 207D Intermediate Arabic I

This course involves the study of the grammar of literary Arabic; the reading of annotated classical and modern prose texts; elementary composition; and practice in speaking and comprehending modern Arabic. Prerequisite: Grade of B- or better in L49 108D or placement by examination. Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

L49 Arab 208D Intermediate Arabic II

Continuation of Intermediate Arabic I. The course involves the study of the grammar of literary Arabic and the reading of annotated classical and modern prose texts; elementary composition; and practice in speaking and comprehending modern Arabic. Prerequisite: Grade of B- or better in L49 207D or placement by examination. Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

L49 Arab 208F Introduction to Jewish Civilization: History and Identity

The anthropologist Clifford Geertz once famously invoked Max Weber in writing that "man is an animal suspended in webs of significance he himself has spun. I take culture to be those webs." The main goal of this course—designed as an introduction to Jewish history, culture, and society—will be to investigate the "webs of significance" produced by Jewish societies and individuals, in a select number of historical periods, both as responses to historical circumstances and as expressions of Jewish identity. Over the course of the semester we will focus on the following historical settings: 7th century BCE Judah and the Babylonian exile; pre-Islamic Palestine and Babylonia (the period of the Mishnah and the Talmud); Europe in the period of the Crusades; Islamic and Christian Spain; Europe in the 18th and 19th centuries; North America in the 20th century; and the modern State of Israel. For each period we will investigate the social and political conditions of Jewish life; identify the major

texts that Jews possessed, studied, and produced; determine the non-Jewish influences on their attitudes and aspirations; and the explore the efforts that Jews made to define what it meant to be part of a Jewish collective.

Same as L75 JIMES 208F

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, IS EN: H

L49 Arab 210F Introduction to Islamic Civilization

A historical survey of Islamic civilization in global perspective. Chronological coverage of social, political, economic and cultural history are balanced with focused attention to special topics, which include: aspects of Islam as religion; science, medicine and technology in Islamic societies; art and architecture; philosophy and theology; interaction between Islamdom and Christendom; Islamic history in the Middle East, South Asia, Southeast Asia, and Central Asia as well as Africa; European colonialism; globalization of Islam and contemporary Islam.

Same as L75 JIMES 210C

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, IS EN: H

L49 Arab 3075 Third-Level Arabic I

This course is a continuation of Intermediate Arabic II. Competence in reading, writing, speaking, listening and culture is developed through intensive exposure to classical and modern standard Arabic in its written and audiovisual forms. Prerequisite: Grade of B- or better in L49 208D or placement by examination. Note: L75 5075 is intended for graduate students only.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

L49 Arab 3085 Third-Level Arabic II

This course is a continuation of Third-Level Arabic I. The continued integration of language development will occur through reading, writing, speaking, and listening activities centered around advanced authentic material. This semester will prove critical for making the transition from modern Arabic to classical Arabic, including Qur'anic Arabic. There will also be focus on the continued development of colloquial Arabic. Prerequisite: Grade of B- or better in L49 3075 or placement by examination. Note: L75 5085 is intended for graduate students only.

Credit 3 units. A&S IQ: LCD, LS BU: HUM

L49 Arab 313C Islamic History: 600-1200

The cultural, intellectual, and political history of the Islamic Middle East, beginning with the prophetic mission of Muhammad and concluding with the Mongol conquests. Topics covered include: the life of Muhammad; the early Muslim conquests; the institution of the caliphate; the translation movement from Greek into Arabic and the emergence of Arabic as a language of learning and artistic expression; the development of new educational, legal and pietistic institutions; changes in agriculture, crafts, commerce and the growth of urban culture; multiculturalism and inter-confessional interaction; and large-scale movements of nomadic peoples.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H

L49 Arab 3149 The Late Ottoman Middle East

This course surveys the Middle East in the late Ottoman period (essentially the 18th and 19th centuries, up to the First World War). It examines the central Ottoman state and the Ottoman provinces as they were incorporated into the world economy, and how they responded to their peripheralization in that process. Students focus on how everyday people's lived experiences were affected by the increased monetarization of social and economic relations; changes in patterns of land tenure and agriculture; the rise of colonialism; state efforts at modernization and reform; shifts in gender relations; and debates over the relationship of religion to community and political identity.

Same as L22 History 3149

Credit 3 units. A&S IQ: HUM, LCD, SD Arch: HUM Art: HUM BU: HUM, IS EN: H

L49 Arab 325 Introduction to Arabic Literature

This course is a survey of the major genres and themes in Arabic literature from the pre-Islamic era to the modern period. Texts will include pre-Islamic, classical, and Sufi poetry as well as popular tales and critical prose from the Umayyad and Abbasid empires and Andalusia. The modern sections of the course will interrogate political commitment in Arabic literature and introduce students to feminist and magical realist novels from North Africa and the Levant. All readings will be in English translation. Note: L75 525 is intended for graduate students only.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H

L49 Arab 329C Middle Eastern Islamic Literatures in Translation

This course studies, in English translation, several great works of Islamic literature that still influence or reflect the ways in which we perceive Islamic culture today. We critically consider great and disparate literary works, originally written in a variety of languages including Arabic, Turkish and Persian and stretched from Spain to India, that share the common backdrop of an urban and educated milieu in which they were produced, widely read and circulated. The course aims at exploring the literary cultures in their historical and social context. Possible themes include court literature, politics, Sufi literature, history, theology and literature of romance. All readings are in English.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

L49 Arab 352 Iraqi Literature

This course introduces students to major works in Iraqi literature in the 20th and 21st centuries, with a focus on the post-World War Two period up to the present day.

Credit 3 units. A&S IQ: HUM BU: IS EN: H

L49 Arab 396 Islamic Philosophy, Mysticism, and Theology

How does an individual achieve access to knowledge and access to God? To what extent is such access dependent upon scripture? To what extent is such access dependent upon reason? Are there forms of truth and experience that only reveal themselves through mysticism? Questions of this sort are central to the interrelated disciplines of Islamic philosophy, Islamic theology, and Islamic mysticism (i.e., Sufism). This course examines how these three disciplines have shaped various aspects of social life within premodern Muslim communities. Same as L23 Re St 396

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU:
ETH EN: H

L49 Arab 4001 Capstone Seminar

The capstone course for Jewish, Islamic, and Middle Eastern Studies majors, Arabic majors, and Hebrew majors. The course content is subject to change.

Same as L75 JIMES 4001

Credit 3 units. A&S IQ: HUM EN: H

L49 Arab 4041 Islam and Politics

Blending history and ethnography, this course covers politics in the Islamic world in historical and contemporary times. Topics include history of Islam, uniformity and diversity in belief and practice (global patterns, local realities), revolution and social change, women and veiling, and the international dimensions of resurgent Islam. Geographical focus extends from Morocco to Indonesia; discussion of other Muslim communities is included (Bosnia, Chechnya, sub-Saharan Africa, U.S.).

Same as L48 Anthro 4041

Credit 3 units. A&S IQ: LCD, SSC Art: SSC BU: IS

L49 Arab 4050 Diaspora in Jewish and Islamic Experience

Tensions between center and periphery; migration and rest; power and powerlessness; and exile, home, and return are easily found in the historical record of both Jews and Muslims. For Muslims, it can be said that it was the very success of Islam as a world culture and the establishment of Muslim societies in in all corners of the globe that lay at the root of this unease. However, the disruptions of the post-colonial era, the emergence of minority Muslim communities in Europe and North America, and the recent tragic flow of refugees following the Arab Spring have created a heightened sense of displacement and yearning for many. Of course, the very term "diaspora" -- from the ancient Greek, meaning "dispersion" or "scattering" -- has most often been used to describe the Jewish condition in the world. The themes of exile and return and of catastrophe and redemption are already woven into the Hebrew Bible, and they continued to be central motifs in Rabbinic Judaism in late antiquity and the Middle Ages. This occurred despite the fact that more Jews lived outside the borders of Judea than within the country many years before the destruction of Jewish sovereignty at the hands of the Romans. In the 20th century, European imperialism, nationalisms of various types, revolution, and war -- including the Israeli-Palestinian conflict -- have done much to underscore the continuing dilemmas of diaspora and home in both Jewish and Islamic identity. The goal of this course is to offer a comparative historical perspective on the themes of migration and displacement, center and periphery, home and residence, and exile and return and to give students the opportunity to examine in depth some aspect of the experience of diaspora. Note: This course fulfills the capstone requirement for Jewish, Islamic, and Middle Eastern Studies. The course also counts as an Advanced Seminar for history. (Students wishing to receive history Advanced Seminar credit should also enroll in L22 491R section 19 for 1 unit.) The course is open to advanced undergraduate and graduate students.

Same as L75 JIMES 405

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

L49 Arab 4060 Convivencia or Reconquista? Muslims, Jews, and Christians in Medieval Iberia

This seminar will explore various facets of the coexistence (convivencia) of Muslims, Jews, and Christians in medieval Spain. Its horizon stretches from the Muslim conquest of Iberia (al-Andalus) up to the turn of the 16th century when Spanish Jews and Muslims were equally faced with the choice between exile and conversion to Christianity. Until about 1100, Muslims dominated most of the Iberian Peninsula; from then onward, Christians ruled much and eventually all of what would become modern Spain and Portugal. Through a process known as reconquista (reconquest), Catholic kingdoms acquired large Muslim enclaves. As borders moved, Jewish communities found themselves under varying Muslim or Christian dominion. Interactions between the three religious communities occurred throughout, some characterized by shared creativity and mutual respect, others by rivalry and strife. The course focuses on these cultural encounters, placing them in various historical contexts. It will explore the ambiguities of religious conversion, and the interplay of persecution and toleration. Last not least, the course will address the question of how the memory of medieval Spain's diversity reverberates-and is utilized-in modern popular and academic discourse. All sources will be read in English translation; however, students are encouraged to make use of their linguistic and cultural expertise acquired in previous classes. This course serves as the capstone seminar for Jewish, Islamic & Near Eastern Studies majors, Arabic majors, and Hebrew majors. Graduate students, minors, and other interested undergrads are likewise welcome.

Same as L75 JIMES 4060

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU:
ETH, IS EN: H

L49 Arab 407 Fourth-Level Arabic: Modern Literature

This course involves the focused reading and discussion of texts written by modern Arab intellectuals. These texts will center on the interrelated topics of modernity, politics, and religion. The course will emphasize the following: (1) increasing reading speed; (2) increasing depth of reading comprehension; (3) strengthening grammar; and (4) building Arabic to English translation skills. Prerequisite: Grade of B- or better in L49 308D or L49 3085 or placement by examination.

Credit 3 units. A&S IQ: LCD, LS Arch: HUM Art: HUM BU: HUM
EN: H

L49 Arab 408 Fourth-Level Arabic: Classical Literature

This course provides an overview of pre-modern Arabic-Islamic thought (i.e., Islamic intellectual traditions expressed in the Arabic language). Topics to be covered include pre-Islamic poetry, the Quran, hadith, Islamic law, Sufism, philosophy, natural science, and social thought. Students will be introduced to these topics through the focused reading and discussion of classical Arabic texts by key thinkers like al-abari, Ibn al-jar, Ibn Qudama, al-Ghazali, Ibn Sina, Ibn Rushd, and Ibn Khaldun. In addition to reading classical Arabic texts, students will be given select exercises designed to strengthen their grammar, expand their vocabulary, and build their translation. Prerequisite: Grade of B- or better in L49 308D or L49 3085 or placement by examination.

Credit 3 units. A&S IQ: LCD, LS Arch: HUM Art: HUM BU: HUM
EN: H

L49 Arab 465 Topics in Arabic

This course is an in-depth study of a particular segment of Arabic literature and/or culture.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

L49 Arab 4675 Beyond the Harem: Women, Gender, and Revolution

This course examines the history and current situations of women in Middle Eastern societies. The first half of the course is devoted to studying historical changes in factors structuring women's status and their sociopolitical roles. The second half of the course will focus on several case studies of women's participation in broad anticolonial social revolutions and how these revolutions affected the position of women in those societies.

Same as L22 History 4675

Credit 3 units. A&S IQ: HUM, LCD BU: BA, HUM EN: H

L49 Arab 470 Topics in Classical Arabic Literature in Translation

Various themes in Arabic religious literature and Belles-Lettres (Adab), e.g., the intertwining of religion and politics, court culture and fashions, social critiques, gender roles, etc., are read in English.

Credit 3 units. Arch: HUM Art: HUM BU: ETH

L49 Arab 471 Topics in Modern Arabic Literature in Translation

Modern Arabic narratives read in English translation foregrounding themes such as the conflict between tradition and modernity, civil war, poverty, alienation, religion and politics, and changing gender roles.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU:

ETH EN: H

L49 Arab 488 Independent Work for Senior Honors

This course to be taken in the fall semester. Prerequisites: senior standing, eligibility for honors, and permission of the department.

Credit 3 units.

L49 Arab 489 Independent Work for Senior Honors

This course to be taken in the spring semester. Prerequisite: senior standing, eligibility for honors, and permission of the department.

Credit 3 units.

L49 Arab 497 Guided Readings in Arabic

Prerequisites: senior standing and permission of instructor and department chair.

Credit variable, maximum 5 units.

L49 Arab 498 Guided Readings in Arabic

Prerequisites: senior standing and permission of the instructor and the department chair.

Credit 3 units.

Archaeology

Archaeology provides the opportunity to investigate the material remains of past societies and cultures and the methods by which they are recovered, analyzed, interpreted and reconstructed.

Archaeologists investigate the entire human past, from the first evidence of tool use 3 million years ago to historical studies as recent as the 20th century. To provide a comprehensive understanding of archaeology, the program emphasizes two approaches: the humanistic, which is represented by classical archaeology, and the social scientific, which is represented by anthropological archaeology.

Archaeology students will encounter a range of specialties within the field, from topical studies in areas such as prehistoric pastoralism, hunter-and-gatherer societies, Mayan archaeology, and Greek and Roman archaeology to methodological approaches involving historical archaeology, ethnoarchaeology, zooarchaeology, paleoethnobotany, geoarchaeology, geographic information systems (GIS) and trace element analysis. A strength of this institution in anthropological archaeology is the focus on biologically based studies (paleoethnobotany, zooarchaeology and GIS) to investigate such questions as the origins of food production or complex societies. The strength of the classical archaeological program capitalizes on the use of ancient documents to investigate the more recent Eurasian human past.

While acquiring basic training in archaeology, students may choose to concentrate on a specific region, such as the Eastern Woodlands of the United States, the Andes, Mesoamerica, Africa, Central Asia, China or the Mediterranean world. Ancient and modern languages as well as history and art are essential for some areas of study. Students, in conjunction with their advisors, can identify a specialized set of courses that meet their goals.

Washington University archaeology faculty members are involved in research projects in many regions, such as Central Asia, Northern Africa, China, Greece, the Andes, the Mayan area, New Mexico and the Mississippi River valley. With a degree in archaeology, a graduate can work in academia, private consulting firms, government conservation and compliance agencies, and museums. Academic and museum positions generally require graduate-level training.

Majors

The Major in Archaeology

During the 2022-23 academic year, the Interdisciplinary Program in Archaeology will continue to suspend declarations of the major due to a restructuring of the curriculum. For questions about majoring in anthropology with an emphasis in archaeology, please contact Professor Sarah Baitzel (<https://anthropology.wustl.edu/people/sarah-baitzel/>).

Total units required: 27

Required courses:

Code	Title	Units
ARC 190B	Introduction to Archaeology	3
ARC 200C	World Archaeology: Global Perspectives on the Past	3

Elective courses:

The major requires 21 advanced (300-/3000- or 400-/4000-level) units in addition to the two introductory courses. These 21 advanced units should be distributed among the offerings in anthropological archaeology and classical archaeology. Eligible courses for the major and minor can be found in the

course listings under the L52 ARC Archeology listings. All majors must also complete a supervised archaeological field school of six weeks (or the equivalent) that has been approved by the departmental director.

Additional Information

Internships/Research: The hands-on experience of archaeological fieldwork is particularly attractive to many students. Undergraduate majors in archaeology will complete at least one supervised field project, which is selected to best meet the student's long-term goals. Most field research projects are small, which allows students to work closely with faculty and staff. Recently, students have worked at excavations in such diverse areas as Ireland, France, Kazakhstan, Greece, Israel, China, Japan, Guatemala, Bolivia, the U.S. Southwest, and Cahokia, Illinois. Students focusing on North American archaeology often take an internship at one of the local private firms to gain experience in contract archaeology. Undergraduate participation in research is encouraged, particularly for students working on Senior Honors theses.

Senior Honors: Archaeology majors are encouraged to work for Senior Honors, for which students may apply during the junior or senior year. Acceptance into the program is based on previous academic performance, a proposal accepted by an archaeology faculty member who agrees to supervise the honors research, and approval of the archaeology program director. The honors thesis will be evaluated by a three-member faculty committee.

Study Abroad: In addition to field schools in the summer, many students — particularly those focusing in classical archaeology — also opt to take a semester abroad.

Minors

The Minor in Archaeology

During the 2022-23 academic year, the Interdisciplinary Program in Archaeology will continue to suspend declarations of the minor due to a restructuring of the curriculum. For questions about studying anthropology with an emphasis in archaeology, please contact Professor Sarah Baitzel (<https://anthropology.wustl.edu/people/sarah-baitzel/>).

Units required: 15

Required courses: The minor in the Interdisciplinary Program in Archaeology requires the completion of 15 course credits. The minor should include one of the two introductory courses (ARC 190B Introduction to Archaeology or ARC 200C World Archaeology: Global Perspectives on the Past) and at least 12 advanced units from 300- and 400-level courses. Eligible courses for the major and minor can be found in the course listings under the L52 ARC Archeology listings.

Additional Information

The archaeology minor is usually fulfilled by a concentration in either humanistic or social science course work. Thus, the minor will satisfy the Humanities or the Social and Behavioral Sciences distribution area, depending on which courses the minor includes.

Courses

Visit online course listings to view semester offerings for L52 ARC (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L52&crslvl=1:4>).

L52 ARC 130 First-Year Seminar: The Ritual Landscape of Cahokia: Perspectives on the Politics of Religion & Chiefly Power

The purpose of this class is to engage and challenge freshman students in an open discussion about the prehistoric Mississippian community of Cahokia. The focus of this course is two-fold. The first is to study the way in which the archaeological evidence has been interpreted. The second is to examine other perspectives on Cahokia, especially from the Native American descendants who consecrated this landscape nearly a millennium ago. An underlying tenet of this seminar in understanding Cahokia can also be achieved through the traditions and literature of Native Americans. In the end we want to understand the basis for Cahokia's organization as a prehistoric Native American community, and the role that ritual and religion played in the rather dramatic and dynamic history of this community and the surrounding region.

L52 ARC 190B Introduction to Archaeology

Archaeology plays a critical and unique role in understanding the human past. Through study of the methods and theories of archaeology, and a survey of important firsts in the human past, this course introduces students to the way archaeologists use material culture to reconstruct and understand human behavior. Chronologically ordered case studies from around the globe are used to look at social, ecological and cultural issues facing humans from the earliest times to the present. Students gain practice reconstructing the past through hands-on participation in two one-hour labs focusing on lithics and animal bones. By the end of the course, students are expected to be able to think critically about how the past is presented, and why, and the importance of the past as it relates to the present and future.

L52 ARC 200C World Archaeology: Global Perspectives on the Past

If we carefully peer beneath the earth's surface, we will discover a hidden world that is being rediscovered by archaeologists. A considerable amount of excitement is generated by the discovery of lost civilizations and societies. Archaeologists from every

corner of the earth come to Washington University to share their experiences as they use the most sophisticated technology to rediscover those forgotten and sometimes embarrassing aspects of our human past.

L52 ARC 300 Internship in Archaeology

Internship with an archaeological project or organization where the primary objective is to obtain professional experience outside of the classroom. Student must have a faculty sponsor and a site or project supervisor. Prerequisites: open only to Archaeology majors with junior standing and permission of department.

Credit variable, maximum 3 units.

L52 ARC 310C Ancient Civilizations of the New World

An examination of the Inca empire in Peru, and the Maya and Aztec empires in Mexico, through the inquiry into the roots, development, form, and evolutionary history of pre-Colombian civilization in each region from its earliest times to the rise of the classic kingdoms. Examples of respective artistic accomplishments are presented and discussed.

L52 ARC 3122 From Country to Heavy Metal: Ancient Civilizations of the Old World

This course will explore the archaeology of Europe, the Near East and Central Asia from approximately 10,000 years ago to classical times (ending before Ancient Greece). This prehistoric epoch saw major developments among various civilizations of the Old World, such as the introduction of agriculture, animal domestication, the growth of cities, and technological developments such as pottery, metallurgy and horse-riding. A major focus will be the trajectory of cultural innovations of regional populations through time, and the complexity of their social, political and ritual practices. We will also investigate the variation in human adaptive strategies to various environmental and social contexts, from hunter/gatherers to early Neolithic farmers, to the interactions between nomadic populations and larger scale, urban societies in the Bronze and Iron Ages.

L52 ARC 3163 Archaeology of China: Food and People

China is a country with a large population, diverse landscapes, and unique food. This course will explore the origins of Chinese food in the context of the formation of Chinese societies. During the last two decades, the archaeology of China has become a fast-moving subject, with advances in methods and theories as well as changes in key perceptions. In this context, the beginning

and spread of food production in China has become one of the key questions in current archaeology. We will focus on the process of the domestication of plants and animals in various regions of China during the Holocene period. We will explore how those processes relate to other sectors of the Old World, such as those of South and Southwest Asia. This course will pursue answers to the following questions: Why are the Chinese ways of living and eating different from those of the West? How were production and consumption in China shaped by food globalization in prehistory?

L52 ARC 3182 Ancient Africa: Social Mosaics and Environmental Challenges

This class introduces students to the basics of the archaeological record of humans in Africa from 3.6 M.Y. to 1000 years ago. The first third of the course focuses on early humans, the origins of meat eating, expansion of diet and cuisine, technical and cultural responses to changing environments. The second section of the course emphasizes African rock art, socioeconomic variability among hunter-gatherers, the origins of African pastoralism, mobile responses to climate change and African contributions to world food supply including domestication of sorghum, also coffee. The last third of the course is devoted to the complex urban societies of ancient Africa, Egypt, Axum, Great Zimbabwe, and Jenne Jenne. Course format is lecture and discussion. There are two midterms and students are expected to participate in interactive stone tool use, rock art creation, and discussion of ethnographic and archaeological data on pastoral decision-making in times of drought and war and of issues surrounding the purchase of African antiquities and conservation of cultural heritage.

L52 ARC 330 Experimental Archaeology

Experiments are an extremely important part of the scientific process. Although archaeology is often treated as an historical science, the nature of the material record does provide an opportunity to use experimentation as an important way of interpreting what we excavate. The class will be working with the most tangible materials recovered from archaeological contexts, that is stone and pottery. After reviewing the history of experimentation in archaeological investigations we will turn to the material record. This will be followed in our initial weeks of setting up the experiments and how they will be used to compare with available data sets derived from archaeological contexts. As part of the class we will take several field trips to areas where materials exist in a natural setting. Each class member will select a specific material for the focus of their experiments. In the end students will produce several experiments using different materials, document their experiments in written reports, and finally present their results to the class for discussion and evaluation.

L52 ARC 3304 Bones to Behavior: Undergraduate Research in the Lab and at the Zoo

We undertake zooarchaeological study of equid skeletons in the zooarchaeology laboratory at Washington University, and in collaboration with the Saint Louis Zoo, participate in a behavioral study of the courtship and breeding behavior of the ancestor of the domestic donkey — the African wild ass. The research questions that we focus on are how the biology and behavior of the African wild ass influenced the domestication of the donkey by prehistoric African herders or ancient Egyptians and how the behavior of the African wild ass continues to affect prospects for conservation of this highly endangered animal. During the first half of the semester, we meet once a week for 2.5 hours in the zooarchaeology laboratory. In the second half of the semester, we no longer meet in the lab, and each student spends two mornings of their choice per week at the Saint Louis Zoo conducting observations of the wild ass. Students may choose two days that fit their schedule. Saturdays and Sundays are included as choices of days. Permission of instructor is required.

Same as L48 Anthro 3304

Credit 3 units. A&S IQ: NSM Art: NSM BU: BA

L52 ARC 3305 Bones to Behavior II

In this class, students undertake zooarchaeological research on skeletal material in the zooarchaeology laboratory at Washington University and/or preparation of animal skeletons for comparative study and, in collaboration with the Saint Louis Zoo, participate in behavioral studies of the ancestor of the donkey — the African wild ass. Collections housed in the zooarchaeological laboratory for study include ancient food-remains from African sites. These collections bear on questions regarding cultural and climate change in the Horn of Africa 2,000 to 12,000 years ago and include animals ranging from African antelopes to domestic camels. During the first half of the semester, students meet once a week for 2.5 hours in the zooarchaeological laboratory. In the second half of the semester, we meet twice a week in the laboratory or at the zoo. Location depends on projects selected for study. Permission of instructor is required. May be repeated for credit.

L52 ARC 3351 The Ancient Maya: Archaeology and History

This course focuses on the ancient Maya civilization because there are many exciting new breakthroughs in the study of the Maya. The Olmec civilization and the civilization of Teotihuacan in the Valley of Mexico are considered as they related to the rise and development of the Maya civilization. The ancient Maya were the only Pre-Columbian civilization to leave us a written record that we can use to understand their politics, religion and history. This course is about Maya ancient history and Maya

glyphic texts, combined with the images of Maya life from their many forms of art. The combination of glyphic texts, art and archaeology now can provide a uniquely detailed reconstruction of ancient history in a New World civilization.

L52 ARC 347B Ancient Mound Builders of the Mississippi Valley

Study of the peoples in North America who built mounds and other earthen structures beginning more than 4000 years ago; why they erected earthworks; what the structures were used for; how they varied through time and across space; and what significance they had to members of society.

Same as L48 Anthro 347B

Credit 3 units. A&S IQ: SSC Art: SSC BU: BA

L52 ARC 3617 Past and Present Cultural Environments

Human societies are situated within and interact with their ecological and environmental systems. Even social relationships within and between groups imply spatial relationships and geographic orientation, advantages, influence, and limitations. Beyond subsistence, environment and the "natural world" play an integral role in how humans pattern the landscape, structure society, develop their world view, and, in turn, alter and adapt the world in which they live. This course introduces students to anthropological conceptions of human-environmental relationships, past and present. Topics include environmental and landscape archaeology; historical, political, and human behavioral ecology; world view and conceptualizations of nature; human adaptation, resilience theory, and niche construction; anthropological case studies; the intersections of humans, animals, and the environment; and environmental politics.

L52 ARC 3693 Anthropology of Death, Mourning and Burial

This course offers anthropological analysis of death, mourning and burial. It draws on data and theoretical explanations from different sub-disciplines of anthropology (archaeology, cultural anthropology, and physical anthropology). In addition to theoretical conceptualization of mortuary practices, specific case studies are used to address a wide range of topics. The course covers cross-cultural comparison of burial among hunter-gatherers, pastoralists and complex societies. Mortuary practices also are conceptualized based on religion and secularity, social organization and biological approaches (e.g., paleodiet, paleodemography, disease). Ethical and legal issues of using human remains worldwide also are addressed. This course helps train and stimulate academic enquiry into ancient and modern societal treatment of death around the globe. The time covered in this course ranges from the Lower Palaeolithic to the contemporary world.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

L52 ARC 373 Introduction to GIS for Anthropologists

Use of GIS is rapidly becoming standard practice in anthropological research. This course will introduce students to the basic theories and techniques of GIS. Topics will include the application of GIS in archaeological survey and ethnographic research, as well as marketing, transportation, demographics, and urban and regional planning. This course will enable students to become familiar not only with GIS software such as ArcGIS, but also the methodologies and tools used to collect and analyze spatial data. Students will gain expertise engaging with data situated across a number spatial scales, from households, communities and cities to landscapes, nation-states, and global phenomena.

Same as L48 Anthro 373

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L52 ARC 374 Social Landscapes in Global View

From the beginning of the human campaign, societies have socialized the spaces and places where they live. This socialization comes in many forms, including the generation of sacred natural places (e.g., Mt. Fuji) to the construction of planned urban settings where culture is writ large in overt and subtle contexts. Over the past two decades or so, anthropologists, archaeologists and geographers have developed a wide body of research concerning these socially constructed and perceived settings — commonly known as "landscapes." This course takes a tour through time and across the globe to trace the formation of diverse social landscapes, starting in prehistoric times and ending in modern times. We cover various urban landscapes, rural landscapes, nomadic landscapes (and others) and the intersection of the natural environment, the built environments and the symbolism that weaves them together. Chronologically, we range from 3000 BCE to 2009 CE and we cover all the continents. This course also traces the intellectual history of the study of landscape as a social phenomenon, and investigates the current methods used to recover and describe social landscapes around the world and through time. Join in situating your own social map alongside the most famous and the most obscure landscapes of the world and trace the global currents of your social landscape!

L52 ARC 376 Warriors, Merchants, Monks and Courtesans:**Ancient Narratives of Globalization in Google Earth**

This introductory seminar-style course examines the history of globalization through the narrative accounts of those who lived along some of the great trade routes of the Old World. Through a combination of in-class discussion and hands-on tutorials and projects in Google Earth, we examine how day-to-day local interactions and the experiences of individuals contributed to broader cultural exchanges and the shaping of ancient cosmopolitan centers. We use a bottom-up approach to understand the process of globalization, and why it is not only a phenomenon of the modern world. This course covers a large geographic and temporal span, but it is not about memorizing lists of dates and places or putting dots on a map — it is about learning how to interpret multiple strands of knowledge and put them together into a cohesive narrative of history. The course covers four broad anthropological themes related to Old World history and globalization in conjunction with weekly lessons in Google Earth; there are no prerequisites for either. The knowledge and skills gained in the course lead to a final independent research project consisting of a short paper and an interactive digital map that can be shared online through the Google Earth community.

L52 ARC 3775 Ancient Eurasia and the New Silk Roads

This course explores the rise of civilization in the broad region of Eurasia, spanning from the eastern edges of Europe to the western edges of China. The focus of the course is the unique trajectory of civilization that is made evident in the region of Central Eurasia from roughly 6000 BC to the historical era (ca. AD 250). In addition to this ancient focus, the course aims to relate many of the most historically durable characteristics of the region to contemporary developments of the past two or three centuries. Fundamentally, this course asks us to reconceptualize the notion of "civilization" from the perspective of societies whose dominant forms of organization defied typical classifications such as "states" or "empires" and, instead, shaped a wholly different social order over the past 5000 years or more. This class provides a well-rounded experience of the geography, social organization, and social interconnections of one of the most essential and pivotal regions in world history and contemporary political discourse.

L52 ARC 403 Culture and History of the Southwestern United States

This course integrates archaeological, historical, and early ethnographic dimensions of American Indian societies in the southwestern United States and northwest Mexico, a region famous for its challenging environment, cultural diversity, and the contributions made by its Native inhabitants. Emphasis is placed on the development of sophisticated desert agriculture and on the rise of regionally integrated cultures including Chaco Canyon and Mesa Verde. The impact of Spanish, Mexican, and American colonization are explored. Ethnographies of Tohono O'odham (Papago), Hopi, Zuni, Rio Grande Pueblo, and Navajo societies are discussed.

Same as L48 Anthro 403

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

L52 ARC 420 The Plundered Past: Archaeology's Challenges in the Modern World

The public imagination thrills at the fantastic adventures of Indiana Jones and Laura Croft, Tomb Raider; but the reality of modern archaeology is more complex, ethically challenging and interesting than a simple treasure hunt. In the U.S. and Canada, our science museums and museums of anthropology still display artifacts that are regarded as sacred and culturally definitive by Indian nations, although such holdings are now subject to negotiation and repatriation. Art museums in Europe and the U.S. are still stocked with looted ancient masterpieces that are revered as vital heritage by the nations from which they were stolen. We display looted art alongside a much smaller number of legitimately excavated artifacts of masterpiece quality, so it is no surprise that our popular images of archaeologists as avid and undiscerning collectors raise little concern. But modern archaeologists are not extractors of art or even of scientific information, from places as passive and inert as the museums' objects ultimately occupy. Archaeologists work with living people inhabiting societies and states that care deeply about their pasts and the relics of it. They are active agents engaged with many other people in the production of knowledge about the past. In our rapidly shrinking world, educated sensitivity to the many ancient cultural legacies that shape the values of modern global society is more than a moral imperative; it is a basic form of collaboration in the common project of survival. Archaeologists are ethically charged to advance that project through education about the complex contemporary arena of artifacts, sites, and information they occupy.

L52 ARC 426 Ancient Athens

Athens was one of the great cities of antiquity. From lavishly decorated marble temples on the Acropolis, to public office buildings and inscriptions in the Agora (civic center), to the houses of the living and the monuments for the dead, the city has left a rich record of her material culture. These buildings and objects, together with an exceptionally large number of literary and historical texts, make it possible to paint a vivid picture of the ancient city. The course concentrates on the physical setting and monuments of Athens, as revealed by both archaeology and texts, and how they functioned within the context of Athenian civic and religious life. Prerequisite: Classics 345C, Classics 350 or permissions of instructor.

Same as L08 Classics 426

Credit 3 units. A&S IQ: HUM, LCD BU: HUM

L52 ARC 4285 Environmental Archaeology

This course intends to introduce students to lines of evidence used in the interpretation of past landscapes, to discuss how we can conceptualize changing human ecological relations, and to consider how we can identify the influence that humans have on their environment. Special emphasis is placed on human-animal-plant relations using case studies from around the world. Combining both lecture and seminar sessions, this course aims to ensure that students are aware of several of the basic methods of bioarchaeological and palaeoenvironmental reconstruction as well as the application of these methods to the interpretation of past landscapes and human impacts on them.

L52 ARC 4375 Ancient Greek Sculpture in Context

Sculpture counts among one of the greatest artistic achievements of ancient Greece, and one that has had the greatest impact on the art of later periods. This course focuses on original works of art of the Archaic and Classical periods (600–300 BCE), placing emphasis on how study of their contexts — the places in which they were produced, displayed and found — contributes to our understanding of their place in the ancient world. Background material, which is covered at the beginning of the semester, includes the origins of monumental Greek

sculpture at the beginning of the Archaic period (late 7th to early 6th century BCE), and the stylistic development of the Archaic and Classical periods. We then proceed to discussion of various types of sculpture (architectural, cult statue, votive, commemorative, funerary) and how these works functioned within the context of the Panhellenic sanctuary, the city sanctuary, the secular center of the city, and the necropolis. In a different view of context, we also consider sculpture recovered from ancient shipwrecks, looted art on its way to the ancient Roman art market. Prerequisite: Art-Arch 331 or permission of the instructor.

Same as L01 Art-Arch 4375

Credit 3 units. A&S IQ: HUM Art: AH EN: H

L52 ARC 4393 The Archaeology of Trade and Exchange

Studies of trade and exchange are fundamental to our past, as cultures in contact result in new imaginings of self, communities, and place in the world. This course engages in archaeological and anthropological discussions about the interconnectedness that results from trade. This seminar concentrates on the discourse of material trade and the mechanisms for exchange, redistribution, dependency and resistance. It also examines the immaterial exchange of ideas, perceptions and values that alter concepts of identity, space and time. Globalization, political economies, and power are also addressed, along with ideas about territory, value, and social and political consequences of trade.

Same as L48 Anthro 4393

Credit 3 units. A&S IQ: LCD, SSC BU: BA, IS EN: S

L52 ARC 4561 Ceramic Analysis

This course presents the methods, techniques, and models for analyzing archaeological ceramics. Students will learn how ceramic artifacts are used by archaeologists to reconstruct social practices of the past, including economics, politics, religion/ritual, migration, social organization, and so on. Students will be trained in both qualitative and quantitative methods of analyzing ceramics and ceramic assemblages. While these methods are applicable to the archaeology of societies across the world, students will specifically conduct hands-on analyses of archaeological collections from the St. Louis/Midwestern U.S. region. Prerequisite: At least one archaeology course, graduate standing, or permission of instructor.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L52 ARC 4562 Artifact Analysis: Mississippian Cultures

The purpose of this course is to provide students with an introductory, hands-on experience of the methods employed in the analysis of archaeological materials common to the Mississippian culture. Students conduct class projects based on collections from Cahokia Mounds and the St. Louis region. Prerequisite: Anthro 314 or equivalent, or graduate standing, or permission of instructor.

Same as L48 Anthro 4562

L52 ARC 4565 Biomolecular Archaeology: Are You What You Eat?

A revolution is underway in archaeology. Working at the cutting edge of isotopic and genetic technologies, researchers have been probing the building blocks of ancient proteins, life-DNA, fats and microfossils - to rewrite our understanding of the past. Their discoveries and analyses have helped revise the human genealogical tree and answer such questions as: Are you what

you eat? How different are we from the Neanderthals? Who first domesticated plants and animals? What was life like for our ancestors? In this class, we will address those fundamental issues to understanding human nature. Here is science at its most engaging.

Same as L48 Anthro 4565

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L52 ARC 4655 New Advances in Archaeology

Archaeological research is moving at an increasingly rapid pace, with advances in archaeological methods and theory propelling new interpretations and understandings of archaeological findings. This course we focus on contemporary developments in archaeology, with an emphasis on current trends in theory, method and discovery. The objectives of the course are to place emerging trends in archaeological research in a historical context, to understand new methods, and to explore how various theoretical approaches influence the conduct of archaeological research around the globe.

Same as L48 Anthro 4655

L52 ARC 4661 Historical Archaeology

This course focuses upon the methods and techniques employed in historical archaeology. We will include method of integration of written records through contextual studies, discussion of specific artifact type identification techniques, and seminar type treatments of other aspects of the field. The class will include some hands-on lab work, working primarily with materials from the first American fort west of the Mississippi (Fort Belle Fontaine) and two Civil War period mansions. Prerequisite: 3 credits of archaeology or permission of instructor.

Same as L48 Anthro 4661

Credit 3 units. A&S IQ: HUM, LCD, WI Art: HUM

L52 ARC 4682 Ethnoarchaeology

Ethnoarchaeologists use studies of aspects of the present to strengthen archaeological interpretation. Since archaeologists do not usually study words, we need to understand relations between human actions and the material record. In this course, we will explore ethnoarchaeological studies of a wide range of topics, from how things are made to what they mean or how we might think differently about the past. Student presentations, class readings, and discussions will examine topics that might include whether reindeer herders think of their animals as domestic or wild; how Australian Aboriginal peoples have or have not used dingoes for hunting; the role of feasts in society; how to make and find beer, ceramics, stone tools, and beads; or how to smelt iron. Ways that the decoration and construction of pots signify ethnic boundaries or what a mother-in-law teaches a new bride have seen famous ethnoarchaeological studies. We can discuss any aspect of archaeology, and we will pick topics that fit students' interests and the questions that they would like to pursue in their papers and presentations.

L52 ARC 4771 Out of the Wild: Domestication and Socioeconomic Diversity in Africa

The reason for the beginnings and spread of food production during the early Holocene in so many parts of the world is one of the most interesting questions in archaeology. It now seems likely that there are many different pathways to domestication. In Africa, there is a record of up to several million years of human existence as hunter-gatherers before some human populations adopted food production. Domestication of plants and animals about 10,000 years ago resulted in fundamental changes in human societies. It provided the basis for the increase in settlement densities, specialization and social stratification, and general decrease in mobility and dietary diversity, characteristic of non-hunter-gatherer societies in the modern world. In this seminar, the class explores the phenomenon of domestication, and the spread of food production, surveying the evidence for manipulation and domestication of plant and animal species by prehistoric peoples in Africa. We focus on how and why domestication occurred, and factors that influenced its spread, and interactions between late hunter-gatherers and early pastoralists, and intersections with complex societies of the Nile. We also look at the contributions of Africa to understanding pathways to food production world wide.

L52 ARC 4792 The Many Paths Leading Toward the Creation of the Ancient City

The purpose of this class is to examine the emergence of the Ancient City across the globe. We want to begin with the concepts of urbanism, city and metropolis. These are words whose derivation are to be found in the classical languages of the Mediterranean. Is there any means to reach an understanding of how other civilizations and societies characterized these special places on the landscape? In the past, many scholars have argued that market economies and state-level societies are essential to their existence. Such arguments reflect issues of sustainability in terms of the economy and the effective control of large populations through state-level institutions. While we want to understand the role of the economy and the level(s) of political integration involved in the process of urbanism, are there other cultural institutions such as religion that play a much larger and more significant role? Do these places reflect the "citizens" perception of the cosmos?

L52 ARC 480 Roman Coins and Their Stories

This course will provide insights into everyday life in Rome and its territories through the evidence of the coins minted from the Roman Republic until the collapse of the Western Roman Empire in AD 476 and beyond. We will discuss general numismatics, starting with the history of coins and coinage, and

we will understand how these small objects became an intrinsic part of the Roman way of life and what evidence they provide for daily life in Rome, from ideology to religion and from politics and culture.

HUM EN: H

L52 ARC 4803 Advanced GIS Modeling and Landscape Analysis

The aim of this course is to learn to analyze archaeological data in terms of its spatial layout, geography, ecology, and temporal dynamics, using Geographic Information Systems and associated computer modeling techniques. A focus is placed on the relationship between natural environments, cultural geography, and the mapping of archaeological landscapes, and on the archaeologist's ability to accurately recover, reconstruct and analyze this relationship in a virtual environment.

Same as L48 Anthro 4803

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L52 ARC 481 Zooarchaeology

Archaeologists use ancient objects or material culture to study all of the human past, in its length and diversity. To do this, we have to reconstruct human actions from the things people made and used and the impacts that they had on the environment. Since the 1960's archaeologists have turned in an increasingly systematic way to aspects of the way people relate to material culture in the present, as sources for analogies for interpreting aspects of the past. Ethnographic field studies designed with archaeological problems in mind have become more common, and have contributed substantially to archaeological interpretation. Questions such as how archaeological sites form, and interpretation of changing human diets, human adaptations to challenging environments, how people domesticated plants and animals, the nature of human foodways, gender roles, the spread of food production or ritual and burial practices have all been informed by ethnoarchaeological studies. We will look at ethnoarchaeological approaches to the interpretation of many different categories of archaeological data including: lithics, ceramics, house structures, and rock art and discuss a wide variety of archaeological topics to which ethnoarchaeological approaches have been applied. The areas that we focus on will depend on the topics in which the class is most interested.

Credit 3 units.

L52 ARC 489 Pathways to Domestication

Survey of the evidence of the domestication of plants and animals, focusing on processes leading to domestication, and on the recognition of pristine features of domestication in the archaeological record. Prerequisite: one 300- or 400-level course in archaeology.

Same as L48 Anthro 489

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

L52 ARC 4892 Hunter-Gatherer Socioeconomic Variation

This class will explore the nature and extent of variation in hunter-gatherer socioeconomic systems as documented in the literature on recent hunter-gatherers, and in the archaeological record of the last 20,000 years. We will discuss Woodburn's concept of delayed return hunter-gatherers, Testart's writing on hunter-gatherer socioeconomic organization, and archaeological concepts of simple and complex hunter-gatherers. We will examine case studies of both delayed and immediate return hunter-gatherers from the Americas, Asia, Africa and Australia, and emphasize understanding underlying reasons for differences between groups, and implications of differences for patterns of cultural change, including the adoption of food production.

Credit 3 units. A&S IQ: LCD, SSC Art: SSC EN: S

L52 ARC 489W Seminar: Pathways to Domestication

The origins of agriculture led to one of the most important transitions in human history, continuing to fascinate anthropologists and all who depend on farmers for food. We examine evidence for the development and spread of settled and mobile farming systems in diverse regions of the world. We discuss old and new theoretical approaches and apply increasingly sophisticated methods for recovering and interpreting the evidence. Recent research puts us in a better position than ever before to understand the preconditions, processes, and possibly the causes of domestication and the spread of food production. This course is the WI version of Anthro 489 Seminar: Pathways to Domestication.

Same as L48 Anthro 489W

Credit 3 units. A&S IQ: SSC, WI EN: S

L52 ARC 491 Archaeological Research

Undergraduate research experience sponsored by one of the archaeology staff. May be taken more than once for credit. Prerequisite: permission of the faculty member under whom the research will be done.

Credit variable, maximum 3 units. A&S IQ: SSC EN: S

L52 ARC 492 Independent Studies

Supervised independent research. For advanced undergraduates only. Prerequisite: permission of the faculty member under whom the work will be done.

Credit variable, maximum 3 units.

L52 ARC 493 Honors Thesis

Limited to students accepted into the honors program.

Prerequisite: permission of department.

Credit 3 units. EN: S

L52 ARC 497 Senior Project

Designed for majors in Archaeology who have not satisfied their college capstone experience in another manner, or who are not satisfying this requirement through ARC 493 Honors Thesis. This course involves a structured research assignment, internship, fieldwork or independent project under the supervision of one of the department's faculty. Limited to students in the junior level and above. Permission of instructor who will supervise the work is required.

Credit variable, maximum 3 units. EN: S

L52 ARC 4975 Collecting Cultures: Taste, Passion and the Making of Art Histories

This seminar examines the theory and the cultural history of the collecting of art objects and artifacts from a range of cultures and periods, and it considers how and why both individuals and institutions create collections. What social and psychological factors drive this passion? What are the various cultural, political, and aesthetic priorities that have driven this practice historically? How is cultural patrimony defined, and how do law, the art market, and cross-cultural ethics impact the placement, study, and display of a culture's material heritage? We will build the seminar around the history of collecting in America, with a focus on Midwestern examples and particularly important case studies in St. Louis. We will consider, for example, the significant local collections built by Joseph and Emily Rauh Pulitzer (modern art) and Morton May (modern and Oceanic art), as well as the histories of both modern European and non-Western collections now owned by St. Louis-area museums. This course will be complemented by various local field trips, including to the Saint Louis Art Museum, the Pulitzer Arts Foundation, the Mildred Lane Kemper Art Museum, and Cahokia Mounds State Historic Site. Prerequisites: L01 113; L01 215; or permission of instructor. One 300-level course in Art History preferred.

Same as L01 Art-Arch 4975

Credit 3 units. A&S IQ: HUM Art: AH EN: H

L52 ARC 498 Intensive Writing Course: Archaeology

Designed for majors who have not satisfied their college writing requirement in another fashion. This course ordinarily is taken in tandem with another 300- or 400-level course in Archaeology, with the required permission to enroll granted by the instructor in that course. The student prepares a portfolio of papers, which undergo revision and rewriting, as assigned by that course instructor. In some cases, this writing-intensive course may be taken as an independent study course with one of the Archaeology professors. This latter option requires permission of both the department and the instructor. When the course is integrated with another 300- or 400-level course, credit is limited to 1 unit. If taken as an independent study course, credit is no more than 3 units. Permission of instructor required; limited to juniors and seniors.

Credit variable, maximum 3 units. A&S IQ: SSC, WI Arch: SSC Art: SSC EN: S

Art History and Archaeology

Art history provides the opportunity to explore the fine arts, architecture and visual culture as well as the social, aesthetic and personal values that helped to shape these disciplines.

Students are introduced to the study of art history and archaeology through general introductory courses that focus on American, Asian and European art as well as world archaeology. In more advanced courses, students enjoy studying original works of art owned by Washington University's Mildred Lane Kemper Art Museum, the Saint Louis Art Museum, the Pulitzer Arts Foundation, and local private collectors. Students are also invited on annual field trips organized by the faculty to visit cities with major museum collections.

A variety of career paths are available to majors in art history and archaeology. Many graduates earn advanced degrees in both related and unrelated fields and work in museums or academia or for art publishers, commercial art galleries, auction houses, nonprofit organizations and other arts-related organizations.

Majors

The Major in Art History and Archaeology

Total units required: 30 (33 for those students undertaking Senior Honors)

The Department of Art History & Archaeology welcomes students who wish to pursue a major in Art History & Archaeology. Students who declare the major must satisfy the requirements listed below to qualify for graduation.

Introductory courses:

All majors must take two courses from a menu of Introductory Courses at the 100 and 200 levels. These courses are recommended foundations for upper-level lecture courses and seminars. The courses may be taken at any time and in any order. First-Year Seminars and Sophomore Seminars can be counted among these two introductory courses.* No specific course is mandatory for students in Arts & Sciences.**

- Art-Arch 113 History of Western Art, Architecture & Design*** and Art-Arch 215 Introduction to Modern Art, Architecture and Design will be offered every fall and spring, respectively.
- Art-Arch 111 Introduction to Asian Art, Art-Arch 232 Myths and Monuments of Antiquity, and Art-Arch 236 Cities and Towns of the Ancient World will be offered at least once every other year.
- This list will be augmented by a rotation of 100-level First-Year Seminars and 200-level Sophomore Seminars (currently in development), as well as other 200-level courses with broad regional, temporal, or topical coverage.*

- * Students will be allowed to count only one First-Year Seminar or one Sophomore Seminar toward this requirement.
- ** Art-Arch 113 History of Western Art, Architecture & Design and Art-Arch 215 Introduction to Modern Art, Architecture and Design are mandatory only for students in the Sam Fox School.
- *** A score of 4 or 5 on the AP Art History exam may be substituted for Art-Arch 113. To receive this college credit, the score must appear on the student's Washington University student record, and the student must also earn at least a B in a related upper-division departmental course.

Major credit units:

All majors must take at least 8 upper-level (300 or 400 level) Art History & Archaeology courses (24 credit units). Two of these courses must be at the 400 level and taken with different faculty members. Students in Arts & Sciences, Business, and Engineering may substitute one Sam Fox School studio art course of 3 or more credits (taken at any level at WashU or at another institution with prior permission) for a 300-level course. This option, which can be taken pass/fail, is meant to encourage a student's exploration and understanding of the practice of making art. We strongly encourage students to take studio art courses above and beyond all requirements for the art history major.

- Any course taken outside the university, including study abroad courses, must receive prior approval from the study abroad advisor, as appropriate. Only two courses (6 credits) can be transferred into the major.
- No internship credit may be applied to the major (internship credits do count toward graduation, however).
- Courses for the major may not be taken with the pass/fail or credit/no credit option (with the exception of the one studio art course).

Distribution and credit:

Majors must take at least one upper-level course in three of the following six broad areas:

- Ancient and Medieval (AM)
- Renaissance and Baroque (RB)
- Modern European and American (MEA)
- Non-Western (NW)
- Architecture (A)
- Cross-Cultural Exchange (CCE)

ARC 200 Introduction to World Archaeology does not count toward the Ancient and Medieval distribution but may count toward the major.

Courses for the major may not be taken with the pass/fail or credit/no credit option. Students must earn a grade of C- or better in all courses for them to apply toward major requirements.

- Art-Arch 215 Introduction to Modern Art, Architecture and Design may count toward the Modern distribution.

Capstone experience:

Seminars are considered the capstone experience for majors in Art History & Archaeology. Seminars are listed as 400-level courses; they consist of small enrollments, and they focus on discussion and research projects. Majors must take two seminars that are home-based in the Department of Art History & Archaeology (cross-listed courses based in other departments or schools, even if they are listed as 400-level courses, may count toward the major but will not count as seminars for this purpose). Lecture courses at the 300 level usually serve as prerequisites for seminars. The two required seminars should be taken with different faculty members, although they may both be in the same distribution area. Seminars are usually taken during the senior year, but they may also be taken during the junior year if the student has the preparation appropriate for the course. We recommend that only one seminar be taken at a time. **Note:** Neither Art-Arch 4900 Independent Study and Research nor Art-Arch 499 Honors Art History and Archaeology fulfill the seminar requirement.

Languages and fine arts:

Students contemplating graduate study in Art History & Archaeology are urged to complete significant course work in foreign languages. There is no specific language requirement for the undergraduate major, although we encourage minors in foreign languages or double majors in foreign languages and Art History & Archaeology.

Additional Information

Internships: Internships in the curatorial and education departments of local museums, arts organizations and commercial galleries are available to undergraduate Art History & Archaeology majors. Students may enroll in up to 6 credit units of a voluntary or paid internship. Such internships provide invaluable experience and may help lead to employment opportunities after graduation. These internship credits are credit/no credit and cannot be counted toward the major, but they do count toward general graduation credits. Students seeking academic credit should make arrangements with the department before the internship begins. Students may pursue up to 6 units of internship credit working in the arts community. Please review the Guidelines for Art History & Archaeology Majors Considering Internships (PDF) (http://bulletin.wustl.edu/undergrad/artsci/arhistoryandarchaeology/guidelines_department_internships_10_22_15_wew.pdf) for further details.

Study Abroad: Students interested in a study abroad program should consult with both the departmental study abroad advisor and Overseas Programs (<https://overseas.wustl.edu/>) as early as possible. Summer, semester and year-long programs are all possible. Majors are expected to take their two capstone seminars on campus, usually during the senior year. On occasion, a seminar of exceptional rigor — such as those at University College London and Utrecht University, in particular — may be proposed as a substitute. However, the credit will only be granted once the course is complete and the syllabus and research paper(s) have been reviewed and approved by the study abroad advisor (and perhaps by relevant faculty). Students are therefore advised that they should not assume that any seminar course taken while on study abroad will count toward this requirement when planning their course program. Students are further reminded that at least 15 credits of their major course work must be completed in residence at Washington University and that the final 30 units of their BA degree must be earned on campus as well.

Latin Honors: Exceptional students may be considered for Latin Honors in the major. Honors in Art History & Archaeology will be awarded to seniors who have completed the major with an average grade-point average of 3.65 or better in advanced (300- and 400-level) courses in the major; who have achieved at least a 3.65 overall cumulative GPA; and who have satisfactorily completed the honors thesis outlined in the Guidelines for Latin Honors in Art History & Archaeology. Interested students should begin discussing topics with potential faculty advisors before

the end of their junior year. Latin Honors are now assigned by the College of Arts & Sciences and not by the department. For details, please consult the Undergraduate Honors Guidelines (<https://arthistory.wustl.edu/undergraduate-honors-guidelines/>) on the departmental website.

The Senior Honors Thesis is conducted over the course of the academic year under the supervision of a faculty member and entails the completion of two independent courses. In the fall, the student enrolls in Art-Arch 499 Honors Art History and Archaeology. With the permission of the student's thesis advisor, the student will complete the thesis in the spring, enrolling again in Art-Arch 499. Only one semester of Art-Arch 499 (3 units) counts toward the 24 upper-level credit requirements, and it does not fulfill either of the two capstone seminar courses. The second semester of Art-Arch 499 is taken as an additional course beyond the usual major requirements; students writing the Honors Thesis complete a total of 33 credits for the major rather than the typical 30 credits. Students planning to write a Senior Honors Thesis should make every effort to complete one 400-level seminar course by the end of their junior year.

Minors

The Minor in Art History and Archaeology

Total units required: 18

The Department of Art History & Archaeology welcomes students who wish to pursue a minor in Art History & Archaeology. Students who choose the minor must complete two courses at the introductory level and four courses at the advanced level. These courses may not be taken with the pass/fail or credit/no credit grading option. Students must earn a grade of C- or better in all courses.

Introductory courses:

All minors must take two courses from a menu of Introductory Courses at 100 and 200 levels. These courses are recommended foundations for upper-level lecture courses and seminars. The courses may be taken at any time and in any order. First-Year Seminars and Sophomore Seminars can be counted among these two introductory courses.* No specific course is mandatory for students in Arts & Sciences.**

- Art-Arch 113 History of Western Art, Architecture & Design*** and Art-Arch 215 Introduction to Modern Art, Architecture and Design will be offered every fall and spring, respectively.
- Art-Arch 111 Introduction to Asian Art, Art-Arch 232 Myths and Monuments of Antiquity, and Art-Arch 236 Cities and Towns of the Ancient World will be offered at least once every other year.

- This list will be augmented by a rotation of 100-level First-Year Seminars and 200-level Sophomore Seminars (currently in development), as well as other 200-level courses with broad regional, temporal, or topical coverage.*
- * Students will be allowed to count only one First-Year Seminar or one Sophomore Seminar toward this requirement.
- ** Art-Arch 113 History of Western Art, Architecture & Design and Art-Arch 215 Introduction to Modern Art, Architecture and Design are mandatory only for students in the Sam Fox School.
- *** A score of 4 or 5 on the AP Art History exam may be substituted for Art-Arch 113. To receive this college credit, the score must appear on the student's Washington University student record, and the student must also earn at least a B in a related upper-division departmental course.

Upper-level courses:

Minors must take at least four upper-level (300 or 400 level) Art History & Archaeology courses (12 credits). At least one upper-level course must be taken in two of the following six broad areas:

- Ancient and Medieval (AM)
- Renaissance and Baroque (RB)
- Modern European and American (MEA)
- Non-Western (NW)
- Architecture (A)
- Cross-Cultural Exchange (CCE)

Additional Information

- Students may opt to take a seminar at the 400 level, but it should build upon a 300-level course in a related field; alternatively, students should complete the proper prerequisites or have the permission of the instructor. In cases of overenrollment in seminars, priority will be given to majors over minors, including majors who have been waitlisted.
- Courses in other departments (including courses in the Sam Fox School) do not count toward the minor unless they are cross-listed as Art History & Archaeology courses at the 300 level or above.
- At least two of the 300-level courses must be completed in residence at Washington University.
- No internship credit may be applied to the minor. (Internship credits do count toward graduation, however.)

Courses

Visit online course listings to view semester offerings for L01 Art-Arch (<https://courses.wustl.edu/CourseInfo.aspx?sch=L&dept=L01&crslvl=1:4>).

L01 Art-Arch 1002 Colloquium: How to Work with Art

This course offers an introduction to the many different ways we interact with art in our daily lives, and explores a spectrum of ways in which we all "work with art," whether as a student on campus or as a career. Learn to articulate an argument based on visual evidence, with case studies drawn from around the world and across millennia. Issues examined will include public art and monument removal, looting and repatriation, Nazi-era provenance, conservation and curatorial practices, legal issues, art investment, and more. Very light course preparation such as short videos, blog posts, podcasts, and newspaper articles provided the basis for weekly discussion. Biweekly guest speakers will offer professional insights from different fields in conversation with students. This discussed-based class is aimed at students who want to learn more about how to look at and think about art in the twenty-first century globalized world, and learn how to apply those skills to diverse careers including business, law, medicine, academia, museums, and more. Prerequisite: none.

Credit 1 unit. Art: AH

L01 Art-Arch 1040 First-Year Seminar: The Trojan War in Myth, Art, and Reality

The Trojan War was one of the most significant events in the history of the world. It was also, almost certainly, fictional. The goal of this class will be to examine the wide-ranging and varied evidence for the story of the Trojan War and its long-lasting cultural influence, from antiquity to the present day. Ultimately, we will seek to understand how every reflection on the Trojan War as a past event - whether poetic, artistic, or archaeological - has also been a reflection of a contemporary society - Iron Age Greece, Imperial Rome, Modern Europe - and an attempt to situate that society within a global history. In doing so, the class will also address questions of pressing contemporary relevance: including how civilizations form and collapse, how fact and fiction are intertwined in the construction of civic and ethnic identities, and how certain kinds of evidence may be alternately privileged or suppressed in the creation of historical narratives. Prerequisites: none

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS

L01 Art-Arch 106 First-Year Seminar: Van Gogh and the Avant Garde

This first-year seminar focuses on the art and career of Vincent Van Gogh and his relationship to artists of the 1880s in France. We explore his art in connection with the movements of Impressionism, Japonism and Symbolism. We examine the avant-garde world of Paris as well as Van Gogh's relationship to such figures as Gauguin, Bernard, and Toulouse-Lautrec. The larger current of fin-de-siecle nostalgia for the countryside informs our study of Van Gogh's work in the south of France. Van Gogh's life and the critical reception of his art offer an excellent opportunity to study how the legends of modern art are formed. Visits to the Saint Louis Art Museum will complement our study. Readings include the artist's letters, critical studies, and biographies of Van Gogh and key figures in his circle. There are no prerequisites for this course, but completion of L01 113 or co-enrollment in L01 215 is recommended.

Credit 3 units. A&S: FYS Art: AH BU: HUM

L01 Art-Arch 107 First-Year Seminar: Public Art/Art and Its Publics in St. Louis

The course considers the history and functions of public art, with special attention to public art in St. Louis. Part of our investigation is to inquire into the conditions that seem to be necessary for visual art to be considered public. So we consider not only the obvious forms of public art in urban sculpture and murals, but also less traditional intersections of art and public in such sites as video and the internet. We also examine the operations of institutions — national and local arts agencies, international exhibitions, nonprofit centers and the like — that foster a public engagement with contemporary art. After studying aspects of the history of public art, we proceed to selected case studies today, many of them in St. Louis, including projects for Arts in Transit (the MetroLink), the Regional Arts Commission, Grand Center, and Missouri SOS (Save Outdoor Sculpture). This leads us, finally, to theorize the function of public art in a variety of contemporary forms. Local field trips to study important public art; visiting speakers from arts agencies; student projects proposing a work of public art in St. Louis, which acquaint students with procedures in arts administration.

Credit 3 units. A&S: FYS Art: AH BU: HUM EN: H

L01 Art-Arch 1071 First-Year Seminar: Whose Art Is It Anyway?: St. Louis Art Museums and Their Audiences

Art museums in the United States today face a daunting set of challenges: budget shortfalls, a lack of diversity with regard to both staff and collections, and maintaining visibility in an inundated, ever-changing virtual world. These struggles are undoubtedly unique to an era defined by COVID-19 and Black Lives Matter, but at their core they are long-standing debates about audience, accessibility, and function. What is a museum's mission? To preserve art or serve the community? Which communities does the museum serve? What is the museum's relationship to power and nationhood? What are the politics and ethics of collecting objects of art, culture, and nature? How is a museum's mission reflected in its architecture? This first-year seminar offers an opportunity to consider such issues within the context of art museums across St. Louis. Through weekly discussions and in-person visits, students will become acquainted with foundational texts in museum theory and history, then apply those ideas to local art institutions. Although art museums are our particular focus, the ideas and issues are relevant to a variety of collecting institutions, from history to the biological sciences. This course is therefore useful to any student interested in art history and museums, as well as those seeking a better understanding of the St. Louis region.

Credit 3 units. A&S IQ: HUM BU: HUM EN: H

L01 Art-Arch 1075 First-Year Seminar: What's New? Contemporary Art in St. Louis and Beyond

This course will introduce a broad range of practices within the field of contemporary art (i.e., art of the last two to three decades), paying particular attention to museum collections and exhibitions in St. Louis at the Kemper Art Museum, the Saint Louis Art Museum, the Contemporary Art Museum, the Pulitzer Foundation for the Arts, and the Museum of Contemporary Religious Art. Works in both new and traditional media will be discussed and will range from photography and sculpture to installation, performance, film, and mixed media. Readings will include artist statements, theoretical texts, art criticism, and

art historical essays. Students with little or no background in art history are encouraged to register. Class meetings will be complemented by local field trips and visits to the studios of local artists.

Credit 3 units. A&S: FYS A&S IQ: HUM Art: AH BU: HUM EN: H

L01 Art-Arch 1076 A Big Beautiful Wall: Contemporary Art of the U.S.-Mexico Border and Beyond

Over the course of the last U.S. election cycle, the nation's border with Mexico proved to be a galvanizing issue. The exhortation to build a "big, beautiful wall," however, is nothing new in the history of U.S.-Mexican international relations. Since its establishment by the 1853 Gadsden Purchase, the border has loomed large in both the U.S. and Mexican cultural imaginaries, and in the post-Chicano period, spurring the production of politically engaged art. This course considers the U.S.-Mexico border and its artistic production in-depth, as well as the art of other border regions around the world.

L01 Art-Arch 1095 First-Year Seminar: Art in the Golden Age of Venice

The art and architecture of Venice are inextricably linked to the city's distinct sociopolitical structure, cultural past, and geography. This freshman seminar will consider the arts in Renaissance Venice within the city's unique context. Exploring the influence of the "Myth of Venice," we will examine the styles of painting, sculpture, and architecture that were specific to Venice — and very different from contemporaneous developments in Rome or Florence. We will also study the unique physical characteristics of Venice, its economy and society, its political and religious life, and its cultural culture. We will also learn about its food and music while we study the magnificent works of its most celebrated artists, including Titian, Tintoretto and Veronese, to name a few. The course will address issues such as the family workshop, the introduction of oil paint, the role of antiquity in a city without ancient ruins, domesticity, and the ceiling painting. From the private patronage of its confraternities, or scuole, to public programs sponsored by the Great Council, the course will examine the reflections of the "ideal state" in the art and architecture of the Serenissima, the most serene Republic. Course is for first-year, non-transfer students only.

Credit 3 units. A&S: FYS A&S IQ: HUM, LCD Art: AH BU: HUM, IS EN: H

L01 Art-Arch 1096 First-Year Seminar: Spectacle! Popular Entertainment in Ancient Greece and Rome

The grand spectacles of the Greco-Roman world still resonate today as some of the most familiar and celebrated images of antiquity, including Athenian tragedy, the Olympic Games, chariot-racing, and gladiatorial combat, among many other forms of visually arresting rituals staged before public audiences. In this seminar students will analyze a range of paintings, mosaics, sculpture, coins, graffiti and other media depicting these spectacular performances, as well as their specific archaeological and cultural contexts, in order to reach a better understanding of how each society defined themselves through such complex and ephemeral phenomena. Drawing on recent work in history, media studies, and political theory, we will also explore together scholarly debates about the function of spectacles in each society, from moral instruction or expressions of communal identity to social control or negotiations for power.

By the end of the semester students will be equipped to compare the highly artificial and theatrical aesthetics characteristic of Julio-Claudian Rome with spectacular modes of expression in our own age of mass production and global telecommunications, including modern protest movements and blockbuster films such as Ben-Hur and Gladiator.

L01 Art-Arch 111 Introduction to Asian Art

Beginning with the birth of the Buddha and continuing through the present, this course introduces the most influential art and architecture from all across Asia. Each class covers both historic and modern works to emphasize the continuing dialogue between past and present in Asian art today. Classroom lectures; smaller, bi-weekly discussion sections. No prerequisite.

Credit 3 units. A&S IQ: HUM, LCD Art: AH, HUM BU: HUM, IS EN: H UColl: CD

L01 Art-Arch 113 History of Western Art, Architecture & Design

This course presents a history of the visual arts -- including architecture, sculpture, painting, and design -- from the ancient world to the present, with emphasis on the relationship of art to society and to political and cultural events. Classroom lectures and smaller, biweekly discussion sections.

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM, IS EN: H

L01 Art-Arch 1135 First-Year Seminar: The World of Cleopatra

Cleopatra — the last queen of ancient Egypt — captivated her contemporaries and has fascinated the Western world ever since her famous suicide by asp in 31 BCE. She was a woman of contrasts: Pharaoh of Egypt and Greco-Macedonian queen; seductive woman and shrewd political strategist; a ruthless monarch using every means available to consolidate her position in the face of the encroaching power of the Roman Empire. Through texts and material culture, the seminar seeks to understand Cleopatra in the context both of her native Egypt and of the wider Mediterranean world. We thus examine the traditions of Pharaonic Egypt; the historical events that brought Egypt under the control of the Macedonian Ptolemies (Cleopatra's dynasty); the wider stage of East-West tension and conquest in which Cleopatra struggled to maintain her power; her relationships (political and personal) with famous men of her day (Caesar, Herod, Mark Antony); her capital city of Alexandria, the largest metropolis of its day; Cleopatra's brilliant court and its luxury arts; and finally the many Cleopatras that have populated art and literature of later times. We emerge with a sense of Cleopatra, both as a unique individual and as a product of her time.

L01 Art-Arch 116 Pompeii: Uncovering the Past

This course examines the Roman city of Pompeii from archaeological, art historical and literary perspectives. Topics include the city's public spaces and religious sanctuaries, its grand mansions and common houses, its political systems and leisure activities. Class discussions probe the problems inherent in the interpretation of a city captured in a moment of crisis, and how ancient literary tropes have affected our understanding of

the archaeological remains. Students also investigate modern interpretations of the site in the form of novels, exhibitions and documentaries. Freshmen and sophomores only. No prerequisites.

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM, IS EN: H

L01 Art-Arch 118 Introduction to Illuminated Manuscripts

Illuminated manuscripts are some of the most complex, intriguing, and beautiful works of art to survive from the medieval period. Not only were they often hugely expensive and highly prized by their owners, but they are also some of the most illuminating (pun intended) documents regarding artist production, patronage, devotion, and transmission of knowledge in the period we roughly define as the Middle Ages. The goal of this course is to investigate the history of illuminated manuscript production between the years 800 and 1500. However, this course intentionally takes a non-chronological approach to the study of these objects, to more comprehensively explore connections across time, geography, technical practices, and patronage circles. It similarly aims to look broadly across Christian, Jewish, and Islamic traditions. This course will investigate this material through engagement with primary sources, workshops on the physical aspects of making manuscripts, visits to Special Collections and the Saint Louis Art Museum's Print Study Room. The overarching goal is to foster strong critical reading and thinking skills, while also developing specialized knowledge in the field of manuscript studies. No prerequisite. Note: this course is for first-year non-transfer students only

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H

L01 Art-Arch 125 First-Year Seminar: Body Images in the Ancient Americas

In this seminar, students will examine how the human body was understood, manipulated, and represented in a variety of ancient American cultures, including the Olmec, Maya, Aztec, Moche, and Inka. Through analysis of various arts (e.g., stone sculpture, ceramics, murals, metalwork, textiles, architecture) and archaeological evidence, we will explore the physical body as locus for culturally specific ideals, political ideologies, and the maintenance of social order. Discussion and scholarly readings will cover topics including facial piercing, cranial modification, bloodletting, costume, gender, and disease. Assignments and class meetings will incorporate multisensory, digital, and active learning methods in recognition of the diverse ways that individuals and ancient cultures accumulated knowledge. The course includes an in-depth research project of an object of the student's choice on view at the Saint Louis Art Museum.

Credit 3 units. A&S: FYS A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: BA EN: H

L01 Art-Arch 1250 St. Louis and the Documentary Image

From magazines to maps to documentary movies and TV, we look to pictures to tell us the truth. But no image is ever completely objective; every visual reflection of the real world is mediated by technology, culture, politics, and memory. How do we-as viewers, as creators, as people-sort out the complicated claims pictures make on the world around us? Drawing on collaborations between four areas in two schools-Visual Arts, English, American Culture Studies, Film and Media Studies-this class will introduce students to theories and practices of visual nonfiction within the city of Saint Louis. Through immersive, site-specific course units focused on a variety of approaches to

visual nonfiction in different media, students will engage with the tumultuous history, material culture, and landscapes of St. Louis. The course will introduce first-year students both to their city and their university, preparing them to explore existing coursework in Arts & Sciences and the Sam Fox School. This course is for first-year (non-transfer) students only. Students who are not first year students will be unenrolled from this course.

L01 Art-Arch 144 FYS: Collecting Art/Excluding People: The Contradictions of Chinese Art in U.S. Museums

Tomb raiders, curators, archaeologists, politicians, dealers, and collectors all contributed to the arrival of Chinese art in the United States since the late nineteenth century. But at the same time as Chinese objects arrived in great quantities, Chinese people were actively excluded from the U.S. In this course we consider the contradiction between U.S. enthusiasm for collecting Chinese art and negative U.S. responses to Chinese immigrants, from the 1882 Chinese Exclusion Act to contemporary anti-Asian racism. Through the lens of museums, private collections, and public exhibitions, we study what the movement of Chinese art into the United States says about changes in U.S.-China relations from the nineteenth century through today. No prerequisite: enrollment limited to first-year students.

Credit 3 units. A&S: FYS A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: BA, HUM EN: H

L01 Art-Arch 146 First-Year Seminar: Beijing and the Forbidden City

The Forbidden City has been the heart of Beijing for nearly six hundred years, and continues to influence both China and its capital today. Through art, architecture, and urban design, this seminar examines the intertwined relationship of the palace and its surrounding city: their origins and constructions, the coded symbolisms of their plans, their most influential characters, their modern identities as the backdrops to major political events, and their roles in contemporary art and the Olympics. This discussion-based seminar also aims to help students develop their skills in writing and critical analysis as a foundation for future classes. No previous experience with Art History or Asian Studies required. Course is for first-year students only.

Credit 3 units. A&S: FYS A&S IQ: HUM, LCD Art: AH BU: HUM, IS EN: H

L01 Art-Arch 175 Mythologies of Modern Art: Fact, Fiction and Film

The history of art -- and its translation into other media -- has celebrated the cutting-edge, the experimental, and the controversial, especially in its examination of modern artists and their work. This course introduces students to the life and work of modern artists Paul Gauguin, Vincent van Gogh, Paul Cézanne, Henri Matisse, and Pablo Picasso. From this introduction, students will then interrogate the representation of these artists' lives and works in multiple media, including fiction literature and film. This course includes visits to the Saint Louis Art Museum and required film screenings. Students will work to collaboratively transform their research into a dramatization of two artists' lives and works as part of their final project.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H

L01 Art-Arch 185 First-Year Seminar: American Monuments: Memory, Identity, and Ideology

This seminar examines public monuments in the United States through the lenses of collective memory, identity, and ideology. It surveys an evolving tradition from Americans' early and short-lived reluctance to fund public monuments — John Quincy Adams famously declared that "democracy has no monuments" — up to the recent controversies over Confederate monuments. The course defines "monument" broadly to encompass a range of commemorative forms, including traditional structures like statues, arches, and obelisks; utilitarian "living memorials" like parks and libraries; and "countermonuments" that challenge core premises of the monument, such as its fixed meaning and permanence. Readings and class discussions will explore how these projects have shaped Americans' cultural beliefs and social relations as well as how they failed to achieve consensus or to reconcile the diverse and competing points of view of varied groups and individuals. We will interrogate the impact of monuments on the nation's historically disempowered communities, including those of African Americans, Native Americans, women, immigrants, and the poor. We will also consider more inclusive modern memorials and evaluate strategies for grappling with outmoded monuments in changing times. This course is for first-year, non-transfer students only. Credit 3 units. A&S: FYS A&S IQ: HUM BU: HUM EN: H

L01 Art-Arch 190B Introduction to Archaeology

Archaeology plays a critical and unique role in understanding the human past. Through study of the methods and theories of archaeology, and a survey of important firsts in the human past, this course introduces students to the way archaeologists use material culture to reconstruct and understand human behavior. Chronologically ordered case studies from around the globe are used to look at social, ecological and cultural issues facing humans from the earliest times to the present. Students gain practice reconstructing the past through hands-on participation in two one-hour labs focusing on lithics and animal bones. By the end of the course, students are expected to be able to think critically about how the past is presented, and why, and the importance of the past as it relates to the present and future. Same as L48 Anthro 190B
Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

L01 Art-Arch 214 American Art and Material Culture of the Gilded Age

This sophomore seminar explores American art and material culture from the aftermath of the Civil War to the dawn of the 20th century. Readings and classroom discussions consider the interplay between artworks and complex cultural and historical developments of the period, including the rise of international travel and trade, rapid industrialization and urbanization, mass consumerism, growing income inequality, immigration, the crisis of faith, the closing of the West, and the changing status of women and African Americans. Key artists to be considered include James McNeill Whistler, John Singer Sargent, William Merritt Chase, Thomas Eakins, Mary Cassatt, and Henry Ossawa Tanner. We will end the semester with a sustained consideration of the work of Winslow Homer, in which major concerns of the Gilded Age — about truth and falsehood, the boundaries of citizenship, and the power of art — converge. Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM EN: H

L01 Art-Arch 215 Introduction to Modern Art, Architecture and Design

This course provides an introduction to major developments in modern art, architecture and design in Europe, the Americas, and across the globe, from the mid-19th century to the present. Focus will be on the history and theories of modernism and its international legacies as well as the relationship of the visual arts, architecture and visual culture more generally to the social, cultural and political contexts of the modern era. Although the precise topics covered may vary from one instructor to another, foundational movements and trends to be discussed will typically include the Beaux-Arts style, the Arts and Crafts Movement, Impressionism, Symbolism, Art Nouveau, Cubism, Dada, Surrealism, Purism, Art Deco, the Bauhaus, the International Style, Abstract Expressionism, Pop Art, Minimalism and Post-Modernism. Cross-currents in various media will be emphasized as we seek to understand the origins and complexity of modern visual forms in relation to political and cultural history and to critical theory. Students will engage a wide range of readings in historical sources; theories composed by artists, architects and designers; critical responses to the arts; and secondary critical literature. Classroom lectures; smaller biweekly discussion sections.

Credit 3 units. A&S IQ: HUM Art: AH BU: HUM EN: H

L01 Art-Arch 232 Myths and Monuments of Antiquity

An introduction to the ancient world (circa 3500 BC to AD 400) based on masterpieces of art and architecture from Mesopotamia, Egypt, Greece, and the Roman Empire. The monuments are accompanied by a selection of myths and documents representing the cultural life of these ancient societies and constituting their legacy to our modern world.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM EN: H

L01 Art-Arch 236 Cities and Towns of the Ancient World

This course is an introduction to ancient urbanism in the Mediterranean region, the Near East, and the Indus Valley. The chronological span is wide, ranging from the Neolithic era to the Late Roman/Early Byzantine period. The archaeological evidence of some of the earliest known cities will be presented and discussed, with the aim of understanding the formation process of urban centers and how these shaped and influenced their sociopolitical, economic, and cultural life. Broad issues that will be considered in class concern the origin of urban life and its different manifestations; the relationship between the natural landscape and the built environment and how the former affected the development of the latter; and the ways in which ancient civilizations constructed and used space in order to shape social relations. The course will also highlight the available evidence of monuments and artworks in context as integral parts of the urban landscape of ancient cities and towns. When available, ancient documentary sources will be introduced in order to present a more comprehensive picture of those urban centers and of the communities that created and inhabited them. The readings assigned for each session (and discussed in class) will also provide a broad sample of primary and secondary sources, the latter consisting of relevant scholarship on the topic of ancient urbanism.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, HUM BU: HUM, IS EN: H

L01 Art-Arch 238 Gothic Art: Patronage, Piety, and Power

In the twelfth century, a new style of art and architecture flourished in Europe. Known since the sixteenth century as the Gothic, this aesthetic pervaded visual culture from towering architecture to stained glass, monumental sculpture, panel paintings, and jewelry. Primarily focusing on art made in Northern Europe, this course explores the making of images in the period 1200 to 1500 and how issues of patronage, devotion, political power, and collaboration were part of this process. In addition to serving as a foundation in the history of medieval art, this course also functions as an introduction to art-historical method. Attention will be paid to the cultivation of visual analysis skills and academic writing, as well as the synthesis of course themes through the final "Virtual Exhibition" project. Prerequisites: none

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM, IS

L01 Art-Arch 280 Picturing Race

This course offers an introduction to the cultural roots of cultural roots of modern Western conceptions of race and of racism. It traces a history of visual constructions of race and ethnicity in Europe and America-by way of paintings, sculpture, prints, caricature, photography, public art, maps, and other forms of visual depiction of racial difference. Together we analyze visual representations of race and racial difference from their origins in the classical Mediterranean world to the present. How have images of racial difference been produced, circulated, and understood in different historical periods and according to western notions of beauty and the ideal? How does visualization relate to concepts and practices and politics? Readings, discussion, and visual and critical analyses are formulated to consider how visual cultures of race have been shaped by the histories of colonization, enslavement, nation-building, and immigration. From the fine arts to popular imagery and public monuments, we aim to trace how the visual construction of race has translated human difference into hierarchies of power. Prerequisites: none

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: AH, HUM BU: BA EN: H

L01 Art-Arch 290 Latinx Art

What is Latinx art? This seemingly simple question holds a number of complicated, contradictory answers. Latinx art is art created by (and often for) Latinx communities in the United States, but who determines the scope of representation? Is Jean-Michel Basquiat, the famed Haitian-Puerto Rican-American of 1980s NYC, a Latino artist? How about the Cuban-born Ana Mendieta, who lived and worked primarily in the United States? This course will consider who gets counted as Latinx in the art world and why. Topics covered include the Chicano/a movement in the 1970s, the Border Art movement in the 1980s and 1990s, the rise of "multiculturalist" rhetoric in the United States, and the contemporary global art market and its relationship to the category "Latinx." We will also consider issues of gender, sexuality and race, as they pertain to Latinx artists. This is an introductory course, and requires no prior knowledge of Art History or Latinx Studies. Prerequisites: none

Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: AH, HUM

L01 Art-Arch 299 Internship in the Art Community

Prerequisite: a major or minor in art history; permission of the undergraduate adviser requested in advance; and a letter from the sponsoring institution stating the nature of the internship.

Credit variable, maximum 3 units.

L01 Art-Arch 3001 Writing Intensive Topics

L01 Art-Arch 307 Northern Renaissance Art

A survey of the major artistic developments in Northern Europe, ca. 1400–1575. The course looks at the production of painting, sculpture, printmaking, drawing, manuscript illumination and architecture in social, political and religious contexts. The major artists covered include Jan van Eyck, Rogier van der Weyden, Albrecht Durer, Hans Holbein, Hieronymus Bosch and Pieter Bruegel the Elder.

Credit 3 units. A&S IQ: HUM Art: AH, GFAH BU: HUM, IS EN: H

L01 Art-Arch 3090 African Art in Context: Patronage, Globalisms, and Inventiveness

This course offers an introduction to principal visual arts from Africa, prehistoric to contemporary. It explores traditions-based and contemporary arts made by African artists from across the continent in conjunction with their various contexts of creation, use, understanding and social history. Theoretical perspectives on the collection, appropriation and exhibition of African arts in Europe and North America will be examined. Course work will be complemented by visits as a group or independent assignments at the Saint Louis Museum, the Pulitzer Arts Foundation, and possibly a local private collection.

Credit 3 units. A&S IQ: HUM, LCD BU: HUM, IS EN: H UColl: CD

L01 Art-Arch 311C Ancient Civilizations of the New World

An examination of the Inca empire in Peru, and the Maya and Aztec empires in Mexico, through the inquiry into the roots, development, form, and evolutionary history of pre-Colombian civilization in each region from its earliest times to the rise of the classic kingdoms. Examples of respective artistic accomplishments are presented and discussed.

Same as L48 Anthro 310C

Credit 3 units. A&S IQ: HUM, LCD Arch: SSC BU: HUM

L01 Art-Arch 320 Independent Study

This course permits students to pursue upper-level research and reading programs with individual faculty at the 300-level. Credit variable, maximum 6 units.

L01 Art-Arch 3212 Art & Archaeology of Cleopatra's Egypt

This course is an introduction to the art and archaeology of Egypt from its conquest by Alexander the Great (332 BCE) to the early fourth century CE. It will examine the rich and multifaceted history and artistic legacy of Egypt under the Ptolemies and their last queen Cleopatra, followed by the Roman conquest under Emperor Augustus up to the flourishing of Egyptian Christianity. Students will become familiar with a wide range of ancient sources, including documentary and literary texts, coins, architecture, paintings and sculpture. Prerequisites: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215), or permission of instructor.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, GFAH, HUM BU: IS EN: H

L01 Art-Arch 325 Pompeii: Cultural Mosaic of the Ancient Mediterranean

This course will provide an in-depth survey of artistic, architectural, and archaeological material from the ancient town of Pompeii, a river port of middling size and importance in southern Italy with remains that were remarkably well preserved by the ash and pumice stones of Mt. Vesuvius during the eruption of 79 CE. Starting with an overview of its development -- an Oscan settlement under Greek and Etruscan influence that expanded after the conquest of the Samnite and then Roman armies -- students will explore all aspects of urban life through Pompeii's uniquely rich archaeological record, with a particular focus on the social, cultural, and ethnic diversity that can be difficult to detect and appreciate even in the much larger, wealthier, and more cosmopolitan capitals of the Roman Empire. Over the course of the semester, students will learn various methods for applying different types of material evidence (including wall paintings, sculpture, architecture, furniture, and graffiti) to a series of scholarly questions about key points of conflict and tension within society, such as local attitudes toward foreign cultures, resistance to imperialism, the marginalization of women and slaves, opportunities for social mobility, and religious censorship. By the end of the course, a dynamic and colorful mosaic of Pompeii will have emerged, far removed from the image of a static Roman town supposedly frozen in time. Prerequisite: L01 113 or permission of instructor. Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, GFAH, HUM BU: HUM, IS EN: H

L01 Art-Arch 326 Archaeology of Roman Slavery

Slavery was a fundamental part of the ancient Roman world. In this course, we will survey various ways in which the institution of slavery played a critical role in shaping Roman society. Through an exploration of social, economic, legal, and cultural aspects of Roman slavery, we will pose questions of what it means to be a slave society, how the ubiquity of forced labor impacted the lives of ancient Romans, and the extent to which we can recover the experiences and subjectivities of enslaved people. Throughout the course, we will confront the interpretive problems posed by biased and/or scarce evidence and by assumptions we may carry as the inheritors of modern slaveries. A recurring theme we will explore is the extent to which evidence of slavery and the material traces of enslaved people's lives are visible in the archaeological record. At the end of the term, we will contextualize Roman slavery by comparing it with modern examples and by considering the legacy of ancient slavery in modern visual culture and representations of enslaved people. Prerequisites: Any 100- or 200-level course in art history or archaeology; or permission of instructor. Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: IS EN: H

L01 Art-Arch 331 Greek Art and Archaeology

A survey of the artistic achievements and material culture of the Greeks in the first millennium BCE (Iron Age through the Hellenistic period). Development of architecture, sculpture and painting, as well as minor arts and utilitarian objects, with emphasis on the insights they offer into Greek society and interactions with the wider Mediterranean world. Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, GFAH, HUM BU: HUM, IS EN: H

L01 Art-Arch 3330 Greek and Roman Painting

This course provides a survey of the major achievements of ancient Greek and Roman painting, broadly understood and encompassing wall painting, panel painting, painted pottery, and mosaic. We will study monuments ranging over a millennium in time and located throughout the ancient Mediterranean. Particular attention will be paid to the social, political, and religious aspects of ancient Greco-Roman painting and to questions of innovation in artistic practice. Special emphasis will be placed on students' cultivation of the tools of art-historical analysis and of the presentation of that analysis in written form. Prerequisite: Intro to Western Art (L01 113) or Intro to Modern Art (L01 215) or permission of instructor. Credit 3 units. A&S IQ: HUM Art: AH, CPSC, GFAH, HUM BU: HUM, IS EN: H

L01 Art-Arch 3412 Japanese Art

Surveying the arts of Japan from prehistory to present, this course focuses especially on early modern, modern, and contemporary art. Emphasizing painting, sculpture, architecture and print culture, the course also explores the tea ceremony, fashion, calligraphy, garden design and ceramics. Major course themes include collectors and collecting, relationships between artists and patrons, the role of political and military culture or art, contact with China, artistic responses to the West, and the effects of gender and social status on art. Credit 3 units. A&S IQ: HUM, LCD Art: AH, GFAH BU: HUM, IS EN: H

L01 Art-Arch 3415 Early Chinese Art: From Human Sacrifice to the Silk Road

How does ancient and medieval Chinese art inspire contemporary artists? This course examines Chinese art, architecture, and material culture from the prehistoric period through the end of the medieval Tang dynasty to demonstrate how the past continues to affect contemporary Chinese art and the art of its future. Topics covered include Neolithic ceramics and jades, the early bronzecasting tradition, the Terracotta Army and its predecessors, early brush arts and Buddhist sites, and the varied exotica of the Silk Road. Each class teaches early and contemporary works side by side to demonstrate how artists today continue to look to the past as they create the art of the future. Prerequisite: One course in Art History at the 100 or 200 level or permission of instructor. Credit 3 units. A&S IQ: HUM, LCD Art: AH, GFAH, HUM BU: HUM, IS EN: H

L01 Art-Arch 3422 Art of the Islamic World

This course surveys the art and architecture of societies in which Muslims were dominant or in which they formed significant minorities from the seventh through the 20th centuries. It examines the form and function of architecture and works of art as well as the social, historical, and cultural contexts; patterns of use; and evolving meanings attributed to art by the users. The course follows a chronological order, and selected visual materials are treated along chosen themes. Themes include the creation of a distinctive visual culture in the emerging Islamic polity; the development of urban institutions; key architectural types such as the mosque, madrasa, caravanserai, palace, and mausoleum; art objects and the art of the illustrated book; cultural interconnections along trade and pilgrimage routes; and Westernization and modernization in art and architecture.

Credit 3 units. A&S IQ: HUM, LCD Art: AH, GFAH BU: IS EN: H
UColl: CD

L01 Art-Arch 3425 Classical to Contemporary Chinese Art

Surveying Chinese art and architecture from the 10th century through today, this course examines classical and imperial works as the foundation for modern and contemporary art. By engaging with the theoretical issues in art history, we will also pay particular attention to questions of gender, social identity, cultural politics, and government control of art.

Credit 3 units. A&S IQ: HUM, LCD Art: AH, GFAH BU: HUM, IS EN: H

L01 Art-Arch 3426 Modern & Contemporary Chinese Art

This course will explore the ways in which Chinese artists of the 19th, 20th, and 21st centuries have defined modernity and tradition against the complex background of China's history. By examining art works in different media along with other documentary materials, we will also engage with theoretical issues in art history, such as modernity, cultural politics, and government control of art.

Credit 3 units. A&S IQ: HUM, LCD Art: AH, GFAH, HUM BU: HUM, IS EN: H

L01 Art-Arch 3442 Chinese Painting, Then and Now

Tracing the unbroken history of Chinese painting from the first through 21st centuries, we explore the full evolution of its traditions and innovations through representative works, artists, genres and critical issues. From its ancient origins to its current practice, we will cover topics such as classical landscapes by scholar painters, the effects of Western contact on modern painting, the contemporary iconography of power and dissent, and theoretical issues such as authenticity, gender, and global art history. Prerequisites: Intro to Asian Art (L01 111) or one course in East Asian Studies recommended.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: AH, GFAH, HUM BU: HUM, IS EN: H

L01 Art-Arch 3482 The Floating World of Japanese Prints

The relationship between Japanese printmaking and popular culture from 1600 to 1900. Woodblock and copperplate printmaking techniques, key masters, kabuki drama, pleasure quarters, fiction, travel, modernization will be explored. Prerequisite: L01 111, Intro to Asian Art, or background in printmaking or Japanese culture.

Credit 3 units. A&S IQ: HUM, LCD Art: AH, GFAH BU: HUM EN: H

L01 Art-Arch 3533 Pilgrimage and the Medieval City

In this course we will explore one of the primary ways people traversed Europe and beyond: pilgrimage. Specifically, this course will explore the material culture of pilgrimage in the context of the urban environment, considering the role of art in guiding, encouraging, and visualizing pilgrimage to and through some of the important religious centers in the medieval Christian world. We will begin in Jerusalem and move outwards to Constantinople as a gateway to holy sites across the Byzantine Empire. We will then move to Paris and London to explore the different ways that pilgrimage could be undertaken, both physically and in the mind's eye. Finally, we will move to the conceptual, considering how the Heavenly Jerusalem was manifested in art and architecture across the medieval world.

This course will investigate this subject through engagement with primary sources, object-focused study, and visits to the Saint Louis Art Museum. The overarching goal is to foster strong critical reading and thinking skills, while also developing specialized knowledge in the history of medieval art. Emphasis will lie in critical interpretation and analysis, in engaging in rigorous class discussion, and in writing coherently at a high academic level. Prerequisite: any 100- or 200-level course in art history

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: IS EN: H

L01 Art-Arch 3545 The Art and Architecture of Ancient Mesoamerica: Objects of Ritual, Places of Power

This course will examine the artistic and architectural achievements of the civilizations of ancient Mesoamerica, a cultural region that covers most of modern-day Mexico, Guatemala, Belize, and Honduras. From the emergence of complex societies during the second millennium BC through the rise of the spectacular cities of the Maya and ending with the violent fall of the Aztec Empire in the 16th century AD, rulers of ancient Mesoamerica relied on a consistent set of themes, images, and media to proclaim their religious and political authority. This course will explore how artists, farmers, priests, elites, kings, and other community members created a vast array of images and objects that expressed cultural ideals, political and religious narratives, and distinct ethnic and civic identities. Prerequisites: L01 113; A46 200; L48 335; or permission of instructor.

L01 Art-Arch 3549 The Art of Mexico: From Aztec to Contemporary

This survey course draws from selected examples of art and architecture to tell the changing story of Mexico. Beginning with the Aztec and ending with contemporary works, this course chronologically traces artistic manifestations of beliefs, politics, and placemaking. Through movements, revolutionary moments, individuals, and trends, the course creates a portrait of Mexico that is multicultural, dynamic, and creative. Course themes include international relationships, diversity, identity, and politics. Prerequisites: L01 113, Intro to Western Art; L01 215, Intro to Modern Art; L45 165; or permission of instructor.

L01 Art-Arch 360 Renaissance Architecture

The modern concept of the architect as creator and genius began with Filippo Brunelleschi, the great innovator of 15th-century Florentine art. The course explores the spread of architecture and architectural theory as it begins in the hands of the innovator and is expressed and changed by other men of genius such as Leon Battista Alberti, Donato Bramante, Michelangelo Buonarroti and Andrea Palladio.

L01 Art-Arch 3602 Italian Renaissance and Baroque Architecture

This course will survey the development of architecture in Italy from 1400 to 1700. From long-established medieval models, we will explore the reintroduction and reinterpretation of Antiquity from the late 14th century onward. The course will then explore how these foundational Renaissance ideals evolved to become Mannerism and found their ultimate expression in Bernini's

Baroque. Following a chronological progression, the course will address the structures and theories of the period through its leading architects: Brunelleschi, Alberti, Michelangelo, Palladio, and Bernini, among others. The course will explore a wide range of architectural types, from the centralized church to private palaces and villas. Further themes to be considered will include the development of the architect as a professional, regional styles and their relationship with antiquity, patterns of patronage, and the interior. Prerequisite: L01 113.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, GFAH, HUM BU: HUM EN: H

L01 Art-Arch 361 Art of the Early Italian Renaissance

This course is a survey of Italian Renaissance art, from its origins to the end of the 15th century. It includes an examination of artists such as Giotto, Masaccio, Donatello, Botticelli, and Leonardo da Vinci. Prerequisite: L01 113.

L01 Art-Arch 3612 Rome in the Renaissance

Renaissance Rome, called by many the Caput Mundi or capital of the world, was the cultural capitol of Europe. It was a tumultuous, vibrant city characterized by ancient structures, medieval foundations and new artistic and architectural projects that were bigger and more luxurious than anywhere else in Europe. These new structures and masterpieces were incorporated into, and built on top of, the extant classical and medieval city. We will take a journey through the Renaissance city, using Andrea Palladio's two guidebooks of Rome, written in the 1550s. Maps, guides and artists' renderings of the city will contribute to the journey. We will discuss chapels, churches, palaces, monuments and piazzas as we encounter them. In addition to works of art and architecture, we will encounter legends (ranging from feasible to preposterous) and popular traditions associated with specific sites. Prerequisites: L01 113, Intro to Western Art; L01 215, Intro to Modern Art; or permission of instructor.

L01 Art-Arch 3634 Pleasure and Pain: European Fashion as (Art) History

In the words of Louis XIV, "Fashion is the mirror of history. It reflects political, social and economic changes, rather than mere whimsy." This course will survey the history of dress in early modern Europe, using art and material culture to explore the relationship between society and style. Beginning with the Renaissance, we will explore what fashion in (art) history can tell us about gender, sexuality, class, race, and revolution. To incorporate a global perspective (although concentrating primarily on the West), further themes to be considered include the textile trade, commerce and empire, identity politics, and nation-building. From the chopine to the corset, the pannier to the Pompadour pump, we will incorporate surviving examples as we explore the art and history of European fashion from the 15th to the early 19th century. This course is open to students who have previously taken or are currently enrolled in Intro to Western Art. Prerequisite: One course in Art History at the 100 or 200 level.

L01 Art-Arch 365 Baroque Art

This course is a survey of the development of painting and sculpture in 17th-century Europe. Emphasis is on the works of Caravaggio, Bernini, Poussin, Rubens, Rembrandt, and Velázquez. Prerequisite: L01 113 or permission of department.

Credit 3 units. A&S IQ: HUM Art: AH, GFAH BU: HUM EN: H

L01 Art-Arch 3655 The Baroque: Art in an Age of Crisis

The late 16th century was a time of crisis and conflict, and change echoed across Europe and its empires. Religious reform, scientific discovery, and political upheaval shook the foundations of early modern society. Yet from this turbulent time, an era of extraordinary artistic achievement emerged, defined by a dynamic new visual language. This course will examine how "the Baroque" became a global language, from its early beginnings in Rome to Spain, France, Flanders and the Dutch Republic, even extending beyond the borders of Europe to Asia and the Americas. In addition to studying leading artists such as Caravaggio, Bernini, Rubens, Vermeer and Velázquez, important themes to be considered will include space and spectacle in urban planning; the mundane and profane in still life and genre; collections and curios; the church triumphant; and the portrait. Prerequisite: Intro to Western Art (L01 113).

L01 Art-Arch 3671 Michelangelo: Painter, Sculptor, Architect

This course presents an examination of the life, work, and time of Michelangelo. It considers the artist's painting, sculpture, and architecture in relation to his contemporaries and to the broad historical, political, and artistic currents of his day. Prerequisite: L01 113.

Credit 3 units. Art: AH BU: HUM

L01 Art-Arch 3682 Mirrors of Nature, Dreams of Art: Northern Renaissance Art

This course surveys the visual culture of the Netherlands and Germany from approximately 1400 to 1550: from Burgundian court culture around the time of Jan van Eyck to the fantastic works of Hieronymus Bosch to the international renown of imperial artist Albrecht Dürer and later Flemish urban culture as represented by Pieter Bruegel the Elder. Works in a variety of media will be presented in light of broader consideration of the role of art within devotional practice and the Reformation, courtly culture and the cultivation of artistic imagination, and the rise of print and "popular" culture. We will consider the power of images to mediate religious experience; the representation of folly and death; the social position of the artist; and the relevance of naturalism. We will also survey the predominant interpretive models that have been developed to analyze the significance of these works. Prerequisite: One course in Art History at the 100 or 200 level.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: GFAH, HUM BU: HUM, IS EN: H

L01 Art-Arch 3683 Global Baroque: Art and World-Making

Europe and along Eurasian contact routes between 1500 and 1700 is a primary focus. The course will open with an examination of the significance of the early modern category of "the exotic" and the role of the exotic or foreign in shaping artistic and collecting practices during a period that tends to be studied with Europe at the center of the world. Throughout the semester, we will explore different modalities of "otherness," and

the political stakes of representations of self and other within the context of early modern empire- and nation-building. We will analyze paintings, prints, drawings, sculptural objects, naturalia, featherwork, ceramics, porcelain, and textiles alongside primary sources, early modern history and art history, cultural and material history, the history of science, and maritime and diplomatic history. The course attends to the atrocities of slavery in the early modern world and trace the relationship of enslavement to procuring and appreciation of exotic materials. Lectures will incorporate contemporary art (installations, photography, collage, and painting) that actively engages the modern era. The course involves close study of works of art in local collections, and will include visits to the Saint Louis Art Museum, where students will be introduced to the extraordinary holdings, in particular the Phoebe Dent Weil and Mark S. Weil collection of early modern prints, drawings, and sculpture. Prerequisites: One 100- or 200-level course in Art History; or permission of the instructor

L01 Art-Arch 370 The American West: The Image in History

Examines representations of the American West and of the frontier encounter between Euro-American and Native American cultures, from the early 19th to the early 20th centuries. We consider travel accounts, fiction painting, ledger drawings, photography and film in order to analyze the ways in which historical circumstances have shaped artistic and literary representations. At the same time, we look at how images and texts have shaped formative myths about the West that in turn leave their impact on history.
Credit 3 units. A&S IQ: HUM, LCD Art: AH BU: HUM

L01 Art-Arch 371 American Art to 1900

This course is a survey of the broad social, cultural, and nationalist themes in the visual arts from European contact with the New World to 1900. Topics include the encounter of New World cultures with European colonizers and the ongoing relationship between America and Europe; the changing image of the artist; and the role of art in the formation of national identity. Prerequisite: L01 113 or permission of instructor.
Credit 3 units. A&S IQ: HUM Art: AH, GFAH BU: HUM EN: H

L01 Art-Arch 3712 Art and Culture in America's Gilded Age

This course covers developments in American culture from the end of the Civil War to the turn of the century, including the novels, buildings, images, and public and private spaces of this transitional period. The Gilded Age was a time of new class formation, of unparalleled social diversity, and of new urban forms. The connections between art, literature, and social experience will be addressed. Representative figures include Henry James, Henry Adams, Louis Sullivan, Stanford White, Thomas Eakins, and Louis Tiffany.
Credit 3 units. A&S IQ: HUM Art: AH BU: BA, HUM

L01 Art-Arch 372 American Art to 1970

From the beginnings of modernism in the visual arts of the United States, around 1900, to Abstract Expressionism and the Beat aesthetic. Focus on the cultural reception and spread of modernism, native currents of modernist expression, from organicism to machine imagery, the mural movement and the art of the WPA, the creation of a usable past, abstraction and figuration, regionalism and internationalism, photography and advertising.
