## Additional Information

- All courses must be letter-graded and completed with a grade of C or better.
- At least 9 credits must be at the 3000 level or above.
- Only one course (3 credits) may be completed through an approved study abroad program.

## Religion and Politics

The John C. Danforth Center on Religion and Politics serves as an open venue for fostering rigorous scholarship and informing broad academic and public communities about the intersections of religion and U.S. politics.

The Center's programs include the following:

- Public lectures, conferences and symposia relating to issues at the many intersections of religion and U.S. public life
- New courses on American religion and politics that can contribute to an interdisciplinary undergraduate minor in religion and politics for Washington University students
- American Religion, Politics, and Culture Colloquium for scholars and students to discuss cutting-edge research
- *Religion & Politics*, an award-winning online journal engaging a diverse array of scholars, journalists, and public leaders

The Center offers a minor in religion and politics that provides an opportunity for sustained exploration of the ways in which religion and politics have intersected in American culture, in both historical and contemporary terms. As part of the minor, students may examine any number of issues, including church-state relations, religion's role in shaping gender and sexuality debates, religion and electoral politics, public conflicts over the nexus of religion and science, and religion's entwining with reform movements (from abolition to environmentalism). The Center's interdisciplinary minor attracts students from many disciplines, including natural sciences, social sciences, and humanities. Whether students are pre-med, pre-law, or pursuing futures in education, business, or the arts, they report that their studies are enriched by our curriculum.

### L57 RelPol 120A Religious Freedom in America

The intersection of religion and law in American society has sparked some of the fiercest cultural engagements in recent memory: Should a for-profit religious corporation have a right not to fund birth control for its employees? Can a public college expel campus religious groups whose membership is not open to all students? May a Muslim in prison grow a beard for religious reasons? Should a cake baker or a florist be permitted to refuse services for a gay wedding? Can a church hire and fire its ministers for any reason? These current debates and the issues that frame them are interwoven in the American story. This course introduces students to the major texts and historical arguments underlying that story. Drawing from the respective expertise of the instructors, the course will expose students to a variety of scholarly methods related to the issue: legal history and case law, intellectual history and canonical texts, social history and narrative accounts, and political philosophy and contemporary analyses. This course is for first-year (non-transfer) students only.

---

### L57 RelPol 201 Religion and American Society

This course explores religious life in the United States in the twentieth and twenty-first centuries. Comprehensive coverage of such a diverse landscape is not our goal. Rather, we will focus on some of the basic social categories that organize our society and that make religion a social phenomenon. How do religious belief and practice relate to race, class, or gender? How do we understand the role of religion in relation to region and space? How can we understand the many different stories that Americans tell about their own country as a special-even sacred-place? Major themes include religion and race; nation, land, and migration; religion, class, and money; evangelicalism and the religious right; business, class, and prosperity; religion and gender; religious nationalism; and the enduring challenges of religious multiplicity in the U.S.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: ETH EN: H

---

### L57 RelPol 203 Religions of St. Louis: Communities of Faith and Practical Action Across the Region

The St. Louis region is home to a diverse array of global religious communities. This course directly introduces students to some of that diversity by revolving around fieldtrips to living institutions and meetings with religious leaders across traditions. In any given semester, our visits may include organizations that identify as Catholic, Pentecostal, evangelical, Jewish (Orthodox, Conservative, Reform, or Reconstructionist), Muslim, Hindu, Buddhist, Vedantist, Scientological, progressive Baptist, or secular humanist, among others. We will also visit the International Institute of St. Louis and study the politics of immigration and refugee resettlement that have helped shape the city and its religious as well as political multiplicity. Through our visits and conversation, the variety within each religious community will also become apparent, as we encounter adherents across the political spectrum, embodying different ethnicities, and committed to different degrees of "orthodoxy" or traditional belief and practice. Students

should emerge from the course with a fresh sense of the cultural and religious vitality of the St. Louis metropolitan area, illustrative of the United States as a whole. \*All required site visits will take place during the regular class time.

---

**L57 RelPol 207C Modern Political Thought: Text and Traditions**

What is power? Why are societies divided along lines of race, class, and gender? When did politics become split between the right and the left? Can religion be reconciled with the demands of modern life? Can democracy? These are some of the questions that will be addressed in this survey of modern political thought. Thinkers covered will include Thomas Hobbes, Immanuel Kant, Karl Marx, WEB Du Bois, Hannah Arendt, and Michel Foucault.

---

**L57 RelPol 209 Scriptures and Cultural Traditions: Text and Traditions**

When we think of the word "scripture" in antiquity, we might think of the texts that have been compiled in the different holy books that we currently have today. Yet the function of "scriptures" within a community, and the status given to different texts treated as "scriptural," has changed in different times and places. In this course, we will consider texts that would eventually come to be part of the Hebrew Bible, New Testament, and the Qu'ran as well as several of the exegetes and reading communities that shaped their various interpretations. We will explore how non-canonical sources played a role in the formation of the various canons we have today, comparing the authoritative status given to these texts to that given to other works from antiquity, such as the epics of Homer. Special attention will be played to the role of the receiving community in the development of "scripture," and the variety of the contexts in which scripture can function in the construction of and opposition to religious authority.

---

**L57 RelPol 210 The Good Life Between Religion and Politics**

What constitutes a life well lived? How do we imagine answers to that question? Who gets to answer that question for us? Do we ask it as an "us" or as an individual? This course considers the way religious and political thought has shaped considerations of the classical ethical question of how we should live and the way that ethics has often served to connect religion and politics in thought and practice. Do we need a religious basis to answer ethical questions, or can we determine how to live without religious sources of authority? Is ethics a project of an individual or of communities? If the latter, are these political communities, religious ones, or something else? On what basis or with what capacities can we imagine new answers to ethical questions, either in community or on our own? We will discuss these questions and more through a consideration of a range of answers to the question of how we should live.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

---

**L57 RelPol 215 Performing Religion, Ritualizing Gender**

What's the difference between a wink and a blink? What the difference between graduation, a sacrament, and the electric slide? We make fine-grained distinctions every day in our own enactment and interpretation of these different kinds of practices. This class will introduce you to key academic approaches to "ritual," "practice," and "performance," and will ask whether these distinctions are important or arbitrary. Ritual studies (based in religious studies) also happens to center

around the very same questions that gave birth to gender and queer studies (is gender a performance?), thus a parallel examination of ritual and performance studies necessarily brings religious identity into conversation with broader questions of identity (gender, race, class).

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

---

**L57 RelPol 225 Religion and Politics in American History**

In a famous 2004 article, historian Jon Butler once remarked that US history textbooks and survey courses tend to pay significant attention to religion during the Colonial Era and early Republic, yet after the Civil War "religion more often appears as a jack-in-the-box" that pops up in historical accounts somewhat randomly and without much elaboration or analysis. To address the gaps in historical understandings that these absences may create, this course will provide a survey of the ways theological ideas and religiously-motivated social movements have shaped US politics and civic life from the Civil War to the present. With a particular emphasis placed on how religion intersects with other social categories such as race, gender, and class, it will examine the complex role that religious beliefs, practices, and identities have played in major political events and debates from the 1860s to today. In doing so, it will also inquire into what it means to study religion as a historical phenomenon, the theoretical and methodological tools that best assist in this work, and the historiographic implications of better attending to religion in historical analyses. No prior coursework in US history or religious studies is required.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

---

**L57 RelPol 230 Jews and Jewishness in Black American Thought**

The history of what has been called "Black-Jewish relations" in the United States has a rich and contested history. The stories told about this relationship feature solidarity, controversy, and betrayal. This course will look at this history by attending to the role of Jews and Jewishness in Black thought. How has Jewishness featured in the self-understanding of Black thinkers? Have Jews been regarded as allies or adversaries, role models or competitors? What role have Jewish texts or narrative paradigms played in Black religion and Black politics? What have Black writers made of the Jewish project of national liberation i.e. Zionism? The course will likely include readings from W.E.B. Du Bois, Marcus Garvey, James Baldwin, and Malcolm X among others.

Credit 3 units. A&S IQ: HUM, SC, SD BU: BA EN: H

---

**L57 RelPol 235 Puritans, Native Americans, and Revolutionaries: Empire and Encounter in Early America**

This course concerns the history of colonial America from early English settlement and encounters among English and Native Americans to revolution against Great Britain. The making of colonial America involved encounters and exchanges among various people groups- Puritans, Indigenous communities, German Moravians, English liberal thinkers with different ideas about politics-with different political convictions. This course explores those encounters, with a focus especially on Puritan and evangelical missions to Native Americans, southern plantation society and race-based slavery, English notions of religious liberty, and how ideas of political liberty, including rationales for American Independence, conflicted with, criticized, or stood as contradictions to English treatment of Indigenous and African peoples. We will read primary texts that illumine new perspectives on these issues. There is no defining argument or ideological "point" to the course but, rather, a series of observations of how different social, political, and intellectual variables made for shifting understandings of what religious ideas mattered to public life in America and how those ideas ought to shape civil affairs. As we examine these understandings, we will pay attention especially to Anglo-Indigenous interactions, the rise of a national self-consciousness that invested America with great historical purpose, the development of different responses to racial difference in America, and the disestablishment of religion from national political power (encoded in the First Amendment to the Constitution).

Credit 3 units. A&S IQ: HUM BU: BA EN: H

---

**L57 RelPol 240 Jewish Political Thought**

The question of Jewish belonging in the Christian West has played a defining role in the formation of the modern state, and the afterlives of "the Jewish question" in Europe, America, and Israel continue to have significant influence on how political life is understood and evaluated. This course begins with classical Jewish sources on politics—including the nature of authority, national belonging, and territory—and then moves to a consideration of several crucial modern Jewish thinkers likely including Spinoza, Marx, and Arendt. The course will consistently consider topical contemporary questions about liberal democracy, totalitarianism, nationalism, Zionism, race, and secularism.

Credit 3 units. A&S IQ: HUM BU: BA EN: H

---

**L57 RelPol 244 Religion and Music in American Culture**

In this course, students will examine public discourse on popular music as a way of understanding questions of religious identity and community formation. Through case studies ranging from the Pueblo Indian dance controversy of the 1920s to post-9/11 disputes about the Islamic call to prayer, students will consider how debates over what "counts" as sacred or secular music reveal disputes over notions of religious authority and authenticity in American culture.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, HUM

---

**L57 RelPol 245 Love and Reason**

Love often seems dramatically unreasonable, and reason can seem coldly rational in a way that excludes any emotion, passion, or affiliation even akin to love. The supposed opposition between love and reason has been used by Christian and secular thinkers throughout modernity to organize ways of knowing and judging, and to criticize claims of faith, belief, and desire. But are love and reason really so distinct? What does it mean to say so, and why might someone make this claim? Can love be reasoned, and even reasonable? Can reason be aided by love, and even driven by it? How might different answers to these questions affect our understanding of other possibly unreasoned categories like faith, belief, and piety? This course offers an introduction to modern Christian thought and Western philosophy through these questions and themes.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H

---

**L57 RelPol 248 Religion, Health, and Wellness in Modern America**

Religion, Health, and Wellness in Modern America will examine changing conceptions of health and wellness in America from the late nineteenth-century to the present. With media, artifacts, and literature drawn from the histories of medicine, religion, and capitalism, this class will cover the proliferation of alternative health regimens, the rise of the medical establishment, claims of divine healing, and the impact of market forces on wellness cultures. Course topics include the raced and gendered dynamics of care, socioeconomic status, technological innovation and media, the role of nature, health activism and radical self-care, and New Age spirituality and mental health. Special attention will be paid to how the politics of the body and its regulation intersect with religious and consumer practices in the modern wellness industry.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, HUM EN: H

---

**L57 RelPol 250 Zionism**

Zionism is often thought of as a commitment to the principle that the Jewish People, as a distinct "people," has a right to self-determination in its own historical land of the biblical Palestine. Yet the history of the term and the set of ideologies show a much more complex understanding. In this course we trace the emergence of a number of different "Zionisms" that would lead to the creation of the modern state of Israel. And we explore how the political principles at the core of these ideologies have fared in the 65 years since the founding of the modern

Jewish state. The course is at its heart applied political theory: a case study of the way that ideas emerge from historical events, take on a life of their own, and then shape real outcomes in the world. The readings will weave together history, philosophy, literature and government.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA EN: S

---

**L57 RelPol 252 Catholicism Confronts Modernity: A Global History from the French Revolution to Pope Francis**

This course explores how the Catholic Church confronted the challenges of modernity—from liberal democracy and human rights; to capitalism and modern science; to fascism and communism. We will examine also how Catholicism itself has shaped modern politics and culture. The course will draw from the experience of Catholics in different countries (with no pretense of being exhaustive) over the past two centuries. We will begin with the French Revolution and the first "culture wars" between Catholics and liberals and end with the ambivalent legacies of Vatican II. We will appreciate how US Catholicism cannot be fully understood without reference to this global context.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

**L57 RelPol 254 Topics in AMCS: A Year in Review: Hindsight is 2020: Piety, Pandemic, and Politics**

What was 2020? This course examines a year that will be remembered alongside 2001, 1968, 1945, 1929, 1865, 1800, and 1776 as one of the most consequential in American history and culture. We will consider how the COVID-19 global pandemic, the bitterly contested 2020 Presidential election, and a summer of renewed protest for social justice reverberated through spheres of American arts, culture, education, energy, health care, labor, religion, sports, the university, technology and more. A series of guest experts from Washington University and around the country will provide instruction via lecture once per week, with students sharing their own experiences and analysis in discussion sections during the other weekly course meeting. The course is open to all, but it is geared toward first-year students and sophomores. It fulfills the Intro course requirement in the AMCS major. This is a variable topics course for courses best suited to the reviewing of a significant year in American Culture Studies. Topics vary by semester, so please see the current course listing.

Same as L98 AMCS 254

---

**L57 RelPol 255 Religion, Environmentalism, and Politics**

This course explores the intersections of anthropology, theology, economic interests, and activism. We will draw on a range of sources including social-scientific theories about religion and ritual, discussions of disenchantment and re-enchantment, and indigenous claims to land. These theoretical frameworks will provide context for discussing contemporary religious responses to ecological disaster, including both environmentalist and anti-environmentalist movements.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: BA EN: H

---

**L57 RelPol 260 Religion in the African American Experience: A Historical Survey**

This course introduces students to important themes in the history of African American, and thus in American, religious history, among them slavery, emancipation, urbanization, migration, consumer culture, sexuality, politics, and media technologies. Primary attention is given to Afro-Protestantism in North America and the cultural, social, and religious practices and traditions of these black communities. However, students will also be introduced to specific expressions of religious diversity and varying religious traditions and practices in African American communities.

Credit 3 units. A&S IQ: HUM, SC, SD BU: ETH EN: H

---

**L57 RelPol 280 African-American Religions**

This course is an introduction to African-American religions. This course attends to change wrought in indigenous African religions by enslavement, the adoption of Christianity (and severe critiques of it) by slaves themselves, the building of African-American denominations, the rise of new black religious movements, and the role of religion in contemporary African-American life. At every stage of the course, religion is discussed with reference to key political developments in broader African-American history African diasporic history. The course proceeds in three parts. The course begins with a brief introduction to key themes and problems in the study of African-American religions. For example, is there such thing as a "black church," and how does the study of African-American religion differ from the study of other religious groups or traditions? The second part, the bulk of the course, moves chronologically and situates African and African-American religions in their shifting cultural and political contexts from the beginning of the European slave trade to the present. We will discuss African-Americans' practice of several religious traditions: creole African religions, Islam, Protestant and Catholic Christianity, and new religious movements. The final part of the course focuses on several key issues and debates that are informed by the study of African-American religions and that have important connections with contemporary American life.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, ETH, HUM EN: H

---

**L57 RelPol 285 Islam in America**

This course explores various Muslim discourses and practices in America with a special focus on the intersections of race, gender, and religion. In this course, students will first study the history of Islam and Muslims in America in light of the narratives of enslaved West African Muslims and some of the early narratives of immigrant Muslims. Students will then explore some later historical narratives that represent the impact of religious and racial structures on identity formations, such as the formation of the Nation of Islam, and transnational religious connections in Cold War America. Students will also examine the construction of Muslim identities and institutions in light of some of the US structures and discourses about Islam and Muslims, with regard to the racialization of Muslims, and in connection to the broader Americas. Students will also use popular culture as a site to observe the intersection of race, religion, and gender in Muslim practices.

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: BA, ETH, HUM EN: H

---

**L57 RelPol 288 Muslims in the Media and Popular Culture**

In the post 9/11 context of the United States, Muslims have been a constant presence in news media, typically cast in a negative light as political others who are backwards, threatening, and inherently prone to violence. This pattern has long been replicated in films in which Muslims serve as static and dehumanized perpetrators of violence and/or as symbols of a backwards and depraved culture, antithetical to U.S. values and interests. In recent years, however, Muslims have become increasingly visible in the entertainment industry as protagonists and producers of their own media, including G. Willow Wilson's "Ms. Marvel," Hulu's "Ramy," and Netflix's "Man Like Mobeen." This course explores a selection of recent media projects created by Muslim writers, actors, musicians, and comedians. We will be pairing films, television shows, music, and comics with scholarship on Islam and religion in the media to analyze Muslim representation and storytelling in contemporary popular culture. We will evaluate these works on their own terms, noting the ways in which gender and racial hierarchies dictate who gets to represent American Muslims while also assessing how these new media both disrupt and further reify Muslims' construction as religious and political outsiders.

Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM BU: BA, ETH

---

**L57 RelPol 290 Islamophobia & U.S. Politics**

The presence of Muslim minorities in the West is increasingly divisive as political leaders appeal to voters' fear of the "Other" to promote Islamophobic agendas that reshape immigration and asylum policies and redefine Western identity as Christian. Politicians further exploit the rise of extremist groups like ISIS to justify anti-Muslim rhetoric and critique multiculturalism, claiming that Islam and the West are inherently antithetical. In this course we examine the phenomenon of Islamophobia as a form of anti-Muslim racism that parallels hostility towards other religious and racial minorities in the US. We explore how while the post-9/11 context gave way to an increase in incidents of anti-Muslim violence, contemporary manifestations of Islamophobia are deeply rooted in state level anti-black racism from the early twentieth century, as well as in anti-Muslim attitudes that date back to the colonial period. By examining academic literature, political speeches, and news media sources, we situate Islamophobia within its historical context and also analyze how US anxieties about Islam and Muslims are not only gendered and racialized, but also exist across the political spectrum.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, HUM EN: H

---

**L57 RelPol 305 Between Malcolm X and Martin Luther King, Jr.: Race, Religion, and the Politics of Freedom**

This course focuses on the political and spiritual lives of Martin and Malcolm. We will examine their personal biographies, speeches, writings, representations, FBI files, and legacies as a way to better understand how the intersections of religion, race, and politics came to bear upon the freedom struggles of people of color in the United States and abroad. The course also takes seriously the evolutions in both Martin and Malcolm's political approaches and intellectual development, focusing especially on the last years of their respective lives. We will also examine the critical literature that takes on the leadership styles and political philosophies of these communal leaders, as well as the very real opposition and surveillance they faced from state forces like the police and the FBI. Students will gain an understanding of what social conditions, religious structures and institutions, and personal experiences led to first the emergence and then the assassinations of these two figures. We will discuss the subtleties of their political analyses, pinpointing the key differences and similarities of their philosophies, approaches, and legacies; we will then apply these debates of the mid-20th century to contemporary events and social movements in terms of how their legacies are articulated and what we can learn from them in struggles for justice and recognition in 21st-century America and beyond.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

---

**L57 RelPol 307 Solidarity and Silence: Religious Strategies in the Political Sphere**

Although political action is often considered a problem of making oneself heard, religious practices of silence, self-effacement, and withdrawal from certain worldly struggles have guided many significant political and social movements, particularly forms of non-violent resistance. This course considers the role of religious thought and practice in such movements in the twentieth century. The history of these movements presents an apparent paradox: how can political action emerge from the supposedly "private" realm of religion in the modern era, particularly its most individualistic formations in contemplative and mystical practices? Does the historical role of these practices in the political sphere complicate their portrayal in some scholarship as private, individual, and depoliticizing? With these questions animating our investigations, we will consider the work of authors and activists including Leo Tolstoy, Mahatma Gandhi, Dietrich Bonhoeffer, Martin Luther King, Jr., Simone Weil, and William Barber, as well as the history of movements associated with their work. Toward

the end of the semester, we will turn to contemporary movements against economic inequality, intimate violence, racially motivated violence, and discrimination toward transgender persons to discuss the use of religious strategies or religiously-derived strategies in current political and social activism.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, ETH EN: H

---

**L57 RelPol 3081 City on a Hill: The Concept and Culture of American Exceptionalism**

This course examines the concept, history, and culture of American exceptionalism—the idea that America has been specially chosen, or has a special mission to the world. First, we examine the Puritan sermon that politicians quote when they describe America as a "city on a hill." This sermon has been called the "ur-text" of American literature, the foundational document of American culture; learning and drawing from multiple literary methodologies, we will re-investigate what that sermon means and how it came to tell a story about the Puritan origins of American culture—a thesis our class will reassess with the help of modern critics. In the second part of this class, we will broaden our discussion to consider the wider (and newer) meanings of American exceptionalism, theorizing the concept while looking at the way it has been revitalized, redefined, and redeployed in recent years. Finally, the course ends with a careful study of American exceptionalism in modern political rhetoric, starting with JFK and proceeding through Reagan to the current day, ending with an analysis of Donald Trump and the rise of "America First." In the end, students will gain a firm grasp of the long history and continuing significance—the pervasive impact—of this concept in American culture.

---

**L57 RelPol 310 Religion and Violence**

Is religion intrinsically connected with violence or merely manipulated to justify political positions and incite supporters? How has religion been the motivation and justification behind violent conflict, aggression and persecution? Does religion have a greater power to make war or peace? People have debated these questions for centuries as believers waged war in the name of their god(s). We'll study several critical theories about religion and violence and test them on historical and recent "religious" conflicts. Our investigation will be organized around five types of violence: 1) martyrdom and redemptive suffering, 2) claims on sacred space, 3) the violence of social stratification and "othering," 4) war and 5) apocalyptic and spiritual warfare. Case studies ranging from early Christian martyrs and crusades to attacks on abortion clinics and Tokyo subways will help clarify patterns and types of religious violence.

---

**L57 RelPol 3105 American Holidays: Civic and Religious Celebrations in American Culture**

This seminar examines a variety of religious holidays and civic rituals in American history and culture. Topics include: public conflicts over Christmas, African-American emancipation celebrations, the Fourth of July, Thanksgiving, Roman Catholic street festivals dedicated to the Virgin Mary, modern renderings of Hanukkah, as well as the memorialization of the Union and the Confederacy. Various interpretive approaches are explored, and the intent is to broach a wide range of questions about history and tradition, gender and race, public memory and consumer culture, religion and nationalism, through this topical focus on holidays and holy days.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, ETH EN: H

---

**L57 RelPol 314 Global Circuits: Religion, Race, Empire**

This seminar explores how American entanglements of race and religion shape and are part of larger global processes. Over the course of the semester, we will investigate these entanglements through conceptual, historical, and ethnographic questions and insights on the remapping of religious traditions and communal experiences onto imperial terrain. We will examine this through a range of problem spaces including: colonial rule, missions, and racial hierarchies; migration and its relationship to religion; the racialization of religion; diaspora and empire; and persecution and power.

**L57 RelPol 315 Virtues, Vices, Values: Regulating Morality in Modern America**

This course takes morality and the question of "what's right" seriously as a lens through which to understand and assess modern American history. "Morality" is, of course, a devilishly flexible rhetoric, a language invoked to tell people how to act and how to be good, or, conversely, to criticize and to shame. When the state or a community wants its citizens or members to be "good," it crafts laws and creates customs to encourage or inhibit behaviors. Yet "good" is a contested concept, especially in a diverse, multiracial society. Thus this class examines a) how state and non-state actors, including religious leaders, have attempted to regulate the lived experiences of Americans and b) the conflicts that emerge over what, exactly, is correct, or right, or good for individuals, society, and the state. To what degree does calling something moral or immoral articulate or obstruct policy solutions? What do political coalitions oriented around "values" accomplish? Is it possible to hew to moral frames and remain inclusive and tolerant? Topics may include marriage, abortion, immigration, alcohol, incarceration, disease, money, and medical care.

---

**L57 RelPol 3160 American Unbelief from the Enlightenment to the Present**

This course examines American secularism, humanism, freethought, and atheism from the Enlightenment forward to the present. Topics to be explored include: the tensions between secular and Christian conceptions of the nation's founding, blasphemy and irreligious cartoons, the civil liberties of atheists and nontheists, the battles over religion in the public schools, atheism and gender politics, the culture wars over secular humanism, and the contemporary growth of the religiously disaffiliated or "nones." The course considers not only the intellectual dimensions of skeptical critiques of religion, but also the underlying politics of secularism (and anti-secularism) in a nation routinely imagined as "under God."

**L57 RelPol 3180 The Abuse Crisis in Modern Christianity**

For over a quarter-century, journalists have broken story after story about sexually abusive clergy in the U.S., many of them serial abusers of children and adolescents. While most accounts have focused on Catholic priests, many have also emerged of abusive evangelical and other Protestant ministers. The stories have illuminated how church bureaucrats have consistently protected abusers and subverted the efforts of victims and their families to seek recompense, accountability, and justice. These protections have often succeeded because of churches' political connections to law enforcement and legislators who have helped hide perpetrators and stymie survivors. Together we will analyze this cautionary tale about religion and politics by contextualizing it within the broader history of Christianity in the United States and beyond. Is this a case simply of a few bad apples or of institutional corruption? How has the church's response been shaped by fear of scandal, antipathy toward secularism, and theological teachings on gender and homosexuality? How does sexual abuse fit into the history of the church as a hierarchical institution? What

challenges has the crisis posed to people of faith who are committed to the church, and can trust be repaired? Readings include legal case studies, internal church correspondence, victims' statements and criminal justice reports, documentary films and memoirs, and both journalistic and scholarly analysis of the clergy sex abuse crisis in the U.S. church. WARNING: Many of our readings contain difficult accounts of abuse as well as the subsequent trauma most victims suffer. If this subject matter is triggering for you and you'd like to speak with me about whether or not to take it, I'll be glad to help you think through it. Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

**L57 RelPol 321 American Religion, Law, and Sexual Politics**

Following philosopher Michel Foucault's vital insight that "sexuality is a major transfer point in the relations of power," this course will explore the complex ways in which theological ideas and religious movements have shaped legal doctrines relating to sex, gender, and sexuality in the United States from roughly the turn of the twentieth century to the present. It will examine how and why religious groups have mobilized within the legal arena at various points in US history, the devotional commitments that influence their activism, the constitutional claims and counterclaims that have emerged over time as a result of legal contestation, and the lived impact of various judicial decisions. To do so, the course will be structured thematically around three overlapping constitutional domains: (1) equal protection rights for women and sexual minorities, (2) substantive due process commitments to privacy and bodily autonomy, and (3) free speech principles related to sexual self-expression. The impact of religious advocacy on contemporary controversies such as drag show bans, restrictions on reproductive healthcare, religious exemptions to LGBT non-discrimination laws, pornography regulation, gender-affirming care access, and more will all be covered. By applying the theories and methods of critical religious studies, this course also takes questions of American religion and sexual politics as a starting point for introducing undergraduate students to legal studies more generally. Through classroom conversations and course texts, students will become familiar with the structure of the American legal system, different methods of constitutional interpretation, theoretical concerns that shape legal thinking, and critical reading skills that may be used to approach legal texts such as judicial opinions. Students from all academic backgrounds interested in gaining increased literacy in American law are encouraged to enroll-no prior exposure is required. Credit 3 units. ---

**L57 RelPol 3230 Jews and Jewishness in Black American Thought**

The history of what has been called "Black-Jewish relations" in the United States has a rich and contested history. The stories told feature solidarity, controversy, and betrayal. This course will look at that history by attending to the role of Jews and Judaism in Black thought. How has Jewishness featured in the self-understanding of Black writers? Have Jews been regarded as allies or adversaries, role models or competitors? What role have Jewish texts or narrative paradigms played in Black religion? What have Black writers made of the Jewish project of national liberation? Credit 3 units. A&S IQ: HUM EN: H

---

**L57 RelPol 330 Native American/Euro-American Encounters: Confrontations of Bodies and Beliefs**

This course surveys the history and historiography of how Native Americans, Europeans, and Euro-Americans reacted and adapted to one another's presence in North America from the 1600s to the mid-1800s, focusing on themes of religion and gender. We will examine the cultural and social implications of encounters between Native peoples, missionaries and other European and Euro-American Protestants and Catholics. We will pay particular attention to how bodies were a venue for encounter-through sexual contact, through the policing of gendered social and economic behaviors, and through

religiously-based understandings of women's and men's duties and functions. We will also study how historians know what they know about these encounters, and what materials enable them to answer their historical questions.

---

**L57 RelPol 334 Religion, Race, and Migration: Borders of Difference?**

This seminar is an experiment in studying the intersections of religion, race, and migration through the idea of difference. We discuss how particular understandings of religion, race, and migration inform contemporary scholarship and shape national and international legal and governmental practices. Specifically, this course explores how difference-of community, body, and place-produces conditions of possibility. Over the semester, we will investigate various borders of difference, using binaries to guide our analysis. We will examine this through a range of problem spaces including: religion/secularism; race/ethnicity/sect; terrorist/citizen; and refugee/migrant. Ultimately, this course aims to critically unpack the relations of power by which people, places, and ideas are differentially constructed, maintained, and transformed

---

**L57 RelPol 3345 The Politics of Play and Protest: Religion and Sports in America**

Play is an essential component of human life. Yet, while the word play evokes leisure and frivolity, it can be serious work. Cultural values, spiritual truths, and social politics arise from play, particularly when they are codified in sports. From raucous games of Chunkey in pre-Columbian North America to Tim Tebow's gameday prayers, sports have long been used as instruments of social cohesion and as a way to connect a people to their gods. This course will examine the close relationship between religion and sport in modern American history and will push students beyond the sports-as-religion paradigm to consider sport as a medium of exchange between the overlapping influences of celebrity, national politics, religion, and the economy. We will cover how sports and religion intersect with topics like nationalism, gender, race, sexuality, identity formation, commercialism, mass-media, recreation, and labor. Concepts like ritual, collective effervescence, and sacred space will be used to analyze key historical movements and organizations, such as muscular Christianity, the YMCA, Fellowship of Christian Athletes, the Olympics, amateurism and the NCAA, and Black Lives Matter. Key figures for examining sport as a site of piety and protest include Muhammad Ali, Serena Williams, Tim Tebow, Jackie Robinson, Colin Kaepernick, and Abe Saperstein. Throughout the course we will ask: How, where, and when do sports act religiously? What do sports and religion accomplish together that they cannot accomplish alone?

---

**L57 RelPol 340 Pilgrims and Seekers: American Spirituality from Transcendentalism to the Present**

This seminar focuses on the formation of "spirituality" in American culture from the Transcendentalist world of Ralph Waldo Emerson on through more recent expressions of the "spiritual-but-not-religious" sensibility. How did "spirituality" come to be seen as something positively distinct from "organized religion"? What are the main contours of spiritual seeking in American culture, especially among those who claim no specific religious affiliation? The course also explores the social, political, and cultural consequences of this turn to the spiritual over the religious: for example, the consecration of liberal individualism, the relationship of religious exploration to both environmentalism and consumerism, the politics of cultural appropriation, the negotiation of religious pluralism, and the pursuit of the spiritual in art.

### L57 RelPol 345 Religion and Race in the United States

Race and ethnicity are central to how religious pluralism is worked out in America. How do the categories of race and religion intersect to produce concepts of a normative American identity? In this course, we examine the construct of race across various American congregational communities in order to understand debates on American identity and belonging. We also explore the idea of an American civil religion, and we engage with the boundaries of inclusion and exclusion of particular religious groups within this category based upon racialized criteria.

---

### L57 RelPol 354 Christian Thought and Politics in the Modern World

This course introduces students to Christian thought in the modern period and its relation to notions of social justice and political action. It takes these issues chronologically, beginning with the Protestant Reformation and challenges to Catholic monarchies, through Puritanism and revolution, evangelicalism and anti-slavery, nineteenth-century liberalism and social reform, twentieth century issues of the Cold War and civil rights, to twentieth century concerns with race and environmentalism. Throughout the course, we will read texts that relate theological claims (about, for example, the nature of God, Christ, and redemption) to social and political matters. The course will end with attention to Christian belief and contemporary political crises.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H

---

### L57 RelPol 355 The FBI and Religion

This seminar examines the relationship between the Federal Bureau of Investigation (FBI) and religion (i.e., faith communities, clerics, and religious professionals) as a way to study and understand 20th-century religion and politics. The course will investigate the history of the FBI as well as the various ways in which the FBI and religious groups have interacted. The course will pay particular attention to what the professor calls the four interrelated "modes" of FBI-religious engagement: counter-intelligence and surveillance, coordination and cooperation, censorship and publicity, and consultation.

Credit 3 units. A&S IQ: HUM BU: BA, ETH EN: H

---

### L57 RelPol 357 God in the Courtroom

The U.S. Constitution holds a promise to secure freedom of religion through its First Amendment. Its two religion clauses declare unconstitutional any prohibition on the free exercise of religion and laws respecting the establishment of religion. The consequence is that, whenever a group demands to be recognized as religious and to be granted the right to exercise its religion, a court, a legislature, or an administrative official must determine whether the religious practice in question is legally religious. This means that law plays a uniquely important role in defining religion in the United States. In this seminar, we will explore the relation between law and religion in America. We will study the religion clauses in the First Amendment to the United States Constitution, the histories of their interpretations by American courts in landmark cases, and the ways that religious studies scholars have understood and critiqued these cases.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H

---

### L57 RelPol 358 Conscience and Religion in American Politics

Conscience is as American as apple pie and baseball, but its meaning and implications are deeply contested in American religion and politics. What is conscience? To what extent is conscience laden with theological -- and, more specifically, Christian -- commitments? What role should conscience, whether religious or ethical, play in political life? By considering what conscience means and what vision of politics it implies, we will reflect on what it means to be American: how

religion should relate to politics, how individuals should engage with democratic laws and norms, and how religious and political dissenters might oppose American politics. We will focus on key moments in the history of American religion and politics through the lens of conscience, from the Interwar Period, the perceived threat of communism during the Cold War, the Civil Rights Movement, and the Vietnam War to the "culture wars" on abortion, marriage equality, LGBTQ rights, and the death penalty. This course draws on interdisciplinary sources from religious studies, political theory, law, and history in 20th- and 21st-century American politics.

---

### L57 RelPol 360 Religion and the Modern Civil Rights Movement, 1954-1968

The modern Civil Rights Movement is a landmark event in the nation's political, civic, cultural, and social history. In many contexts, this movement for and against civil and legal equality took on a religious ethos, with activists, opponents, and observers believing that the net result of the marches, demonstrations, and legislative rulings would redeem and/or destroy "The Soul of the Nation." This seminar examines the modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement. The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures, and communities that were indifferent, combative, instrumental, and/or supportive of Civil Rights legislation throughout the mid-twentieth century.

Credit 3 units. A&S IQ: HUM, SC, SD BU: BA EN: H

---

### L57 RelPol 362 Islam, Gender, Sexuality

In this course, we examine discourses of gender and sexuality across historical period and geographical region. We analyze encounters with Western imperialism, investigating how gender informs social, political, religious, and family life in Islamic cultures. Our course materials include histories, ethnographies, graphic novels, and films, and we examine how these sources approach the study of Islam, gender, and sexuality through the lens of various topics: from women in the earliest years of Islam in 7th century Arabia to revolutionary Iran and American Muslim women in the 21st century. Throughout the course, we examine how notions of gender and sexuality have changed over time and played various roles in the political and social life of Muslim nations, societies, and communities. By the end of the course, students will be able to critically assess scholarly and non-scholarly (media) discussions of gender in Islam.

---

### L57 RelPol 365 Slavery, Sovereignty, Security: American Religions and the Problem of Freedom

The goal of this course is to think critically about freedom as an ideology and institution. What does it mean to be free? What are the relationships among individual liberties, national sovereignty, and civil rights? In what ways has freedom been defined in relation to -- and materially depended on -- unfreedom? At the same time, this course will treat American "religions" in a similar critical fashion: as a historically contingent category that has been forged and inflected within the same context of white Christian settler empire. Religion and freedom have intertwined throughout American history, including in the ideal of religious freedom. Our critical interrogation of freedom should help us think carefully about power, working with but also beyond tropes of domination and resistance.

---

**L57 RelPol 368 Theories and Methods in the Study of Religion**

What is religion, and how can we study it? Do we need an answer to the first question to pursue the second? Why, and toward what ends, might we undertake such study? This course considers these questions through the investigation of significant attempts to study religion over the past century, paying particular attention to the methods, motivations, and aims of these works. Is the study of religion an effort to disprove or debunk it, or perhaps to support it? What would each mean? Is it an effort to describe the indescribable, or perhaps to translate complex beliefs and practices into a language in which they can be discussed by others? Why would such a translation be helpful, and to whom? Is the study of religion an investigation of a social phenomenon, an organization of communities, a specific formation of individuals, or perhaps a psychosis or illusion, evidence of the workings of power on our lives and the difficulty of bearing it? What is at stake in defining religion in these ways, and then in undertaking its study? Same as L23 Re St 368

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

---

**L57 RelPol 370 Religion and the Origins of Capitalism**

This course examines the relationship between religion and the development of a capitalist economy in Europe, England, and America from 1550 to 1800. It relies on intellectual, social, and economic histories. We cover major thinkers from the early mercantilist thinkers such as William Petty to Adam Smith.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH EN: H

---

**L57 RelPol 380 American Religion, Media, and Technology**

American religious communities have often been cast as technological laggards, whether willfully ignorant or generally backwards. Such narratives, fueled by stories about religious leaders condemning cultural trends conceal the ways religions have in fact innovated in the media sphere. Ranging from the time of the earliest printing presses to contemporary social media platforms, this course reframes the question of American religions and media technologies by asking the following questions: How have media technologies shaped religious practice, identity, and belonging? Were religious critiques of mass media valid, particularly around questions of access, constraints, and consumption? And how have religious groups experimented with communications technologies to reimagine their use, message, and audience? These moments of technological encounter reveal how religious communities have not only worked with media technologies, but have driven much of what makes these technologies innovative and modern.

**L57 RelPol 390 Mormon History in Global Context**

The focus of this seminar is Mormonism, meaning, primarily, the Church of Jesus Christ of Latter-day Saints, which is the largest Mormon body. Mormons in the United States have gone from being one of the most intensely persecuted religious groups in the country's history to the fourth largest religious body in the U.S., with a reputation for patriotism and conservative family values. Because of its vigorous missionary program, the LDS Church now has more members outside the U.S. than inside. This seminar will introduce the basic practices and beliefs, and explore issues regarding economics, race, gender, and sexuality within the faith. These issues include: How did conflicts over Mormonism during the 19th century, especially the conflict over polygamy, help define the limits of religious tolerance in this country? How have LDS teachings about gender and race, or controversies about whether or not Mormons are Christian, positioned and repositioned Mormons within U.S. society? What does the LDS faith look like in other parts of the world, and how does its identification with U.S. prosperity and politics shape its growth in other places?

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: ETH EN: H

---

**L57 RelPol 395 Topics in Religion and Politics: Jewish Women and American Culture**

How have Jewish women shaped American politics and culture? How much of our modern world do we owe to what Jewish women have created? And how have these women transformed Judaism itself? This course examines the writings, ideas, and lives of Jewish-American women. From explicitly religious organizations like Hadassah and the National Council of Jewish Women, to more secular Jews who subtly incorporated religion into their style and their ethics, we will consider Jewish-American women in all of their fascinating variety. Students will gain a thorough picture of Jewish-American women's social impact from the ground up. Our reading will extend from colonial community builders like Billah Franks, to early feminists like Rosa Sonneschein, to revolutionaries like Emma Goldman and reformers like Lillian Wald; from the philosopher Hannah Arendt to the labor leader Rose Schneiderman and the novelist Ayn Rand; from America's first woman rabbi, Sally Priesand, to modern-day leaders and celebrities like Ruth Bader Ginsberg, Judy Blume, Adrienne Rich, and Dianne Feinstein. Students will have the opportunity to conduct self-directed research as well as to try out creative projects and collaborative reflection. This course will teach students to thoughtfully analyze texts in historical context, to conduct sensitive conversations with generosity and curiosity, and to broaden their pantheon of American cultural giants. As we explore multiple genres, decades, and perspectives, students will build a rich and collaborative understanding of the vibrant Jewish-American women's intellectual tradition.

---

**L57 RelPol 4060 Senior Seminar: Religion, Politics, and Community**

Religion is a powerful social, economic, and political force across the globe. Its formal authorities and informal influences have changed over time and across space and traditions. Yet even where regular religious practice has become less common, religion remains a means of constructing communities, be it a diaspora, a unique nation within a state, or state-wide national identity or nationalism. Religion intersects with race, gender, and other important social identities, and it overlaps with organized political power from the grassroots to the government. Human relationships with the divine have influenced everyday norms and values, have marked key moments in our life cycle, and have provided material and social psychological resources for communities. In this course, we will examine the political relationships between religion and community from a variety of social scientific perspectives. As a core part of this inquiry, you will conduct an original research paper on a topic of your choice relating to religion, politics, and community. We will work through each step of the scientific method

over the course of the semester-using religion and community as a lens and set of thematic examples-and hold guided workshops to facilitate your research process. Prereq: L32 263 OR L32 363 OR department approved equivalent

**L57 RelPol 407 Solidarity and Silence: Religious Strategies in the Political Sphere**

Although political action is often considered a problem of making oneself heard, religious practices of silence, self-effacement, and withdrawal from certain worldly struggles have guided many significant political and social movements, particularly forms of non-violent resistance. This course considers the role of religious thought and practice in such movements in the twentieth century. The history of these movements presents an apparent paradox: how can political action emerge from the supposedly "private" realm of religion in the modern era, particularly its most individualistic formations in contemplative and mystical practices? Does the historical role of these practices in the political sphere complicate their portrayal in some scholarship as private, individual, and depoliticizing? With these questions animating our investigations, we will consider the work of authors and activists including Leo Tolstoy, Mahatma Gandhi, Dietrich Bonhoeffer, Martin Luther King, Jr., Simone Weil, and William Barber, as well as the history of movements associated with their work. Toward the end of the semester, we will turn to contemporary movements against economic inequality, intimate violence, racially motivated violence, and discrimination toward transgender persons to discuss the use of religious strategies or religiously-derived strategies in current political and social activism.

---

**L57 RelPol 4121 American Religion, Politics, and Culture: Catholicism and Contemporary American Politics**

Twenty-five percent of Americans identify as Roman Catholics, making Catholicism the largest Christian church in the country. With the exception of George W. Bush in 2000, no presidential candidate since 1960 has won the White House without winning a majority of Catholic voters. This course will examine the complex role of Roman Catholics in American politics, looking at how Catholics have shaped American history and political life and how American history and politics have shaped Catholicism. Topics will include the nature and influence of "the Catholic vote," the role of Catholic social teaching in forming Catholic voters, and the influence that Catholics continue to exercise over public policy and in our national institutions, including the U.S. Supreme Court.  
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

**L57 RelPol 4122 American Religion, Politics & Culture:**

**Commentary from Alexis de Tocqueville to Contemporary Pundits**

This research-oriented seminar involves in-depth historiographical investigation of leading scholarship at the busy intersections of American religion, politics, and culture. The second semester focuses on classic and contemporary commentaries on the American religious and political scene from Alexis de Tocqueville through today's leading pundits. Some sessions will include a visiting scholar engaged in cutting-edge research--a feature that will allow seminar members to work with important scholars from beyond the university. Possible topics include: church-state relations, religion and foreign policy, religion and civil rights, religion and the science wars, the rise of the Religious Right, and the role of religion in national elections. The seminar is taught under the auspices of the John C. Danforth Center on Religion and Politics and is offered two complementary parts (though enrollment in either one of the two is certainly possible). Its ambition is to build up a community of inquirers engaged in the core questions that animate the Danforth Center. PREREQ: Advanced undergraduate or graduate standing in AMCS, History, or Religious Studies or permission of instructor.

Credit 3 units. A&S IQ: HUM

---

**L57 RelPol 4125 The First Amendment in an Age of Fracture**

This seminar will explore the constitutional and civic dimensions of engaging across difference in a divided and fractured society. Topics will include free speech, the right of association, religious freedom, public forums, online forums, public funding, protests, boycotts, and strikes.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

**L57 RelPol 425 Law, Religion, and Politics**

What is the role of religious argument in politics and law? What kinds of arguments are advanced, and how do they differ from one another? Are some of these arguments more acceptable than others in a liberal democracy? This course will explore these questions through the work of legal scholars, theologians, and political theorists. Our topics include the nature of violence and coercion in the law, constraints on public reason, the relationship between religion and government, and the nature of religious practice and tradition.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: BA, ETH EN: H

---

**L57 RelPol 430 Spiritual But Not Religious: The Politics of American Spirituality**

What does it mean to be "spiritual but not religious"? What are the social and political consequences of foregrounding spiritual seeking and religious experimentation over the "organized religion" of churches, synagogues, mosques, and temples? How did this contemporary view of spirituality take shape historically? The seminar focuses on a series of debates that have arisen over spirituality in American culture: the entwining of religious practices with consumer culture and corporate capitalism, the rise of therapeutic models of meditation and mindfulness, the politics of Euro-American appropriations of Native American and Buddhist religious practices, the implications of embracing religious variety and eclecticism, and the relationship between spiritual seeking and social justice.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

**L57 RelPol 435 Sabbath Politics: Rest and Refusal in Religion and Politics**

The Jewish Sabbath arrives every week to disrupt ordinary life with a wholly different way of living, abstaining from some activities in divinely commanded rest. Is this different way of life strictly a break from the ordinary, or also a guide to it-and to how it might require disruption, reformation, and repair? Sabbath traditions have inspired radical political action including movements against debt, income

inequality, environmental destruction, and racial injustice. This course will consider the ways that 20th and 21st century American Jews have practiced Shabbat and thought about its significance in political life. Students will read a range of texts including Abraham Joshua Heschel's classic 1951 book *The Sabbath*, and consider them in relation to movements of contemporary radical politics that have been inspired by Sabbath traditions, including Strike Debt, reparations for the descendants of enslaved people, and agonistic democratic politics. Credit 3 units. A&S IQ: HUM EN: H

---

#### **L57 RelPol 440 Religion, Politics, and the University**

This course explores in depth current issues related to pluralism, difference, and belonging in matters pertaining to religion and other important issues, with a particular focus on how these play out in the university context. The instructors, John Inazu and Eboo Patel, are two of the leading national commentators on these issues. Prerequisite: Students enrolling in this class must submit a brief statement of interest to Professor John Inazu. Details on how and where to submit this statement can be found at <http://law.wustl.edu/COURSES/INAZU/seminar1/summaries/>.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

---

#### **L57 RelPol 4491 American Unbelief from the Enlightenment to the Present**

This seminar examines American secularism, humanism, and atheism from the Enlightenment forward to the present. Topics to be explored include: the tensions between secular and Christian conceptions of the republic, the civil liberties of atheists and nontheists, the battles over religion in the public schools, the culture wars over secular humanism and science, and the contemporary growth of the religiously disaffiliated or religious "nones." The course considers not only the intellectual dimensions of skeptical critiques of religion, but also the underlying politics of secularism (and anti-secularism) in a nation routinely imagined as "under God."

Credit 3 units. A&S IQ: HUM Arch: SSP Art: HUM EN: H

---

#### **L57 RelPol 4564 American Pragmatism**

This course examines the history of American pragmatism through three of its primary founders, the philosophers Charles Peirce, William James, and John Dewey. It considers pragmatism as a response to the experience of uncertainty brought on by modernity, and contextualizes it amidst late nineteenth and early twentieth century thought and politics, namely, scientific methodology, evolutionary theory, the probabilistic revolution, Transcendentalism, the rise of secularism, slavery, Abolitionism, and the Civil War. Major essays by each thinker will be read as well as three intellectual biographies and one critical survey.

#### **L57 RelPol 480 Readings in African American Religious History**

This course is an introduction to the history and variety of African-American religions in the New World Diaspora. The approach will be chronological, from the earliest years to the New World, to contemporary expressions. We will also explore some of the major historiographical themes that have catalyzed current scholarship, the purpose and effectiveness of black nationalist movements, issues of class and gender, the persistence of African elements of new world religious practice, performance, and popular culture.

Credit 3 units. A&S IQ: HUM EN: H

---

#### **L57 RelPol 485 Christian Nation, Secular Republic**

The United States has often been imagined as both a deeply Christian nation and a thoroughly secular republic, and those conjoined framings have created recurrent conflict throughout American history. This seminar is designed to introduce advanced undergraduates and graduate students to current discussions of religion, secularism, and unbelief in American religious and political history. The course also places a complementary emphasis on close readings of crucial primary works, say, about the rise of deistic toleration or the persisting political power of Christianity-in textual particularities. The course takes as its starting point Charles Taylor's monumental account *A Secular Age* and works from there through various episodes of the Enlightenment and its long aftermath.

Credit 3 units. A&S IQ: HUM EN: H

---

#### **L57 RelPol 490 Monuments, Museums, and Mountains: Religion and the Politics of Place in Modern America**

Some of the most intense battles in American culture are fought over hallowed places and public memory. This class will examine various contested sites on the borders of pilgrimage, tourism, religious display, and civic commemoration. Among the topics to be considered are: Confederate monuments and plantation tours, Mount Rushmore and the Black Hills, the "Ground Zero Mosque" controversy, the Museum of the Bible and evangelical visions for the nation's capital, the public display of the Ten Commandments and the Satanic Temple's monumental interventions, Holy Land pilgrimages, and such alternative religious landscapes as Sedona and Salvation Mountain. Students will also have the opportunity to identify and explore sites of their own choosing as places of religious and political drama within modern American culture. There are no prerequisites for this course, and it is open to both undergraduates and graduate students.

Credit 3 units. A&S IQ: HUM EN: H

---

#### **L57 RelPol 495 Religion and the State: Global Mission, Global Empire**

This course explores the complex intersections among U.S. political power on a global stage, and religious institutions and identities. Readings and discussions are organized around two very broad questions. First: how has this nation's history been shaped by religious "others" both inside and outside its borders? Second: How have perceptions of those others in turn affected U.S. responses to circumstances of global consequence--including, for example, foreign policy and diplomacy, missionary activity, and economic practices?

## **Religion and Politics Minor**

### **Program Requirements**

- **Total units required:** 15

### **Required Course**

Students select one course from the following list. This required course should be completed prior to the second semester of the junior year.

Code	Title	Units
RelPol 201	Religion and American Society	3
RelPol 210	The Good Life Between Religion and Politics	3
RelPol 225	Religion and Politics in American History	3
BEYOND 120	Religious Freedom in America (This is a course in the selective Beyond Boundaries Program.)	3

## Elective Courses

Students complete 12 additional units, 9 of which must be at the 300 or 400 level and 9 of which, at any level, must be taught by Center faculty.

## Required Activities

Attendance at five events sponsored by the John C. Danforth Center on Religion and Politics (e.g., lectures, colloquia, lunch discussions, film screenings) is required. Students must inform the director of undergraduate studies of the events they attend so that this information can be recorded.

## Religious Studies

If I headed back to college today, I would major in comparative religions rather than political science.

John Kerry, *former U.S. Secretary of State*, "Religion and Diplomacy"

Religion is a major source of inspiration, meaning, and controversy in human societies. Fast-moving forces of globalization, migration, and technology continue to bring diverse communities into closer proximity, often creating new religious communities in the process. The Religious Studies program at Washington University gives students the opportunity to learn about diverse religions as well as to study past and current events with a critical but open mind.

Religious Studies covers a wide range of subjects. It could include religion and American or international politics, religion and music, unbelief, religion and literature, issues of race or climate change, or scriptural studies. As such, Religious Studies embraces research in all its disciplinary and interdisciplinary complexity. Courses offered by our program are, thus, taught by faculty from a variety of disciplines and areas, including the Danforth Center on Religion and Politics; Anthropology; Classics; East Asian Languages and Cultures; English; History; Jewish, Islamic, and Middle Eastern Studies; Music; Political Science; and Women, Gender, and Sexuality Studies.

Pursuing a major in Religious Studies will help students understand and appreciate the complex ways in which religious traditions inform human thought and behavior. A double major or a minor will also enhance a broad range of studies, from politics and law to business and medicine. If a student is preparing for the advanced academic study of

religion, seeking to complement another area of study, or simply feeling the need to acquire a greater knowledge of religions, a major or minor in Religious Studies is excellent preparation for living and working in a pluralistic society and global culture.

### L23 Re St 1010 Western Civilization I

This course is a history of Western civilization from 3500 BC to AD 1600. Western civilization may be characterized as one long debate on the holy. In no other civilization did this debate about the limits of the sacred and the profane -- this constant effort at trying to grasp the divine through word and deed -- last continuously for more than 5000 years. To argue over the holy is to argue over the very nature of how to live a life, from the most mundane daily activity to the most sublime act of the imagination. It is to argue over how politics, economics, art, philosophy, literature, and religion are realized in a society. Apart from many types of polytheism, we study the three great world monotheistic religions: Judaism, Christianity, and Islam. We study the ancient cultures of northern Africa and the eastern Mediterranean, the empires of Alexander the Great and imperial Rome, the Christianization of the Roman Empire and the rise of Islam, the early medieval world in the North Sea and the Byzantine Empire in Constantinople, the formation of Latin Christendom and the papal monarchy, the Crusades and the reaction of the Islamic lands, concepts of individuality, the persecution of Jews and heretics, chivalry and peasant servitude, the Mongol Empire, the Black Death and the devastation of the 14th century, the Renaissance in Italy and the Protestant reformation, the hunt for witches and the scientific revolution, and the medieval origins of the African diaspora and the European conquest of the Americas. What defined being human -- and so a man, a woman, or a child -- over five millennia? Fundamental questions of this course include the following: What is "Western civilization"? When do the characteristics defined as "Western" come together as a coherent phenomenon? What, then, is historical truth? This course (through lectures, reading primary sources, discussion sections, and essay writing) gives the student a learned background in almost 5000 years of history. This is an introductory course for the history major and minor.

### L23 Re St 102 Thinking About Religion

Nearly everyone has had some experience with something they would call "religion," from at least a passing familiarity through the media to a lifetime of active participation in religious communities. But what do we actually mean when we use the word? What is a religion? What does it mean to call something a religion, or "religious"? And what does it mean to study religion, given the slipperiness of the concept itself? This course offers an introduction to the academic study of religion through a consideration of these questions: What is religion, and how can we study it? Do we need an answer to the first question to pursue the second? Why, and toward what ends, might we undertake such study? We will also consider what is at stake in our investigation and inquiry into religion--for the inquirers, for the subjects of inquiry, and for society more broadly--and what kind of lens the study of religion offers us on ourselves, our neighbors, and society, in turn. To these ends, we will discuss major theoretical approaches to the study of religion and significant work on religions and religious phenomena, toward a better understanding of what "religion" might be and how it might be studied today. No prior knowledge or experience of religion, religions, or anything religious is expected or required. This course is required for Religious Studies majors and minors.

### L23 Re St 1021 An Ancient Murder Mystery: The Death of Christ from the Gospels to Mel Gibson

When Mel Gibson's movie "The Passion of the Christ" was released in 2004, it provoked a tremendous amount of public debate and divided Christians (Catholics and Protestants of all sorts) and Jews (Orthodox, Conservative, Liberal and Reform) in every possible combination. Although the virulence of the discussions may have given us the impression that this was a new issue, in reality the question of the Jews' role and involvement in Jesus' death has been disputed for almost two thousand years. The claim that the Jews are responsible for Christ's death is the subject of this class and we will study its history from the gospels to today using textual sources (historical, religious and literary works) and the visual arts (paintings and movies). But this class is not about who did or did not kill Jesus, nor is it about judging people's positions on the issue. Rather it is about the power of a story to travel through time and space, to being told and retold in different versions and with different purposes, and to affect the real lives of men and women. First-Year Seminar; Course is for first-year, non-transfer students only.

### L23 Re St 1200 Religious Freedom in America

The intersection of religion and law in American society has sparked some of the fiercest cultural engagements in recent memory: Should a for-profit religious corporation have a right not to fund birth control for its employees? Can a public college expel campus religious groups whose membership is not open to all students? May a Muslim in prison grow a beard for religious reasons? Should a cake baker or a florist be permitted to refuse services for a gay wedding? Can a church hire and fire its ministers for any reason? These current debates and the issues that frame them are interwoven in the American story. This course introduces students to the major texts and historical arguments underlying that story. Drawing from the respective expertise of the instructors, the course will expose students to a variety of scholarly methods related to the issue: legal history and case law, intellectual history and canonical texts, social history and narrative accounts, and political philosophy and contemporary analyses. This course is for first-year (non-transfer) students only.

### L23 Re St 189 Beginning Coptic II

After completing the remaining grammar lessons from Beginning Coptic I, we will build skill and confidence as translators by reading selections from a variety of Coptic texts: the Sahidic Gospel of Mark, the hagiographic "Life of John the Monk," selections from the Gospels

of Mary and Thomas, and a unique Coptic translation of Plato's "Republic." In our readings from the Bible and Plato, those who read Classical Greek will also have the opportunity to study how ancient translators chose to render the Greek texts into Egyptian, and how, in the process of translation, they changed the meaning of the originals. Prerequisite: Classics 188 or permission of instructor.

### L23 Re St 2010 Religion and American Society

This course explores religious life in the United States in the twentieth and twenty-first centuries. Comprehensive coverage of such a diverse landscape is not our goal. Rather, we will focus on some of the basic social categories that organize our society and that make religion a social phenomenon. How do religious belief and practice relate to race, class, or gender? How do we understand the role of religion in relation to region and space? How can we understand the many different stories that Americans tell about their own country as a special-even sacred-place? Major themes include religion and race; nation, land, and migration; religion, class, and money; evangelicalism and the religious right; business, class, and prosperity; religion and gender; religious nationalism; and the enduring challenges of religious multiplicity in the U.S.

### L23 Re St 2030 Arch City Religion: Global Religion & Public Life in St. Louis

The St. Louis region is home to a diverse array of global religious communities. This course directly introduces students to some of that diversity by revolving around fieldtrips to living institutions and meetings with religious leaders across traditions. In any given semester, our visits may include organizations that identify as Catholic, Pentecostal, evangelical, Jewish (Orthodox, Conservative, Reform, or Reconstructionist), Muslim, Hindu, Buddhist, Vedantist, Scientological, progressive Baptist, or secular humanist, among others. We will also visit the International Institute of St. Louis and study the politics of immigration and refugee resettlement that have helped shape the city and its religious as well as political multiplicity. Through our visits and conversation, the variety within each religious community will also become apparent, as we encounter adherents across the political spectrum, embodying different ethnicities, and committed to different degrees of "orthodoxy" or traditional belief and practice. Students should emerge from the course with a fresh sense of the cultural and religious vitality of the St. Louis metropolitan area, illustrative of the United States as a whole. \*All required site visits will take place during the regular class time.

### L23 Re St 207 Scriptures and Cultural Traditions: Text & Tradition

When we think of the word "scripture" in antiquity, we might think of the texts that have been compiled in the different holy books that we currently have today. Yet the function of "scriptures" within a community, and the status given to different texts treated as "scriptural," has changed in different times and places. In this course, we will consider texts that would eventually come to be part of the Hebrew Bible, New Testament, and the Qu'ran as well as several of the exegetes and reading communities that shaped their various interpretations. We will explore how non-canonical sources played a

role in the formation of the various canons we have today, comparing the authoritative status given to these texts to that given to other works from antiquity, such as the epics of Homer. Special attention will be played to the role of the receiving community in the development of "scripture," and the variety of the contexts in which scripture can function in the construction of and opposition to religious authority. Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

---

### L23 Re St 208F Introduction to Jewish Civilization: History and Identity

The anthropologist Clifford Geertz once famously invoked Max Weber in writing that "man is an animal suspended in webs of significance he himself has spun. I take culture to be those webs." The main goal of this course—designed as an introduction to Jewish history, culture, and society—will be to investigate the "webs of significance" produced by Jewish societies and individuals, in a select number of historical periods, both as responses to historical circumstances and as expressions of Jewish identity. Over the course of the semester we will focus on the following historical settings: 7th century BCE Judah and the Babylonian exile; pre-Islamic Palestine and Babylonia (the period of the Mishnah and the Talmud); Europe in the period of the Crusades; Islamic and Christian Spain; Europe in the 18th and 19th centuries; North America in the 20th century; and the modern State of Israel. For each period we will investigate the social and political conditions of Jewish life; identify the major texts that Jews possessed, studied, and produced; determine the non-Jewish influences on their attitudes and aspirations; and explore the efforts that Jews made to define what it meant to be part of a Jewish collective.

### L23 Re St 210 The Good Life Between Religion and Politics

What constitutes a life well lived? How do we imagine answers to that question? Who gets to answer that question for us? Do we ask it as an "us" or as an individual? This course considers the way religious and political thought has shaped considerations of the classical ethical question of how we should live and the way that ethics has often served to connect religion and politics in thought and practice. Do we need a religious basis to answer ethical questions, or can we determine how to live without religious sources of authority? Is ethics a project of an individual or of communities? If the latter, are these political communities, religious ones, or something else? On what basis or with what capacities can we imagine new answers to ethical questions, either in community or on our own? We will discuss these questions and more through a consideration of a range of answers to the question of how we should live.

Same as L57 RelPol 210

Credit 3 units. A&S IQ: HUM, LCD BU: ETH, IS EN: H

---

### L23 Re St 225 Religion and Politics in American History

In a famous 2004 article, historian Jon Butler once remarked that US history textbooks and survey courses tend to pay significant attention to religion during the Colonial Era and early Republic, yet after the Civil War "religion more often appears as a jack-in-the-box" that pops up in historical accounts somewhat randomly and without much elaboration or analysis. To address the gaps in historical understandings that these absences may create, this course will provide a survey of the ways theological ideas and religiously-motivated social movements have shaped US politics and civic life from the Civil War to the present. With a particular emphasis placed on how religion intersects with other social categories such as race, gender, and class, it will examine the complex role that religious beliefs, practices, and identities have played in major political events and debates from the 1860s to today. In doing so, it will also inquire into what it means to study religion as a historical phenomenon, the theoretical and methodological tools that best assist in this work, and the historiographic implications of better attending to religion in historical analyses. No prior coursework in US history or religious studies is required.

### L23 Re St 2300 Black-Jewish Relations in the United States

The history of what has been called "Black-Jewish relations" in the United States has a rich and contested history. The stories told about this relationship feature solidarity, controversy, and betrayal. This course will look at this history by attending to the role of Jews and Jewishness in Black thought. How has Jewishness featured in the self-understanding of Black thinkers? Have Jews been regarded as allies or adversaries, role models or competitors? What role have Jewish texts or narrative paradigms played in Black religion and Black politics? What have Black writers made of the Jewish project of national liberation i.e. Zionism? The course will likely include readings from W.E.B. Du Bois, Marcus Garvey, James Baldwin, and Malcolm X among others.

Same as L57 RelPol 230

---

### L23 Re St 235 Puritans and Revolutionaries: Religion and the Making of America

This course concerns the history of colonial America from early English settlement and encounters among English and Native Americans to revolution against Great Britain. The making of colonial America involved encounters and exchanges among various people groups—Puritans, Indigenous communities, German Moravians, English liberal thinkers with different ideas about politics—with different political convictions. This course explores those encounters, with a focus especially on Puritan and evangelical missions to Native Americans, southern plantation society and race-based slavery, English notions of religious liberty, and how ideas of political liberty, including rationales for American Independence, conflicted with, criticized, or stood as contradictions to English treatment of Indigenous and African peoples. We will read primary texts that illumine new perspectives on these issues. There is no defining argument or ideological "point" to the course but, rather, a series of observations of how different social, political, and intellectual variables made for shifting understandings of what religious ideas mattered to public life in America and how those ideas ought to shape civil affairs. As we examine these understandings, we will pay attention especially to Anglo-Indigenous interactions, the rise of a national self-consciousness that invested America with great historical purpose, the development of different responses to racial difference in America, and the disestablishment of religion from national political power (encoded in the First Amendment to the Constitution).

Same as L57 RelPol 235

Credit 3 units. A&S IQ: HUM BU: BA EN: H

---

### L23 Re St 236F Introduction to East Asian Religions

This introductory course provides a basic, yet systematic, overview of certain major religious traditions that evolved in East Asia, particularly in China and Japan, but also in Korea. We begin with the classical Chinese traditions of Confucianism and Daoism, then turn our attention to Buddhism, which originated in India (ca. 500 BCE) and was later introduced into China (1st century CE), Korea (4th century CE) and Japan (6th century CE). We then examine the Japanese tradition of Shinto, and focus more specifically upon the development of new Japanese forms of Buddhism. The course ends with a brief look at the coming of some of these religions to the West, and in particular the United States.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

---

### L23 Re St 238 Gothic Art: Patronage, Piety, and Power

In the twelfth century, a new style of art and architecture flourished in Europe. Known since the sixteenth century as the Gothic, this aesthetic pervaded visual culture from towering architecture to stained glass, monumental sculpture, panel paintings, and jewelry. Primarily focusing on art made in Northern Europe, this course explores the making of images in the period 1200 to 1500 and how issues of patronage, devotion, political power, and collaboration were part of this process. In addition to serving as a foundation in the history of medieval art, this course also functions as an introduction to art-historical method. Attention will be paid to the cultivation of visual analysis skills and academic writing, as well as the synthesis of course themes through the final "Virtual Exhibition" project. Prerequisites: none

Same as L01 Art-Arch 238

Credit 3 units. A&S IQ: HUM Arch: HUM Art: AH, HUM BU: HUM, IS EN: H

---

### L23 Re St 2396 The "Orient": Europe and Islamic Art from 1851 to Today

In the 19th century, the expansion of British and French colonial rule in North Africa, the Middle East, and India facilitated a variety of cultural exchanges, including the movement of Islamic carpets, textiles, manuscripts, ceramics, metalwork, and other artifacts to European collections. These collections, both public and private, presented a new repertoire of forms, motifs, and techniques that dramatically transformed cultural production in the west. Taking the Great Exhibition of 1851 in London as its starting point, this course explores the relationships between Islamic art, European modernism, and the artistic currents that traverse the globe today by examining the ways in which Islamic art has been circulated, acquired, understood, appreciated, utilized, and imitated in the west. As a result, students will gain a better understanding of the particular relationship between modern cultural production, museology, and colonialism, and obtain a good overall grasp of the artistic phenomena associated with the interaction between Islam and the West from the Modern Era to the present day. Prerequisite

Same as L01 Art-Arch 2396

### L23 Re St 2400 Jewish Political Thought

The question of Jewish belonging in the Christian West has played a defining role in the formation of the modern state, and the afterlives of "the Jewish question" in Europe, America, and Israel continue to have significant influence on how political life is understood and evaluated. This course begins with classical Jewish sources on politics—including the nature of authority, national belonging, and territory—and then moves to a consideration of several crucial modern Jewish thinkers likely including Spinoza, Marx, and Arendt. The course will consistently consider topical contemporary questions about liberal democracy, totalitarianism, nationalism, Zionism, race, and secularism.

Same as L57 RelPol 240

Credit 3 units. A&S IQ: HUM BU: BA EN: H

---

**L23 Re St 2401 First-Year Seminar: Sex and the Bible**

What does the Bible say about sex and sexual desire? Gender and gender identity? Bodies and bodily pleasure? This class critically examines sex, gender, and sexuality as they are constructed in the Bible. We will consider biblical ideas of sexuality and desire, laws regulating sex and the body, homoeroticism and homosexuality, trans representation, the portrayal of women, and queer characters and moments in the Bible. We will also explore how key biblical texts about gender and sexuality (Adam and Eve, Sodom and Gomorrah, the Whore of Babylon, etc) have been interpreted over time. Our methods of interpretation will include feminist, womanist, postcolonial, queer, and trans reading strategies; biblical texts will come from both the Hebrew Bible and the New Testament. This class is for first-year, non-transfer students only.

Credit 3 units. A&S: FYS A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM BU: BA, ETH EN: H

---

**L23 Re St 244 Religion and Music in American Culture**

In this course, students will examine public discourse on popular music as a way of understanding questions of religious identity and community formation. Through case studies ranging from the Pueblo Indian dance controversy of the 1920s to post-9/11 disputes about the Islamic call to prayer, students will consider how debates over what "counts" as sacred or secular music reveal disputes over notions of religious authority and authenticity in American culture.

---

**L23 Re St 2450 Love and Reason**

Love often seems dramatically unreasonable, and reason can seem coldly rational in a way that excludes any emotion, passion, or affiliation even akin to love. The supposed opposition between love and reason has been used by Christian and secular thinkers throughout modernity to organize ways of knowing and judging, and to criticize claims of faith, belief, and desire. But are love and reason really so distinct? What does it mean to say so, and why might someone make this claim? Can love be reasoned, and even reasonable? Can reason be aided by love, and even driven by it? How might different answers to these questions affect our understanding of other possibly unreasoned categories like faith, belief, and piety? This course offers an introduction to modern Christian thought and Western philosophy through these questions and themes.

**L23 Re St 248 Religion, Health, and Wellness in Modern America**

Religion, Health, and Wellness in Modern America will examine changing conceptions of health and wellness in America from the late nineteenth-century to the present. With media, artifacts, and literature drawn from the histories of medicine, religion, and capitalism, this class will cover the proliferation of alternative health regimens, the rise of the medical establishment, claims of divine healing, and the impact of market forces on wellness cultures. Course topics include the raced and gendered dynamics of care, socioeconomic status, technological innovation and media, the role of nature, health activism and radical self-care, and New Age spirituality and mental health. Special attention will be paid to how the politics of the body and its regulation intersect with religious and consumer practices in the modern wellness industry

**L23 Re St 2500 Zionism**

Zionism is often thought of as a commitment to the principle that the Jewish People, as a distinct "people," has a right to self-determination in its own historical land of the biblical Palestine. Yet the history of the term and the set of ideologies show a much more complex understanding. In this course we trace the emergence of a number of different "Zionisms" that would lead to the creation of the modern state of Israel. And we explore how the political principles at the core of these ideologies have fared in the 65 years since the founding of the modern Jewish state. The course is at its heart applied political theory: a case study of the way that ideas emerge from historical events, take on a life of their own, and then shape real outcomes in the world. The readings will weave together history, philosophy, literature and government.

**L23 Re St 253 Catholicism Confronts Modernity: A Global History from the French Revolution to Pope Francis**

This course explores how the Catholic Church confronted the challenges of modernity—from liberal democracy and human rights; to capitalism and modern science; to fascism and communism. We will examine also how Catholicism itself has shaped modern politics and culture. The course will draw from the experience of Catholics in different countries (with no pretense of being exhaustive) over the past two centuries. We will begin with the French Revolution and the first "culture wars" between Catholics and liberals and end with the ambivalent legacies of Vatican II. We will appreciate how US Catholicism cannot be fully understood without reference to this global context.

**L23 Re St 2600 Religion in the African American Experience: A Historical Survey**

This course introduces students to important themes in the history of African American, and thus in American, religious history, among them slavery, emancipation, urbanization, migration, consumer culture, sexuality, politics, and media technologies. Primary attention is given to Afro-Protestantism in North America and the cultural, social, and religious practices and traditions of these black communities. However, students will also be introduced to specific expressions of religious diversity and varying religious traditions and practices in African American communities.

---

**L23 Re St 280 African-American Religions**

This course is an introduction to African-American religions. This course attends to change wrought in indigenous African religions by enslavement, the adoption of Christianity (and severe critiques of it) by slaves themselves, the building of African-American denominations, the rise of new black religious movements, and the role of religion in contemporary African-American life. At every stage of the course, religion is discussed with reference to key political developments in

broader African-American history African diasporic history. The course proceeds in three parts. The course begins with a brief introduction to key themes and problems in the study of African-American religions. For example, is there such thing as a "black church," and how does the study of African-American religion differ from the study of other religious groups or traditions? The second part, the bulk of the course, moves chronologically and situates African and African-American religions in their shifting cultural and political contexts from the beginning of the European slave trade to the present. We will discuss African-Americans' practice of several religious traditions: creole African religions, Islam, Protestant and Catholic Christianity, and new religious movements. The final part of the course focuses on several key issues and debates that are informed by the study of African-American religions and that have important connections with contemporary American life.

### L23 Re St 285 Islam in America

This course explores various Muslim discourses and practices in America with a special focus on the intersections of race, gender, and religion. In this course, students will first study the history of Islam and Muslims in America in light of the narratives of enslaved West African Muslims and some of the early narratives of immigrant Muslims. Students will then explore some later historical narratives that represent the impact of religious and racial structures on identity formations, such as the formation of the Nation of Islam, and transnational religious connections in Cold War America. Students will also examine the construction of Muslim identities and institutions in light of some of the US structures and discourses about Islam and Muslims, with regard to the racialization of Muslims, and in connection to the broader Americas. Students will also use popular culture as a site to observe the intersection of race, religion, and gender in Muslim practices.

### L23 Re St 288 Muslims in the Media and Popular Culture

In the post 9/11 context of the United States, Muslims have been a constant presence in news media, typically cast in a negative light as political others who are backwards, threatening, and inherently prone to violence. This pattern has long been replicated in films in which Muslims serve as static and dehumanized perpetrators of violence and/or as symbols of a backwards and depraved culture, antithetical to U.S. values and interests. In recent years, however, Muslims have become increasingly visible in the entertainment industry as protagonists and producers of their own media, including G. Willow Wilson's "Ms. Marvel," Hulu's "Ramy," and Netflix's "Man Like Mobeen." This course explores a selection of recent media projects created by Muslim writers, actors, musicians, and comedians. We will be pairing films, television shows, music, and comics with scholarship on Islam and religion in the media to analyze Muslim representation and storytelling in contemporary popular culture. We will evaluate these works on their own terms, noting the ways in which gender and racial hierarchies dictate who gets to represent American Muslims while also assessing how these new media both disrupt and further reify Muslims' construction as religious and political outsiders.

### L23 Re St 290 Islamophobia & U.S. Politics

The presence of Muslim minorities in the West is increasingly divisive as political leaders appeal to voters' fear of the 'Other' to promote Islamophobic agendas that reshape immigration and asylum policies and redefine Western identity as Christian. Politicians further exploit the rise of extremist groups like ISIS to justify anti-Muslim rhetoric and critique multiculturalism, claiming that Islam and the West are inherently antithetical. In this course we examine the phenomenon of Islamophobia as a form of anti-Muslim racism that parallels hostility towards other religious and racial minorities in the US. We explore how while the post-9/11 context gave way to an increase in incidents of anti-Muslim violence, contemporary manifestations of Islamophobia are deeply rooted in state level anti-black racism from the early twentieth century, as well as in anti-Muslim attitudes that date back to the colonial period. By examining academic literature, political speeches, and news media sources, we situate Islamophobia within its historical context and also analyze how US anxieties about Islam and Muslims are not only gendered and racialized, but also exist across the political spectrum.

### L23 Re St 2910 Racism and Antiracism

When President Obama was elected, it ignited a debate about whether America had finally become "post-racial." This assertion was belied by an entrenched underclass of Blacks and others from immigrant backgrounds; by the regular killing of innocent, young Black men alongside their mass incarceration, along with a whole series of other social indicators; by the dramatic rise in anti-Semitic incidents and Islamophobia globally; and most evidently by the discourse used during the Trump era that weaponized white Christian nationalism. At the end of four years of the Trump presidency defined by racist discourse and policies, it culminated in an insurgent riot on the Capitol designed to block the peaceful transfer of power, the basis of American democracy. This course provides the long view to understanding this recent period in American and global history. We begin by defining key terms in the discussion around racism today, including what we mean by racism and what unites anti-Semitism, anti-Black racism and Islamophobia, but also notions like privilege, cultural appropriation, and microaggressions. We then move on to the long history of the category of race. We start with a unit on race and religion and then move on to the role of the discovery of the "New World" and the development of the Atlantic slave system, and its impact on the Enlightenment, which was the incubator for the concept of race. From there, we consider how fundamental race was to European and American colonial dominance by the end of the nineteenth-century and the role it played in racial states like Nazi Germany and South Africa. The last portion of the class will focus on struggles to dismantle racism over the last century, considering the anti-colonial and Civil Rights movement, and the anti-apartheid struggle. Along the way, we will have addressed the overlaps and disconnects between anti-Black, anti-Jewish, and anti-Islamic racism and read a number of key thinkers and activists who can help us in the fight against racism.

### L23 Re St 300 Introduction to the Hebrew Bible/Old Testament

The Hebrew Bible is the foundational text of Judaism and Christianity. It is a complex compilation of materials, reflecting great diversity in ideology, literary expression, social and political circumstances, and theology. In this course, we shall read a significant amount of the Bible in English translation. We shall study the various approaches that have been taken by scholars in trying to understand the Bible in its historical context. We shall also study how the Bible was traditionally interpreted by Jews and Christians during the last two thousand years.

**L23 Re St 303 Daoist Traditions**

This course offers an introduction to the history, practices, and worldviews that define the Daoist traditions. Through both secondary scholarship and primary texts, we consider the history of Daoism in reference to the continuities and discontinuities of formative concepts, social norms, and religious practices. Our inquiry into this history centers on consideration of the social forces that have driven the development of Daoism from the 2nd century to the modern day. Special consideration is given to specific Daoist groups and their textual and practical traditions: the Celestial Masters (Tianshi), Great Clarity (Taiqing), Upper Clarity (Shangqing), Numinous Treasure (Lingbao), and Complete Perfection (Quanzhen). Throughout the semester we also reflect on certain topics and themes concerning Daoist traditions. These include constructions of identity and community, material culture, the construction of sacred space, and cultivation techniques.

**L23 Re St 3030 Love Songs and Laptops: Rediscovering Medieval Music in the Digital Age**

Using our laptops as portals into the past, students will gain first-hand experience as historical detectives. In this course, we will explore the world of medieval love—from the chivalrous and courtly to the bodily and obscene—as represented in books of songs from the fifteenth century. Scrumptiously decorated and preserved, five interrelated songbooks from central France, known as the "Loire Valley Chansonniers" contain the majority of love songs from this period. Working from digitized versions of the songbooks, online editions, and modern audio recordings, we will address the following questions: what do the songbooks tell us about the culture in which they were created? How do the graphic decorations that frame each song interact with its music and lyrics? Lastly, by contextualizing these digital sources with respect to the growing interest in the interface between the humanities and digital technology, we will discuss what we can gain from these developments and what—if anything—we stand to lose. (Ability to read music not required.)

**L23 Re St 3044 Humors, Pox, and Plague: Medieval and Early Modern Medicine**

This course examines how people thought about, experienced, and managed disease in the medieval and early modern periods. Students will consider developments in learned medicine alongside the activities of a diverse range of practitioners—e.g. surgeons, empirics, quacks, midwives, saints, and local healers—involved in the business of curing a wide range of ailments. Significant attention will be paid to the experiences of patients and the social and cultural significance of disease. Major topics include: the rise and fall of humoral medicine; religious explanations of illness; diseases such as leprosy, syphilis, and plague; the rise of anatomy; herbs and pharmaceuticals; the experience of childbirth; and the emergence of identifiably "modern" institutions such as hospitals, the medical profession, and public health. The focus will be on Western Europe but we'll also consider developments in the Islamic world and the Americas.

**L23 Re St 3050 Between Malcolm X and Martin Luther King, Jr.: Race, Religion, and the Politics of Freedom**

This course focuses on the political and spiritual lives of Martin and Malcolm. We will examine their personal biographies, speeches, writings, representations, FBI files, and legacies as a way to better understand how the intersections of religion, race, and politics came to bear upon the freedom struggles of people of color in the United States and abroad. The course also takes seriously the evolutions in both Martin and Malcolm's political approaches and intellectual development, focusing especially on the last years of their respective lives. We will also examine the critical literature that takes on the leadership styles and political philosophies of these communal leaders, as well as the very real opposition and surveillance they faced from state forces like the police and the FBI. Students will gain an understanding of what social conditions, religious structures and institutions, and personal experiences led to first the emergence and then the assassinations of these two figures. We will discuss the subtleties of their political analyses, pinpointing the key differences and similarities of their philosophies, approaches, and legacies; we will then apply these debates of the mid-20th century to contemporary events and social movements in terms of how their legacies are articulated and what we can learn from them in struggles for justice and recognition in 21st-century America and beyond.

**L23 Re St 3051 Orthodoxy and Heresy in Early Christianity**

From the time Jesus of Nazareth preached in the rural countryside of Judea, his followers interpreted his words differently and wrote varied accounts of what he said and did. As time passed and as Jesus' movement grew into a world religion -- Christianity -- disagreement among Christians only continued to increase, leading to the need to define and enforce correct beliefs and practices to create a Christian "orthodoxy" embodied in the now-familiar institutions of creed, canon, and clergy. Yet in the process of creating an orthodoxy, what was left out? Whose voices were suppressed? Through the careful study of ancient texts that were long-ago deemed heretical and virtually lost until the 20th century, this course examines the wide varieties of Christianity in its nascent years and discusses how the framers of orthodoxy defined themselves against these alternatives.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH, HUM EN: H

---

**L23 Re St 3065 Voice, Language and Power: Late Medieval Religious Writing**

In the later Middle Ages, there is a flowering throughout Christian Europe of religious writings that offer a new voice in which personal religious experience can be pursued and expressed. Their voices are mainly intended to be communal ones, to be contained within the Church and regulated by it. But in each case the fact that it is a voice may offer a mode of resistance, or of difference. Such writing is often aimed at lay people, sometimes exclusively at women; and sometimes the intended auditors become the authors, and propose a version of religious experience that claims a new and more intimate kind of power for its readers. This course looks at a wide range of such writing in vernacular languages read in translation (English, French and German), including the work of Meister Eckhart, Marguerite Porete, Margery Kempe, Julian of Norwich, Eleanor Hull, the anonymous writer of *The Cloud of Unknowing* and the perhaps pseudonymous William Langland, author of *Piers Plowman*. Whether such writing seeks to be orthodox or conducive to heresy, it presents a challenge to the power of clergy - a challenge that is written in the vernacular language of lay people, rather than clerical Latin, and in doing so offers distinctively new voices for religious experience. The course will also look at ways in which such work might have been influenced, if only oppositionally or at times indirectly, by contact with Muslim and Jewish writing (including Jewish exegesis of the Psalms).

---

**L23 Re St 3071 Solidarity and Silence: Religious Strategies in the Political Sphere**

Although political action is often considered a problem of making oneself heard, religious practices of silence, self-effacement, and withdrawal from certain worldly struggles have guided many significant political and social movements, particularly forms of non-violent resistance. This course considers the role of religious thought and practice in such movements in the twentieth century. The history of these movements presents an apparent paradox: how can political action emerge from the supposedly "private" realm of religion in the modern era, particularly its most individualistic formations in contemplative and mystical practices? Does the historical role of these practices in the political sphere complicate their portrayal in some scholarship as private, individual, and depoliticizing? With these questions animating our investigations, we will consider the work of authors and activists including Leo Tolstoy, Mahatma Gandhi, Dietrich Bonhoeffer, Martin Luther King, Jr., Simone Weil, and William Barber, as well as the history of movements associated with their work. Toward the end of the semester, we will turn to contemporary movements

against economic inequality, intimate violence, racially motivated violence, and discrimination toward transgender persons to discuss the use of religious strategies or religiously-derived strategies in current political and social activism.

**L23 Re St 3074 Hinduism and the Hindu Right**

We are witnessing a global rise in rightwing politics, and India is no exception. In May 2019, Narendra Modi and his "Hindu Nationalist" party were elected to power for a second term. Observers in the United States and Europe may be stunned by what seems to be a new development, but observers in India have been following the rise of the Hindu Right since the early 1990s. In its wake, the Hindu Right has brought violence against minorities; curbs on free speech; and moves toward second-class citizenship for Indian Muslims. This course will track the history of the Hindu Right in India from its 19th-century roots to the present. The struggle to come to grips with the Hindu Right is of immediate political relevance. It also raises big questions about the history of religion and the politics of secularism.

**L23 Re St 307F Introduction to the New Testament**

What can be known -- from an historical perspective -- about the life and teachings of Jesus and his earliest followers? How did Jesus see himself and how did his followers see him? How did the lives, teachings, and deaths of Jesus and his followers come to form the heart of a new movement? If Jesus and the apostles were all Jews, how did Christianity emerge as a distinct "religion"? This course investigates these questions through a focus on the earliest sources for Jesus and his first followers, including and extending beyond the canonical books of the Christian New Testament. Our approach in this course is historical and literary, rather than theological or confessional: we ask what Jesus, his first followers, and their Jewish and "pagan" contemporaries did and believed, and we try to catch glimpses of the worlds in which they lived and the cultures which they took for granted.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM

---

**L23 Re St 3080 City on a Hill: The Concept and Culture of American Exceptionalism**

This course examines the concept, history, and culture of American exceptionalism--the idea that America has been specially chosen, or has a special mission to the world. First, we examine the Puritan sermon that politicians quote when they describe America as a "city on a hill." This sermon has been called the "ur-text" of American literature, the foundational document of American culture; learning and drawing from multiple literary methodologies, we will re-investigate what that sermon means and how it came to tell a story about the Puritan origins of American culture--a thesis our class will reassess with the help of modern critics. In the second part of this class, we will broaden our discussion to consider the wider (and newer) meanings of American exceptionalism, theorizing the concept while looking at the way it has been revitalized, redefined and redeployed in recent years. Finally, the course ends with a careful study of American exceptionalism in modern political rhetoric, starting with JFK and proceeding through Reagan

to the current day, ending with an analysis of Donald Trump and the rise of "America First." In the end, students will gain a firm grasp of the long history and continuing significance-the pervasive impact-of this concept in American culture.

### **L23 Re St 3082 From the Temple to the Talmud: The Emergence of Rabbinic Judaism**

This course offers a survey of the historical, literary, social, and conceptual development of Rabbinic Judaism from its emergence in late antiquity to the early Middle Ages. The goal of the course is to study Rabbinic Judaism as a dynamic phenomenon -- as a constantly developing religious system. Among the topics to be explored are: How did Judaism evolve from a sacrificial cult to a text-based religion? How did the "Rabbis" emerge as a movement after the destruction of the Second Temple and how could they replace the old priestly elite? How did Rabbinic Judaism develop in its two centers of origin, Palestine (the Land of Israel) and Babylonia (Iraq), to become the dominant form of Judaism under the rule of Islam? How did Jewish ritual and liturgy develop under Rabbinic influence? How were the Rabbis organized and was there diversity within the group? What was the Rabbis' view of women, how did they perceive non-Rabbinic Jews and non-Jews? As Rabbinic Literature is used as the main source to answer these questions, the course provides an introduction to the Mishnah, the Palestinian and Babylonian Talmuds, and the Midrash-collections -- a literature that defines the character of Judaism down to our own times. All texts are read in translation.

### **L23 Re St 3090 Chinese Thought**

This course offers an introduction to Chinese thought through a study of thinkers from arguably one of the most vibrant periods of religious-philosophical discourse in China. We will examine early classical texts from the Daoist, Confucian, Mohist, and Legalist traditions, and we will follow arguments in which the thinkers expand upon, dispute, and respond to each other in regard to questions that are still important to us today. We will explore issues such as notions of the self, conceptions of the greater cosmos, the role of rituals, ideas about human nature, and the subjects of freedom and duty. Motivating the course will be the underlying question, "What is the good life?"

Credit 3 units. A&S IQ: HUM, LCD BU: IS EN: H

---

### **L23 Re St 3091 Confucian Thought**

This course is designed to introduce students to the history and teachings of one of the world's major religious traditions: Confucianism. We will examine how Confucianism developed in ancient China and afterwards spread throughout East Asia and beyond. In particular, we will pay attention to the issue of ritual and how Confucians attempted to ritualize social interactions and the world at large. In order to do so, we will engage in the writings of Confucius, Mengzi, and Xunzi, three early Chinese writers whose basic ideas about ritual heavily informed myriad cultural practices that are formative for large portions of East Asia today. Hence, this course on ancient thinkers not only introduces thoughts and practices prevalent throughout pre-modern China, Japan, and Korea. It also functions as a catalyst that helps us understand some of the reasons and motivations behind these communities' recent efforts to renegotiate and question "the colonialist flavor" of human rights and democracy.

Credit 3 units. A&S IQ: HUM, LCD BU: ETH EN: H

---

### **L23 Re St 3100 Religion and Violence**

Is religion intrinsically connected with violence or merely manipulated to justify political positions and incite supporters? How has religion been the motivation and justification behind violent conflict, aggression and persecution? Does religion have a greater power to

make war or peace? People have debated these questions for centuries as believers waged war in the name of their god(s). We'll study several critical theories about religion and violence and test them on historical and recent "religious" conflicts. Our investigation will be organized around five types of violence: 1) martyrdom and redemptive suffering, 2) claims on sacred space, 3) the violence of social stratification and "othering," 4) war and 5) apocalyptic and spiritual warfare. Case studies ranging from early Christian martyrs and crusades to attacks on abortion clinics and Tokyo subways will help clarify patterns and types of religious violence.

### **L23 Re St 311 Buddhist Traditions**

This course examines the historical development of Buddhism from its origins in South Asia in the 6th to 5th century BCE, through the transmission of the teachings and practices to East Asia, Southeast Asia, and Tibet, to contemporary transformations of the tradition in the modern West. In the first third of the course, we focus on the biographical and ritual expressions of the historical Buddha's life story, the foundational teachings attributed to the Buddha, and the formation and development of the Buddhist community. In the second third, we examine the rise of the Mahayana, the development of the Mahayana pantheon and rituals, and the spread of Mahayana in East Asia. In the final third, we explore the Theravada tradition in Sri Lanka and Thailand, then Tantric Buddhism in India, Tibet, and East Asia. We close the course with an overview of Buddhism in the modern West.

### **L23 Re St 3110 Sacred Architecture of the Indian Subcontinent**

The built structure remains a principal visible record of the evolution of a civilization and its culture. Through this interdisciplinary course on culture, art, design, religion and society, students will be introduced to and gain a deeper insight into the rich diversity of South Asia through the study of the architecture of its significant sacred places. We will take a journey through the Hindu, Jain and Buddhist Temples; the Islamic Mosque; the Sikh Gurudwara; the Zoroastrian Fire Temple; the Jewish Synagogue; and the Christian Church, tracing the evolution

of these places of worship from the Indus Valley Civilization to Pre-Colonial times. Through visuals, readings, and discussions, students will learn about the different architectural styles and motifs used in sacred buildings and how they came about. We will explore the inter-relationships between the design elements through the lens of political, social, religious, regional, artistic, and technological influences and understand the ways in which evolving design principles reflect these influences overtime. This course will be of interest to students of languages and cultures, architecture, archeology, art history, history, preservation, religion, and South Asian culture, among others. Please note: At the end of the semester, students will go on a field trip to experience the diverse sacred architecture in the St. Louis region. No prior knowledge of architecture or the history of this region is required. Same as L73 Hindi 311

### L23 Re St 312 South Asian Religious Traditions

In this course we will learn the basic vocabulary (conceptual, ritual, visual) needed to become conversant with the various religious traditions that are important to personal, social, and political life on the Indian subcontinent and beyond. We will first encounter each tradition through narrative, with the support of visual media. We will then explore how contemporary adherents make these traditions meaningful for themselves -- in their everyday lives, in their struggles for social change, and in their political statements and contestations. Students will also become familiar with the analytical categories and methodologies that make up the basic toolkit of the religion scholar. Prior knowledge of India or Pakistan is not required. First year students are welcome to enroll in this course.

### L23 Re St 3130 Sexuality in Early Christianity

What did Jesus of Nazareth and his early followers teach about sexuality in terms of marriage, adultery, divorce, the virtues of procreation and celibacy, same-sex relationships, and erotic desire? How and why did ancient Christians take different stances on these issues, and how do these traditions continue to inform sexual ethics and gender roles today? In this course, we will study these questions by examining key passages from the teachings of Jesus in the Gospels, Paul's letters, writings of early church leaders, martyr propaganda, monastic literature, and apocryphal books deemed heretical. We will also consider the interpretations of contemporary historians of religion informed by recent trends in sexuality and gender theories.

### L23 Re St 313C Islamic History 600-1200

The cultural, intellectual, and political history of the Islamic Middle East, beginning with the prophetic mission of Muhammad and concluding with the Mongol conquests. Topics covered include: the life of Muhammad; the early Muslim conquests; the institution of the caliphate; the translation movement from Greek into Arabic and the emergence of Arabic as a language of learning and artistic expression; the development of new educational, legal and pietistic institutions; changes in agriculture, crafts, commerce and the growth of urban culture; multiculturalism and inter-confessional interaction; and large-scale movements of nomadic peoples.

### L23 Re St 3140 Global Circuits: Religion, Race, Empire

This seminar explores how American entanglements of race and religion shape and are part of larger global processes. Over the course of the semester, we will investigate these entanglements through conceptual, historical, and ethnographic questions and insights on

the remapping of religious traditions and communal experiences onto imperial terrain. We will examine this through a range of problem spaces including: colonial rule, missions, and racial hierarchies; migration and its relationship to religion; the racialization of religion; diaspora and empire; and persecution and power.

### L23 Re St 314C Islamic History: 1200-1800

An introduction to Islamic polities and societies from the Mongol conquests to the thirteenth century to the collapse and weakening of the colossal "gunpowder" empires of the Ottomans, Safavids and Mughals in the early eighteenth century. Broadly speaking, this course covers the Middle Period (1000-1800) of Islamic history, sandwiched between the Early and High Caliphal Periods (600-100) on the one hand and the Modern Period (1800-Present) on the other hand. Familiarity with the Early and High Caliphal periods is not assumed. The course will not be a "survey" of this period but a series of "windows" that will allow you to develop both an in-depth understanding of some key features of Islamic societies and a clear appreciation of the challenges (as well as the rewards!) that await historians of the Middle Period. Particular attention is given to the Mamluk and Ottoman Middle East, Safavid Iran and Mughal India.

### L23 Re St 315 Virtues, Vices, Values: Regulating Morality in Modern America

This course takes morality and the question of "what's right" seriously as a lens through which to understand and assess modern American history. "Morality" is, of course, a devilishly flexible rhetoric, a language invoked to tell people how to act and how to be good, or, conversely, to criticize and to shame. When the state or a community wants its citizens or members to be "good," it crafts laws and creates customs to encourage or inhibit behaviors. Yet "good" is a contested concept, especially in a diverse, multiracial society. Thus this class examines a) how state and non-state actors, including religious leaders, have attempted to regulate the lived experiences of Americans and b) the conflicts that emerge over what, exactly, is correct, or right, or good for individuals, society, and the state. To what degree does calling something moral or immoral articulate or obstruct policy solutions? What do political coalitions oriented around "values" accomplish? Is it possible to hew to moral frames and remain inclusive and tolerant? Topics may include marriage, abortion, immigration, alcohol, incarceration, disease, money, and medical care.

### L23 Re St 3160 Beauty & Aesthetics In Islam: Islamicate Literature, Material Art, & Architecture

This course provides an introduction to beauty and aesthetics in Muslim societies from across the world. The course focuses on Islamicate literature (e.g., poetry, narrative, biography), material art (e.g., textiles, ceramics, decorated manuscripts), and architecture (e.g., palaces, built gardens, mosques, mausoleums). Some attention is also given to performing arts (e.g., dance, music, plays, puppetry). Various types of material will be considered, ranging from religious to non-religious. Material will be drawn from across the Muslim world, including the Middle East, Sub-Saharan Africa, Central Asia, South Asia, and Southeast Asia. Although the course is primarily concerned with the premodern period, it will also consider the impact of modernity on Muslim literature, art, and architecture.

**L23 Re St 3162 American Unbelief from the Enlightenment to the Present**

This course examines American secularism, humanism, freethought, and atheism from the Enlightenment forward to the present. Topics to be explored include: the tensions between secular and Christian conceptions of the nation's founding, blasphemy and irreligious cartoons, the civil liberties of atheists and nontheists, the battles over religion in the public schools, atheism and gender politics, the culture wars over secular humanism, and the contemporary growth of the religiously disaffiliated or "nones." The course considers not only the intellectual dimensions of skeptical critiques of religion, but also the underlying politics of secularism (and anti-secularism) in a nation routinely imagined as "under God."

**L23 Re St 3171 Religion and Culture in South and Southeast Asia**

Although it is now common to differentiate between South and Southeast Asia, historically these regions have often been conceptualized as part of a single geographical area. Known as the "(East) Indies", this area is marked by a rich history of (earlier) Hindu and Buddhist influences, as well as (later) Islamic and Christian influences. The present course will take an in-depth look at the four aforementioned religious traditions, and examine how they have shaped local forms of culture in premodern and modern times. Students will be introduced to host of phenomena in South and Southeast Asian societies, including religious worship, education, law, traditional governance, colonial governance, art, architecture, economic production, kinship, gender, and sexuality. Countries to be studied in the course include India, Pakistan, Sri Lanka, Thailand, Myanmar, Indonesia, Malaysia, the Philippines, and Papua New Guinea.

**L23 Re St 3180 The Abuse Crisis in Modern Christianity**

For over a quarter-century, journalists have broken story after story about sexually abusive clergy in the U.S., many of them serial abusers of children and adolescents. While most accounts have focused on Catholic priests, many have also emerged of abusive evangelical and other Protestant ministers. The stories have illuminated how church bureaucrats have consistently protected abusers and subverted the efforts of victims and their families to seek recompense, accountability, and justice. These protections have often succeeded because of churches' political connections to law enforcement and legislators who have helped hide perpetrators and stymie survivors. Together we will analyze this cautionary tale about religion and politics by contextualizing it within the broader history of Christianity in the United States and beyond. Is this a case simply of a few bad apples or of institutional corruption? How has the church's response been shaped by fear of scandal, antipathy toward secularism, and theological teachings on gender and homosexuality? How does sexual abuse fit into the history of the church as a hierarchical institution? What challenges has the crisis posed to people of faith who are committed to the church, and can trust be repaired? Readings include legal case studies, internal church correspondence, victims' statements and criminal justice reports, documentary films and memoirs, and both journalistic and scholarly analysis of the clergy sex abuse crisis in the U.S. church. **WARNING:** Many of our readings contain difficult accounts of abuse as well as the subsequent trauma most victims suffer. If this subject matter is triggering for you and you'd like to speak with me about whether or not to take it, I'll be glad to help you think through it.

**L23 Re St 3183 The Jews of North Africa**

This course examines the colonial and postcolonial experiences of Jews living in North Africa (mainly Algeria, Morocco, Tunisia, Libya and Egypt) in the context of the region's connections with and relationships to the European powers in the 19th and 20th centuries. We will focus on how the intrusion of foreign powers disrupted and shifted long-standing relationships between Jews and their non-Jewish neighbors, particularly the Muslim populations. We will also explore changes that occurred within the Jewish community as Jews negotiated their place within the new European Imperial system and its subsequent dismantling. Students will have the opportunity to engage with European ideas of "regenerating" North African Jews living under Ottoman Rule, the changing political and social statuses of Jews throughout the French and British regions, the changing relationship between Jews and their non-Jewish neighbors, the rupture caused by both World Wars, and how Jews coped with and responded to the dismantling of European empires and the birth of nation-states in the region, including Israel.

**L23 Re St 3184 A Rainbow Thread: A History of Queer Identities in Judaism and Islam**

The notion that gender and sexuality minorities are forbidden or simply do not exist within traditional Judaism and Islamic traditions is an assumption that has been questioned in recent years. For these scholars and activists, it is not up for debate whether someone can be queer and Jewish or queer and Muslim. Therefore, what follows is an exploration of how to resurrect gender non-conforming interpretations of religious texts and rediscover the spectrum of gender and sexual identities that have always existed within Judaism and Islam. The course is divided into three parts. First, we will examine the religious textual traditions of both faiths to establish the space for queer identities in both the Qur'an and Torah as well as the traditions of Hadith and Talmud. Second, we will study key communities such as medieval Iberia, the Ottoman Mediterranean, Hasidic communities in Eastern Europe, Qajar Iran, and the colonial empires of the Middle East. This survey will show the influence European Christian dominance had (or did not have) on the evolution of Jewish and Islamic gender and sexual norms from pre-modern times through the 20th century. Finally, we will examine the 21st century by reading the memoirs of trans Muslims and trans Jews in order to analyze the ways in which contemporary queer Jewish and Islamic individuals frame their experiences and tell their stories of faith with agency, in their own words.

**L23 Re St 3185 The Jewish Experience in the United States: A History of Exceptions and Exceptionalism**

This course surveys American Jewish life from the colonial settlement of the new world to the present day with special emphasis on configurations of the Jewish Question in a variety of historical and geographical contexts. We will explore the paradox between American Jewish social and economic success over the last three and a half centuries and the sense of ambivalence many Jews feel toward their place in American society. As a class, we will consider key moments in American Jewish history, including the converso community that arrived alongside early Spanish settlers, the role of Jews in the slave trade and plantation complex, Jewish appeals for acceptance and equality within the American colonies and early republic, as well as how Jews coped with a divided union during the Civil War. We will analyze successive waves of Jewish immigration from different countries, the building of Jewish communal structures, and the evolution of Judaism and Jewish identity within the United States. Jewish contributions to American culture will also be an important

focus of the class as we explore the birth of American popular culture through music, film, television, and fiction. Throughout the course we will be cognizant of the regional, religious, ethnic, racial, class, gender, and sexual differences that comprise American Jewish society from its early inception to the present. We will observe how Jews have been simultaneously welcomed as well as excluded from political, economic, and social realms of the American community. As often as possible we will engage in a multitude of case studies and primary sources so we can gain specific regional expertise, while maintaining a national, and often transnational lens for analyzing these central questions.

### L23 Re St 3201 Gender, Culture, and Madness

This course will explore the relationships among gender constructs, cultural values, and definitions of mental health and illness. Understandings of the proper roles, sensibilities, emotions, and dispositions of women and men are often culturally and morally loaded as indicators of the "proper" selves permitted in a given context. Across cultures, then, gender often becomes an expressive idiom for the relative health of the self. Gender identities or presentations that run counter to these conventions are frequently identified as disordered and in need of fixing. In this course, we will take up these issues through three fundamental themes: the social and cultural (re)production of gendered bodies and dispositions; the normalization of these productions and the subsequent location of "madness" in divergent or dissonant experiences of embodiment; and the situation of discourses of "madness" within debates of resistance and conformity, selfhood and agency.

### L23 Re St 321 American Religion and the Politics of Gender and Sexuality

Following philosopher Michel Foucault's vital insight that "sexuality is a major transfer point in the relations of power," this course will explore the complex ways in which theological ideas and religious movements have shaped legal doctrines relating to sex, gender, and sexuality in the United States from roughly the turn of the twentieth century to the present. It will examine how and why religious groups have mobilized within the legal arena at various points in US history, the devotional commitments that influence their activism, the constitutional claims and counterclaims that have emerged over time as a result of legal contestation, and the lived impact of various judicial decisions. To do so, the course will be structured thematically around three overlapping constitutional domains: (1) equal protection rights for women and sexual minorities, (2) substantive due process commitments to privacy and bodily autonomy, and (3) free speech principles related to sexual self-expression. The impact of religious advocacy on contemporary controversies such as drag show bans, restrictions on reproductive healthcare, religious exemptions to LGBT non-discrimination laws, pornography regulation, gender-affirming care access, and more will all be covered. By applying the theories and methods of critical religious studies, this course also takes questions of American religion and sexual politics as a starting point for introducing undergraduate students to legal studies more generally. Through classroom conversations and course texts, students

will become familiar with the structure of the American legal system, different methods of constitutional interpretation, theoretical concerns that shape legal thinking, and critical reading skills that may be used to approach legal texts such as judicial opinions. Students from all academic backgrounds interested in gaining increased literacy in American law are encouraged to enroll-no prior exposure is required.

### L23 Re St 323 Jews and Christians in the Premodern World

In modern times, it is common to think of Judaism and Christianity as two distinct, if historically connected, "religions." Increasingly, however, historians of ancient religions have thought more deeply about the implications of taking Christianity and Judaism in antiquity as more fluid and porous than we tend to think of them. In this upper division course, we will explore the ways in which the boundaries that early Christians attempted to draw between Christianity and Judaism remained unstable and incomplete. While the various efforts to establish early Christian identity led to the production of a variety of hermeneutical representations of the Judaioi, these literary representations nevertheless often reflected, to various degrees, engagement with actual historical Jews/Judeans, who shared political, economic, and intellectual worlds with Christians. We will consider how early Christian discourse about Jews and Judaism informed and was informed by intra-Christian disputes and their negotiations of their relationships with the wider Greco-Roman culture. We will explore how Christian efforts to establish both continuity and difference between Judaism played a role in the construction of 'orthodoxy' and 'heresy,' as well as the way in which Christians re-appropriated Jewish texts, rituals, and ideas in their efforts to construct a Christian identity. We will also explore how this continued dynamic of difference and continuity continued into the Middle Ages.

---

### L23 Re St 3230 Jews and Jewishness in Black American Thought

The history of what has been called "Black-Jewish relations" in the United States has a rich and contested history. The stories told feature solidarity, controversy, and betrayal. This course will look at that history by attending to the role of Jews and Judaism in Black thought. How has Jewishness featured in the self-understanding of Black writers? Have Jews been regarded as allies or adversaries, role models or competitors? What role have Jewish texts or narrative paradigms played in Black religion? What have Black writers made of the Jewish project of national liberation?

Credit 3 units. A&S IQ: HUM EN: H

---

### L23 Re St 3232 Religion & Nationalism in the Middle East & South Asia

How does religion shape national identity? How and why do some religious traditions become intertwined with the identities of national communities, often at the expense of others? In this course we explore how Islam, Judaism, Hinduism, and Christianity have interacted with modern nationalism to shape the nation-states of the Middle East and South Asia in profound ways. Throughout the course, we examine a range of case studies to compare and contrast, for example, the complex interaction between religion and nationalism in the creation of Pakistan and Israel in 1947 and 1948 as Muslim and Jewish national homes, the rise of the Hindu Right in India, religion and race in Iran, or the significance of Christianity and Islam for Palestinians and Iraqis. As we do so, we investigate how national movements have selectively and creatively engaged religious traditions over time in order to redefine communal boundaries, narrate new histories, exclude minorities, and reread sacred texts to draw the borders of their national homelands, which have often overlapped at great cost.

---

**L23 Re St 3262 The Early Medieval World 300-1000**

This course begins with the crisis of the Roman Empire in the third century and the conversion of the Emperor Constantine to Christianity in 312. We will study the so-called "barbarian invasions" of the fourth and fifth centuries and the collapse of the Roman Empire in the West. The Roman Empire in the East (and commonly known as the Byzantine Empire after the seventh century) survived intact, developing a very different style of Christianity than in the lands of the former western empire. Apart from examining Christianization in the deserts of Egypt or the chilly North Sea, we will discuss the phenomenon of Islam in the seventh century (especially after the Prophet Muhammad's death in 632) and the Arab conquests of the eastern Mediterranean and north Africa. In the post-Roman world of the West we will read about the Anglo-Saxons, the Carolingians, and the Vikings. In exploring these topics we will have to think about the relationship of kings to popes, Emperors to patriarchs, of missionaries to pagans, of cities to villages, of the sacred to the profane. Our attention will be directed to things as various as different forms of monasticism, the establishment of frontier communities, the culture of the Arabian peninsula, magic, paganism, military tactics, Romanesque churches, sea travel, manuscript illumination, the architecture of mosques, early medieval philosophy, the changing imagery of Christ, holiness, and violence as a redemptive act.

**L23 Re St 3300 Native American/Euro-American Encounters: Confrontations of Bodies and Beliefs**

This course surveys the history and historiography of how Native Americans, Europeans, and Euro-Americans reacted and adapted to one another's presence in North America from the 1600s to the mid-1800s, focusing on themes of religion and gender. We will examine the cultural and social implications of encounters between Native peoples, missionaries and other European and Euro-American Protestants and Catholics. We will pay particular attention to how bodies were a venue for encounter-through sexual contact, through the policing of gendered social and economic behaviors, and through religiously-based understandings of women's and men's duties and functions. We will also study how historians know what they know about these encounters, and what materials enable them to answer their historical questions.

**L23 Re St 3341 Religion, Race, and Migration: Borders of Difference**

This seminar is an experiment in studying the intersections of religion, race, and migration through the idea of difference. We discuss how particular understandings of religion, race, and migration inform contemporary scholarship and shape national and international legal and governmental practices. Specifically, this course explores how difference-of community, body, and place-produces conditions of possibility. Over the semester, we will investigate various borders of difference, using binaries to guide our analysis. We will examine this through a range of problem spaces including: religion/secularism; race/ethnicity/sect; terrorist/citizen; and refugee/migrant. Ultimately, this course aims to critically unpack the relations of power by which people, places, and ideas are differentially constructed, maintained, and transformed

Same as L57 RelPol 334

---

**L23 Re St 3345 The Politics of Play and Protest: Religion and Sports in America**

Play is an essential component of human life. Yet, while the word play evokes leisure and frivolity, it can be serious work. Cultural values, spiritual truths, and social politics arise from play, particularly when they are codified in sports. From raucous games of Chunkey in pre-Columbian North America to Tim Tebow's gameday prayers, sports have long been used as instruments of social cohesion and as a way to connect a people to their gods. This course will examine the close relationship between religion and sport in modern American history and will push students beyond the sports-as-religion paradigm to consider sport as a medium of exchange between the overlapping influences of celebrity, national politics, religion, and the economy. We will cover how sports and religion intersect with topics like nationalism, gender, race, sexuality, identity formation, commercialism, mass-media, recreation, and labor. Concepts like ritual, collective effervescence, and sacred space will be used to analyze key historical movements and organizations, such as muscular Christianity, the YMCA, Fellowship of Christian Athletes, the Olympics, amateurism and the NCAA, and Black Lives Matter. Key figures for examining sport as a site of piety and protest include Muhammad Ali, Serena Williams, Tim Tebow, Jackie Robinson, Colin Kaepernick, and Abe Saperstein. Throughout the course we will ask: How, where, and when do sports act religiously? What do sports and religion accomplish together that they cannot accomplish alone?

Same as L57 RelPol 3345

**L23 Re St 334C Crusade, Conflict, and Coexistence: Jews in Christian Europe**

This course will investigate some of the major themes in the history of the Jews in Europe, from the Middle Ages to the eve of the French Revolution. Jews constituted a classic, nearly continuous minority in the premodern Christian world—a world that was not known for tolerating dissent. Or was it? One of the main purposes of the course is to investigate the phenomenon of majority/minority relations, to examine the ways in which the Jewish community interacted with and experienced European societies, cultures, and politics. We will look at the dynamics of boundary formation and cultural distinctiveness; the limits of religious and social tolerance; the periodic eruption of persecution in its social, political, and religious contexts; and the prospects for Jewish integration into various European societies during the course of the Enlightenment era.

---

**L23 Re St 3354 Vienna, Prague, Budapest: Politics, Culture, and Identity in Central Europe**

The term Central Europe evokes the names of Freud and Mahler; Kafka and Kundera; Herzl, Lukács, and Konrád. In politics, it evokes images of revolution and counter-revolution, ethnic nationalism, fascism, and communism. Both culture and politics, in fact, were deeply embedded in the structures of empire (in our case, the Habsburg Monarchy)—structures which both balanced and exacerbated ethnic, religious, and social struggles—in modern state formation, and in the emergence of creative and dynamic urban centers, of which Vienna, Budapest, and Prague were the most visible. This course seeks to put all of these elements into play—empire, nation, urban space, religion, and ethnicity—in order to illustrate what it has meant to be modern, creative, European, nationalist, or cosmopolitan since the 19th century. It engages current debates on nationalism and national identity; the viability of empires as supra-national constructs; urbanism and modern culture; the place of Jews in the social and cultural fabric of Central Europe; migration; and authoritarian and violent responses to modernity.

**L23 Re St 335C Becoming "Modern": Emancipation, Antisemitism and Nationalism in Modern Jewish History**

This course offers a survey of the Jewish experience in the modern world by asking, at the outset, what it means to be-or to become-modern. To answer this question, we look at two broad trends that took shape toward the end of the eighteenth century—the Enlightenment and the formation of the modern state—and we track changes and developments in Jewish life down to the close of the twentieth century with analyses of the (very different) American and Israeli settings. The cultural, social, and political lives of Jews have undergone major transformations and dislocations over this time—from innovation to revolution, exclusion to integration, calamity to triumphs. The themes that we will be exploring in depth include the campaigns for and against Jewish "emancipation;" acculturation and religious reform; traditionalism and modernism in Eastern Europe; the rise of political and racial antisemitism; mass migration and the formation of American Jewry; varieties of Jewish national politics; Jewish-Gentile relations between the World Wars; the destruction of European Jewry; the emergence of a Jewish nation-state; and Jewish culture and identity since 1945.

**L23 Re St 336C History of the Jews in Islamic Lands**

This course is a survey of Jewish communities in the Islamic world, their social, cultural, and intellectual life from the rise of Islam to the Imperial Age. Topics include: Muhammad, the Qur'an and the Jews; the legal status of Jews under Islam; the spread of Rabbinic Judaism in the Abbasid empire; the development of new Jewish identities under Islam (Karaites); Jewish traders and scholars in Fatimid Egypt; the flourishing of Jewish civilization in Muslim Spain (al-Andalus); and Sephardi (Spanish) Jews in the Ottoman empire. On this background, we will look closely at some of the major Jewish philosophical and poetical works originating in Islamic lands. Another important source to be studied will be documents from the Cairo Genizah, reflecting social history, the status of women, and other aspects of daily life.

**L23 Re St 3401 Pilgrims and Seekers: American Spirituality from the Transcendentalists to the Millennials**

This seminar focuses on the formation of "spirituality" in American culture from the Transcendentalist world of Ralph Waldo Emerson on through more recent expressions of the "spiritual-but-not-religious" sensibility. How did "spirituality" come to be seen as something positively distinct from "organized religion"? What are the main contours of spiritual seeking in American culture, especially among those who claim no specific religious affiliation? The course also explores the social, political, and cultural consequences of this turn to the spiritual over the religious: for example, the consecration of liberal individualism, the relationship of religious exploration to both environmentalism and consumerism, the politics of cultural appropriation, the negotiation of religious pluralism, and the pursuit of the spiritual in art.

**L23 Re St 3421 Childhood, Culture, and Religion in Medieval Europe and the Mediterranean World**

From child saints to child scholars and from child crusaders to child casualties, the experience of childhood varied widely throughout the European Middle Ages. This course will explore how medieval Jews, Christians, and Muslims developed some parallel and some very much divergent concepts of childhood, childrearing, and the proper cultural roles for children in their respective societies. Our readings will combine primary and secondary sources from multiple perspectives and multiple regions of Europe and the Mediterranean World, including a few weeks on the history and cultural legacy of the so-called Children's Crusade of 1312. We will conclude with a brief survey of medieval childhood and its stereotypes as seen through contemporary children's books and TV shows. This course fulfills the Language & Cultural Diversity requirement for Arts & Sciences.

**L23 Re St 3422 Art of the Islamic World**

This course surveys the art and architecture of societies in which Muslims were dominant or in which they formed significant minorities from the seventh through the 20th centuries. It examines the form and function of architecture and works of art as well as the social, historical, and cultural contexts; patterns of use; and evolving meanings attributed to art by the users. The course follows a chronological order, and selected visual materials are treated along chosen themes.

Themes include the creation of a distinctive visual culture in the emerging Islamic polity; the development of urban institutions; key architectural types such as the mosque, madrasa, caravanserai, palace, and mausoleum; art objects and the art of the illustrated book; cultural interconnections along trade and pilgrimage routes; and Westernization and modernization in art and architecture.

### L23 Re St 343C Europe in the Age of the Reformation

How should people act towards each other, towards political authorities and towards their God? Who decided what was the "right" faith: the individual? the family? the state? Could a community survive religious division? What should states do about individuals or communities who refused to conform in matters of religion? With Martin Luther's challenge to the Roman Catholic Church, the debates over these questions transformed European theology, society, and politics. In this class we will examine the development of Protestant and Radical theology, the Reformers' relations with established political authorities, the response of the Catholic Church, the development of new social and cultural expectations, the control of marginalized religious groups such as Jews, Muslims, and Anabaptists, and the experiment of the New World.

### L23 Re St 3451 Religion and Race in the United States

Race and ethnicity are central to how religious pluralism is worked out in America. How do the categories of race and religion intersect to produce concepts of a normative American identity? In this course, we examine the construct of race across various American congregational communities in order to understand debates on American identity and belonging. We also explore the idea of an American civil religion, and we engage with the boundaries of inclusion and exclusion of particular religious groups within this category based upon racialized criteria.

### L23 Re St 3461 Zen Buddhism

This course is designed to introduce students to the history, teachings, and practice of Zen Buddhism in China (Chan), Japan (Zen), Korea (Sôn), and the United States. We will discuss how Zen's conception of its history is related to its identity as a special tradition within Mahayana Buddhism, as well as its basic teachings on the primacy of enlightenment, the role of practice, the nature of the mind, and the limitations of language. We will also look at Zen Buddhism and its relation to the arts, including poetry and painting, especially in East Asia. Finally, we will briefly explore the response of Zen teachers and practitioners to questions of war, bioethics, the environment and other contemporary issues. Prerequisites: Rel St. 203 or Re St 311.

---

### L23 Re St 3465 Islamic Law

This course will present a general overview of Islamic law and an introduction to the study of religious legal authority, which values consensus. It will then explore the formation of the major schools of law. Next, it will debate the notions of "ijtihad" and "taqlid" and discuss

how open and independent legal decisions have been in the Islamic world. It will also trace the transmission of legal knowledge in religious institutions across time and place by focusing on medieval Muslim societies and by closely examining the education of a modern-day Ayatollah. Note: L75 546 is intended for graduate students only.

### L23 Re St 3513 Muhammad: His Life and Legacy

This course intends to examine the life and representations of the Prophet Muhammad from the perspective of multiple spiritual sensibilities as articulated in various literary genres from medieval to modern periods. The course is divided roughly into two parts. One part deals with the history of Muhammad and the related historiographical questions. The second part deals with the representations of Muhammad in juristic, theological, Sufi, etc. literature. Because of the availability of primary sources in English translation, there will be a healthy dose of primary source reading and analysis throughout the semester. Those students with advanced Arabic (and Persian and Turkish) skills will be encouraged to engage sources in their original language.

### L23 Re St 3540 Anthropological and Sociological Study of Muslim Societies

This course introduces students to anthropological and sociological scholarship on Muslim societies. Attention will be given to the broad theoretical and methodological issues which orient such scholarship. These issues include the nature of Muslim religious and cultural traditions, the nature of modernization and rationalization in Muslim societies, and the nature of sociopolitical relations between "Islam" and the "West." The course explores the preceding issues through a series of ethnographic and historical case studies, with a special focus on Muslim communities in the Middle East, Southeast Asia, and Europe. Case studies address a range of specific topics, including religious knowledge and authority, capitalism and economic modernization, religion and politics, gender and sexuality, as well as migration and globalization. Please note: L75 554 is intended for graduate students only.

### L23 Re St 3542 Christian Theology and Politics in the Modern West

This course introduces students to Christian thought in the modern period and its relation to notions of social justice and political action. It takes these issues chronologically, beginning with the Protestant Reformation and challenges to Catholic monarchies, through Puritanism and revolution, evangelicalism and anti-slavery, nineteenth-century liberalism and social reform, twentieth century issues of the Cold War and civil rights, to twentieth century concerns with race and environmentalism. Throughout the course, we will read texts that relate theological claims (about, for example, the nature of God, Christ, and redemption) to social and political matters. The course will end with attention to Christian belief and contemporary political crises.

### L23 Re St 3551 The FBI and Religion

This seminar examines the relationship between the Federal Bureau of Investigation (FBI) and religion (i.e., faith communities, clerics, and religious professionals) as a way to study and understand 20th-century religion and politics. The course will investigate the history of the FBI as well as the various ways in which the FBI and religious

groups have interacted. The course will pay particular attention to what the professor calls the four interrelated "modes" of FBI-religious engagement: counter-intelligence and surveillance, coordination and cooperation, censorship and publicity, and consultation.

### L23 Re St 356 Genesis

Genesis, the first book of the Bible, remains among the most important literary, historical, and theological works ever written - at once beautiful, funny, perplexing, and challenging. In this class, we will take a deep dive into Genesis, while also exploring literary, historical, mythological, feminist, postcolonial, and other responses to the text. We will also consider the history of interpretation, with a particular interest in the reception of Genesis in literature and in popular culture.  
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: ETH, HUM EN: H

---

### L23 Re St 3561 Exodus

We will investigate the biblical book of Exodus in both its original significance in the ancient Near East and its later meanings for Jews, Christians, and Muslims in societies around the world. Why did its narratives and ideas about law and justice and religion resonate so strongly both in biblical times and afterwards? Which assumptions did the biblical authors make about writing stories and poetry? What is the historical reality of the Exodus? How did the biblical Israelites conceive of their religious practices and institutions? We will also explore how Exodus and the celebration of Passover has been, and continues to be, a crucial source of identity in Jewish and Christian circles. How has Exodus been re-imagined and transfigured multiple times, and how has the Passover celebration reflected transformations in the understanding of the Exodus? We will analyze many types of expression influenced by Exodus: historical sources, liturgy, art, commentaries, theology, literature, film, mysticism, and music.

### L23 Re St 3571 God in the Courtroom

The U.S. Constitution holds a promise to secure freedom of religion through its First Amendment. Its two religion clauses declare unconstitutional any prohibition on the free exercise of religion and laws respecting the establishment of religion. The consequence is that, whenever a group demands to be recognized as religious and to be granted the right to exercise its religion, a court, a legislature, or an administrative official must determine whether the religious practice in question is legally religious. This means that law plays a uniquely important role in defining religion in the United States. In this seminar, we will explore the relation between law and religion in America. We will study the religion clauses in the First Amendment to the United States Constitution, the histories of their interpretations by American courts in landmark cases, and the ways that religious studies scholars have understood and critiqued these cases.  
Same as L57 RelPol 357

### L23 Re St 358 Conscience and Religion in American Politics

Conscience is as American as apple pie and baseball, but its meaning and implications are deeply contested in American religion and politics. What is conscience? To what extent is conscience laden with theological -- and, more specifically, Christian -- commitments? What role should conscience, whether religious or ethical, play in political life? By considering what conscience means and what vision of politics it implies, we will reflect on what it means to be American: how religion should relate to politics, how individuals should engage with democratic laws and norms, and how religious and political dissenters might oppose American politics. We will focus on key moments in the history of American religion and politics through the lens of conscience, from the Interwar Period, the perceived threat of communism during the Cold War, the Civil Rights Movement, and the Vietnam War to the "culture wars" on abortion, marriage equality, LBGTQ rights, and the death penalty. This course draws on interdisciplinary sources from religious studies, political theory, law, and history in 20th- and 21st-century American politics.

### L23 Re St 359 Travelers, Tricksters, and Storytellers: Jewish Travel Narratives and Autobiographies

Jewish literature includes highly fascinating travel accounts and autobiographies that are still awaiting their discovery by a broader readership. In this course, we will explore a broad range of texts originating from the Middle Ages to the 19th century. They were written by both Ashkenazi and Sephardi Jews hailing from countries as diverse as Spain, Italy, Germany, and the Ottoman Empire. Among the authors were pilgrims, rabbis, merchants, and one savvy businesswoman. We will read their works as responses to historical circumstances and as expressions of Jewish identity, in its changing relationship to the Christian or Muslim environment in which the writers lived or traveled. Specifically, we will ask questions such as: How do travel accounts and autobiographies enable their authors and readers to reflect on issues of identity and difference? How do the writers produce representations of an "other," against which and through which they define a particular sense of self? This course is open to students of varying interests, including Jewish, Islamic, or Religious Studies, medieval and early modern history, European or Near Eastern literatures. All texts will be read in English translation. Please note: L75 559 is intended for graduate students only.

### L23 Re St 360 Religion and the Modern Civil Rights Movements, 1954-1968

The modern Civil Rights Movement is a landmark event in the nation's political, civic, cultural, and social history. In many contexts, this movement for and against civil and legal equality took on a religious ethos, with activists, opponents, and observers believing that the net result of the marches, demonstrations, and legislative rulings would redeem and/or destroy "The Soul of the Nation." This seminar examines the modern Civil Rights Movement and its strategies and goals, with an emphasis on the prominent religious ideologies and activities that were visible and utilized in the modern movement. The course pays particular attention to the Protestant, Catholic, Jewish, and Islamic traditions, figures, and communities that were indifferent, combative, instrumental, and/or supportive of Civil Rights legislation throughout the mid-twentieth century.

**L23 Re St 3620 Islam, Gender, Sexuality**

In this course, we examine discourses of gender and sexuality across historical period and geographical region. We analyze encounters with Western imperialism, investigating how gender informs social, political, religious, and family life in Islamic cultures. Our course materials include histories, ethnographies, graphic novels, and films, and we examine how these sources approach the study of Islam, gender, and sexuality through the lens of various topics: from women in the earliest years of Islam in 7th century Arabia to revolutionary Iran and American Muslim women in the 21st century. Throughout the course, we examine how notions of gender and sexuality have changed over time and played various roles in the political and social life of Muslim nations, societies, and communities. By the end of the course, students will be able to critically assess scholarly and non-scholarly (media) discussions of gender in Islam.

**L23 Re St 365 The Bible as Literature**

The Bible is one book among many; the Bible is a book like no other; the Bible is not one book but many. The course will debate such positions and the different histories and practices of reading they involve. We shall read extensively in English translations of the Bible, both Jewish and Christian, with emphasis on literary form and ideas. We shall look at the Bible's material forms, and the history of its interpretation and translation. The aim is not to adjudicate its meaning but to explore what over time it has been taken to mean, attempting to locate within the book the potential for different interpretations.

The course requires, and should foster, attentive reading, vigorous yet courteous argument, and respect for the readings of others.

**L23 Re St 3650 Slavery, Sovereignty, Security: American Religions and the Problem of Freedom**

The goal of this course is to think critically about freedom as an ideology and institution. What does it mean to be free? What are the relationships among individual liberties, national sovereignty, and civil rights? In what ways has freedom been defined in relation to -- and materially depended on -- unfreedom? At the same time, this course will treat American "religions" in a similar critical fashion: as a historically contingent category that has been forged and inflected within the same context of white Christian settler empire. Religion and freedom have intertwined throughout American history, including in the ideal of religious freedom. Our critical interrogation of freedom should help us think carefully about power, working with but also beyond tropes of domination and resistance.

**L23 Re St 3660 The Sephardic Experience: 1492 to the Present**

In the public perception, modern Jews divide into two subethnic groups: Ashkenazi and Sephardi, or European and Middle Eastern Jews. However, this is an oversimplification that does not do justice to the diversity and complex history of Jewish identities, which are often multilayered. Strictly speaking, Sephardi Jews trace their ancestral lines or cultural heritage to the medieval Iberian Peninsula, present-day Spain and Portugal. That said, according to some scholars, Sephardi Judaism did not even exist before the general expulsion of Spanish Jewry in 1492 and is the result of their subsequent migrations within the Mediterranean and transatlantic worlds. We will start with an introduction into the history of Spanish Jews prior to 1492, asking to what extent memories of pre-expulsion Iberia are at the heart of Sephardi identity. We will then follow the migratory path of Sephardi exiles to North Africa, Italy, the Ottoman Empire, the Netherlands, and the Americas. The questions we will explore include: in what sense did Sephardim form a transnational community? How did they transmit and transform aspects of Spanish culture in form of Ladino (Judeo-Spanish) language and literature? How did they become intermediaries between Christian Europe and the Ottoman Empire? What was their role in Europe's transatlantic expansion and the slave trade? How did Ottoman and North African Jews respond to European cultural trends in the nineteenth century and create their own forms of modernity? How did the Holocaust impact Sephardi Jews?

**L23 Re St 3670 Gurus, Saints, and Scientists: Religion in Modern South Asia**

Many long-standing South Asian traditions have been subject to radical reinterpretation, and many new religious movements have arisen, as South Asians have grappled with how to accommodate their traditions of learning and practice to what they have perceived to be the conditions of modern life. In this course we consider some of the factors that have contributed to religious change in South Asia, including British colonialism, sedentarization and globalization, and new discourses of democracy and equality. We consider how new religious organizations were part and parcel with movements for social equality and political recognition; examine the intellectual contributions of major thinkers like Swami Vivekananda, Sayyid Ahmad Khan, and Mohandas Gandhi; and explore how Hindu, Islamic, and other South Asian traditions were recast in the molds of natural science, social science, and world religion.

Credit 3 units. A&S IQ: HUM, LCD BU: ETH EN: H

---

**L23 Re St 368 Theories and Methods in the Study of Religion**

What is religion, and how can we study it? Do we need an answer to the first question to pursue the second? Why, and toward what ends, might we undertake such study? This course considers these questions through the investigation of significant attempts to study religion over the past century, paying particular attention to the methods, motivations, and aims of these works. Is the study of religion an effort to disprove or debunk it, or perhaps to support it? What would each mean? Is it an effort to describe the indescribable, or perhaps to translate complex beliefs and practices into a language in which they can be discussed by others? Why would such a translation be helpful, and to whom? Is the study of religion an investigation of a social phenomenon, an organization of communities, a specific formation of individuals, or perhaps a psychosis or illusion, evidence of the workings of power on our lives and the difficulty of bearing it? What is at stake in defining religion in these ways, and then in undertaking its study?

**L23 Re St 374 Of Dishes, Taste, and Class: History of Food in the Middle East**

This course will cover the history of food and drink in the Middle East to help us understand our complex relation with food and look at our lives from perspectives we intuitively feel or by implication know, but rarely critically and explicitly reflect on. Food plays a fundamental role in how humans organize themselves in societies, differentiate socially, culturally, and economically, establish values and norms for religious, cultural, and communal practices, and define identities of race, gender, and class. This course does not intend to spoil, so to speak, this undeniably one of the most pleasurable human needs and activities, but rather to make you aware of the social meaning of food and reflect on how food shapes who we are as individuals and societies. We will study the history of food and drink in the Middle East across the centuries until the present time, but be selective in choosing themes, geographic regions, and historical periods to focus on. Please consult the instructor if you have not taken any course in the humanities. Enrollment priority given to seniors and juniors.

**L23 Re St 377 History of Slavery in the Middle East**

This course examines slavery and its abolition in the Middle East and North Africa from 600 C.E. to the 20th Century. It addresses slavery as a discourse and a question of political economy. We begin with an overview of slavery in late antiquity to contextualize the evolution of this practice after the rise of Islam in the region. We then examine how it was practiced, imagined, and studied under major empires, such as the Umayyads, the Abbasids, the Fatimids, the Mamluks, the Ottomans, and the Safavids. In addition to examining the Qur'anic discourse and early Islamic practices of slavery, to monitor change over time we address various forms of household, field, and military slavery as well as the remarkable phenomenon of "slave dynasties" following a chronological order. We discuss, through primary sources, theoretical, religious, and moral debates and positions on slavery, including religious scriptures, prophetic traditions, religious law, and a plethora of narratives from a range of genres. We highlight a distinct theme each week to focus on until we conclude our discussion with the abolition of slavery in the 19th and 20th centuries. Topics of discussion include various forms of male and female slavery, Qur'anic and prophetic discourse on slavery, legal and moral views on slavery, slavery as represented in religious literature, political, military, and economic structures of slavery, issues of race and gender as well as slave writings to reflect on the experiences of slavery from within. The goal is to enable students to understand the histories of slavery in the Middle East and eventually compare it to that of other regions and cultures, such as European and Atlantic slavery. No second language required.

**L23 Re St 379 Gender, Religion, and Secularism**

This course considers how gender is constructed in the processes of distinguishing between religion and secularism. Students will be exposed to a variety of case studies that examine the specific dynamics of producing an oppositional difference between religion and secularism through attitudes toward gender roles, values, and

commitments. This course is designed to help students examine how the assumptions about secularism as necessarily more freeing and equalizing for women become normative and make many religious women's claims to freedom, equality, and agency illegible.

Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM EN: H

---

### L23 Re St 3801 Religion in the Kitchen

The kitchen is home to food preparation and everyday conversations, not a privileged place of formal religious rites. But much can be learned about religion by focusing our analytical gaze on this seemingly benign space. By expanding the focus of where, and how, we study religion, the kitchen is revealed as a remarkably unstable social space. In this course we will consider questions such as: Is the kitchen constructed as a sacred, profane, or an in-between space? How is the kitchen gendered? Is it perceived as a dominantly female (or male) space, and under what conditions of power? How is food used to construct religious or racial identity, and why is it so powerful? Are kitchen practices cultural or religious activities? And who identifies kitchen work as an authentic (or inauthentic) religious practice? To answer these questions, we will consider a variety of religious, and not-so-religious, traditions within North America.

### L23 Re St 3803 American Religion, Media, and Technology

American religious communities have often been cast as technological laggards, whether willfully ignorant or generally backwards. Such narratives, fueled by stories about religious leaders condemning cultural trends conceal the ways religions have in fact innovated in the media sphere. Ranging from the time of the earliest printing presses to contemporary social media platforms, this course reframes the question of American religions and media technologies by asking the following questions: How have media technologies shaped religious practice, identity, and belonging? Were religious critiques of mass media valid, particularly around questions of access, constraints, and consumption? And how have religious groups experimented with communications technologies to reimagine their use, message, and audience? These moments of technological encounter reveal how religious communities have not only worked with media technologies, but have driven much of what makes these technologies innovative and modern.

### L23 Re St 3831 Magicians, Healers, and Holy Men

Magic is perhaps not one of the first words one associates with Greco-Roman antiquity. Yet for most individuals living in the ancient Mediterranean, including philosophers, businessmen, and politicians, magic was a part of everyday life. Casting spells, fashioning voodoo dolls, wearing amulets, ingesting potions, and reading the stars are just some of the activities performed by individuals at every level of

society. This course examines Greco-Roman, early Christian, and Judaic "magical" practices. Students read spell-books which teach how to read the stars, make people fall in love, bring harm to enemies, lock up success in business, and win fame and the respect of peers. Students also look at what is said, both in antiquity and in contemporary scholarship, about magic and the people who practiced it, which helps illuminate the fascinating relationship between magic, medicine, and religion.

### L23 Re St 3843 Comparative Religion

This course provides an overview of religion from the emergence of the human species until the present. It draws on scholarship from a variety of fields including archaeology, cultural anthropology, history, religious studies, evolutionary biology, psychology, and neuroscience. The course begins with a discussion of the psychological/biological foundations of religion. It then examines hunter-gatherer religions, prehistoric agricultural/pastoral religions, and major ancient/early religions (e.g., Mesopotamian, Egyptian, Zoroastrian, Greco-Roman, Aztec). Next, students are introduced to the three major families of world religions; namely, the "Abrahamic" religions (Judaism, Christianity, Islam); the "Indic" religions (Hinduism, Buddhism, Jainism), and the "East Asian" religions (Confucianism, Daoism, Shintoism).

### L23 Re St 3900 Mormon History in Global Context

The focus of this seminar is Mormonism, meaning, primarily, the Church of Jesus Christ of Latter-day Saints, which is the largest Mormon body. Mormons in the United States have gone from being one of the most intensely persecuted religious groups in the country's history to the fourth largest religious body in the U.S., with a reputation for patriotism and conservative family values. Because of its vigorous missionary program, the LDS Church now has more members outside the U.S. than inside. This seminar will introduce the basic practices and beliefs, and explore issues regarding economics, race, gender, and sexuality within the faith. These issues include: How did conflicts over Mormonism during the 19th century, especially the conflict over polygamy, help define the limits of religious tolerance in this country? How have LDS teachings about gender and race, or controversies about whether or not Mormons are Christian, positioned and repositioned Mormons within U.S. society? What does the LDS faith look like in other parts of the world, and how does its identification with U.S. prosperity and politics shape its growth in other places?

### L23 Re St 3921 Secular and Religious: A Global History

Recent years have seen a dramatic rethinking of the past in nearly every corner of the world as scholars revisit fundamental questions about the importance of religion for individuals, societies and politics. Is religion as a personal orientation in decline? Is Europe becoming more secular? Is secularism a European invention? Many scholars now argue that "religion" is a European term that doesn't apply in Asian societies. This course brings together cutting-edge historical scholarship on Europe and Asia in pursuit of a truly global understanding. Countries covered will vary, but may include Britain, France, Turkey, China, Japan, India and Pakistan.

### L23 Re St 396 Islamic Philosophy, Mysticism, and Theology

How does an individual achieve access to knowledge and access to God? To what extent is such access dependent upon scripture? To what extent is such access dependent upon reason? Are there forms of truth and experience that only reveal themselves through mysticism? Questions of this sort are central to the interrelated disciplines of Islamic philosophy, Islamic theology, and Islamic mysticism (i.e., Sufism). This course examines how these three disciplines have shaped various aspects of social life within premodern Muslim communities.

---

### L23 Re St 3977 The Making of the Modern Catholic Church

This course examines the work of three church councils that put their stamp on the Catholic Church at key moments in its history, making it what it is today. The first section is dedicated to the Fourth Lateran Council (1215), which defined the high medieval church as an all-encompassing papal monarchy with broad powers over the lives of all Europeans, Christian and non-Christian alike. In the second section we turn our attention to the Council of Trent (1545-1563), which responded to the threat posed by the Protestant Reformation by reforming the Catholic church, tightening ecclesiastical discipline, improving clerical education, and defining and defending Catholic doctrine. We conclude with a consideration of the largest church council ever, Vatican II (1962-1965), which reformed the liturgy and redefined the church to meet the challenges of the modern, multicultural, post-colonial world.

### L23 Re St 404 Material Religion

This seminar examines contemporary theories and approaches to materiality in the study of religion. Particular attention is given to how scholars envision the relationship between bodies, rituals, religious objects, and the human ability to think, know, and act in the world. By attending to a variety of "things" -- prints, icons, ritual clothes, food, incense -- and to the history of their use within such traditions as Islam, Buddhism, Candomble, Lucumi, and Christianity, this course seeks to provide students with an opportunity to familiarize themselves with contemporary studies that take seriously the power of material objects to make and sustain religion. This course is simultaneously designed to allow students to practice utilizing material culture as a method in their own research.

### L23 Re St 405 Diaspora in Jewish and Islamic Experience

Tensions between center and periphery; migration and rest; power and powerlessness; and exile, home, and return are easily found in the historical record of both Jews and Muslims. For Muslims, it can be said that it was the very success of Islam as a world culture and the establishment of Muslim societies in all corners of the globe that lay at the root of this unease. However, the disruptions of the post-colonial era, the emergence of minority Muslim communities in Europe and North America, and the recent tragic flow of refugees following the Arab Spring have created a heightened sense of displacement and yearning for many. Of course, the very term "diaspora" -- from the ancient Greek, meaning "dispersion" or "scattering" -- has most often been used to describe the Jewish condition in the world. The themes of exile and return and of catastrophe and redemption are already woven into the Hebrew Bible, and they continued to be central motifs in Rabbinic Judaism in late antiquity and the Middle Ages. This occurred despite the fact that more Jews lived outside the borders of Judea than within the country many years before the destruction of Jewish sovereignty at the hands of the Romans. In the 20th century, European imperialism, nationalisms of various types, revolution, and war -- including the Israeli-Palestinian conflict -- have done much to underscore the continuing dilemmas of diaspora and home in both Jewish and Islamic identity. The goal of this course is to offer a comparative historical perspective on the themes of migration and displacement, center and periphery, home and residence, and exile and return and to give students the opportunity to examine in depth some aspect of the experience of diaspora. Note: This course fulfills the capstone requirement for Jewish, Islamic, and Middle Eastern Studies. The course also counts as an Advanced Seminar for history. (Students wishing to receive history Advanced Seminar credit should also enroll in L22 491R section 19 for 1 unit.) The course is open to advanced undergraduate and graduate students.

### L23 Re St 4060 Convivencia or Reconquista? Muslims, Jews, and Christians in Medieval Iberia

This seminar will explore various facets of the coexistence (convivencia) of Muslims, Jews, and Christians in medieval Spain. Its horizon stretches from the Muslim conquest of Iberia (al-Andalus) up to the turn of the 16th century when Spanish Jews and Muslims were equally faced with the choice between exile and conversion to Christianity. Until about 1100, Muslims dominated most of the Iberian Peninsula; from then onward, Christians ruled much and eventually all of what would become modern Spain and Portugal. Through a process known as reconquista (reconquest), Catholic kingdoms acquired large Muslim enclaves. As borders moved, Jewish communities found themselves under varying Muslim or Christian dominion. Interactions between the three religious communities occurred throughout, some characterized by shared creativity and mutual respect, others by rivalry and strife. The course focuses on these cultural encounters, placing them in various historical contexts. It will explore the ambiguities of religious conversion, and the interplay of persecution and toleration. Last not least, the course will address the question of how the memory of medieval Spain's diversity reverberates and is utilized in modern popular and academic discourse. All sources will be read in English translation; however, students are encouraged to make use of their linguistic and cultural expertise acquired in previous classes. This

course serves as the capstone seminar for Jewish, Islamic & Near Eastern Studies majors, Arabic majors, and Hebrew majors. Graduate students, minors, and other interested undergrads are likewise welcome.

### L23 Re St 407 Solidarity and Silence: Religious Strategies in the Political Sphere

Although political action is often considered a problem of making oneself heard, religious practices of silence, self-effacement, and withdrawal from certain worldly struggles have guided many significant political and social movements, particularly forms of non-violent resistance. This course considers the role of religious thought and practice in such movements in the twentieth century. The history of these movements presents an apparent paradox: how can political action emerge from the supposedly "private" realm of religion in the modern era, particularly its most individualistic formations in contemplative and mystical practices? Does the historical role of these practices in the political sphere complicate their portrayal in some scholarship as private, individual, and depoliticizing? With these questions animating our investigations, we will consider the work of authors and activists including Leo Tolstoy, Mahatma Gandhi, Dietrich Bonhoeffer, Martin Luther King, Jr., Simone Weil, and William Barber, as well as the history of movements associated with their work. Toward the end of the semester, we will turn to contemporary movements against economic inequality, intimate violence, racially motivated violence, and discrimination toward transgender persons to discuss the use of religious strategies or religiously-derived strategies in current political and social activism.

### L23 Re St 408 Nuns

Nuns -- women vowed to a shared life of poverty, chastity, and obedience in a cloistered community -- were central figures in medieval and early modern religion and society. This course explores life in the convent, with the distinctive culture that developed among communities of women, and the complex relations between the world of the cloister and the world outside the cloister. We look at how female celibacy served social and political, as well as religious, interests. We read works by nuns: both willing and unwilling; and works about nuns: nuns behaving well, and nuns behaving scandalously badly; nuns embracing their heavenly spouse, and nuns putting on plays; nuns possessed by the devil, and nuns managing their possessions; nuns as enraptured visionaries, and nuns grappling with the mundane realities of life in a cloistered community.

### L23 Re St 4080 Sacred Ways and Holy Spaces: Athenian Religion and Topography

From seashore to mountain top, ancient Athens was famous for being a landscape rich with myth and religion. In order to worship their gods with processions, sacrifices, and other acts of devotion, Athenians moved through, across, and within space as defined by such things as sacred roads, monumental gateways and altars, and even places considered so holy that one was forbidden to enter. This course will introduce students to the study of place (topography) and to the methods and evidence by which we can determine where specific buildings and sites were, how they were used, and what they signified. We will explore major sites like the Acropolis as well as a variety of other temples, shrines, and holy sites across urban and rural landscapes alike, each of which structured space in its own way. By examining a wide range of archaeological and textual evidence (c. 800 BC-AD 400), we will develop an integrated understanding of Athenian religious

belief and ritual in the context of architecture and space. While this course will concentrate on the topography of architecturally definable religious sites, we will also explore religious practices (e.g., magic, early Christianity) that employed the landscape in fundamentally different ways than other parts of the Athenian religious system.

**L23 Re St 4118 The Good Cause: Psychological Anthropology of Moral Crusades**

Why do people join moral crusades? These are social movements based on powerful moral institutions, ranging from the abolitionist and suffragette movements to witch hunts, insurgency and ethnic riots. Such movements are extremely diverse, yet their unfolding and the dynamics of recruitment show remarkably common properties. We will examine a series of empirical cases, including recent events, and assess the relevance of models based on individual psychological dynamics, intuitive moral capacities, and human motivation for participation in collective action.

**L23 Re St 4122 American Religion, Politics & Culture: Commentary from Alexis de Tocqueville to Contemporary Pundits**

This research-oriented seminar involves in-depth historiographical investigation of leading scholarship at the busy intersections of American religion, politics, and culture. The second semester focuses on classic and contemporary commentaries on the American religious and political scene from Alexis de Tocqueville through today's leading pundits. Some sessions will include a visiting scholar engaged in cutting-edge research--a feature that will allow seminar members to work with important scholars from beyond the university. Possible topics include: church-state relations, religion and foreign policy, religion and civil rights, religion and the science wars, the rise of the Religious Right, and the role of religion in national elections. The seminar is taught under the auspices of the John C. Danforth Center on Religion and Politics and is offered two complementary parts (though enrollment in either one of the two is certainly possible). Its ambition is to build up a community of inquirers engaged in the core questions that animate the Danforth Center. PREREQ: Advanced undergraduate or graduate standing in AMCS, History, or Religious Studies or permission of instructor.

**L23 Re St 413 Topics in Islam**

This course aims to study political thought and practice in Islamic history through a close reading of a selection of primary sources in translation (and in their original language, if language proficiency is satisfactory). Particular attention will be given to the historical contexts in which thoughts are espoused and texts written. We plan to examine the development of political concepts and themes as articulated in diverse literary genres (e.g., legal, theological, political) from the eighth through the 13th centuries. We hope to engage various theoretical models to analyze the relationship between politics and religion and to tease out the role of power in determining sociopolitical relations, distinctions, and structures. We hope to have a better grasp on the historicity of ideas presented in timeless categories in political discourse. Advanced knowledge of Arabic preferred but not required.

Credit 3 units. A&S IQ: HUM BU: IS EN: H

---

**L23 Re St 418 Sexuality and Gender in East Asian Religions**

In this course we will explore the role of women in the religious traditions of China, Japan and Korea, with a focus on Buddhism, Daoism, Shamanism, Shinto and the so-called "New Religions." We will begin by considering the images of women (whether mythical or historical) in traditional religious scriptures and historical or literary texts. We will then focus on what we know of the actual experience and practice of various types of religious women - nuns and abbesses, shamans and mediums, hermits and recluses, and ordinary laywomen - both historically and in more recent times. Class materials will include literary and religious texts, historical and ethnological studies, biographies and memoirs, and occasional videos and films. Prerequisites: This class will be conducted as a seminar, with minimal lectures, substantial reading and writing, and lots of class discussion. For this reason, students who are not either upper-level undergraduates or graduate students, or who have little or no background in East Asian religion or culture, will need to obtain the instructor's permission before enrolling.

**L23 Re St 419 Of Zombies, Ghosts, and Ancestors: Interactions of the Living and the Dead in Chinese Religions**

This course introduces a basic aspect of the multifaceted history of Chinese religions, culture, and civilization by centering on the practice of taking care of the dead. In particular, we will observe how various religious texts, short stories, and plays from China's earliest times until the sixteenth century depicted the interactions of the living and the dead. Despite the distinct genres, time periods, and topics, one important aspect will regularly appear: apparently people perceived the boundaries between the living and the dead to be quite porous in pre-modern China. In other words, the dead seemed to have played as much of a role in society and everyday life as living family members, friends, and government officials.

---

**L23 Re St 4251 Topics in Religion and Culture in East Asia: The Buddhist Culture(s) of Japan**

This reading seminar introduces students to texts on and by women in East Asia from the earliest extant writings to the nineteenth century. Texts covered in the first half of the course include philosophical and doctrinal writings that deal with the role of women in society, their fitness for self-cultivation, and their access to salvation. The second part of the course focus is on narrative texts, memoirs and diaries that portray women or that were written by women, drawn from the literary traditions of China, Korea and Japan. Some of the issues students will grapple with are: Are Confucianism and Buddhism, some of the great intellectual traditions of East Asia, inherently misogynistic? Or can they function as liberating forces for women in their search for agency and meaning? More broadly, how can boundaries and constraints contribute to self-cultivation, growth, and even salvation? Previous coursework on East Asia and/or Buddhism is strongly recommended, but no prior knowledge of Chinese, Korean, or Japanese language is required. Undergraduates enroll in the 400-level section; 500-level section is for graduate students only. Prerequisite: junior level or above or permission of instructor.

**L23 Re St 4300 Spiritual But Not Religious: The Politics of American Spirituality**

What does it mean to be "spiritual but not religious"? What are the social and political consequences of foregrounding spiritual seeking and religious experimentation over the "organized religion" of churches, synagogues, mosques, and temples? How did this contemporary view of spirituality take shape historically? The seminar focuses on a series of debates that have arisen over spirituality in American culture: the entwining of religious practices with consumer culture and corporate capitalism, the rise of therapeutic models of meditation and mindfulness, the politics of Euro-American appropriations of Native American and Buddhist religious practices, the implications of embracing religious variety and eclecticism, and the relationship between spiritual seeking and social justice.

**L23 Re St 432 Early Christianity and Classical Culture**

This course explores the development of Early Christianity from the Apostolic fathers (late 1st century CE) to Augustine in the 5th century. We will be focused on contextualizing these early Christian communities within the classical Greek and Roman worlds through which they spread, examining their engagement with Greco-Roman models of rhetoric, philosophy, and literature. Prereq: L23 307F Introduction to the New Testament or previous work in Classical Studies recommended but not required.

Credit 3 units. A&S IQ: HUM EN: H

---

**L23 Re St 435 Sabbath Politics: Rest and Refusal in Religion and Politics**

The Jewish Sabbath arrives every week to disrupt ordinary life with a wholly different way of living, abstaining from some activities in divinely commanded rest. Is this different way of life strictly a break from the ordinary, or also a guide to it-and to how it might require disruption, reformation, and repair? Sabbath traditions have inspired radical political action including movements against debt, income inequality, environmental destruction, and racial injustice. This course will consider the ways that 20th and 21st century American Jews have practiced Shabbat and thought about its significance in political life. Students will read a range of texts including Abraham Joshua Heschel's classic 1951 book *The Sabbath*, and consider them in relation to movements of contemporary radical politics that have been inspired by Sabbath traditions, including Strike Debt, reparations for the descendants of enslaved people, and agonistic democratic politics.

**L23 Re St 4357 The Holocaust in the Sephardic World**

The course provides students with a comprehensive understanding of the Holocaust, of its impact on the Sephardic world, of present-day debates on the "globalization" of the Holocaust, and of the ways in which these debates influence contemporary conflicts between Jews, Muslims and Christians in Southern Europe and North Africa. We will turn to the history of these conflicts, and study the Sephardic diaspora by focusing on the consequences that the 1492 expulsion had within the Iberian Peninsula, in Europe, and in the Mediterranean world. We will study Sephardic communities in Europe and North Africa and their interactions with Christians and Muslims before World War II. Once we have examined the history of the Holocaust and its impact on the Sephardic world in a more general sense, our readings will focus on the different effects of the Holocaust's "long reach" into Southeastern Europe, the Balkans, and North Africa, paying close attention to interactions among Jews, local communities, and the Nazi invaders. Finally, we will address the memory of the Sephardic experience of the Holocaust, and the role of Holocaust commemoration in different parts of the world. We will approach these topics through historiographies, memoirs, novels, maps, poetry, and film.

**L23 Re St 4366 Europe's New Diversities**

Since the late 1980s, three major upheavals have transformed European senses of identity. The demise of the Soviet Union has forced citizens of new "post-socialist" nations to forge new senses of belonging and new strategies of survival. The rise of a new public presence of Islam and the growth of children of Muslim immigrants to adulthood have challenged notions that Europe is a secular or post-Christian space. Finally, the heightened authority of European institutions has challenged the nation-state from above, and the granting of new forms of subnational autonomy to regions and peoples has challenged it from below. The new Europe is increasingly constituted by way of regional identifications, transnational movement(s), and umbrella European legal and political organizations; these new realities occasion new rhetorics of secularism, nationalism, and ethnic loyalties. We examine these forms of diversity, movement, and debate by way of new works in anthropology, sociology and political science.

**L23 Re St 4400 Religion, Politics, and the University**

This course explores in depth current issues related to pluralism, difference, and belonging in matters pertaining to religion and other important issues, with a particular focus on how these play out in the university context. The instructors, John Inazu and Eboo Patel, are two

of the leading national commentators on these issues. Prerequisite: Students enrolling in this class must submit a brief statement of interest to Professor John Inazu. Details on how and where to submit this statement can be found at <http://law.wustl.edu/COURSES/INAZU/seminar1/summaries/>. Same as L57 RelPol 440  
Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM BU: HUM EN: H

---

### L23 Re St 4401 Topics in Rabbinic Texts

The course aims to introduce students to independent reading of selected rabbinic texts in the original language. We will focus on a number of topics representing the range of rabbinic discussion, including legal, narrative, and ethical issues. At the same time, we will study the necessary linguistic tools for understanding rabbinic texts. Prereq: HBRW 385 or HBRW 401 or instructor's permission. Same as L74 HBRW 440  
Credit 3 units. A&S IQ: HUM, LCD EN: H

### L23 Re St 444 The Mystical Tradition in Judaism

What is Jewish "mysticism"? What is its relationship to the category of "religion"? Is Jewish mysticism just one form of a general phenomenon common to a variety of religious traditions or is it a specific interpretation of biblical, rabbinic, and other Jewish traditions? Taking the above questions as a starting point, this course aims at a systematic and historically contextualized analysis of a broad range of Jewish texts that are commonly classified as "mystical". (All primary texts are read in translation.) At the same time, we explore such overarching themes as: the interplay of esoteric exegesis of the Bible and visionary experiences; the place of traditional Jewish law (halakha) within mystical thought and practice; the role of gender, sexuality, and the body in Jewish mystical speculation and prayer; the relationship between mysticism and messianism; Ashkenazic and Sephardic traditions and their mutual impact on Jewish mysticism; the "absence of women" from Jewish mystical movements; esoteric traditions of an elite vs. mysticism as a communal endeavor; and the tension between innovation and (the claim to) tradition in the history of Jewish mysticism.

---

### L23 Re St 446 History of Political Thought in the Middle East

This course aims to study political thought and practice in Islamic history through a close reading of a selection of primary sources in translation (and in their original language, if language proficiency is satisfactory). Particular attention will be given to historical contexts in which thoughts are espoused and texts written. We plan to examine the development of political concepts and themes as articulated in diverse literary genres (e.g., legal, theological, political) from the eighth through 13th centuries. We hope to engage various theoretical models to analyze the relationship between politics and religion and to tease out the role of power in determining sociopolitical relations, distinctions, and structures. We hope to have a better grasp on the historicity of ideas presented in timeless categories in political discourse. Advanced knowledge of Arabic preferred but not required. Same as L75 JIMES 446  
Credit 3 units. A&S IQ: HUM, LCD, SC BU: HUM, IS

### L23 Re St 4491 American Unbelief from the Enlightenment to the New Atheism

This seminar examines American secularism, humanism, and atheism from the Enlightenment forward to the present. Topics to be explored include: the tensions between secular and Christian conceptions of the republic, the civil liberties of atheists and nontheists, the battles over religion in the public schools, the culture wars over secular humanism and science, and the contemporary growth of the religiously

disaffiliated or religious "nones." The course considers not only the intellectual dimensions of skeptical critiques of religion, but also the underlying politics of secularism (and anti-secularism) in a nation routinely imagined as "under God."

Credit 3 units. A&S IQ: HUM Arch: SSP Art: HUM EN: H

---

### L23 Re St 4711 Topics in Religious Studies: Gender and Religion in China

In this course, we explore the images, roles, and experience of women in Chinese religions: Confucianism, Daoism, Buddhism, and so-called "popular" religion. Topics discussed include: gender concepts, norms, and roles in each religious tradition; notions of femininity and attitudes towards the female body; biographies of women in Confucian, Daoist, and Buddhist literature; female goddesses and deities; and the place of the Buddhist and Daoist nun and laywoman in Chinese society. All readings are in English or in English translation. Prerequisite: Senior/Graduate Standing. Students with no previous background in Chinese religion, literature or culture need to obtain instructor's permission before enrolling.  
Credit 3 units. A&S IQ: HUM, LCD

---

### L23 Re St 479 Senior Seminar in Religious Studies

The topic for this seminar differs every year. Previous topics include Religion and Violence; Governing Religion; Saints and Society; and Religion and the Secular: Struggles over Modernity. The seminar is offered every spring semester and is required of all Religious Studies majors, with the exception of those writing an honors thesis. The class is also open, with the permission of the instructor, to other advanced undergraduates with previous coursework in Religious Studies.  
Credit 3 units. A&S IQ: HUM, SD Arch: HUM Art: HUM BU: ETH EN: H

### L23 Re St 4803 Advanced Seminar: Partition: The Making of India and Pakistan

The division of India and Pakistan at the time of Independence from British colonial rule was a major event that has left its mark on the lives, memories, and politics of contemporary South Asians. Why did British India break apart along apparently religious lines? Was sectarian or "communal" violence inevitable, or endemic in South Asian society? How was Partition - a time of violence, mistrust, dispossession, displacement, and mass migration -- experienced by ordinary people? How is the traumatic memory of this event borne by individual women, children, by families? How does its legacy persist, and how is it being remembered, and reckoned with, today? In this course, we will not find final answers to these difficult questions, but we will learn how to explore them responsibly, using literature, film, and other archival sources. This course provides students with a forum to discuss and explore topics of their own choosing. Same as L22 History 4803  
Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM EN: H

---

### L23 Re St 4890 Catholicism and Slavery

This course explores the role of Catholicism in the global history of slavery. Beginning with an assessment of how early Church theologians interpreted slavery in the Bible, the course will then grapple with how the Church justified taking a leading role in ending serfdom in Europe but endorsed the Atlantic slave trade, becoming one of its most invested participants. We will compare regional contexts of Catholicism & examining global continuities and regional particularities regarding

the questions: What did it mean to be enslaved by the Catholic Church? How did enslavers and the enslaved approach Catholicism, as both institution and religious practice, in a context of unfreedom and oppression? In what ways did enslaved people resist Catholic enslavement, drawing upon or rejecting the teachings of Catholicism in their resistance?

### L23 Re St 4902 Monuments, Museums, and Mountains: Religion and the Politics of Place in Modern America

Some of the most intense battles in American culture are fought over hallowed places and public memory. This class will examine various contested sites on the borders of pilgrimage, tourism, religious display, and civic commemoration. Among the topics to be considered are: Confederate monuments and plantation tours, Mount Rushmore and the Black Hills, the "Ground Zero Mosque" controversy, the Museum of the Bible and evangelical visions for the nation's capital, the public display of the Ten Commandments and the Satanic Temple's monumental interventions, Holy Land pilgrimages, and such alternative religious landscapes as Sedona and Salvation Mountain. Students will also have the opportunity to identify and explore sites of their own choosing as places of religious and political drama within modern American culture. There are no prerequisites for this course, and it is open to both undergraduates and graduate students.

Same as L57 RelPol 490

Credit 3 units. A&S IQ: HUM EN: H

---

### L23 Re St 495 Religion and the State: Global Mission, Global Empire

This course explores the complex intersections among U.S. political power on a global stage, and religious institutions and identities. Readings and discussions are organized around two very broad questions. First: how has this nation's history been shaped by religious "others" both inside and outside its borders? Second: How have perceptions of those others in turn affected U.S. responses to circumstances of global consequence--including, for example, foreign policy and diplomacy, missionary activity, and economic practices?

Same as L57 RelPol 495

### L23 Re St 498 Independent Work for Senior Honors I

Investigation of a topic, chosen in conjunction with a faculty advisor, on which the student prepares a paper and is examined. Students enroll in L23 498 in the fall semester and L23 499 in the spring semester. Prerequisite: Admission to the Honors Program.

Credit 3 units.

---

### L23 Re St 499 Independent Work for Senior Honors II

Investigation of a topic, chosen in conjunction with a faculty advisor, on which the student prepares a paper and is examined. Students enroll in L23 498 in the fall semester and L23 499 in the spring semester. Prerequisite: Admission to the Honors Program.

Credit 3 units.

---

### L23 Re St 4993 Advanced Seminar in History: Women and Religion in Medieval Europe

This course explores the religious experience of women in medieval Europe and attempts a gendered analysis of the Christian Middle Ages. In it, we will examine the religious experience of women in a variety of settings - from household to convent. In particular, we will try to understand how and why women came to assume public roles of unprecedented prominence in European religious culture between the twelfth century and the sixteenth, even though the institutional church barred them from the priesthood and religious precepts remained a principal source of the ideology of female inferiority.

Same as L22 History 4993

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

---

### L23 Re St 49CA Advanced Seminar in History: Religion and the Secular: Critical Perspectives from South Asia

A generation ago, scholars and observers around the world felt assured that modernization would bring the quiet retreat of religion from public life. But the theory of secularization now stands debunked by world events, and a host of questions has been reopened. This course provides students with a forum to think through these issues as they prepare research papers on topics of their own choosing.

Same as L22 History 49CA

---

### L23 Re St 49JK Advance Seminar in History: Blood & Sacred Bodies: Ritual Murder & Host Desecration Accusations

This seminar follows the history of the Ritual Murder and Host Desecration accusations from the origins in 12th and 13th century Europe to the 20th century. It pays close attention to the social and political functions of the narratives; their symbolic importance in Christianity's salvific drama; attacks on such beliefs from both within and outside the community of the faithful; the suppression and decline of the ritual murder accusation; the integration of Jews into European societies in the 19th century; and the reappearance of the blood libel in the aftermath of emancipation.

## Religious Studies Major Program Requirements

- **Total units required:** 30; 24 must be at the 300 level or higher

Religious Studies follows the Arts & Sciences minimum grade requirement of C- for courses that apply to the major.

### Required Courses

Code	Title	Units
Re St 102	Thinking About Religion	3
Re St 368	Theories and Methods in the Study of Religion	3
<b>Total Units</b>		<b>6</b>

## Senior Capstone Experience

During their senior year, religious studies majors are required to take Re St 479 Senior Seminar in Religious Studies or Re St 404 Material Religion for 3 units of credit. Alternatively, students can fulfill the capstone requirement by writing a Senior Honors thesis.

## Elective Courses

All majors must take at least seven courses (21 units; 18 must be at the 300 level or higher), chosen in consultation with their major advisor, that fulfill the following requirements:

- A. Broad coverage of religious traditions: Majors explore various religions by taking at least one course in four different traditions (e.g., Judaism, history of Christianity, Islam, Buddhism, East Asian religions, South Asian religions, religion in the Americas).
- B. Course concentrations: Majors focus their interests on a single religious tradition or theme by creating two course series: a three-course series and a two-course series.

**Note:** An elective course can count toward the fulfillment of both A and B.

## Additional Information

### Senior Honors

Qualified majors are encouraged to apply for Senior Honors. Applications are available on the Religious Studies website and are due prior to the end of the junior year. Students wishing to pursue this option need to meet the minimum honors requirements stated in this *Bulletin* and to satisfactorily complete, during their last two semesters, Re St 498 Independent Work for Senior Honors I and Re St 499 Independent Work for Senior Honors II. Full guidelines are available on the Religious Studies website.

### Transfer Credit

A maximum of 6 units of course work completed elsewhere — whether at another college or university or through a Washington University-approved study abroad program — may be applied toward the major. Credit will be awarded only for those courses that have been approved by the Religious Studies program.

Contact: Tia Crook  
Phone: 314-935-8677

## Romance Languages and Literatures

Romance Languages and Literatures offers vibrant programs in French, Italian, Portuguese, and Spanish. Our language courses have long been popular with undergraduates, including those interested in international travel and those who anticipate a global dimension to their future careers. All of our classes focus on culture writ large: we study great texts, and we do so with an eye toward gender roles, traditions, communities, individual freedom, social obligations, and many other topics of critical importance today. We offer concentrations in French, Italian, Spanish, applied linguistics, and introductory Portuguese.

Our undergraduate programs in French, Italian, and Spanish include a compelling series of language, literature, culture, and civilization courses that introduce students to the global Hispanic, Francophone, and Italoophone communities. The curriculum affords students the opportunity to become fluent in a foreign language, enrich their historical and cultural understanding, and acquaint themselves with influential intellectual, literary, and artistic traditions.

Students also benefit from linguistic and cultural immersion opportunities through our many summer, semester, and year-long study abroad programs. These programs offer unique possibilities to combine foreign language training with other interests, including participating in business internships in Paris; pursuing fieldwork in Cameroon; or studying art history in Italy, literature in Madrid, or Andean culture in Ecuador. These experiences lead to a variety of career paths, including international law, international business, medicine, journalism, and graduate studies in political science, international relations, history, anthropology, art history, comparative literature, French, and film studies. To prepare our students to take full advantage of such opportunities, our faculty provides an innovative range of courses that combine the study of literature with contemporaneous developments in philosophy, science, music, art, and theory.

For undergraduates interested in cross-language study, we offer two programs. Students may elect to major in Romance languages and literatures. This major requires advanced course work in French, Italian, and Spanish, with one of the three languages as the focus of primary emphasis. Alternatively, students may minor in applied linguistics, studying the theoretical, empirical, and practical foundations of teaching and learning languages. This minor is available to all majors on campus, but it is particularly suited to language majors.

---

### L34 French 1011 Essential French 1 Workshop

Application of the curriculum presented in French 101D. Pass/Fail only. Grade dependent on attendance and participation. Students must be enrolled concurrently in French 101D.

Credit 1 unit. EN: H

---

### L34 French 101D French Level 1: Essential French 1

This course immerses students in the French language and Francophone culture from around the world, focusing on rapid acquisition of spoken and written French as well as listening and reading comprehension. Songs, games, skits, videos, chats, and debates provide a rich cultural context for the themes of the course, including identity, self, and family; school and university life; French cafe culture; and travel. Interactive web-based practice at home helps students prepare to apply their knowledge in the classroom. By the end of the semester, students are able to present on real or imaginary journeys in French-speaking countries. While not required, it is strongly recommended that students also enroll in French 1011, a one-credit, pass-fail practice culture class. 3 credits.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

### L34 French 1021 Essential French 2 Workshop

Application of the curriculum presented in French 102D. Pass/Fail only. Grade dependent on attendance and participation.

Credit 1 unit. EN: H

---

### L34 French 102D French Level 2: Essential French 2

This course encourages students to continue their exploration of French and Francophone language and culture through intensive and interactive activities that help solidify their acquisition of oral and written communication skills. Songs, games, skits, videos, chats, and debates provide a rich cultural context for the themes of the course, including living quarters, neighborhoods, and cities; technology and social media; shopping and commerce; French food culture; and nature and the environment. Prerequisite: Fr 101D or equivalent. (Recommended for students with 2-3 years of high school French [7th and 8th grades together count as 1 year]). 3 credits.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

### L34 French 1051 Advanced Elementary French Practice Session

Application of the curriculum presented in French 102D or French 105D. For students with 2-4 years of high school French. Pass/Fail only. Grade dependent on attendance and participation.

Credit 1 unit. A&S IQ: LCD EN: H

---

### L34 French 1052 Advanced Elementary French Workshop

Working vocabulary for the Institute taught to emphasize real-life situations abroad. Only for students who have completed Fr 102D and 105D in Fall 2003 and WHO PLAN TO ATTEND FRENCH SUMMER LANGUAGE INSTITUTE. Credit/No Credit.

Credit 1 unit. A&S IQ: LCD EN: H

---

### L34 French 201D French Level 3: Intermediate French

An intermediate review course with multiple goals: independent and accurate oral and written communication; comprehension of a variety of French and Francophone materials; review of grammar functions; communicative activities. Prereq: French 102D or the equivalent (usually recommended for students with 4 years of high school French [7th and 8th grades count as 1 year]).

Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

---

### L34 French 202 French Level III At the Summer Institute

This Summer Institute course focuses on the major features of French 201D. Students will improve speaking, writing, and reading skills in French by combining study of grammatical forms with exercises designed to mirror many experiences they encounter while in France. The location abroad and contact with French host families and other French people will facilitate the student's learning experience. Students enrolled in this course will also take French 353, and will be prepared to enroll in French 307D upon their return to St. Louis. Open only to students attending the Summer Institute in France. Prereq: French 102D or 105D.

Credit 3 units. A&S IQ: HUM, LCD BU: IS EN: H

---

### L34 French 203D Intermediate French 1

This redesigned, interactive course explores the richness and diversity of the Francophone world and important contemporary issues such as social justice, inequalities, and the influence of media on society. Using an innovative approach based on lived experience, students will strengthen their abilities and accuracy in speech and writing and will considerably expand their vocabulary. Multi-media activities include films, readings, songs, virtual museum tours, and group projects. Prerequisite: Fr 102D or equivalent. (Usually recommended for students with 3 years of high school French [7th and 8th grades together count as 1 year]). 3 credits.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

### L34 French 204D Intermediate French 2

In this second semester of the intermediate language sequence, students deepen their knowledge of the Francophone world and refine their oral and written expression, preparing them for the 300 level language, literature, and culture courses. Through discussion of films, radio, television, newspaper articles, and a novel, students broach controversial topics including family values, the business world, art and entertainment, science and technology and the environment. Prerequisite: Fr 203D or equivalent. (Usually recommended for students with approximately 4 years of high school French [7th and 8th grades together count as 1 year]). 3 credits.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

### L34 French 214 Medical French

In this introductory course to the "Français Professionnel de la Santé" track (French for Medical Professionals), students will be exposed to medical terminology and practices as well as to health-related issues in France and the Francophone world (Quebec, Haiti, West and North Africa). Using an interactive approach based on real life situations, students will learn to perform various medical tasks such as writing a prescription, advising a patient, or presenting a humanitarian project to potential donors. Medical vocabulary and pre-professional oral and written expression will be enhanced throughout the course. Students will acquire the necessary tools to perform their tasks, preparing them for further coursework in the FPS track, the Diplôme de français professionnel de la santé, and the France for the Pre-Med study abroad program in Nice. Prereq: Fr 203D or equivalent (this class can replace Fr 204D).

Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: HUM EN: H

---

**L34 French 215 Conversation, Culture, Communication 1: Pop Culture**

The course will examine popular culture through a focus on what is said and performed, viewed especially but not exclusively through French film. Five thematic units will focus on everyday occurrences and themes that mark both French and Francophone experience: the intersection of French History with the lives of ordinary people; the role of the French family in modern life; the motto of the French Revolution and how it applies today; the notions of community and the individual in modern French and Francophone society; the role of the French in the world at large. Active student participation is required; student will be required to do at least two oral presentations on the films we will be seeing, and in some of the versions, to make their own film. An optional film-viewing is scheduled on Fridays 2-4. Prereq: Fr 201D or the equivalent. May be taken before or after Fr 216. Credit 3 units. A&S IQ: LCD BU: ETH

---

**L34 French 216 Conversation, Culture, Communication 2: French Culture Through French Film**

This course enables students to pursue your exploration of French culture through French film. Though not a history of French cinema, it introduces some of France's most celebrated actors and directors. We focus on excerpts that illustrate important life themes, including childhood, coming of age, existential crises, the search for happiness, the need for laughter, the threat of crime and violence, the complexities of love, and attitudes toward death. Students are asked to contrast their expectations of how such themes are to be treated with the way in which the French choose to portray them. Students write film reviews as though they were, alternately, an American or a French critic. As a final project, they write their own screenplay and imagine how it might be filmed in France. By the end of the course, they will have begun to view French culture with a French eye. Prerequisite: French 201D or the equivalent. May be taken before or after French 215. Credit 3 units. A&S IQ: LCD BU: ETH EN: H

---

**L34 French 247 First-Year Seminar**

Taught in English. This small-group seminar is devoted to the reading and study of other texts, such as films, paintings, and so on, as well as discussion and writing. Topics vary but have an interdisciplinary focus. Prerequisite: AP in English, French, or History, or permission of instructor. Does not substitute for any other French course. Credit 3 units. A&S: FYS A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

---

**L34 French 299 Undergraduate Independent Study**

Prereq: Fr 201D and permission of the Director of Undergraduate Study. Credit variable, maximum 3 units.

---

**L34 French 307D Cultural Expression**

This course enables students to reinforce and refine their French written and oral expression while exploring culturally-rich contexts and addressing socially-relevant questions. Students develop linguistic mastery, expand their vocabulary, and improve their communication skills through themed readings, films, and interactive activities. FR307D is essential for further study of French language, literature, and culture. Prereq: French 204 or the equivalent. (Usually recommended for students with 5 years of high school French [7th and 8th grades count as 1 year]). Director: Haklin TOPIC FALL 2024: Invitation au voyage. Travel and tourism have long shaped cultural production in French, inspiring writers, artists, and travelers alike to traverse the globe and imagine the world beyond one's doorstep. This course invites students on a journey across the francophone world as we revisit attractions from Paris to the Moon. Through the exploration of various media

from short stories and films to songs and street art, we will embark on imaginary expeditions, exotic excursions, spiritual pilgrimages, and touristic treks. These quests will offer us an opportunity to deepen and enrich our cultural expression in the language.

**L34 French 308D Introduction to Literary and Cultural Analysis**

The continuation of French 307D, this course emphasizes the improvement of writing skills through the analysis of a broad array of cultural and literary texts. This course introduces students to some of the most defining customs, ideas, and values of the French and Francophone traditions. Each semester a specific theme orients the readings, films, and artworks studied, and provides a context for class discussions and student papers. 3 class hours per week. Should be taken before Fr 325 or Fr 326. Prereq: Fr 307D or the equivalent. Director: Jouane.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L34 French 320 Advanced Conversation: The Art of French Cooking**

This class explores both historically and experientially the fine arts of French cooking. Students will investigate food culture from various perspectives, including recipes from the chefs of kings, famed literary homages, excerpts from contemporary writers, films, and cooking shows. They will present online food blogs or videos sharing their attempts to master an aspect of the historical, regional, or contemporary food culture we have studied; cooking is optional, but creativity is a plus. Topics to be explored include Terroir; the slow food movements; La table d'hote; the role of the cafe and the market in French and Francophone cooking; and reflections on our own national food cultures. Students will gain the necessary vocabulary and cultural knowledge to be able to converse about cuisine with ease with people from any Francophone country, preferably over a long meal. Prereq: Fr 307D.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

---

**L34 French 321 Topics I: In Perspective**

Focusing on topics of cultural and social importance, this course will offer students the opportunity to learn about defining moments in the French tradition. The specific topic of the course will vary from semester to semester, and may include works from different disciplines, such as art, film, gender studies, history, literature, music, philosophy, politics, science. Prereq: Fr 307D. SEC 06: An introduction to some of the "other" literatures in French: the literary traditions and cultural contexts of Francophone countries in North and sub-Saharan Africa and the Caribbean. Vibrant and productive cultures around the world have interacted with the French language and its literature to produce highly diverse texts of their own. We will study some of them, focusing on issues like cultural adaptation, colonialism, and "civilizing missions" and the responses to them. We will also consider the varying meanings of the term "Francophone", from conservative to liberal, and examine the ways in which contemporary mainland France has been transformed by the Francophone presence. Prereq: Fr 307D

Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: ETH EN: H

---

**L34 French 322 Topics II**

Focusing on topics of cultural and social importance, this course offer students the opportunity to learn about defining moments in the French tradition. The specific topic of the course will vary from semester to semester, and may include works from different disciplines, such as art, film, gender studies, history, literature, music, philosophy, politics, science. Prerequisite: French 307D.

Credit 3 units. A&S IQ: LCD, LS BU: ETH EN: H

---

---

**L34 French 325 French Literature I: Dramatic Voices: Poets and Playwrights**

An interpretation of cultural, philosophical, and aesthetic issues as presented in influential works of French poetry and drama from the Middle Ages to the present. May be taken before or after French 326. Prereq: Fr 308D or Fr 318D.

Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: HUM EN: H

---

**L34 French 3252 French out of France: Introduction to Francophone Literatures**

An introduction to some of the "other" literatures in French: the literary traditions and cultural contexts of Francophone countries in North and sub-Saharan Africa and the Caribbean. Vibrant and productive cultures around the world have interacted with the French language and its literature to produce highly diverse texts of their own. We study some of them, focusing on issues like cultural adaptation, colonialism, and "civilizing missions," and the responses to them. We also consider the varying meanings of the term "Francophone," from conservative to liberal, and think about its implications for the study of French literature as a whole. Finally, we examine the ways in which contemporary mainland France has been irrevocably transformed by the Francophone presence. Works by Kourouma, Césaire, Kateb, and Lopes. Prereq: Fr 307D.

Credit 3 units. BU: IS

---

**L34 French 326 French Literature II: Narrative Voices: Fiction and Nonfiction**

An investigation of cultural, philosophical, and aesthetic issues as presented in influential works of French prose from the Middle Ages to the present. May be taken before or after French 325. Prerequisite: French 308D or French 318D. Sec 09 Prosaic Greatness. The title of this course emphasizes both the artistic value of certain major prose texts in French and the everyday facets of knowledge about French culture they convey. From the Middle Ages to the present, influential writers like Montaigne, Pascal, Sand, Flaubert, and Gide have demonstrated how important political, philosophic, literary, and artistic concepts have been skillfully passed down from one generation to another through a masterful usage of French prose. By looking closely at the aesthetic and social questions raised by works such as theirs, which are so characteristic of their times, students come to appreciate better the evolution of French prose and its true place within the general history of France.

---

**L34 French 350 Undergraduate Seminar in French Literature and Culture**

An exploration of a variety of cultural icons, objects, myths, and traditions that define the French experience throughout the centuries. Topics vary. Prereq: French 308. SECTION 01. LITERATURE, ART, AND HISTORY OF THE FRENCH MIDDLE AGES. In France the Middle Ages is a period of intense artistic and literary creation despite an often brutal history. Feudal struggles, the Hundred Years' War, the Crusades, frequent epidemics, and famines add a tragic cast to daily life. Yet this period witnesses the birth of literature written in French (CHANSONS DE GESTE, courtly romances and poetry, theater), a tradition rich with knights and damsels in distress, stories of love and conquest. Cities are built, as are castles and cathedrals. Botanical gardens are planted. Elaborate wall tapestries and paintings begin to decorate the homes of lords and churches. France discovers the art of the book in the form of illuminated manuscripts. Men and women develop a taste for clothing and jewelry. The course explores this fascinating history by examining celebrated examples of the period's literature and art. It includes a visit to the medieval collection of the St. Louis Art Museum and the film VISITEURS DU SOIR.

Credit 3 units. BU: IS

---

**L34 French 352 French Institute Project**

Students investigate an important aspect of French life by conducting interviews with French natives and by observing them at work. Supplementing this direct experience with further research, students prepare a presentation on their selected topic for the Institute participants and for their French hosts. Open only to students enrolled in the French Summer Institute.

Credit 2 units.

---

**L34 French 353 Project Plus**

This Summer Institute course combines 1) a course that examines French culture as it is represented in the evocative history of French châteaux, the arts, and contemporary lifestyle; 2) the student's project; and 3) the student's experiences as part of the community abroad (excursions, visits, group discussions). In class students gain background for appreciating the primary sites of the Institute: in the Loire Valley, Paris, and Brittany. The classroom experience is discussion-oriented, with small writing assignments and readings. The project is an individual research program that students conduct with a French native on a particular aspect of French culture. In the past students have dealt with serious topics such as the deportation of the Jewish community in Amboise during World War II; with less grave subjects such as the work of a local wine grower or goat cheese producer, and the culinary repertoire of French and American families; and current topics concerning the political situation in Europe and the euro. Following weekly conferences with the teaching staff, students present a formal report on their experiences to an audience comprised of other members of the group and the students' host families. Students at the Institute are expected to speak French in all group settings. Assignments in this course level-appropriate (students enrolled in French 385 will complete longer papers and projects than those enrolled in French 202; expectations for conversations are likewise adjusted accordingly). Required of all students attending the Summer Institute in France.

Credit 3 units. A&S IQ: HUM, LCD EN: H

---

**L34 French 360 Thinking-It-Through**

Thinking-It-Through courses provide students with long views of contemporary issues. Cross-cultural perspectives from the French and Francophone world, past and present, help us to think creatively about the most pressing problems we face today. The subject -- which is of social, cultural, and/or political interest -- will change each semester. Beginning with a watershed moment in history, students will consider how the topic in question evolved over time by interpreting related forms of cultural representation and expression in order to develop an informed critical perspective on current debates. Prerequisite: French 308.

---

**L34 French 3701 In-Depth: Paris, Capitol of Modernity: A Digital 19th Century**

The French assert that the world learned to be modern in 19th-century Paris. Even though this is not entirely true, the Paris we observe today owes a great deal to 19th-century interventions in the city's physical fabric. Our ideas about modernity are informed by the ways in which the French learned to observe and describe the radical changes in their capitol. This course will examine maps, guidebooks, urban descriptions, and fiction to see how Paris changed in the century that brought us urban modernity, including anonymity, city crowds, cycles of boom and bust, high-scale public works, energy and anomie. It will also introduce students to some of the tools for digital scholarship and the presentation of academic work to non-academic audiences. Students will collaborate in the creation of a textual database on Paris monuments, and learn to present their research on urban sites via ArcGIS's Story Maps. Prerequisite: French 308 or In-Perspective. Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

---

**L34 French 3702 In-Depth: Subtexts and Subterfuges**

What persuades us that we understand a situation -- that we know the players, their intentions, and the effects of their actions? Do we rely on a parent's, lover's, or leader's moral authority or on our own sense of justice? Are we motivated by the coherence of their proposals or by our own emotional needs? All of the above? How, then, do we sort through layers of argument to detect ulterior motives and censored thoughts? Our class will focus on subtexts: hidden meanings, innuendo, ambiguity, veiled hints, omissions, and outright lies. We will consider how storytelling works to elicit particular responses in personal and commercial ads, travel brochures, cookbooks, political speeches, and street art. Tales of seduction by Perrault ("Puss in Boots"), Laclos ("Dangerous Liaisons" [excerpts]), and Proust ("Swann in Love" [excerpts]) along with Haneke's film of suspense and surveillance ("Hidden") will focus our attention on techniques of camouflage and detection. The subtexts in these works will inform our own (thriller?) subplot of contemporary life: a creative project to top off the semester. Prerequisite: French 308.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: BA EN: H

---

**L34 French 3703 In-Depth: A Passion for Things**

Imagine a collection of prized objects. What motivates a collector to acquire and display them? How do these objects allow us to understand the past as it defines our own heritage and that of others, what we choose to preserve or erase? These questions ground our study of the pleasures of collecting. A passion for things can be empowering, but it can also signal exploitation. What happens when the desire to possess extends to a person--when a person becomes the thing possessed? The passion to possess implies the power to dispossess, to take from others the property, privileges, and promises that were theirs. We will focus on three sites of power in which collections figure prominently: the court of Louis XIV at Versailles; the museums, department stores, and world's fairs of 19th-century Paris; and the world of objects in 20th-century poetry and photographs. The class will examine objects that speak to the relations between men and women; kings and subjects; humans and nature; ideas of freedom and efforts to suppress it. Authors and artists include Perrault, Lafayette, Duras, Baudelaire, Zola, Ponge, Vuillard, Caillebotte, Cartier-Bresson, and others. Prereq: In-Perspective or Fr 308.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

---

**L34 French 3704 In-Depth: France and the Muslim World**

France today has more Muslim citizens than any other country in Europe, and this fact puts the country's relationship with Muslims, both within and beyond its borders, constantly in the news. Starting with Napoleon's invasion of Egypt, we will examine the wide involvement of France in the affairs of Muslim countries: its presence in Egypt and

Lebanon, and most notably its colonization of Morocco, Algeria, and Tunisia, which had an irreversible effect on French culture today. We will also consider the anthropology and cultural productions (literature, film, and art) of French people of Muslim origin. Given the influence of francophone Muslim religious scholars, we can not only speak of France and the Muslim world, but investigate France in the Muslim world. What futures become imaginable, when we see Muslims as an integral part of French culture, and France as part of the global Muslim community? Assignments will include writing for non-academic audiences, and the creation of a StoryMap presentation in ArcGIS. Prereq: In-Perspective or Fr 308.

Credit 3 units. A&S IQ: HUM, LCD EN: H

---

**L34 French 374 In-Depth: Science Fiction**

What we now call science fiction emerged from early tales of voyage and discovery, whose authors envisioned other times, places, customs, and perspectives. It flourished in the fantastic and futurist tales that first arose in France but were popularized in Germany, England, and America. An outgrowth of the scientific and the industrial revolutions, it informed the genres of opera, painting, and the novel before reaching the silver screen. Drawing on theories of the uncanny, we will consider how we determine whether stories are governed by the laws of nature (madness, dreams, coincidence) or the supernatural (ghosts, sylphs, devils). We will then explore when and how the Romantic realms of the gothic gave way to the dystopian worlds of science fiction that inform not only contemporary film but our current perception of reality. Readings by Cyrano de Bergerac, Voltaire, Cazotte, Balzac, Maupassant, Verne, Villiers de l'Isle-Adam, Zola, and Leroux; films by Resnais, Godard, and Jeunet. Prereq: In-Perspective or Fr 308.

Credit 3 units. A&S IQ: HUM, LCD, LS EN: H

---

**L34 French 375C Biography of a City: Paris**

This class has a dual focus: to trace the political and cultural history of Paris throughout the ages since its founding; to highlight Paris as a theme or topos in works of art and in the popular imagination. Thus, we examine both Paris's role as an important historical center as well as its function as a vital cultural symbol. Guest speakers from the Departments of Romance Languages, Art History, History, Music, Philosophy, and others. Course taught entirely in English. Same as Art-Arch 376 and Comp. Lit.

Credit 3 units. Art: HUM BU: IS

---

**L34 French 376C Cinema and Society: Feminist Filmmaking**

Did you know that the inventor of narrative fiction film, and perhaps the only female filmmaker from 1896-1906, was a French woman? This course introduces students to French and Francophone cinema through the lens of the feminine. In this "her" story of French-language film, we will explore works by female directors as well as representations of women and girls on the silver screen from cinema's silent origins to the empowered voices of the #MeToo era. In tandem, we will engage with key ideas from feminist critics like Simone de Beauvoir and Françoise d'Eaubonne. Class discussions will take an intersectional approach, addressing feminism's connections with the following topics: girlhood and adolescence; race and ethnicity; post-colonial cultures; gendered spaces/places and the environment; LGBTQ+ identities; motherhood and domesticity. Our corpus includes classics from the French tradition as well as understudied films, running the spectrum from drama to documentary, to coming-of-age narratives and cult favorites, including works by Chantal Akerman, Yamina Benguigui, Alice Guy, Céline Sciamma, and Agnès Varda, among others. Prereq: In-Perspective or Fr 308.

Credit 3 units. A&S IQ: LCD, LS Art: CPSC BU: IS EN: H

---

**L34 French 383C Literature and Society: Ailing Body/Ailing Mind in French Autobiographical Writings**

Illness and suffering have inspired a great variety of literary texts from the Middle Ages to the modern era. This course considers works ranging from Montaigne's influential ESSAIS through contemporary novels that focus on autobiographical writings in which the author gives a personal account of his or her own direct experience with illness. Open only to students enrolled in the Nice Pre-Med program.

**L34 French 395 Paris and New York: The Art of the City**

The cultural icons Paris and New York exert a powerful hold on our imagination. We will explore how the French and Americans define themselves, and each other, through their premiere cities. The themes of integration and isolation, class and race, innovation and tradition, and commemoration and celebration will ground our discussions of writers Zola ("Therese Raquin"), Wharton ("The Age of Innocence"), Proust ("Swann's Way"), Foer ("Extremely Loud and Incredibly Close"), Krauss ("The History of Love"), Truong ("The Book of Salt"), and Gopnik ("Paris to the Moon"); painters Vuillard, Caillebotte, and de Kooning; photographers Brassai, Cartier-Bresson, Doisneau, Ronis, Abbott, Hine, and Stieglitz; and filmmakers Godard ("Breathless"), Allen ("Manhattan," "Midnight in Paris"); Jeunet ("Amelie Poulain"), and Kassovitz ("Hate"). Through our study of public spaces (the Brooklyn Bridge, the Twin Towers, the Eiffel Tower, and the streets themselves), we will consider how each city functions as a site of memory even as it fashions the future.

**L34 French 400 Intensive Translation for Graduate Students I**

The first part of a two-semester course sequence in reading and translating French. For graduate students in the humanities, social and natural sciences. Nongraduate students may enroll with permission of the department. Must be followed by Fr 401.

Credit 3 units. A&S IQ: LCD EN: H

---

**L34 French 401 Intensive Translation for Graduate Students II**

Continuation of Fr 400. For graduate students in the humanities, social and natural sciences. Prereq: Fr 400; credit for Fr 400 is contingent on completion of Fr 401.

Credit 3 units. A&S IQ: LCD EN: H

---

**L34 French 4013 Second Language Acquisition and Technology**

This seminar for undergraduate and graduate students will transform research and theory about second-language acquisition into practice while focusing on technology-driven applications. The course fosters professional development as participants formulate critical skills for evaluating, creating, and integrating technology into the language classroom and other language learning contexts, including business, engineering, and law. Course formats include readings, discussions, and demonstrations with technologies. The course counts for the minor in applied linguistics, the PhD in applied linguistics, and the graduate certificate in language instruction. This course carries the Social and Behavioral Sciences attribute and can be taken for different majors.

Same as L92 APL 4023

---

**L34 French 411 Intensive Writing in French: Timely Topics**

This course enables advanced students to refine and develop their writing skills and to develop specialized vocabularies based upon current issues in the Francophone world chosen in light of their interests (Global Health, International Relations, Anthropology, Political Science, etc.). They will analyze the rhetorical strategies used in contemporary cultural debate and write creative, persuasive, and analytical compositions that prepare them to apply for internships and pursue careers in international medicine, business, law, diplomacy, and the arts. Students will complete a series of short papers, each with required revisions. Meets WI requirement. Prereq: Fr 307D, Fr 308D, or permission of instructor.

Credit 3 units. A&S IQ: LCD, LS, WI EN: H

---

**L34 French 4131 Advanced French and Translation**

This course fosters an in-depth knowledge of the French language and accuracy in its use. It employs a comparative approach (linguistic and cultural) initiating students into the art of translation (from English to French and from French to English and sensitizing them to the problem of cultural transfer. Students will acquire practical training, cultivating skills advantageous in the workplace by drawing on a wide variety of documents to develop translation strategies. Genres include fiction, autobiography, journalism, advertising, and correspondence spanning different eras, regions, and registers. This course satisfies the college's writing intensive requirement. Prereq: In-Perspective or Fr 308.

Credit 3 units. A&S IQ: LCD, LS, WI EN: H

---

**L34 French 413B Linguistics and Language Learning**

This course, taught in English, is a foundation for students who will work with linguistically and culturally diverse people in the USA and around the world, whether this work is in the courtroom, hospital, classroom, office and more. The class will help prepare students for the diverse range of twenty-first century occupations that have language and linguistics at their center, including machine learning and translation studies. The class utilizes a survey format and covers both internal and external factors related to language acquisition and language use, such as language and the brain, language aptitude, age, gender, memory, prior knowledge, etc. Theoretical and research dimensions of both linguistics and foreign / second language learning are treated. Corresponding implications of the readings focus on action - on making decisions for language policies and debates around the world that are informed by linguistic and language knowledge. The course is required for the minor in applied linguistics, the PhD in Applied Linguistics, and the graduate certificate in language instruction. This course carries the Social and Behavioral Sciences attribute and can be taken for different majors such as Global Studies and Educational Studies. Prereq: Ling 170 is recommended but not required.

Same as L92 APL 4111

Credit 3 units. A&S IQ: SSC BU: BA, ETH

---

**L34 French 415 The 19th-Century Novel: From Realism to Naturalism to Huysmans**

In this seminar we will read some of the great realist novels of the nineteenth century, by the four masters of the genre: Balzac, Stendhal, Flaubert, Zola. We will also examine Huysmans's A REBOURS, which was written in reaction to the excesses of Realism. We will determine what characterizes the realist novel and how it has evolved from Balzac to Zola. We will consider its theoretical orientation, but we will also focus on the major themes it addresses: the organization of French society throughout the nineteenth century, Paris vs. the province, love, money, ambition, dreams, material success, decadence, etc. Prereq: Fr 325 and 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. 3 units.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM EN: H

---

**L34 French 417 Poetry and Prose of the Renaissance: Gender, Love, and Sexuality in the Renaissance**

A major writer, an early sympathizer of the reform movement, and a generous patron of the arts and sciences, Marguerite de Navarre (1492-1549), King Francis I's sister, has continued to intrigue readers throughout the ages. Her correspondence, short stories, plays, dialogues and religious poems have been edited and translated into several languages. However, her best known work today remains the *Heptameron*, her collection of novellas. This course will focus primarily on the *Heptameron* in the context of the *Querelle des femmes*, a centuries-long literary debate over the nature and status of woman. It proposes a close study of the text with special emphasis on gender issues. Close attention will be paid to early modern understandings of sex and gender and the extent to which devisants and characters in the stories conform to or defy the predominant gender stereotypes; gender relations; the dynamics of love and marriage; attitudes toward sexuality, gender and sexuality, and sexual aggression and violence. Prereq: Fr 325 or Fr 326, or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM EN: H

---

**L34 French 4171 Travel Abroad in Early Modern Times**

This course addresses such questions as national identity; international relations; migration, cultural differences, and integration; cultural interactions and influences. It concerns more specifically the important role humanism played in the spectacular development of vernacular languages and traveling abroad in Early Modern times. It will be organized around the following themes: 1. Humanism, nationalism, and the growing interest in the vernacular; 2. Humanism and the on-going project of translation (TRANSLATIO STUDII); 3. Humanism and Travel Abroad; 4. Views on foreign cultures and one's own after returning home; 5. "La France italienne" (including at least one session on Lyons and another on Italian artists living in France); and 6. Integration and Conflicts. Readings will include major authors (Rabelais, Montaigne, Marguerite de Navarre, Du Bellay) as well as lesser-known figures (Pasquier, Lery, Thevet), diaries and travelogues. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates.

Credit 3 units.

---

**L34 French 4172 Travel in the Renaissance and the Literature of Discovery**

Improved modes of transportation under the king Francis I facilitated travel in the Renaissance. Men and women were able to view famous cultural monuments on their continent and explore parts of the world where no one had ventured before, returning home with vivid tales of distant lands and exotic peoples. With the advent of the printing press, such fascinating stories were made available to a wider audience. This course examines this literature of discovery, paying special attention to the multiple genres that flourished at the time (historical narratives, diaries, correspondences, travelogues, elegiac poetry, adventure novels) as well as the historical and cultural contexts of these works. Other questions addressed include national identity and cultural differences, cultural interactions and influences, international relations, the impact of humanism, and the concept of CURIOSITAS. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

---

**L34 French 419 Feminist Literary and Cultural Theory**

This course provides a historical overview of feminist literary and cultural theories since the 1960s and 70s, acquainting students with a diversity of voices within contemporary feminism and gender studies. Readings will include works of French feminism, Foucault's *History of Sexuality*, feminist responses to Foucault, queer (LGBTQ+) theory, postcolonial and decolonial feminism, feminist disability theory, and writings by US feminists of color (African-American, Asian-American, Latina, Native-American). The reading list will be updated each year to reflect new developments in the discipline. We will approach these readings from an intersectional and interdisciplinary perspective, considering their dialogue with broader sociopolitical, cultural, and philosophical currents. By the end of the course, students are expected to have gained a basic knowledge of the major debates in feminist literary and cultural studies in the last 50 years, as well as the ability to draw on the repertoire of readings to identify and frame research questions in their areas of specialization. The class will be largely interactive, requiring active participation and collaborative effort on the part of the students. Students will be encouraged to make relevant connections between the class readings, everyday social and political issues, and their own research interests. NOTE: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Prerequisite: advanced course work in WGSS or in literary theory (300 level and above) or permission of the instructor.

Same as L77 WGSS 419

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM EN: H

---

**L34 French 4191 The French Islands: From CODE NOIR to Conde**

The French have been dreaming about the tropics ever since transatlantic trade became possible in the sixteenth century, and literature in French has reflected these dreams ever since. Closer to our own period, writers from the French Caribbean have written themselves into the French canon, winning prestigious literary prizes. This course will link these two phenomena by studying literature from and about the tropics from the 18th century to the present. In our readings, we will attempt to see the ways in which the literature from and about France's island possessions has contributed to the forming of cultural and political relations between France and the islands, but also among the islands and within the Americas. Almost all texts available in English for students not majoring in French; main seminar session taught in English with weekly undergraduate preceptorial in French. Prereq: Fr 325 and Fr 326. One-hour preceptorial for required for undergraduates.

Credit 3 units. A&S IQ: HUM, LCD EN: H

---

**L34 French 4192 Dark Humor: Francophone Literature from West Africa**

In 1960, most of the French colonies in Africa gained independence in a largely peaceful transfer of power. Since then, this development has been viewed alternatively as the triumph of self-determination, and as a hollow act undermined by neo-colonial French ministries, multinational companies, and corrupt governments. Media today commonly adopt a highly pessimistic tone when speaking of these phenomena, but literature from West Africa provides alternative ways of looking at the region, which today includes over 140 million French speakers. Reading authors such as Kourouma, Kane, Tansi, Tchicaya, and Lopes, we will consider the ways that literature enters into dialogue with political discourses represented both as tragedy and as farce. The main seminar (section 01) is taught in English; undergraduates also register for a weekly discussion (section A) conducted in French. Prereq: for undergraduates, Fr 325, 326, Thinking-It-Through, or In-Depth; for graduates not in French, reading knowledge of the language.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM EN: H

---

### L34 French 421 The 20th-Century Novel

In this seminar we examine the evolution of the French novel in the twentieth century. We closely read five great novels, by Proust, Gide, Céline, Robbe-Grillet, and Ernaux. We determine what characterizes the twentieth-century French novel and how it has evolved from Proust to Ernaux. We consider its technical aspects but will also focus on the major themes it addresses: love, art, memory, time, death, and the general problem of the human condition. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM EN: H

---

### L34 French 4211 The Novel of the 1930s: The Human Condition and the Meaning of Life

Most French novelists of the 1930's were no longer satisfied simply to entertain their readers, to bring formal innovations to their writing, to depict society, or to represent human consciousness. Economic transformations, technological advances, and the unspeakable horrors of WWI challenged traditional beliefs. Authors therefore dedicated themselves to examining the human condition and the meaning of life. In this seminar we will read five major novels of the period by Saint-Exupéry, Mauriac, Malraux, Céline, and Sartre. We will determine how each author approaches the fundamental questions of human existence and what, if any, answers he provides. Prereq: Fr 325 and 326 (or, for students who have completed the Paris Business Program, completion of either course). One-hour preceptorial required for undergraduates.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM EN: H

---

### L34 French 4221 Topics in French Literature: The Voyage of Self-Discovery

In our modern interconnected society, it is not always easy for young people to define who they really are or to discover and fulfill their potential, but it is encouraged and facilitated through education, travels, social contacts, and even technology. But it was not always so. In earlier times, individuals were often constrained by the prevalent social and moral values of their worlds and had a much harder time discovering their persona or fulfilling their needs and aspirations. This seminar explores the issues of self-discovery, initiation, and self-realization in the modern novel, including Balzac's EUGENIE GRANDET, Stendhal's LE ROUGE ET LE NOIR, Flaubert's MADAME BOVARY, Mauriac's THERESE DESQUEYROUX; and Philippe Grambert's UN SECRET. Prereq: Fr. 308.

Credit 3 units. Arch: HUM Art: HUM BU: IS

### L34 French 427 Literature of the 17th Century I

UNDERGRADUATES ONLY REGISTER FOR THIS SECTION Prereq: Fr 325, 326, Thinking-It-Through, or In-Depth or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM

---

### L34 French 4271 French Classical Theater

A study of works by Corneille, Molière, and Racine. We consider how the theater contributes to the rise of absolutism in France in the seventeenth century. The depiction of kings and the role of primogeniture; the function of sacrifice; the marginalization of women; the glorification of Ancient Rome; Orientalism; tensions between family and State; and the rise of the bourgeoisie in these plays suggest how the dramas played out on stage mirror the historic spectacle of the court over the course of the century as it develops an increasingly

centralized authority culminating in the image of an all-powerful Louis XIV. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM

---

### L34 French 428 Literature of the 17th Century II

This seminar examines critical points of intersection in the 17th century. All connections engage texts as well as images. We will explore the expansion of knowledge as reflected in the mapping of bodies (anatomy), cities, and countries; humans in relation to animals; commerce and the rise of the bourgeoisie that challenges the privileges of the aristocracy; the splendors of nature and culture as manifest in the magnificent Versailles gardens, the tulip craze, and landscape painting; the lure of the exotic as part of everyday experience; and links between art and science. These topics will allow us to situate classical France in relation to the periods that precede and that follow it: the Renaissance and the Enlightenment. We will view the French monarchy in relation to both Italy, whose art provided much inspiration, and Holland, where the prosperity of merchants supported an art market that included Vermeer, de Hooch, and other celebrated Golden Age painters, all who are so unlike the artists who flourished under Louis XIV. Works will include Corneille's "Horace" and "Surenna"; Racine's "Berenice" and "Phedre"; Descartes's "Discours de la Methode"; La Bruyère's "Caracteres"; Lafayette's "Princesse de Cleves"; Pascal's "Pensees"; Graffigny's "Lettres d'Une Peruvienne"; extracts from the "Encyclopedie"; art by Le Brun, Poussin, Patel, Bernini, Vermeer and his contemporaries, and Boucher; anatomical drawings by Vesalius; as well as maps and cityscapes. Prerequisites: French 325C and French 326C. One-hour preceptorial required for undergraduates.

Credit 3 units. A&S IQ: LCD Art: HUM EN: H

---

### L34 French 4281 Order in the Court: Classical Struggles During the Reign of Louis XIV

Beginning with a study of Versailles, we examine the spectacular dimensions of artistic production under Louis XIV, including architecture, visual arts, and landscapes, in addition to literature. The recent historical novel L'ALLEE DU ROI, which details the romance between the king and his mistress and then second wife Mme de Maintenon, and the MEMOIRES of Saint-Simon help to set the stage for us to appreciate the intrigues at court. Situating the king at the head of a hierarchical and orderly court structure, we examine some of the less harmonious elements of court-dominated life offered in representations by Corneille (SURENA), Molière (LES FEMMES SAVANTES), Racine (MITHRIDATE, PHEDRE), La Rochefoucauld, La Bruyère, La Fontaine, Mme de Sévigné, Pascal. We consider the ways in which the court assures its power through primogeniture, the right of the eldest born son to inherit power, as well as through strict codes of etiquette and the generosity of the crown to its loyal and productive followers. We examine how these factors are insufficient to protect the monarchy against the contravening forces of political ambition, family struggles, the emerging role of women, religious faith, and the devastating effects of war and disease. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates.

Credit 3 units.

---

### L34 French 431 Literature of the 18th Century I

Prereq: Fr 325 or 326. One-hour preceptorial required for undergraduates.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM EN: H

---

### **L34 French 4311 Voices of Dissent: Enlightenment Principle and Social Protest**

The eighteenth century saw a rise in overtly moralizing texts, on the one hand, and unapologetically immoralist philosophies on the other. We focus on texts that avoid these extremes, allowing multiple voices to be heard. With the aid of excerpts from Genette, Bakhtine, Todorov, and Barthes, we identify the voices of dissent in several eighteenth-century genres, including satire, the tale, the novella, the philosophical dialogue, theater, autobiography, and the epistolary novel. By reading authors such as Voltaire, Montesquieu, Prévost, Diderot, Cazotte, Rousseau, Beaumarchais, and Charrière, students come to appreciate a third tendency in eighteenth-century texts that is crucial to our understanding of the Enlightenment: the tendency to validate conflicting perspectives. We consider whether a moral can be derived from a text that consistently questions the voice of authority. We analyze the implications of such questioning in the years before the Revolution. Finally, we consider the extent to which the overzealous censorship laws of the period may have obliged authors to couch socially controversial ideas in narrative forms that seem to deny their own assertions. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One hour preceptorial required for undergraduates. Credit 3 units.

---

### **L34 French 4321 Art, Revolution, and Society**

This course examines major eighteenth-century aesthetic treatises and literary texts that explore solutions for aesthetic quandaries. Authors include d'Alembert (PREFACE A L'ENCYCLOPEDIE), Rousseau (DISCOURS SUR LES SCIENCES ET LES ARTS, LETTRE A D'ALEMBERT), Diderot (ENTRETIENS SUR Le Fils naturel, LE PARADOXE DU COMEDIEN, LE NEVEU DE RAMEAU), Cazotte (LE DIABLE AMOUREUX), Beaumarchais (LE BARBIER DE SEVILLE, LE MARIAGE DE FIGARO), Staël (DE LA LITTERATURE, CORINNE). These works allow us to study some of the major insights into the aesthetics of music, painting, and the performing arts with an eye to how these aesthetic "revolutions" expanded the scope and influenced the form of the French language and literary texts. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates. Credit 3 units. A&S IQ: HUM, LCD EN: H

---

### **L34 French 4331 Women of Letters**

We investigate the representation of women in eighteenth-century texts. Why did the novel and epistolary fiction become so closely associated with women as writers, heroines, and readers in the course of the century? Why were women considered exemplary and yet, at the same time, a threat? The eighteenth century saw the last of the salons led by women well-versed in philosophy, literature, art, and politics. It saw the reinforcement of the opposition between the public and the private sphere. Woman was the incarnation of the ideal of liberty and yet excluded from the "Rights of man." Rousseau praised women's role as nurturers and peace-makers but cast into doubt their capacity for genius. Literary texts that feature women became a sparring ground for two of the century's major literary trends: SENSIBILITE and LIBERTINAGE, for a woman's sensitivity was thought to contain the seeds of virtue and licentiousness. We investigate philosophical discourses on the senses and emotions and political discourses on republican responsibility. We read these texts in conjunction with the literary works of men and women authors, including Prévost, Marivaux, Graffigny, Riccoboni, Diderot, Rousseau, Charrière, Laclose, Sade, and Staël. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One hour preceptorial required for undergraduates. Credit 3 units. Art: HUM

---

### **L34 French 4341 Enlightenment Energy: Comedy, Eroticism, and the Grotesque**

In this course we will examine works in which the comic, the erotic, and the grotesque--base urges that eighteenth-century audiences deplored yet found entertaining--made inroads into the literature of the time. The Enlightenment was highly suspicious of impulses and intuitions that challenged or escaped the bounds of virtue, sentiment, and reason. French philosophes debated whether genius lay in the supreme mastery or the spontaneous creation of art, whether talent was inborn or could be acquired through practice. Reading texts that span the long eighteenth century, by authors such as Molière, Marivaux, Crébillon fils, Voltaire, Diderot, Restif de la Bretonne, Beaumarchais, Sade, and Hugo, we will investigate how the satirical, the bawdy, and the profane served as the wellspring of Enlightenment inspiration, giving rise to visions of an ideal society. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for required for undergraduates. Credit 3 units.

---

### **L34 French 4351 Philosophical Fictions**

The French Enlightenment witnessed a veritable explosion of short fiction, including philosophical, oriental, moral, and libertine tales bearing such self-conscious titles as A THOUSAND AND ONE FOLLIES and THIS IS NOT A TALE. Though written by the literary elite and not considered children's literature, the genre enjoyed widespread popular appeal and had the power to shape mentalities. Often satirical in tone, these tales served to convey and question contemporary political, philosophical, scientific, religious, and moral trends. They inspired some of the most vivid illustrations of the day and were often circulated as part of the literary underground. We will read works by Crébillon fils, Voltaire, Diderot, Cazotte, Charrière, Sade, and Staël alongside excerpts from French cultural history on eighteenth-century mentalities, salons, and print culture. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S IQ: HUM, LCD EN: H

---

### **L34 French 4391 Classicism/A-Classicism**

Among the hallmarks of seventeenth-century, French classicism celebrated reason, order, balance, and a power often associated with the great achievements of Ancient Greece and Rome. Reason, however, coexisted with dreams and madness; order encountered threats both political and sexual; disharmony persisted despite longings for justice; and depictions of Antiquity flourished alongside those of the Orient, the exotic other world of the East. The course explores these "a-classicisms," or countervailing forces, by studying the challenges that ground the struggles and seductions in dramas by Corneille, Molière, and Racine as well as in the novels of Madame de Lafayette. We read Graffigny's LETTRES D'UNE PERUVIENNE, Prévost's MANON LESCAUT, Laclous's LIAISONS DANGEREUSES to understand classicism retrospectively, through the "a-classicism" of the eighteenth Century's treatment of identity, alienation, desire, and societal tensions. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for required for undergraduates. Credit 3 units.

---

### **L34 French 4392 Commemorating the King**

The court of Louis XIV at Versailles was remarkable for its grandeur, its consolidation of power, and its celebration of the Sun King. Arguably, all aspects of court life were regulated by the crown and all things produced--whether wars or monuments; art or science; novels or histories--were tributes to the king. All reflected a certain "ideology of commemoration," that is, an implicit or explicit validation of the monarch's privilege and prestige, both for his contemporaries and for posterity. We will explore how authors (including Louis XIV, La

Bruyère, La Rochefoucauld, Perrault, La Fontaine), artists (Lebrun, Rigaud, Poussin, Félibien), and historiographers/memorialists (Racine, Saint Simon) support the ambitions of the crown through their works. Modern critics Elias, Marin, Burke, and Merlin will guide our research into the activities of the royal family, the ideology of absolutism, and the role of art in affirming the power of Versailles as we continue to memorialize it through surviving texts, monuments, and images. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for required for undergraduates. Credit 3 units.

---

#### **L34 French 443 Contemporary Francophone Literature**

A general survey of Francophone literature. This seminar examines representative texts of Quebec, "Acadia," Africa, and West Indies. Authors to include Antonine Maillet, Louis Hémon, Michel Tremblay, Gérard Leblanc, Anne Hébert, Maryse Condé, along with the influential poets of "négritude," Senghor and Césaire. This course counts towards the seminar requirement for the major. Prereq: Thinking-It-Through or In-Depth. Credit 3 units. A&S IQ: HUM, LCD Art: HUM

---

#### **L34 French 447 The Medieval Literary Arts**

How do medieval French writers understand the structures and functions of the human body? What kinds of bodies are considered disabled? Are womanhood, childhood, and old age construed as disabilities? In this course we will read texts of varied genre--farces, saints' lives, fabliaux, poems, romances, journals and chronicles--as we consider how, if at all, disability exists as a social or literary construct in the Middle Ages. Texts include Philippe de Beaumanoir's MANEKINE, Courtebarbe's TROIS AVEUGLES DE COMPIÈGNE, Guillaume de Machaut's VOIR DIT, and the farce LE GARÇON ET L'AVEUGLE; excerpts from Jean de Meun's ROMAN DE LA ROSE, from the OVIDE MORALISÉ and from Christine de Pizan's MUTACION DE FORTUNE; and poems by Rutebeuf, Deschamps, and Molinet, as well as critical and theoretical texts from the emerging discipline of disability studies. Texts will be available in modern French; no prior study of Old French language is necessary. This course counts towards the seminar requirement for the major. Prereq: Fr 325 or Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates. Credit 3 units. A&S IQ: HUM, LCD Art: HUM EN: H

---

#### **L34 French 451 French Literature of the Middle Ages I**

French literature from the beginning to 1250. The course emphasizes CHANSONS DE GESTE, courtly romance and lyric, and early drama. Most works read in modern French. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates. Credit 3 units. A&S IQ: HUM, LCD Art: HUM EN: H

---

#### **L34 French 452 French Literature of the Middle Ages II: I, Object**

In this seminar we will explore the significance of objects and objectification in medieval French literature. What happens when people are treated as "love objects" in lyric poetry, or when inanimate objects take on human properties in comical or allegorical texts? How do the "transactions" of fictional wills and legacies bind one human subject to another? We will approach these questions through a number of theoretical perspectives, including psychoanalytic, poststructuralist, posthuman, and thing theory. Texts include poems of the troubadours and trouvères, fabliaux, the Roman de la Rose, René d'Anjou's Livre du cuer d'amour espris, and Villon's Testament. Texts will be read in modern French; no prior study of Old French language is necessary. Prereq: Fr 325 or Fr 326 or the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial required for undergraduates.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM

---

#### **L34 French 450 Intersectional Identities in Medieval France**

Were medieval French identities "intersectional"? What cultural evidence is there -- in literature, theatrical performance, the visual arts, and the artifacts of everyday life -- for such identity categories as "race," "sexuality," or "disability"? In this course, we will investigate medieval French imaginaries of the racialized, gendered, classed, and abled/disabled body, seeking to do the following: (1) understand the systems of power and privilege that undergirded medieval identities; (2) critique the contemporary perception of medieval Europe as an all-"white," male-dominated space; and (3) explore how contemporary critical identity studies can deepen our comprehension of medieval culture and how medieval materials can offer new insights into contemporary identity formations. This course will be taught in English, with a weekly discussion section in French for undergraduates enrolling for French credit. Prerequisite: French 325, French 326, Thinking-It-Through, or In-Depth. Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM BU: BA EN: H

---

#### **L34 French 456 Romance Philology**

Study of the evolution of the major Romance languages from their common Latin origins. Knowledge of classical Latin not required, but acquaintance with phonetics of at least one Romance language extremely helpful. Conducted in English. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One-hour preceptorial for undergraduates. Credit 3 units.

---

#### **L34 French 459 Writing North Africa: Francophone Literature of the Maghreb**

With statues of colonizers coming down around the world, France reckons with its colonial legacy in North Africa. Ever since their conquest of Algiers in 1830, the French have been fascinated by writing from across the Mediterranean. Beginning with nineteenth-century French travel narratives about Algeria, the colonial era defined ideas of the "exotic." As Algeria, Morocco, and Tunisia gained independence from France in the mid-twentieth century, North African authors often wrote their own literature in the language of their former colonizer. These authors and their contemporary descendants continue to create and challenge the ideas of postcolonial francophone literature today. The main seminar sessions are taught in English, with additional required weekly undergraduate discussions (section A) in French. Prerequisites: for undergraduates, French 325 or 326, Thinking-It-Through, or In-Depth; for graduates not in French, reading knowledge of the language. Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

---

#### **L34 French 461 Topics in French Literature and History**

How genre affects both the production of a given literary text and its perception by the reader. Representative texts from different centuries and movements. Prereq: Fr 325C and 326C (or, for students who have completed the Paris Business Program, completion of either course). One-hour preceptorial for undergraduates only. Credit 3 units. A&S IQ: HUM, LCD Art: HUM EN: H

---

#### **L34 French 466 Second Language Acquisition**

There are many ways in which a second language can be learned: from infancy as the child of bilingual parents, or later through formal instruction, immersion in a new culture, or in a particular work or social situation. This class is an inquiry into the processes by which acquisition occurs. Topics include the nature of language learning within the scope of other types of human learning; the relationship between first and second language acquisition; the role of linguistic, cognitive, and sociocultural factors; insights gained from

analyzing learners' errors; key concepts such as interlanguage and communicative competence; bilingualism; the optimal age for second language acquisition; and a critical appraisal of different theories of second language acquisition. Both theoretical and instructional implications of second language acquisition research are considered. This course can be used towards certification in TESOL and is a required course for the Graduate Certificate in Language Instruction. Prerequisite: Ling 170D or equivalent is recommended, especially for undergraduates, but is not required.

Same as L44 Ling 466

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

### L34 French 469 Reading and Writing in a Second Language

In the past decade the process of becoming literate in a second language has received considerable attention by researchers and instructors. This course, taught in English, extends issues in L2 literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second language learners involves a number of variables including both cognitive and social factors. Topics to be discussed in class include: individual learner differences; the extent to which reading and writing are interrelated; text types and literary forms; literacy and social power; and universal cognitive operations. Students will discuss how to bridge research and practice, and they will create activities to be included in a reading and writing portfolio. Course counts toward the Graduate Certificate in Language Instruction.

Credit 3 units. A&S IQ: LCD

---

### L34 French 495 Honors

To be considered for graduation with Honors, students must: (1) participate satisfactorily in two 400-level literature courses and (2) enroll in Fr 495 and submit an Honors Thesis approved by the Department at least two months before graduation. Prereq: 3.0 grade point average. Qualified students should consult the Department. Credit 3 units.

---

### L34 French 4951 Honors

To be considered for graduation with Honors, students must: (1) participate satisfactorily in two 400-level literature courses and (2) enroll in Fr 495 and submit an Honors Thesis approved by the Department at least two months before graduation. Prereq: 3.0 grade point average. Qualified students should consult the Department. Pass/Fail.

## Italian

Visit online course listings to view semester offerings for L36 Ital.

---

### L36 Ital 1015 Introductory Italian for Visual Arts

Students learn methods of effective communication, the rapid acquisition of spoken ability, and a working vocabulary for the visual arts: drawing, painting, sculpture, architecture, photography, the museum, etc. Students will also learn beginning reading and writing skills.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

### L36 Ital 101D Elementary Italian in the Everyday World, Level I

This course stresses the rapid acquisition of spoken ability, with attention to the development of reading, writing, and listening skills through contextualized learning and engagement with culturally authentic materials. Designed for students with no prior knowledge of Italian or minimal experience in another Romance language.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

### L36 Ital 102D Elementary Italian in the Everyday World, Level II

Continuation of Ital 101D. This sequence stresses effective communication and the rapid acquisition of spoken ability with increased attention to the development of reading, writing, and listening skills. Prerequisite: Ital 101D or placement by examination.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

### L36 Ital 106D Accelerated Elementary Italian in the Everyday World, Level I

This course is designed especially for students with previous language study. It moves at an accelerated pace toward the acquisition of spoken ability, with attention to the development of reading, writing and listening skills through contextualized learning and engagement with culturally authentic materials.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

### L36 Ital 107D Accelerated Elementary Italian II

Continuation of Italian 106D. Designed for students whose previous study of French or Spanish will enable them to grasp the principles and rules of Italian grammar more efficiently. Emphasis on all four language skills: speaking, listening, reading, writing. Prereq: Italian 106D or permission of instructor.

Credit 3 units. A&S IQ: LCD, LS BU: HUM

---

### L36 Ital 201D Intermediate Italian in the Everyday World, Level III

This course aims for students to achieve intermediate proficiency in speaking, listening, reading, and writing. Focus is placed on vocabulary building and increased facility with Italian grammar through interactive exercises and the use of authentic materials, such as readings and videos. Regular compositions and exams as well as a final exam. Prerequisite: Ital 102D or higher.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

### L36 Ital 215 Conversation/Culture

This course examines popular culture through a focus on what is said and performed. The course consists of thematic units focusing on everyday occurrences and themes that mark the Italian experience, such as conversation in the Italian bar; poignant views of life expressed in films and other media; daily experiences depicted in poems and songs; public and private politics; the role of the meal in real life, art, and literature. As students advance through each thematic module, they develop a creative project in which they put into practice (by a skit/presentation/text/artwork) what they have learned. Prereq: Ital 102D or the equivalent.

Credit 3 units. A&S IQ: LCD BU: HUM

---

### L36 Ital 216 Conversation

A continuation of Italian 215, this course emphasizes the development of speaking skills in Italian through study of aspects of contemporary Italian culture in particular art, music, film, and politics

Credit 2 units. BU: HUM

---

### L36 Ital 247 First-Year Seminar: Italy's Invention of the Modern Museum

This course traces the development in Italy of what we know as the modern museum. Unfolding chronologically from the Renaissance to the current day, the course will examine the origins and rise of art, natural history, science, and national museums across the peninsula from Rome to Venice, Florence to Naples. We will study the establishment of the early public art museums epitomized by the Vatican Museums, the Uffizi Gallery, and the Capitoline Museums. We

will examine the impact on national and cultural identity of Fascist propaganda museums instituted under Mussolini's regime, and we will conclude with an examination of extraordinary new museums in Italy, such as the interactive MUSME (Museum of Medicine) in Padua, and the MEIS (National Italian Judaism and Shoah Museum) in Ferrara. Art Curators, and Museum directors will visit our course.

Credit 3 units. A&S: FYS A&S IQ: HUM, LCD BU: IS EN: H

---

### **L36 Ital 248 First-Year Seminar: Italian Literary Culture: Identity, Subjectivity, Audience**

In this course we'll sample eight centuries of Italian literary culture by reading some of its greatest works. While familiarizing ourselves with key Italian authors (and some outliers); we'll also work to clarify our thinking about three problems: (1) identity (How does each work express an idea of "Italianness"? What other elements of identity, such as gender or religion, are in play? Why do authors sometimes conceal their true identities by using a *nom de plume*?); (2) subjectivity (How does the author or narrator establish their place in the world?); (3) audience (For whom does the author write? Is the author's audience the same as the narrator's? How do authors make their writings available to others?). Authors studied include Boccaccio, Petrarch, Vasari, Galilei, Collodi, Ginzburg, Ferrante. Three short papers. Class conducted in English with readings in English.

Credit 3 units. A&S: FYS A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

---

### **L36 Ital 249 Refracted Light: How Others View Italy**

Throughout the centuries Italy has both enjoyed and suffered the fascinated gaze of foreigners, who have written about it, painted it, made music and films about it. Drawing principally on prose writings from the eighteenth to the twentieth centuries, in such varied genres as the short story, the novel, the mystery novel, travel writing, and the memoir, this course will examine the images of Italy that non-Italians project. Beyond learning about Italy, students will consider their own "idea" of Italy, examine their own frame of reference and cultural biases, interrogate a variety of stereotypes, and ponder how well one can truly understand a place as an outsider or reader. Authors studied include Stendhal, Dickens, James, Forster and Mann, and James, as well as such contemporary writers as Michael Dibdin and Shirley Hazzard.

Credit 3 units. A&S: FYS A&S IQ: HUM, LCD BU: HUM

---

### **L36 Ital 280 Sex in Italian Culture and Media**

From XIXth century hotbed of sexual tourism to XXist century idyllic scenario of Guadagnino's steamy romance "Call Me by Your Name," Italy has been cast globally as an imaginary site of sexual freedom. Throughout the 20th century, Italy's sexual culture and mores have been shaped more by a climate of discretion, secrecy, and scandals than by overt identity politics. However, between the early 70s and the first Rome Pride in 2000, an Italian movement of sexual activism featuring activists, writers, and artists have impacted globally the ways in which we experience and talk about bodies, desires, and sexual identities nowadays. How do we think, represent, and talk sex in Italian culture? What is queer about Italian culture and how does "queer" translate into Italian language? This course introduces students to the study of Italian cultural productions on sexuality between discretion and identity politics spanning early sexological work, accounts of homosexuality under Fascism, "transsexualita" Italian-style, sexual manifestos, photographic archives, AIDS fiction, LGBTQI films and YouTube videos, transnational queer comedies, drag king performances, etc. The class is taught in English with no prerequisite necessary. No Final.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

---

### **L36 Ital 290 The Culture of Food in Italy**

This interdisciplinary course will provide students with an introduction to Italian culture presented through an exploration of one of Italy's most appreciated aspects around the world: its food. A major focus will be on understanding the extraordinary significance of food in the definition of "Italianness" and the influence of gastronomy in the creation of national identity. Some of the questions that will guide our exploration will be: how has Italian cuisine changed from antiquity through the Middle Ages and Renaissance, from the political unification in 1861 till today? How do national identity and national cuisine relate? How can food become a tool of political power? How do different products, preparation methods, and consumption patterns, determine the Italian approach towards food that has become renowned (and often misrepresented) all over the world? Students will learn through a combination of lectures, class discussions, presentations, hands-on experiences, and interactions with representatives of the Italian food scene in St. Louis. Texts will include excerpts from literary works (such as Boccaccio's *Decameron* and Collodi's *Pinocchio*), academic articles, food magazines and blogs, cookbooks, interviews, and films/documentaries. Students will have the opportunity to increase their vocabulary, review and practice major grammar structures, and improve their conversational and presentational skills in Italian. The course will be taught in Italian. Prereq: Italian 201D

Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM EN: H

---

### **L36 Ital 2991 Undergraduate Independent Study**

Prereq: Ital 201D and permission of the department. No more than 6 units may be earned by a student.

Credit 3 units. A&S IQ: HUM EN: H

---

### **L36 Ital 301 Oral Communication I**

Designed to offer students an opportunity to practice and refine their conversational skills while expanding their practical vocabulary. Wide variety of topics for discussion; brief oral reports. Regular homework assignments with emphasis on web-based research and learning. Prereq: Italian 201D.

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

---

### **L36 Ital 307D Advanced Italian in the Everyday World**

The course aims at reinforcing and developing advanced grammar structures and writing abilities through the study of a variety of media centered around the theme of humor. Have you ever laughed . . . in Italian? Materials include literary excerpts, short stories, film, television clips, and songs. Our focus will be on grammar and syntax as the bases to understanding contemporary Italian humor. Essential for further study of Italian language and literature, this course must be taken before or concurrently with Ital 323C and 324C. Prereq: Ital 201D, or permission of instructor.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

### **L36 Ital 308D Grammar and Composition II**

A continuation of Italian 307D, this course features advanced lessons in Italian syntax and vocabulary and an introduction to the analysis of poetry and theatrical texts, with the goal of improving both reading and writing in Italian. The basis of our work will be a series of readings having a common theme, desire required and unrequired. We will think about what poets desire, how they give verbal expression to it, and how the success or failure of their pursuit informs their writing. Likewise we will look at how playwrights exploit this theme as a plot device. Readings include poetry by Petrarch, Michelangelo, Tasso, and Montale, as well as two comedies. Grammar exams and regular composition assignments; final exam. Essential for further study of Italian language and literature, this course must be taken concurrently with Italian 323C or 324C. Prereq: Ital 307D or permission of instructor.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L36 Ital 309 Transmedia Italian Culture: Stories, Interpretation, Performance**

This course examines contemporary Italian culture through a variety of genres and media, which may include short stories, graphic novels, blogs, zines, essays, news articles, podcasts, film, music, and so on. Strong emphasis will be placed on writing. Throughout the course, students will produce their own analyses of key questions defining Italian culture through the production of multimedia pieces that combine writing with such interpretive vehicles as film, music, and digital photography. This course is in Italian, and it aims to expand students' writing and analytical skills in Italian as well as their cultural competence. No final.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

---

**L36 Ital 310 Advanced Italian Grammar in Padua**

This advanced Italian grammar course is taught every year in the Boston University program in Padua, Italy, with which Washington University is affiliated. The course allows students to further their mastery of Italian grammar and syntax, in order to achieve a level of full satisfaction of comprehension and active communication. Readings include newspaper articles, literary essays; students write brief compositions while taking weekly tests. Open only to Washington University students enrolled in the Padua, Italy program with Boston University.

Credit 4 units. BU: HUM

---

**L36 Ital 311 Introduction to Contemporary Italy**

This course is taught every year in the Boston University program in Padua, Italy, with which Washington University is affiliated. The course focuses on refining students' ability to express themselves in Italian while presenting an overview of the history and society of contemporary Italy. Readings include works by authors who are particularly significant to Italian literature of the 20th century, as well as an array of other materials. Open only to Washington University students enrolled in the Padua, Italy program with Boston University.

Credit 4 units.

---

**L36 Ital 319 Advanced Conversational Italian**

Designed to offer students with strong proficiency in Italian an opportunity to practice and refine their conversational skills through the study, rehearsal and performance of theatrical scenes or an Italian comedy from the repertoire of such chief literary figures as Machiavelli, Goldoni, Pirandello, Natalia Ginzburg and Dario Fo. Prereq: Ital 215, or placement by examination.

Credit 3 units. A&S IQ: LCD BU: HUM

---

**L36 Ital 320 Advanced Conversation**

Designed for students who wish to further their oral mastery of the language. Prereq: Ital 319, or permission of instructor.

Credit 3 units.

---

**L36 Ital 321 Independent Study**

Credit variable, maximum 3 units.

---

**L36 Ital 322 Topics**

This course examines contemporary Italian culture through a variety of genres and media, which may include short stories, graphic novels, blogs, zines, essays, news articles, podcasts, film, music, and so on. Strong emphasis will be placed on writing. Throughout the course, students will produce their own analyses of key questions defining Italian culture through the production of multimedia pieces that

combine writing with such interpretive vehicles as film, music, and digital photography. Essential for further study of Italian language and literature, this course may be taken concurrently with Italian 307D, 323C or 324C. Prerequisite: Ital 201D or permission of instructor. In Italian. Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

---

**L36 Ital 3221 Topics: The Jewish Experience in Italy**

This course will examine the social and political history of the Jews of Italy from the period of Italian unification through the end of the Second World War. We will look through two different prisms: first, the constant of Jews' minority status in a Catholic country at a time when Church doctrine was hostile to them and second, their changing status during significant moments in the brief history of the Italian monarchy. Under the latter rubric we will study the rehabilitation of the Jews under liberal political philosophies, their problematic relationship with Fascism, and finally the arrival of the Holocaust in Italy and efforts to defend Jews against Nazi genocide. We will approach these topics wherever possible through primary texts, including essays, memoirs, and novels. Reading knowledge of Italian is not required. Readings in English; some readings in Italian for Italian majors. Discussion in English. Prerequisite for Italian majors: Italian 307D; no prerequisite for students in other majors. Three five-page papers. PLEASE NOTE: THE L75 5221 CROSS-LISTING COURSE IS FOR GRADUATE STUDENTS ONLY. Credit 3 units. A&S IQ: HUM, LCD BU: HUM, IS EN: H

---

**L36 Ital 3224 Topics: From Basilisks to Botticelli: The Birth, Development and Politics of Museums in Italy**

This course investigates the rise and cultural authority of museums in Italy from the Renaissance to the twentieth century. The course unfolds chronologically, beginning with the distant precursors and etymological roots of the museum in ancient Alexandria and Rome. We trace the origins of the museum in the art collection and patronage that surged during the Renaissance, including the sixteenth- and seventeenth-century Curiosity Cabinet with its fossils, mythical basilisks, gems and weapons and church displays of religious and classical art. We will study the establishment during the Enlightenment in Italy of the first public art museums epitomized by the Vatican Museums, the Uffizi Gallery and the Capitoline Museums. We will conclude by examining the impact on national and cultural identity of Fascist propaganda museums instituted under Mussolini's regime. No prerequisites. Credit 3 units. A&S IQ: HUM, LCD EN: H

---

**L36 Ital 323C Italian Literature 1: Genre and Gender in Italy, 1200-1600**

This course traces the evolution of narrative and lyric genres in Italy from the late Middle Ages through the Renaissance, with a particular focus on men as writing subjects and the women they constitute as objects. We will focus on such topics as how male poets formed lyric communities, the conflicting dynamics of love and misogyny, the notions of the real and the ideal in the representation of women. We will also look at how women writers both adapted to and wrote back at the dominant discourses of their time. Authors studied include Dante, Petrarch, Boccaccio, Lorenzo il Magnifico, Lucrezia Tornabuoni, Castiglione, Veronica Franco. Prereq: Ital 201D. Previous or concurrent enrollment in Ital 307D or 308D recommended.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM, IS EN: H

---

**L36 Ital 323W Italian Literature I - Writing Intensive Seminar**

Introductory survey of Italian literature from its beginnings in the Middle Ages through the late Renaissance. Analysis of the predominant genres: lyric, religious narrative, novella, treatise, chivalric epic. This is a writing intensive version of the previously offered course L36 323C. Prereq: Ital 201D. Previous or concurrent enrollment in Ital 307D or 308D recommended.

Credit 3 units. A&S IQ: HUM, LCD, LS, WI BU: IS EN: H

---

**L36 Ital 324C Italian Literature II: The Making of Modern Italy, Texts and Contexts**

This course examines key political, social, cultural, and religious aspects of Italian life from Galileo's condemnation in 1633, through the Risorgimento, Fascism, and the birth of the modern Republic, to the increasingly multicultural Italy of today. The overarching theme of this course is the pervading question of Italian identity, or *italianita*. We will study a variety of male and female, native born and immigrant authors, visual artists and cultural critics. Prereq: Italian 201D. Previous or concurrent enrollment in Ital 307D or 308D recommended. Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: IS EN: H

---

**L36 Ital 327 History of the Italian Language**

In this course we'll trace the evolution of Italian from its very earliest written manifestations to its increasing internationalization in the twentieth and twenty-first centuries. We'll study the natural evolution of Italian up until the sixteenth century, its codification as a literary language during the sixteenth century, the debates over the institution of a national language that coincide with the unification of Italy in the nineteenth century, the recovery of dialects as literary languages in the twentieth century, and the more recent incorporation of words and phrases originating outside of Italy. Along the way we'll come to understand the reasons why we study a particular form of Italian in school, and we'll consider the implications of these choices not only for our own learning but for Italian literature and its sense of nationhood. Credit 3 units. A&S IQ: HUM, LCD, LS BU: IS EN: H

---

**L36 Ital 332 Topics in Film Studies: Italian Cinema**

This course studies the influence of film on Italian culture. We will consider the trajectory of Italian film from its origins to the present day. Specific areas of discussion may include: cinema as a revolutionary aesthetic; mass culture versus high art; neorealism; literary adaptation; and cinema as political resistance and vehicle for social justice. The course will also work collaboratively with the Italian Film Fest of Saint Louis in the development of materials, class discussion, and student engagement. Two to three hours of film-viewing plus three class hours a week. Taught in English. Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

---

**L36 Ital 334 Topics in Italian Cinema**

A companion to Italian 332, this course focuses on a select topic in the history of Italian cinema, such as the work of a single director or a significant cinematic movement. Course conducted in English. Italian majors read in Italian, others in English translation. Prerequisite for Italian majors: Italian 307D. Prerequisite for non-majors: Italian 332, Film 220, or permission of instructor. Credit 3 units. BU: IS

---

**L36 Ital 350 Topics: Global Italy: Race, Gender, Migration and Citizenship**

Traditionally represented as a land of emigrants and exiles from the south, 21st-century Italy has become the destination of many immigrants and a place of encounter of different cultures and races. In "Cara Italia" [Dear Italy], a rap hymn by the famous artist Ghali, Italy is both a dear and a contested space of belonging where many children of migrants feel both at home and out of place. Exploring the cultural and historical roots of this feeling, the course asks the following: What does it mean to culturally belong? Why are certain people denied the status of Italian citizens? What does it mean to be Black in Italy? How are interracial younger generations reshaping Italy and Italian-ness? This course is an introduction to cultural productions at the intersection of migration, race, gender, and citizenship in contemporary Italy. In the course, students will critically engage a variety of issues such as the relation between Italian colonialism and recent migration,

border politics and civic mobilization, gender struggles and networking, xenophobia and racism, and social protests and activism. Although African migration and Italians of Afro-descent are at the core of the course, students will also explore representations by/of other migrant communities such as the Asian and the Albanian ones. The course will be conducted in English, and screenings will be in the original language with English subtitles.

Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM BU: HUM, IS EN: H

---

**L36 Ital 404 Senior Independent Study in Italian**

Prereq: senior status; Ital 307D, 308D, 323C, 324C; and permission of instructor. Credit 3 units.

---

**L36 Ital 408 Disease, Madness, and Death Italian Style**

Italian literary history teems with representations of illness, insanity, and death. From the ghastly 1348 plague that frames Boccaccio's Decameron to the midday madness of errant Renaissance knights, from 16th-century tales of poisoning and 19th-century Pirandellian madmen to the contemporary scourge of mafia killings, disease, madness and death are dominant facts of reality, points of view, symbols, and cultural characteristics of Italian poetry and prose. This course undertakes a pathology of these tropes in Italian literary history and seeks to understand their meaning for the changing Italian cultural identity across time and the Italian peninsula. We will read primary literary texts and view excerpts from films alongside articles focused on the cultural history of medicine, religion, and criminal justice. Taught in English. No Final.

Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: BA, IS EN: H

---

**L36 Ital 428 The New Sicilian School**

The unification of Italy in the mid-19th century led to the creation of a new "Sicilian School," the first since that of the court poets associated with Frederick II in the 13th century. These new Sicilian writers have given us many narrative masterpieces, focusing on common concerns such as the island's identity over two millennia and the impact of Italian nationalism; the rise of bourgeois culture and the decline of indigenous patriarchal structures; the rule of law and the role of the Mafia; and the politics of language. Authors studied include Verga, Pirandello, Vittorini, Brancati, Tomasi di Lampedusa and Sciascia. Course taught in Italian or English.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM EN: H

---

**L36 Ital 430 Divergent Voices: Italian Women Writers**

This course engages the fictional and political works of Italian women writers from the seventeenth century to the present day. We will read one of the acclaimed Neapolitan novels of Elena Ferrante, who is considered by many to be the most important Italian fiction writer of her generation. We will examine a cloistered Venetian nun's defiant 1654 indictment of the misogynist society that forced her into the convent. We will confront the reality of a woman writer who in 1901 was compelled to choose between her child and her literary career. Among other contemporary writers, we will study the humorous and radical feminist one-acts of playwright Franca Rame. Taught in English. No Final.

Credit 3 units. A&S IQ: HUM, LCD, SC, SD EN: H

---

**L36 Ital 432 Divergent Voices: Italian Women Writers**

This course will examine select novels, poetry, and political writings by such noted authors as Sibilla Aleramo, Dacia Maraini, Luisa Muraro, and Anna Banti. Special attention will be paid to the historical, political, and cultural contexts that influenced authors and their work. Textual

and critical analysis will focus on such issues as historical revisionism in women's writing, female subjectivity, and the origins and development of contemporary Italian feminist thought and practice. Taught in English.

Credit 3 units. A&S IQ: HUM, LCD, SD Art: HUM

---

### L36 Ital 433 Literature of the Italian Enlightenment

This course aims to explore the spectrum of intellectual and literary discourse of the Italian Enlightenment by examining a wide array of texts and genres. Readings will include selections from Enlightenment and popular periodicals, scientific tracts on human anatomy, women's fashion magazines, the reformed theater of Carlo Goldoni, as well as Arcadian poetry, and literary criticism. We will study the rise and characteristics of "coffee culture" during this age. We will pay special attention to the "woman question," which stood at the center of eighteenth-century Italian intellectual discourse, and which was critical to the contemporary drive to define the enlightened nation-state. The class will be conducted as a workshop in which students and instructor collaborate in the realization of course goals. Readings in Italian or English; discussion in English. Prereq. Ital 323C or Ital 324C.

Credit 3 units. Art: HUM

---

### L36 Ital 437 Caffè, Cadavers, Comedy, and Castrati: Italy in the Age of the Grand Tour

Taught in English. With French libertine philosopher the Marquis de Sade, German novelist Johann Wolfgang von Goethe, Romantic poet Lord Byron, and other illustrious travelers of high birth and good fortune who sought finishing enrichment by making their Grand Tour to Italy from the mid-eighteenth through the early nineteenth centuries, we will explore the richness and variety of Italian life and culture as depicted by both Grand Tourists as well as their Italian interlocutors. Chief among our destinations will be Venice, Bologna, Florence and Rome. Attractions typical of the early modern Tour will circumscribe our journey. Coffee houses first appeared in the eighteenth century and, in ways strikingly similar to their function today, became the real and symbolic centers of social, intellectual and civil exchange. We will explore eighteenth-century coffee culture through comedies and Enlightenment and popular journals that took them as their theme, as well as through a study of the coffee houses themselves, a number of which are still in existence. Theaters, concert halls, gaming houses, literary and scientific academies, galleries, churches, and universities will be part of the standardized itinerary we will follow. During the period, anatomy and physiology attained new legitimacy as crucial scientific disciplines and we will visit both the anatomical theater at the University of Bologna, where the annual Carnival dissection took place, as well as the first museum of anatomy and obstetrics founded in the Bolognese Institute of Sciences in 1742 by Pope Benedict XIV. We will visit archeological excavation sites, in particular Pompeii, first unearthed in 1748. Fashion, an obsessive preoccupation of the day, will also be a point of interest in our travels. Through primary and recently published secondary sources we will also encounter the remarkable authority of Italian women unmatched anywhere else in Europe at the time. Prereq: at least one 300-level literature course. Readings in Italian or English.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: HUM EN: H

---

### L36 Ital 442 Literature and Fascism

The course features a historical approach to Italian literature from 1930-1950. We will focus on life under the fascist dictatorship, wartime partisan resistance, issues of censorship, and literature as propaganda. Course conducted in English; readings in the original or, if necessary, in translation.

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

### L36 Ital 462 Prose Writers of the Sixteenth Century

With the triumph of the vernacular in 16th century Italy, the peninsula bore witness not just to an outpouring of poetic works but to the arrival of some of the most important prose works in the Italian canon prior to the advent of the novel. In this course, we will conduct close readings of two treatises, Machiavelli's "Prince" and Castiglione's "Book of the Courtier." We will study these works for their linguistic and rhetorical features as well as their historical context and ideological content. We will also consult some secondary readings to help us understand the place of each in the political and cultural landscape of Renaissance Italy. Readings in Italian or English; discussion in English.

Credit 3 units.

---

### L36 Ital 473 Machiavelli and Guicciardini

The development of modern political science in 16th-century Italy. We will address questions of both theory and methodology in Machiavelli's and Guicciardini's political visions. We will also pay close attention to the Florentine context of their work, as well as to the influence of historical examples, both classical and contemporary, in the development of their analyses. Finally, we will ask how the examples they set, and the theories they promulgate, can have resonance in addressing political questions in our own age. Readings in Italian or English; discussion in English.

Credit 3 units. A&S IQ: HUM, LCD EN: H

---

### L36 Ital 481 Dante

This course features an in-depth approach to Dante's "Inferno," the first, and in many ways the most famous, of the three parts of the "Divina Commedia." We'll study the structure of the poem as well as the structure of Dante's Hell, his verse form and use of the vernacular, his notion of sin and punishment and its relation to the theological traditions of which he is an heir. Because so much of the poem is rooted in and extends Dante's autobiography—literary, sentimental, and political—we'll also read two other important texts by him, his early "Vita nuova" (New Life) and his political treatise, "Monarchy." Reading knowledge of Italian helpful but not required. Course conducted in English.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

---

### L36 Ital 483 Boccaccio: Decameron

The unrivaled master of late medieval Italian prose, Boccaccio is also a strikingly modern author whose works address such questions as the relationship between literature and history; God and man; storyteller and audience; gender, language, and power; literature and truth. With these and other concerns in mind, we will read his masterpiece, the DECAMERON, a collection of 100 tales set in the Black Plague of 1348. We will then contrast it to his late CORBACCIO, ostensibly a misogynist novel but a text that finally resists such a flattening judgment. Readings in Italian or English; discussion in English. Prerequisite: 3 units of literature.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM EN: H

---

### L36 Ital 485 Ariosto: Orlando Furioso

A close reading of this Renaissance masterpiece with attention to questions of structure and sources, the themes of love and madness, the representation of court life. Readings in Italian or English; discussion in English.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: HUM, IS

---

### L36 Ital 491 Postmodernism

This course explores the complex significance of Italian Postmodernism through an examination of the theoretical arguments and literary works that have shaped the cultural and political debate of the past fifty years. Students will study, among others, the critical theories of "open work" (Umberto Eco), "literature as lie" (Manganelli), and

"weak thought" (Gianni Vattimo) that developed from the neo-avant-garde movement of the 1960s. Analysis will focus on the novels of four authors who have had a defining influence on Italian postmodern thought and narrative forms: Carlo Emilio Gadda, Italo Calvino, Luigi Malerba, and Umberto Eco. Course conducted in English; Italian majors read in Italian, others in English translation. Prereq for Italian majors: Ital 307D, or permission of instructor.  
Credit 3 units.

---

**L36 Ital 492 The Italian Detective Novel**

The detective novel has an unusual and exceptionally brief history in Italy. Only within the past 35 years has an Italian version or, more precisely, subversion of the genre emerged and come to dominate the Italian literary scene. Prominent Italian writers such as Italo Calvino, Umberto Eco, Leonardo Sciascia, and Luigi Malerba have deconstructed the conventions of the detective novel in order to portray the disorder and arbitrary meaning of the postmodern world. This course will explore the history of the "anti-detective" novel in Italy, and the philosophical and political questions the genre evokes. Readings in Italian and English. Conducted in English.  
Credit 3 units. Art: HUM

---

**L36 Ital 495 Senior Honors**

Prereq: senior standing, at least one course at the 400 level, and acceptance into the Honors program.  
Credit 3 units.

## Portuguese

Visit online course listings to view semester offerings for L37 Portug.

---

**L37 Portug 101 Portuguese I**

Introduction to Portuguese language. The course emphasizes acquisition of communicative ability. It also covers basic grammar points through reading and writing activities. Classes are taught entirely in Portuguese. No prior experience in the language is required.  
Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L37 Portug 102A Portuguese II**

Introduction to Portuguese language. This second course in the Portuguese program emphasizes acquisition of communicative ability. It also covers basic grammar structures through reading and writing activities. Classes are taught entirely in Portuguese. Prereq: Port 101 or permission of instructor.  
Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L37 Portug 103 Portuguese for Romance Language Speakers I**

Intensive and accelerated course especially designed to take advantage of students' knowledge of Spanish and/or other Romance Languages and to promote a more rapid learning of Portuguese. Classes are taught entirely in Portuguese and stress oral communication, basic use of grammar, reading and writing skills. Proficiency in Spanish or another Romance Language is required. 3 units.  
Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L37 Portug 104 Portuguese for Romance Language Speakers II**

This course offers a sequence in the learning process initiated in L37 103. It is a fast-paced class designated for students with proficiency in Spanish and/or other Romance Languages, and its objective is improving conversation, writing, and reading skills. Prereq 103 or permission of instructor. 3 units.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L37 Portug 215 Reading and Conversation I**

The goal of this course is to review and to enhance the content learned at the basic level. Through culturally relevant readings and related conversational activities, students are expected to enrich their vocabulary, gain fluency, and improve both reading comprehension and writing skills. Prereq: two college semesters of Portuguese or permission of instructor.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L37 Portug 220 Reading and Conversation II: Intermediate Portuguese**

This course is a continuation of Port 215, therefore an intermediate level in the Portuguese section. Its main goal is to improve students' reading proficiency, as well as to provide a class environment in which conversational skills can be practiced and made into a solid foundation. In addition, the class will provide tools to expand vocabulary and promote a cultural understanding of Brazil and other Lusophone countries. Prereq: Port 215 or permission of instructor  
Credit 3 units. A&S IQ: LCD BU: HUM EN: H

---

**L37 Portug 399 Undergraduate Independent Study**

Prereq: Permission of the Department.  
Credit 3 units.

---

**L37 Portug 400 Independent Study**

---

## Spanish

Visit online course listings to view semester offerings for L38 Span.

---

**L38 Span 101 Elementary Spanish 1**

Beginning language program stressing acquisition of spoken ability together with attention to the development of reading, writing, and listening skills. In addition to three hours of class, students complete weekly, assessed independent learning activities with multimedia resources.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L38 Span 102 Elementary Spanish 2**

Second semester of the beginning language program stressing acquisition of spoken ability together with attention to the development of reading, writing, and listening skills. In addition to three hours of class, students complete weekly, assessed independent learning activities with multimedia resources. Prereq: Span 101D or placement by examination.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L38 Span 201E Intermediate Spanish I**

The first half of a two-semester intermediate level sequence. Reviews basic knowledge and introduces advanced skills in grammar, reading, writing, culture, and vocabulary. Prereq: Span102D, or placement by examination.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

### L38 Span 202 Intermediate Spanish II

The second half of a two-semester intermediate level sequence. This class continues to review basic knowledge and to introduce advanced skills in grammar, reading, writing, culture, and vocabulary. Prereq: Span201E, or placement by examination.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

### L38 Span 223 Intermediate Spanish Conversation and Culture

Practice of spoken Spanish and expansion of vocabulary in a wide range of topics. Discussion and role play based on short readings, music and film. Use of the World Wide Web for up-to-date news and culture. Oral presentations and limited writing. Prereq: 201D or equivalent. Concurrent enrollment in Sp 307D recommended.

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

---

### L38 Span 299 Undergraduate Independent Study

Prereq: Span 201D and permission of the department.

Credit variable, maximum 3 units.

---

### L38 Span 3008 The Stories that Win

We all know them. From fairy tales to bestsellers, legends of oral tradition to trend-setting points in the U.S. and global literary marketplace, they are the stories that win. These stories are rooted in a collective literary imagination that binds individual and community hopes + struggles. They are novels, or memoirs of political coming of age, tales of creative sparks that have led to iconic global brands and products, or narrative analyses that become collective origin stories. They speak to the relationship between expectations of justice and our varied political identities; they provide communal reference points during marked moments in history. These stories win by transcending the limits of time or through the entanglements of commercial success. This semester we delve into political memoirs; origin stories of athletes, iconic products, and CEOs; community narrative histories; fairy tales; and myths of national beginnings. We want to understand how power and the uses of history are central to making certain stories, especially "origin stories," the ones public figures deploy to represent their identity, the stories we as a nation tell about ourselves over and over, and the ones that become our collective points of reference—that is, the stories that win. And we want to know why other stories—and the people they're about—are so often left out of our collective imagination.

Same as L32 Pol Sci 3008

Credit 3 units. A&S IQ: HUM EN: H

---

### L38 Span 302 Cultures and Communication in the Spanish-Speaking World

This course is the first part of a two-semester advanced-level sequence. Through the study of a variety of media (i.e., written, visual, aural, and digital), students will develop linguistic and cultural competence and gain a general understanding of contemporary issues of interest in Spain, Latin America, and the United States. Discussion of a wide array of cultural and linguistic materials will serve as the basis for an exploration of the diversity of the Spanish-speaking world. The course focuses primarily on speaking skills. It is designed to prepare students to proceed to higher-level Spanish courses and to build written and oral proficiency. This course replaces Span 307D and is a prerequisite for several study abroad programs. Prerequisite: Span 202 or placement by examination.

Credit 3 units. A&S IQ: LCD, LS BU: HUM, IS EN: H

---

### L38 Span 3021 Language and Culture for Heritage Speakers of Spanish

This course offers an approach to the linguistic and historical study of different cultural productions in various Spanish-speaking communities in the United States and other Spanish-speaking countries. The materials and structure of the course are designed for students whose cultural roots are, to some degree, Latin and who have grown up in Spanish-speaking environments, so course materials focus on autobiography and identity. This course offers students a multidisciplinary way of working at points where linguistic and literary analysis runs parallel to other forms of cultural production and to the historical narrative of Latinx culture in the United States. Prerequisite: placement by examination.

Credit 3 units. A&S IQ: LCD, LS BU: HUM, IS EN: H

### L38 Span 303 Cultures and Communication in the Spanish-Speaking World II

This course is the second part of a two-semester advanced-level sequence. Through the study of a variety of media (written, visual, aural, and digital), students will develop linguistic and cultural competence and gain a general understanding of contemporary issues of interest in Spain, Latin America, and the US. Discussion of a wide array of cultural and linguistic materials will serve as the basis for an exploration of the diversity of the Spanish-speaking world. Course content is organized thematically into five units: Youth Cultures, Food Culture, New Indigeneity, Environment, and Public Health. The course focuses primarily on writing skills. It is designed to prepare students to proceed to higher-level Spanish courses and to build written and oral proficiency. Prerequisite: Spanish 302, 3021 or 307D. Fromm Ayoroa in charge.

Credit 3 units. A&S IQ: LCD, LS BU: IS EN: H

---

### L38 Span 308E Advanced Reading and Writing

In depth study of the process of advanced reading and writing designed to prepare the Spanish major for upper level courses. Literary texts studied as examples of writing styles. Regular compositions. Prereq: Span 307D or placement by examination. Conducted in Spanish. Doran in charge.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

### L38 Span 310 Advanced Intermediate Spanish in Spain

Continued study of Spanish grammar and syntax at Washington University's Madrid Carlos III University program. A course designed for non-native speakers of Spanish, to refine communicative abilities in all four skills. Prereq: Placement by exam at Carlos III.

Credit variable, maximum 4 units.

---

### L38 Span 311 Hispanic Culture and Civilization I

Study of aspects of the political, social, and cultural life of contemporary Spain and Portugal, and their historical development. Class discussion; readings with compositions. Conducted in Spanish. May be repeated for credit. Prereq: Span 201D.

Credit 3 units. A&S IQ: HUM, LCD Art: HUM BU: BA EN: H

---

### L38 Span 313 Chilean Contemporary Culture

This two-week course will provide a panoramic view of Chilean contemporary culture, focusing on the years from 1988 to the present. We will examine the representation of current issues in literature, the arts, and the media, and study topics such as governmental institutions, the constitution of 1980, the economy, the role of the Catholic Church, public policy concerning culture, etc. The course will meet three hours a day, and there will be several guest lecturers. Conducted in Spanish. Requirements: two short papers, short reports

in class of the news or a cultural activity students have attended, and participation in class discussions. Course includes an all-day cultural excursion on Saturday (it includes a visit to one of Neruda's houses, a history museum, etc.).

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

---

### L38 Span 317 Advanced Spanish Language in Chile/Spain

Continued study of Spanish grammar and syntax at Washington University's program in Chile or Spain. A course designed for non-native speakers of Spanish to refine mastery of difficult uses and structures in all four skills. Prereq: placement by exam or program director.

Credit variable, maximum 4 units.

---

### L38 Span 3181 Spanish Culture and Civilization

This course is intended to acquaint students with important aspects of Spanish culture, including history, civilization, society, politics, and the arts, dating from the first invasions of the Peninsula to the present. Students will gain an awareness of the ethnic, cultural, and aesthetic diversity of Spain, as a country of multiple autonomous regions, by working with written texts, other media, and by visits to various locations. The broader aim of the course is to enable students to engage with and to analyze Spanish culture from an intellectually critical perspective and knowledge of its sociohistorical distinctiveness. Requirements include active participation within all classes and excursions, presentations, and various written assignments. This course is taught in Madrid, as part of the Washington University Carlos III Program. Conducted in Spanish.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

---

### L38 Span 3200 Debating Cultures: Latin(x) America in the Streets

So much of life in Latin America -- and in many Latinx communities across the United States -- happens in public space: in the streets, to be precise. Picture street food vendors in Mexico City, outdoor produce markets lining squares across Lima, Rio de Janeiro's world-famous carnival celebrations, or politicians addressing thousands in Buenos Aires's Plaza de Mayo. Economic transactions, social interactions, political legends and mass political movements, religious processions, festivals and spectacles, and public art all depend on the streets.

In this course, we will focus on the incredible diversity of activities that define and give meaning to public life in Latin America and the Latinx diaspora. This course will have a strong, mandatory and graded oral communications component, and it is taught in Spanish. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, LS, SC Arch: HUM Art: HUM BU: IS EN: H

---

### L38 Span 3202 Debating Cultures: How Spanish Works

This course offers an introduction to the study of the Spanish language as a science. It focuses on the main linguistic subsystems: the sound system (phonetics and phonology), the formation and use of words (morphology), and the formation and structure of sentences (syntax). When working with each linguistic subsystem, students are provided with opportunities to reflect on and improve their own abilities in Spanish, such as with regard to how mood (indicative versus subjunctive) and aspect (preterit versus imperfect) work in the Spanish verbal system. Similarities and differences between Spanish and other languages, such as English, are highlighted. The course also provides students with an introduction to the history of Spanish in its evolution from Latin as one of many Romance languages (a diachronic view) and an exploration of various regional varieties of Spanish today (a synchronic view). The goals of the course include understanding linguistics and Hispanic linguistics as cognitive sciences; understanding language acquisition and use as neural processes;

disentangling linguistic rules and linguistic variation from pedagogical rules and stigmatization; and applying one's knowledge of linguistics in general and Hispanic linguistics in particular to practical issues and challenges. This course will have a strong, mandatory and graded oral communications component, and it is taught in Spanish. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: IS EN: H

---

### L38 Span 3203 Debating Cultures: Extraordinary Lives

This course studies Latin America through the lives of its people. We will take biographies as sites where individual dreams and struggles intersect with global, national, and local structures of power and cultural flows. Through various cultural objects and media (film, literature, music, and social media), we will approach the extraordinary yet everyday luchas of Latin Americans in cities and rural areas. We will contextualize each life within the region's political, economic, racial, and gender historicities. The biographies we will discuss may include but are not limited to domestic workers, taxi drivers, street vendors, wrestlers, musicians, folklore dancers, college students, rural teachers, political and ecological activists, influencers, indigeneous YouTubers and filmmakers, LGBTQIA+ communities, and transnational immigrants. This course will have a strong, mandatory and graded oral communications component, and it is taught in Spanish. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, LS, SC Arch: HUM Art: HUM BU: IS EN: H

---

### L38 Span 320Y Debating Cultures: Mediated Politics in Argentina, Chile, and Uruguay

This course explores the intertwined history of media, culture and political struggle in the region known as the Southern Cone, which encompasses Argentina, Chile and Uruguay. We will discuss the role that media have had in shaping the experience of modernity as well as fostering nation formation in these countries. The course will address the political uses of different types of media, covering a wide spectrum of cultural production (literature, music, comic, political cinema, television, internet) and following a long-term chronological approach, from 19th-century print media to recent YouTube production. In doing so, the course engages with questions of technology, identity, memory, gender, indigenous, and working-class cultures, and it draws special attention to the possibilities and limits that grassroots movements found in different types of media. Course materials may include the Argentine comic "Mafalda," the Afro-Uruguayan newspaper "Nuestra Raza," and Rodolfo Walsh's non-fiction literature, as well as telenovelas and indigenous radio. As part of the course, students will engage in active research on the interplay of media and political struggle in the region. This course will have a strong, mandatory and graded oral communications component, and it is taught in Spanish. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

---

### L38 Span 3210 Debating Cultures: Representations of Gender Violence in Modern Iberian Literatures and Cultures

The landmark law against gender violence in Spain, which was passed under the Socialist government in 2004, became the rallying point for feminist activists, even as it generated a vigorous backlash from among conservative sectors of Spanish society. More recently, the

"La Manada" gang rape case in Pamplona in July 2016 provoked national outrage, and, together with the #MeToo and the #NiUnaMenos movements in the United States and Latin America, a global feminist movement was mobilized to protest sexual assault, femicide, and all other forms of gender-based violence. We will consider the works of 19th-century through present-day Spanish women writers, journalists, and filmmakers, including Emilia Pardo Bazan, Carmen de Burgos, Rosa Montero, Carme Riera, Lucia Etxebarria, Isabel Coixet, Iciar Bollain, and Roser Aguilar, who have spoken out against gender violence in a variety of fora. Their works will serve as points of departure for exploring the social and cultural causes and dynamics of gender-based violence as well as the ways in which Spanish women have responded to this problem in their writings, film, and other forms of representation. Our analysis will be informed by the larger historical framework of the development of feminism in Spain as well as by the recent global movement against gender-based violence. Course assignments will consist of daily readings, film viewings, group oral presentations, quizzes, discussion forum posts, and a final project that is orally based; students are also expected to engage actively in class discussions and in small group work. This course will have a strong, mandatory and graded oral communications component, and it is taught in Spanish. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

---

### **L38 Span 3211 Debating Cultures: Inclusion & Expulsion, Memory, and Erasure in the Hispanic World**

In this course, we will analyze and discuss the ways in which the Hispanic world has lived, regulated and represented its great religious and cultural diversity. As we progress in our understanding of these multifaceted and varied responses, we will examine the two most important ethical choices that the Hispanic peoples of both sides of the Atlantic Ocean have had in front of them at different points in time: (1) the choice between inclusion and exclusion; and (2) the concerted decision to either memorialize or forget history and the consequences of having chosen to exclude or include certain individuals, ideas, religions or cultural aspects of society. The consideration of these two choices -- as they appear represented in laws, texts and images -- will help us acquire the ability to better understand the challenges and dilemmas that the various Hispanic peoples have encountered in the past and the decisions they continue to make in the present moment when confronted with diversity. Each module of this course will be anchored by an official document or policy that rubber stamped the decision to include, exclude, remember, or forget those who were different because of their origins, their religion, their language, their way of living, or their political choices. Examples of these laws or decrees are the Capitulations of Granada, the Edict of Expulsion of 1492, the New Laws of the Indies, the laws of land confiscation of the 19th century, the persecutions and censorship of the dictatorial regimes in both Spain and Latin America, and the recent Spanish law for the recovery of historical memory. Also, each module will begin in the past and end in the present, with an exploration of the contemporary consequences of those laws and policies. These diachronic studies will contribute to inform the analysis of both social issues and cultural artifacts, and they will enrich the class presentations and discussions. This course will have a strong, mandatory and graded oral communications component, and it is taught in Spanish. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

### **L38 Span 3212 Debating Cultures: Latin American Soundscapes**

This course explores Latin America through its sound cultures from the beginning of the 20th century to the present. Diving into aural, literary, and scientific archives, we will discuss how sound produces meaning beyond visual and written cultures, articulates experience, and mobilizes political and cultural change. We will study sound, beats, speech, music, and noise through various cultural objects and media (novels, poems, essays, anthropological studies, journalism, films, radio, records, and digital cultures). We will contextualize these objects in the region's political, economic, racial, and gender historicities. We will examine the interplay of national identity, popular culture, aurality, and modernity in a variety of case studies: folklore (national and American folkloric missions), indigenista operas, indigenous radio and shamanism, the Latin American new song movement (the 1960s and 1970s), rock and youth cultures, cumbia, reggaeton, avant-garde and slam poetry, and the noises of Latin American megacities and protests. This course will have a strong, mandatory and graded oral communications component, and it is taught in Spanish. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

---

### **L38 Span 3213 Debating Cultures: Redes/ Networks: Digital Cultures in 21st-Century Spain**

This is a discussion-based course that examines from interdisciplinary and collaborative perspectives the new digital cultures emerging in Spain during the first two decades of the 21st century. Shaping and connecting an innovative series of creative, political, artistic, and social "redes" or networks, the emergence of new digital media has radically changed the cultural forms produced and circulated in Spain today. How do these different digital networks function, in what ways are these redes formed, and to what extent have they changed the material, ideological, and social ramifications of culture in the 21st century? The course explores a wide range of cultural materials specifically connected to particular redes or digital networks emerging in Spain in the last two decades. The materials studied will range from digital literatures--such as poetry (Alex Saum-Pascual), graphic novels (Fernandez Mallo), alternative forms of literary and cultural journalism--to music (Rosalia), visual arts (Varvara & Mar), cinema (Chus Gutierrez, digital shorts from notodofilmfest), as well as the generation of new forms of social activism (such as the #8M feminist movement) and alternative political communities (15-M). We will also examine in particular the role of new media platforms (YouTube, WhatsApp, Facebook) in the contemporary production and circulation of digital culture. Students will have a strong, mandatory and graded oral component. Course taught in Spanish. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, LS BU: BA

---

### **L38 Span 3214 Debating Cultures: Migration in the Spanish-Speaking World**

In this course we will study how migration shapes and transforms societies, cultural products and practices in the Spanish-speaking world. We will explore questions pertaining to border crossing, displacement, identity, and community in different historical periods and in diverse geographical contexts. We will move chronologically and thematically and also pay close attention to the different ways in which our authors choose to tell their stories. The course is divided into 10 sections that correspond to specific places, both real and imagined.

Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, SC BU: IS EN: H

---

**L38 Span 3215 Debating Cultures: Love, Actually: (Re)Imagining Love in Latin American and Latinx Literature**

If you are inclined to trust the polls, according to a worldwide survey conducted by Gallup in 2014, Latin Americans are the most emotional people on the planet. In this course we will test this assertion by critically exploring one of the most intense and complex of human emotions: love. We will look at multidimensional and contradictory facets of love—from passion, desire, and happiness to solitude, betrayal and revenge, from family blood ties to bonds of community and patriotism, from motherhood to miscegenation—as they are reimagined in a wide range of 20th and 21st century literary works, performances, films, artwork, music, and popular culture from across Latin American and Latinx diasporic communities. Love as affect and existential experience invariably intersects and becomes interwoven with such important dimensions of the socio-historical framework as ethnicity, class, gender, sexual identity, nationality, exile, and spirituality. In addition to poems, essays and short narratives by authors representing several Latin American countries and their diasporas (Neruda, Mistral, Quiroga, Storni, Benedetti, Garro, Castellanos, Fuentes, Morejón, Poniatowska, Ocampo, Borges, Cortázar, Bobes, Bahr, Vega Serova, Paz Soldán, Obejas, and Meruane, among others), we will examine academic research on the subject of love, blending insights from psychology, sociology, history, anthropology, religion studies, neuroscience, and philosophy. This focus on interdisciplinary approaches will encourage students to seek their own insights grounded in their experiences and areas of expertise and to perceive love as a complex human condition that encompasses a plurality of socio-cultural expressions and unique individual relationships. This course is conducted in Spanish and has a strong, mandatory and graded oral component. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, LS, SC Arch: HUM Art: HUM BU: BA, IS EN: H

---

**L38 Span 3216 Debating Cultures: Afro-Latin Americans in Film and Television**

This course explores the representation and self-representation of Latin Americans of African descent in film and television. We will discuss, among other things, slavery, race, politics of representation, agency, and Afro-Latin American culture, history, and religion. Students will learn to analyze filmic art. The course will have a strong, mandatory and graded oral component. Students will watch two films and have two short readings per week. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, SC BU: BA

---

**L38 Span 3217 Debating Cultures: Unveiling the Secrets of Fantasy, Magic, Mystery in Latin America**

In this course we will explore a variety of Spanish American discourses (short fiction, essays, films, artwork) built around the unveiling of secrets, mystery, fantasy, and magic through the art of detection, whereby the reader or a viewer becomes engaged in the process of sleuthing, either alone or alongside the fictional figure of a detective. We will explore the creative and versatile ways in which Spanish American writers and artists make use of existing aesthetic paradigms—such as magical realism, literary gothic, fairy tales, science fiction,

surrealism, film noir, and detective fiction, among others—as they adapt them to the diverse political, economic and socio-cultural realities of their countries. In many of these discourses, overarching themes of imagination, dreams, madness, criminality, and metaphysical search become intertwined with gendered sensibilities and heterogeneous perspectives profoundly embedded in socio-political realities. Some of the mysteries and crimes that often elude detection and punishment have to do with corruption and state-sanctioned violence, as it happens in the cases of systemic violence in Colombia, of the plight of the "disappeared" persons under the dictatorial regimes of the Southern Cone (Argentina, Chile), or the systemic corruption surrounding narco-trafficking. Authors to be studied include Borges, Ocampo, Cardenal, Casey, Quiroga, Valenzuela, Cortázar, Rulfo, Paz Soldán, Téllez, García Márquez, Schweblin, Dávila, Vega Serova, Benítez Rojo, Bahr, and Enríquez, among others. This course is conducted in Spanish and has a strong, mandatory and graded oral component. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, LS, SC Arch: HUM Art: HUM BU: BA EN: H

---

**L38 Span 3218 Debating Cultures: Youth and Counterculture in South America**

This course will explore South American cultures from their most provocative and insurgent expressions, lifestyles, and identities. Focusing on the Andes (Peru, Colombia, and Bolivia) and the South Cone (Chile, Argentina and Uruguay) regions, we will study a conjunction of cultural producers that used their rebellious nature as part of their art. How did they represent the youth of their societies? How did they respond to the status quo? How have they used the flows of globalization, media, and revolution? By exploring literature, music, cinema, and performance, we will discuss the sociopolitical impact of these works, which includes poetry performances to punk albums. In addition, we will emphasize the role of the youth as producers and consumers, as opposed to the politics of adults and institutions. By covering the long sixties to the present, this course will discuss the transformation of these movements and subcultures and how they impacted the sociocultural processes of their regions, both nationally and transnationally. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, LS, SC Arch: HUM Art: HUM BU: BA, IS EN: H

---

**L38 Span 3219 Debating Cultures: Broken Promises and Resilient Bregas: Snapshots of Puerto Rican Culture**

The end of WWII and the advent of the Cold War brought heightened global attention to the Caribbean. While Cubans rid themselves of the Batista dictatorship, embraced socialism, and entered the USSR's realm of influence, Puerto Rico's importance for the U.S. as a showcase of capitalist modernization increased exponentially. Bad Bunny and reggaeton, Lin Manuel Miranda, and JLo wouldn't exist without the events and policies set in motion in Puerto Rico in the 1950s and 60s. This course will offer entry points into Puerto Rico's complex and often contradictory culture, with the goal that students develop a critical understanding of the leading social, political, and historical processes that have shaped the island's cultural production over the past 70 years. We will explore topics such as colonialism and neocolonialism, migration and diasporic communities, environmental and social justice, globalization and neoliberalism, and the intersection of race, class, gender, and identity formation. We will study works from island-born and Puerto Rican Diaspora cultural producers. Materials will include short stories and poems, films, podcasts, pop culture and sports

icons, comics, performances, and historical essays. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

### L38 Span 322 Advanced Conversation in Spain

Designed to offer students with advanced skills in Spanish an opportunity to refine their ability to discuss a variety of topics. Various media such as films, television, newspapers, and other modes of communication will be used for oral presentations and some writing. Prereq: Spanish 301, 307D or 308E, or multiple 300-level courses.

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

---

### L38 Span 3220 Debating Cultures: How Spanish is Used

This course examines how the Spanish language is used in context with emphasis on variation across linguistic subsystems—the sound system (phonetics and phonology), vocabulary (lexis), sentences (morphosyntax), meaning (semantics), and language in use (pragmatics)—and Spanish applied linguistics. Module 1 includes a concise overview and review of basics about linguistics, Hispanic linguistics, the nature of each linguistic subsystem, the history of the Spanish language, and characteristics of present-day regional varieties of Spanish. Module 2 focuses on semantics and pragmatics, complemented by an exploration of variation in vocabulary throughout the Spanish-speaking world, such as how the English word "popcorn" may translate as palomitas, canguil, cancha, pochoclo, among various other options, depending on the Spanish-speaking region in question. Module 3 introduces students to sociolinguistics as applied to the Spanish-speaking world, beginning with key concepts such as sociolinguistic variable and concluding with student-led analyses of samples of Spanish day-to-day interactions, emphasizing the legitimacy and value of variation in light of what might be relegated as "standard." Module 4 explores a selection of other areas of Spanish applied linguistics, which include teaching Spanish as a second or heritage language and dual immersion programs with Spanish and English in the United States. Students in the course are provided with opportunities to improve their own abilities in Spanish, such as regarding context-appropriate usage, and to apply their knowledge in practical ways to a range of issues and challenges related to the Spanish language today. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

### L38 Span 3221 Debating Cultures: Media, Materiality and Cultural Production in Greater Mexico and the U.S.-Mexico

This course is an invitation to explore the complex mediatic landscape of Greater Mexico and the U.S.-Mexico borderlands throughout the nineteenth and twentieth century. What did an early Spanish-language press look like in the United States? What are the connections it holds with the United Farm Workers publications later in the twentieth century? How did these publications interact with other platforms, such as Spanish-language radio? What are the political and cultural implications of hearing or seeing in the present-day militarized border zone? These are just some of the questions that we will collectively attempt to answer as we approach the cultural and artistic practices of the region. The course will deal with print, visual and aural culture, and you will have the chance to explore material such as Spanish-language newspapers, border ballads, radio, performance art, digital art and activism, among many others. We will discuss issues like ethnic identity, language, race, citizenship and gender, as they intersect with cultural production and its mediality. Moreover, you will become

familiar with transnational frameworks for the study of culture, critically engaging with the work of border studies exponents such as Gloria Anzaldúa and Américo Paredes. This overarching approximation of the nineteenth and twentieth centuries is meant to encourage a comprehensive understanding of the cultural processes of the borderlands: its fluctuations, as well as the continuities it maintains with present-day border culture. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

### L38 Span 3222 Debating Cultures: Poetics of Extinction: extraction, violence, and possible futures in Latin America

The increasing anxiety regarding multiple axes of violence has become a major referent for contemporary literature across Latin America. While there are international discussions and treaties to reduce our carbon footprint on the planet and deliver a livable space for the future generations, the landscape seems to be completely different for countries that depend on the extraction of fossil fuels and other resources to move their economies. This course aims to be a window to some of the ways in which contemporary writers are portraying and criticizing the duality of extraction and violence that leads to extinction, and some of the possible futures they propose while we develop our own possibilities with their help. Here, the idea is that we will see extinction in a broader sense looking at efforts to erase, suppress, and control in the name of consumerism and individual enrichment. We will explore the relationship between the extraction and usage of natural resources, the harm caused onto human and non-human bodies, and the physical, emotional, and economical violence women and other feminized individuals suffer. Some of the topics we are going to engage with include indigeneity and sovereignty, environmental and social justice, ecofeminism and ecocriticism, neoliberalism, counter-market literary practices, technology, and the overall intersection of gender, class, and race through the intertwined triad of capitalism, coloniality, and patriarchy. Materials will include short stories, poems, music, films, podcasts, performances, and essays. Among the authors to be studied, we include Isabel Zapata, Liliana Colanzi, Verónica Gerber Bicecci, Lorena Cabnal, Yásnaya Aguilar Gil, Verónica Gago, Gabriela Damián Miravete, Julieta Paredes, Daniela L. Guzmán, Cristina Rivera Garza, Gladys Tzul Tzul, and others. This course will have a strong, mandatory, and graded oral communications component and is taught in Spanish. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, LS, SC EN: H

### L38 Span 3223 Debating Cultures: Art of Recycling: Remix, Appropriation, & Eco-Narratives in Latin America & Spain

Some of the most disruptive and controversial artistic and literary works of the 20th and 21st centuries reuse previous materials and known works. These practices of recycling and appropriation have reopened great theoretical and socioeconomic debates: Is it ethical to create a work of art by recycling parts of other works? In these times of remakes and remixes, what gives originality and value to a work of art today? What are the legal limits of appropriation and intellectual property? In our course, we will discuss these questions by analyzing a varied corpus (music, cinema, literature, photography, and other plastic and visual arts) of contemporary works and authors that are recycling the canon and rewriting the current laws of how art and literature work in the Latin American and Spanish context. At the same time, the importance of the aesthetics of recycling coincides with a historical moment in which the ecological crisis is at the center of public debate. For this reason, we will also analyze how Climate and Weird Fiction in Spanish are creating ecological narratives to denounce, among other topics, the extractivism of the planet's resources and propose

new sustainable ways of relating to our environment. This course will have an important practical dimension, so students will have the opportunity to experiment with different forms of artistic intervention. The course will be taught entirely in Spanish, with a strong and graded oral communication component. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

---

**L38 Span 3224 Debating Cultures: Race, Migration, and Coloniality in Mediterranean Crossings**

Taking as a point of departure the cultural and religious diversity of medieval Iberia, this course takes a postcolonial approach to the study of migrant cultures in contemporary Spain. The course studies migrants both as objects of representation and as producers of culture. From filmmakers to literary writers, thinkers on both sides of the Strait of Gibraltar produce narratives about migration that invite us to reflect upon how immigrant communities are racialized, how religion becomes entangled with far-right politics, and how Spain's colonial legacies shape immigrants' lives. The materials studied include film (Chus Gutiérrez) and literary texts (Najat el Hachmi). As part of the course, students will discuss the interplay of cultural production, history, and politics. Students will be encouraged to think about the relevance, and limits of, prevailing and emerging concepts such as Orientalism (Said), andalucismo (Hirschkind), migration studies, and Mediterranean studies. This course will have a strong writing and oral communication component. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

**L38 Span 3225 Debating Cultures: Escritoras, guerrilleras y activistas: Central American Womens Legacy in Art and**

Debating Cultures: Escritoras, guerrilleras y activistas: Central American Women's Legacy in Art and Politics. This course will examine Central American history through the lens of women's struggles and their literary and artistic production. The class will start with readings from Marxist writers like Carmen Lyra and proto-feminists who contributed to the prestigious journal *Repertorio Americano*. The students will be introduced to Prudencia Ayala, the first Latin American woman presidential candidate and her political platform. They will also learn about women's contributions to revolutionary culture during the twentieth-century civil wars, such as testimonio and participation as war reporters. Finally, we will discuss contemporary activism forms such as music, performance, visual art, and Central American film. We will investigate the causes and motivations for women's struggles and creative political participation. The course will be taught entirely in Spanish, with a strong and graded oral communication component. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

---

**L38 Span 3226 Debating Cultures: Gender and Feminism in Contemporary Latin American Fiction**

This course will explore the innovative feminist theory and fiction written by Latin American women and feminine-identifying writers in the twenty-first century. We will read and debate a broad range of texts together to think critically about how gender is represented in fiction and to practice doing feminist or gender-focused readings of literary works. During the first part of the class, we will explore major contemporary trends in Latin American feminisms, examining their key themes and differences and using their insights to analyze and critique

the ways gender categories are constructed and mobilized in society. We will then transition to reading fiction, using the critical tools we have developed through reading and discussion to analyze the content and form of novels and short narratives. These stories will help us open a dialogue about how gender and feminist concepts are represented in fiction and intersected by dynamics of race, class, sexuality, memory, violence, family, care, and identity. By the end of our course, you will have the skills and conceptual foundation necessary to craft, write, and present your own original analysis of a fictional text through the lens of gender and/or feminism, and to apply these approaches to any literary or artistic work you may encounter outside the classroom. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

Credit 3 units. A&S IQ: HUM, LCD, SC EN: H

---

**L38 Span 3227 Debating Cultures: Afrodescendants in Comic Books and Graphic Novels**

This course will explore the representation of people of African descent in comic books and graphic novels from Spain and Latin America. These will include comic books about Afro-Latin Americans and black Spaniards as well as comic books and graphic novels by black artists and writers from these regions. Students will learn how to engage academically with these two literary genres while reading and conducting research about the histories and cultures of Afrodescendants in the Iberian world. Topics of discussion will include: race, slavery, representation, and black resistance. Prior or concurrent enrollment in Spanish 303 is required. Students who have taken more than two Spanish culture or literature classes are not allowed in this course and must proceed to a Researching Cultures class.

---

**L38 Span 331 Hispanic Art/Arte Hispano**

This course focuses on the most important movements, artistic expressions and its representatives of the art history of Latin America and Spain. From the Pre-Columbian art of the Mayas, Aztecs and Incas, to the syncretism of Post-colonial Latin American art, the Mexican Muralism and the self-reconstruction portraits of Mexican artist Frida Kahlo to the Chicano Art in the U.S.A. From the Medieval paintings of religious Spain, to the criticism of the Spanish nobility by Diego Velazquez, the Spanish Civil War of "Guernica" by Pablo Picasso, to the Surrealism of Salvador Dalí and Antonio Gaudi. The students will visit the St. Louis and the Kemper Art Museums. Prereq: Span 303 or 308E. In Spanish.

---

**L38 Span 3361 Spanish-American Literature II in Chile/Spain**

A survey of major Spanish-American literary works from the end of the 19th century to the contemporary period at Washington University's program in Chile or Spain. Prereq: Span 308E or the equivalent.

Credit 3 units. Art: HUM

---

**L38 Span 341 Literary and Cultural Studies in Spanish**

This course is an introduction to cultural and literary analysis within Iberian and Latin American cultures. The course will be covering a wide variety of materials that span different countries, historical periods, and various cultural and literary forms. The main objective of the course is to introduce students to key historical, geographical and political aspects of these cultures, while at the same time applying different approaches of cultural analysis. The course is structured upon key central concepts as they are particularly related to the cultures of the Iberian Peninsula and Latin America, such as Nation, Colonialism / Postcolonialism; Modernity and Postmodernity; Popular & Visual Media; Gender, Race, Migration and Social Class. The course combines

the reading of literary texts, films and other cultural forms, with the examination of introductory critical works related to the key concepts that will be explored throughout the semester. Prereq: Spanish 308E or concurrent enrollment in 303. Taught in Spanish.

Credit 3 units. A&S IQ: HUM, LCD, LS, SD Arch: HUM Art: HUM BU: IS EN: H

### L38 Span 342 Iberian Literatures and Cultures

Which are the cultures that shape what Spain is today? This course explores the diversity of the Iberian Peninsula through its literatures and cultures. As part of both the Mediterranean and Western Europe, the Iberian Peninsula has been shaped through a dynamic of conflict and negotiation between various cultures, languages, and religions. Students will engage themes such as internal colonization, imperialism, multiculturalism, regional identities, nation formation, migration, media and popular culture, modernization, and gender and race relations, as they relate to our understanding of the country today. Focuses may include but are not limited to the following: multiculturalism of the Middle Ages, the Muslim and Jewish presence in Spain, identity narratives and power relations, stage and performance traditions, as well as authors and artists like Cervantes, Galdós, García Lorca, Picasso, Almodóvar. Prereq: Spanish 308E or concurrent enrollment in 303. Taught in Spanish.

Credit 3 units. A&S IQ: HUM, LCD, LS, SD Arch: HUM Art: HUM BU: IS EN: H

---

### L38 Span 343 Latin American Literatures and Cultures

How did Latin America become Latin America? This course explores the different inventions and reinventions of the region through its literatures and cultures. Beginning with the encounter of Europeans with America, students will engage themes like colonization and colonialism, urban and rural cultures, nation formation, modernization, media and popular culture, as well as gender and race relations. Authors studied may include Colón, Sor Juana, Sarmiento, Neruda, Borges, García Márquez, or Morejón. Prereq: Spanish 308E or concurrent enrollment in 303. Taught in Spanish.

Credit 3 units. A&S IQ: HUM, LCD, LS, SD Arch: HUM Art: HUM BU: IS EN: H

---

### L38 Span 351 Business Spanish

Study of language and structures used in conducting business in the Hispanic world. Actual materials from various businesses--advertising, marketing, real estate, accounting--used. Particular stress on speaking and writing. Prereq: Span 308E, or permission of instructor.

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

---

### L38 Span 353 Medical Spanish

Designed for future medical professionals, this course will provide students with a complete vocabulary and cultural sensitivity necessary for treating Spanish-speaking patients. While the main focus is oral/aural, written exams, varied reading and some research are required. Volunteer work recommended for enrolled students. Advanced students will be given priority. Prereq: Span 307D or 302.

Credit 3 units. A&S IQ: LCD BU: HUM EN: H

---

### L38 Span 354 A View from the Southern Cone: Perspectives on Art, Literature and Culture

This course will deal with current issues of cultural, social, political and literary importance related to the Southern Cone. We shall study selected texts from Argentina, Chile and Uruguay as well as contemporary films and drama productions. This course will seek to determine what specifically can be expressed about national identity, globalization and the environment as these countries face the twenty-

first century. Course requirements include four short essays and a final exam. This course is taught in Santiago, Chile, as part of the Washington University Chile Program. May be repeated for credit. Conducted in Spanish.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: ETH EN: H

---

### L38 Span 355 Spanish for the Social Sciences

This is an advanced Spanish language course designed to develop conversational, writing and listening skills for students in the social sciences. Students will learn and use the language in a content-based format, guided by culturally sensitive readings, discussions and activities. Prereq: Spanish 307D or 302. In Spanish.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: HUM EN: S

### L38 Span 360 Literature Topics Course in Spain

Taught through the Humanidades program of Carlos III University. Topics vary each semester. May be repeated for credit. Prereq: Approval of Washington University's Madrid program director and Carlos III. Credit variable, maximum 3 units. Art: HUM

---

### L38 Span 3600 Researching Cultures: Film and Dictatorship in Argentina and Chile

In this course, we will explore the methods by which filmmakers from the Southern Cone of Latin America used film to engage, document, and remember the military dictatorships of the 1970s and 1980s. We will look at the development of protest cinema in the area, the use of documentary filmmaking and resistance, navigating censorship, and the use of film as a nation's memory as we study films for which directors and actors risked (and sometimes lost) their lives. We will accompany our study of film with historical readings, reports on human rights abuses, and theories on memory and trauma. This course will have a strong, mandatory and graded written communications component, and it is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts & Sciences students. Prerequisite: Span 303 or Span 308D, and one (or preferably two) of the following: Span 341, Span 342, Span 343, Span 370, Span 380 or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

Credit 3 units. A&S IQ: HUM, LCD, WI Arch: HUM Art: HUM BU: IS EN: H

---

### L38 Span 3601 Cultural Studies Topics Course in Spain

Taught through the Humanidades program of Carlos III University. Topics vary each semester. May be repeated for credit. Prereq: Approval of Washington University's Madrid program director and Carlos III. Credit variable, maximum 3 units.

### L38 Span 3604 Researching Cultures: Making Latin America Popular

"Despacito," futbol, telenovelas: All of these are forms of Latin American popular culture that are increasingly part of our everyday reality here in the United States. All are also inseparable from stories of inequality, ethnic tensions and celebrations, understandings of gender relations, and notions of hope that blend ideas of nation with cultural consumption. While popular culture in Latin America is often considered a contemporary phenomenon linked to the 20th century and the mass production of cultural goods -- film, books, and music -- it has deeper roots. We can trace these back to the 19th century, where people, cultural processes, and phenomena literally began making Latin America popular. This course will survey the emergence and variety of modern popular culture in Latin America, from the 1800s to the present. Readings may include best sellers, gaucho poetry, stories of urban life and folk heroes, and materials engaging themes from dictatorship to contemporary Latinx experiences. We will learn about the intersections between race, nation, and music; explore the

emotional and political power of futbol, along with the intense gender divisions it reveals; and delve into the appeal of telenovelas across socioeconomic divides. Historical and anthropological essays will also guide us throughout the semester. This course will have a strong, mandatory and graded written communications component, and it is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts & Sciences students. Prerequisite: Span 303 or Span 308D, and one (or preferably two) of the following: Span 341, Span 342, Span 343, Span 370, Span 380, or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

Credit 3 units. A&S IQ: HUM, LCD, SC, WI Arch: HUM Art: HUM BU: ETH, IS EN: H

---

### **L38 Span 360Y Researching Cultures: Latin American Women Travelers**

When we talk about "adventurers," "explorers," or "travelers," we tend to imagine them embodied in a masculine figure. In this course, we will focus on the limits of this idea of travel, analyzing travel as a gendered and racialized experience. Throughout the semester, we will study different types of mobility, travel, and travel literature created by Latin American women from the 19th century to the present, debunking the stereotypes of female immobility and immanence. From the Peruvian *rabonas* to the Mexican Revolution's *soldaderas*, from pleasure trips to forced exiles, we will read and examine the writings of Flora Tristan, Clorinda Matto de Turner, Victoria Ocampo, Clarice Lispector, Circe Maia, Cristina Peri Rossi, Samanta Schweblin, Cristina Rivera Garza, and Valeria Luiselli, among others. These different travelogues will serve as the basis for discussing the complexities of gender, race and social class in relation to travel, nation and literature. We will also discuss different theoretical approaches, seeking to deepen and enrich our academic writing in the Spanish language. In this course, students will write two short compositions and a final research composition on the topic of their choice related to the course content. This course will have a strong, mandatory and graded written communications component, and it is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts & Sciences students. Prerequisites: Span 303 or Span 308D, and one (or preferably two) of the following: Span 341, Span 342, Span 343, Span 370, Span 380, or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

---

### **L38 Span 3611 Researching Cultures: Urban Iberian Cultures -- Barcelona and Madrid**

In this course, we will explore the various urban cultures of two paradigmatic cities in the Iberian Peninsula: Barcelona and Madrid. This is a research-focused course that examines from interdisciplinary and collaborative perspectives the urban spaces and cultures that have shaped the life of the dwellers of these two key cities, both across time and with a focus on the contemporary moment. While the founding of the city of Barcelona, the capital of Catalonia, dates back to the Roman empire (i.e., the first century BCE), the city of Madrid, the capital of Spain, was established during the 15th century around a small fortification developed during Al-Andalus, soon becoming the political center of the Spanish Empire during the 16th century. Through an examination of the urban development of both cities across time and the various contemporary urban spaces and cultures of the 21st century, this course will explore the ways in which writers (Jorge Carrión, Belén Gopegui, Julio Llamazares), musicians (Joan Manuel Serrat, Rosalía), visual artists (Pablo Picasso, Cristina García Rodero, Angeles Santos Torroella), filmmakers (Jose Luis Guerin, Isabel Coixet, Chus Gutiérrez) and architects (Juan de Villanueva, Antoni Gaudí) have reflected on and explored through their work in both cities. We will also explore the political and social relevance of both cities today as related to their own urban planning and development as well as their political

relevance in both Catalonia and Spain as a whole. This course will have a strong, mandatory and graded written communications component, and it is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts & Sciences students. Prerequisites: Span 303 or Span 308D, and one (or preferably two) of the following: Span 341, Span 342, Span 343, Span 370, Span 380, or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

Credit 3 units. A&S IQ: HUM, LCD, WI Arch: HUM Art: HUM BU: ETH, IS EN: H

---

### **L38 Span 3612 Researching Cultures: Afterlives, Ghosts, and Haunted Places**

In this course, we will examine the historical, cultural and aesthetic implications of how different artists, filmmakers, and writers approach the afterlife in the Spanish-speaking world. We will explore experiences and emotions that can be deeply personal and intimate as well as shared and lived out in public. We will discuss how practices and beliefs vary widely across the Spanish-speaking world and explore how traditions and rituals are invented and how these change over time. While our readings will include a few works from earlier periods, most of the texts stem from the 20th and 21st centuries, allowing us also to examine a number of historical events and their depiction in history and memory. We will discuss the ways in which grief, mourning, and trauma relate to identity and belonging, and we will also pay close attention to coping mechanisms that range from forgetting to humor. The last section of the course will focus on a specific case study of public mourning and remembrance: the Spanish Civil War and its multiple afterlives. This course will have a strong, mandatory and graded written communications component, and it is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts & Sciences students. Prerequisites: Span 303 or Span 308D, and one (or preferably two) of the following: Span 341, Span 342, Span 343, Span 370, Span 380, or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

---

### **L38 Span 3613 Researching Cultures: The Paradoxes of Contemporary Cuba: The Good, the Bad, and the In-Between**

In the wake of such momentous events as president Obama's visit to Cuba (March 2016), Fidel Castro's death (November 2017) and the end of Raul Castro's presidency (April 2018), for many Americans the island has advanced from the category of a forbidden and exotic fruit to a full-fledged reality. Now is a good time to ask not only "What is next for Cuba?" but also "What can we learn from Castro's revolutionary experiments?" This course explores from interdisciplinary perspectives the paradoxes of Cuban lives on the island and in the diaspora—the good, the bad and the in-between—along with the intertwined histories of the United States and Cuba. Using a combination of literary texts (Carpentier, Cabrera Infante, Ponte, Bobes, Obejas, Morejón, Padura), films ("Strawberry and Chocolate," "Guantanamo," "The Promise," "The New Art of Making Ruins"), artwork (Mendieta, Bruguera, Garaicoa), political speeches, and unique visual materials compiled by the instructor throughout her many research trips to Cuba, we will look at the island's contemporary reality through the lens of its colonial and postcolonial past. Topics include ethnic and gender identities, the history of slavery and plantation economy, the "myths" of Che Guevara and Fidel Castro, African-Cuban spirituality, popular music, political oppression and dissent, and the interplay of migration and exile, along with multiple perspectives on everyday life (foreign tourism, food rationing, dual-currency economy, restoration of colonial Course description: Havana, education, and healthcare). Due to the interdisciplinary perspectives inherent to this course, students will have an opportunity to engage their knowledge of and interest in disciplines outside the humanities (including but not limited to: public health, law, political science, urban studies, anthropology) in the exploration

of Cuba's past, present, and future. This course will have a strong, mandatory and graded written communications component and is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 or 308E, and one (or preferably two) of the following: 341, 342, 343, 370, 380 or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

---

### L38 Span 3614 Researching Cultures: Iberian Feminisms

This course will examine the development and transformations of feminist thought in the Iberian Peninsula, from the Enlightenment to the present, considering a diverse array of literary and cultural production (narrative fiction, poetry, essay, press accounts, film and visual culture) by women. We will consider not only the challenges faced by women cultural producers, given their social, legal, and historical circumstances, but also the strategies they used to negotiate their participation in the public sphere as writers, intellectuals, social reformers and activists. We will explore, from an intersectional perspective, the unique perspectives these women brought to their work, as they address pressing social, political, and cultural issues pertaining to their place in society, such as citizenship, suffragism, equal rights, divorce, gender violence, personal and political freedom, racial justice, among others. We will consider works of Enlightenment thinkers such as Josefa Amar y Borbón, representing the beginnings of a modern feminist consciousness in Iberia; Romantic writers (Coronado, Gómez de Avellaneda), who, under the impact of liberalism, were key to shaping new models of subjectivity for women; nineteenth-century (proto)feminists and social reformers of the fin-de-siècle (Pardo Bazán, Gimeno de Flaquer, Arenal); early twentieth-century suffragists and freethinkers (Carmen de Burgos, Campoamor, Hildegart); and feminist writers and filmmakers of the post-Franco era (Montero, Riera, Bollaín, Taberna) and women representing the diverse diasporic communities of 21st-century Spain (El Hachmi, Bela-Lobedde, Mbomio Rubio, Quanzhou Wu). Course assignments will consist of short essays, a book report, and a final project. Prerequisites: Spanish 308D or 303 and two of the following (341, 342, 343, 370, 380, or Debating Cultures). Credit 3 units. A&S IQ: HUM, LCD, SC, WI Arch: HUM Art: HUM BU: BA, IS EN: H

---

### L38 Span 3615 Researching Cultures: Leisure and Urban Entertainment in Latin America

How do we define leisure or free time? Who can experience it? Can we choose which activities to perform in our free time? By establishing a dynamic dialogue between leisure/free time and other notions such as play, labor, inequality, alienation, and consumption, we will approach Latin America's urban entertainment scene from the end of the nineteenth century to the present. Beginning with the incorporation of the region into the global economic networks, we will trace the trajectory of the concept of leisure/free time to reflect on socio-political issues such as migration, gender, race, and social class. We will examine historical landmarks alongside examples of urban entertainment: from street celebrations, mass media, and soccer games, to social networks and virtual platforms in a pandemic scenario. Even though this course is mainly focused on Argentina and Uruguay, we will also have the opportunity to study cases from other parts of Latin America. This course will have a strong, mandatory and graded written communications component and is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. PreReq: Spanish 308D or 303 and at least one Spanish surveys (341, 342, 343, 370, 380, or Debating Cultures). There are no exceptions to the prerequisite. Students who have completed four or more Spanish surveys (including Researching Cultures and the ones mentioned before) may not take this class and must proceed to the 400-level. Credit 3 units. A&S IQ: HUM, LCD, LS, SC, WI Arch: HUM Art: HUM BU: IS

---

### L38 Span 3616 Researching Cultures: Imagining the Andes

Taking Peru and Bolivia as case studies, this course explores the Andean region's cultures by examining the interactions between global, national, and indigenous cultures. We will study six main topics: indigenous peoples and state-formation; peasant revolutions; internal and transnational migration; memory and political violence; racialization and coloniality; and extractive capitalism and indigenous thinking (Buen Vivir). We will explore these issues while learning about the region's major historical transformation between the 1900s and the present. Course materials include oral histories, myths, literature, film, photography, music, and social media. Authors studied include Jose Maria Arguedas, Claudia Llosa, Yuyachkani, Anibal Quijano, Jorge Sanjines, and Silvia Rivera Cusicanqui. This course fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 or 308E, and one (or preferably two) of the following: 341, 342, 343, 370, 380 or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar. In Spanish.

### L38 Span 3617 Researching Cultures: Representations of Childhood in the Spanish-speaking World

This course examines the construct of childhood in the Spanish-speaking world from an interdisciplinary perspective. We will explore the aesthetic, cultural, sociopolitical, and legal implications of a variety of media, about and/or for children. The course is divided into three thematic units. The first will delve into the pedagogical, nation-building and moral projects that underpin the development of children's literatures in the Hispanic world. The second focuses on children in the midst of crises, where we will turn our attention to issues of child labor, migration, poverty, public health, the environment, as well as economic and political crises that lay bare the inherent vulnerabilities of children. We will also familiarize ourselves with the work of a variety of organizations that aim to mitigate child suffering and develop social awareness about the treatment and living conditions of children. The third unit centers around media and the child consumer, where we will explore the effects of social media, the advertising and marketing of food, games and toys, as well as a variety of other issues that affect children's emotional and psychosocial development. Some of the texts and films we will study include *Ismaelillo* and a selection of *La edad de oro* by José Martí, *Cuentos pintados y morales* by Rafael Pombo, *Perico trepa por Chile* by Alicia Morel, a selection of poems by Rubén Darío, *Sólo un pie descalzo* by Ana María Matute, *Los herederos* by Eugenio Polgovsky, *Voces inocentes* by Luis Mandoki and *Entre nos* by Gloria La Morte and Paola Mendoza. Additional materials include newspaper articles, podcasts and songs. This course fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 or 308E, and one (or preferably two) of the following: 341, 342, 343, 370, 380 or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar. In Spanish. 3 units.

Credit 3 units. A&S IQ: HUM, LCD, LS, SC, WI Arch: HUM Art: HUM BU: IS EN: H

---

### L38 Span 3618 Researching Cultures: Cultural Revolutions in Central America

Central American region has been invisible and stigmatized as the most violent and unequal of the continent. Nevertheless, these seven countries (Guatemala, El Salvador, Honduras, Nicaragua, Costa Rica, Panamá and Belice) have a complicated history of creativity and cultural struggles related to indigenous people, national identity, revolution, Cold War, postwar and peace times, and transnational migration. This course will explore some of these topics through the lenses of cultural revolutions in Guatemala, El Salvador, and Nicaragua, in the context of the Cold War. Attention will be given to the articulation

of culture and politics. We will study a wide range of media products and performances, such as rock songs, painting, folkloric music, radio streaming, street theater, testimony genre, literature, and film. In addition, we will discuss the engagement of writers and public intellectuals such as Ernesto Cardenal, Daysi Zamora, Roque Dalton, and Gioconda Belli to the revolutionary process in Latin America and the interplay between political mass mobilization and radical resistance. This course fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 or 308E, and one (or preferably two) of the following: 341, 342, 343, 370, 380 or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar. In Spanish.

---

### **L38 Span 3619 Researching Cultures: Graphic Latin America**

This course examines the visual, affective and linguistic registers that graphic novels, comics and illustrations have used in Latin America to represent popular desire, enjoyment and resistance. We will challenge traditional perceptions of graphic formats as "minor literature" and we will delve into the relationship between popular consumption and structural changes in Latin American countries. Some of the questions that would lead the units are: Is there a specific storytelling attached to graphic narratives? What are the cognitive and perceptual challenges that graphic texts pose to the readers? What do we mean when we talk about "Latin America Graphic Fiction"? What does it mean to read "massive texts"? Can reception have a transformative power in Latin American societies? The genres analyzed include memoirs, political satire, parodies, science fiction and radical zines. This course fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 or 308E, and one (or preferably two) of the following: 341, 342, 343, 370, 380 or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar. In Spanish. 3 units. This course fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 or 308D, and one (or preferably two) of the following: 341, 342, 343, 370, 380 or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

---

### **L38 Span 361Y Researching Cultures: The Black Parade: Black Social Movements in Columbia & Peru, 1960s to Present**

This course is a conceptual and thematic exploration of Black social movements in Colombia and Peru from the 1960s to present. Learners will explore topics such as Black Consciousness, Black Women's Rights, civil conflicts and drug conflicts, land rights, environmental justice, genocides against Black activists, Black Lives Matter, forced and quasi-voluntary displacements, as well as COVID-19, among others. The course not only highlights the widespread resistance by Blacks against systemic racism and inequality but also movements that celebrate Blackness and the curation of Black representation in countries that have intentionally made Black bodies invisible. Through an interdisciplinary and intersectional approach in an inclusive and co-collaborative environment, learners will analyze, understand, and juxtapose multiple (trans)national movements centering on the dimensions of race, gender, and class in order to productively discuss Afro-Latin American history, culture, and politics. Although this course is focused on writing, research and instructor feedback, learners will have the opportunity to engage bi-weekly with articles, videos, music, children's books, poetry, performances, films, and much more. This course will have a strong, mandatory and graded written communications component, and it is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts & Sciences students.

Prerequisites: Span 303 or Span 308D, and one (or preferably two) of the following: Span 341, Span 342, Span 343, Span 370, Span 380, or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.

### **L38 Span 3620 Researching Cultures: Politics of Melodrama in Latin America: From Serialized Novels to Telenovelas**

This course explores the social and political history of melodrama in Latin America. We will discuss the role that melodrama has had within Latin American media following a long-term chronological approach that begins with nineteenth-century serialized novels (folletín) and ends with recent streaming television. As a language of emotions and familiarity, Latin American melodrama has been a key tool to reflect on the most important social and political issues, from mid-twentieth century populisms to globalization, from modernization to the human rights abuses of the 1970s' dictatorships. Thus, in this course we will delve into the political power of tears and smiles. The course will address the uses of melodrama in print media, radio, cinema, and television, in order to explore how the melodramatic imagination shaped the experience of modernity in the region and allowed Latin American audiences to deal with issues of class inequality, gender roles, sexuality, national identities, and racism. Course materials may include tango albums, 1940's Argentine and Mexican films, Cuban radionovela *El derecho de nacer*, Manuel Puig's novel *El beso de la mujer araña* [Kiss of the Spider Woman], as well as telenovelas from Colombia, Mexico, and Argentina. As part of the course, students will engage in active research on the interplay of politics and melodrama in contemporary Latin American media. This course fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 or 308E, and one (or preferably two) of the following: 341, 342, 343, 370, 380 or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar. In Spanish.

Credit 3 units. A&S IQ: HUM, LCD, SC, WI BU: BA, IS EN: H

---

### **L38 Span 3621 Researching Cultures: Not a Piece of Cake: Culinary Crossroads of Latin American Cultures**

This course explores from interdisciplinary perspectives the intersectional, transdisciplinary and cross-cultural dimensions of food in the Hispanic cultures of South and Central America, the Caribbean, and their respective (Latinx) diasporas. Using a combination of literary texts, artwork, testimonials, films, and scholarly articles, we will look at food, both as material commodity and metaphor, through the lens of Hispanic America's colonial and postcolonial past. Some topics include ethnic and gender identities, the history of enslavement and plantation economy (sugar, coffee), African-descendant and Indigenous spirituality as it pertains to food rituals, interplay of migration and exile in culinary transformations, along with multiple perspectives on everyday life (hunger, diets and dieting, food rationing, etc.). Due to the interdisciplinary perspectives inherent to this course, students will have an opportunity to engage their knowledge of and interest in disciplines outside the humanities (including but not limited to: sociology, psychology, public health, anthropology, global studies) in the exploration of food/gastronomy/culinary cultures, past, present, and future. This course has a substantial, mandatory and graded written communications component and is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 and at least one Debating Cultures (32XX). Students who have taken more than four Spanish Debating/Researching classes are not allowed in this course and must proceed to a Major Seminar (4XX).

Credit 3 units. A&S IQ: HUM, LCD, SC, WI Arch: HUM Art: HUM EN: H

---

**L38 Span 3622 Researching Cultures: The Stuff of Legends: Remembering and Recreating the Past in the Hispanic World**

Researching Cultures: The Stuff of Legends: Remembering and Recreating the Past in the Hispanic World. In this course we will study various versions of some of the most memorable legends that populate the imagination of Hispanic people in both sides of the Atlantic Ocean. We will study these narratives as they have evolved through time, depending on the contexts and media on which they are told, and we will compare their written versions with their transformations into plays, movies, comics and artistic renderings. To inspire our discussions, we will use the support of some key theories both past and present about emotions, and how these can contribute to our ability to memorize and retrieve the stories we love to remember. This course has a substantial, mandatory, and graded written communications component and is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 and at least one Debating Cultures (32XX). Students who have taken more than four Spanish Debating/Researching classes are not allowed in this course and must proceed to a Major Seminar (4XX).  
Credit 3 units. A&S IQ: HUM, LCD, SC, WI Arch: HUM Art: HUM EN: H

---

**L38 Span 3623 Researching Cultures: Decolonial Imaginaries in Latinx Cultures**

Latinx-typically defined as the Latin American descendant and migrant populations settled in the US-is a hotly contested category and a fast-growing presence in US cultural and political life. In this course, we will examine cultural productions: literature, film, television, popular music, and more, to interrogate and attempt to understand the contours of Latinx experience. We will consider questions such as: what is the relationship of Latinx identity to language, migration, colonialism, labor, borders, race, ethnicity, and sexuality? How do race, ethnicity, class, gender, sexualities, citizenship, geography, and imperialism work with or push against Latinx identification? We will also consider the role of shared histories of coloniality in Latin America have on the formation of Latinx identity in the United States. Is there a shared decolonial impetus in Latinx cultural forms? Using an interdisciplinary lens, we will analyze how Latinx identities are imagined and produced through culture, and what they offer Latin American and US American cultural traditions as they push against multiple colonial orders. This course is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 and at least one Debating Cultures (32XX). Students who have taken more than four Spanish Debating/Researching classes are not allowed in this course and must proceed to a Major Seminar (4XX).

---

**L38 Span 3624 Researching Cultures: Afro-Central American Literature and Culture**

While Afro-Latin Studies have flourished in other regions of Latin America, Afrodescendants and their contributions in Central America have been submerged in a deep mutism. Some countries, such as El Salvador, have gone as far as to officially deny the presence of Afrodescendants in the nation while others characterize Afro-Central Americans as an anomaly or as foreign. Nonetheless, Afro-Central Americans possess a long, rich and complex history within the region which although often denied, is very much present. This course introduces students to the contemporary literature and culture of people of African descent in Central America in their attempts to visibilize themselves, rescue their history and to properly represent their roots and culture. We will analyze how this history and culture is represented in the literature of authors such as Gerardo Maloney from Panama, Xiomara Cacho Caballero from Honduras, Isabel Estrada Colindres from Nicaragua, and Wingston Gonzalez from Guatemala, to name a few. In addition, students will also have the opportunity to engage with music, podcasts, art and films which feature and/or are produced by self-identifying Afro-Central Americans. This course has a substantial, mandatory and graded written communications

component and is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 and at least one Debating Cultures (32XX). Students who have taken more than four Spanish Debating/Researching classes are not allowed in this course and must proceed to a Major Seminar (4XX).  
Credit 3 units. A&S IQ: HUM, LCD, SC, WI Arch: HUM Art: HUM EN: H

---

**L38 Span 3625 Researching Cultures: Cumbia Culture in Latin America**

This course explores the social impact of cumbia culture in Latin American lifestyles. Why has this music genre become a staple of Latin American countries? How does this music genre interact with the social, ethnic, and economical issues of the region(s)? By looking at cumbia as a transnational phenomenon, we will study how this genre interacted with different contexts and countries, such as Colombia, Venezuela, Peru, Mexico, Argentina, Chile, and the United States. We will explore the multiple cultural practices related to this culture, including music production, visual imagery, identities, parties, and dance. Our material includes music, album covers, video footage, and films, starting from the sixties to the present. From these productions, students will develop research essays using academic sources and methodologies from the cultural discussions of the classes with the guidance of the instructor. This course will have a strong, mandatory, and graded written communications component and is taught in Spanish. Prereq. Spanish 303 or 308D, and one (or preferably two) of the following: 341, 342, 343, 370, 380 or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar.  
Credit 3 units. A&S IQ: HUM, LCD, WI EN: H

---

**L38 Span 3626 Researching Cultures--Curatorial Mexico: Unfolding Heritage Through Curatorial Practice**

This course will get us immersed in Mexico's rich cultural heritage through the perspective of curatorial practice as dispersed throughout its myriad museums, heritage sites, and everyday spaces. We will focus on curatorial discourse as a unique form of communication, a genre in itself that is often understated on the role it plays in shaping, shifting, and contesting cultural and social identities. We will analyze how curatorial language inhabits not only writing but visual culture, speech, heritage collections, gallery installations, and even architecture, fashion, and food. We will discuss how the instability of curatorial discourse reveals the instability and contradictions within cultural heritage itself, deceptively presented constantly as a neutral, unchangeable, and unquestionable entity. The materials and reflections in this course will ponder on cultural heritage as inevitably curated, discern the forms and implications of such mediation, and study curatorial practice and the trade of the curator as a form of agency that should aim to be ethical, inclusive, collaborative, and always challenged and renewed. We will work with a wide variety of materials from the early 20th century to contemporary Mexico that range from gallery and museum texts to political speeches, mass-media dispatches, literary texts, scholarly research, critical essays, interviews, fiction, magazine articles, manifestos, fashion statements, food menus, and architecture. These will lead us to reflect on how curatorial practice is a dynamic tool for understanding, renewing, preserving, and sometimes defying cultural heritage and what it stands for at different times and for different people. \*This course has a substantial, mandatory and graded written communications component and is taught in Spanish. It also fulfills the Writing Intensive (WI) requirement for Arts and Sciences students. Prereq. Spanish 303 and at least one Debating Cultures (32XX). Students who have taken more than four Spanish Debating/Researching classes are not allowed in this course and must proceed to a Major Seminar (4XX).  
Credit 3 units. A&S IQ: HUM, LCD, WI EN: H

---

**L38 Span 3650 Researching Cultures: Cultural Geographies of the Hispanic World**

This course provides students with an overview of the cultural history of various regions of the Hispanic World, considering its global, transatlantic, hemispheric, national, and regional formations through print, visual, and sonic media and genres. Taking the multilayered tension between power and resistance as a conceptual framework, the course explores four key cultural geographies: the colonial space, the national space, the migrant space, and the natural space. Each cultural geography maps the oppositional forces that have shaped various regions of the Hispanic World since Western colonial expansion: colonialism and decolonial thinking, melting pot utopias and ethnic communities, revolution and the State, modernity, race, and gender identities, and extractivismo and ecological dissidence. Materials include films, songs, short stories, poetry, comics, and digital culture. This is a writing-intensive course. Prerequisites: Span 303 or Span 308D, and one (or preferably two) of the following: Span 341, Span 342, Span 343, Span 370, Span 380, or Debating Cultures. Students who have taken more than four Spanish culture or literature classes are not allowed in this course and must proceed to a Major Seminar. Credit 3 units. A&S IQ: HUM, LCD, WI EN: H

---

**L38 Span 3660 Researching Cultures: Sociolinguistics of the Spanish-Speaking World**

This course provides an introduction to the basic concepts in sociolinguistics. Sociolinguistics focuses on the symbolic value of language as an expression of group identity based on region, gender, ethnicity, socioeconomic class, age, or other ways of defining group affiliation. Notions such as speech community, sociolinguistic variable, phonological and syntactic variation, and field methods will be included. The course also surveys other related topics such as language in contact, bilingualism and Spanish in the United States, Spanish as heritage language, language attitudes and language identity, and language and the law. We will focus on research examining the use of Spanish in Latin America, Spain, and the United States. Credit 3 units. A&S IQ: HUM, LCD, SC EN: H

---

**L38 Span 370 Introduction to Hispanic Linguistics**

An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax), and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional, and social varieties of Spanish and situations of Spanish in contact with other languages. Credit 3 units. A&S IQ: LCD BU: HUM EN: H

---

**L38 Span 380 Topics in Hispanic Cultures**

This course surveys cultures in specific contexts (Latin America and Spain) and in different historical periods, from the Middle Ages to the present. The course provides students with critical and methodological tools in order to carry out an articulate and informed cultural analysis. Prereq: Span 308E or concurrent enrollment in 303. In Spanish. Topics vary from semester to semester. See section description for current offering. Credit 3 units. A&S IQ: HUM, LCD, LS Arch: HUM Art: HUM BU: ETH EN: H

---

**L38 Span 401 Intensive Translation for Graduate Students II**

Designed to help graduate students in the humanities, social and natural sciences fulfill their Ph.D. language requirement, this is the second part of a two-semester course sequence in reading and translating Spanish. Non-graduate students may enroll with permission of the department. Credit for Span 400 is contingent on completion of Span 401. Credit 3 units. A&S IQ: LCD EN: H

---

**L38 Span 4013 Second Language Acquisition and Technology**

This seminar for undergraduate and graduate students will transform research and theory about second-language acquisition into practice while focusing on technology-driven applications. The course fosters professional development as participants formulate critical skills for evaluating, creating, and integrating technology into the language classroom and other language learning contexts, including business, engineering, and law. Course formats include readings, discussions, and demonstrations with technologies. The course counts for the minor in applied linguistics, the PhD in applied linguistics, and the graduate certificate in language instruction. This course carries the Social and Behavioral Sciences attribute and can be taken for different majors. Same as L92 APL 4023. Credit 3 units. A&S IQ: SSC EN: S

---

**L38 Span 405 Undergraduate Seminar: Special Topics**

An undergraduate seminar. Prerequisites: Span 307D, 308E, and either 333C-334C or 335C(Q)-336C(Q). Credit 3 units.

---

**L38 Span 405W Major Seminar**

An undergraduate seminar. Topics vary. This is a writing-intensive course, which requires a minimum of 3 papers of approx. 4-5 pp. length, with rewrites; 50% of the grade must come from written work. Prereq: Span 307D and Span 308E and at least two 300-level literature courses taught in Spanish. In Spanish. Credit 3 units. A&S IQ: HUM, LCD, WI Arch: HUM Art: HUM EN: H

---

**L38 Span 410 Major Seminar**

An undergraduate seminar. Topics vary. Prereq: Span 307D and Span 308E and at least two 300-level literature/culture surveys taught in Spanish. Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

---

**L38 Span 411 Spanish Grammar and Syntax**

This course presents a detailed study of Spanish syntax. Different theories (including generative theory) as well as the relationship between (morpho) syntax and other linguistic subsystems are considered. Special attention is also given to Spanish/English contrasts of particular interest to language learners and teachers. Prerequisite: Any one Researching Cultures course. Credit 3 units. A&S IQ: LCD EN: H

---

**L38 Span 4111 Advanced Grammar and Syntax in Spain**

Detailed study of contemporary Spanish syntax. Special attention to fine points of grammar and syntax necessary for communication at the advanced level, taught at Washington University's Carlos III program in Madrid. Prereq: placement by exam. Credit variable, maximum 4 units.

---

**L38 Span 4112 Bilingual Advanced Grammar and Syntax in Spain**

Detailed study of contemporary Spanish syntax for bilingual students, taught at Washington University's Carlos III program in Madrid. Prereq: placement by exam or program director.

Credit 3 units.

---

### L38 Span 413 Linguistics and Language Learning

This course, taught in English, is a foundation for students who will work with linguistically and culturally diverse people in the USA and around the world, whether this work is in the courtroom, hospital, classroom, office and more. The class will help prepare students for the diverse range of twenty-first century occupations that have language and linguistics at their center, including machine learning and translation studies. The class utilizes a survey format and covers both internal and external factors related to language acquisition and language use, such as language and the brain, language aptitude, age, gender, memory, prior knowledge, etc. Theoretical and research dimensions of both linguistics and foreign / second language learning are treated. Corresponding implications of the readings focus on action- on making decisions for language policies and debates around the world that are informed by linguistic and language knowledge. The course is required for the minor in applied linguistics, the PhD in Applied Linguistics, and the graduate certificate in language instruction. This course carries the Social and Behavioral Sciences attribute and can be taken for different majors such as Global Studies and Educational Studies. Prereq: Ling 170 is recommended but not required. Same as L92 APL 4111

Credit 3 units. A&S IQ: SSC BU: BA, ETH EN: S

---

### L38 Span 416 Introduction to Hispanic Linguistics

An introduction to the scientific study of the Spanish language, this course focuses on each of the major linguistic subsystems, including the sound system (phonetics and phonology), word formation (morphology), formation of phrases and sentences (syntax), and the use of the language to convey meaning (semantics and pragmatics). At each level of analysis, selected comparisons are made between Spanish and English and between Spanish and other languages. The course also examines different historical, regional, and social varieties of Spanish and situations of Spanish in contact with other languages. Preceptorial for undergraduates only.

Credit 3 units. A&S IQ: LCD EN: H

---

### L38 Span 417 Spanish Phonetics, Phonology, and Dialectology

This course, conducted in Spanish, explores the linguistic varieties of the 21 Spanish-speaking countries from both a historical and a synchronic perspective. The course begins with a traditional look at Spanish phonetics and phonology, with all students memorizing and utilizing the International Phonetic Alphabet. Course readings and discussions extend beyond the descriptive and include a search for the sources of language variation within the Spanish speaking world. Particular attention is devoted to language contact and bilingualism. Students will read in areas such as history, sociolinguistics, dialectology, and sociology, as well as traditional linguistic studies, in designing their projects concerning phonetics, phonology and dialect diversification.

Credit 3 units. A&S IQ: LCD BU: IS EN: H

---

### L38 Span 466 Second-Language Acquisition

There are many ways in which a second language can be learned: from infancy as the child of bilingual parents, or later through formal instruction, immersion in a new culture, or in a particular work or social situation. This class is an inquiry into the processes by which acquisition occurs. Topics include the nature of language learning within the scope of other types of human learning; the relationship between first and second language acquisition; the role of linguistic, cognitive, and sociocultural factors; insights gained from analyzing learners' errors; key concepts such as interlanguage and communicative competence; bilingualism; the optimal age for second language acquisition; and a critical appraisal of different theories of second language acquisition. Both theoretical and instructional

implications of second language acquisition research are considered. This course can be used towards certification in TESOL and is a required course for the Graduate Certificate in Language Instruction. Prerequisite: Ling 170D or equivalent is recommended, especially for undergraduates, but is not required.

Same as L44 Ling 466

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

### L38 Span 467 Grammar and Vocabulary Acquisition

This course examines theoretical and instructional implications of research on grammar and vocabulary acquisition. Topics include making form-meaning connections during language learning; developmental stages; the role of input and input processing; explicit and implicit methods of grammar instruction; pertinent factors in vocabulary acquisition, such a learning context and processing resource allocation; and comparisons of incidental and direct vocabulary instruction techniques. Major theories of language acquisition (e.g., nativism, emergentism) are critically examined in light of the research presented, and research findings are applied to instructional practices.

Credit 3 units. A&S IQ: LCD BU: BA EN: H

---

### L38 Span 469 Reading and Writing in a Second Language

This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second language learners involves a number of variables including both cognitive and social factors. Topics to be discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students will discuss how to bridge research and practice, and they will create reading and writing activities driven by theory and empirical investigations. This course is a required course for the for the undergraduate minor in Applied Linguistics and an elective for the Graduate Certificate in Language Instruction.

Credit 3 units. A&S IQ: HUM, LCD

---

### L38 Span 4691 Second Language Reading and Writing: Theory, Research and Practice

This course, taught in English, extends issues in second language literacy beyond pedagogy by examining the wide range of theoretical and research issues, both historical and current. Literacy acquisition among second language learners involves a number of variables including both cognitive and social factors. Topics to be discussed in class include literacy and social power, universal cognitive operations, individual learner differences, text types and literary forms, and the extent to which reading and writing are interrelated. Students will discuss how to bridge research and practice, and they will create reading and writing activities driven by theory and empirical investigations. This course is a required course for the for the undergraduate minor in Applied Linguistics and an elective for the Graduate Certificate in Language Instruction. This course carries the Social and Behavioral Sciences attribute.

Credit 3 units. A&S IQ: SSC EN: S

---

### L38 Span 4692 Reading Across Languages and Cultures: Theory, Research, and Practice

The United Nations has declared that literacy is a fundamental human right. This course, which is taught in English, connects to the mission of UNESCO and examines the wide range of theoretical and research issues -- both historical and current -- related to reading and writing across languages and cultures. Literacy acquisition among second-language learners involves a number of variables, including both cognitive and social factors. Topics to be discussed include universal cognitive operations, individual learner differences, text types and

literary forms, literacy and social power, and the extent to which reading and writing are interrelated. Students will discuss how to bridge scientific research in the laboratory to practice, and they will be involved in St. Louis community outreach projects with refugees and immigrants at the International Institute, where they will create and implement reading and writing activities driven by theory and empirical investigations. Students will take the theory and research they learn, and they will help meet the local reading and writing needs of a changing population with a variety of backgrounds, values, and educational preparations. The course is required for the minor in applied linguistics, the PhD in applied linguistics, and the graduate certificate in language instruction. This course carries the Social and Behavioral Sciences attribute and can be taken for different majors, such as Global Studies and Educational Studies.

Same as L92 APL 4692

Credit 3 units. A&S IQ: SSC EN: S

### L38 Span 495 Honors

Students who meet the requirements work closely with a member of the faculty on an individual basis on a project of mutual interest. Emphasis on a tutorial on a regular basis. Prereq: permission of Director of Undergraduate Studies. Preregistration not permitted. Credit variable, maximum 3 units.

### L38 Span 4951 Honors

Students who meet the requirements work closely with a member of the faculty on an individual basis on a project of mutual interest. Emphasis on a tutorial on a regular basis. Prereq: permission of Director of Undergraduate Studies. Preregistration not permitted. Pass/Fail. Credit 3 units. EN: H

## French Major

### Program Requirements

- **Total units required:** 30 (27 for second majors)

### Required Courses

Code	Title	Units
French 307D	Cultural Expression	3
French 321 or 322	One "In-Perspective" course	3
French 321	Topics I: In Perspective	
French 322	Topics II	
French 360 or 361	One "Thinking-It-Through" course	3
French 360	Thinking-It-Through	
French 361	Thinking-It-Through II	
French 370s-390s	One "In-Depth" course	3
French 4xx	Two 400-level seminars	6

\* Students pursuing the major earn the remainder of their credits by taking our rich 300- and 400-level elective offerings in French and Francophone literature, language, culture, and related disciplines in the arts and sciences. Majors may count one course taken abroad toward the satisfaction of their Thinking-It-Through or In-Depth requirement. Students also may count as elective credit toward the

major one 3-credit course that is taught in English by a member of the French faculty, either within or beyond the department at Washington University. This course must be at the 300 level or above and does not replace any specifically required course.

### Additional Information

Courses taken Pass/Fail do not count toward the major. Students must maintain an average of B- or higher and are expected to maintain a B average or better in all French courses. Both 400-level courses required for the major must be taken at Washington University. All primary majors must complete a capstone experience by achieving a B+ or better in one of the 400-level seminars.

### Study Abroad

We encourage French majors to participate in a study abroad program. Summer programs are available in Paris, Nice, and Senegal, and semester- and year-long programs are available in Toulouse and Paris. Three credits from the Senegal program, and up to 6 credits from each of the others, can count toward the major. Those interested in studying in other historically French-speaking countries should consult the faculty. **Students should complete an In-Perspective course prior to attending the Nice, Toulouse, or Paris programs.**

Please refer to the French home page for more information about French study abroad programs and for our **French for the Medical Professions track**.

### Writing Intensive (WI) Courses

Students wishing to satisfy the university Writing Intensive requirement within their French major may do so by taking either French 411 Intensive Writing in French: Timely Topics or French 4131 Advanced French and Translation. These Writing Intensive courses are not seminars, are not required for the major, and do not replace the major requirements.

### Senior Honors

Students who have maintained at least a minimum cumulative grade point average of 3.65 through the end of their junior year are encouraged to work toward Latin honors (cum laude, magna cum laude, summa cum laude). To qualify for Latin honors in the major by thesis, a student must complete special literary research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. To qualify for Latin honors by course work, a student must complete four literature courses at the 400 level (including two in literature before 1800) and present two critical essays written for those courses to be judged by an honors faculty committee. Recommendations for Honors are based on performance and the quality of the thesis or critical essays in addition to the student's cumulative GPA.

## Transfer Credits

21 of the 30 units required for the major must be taken in residence. Courses not taken at Washington University may count toward the major only with departmental permission.

Phone: 314-935-5175  
Email: rll@wustl.edu  
Website: <http://rll.wustl.edu>

## Italian Major

### Program Requirements

- **Total units required:** 27 (24 for second majors); of these units, 3 may be taken outside of Italian (L36) with the approval of the major advisor.

For more information about the program and language study in general, Washington University Arts & Sciences has produced a video called "Falling in Love With Another Language and Culture."

### Required Courses

- Students may count one of the following:\*

Code	Title	Units
Ital 247	First-Year Seminar: Italy's Invention of the Modern Museum	3
Ital 248	First-Year Seminar: Italian Literary Culture: Identity, Subjectivity, Audience	3
Ital 249	Refracted Light: How Others View Italy	3
Ital 280	Sex in Italian Culture and Media	3
Ital 290	The Culture of Food in Italy (The Culture of Food in Italy)	3

\* Students may count Ital 201D Intermediate Italian in the Everyday World, Level III toward the major as an elective as well.

- Students are required to complete one of the following courses (3 units):

Code	Title	Units
Ital 307D	Advanced Italian in the Everyday World	3
Ital 309	Transmedia Italian Culture: Stories, Interpretation, Performance	3

- Students are required to complete one of the following courses (3 units):\*

Code	Title	Units
Ital 323C	Italian Literature 1: Genre and Gender in Italy, 1200-1600	3
Ital 324C	Italian Literature II: The Making of Modern Italy, Texts and Contexts	3
Ital 327	History of the Italian Language	3

\* Students may count Ital 201D Intermediate Italian in the Everyday World, Level III, which is a prerequisite for Ital 323C and Ital 324C, toward the major as an elective as well.

- Students must complete two of the following 400-level seminars (6 units):

Code	Title	Units
Ital 408	Disease, Madness, and Death Italian Style	3
Ital 428	The New Sicilian School	3
Ital 432	Divergent Voices: Italian Women Writers	3
Ital 437	Caffe, Cadavers, Comedy, and Castrati: Italy in the Age of the Grand Tour	3
Ital 442	Literature and Fascism	3
Ital 456	Romance Philosophy	3
Ital 462	Prose Writers of the Sixteenth Century	3
Ital 473	Machiavelli and Guicciardini	3
Ital 481	Dante	3
Ital 483	Boccaccio: Decameron	3
Ital 485	Ariosto: Orlando Furioso	3
Ital 491	Postmodernism	3
Ital 492	The Italian Detective Novel	3

### Additional Information

Students must maintain an average of a B- or better, and they must maintain a B or better in Italian. Courses taken credit/no credit do not count toward the Italian major.

### Study Abroad

Students are strongly encouraged to participate in a study abroad program. We offer a semester abroad program at our affiliate program with Boston University's Centro in Padua. This program is considered in residence.

### Senior Honors

Students are encouraged to work toward Latin honors (cum laude, magna cum laude and summa cum laude). To qualify for Latin honors in the major by thesis, a student must complete special literary research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. To qualify for Latin honors by course work, a student must enroll in Ital 4951 (Honors, fall of the senior year) and Ital 495 (Senior Honors, spring of the senior year). Recommendations

for honors are based on performance and the quality of the thesis in addition to the student's cumulative grade point average. (Please refer to the departmental guidelines for more information about Latin honors.)

## Transfer Credits

A minimum of 18 of the 27 units required for the major must be taken in residence. Courses not taken at Washington University may count toward the major only with departmental permission.

Phone: 314-935-5175  
Email: rll@wustl.edu  
Website: http://rll.wustl.edu

## Spanish Major

### Program Requirements

- **Total units required: 30**

The Spanish major requires a minimum of 30 units at the 300 level or above, 24 units of which must be taken in residence. Courses within Washington University's own study abroad programs in Spain or Chile are considered "in residence."

### Required Courses

The following courses must be included in the 30 units:

#### Cultures and Communications in the Spanish-Speaking World

- Span 302 Cultures and Communication in the Spanish-Speaking World (Heritage speakers of Spanish must be certified by the director of undergraduate studies and must enroll in Span 3021 Language and Culture for Heritage Speakers of Spanish.)
- Span 303 Cultures and Communication in the Spanish-Speaking World II

Span 303 is a prerequisite or corequisite for any other 300-level literature course in Spanish.

#### Two "Debating Cultures" Courses (6 units)

- Courses designated as Spanish 32xx
- Study abroad options:\*

Code	Title	Units
Span 3341	Literatura Espanola	3
Span 322	Advanced Conversation in Spain	3
Span 3361	Spanish-American Literature II in Chile/Spain	3
Span 350	Topics in Spanish Literature	3
Span 354	A View from the Southern Cone: Perspectives on Art, Literature and Culture	3

- \* One literature course taken in the Chile or Spain semester abroad program offered by Romance Languages and Literatures, designated as an acceptable substitute, may be used as one of the 32xx-level courses.

#### Two "Researching Cultures" Courses (6 units)

- Courses designated as Spanish 36xx
- Study abroad options:\*

Code	Title	Units
Span 311	Hispanic Culture and Civilization I	3
Span 313	Chilean Contemporary Culture	3
Span 3181	Spanish Culture and Civilization	3

- \* 32xx and 36xx designations indicate sequential levels. Once a student takes a course at one level, they may not take a course at the previous level.

#### Two 400-Level Seminars (6 units)

Code	Title	Units
Span 405W	Major Seminar	3
Span 410	Major Seminar	3

- Other 400-level courses taught in Spanish, including the following linguistics courses:

Code	Title	Units
Span 411	Spanish Grammar and Syntax	3
Span 417	Spanish Phonetics, Phonology, and Dialectology	3

- The prerequisite for 400-level courses is the completion of at least one "Researching Cultures" course.
- Study abroad:
  - One 400-level seminar taken on campus
  - An approved 400-level course from the Madrid or Chile program (refer to the study abroad guidelines on the Romance Languages and Literatures website)

#### Elective Courses

Students must select two elective courses (6 units) from the following list:

Code	Title	Units
Span 202	Intermediate Spanish II	3
Span 353	Medical Spanish	3
Span 355	Spanish for the Social Sciences	3
Any other advanced 300- or 400-level Spanish (L38) class taught by a Romance Languages and Literatures faculty member		

- Only one elective course taught in English may be taken, when available, for the major.
- Study abroad:
  - Span 322 Advanced Conversation in Spain
  - Elective credit from semester programs in Santiago or Madrid
  - Elective credit from Petitioned, Organization for Tropical Studies, School for International Training, or Comparative Literature programs (refer to the study abroad guidelines on the Romance Languages and Literatures website)
  - Spanish courses completed (and approved) as part of study abroad programs other than those offered by Washington University may be used for Spanish elective credit only.
  - All study abroad credit requires authorization from the director of undergraduate studies.

## Other Requirements

To declare the Spanish major, a student must first file an "Intent to Major" form on WebSTAC. The student must then request an appointment with the director of undergraduate studies in Spanish for review and approval of their major program.

- Major requirements have been revised as of 2021.
- Under the new requirements, to major in Spanish, students must take a minimum of 30 units, starting with Span 202; 24 of these units must be taken in residence at Washington University, with Washington University's study abroad programs in Spain or Chile being considered "in residence."
- Students must complete all courses with grades of B- or above and maintain a B average or better overall in Spanish. Courses taken Pass/Fail do not count toward the Spanish major.
- Transfer students with an advanced level of Spanish and native/heritage speakers need to be certified by the director of undergraduate studies prior to declaring the major.

### Recommended for prospective teachers:

1. A second language
2. Span 466, Span 467, Span 469, Span 413, Span 417 and Span 411
3. A semester or year in Spain or Chile

### Recommended for prospective graduate students:

1. A second language related to the student's area of interest
2. Advanced work in other literatures, literary criticism and theory, and related course work in other literature or film programs
3. A year in Spain or Chile
4. Senior honors by thesis or course work (refer to the honors requirements on the Romance Languages and Literatures website): Students who have maintained a minimum cumulative grade point average of at least of 3.65 through the end of the junior year are encouraged to work toward Latin honors (i.e., cum laude, magna cum laude, or summa cum laude).

## Romance Languages and Literatures Major

### Program Requirements

- **Total units required:** A minimum of 42 units at the 300 and 400 level, distributed among French, Italian, and Spanish

### Required Courses

Like our other majors, the Romance languages and literatures major requires a writing-intensive course and a capstone experience. Further details are available on the department's website.

- **Language I:** Six courses, all at the 300 or 400 level:
  - *If Language I is French:*
    - French 307D Cultural Expression
    - One "In Perspective" course
    - One "In Depth" course
    - Two 400-level courses
    - One other course from among the 300- and 400-level offerings
  - *If Language I is Italian:*
    - Ital 307D Advanced Italian in the Everyday World
    - Ital 309 Transmedia Italian Culture: Stories, Interpretation, Performance
    - Two from among Ital 323C Italian Literature 1: Genre and Gender in Italy, 1200-1600; Ital 324C Italian Literature II: The Making of Modern Italy, Texts and Contexts; and Ital 327 History of the Italian Language
    - Two 400-level courses
  - *If Language I is Spanish:*
    - Span 302 Cultures and Communication in the Spanish-Speaking World
    - Span 303 Cultures and Communication in the Spanish-Speaking World II
    - Two "Debating Cultures" courses
    - Two 400-level courses
- **Language II:** Five courses, all at the 300 or 400 level:
  - *If Language II is French:*
    - French 307D Cultural Expression
    - One "In Perspective" course
    - One "In Depth" course
    - One 400-level course
    - One other course from among the 300- and 400-level offerings
  - *If Language II is Italian:*

- Ital 307D Advanced Italian in the Everyday World
- Ital 309 Transmedia Italian Culture: Stories, Interpretation, Performance
- Two from among Ital 323C Italian Literature 1: Genre and Gender in Italy, 1200-1600; Ital 324C Italian Literature II: The Making of Modern Italy, Texts and Contexts; and Ital 327 History of the Italian Language
- One 400-level course
- *If Language II is Spanish:*
  - Span 302 Cultures and Communication in the Spanish-Speaking World
  - Span 303 Cultures and Communication in the Spanish-Speaking World II
  - Two “Debating Cultures” courses
  - One 400-level course
- **Language III:** Four courses, all at the 300 or 400 level:
  - *If Language III is French:*
    - French 307D Cultural Expression
    - One “In Perspective” course
    - One “In Depth” course
    - One other course from among the 300- and 400-level offerings
  - *If Language III is Italian:*
    - Ital 307D Advanced Italian in the Everyday World
    - Ital 309 Transmedia Italian Culture: Stories, Interpretation, Performance
    - Two from among Ital 323C Italian Literature 1: Genre and Gender in Italy, 1200-1600; Ital 324C Italian Literature II: The Making of Modern Italy, Texts and Contexts; and Ital 327 History of the Italian Language
  - *If Language III is Spanish:*
    - Span 302 Cultures and Communication in the Spanish-Speaking World
    - Span 303 Cultures and Communication in the Spanish-Speaking World II
    - Two “Debating Cultures” courses
- One writing intensive course in Spanish, Italian, or French (French 411 in fall only)
- A capstone experience, either by completing Latin Honors or by completing a senior undergraduate seminar during the junior or senior year with a grade of B+ or better

We encourage students to think about doing an honors thesis, perhaps combining French and Spanish. The 6 units of Span 495 Honors or French 495 Honors would be above and beyond the requirements listed above for each language.

Students need to take these courses for a letter grade and earn a B- or better, with a B average overall, per departmental requirements of all majors.

Students need approval from directors of undergraduate studies for Italian, French, and Spanish for this major.

## Additional Information

Students who plan to teach or pursue graduate study should consider taking a second foreign language as well as linguistics courses. In all departmental courses for the major, the student must receive a grade of B- or better. Each student's progress toward achieving the objectives of the major will be assessed on a regular basis and by a variety of means. More information is available in the departmental mission statement.

## Spanish Honors in Linguistics

To qualify for Spanish Honors in Linguistics in the major by thesis, a student must complete linguistic research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. The honors thesis in linguistics may include scientific experiments conducted in Spanish. The written thesis will include several drafts, all of which will be written in Spanish.

## Study Abroad

Students are encouraged to participate in a study abroad program. Programs are available in France, Italy, Spain, and Chile. Up to six units from each approved study abroad program may count toward the major. A minimum of 33 of the 42 units required for the major must be taken in residence. Courses not taken at Washington University may count toward the major only with departmental permission.

## Senior Honors

Students who have maintained at least a 3.65 overall cumulative grade point average through the end of the junior year are encouraged to work toward Latin honors (i.e., cum laude, magna cum laude, or summa cum laude). To qualify for Latin honors in the major by thesis, a student must complete special literary research and prepare and orally defend an honors thesis, which is judged by an honors faculty committee. To qualify for Latin honors by course work, the student must complete four literature courses at the 400 level (including two in literature before 1800) and present two critical essays written for those courses to be judged by an honors faculty committee. Recommendations for honors are based on performance, the quality of the thesis or critical essays, and the cumulative GPA.

Email: rll@wustl.edu  
Website: <http://rll.wustl.edu>

## French Minor Program Requirements

- **Total units required:** 18

## Required Courses

Code	Title	Units
French 307D	Cultural Expression	3
French 321 or 322	One "In-Perspective" course	3
French 370s-390s	One "In-Depth" course	3

<sup>1</sup> Students pursuing the minor earn the remainder of their credits by taking our rich 300- and 400-level elective offerings in French and Francophone literature, language, culture, and related disciplines in the arts and sciences. Units earned from study abroad will be transferred as elective credit. Students also may count as elective credit toward the minor one 3-credit course that is taught in English by a member of the French faculty, either within or beyond the department at Washington University. This course must be at the 300 level or above and does not replace any specifically required course.

## Additional Information

Courses taken Pass/Fail do not count toward the minor. Students must complete courses taken for the minor with a grade of B- or higher and are expected to maintain a B average or better in all French courses.

## Study Abroad

We encourage French minors to participate in a study abroad program. Summer programs are available in Paris, Nice, and Senegal, and semester- and year-long programs are available in Toulouse and Paris. Three credits from the Senegal program, and up to 6 credits from each of the others, can count toward the minor. Those interested in studying in other historically French-speaking countries should consult the faculty. **Students should complete an In-Perspective course prior to attending the Nice, Toulouse, or Paris programs.**

Please refer to the French home page for more information about French study abroad programs and for our **French for the Medical Professions track**.

Phone: 314-935-5175  
Email: rll@wustl.edu  
Website: <http://rll.wustl.edu>

## Italian Minor

### Program Requirements

**Total units required: 18**

### Required Courses

- Students may count one of the following courses (3 units):
  - Students may count Italc 201D Intermediate Italian in the Everyday World, Level III toward the major as an elective as well.

Code	Title	Units
Italc 247	First-Year Seminar: Italy's Invention of the Modern Museum	3
Italc 248	First-Year Seminar: Italian Literary Culture: Identity, Subjectivity, Audience	3
Italc 249	Refracted Light: How Others View Italy	3
Italc 280	Sex in Italian Culture and Media	3
Italc 290	The Culture of Food in Italy (The Culture of Food in Italy)	3

- Students are required to complete one of the following courses (3 units):

Code	Title	Units
Italc 307D	Advanced Italian in the Everyday World	3
Italc 309	Transmedia Italian Culture: Stories, Interpretation, Performance	3

- Students are required to complete one of the following courses (3 units):
  - Students may count Italc 201D Intermediate Italian in the Everyday World, Level III, which is a prerequisite for Italc 323C and Italc 324C, toward the major as an elective as well.

Code	Title	Units
Italc 323C	Italian Literature 1: Genre and Gender in Italy, 1200-1600	3
Italc 324C	Italian Literature II: The Making of Modern Italy, Texts and Contexts	3
Italc 327	History of the Italian Language	3

## Elective Courses

Code	Title	Units
Italc 301	Oral Communication I	3
Italc 319	Advanced Conversational Italian	3
Italc 320	Advanced Conversation (Advanced Conversation)	3
Italc 3221	Topics: The Jewish Experience in Italy	3
Italc 3224	Topics: From Basilisks to Botticelli: The Birth, Development and Politics of Museums in Italy	3
Italc 332	Topics in Film Studies: Italian Cinema	3
Italc 334	Topics in Italian Cinema	3
Italc 350	Topics: Global Italy: Race, Gender, Migration and Citizenship	3
Italc 408	Disease, Madness, and Death Italian Style	3
Italc 428	The New Sicilian School	3
Italc 430	Divergent Voices: Italian Women Writers	3
Italc 433	Literature of the Italian Enlightenment	3
Italc 437	Caffe, Cadavers, Comedy, and Castrati: Italy in the Age of the Grand Tour	3
Italc 442	Literature and Fascism	3

Ital 473	Machiavelli and Guicciardini	3
Ital 481	Dante	3
Ital 483	Boccaccio: Decameron	3
Ital 485	Ariosto: Orlando Furioso	3
Ital 491	Postmodernism	3
Ital 492	The Italian Detective Novel	3

## Additional Information

Students must maintain an average of B- or better, and they must maintain a B or better in Italian. Courses taken credit/no credit do not count toward the Italian minor.

Students are strongly encouraged to participate in a study abroad program. Please refer to the Italian page on the Romance Languages and Literatures website for more information about Italian study abroad programs.

Phone: 314-935-5175  
Email: rll@wustl.edu

## Spanish Minor

### Program Requirements

- **Total units required:** 18

The Spanish minor requires the completion of 18 units, 12 of which must be taken in residence. Study at Washington University's own programs in Spain or Chile is considered "in residence." Students must complete courses with a grade of B- or better and maintain a B average or better overall in Spanish. Courses taken on a Pass/Fail basis do not count toward the Spanish minor.

### Required Courses

#### Cultures and Communications in the Spanish-Speaking World (6 units)

- Span 302 Cultures and Communication in the Spanish-Speaking World (Heritage speakers of Spanish must be certified by the director of undergraduate studies and enroll in Span 3021 Language and Culture for Heritage Speakers of Spanish.)
- Span 303 Cultures and Communication in the Spanish-Speaking World II

Spanish 303 is a prerequisite or corequisite for all 300-level literature and culture courses in Spanish.

#### Three "Debating Cultures" and/or "Researching Cultures" Courses (9 units)

- **One or two "Debating Cultures" courses (3-6 units):**

- Courses designated as Spanish 32xx
- Study abroad options:\*

Code	Title	Units
Span 322	Advanced Conversation in Spain	3
Span 3341	Literatura Espanola	3
Span 3361	Spanish-American Literature II in Chile/Spain	3
Span 350	Topics in Spanish Literature	3
Span 354	A View from the Southern Cone: Perspectives on Art, Literature and Culture	3

- \* One literature course taken in the Chile or Spain semester abroad program offered by Romance Languages and Literatures, designated as an acceptable substitute, may be used as one of the 32xx-level courses.

#### One or two "Researching Cultures" courses (3-6 units):

- Courses designated as Spanish 36xx
- Study abroad options:\*

Code	Title	Units
Span 311	Hispanic Culture and Civilization I	3
Span 313	Chilean Contemporary Culture	3
Span 3181	Spanish Culture and Civilization	3

- \* 32xx and 36xx designations indicate sequential levels. Once a student takes a course at one level, they may not take a course at the previous level.

#### One 400-Level Seminar (3 units)

Code	Title	Units
Span 405W	Major Seminar	3
Span 410	Major Seminar	3

- Other 400-level courses taught in Spanish, including the following linguistics courses:

Code	Title	Units
Span 411	Spanish Grammar and Syntax	3
Span 417	Spanish Phonetics, Phonology, and Dialectology	3

- The prerequisite for 400-level courses is the completion of at least one "Researching Cultures" course.

Website: <http://rll.wustl.edu>

## Russian Language and Literature

Students who want to achieve a high level of proficiency in the Russian language and study Russian literature can pursue a minor in Russian language and literature. The program offers elementary through third-year language courses and a number of courses on 19th- and 20th-century Russian literature (in translation) on a wide variety of topics. Students are strongly encouraged to study abroad.

Russian language and literature is an independent minor administered by Global Studies. Students undertaking this minor are encouraged to consider a major in Eurasian studies (p. 669) (through Global Studies), comparative literature and thought (p. 425), or history (p. 729), all of which can be pursued with a focus on Russia and the former Soviet Union.

## Faculty

### Program Faculty

#### Steven J. Hirsch

Professor of Practice  
PhD, George Washington University  
(Global Studies; Latin American Studies)

#### Hillel Kieval

Professor Emeritus  
Gloria M. Goldstein Professor of Jewish History and Thought  
PhD, Harvard University  
(History; Jewish, Islamic, and Middle Eastern Studies)

#### Max J. Okenfuss

Professor Emeritus  
PhD, Harvard University  
(History)

#### Mikhail Palatnik

Senior Lecturer  
MA equivalent, University of Chernovtsy  
MA, Washington University

#### Nicole Svobodny

Teaching Professor  
PhD, Columbia University  
(Global Studies; Russian Literature)

#### Anika Walke

Associate Professor  
Georgie W. Lewis Career Development Professor  
PhD, University of California, Santa Cruz  
(History; Jewish, Islamic, and Middle Eastern Studies; Women, Gender, and Sexuality Studies; Global Studies)

#### James V. Wertsch

Professor Emeritus  
Director Emeritus of the McDonnell International Scholars Academy  
David R. Francis Distinguished Professor  
PhD, University of Chicago  
(Sociocultural Anthropology; Global Studies)

## Majors

There is no major in Russian language and literature. Students interested in Russian are encouraged to consider a major in Eurasian studies (p. 669), comparative literature and thought (p. 425), or history (p. 729), all of which can be pursued with a focus on Russia and the former Soviet Union.

## Minors

- Russian Language and Literature Minor (p. 1057)

## Courses

Visit online course listings to view semester offerings for L39 Russ.

---

#### L39 Russ 101D Elementary Russian I

Interactive multimedia course designed to emphasize spoken language; includes the very latest video materials geared toward situations in contemporary post-Soviet Russian life. Also provides thorough understanding of fundamental grammar and develops reading and writing skills. Five class hours per week, plus an additional hour for conversation, review and testing.  
Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

---

#### L39 Russ 102D Elementary Russian II

Continuation of 101D (Russian 101D or the equivalent is required). Interactive multimedia course designed to emphasize spoken language; includes the very latest video materials geared toward situations in contemporary Russian life. Also provides thorough understanding of fundamental grammar and develops reading and writing skills. Five class hours per week, plus an additional hour for conversation, review, and testing. Prerequisite: Russian 101D.  
Credit 5 units. A&S IQ: LCD, LS BU: HUM EN: H

---

#### L39 Russ 211D Intermediate Russian I

Designed to solidify students' control of Russian grammar and advance conversational, reading, and writing skills. Includes video materials produced in Russia and conveying an up-to-the-minute picture of contemporary Russian life.  
Credit 4 units. A&S IQ: LCD, LS BU: HUM EN: H

---

#### L39 Russ 212D Intermediate Russian II

Continuation of 211D, completes comprehensive review of Russian grammar and further advances conversational, reading, writing, and listening skills. Revised textbook with new audio and video materials that convey an up-to-the-minute picture of contemporary Russian life.

Credit 4 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L39 Russ 322D Third-Year Russian I**

Designed to develop students' abilities in the contemporary spoken language. Conversational practice is combined with a review of grammatical concepts. Students also work with newspapers, read literary texts, and write compositions. Prerequisite: Russ 212D or equivalent.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L39 Russ 324D Third-Year Russian II**

Designed to develop students' abilities in the contemporary spoken language. Conversational practice is combined with a review of grammatical concepts. Students also work with newspapers, read literary texts, and write compositions. Prerequisite: Russ 322D or equivalent.

Credit 3 units. A&S IQ: LCD, LS BU: HUM EN: H

---

**L39 Russ 332 Russian Theater, Drama and Performance: From Swan Lake to Punk Prayer**

This course explores performance in Russia from the wandering minstrels of medieval times to protest art of the present day. Genres include tragedy and comedy (Griboedov, Pushkin Gogol), drama (Ostrovsky, Turgenev, Chekhov), experimental theater (Stanislavsky, Evreinov, Meyerhold), ballet (Imperial, Soviet, Ballets Russes), opera (Tchaikovsky, Mussorgsky, Shostakovich), and performance art (Futurists, Pussy Riot, Pavlensky). We also consider performativity in rituals, public events, and everyday life. Our discussions center on the analysis of short and full-length plays, critical theory, specific productions and performers, and the role that performance has played in shaping Russian culture. All readings are in English translation. No prerequisites.

Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM BU: IS EN: H

---

**L39 Russ 350C The 19th-Century Russian Novel (WI)**

The 19th-century "realistic" novel elevated Russian literature to world literary significance. In this course we do close readings of three major Russian novels: Nikolai Gogol's *Dead Souls*, Ivan Turgenev's *Fathers and Sons*, and Leo Tolstoy's *Anna Karenina*. While we consider a variety of formal and thematic concerns, special emphasis is placed on the social context and on questions of Russian cultural identity. Readings and discussions are supplemented by critical articles and film. This is a Writing Intensive course: workshops are required. All readings are in English translation. No prerequisites.

Credit 3 units. A&S IQ: HUM, LCD, SD, WI Arch: HUM Art: HUM BU: HUM EN: H

---

**L39 Russ 3559 Socialist and Secular? A Social History of the Soviet Union**

This class explores daily life and cultural developments in the Soviet Union, 1917 to 1999. Focusing on the everyday experience of Soviet citizens during these years, students learn about the effects of large-scale social and political transformation on the private lives of people. To explore daily life in the Soviet Union, this class uses a variety of sources and media, including scholarly analysis, contemporaneous portrayals, literary representations, and films. Students will receive a foundation in Soviet political, social, and cultural history with deeper insights into select aspects of life in Soviet society.

Same as L22 History 3559

Credit 3 units. A&S IQ: HUM, LCD, SD Arch: HUM Art: HUM BU: HUM, IS EN: H

---

**L39 Russ 364 Anarchism: History, Theory, and Praxis**

This course analyzes the genesis, historical evolution, and current iterations of global anarchism. It examines anarchist beliefs, ethics, aims, countercultural expressions, organizations, emancipatory practices, and intersectional modes of struggle in different temporal, geographic, and cultural contexts. Special attention will be given to anarchism in the global south, cross-fertilization and relations between anarchists and the Marxist Left, anarcho-feminism, green anarchism, and anarcho-pacifism.

Same as L97 GS 364

Credit 3 units. A&S IQ: LCD, SSC, SD Arch: SSC Art: SSC BU: BA EN: S

---

**L39 Russ 372 Dostoevsky's Novels**

In this discussion-based course we focus on two of Dostoevsky's major novels: *Demons* (also translated as *The Possessed* and *Devils*) and *The Brothers Karamazov*. Our close readings of the novels are enriched by literary theory and primary documents providing socio-historical context. All readings are in English translation. No prerequisites.

Credit 3 units. A&S IQ: HUM, LCD, WI BU: IS EN: H

---

**L39 Russ 375 Topics in Russian Lit and Culture: (WI)**

The words "Russian Literature" might conjure up long, sprawling, "loose and baggy monsters." However, the short story is arguably the most significant genre in the Russian literary tradition. In this course we do close readings of some of the greatest Russian short stories, mostly from the 19th and 20th centuries. Authors might include Pushkin, Lermontov, Gogol, Dostoevsky, Tolstoy, Turgenev, Chekhov, Gippius, Teffi, Tsvetaeva, Platonov, Bunin, Nabokov, and others. Some of the questions we explore: Is a short story (*rasskaz*) just a shorter piece of fiction or does it aim to do something very different from a novel? How did the Russians develop—and maybe change—the genre? In what ways are these stories connected to the place and time in which they were written? We will read one or two short stories a week. This is a Writing Intensive course. No knowledge of Russian is required. All readings are in English translation.

Same as L97 GS 3750

Credit 3 units. A&S IQ: HUM, LCD, WI Arch: HUM Art: HUM BU: IS EN: H

---

**L39 Russ 379 Nabokov in Europe and America**

This course begins with our close reading of Vladimir Nabokov's autobiography *Invitation of a Memory*. We then study some of the author's first works originally written in Russian and published in émigré presses. In the second half of the course, we move to a selection of his short stories and novels originally written in English, including *Lolita*, *Invitation of a Memory*, and *Pale Fire*. Discussion topics will include memory, multilingualism, migration, authorial identity, narrative personae, and literature as enchantment. Requirements include three short papers, weekly Canvas and in-class participation, and an oral presentation. All assignments are in English.

Same as L97 GS 379

Credit 3 units. A&S IQ: HUM, LCD BU: IS EN: H

---

**L39 Russ 3866 Interrogating "Crime and Punishment"**

Whether read as psychological thriller, spiritual journey, or social polemic, Dostoevsky's 1866 novel *CRIME AND PUNISHMENT* has inspired diverse artistic responses around the world. From the nineteenth century to the present day, writers and filmmakers have revisited (and often subverted) questions that Dostoevsky's novel poses: What internal and external forces cause someone to "step over" into crime? What are the implications of a confession? To what extent can the legal system provide a just punishment? Are forgiveness and redemption possible, or even relevant? What role does grace—or luck—play in the entire process? This course begins with our close reading of Dostoevsky's novel and then moves on to short stories,

novels, literary essays, and movies that engage in dialogue with the Russian predecessor. A central concern of our intertextual approach is to explore the interplay between specific socio-historical contexts and universal questions. All readings are in English. No prerequisites. Same as L97 GS 3866  
Credit 3 units. A&S IQ: HUM, LCD, SD Arch: HUM Art: HUM BU: BA EN: H

**L39 Russ 4442 The Jewish Experience in Eastern Europe**

A study of Jewish culture, society, and politics in Poland-Lithuania, Hungary, the Czech lands, Russia, Romania, and the Ukraine, from the 16th century through the 20th century. Among the topics to be covered are: economic, social, and political relations in Poland-Lithuania; varieties of Jewish religious culture; Russian and Habsburg imperial policies toward the Jews; nationality struggles and antisemitism; Jewish national and revolutionary responses; Jewish experience in war and revolution; the mass destruction of East European Jewish life; and the transition from Cold War to democratic revolution. Same as L22 History 4442  
Credit 3 units.

**L39 Russ 4868 Russia and the West: Creating and Representing Identity**

What does the West look like through Russia's eyes, and what does Russia look like through the eyes of the West? And to what extent does this relationship matter to the rest of the world? In this course, students will examine American/European/Russian philosophical and polemical essays, literary texts (novels, poetry, short stories), films, dance/vocal/theatrical performances, architecture, travelogues, autobiographies, visual arts, propaganda, and primary historical documents- from the early 19th century to the Cold War to the present day. Our focus is on how group identity (national, ideological, coalitional, and so forth) intersects with various types of personal or individual identity. This is a discussion-based course and active participation (speaking and listening) each class-day is expected. There will be two short writing assignments and weekly online Canvas discussion and collaboration. Students will research a topic of their choice, culminating in an in-class presentation and final paper or project. No prerequisites. All interested students are welcome.  
Same as L97 GS 4868  
Credit 3 units. A&S IQ: HUM, LCD Arch: HUM Art: HUM EN: H

**L39 Russ 4869 Reading War and Peace**

What is it like to enter into a fictional world for a semester? In this course we read Leo Tolstoy's War and Peace in its entirety. Set during the Napoleonic wars (1805-1812), War and Peace takes the reader on a panoramic journey from the battlefield to the hay field, from the war room to the ballroom. It is a vivid portrayal of 19th-century Russian society as well as a penetrating examination of the causes and consequences of violence and the nature of love and family dynamics. In our discussions, we explore philosophies of history, issues of social injustice and gender inequality, the psychology of human suffering and joy, questions of literary form and genre, and the very experience of reading a long work of fiction. We begin with a selection of Tolstoy's early works that laid the foundation for War and Peace and conclude with a few of Tolstoy's late works that had an enormous influence on, among others, Mahatma Gandhi. Primary texts are supplemented with literary theory and film. All readings are in English.

# Russian Language and Literature Minor

## Program Requirements

- Total units required: 20

### Prerequisites

Code	Title	Units
Russ 101D	Elementary Russian I	5
Russ 102D	Elementary Russian II	5

### Requirements

Code	Title	Units
Russ 211D	Intermediate Russian I	4
Russ 212D	Intermediate Russian II	4
Russ 322D	Third-Year Russian I	3
Russ 324D	Third-Year Russian II	3
One 300- or 400-level course in Russian literature		3
One elective course: either another Russian literature course or a Russian subject course taught in such departments as history or political science		3
<b>Total Units</b>		<b>20</b>

### Regulations

- Students can earn up to 6 credits from a semester or summer study abroad program, with the approval of the Russian language and literature advisor.
- Students may be allowed to transfer credit from course work completed at another college or university. Transfer of credit requires prior approval of the Russian language and literature advisor.
- All advanced units must be unique to the Russian language and literature minor (i.e., not counted toward any other major or minor).
- Students must earn at least a B- in language courses in order to continue to the next level. They must also maintain at least a B- average in all courses taken to fulfill the minor requirements. Students who do not meet this requirement may either repeat the course or courses in question or earn at least a B- in an approved equivalent course or courses (either during the summer or in a study abroad program).

## Additional Information

### Study Abroad

The Russian Language and Literature minor program encourages students to study abroad in Russia and other post-Soviet countries. Washington University offers summer, semester, and year-long study in St. Petersburg, Russia, under the auspices of the Council on International Educational Exchange (CIEE). Students can also petition for an alternative study abroad program by filling out the Washington University Petition Packet. Students may count up to 6 units from study abroad toward the Russian Language and Literature minor: 3 units for a literature or culture course and 3 units for a language course.

Semester options include both language and area studies programs. The summer program is language-focused only, but there are programs available for students at any language level, including beginning.

Financial aid may be available for these programs through both Washington University and the CIEE.

### Sociology

The Department of Sociology strives to understand the origins and reproduction of social inequality, especially as it relates to issues of pressing public concern. Our particular areas of focus include — but are not limited to — the following: race/ethnicity; gender and the family; the sociology of organizations, work, and the workplace; immigration; political sociology and social movements; and community and urban sociology.

Sociological analysis begins from theoretical perspectives that explain how the structures that organize and govern social systems emerge and change. Our curriculum and research emphasize an understanding of social processes that is well-grounded in empirical data related to how societies actually function. We also seek to engage with social policies and social institutions to better understand the world in which we live and to help guide social change.

Re-established in 2015 after a hiatus of more than two decades, the department offers undergraduate major and minor programs with wide-ranging course offerings every semester. The curriculum provides students with research tools to examine critical social issues and to apply their understanding of sociology to activities outside of the university.

---

### L40 SOC 106 Social Problems and Social Issues

This course explores and analyzes contemporary American social problems and social issues using sociological tools. The sociological perspective provides the overarching framework for analyses of social issues, along with the application of sociological theory and research. Topics may include aging, substance use and abuse, crime, violence, poverty, discrimination, health care, family, globalization, and environmental degradation. This course will be valuable to students pursuing graduate work and careers in sociology, law, medicine and health care, and social services. The content may also prove useful for MCAT, LSAT, and GRE preparations. No prerequisite.

Credit 3 units. A&S IQ: SSC, SC Arch: SSC Art: SSC BU: BA EN: S

---

### L40 SOC 144 First-Year Seminar: Monumental Anti-Racism

As sources of national memory and identity, public monuments, place names, historical markers, and other elements of commemorative landscapes are potential sites of cultural violence (e.g., alienation, disrespect, and erasure) contributing to broader conflict and inequality; they are therefore important considerations in movements for equal opportunity and justice. Some contend that memory sites are "the new lunch counters," where our racial politics are worked out. This course examines the racial politics of commemorative objects and practices as well as commemorative intervention as a strategy of anti-racist activism. We begin with an historical survey of various ways that racism has been inscribed on the commemorative landscape, and readings in history, political theory, cultural studies, and other fields will be used to gain insight into these contested commemorative objects, their development, and social significance. We then turn to a critical assessment of efforts to remove and recontextualize commemorative objects and to erect new objects commemorating neglected figures and issues. We consider how these reparative efforts relate to what political theorists call "remedies of recognition" and specifically how they might aid in advancing equal opportunity and justice. Through our study and engagement with contested commemorative landscapes (including local, national, and global cases), students will become familiar with the burgeoning interdisciplinary field of memory studies, diverse forms and sites of commemoration, local and global efforts to advance what has been termed "commemorative justice," and the challenges being faced.

---

### L40 SOC 2010 The Roots of Ferguson: Understanding Racial Inequality in the Contemporary U.S.

This course provides an overview of sociological understandings of race, with a particular focus on race relations in the contemporary United States. The course begins by inquiring how sociologists understand racial distinctions, asking: What comprises a racial group? What constitutes a "group" in the social sense? The course then shifts to explore patterns of racial inequality in the U.S., particularly through investigating the intersections of economic, political, and racial stratification. After analyzing national trends in racial stratification, the course narrows its focus to particular regions and metropolitan areas, including St. Louis, to shed light on pressing public concerns such as the interrelationships between race and the criminal justice system. The course ends by looking beyond U.S. borders to compare the way that race is understood in other countries. Are there common patterns of racial classification shared by many societies? What makes the U.S. system of racial stratification distinctive? No prerequisite.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

---

### L40 SOC 2020 Order and Change in Society

This course identifies and analyzes processes that create social order and forces that generate social change. What kinds of structures make social life coherent so that people can navigate a wide range of social settings? How do societies sometimes mobilize to alter the status quo, and what kinds of barriers limit those efforts to change social systems? This course engages with such core issues through a sociological lens. Specific topics include: the emergence of social roles and status systems; how social networks matter in communities, schools, and other groups; and the performance, reproduction, and, subversion of privilege and inequality. No prerequisite.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

---

### L40 SOC 2030 Social Movements

Social movements are collective efforts to produce political, economic, and/or cultural change. This course draws on a range of historical and contemporary case studies to analyze such collective actions by interrogating distinctive aspects of movements and their associated campaigns. Key questions include: when and where do movements occur, who participates and why, how do protest strategies and tactics develop, how do police and other movement targets react to challenges to the status quo, and how can we assess the direct and indirect impacts of contention? No prerequisite.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

---

### L40 SOC 2090 Media, Culture, and Society

This introductory level course will focus on the critical analysis of media at both structural and interactional levels. The course will approach critical questions about media as a social institution, such as how media is socially constructed and, relatedly, how media shapes the social world. Core themes students will consider include critical media theory, representation in media, consumption of media, and action/engagement with social issues concerning media. Along these themes, the course will consider key concepts such as race, gender, class, sexuality, nation, language, law/justice, generation, space/place, and social change. The course will use an intersectional, social justice framework to discern how media reflects, commodifies, oppresses, liberates, and constructs social life. This course will be an accessible entry point for students who are new to sociology as a discipline. No prerequisite.

Credit 3 units. A&S IQ: SSC, SC EN: S

---

#### **L40 SOC 2110 Social Inequality in America**

Americans face different challenges and opportunities that depend on a variety of characteristics, including race, class, gender, and sexual orientation. This class examines these intersecting categories from a sociological perspective - not simply as ways to classify people, but as social constructions that help to explain social inequality. Students will examine these systems in a variety of institutional contexts, such as popular culture, family life, education, the criminal justice system, and the labor force. No prerequisite.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 250 Topics in Sociology**

This course acts as an introductory-level seminar that provides in-depth explorations of sociological concepts, methods, or perspectives. Topics of study vary. No prerequisite.

Credit 3 units. A&S IQ: SSC

---

#### **L40 SOC 2510 Sociological Approaches to American Health Care**

This course is a sociological exploration of how health, illness, and health care delivery in the United States are influenced by the social structure in which they are embedded. With the backdrop of the ongoing crisis of health care in the United States and the controversy surrounding the Affordable Care Act, the course focuses on the intersections of diversity factors including such as race, social class, gender, and sexuality that predict risks in navigating the health care system. Professionals representing a variety of health-oriented settings who serve the needs of a diverse constituency will share their perspectives. No prerequisite.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 2511 Juvenile Justice in the Black Experience**

This course examines the sociological past, present, and future of American juvenile justice, with a focus on the Black American experience. The course is organized in three parts. Part I surveys the late 19th- and early 20th-century development of the "parental state," including its institutional centerpiece (the juvenile court), its principle legal subjects ("dependents" and "delinquents"), and how these took shape alongside the contemporaneous rise of American Apartheid. Part II examines several key changes and challenges in contemporary juvenile justice, including the transformation of this institution in the wake of the Civil Rights Movement and the endurance of racialized juvenile social control in the post-Civil Rights period. Finally, Part III considers possible futures of youth justice in the United States and beyond as well as practical strategies for achieving equal protection within and beyond the law. For AFAS majors, this course counts as Area Requirement 2.

Same as L90 AFAS 251

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 2520 Inequality By Design: Understanding Racial/Ethnic Health Disparities**

This course critically examines health status and health care disparities among racial/ethnic minority groups in the United States. The course will utilize sociological, demographic, epidemiological, and psychological concepts to introduce students to racial/ethnic health disparities research. Students will be exposed to the descriptive demography and epidemiology of health indicators across population groups, as well as to the theories used to understand and explain racial/ethnic health disparities. In particular, the course will examine the ways in which multiple forms of interpersonal and institutional discrimination, neighborhood and community factors, and inequalities in socioeconomic status influence health behaviors, access to health care services, and health status outcomes across racial/ethnic groups. Concepts such as acculturation, patient preferences, provider congruence and cultural competence will also be explored in this

course. Finally, students will be challenged to use the theories and frameworks introduced in this course to develop and present policy approaches to address racial/ethnic disparities in health and health care in the United States. No prerequisite.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 2530 Punishment and Inequality**

This course examines the institutions and policies that shape punishment in the United States, with a particular focus on mass incarceration. The U.S. incarceration rate has more than quadrupled since the early 1970s. In this course, students examine how the United States became the world's leader in incarceration and how racial and class disparities in imprisonment became so large. The course next investigates the consequences of incarceration, both in terms of its high rates and intense social concentration. The course concludes by assessing recent attempts to reform the criminal justice system. No prerequisite.

Credit 3 units. A&S IQ: SSC, SC BU: BA EN: S

---

#### **L40 SOC 2580 Families and Social Inequality**

Families have changed dramatically in recent decades in the United States. Dual-earner families, single parents, cohabiting families, and blended families are now common in the contemporary family landscape. The prevalence of increasingly diverse and complex family configurations varies substantially by social class, race and ethnicity, and gender. Men's and women's work and family lives have also become more similar over time, but gender inequalities in child care remain significant. Drawing on insights from sociology, demography, and economics, this course aims to understand the causes and consequences of social inequalities in family life. The course focuses primarily on the contemporary U.S. context, but also explores historical and cross-national variation in families. The course also considers the role of social policy in affecting inequalities. No prerequisite.

Credit 3 units. A&S IQ: SSC, SC Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 2710 First-Year Seminar: Beyond the Melting Pot: Life in Immigrant America**

This course uses a sociological lens to explore contemporary immigration to the United States. The more than 43 million immigrants living in the United States today come from across the globe. Their reasons for migrating to the United States are complex, as are the laws, policies, and social structures they must navigate before and after their arrival. In the first half of the course, students will get to know Mexican immigrants who split their lives between Brooklyn and their small hometown in Mexico, fourth-generation Chinese Americans who are still asked, "Where are you from?", and West Indian immigrants forced to confront a U.S. racial order where they are defined by their Blackness. In the second half of the course, students will learn about Iranian-American youth navigating life in post- 9/11 America and the challenges of becoming a young adult when one learns that they lack any legal status. Who are these immigrants? Why and how did they come here? How well are they and their children integrating into American society? Readings will be drawn from sociological research that opens windows into the lives of immigrants in America. Students will also conduct their own hands-on research to better understand life in immigrant America. This course is open to first-year students only. No prerequisite.

Credit 3 units. A&S: FYS A&S IQ: LCD, SSC, SC BU: BA, IS EN: S

---

#### **L40 SOC 2910 Alternative Facts: An Introduction to the Social Construction of Reality**

This course acts as an introduction to the concept of social construction - the idea that an 'objective' reality is shaped by one's social positions and through social interactions. Recent political events and social conflicts highlight deep divisions in American society, raising critical questions about the media and objectivity (e.g., alternative facts and 'fake' news), networks and segregation (e.g., who

talks to whom), who gets to decide what is viewed as 'truth,' and the role of researchers and academia in combating (or contributing to) misinformation. This course explores these questions through a sociological lens. Students will use foundational sociological theories to learn how to recognize the existence of multiple realities, and consider the implications of social constructionism for key domains of everyday life, American politics, and the production of knowledge. Students will also evaluate the ways that cutting-edge technological innovations and academic research can - or cannot - help people distinguish facts from 'alternative' facts. No prerequisite.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 2911 Racism and Antiracism**

When President Obama was elected, it ignited a debate about whether America had finally become "post-racial." This assertion was belied by an entrenched underclass of Blacks and others from immigrant backgrounds; by the regular killing of innocent, young Black men alongside their mass incarceration, along with a whole series of other social indicators; by the dramatic rise in anti-Semitic incidents and Islamophobia globally; and most evidently by the discourse used during the Trump era that weaponized white Christian nationalism. At the end of four years of the Trump presidency defined by racist discourse and policies, it culminated in an insurgent riot on the Capitol designed to block the peaceful transfer of power, the basis of American democracy. This course provides the long view to understanding this recent period in American and global history. We begin by defining key terms in the discussion around racism today, including what we mean by racism and what unites anti-Semitism, anti-Black racism and Islamophobia, but also notions like privilege, cultural appropriation, and microaggressions. We then move on to the long history of the category of race. We start with a unit on race and religion and then move on to the role of the discovery of the "New World" and the development of the Atlantic slave system, and its impact on the Enlightenment, which was the incubator for the concept of race. From there, we consider how fundamental race was to European and American colonial dominance by the end of the nineteenth-century and the role it played in racial states like Nazi Germany and South Africa. The last portion of the class will focus on struggles to dismantle racism over the last century, considering the anti-colonial and Civil Rights movement, and the anti-apartheid struggle. Along the way, we will have addressed the overlaps and disconnects between anti-Black, anti-Jewish, and anti-Islamic racism and read a number of key thinkers and activists who can help us in the fight against racism.

---

#### **L40 SOC 3001 Social Theory**

This course provides an overview of major theoretical frameworks used by sociologists to understand social behavior and group patterns. This course explores classical theories, including those developed by Marx, Weber, and Durkheim, along with contemporary perspectives such as functionalist, interactionist, and conflict theories. Class discussions and writing assignments emphasize students' application of theory to understand current social experiences and structures. The course has no specific prerequisites, but students should be prepared for intensive study of challenging ideas and the application of these ideas in new contexts relevant to modern society. This course counts toward the program's Theory component which Sociology majors and minors must complete to fulfill degree requirements.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 3002 Black Feminist Theory**

What makes Black feminist theory unique? Whose theorizing is considered "theory" worthy of canonizing? What are the different strands of Black feminist thought? What has Black feminist thought contributed to academic and popular culture? Through engaging with primary text and producing their own text, students in this seminar

will develop answers to these questions through exploration of (contemporary) Black feminist thought. The course has no specific prerequisites, but students should be prepared for intensive study of challenging ideas and the application of these ideas in new contexts relevant to modern society. This course counts toward the program's Theory component which Sociology majors and minors must complete to fulfill degree requirements.

Credit 3 units. A&S IQ: SSC, SC Arch: SSC Art: SSC EN: S

---

#### **L40 SOC 3006 Global Health and Language**

Long before COVID-19, scholars across the globe postulated that language in health care is one of the most significant, and yet underexplored, social determinants of health in underserved linguistic diverse communities. This new course attempts to harmonize work across the disciplines of Global Public Health and Applied Linguistics by analyzing studies that examine language acquisition and language use across contexts with populations that experience serious health disparities- immigrants, refugees, indigenous peoples, racial and ethnic minority groups- and the course offers corresponding implications for health equity. Broadly speaking, this course addresses global health literacy issues, in both spoken and written communications, and its relationship to public health. As part of the seminar, students will apply the theory and research they learn to help meet the local language health needs of a changing population of refugees and immigrants in St. Louis community.

Credit 3 units. A&S IQ: LCD, SSC, SC Arch: SSC Art: SSC BU: BA, ETH, IS EN: S

---

#### **L40 SOC 301B Individual and Community**

What social, political, and cultural forces shape the individuality of people and yet make them part of not just one community but many, each of which is greater than the sum of the individuals that comprise it? What role do families and friends fill in this process? Students explore answers to these questions by reading theories and case studies that try to explain the foundations of individuals' sense of self and the interdependence and responsibilities of individuals, families, and communities to one another. Cases students read highlight (1) how family and communal experiences (like school) influence individuals and (2) how virtual (online) and non-virtual communities are structured and sustained as social entities. In addition to readings, the class will rely on guests from the "real world" as well as field trips into virtual and non-virtual communities. AMCS Majors may count this course for Fieldwork credit with permission of instructor; a supplemental assignment might be required.

Same as L98 AMCS 301B

Credit 3 units. A&S IQ: SSC, SD Arch: SSC Art: SSC BU: BA, ETH, IS EN: S

---

#### **L40 SOC 3030 Introduction to Research Methods**

This course offers an overview of research methods commonly used to investigate sociological phenomena, including experiments, surveys, ethnographic field research, and analysis of existing data. The course explores general issues in sociological research, such as research design, conceptualization and measurement, reliability, validity, sampling, and ethical conduct. Students will also review applications of research methods in specific sociological studies and analyze how research results are communicated. This is a core course within the Sociology program and is required of all Sociology majors; Sociology minors are encouraged to take this course to fulfill their Methods prerequisite within their course of study. The course has no specific prerequisites, but some familiarity with sociological analysis is recommended.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 3050 Statistics for Sociology**

This course acts as an introduction to descriptive and inferential statistical techniques used in sociological research. Topics addressed include: probability distributions, data presentation and visualization, confidence intervals, hypothesis testing, and linear regression. Students will learn to design and evaluate statistical analysis drawn from sociological research and other social science data sources, such as polling and economic data. Students will use statistical software to complete lab assignments. This is a core course within the Sociology program and is required of all majors; Sociology minors are encouraged to take this course to fulfill the Methods requirement within their course of study. The course has no specific prerequisites, but some familiarity with sociological analysis is recommended.

Credit 3 units. A&S IQ: NSM, AN Arch: NSM Art: NSM

---

#### **L40 SOC 320B Deviance and Society**

In sociology, deviance is the term used to describe actions or identities that differ from group norms. It encompasses everything from serious crimes (e.g. murder) to non-criminal, but frowned upon, behavior (e.g. talking loudly at the movies). Why do certain actions and identities become labeled as deviant and others do not? In what ways do societal conceptions of deviance change over time? How do people labeled as deviant manage their deviant identities and deal with any associated stigma? In this course, students will think about and explore how sociology and related disciplines have approached the study of social deviance and consider what can be learned about societies by looking at the way they construct deviant identities and acts. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor.

Credit 3 units. A&S IQ: SSC, SC

---

#### **L40 SOC 3212 The Social Construction of Race**

This course examines race, ethnicity, and racism from a sociological perspective to understand race as a socially-constructed phenomenon manifested in a wide range of social institutions. The course focuses on how race and racism impact contemporary social problems and public policy issues including immigration, affirmative action, education, media representation, and work. Students will learn to apply sociological analysis to understand current race-related events. This course has no specific prerequisites, but completion of an introductory Sociology course is recommended prior to enrollment.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 3310 The New Inequality**

This course explores recent trends of economic inequality in the United States that have reached levels not seen since before the Great Depression. Students will examine factors that account for the decades-long increase in economic disparities, paying particular attention to patterns in educational attainment, political developments, and the role of technological change. Students will also compare recent movements in economic inequality and macroeconomic performance in the U.S. to other advanced industrialized nations. This course has no specific prerequisites but successful completion of an introductory Sociology course is recommended prior to enrollment.

Credit 3 units. A&S IQ: SSC, SC, SD, WI Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 3320 Getting Paid: A Sociological Investigation of Wages and Salaries**

A Burger King worker in the United States today performs the same duties and requires the same skills as a Burger King worker in Denmark. However, the worker in Denmark earns two-and-a-half times as much money. Why? A full-time construction worker in the United States today earns \$10,000 less per year (adjusted for inflation) than a worker with the same job in 1973. Construction work cannot be shipped overseas, so why the decline? What determines one's pay? Are people paid fairly? How might one know? This course seeks to

answer these questions. Students will draw on a range of comparative, historical, and contemporary case studies to explore changes in the ways in which American workers get paid. Key areas of focus include: employer strategies to prevent workers from realizing their market value, the role Wall St. plays in influencing pay, and ongoing efforts to measure and reward individual productivity. The ultimate goal of the course is to upend students' taken-for-granted assumptions about pay-setting, and to provide students with a richer and more complex understanding of the contemporary world of wage and salary determination. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: ETH EN: S

---

#### **L40 SOC 3350 Poverty and the New American City**

This course explores structural changes that are transforming the American urban landscape, especially for low-income populations. The course begins with a review of classic theories of urban poverty and consider their relevance in the modern context. Students will then analyze key political, economic, demographic, and geographic shifts in how urban poverty is organized and reproduced, including gentrification, immigration, social policy reform, and the credit crisis. Special attention will be devoted to exploring the social and political implications of changing urban policy approaches, as well as the "suburbanization" of poverty. The course will conclude by discussing how urban poverty interfaces with broader social structures, including law, markets, and the state. Prerequisite: successful completion of an introductory sociology course or consent of the instructor.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 3410 Gender in Society**

This course acts as an introduction to the sociological study of gender. The primary focus of the course will be on U.S. society, but the course will also discuss gender in an international context. From the moment of birth, boys and girls are treated differently. Gender structures the experiences of people in all major social institutions, including the family, the workplace, and schools. Students will explore how gender impacts lives and life chances. The central themes of the course are historical changes in gender beliefs and practices; socialization practices that reproduce gender identities; how race/ethnicity, class, and sexuality shape the experience of gender; and the relationship between gender, power, and social inequality. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 351 Topics in Sociology**

An intermediate- to advanced-level seminar focused upon various topics and subject areas within - and adjacent to - the field of Sociology. Themes and content of course will vary by offering and instructor. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor.

Credit 3 units.

---

#### **L40 SOC 352 Topics in Sociology: Growing Up Poor Across America-An Application of Sociological Reasoning to Data**

This is an advanced seminar on poverty in America, with a special focus on applying and analyzing data pertaining to its study. The American Dream is built around the idea that anyone, regardless of his or her origins, can have a fair start in life. Yet, recent research shows that the promise of the American Dream is uneven across the nation. Poor children growing up in San Jose, CA are three times more likely to escape poverty than those in Charlotte, NC. What might be driving these geographic differences in opportunities for low-income youth? This course will investigate factors that might drive these differences by working with engaging real-world data. Students will explore cutting-edge research on poverty and mobility in America to develop their

own research questions. Students will also develop the computational and statistical skills to put their ideas into practice by learning to analyze data and construct data representations that communicate their findings effectively. The ultimate goal of this course is to learn to connect sociological reasoning and understanding of poverty and inequality with data analysis. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor. Completion of - or concurrent enrollment in - Introduction to Research Methods (SOC 3030) and/or an introductory statistics course (SOC 3050 or equivalent) is strongly encouraged.

Credit 3 units. BU: BA

---

#### **L40 SOC 3550 Sociology of Work**

This course acts as an overview of the sociological understandings of work, and in particular, how work reduces or replicates inequality. This course will cover classic and contemporary sociological theories of work; how work in the U.S. has changed over time; and how workers are matched to "good" and "bad" jobs. Threaded through the course is the exploration of barriers to racial, gender, and class to inclusion and advancement at work. Students will explore how organizational structures, policies, and practices can increase or decrease those barriers. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 3660 Social Conflict**

This course is a comparative and historical examination of conflict between social groups, including groups defined by race, ethnicity, and class. Course readings will combine classical and contemporary perspectives on collective conflict with in-depth analyses of historical and contemporary episodes. The course will discuss the various ways in which conflicts can manifest, including: the formation and hardening of divisive attitudes; discriminatory lawmaking and criminal justice practices; riots and collective violence; residential segregation; and sustained social movement activity. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 3710 Sociology of Immigration**

This course reviews theoretical and empirical research on how and why people migrate across international borders, and the consequences of international migration for immigrants and natives in the United States. While immigration is one of the most controversial issues in the contemporary United States, these contentious debates are not new. Americans once voiced the same concerns about the economic and social impact of Southern and Eastern European immigrants that today are aimed at immigrants from Latin America, Asia, Africa, and the Caribbean. In this course, students will compare historical (1880-1920) and contemporary (1965-present) waves of immigration to the United States. In this, students will explore why and how people migrate; immigrant integration; the impact of immigration on native-born Americans; and how government policies - at the national, state, and local level - shape immigrant assimilation and what it means to be considered truly "American" in a social as well as a legal sense. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor.

Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 3711 Confronting Capitalism: Feminism, Work and Solidarity**

This course explores the relationship between gender, the ideological construction of work and workers, and feminist and queer mobilizations against labor exploitation. To examine how notions of the "ideal worker" shape and are shaped by gender, sexuality, and race, we will study various forms of work, including care work and reproductive labor; affective and emotional labor; migrant labor; service work;

and sex work. Considering what is "new" and old about late (or neoliberal) capitalism, we will explore how the relationship between citizenship, the state and political economy has shifted over the last four decades. Across each of these registers, we will engage thinkers spanning Marxist feminist, radical feminist, liberal feminist, indigenous feminist, Black feminist, and disability justice traditions. We will ask how these interwoven genealogies grapple with U.S. imperialism and the relationship between race, class, and patriarchy, while mapping out various visions of solidarity economies, internationalism, and anti-work politics. Prerequisite: Intro to WGSS or permission of instructor.

Same as L77 WGSS 371

---

#### **L40 SOC 3810 Film and the City**

What makes a city a city? Is there something unique about urban life, in comparison to the way life is lived in rural areas and small towns? Only recently has over half of the world's population started to live in urban centers. What issues, if any, might have arisen from this development? In this course, students will think about and explore how sociology and related disciplines have approached the study of cities. Students will read classic and contemporary theorists on urban life and consider how cities shape the human experience. Then, they will apply what they learn to consider the city as portrayed in film. Movies will become the lab where students grapple with the good, the bad, the ugly, and also the beauty of cities. This course has no specific prerequisites, but completion of an introductory Sociology course is recommended prior to enrollment.

Credit 3 units. A&S IQ: SSC, SC Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 3910 Economic Realities of the American Dream**

Exploration of the realities of economic life in the U.S. and how they correspond to the American Dream. Interdisciplinary perspectives from economics, sociology, and other areas of social inquiry. Emphasis on the consistency between empirical data and different concepts of the American Dream. Specific topics to include sources of economic growth and changing living standards, unemployment, impact of globalization on U.S. citizens, economic mobility, poverty and inequality, and social justice. Prerequisites: An introductory course in economics or sociology, or consent of the instructors. All students who pre-register will be put on the wait list. Students will receive an email immediately after pre-registration requesting more information.

Same as L11 Econ 348

Credit 3 units. A&S IQ: SSC, WI Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 3920 Philanthropy Lab**

This course is designed to give students a theoretical and practical understanding of contemporary philanthropic efforts. First, the course will lay out the sociological and historical roots of philanthropy in the United States, including where philanthropic funds come from, how they are used, and the inherent tension between capitalism and philanthropy. The role of government in funding non-profits and new philanthropic tools, such as donor-advised funds, will also be reviewed. The course will also look at philanthropy's role in addressing social issues, including new approaches that go beyond simply giving money - such as the growing interest in and need for advocacy among institutional givers. This course has no specific prerequisites, but some familiarity with sociological analysis is recommended.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA, HUM EN: S

---

#### **L40 SOC 3950 Culture and Identity**

Topics course focusing on instances of identity and culture within the American scope. Varies by semester, see Course Listings for description of current semester's offering. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor.

Credit 3 units.

---

**L40 SOC 4036 Children of Immigrants: Identity and Acculturation**

This seminar takes an interdisciplinary approach to children of immigrants as an analytical subject. The course texts are in sociology, anthropology, and cultural studies, and a significant number of our case studies focus on 1.5- and second-generation Asian Americans and Latinx. Identity and identity politics are main topics; in addition, the course will critically examine theories on acculturation and assimilation. Our discussions cover a wide range of topics from culture, ethnicity, and race, to bilingualism, education, family, school, ethnic community, and youth culture. Students are required to conduct an individual research project among a selected group of children of immigrants. Attendance on the first day of class is mandatory to reserve class enrollment.

Same as L97 GS 4036

Credit 3 units. A&S IQ: HUM, LCD, SC, SD Arch: HUM Art: HUM BU: HUM EN: H

---

**L40 SOC 411 Childhood and Society**

This discussion-based course will focus on the social context and critical analysis of childhood as a social construct and as a valuable site of sociological research, social inquiry, and social action. The course will discuss critical questions about how social inequalities and social institutions shape life chances and outcomes from early childhood through young adulthood. The breadth of the analytic framing of this course will range from the prenatal context and birth to early childhood, school age, pre-teen and teen stages and will also importantly consider how the social transition to "adulthood" is both socially constructed and has concrete impacts and outcomes. Students will consider intersections of inequality and childhood including but not limited to economic inequalities, race, gender, sexuality, education, criminal justice, health, disability, immigration, media, environment, and social change as the course highlights an intersectional lens. Students focus on an applied sociological perspective of childhood and will emphasize social action and social change. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor. Graduate students should enroll in the 500-level offering.

Credit 3 units. A&S IQ: SSC, SC EN: S

---

**L40 SOC 4110 Applied Sociological Research**

This course is an advanced seminar that aims to connect sociological reasoning with practical data analysis. Course instructors will select current issues in contemporary sociology and identify relevant data that students will use to explore a range of related research questions. The course develops computational and statistical skills in order to put sociological ideas into practice by learning to analyze and evaluate data, in addition to presenting study results in ways that communicate one's research findings effectively. Topics and subject areas covered will vary by offering and instructor. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor. Completion of - or concurrent enrollment in - Introduction to Research Methods (SOC 3030) and/or an introductory statistics course (SOC 3050 or equivalent) is strongly encouraged. Graduate students should enroll in the 500-level offering.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

---

**L40 SOC 4210 Land of Dollars: Race, Money, and the Politics of Equity**

This course will explore how racialized meanings and structures shape the circulation and accumulation of money throughout the market economy. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor. Graduate students should enroll in the 500-level offering.

Credit 3 units. A&S IQ: SSC, SC BU: BA

---

**L40 SOC 4211 Race and Place**

In this course, students will investigate the claim that race and place are mutually constitutive; that is, race shapes how people perceive and organize places, and places in turn shape understandings and experiences of race. This investigation will span time - from the beginning of colonization in North America to the present - and space - from rural communities to central cities. Students will use a primarily sociological lens, but will also draw insights from history, political science, demography, and philosophy. Topics of study include segregation, housing, the criminal legal system, schooling, work, and more. This seminar is an upper level course intended for advanced sociology majors and minors, as well as graduate students. Graduate students should enroll in the 500-level offering.

Credit 3 units. A&S IQ: SSC, SC Arch: SSC Art: SSC EN: S

---

**L40 SOC 4212 Work, Family, and Gender Inequality in the Contemporary U.S.**

Despite dramatic increases in women's education and employment over the past century, progress toward gender equality in both the public and private sphere has slowed or stalled in recent decades. Drawing on research in sociology, economics, and demography, this course examines why gender inequality persists in the workplace and in family life. Students focus primarily on the contemporary U.S. context but also draw on historical and cross-national comparisons. In addition, the course considers the role of cultural norms and work-family policy in shaping gender inequality. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor. Graduate students should enroll in the 500-level offering.

Credit 3 units. A&S IQ: SSC, SC Arch: SSC Art: SSC EN: S

---

**L40 SOC 423 Political Sociology**

In this course, students will be discussing politics, the way that people interact with politics, and the way that politics shape our lives. Why do individuals participate in politics (e.g., vote) or become engaged in their communities (e.g., join a voluntary association, protest, etc.)? What role do social connections play in political and civic engagement? What does political competition in the US look like today? What accounts for increasing political partisanship in the United States? Who has access to political institutions? How amenable is our political system to change? Who has the power to impact policy and institutions? How do shifts in political participation, civic engagement, and partisanship all shape policymaking? How does policy shape participation? In this class students will engage with these questions through course discussion, group work, class data collection and analysis, and more. Prerequisite: successful completion of an introductory-level Sociology course or consent of instructor. Graduate students should enroll in the 500-level offering.

Credit 3 units. A&S IQ: SSC EN: S

**L40 SOC 4260 Memory for the Future**

The year-long Studioloab "Memory for the Future" (M4F) will create spaces and practices of humanities education, practical public history, and collaboration in the spirit of "multidirectional memory." This concept tries to address the interlinked histories and legacies of the Holocaust, slavery, apartheid, and colonialism and create opportunities for dialogue between communities impacted by and implicated in these forms of violence. Our principal aims are to explore, enrich, and sustain the global and local focus of "reparative memorial practices" in St. Louis. Focusing on commemorative efforts through public memorials, monuments and especially museums, M4F will engage survivors, activists, institutional leaders, and scholars (students and faculty) in the development of educational materials, artistic representations, exhibitions, and other approaches to bringing the past into the present. We strive to support the efforts of local and regional initiatives and venues to end racism, antisemitism, and homophobia and their related violence through innovative and inclusive memory

work. Alongside classroom-based instruction focusing on discussing scholarship and acquiring practical, curatorial, and pedagogical skills, students will work with area institutions and initiatives to apply their study of multidirectional memory. This practicum is an integral part of the course and requires students to leave campus and regularly work with one of our partners (The Griot Museum of Black History, George B. Vashon Museum, St. Louis Kaplan Feldman Holocaust Museum, The Mildred Lane Kemper Art Museum, Reparative Justice Coalition of St. Louis, St. Louis Community Remembrance Project). Participants of the Studioloab are expected to attend regular weekly meetings and engage in self-directed and collaborative project work. We are also preparing study trips to regional sites of memory and education. The M4F Studioloab will convene at the Lewis Collaborative, a living-learning-commercial space at the west end of the Delmar Loop. All A&S graduate students and advanced undergraduates are invited to participate. Undergraduate enrollment by permission of the instructors. For History majors, this course fulfills the capstone requirement as an Advanced Seminar. As a year-long course, students are expected to enroll in both the fall and spring sections. For more information, please consult <https://www.m4f.community/>

#### **L40 SOC 4289 Neighborhoods, Schools, and Social Inequality**

A major purpose of the course is to study the research and policy literature related to neighborhoods, schools and the corresponding opportunity structure in urban America. The course will be informed by theoretical models drawn from economics, political science, sociology, anthropology, education and law. A major focus is to gain greater understanding of the experiences and opportunity structure(s) of urban dwellers, in general, and urban youth, in particular. While major emphasis will be placed on data derived from the interface of urban environments and the corresponding institutions within them, the generational experiences of various ethnic groups will complement the course foci. Prerequisite: Completion of any 1000, 2000, or 3000-level Education course, graduate standing, or permission of instructor. Enrollment note: All students are enrolled onto the waitlist. Priority is given to Department of Education majors, minors, and graduate students. Undergraduate students must enroll in Educ. 4289 and graduate students must enroll in Educ. 5289  
Same as L12 Educ 4289

#### **L40 SOC 4310 Sociology of Higher Education**

What we call "higher education" in the United States is a complex web of institutions - nearly 3,000 4-year colleges, 1,500 2-year colleges, and still more postsecondary institutions that grant a variety of credentials. It is a system through which tens of millions of students pass each year; over the last few decades, the importance of earning a postsecondary credential has increased markedly. As such, higher education is deserving of rigorous scrutiny and careful interrogation. But in studying "higher education," we are in fact attending to a multitude of things - among other things, varied institutional types with different resources and different imperatives, experiences of accessing and navigating higher education that are widely divergent along axes of inequality, and institutional processes that play out on campus but have resonance beyond the university gates. In this course, which will be conducted as a discussion-based seminar, we will engage with texts examining the enterprise of higher education from varied vantage points, but always through a sociological lens. We'll discuss why and how higher education came to be so important and loom so large in contemporary life, the stark differences between different sectors of the higher education landscape, and how stratification occurs between and within institutions. We'll talk at length about how higher education is a microcosm of many of the inequalities we see in the broader society, looking at issues of race, class, gender, and politics

on campus. By taking a sociological lens to studying higher education, we'll learn a language and facility for rooting discussion of issues in higher education in theoretical grounding and empirical evidence. In so doing, students will develop the capacity to more critically assess research and public discourses on higher education, as well as their own work and experiences in the sector. Prerequisite: Completion of any 1000, 2000, or 3000-level Education course, graduate standing, or permission of instructor. Enrollment Note: Undergraduate students must enroll in Educ. 4310, and graduate students must enroll in Educ. 5310.

#### **L40 SOC 451 Topics in Sociology**

This course is an upper-level seminar course providing in-depth explorations of sociological concepts, methods, or perspectives intended for advanced Sociology majors or minors and graduate students. Topics of study vary. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor. Graduate students should enroll in the 500-level offering.  
Credit 3 units. BU: BA

---

#### **L40 SOC 4510 Race, Ethnicity, and Migration**

This course will explore theoretical and empirical analyses of race, ethnicity and migration through a sociological lens, focusing on children of immigrants and later-generation descendants of migrants in the United States. Students will compare the experiences and outcomes of various racial and ethnic "groups," including whites/Europeans, Blacks/African-Americans, Latinos/Hispanics, and Asians, investigating how migration processes and patterns shape racial/ethnic group formations and inequalities. Examples of specific topics related to these issues include: assimilation; ethnic and racial identities; multiraciality; language; legality; intergroup relations; and education. This course will be taught in a seminar style where student engagement within class discussions is required and one's participation is central to the learning process. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor. Graduate students should enroll in the 500-level offering.  
Credit 3 units. A&S IQ: LCD, SSC, SC Arch: SSC Art: SSC BU: BA, IS EN: S

#### **L40 SOC 4511 Sick Society: Social Determinants of Health and Health Disparities in the United States**

Improving the health of the U.S. population and reducing disparities in health are national priorities. To reach these goals, much research has sought to determine the factors that influence health status beyond health care quality and access. This course explores the broad area of study termed the "social determinants of health" while placing special emphasis on the exploration of health disparities in the United States. The course will examine the social conditions that relate to the health of populations, paying particular attention to how patterns of health vary by social class, race/ethnicity, and gender. The course will also consider mechanisms that produce and maintain these differences. In addition to sociology, students will draw upon the work of multiple disciplines, including public health, demography, anthropology, public

policy, economics, and medicine to understand what makes our populations sick and what might make them better. The class will be taught through an active learning approach, with class discussions, small group work, presentations, and critical writing assignments being central to the learning process. Student participation through reading and discussions is essential for both the success of the class and individual student learning. While this course has no specific prerequisites, some familiarity with sociological analysis is strongly recommended. Graduate students should enroll in the 500-level offering.

---

#### **L40 SOC 4515 Migration and Health**

This course explores the complex relationship between migration and health, with a focus on immigrant health in the United States. Topics include the immigrant health paradox, the impact of immigration enforcement on health and health behavior, access to health care, the health effects of migration on those left behind, and refugee health. Throughout the course, students will pay particular attention to the diverse mechanisms through which immigration and immigration status affect health. In addition to sociology, students will draw on scholarship from the fields of anthropology, demography, medicine, public health, and public policy. Prerequisite: successful completion of an introductory Sociology course or consent of instructor. Graduate students should enroll in the 500-level offering.

Credit 3 units. A&S IQ: SSC, SC Arch: SSC Art: SSC BU: BA EN: S

---

#### **L40 SOC 4601 Historical Racial Violence: Legacies & Reckonings**

There is growing awareness of the legacies of historical racial violence in the United States and a related increase in reckoning efforts. Area histories of enslavement, lynching, and other racial terror and dispossession relate to inequality, conflict, and violence in the same places today. These 'haunting legacies' include heart disease and other health disparity, homicide rates, white supremacist mobilization, and corporal punishment in schools. Meanwhile, many communities and institutions are moving to acknowledge and address legacies of historical racial violence in various ways. This course combines seminar-style readings and writing on legacies of racial violence with a practicum component, where individual students or groups of students will conceptualize and develop interventions intended to clarify and disrupt legacies of racial violence, facilitating contemporary reckoning. The practicum will explore and support a broad range of interventive efforts, including public policy measures, original research projects, archival development, commemorative efforts, and a related array of mediums, including visual art, design, film, digital projects, and other creative approaches.

---

#### **L40 SOC 4720 Race, Reproduction, and Justice**

Reproduction is biological, economic, political, and social. Of course, individuals reproduce, but when, how, why, and with whom we do (or do not) is also a matter of public policy and social concern. Drawing on readings from sociology, law and other fields that engage continually with these key questions: Why is reproduction an important site through which to understand sociology? How do statuses such as race, class, gender, sexuality, and ability influence people's reproductive possibilities? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these

answers? Students will review theoretical pieces, empirical research, media and more to explore the answers. This course primarily focuses on the US but will expose students to global reproductive concerns. Class sessions include lecture, in-class discussion and online discussion, media analysis and other activities. This upper-level seminar presumes an understanding of the basic concepts in sociology such as sociological imagination and social construction. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor. Graduate students should enroll in this 500-level offering.

Credit 3 units. A&S IQ: SSC, SC EN: S

---

#### **L40 SOC 4810 Global Structures and Problems**

This course examines social problems around the world and their relationship to globalization - that is, the increasing connectedness of social and economic life across borders. Students will investigate a range of these problems - such as environmental degradation, labor exploitation, human rights abuses, ethnic conflict, poverty, and inequality - and these issues' links to both personal experiences and larger social structures. The course is premised on the idea that to understand current global social problems, one must understand the evolution of markets, states, civil society and social movements, gender hierarchies, ethnic categories, and global governance over the past century. While the course has no specific prerequisites, some familiarity with sociological analysis is strongly recommended. Graduate students should enroll in the 500-level offering.

Credit 3 units. A&S IQ: LCD, SSC Arch: SSC Art: SSC, SSP BU: BA, IS EN: S

---

#### **L40 SOC 4830 Global Racial Systems**

This course will examine the history and contemporary expressions of racism around the world. Specifically, it aims to illuminate the entwinement of racist systems with capitalism, gender, science/knowledge production, and politics over time, focusing on global convergences and localized manifestations of such overlapping structures. The course aims to highlight the effects of global racism across spectrums of (dis)advantage as well as social movements, programs, and policies resisting racism and its effects. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor. Graduate students should enroll in the 500-level offering.

Credit 3 units. A&S IQ: LCD, SSC, SC Arch: SSC Art: SSC EN: S

---

#### **L40 SOC 4884 Advanced Seminar: The Roots of the American Working Class: Myths, Realities, Histories**

The diverse realities of American labor and working-class experience have long been submerged under layers of politics and ideology. How should we study the lives of working people? What questions should we ask? Where do we go to answer them? This research seminar engages the lived experiences of the American working classes, in all their complexity, over the long 19th- and 20th-centuries, to the present. The course has the double project of (1) exploring the roots of mythologies about American working people that have the effect of distorting or erasing their experiences, efforts and accomplishments, and struggles for organization, visibility, citizenship, and power, with special attention to mythologies about American workers who are non-white, non-male, and non-U.S.-born who did/do not fit conventional tropes of "American labor" or "the white worker"; and (2) exploring the roots of working people's experiences, as shaped by forces of technology, class, race, gender and sexuality, religion, nationalism, and violence: what are the challenges, conceptual and archival, of studying the people, in their working and familial/community lives, as producers and consumers, in their organizing efforts, and in their civic and political capacities? How did the transformation of work, technology, culture, and society over this long era from Enslavement to Artificial Intelligence, from Blackface Minstrelsy to Hip Hop, shape working people's lives and struggles? How did working people survive cataclysmic crises, from the Civil War to Covid, and mold the evolution of American citizenship and democracy?

Each student will produce a 12-15 page original research paper related to the course material, based on an analysis of primary sources, in consultation with the instructor, and due at the end of the semester; the course is designed to closely mentor students in this project. Same as L22 History 4884  
Credit 3 units. A&S IQ: HUM, SC EN: H

#### **L40 SOC 4900 Capstone Paper for Sociology Majors**

This course requires students to carry out an independent research and writing project pertaining to the material covered within the student's choice of an associated 300- or 400-level class that they have successfully completed prior to this Capstone course - or such a course in which the student is currently enrolled. Student work will be supervised and evaluated by the faculty member who instructed or is instructing the course on which this paper is written. Registration may be concurrent with the associated course or after the course is completed. Successful completion of this paper satisfies the capstone requirement for the Sociology major. Students will normally enroll in the minimum one credit required to fulfill the capstone requirement, but students may register for up to three credits with the approval of their faculty supervisor. This course is open to Sociology majors only. Students should obtain faculty approval for their sponsorship and proposed paper topic well in advance of course registration. Students will register for the section assigned to their respective faculty supervisor and will be waitlisted until supervisor approval is confirmed. Prerequisites: approval of faculty supervisor and upper-level class standing at the time of enrollment.  
Credit variable, maximum 3 units.

---

#### **L40 SOC 4901 Sociology Honors Thesis**

The Honors Thesis program is a two-semester sequence of coursework that aids students in developing, designing, executing, and producing original research within the field of sociology. Successful completion of this sequence and the thesis product is required for a student to be eligible for Latin Honors in Sociology. In the fall term, students will participate in a seminar-style course centered upon research design and obtaining needed approvals for carrying out their proposed project. In the spring term, students will be supervised by faculty mentors in an independent study as they carry out their research, analyze their findings, construct the thesis document, and defend their work in a formal defense. Students may be required to share their work in additional venues, such as departmental symposiums or institution-wide undergraduate research events. Successful completion of both terms of coursework and completion of a defensible thesis paper satisfies the capstone requirement for the Sociology major. Additionally, students may count three of the six-credit sequence's hours toward the major's upper-level requirements. This course is open to Sociology majors only. Students who are interested in the thesis program should contact the department's Director of Undergraduate Studies and/or the Academic Coordinator - as well as their planned faculty mentor(s) - prior to their planned enrollment. Students will be waitlisted until program acceptance and faculty approval is confirmed. Prerequisites: acceptance into Honors Sociology Program; consent of instructor and faculty mentor(s).  
Credit 3 units. A&S IQ: SSC EN: S

---

#### **L40 SOC 4910 Internship in Sociology**

Students may receive up to three units of credit for an approved, faculty-sponsored internship that relates to the study and application of sociological material. To fulfill the major's capstone requirement, students must enroll in no less than two credit hours and complete at least 90 approved hours at their internship site, in addition to constructing an academic product to be submitted to and evaluated by their faculty advisor. Specific academic and work requirements will be set by the faculty supervisor in consultation with the student's supervisor at the organization where the internship work is completed. Students must complete and submit an Internship Learning Agreement

prior to their course enrollment and no less than two weeks after beginning at their internship site. This course is open to sociology majors; Sociology minors may enroll with departmental permission. Student should register for the section assigned to their faculty supervisor. Students will be waitlisted until their completed Internship Learning Agreements have been received. Prerequisites: completion and submission of the department's Internship Learning Agreement and approval of faculty and internship site supervisors.  
Credit variable, maximum 3 units.

---

#### **L40 SOC 4920 Teaching Practicum in Sociology**

Students may receive up to 3 units of credit for work assisting in course instruction, tutoring, and preparation of course materials under the supervision of a faculty member. This course may fulfill sociology major requirements with the permission of one's advisor and/or the Director of Undergraduate Studies. Students may enroll in this course multiple times, but may only receive program credit once. Register for the section assigned to the faculty supervisor. This course is open only to students who have been approved and assigned to work as a departmental course assistant. Students who register will be waitlisted until practicum assignments have been confirmed with faculty supervisors. Please contact the department's Academic Coordinator for additional details. Prerequisites: approval for practicum participation from supervising faculty and Academic Coordinator.  
Credit variable, maximum 3 units.

---

#### **L40 SOC 4930 In|Visible St. Louis: People, Place, and Power in the Divided City**

This course approaches the study of segregation and inequality in St. Louis as deeply relational and contextual -- that is, embedded in a particular space and place and constituted through social-political relations. Students will be immersed in the history, theory and contemporary academic debates surrounding inequality, segregation, and social justice initiatives in urban cities across the United States. The course pairs this theoretical base (conceiving of segregation as multifaceted and durable, historical, spatial, and interpersonal) with intensive research experiences drawing on the methodological tools available across sociology, urban design, and architecture (archival research, data collection, mapping, diagramming, interviewing, field observation). Students will initiate collaborative research projects aligning with the needs of local organizations that serve the city's historically disadvantaged populations. Local guest speakers (scholars, community leaders, residents) will enhance students' classroom learning, as will site visits and other discussion formats. This interdisciplinary course bridges the Department of Sociology and the Sam Fox School of Design and Visual Arts, a collaboration supported by The Divided City initiative.  
Same as I50 INTER D 4930  
Credit 3 units. A&S IQ: SSC, SC BU: BA EN: S

---

#### **L40 SOC 4950 Research in Sociology**

Students will conduct independent research on a sociological topic as directed by a faculty member within the Department of Sociology. The student and supervising professor will agree in writing on the course goals, requirements, readings, assignments, meeting schedule, and evaluation criteria. The written agreement must be submitted to the department's Academic Coordinator and approved by the Director of Undergraduate Studies before registration will be authorized. Students should enroll in the section assigned to their faculty supervisor. Students will be waitlisted until faculty supervisor approval is confirmed. Students may take the course for up to three credits, and, with the approval of the supervising faculty member may be repeated. However, this course may be taken for program credit no more than twice (a maximum of 6 credit hours), depending on the student's status as a major or minor. Prerequisites: approval of faculty supervisor and Academic Coordinator.

Credit variable, maximum 3 units.

---

## Sociology Major

### Program Requirements

- **Total units required:** 31-36 (credits may vary based on capstone option taken)

The major in Sociology provides students with a rigorous understanding of the ways in which social relations and settings shape individual and group experiences and outcomes, with an emphasis on how various forms of inequality are created and propagated through time. Reflecting the diversity of social settings that motivate sociological inquiry, students will enroll in multiple introductory-level courses. We intend that these foundational courses will help students develop a sociological lens through which they can better understand the baseline determinants of inequality, social order, and change. Because the discipline draws on diverse theoretical and methodological tools to engage with these core issues, required course work ensures that students develop expertise in classical and contemporary theoretical concepts as well as both quantitative and qualitative research methods. Upper-level seminars provide majors and minors with opportunities to apply these substantive, theoretical, and methodological perspectives to focused and more intensive study of specific sociological topics. The major additionally features a capstone experience, which enables students to deploy sociological tools to undertake original work connected with a course-related research project, an internship, or an honors thesis.

The sections that follow provide a detailed overview of the Sociology major, with an emphasis on providing answers to many of the questions likely to arise at each stage as well as serving as a guide to related opportunities available to our majors and minors.

## Requirements

The major requires the successful completion of 10 courses, distributed as specified below. Courses that satisfy major requirements must be completed with a letter grade of C- or better. Courses taken on a Pass/Fail basis do not satisfy program requirements.

- a. **Introductory requirement** (6 credits): Any two 100- or 200-level Sociology courses. Students may substitute an upper-level Sociology course for one of their two introductory courses with the written approval of their major advisor.
- b. **Theory requirement** (3 credits): SOC 3001 Social Theory or SOC 3002 Black Feminist Theory
- c. **Methods requirement** (6 credits): SOC 3030 Introduction to Research Methods and SOC 3050 Statistics for Sociology. Because SOC 3050 Statistics for Sociology draws on specific sociological applications of statistical analyses, we strongly encourage students to enroll in our department's Statistics for Sociology course. However, with the written approval of their major advisor, students may substitute SDS 2200, SDS 3200, or a disciplinary statistics course from another social science for

SOC 3050 Statistics for Sociology. Majors who receive approval to fulfill this requirement with a course from another department or university are required to take an additional upper-level Sociology elective in lieu of SOC 3050 Statistics for Sociology.

- d. **Upper-level Sociology electives** (15 credits): Any five 300- or 400-level seminar courses. An independent learning course (i.e., independent research, a teaching assistantship, or an internship) can fulfill one of these five elective course requirements. Courses taken to fulfill Theory and Methods requirements cannot count toward upper-level elective program credit.
- e. **Capstone:** Majors will choose to complete one of the following options:

(1) *Capstone paper tied to an upper-level course* (at least 1 credit): Students electing this option may align the research paper with any upper-level Sociology elective course taken during or prior to the semester in which they undertake this accompanying capstone paper. Capstone research papers typically are 10 to 15 pages in length and represent a researched extension of the course content addressed in an elective course taken by the student. The capstone paper topic should be developed by the student in consultation with the instructor. Students interested in this option should register for the section of SOC 4900 Capstone Paper for Sociology Majors assigned to the relevant instructor, who will then do the following:

- a. Upon completion of the paper, certify the final product as fulfilling the capstone requirement
- b. Assign a final grade for this course
- c. Be available for consultation throughout the duration of the project
- d. Approve the capstone paper topic no later than the beginning of the semester in which the capstone is to be completed

Students should schedule a meeting with the relevant instructor well prior to or at the start of the semester (i.e., well before the add/drop period) to obtain the required approval for enrollment in SOC 4900 Capstone Paper for Sociology Majors and discuss the paper.

(2) *Internship* (at least 2 credits): Students electing to complete a field internship are able, in consultation with their faculty advisor, to identify and select a position with an organization of their choosing. For help identifying options in St. Louis, we recommend that students reference the Gephardt Institute's internship opportunities listings as well as the Center for Career Engagement's resource pages. Capstone internships are intended to integrate and apply the knowledge gained in the classroom to community and organizational settings. As such, students are required to identify a faculty advisor of their choosing to approve and oversee the experience in consultation with the on-site internship manager. (**Note:** The internship advisor need not be the same as the student's major advisor.) To receive credit for the internship, students should first obtain approval for the proposed experience from their selected faculty advisor in advance of the internship start date. The selected faculty advisor will then provide the required permission for the student to enroll in the advisor's assigned section of SOC 4910 Internship in Sociology. Students must complete and file an Internship Learning Agreement with the department no later than two weeks after the first day of the internship. Students should contact the Academic Coordinator for this form well before beginning their internships.

*Internships cannot be awarded retroactively.* The university stipulates 45 hours of work for each academic credit earned, so students will need to complete at least 90 internship hours — along with a series of reflective assignments arranged in consultation with their advisor — to fulfill the capstone requirement. Although only 2 credit units are required, students can register for up to 3 credit units, which would require a minimum of 135 internship hours to be completed.

(3) *Honors thesis* (6 credits): The Sociology Honors Thesis program is a two-semester sequence that students complete during their final year of study. Students interested in the program should submit an application in the late spring of their junior year. In the fall of their senior year, students who have been admitted to the program will enroll in the Honors Thesis Seminar (SOC 4901 Sociology Honors Thesis), which will aid them in developing their research questions and their thesis proposals. In the spring, students will undertake independent research under faculty mentor supervision through an independent study-style course (SOC 4901 Sociology Honors Thesis). Honors students must successfully defend their thesis in front of a faculty committee. The students are also expected to share their work by participating in department- and university-level research forums. Students who choose the thesis capstone option can apply 3 of their thesis credits toward their major elective requirement (part d in the list above). Thus, in addition to their thesis project, they would need to complete four (rather than five) additional 300- or 400-level seminar courses. Students must complete both fall and spring offerings of the honors sequence to receive this dual credit. *To be eligible for Latin honors in Sociology, students must complete an honors thesis.* For more information about honors within the department (including types of previous projects and suggested timelines), please visit our Honors Thesis Program page.

(4) SOC 4930 In\Visible St. Louis: People, Place, and Power in the Divided City (3 credits): This course collaboration between the Sam Fox School of Design & Visual Arts and the Department of Sociology (SOC 4930 In\Visible St. Louis: People, Place, and Power in the Divided City) provides a unique, hands-on opportunity to fulfill the capstone requirement in a formal classroom experience. As the class collectively works with St. Louis community partners to further their missions through student projects, students who enroll will learn about inequalities of power and place within the city and region. *Although first-year and sophomore students may enroll in this course, only juniors and seniors will earn capstone credit for their work. This capstone option is offered episodically; please contact the Department's Academic Coordinator to inquire about the course's upcoming availability.*

## Additional Information

In very exceptional cases, students may request a course outside of Sociology to count toward their program requirements. Please contact the Academic Coordinator (Contacting the Director of Undergraduate Studies) for additional information about course substitutions.

Students interested in teaching, research, or leaderships opportunities within the Department should contact the Academic Coordinator.

Majors may apply up to 6 credits of Study Abroad coursework approved through Washington University or approved transfer credits from another US institution. The Department of Sociology hosts numerous Study Abroad opportunities, and this list is ever-growing. Keep up to date on Study Abroad opportunities on the Department of Sociology website. Students who wish to apply Study Abroad credits or transfer credits to their program requirements should contact the Academic Coordinator (and copy the Director of Undergraduate Studies).

*To be eligible for Latin honors in Sociology, students must complete an honors thesis.* For more information about honors within the department (including types of previous projects and suggested timelines), please review the Requirements entry above and/or visit our Honors Thesis Program page.

Email: kaitlyne.motl@wustl.edu  
Website: <http://sociology.wustl.edu>

## Sociology Minor Program Requirements

**Total units required:** 15

### Required Courses

To earn the minor in Sociology, students must complete the following course work:

- **Introductory requirement** (3 credits): One 100- or 200-level Sociology course
- **Theory requirement** (3 credits): Either SOC 3001 Social Theory **or** SOC 3002 Black Feminist Theory
- **Methods requirement** (3 credits): Either SOC 3030 Introduction to Research Methods **or** SOC 3050 Statistics for Sociology
- **Additional upper-level sociology electives** (6 credits): Any two 300- or 400- level Sociology courses

Courses taken Pass/Fail and courses in which a student earns less than a C- do not fulfill minor requirements. Upper-level courses taken to fulfill Theory or Methods requirements cannot be used toward upper-level elective credit.

## Additional Information

In very exceptional cases, students may request a course outside of Sociology to count toward their program requirements. Please contact the Academic Coordinator and the Director of Undergraduate Studies for additional information about course substitutions.

Students interested in teaching, research, or leaderships opportunities within the department should contact the Academic Coordinator.

Minors may apply up to 3 credits of study abroad course work approved through Washington University or approved transfer credits from another U.S. institution. The Department of Sociology hosts numerous study abroad opportunities, and the list of opportunities is always

growing and changing; the most up-to-date information can be found on the Department of Sociology website. Students who wish to apply study abroad credits or transfer credits to their program requirements should contact the Academic Coordinator and the Director of Undergraduate Studies.

Contact: Kaitlyne A. Motl  
Phone: 314-935-5790  
Email: kaitlyne.motl@wustl.edu  
Website: <http://sociology.wustl.edu>

## Speech and Hearing

The minor in speech and hearing is offered by the Program in Audiology and Communication Sciences (PACS) in the School of Medicine and is designed for students interested in exploring topics related to typical and disordered human communication. The required course work provides an overview of the fields of hearing, deafness, language, and speech with opportunities to explore related topics in more depth. This minor is especially valuable for students in fields such as psychological and brain sciences, education, philosophy-neuroscience-psychology (PNP), and linguistics, but it has broad applicability for many fields of study. Courses completed as part of this minor can also be used to fulfill the total unit requirements for graduation and as prerequisites for graduate studies in audiology, deaf education, and speech-language pathology. However, the minor may not be used as an Integration in Arts & Sciences Integrated Inquiry (IQ) curriculum, and it does not otherwise fulfill any Arts & Sciences distribution requirements.

Contact: Kate McClannahan  
Phone: 314-747-0109  
Email: k.mcclannahan@wustl.edu  
Website: <http://pacs.wustl.edu>

## Faculty

### Minor Advisor

**Kate McClannahan**  
Assistant Professor of Otolaryngology

### Program Directors

**Kate McClannahan**  
Director of Undergraduate Studies  
Assistant Professor of Otolaryngology

**Amanda Ortmann**  
Director of Audiology Studies  
Assistant Professor of Otolaryngology

**Casey Reimer**  
Director of Deaf Education Studies  
Assistant Professor of Otolaryngology

## Faculty and Staff List

For a full list of faculty and staff, please visit the PACS website.

## Majors

There is no major in this area. The minor in speech and hearing is offered by the Program in Audiology and Communication Sciences at Washington University School of Medicine. The program also offers graduate study in the fields of audiology, deaf education, and speech and hearing sciences, which lead to the following degrees: Doctor of Audiology (AuD), Master of Science in Deaf Education (MSDE), and Doctor of Philosophy (PhD)—Speech and Hearing Sciences.

## Minors

- Speech and Hearing Minor (p. 1070)

## Courses

To view offerings, visit online course listings for M89 PACS or the PACS course listings page. Please visit the Speech and Hearing Minor page (p. 1070) for courses that are open to undergraduate students.

## Speech and Hearing Minor

### Program Requirements

**Total units required:** 15

### Required Course

Code	Title	Units
Educ 234	Introduction to Speech, Language, and Hearing Sciences	3

### Elective Courses

At least four of the following, totaling at least 12 units:

Code	Title	Units
PACS 324	Acoustics and Speech Perception	3
PACS 343	Observation in Audiology	3
PACS 344	Observation and Methods in Speech-Language Pathology	3
PACS 360	Introduction to Audiology	3
PACS 401	Anatomy and Physiology of Speech and Hearing	3
PACS 4301	Sign Language I	2
PACS 4302	Sign Language II	2
PACS 4303	Sign Language III	2

PACS 434	Typical Language Development	3
PACS 443	Speech and Language Disorders	3
Ling 170D	Introduction to Linguistics	3
Ling 312	Phonetics	3

## Additional Information

This minor is composed of a minimum of 15 units that focus on the study of speech, language, and hearing. Of the 15 units, 3 units must be Educ 234; at least 9 units must be at the 300 level or higher; and at least 9 units must be offered by the department (M89). To count toward the minor, courses must be selected from the courses listed above or approved in advance by the minor advisor. A grade of C- or higher is required for a course to count toward the minor.

For students who intend to pursue graduate studies in audiology, speech-language pathology, or deaf education, we recommend meeting with the minor advisor to develop a course of study that will fulfill prerequisite requirements for the intended area of study.

Because the minor in speech and hearing sciences is offered by the Program in Audiology and Communication Sciences (PACS) in the School of Medicine, it may not be used as an Integration and does not otherwise fulfill any Arts & Sciences distribution requirements.

Contact: Kate McClannahan  
Phone: 314-747-0109

## Statistics and Data Science

Statistics — as a core discipline focusing on data-driven discovery, understanding, and decision-making — is rapidly evolving and advancing in the data science era. The new Department of Statistics and Data Science (SDS) strives to be a world-class department with outstanding scholars who will transform the university's intellectual community not only through their own activities and achievements but also through synergistic collaborations with existing faculty and departments across Arts & Sciences, the McKelvey School of Engineering, and all of the other schools at the university.

The department aims to provide a foundation for ambitious and innovative digital transformation across a range of disciplinary areas, filling a vital niche in the current academic landscape that leverages the emerging opportunities of computational and data science. SDS values foundational as well as transdisciplinary scholarship and will focus on using data to offer solutions to some of the most complex global issues.

The Department of Statistics and Data Science offers two Bachelor of Arts degrees:

1. The AB in Statistics provides flexible and rigorous training in statistics for a wide range of career paths in industry or further graduate studies.
2. Jointly offered with CSE, the AB in Data Science offers students the formal foundation needed to understand the applicability and consequences of the various approaches to analyzing data with a focus on statistical modeling and machine learning.

Both programs are offered as a prime or a double major. In addition, SDS offers a Minor in Statistics and an Accelerated AB/AM in Statistics. All of our programs are flexible enough to allow a broad range of double majors or major/minor combinations. Majors are encouraged to complete additional work in other related areas.

Why choose the AB in Statistics? Data permeates every aspect of our lives. The ability to comprehend, synthesize, analyze, extract valuable information, and draw sound conclusions from data is a must-have in almost all human endeavors and activities. Statistics not only facilitates the implementation and evaluation of mathematical and computational models that represent reality but also acknowledges the inherent randomness in data, rendering it indispensable for the making of informed decisions in a wide range of domains.

Why choose the AB in Data Science? Data science arises in the midst of a new era of data revolution and the challenges faced by the standard mathematical and statistical approaches when dealing with massive datasets, high dimensionality, and extremely complex data objects. These datasets appear in modern applications ranging from medicine to climatology to social sciences, to name just a few. Students trained in data science are already in high demand across a wide spectrum of industries. Data science is by nature interdisciplinary, requiring the mastery of a variety of skills and concepts, including many traditionally associated with the fields of statistics, computer science, and mathematics. In crafting the BA in Data Science, SDS and CSE have sought to leverage courses that are already taught as much as possible, while at the same time judiciously introducing a handful of new courses that capture unique aspects at the intersection of the two disciplines. The program features a novel practicum component during which students undertake a mentored experience to apply their knowledge and skills in industry or research.

The Accelerated AB/AM in Statistics allows highly qualified undergraduate majors to earn both the AB and AM degrees with two additional semesters of work (i.e., usually a total of five years). Participants can count up to 15 units of 400-/500-level course work earned during the four years of undergraduate study (with grades of B or better) toward the AM course requirements. Counting these 15 units makes it possible to finish the master's requirements in one additional year, but the program is still fast-paced and requires a lot of intense work and careful planning. For more information, visit the Statistics and Data Science page of the graduate Arts & Sciences *Bulletin*.

## Overview of Faculty Research

The interdisciplinary interests of our faculty span a broad range of areas including the application of statistics and data science to medicine, finance, environmental sciences, and technology. Research interests of our faculty include the following:

1. Bioinformatics
2. Bootstrap methodology
3. Environmental statistics
4. Functional data analysis
5. High-dimensional statistics
6. Statistical computing for massive data
7. Mathematical and statistical finance
8. Model selection and post-selection inference
9. Network analysis
10. Objective Bayes
11. Robust statistics
12. Statistical and machine learning
13. Time series and spatial statistics

## Faculty

### Chair

#### Xuming He

Kotzubei-Beckmann Distinguished Professor  
PhD, University of Illinois at Urbana-Champaign  
Robust statistics; quantile regression; Bayesian inference; post-selection inference

### Director of Graduate Studies, PhD Program

#### José Figueroa-López

Professor  
PhD, Georgia Institute of Technology  
Inference methods for stochastic processes based on high-frequency sampling data; nonparametric estimation and model selection methods; time series analysis; high-frequency algorithmic trading, limit order book modeling, and asset price formation

### Director of Graduate Studies, AM Program

#### Nan Lin

Professor  
PhD, University of Illinois at Urbana-Champaign  
Statistical computing in massive data, bioinformatics, Bayesian quantile regression, longitudinal data and functional data analysis, and statistical applications in anesthesiology

### Department Faculty

#### Nilanjan Chakraborty

William Chauvenet Postdoctoral Lecturer  
PhD, Michigan State University  
High dimensional inference; time series; bootstrap

#### Likai Chen

Assistant Professor  
PhD, University of Chicago  
Time series; high dimensional data analysis; statistical learning theory

#### Jimin Ding

Associate Professor  
PhD, University of California, Davis  
Survival analysis; longitudinal data analysis; joint modeling of longitudinal and survival data; functional data analysis; nonparametric smoothing methods; systems of differential equations; dynamical systems; profile likelihood; asymptotic theories

#### Abigail Jager

Senior Lecturer  
PhD, University of Chicago  
Statistics; causal inference

#### Chetkar Jha

Postdoctoral Lecturer  
PhD, University of Missouri-Columbia  
Hierarchical Bayesian methods; high-dimensional data analysis; network analysis with applications to biomedical datasets such as single-cell RNA sequencing datasets; SNP genotyping datasets

#### Todd Kuffner

Associate Professor  
PhD, Imperial College London  
Statistics; econometrics; Bayesian asymptotics; applications of differential geometry to statistics; empirical likelihood; variable and model selection methods

#### Soumendra Lahiri

Stanley A. Sawyer Professor  
PhD, Michigan State University  
Asymptotic expansions, astrostatistics, inference for high dimensional and massive data sets, machine learning and predictive modeling, resampling and computer intensive methods, spatial statistics, time series and econometrics

### Robert Lunde

Assistant Professor  
PhD, Carnegie Mellon University  
Statistical network analysis; time series; resampling methods; high-dimensional statistics

### Debashis Mondal

Associate Professor  
PhD, University of Washington  
Spatial statistics; computational science; machine learning; applications in ecology (including microbial ecology); environmental sciences

### Debjoy Thakur

Postdoctoral Lecturer  
PhD, Indian Institute of Technology  
Spatial statistics, resampling method, copula, spatial extreme, statistical neural network

### Bowen Xie

Postdoctoral Lecturer  
PhD, Iowa State University  
Queueing theory; stochastic control problems; mathematical finance

## Majors

- Data Science Major (p. 1075)
- Statistics Major (p. 1079)

## Minors

- Statistics Minor (p. 1081)

## Courses

Visit online course listings to view semester offerings for L87 SDS.

---

### L87 SDS 1011 Introduction to Statistics

Basic concepts of statistics. Data collection (sampling, designing experiments), data organization (tables, graphs, frequency distributions, numerical summarization of data), statistical inference (elementary probability and hypothesis testing). Prerequisites: 2 years of high school algebra.

Credit 3 units. A&S IQ: NSM, AN

---

### L87 SDS 2200 Elementary Probability and Statistics

An elementary introduction to statistical concepts, reasoning and data analysis. Topics include statistical summaries and graphical presentations of data, discrete and continuous random variables, the logic of statistical inference, design of research studies, point and interval estimation, hypothesis testing, and linear regression. Students will learn a critical approach to reading statistical analyses reported in the media, and how to correctly interpret the outputs of common statistical routines for fitting models to data and testing hypotheses. A major objective of the course is to gain familiarity with basic R commands to implement common data analysis procedures. Students intending to pursue a major or minor in statistics or wishing to take 400 level or above statistics courses should instead take Math/SDS 3200 or Math/SDS 3211. Prerequisite: Math 131

Credit 3 units. A&S IQ: NSM, AN Art: NSM

---

### L87 SDS 3200 Elementary to Intermediate Statistics and Data Analysis

An introduction to probability and statistics. Major topics include elementary probability, special distributions, experimental design, exploratory data analysis, estimation of mean and proportion, hypothesis testing and confidence, regression, and analysis of variance. Emphasis is placed on development of statistical reasoning, basic analytic skills, and critical thinking in empirical research studies. The use of the statistical software R is integrated into lectures and weekly assignments. Required for students pursuing a major or minor in statistics or wishing to take 400 level or above statistics courses. Prerequisite: Math 132. Though Math 233 is not essential, it is recommended.

Credit 3 units. A&S IQ: NSM, AN Art: NSM

---

### L87 SDS 3211 Statistics for Data Science I

This course starts with an introduction to R that will be used to study and explore various features of data sets and summarize important features using R graphical tools. It also aims to provide theoretical tools to understand randomness through elementary probability and probability laws governing random variables and their interactions. It integrates analytical and computational tools to investigate statistical distributional properties of complex functions of data. The course lays the foundation for statistical inference and covers important estimation techniques and their properties. It also provides an introduction to more complex statistical inference concepts involving testing of hypotheses and interval estimation. Required for students pursuing a major in Data Science. Prerequisite: Multivariable Calculus (Math 233). No prior knowledge of Statistics is required. NOTE: Math/SDS 3211 and Math/SDS 3200 can not both count towards any major or minor in the Statistics and Data Science Department.

Credit 3 units. A&S IQ: NSM, AN Art: NSM

---

### L87 SDS 322 Biostatistics

A second course in elementary statistics with applications to life sciences and medicine. Review of basic statistics using biological and medical examples. New topics include incidence and prevalence, medical diagnosis, sensitivity and specificity, Bayes' rule, decision making, maximum likelihood, logistic regression, ROC curves and survival analysis. Prerequisite: CSE 131 or 200; Math/SDS 3200, Math/SDS 3211, or a strong performance in Math/SDS (with permission of the instructor).

Credit 3 units. A&S IQ: NSM

---

### L87 SDS 400 Undergraduate Independent Study

Approval of instructor required  
Credit variable, maximum 3 units.

---

### L87 SDS 408 Nonparametric Statistics

Statistical methods that make few or no assumptions about the data distribution. Permutation tests of different types; nonparametric confidence intervals and correlation coefficients; jackknife and bootstrap resampling; nonparametric regressions. If there is time, topics chosen from density estimation and kernel regression. Short computer programs will be written in a language like R or C. Prerequisite: CSE 131 or 200, Math 3200 and Math 493, or permission of instructor

Credit 3 units. A&S IQ: NSM

---

### L87 SDS 420 Experimental Design

A first course in the design and analysis of experiments, from the point of view of regression. Factorial, randomized block, split-plot, Latin square, and similar design. Prerequisite: CSE 131 or 200; Math/SDS 3200, or Math/SDS 3211.

Credit 3 units. A&S IQ: NSM Art: NSM

---

### L87 SDS 4211 Statistics for Data Science II

This builds on the foundation from the first course (SDS I) and further develops the theory of statistical hypotheses testing. It also covers advanced computer intensive statistical methods, such as the Bootstrap, that will make extensive use of R. The emphasis of the course is to expose students to modern statistical modeling tools beyond linear models that allow for flexible and tractable interaction among response variables and covariates/feature sets. Statistical modeling and analysis of real datasets is a key component of the course. Prerequisites: Math/SDS 3211, or Math/SDS 3200 and Math/SDS 493; Math/SDS 439 (Math/SDS 439 can be taken concurrently).  
Credit 3 units. A&S IQ: NSM, AN Art: NSM

---

### L87 SDS 4311 Statistics for Humanities Scholars: Data Science for the Humanities

A survey of statistical ideas and principles. The course will expose students to tools and techniques useful for quantitative research in the humanities, many of which will be addressed more extensively in other courses: tools for text-processing and information extraction, natural language processing techniques, clustering & classification, and graphics. The course will consider how to use qualitative data and media as input for modeling and will address the use of statistics and data visualization in academic and public discourse. By the end of the course students should be able to evaluate statistical arguments and visualizations in the humanities with appropriate appreciation and skepticism. Details. Core topics include: sampling, experimentation, chance phenomena, distributions, exploration of data, measures of central tendency and variability, and methods of statistical testing and inference. In the early weeks, students will develop some facility in the use of Excel; thereafter, students will learn how to use Python or R for statistical analyses.  
Same as L93 IPH 431

Credit 3 units. A&S IQ: HUM, AN EN: H

---

### L87 SDS 434 Survival Analysis

Life table analysis and testing, mortality and failure rates, Kaplan-Meier or product-limit estimators, hypothesis testing and estimation in the presence of random arrivals and departures, and the Cox proportional hazards model. Techniques of survival analysis are used in medical research, industrial planning and the insurance industry. Prerequisites: CSE 131 or 200; Math 309 or 429; Math/SDS 3200 or Math/SDS 3211.  
Credit 3 units. A&S IQ: NSM

---

### L87 SDS 439 Linear Statistical Models

Theory and practice of linear regression, analysis of variance (ANOVA) and their extensions, including testing, estimation, confidence interval procedures, modeling, regression diagnostics and plots, polynomial regression, colinearity and confounding, model selection, geometry of least squares, etc. The theory will be approached mainly from the frequentist perspective and use of the computer (mostly R) to analyze data will be emphasized. Prerequisite: CSE 131 or 200; a course in linear algebra (such as Math 309 or 429); Math/SDS 3211 or Math/SDS 3200 and Math/SDS 493 (493 can be taken concurrently). If Math/SDS 3211 is taken, Math/SDS 493 is not required.  
Credit 3 units. A&S IQ: NSM Art: NSM

---

### L87 SDS 4392 Advanced Linear Statistical Models

Review of basic linear models relevant for the course; generalized linear models including logistic and Poisson regression (heterogeneous variance structure, quasiliikelihood); linear mixed-effects models (estimation of variance components, maximum likelihood estimation, restricted maximum likelihood, generalized estimating equations), generalized linear mixed-effects models for discrete data, models for longitudinal data, optional multivariate models as time permits.

The computer software R will be used for examples and homework problems. Implementation in SAS will be mentioned for several specialized models. Prerequisites: Math/SDS 439 and a course in linear algebra (such as Math 309 or 429).  
Credit 3 units. A&S IQ: NSM

---

### L87 SDS 459 Bayesian Statistics

Introduces the Bayesian approach to statistical inference for data analysis in a variety of applications. Topics include: comparison of Bayesian and frequentist methods, Bayesian model specification, choice of priors, computational methods such as rejection sampling, and stochastic simulation (Markov chain Monte Carlo), empirical Bayes method, hands-on Bayesian data analysis using appropriate software. Prerequisite: CSE 131; Math 309; multivariable-calculus-based probability and mathematical statistics (Math/SDS 493-494 or Math/SDS 3211/4211).  
Credit 3 units. A&S IQ: NSM

---

### L87 SDS 460 Multivariate Statistical Analysis

A modern course in multivariate statistics. Elements of classical multivariate analysis as needed, including multivariate normal and Wishart distributions. Clustering; principal component analysis. Model selection and evaluation; prediction error; variable selection; stepwise regression; regularized regression. Cross-validation. Classification; linear discriminant analysis. Tree-based methods. Time permitting, optional topics may include nonparametric density estimation, multivariate regression, support vector machines, and random forests. Prerequisite: CSE 131; Math 233; Math 309 or Math 429; multivariable-calculus-based probability and mathematical statistics (Math/SDS 493-494 or Math/SDS 3211/4211); Math/SDS 439. Prior knowledge of R at the level introduced in Math/SDS 439 is assumed.  
Credit 3 units. A&S IQ: NSM

---

### L87 SDS 461 Time Series Analysis

Time series data types; autocorrelation; stationarity and nonstationarity; autoregressive moving average models; model selection methods; bootstrap condense intervals; trend and seasonality; forecasting; nonlinear time series; filtering and smoothing; autoregressive conditional heteroscedasticity models; multivariate time series; vector autoregression; frequency domain; spectral density; state-space models; Kalman filter. Emphasis on real-world applications and data analysis using statistical software. Prerequisite: Math/SDS 493 or Math/SDS 3211; Math/SDS 3200, Math/SDS 494 or Math/SDS 4211.  
Credit 3 units. A&S IQ: NSM Art: NSM

---

### L87 SDS 462 Mathematical Foundations of Big Data

Mathematical foundations of data science. Core topics include: Probability in high dimensions; curses and blessings of dimensionality; concentration of measure; matrix concentration inequalities. Essentials of random matrix theory. Randomized numerical linear algebra. Data clustering. Depending on time and interests, additional topics will be chosen from: Compressive sensing; efficient acquisition of data; sparsity; low-rank matrix recovery. Divide, conquer and combine methods. Elements of topological data analysis; point cloud; Cech complex; persistent homology. Selected aspects of high-dimensional computational geometry and dimension reduction; embeddings; Johnson-Lindenstrauss; sketching; random projections. Diffusion maps; manifold learning; intrinsic geometry of massive data sets. Optimization and stochastic gradient descent. Random graphs and complex networks. Combinatorial group testing. Prerequisite: Multivariable calculus (Math 233), linear or matrix algebra (Math 429 or 309), and multivariable-calculus-based probability and mathematical statistics (Math/SDS 493-494 or Math/SDS 3211/4211). Prior familiarity with analysis, topology, and geometry is strongly recommended. A willingness to learn new mathematics as needed is essential.  
Credit 3 units. A&S IQ: NSM

### L87 SDS 475 Statistical Computation

Introduction to modern computational statistics. Pseudo-random number generators; inverse transform and rejection sampling. Monte Carlo approximation. Nonparametric bootstrap procedures for bias and variance estimation; bootstrap confidence intervals. Markov chain Monte Carlo methods; Gibbs and Metropolis-Hastings sampling; tuning and convergence diagnostics. Cross-validation. Time permitting, optional topics include numerical analysis in R, density estimation, permutation tests, subsampling, and graphical models. Prior knowledge of R at the level used in Math 494 is required. Prerequisite: Math 233; Math 309 or 429; multivariable-calculus-based probability and mathematical statistics (Math/SDS 493-494 or Math/SDS 3211/4211), not taken concurrently; acquaintance with fundamentals of programming in R.  
Credit 3 units. A&S IQ: NSM Art: NSM

### L87 SDS 493 Probability

Mathematical theory and application of probability at the advanced undergraduate level; a calculus based introduction to probability theory. Topics include the computational basics of probability theory, combinatorial methods, conditional probability including Bayes' theorem, random variables and distributions, expectations and moments, the classical distributions, and the central limit theorem. permission of the instructor. Prerequisites: Math/SDS 3200 and Math 233.  
Credit 3 units. A&S IQ: NSM Art: NSM

### L87 SDS 494 Mathematical Statistics

Theory of estimation, minimum variance and unbiased estimators, maximum likelihood theory, Bayesian estimation, prior and posterior distributions, confidence intervals for general estimators, standard estimators and distributions such as the Student-t and F-distribution from a more advanced viewpoint, hypothesis testing, the Neymann-Pearson Lemma (about best possible tests), linear models, and other topics as time permits. Prerequisite: CSE 131 or 200, Math/SDS 3200 and Math/SDS 493.  
Credit 3 units. A&S IQ: NSM Art: NSM

### L87 SDS 495 Stochastic Processes

Content varies with each offering of the course. Past offerings have included such topics as random walks, Markov chains, Gaussian processes, empirical processes, Markov jump processes, and a short introduction to martingales, Brownian motion and stochastic integrals. Prerequisites: Math 309; Math/SDS 493 or Math/SDS 3211.  
Credit 3 units. A&S IQ: NSM Art: NSM

### L87 SDS 496 Topics in Statistics

Topic varies with each offering.  
Credit 3 units. A&S IQ: NSM Art: NSM

### L87 SDS 4971 Topics in Statistics: Spatial Statistics

The course covers all three main branches of spatial statistics, namely, (1) the continuum spatial variations, (2) the discrete spatial variations and, (3) the spatial point patterns. Topics include positive definite functions, geostatistics, variograms, kriging, conditional simulations, Markov random fields, conditional and intrinsic autoregressions, Ising and Potts models, pseudolikelihood, MCMC, Inference for spatial generalized linear and mixed models, Spatial Poisson, and other point processes. The computer software R is used for examples and homework problems. Prerequisites: CSE 131; Math 233; Math 309 or Math 429; multivariable-calculus-based probability and mathematical statistics (Math/SDS 493-494 or Math/SDS 3211/4211); Math/SDS 439. Prior knowledge of R at the level introduced in Math/SDS 439 is assumed.

Credit 3 units. A&S IQ: NSM Art: NSM

### L87 SDS 499 Study for Honors

Prereq: Senior standing, a distinguished performance in upper level statistics courses, and permission of the Chair of the Undergraduate Committee. Register for the section (listed in department header) corresponding to your honors project supervisor.  
Credit 3 units.

## Data Science Major Program Requirements

- **Total units required:** 51-54

### Required Courses and Practicum

- 12 core requirement courses (36 credits)
- Four elective courses (12 credits)
- One course in Ethics and Professional Responsibility (3 credits)
- Practicum requirement (3 credits if completed via independent study or a project-focused course)

The College of Arts & Sciences and McKelvey School of Engineering developed a new major that efficiently captures the intersection of mathematics and statistics with computer science for data science. The Bachelor of Arts in Data Science (BADS) will give students the formal foundation needed to understand the applicability and consequences of the various approaches to analyzing data with a focus on statistical modeling and machine learning.

McKelvey Engineering students who declare this major must fulfill the core course requirements listed below and all other requirements for the Applied Science degree (p. 1304) in the McKelvey School of Engineering. They must also complete Engr 310 Technical Writing and 8 units of courses designated as NSM (Natural Sciences & Math) from Anthropology (L48 Anthro), Biology and Biomedical Sciences (L41 Biol), Chemistry (L07 Chem), Earth, Environmental, and Planetary Sciences (L19 EEPS), Physics (L31 Physics), or Environmental Studies (L82 EnSt).

Arts & Sciences students who declare this major must fulfill the distribution requirements and all other requirements for an AB degree (p. 1112) in addition to the specific requirements listed below.

### Data Science Core Requirements (CR)

Code	Title	Units
Math 131	Calculus I	3
Math 132	Calculus II	3
Math 233	Calculus III	3
Math 309	Matrix Algebra	3
SDS 3211	Statistics for Data Science I	3
SDS 4211	Statistics for Data Science II	3
SDS 439	Linear Statistical Models	3

CSE 131	Introduction to Computer Science	3
CSE 217A	Introduction to Data Science	3
CSE 247	Data Structures and Algorithms	3
CSE 314A	Data Manipulation and Management	3
CSE 417T	Introduction to Machine Learning	3
or SDS 460	Multivariate Statistical Analysis	
<b>Total Units</b>		<b>36</b>

**Notes:**

- Each of these core courses must be passed with a grade of C- or better.
- AP credit can be applied for Math 131 Calculus I, Math 132 Calculus II, and Math 233 Calculus III. Students who have completed Math 203 Honors Mathematics I and Math 204 Honors Mathematics II will have this requirement waived.
- CSE 131 Introduction to Computer Science may be waived after consultation with the director of undergraduate studies of the Department of Computer Science and Engineering.

## Data Science Technical Electives

Four courses can be chosen from the list of approved electives given below, with the following caveats:

- At least one course from Statistics and Data Science (at the 400 level or above)
- At least one course from CSE (ending in S, T, M, or A)
- At most one course at the 200 level

## List of Approved Data Science Technical Electives

### Computer Science and Engineering

Code	Title	Units
CSE 237S	Programming Tools and Techniques	3
CSE 256A	Introduction to Human-Centered Design	3
CSE 311A	Introduction to Intelligent Agents Using Science Fiction	3
CSE 347	Analysis of Algorithms	3
CSE 359A	Signals, Data and Equity (Cannot be double-counted in EPR)	3
CSE 411A	AI and Society (Cannot be double-counted in EPR)	3
CSE 412A	Introduction to Artificial Intelligence	3
CSE 416A	Data Science for Complex Networks	3
CSE 417T	Introduction to Machine Learning (Cannot be double-counted in CR)	3
CSE 427S	Cloud Computing with Big Data Applications	3
CSE 435S	Database Management Systems	3
CSE 457A	Introduction to Visualization	3
CSE 514A	Data Mining	3

CSE 515T	Bayesian Methods in Machine Learning	3
CSE 517A	Machine Learning	3
CSE 518A	Human-in-the-Loop Computation	3
CSE 534A	Large-Scale Optimization for Data Science	3
CSE 543T	Algorithms for Nonlinear Optimization	3
CSE 559A	Computer Vision	3

### Statistics and Data Science

Code	Title	Units
SDS 322	Biostatistics	3
SDS 420	Experimental Design	3
SDS 434	Survival Analysis	3
SDS 4392	Advanced Linear Statistical Models	3
SDS 459	Bayesian Statistics	3
SDS 460	Multivariate Statistical Analysis	3
SDS 461	Time Series Analysis	3
SDS 462	Mathematical Foundations of Big Data	3
SDS 475	Statistical Computation	3
SDS 494	Mathematical Statistics	3
SDS 495	Stochastic Processes	3
SDS 496	Topics in Statistics	3
SDS 5061	Theory of Statistics I	3
SDS 5062	Theory of Statistics II	3
SDS 5071	Advanced Linear Models I	3
SDS 5072	Advanced Linear Models II	3
SDS 5531	Advanced Statistical Computing I	3
SDS 5532	Advanced Statistical Computing II	3
SDS 5595	Topics in Statistics: Spatial Statistics	3
SDS 579	Topics in Statistics	3
SDS 586	Topics in Statistics	3

### Mathematics

Code	Title	Units
Math 449	Numerical Applied Mathematics	3
Math 450	Topics in Applied Mathematics	3
Math 456	Topics in Financial Mathematics	3
Math 5047	Geometry/Topology III: Differential Geometry	3

### Electrical and Systems Engineering

Code	Title	Units
ESE 4031	Optimization for Engineered Planning, Decisions and Operations	3
ESE 415	Optimization	3
ESE 427	Financial Mathematics	3

## Energy, Environmental & Chemical Engineering

Code	Title	Units
EECE 202	Computational Modeling in Energy, Environmental and Chemical Engineering	3

## Linguistics

Code	Title	Units
Ling 317	Introduction to Computational Linguistics	3

## Ethics and Professional Responsibility Requirement (EPR)

- 3 units of courses from the following list:

### List of EPR Course Options

Code	Title	Units
Engr 450F	Engineers in the Community (Engineering Ethics, Leadership and Conflict Management)	3
Engr 4501	Engineering Ethics and Sustainability	1
Engr 4502	Engineering Leadership and Team Building	1
Engr 4503	Conflict Management and Negotiation	1
Engr 520P	Presentation Skills for Scientists and Engineers	2
CSE 359A	Signals, Data and Equity (This course cannot be double-counted as an elective)	3
CSE 411A	AI and Society (Cannot be double-counted as an Elective)	3
MSB 512	Ethics in Biostatistics and Data Science	2

## Practicum Requirement

- Students must complete an approved comprehensive data science project or experience for their practicum requirement. The practicum must be approved by the committee of data science faculty.
- The practicum experience should be completed during the next-to-last semester of study (i.e., the first semester of senior year). It is important that practicum plans be submitted for review prior to starting the project or course work to ensure the proposed work is sufficient for the objectives of the practicum. After-the-fact approvals are possible but not guaranteed.
- Appropriate practicum work is possible via Independent Study (CSE 400E or SDS 400 Undergraduate Independent Study) or via project-focused classes, including (but not limited to) CSE 437S Software Engineering Workshop and CSE 454A Software Engineering for External Clients. Students should contact course instructors in advance to identify the degree of agency the student will have over project selection and requirements.

- Internships related to data science can be used to fulfill the practicum. If the internship is paid, it cannot count for credit, but can satisfy the requirements.
- To initiate the approval process, majors through the McKelvey School of Engineering should contact the CSE undergraduate coordinator (cse.undergrad@email.wustl.edu) in the CSE department, and majors through Arts & Sciences should contact the Associate Chair in the Statistics and Data Science Department, José Figueroa-López.

## Notes to All Majors in Statistics and Data Science

1. Upper-level courses have course numbers that begin with a "3" or higher (e.g., SDS 3200 Elementary to Intermediate Statistics and Data Analysis). Lower-level courses do not count toward upper-level data science requirements, even if they are cross-listed as an upper-level course in another department or program. For example, if SDS 2200 Elementary Probability and Statistics was cross-listed by another department as 3XXX, registering for that 3XXX course would not satisfy an upper-level data science requirement.
2. Certain approved substitutions are found on the Department of Statistics and Data Science website.

## Course Substitutions

- ESE 326 can be taken in place SDS 3200. ESE 326 Probability and Statistics for Engineering and SDS 3200 Elementary to Intermediate Statistics and Data Analysis cannot both count toward a major or minor.
- Any course from another department that is cross-listed as a Mathematics L24 or Statistics and Data Science L87 course can count as an upper-level elective. Examples include Math 501C Theoretical Physics, L24 Math 440C, and L24 Math 403C. Such L24 or L87 courses always end with a "C."
- The following courses can count as upper-level electives:
  - Econ 4151 (this course can count as a statistics elective)
  - ESE 319, ESE 403

## Distinctions in Data Science

### Distinction

- For Distinction in Data Science, a student must take an additional two electives for a total of 6 electives.
- The student's GPA in the 6 electives must be at least 3.7. If the student takes additional courses that satisfy these requirements, the courses with the lowest grades may be omitted when calculating the GPA for this purpose.
- The electives need to be taken from the list of approved data science technical electives. Electives need to be passed with a grade of B or better.

## High Distinction

- Complete all requirements for Distinction.
- Complete an honors thesis in either department (Statistics and Data Science or Computer Science & Engineering).

## Highest Distinction

- Complete the requirements for High Distinction.
- Complete one of the two options described below:
  - **Qual Option:** Take either SDS 5061 Theory of Statistics I–SDS 5062 Theory of Statistics II or SDS 5071 Advanced Linear Models I–SDS 5072 Advanced Linear Models II, which corresponds to one of the qualifiers for the PhD in Statistics, earning a grade of B+ or better in each course.
  - **Course Option:** Complete three additional electives from the list of approved data science technical electives for a total of 12 courses. As with Distinction, the student's GPA in the 12 electives must be at least 3.7 with the student earning a grade of B+ or better in each course, and additional courses beyond 12 can be disregarded when calculating the GPA. At least four of these 12 courses must be from the Department of Statistics and Data Science, and at least four must be from the Department of Computer Science & Engineering.

## Additional Information

### Additional Requirements

- All Statistics and Data Science majors must take Math 131 Calculus I, Math 132 Calculus II, and Math 233 Calculus III. There are other ways to fulfill this requirement, including AP credit and Math 203 Honors Mathematics I or Math 204 Honors Mathematics II. Some students may obtain a waiver if they took similar courses before coming to Washington University.
- All required courses (both lower- and upper-level courses) must be completed with a letter grade of C- or better.
- Courses transferred from other accredited colleges and universities can be counted, with the following caveats, if they receive department approval:
  - a. Courses transferred from a two-year college (e.g., a community college) cannot be used to satisfy upper-level requirements.
  - b. At least half of the upper-level units required in a major or minor program must be fulfilled by courses taken in the major's home departments or by approved courses taken in Washington University-approved overseas study programs.
  - c. Courses from the School of Continuing & Professional Studies cannot be used to fulfill major requirements.
- No **upper-level** course used to satisfy a major requirement can be counted toward the requirements of any other major or minor (i.e., no double-counting of courses).
- At most, 3 units of independent study or research work can count toward the major requirements.
- A student cannot declare more than one major or minor in the department.

## Latin Honors

At the time of graduation, the Department of Statistics and Data Science will recommend that a candidate receive Latin Honors (cum laude, magna cum laude, or summa cum laude) if that student has completed the department's requirements for High Distinction or Highest Distinction in Mathematics, including an Honors Thesis. The actual award of Latin Honors is managed by the College of Arts & Sciences.

## The Honors Thesis

Arts & Sciences majors who want to be candidates for Latin Honors, High Distinction, or Highest Distinction must complete an honors thesis. Writing an honors thesis involves a considerable amount of independent work, reading, creating mathematics, writing a paper that meets acceptable professional standards, and making an oral presentation of the results.

## Types of Projects

An honors thesis can take three forms:

1. A thesis that presents significant work by the student on one or more nontrivial statistics or probability problems.
2. A project in applied statistics that involves an in-depth analysis of a large data set. To do an honors thesis involving data analysis, it is usually necessary to have completed SDS 3200, SDS 493, and SDS 494 (or SDS 3211 Statistics for Data Science I and SDS 4211 Statistics for Data Science II) by the end of the junior year and to have the ability to work with statistical software such as SAS, R, or Python.
3. A substantial expository paper that follows independent study on an advanced topic under the guidance of a department faculty member. Such a report would involve the careful presentation of ideas and the synthesis of materials from several sources.

## Process and Suggested Timeline

### Junior Year, Spring Semester:

1. Talk with a faculty advisor about possible projects.
2. Complete the Honors Proposal Form and submit it to Dr. Figueroa-López.

### Senior Year:

1. By the end of January, provide the advisor with a draft abstract and outline of the paper.
2. By the end of February, submit a rough draft, including an abstract, to the advisor.
3. The student and the advisor should agree on a date that the writing will be complete and on a date and time for the oral presentation in mid-March (the deadline is March 31).

## Departmental Prizes

Each year, the department considers graduating majors for several departmental prizes and also awards a prize to a junior. Recipients are recognized at an annual awards ceremony in April where graduating majors each receive a certificate and a set of honors cords to be worn as part of the academic dress at Commencement. Awards are noted on the student's permanent university record.

Contact: José E. Figueroa-López  
Email: sdsadvising@wustl.edu  
Website: <https://sds.wustl.edu/>

## Statistics Major Program Requirements

- **Total units required:** 42
  - 10 core requirement courses (30 credits)
  - Four elective courses (12 credits)

### Required Courses

Code	Title	Units
CSE 131	Introduction to Computer Science	3
Math 131	Calculus I	3
Math 132	Calculus II	3
Math 233	Calculus III	3
Math 309	Matrix Algebra	3
SDS 3200	Elementary to Intermediate Statistics and Data Analysis	3
SDS 439	Linear Statistical Models	3
SDS 459	Bayesian Statistics	3
or SDS 475	Statistical Computation	
SDS 493	Probability	3
SDS 494	Mathematical Statistics	3
<b>Total Units</b>		<b>30</b>

#### Notes:

- <sup>1</sup> Each of these core courses must be passed with a grade of C- or better.
- <sup>2</sup> AP credit can be applied for Math 131 Calculus I, Math 132 Calculus II, and Math 233 Calculus III. Students who have completed Math 203 Honors Mathematics I and Math 204 Honors Mathematics II will have this requirement waived.
- <sup>3</sup> CSE 131 Introduction to Computer Science may be waived after consultation with the director of undergraduate studies of the Department of Computer Science and Engineering.

## Elective Courses

Students complete four additional elective courses (12 units). At least two probability or statistics courses must be taken at the 400 level or above; the other courses may be chosen from an approved list of electives. For more information, visit the Department of Statistics and Data Science website.

## Courses in Probability and Statistics

The major and minor in statistics require electives in probability and statistics. Below is the list of these allowed courses:

Code	Title	Units
SDS 3200	Elementary to Intermediate Statistics and Data Analysis	3
SDS 3211	Statistics for Data Science I	3
SDS 322	Biostatistics	3
SDS 420	Experimental Design	3
SDS 434	Survival Analysis	3
SDS 439	Linear Statistical Models	3
SDS 4392	Advanced Linear Statistical Models	3
SDS 459	Bayesian Statistics	3
SDS 460	Multivariate Statistical Analysis	3
SDS 461	Time Series Analysis	3
SDS 462	Mathematical Foundations of Big Data	3
SDS 475	Statistical Computation	3
SDS 493	Probability	3
SDS 494	Mathematical Statistics	3
SDS 495	Stochastic Processes	3
SDS 496	Topics in Statistics	3
SDS 5061	Theory of Statistics I	3
SDS 5062	Theory of Statistics II	3
SDS 5071	Advanced Linear Models I	3
SDS 5072	Advanced Linear Models II	3
SDS 5531	Advanced Statistical Computing I	3
SDS 5532	Advanced Statistical Computing II	3
SDS 5595	Topics in Statistics: Spatial Statistics	3
SDS 579	Topics in Statistics	3
SDS 586	Topics in Statistics	3

\* SDS 3200 and SDS 3211 cannot both be counted toward a major or minor.

## Notes to All Majors in Statistics and Data Science

1. Upper-level courses have course numbers that begin with a "3" or higher (e.g., SDS 3200 Elementary to Intermediate Statistics and Data Analysis). Lower-level courses do not count toward upper-level data science requirements, even if they are cross-listed as an upper-level course in another department or program.

For example, if SDS 2200 Elementary Probability and Statistics was cross-listed by another department as 3XXX, registering for that 3XXX course would not satisfy an upper-level data science requirement.

2. Certain approved substitutions are found on the Department of Statistics and Data Science website.

## Course Substitutions

At most, one approved substitution can be made using a course not based in the major's home departments. Please note the policy that, at most, one course from a different department at Washington University can count toward a major or minor.

- ESE 326 can be taken in place SDS 3200. ESE 326 Probability and Statistics for Engineering and SDS 3200 Elementary to Intermediate Statistics and Data Analysis cannot both count toward a major or minor.
- Any course from another department that is cross-listed as a Statistics and Data Science L87 course can count as an upper-level elective. Such L87 courses always end with a "C."
- The following courses can count as upper-level electives:
  - Econ 4151 (this course can count as a statistics elective)
  - ESE 319, ESE 403

## Distinctions in Statistics

### Distinction

- Complete at least 33 units of courses from the approved list of electives (besides Math 131, Math 132, Math 233, and CSE 131).
- The GPA for these 33 upper-level units must be at least 3.7. If more than 33 units are taken for a letter grade, the courses with the lowest grades can be omitted when computing the GPA for this purpose.
- Complete at least five courses, each with a B or better, at level 400+.
- All of these courses must be classroom courses (not independent study or study for honors), and they must all be taken for a letter grade.

### High Distinction

- Complete all requirements for Distinction.
- Complete an honors thesis.

### Highest Distinction

- Complete all requirements for High Distinction.
- Complete at least five courses, each with a grade of B+ or better, at the 400 level or higher. These courses can be the same five courses used for the Distinction requirement, but the grades must be B+ or better.
- Complete one of the two paths described below:

#### • Graduate Qualifier Path:

- Graduate qualifier courses\* in Statistics and Data Science are two-semester sequences that start in the fall. The two-semester sequence has a qualifier exam only at the end of the sequence in spring.
- Students must complete and pass one full-year qualifier course sequence and its corresponding exam in statistics.

#### • Course Work Path:

- Complete at least 42 units of upper-level statistics and data science courses (besides Math 131, Math 132, Math 233, and CSE 131). The GPA for these 42 upper-level units must be at least 3.7. If more than 42 units are taken for a letter grade, the courses with the lowest grades can be omitted when computing the GPA for this purpose.
- Complete at least nine total courses at the 400 level or above, all with a B+ or better. These courses can include the five courses taken for distinction. All of these courses must be classroom courses (not independent study or study for honors), and they must all be taken for a letter grade.

\* These qualifier courses can count toward the additional course requirements for Distinction.

## Additional Information

### Additional Requirements

- All Statistics and Data Science majors must take Math 131 Calculus I, Math 132 Calculus II, and Math 233 Calculus III. There are other ways to fulfill this requirement, including AP credit and Math 203 Honors Mathematics I or Math 204 Honors Mathematics II. Some students may obtain a waiver if they took similar courses before coming to Washington University.
- All required courses (both lower- and upper-level courses) must be completed with a letter grade of C- or better.
- Courses transferred from other accredited colleges and universities can be counted, with the following caveats, if they receive department approval:
  - a. Courses transferred from a two-year college (e.g., a community college) cannot be used to satisfy upper-level requirements.
  - b. At least half of the upper-level units required in a major or minor program must be fulfilled by courses taken in the major's home departments or by approved courses taken in Washington University-approved overseas study programs.
  - c. Courses from the School of Continuing & Professional Studies cannot be used to fulfill major requirements.
- No **upper-level** course used to satisfy a major requirement can be counted toward the requirements of any other major or minor (i.e., no double-counting of courses).

- At most, 3 units of independent study or research work can count toward the major requirements.
- A student cannot declare more than one major or minor in the department.

## Latin Honors

At the time of graduation, the Department of Statistics and Data Science will recommend that a candidate receive Latin Honors (cum laude, magna cum laude, or summa cum laude) if that student has completed the department's requirements for High Distinction or Highest Distinction in Mathematics, including an Honors Thesis. The actual award of Latin Honors is managed by the College of Arts & Sciences.

## The Honors Thesis

Arts & Sciences majors who want to be candidates for Latin Honors, High Distinction, or Highest Distinction must complete an honors thesis. Writing an honors thesis involves a considerable amount of independent work, reading, creating mathematics, writing a paper that meets acceptable professional standards, and making an oral presentation of the results.

## Types of Projects

An honors thesis can take three forms:

1. A thesis that presents significant work by the student on one or more nontrivial statistics or probability problems.
2. A project in applied statistics that involves an in-depth analysis of a large data set. To do an honors thesis involving data analysis, it is usually necessary to have completed SDS 3200, SDS 493, and SDS 494 (or SDS 3211 Statistics for Data Science I and SDS 4211 Statistics for Data Science II) by the end of the junior year and to have the ability to work with statistical software such as SAS, R, or Python.
3. A substantial expository paper that follows independent study on an advanced topic under the guidance of a department faculty member. Such a report would involve the careful presentation of ideas and the synthesis of materials from several sources.

## Process and Suggested Timeline

### Junior Year, Spring Semester:

1. Talk with a faculty advisor about possible projects.
2. Complete the Honors Proposal Form and submit it to Dr. Figueroa-López.

### Senior Year:

1. By the end of January, provide the advisor with a draft abstract and outline of the paper.
2. By the end of February, submit a rough draft, including an abstract, to the advisor.
3. The student and the advisor should agree on a date that the writing will be complete and on a date and time for the oral presentation in mid-March (the deadline is March 31).

## Departmental Prizes

Each year, the department considers graduating majors for several departmental prizes and also awards a prize to a junior. Recipients are recognized at an annual awards ceremony in April where graduating majors each receive a certificate and a set of honors cords to be worn as part of the academic dress at Commencement. Awards are noted on the student's permanent university record.

## Statistics Minor

### Program Requirements

- **Total units required: 27**
  - Six required courses
  - Three elective courses (from list)

### Required Courses

Code	Title	Units
CSE 131	Introduction to Computer Science	3
Math 131	Calculus I	3
Math 132	Calculus II	3
Math 233	Calculus III	3
Math 309	Matrix Algebra	3
or Math 429	Linear Algebra	
SDS 3200	Elementary to Intermediate Statistics and Data Analysis	3
or SDS 494	Mathematical Statistics	
Three upper-level statistics electives chosen from the list below		9
<b>Total Units</b>		<b>27</b>

### Statistics Electives

Code	Title	Units
SDS 322	Biostatistics	3
SDS 420	Experimental Design	3
SDS 434	Survival Analysis	3
SDS 439	Linear Statistical Models	3
SDS 4392	Advanced Linear Statistical Models	3
SDS 459	Bayesian Statistics	3
SDS 460	Multivariate Statistical Analysis	3
SDS 461	Time Series Analysis	3
SDS 462	Mathematical Foundations of Big Data	3
SDS 475	Statistical Computation	3
SDS 493	Probability	3
SDS 494	Mathematical Statistics	3

SDS 495	Stochastic Processes	3
SDS 496	Topics in Statistics	3
SDS 5061	Theory of Statistics I	3
SDS 5062	Theory of Statistics II	3
SDS 5071	Advanced Linear Models I	3
SDS 5072	Advanced Linear Models II	3
SDS 5531	Advanced Statistical Computing I	3
SDS 5532	Advanced Statistical Computing II	3
SDS 5595	Topics in Statistics: Spatial Statistics	3
SDS 579	Topics in Statistics	3
SDS 586	Topics in Statistics	3

## Additional Information

- All required courses (both lower- and upper-level courses) must be completed with a letter grade of C- or better.
- Math 318 Introduction to Calculus of Several Variables and Math 308 Mathematics for the Physical Sciences cannot both be used to fulfill minor requirements.
- Courses transferred from other accredited colleges and universities can be counted with department approval and with the following caveats:
  - Courses transferred from a two-year college (e.g., a community college) cannot be used to satisfy upper-level requirements.
  - At least 6 of the upper-level units required in a minor must be earned at Washington University or in a Washington University-approved overseas study program.
  - Courses from the School of Continuing & Professional Studies cannot be used to fulfill minor requirements.
- No upper-level course used to satisfy a minor requirement can be counted toward the requirements of any other major or minor (i.e., no double-counting of courses).
- At most, one approved upper-level course from another department may be used for the upper-level courses for the minor.

## Women, Gender, and Sexuality Studies

Faculty and students in the Department of Women, Gender, and Sexuality Studies use an interdisciplinary approach to examine the construction of women, gender, and sexuality throughout the world. The interdisciplinary research and training in our department position our students to be thought leaders and agents in addressing inequality in all of its forms. Our graduates have gone on to work in fields such as business, entertainment, law, medicine, and social work. This community of scholars and activists is committed to doing the critical work of reimagining and producing a more inclusive future.

Among the first of its kind in the nation (est. 1972), the Department of Women, Gender, and Sexuality Studies at Washington University has emphasized the importance of gender and sexuality to such disciplines and interdisciplinary programs as philosophy, psychology, history, education, law, architecture, art history and archaeology, anthropology, political science, international studies, American culture studies, and studies in culture and languages.

Women, Gender, and Sexuality Studies students are often leaders in campus organizations that deal with issues concerning women, gender relations, sexuality, and health.

## Faculty

### Chair

#### Rebecca Wanzo

Professor, Women, Gender, and Sexuality Studies  
PhD, Duke University  
Women, Gender, and Sexuality Studies

### Co-Directors of Graduate Studies

#### Marlon M. Bailey

Professor  
PhD, University of California, Berkeley  
African and African American Studies; Women, Gender, and Sexuality Studies

#### Heather Berg

Assistant Professor  
PhD, University of California, Santa Barbara  
Women, Gender, and Sexuality Studies; Feminist Studies

### Co-Directors of Undergraduate Studies

#### Amy Ciso

Teaching Professor  
PhD, Washington University  
Women, Gender, and Sexuality Studies; German

#### Cynthia Barounis

Senior Lecturer  
PhD, University of Illinois Chicago  
Women, Gender, and Sexuality Studies

### Department Faculty

#### Jami Ake

Senior Lecturer  
PhD, Indiana University Bloomington  
Interdisciplinary Project in the Humanities; Women, Gender, and Sexuality Studies

**Rachel Brown**

Assistant Professor  
PhD, The Graduate Center, City University of New York  
Women, Gender, and Sexuality Studies; Political Science

**Shefali Chandra**

Associate Professor  
PhD, University of Pennsylvania  
Women, Gender, and Sexuality Studies; History

**René Esparza**

Assistant Professor  
PhD, University of Minnesota, Twin Cities  
Women, Gender, and Sexuality Studies; American Studies

**Tamsin Kimoto**

Assistant Professor  
PhD, Emory University  
Women, Gender, and Sexuality Studies

**Andrea Nichols**

Lecturer  
PhD, University of Missouri-St. Louis  
Women, Gender, and Sexuality Studies; Criminology

**Allison S. Reed**

Postdoctoral Fellow  
PhD, University of Chicago  
Women, Gender, and Sexuality Studies

**Trevor Sangrey**

Lecturer  
PhD, University of California, Santa Cruz  
Women, Gender, and Sexuality Studies; History of Consciousness

**Elisabeth Windle**

Lecturer  
PhD, Washington University in St. Louis  
Women, Gender, and Sexuality Studies; English

## Professors Emeritas

**Mary Ann Dzuback**

Professor Emeritas  
PhD, Columbia University  
Women, Gender, and Sexuality Studies; Education; History

## Majors

- Women, Gender, and Sexuality Studies Major (p. 1106)
- Women, Gender, and Sexuality Studies Major, Health Specialization (p. 1110)
- Women, Gender, and Sexuality Studies Major, Politics Specialization (p. 1111)

## Minors

- Women, Gender, and Sexuality Studies Minor (p. 1112)

## Courses

Visit online course listings to view semester offerings for L77 WGSS.

---

### L77 WGSS 100B Introduction to Women, Gender, and Sexuality Studies

This course will provide an introduction to the major and concepts in the interdisciplinary field of women, gender and sexuality studies. We will examine the meanings attached to terms such as "man," "woman," "gay," and "sex." Topics discussed may include the history of feminist movements, masculinity, biological frameworks for understanding gender, intimate violence, sexual identities, and intersectionality. In each section, five seats are reserved for first-year students and sophomores, four seats are for juniors, and five seats are for seniors. Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA, HUM EN: H

---

### L77 WGSS 102 Women in Science: An Introduction

Throughout the centuries, women were interested and involved in the sciences. Their scientific contributions, however, have often been overlooked and their abilities questioned. The 2205 proposition by Harvard's President Larry Summers that women's innate differences explain why fewer women succeed in math and science suggests that women continue to face assumptions about their scientific competence. In addition to examining the history of women's participation in science, this class explores the continuing cultural and economic barriers to women interested in science. Starting with a historical overview of women in science, we look at the contributions of women scientists. We review the numbers of women in various fields with good representation, such as biology, and those with few women, such as physics and computer science. Like the prestigious journal *Science*, we also explore whether women do science differently. This course is restricted to Women in Science Focus program participants. Credit 1 unit. Art: HUM EN: H

---

### L77 WGSS 103 First Sem: Sex & Gender in the Gutter: An Intro to Gender and Sexuality Studies Through Comics

This freshman seminar serves as an introduction to some of the history and concepts important in the field of gender and sexuality studies through graphic storytelling. Topics include the history of feminism in the United States, violence against girls and women, queer theory, intersectionality, and transnational feminism. Please be advised that while we will read comics-most of these texts are not for kids. We discuss traumatic issues and will look at some disturbing images. Please spend some looking at descriptions of the required texts and think about whether or not this class is for you.

Credit 3 units. A&S: FYS A&S IQ: HUM, SD Arch: HUM Art: HUM BU: BA EN: H

---

### L77 WGSS 104 First-Year Seminar: Gender, Sexuality and Settler Colonialism

This course examines settler colonial societies through the lens of gender and sexuality. Central questions of the course include: How is colonialism a fundamentally gendered process? What is settler colonialism and how is it different from/similar to "extractive" or "franchise" colonialism? How does the political, legal and social construction of indigeneity intersect with other social categories such as race, gender, class and sexuality? How have social movements

mobilized against land dispossession globally in ways that incorporate diverse understandings of gender? Looking at various global case studies, we will examine how indigenous feminist scholars and organizers think about and respond to resource extraction, economic exploitation, gender violence, and land theft. Drawing on anti-colonial, queer, indigenous feminist, two-spirit, transnational feminist and anti-capitalist traditions, we will compare settler colonial regimes and modes of organizing across economic, cultural, political, and environmental spheres. This course is for first-year, non-transfer students only.

Credit 3 units. A&S: FYS A&S IQ: LCD, SSC Arch: SSC Art: SSC BU: BA, ETH EN: S

---

### L77 WGSS 106 First-Year Seminar: Feminist and Queer Science and Technology Studies

This course will introduce students to key concepts and ideas emerging from the fields of feminist and queer science and technology studies. Science and scientific practice are commonly understood to proceed from a neutral, objective perspective aimed at producing universal truths. Similarly, technological innovation is understood to be an unquestioned good for human development. Feminist and queer thinkers have critiqued these views along epistemological, methodological, and socio-political lines. They have consistently pointed to both the gaps in scientific knowledge production and the risks of uncritical technological development for reproducing marginalization and oppression. At the same time, feminist and queer thinkers have critically imagined the possibilities of both science and technology as potential forces for addressing social injustice. We will survey a number of these interventions while considering how this work might inform our present contexts. Course is for first-year, non-transfer students only.

Credit 3 units. A&S: FYS A&S IQ: HUM, SC EN: H

---

### L77 WGSS 1135 First-Year Seminar: The World of Cleopatra

Cleopatra -- the last queen of ancient Egypt -- captivated her contemporaries and has fascinated the Western world ever since her famous suicide by asp in 31 BCE. She was a woman of contrasts: Pharaoh of Egypt and Greco-Macedonian queen; seductive woman and shrewd political strategist; a ruthless monarch using every means available to consolidate her position in the face of the encroaching power of the Roman Empire. Through texts and material culture, the seminar will seek to understand Cleopatra in the context both of her native Egypt and of the wider Mediterranean world. We will thus examine the traditions of Pharaonic Egypt; the historical events that brought Egypt under the control of the Macedonian Ptolemies (Cleopatra's dynasty); the wider stage of East-West tension and conquest in which Cleopatra struggled to maintain her power; her relationships (political and personal) with famous men of her day (Caesar, Herod, Mark Antony); her capital city of Alexandria, the largest metropolis of its day; Cleopatra's brilliant court and its luxury arts; and finally the many Cleopatras that have populated art and literature of later times. We will emerge with a sense of Cleopatra, both as a unique individual and as a product of her time.

---

### L77 WGSS 205 Introduction to Queer Studies

This course offers an introduction to the topics, questions, and approaches that characterize the rapidly growing field of lesbian/gay/bisexual/trans/queer studies. Using an interdisciplinary approach, we will explore such topics as the relation between gender and sexual identity, the history of same-sex relations, homophobia and heterosexism, queer cultures, and LGBTQ politics, particularly in the United States. Our focus will be on asking whether and how "LGBTQ" functions as a coherent category of analysis or identity, and we will pay

particular attention to differences (of race, age, gender, sexual practice, class, national origin, temperament, and so on) that are contained within and that often disrupt that category. This course is not open to students who have taken L77 203 or L77 3031.

Credit 3 units. A&S IQ: HUM, SC, SD Art: HUM BU: BA EN: H

---

**L77 WGSS 206 Sexuality and the State: Introduction to Sexuality Studies**

Taking Michel Foucault's idea of biopolitics as a starting point. This course examines the ways in which sexuality has been produced and regulated by the state. Drawing on history, theory, and literature, we will look at contemporary examples of the relationship between the state and sexuality. What assumptions lie behind our ideas of sexuality? How are bodies linked by the prevailing logic of sexuality? How does sexuality inform the way that we see bodies as gendered, raced, or able-bodied. In addition to looking at the relationship between sexuality and capitalism, religion, and nation, this course asks how these ideas are embodied in particular raced and gendered ideologies.

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

---

**L77 WGSS 207 Constructions of Black Womanhood and Manhood in the Black Community**

This course introduces students to everyday and representational experiences of Black women and men. We will explore different understandings of Black gender through engaging scholarly work and creative texts/performances/visual representations. How is the construction of gender informed by race and other categories of difference (e.g., sexuality, class)? How might we gain a better understanding of how gender is (re)constructed within American society? What role does gender play in Black community politics and issues? This course is for first-year and sophomore students only.

Credit 3 units. A&S IQ: SSC, SC Arch: SSC Art: SSC BU: BA EN: S

---

**L77 WGSS 2118 First Year Seminar: Angels, Prostitutes and Chicas Modernas: Women in Latin American History**

Women have been active players in the construction of Latin American nations. In the last two decades, leading scholars in the field have taken up the challenge of documenting women's participation. This research explosion has produced fruitful results to allow for the development of specialized courses. This course looks at the nation building process through the lens of Latin American women. Students will examine the expectations, responsibilities and limitations women confronted in their varied roles from the Wars of Independence to the social revolutions and dictatorial regimes of the twentieth century. Besides looking at their political and economic lives, students will explore the changing gender roles and relations within marriage and the family, as well as the changing sexual and maternal mores.

---

**L77 WGSS 214C Gender and Texts**

Discussion of canonical and non-traditional texts, most by women. Emphasis on how these texts represent gender, how literature contributes to identity-formation, and how women have used the written word to change their social and imaginative conditions.

Credit 3 units. A&S IQ: HUM, SC, SD Art: HUM BU: HUM EN: H

---

**L77 WGSS 2232 Gender and Sexuality in the African Diaspora**

This course is an interdisciplinary examination of gender and sexuality in the Africa Diaspora. We will study the complexities of gender and sexual experiences, practices, identities, and community formations within select cultural contexts. Through lectures, and

discussion and creative activities, films, and reading materials, both fiction and nonfiction, we will examine how genders and sexualities are constructed, experienced, and lived in various socio/cultural geographies throughout the Black world.

Same as L90 AFAS 2232

---

**L77 WGSS 270A Sophomore Seminar: Globalization and its Discontents**

The metanarrative of globalization and global inter-connections privileges the story of markets, growth, and mobility. That story is relentlessly optimistic, and simultaneously, devoid of an understanding of gender, sexual difference or race. In this course, we take a different approach. We discard the more conventional "metrics" of globalization by focusing instead on another equally global story: the manner by which human beings have been gendered and racialized over time. Doing so allows us to revisit globalization through its own deceptions, its interconnected secrets. We confront a different set of questions: how has intimacy shaped global mobility, what is the relationship between caste and MAMAA, between custom and the movement of capital, between "slums" and scale, between outsourcing and incarceration, how does the normative family propel global racial regimes? Most crucially, how and why is the emotional and intimate story of globalization concealed? The seminar class utilizes a wide array of sources, historical documents, scholarly critiques, novels and film and largely considers the longer, global history of India as the case study. Our specific focus will be on the secretive interconnections of slavery, seclusion, settlers, servitude, surrogacy, and scholarship, as we take a deep dive into the disguises, and the more hidden aspects, of globalization.

Credit 3 units. A&S IQ: HUM, LCD BU: BA, IS EN: H

---

**L77 WGSS 280A Sex in Italian Culture and Media**

From XIXth century hotbed of sexual tourism to XXist century idyllic scenario of Guadagnino's steamy romance "Call Me by Your Name," Italy has been cast globally as an imaginary site of sexual freedom. Throughout the 20th century, Italy's sexual culture and mores have been shaped more by a climate of discretion, secrecy, and scandals than by overt identity politics. However, between the early 70s and the first Rome Pride in 2000, an Italian movement of sexual activism featuring activists, writers, and artists have impacted globally the ways in which we experience and talk about bodies, desires, and sexual identities nowadays. How do we think, represent, and talk sex in Italian culture? What is queer about Italian culture and how does "queer" translate into Italian language? This course introduces students to the study of Italian cultural productions on sexuality between discretion and identity politics spanning early sexual work, accounts of homosexuality under Fascism, "transsexualita" Italian-style, sexual manifestos, photographic archives, AIDS fiction, LGBTQI films and YouTube videos, transnational queer comedies, drag king performances, etc. The class is taught in English with no prerequisite necessary. No Final.

**L77 WGSS 299 Independent Study: Internships**

This course number is to be used for internships only.

Credit variable, maximum 3 units.

---

### L77 WGSS 2991 Undergraduate Teaching Assistant

In this course an advanced undergraduate can assist a faculty member in the teaching of an introductory level Women and Gender Studies course. Students can enroll in one course only after having obtained permission from a faculty member who is willing to supervise. Students will not engage in any grading but may serve in a variety of other capacities - as discussion leaders, in providing logistical support, or in otherwise assisting with the transmission of course material. Credit variable, maximum 3 units.

---

### L77 WGSS 3002 Feminist Fire!: Radical Black Women in the 20th Century

Black women have been at the forefront of the Black radical tradition since its inception. Often marginalized in both the scholarship and the popular memory, there exists a long unbroken chain of women who have organized around the principles of anti-sexism, anti-racism, and anti-capitalism. Frequently critical of heterosexist projects as well, these women have been the primary force driving the segment of the Black radical tradition that is commonly referred to as Black Feminism. Remaining cognizant of the fact that Black Feminist thought has also flourished as an academic enterprise -- complete with its own theoretical interventions (e.g., standpoint theory, intersectionality, dissemblance) and competing scholarly agendas -- this course will think through the project of Black Feminism as a social movement driven by activism and vigorous political action for social change. Focusing on grassroots efforts at organizing, movement building, consciousness raising, policy reform, and political mobilization, this course will center Black Feminists who explicitly embraced a critical posture toward capitalism as an untenable social order. We will prioritize the lives and thoughts of 20th-century women like Claudia Jones, Queen Mother Audley Moore, Frances Beal, Barbara Smith, Audre Lorde, and Angela Davis as well as organizations like the Combahee River Collective, the Chicago's Black Women's Committee, and the Third World Women's Alliance. At its core, this course aims to bring the social movement history back into the discourse surrounding Black Feminism.

### L77 WGSS 3013 On Love and Intimacy: Theorizing Kinship in the Multiple

Love and Intimacy are terms that have a lot of cultural cache. In this course, we will analyze the ways in which intimacy has been embedded within certain discourses of privacy, rights, and individuality. In addition to the couple form, we will examine friendship, celibacy, therapy and

relationships people form with pets and with objects to flesh out intimacy's multiplicities to see how these forces impact these affective tides. This course will bring together history, critical theory, and film to think through various expressions of intimacy and what it means to relate to the other. Prerequisites: Any 100- or 200- level Women, Gender, and Sexuality Studies course or permission from the instructor.

Credit 3 units. A&S IQ: HUM, SC, SD Art: HUM BU: BA, ETH EN: H

---

### L77 WGSS 3014 Queering Citizenship: Gender/Abolition

"Queering Citizenship: Gender/Abolition" asks how the struggle for gender self-determination overlaps with struggles to refigure, transform, and abolish political institutions. We will ask: How have queer thinkers/social movements in the last four decades helped create collective forms of life and social organization beyond the state and the prison-industrial complex? Global resistance to citizenship, borders, carceral violence and gender injustice makes these question unavoidable for queer and feminist thinkers and activists. Through our study of queer theory and abolitionist politics, we will consider the costs of exclusion from, as well as inclusion in, citizenship regimes transnationally and state discourses of LGBT recognition. The course considers connections between heteronormativity and citizenship; carceral and gender violence; state support for the white, middle-class nuclear family; the policing of intimacy; queer liberation and abolition democracy; gender anarchy and political anarchism; and the surveillance of gender and the political economy of prisons and policing. In each of these areas, we will attend to the politics of transgender recognition; gay imperialism; campaigns to defund the police; legislative violence against transgender youth; and overlaps between global abolitionist movements and the struggle for bodily autonomy and sovereignty. Pre-Requisite: L77 100B or consent of instructor.

Credit 3 units. A&S IQ: LCD, SSC, SD Arch: SEM, SSC Art: SSC BU: BA EN: S

---

### L77 WGSS 302A Black Feminist Theory

What makes Black feminist theory unique? Whose theorizing is considered "theory" worthy of canonizing? What are the different strands of Black feminist thought? What has Black feminist thought contributed to academic and popular culture? Through engaging with primary text and producing their own text, students in this seminar will develop answers to these questions through exploration of (contemporary) Black feminist thought. The course has no specific prerequisites, but students should be prepared for intensive study of challenging ideas and the application of these ideas in new contexts relevant to modern society. This course counts toward the program's Theory component which Sociology majors and minors must complete to fulfill degree requirements.

Same as L40 SOC 3002

Credit 3 units. A&S IQ: SSC, SC Arch: SSC Art: SSC EN: S

---

### L77 WGSS 303 Gender and Education

An examination of educational experiences, practices, and institutions across multiple levels (PK-university) using gender as a critical lens. Key topics include common beliefs, practices, and expectations related to gender in educational spaces, as well as the intersections between gender and other identities that may influence educational experiences and outcomes. Readings are drawn from multiple disciplines, including sociology, history, psychology, and philosophy. Students should be prepared to analyze their own gendered educational experiences in the context of the scholarship explored in the course, while also listening respectfully and reflecting on the experiences shared by classmates. Enrollment Note: Undergraduate students must enroll in Educ. 303, and graduate students must enroll in Educ. 5003.

Same as L12 Educ 303

**L77 WGSS 3031 Queer Theory**

This course provides students with an interdisciplinary examination of the history, politics, and cultural expressions of gay and lesbian communities in American culture. It explores the ways lesbians, gay men, and bisexual and transgender people construct, participate in, and resist various constructions of gender and sexuality. We question desire and social/cultural power, the nature and power of social change, and so on. Particular attention is paid to examining the roots and effects of heterosexism and homophobia, the call for hate crime legislation, the ethics of "outing" and "passing," the impact of AIDS, partnership recognition, and domestic violence in LGBT communities. Throughout the course, students are encouraged to examine the intersections of gender, race, ethnicity, and social class with sexual orientation.

---

**L77 WGSS 3032 Music and Queer Performance**

This course examines how music serves as a delightful site for performing, negotiating, and living queerness. Some questions we will ask include: How does queer musical performance inhabit the full gamut between conformity and subversion, irony and sincerity, or camp and authenticity? How do performers use or resist tropes of belonging, passing, and coming out to constitute queer performance? How do singers manipulate the sound of their voice, the gendered associations carried by that sound, and the assumptions about the body which produces it? Are queer musical acts a mode of performance or a way of being, and who decides? We will analyze a range of examples from the past and from contemporary popular culture: soft masculinities, cowboy and country personas, cross-dressing in music theater, lip-syncing drag queens and kings, high-femme divas, and performers of androgynous, cyborg, and post-human aesthetics. The parameters for what counts as queer performance are capacious, and students will have plenty of opportunities to contribute their own examples and case studies to the course.

**L77 WGSS 3041 Making Sex and Gender: Understanding the History of the Body**

This course provides an overview of history of the body in Europe and the United States from medieval to modern times using feminist and queer theoretical frameworks. We explore the shifting authority in defining a "normal" body as the fields of medicine and science become professionalized, the cultural interaction with science and medicine in the modern era, and how aesthetics and popular perception of science inform the notion of ideal body, gender, race, sex, and sexuality in the modern era. Prerequisite: Any -100 or -200 level Women, Gender, and Sexuality Studies course or permission of instructor.

**L77 WGSS 308 Masculinities**

This course critically examines the subject of masculinity through a number of themes including history, society, politics, race, gender, sexuality, art and popular culture. Interdisciplinary readings are drawn from the fields of sociology, anthropology, literature, history, art history and cultural studies. We will examine the challenges presented to 'masculinity' (and a variety of responses) by the late-twentieth century emergency of gender studies. Our goal is to come to a working definition of masculinity/ies and gain an understanding of some past, current and possible future masculine behaviors, mythologies, ideologies, experiences and identities. Previous coursework in Women, Gender, and Sexuality Studies strongly recommended but not required. ATTENDANCE MANDATORY FIRST DAY IN ORDER TO RESERVE YOUR CLASS ENROLLMENT.

**L77 WGSS 30GS "I Know It When I See It." A History of Obscenity & Pornography in the United States**

When Supreme Court Justice Potter Stewart was asked to describe his test for obscenity in 1964, he responded: "I know it when I see it." But do we? What is pornography and how has it changed over the last two and a half centuries? What role does pornography play in our society and how is our society reflected in its contents? This course seeks to explore these questions and more and actively engages in the debate and controversies inherent to discussions of pornography in America. In this course we will engage with primary sources to track the changing nature of pornographic material- written, physical, and visual- and to recognize the way pornography reflects changes in the wider social milieu, as well as secondary and theoretical sources to contextualize and provoke our understanding of patterns of pornography use and regulation. It is likely that our definition of pornography will change over the semester- our initial definition is broadly bounded by material considered pornographic by its contemporaries and that which is created with the intent of erotic simulation.

---

**L77 WGSS 310I An Intellectual History of Sex and Gender: Text and Traditions**

When did sexuality begin? Is it safe to assume that gender constructions are universal and timeless? In this course, we will engage with a broad range of readings that serve as primary texts in the history of sexuality and gender. Our aims are threefold: (1) to analyze the literary evidence we have for sexuality and gender identity in Western culture; (2) to survey modern scholarly approaches to those same texts; and (3) to consider the ways in which these modern theoretical frameworks have become the most recent set of primary texts on sexuality and gender.

**L77 WGSS 3103 Sex and Money: Economies of Desire**

This interdisciplinary course explores the connections between sexuality and money. First, we investigate the role of money in sexual life that appears to exist outside of the market. How does heterosexuality reproduce capitalism, and are there sexual formations that escape capitalism's reach? Can there be meaningful consent so long as there is rent to pay? How do economics, race, and colonialism shape desire? What is the role of money in dating and marriage, and should these be understood as forms of legalized prostitution, as Marxist feminists and sex workers have long suggested? Next, we turn to sex work to explore how explicit economic exchange shapes sexuality. What power dynamics does money engender, and how do sex workers navigate and subvert them? Is sex work merely an extension of the "work we do as women," as sex worker activists wrote in a 1977 manifesto? Finally, we close with the question of whether women have better sex under socialism. What economic systems make way for sexual liberation, and how might projects for economic justice center demands for better sexual futures?

**L77 WGSS 312W Topics in English and American Literature: 30 Years of Queer**

Starting with Allan Bloom's *The Closing of the American Mind*, a book that helped re-ignite the Culture Wars, this course will consider the debates and problems that pervaded American culture during the 1990s. From the end of the Cold War to the sexual scandals that rocked Bill Clinton's presidency, from the emergence of the Internet to the rise of grunge and rap, the 1990s were a time of vast change in American culture. It was a period when we, as a nation, reconsidered the legacy of the 1960s, the Reagan revolution, and the end of the Cold War, a time of economic expansion and cultural tension. In our consideration of this period, we will take a multidisciplinary approach when tackling a variety of materials—ranging from literary fiction (Philip Roth's *The Human Stain*, Jonathan Franzen's *The Corrections*) and popular films (Spike Lee's *Do the Right Thing* and *The Cohen Brothers' The Big Lebowski*) to the music of Nirvana and Public Enemy—in an attempt to come to a better understanding of our recent history. Throughout the semester, we will pursue the vexed cultural, political, and historical questions that Americans faced in the years between the fall of the Berlin Wall and the terrorist attacks of September 11th, 2001, and consider how literary texts imagined this period of American history.

**L77 WGSS 3130 Sexuality in Early Christianity**

What did Jesus of Nazareth and his early followers teach about sexuality in terms of marriage, adultery, divorce, the virtues of procreation and celibacy, same-sex relationships, and erotic desire? How and why did ancient Christians take different stances on these issues, and how do these traditions continue to inform sexual ethics and gender roles today? In this course, we will study these questions by examining key passages from the teachings of Jesus in the Gospels, Paul's letters, writings of early church leaders, martyr propaganda, monastic literature, and apocryphal books deemed heretical. We will also consider the interpretations of contemporary historians of religion informed by recent trends in sexuality and gender theories.

**L77 WGSS 3141 The Racial and Sexual Politics of Public Health**

Race and sexuality have long been concerns of public health. From hygienic campaigns against Mexican immigrants in early-1900s California to the 1991 quarantine of Haitian refugees with HIV at Guantanamo Bay, race and sexuality have proven crucial to how society identifies health and, by extension, determines who is fit to be a citizen. This interdisciplinary course interrogates the intersections of race, sexuality, and medicine, discussing how each domain has been constitutive of the other in the American context. Via feminist and queer theorizing, we will examine the political and economic factors under which diseases, illnesses, and health campaigns have impacted racial and sexual minorities over the last two centuries. An orienting question for the course is the following: How has the state wielded public health as a regulatory site to legitimize perceived racial differences and to regulate ostensible sexual deviations? Through primary and secondary sources, we will likewise explore the various forms of "health activism" undertaken by these very same targeted populations. Themes to be addressed will include the medicalization of racial and sexual difference; activism both in and against health institutions; and the roles of race, class, gender, sexuality, and disability in contemporary health issues. Case studies include the Tuskegee syphilis experiment; the sterilization of black, Mexican, Puerto Rican, and Native American women; the medicalization of homosexuality during the Cold War; and the role of mass incarceration in the diffusion of HIV. At a moment in time when access to health continues to be shaped by categories of social difference, understanding the role of public health in the normalization and subversion of racial and sexual hierarchies in the West is more pertinent than ever.

---

**L77 WGSS 3152 Sex and Gender in Greco-Roman Antiquity**

In this course, we will explore how ancient Greeks and Romans thought about gender and sexuality. We will consider questions such as: which traits and behaviors did the Greeks and the Romans associate with masculinity and with femininity? What can we tell from our sources about those who did not fit neatly into this binary? How did ancient Greeks and Romans think about male and female anatomy and psychology? How did the Greeks and the Romans construct sexuality and how did they approach homosexual and heterosexual relationships? How did they think about erotic desire? How did ancient laws and institutions circumscribe the lives of men and women, and how did they contribute to the construction of gender and sexuality? How did class, ethnicity, and age intersect with ideas about gender and sexuality in antiquity? We will read an array of ancient texts in translation, we will consider various theoretical viewpoints, and we will move toward a better understanding of how gender and sexuality were constructed in antiquity. Ultimately, we will reflect on how our exploration of ancient ideas about these issues can help us understand better how we think about them today.

---

**L77 WGSS 3153 The Women of Greek Tragedy**

This course examines the role of women in Athenian drama. Students will read English translations of the works of the three major tragedians -- Aeschylus, Sophocles, and Euripides -- and their near contemporary, the comedian Aristophanes. Direct engagement with ancient texts will encourage students to develop their own interpretations of and written responses to the political, social, and ethical manipulation that these mythological women were compelled to endure and the subtle ways in which they appear to exercise power themselves. Selected scholarly articles and book chapters will help students to contextualize these ancient dramas in their culture of origin. Because such issues continue to preoccupy both sexes today, students will see how Greek tragedy addresses perennial historical and cultural concerns through the examination of adaptations of Greek tragedies ranging from Seneca

in ancient Rome to Spike Lee's "Chi-Raq" and Luis Alfaro's "Mojada: A Medea in Los Angeles." The final research paper will encourage students to consider how a specific female character from antiquity is transformed for a "modern" dramatic audience.

---

**L77 WGSS 3171 Community-Engaged Learning: Gender and Incarceration**

Since President Reagan declared the war on drugs in the 1980s, the numbers of women in prison have increased dramatically. Due to mandatory minimum sentencing requirements and increasingly harsh sentences for nonviolent offenses, the U.S. prison population has swelled to unprecedented numbers over the last few decades. While women are the fastest growing population in prison, men still make up the vast majority of prisoners, and the system is largely geared toward men and their needs. In this course, we will explore the historical treatment of and contemporary issues related to women and girls who get caught up in the criminal justice system. Through readings, films, reflective writings, and facility tours, we will explore the impact of incarceration on women and their families. Although our scope will be national, we will focus on the corrections system in Missouri. Note: This is a community-engaged learning class, which means that it combines classroom learning with outside work at a community organization. In addition to regular class time, there is a service requirement that will necessitate an additional four to five hours per week. There are several organizations with which we are partnering, and students will be assigned to one of these groups to work with for the entire semester. Moreover, there is a required all-day field trip to visit the women's prison in Vandalia, Mo., and the men's prison in Bowling Green, Mo. If students cannot commit to these out-of-class obligations, which are required to pass the course, they should not register for this course. Prerequisite: Intro to Women and Gender Studies or Intro to Sexuality Studies. Juniors and seniors only. Waitlists controlled by Department; priority given to WGSS majors.

**L77 WGSS 3172 Queer Histories**

Queer history is a profoundly political project. Scholars and activists use queer histories to assert theories of identity formation, build communities, and advance a vision of the meanings of sexuality in modern life and the place of queer people in national communities. This history of alternative sexual identities is narrated in a variety of settings—the internet as well as the academy, art and film as well as the

streets—and draws upon numerous disciplines, including anthropology, geography, sociology, oral history, fiction and memoir, as well as history. This discussion-based course will examine the sites and genres of queer history, with particular attention to moments of contestation and debate about its contours and meanings.  
Credit 3 units. A&S IQ: HUM, SC, SD Arch: HT BU: BA EN: H

---

**L77 WGSS 3173 Community-Engaged Learning: Documenting the Queer Past in St. Louis**

Around the United States and the world, grassroots LGBTQ history projects investigate the queer past as a means of honoring the courage of those who have come before, creating a sense of community today as well as building an understanding of the exclusions and divisions that shaped these communities and that continue to limit them. In this course, we participate in this national project of history-making by helping to excavate the queer past in the greater St. Louis region. Course readings will focus on the ways that sexual identities and communities in the United States have been shaped by urban settings since the late 19th century, with particular attention to the ways that race, class, and gender have structured queer spaces and communities. In their community service project, students will work with local LGBTQ groups, including the St. Louis LGBT History Project, to research St. Louis's queer past. Each student will also conduct an oral history interview with an LGBTQ community member. Note: This is a community-engaged learning class, which means that it combines classroom learning with outside work at a community organization. In addition to regular class time, there is a service requirement, which necessitates an additional three to five hours per week. Before beginning the community service component, students must complete required training. Prerequisite: Introduction to Women, Gender, and Sexuality Studies; Introduction to Queer Studies; or permission of instructor.

---

**L77 WGSS 3174 Community Engaged Learning: Feminist and Queer Community Praxis**

Using St. Louis as a lens, the course focuses on examining the imbrication of class, gender, race, and sexuality in the US and the variety of community efforts that use feminist and queer principles to enact social change. Course readings present theories of class, gender, race, and sexuality as well as visions of community response. Service work in community engagement placements enables students to ask how their understanding of social change is challenged when put into practice and how communities can and should shape academic discourse. Course assignments ask students to evaluate both academic and community praxis (theory in practice) with the goal of creating a more just and equitable St. Louis. Students can do engagement hours with a group with which they already have established a relationship, but must notify instructor when enrolling in the course. Course enrollment is limited to Juniors and Seniors. Course expects significant community work outside of class meeting hours and thus carries 4 credits.  
Credit 4 units. A&S IQ: HUM, SC Arch: HUM Art: HUM EN: H

---

**L77 WGSS 3180 The Abuse Crisis in Modern Christianity**

For over a quarter-century, journalists have broken story after story about sexually abusive clergy in the U.S., many of them serial abusers of children and adolescents. While most accounts have focused on Catholic priests, many have also emerged of abusive evangelical and other Protestant ministers. The stories have illuminated how church bureaucrats have consistently protected abusers and subverted the efforts of victims and their families to seek recompense, accountability, and justice. These protections have often succeeded because of churches' political connections to law enforcement and legislators who have helped hide perpetrators and stymie survivors. Together we will analyze this cautionary tale about religion and politics by

contextualizing it within the broader history of Christianity in the United States and beyond. Is this a case simply of a few bad apples or of institutional corruption? How has the church's response been shaped by fear of scandal, antipathy toward secularism, and theological teachings on gender and homosexuality? How does sexual abuse fit into the history of the church as a hierarchical institution? What challenges has the crisis posed to people of faith who are committed to the church, and can trust be repaired? Readings include legal case studies, internal church correspondence, victims' statements and criminal justice reports, documentary films and memoirs, and both journalistic and scholarly analysis of the clergy sex abuse crisis in the U.S. church. **WARNING:** Many of our readings contain difficult accounts of abuse as well as the subsequent trauma most victims suffer. If this subject matter is triggering for you and you'd like to speak with me about whether or not to take it, I'll be glad to help you think through it. Same as L57 RelPol 3180

### **L77 WGSS 3181 Gender, Sexuality and Power in Brazil**

This course examines the nexus of gender, sexuality, and power in Brazil through an interdisciplinary lens. We will aim to understand how varying understandings of gender and sexuality have impacted the development of Brazilian society in history and continue to shape contemporary society and politics. We will pay special attention to the ways in which the intersections of race, gender, sexuality, class, ethnicity, and so on impact people's lived experiences and how heteronormativity and homophobia shape current politics. We will take an intersectional feminist approach to analyze topics such as slavery in colonial Brazil, national aspirations to modernity, authoritarian repression and "moral panics," domestic labor, motherhood, sex tourism, Brazilian feminisms, and LGBTQ+ activism. Scholarly work from various fields of study -- with an emphasis on gender studies, history, and anthropology -- will be supplemented by documentaries, film, podcasts, and other media. This is a Writing Intensive and a Social Contrasts class in the IQ curriculum. Prerequisite: L45 165D, or two courses on Latin American or Women and Gender Studies, or permission of instructor.

### **L77 WGSS 319A The Body in Brazil: Race, Representation, Ontologies**

This course is an introduction to various ways of understanding, representing, and performing the body in Brazil. Course materials will draw on insights from anthropology, the medical humanities, and science and technology studies in order to approach the body not just as biological material but also in its social, cultural, and spiritual dimensions. We will cover topics such as the importance of race and ethnicity since the time of colonization, sexualized media representations of gendered bodies, how some bodies are cast as disposable or "out of place" in contexts of social inequality, indigenous ways of viewing the body in relation to the natural and spiritual world, the politics of disability and access, and constructions of the "body politic" in the formation of national identity through ideas such as "antropofagia" (cultural cannibalism). Throughout, we will pay particular attention to how race, gender, sexuality, and disability shape the lived experiences of Brazilians. Topics will include the impact of slavery in the construction of the body in Brazil, the role played by race in the construction of discourses of corporality, and the development

of beauty stereotypes and practices such as the medical industry of plastic surgery, among others. Students will analyze visual materials, ethnographies, historical texts, and internet sources in dialogue with critical theories from the social sciences and humanities, assessing how the body "matters" in a variety of ways that reflect Brazil's cultural diversity while also starkly highlighting its persistent racialized and gendered social inequities. These materials will form the basis of our class discussions and written assignments. The course will be taught in English. Prerequisite: L45 165D, L45 304, or another course on Latin America suggested.

### **L77 WGSS 3203 Bodies Out of Bounds: Feminist and Queer Disability Studies**

For many, "disability" seems like a concept with a relatively stable definition and a fairly straightforward relationship to questions of health and well-being. But in the past few decades, scholars and activists have begun to challenge the notion that disability is a tragedy to be medically prevented or inspirationally "overcome." These scholars have instead focused their attention on the social aspects of disability: how it came to be constructed as a category of identity, the physical and institutional barriers that have excluded disabled people from public life, and the distortion of disabled lives within the mainstream representation. More recently, writers have turned their attention to the way disability has been defined through norms of race, gender, and sexuality. These intersections will be the focus of this course. From the diagnoses of hysteria to debates over selective abortion and the recent proliferation of breast cancer memoirs, we will consider how the politics of disability has both complemented and complicated the usual goals of feminism. We will also explore some of the ways that disability studies as a discipline has redefined and in turn been shaped by the fields of queer theory, masculinity studies, and critical race theory. We will consider how deviant genders have been the target of medicalization, the relationship between "corrective surgery" and compulsory gendering, the desexualization and hypersexualization of disabled bodies, and the role that medicine has played in justifying colonial conquest and perpetuating racial inequalities. Prerequisite: any 100- or 200-level Women, Gender, and Sexuality Studies course.

---

### **L77 WGSS 3221 Girls' Media and Popular Culture**

This course will analyze girls as cultural consumers, mediated representations, cultural producers, and subjects of social anxiety. Readings will cover a range of media that have historically been associated with girlhood, including not only film, television, and digital media but also dolls, magazines, literature, and music. We will explore what role these media texts and technologies have had in the socialization of girls, the construction of their gendered identities, and the attempts at regulation of their behavior, sexuality, and appearance. Although the course will focus on girlhood media since the 1940s, we will consider how constructions of girlhood identity have changed

over time and interrogate how girlhood identity intersects with race, sexuality, and class. The course will examine important debates and tensions arising in relation to girls' media. We will evaluate concerns and moral panics about girls and their relationship to or perceived overinvestment in media and compare and contrast this with accounts of girls as active media consumers and producers. We will critically analyze how girls have been understood to negotiate agency in relation to commercialized culture -- how they have been represented as wielders of "girl power," as passive or active consumers, as fans, and as media producers themselves. We will also analyze attempts to intervene in girls' media and popular culture and consider how these interventions have attempted to empower, inspire, or regulate girls or how they have worked to reinforce or challenge gendered understandings of childhood.

### **L77 WGSS 3226 A Rainbow Thread: A History of Queer Identities in Judaism and Islam**

The notion that gender and sexuality minorities are forbidden or simply do not exist within traditional Judaism and Islamic traditions is an assumption that has been questioned in recent years. For these scholars and activists, it is not up for debate whether someone can be queer and Jewish or queer and Muslim. Therefore, what follows is an exploration of how to resurrect gender non-conforming interpretations of religious texts and rediscover the spectrum of gender and sexual identities that have always existed within Judaism and Islam. The course is divided into three parts. First, we will examine the religious textual traditions of both faiths to establish the space for queer identities in both the Qur'an and Torah as well as the traditions of Hadith and Talmud. Second, we will study key communities such as medieval Iberia, the Ottoman Mediterranean, Hasidic communities in Eastern Europe, Qajar Iran, and the colonial empires of the Middle East. This survey will show the influence European Christian dominance had (or did not have) on the evolution of Jewish and Islamic gender and sexual norms from pre-modern times through the 20th century. Finally, we will examine the 21st century by reading the memoirs of trans Muslims and trans Jews in order to analyze the ways in which contemporary queer Jewish and Islamic individuals frame their experiences and tell their stories of faith with agency, in their own words.

### **L77 WGSS 323A Sex Trafficking**

Sex trafficking is a complex social problem with multiple contributing factors largely rooted in intersecting inequalities. Both in the United States and on a global level, interrelated inequities in gender, sex, sexual orientation, gender identity, power, class, opportunity, education, culture, politics, and race are among the social phenomena that contribute to sex trafficking/CSE victimization. In this course, we will examine the dynamics of sex trafficking on a local and global level from various feminist and political perspectives, with particular attention given to the sexed and gendered social and structural conditions that impact sex trafficking. This course will cover the extent and nature of the problem, as well as current debates in the field, including demand, prevalence, experiences of survivors, types of sex trafficking, methods of traffickers, the role of weak social institutions, cultural dynamics, and global power dynamics. The course will also examine international, federal, and state legislation as

well as organizational and grassroots efforts to prevent and respond to sex trafficking victimization. The aim of this course is to provide students with a holistic understanding of sex trafficking drawing from interdisciplinary sources and presenting a variety of perspectives. Credit 3 units. ### **L77 WGSS 3290 American Religion, Law, and Sexual Politics**

Following philosopher Michel Foucault's vital insight that "sexuality is a major transfer point in the relations of power," this course will explore the complex ways in which theological ideas and religious movements have shaped legal doctrines relating to sex, gender, and sexuality in the United States from roughly the turn of the twentieth century to the present. It will examine how and why religious groups have mobilized within the legal arena at various points in US history, the devotional commitments that influence their activism, the constitutional claims and counterclaims that have emerged over time as a result of legal contestation, and the lived impact of various judicial decisions. To do so, the course will be structured thematically around three overlapping constitutional domains: (1) equal protection rights for women and sexual minorities, (2) substantive due process commitments to privacy and bodily autonomy, and (3) free speech principles related to sexual self-expression. The impact of religious advocacy on contemporary controversies such as drag show bans, restrictions on reproductive healthcare, religious exemptions to LGBT non-discrimination laws, pornography regulation, gender-affirming care access, and more will all be covered. By applying the theories and methods of critical religious studies, this course also takes questions of American religion and sexual politics as a starting point for introducing undergraduate students to legal studies more generally. Through classroom conversations and course texts, students will become familiar with the structure of the American legal system, different methods of constitutional interpretation, theoretical concerns that shape legal thinking, and critical reading skills that may be used to approach legal texts such as judicial opinions. Students from all academic backgrounds interested in gaining increased literacy in American law are encouraged to enroll--no prior exposure is required. Same as L57 RelPol 321

### **L77 WGSS 330A Native American/Euro-American Encounters: Confrontations of Bodies and Beliefs**

This course surveys the history and historiography of how Native Americans, Europeans, and Euro-Americans reacted and adapted to one another's presence in North America from the 1600s to the mid-1800s, focusing on themes of religion and gender. We will examine the cultural and social implications of encounters between Native peoples, missionaries and other European and Euro-American Protestants and Catholics. We will pay particular attention to how bodies were a venue for encounter-through sexual contact, through the policing of gendered social and economic behaviors, and through

religiously-based understandings of women's and men's duties and functions. We will also study how historians know what they know about these encounters, and what materials enable them to answer their historical questions.

### L77 WGSS 330S Topics in Gender and American Culture

This topics course introduces students to gender as a category of analysis. Students investigate why and how gender becomes infused with cultural meanings. Through various methodological approaches, they explore how these socially constructed meanings shape Americans' everyday lives and societal dynamics more broadly. The topic varies by semester; common focal points include the intersection of gender with race and ethnicity, social class, health care, education, and politics. This course fulfills the Social Differential requirement. Please see the course listings for a description of the current offering.

### L77 WGSS 3313 Topics in Gender & Religion

This course examines the ways in which issues pertaining to gender are salient in U.S. politics. The course is divided into four parts. First, we will examine theoretical approaches to the study of gender and politics, including the use of gender as an analytical category, and the relationship between gender, race, ethnicity and power. Second, we will study gender-based social movements, including the suffrage and woman's rights movements, women's participation in the civil rights movement, the contemporary feminist and anti-feminist movements, the gay rights/queer movement and the women's peace movement. Third, we will examine the role of gender in the electoral arena, in terms of how it affects voting, running for office and being in office. Finally, we will examine contemporary debates about public policy issues, including the integration of women and gays in the military, sexual harassment, pornography and equal rights.

### L77 WGSS 335 Feminist Theory

This course begins by examining the 19th and early 20th century historical context out of which contemporary feminist theory emerged. We then turn to the 1960's and the emergence of the "Second Wave" of Feminism. We focus on some of the major theories that developed during the 1960's, 1970's and 1980's and the conflicts and internal problems these theories generated. We then examine some of the ways these problems were resolved in feminist theory of the 1990's. The last part of the course focuses on topics of concern to contemporary feminists -- such as the family, sexuality and globalism -- and the contributions feminist theory brings to these topics. Open to graduate students by enrolling in L77 WS 500; contact the Women, Gender, and Sexuality Studies office for details.

### L77 WGSS 337 Women's Literature: Before Thelma and Louise: American Women's Adventure Stories

American literature is filled with adventurers and adventure stories. Some of the most exciting tales were written by women. Their adventures include Mary Rowlandson's autobiography of her capture by and life with the Indians, E.D.E.N. Southworth's story of a nineteenth-century heroine who rescues imprisoned maidens and fights duels, and Octavia Butler's science fiction account of a twentieth-century black woman who is transported back through time to an antebellum

plantation. Until recently, American women authors and their stories were largely dismissed because they were perceived to focus on domestic concerns, which were seen as narrow and trivial. But the works of many women authors are far different from sentimental domestic fiction. In addition to looking closely at the historical and cultural conditions in which the narratives were written, we examine the ways in which these writers conform to and rebel against cultural prescriptions about femininity. Finally, we read some contemporary and current criticism about these works and American women's writing and discuss the politics of canon formation. Tentative Reading List: Mary Rowlandson, *The Captivity and Restoration of Mrs. Mary Rowlandson* (1682); *The Journal of Madam Knight* (1704); Catharine Maria Sedgwick, *Hope Leslie* (1827); E.D.E.N. Southworth, *The Hidden Hand* (1858); Zora Neale Hurston, *Their Eyes Were Watching God* (1937); Octavia Butler, *Kindred* (1979); Paule Marshall, *Praisesong for the Widow* (1983). Writing intensive.

### L77 WGSS 338 Women and Technology

Examination of the effect of technology on women's lives and the power of technology from a feminist perspective. Focuses primarily on three areas: the effects of technology on women's experience in domestic and occupational settings, (e.g., housework technologies, the feminization of office work); the effects of reproductive technology on women, including artificial insemination, in-vitro fertilization, surrogate "motherhood," and fetal sex selection; the effects of current and future technologies on the concepts of gender, sex, and relationships, including sex change/gender reassignment operations and prosthetics. Prerequisite: one course in women's studies, social thought and analysis, or philosophy, or permission of instructor.

### L77 WGSS 340I Performing Gender

This course investigates an array of contemporary performances to explore manifestations of and challenges to gender norms in American culture. An initial reading of crucial performance theories by Judith Butler, Jill Dolan, and others will help set the stage for our examination of a diverse collection of contemporary texts, including plays, solo performances, stand-up, and pop culture phenomenon. We'll raise questions about feminist performance strategies, butch/femme performance, camp, cross-dressing, feminist spectatorship, multi-media performances, and the representation of lesbian desire. Prereq: Any 100 level Women, Gender, and Sexuality Studies course. Same as L15 Drama 3301

**L77 WGSS 3410 Gender in Society**

This course acts as an introduction to the sociological study of gender. The primary focus of the course will be on U.S. society, but the course will also discuss gender in an international context. From the moment of birth, boys and girls are treated differently. Gender structures the experiences of people in all major social institutions, including the family, the workplace, and schools. Students will explore how gender impacts lives and life chances. The central themes of the course are historical changes in gender beliefs and practices; socialization practices that reproduce gender identities; how race/ethnicity, class, and sexuality shape the experience of gender; and the relationship between gender, power, and social inequality. Prerequisite: successful completion of an introductory Sociology course or consent of the instructor.

**L77 WGSS 3416 War, Genocide and Gender in Modern Europe**

This course explores the way in which gender and gender relations shaped and were shaped by war and genocide in 20th century Europe. The course approaches the subject from various vantage points, including economic, social and cultural history, and draws on comparisons between different regions. Topics covered will include: new wartime tasks for women; soldier's treatment of civilians under occupation, including sexual violence; how combatants dealt with fear, injury and the loss of comrades; masculine attributes of soldiers and officers of different nations and in different wartime roles; survival strategies and the relation to expectations with regard to people's (perceived) gender identity; the meanings of patriotism for women and men during war; and gender specific experiences of genocide.

**L77 WGSS 343 Understanding the Evidence: Provocative Topics of Contemporary Women's Health and Reproduction**

Contemporary topics of women's health and reproduction are used as vehicles to introduce the student to the world of evidence-based data acquisition. Selected topics span and cross a multitude of contemporary boundaries. Issues evoke moral, ethical, religious, cultural, political and medical foundations of thought. The student is provided introductory detail to each topic and subsequently embark on an independent critical review of current data and opinion to formulate their own said notions. Examples of targeted topics for the upcoming semester include, but are not limited to: Abortion, Human Cloning, Genetics, Elective Cesarean Section, Fetal Surgery, Hormone Replacement, Refusal of Medical Care, Medical Reimbursement, Liability Crisis and Gender Bias of Medical Care.

**L77 WGSS 345A Sexual Politics in Film Noir and Hard-boiled Literature**

Emerging in American films most forcefully during the 1940s, film noir is a cycle of films associated with a distinctive visual style and a cynical worldview. In this course, we will explore the sexual politics of film noir as a distinctive vision of American sexual relations every bit as identifiable as the form's stylized lighting and circuitous storytelling. We will explore how and why sexual paranoia and perversion seem to animate this genre and why these movies continue to influence "neo-noir" filmmaking into the 21st century, even as film noir's representation of gender and sexuality is inseparable from its literary antecedents, most notably, the so-called "hard-boiled" school of writing. We will read examples from this literature by Dashiell Hammett, James Cain, Raymond Chandler and Cornell Woolrich, and discuss these novels and short stories in the context of other artistic and cultural influences on gendered power relations and film noir. We

will also explore the relationship of these films to censorship and to changing post-World War II cultural values. Films to be screened in complete prints or in excerpts will likely include many of the following: The Maltese Falcon, Double Indemnity, Murder My Sweet, Phantom Lady, Strangers on a Train, The Big Sleep, The Killers, Mildred Pierce, The High Wall, Sudden Fear, The Big Combo, Laura, The Glass Key, The Big Heat, Kiss Me Deadly, The Crimson Kimono, Touch of Evil, Alphaville, Chinatown, Taxi Driver, Devil in a Blue Dress, The Bad Lieutenant, and Memento. Required Screenings.

**L77 WGSS 347 Gender and Citizenship: Writing-Intensive Seminar**

In this writing-intensive course we examine how ideas about gender have shaped the ways Americans understand what it means to be a citizen. We focus on a variety of cases in the past and present to explore the means by which women and men have claimed the rights and responsibilities of citizenship. The types of questions that we will ask include: What rights or duties devolve from the status of citizen? Who qualifies for citizenship and what qualifies them? What distinct models of citizenship have been available to Americans? How have individuals used notions of gender identity to make claims to political subjectivity? And finally, how do gendered claims to citizenship intersect or conflict with claims based on race, class, ethnicity, or humanity? PREQ: Previous coursework in Women, Gender, and Sexuality Studies or permission of the instructor. Not open to students who have taken L77 210

Credit 3 units. BU: BA EN: H

---

**L77 WGSS 348 "Revolutionize It!" The Radical History of Second-Wave Feminisms**

In this discussion-based course, we explore the complex, contradictory and profoundly multiracial history of the so-called "second wave" of the feminist movement (1960s-1980s). We will focus on those activists who understood themselves to be radicals and revolutionaries -- women's liberationists, women of color (or third-world) feminists, and lesbian-feminists -- as they collaborated and collided with each other. Among the questions we will ask are the following: What happens to our understanding of the second wave when we center the activism of African-American, Latinx, indigenous and anti-capitalist feminists? What were the promises and the pitfalls of a politics of "sisterhood"? How did sexual desire and sexual conflict shape both notions of identity and the movement on the ground? We will also consider the legacy of second-wave feminism for the politics of our time, including #MeToo, reproductive freedom, and the struggle for trans liberation. Prerequisite: L77 100B or permission of instructor.

---

**L77 WGSS 350B Topics: Global Italy: Race, Gender, Migration and Citizenship**

Traditionally represented as a land of emigrants and exiles from the south, 21st-century Italy has become the destination of many immigrants and a place of encounter of different cultures and races. In "Cara Italia" [Dear Italy], a rap hymn by the famous artist Ghali, Italy is both a dear and a contested space of belonging where many children of migrants feel both at home and out of place. Exploring the cultural and historical roots of this feeling, the course asks the following: What does it mean to culturally belong? Why are certain people denied the status of Italian citizens? What does it mean to be Black in Italy? How are interracial younger generations reshaping Italy and Italian-ness? This course is an introduction to cultural productions at the intersection of migration, race, gender, and citizenship in contemporary Italy. In the course, students will critically engage a variety of issues such as the relation between Italian colonialism and recent migration, border politics and civic mobilization, gender struggles and networking, xenophobia and racism, and social protests and activism. Although

African migration and Italians of Afro-descent are at the core of the course, students will also explore representations by/of other migrant communities such as the Asian and the Albanian ones. The course will be conducted in English, and screenings will be in the original language with English subtitles.

**L77 WGSS 354 No Boys Allowed: Girlhood and Programming for Girls in 19th and 20th Centuries, United States**

This course takes an intersectional feminist approach to studying girlhood in 19th and 20th Century United States using fictional accounts of girlhood, conduct books for girls, the history of girls' education, psychological theories of girlhood, girls' toys, and the development of extracurricular programming for girls. Each topic will allow us to study the way stereotypical girlhood of a particular historical moment serves a political purpose in articulating American identity. At the end of the course students will understand how the concept of girlhood is socially constructed, which means that understanding historical context is a core component of the course. The title of the course is a play on words because in the 19th century and the first half of the 20th century, most schools and boys' clubs excluded girls. All are welcome to enroll in the course. L77 100B Introduction to Women, Gender, and Sexuality Studies recommended, but not required.

---

**L77 WGSS 3548 Gender, Sexuality & Communism in 20th-Century Europe**

This upper-division course examines the role of gender and sexuality for the establishment of communist societies in Europe in 20th century. We will explore to what extent societies built on the communist model succeeded with the achievement of gender equality and allowed for sexual relations liberated from religious or economic constraints.

Class materials examine how state socialism shaped gender roles and women's and men's lives differently as well as how gays and lesbians struggled against social taboo and state repression. Students analyze the impact of modernization, industrialization, war and other conflicts on concepts of femininity and masculinity as well as on the regulation of sexuality and family relations in several Eastern European countries. We will place these dynamics within the context of broader political and cultural developments, ending with an analysis of the breakdown of socialism in the early 1990s and its impact on gender relations and the freedom of expression. The course provides students with a basic knowledge of the history of Eastern Europe and of left-wing movements active in the area, emphasizing the effects of communist ideas on women, gender equality, and non-normative sexual orientations.

**L77 WGSS 3560 Black Women Writers**

When someone says, black woman writer, you may well think of Nobel Prize winner Toni Morrison. But not long ago, to be a black woman writer meant to be considered an aberration. When Thomas Jefferson wrote that Phillis Wheatley's poems were "beneath the dignity of criticism," he could hardly have imagined entire Modern Language Association sessions built around her verse, but such is now the case. In this class we will survey the range of Anglophone African American women authors. Writers likely to be covered include Phillis Wheatley, Harriet Wilson, Nella Larsen, Lorraine Hansberry, Octavia Butler, and Rita Dove, among others. Be prepared to read, explore, discuss, and debate the specific impact of race and gender on American literature.

---

**L77 WGSS 3561 Law, Gender, and Justice**

This course explores how social constructions of gender, race, class, and sexuality have shaped traditional legal reasoning and American legal concepts, including women's legal rights. We will begin by placing our current legal framework, and its gender, race, sexuality, and other societal assumptions, in an historical and Constitutional context. We will then examine many of the questions raised by feminist theory, feminist jurisprudence, and other critical perspectives. For example, is the legal subject gendered male, and, if so, how can advocates (for women and men) use the law to gain greater equality? What paradoxes have emerged in areas such as employment discrimination, family law, or reproductive rights, as women and others have sought liberal equality? What is the equality/difference debate about and why is it important for feminists? How do intersectionality and various schools of feminist thought affect our concepts of discrimination, equality, and justice? The course is thematic, but we will spend time on key cases that have influenced law and policy, examining how they affect the everyday lives of women. Over the years, this course has attracted WGSS students and pre-law students. This course is taught by law students under the supervision of a member of the School of Law faculty.

---

**L77 WGSS 3563 Queering the History of Health**

This course identifies the key conceptual and methodological terrain pertinent to the historical development of the concepts of "health" "disease," and "ability." We will use an intersectional lens to trace various contingencies that produce a set of false binaries, including healthy, slender, responsible self v. the medically diseased, disabled, fat, and irresponsible other. Historically, these binaries have created and maintained social, political, and cultural inequalities and have been used as a powerful ideological weapon against queer and trans people of color, people with disabilities, people living with HIV/AIDS, fat people, and other people who do not/cannot embody normative race, gender, sexuality, and ability. However, as we will see, these inequalities, somehow counterintuitively, also enable a predisposition

for a resistance, world-making, and political agency. While the course serves as an introduction to the key terms that surround the construction of "health" from the establishment of modern nation-states in the 19th century to the present, it is structured as a history of the present-it assesses how different notions pertinent to "health" shape our daily lives and inform the choices we make still today(?).

**L77 WGSS 358 Scribbling Women: 19th-Century American Women Writers**

In 1855, Nathaniel Hawthorne wrote to his publisher, William Tichnor, that "America is now wholly given over to a damned mob of scribbling women and I should have no chance of success while the public taste is occupied with their trash." In this class, we examine works of those scribbling women of the nineteenth century. We read one of the best selling novels of the century, one that created a scandal and ruined the author's literary reputation, along with others that have garnered more attention in our time than their own. In addition to focusing on these women writers, we also explore questions about the canon and American literature: What makes literature "good"? What constitutes American literature? How does an author get in the canon and stay there? Finally, in this writing intensive course, there are frequent writing assignments and a strong emphasis on the essential writing process of drafting and revising.

---

**L77 WGSS 361 Women and Social Movements: Gender and Sexuality in U.S. Social Movements**

This course examines the history of grassroots activism and political engagement of women in the United States. Looking at social movements organized by women or around issues of gender and sexuality, class texts interrogate women's participation in, and exclusion from, political life. Key movements organizing the course units include, among others: the Temperance Movement, Abolitionist Movements, the Women's Suffrage Movements, Women's Labor Movements, Women's Global Peace Movements, and Recent Immigration Movements. Readings and discussion will pay particular attention to the movements of women of color, as well as the critiques of women of color of dominant women's movements. Course materials will analyze how methods of organizing reflect traditional forms of "doing politics," and we will also examine strategies and tactics for defining problems and posing solutions particular to women. Prerequisites: any 100- or 200-level Women, Gender, and Sexuality Studies course or permission from the instructor.

Credit 3 units. A&S IQ: HUM, SC, SD BU: BA EN: H

**L77 WGSS 362A Islam, Gender, Sexuality**

In this course, we examine discourses of gender and sexuality across historical period and geographical region. We analyze encounters with Western imperialism, investigating how gender informs social, political, religious, and family life in Islamic cultures. Our course materials include histories, ethnographies, graphic novels, and films, and we examine how these sources approach the study of Islam, gender, and sexuality through the lens of various topics: from women in the earliest years of Islam in 7th century Arabia to revolutionary Iran and American Muslim women in the 21st century. Throughout the course, we examine how notions of gender and sexuality have changed over time and played various roles in the political and social life of Muslim nations, societies, and communities. By the end of the course, students will be able to critically assess scholarly and non-scholarly (media) discussions of gender in Islam.

**L77 WGSS 366 Caste: Sexuality, Race and Globalization.**

Be it sati or enforced widowhood, arranged or love marriage, the rise of national leaders like Indira Gandhi and Kamala Harris, or the obsession with "fair" skin, caste shapes possibilities and perceptions for billions. In this class we combine a historical understanding of the social caste structure with the insights made by those who have worked to annihilate caste. We will re-visit history with the analytic tools provided by the concepts of compulsory endogamy, "surplus woman," and "brahmanical patriarchy," and we will build an understanding of the enduring yet invisible "sexual-caste" complex. As we will see,

caste has always relied on sexual difference, its ever-mutating power enabled by the intersectionalities of race, gender and class. We'll learn how caste adapts to every twist in world history, increasingly taking root outside India and South Asia. We will delve into film and memoir, sources that document the incessant injustices of caste and how they have compounded under globalization. The class will research the exchange of concepts between anti-race and anti-caste activists: how caste has shaped the work of prominent anti-racist intellectuals and activists in the United States such as W.E.B. DuBois and Isabel Wilkerson and in turn, the agenda and creativity of groups such as the Dalit Panthers. Finally, the course will build a practical guide to engaging with and interrupting caste in the context of the contemporary global world today. Waitlists controlled by Department; priority given to WGSS majors. Enrollment cap 15.

---

#### **L77 WGSS 369A Reading Sex in Premodern England**

This course introduces students to the literary representation of gender and sexuality in England from the medieval period to the eighteenth century. To understand a tradition that addressed the intractable problem of human sexuality in terms very different from ours, we will ask: how does pre-modern culture imagine gendered identities, sexual difference, and erotic desire? How do various contexts-medical, religious, social, private, public-inform the literary representation of gender and sexuality? What are the anatomies and economies of the body, the circuits of physical pleasure, and the disciplines of the self that characterize human sexuality? Students will have the opportunity to study romances, saints' lives, mystical writings, diaries, plays, sex guides, novels, and scientific treatises. By learning how to "read sex" in pre-modern literature, students will acquire a broad cultural and historical understanding of English sexualities before the descent of modern sensibilities.

#### **L77 WGSS 371 Confronting Capitalism: Feminism, Work and Solidarity**

This course explores the relationship between gender, the ideological construction of work and workers, and feminist and queer mobilizations against labor exploitation. To examine how notions of the "ideal worker" shape and are shaped by gender, sexuality, and race, we will study various forms of work, including care work and reproductive labor; affective and emotional labor; migrant labor; service work; and sex work. Considering what is "new" and old about late (or neoliberal) capitalism, we will explore how the relationship between citizenship, the state and political economy has shifted over the last four decades. Across each of these registers, we will engage thinkers spanning Marxist feminist, radical feminist, liberal feminist, indigenous feminist, Black feminist, and disability justice traditions. We will ask how these interwoven genealogies grapple with U.S. imperialism and the relationship between race, class, and patriarchy, while mapping out various visions of solidarity economies, internationalism, and anti-work politics. Prerequisite: Intro to WGSS or permission of instructor.

#### **L77 WGSS 3751 Topics in Women's History: Women, Gender and Sexuality in Postwar America**

We will explore the history of the United States since 1945 by focusing on the ways that gender and sexuality have shaped the lives of Americans, particularly the diverse group of women who make up more than half the nation's population. Topics will include: domesticity and the culture of the 1950s; gendering the cold war; the gender politics of racial liberation; the sexual revolution; second-wave feminism and the transformation of American culture; the new right's gender politics; and the impact of new conceptions of sexual and gender identity at century's end. Course texts will include scholarly literature, memoirs, novels and film.

#### **L77 WGSS 379 Gender, Religion and Secularism**

This course considers how gender is constructed in the processes of distinguishing between religion and secularism. Students will be exposed to a variety of case studies that examine the specific dynamics of producing an oppositional difference between religion and secularism through attitudes toward gender roles, values, and commitments. This course is designed to help students examine how the assumptions about secularism as necessarily more freeing and equalizing for women become normative and make many religious women's claims to freedom, equality, and agency illegible.

#### **L77 WGSS 384 Gender & Consumer Culture in U.S. Fiction of the Late 19th and Early 20th Century**

The decades between the end of the Civil War and the 1930s saw the rise of a mass consumer culture that would dramatically reshape America. The fiction writers of this period, keen to capture the spirit of the age, helped to create the enduring idea that consumerism and an orientation toward material acquisition are at the heart of gendered concepts of American identity. Their stories documented, and sometimes celebrated, the emergence of recognizable "types" of American womanhood and manhood-such as self-made millionaires, ambitious "working girls," bargain-hunting middle-class housewives, and the commercially minded women and men of the social and intellectual elite. At the same time, their stories articulated anxieties about U.S. consumer culture and its impact on the world. Students in this course will read, discuss, and write about novels and short stories by writers such as Henry James, Mary Wilkins Freeman, Kate Chopin,

Theodore Dreiser, Edith Wharton, Nella Larsen, Langston Hughes, and F. Scott Fitzgerald. Students in the course will also examine primary materials such as magazine advertisements, and will read and respond to relevant scholarship on the period. Writing Intensive Course

**L77 WGSS 3861 Psychology of Black Women**

This course is designed to provide a critical analysis of the distinctive experiences of Black women through a psychological lens. We will explore topics relating to Black women's experiences in home, school, and community contexts, such as identity development, socialization experiences, and misogyny. The class will also consider how Black women draw on individual strengths and cultural assets to support their personal wellbeing. This course will heavily center the narratives of Black women, and focus on mixed methods and qualitative research approaches. We will draw upon interdisciplinary frameworks (e.g., intersectionality, Black feminist thought, and liberation psychology) to help us understand Black women's experiences. PREREQ: L33 Psych 100B

**L77 WGSS 3884 Regulating Reproduction: Morality, Politics and (In)justice**

This course centers on the burgeoning corpus of anthropological scholarship on reproduction, with special attention to the regulation of reproductive behaviors and population management in cross-cultural perspective. Anthropologists and feminist scholars have shown how reproduction—which links individual bodies to the body politic—is a privileged site for processes of governance. Scholars have also shown how seemingly personal reproductive choices made in the micro units of families, are always bound up with broader, if obscured, economic, national, and political projects. In this course, we will cover how diverse entities, including the state, the Church, NGO's and feminist groups, seek to manage reproductive behaviors and politics across the world. We will discuss population control campaigns (such as China's notorious one-child policy) and pronatalist population policies (like those seen in Israel) in order to underscore how the management of fertility becomes a crucial site for nationalist and state-building projects. In this course we examine processes of "reproductive governance" around topics including pregnancy and birth, family planning, abortion, and adoption. We also examine how the global proliferation of Assisted Reproductive Technologies (such as in vitro, sonogram, abortifacient pills, amniocentesis) intersects with efforts to govern reproduction. Crucially, we take class and race as key axes through which reproduction is experienced and stratified in diverse contexts. At the end of this course students should have a solid grasp of key topics and themes in the anthropology of reproductive governance, as well as more in-depth knowledge of a particular controversial reproductive issue that they choose to focus on for their final research paper.

**L77 WGSS 389 The Global History of HIV/AIDS**

Most (if not all) of us have never known a world without HIV/AIDS. The potential risk of seroconversion has been integrated into sexual health education and popular media for more than three decades. At the same time, HIV has often been portrayed as either an issue of

a minority (e.g., gay men, intravenous drug users, sex workers) or as existing "over there" in the Global South, overlooking the major crisis within the United States. This course tackles the history of HIV/AIDS as a global history of gender and sexuality between the Global North and the Global South. Throughout the course, we will consider major ethical questions regarding disease and control. Who gets to be a victim, and who is labeled a culprit? What actions should be pursued in the midst of an epidemic? Who controls the narrative about disease? We will look at international biopolitical practices by tracing the downward flow of researchers and specialists from the Global North to the Global South and the upward flow of scientific knowledge and capital. In this way, we will see how the Global South has played a crucial role in the perceptions, treatment, and profiting of HIV/AIDS in the United States and the Global North through the recent breakthrough in pre-exposure prophylaxis (PrEP), sold on the market as Truvada/Descovy. The course has three thematic sections: Discovery and Reaction, Politics and Activism, and Research and Health.

**L77 WGSS 389A Furies and Die-Hards: Women in Rebellion and War**

Furies and Die-Hards: Women in Rebellion and War juxtaposes contemporary social science perspectives on women and war with the history and testimonies of Irish women during the Irish revolutionary period (1898-1922), the Irish Civil War (1922-1923), and the Free State. Under English rule from the 12th-century Norman invasions to the establishment of the Irish Free State and the partition of Northern Ireland in 1922, Ireland presents a compelling historical laboratory to deliberate on the relationship between gender and political conflict. Intentionally transdisciplinary, the course draws from across disciplinary discourses and highlights perspectives across race, gender, class, ethnicity, religion, and sexuality. Topics include political organizing, nationalism, rebellion, radicalization, militarism, terrorism, pacifism, and peacebuilding. Rooted in Cynthia Enloe's enduring question of "Where are the women?" and drawing on sociologist Louise Ryan's landmark essay by the same name, we inquire how and why Irish nationalist women, who were integral to building the revolutionary movement, became "Furies" and "Die-hards" in the eyes of their compatriots when the Free State was established (Bishop Doorley, 1925; President Cosgrave, 1923). Taking advantage of the plethora of archival resources now available through the Irish Decade of Centenaries program, the course incorporates the voices of Irish women through their diaries, military records, letters, interviews, speeches, newspapers, and memoirs.

**L77 WGSS 3942 Community-Engaged Learning: Projects in Domestic Violence**

In this course, students explore the links between the theories and practices of Women, Gender, and Sexuality Studies through a combination of research and direct community engagement. Course readings focus on the ways that poverty and violence -- along with race and gender expectations -- shape the lives of women. A required community service project for this course asks students to examine the relationship between the course readings and the lives of actual women in St. Louis. Over the course of the semester, students design and execute programming for women at a local community agency. This is a writing-intensive course. Prereq: Intro to Women and Gender Studies or Intro to Sexuality Studies and Gender Violence (L77 393) or by permission of instructor.

Credit 4 units. A&S IQ: SSC, SC, SD, WI Arch: SSC Art: SSC EN: S

---

**L77 WGSS 3943 Violence Against Women Court Project**

The seminar will explore the links between the theories and practices of Women, Gender, and Sexuality Studies through a combination of readings, discussion and direct community engagement. Readings focus on the legal system and the ways domestic violence is confronted and how criminal justice interventions have responded to new theories and research about the nature of intimate partner violence. Particular attention will be directed to the ways that issues of race, poverty, parenthood, and sexual orientation influence the criminal justice response and shape the lives of abused women. Students will participate in a court advocacy program to investigate the important discrepancies between theory and practice in the field. Students are required to take L77 393 or have taken L77 393 to enroll in the seminar.

---

**L77 WGSS 39SC Imperialism and Sexuality: India, South Asia, and the World: Writing-Intensive Seminar**

What is the connection between the appropriation of other people's resources and the obsession with sex? Why is 'race' essential to the sexual imperatives of imperialism? How has the nexus between 'race,' sexuality, and imperial entitlement reproduced itself despite the end of formal colonialism? By studying a variety of colonial documents, memoirs produced by colonized subjects, novels, films and scholarship on imperialism, we will seek to understand the history of imperialism's sexual desires, and its continuation in our world today.

---

**L77 WGSS 4006 Advanced Topics in Trans Theories: Femme**

In the current moment, "femme" is used to index a variety of gender and sexual expressions. This course explores the aesthetics and politics of femme through the lens of trans theories. A quick search for "femme" in relation to gender and sexuality will show that one of its origin stories is within lesbian communities often in relation to the butch/femme relationship. The lipstick lesbian is the figure who emerges here as exemplifying a kind of adherence to "traditional" forms of femininity even while being queer. Trans women are often criticized for attachments to similar forms of gender expression. Femininity is often derided as unserious or, worse, hopelessly entangled in the dynamics of heteropatriarchy. To be feminine, then, is often taken as a sign of a retrograde politics or submission to normative ideals of gender. This course will take up this problem as a way of beginning to think through what interventions femme might make into our ordinary ways of understanding gender and sexuality.

Credit 3 units. A&S IQ: HUM, SC EN: H

---

**L77 WGSS 4013 Queer of Color Critique: Sense and Sexuality**

That sensation produces surplus, often uncontainable knowledge, is something that is beginning to be explored in various arenas of queer theory as an important component of queer of color critique. This seminar will explore different sensational arenas, the different possible critiques that they produce, and what this means for thinking about sexuality, gender, and queer theory. Throughout the course of the semester, we will explore sensation in multiple ways 1) as a diagnostic tool for understanding some of the different ways that race, gender, and sexuality intersect 2) as a way to trouble the dichotomy between interiority and exteriority to understand the ways in which orders of knowledge become imprinted on the body 3) as a mode of producing alternate forms of knowledge about gender, race, and sexuality. In addition to reading about different sensations and their relationships to politics and sexuality, this course will require students to think creatively as they attempt to write about sensation, sexuality, and politics. Ultimately, the purpose of this class is to examine sexuality and sensation as collections of embodied and politicized experiences. Prerequisite: Introduction to Women, Gender, and Sexuality Studies (L77 100B) or permission of instructor.

---

**L77 WGSS 403 Race, Sex, and Sexuality: Concepts of Identity**

This course examines changes in the meanings of three concepts of identity -- race, sex, and sexuality -- from the early modern period to the present. The course begins by looking at early modern constructions of these concepts in Western Europe. We then focus on changes occurring during the course of the eighteenth and nineteenth centuries in Europe and the United States and at how such changes were similar and different among these three concepts. We then examine twentieth century challenges to nineteenth century constructions. The course concludes by studying the relationship between these challenges and twentieth century identity political movements organized around these concepts. Prerequisite: Completion of at least one Women, Gender, and Sexuality Studies course or permission of the instructor.

Credit 3 units. A&S IQ: SSC, SD Art: SSC BU: BA

---

**L77 WGSS 406 Queering Theory: Collaborating, Solidarity, and Working Together**

This class aims to use theory to destabilize the concepts of race, sexuality, gender, disability, and academic methodology. This class will submerge you in some of the most influential texts in queer theory. The selected readings range across many disciplines, including biology, philosophy, anthropology, sociology, history, and cultural studies. The core premise of this class is that to queer something is to destabilize it. Therefore, not all of the readings will specifically be about gay, lesbian, bisexual, or transgender people. However, these readings will help any scholar in their future work in queer theory. Prerequisite: Any 300 level WGSS class or equivalent or permission from instructor.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

---

**L77 WGSS 409 Gender, Sexuality, and Change in Africa**

This course considers histories and social constructions of gender and sexuality in sub-Saharan Africa during the colonial and contemporary periods. We will examine gender and sexuality both as sets of identities and practices and as part of wider questions of work, domesticity, social control, resistance, and meaning. Course materials include ethnographic and historical materials and African novels and films. PREREQUISITE: Graduate students or undergraduates with previous AFAS or upper level anthropology course.

Same as L90 AFAS 409

Credit 3 units. A&S IQ: SSC, SC, SD, WI Arch: SSC Art: SSC EN: S

---

**L77 WGSS 4102 Everyday Unruliness: Feminist and Queer Resistance**

This course is interested in the ways ordinary people break rules, flout norms, and make trouble. We know that resistance manifests in social movements, militant activism, and direct confrontation, but it also comes through quieter acts of unruliness and noncompliance. Looking at power "from below," readings focus on everyday interventions in systems of control. Garment workers threaten "good pay or bum work," queers "fail" at reproductive heterosexuality, and shiftless people steal moments of leisure from a system that wants us either productive or dead. These acts may not be obviously political, but because people at the margins have so often been left outside (and also opt out) of formal politics, subtle resistance is particularly interesting for feminist and queer scholars. Everyday acts do threaten the status quo -- otherwise, why would they be so rigidly policed? But questions remain. Throughout the semester, we will ask the following: What counts as resistance? What are its ethics? When is a bad attitude an act of rebellion, and does it matter if that rebellion is conscious? Does survival constitute resistance for those not meant to survive? On the other hand, for those subjects whose active engagement sustains the status quo, is withdrawal the more radical choice? Does the refusal of sociality constitute a form of resistance? Or are there ways to forge communities of mutual care that erode the status quo rather than reproduce it? Prerequisite: L77 110B (Intro to Women, Gender, and Sexuality Studies) or permission of instructor.

Credit 3 units. A&S IQ: SSC, SC Arch: SSC Art: SSC BU: BA EN: S

---

**L77 WGSS 4112 Body and Flesh: Theorizing Embodiment**

This seminar explores a wide range of readings on "the body" as a site of theoretical analysis in social scientific and humanistic inquiry. Issues include: How do we think about the body as simultaneously material (flesh and bone) and constructed in and through social and political discourse? How do we think about the relationship between these contingent bodies and subjective experiences of "self" in various contexts? The course focuses upon the different ways in which these questions have been posed and engaged, and the implications of these formulations for the theorizing of human experience. Prerequisite: Anthropology 3201, or permission of instructor.

Same as L48 Anthro 4112

Credit 3 units. A&S IQ: SSC Art: SSC EN: S

---

**L77 WGSS 4134 The AIDS Epidemic: Inequalities, Ethnography, and Ethics**

In the year 2000, HIV became the world's leading infectious cause of adult death. In the next 10 years, AIDS killed more people than all wars of the 20th century combined. As the global epidemic rages on, our greatest enemy in combating HIV/AIDS is not knowledge or resources but rather global inequalities and the conceptual frameworks with which we understand health, human interaction, and sexuality. This course emphasizes the ethnographic approach for the cultural analysis of responses to HIV/AIDS. Students will explore the relationships among local communities, wider historical and economic processes, and theoretical approaches to disease, the body, ethnicity/race, gender, sexuality, risk, addiction, power, and culture. Other topics

covered include the cultural construction of AIDS and risk, government responses to HIV/AIDS, origin and transmission debates, ethics and responsibilities, drug testing and marketing, the making of the AIDS industry and "risk" categories, prevention and education strategies, interactions between biomedicine and alternative healing systems, and medical advances and hopes.

#### **L77 WGSS 414 Gender, Religion, Medicine and Science**

Have you ever wondered why some topics are argued using religion as a guide, while others may approach the topic from what is perceived as a strictly scientific point of view? This course explores how and why gender and sexuality tend to be at the center of debates that pit Medicine and Science against Religion. Using feminist and queer scholarship, this course explores five hundred years of rhetorical strategies related to defining, or regulating, gender and sexuality. We will consider how much debates have changed from sixteenth-century Europe to 21st century United States by asking when, why and how either Medicine & Science or Religion influenced social thought and laws. Finally, we will consider how, and if, contemporary debates on vaccines are either part of the long history of debating bodily autonomy (as is the case with the other topics addressed in class), or if the conflict between religion, medicine and science in the modern era is new and distinctly different from past rhetorical strategies. Prerequisite: Introduction to Women, Gender and Sexuality Studies

Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: IS EN: H

---

#### **L77 WGSS 4140 Topics in Feminist Philosophy: Feminist Epistemology and Philosophy of Science**

---

#### **L77 WGSS 4154 Decolonization to Globalization: How to End an Empire**

The conventional markers of the twentieth century - imperialism, decolonization and globalization - are acutely compromised if we mobilize gender and sexuality as modes of analysis. In this course we bring questions of sexual difference and gender to the wider stories of colonialism, nationalism, decolonization, neocolonialism, US imperialism, neoliberalism, globalization, WoT, and majoritarianism. We "engender" the contradiction between enormous turning points and the lived experiences of billions. We probe how the non-profit industrial complex, development aid, and the normative family have shaped and given shape to the very idea of gender. Finally, we examine the capacious power of gender to interrupt the power of the state and to reorganize extractive relations of race and caste.

Credit 3 units. A&S IQ: HUM, LCD, SC Arch: HUM Art: HUM EN: H

---

#### **L77 WGSS 416 The Politics of Pleasure**

This 400 level seminar interrogates the concept of pleasure. Pleasure occupies a fraught space in feminist and queer theory. This course examines several ways that people have theorized pleasure as a space for politics, a space for conservatism, or a way to think about racialized difference. This course is not interested in defining what pleasure is, but it interrogates what the stakes of talking about pleasure have been within contemporary theory and culture. Beginning with an examination of pleasure in the context of early twentieth century sexology, this course looks at the sex wars of the 1970s, the turn toward pleasure as a space of protest, and ends by thinking of ways to imagine pleasure outside of current paradigms of sexuality. The course takes gender, race, and sexuality as central analytic components to understand how pleasure is defined and who has access to it. Either Introduction to Sexuality Studies or Introduction to Women, Gender, and Sexuality Studies are prerequisites.

Credit 3 units. A&S IQ: HUM, SC, SD EN: H

---

#### **L77 WGSS 417W Feminist Research Methodologies**

What does it mean to do research through the lens of feminist and queer politics? This course surveys key methodological approaches to feminist and queer research. Interdisciplinary at its core, it draws from methodological traditions across the humanities and social sciences while focusing on forms of inquiry that resist these boundaries. We explore how feminist and queer politics inform the work of knowledge production. We ask how scholars, organizers and artists engage and repurpose various research methodologies and how they reflect on the politics of power, experience, domination, and resistance in the research encounter. We ask who research is for, parsing the political stakes of scholarship that archives the stories of collective resistance, survival, collaboration, and domination, at the same time as it authorizes hierarchies of expertise, builds institutional power, and (too often) extracts from those studied. What might a redistributive approach to feminist and queer research look like? Prerequisite: At least 2 courses in WGSS, including Introduction to WGSS or Sexuality Studies at the 100 or 200-levels and one 300-level WGSS course, preferably in feminist or queer theory. This class is a writing intensive course. Waitlists controlled by Department; priority given to WGSS majors.

Credit 3 units. A&S IQ: SC, SD, WI

---

#### **L77 WGSS 418C Sexuality and Gender in East Asian Religions**

In this course we will explore the role of women in the religious traditions of China, Japan and Korea, with a focus on Buddhism, Daoism, Shamanism, Shinto and the so-called "New Religions." We will begin by considering the images of women (whether mythical or historical) in traditional religious scriptures and historical or literary texts. We will then focus on what we know of the actual experience and practice of various types of religious women - nuns and abbesses, shamans and mediums, hermits and recluses, and ordinary laywomen - both historically and in more recent times. Class materials will include literary and religious texts, historical and ethnological studies, biographies and memoirs, and occasional videos and films. Prerequisites: This class will be conducted as a seminar, with minimal lectures, substantial reading and writing, and lots of class discussion. For this reason, students who are not either upper-level undergraduates or graduate students, or who have little or no background in East Asian religion or culture, will need to obtain the instructor's permission before enrolling.

---

#### **L77 WGSS 419 Feminist Literary and Cultural Theory**

This course provides a historical overview of feminist literary and cultural theories since the 1960s and 70s, acquainting students with a diversity of voices within contemporary feminism and gender studies. Readings will include works of French feminism, Foucault's History of Sexuality, feminist responses to Foucault, queer (LGBTQ+) theory, postcolonial and decolonial feminism, feminist disability theory, and writings by US feminists of color (African-American, Asian-American, Latina, Native-American). The reading list will be updated each year to reflect new developments in the discipline. We will approach these readings from an intersectional and interdisciplinary perspective, considering their dialogue with broader sociopolitical, cultural, and philosophical currents. By the end of the course, students are expected to have gained a basic knowledge of the major debates in feminist literary and cultural studies in the last 50 years, as well as the ability to draw on the repertoire of readings to identify and frame research questions in their areas of specialization. The class will be largely interactive, requiring active participation and collaborative effort on the part of the students. Students will be encouraged to make relevant connections between the class readings, everyday social and political issues, and their own research interests. NOTE: This course is in the core curriculum for the Women, Gender, and Sexuality Studies graduate certificate. Prerequisite: advanced course work in WGSS or in literary theory (300 level and above) or permission of the instructor.

**L77 WGSS 421 From Mammy to the Welfare Queen: African American Women Theorize Identity**

How do representations of identity affect how we see ourselves and the world sees us? African American women have been particularly concerned with this question, as the stories and pictures circulated about black female identity have had a profound impact on their understandings of themselves and political discourse. In this course we will look at how black feminist theorists from a variety of intellectual traditions have explored the impact of theories of identity on our world. We will look at their discussions of slavery, colonialism, sexuality, motherhood, citizenship, and what it means to be human.

**L77 WGSS 4212 Work, Family, and Gender Inequality in the Contemporary US**

Despite dramatic increases in women's education and employment over the past century, progress toward gender equality in both the public and private sphere has slowed or stalled in recent decades. Drawing on research in sociology, economics, and demography, this course examines why gender inequality persists in the workplace and in family life. Students focus primarily on the contemporary U.S. context but also draw on historical and cross-national comparisons. In addition, the course considers the role of cultural norms and work-family policy in shaping gender inequality. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor. Graduate students should enroll in the 500-level offering. Same as L40 SOC 4212

**L77 WGSS 4221 Topics in Women and French Literature**

In our modern interconnected society, it is not always easy for young people to define who they really are or to discover and fulfill their potential, but it is encouraged and facilitated through education, travels, social contacts, and even technology. But it was not always so. In earlier times, individuals were often constrained by the prevalent social and moral values of their worlds and had a much harder time discovering their persona or fulfilling their needs and aspirations. This seminar explores the issues of self-discovery, initiation, and self-realization in the modern novel, including Balzac's EUGENIE GRANDET, Stendhal's LE ROUGE ET LE NOIR, Flaubert's MADAME BOVARY, Mauriac's THERESE DESQUEYROUX; and Phillipe Grambert's UN SECRET. Prereq: Fr. 308.

**L77 WGSS 427 Technology and Feminist Practice: Gender Violence Prevention Tools**

How can we best use technology, and the tools and insights of the Digital Humanities in particular, to promote effective approaches to addressing gender-based violence? What are the most effective ways to bridge the innovations of the research university with the everyday work of practitioners seeking to prevent violence or intervene in its aftermath? What are the ethics involved in constructing tools for public and professional use? Which interests should govern the choices in content, design, and dissemination of information? This course will introduce students to the strategies and challenges of devising technological tools for violence prevention for use beyond the classroom. Class readings and discussions will be supplemented by

hands-on project work with Washington University's Gender Violence Database and lab sessions that focus on skill-building in digital project construction. Prerequisite: For undergraduate students, L77 393 01 or previous work experience with the Gender Violence Database. Graduate students by permission of instructor.

**L77 WGSS 429 Feminist Political Theory**

This course asks how feminist thinkers from various political and intellectual traditions critique, adopt and transform political theories of justice, citizenship, property and the state. To uncover how different feminist theories have been adopted in the struggle for political transformation and social justice, we will pursue two main lines of inquiry. The first asks how feminist thinkers from various traditions critique and engage the history of political thought within the social contract tradition. We will ask, in particular, how gender, race, slavery, colonialism and empire shape conceptions of citizenship and property. We will also examine transnational feminist critiques of the public/private division in the Western political theory canon as it impacts the role of women and the social construction of women's bodies. During the second half of the semester, we will ask how various transnational social movements have engaged and adopted feminist theories in efforts to resist state violence, colonialism, labor exploitation and resource extraction. In following these lines of inquiry we will draw from postcolonial, decolonial, liberal, Black, radical, Marxist and Chicana feminist perspectives. Part of our goal will be to uncover how various feminist theories treat the relationship between politics and embodied experience, how gendered conceptions of family life affect notions of political power and how ideas about sexuality and sexual conquest intersect with empire-building. Majors and minors in WGSS receive first priority. Other students will be admitted as course enrollment allows. Credit 3 units. A&S IQ: HUM, SC, SD Arch: HUM Art: HUM BU: BA EN: H

**L77 WGSS 430A Divergent Voices Italian Women Writers**

This course engages the fictional and political works of Italian women writers from the seventeenth century to the present day. We will read one of the acclaimed Neapolitan novels of Elena Ferrante, who is considered by many to be the most important Italian fiction writer of her generation. We will examine a cloistered Venetian nun's defiant 1654 indictment of the misogynist society that forced her into the convent. We will confront the reality of a woman writer who in 1901 was compelled to choose between her child and her literary career. Among other contemporary writers, we will study the humorous and radical feminist one-acts of playwright Franca Rame. Taught in English. No Final.

---

**L77 WGSS 432 Women Writers of the 20th Century**

This course will examine select novels, poetry, and political writings by such noted authors as Sibilla Aleramo, Dacia Maraini, Luisa Muraro, and Anna Banti. Special attention will be paid to the historical, political, and cultural contexts that influenced authors and their work. Textual and critical analysis will focus on such issues as historical revisionism in women's writing, female subjectivity, and the origins and development of contemporary Italian feminist thought and practice. Taught in English.

**L77 WGSS 4333 Women of Letters**

We investigate the representation of women in eighteenth-century texts. Why did the novel and epistolary fiction become so closely associated with women as writers, heroines, and readers in the course of the century? Why were women considered exemplary and yet, at the same time, a threat? The eighteenth century saw the last of the salons led by women well-versed in philosophy, literature, art, and politics. It saw the reinforcement of the opposition between the public and the private sphere. Woman was the incarnation of the ideal of liberty and yet excluded from the "Rights of man." Rousseau praised women's role as nurturers and peace-makers but cast into doubt their capacity for genius. Literary texts that feature women became a sparring ground for two of the century's major literary trends: SENSIBILITE and LIBERTINAGE, for a woman's sensitivity was thought to contain the seeds of virtue and licentiousness. We investigate philosophical discourses on the senses and emotions and political discourses on republican responsibility. We read these texts in conjunction with the literary works of men and women authors, including Prévost, Marivaux, Graffigny, Riccoboni, Diderot, Rousseau, Charrière, Laclose, Sade, and Staël. Prereq: Fr 325 and Fr 326 or one of these courses and the equivalent WU transfer literature course from Toulouse or Paris. One hour preceptorial required for undergraduates. Same as L34 French 4331

**L77 WGSS 433A Performing Gender and Sexuality in America**

This course examines how the performance of gender and sexuality has shaped the social, cultural, and political history of the United States from the early nineteenth century to the present. While performance happens in everyday life, we will primarily focus on how the stage has been a potent space to debate issues about gender and sexuality. This course will put forth the argument that the stage has historically not only reflected broader social concerns, but also actively helped to shape those social dynamics. After an introduction to foundational ideas, we will start the semester with minstrelsy, signaling that the performance of gender and sexuality in America is deeply intertwined with race, class, and national belonging. Reading and viewing assignments bring together feminist theory, queer theory, American social history, and performance texts to build robust seminar discussions.

**L77 WGSS 4350 Queer and Feminist Geographies**

There is a tendency to see space and place as backdrops, mere stages where human social interactions simply play out. Yet when we fail to interrogate the processes behind the social production of space, we run the risk of naturalizing space as heteronormative and obfuscating its inherent exclusions. This upper-level seminar seeks to challenge such assumptions by treating space and place as dynamic formations that actively influence our identities, behaviors, and politics. Using queer and feminist perspectives within the realm of geography, we will explore how spaces, places, and boundaries are shaped, experienced, and contested through diverse gender identities and sexual formations. Questions driving our inquiry include: How do queer and feminist geographies intersect to shape landscapes- both urban and rural in the United States and abroad? What role do geographic spaces play in the construction of LGBTQ identities across different social milieus? And in what ways can queer and feminist perspectives contribute to decolonial and environmental justice movements? In addition to queer and feminist spatial theories, topics will include sexuality

and place-making, transnational queer migrations, queer ecologies and environmental justice, and the queering of the "public" and "private" divide at the heart of spatial taxonomies in the West. By mobilizing queer and feminist forms of spatial analysis, this seminar will equip you with tools to identify the ways in which spaces, places, and boundaries can further social inequalities and the opportunity to theorize alternative geographies that promote inclusion and more just worlds.

---

**L77 WGSS 437 Transnational Feminisms**

This course engages contemporary feminist theories from diverse transnational contexts, as well as the social movements and local resistances they inspire. Through engagement with key works of feminist theory, political manifestos, and creative works of resistance, we will explore how transnational feminist alliances and coalitions have contested and responded to gendered and racialized forms of exploitation, navigating and reshaping territorial and social boundaries. We will engage with debates around the notion of a "global sisterhood"; tensions between universal and local feminist practice; the role of difference, nationality and culture in navigating the possibility of solidarity; the role of the Internet in forging cross-border alliances; human rights-based activism; "women's" work; transgender inclusivity and transfeminisms. Part of our goal will be to ask how feminist theories from diverse geographical locations have influenced the politics of borders, movements for environmental justice, migrations and mobility, resistance to imperialism and the forging of alternative economies. We will also explore the gray areas existing in between binaries such as feminist/anti-feminist; local/global; home/away; global South/North; victim/agent; domination/dependency. Finally, we will ask how processes of knowledge-production take shape within different intellectual and political movements such as post-colonial feminism, decolonial and indigenous feminism, liberal and radical feminism, Marxist feminism and religiously-based feminisms.

**L77 WGSS 441A Gender Analysis for International Affairs**

In this transdisciplinary course, gender is not a synonym for women, as Terrell Carver reminds us; rather, students take gender seriously as both an analytical category and a lived experience, examining how masculinities, femininities, gender identities, and sexualities shape international affairs. Traversing from the macro to the micro level, the course functions as a learning community in which students are exposed to diverse voices from around the world, and students conduct gender analyses in case studies and simulations. Throughout, the class will be mindful of 1) how gender functions in tandem with other aspects of identity, such as race, religion, class, sexuality, and more (intersectionality) and 2) how multidimensional identities morph historically, regionally, and culturally. Students build a gender analysis toolkit and practice what Cynthia Enloe describes as "feminist curiosity," exploring the relationship between gender and power in international affairs.

**L77 WGSS 445A Japanese Fiction**

The Meiji Period (1868-1912) in Japan was a time of tumultuous change. During the era Japan made sweeping reforms to its government, educational system, and social structures. Meiji men were encouraged to "modernize" along Western lines, while women were expected to serve as "repositories of the past." Most women prized the elegant traditions and saw these as important markers of cultural identity. But not all were willing to completely abdicate their place in the modernizing impulse. This writing intensive course will examine these women's literary works, paying attention to the way they developed strategies to both "serve the nation" and find an outlet for their own creative voice. Works to consider include the short fiction of Higuchi Ichiyo, Shimizu Shikin, and Tamura Toshiko, the poetry of Yosano Akiko, the essays of Kishida Toshiko, and the translations of Wakamatsu Shizuko. All readings are available in English translation and students need not be familiar with Japanese, though background in Japanese Studies, Women's Studies, or literary studies will be helpful. This is a Writing-Intensive Seminar. Prerequisite: junior level or above or permission of instructor.

**L77 WGSS 4494 Modern Japanese Women Writers**

Japanese women have been scripted by Western (male) imagination as gentle, self-effacing creatures. From their (re)emergence in the late 19th century to their dominance in the late 20th, Japanese women writers have presented an image of their countrywomen as anything but demure. Struggling to define their voices against ever-shifting expectations and social contexts, the women they create in their fiction are valiant, if not at times violent. This course examines the various manifestations of the female image in female-authored modern Japanese fiction. Writers to be considered are Higuchi Ichiyo, Hirabayashi Taiko, Uno Chiyo, Enchi Fumiko, Yamada Eimi, and others. A selection of novels and shorter fiction will be available in

English translation, and students need not be familiar with Japanese. Prior coursework in literature/women's studies may be helpful. This is a Writing Intensive course. Prerequisite: junior level or above or permission of instructor.

**L77 WGSS 4551 Intersectional Identities in Medieval France**

Were medieval French identities "intersectional"? What cultural evidence is there -- in literature, theatrical performance, the visual arts, and the artifacts of everyday life -- for such identity categories as "race," "sexuality," or "disability"? In this course, we will investigate medieval French imaginaries of the racialized, gendered, classed, and abled/disabled body, seeking to do the following: (1) understand the systems of power and privilege that undergirded medieval identities; (2) critique the contemporary perception of medieval Europe as an all-"white," male-dominated space; and (3) explore how contemporary critical identity studies can deepen our comprehension of medieval culture and how medieval materials can offer new insights into contemporary identity formations. This course will be taught in English, with a weekly discussion section in French for undergraduates enrolling for French credit. Prerequisite: French 325, French 326, Thinking-It-Through, or In-Depth.

**L77 WGSS 457 Gender and Modernity in Latin America**

The purpose of this course is to introduce students to the particular forms modernity assumes in Latin American countries and to the ways in which national cultures, identity politics, and gender issues interweave during the 20th-century. The course will discuss three particular articulations of this topic: 1) Gender and the national question in Argentina: Eva Peron; 2) Gender and Visual Arts: Frida Kahlo; and 3) Gender and Ethnicity: Rigoberta Menchu. Through these iconic figures students will be introduced to the specific features that characterized three very different but representative cultural scenarios in Latin America. In each case, the context for the emergence of these highly influential public figures will be studied from historical, social and

cultural perspectives. In order to explore the cultural and political significance of Eva Peron, Frida Kahlo and Rigoberta Menchu, the course will utilize literary texts (speeches, letters, diaries, etc.), visual materials (photography, films, and paintings) and critical bibliography. ---

**L77 WGSS 4601 Taboo: Contesting Race, Sexuality, and Violence in American Cinema**

Pushing the envelope or going too far? What is the boundary between films that challenge us and films that offend us? This is a course about films that crossed that boundary, most often by presenting images of race, sexuality and violence, images that could attract audiences as much as they offended moral guardians and courted legal sanctions. Because they were denied the First Amendment protection of free speech by a 1915 Supreme Court decision, movies more than any prior art form were repeatedly subject to various attempts at regulating content by government at federal, state, and even municipal levels. Trying to stave off government control, Hollywood instituted forms of self-regulation, first in a rigid regime of censorship and subsequently in the Ratings system still in use. Because taboo content often means commercial success, Hollywood could nonetheless produce films that pushed the envelope and occasionally crossed over into more transgressive territory. While control of content is a top-down attempt to impose moral norms and standards of behavior on a diverse audience, it also reflects changing standards of acceptable public discourse. That topics once barred from dramatic representation by the Production Code - miscegenation, homosexuality and "lower forms of sexuality," abortion, drug addiction - could eventually find a place in American movies speaks to changes in the culture at large. In trying to understand these cultural changes, this course will explore films that challenged taboos, defied censorship, and caused outrage, ranging from films in the early 20th Century that brought on the first attempts to control film content through to films released under the Ratings system, which has exerted subtler forms of control. ---

**L77 WGSS 4700 Ancient Greek and Roman Gynecology**

This course examines gynecological theory and practice in ancient Greece and Rome, from about the 5th century BCE to the 3rd century CE. The task is complicated by the nature of our evidence. Our surviving textual sources are authored exclusively by men, mainly physicians. They have a pronounced tendency to conceptualize the health and disease in terms of a single body, which was male by default. They distinguished female bodies from male primarily in reproductive aspects. How exactly did these physicians understand diseases of

women and, as far as can be recovered, to what extent were their views represented among laypeople? What form did treatment take and what was the social status of practitioners, both that of our extant sources and female practitioners whose voices have largely been silenced by the textual tradition? We will approach the study of Greek and Roman gynecology, first from the perspective of Greco-Roman medical views, then from the point of view of contemporary Western biomedicine. The limited nature of our sources will allow students to read the majority of surviving material. These primary readings will be accompanied by current secondary scholarship that explores these fascinating and often frustrating questions about the female body in ancient medical thought. All primary materials will be available in English translation. There will be an option for students with a background in Greek or Latin to form a satellite reading group. The course does not assume familiarity with Greek and Roman medicine more broadly.

**L77 WGSS 4720 Race, Reproduction, and Justice**

Reproduction is biological, economic, political, and social. Of course, individuals reproduce, but when, how, why, and with whom we do (or do not) is also a matter of public policy and social concern. Drawing on readings from sociology, law and other fields that engage continually with these key questions: Why is reproduction an important site through which to understand sociology? How do statuses such as race, class, gender, sexuality, and ability influence people's reproductive possibilities? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers? Students will review theoretical pieces, empirical research, media and more to explore the answers. This course primarily focuses on the US but will expose students to global reproductive concerns. Class sessions include lecture, in-class discussion and online discussion, media analysis and other activities. This upper-level seminar presumes an understanding of the basic concepts in sociology such as sociological imagination and social construction. Prerequisite: successful completion of an introductory-level Sociology course or consent of the instructor. Graduate students should enroll in this 500-level offering.

## Women, Gender, and Sexuality Studies Major

### Program Requirements

- **Total units required: 27**

A Bachelor of Arts degree with a major or second major in Women, Gender, and Sexuality Studies (WGSS) requires a total of 27 credits, 21 of which must be taken in courses numbered 300 or higher. At least 18 of the 21 upper-level credits required for the major may only count for the WGSS major and may not be double-counted toward another major. Courses that count for the major should be registered as WGSS courses (i.e., with the WGSS designation, L77). All courses taken for the major must be taken for a grade, and students must earn a grade of C- or higher.

### Requirements for the WGSS Major

The following six requirements must be fulfilled through WGSS home-based or cross-listed courses taken at Washington University, unless otherwise indicated. The theory and methods/service learning requirements must be completed at Washington University. Students requesting an exception and who wish to transfer credits in the theory or methods/service learning category must petition the department chair or the director of undergraduate studies, who will consider the request.

Only one course may fulfill two requirements (i.e., one course may double count for two of the six required areas). Students on approved study abroad programs may petition for one course to count toward one of these six requirements.

**1. A 100-Level Introductory Course: 3 credits**

Students must complete the following course and file a copy of a paper from this course with the WGSS office (McMillan Hall, Room 210):

Code	Title	Units
WGSS 100B	Introduction to Women, Gender, and Sexuality Studies	3

**2. One Theory Course: 3 credits**

Choose one of the following:

Code	Title	Units
WGSS 3031	Queer Theory	3
WGSS 3203	Bodies Out of Bounds: Feminist and Queer Disability Studies	3
WGSS 335	Feminist Theory	3
WGSS 3563	Queering the History of Health	3

WGSS 371	Confronting Capitalism: Feminism, Work and Solidarity	3
WGSS 383	Topics in Women, Gender, and Sexuality Studies: Spectacular Blackness, Race, Gender, & Visual Culture	3
WGSS 4006	Advanced Topics in Trans Theories: Femme	3
WGSS 406	Queering Theory: Collaborating, Solidarity, and Working Together	3
WGSS 4013	Queer of Color Critique: Sense and Sexuality	3
WGSS 4014	Feminist and Queer Media Studies	3
WGSS 4102	Everyday Unruliness: Feminist and Queer Resistance	3
WGSS 416	The Politics of Pleasure	3
WGSS 419	Feminist Literary and Cultural Theory	3
WGSS 421	From Mammy to the Welfare Queen: African American Women Theorize Identity	3
WGSS 429	Feminist Political Theory	3
WGSS 4350	Queer and Feminist Geographies	3
WGSS 437	Transnational Feminisms	3

**3. One Feminist Research Methods or Community-Engaged Learning Course: 3 credits**

Choose one of the following:

Code	Title	Units
WGSS 3171	Community-Engaged Learning: Gender and Incarceration	4
WGSS 3173	Community-Engaged Learning: Documenting the Queer Past in St. Louis	4
WGSS 3174	Community Engaged Learning: Feminist and Queer Community Praxis	4
WGSS 3942	Community-Engaged Learning: Projects in Domestic Violence	4
WGSS 417W	Feminist Research Methodologies	3
WGSS 444	Sex and Gender in Public	1.5
WGSS 444B	Sex and Gender in Public	1.5

**Note:** Students who write an honors thesis must take WGSS 417W Feminist Research Methodologies and enroll in WGSS 499 Honors Thesis: Research and Writing to fulfill this requirement. Students who take WGSS 417W Feminist Research Methodologies must submit a copy of their final paper from this course to the WGSS office (McMillan Hall, Room 210).

**4. Two 400-level Courses or an Honors Thesis: 6 credits**

Courses taken in any of the above categories will satisfy this requirement, or the student may choose to write an honors thesis. One of the 3-credit courses must be a home-based WGSS course; the second may be either home-based or cross-listed. Students should consult with their WGSS advisors for approval of their chosen courses and to ensure that one of the courses is home-based.

**5. One Historical Context Course: 3 credits**

Students must choose one course that explores gender, sex, or sexuality in historical context or that studies the history of these categories. A single course may not fulfill both the historical context category and the ethnic/global/racial context category. In other words, one may not double count a class even if it is listed in both categories. This course must be home-based or cross-listed in WGSS. Courses used to fulfill this requirement must be listed under WGSS. **Note:** A course that satisfies one of the previous four requirement areas in this list may also fulfill this requirement.

Choose one of the following:

Code	Title	Units
WGSS 2118	First Year Seminar: Angels, Prostitutes and Chicas Modernas: Women in Latin American History	3
WGSS 30GS	"I Know It When I See It." A History of Obscenity & Pornography in the United States	3
WGSS 3002	Feminist Fire!: Radical Black Women in the 20th Century	3
WGSS 3003	Writing Intensive in Ancient Studies	3
WGSS 3041	Making Sex and Gender: Understanding the History of the Body	3
WGSS 310	From Hysteria to Hysterectomy: Women's Health Care in America	3
WGSS 3101	An Intellectual History of Sex and Gender: Text and Traditions	3
WGSS 312W	Topics in English and American Literature: 30 Years of Queer	3
WGSS 3121	Topics in American Literature: Girls' Fiction	3
WGSS 3130	Sexuality in Early Christianity	3
WGSS 3141	The Racial and Sexual Politics of Public Health	3
WGSS 3152	Sex and Gender in Greco-Roman Antiquity	3
WGSS 3153	The Women of Greek Tragedy	3
WGSS 3172	Queer Histories	3
WGSS 3173	Community-Engaged Learning: Documenting the Queer Past in St. Louis	4
WGSS 3180	The Abuse Crisis in Modern Christianity	3
WGSS 330A	Native American/Euro-American Encounters: Confrontations of Bodies and Beliefs	3
WGSS 330S	Topics in Gender and American Culture	3

WGSS 3416	War, Genocide and Gender in Modern Europe	3
WGSS 345A	Sexual Politics in Film Noir and Hard-boiled Literature	3
WGSS 348	"Revolutionize It!" The Radical History of Second-Wave Feminisms	3
WGSS 354	No Boys Allowed: Girlhood and Programming for Girls in 19th and 20th Centuries, United States	3
WGSS 3548	Gender, Sexuality & Communism in 20th-Century Europe	3
WGSS 3563	Queering the History of Health	3
WGSS 359	Topics in European History: Modern European Women	3
WGSS 361	Women and Social Movements: Gender and Sexuality in U.S. Social Movements	3
WGSS 366	Caste: Sexuality, Race and Globalization.	3
WGSS 369A	Reading Sex in Premodern England	3
WGSS 375	Topics in Women's History	3
WGSS 3751	Topics in Women's History: Women, Gender and Sexuality in Postwar America	3
WGSS 385A	Topics in Jewish Studies	3
WGSS 389	The Global History of HIV/AIDS	3
WGSS 389A	Furies and Die-Hards: Women in Rebellion and War	3
WGSS 39F8	Gender and Sexuality in 1950s America: Writing Intensive Seminar	3
WGSS 39SC	Imperialism and Sexuality: India, South Asia, and the World: Writing-Intensive Seminar	3
WGSS 396	Gender and Social Class	3
WGSS 408A	Nuns	3
WGSS 414	Gender, Religion, Medicine and Science	3
WGSS 4154	Decolonization to Globalization: How to End an Empire	3
WGSS 4231	Topics in American Literature I	3
WGSS 455	Topics in Korean Literature and Culture: Gender in Korean Literature and Film	3
WGSS 4551	Intersectional Identities in Medieval France	3
WGSS 4601	Taboo: Contesting Race, Sexuality, and Violence in American Cinema	3
WGSS 4700	Ancient Greek and Roman Gynecology	3
WGSS 4918	Advanced Seminar: Sexuality in the United States	3
WGSS 4993	Advanced Seminar: Women and Religion in Medieval Europe	3

**6. One Ethnic/Global/Racial Context Course: 3 credits**

Students must choose one course that considers gender and ethnicity, gender and race, or gender in a global context. This course must be home-based or cross-listed in WGSS. Courses used to fulfill this requirement must be listed under WGSS. **Note:** A course that satisfies one of the first four requirement areas in this list may also fulfill this requirement.

Choose one of the following:

Code	Title	Units
WGSS 104	First-Year Seminar: Gender, Sexuality and Settler Colonialism	3
WGSS 207	Constructions of Black Womanhood and Manhood in the Black Community	3
WGSS 2118	First Year Seminar: Angels, Prostitutes and Chicas Modernas: Women in Latin American History	3
WGSS 2232	Gender and Sexuality in the African Diaspora	3
WGSS 270A	Sophomore Seminar: Globalization and its Discontents	3
WGSS 280A	Sex in Italian Culture and Media	3
WGSS 3002	Feminist Fire!: Radical Black Women in the 20th Century	3
WGSS 3014	Queering Citizenship: Gender/Abolition	3
WGSS 3141	The Racial and Sexual Politics of Public Health	3
WGSS 3152	Sex and Gender in Greco-Roman Antiquity	3
WGSS 3153	The Women of Greek Tragedy	3
WGSS 3181	Gender, Sexuality and Power in Brazil	3
WGSS 319A	The Body in Brazil: Race, Representation, Ontologies	3
WGSS 3201	Gender, Culture, and Madness	3
WGSS 330S	Topics in Gender and American Culture	3
WGSS 340	Israeli Women Writers	3
WGSS 3416	War, Genocide and Gender in Modern Europe	3
WGSS 350B	Topics: Global Italy: Race, Gender, Migration and Citizenship	3
WGSS 3548	Gender, Sexuality & Communism in 20th-Century Europe	3
WGSS 357B	Gender and Politics in Global Perspective	3
WGSS 3560	Black Women Writers	3
WGSS 366	Caste: Sexuality, Race and Globalization.	3
WGSS 371	Confronting Capitalism: Feminism, Work and Solidarity	3
WGSS 383	Topics in Women, Gender, and Sexuality Studies: Spectacular Blackness, Race, Gender, & Visual Culture	3
WGSS 383A	Topics in Women, Gender, and Sexuality Studies	3
WGSS 3861	Psychology of Black Women	3

WGSS 389	The Global History of HIV/AIDS	3
WGSS 39SC	Imperialism and Sexuality: India, South Asia, and the World: Writing-Intensive Seminar	3
WGSS 409	Gender, Sexuality, and Change in Africa	3
WGSS 4013	Queer of Color Critique: Sense and Sexuality	3
WGSS 4134	The AIDS Epidemic: Inequalities, Ethnography, and Ethics	3
WGSS 4154	Decolonization to Globalization: How to End an Empire	3
WGSS 416	The Politics of Pleasure	3
WGSS 418C	Sexuality and Gender in East Asian Religions	3
WGSS 4231	Topics in American Literature I	3
WGSS 432	Women Writers of the 20th Century	3
WGSS 437	Transnational Feminisms	3
WGSS 4401	Intersectionality	3
WGSS 441A	Gender Analysis for International Affairs	3
WGSS 445A	Japanese Fiction	3
WGSS 4494	Modern Japanese Women Writers	3
WGSS 455	Topics in Korean Literature and Culture: Gender in Korean Literature and Film	3
WGSS 457	Gender and Modernity in Latin America	3
WGSS 4601	Taboo: Contesting Race, Sexuality, and Violence in American Cinema	3
WGSS 4675	Beyond the Harem: Women, Gender, and Revolution	3
WGSS 4720	Race, Reproduction, and Justice	3
WGSS 480	Topics in Buddhist Traditions: Gender and Sexuality in Buddhism	3
WGSS 49MB	Advanced Seminar: Women and Gender in Modern Caribbean History	3
WGSS 4993	Advanced Seminar: Women and Religion in Medieval Europe	3

WGSS 106	First-Year Seminar: Feminist and Queer Science and Technology Studies	3
WGSS 205	Introduction to Queer Studies	3
WGSS 206	Sexuality and the State: Introduction to Sexuality Studies	3
WGSS 3012	Gender and Politics	3
WGSS 303	Gender and Education	3
WGSS 308	Masculinities	3
WGSS 3103	Sex and Money: Economies of Desire	3
WGSS 315E	Topics in Literature: Queer Love in Public	3
WGSS 316	Feminist Health Studies	3
WGSS 3221	Girls' Media and Popular Culture	3
WGSS 323A	Sex Trafficking	3
WGSS 3410	Gender in Society	3
WGSS 3522	Topics in Literature: Drama Queens: Cleopatra in Elizabethan England	3
WGSS 3561	Law, Gender, and Justice	3
WGSS 360	Trans Studies	3
WGSS 3666	Women and Film	3
WGSS 393	Gender Violence	3
WGSS 3943	Violence Against Women Court Project	1
WGSS 4112	Body and Flesh: Theorizing Embodiment	3
WGSS 427	Technology and Feminist Practice: Gender Violence Prevention Tools	3
WGSS 4331	Topics in Feminist Theory: Feminist Philosophy	3
WGSS 3290	American Religion, Law, and Sexual Politics	3

## General WGSS Education Credits: 6 credits

6 credit units of general WGSS courses, enrolled under L77, are required to complete the major. Students may earn elective credits abroad or at another university. General education may be chosen from the following or from courses listed above under other WGSS requirements.

General WGSS education credits may be chosen from the following:

Code	Title	Units
WGSS 103	First Sem: Sex & Gender in the Gutter: An Intro to Gender and Sexuality Studies Through Comics	3
WGSS 104	First-Year Seminar: Gender, Sexuality and Settler Colonialism	3

## Additional Information

Pass/No Pass credits do not count toward the major, even if they are WGSS internships. For a course to count for major credit, the student must earn a C- or better; however, the College of Arts and Sciences will only grant credit for a writing intensive course if the student earns at least a C+.

We strongly encourage and support students who wish to study abroad. Therefore, we accept up to 9 credits from study abroad (3 of those credits could fulfill the historical context or ethnic/global/racial requirement). Please contact Amy Cislo (acislo@wustl.edu), WGSS Study Abroad Faculty Advisor, about this option.

Current students who wish to take courses at other universities during the summer may transfer up to 6 credit units. However, these credits cannot be used to fulfill the introductory course or the theory or methods/service-learning requirements.

Students transferring to Washington University who wish to complete the major in WGSS may transfer no more than 9 credits of course work taken elsewhere.

# Women, Gender, and Sexuality Studies Major, Health Specialization

## Program Requirements

- **Total units required: 27**

WGSS majors may choose an optional specialization within the major called Health if the students' interests lie primarily within this area of WGSS. Students enrolled in the Health specialization must complete the WGSS major using the approved courses in each required category below. Only 6 units may be taken at the 100 or 200 level. In addition, 6 units must be taken at the 400 level. One of the 400-level courses can be double-counted for one other category. For example, one class may count toward the 400-level class and it may fulfill the theory requirement.

## Required Courses

- Introduction (3 credits); this course is required for all majors:

Code	Title	Units
WGSS 100B	Introduction to Women, Gender, and Sexuality Studies	3

- Theory (3 credits); students select one of the following:

Code	Title	Units
WGSS 3203	Bodies Out of Bounds: Feminist and Queer Disability Studies	3
WGSS 3563	Queering the History of Health	3

- History (3 credits); students select one of the following:

Code	Title	Units
WGSS 3041	Making Sex and Gender: Understanding the History of the Body	3
WGSS 310	From Hysteria to Hysterectomy: Women's Health Care in America	3
WGSS 3141	The Racial and Sexual Politics of Public Health	3
WGSS 414	Gender, Religion, Medicine and Science	3

- Race or Non-U.S. Course (3 credits); students select one of the following:

Code	Title	Units
WGSS 3141	The Racial and Sexual Politics of Public Health	3
WGSS 3201	Gender, Culture and Madness	3
WGSS 389	The Global History of HIV/AIDS	3
WGSS 402	Transnational Reproductive Health Issues: Meanings, Technologies, Practices	3
WGSS 4134	The AIDS Epidemic: Inequalities, Ethnography, and Ethics	3

- Required Health Elective (3 credits); students select one of the following:

Code	Title	Units
WGSS 316	Feminist Health Studies	3
WGSS 360	Trans Studies	3
WGSS 393	Gender Violence	3

- Methods (3 credits); students select one of the following:

Code	Title	Units
WGSS 417W	Feminist Research Methodologies	3
WGSS 444 & 444B	Sex and Gender in Public and Sex and Gender in Public (These are 1.5-credit courses that meet once a week during both semesters of the senior year and that will result in a capstone project exploring gender and/or sexuality and politics broadly conceived.)	3
WGSS 3942	Community-Engaged Learning: Projects in Domestic Violence	4
WGSS 3174	Community Engaged Learning: Feminist and Queer Community Praxis	4

## Elective Courses

- Students select 9 units of any WGSS courses as electives.

## Additional Information

Pass/No Pass credits do not count toward the major, even if they are WGSS internships. For a course to count for major credit, the student must earn a C- or better; however, the College of Arts and Sciences will only grant credit for a writing intensive course if the student earns at least a C+.

We strongly encourage and support students who wish to study abroad. Therefore, we accept up to 9 credits from study abroad (3 of those credits could fulfill the historical context or ethnic/global/racial requirement). Please contact Amy Cislo (acislo@wustl.edu), WGSS Study Abroad Faculty Advisor, about this option.

Current students who wish to take courses at other universities during the summer may transfer up to 6 credit units. However, these credits cannot be used to fulfill the introductory course or the theory or methods/service-learning requirements.

Students transferring to Washington University who wish to complete the major in WGSS may transfer no more than 9 credits of course work taken elsewhere.

## Women, Gender, and Sexuality Studies Major, Politics Specialization

### Program Requirements

- **Total units required:** 27

WGSS majors may choose an optional specialization within the major called Politics if the students' interests lie primarily within this area of WGSS. Students enrolled in the Politics specialization must complete the WGSS major using the approved courses in each required category below. Only 6 units may be taken at the 100 or 200 level. In addition, 6 units must be taken at the 400 level. One of the 400-level courses can be double-counted for one other category. For example, one class may count toward the 400-level class and it may fulfill the theory requirement.

### Required Courses

- Introduction (3 credits); this course is required for all majors:

Code	Title	Units
WGSS 100B	Introduction to Women, Gender, and Sexuality Studies	3

- Race/Ethnicity/Politics (3 credits); students select one of the following (these courses can also be electives):

Code	Title	Units
WGSS 3002	Feminist Fire!: Radical Black Women in the 20th Century	3
WGSS 383A	Topics in Women, Gender, and Sexuality Studies	3
WGSS 39SC	Imperialism and Sexuality: India, South Asia, and the World: Writing-Intensive Seminar	3
WGSS 421	From Mammy to the Welfare Queen: African American Women Theorize Identity	3

- Sexuality and Politics (3 credits); students select one of the following (these courses can also be electives):

Code	Title	Units
WGSS 206	Sexuality and the State: Introduction to Sexuality Studies	3
WGSS 3014	Queering Citizenship: Gender/Abolition	3
WGSS 3103	Sex and Money: Economies of Desire	3
WGSS 3141	The Racial and Sexual Politics of Public Health	3
WGSS 3172	Queer Histories	3
WGSS 323A	Sex Trafficking	3

- Non-U.S. Course (3 credits); students select one of the following:

Code	Title	Units
WGSS 3416	War, Genocide and Gender in Modern Europe	3
WGSS 3548	Gender, Sexuality & Communism in 20th-Century Europe	3
WGSS 362A	Islam, Gender, Sexuality	3
WGSS 39SC	Imperialism and Sexuality: India, South Asia, and the World: Writing-Intensive Seminar	3
WGSS 437	Transnational Feminisms	3

- Theory (3 credits); students select one of the following:

Code	Title	Units
WGSS 3203	Bodies Out of Bounds: Feminist and Queer Disability Studies	3
WGSS 371	Confronting Capitalism: Feminism, Work and Solidarity	3
WGSS 4102	Everyday Unruliness: Feminist and Queer Resistance	3
WGSS 421	From Mammy to the Welfare Queen: African American Women Theorize Identity	3
WGSS 429	Feminist Political Theory	3
WGSS 437	Transnational Feminisms	3
WGSS 4350	Queer and Feminist Geographies	3

- History (3 credits); students select from the WGSS course offerings in this area.

- Methods (3 credits); students select one of the following:

Code	Title	Units
WGSS 417W	Feminist Research Methodologies	3
WGSS 444 & 444B	Sex and Gender in Public and Sex and Gender in Public (These are 1.5-credit courses that meet once a week during both semesters of the senior year and that will result in a capstone project exploring gender and/or sexuality and politics broadly conceived.)	3

## Elective Courses

- Students select 6 units of any WGSS courses as electives, but one of the courses listed below is encouraged:

Code	Title	Units
WGSS 3012	Gender and Politics	3
WGSS 3203	Bodies Out of Bounds: Feminist and Queer Disability Studies	3
WGSS 3410	Gender in Society	3
WGSS 348	"Revolutionize It!" The Radical History of Second-Wave Feminisms	3
WGSS 3561	Law, Gender, and Justice	3
WGSS 393	Gender Violence (If a student wants to take WGSS 3942 Community-Engaged Learning: Projects in Domestic Violence, this course must be taken first.)	3
WGSS 396	Gender and Social Class	3

## Additional Information

Pass/No Pass credits do not count toward the major, even if they are WGSS internships. For a course to count for major credit, the student must earn a C- or better; however, the College of Arts and Sciences will only grant credit for a writing intensive course if the student earns at least a C+.

We strongly encourage and support students who wish to study abroad. Therefore, we accept up to 9 credits from study abroad (3 of those credits could fulfill the historical context or ethnic/global/racial requirement). Please contact Amy Cislo (acislo@wustl.edu), WGSS Study Abroad Faculty Advisor, about this option.

Current students who wish to take courses at other universities during the summer may transfer up to 6 credit units. However, these credits cannot be used to fulfill the introductory course or the theory or methods/service-learning requirements.

Students transferring to Washington University who wish to complete the major in WGSS may transfer no more than 9 credits of course work taken elsewhere.

Phone: 314-935-5102  
Email: wgss@wustl.edu  
Website: <http://wgss.wustl.edu>

## Women, Gender, and Sexuality Studies Minor Program Requirements

**Total units required:** 18 units, 12 of which must be taken in courses numbered 300 or higher.

## Required Courses

Individual programs are designed in consultation with an advisor in light of each student's interests and abilities, major course of study, and plans for the future. All courses must be home-based or cross-listed in WGSS.

## Additional Information

- All minor courses must be home-based or cross-listed in Women, Gender, and Sexuality Studies (WGSS). All courses taken for the minor must be taken for a grade, and students must earn a grade of C- or higher.
- We strongly encourage and support students who wish to study abroad and will accept up to 6 credits from approved programs. Please contact Amy Cislo (acislo@wustl.edu), WGSS Study Abroad Supervisor, about this option.

Phone: 314-935-5102  
Email: wgss@wustl.edu  
Website: <http://wgss.wustl.edu>

## Degree Requirements

The faculty of the College of Arts & Sciences believes each student should strive toward breadth and depth of study, as represented in the formal requirements for each program of study. The faculty also believes that the primary responsibility for the selection of an academic program rests with the student, in consultation with academic advisors. This freedom of choice carries with it a corresponding responsibility for the consequences of such choices, and students are, therefore, expected to familiarize themselves with and meet the requirements detailed below.

## Planning

The degree requirements for the Bachelor of Arts (AB) degree in Arts & Sciences are designed to provide students with strong and sustained training in writing and numerical applications; to enable students to construct a coherent program in which courses reinforce each other in challenging and productive ways; and to take advantage of two distinctive features of the academic environment at Washington University: the strong tradition of cooperation among faculty working in different disciplines and the fact that teaching and learning at Washington University draw energies from an environment of vigorous and creative research.

The College of Arts & Sciences regards active student engagement in curricular planning as central to successful student learning. Each semester, the student's advisors will help them develop a personalized academic plan that responds to what they have already learned about the university, about the structure and aims of intellectual disciplines, and about themselves.

By the end of the sophomore year, students must have declared a major and constructed and nominated an online curricular plan that will satisfy all of the following General Education requirements:

## Core Skills

- A. **College Writing (3 units):** Students demonstrate proficiency in reading and writing English and begin to develop mature skills in framing and revising arguments by completing course work determined by the College Writing Program with a grade of C- or higher. This requirement should be completed during the first year.
- B. **Applied Numeracy (3 units):** Students develop their skills in numerical applications by completing one of an approved list of "AN" courses with a grade of C- or higher. Students often find that there is an AN course in their major field of interest. This course may also satisfy other degree requirements.
- C. **Social Contrasts (3 units):** Students take one course with primary emphasis on the formation, maintenance or impact of social categories, such as race, ethnicity, gender, class, sexual orientation, religious affiliation, ability status or other categories. This course, which may be taken Pass/Fail, must be selected from an approved list of "SC" courses. It may also satisfy other requirements.
- D. **Writing-Intensive Course (3 units):** To consolidate their written communication skills, students must take a writing-intensive course, preferably in their major field. The course, selected from an approved list of "WI" courses, must be completed with a C- or higher. It may also satisfy other requirements.

## Area Requirements

- A. Students must complete course work in each of the following academic areas:
  1. Humanities (HUM): three courses totaling at least 9 units
  2. Natural Sciences and Mathematics (NSM): three courses totaling at least 9 units
  3. Social Sciences (SSC): three courses totaling at least 9 units
  4. Linguistic and Cultural Diversity (LCD): either three sequenced courses of at least 3 units each in a single foreign language or at least four courses designated "LCD" of at least 3 units eachUp to 12 units of the area requirements may be taken Pass/Fail.
- B. To achieve depth and coherence, students must complete three integrations in at least two of the four areas of study (HUM, NSM, SSC, LCD). There are four types of integrations:
  - Arts & Sciences majors, second majors (p. 1137), and minors (p. 1138)
  - Ampersand programs (p. 1114)
  - Designated study away programs (p. 1116)
  - Integrated inquiries (p. 1117)

## The Major

Students must complete a major by taking no fewer than 18 units of courses numbered 300/3000 or greater and earning grades of C- or higher. Individual departments may specify additional units or stricter minimum-grade requirements. Students should refer to the department program pages in this *Bulletin* for program-specific requirements.

Degree completion is based on the primary major of record. At least half of the units for the major must be completed in residence. Students are strongly encouraged to complete a capstone experience in their major as a way of culminating their undergraduate education.

For more details regarding majors — including information about second majors, special majors and majors across schools — visit the main Arts & Sciences (p. 194) section of this *Bulletin*. For more information regarding specific departments' major requirements, visit the Majors pages (p. 1137) of this *Bulletin*.

## Additional Requirements

- A. Students must complete 120 units with at least 30 units in advanced courses (numbered 300/3000 or greater). The 30 units in advanced courses may include the number of advanced units required for the major.
- B. Students must have an overall grade point average of at least 2.0.
- C. Students must earn the final 30 units toward the degree at Washington University while enrolled in the College of Arts & Sciences. Students pursuing 3-2 degrees should follow the requirements laid out by their master's program.
- D. Students must be recommended by the College of Arts & Sciences to the Board of Trustees.

## Regulations

- A. No more than 24 units may be earned using the Pass/Fail option, and no more than 12 of the 24 Pass/Fail units may be for area distribution requirements.
- B. No more than 15 units of pre-matriculation credit may be counted toward the degree. Pre-matriculation sources include Advanced Placement (AP), British Advanced (A) Levels, the International Baccalaureate (IB), and course credit earned by proficiency (i.e., back credit). Pre-matriculation sources may also include college courses taken after the sophomore year in high school but not applied toward the high school diploma. Credits earned via the High School Summer Scholars or High School College Access programs at Washington University are considered to be pre-matriculation units and are subject to the same regulation.
- C. Students may not earn more than 12 units toward the bachelor's degree (AB) in group and/or individual performance courses. Exceptions may be made for students majoring in departments that require a large number of performance courses for the major, such as dance, drama and music.
- D. No more than 18 units of credit in independent study may be applied to the AB; no more than 6 units of independent study may be attempted in a single semester.

- E. No more than 6 units of internship credit may be applied to the AB; no more than 3 units of internship credit may be attempted in a single semester.
- F. A student may receive no more than a total of two majors and one minor or one major and two minors.

## Transfer Students

Transfer students will follow the requirements of the Integrated Inquiry Curriculum, outlined above. Where appropriate, previous course work may be applied to the distribution requirements based on the following guidelines:

- A. Transfer students who have not taken a college writing course at their prior school will take College Writing during their first year at Washington University. Students who have taken such a course may be eligible to submit a writing portfolio to the College Writing Program for evaluation. The program will review the portfolio to determine if the College Writing requirement has been satisfied or if the student must complete additional writing course work.
- B. The transfer advisors will evaluate a student's transcript on an individual basis. Generally speaking, course work taken at the previous institution may count toward the College's area requirements but not toward the core requirements. For students transferring after one year at another institution, the three required integrations must be completed through courses taken in residence. Students transferring after two years at another institution must complete two integrations through courses taken in residence. Whether course work taken at the previous institution may count toward a major or minor program of study is at the discretion of the major/minor department or program.
- C. Transfer students must be enrolled for at least four consecutive full-time semesters, which may include an approved semester abroad program, to satisfy the residency requirement. These full-time semesters do not include Summer Session. Students must complete a minimum number of units at Washington University and a minimum number of units in the College of Arts & Sciences according to the following table. No more than 3 units per semester may be taken on a Pass/Fail basis.

Semesters in Residence	Arts & Sciences Units in Residence	Total WashU Units in Residence
Seven semesters	78 units	105 units
Six semesters	69 units	90 units
Five semesters	57 units	75 units
Four semesters	45 units	60 units

## Sealing of the Transcript

Conferral of the degree seals the student's academic record at Washington University. No changes can be made to the student's academic record after conferral of the degree. All students are strongly advised to obtain a copy of their final transcript, which is available for order from the Office of the University Registrar via WebSTAC.

## A&S Integration: Ampersand Programs

This page documents programs currently designed and approved to fill Arts & Sciences integration requirements.

### Beyond Boundaries (HUM, SSC)

**Two courses are required:**

Select any two of the following courses:

Code	Title	Units
BEYOND 101	Earth's Future: Causes and Consequences of Global Climate Change	3
BEYOND 102	The Business of Elections	3
BEYOND 105	The Endgame of Entrepreneurship: Leveraging Capitalism for Good	3
BEYOND 111	Law, Race, and Design: Examining the St. Louis Story	3
BEYOND 115	Environmental Racism and the Health of Everyone	3
BEYOND 120	Religious Freedom in America	3
BEYOND 123	When I'm Sixty-Four: Transforming Your Future	3
BEYOND 125	St. Louis and the Documentary Image	3
BEYOND 130	The Art of Medicine	3
BEYOND 140	To Sustainability and Beyond: People, Planet, Prosperity (P3)	3
BEYOND 160	Gender, Youth, and Global Health	3
BEYOND 161	Morality and Markets	3
BEYOND 175	Designing Creativity: Innovation Across Disciplines	3

### Ampersand: Biotech Explorers Pathway (NSM)

**Three courses are required:**

Code	Title	Units
FYP 2010	Ampersand: The Science of Biotechnology	3
FYP 2020	Ampersand: Biotechnology Entrepreneurs Seminar	3
Biol 3010	Biotechnology Project	3

### Ampersand: Encountering China (HUM)

**Two courses are required:**

Code	Title	Units
FYP 107	Ampersand: Encountering Chinese Culture: A Performative Perspective on Chinese Culture and Identity	3
FYP 1080	Encountering Chinese Culture: Performing Tradition, Engendering Transformations	3

## Ampersand: Examining America (HUM)

Two courses are required:

Code	Title	Units
FYP 1100	Ampersand - American Stories: Place, Power, and Imagination	3
FYP 110A	Ampersand: Examining America: American Landscapes: Identity, Power, Place and Meaning	3

## Ampersand: Global Citizenship Program (HUM, SSC)

Four courses are required:

Code	Title	Units
<b>Select any two of the following three courses:</b>		
FYP 1133	Ampersand: Legacies of the Silk Road	3
FYP 116	Ampersand: Geographies of Globalization and Development	3
FYP 117	FYS: Global Population on the Move: Language & Resettlement with Law, Healthcare & Education	3
<b>Complete these two workshops:</b>		
FYP 1503	Ampersand: Workshop for the Global Citizenship Program	1
FYP 1504	Ampersand: Workshop for the Global Citizenship Program	1

## Ampersand: The Hallmarks of Cancer and Patient Care (NSM)

Two courses are required:

Code	Title	Units
Biol 144	Ampersand: The Biology of Cancer Part I	4
Biol 1441	Ampersand: Frontiers in Cancer Research and Treatment	3

## Ampersand: The History, Memory, and Representation of the Holocaust (HUM, LCD, SD)

Two courses are required:

Code	Title	Units
FYP 2850	Ampersand: The Holocaust: A European Experience	3
FYP 2851	Ampersand: Representations of the Holocaust in Literature and Film	3

## Ampersand: Literary Culture of Modern Ireland (HUM)

Two courses are required:

Code	Title	Units
FYP 2811	Ampersand: Literary Culture of Modern Ireland	3
FYP 2812	Ampersand: Literary Culture of Modern Ireland II	3

## Ampersand: Medicine and Society (LCD, SSC)

Two courses are required:

Code	Title	Units
Anthro 141	Ampersand: Medicine and Society	3
Anthro 142	Ampersand: Medicine and Society	3

## Ampersand: Mind, Brain, and Behavior (NSM, SSC)

Two courses are required:

Code	Title	Units
FYP 120A	Amp: Intro to Study of the Mind-Brain: Psychological, Biological, & Philosophical Perspectives	3
FYP 122A	Ampersand: Introduction to the Study of the Mind Brain II	3

## Ampersand: Modern Media: The Good, the Bad, and the Future (HUM)

Two courses are required:

Code	Title	Units
FYP 1505	Ampersand: Modern Media: The Good, the Bad, & the Future	3
FYP 1506	Ampersand: Modern Media: The Good, the Bad, & the Future	3

## Ampersand: Pathfinder: A Sense of Place: Discovering Missouri's Natural Heritage (NSM, SSC)

Three courses are required:

Code	Title	Units
FYP 121	Ampersand: Pathfinder - A Sense of Place: Discovering Missouri's Natural Heritage	3
FYP 122	Ampersand: Pathfinder - A Sense of Place: Discovering the Environment of St. Louis	3
FYP 181P	Ampersand: Pathfinder: Environmental Seminar	1

## Ampersand: Phage Hunters (NSM)

Two courses are required:

Code	Title	Units
FYP 1910	Ampersand: Phage Hunters	3
FYP 1920	Ampersand: Phage Bioinformatics	3

## Ampersand: Rethinking WashU's Relation to Enslavement: Past, Present, and Future (HUM)

Two courses are required:

Code	Title	Units
FYP 2721	Ampersand: Rethinking WashU's Relation to Enslavement: Past, Present, and Future	3
FYP 2722	Ampersand: Rethinking WashU's Relation to Enslavement: Past, Present, and Future II	3

## Ampersand: Safe Asylum: Refugee Politics and Pathways (SSC)

Two courses are required:

Code	Title	Units
FYP 2242	Ampersand: Migration Policies and Colonialism: Refugee Resettlement and Integration	3
FYP 2243	Ampersand: Mediterranean Migration: Dynamics and Consequences on the EU and MENA	3

## Ampersand: Shakespeare's Globe: All the World's a Stage (HUM)

Two courses are required:

Code	Title	Units
FYP 119	Ampersand: Shakespeare's Globe: All the World's a Stage	3
FYP 1192	Ampersand: Shakespeares Globe: All the Worlds a Stage II	3

## Ampersand: Text and Tradition (HUM)

Two courses are required:

Code	Title	Units
IPH 203C	Early Political Thought: Text & Traditions	3
IPH 201C	Classical to Renaissance Literature: Text & Traditions	3

## Ampersand: The Venetian Republic (HUM)

Two courses are required:

Code	Title	Units
FYP 1703	Ampersand: The Republic of Venice I	3
FYP 1704	Ampersand: The Republic of Venice II	3

## A&S Integration: Study Away Programs

This page documents programs currently designed and approved to fill Arts & Sciences integration requirements.

### The Program in Chile (HUM, LCD)

The Washington University Program in Chile offers students an exciting opportunity to study at the Pontificia Universidad Católica de Chile (PUC) in Santiago. Students further their Spanish fluency by studying the language as a representation of the dynamic and concrete realities of the national regional culture of Santiago, augmenting their classroom study with activities in the city. They also explore contemporary issues of cultural, social, political, and literary importance related to the "Southern Cone," seeking to determine what specifically can be expressed about national identity, globalization, and the environment as Chile and its neighbors face the 21st century.

Offered Spring, Fall, Academic Year

Two courses are required:

Code	Title	Units
Span 313	Chilean Contemporary Culture	3
Span 354	A View from the Southern Cone: Perspectives on Art, Literature and Culture	3

## WU Healthcare in France (HUM, LCD)

The WU Healthcare in France program offers students a transformative opportunity to directly engage with the French healthcare system, enhance their French language skills, and deepen their cultural understanding in a fully immersive environment. Set against the picturesque backdrop of Nice and France's Mediterranean coast, this five-week program combines real-life experience in French hospitals with a profound exploration of health and human well-being in course work.

Offered Summer only

### Two courses are required:

Code	Title	Units
French 3193	Healthcare in France: Observational Internship	3
French 3720	The Art of Health in Nice	3

## Music in Florence Summer Program @ Accademia Europea di Firenze (HUM)

The Summer Music Study in Florence Program engages students in the musical arts as composers, improvisers, singers, instrumentalists, and lyricists. Courses, lessons, and ensembles in the program divisions of chamber music, jazz, musical theatre, popular music, film music, and composition/new music are made available to students of all levels. In addition, weekly master classes are offered from visiting artists with translation by William Lenihan (Professor the Practice in the Department of Music), combining cultural immersion in the City of the Renaissance and professional performing opportunities along with regular lectures, on-site classes, field trips, and ensembles.

Offered Summer only

### Two courses are required:

Code	Title	Units
Music 2231	Musicianship I	1
Music 3091	Jazz Improvisation I	3
or Music 3238	Towards a New Music	

## WU French and African Studies Summer Program in Senegal (HUM, LCD)

The summer program to Senegal, West Africa, is designed for students who want to build their conversational French language skills, learn more about Francophone West Africa, and experiment with field research. Dakar, Senegal, provides the perfect opportunity to explore themes in African and Francophone studies because of its geographical space and unique history. Geographically, Dakar naturally opens itself to the wider world, as reflected in its history, its role in the former French empire, its religious landscape, and its current relationships with other countries. Senegal, very proud of its place as an intellectual center, is the epicenter of many artistic and cultural movements. Dakar is a stable, cosmopolitan, and culturally rich capital city.

Offered Summer only

### Two courses are required:

Students must take the following course:

Code	Title	Units
AFAS 369	Senegal: History, Politics and Culture	3

Students must take one of the following:

Code	Title	Units
French 313	Conversational Fluency	3
AFAS 1040	Intensive Introductory Wolof	3

## WU Spanish Language Summer Institute (HUM, LCD)

This is a dynamic, intensive program in Spanish language and culture offering full immersion for approximately 6 weeks in Madrid and other areas of Spain. It is designed to accelerate the language acquisition process of intermediate students in Spanish and to introduce them to the experience of life in this modern European country with its very unique history and traditions.

Offered Summer only

### Two courses are required:

Code	Title	Units
Span 311	Hispanic Culture and Civilization I	3
Span 322	Advanced Conversation in Spain	3

## A&S Integration: Integrated Inquiries

This page documents programs currently designed and approved to fill Arts & Sciences integration requirements.

## Twentieth-Century Political Dynamics (HUM, LCD, SSC)

What were the major events, personalities, and struggles of 20th-century international history? How do we explain or interpret them? What was their significance, and what were their enduring legacies for world and regional politics? This IQ explores these issues through courses that examine central institutions, social movements, and regions in global affairs. Students will deepen their historical and/or theoretical understanding of current issues. They will also gain a greater appreciation of what happened in the past and how it continues to shape the present in important ways.

**Note:** Students complete two courses, each from a different department outside of their major.

### African and African American Studies

Code	Title	Units
AFAS 322C	African Civilization: 1800 to the Present (HUM, LCD)	3
AFAS 3113	Culture, Politics, and Society in Francophone Africa (SSC, LCD, SC)	3

### Anthropology

Code	Title	Units
Anthro 204B	Anthropology and the Modern World (SSC, LCD)	3

### East Asian Languages and Cultures

Code	Title	Units
East Asia 312C	Japan Since 1868 (HUM, LCD)	3
East Asia 316C	Modern China 1890s to the Present (HUM, LCD)	3
Chinese 3163	Historical Landscape and National Identity in Modern China (HUM, LCD)	3

### History

Code	Title	Units
History 164	Introduction to World History: The Second World War in World History (HUM, LCD)	3
History 3150	The Middle East in the 20th Century (HUM, LCD)	3
History 3192	Modern South Asia (HUM, LCD)	3
History 322C	Modern Latin America (HUM, LCD)	3
History 356C	20th-Century Russian History (HUM, LCD)	3
History 3220	Modern Mexico: Land, Politics and Development (HUM, LCD)	3

### Latin American Studies

Code	Title	Units
LatAm 165D	Latin America: Nation, Ethnicity and Social Conflict (HUM, LCD, SC)	3

### Political Science

Code	Title	Units
Pol Sci 102B	Introduction to Comparative Politics (SSC, LCD)	3
Pol Sci 103B	International Politics (SSC)	3
Pol Sci 3093	Politics of the European Union (SSC, LCD)	3
Pol Sci 326B	Latin-American Politics (SSC, LCD)	3
Pol Sci 3280	Political Intolerance in World Politics (SSC, LCD)	3
LatAm 322C	Modern Latin America (HUM, LCD)	3

### Religion and Politics

Code	Title	Units
RelPol 302	Religion and Politics in 20th-Century U.S. History (HUM)	3

### Religious Studies

Code	Title	Units
Re St 3031	Christianity in the Modern World (HUM)	3
Re St 3670	Gurus, Saints, and Scientists: Religion in Modern South Asia (HUM, LCD)	3

## Along the Silk Road (HUM, LCD, SSC)

How were civilizations connected throughout history? How did societies from East Asia, Central Asia, the Near East, and Europe shape each other's material and ideological worlds? The "Silk Routes" comprised one of the most extensive and diverse networks of trade and social interaction in history. The exchange and diffusion of material culture, technological innovations, ideology, food, and social institutions across this vast overland system resulted in the growth and development of societies from Japan to Europe and everywhere in between. This IQ is designed to provide students with a multidisciplinary view of the history of Eurasia in light of major transformations in art and archaeology, religion, political organization, and literature that linked Eurasian societies within a wider world system.

**Note:** Students complete two courses, each from a different department outside of their major.

### Anthropology

Code	Title	Units
Anthro 3053	Nomadic Strategies and Extreme Ecologies (SSC)	3
Anthro 3775	Ancient Eurasia and the New Silk Roads (SSC, LCD)	3

### Art History

Code	Title	Units
Art-Arch 111	Introduction to Asian Art (HUM, LCD)	3
Art-Arch 3422	Art of the Islamic World (HUM, LCD)	3

*East Asian Languages and Cultures*

Code	Title	Units
East Asia 223C	Korean Civilization (HUM, LCD)	3
East Asia 226C	Japanese Civilization (HUM, LCD)	3
East Asia 227C	Chinese Civilization (HUM, LCD)	3

*History*

Code	Title	Units
History 3149	The Late Ottoman Middle East (HUM, LCD)	3
History 3162	Early Modern China (HUM, LCD)	3

*Jewish, Islamic, and Middle Eastern Studies*

Code	Title	Units
JIMES 210C	Introduction to Islamic Civilization (HUM, LCD)	3

*Literature*

Code	Title	Units
Japan 332C	Japanese Literature: Beginnings to 19th Century (HUM, LCD)	3
East Asia 3411	Early and Imperial Chinese Literature (HUM, LCD)	3
GS 3500	The 19th-Century Russian Novel (WI) (HUM, LCD, WI)	3

*Religious Studies*

Code	Title	Units
Re St 3090	Chinese Thought (HUM, LCD)	3
Re St 311	Buddhist Traditions (HUM, LCD)	3
EALC 3340	Topics in East Asian Religions (HUM, LCD)	3

## The Americas (HUM, LCD, SSC)

What shared histories of indigenous settlement, colonialism, and nation-building unite the Americas as the "New World" that sparked the imaginations of so many travelers, immigrants, and empire builders of the past and present? How do the Americas today reflect this shared history yet also reveal vast differences in cultural tradition, wealth and inequality, and visions of the future? This IQ will allow students to explore a range of historical roots: from pre-European empires and worlds of indigenous peoples to the revolutionary struggles of the 18th century and the rise of nation-states. Students may also delve into the political and cultural complexities that shape the Americas today. Across these histories, this IQ draws attention to struggles over identity and resources that lay the foundations for the Americas as we know them today and to the rise of ideas and institutions that shaped these places in very different ways over the centuries. By completing this IQ, students will gain a deeper understanding of their own place in the Americas and of the ways that scholars of different disciplines engage the social, historical, and political-economic complexities of world regions.

**Note:** Students complete two courses, each from a different department outside of their major.

*American Culture Studies*

Code	Title	Units
AMCS 202	The Immigrant Experience (SSC, LCD, SC)	3
AMCS 227	Topics in Native American Culture (SSC, LCD)	3
AMCS 395	American Indians and American Empire (SSC, LCD)	3

*Anthropology*

Code	Title	Units
Anthro 314B	Before Columbus: Indigenous Histories of North America before 1492 (SSC, LCD)	3
Anthro 3351	The Ancient Maya: Archaeology and History (SSC, LCD)	3

*Art History & Archaeology*

Code	Title	Units
Art-Arch 290	Latinx Art (HUM, LCD, SC)	3
Art-Arch 3810	Mexican Visual Culture (HUM, LCD)	3

*Economics*

Code	Title	Units
Econ 326	American Economic History (SSC)	3

*History*

Code	Title	Units
History 321C	Introduction to Colonial Latin America until 1825 (HUM, LCD, SC)	3
History 322C	Modern Latin America (HUM, LCD)	3
History 3220	Modern Mexico: Land, Politics and Development (HUM, LCD, SC)	3

*Latin American Studies*

Code	Title	Units
LatAm 165D	Latin America: Nation, Ethnicity and Social Conflict (HUM, LCD, SC)	3
LatAm 321C	Introduction to Colonial Latin America Until 1825 (HUM, LCD)	3
LatAm 322C	Modern Latin America	3

*Political Science*

Code	Title	Units
Pol Sci 326B	Latin-American Politics (SSC, LCD)	3

*Religion and Politics*

Code	Title	Units
RelPol 225	Religion and Politics in American History (HUM, SC)	3
RelPol 235	Puritans, Native Americans, and Revolutionaries: Empire and Encounter in Early America (HUM)	3

*Spanish*

Code	Title	Units
Span 302	Cultures and Communication in the Spanish-Speaking World (LCD-LS)	3
Span 303	Cultures and Communication in the Spanish-Speaking World II (LCD-LS)	3

## Arts and Society (HUM, LCD)

How do the performed arts (dance, music, and theater), the visual arts, and the cinematic arts relate to the societies in which they are practiced? What roles do they play in the formation of individual or social consciousness? How is the practice and understanding of these arts influenced by what happens in the social context? Answers to these questions vary from art to art and society to society, so the courses in this IQ focus on the historical development of artistic practices within particular cultures and the ways in which such practices function in the development of particular societies. By completing this IQ, students will develop language with which to analyze acts and works of nonliterary art and gain a richer understanding of how these arts function in people's lives.

**Note:** Students complete two courses, each from a different department outside of their major.

*African and African American Studies*

Code	Title	Units
AFAS 301	A History of African-American Theater (HUM, SC)	3

*Art History*

Code	Title	Units
Art-Arch 111	Introduction to Asian Art (HUM, LCD)	3
Art-Arch 113	History of Western Art, Architecture & Design (HUM)	3
Art-Arch 215	Introduction to Modern Art, Architecture and Design (HUM, LCD)	3

*Dance*

Code	Title	Units
Dance 331	Movement and Meaning: Dance in a Global Context (HUM, LCD)	3
Dance 316	Histories of Theatrical and Concert Dance (HUM)	3

*Drama*

Code	Title	Units
Drama 228C	Theater Culture Studies I: Antiquity to Renaissance (HUM)	3
Drama 229C	Theater Culture Studies II: From Renaissance to Romanticism (HUM)	3
Drama 365C	Theater Culture Studies III: Melodrama to Modernism (HUM)	3

*Film and Media Studies*

Code	Title	Units
Film 220	Introduction to Film Studies (HUM)	3
Film 330	History of American Cinema (HUM)	3
Film 340	History of World Cinema (HUM, LCD)	3
Film 350	History of Electronic Media (HUM)	3

*Music*

Code	Title	Units
Music 1021	Musics of the World (HUM, LCD)	3
Music 1022	Popular Music in American Culture (HUM)	3
Music 105	History of Jazz (HUM)	3
Music 114E	Exploring Music: Music & Disability: Performing Disability on Stage and Screen (HUM)	3
Music 3023	Jazz in American Culture (HUM)	3

## The Culture of European Modernity (HUM, LCD)

How did artists and intellectuals respond to the social, political, and economic transformations that swept through 18th-, 19th-, and 20th-century Europe? The courses in this IQ investigate some of the remarkable cultural and intellectual innovations of this tumultuous period and also attempt to situate them within their broader social and historical contexts. Students who complete this IQ will have a better understanding of what we mean when we talk about European modernity, modernization, and modernism and a better sense of how works of art, literature, and philosophy both reflect and help to shape the historical epochs out of which they emerge.

**Note:** Students complete two courses, each from a different department outside of their major.

*Art History*

Code	Title	Units
Art-Arch 215	Introduction to Modern Art, Architecture and Design (HUM, LCD)	3
Art-Arch 3783	The Modernist Project: Art in Europe and the United States, 1905-1980 (HUM)	3
Art-Arch 3815	Rococo to Revolution: Art in Eighteenth-Century Europe (HUM)	3

*Comparative Literature and Thought*

Code	Title	Units
Comp Lit 3123	Introduction to Digital Humanities (HUM, LCD)	3

*Drama*

Code	Title	Units
Drama 365C	Theater Culture Studies III: Melodrama to Modernism (HUM)	3

*English*

Code	Title	Units
E Lit 2152	Literature in English: Modern Texts and Contexts (HUM)	3

*German*

Code	Title	Units
German 340C	German Literature and the Modern Era (HUM, LCD)	3

*History*

Code	Title	Units
History 102D	Introduction to Modern European History (HUM, LCD, SC)	3
History 3450	Modern Germany (HUM, LCD)	3
History 3598	The First World War and the Making of Modern Europe (HUM, LCD)	3

*Interdisciplinary Project in the Humanities*

Code	Title	Units
IPH 207C	Modern Political Thought: Text & Traditions (HUM, LCD)	3
IPH 3050	Literary Modernities in Europe and America: Text & Traditions (HUM, LCD)	3

*Philosophy*

Code	Title	Units
Phil 357C	Kant and 19th-Century Philosophy (HUM)	3
Phil 375	Existentialism (HUM, LCD)	3
Phil 349	Descartes to Hume (HUM)	3

## The Development of U.S. Democracy (HUM, LCD, SSC)

What does it mean to live in a democracy? In what ways are the institutions of government bound by the wishes of American citizens, and in what ways does a broader culture inform how democracy takes shape? This IQ explores those questions through courses that consider the complex ways that Americans have conceived of the relationship between citizens and their government. While some courses examine the formal structures of that government, others consider how democracy takes shape through forms of culture that exist outside the familiar definitions of politics.

**Note:** Students complete two courses, each from a different department outside of their major.

*African and African American Studies*

Code	Title	Units
AFAS 251	Juvenile Justice in the Black Experience (SSC, SC)	3

*American Culture Studies*

Code	Title	Units
AMCS 202	The Immigrant Experience (SSC, LCD, SC)	3

*English Literature*

Code	Title	Units
E Lit 302	The Great American Novel (HUM)	3

*History*

Code	Title	Units
History 163	Freedom, Citizenship and the Making of American Life (HUM, LCD)	3
History 2152	The Theory and Practice of Justice: The American Historical Experience (HUM, SC)	3
History 365	The Birth Crisis of Democracy: The New United States of America, 1776-1850 (HUM)	3

*Political Science*

Code	Title	Units
Pol Sci 101B	American Politics (SSC)	3
Pol Sci 3070	Politics and Policymaking in the American States (SSC)	3
Pol Sci 3255	Development of the American Constitution (SSC)	3
Pol Sci 393	History of Political Thought III: Liberty, Democracy, and Revolution (SSC)	3

*Religion and Politics*

Code	Title	Units
RelPol 225	Religion and Politics in American History (HUM, SC)	3
RelPol 201	Religion and American Society (HUM, SC)	3

*Women, Gender, and Sexuality Studies*

Code	Title	Units
WGSS 3561	Law, Gender, and Justice (SSC, SC)	3

## Environmental Issues (HUM, LCD, NSM, SSC)

How do humans interact with the natural world? The courses in this IQ investigate the dynamic and highly interdependent nature of the natural and social systems that shape the Earth's environment, as well as the profound impact of humans on the diversity and distribution of life on Earth. Students who complete this cluster will better understand how environmental issues transcend traditional disciplinary and political boundaries.

**Note:** Students complete two courses, each from a different department outside of their major.

### Anthropology

Code	Title	Units
Anthro 3182	Ancient Africa: Social Mosaics and Environmental Challenges (SSC, LCD)	3
Anthro 361	Culture and Environment (SSC, LCD)	3
Anthro 379	Meltdown: The Archaeology of Climate Change (SSC)	3

### Biology

Code	Title	Units
Biol 2950	Introduction to Environmental Biology (NSM)	3

### Earth, Environmental, and Planetary Sciences

Code	Title	Units
EEPS 108A	Oceans and the Atmosphere (NSM)	3
EEPS 109A	Quantitative Reasoning in Environmental Science (NSM, AN)	3
EEPS 111	Introduction To Global Climate Change In the 21st Century (NSM)	3
EEPS 202	Introduction to Earth, Environmental, and Planetary Science (NSM, AN)	3

### Environmental Studies

Code	Title	Units
EnSt 110	Environmental Issues (NSM)	3
EnSt 115	Introduction to Conservation Biology (NSM)	3
EnSt 250	One Health: Linking the Health of Humans, Animals, and the Environment (SSC)	3

### Philosophy

Code	Title	Units
Phil 235F	Introduction to Environmental Ethics (HUM)	3

### Political Science

Code	Title	Units
Pol Sci 2010	Introduction to Environmental Policy (SSC)	3
Pol Sci 3760	Globalization, Urbanization, and the Environment (SSC)	3

### Writing

Code	Title	Units
Writing 309	Writing the Natural World (HUM, WI)	3

## Ethics and Morality (HUM, LCD, SSC)

What is a good life for a human being? What do we, individually and collectively, owe to other humans (and to non-human animals)? How can social institutions (such as government or religion) help us to lead good lives and meet our moral obligations? Courses in this IQ expose students to historical and contemporary debates about these fundamental questions from a variety of secular and religious perspectives. Students will be introduced to rival accounts of virtue, arguments about the source and content of our rights and duties, and diverse understandings of the meaning and purpose of human lives.

**Note:** Students complete two courses, each from a different department outside of their major.

### Interdisciplinary Project in the Humanities

Code	Title	Units
IPH 203C	Early Political Thought: Text & Traditions (HUM, LCD)	3
IPH 207C	Modern Political Thought: Text & Traditions (HUM, LCD)	3

### Philosophy

## Forms of Creative Expression: Theory and Practice (HUM, LCD)

How does a poem, sonata, pas de deux, or play mean? How does writing a play, making a film, choreographing a dance, or composing music help us to understand these forms from within? By theoretically and practically engaging dance, film, theater, music, or creative writing, one develops the body, the emotions, and the mind in new ways. The arts do not merely reflect culture and knowledge; they create new ways and forms of knowing and feeling, and they are therefore vital engines of cognition. They require imagination, cunning, the control of resistant materials, empathy, and the ability to both master and violate conventions. Students taking this IQ will appreciate the rich theoretical dimensions of art forms and, by making art, learn how to match the stuff of raw inspiration with material form.

**Note:** Students complete two courses, each from a different department outside of their major. Students who are placed by the Dance department into higher-level courses should speak with their advisor about obtaining a waiver.

Writing 351	Introduction to Playwriting (HUM)	3

## The Individual and Society (HUM, LCD, SSC)

How do societies structure and shape the lives of their members? Courses in this IQ analyze the ways in which individuals are impacted by social institutions, including both formal institutions (such as government, the economy, and schools) and informal institutions (such as religious and cultural norms). Social institutions play a major role in determining our options, guiding our choices, and endowing our actions with meaning. Social institutions create differences between individuals (especially by producing and reproducing inequalities of status, power, opportunity, income, and wealth), but those same institutions also create similarities among a society's members (in their behavior, beliefs, values, identities, tastes, and habits). Students who complete this IQ should improve their understanding of how social institutions work, where they come from, and how they change; students should also improve their ability to reason about whether and how particular social institutions should be changed.

**Note:** Students complete two courses, each from a different department outside of their major.

## Language: Theory and Practice (HUM, LCD, SSC)

How can people effectively use language to convey their thoughts, feelings, and beliefs? What properties of language allow it to be used so creatively? How do children acquire language in the first place? The courses in this IQ examine language from a variety of perspectives. They examine the structures of language itself: the sounds, phrases, and sentences that convey meaning; they examine the role of language in effective communication; and they examine the properties of the mind responsible for language.

**Note:** Students complete two courses, each from a different department outside of their major.

## Life and Physical Sciences (NSM)

What are the fundamental principles upon which advanced scientific knowledge is based? How are these principles, drawn from different academic fields, related to each other? This IQ provides students with a rigorous introduction to the life and physical sciences, teaching both principles and applications of foundational scientific knowledge. Moreover, the concepts taught in these courses reinforce each other, such that students pursuing this IQ will gain a better understanding of how one discipline complements and completes the others. Because advances in medical and biomedical science rests upon the introductory material explored in this IQ, it is an excellent inquiry for life sciences students not majoring in one of the natural sciences.

**Note:** Students complete two courses, each from a different department outside of their major.

Physics 192	Physics II (NSM, AN)	3

## Mind, Brain, Cognition (HUM, NSM, SSC)

How do we perceive, remember, and think? What is the relation of the mind to the brain? These questions are addressed in cognitive science, an interdisciplinary field that combines philosophy, psychology, neurobiology, and computer science. In this IQ, you will be exposed to recent empirical research and theory in which new avenues have been opened for understanding the nature of consciousness, our ability to use and understand language, varieties of memory, the functional organization of the brain, the nature of reasoning, and how perceptual experience may vary across individuals.

**Note:** Students complete two courses, each from a different department outside of their major.

## Modes of Inquiry and Analysis (NSM, SSC)

In a world in which we are bombarded by information, how can data best be evaluated and interpreted? How can we determine the nature of relationships between variables? Students who explore this IQ will be able to think critically when confronted with a wide variety of information. In addition to learning to evaluate the claims of others, students will also learn to interpret, summarize, and effectively communicate information themselves.

**Note:** Students complete two courses, each from a different department outside of their major.

## Race and Ethnicity in America (HUM, SSC)

How have encounters among diverse peoples affected the historical, political, and artistic landscape in America? Is American "exceptionalism" a product of such encounters? How should we consider the ideal of "America" as a conceptual construct in light of the legacies of genocide, slavery, and discrimination? The courses in this IQ investigate the varied roles race has played in shaping history, politics, and arts in America. By completing it, students will have a deeper understanding of and a more nuanced appreciation for the roles and contributions of race to American culture and society.

**Note:** Students complete two courses, each from a different department outside of their major.

## Science and Society (HUM, NSM, SSC)

What does science teach us about the natural world, and how should we integrate that knowledge into our decision making? In the last century, systematic scientific investigation has given us great insight into the world around us and great power to influence it to our benefit. Students investigating this IQ will explore that knowledge and grapple with deeper questions that science raises, including our understanding of our place in the universe, how to evaluate our own impact on the world, and how to make responsible use of the scientific knowledge we are acquiring.

**Note:** Students complete two courses, each from a different department outside of their major.

## Understanding the Natural World (NSM)

How did the Universe, Earth, and life come to be, and what are the fundamental principles that govern their structure and function? The courses in this IQ investigate the basic biological, chemical, physical, and geological aspects of the natural world. Students who complete this IQ will be able to engage in the process of scientific inquiry and have an informed and interdisciplinary understanding of the scientific approach to describing, classifying, and interpreting natural phenomena.

**Note:** Students complete two courses, each from a different department outside of their major.

## Western Roots (HUM, LCD)

What conditions and concerns shaped the history, literature, and art of the ancient Mediterranean world? Why did the cultures of Greece, Rome, and the Near East come to inspire key Western institutions and values? What do we gain by studying ancient cultures, not just as our monolithic "foundations" but also with an appreciation for the alien, the inconsistent, and the ambiguous? Our cultural ancestors prove most valuable when we recognize this range of qualities in them, and the courses in this IQ give students the critical tools to do so. Students who complete this IQ acquire a deeper knowledge of one or more of the "foundational" ancient Mediterranean cultures, in the process learning to interpret both textual and material primary sources.

**Note:** Students complete two courses, each from a different department outside of their major.

## World Arts and Letters (HUM, LCD)

What do we gain from an encounter with other cultures? Anthropologist Margaret Mead observed the following: "A knowledge of one other culture should sharpen our own ability to scrutinize more steadily, to appreciate more lovingly, our own." The courses in this IQ will help students broaden their horizons as global citizens, introducing them to the richness and diversity of other cultural traditions — some diametrically different from their own and others surprisingly similar. These courses address a wide range of forms of cultural production within these traditions, from literature, cinema, and music to the performing arts, architecture, and material culture. Students who complete this IQ will be challenged to grow as individuals with a greater appreciation of their own cultural heritages.

**Note:** Students complete two courses, each from a different department outside of their major.

## Academic Honors & Awards

**Dean's List:** At the end of each semester, in recognition of exceptional scholarship, the College compiles a list of those students whose work has been particularly worthy of commendation. Students will be cited on the Dean's List if they complete a minimum of 14 units of graded work while achieving a grade point average of 3.6 or higher for the semester. No incomplete grades or N grading notations may be outstanding as part of the semester record. All work must be completed and grades posted by the first day of the following semester in order to be considered for Dean's List. For spring semester courses, all work must be completed by the beginning of Summer Session II (typically mid-June).

**College Honors:** Upon assessment by the College Office, the AB with College Honors will be awarded to any student who achieves College-wide academic excellence as measured by a cumulative GPA of 3.6 or better through their degree completion and who does not receive Latin Honors.

**Latin Honors:** Latin Honors are awarded by the College to students who are receiving the Bachelor of Arts degree in Arts & Sciences. To be eligible, students must have maintained a 3.65 or better GPA throughout their education at Washington University and must be accepted for candidacy by their major department or program. Students may pursue Latin Honors in either their first or their second major; however, Latin Honors are not available through an Arts & Sciences minor. Latin Honors candidates must enroll in such courses as their department or program may require, satisfactorily complete a significant project appropriate to the nature of the discipline, and pass such written and/or oral examinations as the department or program may set.

Upon certification by the department that the Honors program has been satisfactorily completed, the student may be awarded the AB cum laude, magna cum laude, or summa cum laude according to the following proportions: The top 15% in overall GPA of the full cohort of Latin Honors candidates who complete the necessary requirements of their major departments will graduate summa cum laude; the next 35% magna cum laude; and the next 50% cum laude.

To be eligible for Latin Honors, transfer students must have earned a minimum of 48 letter-graded Washington University units. Grades earned at other institutions do not figure in the calculation of minimum averages required for eligibility for Latin Honors.

**Phi Beta Kappa:** For more than 200 years, election to Phi Beta Kappa has been a distinctive recognition of intellectual accomplishment in the liberal arts and sciences. The Washington University chapter, Beta of Missouri (established in 1913), strives to enhance worthy intellectual endeavors and to recognize individual achievement.

Candidates for Phi Beta Kappa should have demonstrated both superior scholarship and breadth and depth of interest in the liberal arts. Study of a foreign language and of mathematics, while not required, strongly enhances candidacy. Extensive study in pre-professional fields detracts from candidacy.

Students do not apply for Phi Beta Kappa; rather, each year, the Washington University chapter elects students into membership from the College of Arts & Sciences. The chapter also gives the annual Burton M. Wheeler Sophomore Book Award for distinguished achievement during the first three semesters. Selection committees are composed of Washington University faculty who are members of Phi Beta Kappa.

## Departmental Prizes and Awards

Several departments recognize the superior achievement of graduating seniors with election to the honor societies of their major fields. These honor societies include Sigma Gamma Epsilon for earth, environmental, and planetary sciences students; Omicron Delta Epsilon for economics students; Delta Phi Alpha for German students; Phi Alpha Theta for history students; Sigma Iota Rho for international and area studies students; Pi Mu Epsilon for mathematics students; Mu Phi Epsilon for music students; Pi Sigma Alpha for political science students; and Psi Chi for psychological & brain sciences students.

Departments may recognize work a student has accomplished within the major by awarding the major with highest distinction, high distinction, or distinction.

In a number of academic fields, special recognition is given to students whose accomplishments have been exceptionally noteworthy. The majority of such awards carry modest monetary prizes and include the following, listed alphabetically by department:

- Best Essay on Any Subject Related to African-American Culture and Life in the United States (African and African-American Studies)
- Henry Hampton Prize for Best Civil Rights Essay
- James Baldwin Essay Prize for Best Essay on African-American Culture and Life in the United States
- Julius Nyerere Essay Prize for Best Essay on African Culture and Life
- Louis Lomax Journalism Prize in African and African-American Studies
- Ralph Bunche Prize for Best Political Science Essay about Africans or African Americans
- Sylvia Wynter Essay Prize for Best Essay on African Culture and Life Outside of the United States
- Lynne Cooper Harvey Undergraduate Writing Prize in American Culture Studies
- John W. Bennett Prize to the Outstanding Graduating Senior in Anthropology
- Mark S. Weil Prize for Distinction in Art History and Museum Practice
- Murphy Family Prize for Outstanding Honors Thesis in Art History and Archaeology
- Yale Book Prize for Distinction in Art History and Archaeology
- Harrison D. Stalker Prize in Biology
- Marian Smith Spector Prize for Outstanding Graduate in Biology
- John C. Snowden Prize for Outstanding Senior in Chemistry
- The Hemholtz Award in Chemistry
- The Lipkin Award in Chemistry
- The Wahl Award in Chemistry

- The Weissman Award in Chemistry
- Stanley Spector Memorial Award for Outstanding Paper in East Asian Languages and Cultures
- Ansehl Prize for Excellence in Chinese
- Yukiko Takahashi Prize for Excellence in Japanese
- Carl Conrad Prize for Excellence in Classical Studies
- Eugene Tavenner Prize for Excellence in the Study of Classics
- Edward Weltin Award for Excellence in the Study of Ancient History
- Liselotte Dieckmann Prize for Excellence in Comparative Literature
- William H. Matheson Prize for Excellence in Comparative Literature
- A.E. Hotchner Playwriting Competition Award
- Annelise Mertz Memorial Award for Outstanding Achievement in Modern Dance
- Ian D.W. Cramer Prize for Outstanding Achievement in Dance
- John J. Jutkowitz Memorial Prize for Outstanding Contributions in Performing Arts
- Margaret Ewing Memorial Prize for Outstanding Achievement in Acting
- Stephen H. Duncan Prize for Outstanding Achievement in Design and Technical Theatre
- Courtney Werner Memorial Prize for Outstanding Academic Achievement in Earth, Environmental, and Planetary Sciences
- Ernest L. Ohle Jr. Award for Outstanding Potential in Earth, Environmental, and Planetary Sciences
- Margaret E. Bewig Memorial Field Camp Award for Academic Merit in Earth, Environmental, and Planetary Sciences
- Adam Smith Prize for Excellence in Economics
- Hyman P. Minsky Prize for Excellence in Economics
- Olin Prize for Excellence in Economics
- Howard Nemerov Award Prize in Poetry
- James Merrill Prize for Poetry
- Julia Viola McNeely Prize for Poetry
- Norma Lowry Memorial Prize in Poetry
- Roger Conant Hatch Prize for Lyric Poetry
- F. Ward Denys Prize for Critical Prose
- Herbert E. Metz Prize for Literary Criticism
- Leanna Boysko Prize for Best Essay in English Literature
- Admussen Prize for Outstanding Senior Honors Thesis in French
- Cecilia L. Hospes Scholarship for Study Abroad in Germany
- David Bronsen Prize for Excellence in German Studies
- Raoul Wallenberg Prize for Excellence in Swedish Studies
- J. Walter Goldstein Prize for Best Senior Thesis in History
- Rowland T. Berthoff Award in History
- Shirley McDonald Wallace Prize in History
- The Madeleine Albright Scholarship in Global Studies
- Outstanding Senior Honors Thesis in Global Studies
- Paul and Silvia Rava Prize for Excellence in Italian Studies
- David and Sarah Visenberg Prize for Outstanding Thesis in Jewish Studies

- Steven S. Schwarzschild Prize for Overall Excellence in Jewish Studies
- Martin Silverstein Award for Outstanding Student in Mathematics/Statistics and Probability
- Putnam Examination Prize for Mathematics
- Ross Middlemiss Prize for Outstanding Mathematics Major
- Antoinette Frances Dames Award for Productive Scholarship in Music
- Clare M. Westmont Award in Music
- The Friends of Music Award
- Lewis B. Hilton Award in Music
- Helen Stenner Memorial Essay Prize in Philosophy
- Nishi Luthra Prize for Outstanding Graduate in Philosophy
- Greg Delos Prize for Undergraduate Research in Physics
- Robert N. Varney Prize for Excellence in Introductory Physics
- Antoinette Frances Dames Prizes for Lower-Division Paper in Political Science
- Antoinette Frances Dames Prizes for Upper-Division Paper in Political Science
- Antoinette Frances Dames Prizes for Best Senior Honors Thesis in Political Science
- Arnold J. Lien Prize for Outstanding Graduate in Political Science
- Grossman-Alexander Prize for Outstanding Graduate in American Politics
- Robert H. Salisbury Prize for Initiative, Leadership, and Service in Political Science
- Todd Lewis Friedman Memorial Prize for Outstanding Work in Comparative or International Politics
- William Benton Parshall Prize for Outstanding Paper on Women in Politics
- Hyman Meltzer Memorial Award for Undergraduate Research in Psychology
- John A. Stern Award for Undergraduate Research in Psychology
- Louis G. Zelson Award for Outstanding Junior in the Spanish Program
- Sherman Eoff Prize for Excellence in Spanish
- Helen Power Women, Gender, and Sexuality Studies Award for Scholarship and Service

## Academic Regulations

### Attendance

Successful education at the college level depends, to a large extent, on regular attendance at classes and laboratories. The College of Arts & Sciences has no fixed rules for "cuts" or "excused absences" but leaves the number of absences of any kind a student may have and still expect to pass a course to the judgment of each department or instructor. Each instructor should give reasonable consideration to unavoidable

absences and to the feasibility of making up missed work. The student is expected to explain the reasons for such absences to instructors and to discuss the possibility of completing missed assignments with instructors.

### Units and Grades

The grading system used by the College of Arts & Sciences assumes that evaluation is useful to effective learning and that grades provide an indicator of accomplishment to the student, advisors and the College Office, graduate and professional schools, and employers to whom the student chooses to submit their grades. Grades are symbols of achievement in a particular endeavor and should not be confused with achievement itself or with personal worth.

Grades are important, particularly for students with pre-professional interests, but the student whose concern for grades is primary may lose sight of the total educational process.

Grade	Points per Unit
A+	4.0
A	4.0
A-	3.7
B+	3.3
B	3.0
B-	2.7
C+	2.3
C	2.0
C-	1.7
D+	1.3
D	1.0
D-	0.7
F	0.0
CR	Credit awarded, work not given finer evaluation
NCR	No credit awarded due to unsatisfactory work
I	Course work incomplete
W	Withdrawal
R	Repeat
L	Successful audit
Z	Unsuccessful audit
S	Satisfactory thesis work
U	Unsatisfactory thesis work

In the rare event that an instructor is unable to submit a grade by the grade deadline, an N, signifying that the grade has not yet been submitted, may temporarily appear as a transcript notation on the student's record. Grades that are not posted within 120 days of the last day of the semester for which the N notation was posted will result in these temporary notations being automatically changed to a grade of F (or, in the case of a course taken as Pass/Fail, to a grade of NCR).

Grades cannot be changed after the sealing of a student's transcript, which follows conferral of the student's degree.

Grades earned in physical education courses are not included when calculating the student's grade point average.

## Online Courses

Online courses are not applicable to Arts & Sciences degree programs. Therefore, students may not enroll in online courses offered by other schools at Washington University (with the exception of CSE 131 Introduction to Computer Science offered online during summer session through the McKelvey School of Engineering at Washington University and approved online courses offered during summer session through the College of Arts & Sciences) nor attempt to transfer courses, taken at other institutions, that were delivered online.

## Auditing a Course

In any semester, a full-time student may register for one course as an auditor, which entitles the student to all of the privileges of a regularly enrolled member of the class; however, courses taken for audit do not earn credits and thus do not count toward the degree. Consult the instructor regarding the requirements of a successful audit as unsatisfactory performance results in a grade of Z. A successful audit results in a grade of L.

## Grade Appeals

If a student believes a grade they have received — whether referring to a single assignment or to the course grade as a whole — is inappropriate, arbitrary, or assigned for nonacademic reasons, they have the right to discuss any grade(s) with their instructor and to request a change of grade(s). (Students wanting to discuss the possibility of appealing their grades are encouraged to first speak with their four-year advisor. They may also connect with the Arts & Sciences Undergraduate Faculty-Student Mediator. Neither the four-year advisor nor the mediator may consider the merit of the appeal nor make any decisions with regard to the appeal, but they can inform students about possible options for approaching the appeal.)

Grade appeals should be filed as soon as possible after the grade is assigned and must be addressed in a timely manner. Grade appeals are not allowed after one semester has passed since the grade has been awarded. Grade appeals in the semester prior to the student's graduation must be raised immediately and addressed on a truncated timeline from what is outlined below in order for the appeal to be addressed prior to the conferral of a degree and the sealing of the student's transcript. If a grade appeal is submitted after a student has graduated, it will not be reviewed as no grade changes will be made to the academic record following conferral of a degree. In addition, grades that are a result of sanctions for a violation of Academic Integrity (as determined by the Academic Integrity Committee) are not eligible for appeal through the following process.

The below steps outline the grade appeal process:

- The student must first request the grade change from the instructor. The request should be in writing and outline the reasons the grade change is being requested. The instructor must respond to the student in writing with detailed justification for the grade given within two weeks of the student's request.

- If the student is not satisfied by the instructor's justification for the grade, they may appeal the grade in writing to the appropriate department chair or program director (based on the home department or program of the course and not on the student's program of enrollment) within one week of the instructor's response. The student's statement should respond to the instructor's detailed justification and explain why the student believes there remains cause for appeal. The appropriate chair or director will review the appeal and provide a written response to the student within three weeks.
- An undergraduate student's last opportunity for appeal is to the Vice Dean of Undergraduate Affairs. If a student wants to pursue a grade appeal at this level, the appeal must be in writing and be submitted within one week of the written response from the chair. The student's statement should acknowledge both the instructor's and the chair's responses and explain why the student believes there remains cause for appeal. The Vice Dean of Undergraduate Affairs must respond within four weeks of the student's appeal, and the response must be in writing.
- If a student believes that the grade is the result of identity-based discrimination, they should make a report through the Bias Report and Support System.

## Incomplete Grades

A student may be eligible for a grade of Incomplete if they experience medical or acute personal challenges that make the satisfactory completion of course work difficult or unlikely. The student may request a grade of Incomplete (I) from one or more instructors and must take the following steps with each instructor:

1. The student should meet with the instructor before the final examination or due date for the final paper/project to request the Incomplete.
2. If the instructor grants the Incomplete, the student and instructor should agree on the scope of the work remaining to complete the course and a date when it will be submitted. This date should be within 120 days of the last day of the semester in which the course is being taken. The instructor should confirm with the student, in writing, the details of the work with respective deadlines.

Whether or not to grant an Incomplete is at the instructor's discretion. When determining whether to do so, the instructor should consider whether the student has consistently attended and engaged with the course (for example, whether the student has submitted all assignments except the final assignments/assessments) and made satisfactory progress in the course. Incompletes should not be granted unless the student has completed at least two-thirds of the assignments/assessments for the course.

If sufficient work has not been completed, the grade of Incomplete will not be feasible. In such situations, the instructor will submit whatever final grade the student has earned. The student may repeat the course at a later time if they choose. (For information about repeating a course, see below.)

If an Incomplete is granted, the work should be completed in the time frame agreed upon with the instructor. However, this time frame should not extend more than 120 days from the last day of the semester in which the Incomplete is granted/the course for which the Incomplete is granted is taken.

Failure to submit completed work and for the earned grade to be posted within 120 days of the last day of the semester in which the Incomplete was granted will result in the grade of Incomplete being automatically changed to a grade of F (or, in the case of a course being taken as Pass/Fail, to a grade of NCR).

Furthermore, students cannot have a grade of Incomplete on their transcripts when their degrees are conferred. Thus, students who are expecting to graduate at the end of the semester in which the course being considered for an Incomplete was taken should not request or be granted a grade of Incomplete.

Any student who does have an Incomplete on their transcript at the time of certification and degree conferral will have the Incomplete changed to a grade of F (or, in the case of a course being taken as Pass/Fail, to a grade of NCR).

Grades cannot be changed after the conferral of a student's degree.

**Note:** If an Incomplete is granted, students cannot be added to the Canvas shell of a subsequent offering of the course in order to complete the previous enrollment. Instead, at the instructor's request, the student can be given access to the original course shell, and the instructor can reopen assignments within that course shell. All work for an Incomplete should occur within the original course's Canvas course shell or outside of Canvas entirely.

By action of the faculty of the College of Arts & Sciences and the ArtSci Council, the College limits the number of accrued grades of Incomplete (I). The policy is intended to protect the student from building an overwhelming burden of unfulfilled course work. The regulation reads as follows: "Students who accrue three or more Incompletes will not be permitted to enroll for any subsequent semester until the number is reduced to two or fewer." Should students have too many Incompletes, they will be declared ineligible for subsequent semesters until they have complied with the regulation. Compliance is normally achieved by the posting of grades, but it also may be achieved by the instructor(s) confirming to the College Office that the student has turned in all requisite assignments for the relevant class(es).

## Pass/Fail Option

To encourage students to enroll in courses they might not otherwise take, the faculty has established the Pass/Fail option under which a student may register for courses and receive a grade of credit (CR) or no credit (NCR). During any semester, a full-time student may enroll in one course under the Pass/Fail option. A maximum of 24 units earned under this option may be applied toward the AB degree. No change into or out of the Pass/Fail option may be made after the dates designated in the dates and deadlines calendar, which is published online in the Course Listings each semester.

No more than 12 of the 24 units allowed for the credit/no credit option may be applied to area distribution requirements.

It is the student's responsibility to discuss what constitutes a successful pass/credit in a particular course with the faculty member. Although the pass mark is generally a C-, instructors have the discretion to set the pass mark higher in their individual courses.

The first-year writing course, the writing-intensive course, the applied numeracy course, and courses in the major and minor are excluded from the Pass/Fail option. Pre-professional and prospective graduate students should also seriously consider the strong probability that professional schools may seek more definite grades than CR in courses that are required or strongly recommended for admission to professional or graduate study.

A few courses, particularly designated by departments, may require enrollment on a Pass/Fail basis. When courses are designated as Pass/Fail, students are permitted to elect an additional course to be taken as Pass/Fail but should carefully consider the consequences of that choice. In addition, units earned in courses with required Pass/Fail grade options are counted toward the maximum of 24 Pass/Fail units that may be applied toward the AB degree.

## Reading Days and Final Examination Period

When registering for classes at Washington University, students commit to all course requirements, including the examination procedures chosen and announced by the course instructor. When selecting courses, students are advised to take note of all final exam information. Students anticipating conflicts in their final examination schedule should seek to resolve them with the relevant instructors before enrolling. Students should not register for courses that result in three or more final examinations on one day. If a student does so, the instructors are not obligated to offer an alternative exam.

Final exam days and times are subject to change. The most current final exam schedule information can be found on the Course Listings website.

## Minimum and Maximum Course Loads

The average course load necessary to fulfill the required 120 units for the bachelor's degree in a timely fashion is 15 units — typically five courses — each semester. Except for students approved for a reduced course load through Disability Resources, students must attempt a minimum of 12 units to be considered full-time. Students may not enroll for more than 21 units without permission and an additional per-unit tuition charge. Any enrollment between 12 and 18 units is considered typical.

Courses that require more preparation and class time than average — for example, foreign languages, mathematics, and science — may carry 4 or 5 units of credit. When enrolled in these and other demanding courses, students should consider taking fewer than 15 units of academic work in that particular semester and balancing such intensive semesters with a modestly increased number of units in subsequent semesters.

## Repeating a Course

Students whose performance in a course has not met their expectations are permitted to retake the course, receive a second grade, and have the letter R (denoting the retake) placed next to the grade for the first enrollment. All registrations will show on the transcript; however, only the grade and units of the final enrollment will be used to calculate the GPA.

**Note:** This procedure should be reserved for serious cases, such as a grade of D or lower in a course required for the major.

**Regulations:** Although courses initially taken as Pass/Fail may be retaken for a letter grade, courses initially taken for a letter grade **must** be retaken for a letter grade. Credit earned in the original enrollment will not be revoked should a failing grade be earned in the second or subsequent enrollments. Except in the case of a retake of an unsuccessful audit, the retake policy will not be invoked if the grade option for the original enrollment was audit.

## Academic Progress

Students are expected to maintain the highest level of scholarship during their time at Washington University. At a minimum, students must meet the standards set by the faculty and those mandated by the U.S. Department of Education. (Additional information about Satisfactory Academic Progress [SAP] is available from Student Financial Services.) Based on these standards, the College of Arts & Sciences requires that students complete a minimum of 12 units per semester with a minimum 2.0 semester GPA.

Each student's semester GPA is computed as the total grade points earned during the semester divided by the total letter-graded units attempted. At the same time, the cumulative GPA is computed as the quotient of the cumulative total of grade points divided by the cumulative total of letter-graded units attempted. The computations are made on the basis of the grade point scale indicated in the Units and Grades section above. Courses taken on a Pass/Fail basis are not included in these calculations.

All student records are examined by the Committee on Academic Progress at the close of each semester, with an initial focus on the semester and cumulative grade point averages and earned units. Students who do not meet the criteria above (i.e., at least 12 units earned and/or a cumulative grade point average below 2.0) will be reviewed further by the Committee to determine the appropriate academic action, which may include Academic Concern, Academic Notice, or Academic Time Away. Students already on an academic action will also be reviewed, regardless of the semester's earned units and GPA. After this review, the committee may remove, retain, or escalate the action based on the criteria detailed below. In all cases, the College will work with students to develop a plan for improvement and/or returning to satisfactory academic progress.

## Academic Concern

Academic Concern is an early alert to the student and their advisor(s) that additional support may be needed to maintain academic progress. Academic Concern status may be applied the first time a student meets one of the following criteria:

- Student received an unsatisfactory or failing grade (e.g., D, F, NCR) in a course
- Student earned a semester GPA or has a cumulative GPA between 2.0 and 2.5 at the end of the semester
- Student earned lower than a C- in College Writing
- Student had two or more grades of Incomplete for the semester, regardless of current completion status
- Student completed fewer than 12 units in the semester

Students who are assigned to Academic Concern status in one semester and fail to address the issue(s) that led to that status in a subsequent semester may be moved to Academic Notice or Academic Time Away status.

## Academic Notice

Students experiencing more significant academic difficulties than those noted above in the Academic Concern section may be placed on Academic Notice. Students on Academic Notice are not in good academic standing. This status is applied when a student meets one of the following criteria for more than one semester or meets multiple criteria in one semester:

- Student received unsatisfactory or failing grades (e.g., D, F, NCR) in more than one course
- Student has two unresolved Incompletes
- Student earned a semester GPA or has a cumulative GPA below 2.0 at the end of the semester
- Student did not complete and/or earn the minimum required grade in at least one major-related course
- While on Academic Concern, student received more than one unsatisfactory or failing grade (e.g., D, F, or NCR) or completed the most immediate semester with an Incomplete grade
- Student completed fewer than 12 units in the semester
- While on Academic Concern, student did not address the issue(s) that led to that status in the previous semester

If a student is placed on Academic Notice, they are expected to participate in an academic success program the following semester (e.g., Progress Counseling, student success course, mentoring). These measures are meant to assist students to return to good academic standing. The student must complete an academic agreement that articulates an improvement plan.

To be eligible to return to good academic standing, a student on Academic Notice must address the academic difficulties identified by the Committee on Academic Progress, including participation in support programs. Failure to participate in these support programs, to attend class, or to complete work in a timely manner while on

Academic Notice may result in the termination of enrollment at the end of the semester. In addition, students who fail to address the issue(s) raised by the Committee at the end of the semester during which they are on Academic Notice may be moved to Academic Time Away status.

## Academic Time Away

Students experiencing serious academic difficulties that jeopardize their ability to complete their degree in a timely manner may be placed on Academic Time Away. Students on Academic Time Away are not in good academic standing. If placed on this status, students are required to take a one-semester break from the university, which will allow them time to address matters that have significantly impeded their academic progress. Academic Time Away may be applied when the student meets one of the following criteria:

- Student received unsatisfactory or failing grades (e.g., D, F, or NCR) and/or Incomplete grades (I) in the majority of their courses
- While on Academic Notice, student received more than two grades that fall into the following categories: unsatisfactory or failing grades (e.g., D, F, or NCR) or Incomplete grades
- After having been on Academic Notice, student did not meet the requirements to return to good academic standing
- Student has three or more unresolved Incomplete grades (see the Incomplete Grades (p. 1133) section above)
- Student did not participate in measures provided by the College (e.g., Progress Counseling and/or the College Intensive Study Program) while on Academic Notice

Students may return to the College of Arts & Sciences from Academic Time Away only when they demonstrate, under the conditions set for each individual case, a capacity to work productively at the level required by the College.

## Leaves of Absence

Undergraduates in good standing at the completion of a semester are eligible to take a leave of absence (LOA) by completing an LOA request. Students on LOA are assured reinstatement for the next two years. Before returning, students are asked to notify the College Office and submit a Reinstatement Form at least six weeks prior to the beginning of the appropriate semester. Students should consult with the College Office for the specific date for the appropriate semester. The forms for requesting an LOA and reinstatement are available on the College's Policies & Procedures webpage.

A student wishing to take a medical leave of absence (MLOA) must have a recommendation from the Habif Health and Wellness Center and a completed MLOA request submitted to the appropriate dean in the College Office. Upon reviewing the recommendations from the Habif Health and Wellness Center and the student's file, the appropriate dean in the College Office will decide whether to grant the request for the MLOA and/or re-enrollment. The required forms for an MLOA and reinstatement after an MLOA are available through the Habif Health and Wellness Center.

## Transfer Credit

With preapproval, courses from accredited colleges and universities can be transferred to Washington University and will count toward the student's 120 units required for the Bachelor of Arts degree; such courses may also serve as prerequisites to advanced courses and may count, with prior departmental approval, toward a student's major or minor. Transfer credits do not, however, substitute in Integrations or count toward other Arts & Sciences distribution requirements. No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Judicial Code or Academic Integrity Policy.

For further information pertaining to transfer credit, matriculating first-year students should visit the Pre-Matriculation Credit (p. 194) section in this *Bulletin*; transfer students should visit the Transfer Students (p. 1112) section in this *Bulletin*.

## Military Training

Army and Air Force ROTC programs are available at Washington University.

ROTC courses numbered I25 MILS 3010, MILS 3020, MILS 4010, and MILS 4020 and AFROTC courses numbered I02 MAIR 3010, MAIR 3020, MAIR 4010, and MAIR 4020 will be granted full credit toward the AB degree for a total of 12 units. The courses do not count toward the 90 minimum Arts & Sciences units required for the Bachelor of Arts degree and are categorized in the 30 maximum units that students may earn in courses taken from the McKelvey School of Engineering, the Olin Business School, the Sam Fox School, or the School of Continuing & Professional Studies. These courses are letter graded and count toward the GPA, as do courses from the schools listed above.

ROTC courses numbered I25 MILS 1010, MILS 1020, MILS 2010, and MILS 2020 and AFROTC courses numbered I02 MAIR 1010, MAIR 1020, MAIR 2010, and MAIR 2020 will be granted 1 credit each for the Physical Training component, as is commensurate with performance courses currently receiving credit toward the Bachelor of Arts degree, including courses listed under L28 Physical Education. Such courses do not count toward the GPA.

## School of Continuing & Professional Studies Courses

Students in the College of Arts & Sciences may not enroll in online course work offered by the School of Continuing & Professional Studies. However, students in the College of Arts & Sciences may enroll in one in-person School of Continuing & Professional Studies course per semester with a maximum total of 24 units allowed. Any units earned through the School of Continuing & Professional Studies are subject to the degree requirement stipulating that a maximum of 30 units from Washington University schools other than Arts & Sciences may be applied to the Bachelor of Arts degree. School of Continuing & Professional Studies courses do not fulfill distribution requirements and may only count for a major or minor with approval from the relevant department.

## Administration

### Feng Sheng Hu, PhD

Richard G. Engelsmann Dean of Arts & Sciences  
Lucille P. Markey Distinguished Professor in Arts & Sciences  
Professor of Biology and of Earth, Environmental, and Planetary Sciences

### Erin McGlothlin, PhD

Vice Dean of Undergraduate Affairs in Arts & Sciences  
Professor of German and Jewish Studies

For more information about the College's leadership and the advisory and administrative staff, please visit the Arts & Sciences Staff Directory.

## Majors (directory)

### A

- African and African-American Studies Major (p. 213)
- American Culture Studies Major (p. 264)
- Ancient Studies Major (p. 423)
- Anthropology Major (p. 302)
- Anthropology Major, Global Health and Environment Specialization (p. 304)
- Applied Mathematics Major (p. 796)
- Arabic Major (p. 767)
- Art History and Archaeology Major (p. 341)
- Astrophysics Major (p. 901)

### B

- Biology Major (p. 378)
- Biology Major, Ecology and Evolution Specialization (p. 380)
- Biology Major, Genomics and Computational Biology Specialization (p. 381)
- Biology Major, Microbiology Specialization (p. 383)
- Biology Major, Molecular Biology and Biochemistry Specialization (p. 385)
- Biology Major, Neuroscience Specialization (p. 387)

### C

- Chemistry Major (p. 406)
- Chemistry Major, Biochemistry Specialization (p. 407)
- Classics Major (p. 423)
- Comparative Literature and Thought Major (p. 458)
- Comparative Literature and Thought Major, Comparative Arts Specialization (p. 459)

### D

- Dance Major (p. 860)
- Data Science Major (p. 1075)

- Drama Major (p. 862)

### E

- Earth Science Major (p. 472)
- East Asian Languages and Cultures Major (p. 507)
- East Asian Languages and Cultures Major, Chinese Specialization (p. 509)
- East Asian Languages and Cultures Major, Japanese Specialization (p. 510)
- East Asian Languages and Cultures Major, Korean Specialization (p. 511)
- Economics and Computer Science Major (p. 521)
- Economics Major (p. 522)
- Educational Studies Major (p. 538)
- Elementary Teacher Education Major (p. 541)
- English Literature Major (p. 580)
- English Literature Major, Creative Writing Specialization (p. 580)
- English Literature Major, Publishing Specialization (p. 581)
- Environmental Analysis Major (p. 594)
- Environmental Biology Major (p. 389)
- Environmental Policy Major (p. 927)
- Environmental Science Major (p. 474)

### F

- Film and Media Studies Major (p. 613)
- Film and Media Studies Major, Film and Media Production Specialization (p. 613)
- Financial Economics Specialization for Economics Majors (p. 523)
- French Major (p. 1048)

### G

- Germanic Languages and Literatures Major (p. 461)
- Global Studies Major, Development Concentration (p. 666)
- Global Studies Major, Eurasian Studies Concentration (p. 669)
- Global Studies Major, European Studies Concentration (p. 673)
- Global Studies Major, Global Asias Concentration (p. 675)
- Global Studies Major, Global Cultural Studies Concentration (p. 680)
- Global Studies Major, International Affairs Concentration (p. 682)

- Writing Minor (p. 584)

## Additional Academic Opportunities

- Accelerated Bachelor's/Master's Program (p. 1140)
- Ampersand Programs (p. 1140)
- Bachelor's and Master's Degrees in the Professional Schools (p. 1144)
- Combined Undergraduate Degree Opportunities (p. 1145)
- Individual and Group Performance (p. 1145)
- Internships (p. 1145)
- Majors Across Schools (p. 1145)
- Medicine & Society (p. 1145)
- Other First-Year Programs (p. 1147)
- Overseas Study Programs (p. 1147)
- Physical Education (p. 1147)
- Special Major and Special Minor (p. 1149)
- Undergraduate Pre-Professional Preparation (p. 1149)

## Accelerated Bachelor's/ Master's Program

Exceptional students who bring to the university a definite commitment to a field of study in the College of Arts & Sciences and a demonstrated capacity for intensive work may be able to complete a master's degree in a one-year accelerated program after completing the AB degree. This accelerated program, which begins each year in the fall semester, is open exclusively to students who graduated during the immediately preceding December, May, or August. Applications may be submitted at any time during the senior year up to the deadline of March 15. Graduate Record Examination (GRE) scores are not required. The program is available only to students currently in their senior year and only for continuous enrollment the next year. There is no option for deferred admission. The application for admission must be made to the department, which forwards the application and recommendation for admission to the Office of Graduate Studies, Arts & Sciences. Application forms are available on the website of the Office of Graduate Studies, Arts & Sciences.

Some departments may not participate in this program, and some departments that do not otherwise offer a master's degree may provide this opportunity to Washington University undergraduates. Contact the relevant department for more specific information about its admission policies and requirements. Students admitted to the program will be regular, full-time graduate students enrolled in the School of Arts & Sciences at Washington University.

Most master's degrees in Arts & Sciences require 36 credits. The accelerated program allows Washington University undergraduates to complete a master's degree in one academic year by applying up to five 3-credit courses or four 4-credit courses (a maximum of 16 units), taken as an undergraduate at the 400/4000 level or above, toward the master's degree requirements. For master's programs requiring fewer than 36 units, three courses at the 400/4000 level or above (with a maximum of 12 units) may be applied toward the master's degree. Master's programs requiring more than 36 units may require an additional semester or summer of enrollment. These undergraduate courses must be in an appropriate discipline, approved by the department, and completed with a grade of B or higher.

## Ampersand Programs

Ampersand Programs are special multi-semester seminar programs open only to matriculating first-year students. An Ampersand Program combines a coherent, group-oriented learning experience with out-of-classroom activities while still allowing time for electives. There are no majors or minors available in this area.

Ampersand Programs change each year and have included such topics as 50 Years of Hip Hop; Biotech Explorers Pathway; Examining America; Global Citizenship Program; History, Memory & Representation of the Holocaust; Literary Culture of Modern Ireland; Law and Society; Medicine & Society (p. 1145); Mind, Brain, Behavior; Modern Media: The Good, the Bad, & the Future; Pathfinder Fellows in Environmental Leadership; Phage Hunters; Rethinking WashU's Relationship to Enslavement; Safe Asylum: Refugee Politics and Pathways; Shakespeare's Globe: All the World's a Stage; Text and Traditions; and The History and Culture of the Venetian Republic. Enrollment in each Ampersand Program is limited to ensure closely mentored personalized instruction. All Ampersand Programs constitute integrations and, therefore, fulfill one of the requirements for the Bachelor of Arts degree. Ampersand Programs are open to all Arts & Sciences students, regardless of their intended majors, and they complement any major or pre-professional curriculum.

## Faculty

### Participating Faculty

**Michael Barski**

Lecturer in Philosophy and Philosophy-Neuroscience-Psychology  
PhD, Rice University

**Stan Braude**

Teaching Professor in Biology  
PhD, University of Michigan

**Todd Braver**

Professor of Psychological & Brain Sciences, Radiology, and  
Neuroscience  
PhD, Carnegie Mellon

**Emily Cohen-Shikora**

Senior Lecturer in Psychological & Brain Sciences  
PhD, Washington University in St. Louis

**Tansu Daylan**

Assistant Professor of Physics  
PhD, Harvard University

**Michelle DeLair**

Lecturer in American Culture Studies  
PhD, Washington University in St. Louis

**David Fike**

Professor  
PhD, Massachusetts Institute of Technology

**Erin Finneran**

Lecturer  
PhD, Washington University in St. Louis

**John Green**

Lecturer  
AB, Washington University in St. Louis

**Eileen G'Sell**

Senior Lecturer in College Writing  
MFA, Washington University in St. Louis

**Kathleen Hafer**

Professor of the Practice of Biology  
PhD, Washington University in St. Louis

**Elinor Harrison**

Lecturer in Dance  
Faculty Affiliate in Philosophy-Neuroscience-Psychology  
PhD, Movement Science, Washington University in St. Louis

**Anna Jacobsen**

Director of Anthropology's Medicine and Society Program  
PhD, Washington University in St. Louis

**Joseph Jez**

Professor of Biology  
PhD, University of Pennsylvania

**Dirk M. Killen**

Associate Dean, College of Arts & Sciences  
PhD, Harvard University

**Henric Krawczinski**

Chair and Professor of Physics  
PhD, University of Hamburg

**Zhao Ma**

Associate Professor of Modern Chinese History and Culture  
PhD, Johns Hopkins University

**Ron Mallon**

Chair and Professor of Philosophy and Philosophy-Neuroscience-  
Psychology  
PhD, Rutgers University

**Beth Martin**

Teaching Professor in Environmental Studies  
MS EECE, Washington University in St. Louis

**Jeffery S. Matthews**

Professor of the Practice in Drama  
MFA, Virginia Commonwealth University

**Erin McGlothlin**

Associate Professor  
PhD, University of Virginia

**Meghann Pytka**

Instructional Specialist  
PhD, Northwestern University

**Elizabeth Reynolds**

Lecturer in Global Studies  
PhD, Columbia University

**Trevor Sangrey**

Assistant Dean, College of Arts & Sciences; Teaching Professor in  
Women, Gender, and Sexuality Studies  
PhD, University of California, Santa Cruz

**Chris Shaffer**

Lecturer  
PhD, Cornell University

**Anthony Smith**

Lecturer in Biology  
PhD, University of Miami

**Younasse Tarboni**

Senior Lecturer in Arabic  
PhD, Université PSL

**Kathleen Weston-Hafer**

Professor of the Practice  
PhD, Washington University in St. Louis

**Kathryn Wilson**

Lecturer  
PhD, University of Pennsylvania

## Courses

---

### L61 FYP 1100 Ampersand - American Stories: Place, Power, and Imagination

If an American landscape could tell a story, what would it say? American Stories is an interdisciplinary approach to reading landscapes from the nineteenth century to today, uncovering untold stories of American places and the people, politics, and power that shaped them. The first semester of this Ampersand program introduces ways of seeing and interpreting American histories and cultures, as revealed in the built environment and stories of our cities. We will travel through time and place, touching down in Boston, Charleston, New York, Chicago, Los Angeles, and more. The course encourages students to read landscapes as multilayered records of past and present social relations, and to speculate for themselves about cultural meanings. It also introduces students to the social, economic, and political forces that have profoundly shaped the American urban landscape. This class is for first-year non-transfer students only.

---

### L61 FYP 2010 Ampersand: The Science of Biotechnology

Biotechnology is truly interdisciplinary, incorporating a myriad of pieces from biology, chemistry, engineering, physics, computer sciences, management, public policy, and law that apply the scientific process to societal challenges. This course introduces topics for science and engineering majors with an interest in biotech, and it teaches scientific concepts to business students considering careers in biotech management and entrepreneurship. Students who complete Biol 2010 understand key science concepts, how discoveries lead to applications addressing global challenges, how to effectively use a variety of resources to explore connections between science and biotech business, how to synthesize information from different fields, and how to exhibit strong teamwork skills and communicate information in written and oral forms. This course also provides a gateway for students interested in the two-year Biotech Explorers Program (BEP). The first two weeks of the course introduce students to the history of biotechnology, the BEP, and the use of case studies. The remainder of the course uses a series of four three-week units that combine lecture material, in-class group assignments, and readings to introduce the science and scope of biotechnology. For each unit, student teams also develop short case studies of St. Louis biotech companies and present their findings to the class. A series of site visits introduce students to the vibrant St. Louis biotech community. This course is for students in the Biotech Explorers Program only.

---

### L61 FYP 223A Ampersand: The Age of Pericles

This seminar will explore the relationship between the sociopolitical history and cultural development of Athens in the fifth and fourth centuries BC. Students will be encouraged to analyze both archeological and literary evidence throughout the process of democratization, paying particular attention to the Periclean building program, including the sanctuary of Athena on the Acropolis, the Agora, domestic Athenian architecture, and the panhellenic sanctuaries of Delphi and Olympia. Selections from the histories of Herodotus and Thucydides, the plays of Sophocles and Aristophanes, the dialogues of Plato, and Aristotle's "Constitution of Athens" will highlight the functions and limitations of the democratic regime. This course is for first-year, non-transfer students in the Democracy and Myth in Ancient Greece Ampersand program.

---

### L61 FYP 116 Ampersand: Geographies of Globalization and Development

This course provides an overview to the geographies of globalization and development in the world today. We begin by engaging with a variety of theoretical perspectives, definitions, and debates in order to establish the foundations upon which students can conceptualize and understand existing patterns of inequality, social injustice and environmental conflicts. In order to further highlight the different ways in which development and globalization interventions are experienced and contested, in the second half of the course we will focus our considerations towards specific contemporary issues at the forefront of globalization and development debates, including migration and refugees, urbanization, sustainable development, tourism, and alter-globalization social movements. This course is restricted to first-year students in the Global Citizenship Program.

---

### L61 FYP 2850 Ampersand: The Holocaust: A European Experience

Between 1939 and 1945, Nazi troops invaded, occupied and destroyed major parts of Europe. A central aim of the Nazi project was the destruction of European Jewry, the killing of people, and the annihilation of a cultural heritage. This course seeks to deal with questions that, more than seventy years after what is now known as the Holocaust, still continue to perplex. Why did Germany turn to a dictatorship of racism, war, and mass murder? Why did the Nazis see Jews as the supreme enemy, while also targeting Poles, Ukrainians, Soviets, homosexuals, the Roma, and the disabled? The course introduces students to issues that are central to understanding Nazi occupation and extermination regimes. Students will look at survival strategies in Western Europe including emigration, resistance movements in Eastern European ghettos, local residents' reactions to the murder in their midst, and non-European governments' reactions. Course is for first-year, non-transfer students only.

---

### L61 FYP 2811 Ampersand: Literary Culture of Modern Ireland

This course will examine the literature of Ireland from the fall of Parnell to the outbreak of the Second World War. This is the period of an emerging cultural nationalism, a great efflorescence of literature in many genres, and some of the most important political, social, and military events in modern Irish history. One of the remarkable things about the period is the close relationship between prominent figures in the literary and artistic world and those in the realm of politics and social change. The result was a rich cross-fertilization of ideas and attitudes which had enormous implications for the future of this embattled island nation. We will explore this vital and transformative exchange by close attention to some primary texts of the period. Writers to be studied will include: Yeats, Gregory, Wilde, Synge, Shaw, Joyce, O'Casey, and Bowen. Course is for first-year, non-transfer students only.

Credit 3 units. A&S: AMP A&S IQ: HUM Arch: HUM Art: HUM BU: IS EN: H

---

### L61 FYP 141 Ampersand: Medicine and Society

This course provides the basic foundation in medical anthropology and cultural anthropology for students enrolled in the Medicine and Society Program. The purpose of the course is to introduce students to the central themes and theoretical approaches employed by medical anthropologists to study health and illness in cross-cultural perspective. Topical areas include analyses of disease, illness and sickness at micro and macro levels; impact of personal and

interpersonal factors on health; health effects of social, political, and economic factors; relationship of anthropology to biological and social science approaches; ecology of health and development; and cross-cultural health studies of language, gender, and race/ethnicity. Note: Content for this course overlaps with and replaces Anth 160 for students enrolled in the Medicine and Society Program. Open only to students enrolled in the Medicine and Society Program.

Same as L48 Anthro 141

---

### **L61 FYP 120A Amp: Intro to Study of the Mind-Brain:**

#### **Psychological, Biological, & Philosophical Perspectives**

A consideration of three primary areas of research in cognitive science: attention, memory, and language. These topics are used to illustrate the techniques by which mental abilities are investigated and explained in psychology and neuroscience: the focus, in particular, is on the use of reaction time studies, brain imaging, and cell recordings to isolate the basic components that make up complex functions. In addition to the central concepts and theories in each area, the course will address philosophical implications of this research concerning how the mind and brain are related, how the mind-brain encodes or represents information, and the nature of consciousness. And there will be an emphasis on applying these findings to important problems, such as Alzheimer's disease and deficits due to brain damage. The class is taught by three members of the faculty from different disciplines and combines a whole-group lecture with small discussion classes. The goal is to give students a good understanding of the interdisciplinary nature of cognitive science and to help them develop the ability to think and write critically about scientific research into the mind-brain. Prerequisite: admission to the Hewlett Program in the Study of the Mind-Brain.

Credit 3 units. A&S: AMP A&S IQ: NSM Arch: NSM Art: NSM BU: BA

---

### **L61 FYP 1505 Ampersand: Modern Media: The Good, the Bad, & the Future**

This first term of a two-semester course would establish an essential background in media literacy and theory for both traditional mass media and the types of digital, or "new," media which have exploded over the past thirty years of the digital age. Accruing a nuanced understanding of the historic and present-day realities of journalism, publishing, documentary, and news reportage, we will consider the myriad ways in which new media have transformed the landscape of each. Eileen G'Sell will be leading discussion on readings relevant to mass media and new media histories, and assigning short, generative assignments. John R. Green will appear via Zoom to discuss television in the time of 9/11 and the new landscape of documentary. Small class. First Year Students Only. Credit Only

Credit 3 units. A&S IQ: HUM EN: H

---

### **L61 FYP 121 Ampersand: Pathfinder - A Sense of Place:**

#### **Discovering Missouri's Natural Heritage**

This is the first course in the Pathfinder program, and it will introduce students to their new home for the next four years. This interdisciplinary course will cover Missouri geology, climate, archaeology, and native megafauna. We will explore many of the habitats found in Missouri (prairie, forest, glade, and stream) and the biology of our diverse plant and animal wildlife (arthropods, mollusks, fish, salamanders, lizards, birds, and mammals). This will provide a foundation that will inform the study of ecology, policy and management in other courses. In addition to weekly lectures and discussions, students in this course will visit sites across the state during three weekend camping trips and two one-day trips. Attendance on field trips is an essential component of the course. Course enrollment is open only to students admitted into the Pathfinder Fellowship program.

Credit 3 units. A&S: AMP A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

---

### **L61 FYP 1910 Ampersand: Phage Hunters**

A research-based laboratory class for first years. Students join a national experiment organized by HHMI, with the goal of isolating and characterizing bacteriophage viruses found in the soil in the St. Louis area. Laboratory work includes isolation and purification of your own phage, DNA isolation and restriction mapping, and EM characterization of your phage. Several WU phage are selected for genome sequencing over winter break, and are annotated in the spring in Bio 192, Phage Bioinformatics. Students who successfully isolate and annotate a phage may become co-authors on a scientific paper. Prereqs: High school courses in biology and chemistry, at least one at the AP or International Baccalaureate level; permission of the instructor. One hour lecture, one hour discussion, and 3 hrs lab per week. Course is for first-year students in the Phage Hunters Program only.

Credit 3 units. A&S: AMP A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

---

### **L61 FYP 2443 First-Year Seminar: The Nuremberg Trials and International Justice**

This course is an exercise in understanding how professional historians and the general public discover and use the past. The main goals of this course are to understand the many different methods and standards applied to the past; to understand how and why each generation changes the past as it seeks to make it "usable"; and to develop the skills of exposition and argumentation necessary to describe and analyze complex historical issues and to express critical ideas effectively. The subject of this inquiry will be the Nuremberg trials - the innovations and critiques around the law and politics of the trials themselves, as well as the trials' legacies for ideas about international justice in postwar America and the world. Course is for first-year, non-transfer students only.

Same as L22 History 2443

Credit 3 units. A&S: FYS A&S IQ: HUM BU: HUM, IS EN: H

---

### **L61 FYP 1441 Ampersand: Frontiers in Cancer Research and Treatment**

Cancer as a disease has touched countless people in every country and every lifestyle. Cancer is not one single disease; rather, it is a collective scourge of many underlying disorders. Over the years, biomedical research has led to a fuller understanding of cancer etiology and spawned new diagnostic and treatment strategies to better manage and treat this condition. More recently, the launch of the Precision Medicine Initiative by the National Cancer Institute has led to unprecedented insights into the cellular signaling pathways that drive the development and progression of cancer. Furthermore, the current onset of "omics" technology and high-throughput biological readouts has opened the possibility of precisely identifying molecular changes and affected metabolic pathways in individual cancers, paving the way for precision medicine and patient care. In this second semester, we will build upon our foundational understanding of cancer and explore recent and groundbreaking advances in cancer research and therapies. The course is driven largely by student-led presentations and discussions with a mix of faculty lectures and guest seminars. Students work in teams and take responsibility for their own active, inquiry-based learning by examining various cancer topics using primary literature as the principle resource. Learning to read, interpret, and assemble a presentation from scientific literature and biomedical research is emphasized. Student teams choose a hypothesis-driven topic of interest in the field of oncology for further study and, near the end of the semester, prepare a written report and oral presentation to the class outlining its background, central hypothesis-driven question(s), experimental rationale/strategy, research data, scientific conclusion, and future direction. Prerequisite: BIOL 144. Enrollment is limited to students in the Hallmarks of Cancer & Patient Care program. Limited to 20 students.

Same as L41 Biol 1441

Credit 3 units. A&S: AMP A&S IQ: NSM Art: NSM BU: SCI

## Bachelor's and Master's Degrees in the Professional Schools

The College of Arts & Sciences — in conjunction with the Brown School, the McKelvey School of Engineering, the Olin Business School, and the Program in Occupational Therapy at the School of Medicine — offers dual (3-2) degree programs. If accepted into a 3-2 degree program, a student may work toward the AB degree during the initial three years at Washington University and toward the professional degree during the fourth and fifth years. A student electing to do a 3-2 program must complete a combined 150 academic units to earn both the AB degree and the professional degree.

Prior to entry into a 3-2 program, a student in the College of Arts & Sciences must complete the following:

1. At least 90 academic units of course work offered in the College of Arts & Sciences;
2. All distribution requirements;
3. All requirements for an Arts & Sciences major; and
4. At least 18 of the 30 required units in upper-level course work.

**Note:** Some graduate programs may allow one or two courses for the undergraduate degree to be taken concurrently with graduate-level course work. Students should consult carefully with advisors in both programs to determine whether this option is available and, if so, if it is advisable.

A transfer student who seeks the AB degree under this plan must complete at least four semesters in full-time residence in the College of Arts & Sciences at Washington University.

Thirty units of graduate academic credit taken during the fourth year will complete the 120 academic units required for the AB degree. The professional degree is earned when 150 combined academic units and all degree requirements for the professional school are completed. A student must be recommended by the faculty of the professional school to the dean of the College of Arts & Sciences in order to receive the combined degree.

Students interested in a 3-2 degree program should do the following: (1) discuss degree options with a dean in the College of Arts & Sciences and with a dean in the professional school; (2) request the Eligibility Certification Form in the College of Arts & Sciences; and (3) submit the completed Eligibility Certification Form with the application for the 3-2 program to the professional school early in the spring semester of their junior year.

AB dual master's degree students are formally admitted into the graduate program of the professional school for a 3-2 program for the fourth year. For students accepted into these 3-2 programs, the undergraduate division will remain the primary school for the fourth

year. The professional school program will not become primary until after the eighth semester of study as an undergraduate (or after early graduation with a bachelor's degree). In the fifth year, the professional program will become primary.

Students in 3-2 programs will pay the standard full-time undergraduate tuition rate for the fourth year, except for those enrolled in the MBA program, which charges a premium above the undergraduate tuition rate. Students will receive financial aid for the fourth year based upon their eligibility for undergraduate financial aid awards, including Pell Grants.

There is no commitment for undergraduate financial aid beyond the fourth year of study. Students in 3-2 programs may apply to the professional programs (MBA, Social Work) for graduate student financial aid for study in the professional program beyond the fourth year.

This policy applies to all Arts & Sciences undergraduates who have completed less than the equivalent of eight semesters of academic work toward their bachelor's degree. If these students enroll in any Washington University graduate or post-baccalaureate degree program to begin course work toward a graduate degree during their fourth year before they have been awarded a Washington University bachelor's degree or completed the equivalent of eight semesters of undergraduate enrollment, they are covered by this policy.

This policy applies to current 3-2 programs involving Washington University bachelor's and master's programs and to any future 3-2 programs.

### Brown School Master of Public Health Program

The Public Health 3-2 program leads to an AB degree from the College of Arts & Sciences and an MPH degree from the Brown School. Interested students should apply to the Brown School during the first semester of their junior year. Students from all academic disciplines with an interest in public health are encouraged to apply. For more information, please visit the Brown School's 3-2 MPH Program website.

### Brown School Master of Social Work Program

The Social Work 3-2 program leads to an AB degree from the College of Arts & Sciences and an MSW degree from the Brown School. Interested students should apply to the Brown School during the second semester of their junior year. Students from all academic disciplines with an interest in social work are encouraged to apply. For more information, please visit the Brown School's 3-2 MSW Program website.

### McKelvey School of Engineering

The combined AB/Master's Program is designed to enable students in the College of Arts & Sciences to pursue a coordinated five-year program of study leading to an AB degree in the College of Arts & Sciences and a master's degree in the McKelvey School of Engineering.

## Olin Business School

A five-year program combining an undergraduate degree and a master's degree is available to a select number of students. More information about the Olin Business School 3+2 Program is available on the Olin website.

## Program in Occupational Therapy at the School of Medicine

The Washington University 3-2 Occupational Therapy program allows students to earn both their undergraduate degree and a Master of Science in Occupational Therapy (MSOT) within five and a half years.

## Combined Undergraduate Degree Opportunities

Students may work toward the Bachelor of Arts (AB) degree in the College of Arts & Sciences while simultaneously earning another undergraduate degree in architecture, art, business, or engineering. Students undertaking such a "dual degree" program must earn 150 units, 90 of which must be in the College of Arts & Sciences. They must also fulfill the requirements for a major in each of the two schools and complete the distribution requirements for both schools. Interested students should contact both a dean in the College and the designated dean in the appropriate professional school as early as possible during their undergraduate careers.

## Individual and Group Performance

Opportunities for individual and group performance include participation in various musical organizations sponsored by the Department of Music (e.g., mixed choir, symphony orchestra, wind ensemble) and in courses offered in physical education. To encourage students to pursue such creative, physical, and social activities, the College allows up to 12 units of credit toward the bachelor's degree for the successful completion of enrollment in individual and group performance. Exceptions to the minimums may be made for students majoring in departments that require a large number of performance courses, such as dance, drama, and music.

## Internships

Students participating in internships that contribute to their academic or professional development may earn credit for those internships. Registration in an internship for credit is conditional upon the satisfactory completion of the Internship Learning Agreement form provided by the College Office and the approval of this completed form by the College Office, the faculty sponsor, and the internship sponsor.

Credit awarded for an internship corresponds to the time spent in work activities. The student is expected to work 45 hours of internship experience over a period of six to eight weeks for each unit of credit. Registration for 1 to 3 units of credit is possible.

Students may complete the work for an internship over the summer and receive credit during the subsequent semester. Any internship completed this way must satisfy all requirements stated here. The learning agreement must be submitted and approved prior to the student beginning work at the internship site. Therefore, credit cannot be awarded retroactively.

Internship courses are offered for credit/no credit grades only and, therefore, count toward the maximum of 24 credit/no credit units that may be applied toward graduation requirements. Internships do not count toward the advanced unit requirement and may count toward the major only with departmental approval. Students may not receive more than 3 units of internship credit in any semester and may count no more than 6 units of internship credit toward the 120 units required for graduation. (These regulations, along with all others governing the AB degree, are detailed on the Arts & Sciences Academic Regulations page (p. 1132).)

## Majors Across Schools

Students may earn an AB degree with a first major in the College of Arts & Sciences and a second major in art and design, business, or engineering by fulfilling all the distribution requirements for the AB degree and completing the requirements both for the first major in Arts & Sciences and for the second major in art and design, business, or engineering. With careful planning, meeting these requirements can be accomplished within the 120 units required for the AB degree; students should keep careful count to ensure that they complete at least 90 units of credit in the College of Arts & Sciences. For further information about second majors in art and design, visit the College of Art (p. 106) *Bulletin* page; for further information about second majors in business, visit the Olin Business School website; and for further information about second majors in engineering, visit the McKelvey School of Engineering website.

## Medicine & Society

The Medicine & Society Program is an exciting opportunity for undergraduate students in Arts & Sciences who are interested in exploring the interface of culture, behavior and health from a social science perspective. The program addresses the important social and cultural foundations of health and illness in human societies, with a specific emphasis on service, research, and mentoring opportunities. In addition to the academic activities, Medicine & Society has a robust sense of community with several opportunities to work with, spend time with, and serve with other Medicine & Society Scholars.

The Medicine & Society program is supported by a grant from the Danforth Foundation and administered through the Department of Anthropology. It is not a major/minor program; it is a four-year program that is available by application only.

## Eligibility

The Medicine & Society Program is a four-year program designed for matriculating first-year students. Admission to this program is highly competitive. Academic credentials, aptitude and interest in a health-related career, and personal statements all will be considered when selecting up to 20 participants to join the entering cohort. The program will particularly appeal to students with a long-term commitment to careers and research in healthcare and related fields. All evaluations for admission into this program are blind.

## Curriculum

The Medicine & Society Program has its intellectual and programmatic roots in the field of medical anthropology, which is broadly defined as the study of human health and illness across culture, time and space. Medical anthropologists examine the role of culture and society in the shaping of illness experiences. Foci of inquiry may include such issues as traditional health beliefs and practices; cultural clashes between traditional medicine and biomedicine; political and economic foundations of health disparities; ethical considerations pertaining to health care research, access, and the experience of care and illness; alternative and complementary medicine; social and behavioral factors that affect disease rates; and public health responses to emerging health problems. These topics all share a focus on community as a primary area of inquiry and population as a primary unit of analysis.

## Requirements

Once admitted to the program, students must complete the following during the 4-year period of their undergraduate careers (Total of 18 credit hours) the table lists required courses, the information below it provides information about additional program requirements:

Code	Title	Units
Anthro 141	Ampersand: Medicine and Society	3
Anthro 142	Ampersand: Medicine and Society	3
Anthro 341	Health and Wellness in the Community: A Service Learning Seminar	4
Anthro 4421	Advanced Seminar in Medicine and Society: Patients, Politics, Policy	3

- First-year Medicine & Society year-long seminar (141, 142)
- Community health internship or service-learning course (341)
- A major or minor in anthropology or the global health and environment track of anthropology
- A junior/senior advanced seminar addressing contemporary issues in Medicine & Society (4421)
- 2 additional Medical Anthropology electives.
  - Sample elective courses offered in Medical Anthropology can be found here: [Global Health and the Environment](#)
- The W.H.R Rivers Project, which is a final project, paper, capstone, or honors thesis conducted during their senior year.

Students who are accepted into the Medicine & Society Program are enrolled in a year-long first-year seminar on culture, health and society in the Department of Anthropology. This seminar provides the academic foundation for future community health work in St. Louis. Beginning as early as the sophomore year, students identify and select a community health site for internship placement or service-learning activities. The internship/service-learning opportunity provides students with a location for focusing their interest and involvement in community health and allows them to participate in the work of the host organization. During the junior and senior years, students have the opportunity to intensify their academic and service activities at the internship or service-learning site, which may culminate in a senior honors thesis or a capstone project based on original research and investigation. Students in the Medicine & Society Program are encouraged to graduate with honors, based on their independent research and academic achievement.

## Personnel

The Medicine & Society Program is directed by Dr. Anna Jacobsen, a sociocultural and medical anthropologist whose previous work discussed issues pertaining to religion and morality as they influence perspectives and understandings of personhood and health. This research focused on these processes as they unfolded in Somali refugee communities in Kenya and Northern Europe. Dr. Jacobsen's work then expanded to include the ways vaccine confidence was informed by moral and religious ideologies in Somali communities around North America and how understandings of death and dying have been broadly influenced by the same. Her current research explores end of life care, including palliative and hospice care, in the St. Louis area.

Students should also be aware that they also have full access to other faculty in anthropology and related disciplines who offer courses of relevance and interest.

## Courses

Please refer to the requirements in the Medicine & Society Overview (p. 1145) section, where required courses are listed. Please visit the Medicine & Society page for additional information about the program and courses. Each semester the department offers a range of Medical Anthropology and Global Health electives. During Fall 2024, these courses will include the following:

Code	Title	Units
Anthro 3006	Global Health and Language	3
Anthro 307A	Human Variation	3
Anthro 3090	Cultures of Health in Latin America	3
Anthro 3151	Evolution of the Human Diet	3
Anthro 3316	Introduction to Forensic Anthropology	3
Anthro 3621	Anthropology of Human Birth	3
Anthro 3876	Darwin and Doctors: Evolutionary Medicine and Health	3
Anthro 3885	Global Mental Health	3
Anthro 4134	The AIDS Epidemic: Inequalities, Ethnography, and Ethics	3
Anthro 4581	Principles of Human Anatomy and Development	3

## Other First-Year Programs

Students who have already made a firm commitment to a particular discipline in the humanities, natural sciences, or social sciences or who are uncertain about what they would like to pursue also have a rich array of academic choices to be made throughout their college careers. The course schedule can be either widely exploratory or oriented toward a particular objective, such as pre-health studies. Students who are still exploring their options are strongly encouraged to consider enrolling in a First-Year Seminar or another first-year opportunity when selecting courses in consultation with their four-year academic advisors. First-Year Seminars are single-semester, small-group courses that enable entering students to work closely with peers and faculty around an exciting topic of inquiry. First-year opportunities are single-semester, 1- or 2-unit courses designed to highlight interesting research while complementing other elective course work.

## Overseas Study Programs

The guiding principle of international study through the College of Arts & Sciences is to encourage students to acquire the broad cultural knowledge, languages, and practical skills to enable them to participate fully in a global society.

For information about the 100-plus study abroad programs offered in more than 50 countries, visit the Overseas Programs website or the webpages of specific departments and programs.

## Physical Education

Undergraduate students may take both lecture-laboratory and performance courses through the Department of Athletics. A total of 12 performance units may be included in the 120 units required for graduation.

Students may take both lecture-laboratory and performance courses through the Department of Athletics; however, there are no majors or minors in this area. All courses are offered only on a Pass/Fail basis.

## Courses

Visit online course listings to view semester offerings for L28 P.E..

---

**L28 P.E. 115 Topics In Physical Education: Beginning Weight Training**

Major emphasis is on strength development. First class will meet in the Burmesiter Lounge, Summers Recreation Center.

Credit 1 unit.

---

**L28 P.E. 1201 Fundamentals of Rowing for Fitness**

This eight-week course will focus on the effective use of Concept II Rowing as tools to learn the rowing stroke as well as to maintain aerobic fitness and develop strength. Emphasis will be placed on the correct use of technique to decrease risk of injury; varying duration and intensity of work on the machine to develop different energy systems; and using these new skills in developing lifetime fitness. Instruction will include the use of videotape and video monitoring. Athletic shoes and clothes that are not baggy are needed to participate. There will be a minimum amount of running and light, low-impact aerobic activity required as a warm-up.

Credit 1 unit.

---

**L28 P.E. 131 Topics in Physical Education: Group Fitness**

This 10-week course is designed to give students the unique experience of a group fitness class catered just to them. Using various formats of group exercise, Group Fitness will provide a fun and dynamic way to motivate participants to reach their desired results. Topics will include cycling, bootcamp, pilates, yoga, cardio, strength training, TRX suspension training, and a variety of other formats specific to the group, helping students to improve their overall fitness and wellness. First class meets in the Olympic Studio, Summers Recreation Center.

Credit 1 unit.

---

**L28 P.E. 132 Topics in Physical Education: High-Intensity Conditioning**

This eight-week course offers a varied program of high-intensity conditioning techniques specifically designed for individual needs. Supervised areas covered are cardiovascular and strength testing; weight training; plyometric training; flexibility and stretching; and aerobic and anerobic training. There will be an organizational meeting in the Burmeister Lounge, Summers Recreation Center.

Credit 1 unit.

---

**L28 P.E. 136 Fitness and Conditioning**

Students complete fitness testing at the beginning and end of the semester. Individual workout schedules are followed outside of class time. Orientation sessions will take place in the Burmeister Lounge, Summers Recreation Center.

Credit 1 unit.

---

**L28 P.E. 139 Topics in Physical Education: Intermediate/Advanced Tennis**

Intermediate/advanced tennis.

Credit 1 unit.

---

**L28 P.E. 140 Topics in Physical Education: Beginning Tennis**

Beginning tennis.

Credit 1 unit.

---

**L28 P.E. 155 Topics In Physical Education: Life Skills for Scholar Champions**

Participation includes informal leadership tasks under the direction of Washington University Athletic Department personnel. The selection of the task and the scope of work is to be determined before enrollment by conference with the instructor. Prerequisite: permission of the department.

Credit 1 unit.

---

**L28 P.E. 160 Fundamentals of Fitness: Personal Training**

This course is designed to provide students with the foundational knowledge and skills needed to pass the American College of Sports Medicine's (ACSM) Certified Personal Trainer exam. Classes will be a fusion of lecture and practical application to ensure an environment of applied knowledge. The primary emphasis will include basic human anatomy, physiology, bioenergetics, biomechanics, nutrition and their relationship with exercise. Using the guidelines provided by the ACSM and the accreditation standards of the National Commission for Certifying Agencies (NCCA), students will familiarize themselves with industry standards. Specifically, this course will refer to guidelines provided by the ACSM regarding health screening, scope of practice, client safety, behavior change strategies, program design, fitness assessments and legal issues. At the conclusion of this course, students will take a final comprehensive written and practical exam as their final evaluation. A \$90 course activity fee is required.

Credit 1 unit.

---

**L28 P.E. 220 Topics in Physical Education: Varsity Sports**

Varsity sports. Prerequisite: permission of the department.

Credit 1 unit.

---

**L28 P.E. 225 Topics in Physical Education: Varsity Sports Training**

Through sports performance training, team practices, and meetings, this course prepares varsity student athletes for their return to a competitive season. Prerequisite: Permission of the Athletic Department and varsity athlete status.

Credit 1 unit.

---

**L28 P.E. 232 Topics in Physical Education: High-Intensity Conditioning**

HIGH INTENSITY CONDITIONING. Varied program of high intensity conditioning techniques designed for individual needs. Supervised areas covered are: cardiovascular and strength testing; weight training; plio-metric training; flexibility and stretching and aerobic and anerobic training.

Credit 1 unit.

---

**L28 P.E. 234 Topics in Physical Education: Lifeguard Training**

LIFEGUARD TRAINING This course provides skill instruction and knowledge needed to prevent and respond to aquatic emergencies in a pool setting. Successful completion of requirements results in certification in American Red Cross Lifeguard Training for swimming pools, CPR and First Aid. Prerequisite: swimming test given during the first week of class. Course materials fee: \$100. Summers Rec Center/ Millstone Pool. 8 week course: 1/26-3/25.

Credit 1 unit.

---

**L28 P.E. 236 Topics in Physical Education: Fitness and Conditioning**

FITNESS AND CONDITIONING. Students complete fitness testing at the beginning and end of the semester. Individual workout schedules are followed outside of class time.

Credit 1 unit.

---

**L28 P.E. 239 Topics in Physical Education: Beginning Tennis**

BEGINNING TENNIS Eight-week course: Start 3/1-4/28. MW 1:00-2:30. Summers Rec/Tennis Courts

Credit 1 unit.

---

**L28 P.E. 240 Topics in Physical Education: Intermediate Tennis**

INTERMEDIATE TENNIS Eight-week course, Start 3/2-4/29. Summers Rec Center/TAO Tennis Courts

Credit 1 unit.

---

**L28 P.E. 258 Indoor Cycling**

Indoor Cycling is a high energy cardiovascular workout on stationary bikes in the Wigdor Cycling Studio (The Dark Room). All levels welcome - the workout can be tailored to your personal fitness goals and needs. A water bottle and towel are required. There will be a \$45.00 fee for a Heart-Rate Monitor that will be provided the first day of class; T Th 3:00-4:00. Summers Recreation Center.

Credit 1 unit.

---

## Special Major and Special Minor

On some occasions, a student's interests may fall in the intersection of two or more formally organized major programs, in which case a student may propose a special major that brings the related course work together. Students who propose a special major should be prepared to undertake honors-level work as all special majors must complete a capstone project of 3 to 6 units during the senior year.

Students interested in creating a special major or minor must confer with the dean charged with coordinating this program. Email [college@wustl.edu](mailto:college@wustl.edu) or call 314-935-6800 to get in contact with the appropriate dean.

After consultation, students must submit a formal proposal to the appropriate dean. The proposal must include the following: (1) a description of the program of study, including an explanation of the program's integrating idea; (2) a list of courses to be taken; (3) a letter of support from the proposed academic advisor; and (4) a letter of support from a faculty member in a second, related department who has approved the proposal.

A proposal for a special major or minor must be submitted no later than the fifth semester of undergraduate enrollment. The Committee on the Special Major and Minor is responsible for final action on these proposals.

## Undergraduate Pre-Professional Preparation

Students planning to pursue pre-professional studies should refer to the general recommendations given below. For more specific recommendations, visit the appropriate webpages.

### Architecture

Please refer to the College of Architecture (p. 57) section in this *Bulletin*.

### Business Administration

Students in the College of Arts & Sciences are welcome to consult with the associate dean for the undergraduate program in the Olin Business School concerning any aspect of preparation for careers in business. For more information, visit the Olin Business School website.

### Law

The two most significant factors law schools use in determining who to admit for legal study are the undergraduate GPA (taking into consideration the difficulty of courses attempted and the breadth of study) and the score on the Law School Admission Test (LSAT). Admission to law school requires a bachelor's degree.

There is no required set of courses for pre-law study at the undergraduate level. Many law school applicants have majors in economics, English, history, philosophy, and political science, but law schools also seek students with undergraduate majors in business, engineering, science, and other disciplines. Whatever areas pre-law students choose to emphasize in their undergraduate studies, they should take courses that require significant amounts of writing, that develop analytic thinking skills, that encourage the application of principles or theories to new situations, and that require the original writing and revision of written work in response to comment and critique. It is also important to learn to read and analyze complex written material and to develop sound research skills.

Economics, history, philosophy, and political science courses can help students to develop an understanding of the traditions behind and the development of the U.S. legal system. Accounting, logic, and statistics courses also provide valuable background for legal study and the practice of law.

The pre-law advisors in the College of Arts & Sciences are available to help students plan a course of study and prepare a strategy for applying for admission to law school. For more information, visit the pre-law website.

## Medicine

Pre-medical students in the College of Arts & Sciences of Washington University complete the bachelor's degree before admission to a medical school. In addition to fulfilling the requirements for the AB, pre-medical students must fulfill the entrance requirements of the medical schools to which they plan to apply. Specific requirements, which may vary, are summarized in the *Medical College Admission Requirements* online handbook, published annually by the Association of American Medical Colleges.

Pre-medical students must demonstrate high academic achievement and possess the character, responsibility, and level of commitment suitable for a career in medicine. Although requirements for specific medical schools are increasingly varied, most schools have traditionally required at least one year each of English, general biology, inorganic chemistry, organic chemistry, and physics with laboratory components traditionally required for all of the core science courses. In addition, students preparing to take the Medical College Admissions Test (MCAT) should take one semester each of biochemistry, psychology, and sociology. Medical schools also encourage applicants to develop a broad intellectual background that includes the humanities, the social and behavioral sciences, and a demonstrated understanding of and appreciation for social and cultural diversity.

Students interested in the health professions may choose a major in any field — the humanities, the social sciences, or the natural sciences — as long as they complete the pre-medical requirements. Any student planning to apply to MD/PhD programs is strongly advised to major in one of the natural sciences and to begin gaining bench research experience no later than the beginning of their sophomore year. Research opportunities are available on the Danforth Campus and at the School of Medicine, and these opportunities are open to both science and nonscience majors. Health-related volunteer opportunities are also widely available.

Students who enter the university planning to apply to medical school should, with the aid of their advisors, structure their course of study to include the medical school requirements. There is no one right or best sequence of courses, and there are numerous pathways to medical school. Because each student's pathway is different, students interested in a career in the health professions are encouraged to consult the PreHealth deans in the College in addition to their academic advisors. Additional information can be found on the PreHealth website.

## Other Health Professions

Students interested in pursuing other careers in the health professions — including dentistry, nursing, occupational therapy, optometry, physical therapy, and veterinary medicine — are invited to visit with a specialist advisor from the PreHealth advising team. Interested students will find additional information on the PreHealth advising website.

## Summer Session

The Summer Session in Arts & Sciences offers courses for current Washington University students and visiting students, including pre-college learners. Summer courses are scheduled over five separate sessions. Visit the Summer Session website for more information.

## Enrollment Eligibility

### WashU Undergraduate Students

Students who are admitted to a degree program and have completed at least one full semester at Washington University in St. Louis may enroll in Summer Session courses provided that they have a cumulative grade point average of 2.0 or higher. Any student who has been suspended or dismissed from (and not formally readmitted to) any school within Washington University may not register without the written permission of their former dean. In addition, students who have been placed on academic notice or academic time away or who have taken a regular leave of absence must be reinstated and/or cleared by the College Office (or the dean of their respective school if not an Arts & Sciences student) prior to enrolling in Summer Session courses. Please note that reinstatements are typically issued for the fall semester and not for Summer Session. Matriculated Washington University undergraduate students register for Arts & Sciences summer courses directly through WebSTAC.

### Domestic Visiting Students

Undergraduates in good academic standing attending another U.S. college or university are welcome to register through the visiting student program. Prior to registration, we strongly encourage that students consult with their home institution advisors to discuss courses and transfer credit procedures.

### International Visiting Students

International students currently studying on F-1 or J-1 visas sponsored by another U.S. college or university may register through the visiting student program. Students will be required to provide the following official documents before their request is reviewed:

1. Official I-20 or DS-2019
2. Official I-94
3. Official score report from TOEFL or IELTS
4. Transcript of record from home institution

If students have questions about their current visa status, they should contact the Office for International Students and Scholars.

### Pre-College Students

Arts & Sciences Pre-College Programs offer a variety of programs for middle and high school students. Please visit the Pre-College Programs (p. 1151) page of this *Bulletin* for more information.

## Maximum Credit Load

Due to the intensive nature of summer courses, students may carry no more than the maximum credit load for each session, indicated below:

- Session I: Maximum of 4 units
- Session II: Maximum of 6 units
- Session III: Maximum of 6 units
- Session IV: Maximum of 6 units

When enrolled in overlapping sessions, students may still carry no more than 6 units at one time. Finally, students are limited to taking no more than 12 units total over the course of the summer.

Contact: Ashley June Moore

Email: [summersession@wustl.edu](mailto:summersession@wustl.edu)  
Website: <https://summersession.wustl.edu>

## Pre-College Programs

The Pre-College Program offerings in Arts & Sciences at Washington University in St. Louis provide opportunities for qualified middle and high school students to study on a non-degree basis. Both credit and noncredit course work is available during the academic year and summer.

Students interested in attending a Pre-College Program must submit an application for admission that may include essays, transcripts, and teacher recommendations. Students are expected to meet the age/year-in-school eligibility of the program unless an exception has been granted. International students must be able to verify fluency in the English language by providing a minimum TOEFL score of 90 (iBT) or a minimum IELTS Academic score of 6.5. Students may request a waiver based on the current standards of English proficiency certification set by the Office for International Students and Scholars.

Credit courses enrolled in through a Pre-College Program are considered pre-matriculation units and are subject to Washington University policies regarding Pre-Matriculation Credit Units (p. 39).

Admission to and participation in a Pre-College Program does not imply or guarantee acceptance into a degree program at Washington University.

Need-based scholarship assistance is available for all programs. Information about applying for scholarship assistance is available on the Pre-College Programs website.

## Summer Programs

Summer Pre-College Programs are designed for mature, academically motivated students enrolled in challenging curriculum that may include honors, advanced placement, and International Baccalaureate courses, if offered by their high schools. Students who are collaborative,

intellectually curious, and creative thinkers thrive in these programs. Courses are taught by Washington University instructors from across disciplines and research fields. Course offerings rotate each year. For current course offerings, visit the Pre-College Programs website.

In addition to course work, students participate in enrichment programming designed to support the development of college readiness skills.

## High School Summer Scholars Program

Through the High School Summer Scholars Program, students enroll in one or two courses for credit. Students choose from a selection of Arts & Sciences undergraduate courses. To be eligible for the program, students must be current juniors in high school. Students must meet any prerequisites listed for a course in order to be approved to enroll.

## High School Summer Institutes

Through the noncredit High School Summer Institutes, students discover a new passion or dive deeper into an existing one through an interdisciplinary environment. Each institute has a specific theme or focus and includes traditional undergraduate classroom activities like lectures, discussions, small group collaboration, and final projects. To be eligible for the program, students must be current sophomores or juniors in high school, and they must meet any prerequisites listed for the institute to which they are applying.

## High School Summer Launch

Through the noncredit High School Summer Launch, students participate in a series of daily lectures, workshops, and seminars designed to build a strong foundation for future academic studies and to prepare students for the college application process. To be eligible for the program, students must be current freshmen or sophomores in high school.

## Middle School Summer Challenge

Through the noncredit Middle School Summer Challenge program, students participate in a humanities-themed course, leadership and team-building workshops, and a STEM course to create a well-rounded summer experience. To be eligible for the program, students must be current fifth-, sixth-, seventh-, or eighth-grade students.

## Academic Year Programs

### Early College Scholars Program

The Early College Scholars Program is a year-round dual-enrollment program that allows St. Louis area high school students to enroll in courses for credit. To be eligible for the program, students must be current 12th-grade St. Louis-area high school students, and they must

meet any prerequisites listed for a course. Priority for enrollment in the fall and spring semesters is given first to full-time degree students. If space is available, pre-college students may then be permitted to enroll in a course pending instructor and department approval.

## Exploration Courses

The noncredit, online Exploration Courses allow students to explore a topic or subject through a series of interactive activities, lectures, and discussions. To be eligible, students must be current sophomores, juniors, or seniors in high school, and they must meet any prerequisites listed for the course.

Contact: Becki Baker  
Phone: 314-935-4807  
Email: [precollege@wustl.edu](mailto:precollege@wustl.edu)  
Website: <https://precollege.wustl.edu/>

## Undergraduate Visiting Students

The Undergraduate Visiting Student offerings in Arts & Sciences at Washington University in St. Louis provide opportunities for qualified individuals to register for undergraduate courses in Arts & Sciences on a non-degree basis.

Permission to register under this arrangement does not constitute or imply admission to a degree program at Washington University. However, at a future date, qualified visiting students may apply for admission to one of the degree-granting divisions of the university. Courses taken during visiting status may be applied to a degree program at Washington University only if authorized by the appropriate academic division.

Students seeking admission to an undergraduate degree program at Washington University should contact the Office of Undergraduate Admissions ([admissions@wustl.edu](mailto:admissions@wustl.edu)). Students seeking admission to a graduate degree program in Arts & Sciences at Washington University should contact the Office of Graduate Studies, Arts & Sciences ([artscigrads@wustl.edu](mailto:artscigrads@wustl.edu)). Individuals wishing to pursue non-degree course work in art, architecture, business, or engineering should contact those schools directly for information relating to non-degree study. High school students wishing to pursue non-degree course work at Washington University should contact the Early College Scholars Program ([precollege@wustl.edu](mailto:precollege@wustl.edu)).

## Summer Session Opportunities

Students from other colleges and universities are eligible to enroll in summer courses as visiting students in the College of Arts & Sciences.

## Policies and Procedures

- To be eligible to enroll, students must be at least 18 years of age by the start of the session and meet one or more of the following eligibility criteria:
  - Be a matriculated undergraduate student at another U.S. college or university
  - Be a matriculated international undergraduate student attending a U.S. college or university
- Additional eligibility requirements are as follows:
  - The student must be in good academic standing (a transcript will be required during the enrollment process). Good standing is defined as having a minimum 3.0 GPA on a 4.0 scale.
  - International students must be able to verify fluency in the English language by providing a minimum TOEFL score of 90 (iBT) or a minimum IELTS Academic score of 6.5. Students may request a waiver based on the current standards of English Proficiency Certification set by the Office for International Students and Scholars.

(Please refer to the Summer Session visiting student eligibility requirements for additional clarification.)

- Any student who has been suspended or dismissed from any school within Washington University may not register without written permission from their former dean.
- Individuals wishing to enroll as visiting students in Arts & Sciences during the Summer Session must complete the enrollment request form and provide all requested information.

## Housing

On-campus housing is available to visiting students during Summer Session. For more information about housing options, please visit Summer Housing.

## Academic Year Opportunities

Undergraduate Visiting Student offerings during the academic year are considered on a case-by-case basis and are designed for individuals who are currently undergraduate degree candidates in good standing at other colleges or universities who wish to take a leave of absence from their home institutions and enroll full-time in undergraduate courses at Washington University on a temporary basis.

## Policies and Procedures

- Eligibility for visiting student status includes current matriculation in good standing and completion of at least one semester of full-time study (12 or more units) at another accredited college or university with a 3.0 minimum grade point average in previous college work.
- Undergraduate visiting students may register for a minimum of 12 units and a maximum of 21 units of course work during a single semester.

- Undergraduate visiting students are eligible to register for a maximum of two semesters of full-time study at Washington University.
- All course enrollments are on a space-available basis and subject to instructor and Arts & Sciences approval.
- If approved, undergraduate visiting students register for courses with an academic advisor and pay tuition and course-related fees in full at the time of registration.
- Visiting students are not eligible for federal or institutional financial assistance.
- International students are eligible to apply for non-degree study as undergraduate visiting students if they already hold a visa that permits full-time study.
- Individuals wishing to participate in Undergraduate Visiting Student opportunities in Arts & Sciences during the academic year should contact Ashley June Moore, Director of Summer Session & Programmatic Initiatives, at college@wustl.edu.

## Housing

On-campus housing is not available to visiting students during the academic year. Off-campus housing, however, is available. For more information about housing options, please contact the Office of Residential Life at [reslife@wustl.edu](mailto:reslife@wustl.edu) or Quadrangle Housing at [quadrangle@wustl.edu](mailto:quadrangle@wustl.edu).

## Post-Baccalaureate Premedical Program

The **Post-Baccalaureate Premedical (PBPM) program** at Washington University enables qualified college graduates to take prerequisites and elective science and math courses to satisfy medical school admission requirements. Students also may take approved elective courses in the natural sciences, social sciences, and humanities that provide a broad context and skill set for the practice of medicine today. The program is flexible to accommodate individuals changing careers, including those without a science background. For students who enter the program with most premedical course requirements complete, the program offers numerous upper-level biology courses to enhance a previous academic record and demonstrate science mastery. Courses are typically taken during the evening and are available during the fall, spring, and summer semesters. Day courses are also available to students, although tuition rates are higher.

Students earning 24 units of course credit at Washington University with a cumulative grade point average of 3.2 or higher will receive a letter of completion of the Post-Baccalaureate Premedical program.

Students are also supported and guided in preparing their professional school application by a dedicated advisor. Qualified students receive a cover letter of support from the program to accompany their letters of recommendation to professional school.

Phone: 314-935-6800  
Email: [postbaccpremed@wustl.edu](mailto:postbaccpremed@wustl.edu)  
Website: <http://postbaccpremed.wustl.edu>

## Requirements

### The Curriculum

The Post-Baccalaureate Premedical (PBPM) program offers courses to meet the general entrance requirements (prerequisites) for American medical schools as well as those requirements for dental, veterinary, osteopathic, and other health professional programs. The PBPM program also offers supplemental biology, chemistry, and math courses to allow students to demonstrate additional proficiency in those subjects. Students are urged to check individual schools and programs for specific entry requirements.

All courses taken as part of the PBPM program must be taken for letter grades, except for courses offered only on a pass/fail basis. No more than 2 units of pass/fail work may apply toward program requirements.

Once students begin the program, all course work must be taken in residence at Washington University. Cover letters will be written only for students who observe this policy.

### Prerequisite Courses

The PBPM program offers courses that are required for medical and professional school admission, including the following:

- **Biology:** two semesters with laboratory
- **General Chemistry:** two semesters with laboratory
- **Organic Chemistry:** two semesters with laboratory
- **Biochemistry:** one semester
- **Mathematics and Statistics:** two semesters of college math (This requirement varies according to school. Statistics is recommended. For the broadest range of schools, Calculus I and II should be completed.)
- **General Physics:** two semesters with laboratory
- **English:** two semesters, one of composition

In addition to the prerequisite courses, elective courses in biology, chemistry, and mathematics are also available.

### Additional Information

- Appropriate course work includes the prerequisites needed to apply to professional school as well as upper-level biology courses that are relevant to human or animal biology. Course work that does not meet those criteria must be approved by an advisor, in advance, in order for it to count toward program completion.
- To qualify for a cover letter from the program, students must be in good academic standing (i.e., they must have a grade point average of 3.2 or higher), and they must successfully complete at least 18 units of course work at Washington University by the end of the spring semester that precedes the opening of the professional school application cycle. They must also be registered for their 24th unit, which must be successfully completed no later than the summer of that same year.

- Students who complete course work at another academic institution after beginning the Post-Baccalaureate Premedical program at Washington University will lose eligibility for a cover letter from the program. Exceptions to this rule are allowed in extenuating circumstances and must be approved by a program advisor in advance.
- While most students complete the program in two years or less, students are limited to a three-year period in which to complete the program. They may take up to 45 units total while enrolled in the post-baccalaureate program.
- Students who do not enroll in any course work in the program for a span of one academic year or more will be required to reapply if they wish to return.

# Business

## About Olin Business School

At Washington University's Olin Business School, students learn to look beyond the bottom line and make thoughtful decisions that benefit business and society. Our global-mindedness — coupled with a values-based, data-driven approach to decision making — prepares students to tackle the greatest challenges of our day and to change the world, for good.

As a leading research-oriented business school, Olin has a network of partners on campus, in the St. Louis community, and around the world. Students are able to apply what they have learned in the classroom to real-world situations through experiential learning opportunities that include student consulting, internships, case competitions, and study abroad programs, among others. Students also develop an entrepreneurial mindset that allows them to act nimbly and quickly in the constantly changing business landscape.

Olin is a welcoming community that allows for a deeper level of engagement, collaboration and program customization. Students can rely on support from faculty, staff and their peers while feeling accomplished in the rigorous course work.

## Bachelor of Science in Business Administration

Olin Business School offers a full-time Bachelor of Science in Business Administration (BSBA) degree program of instruction. Our BSBA students enroll in business courses during their first year, and the curriculum covers the core functional areas of business. At least one major course of study in a field of business is chosen, and at least 40% of the course work must be in non-business fields, from fine arts to science; this allows students to pursue individual careers and ensures a well-rounded educational experience.

## Majors

Students in the BSBA program are offered the option to focus their studies in a specific field of business. Although a business student is not required to declare a business major, almost all of our business students earn at least one professional major. A student may pursue one or two majors from the list below:

- Accounting
- Economics and Strategy
- Entrepreneurship
- Finance
- Financial Engineering (offered as a second major option only)
- Health Care Management
- Marketing
- Organization and Strategic Management
- Supply Chain, Operations, and Technology (formerly Operations and Supply Chain Management)

Specific requirements for each major can be found in the Majors for BSBA Degree Candidates (p. 1158) section of this page.

## Minors

Many departments and schools in the university offer minors. Business students can also pursue a minor outside of Olin Business School in any recognized academic discipline offered within the university by satisfactorily completing all of the requirements for both the BSBA degree and the minor. Required courses for a minor outside of the business school may range from 15 to 27 units, depending on the specific regulations of the academic department. A business student who applies for a minor and completes all of the requirements will have the award of the minor noted on the official transcript. A student must be approved for admission to a minor program by the department offering the minor.

BSBA students may choose the following minors offered through the Olin Business School:

- Business of Social Impact
- Business of Sports
- Business of Entertainment
- Business of the Arts
- Business Analytics
- International Business

Specific requirements for each major can be found in the Minors for BSBA Degree Candidates (p. 1161) section of this page.

## Combined Majors

Business students have the option to major in more than one field of study. BSBA students can earn a total of two majors, either both in business or one in business and one from outside of Olin. For example, a student could earn a BSBA degree with a major in finance and a major in English literature from the College of Arts & Sciences. Students must complete the specific courses required for the second major, but they are not required to complete the general requirements for the second degree. Students should consult with their academic advisors for additional information. Upon completion, the student's transcript would show a BSBA degree along with the earned second major. A diploma is awarded for the degree, with reference to any major(s) appearing on the official transcript.

## Combined Degrees

A student also can earn two undergraduate degrees simultaneously: a BSBA degree and another undergraduate degree offered at the university. The student must be admitted to the other degree-granting program, and they must meet specific degree requirements for both schools. Typically, this option requires additional time to complete all requirements. For example, if a student combines a business degree with a degree from the College of Arts & Sciences, the student must complete a minimum of 150 units between the two disciplines. Of the 150 units, at least 90 units must be from the College of Arts & Sciences, and at least 60 units must be from Olin Business School. Some courses

may be used to satisfy both degree requirements simultaneously. Because requirements for a second degree vary from discipline to discipline, students should talk with their primary advisor to plan their program.

## Non-BSBA Students

Students in other undergraduate divisions of the university may choose to complete a second major or a minor in a business discipline. This opportunity allows students to combine their academic interests between two schools. If students wish to pursue a second major or minor in business, they are required to follow the degree requirements for their primary school/major along with a set of core business or prerequisite requirements and 15 units of professional major/minor course work. Additional information for students from other schools of Washington University who wish to pursue business second majors and minors can be found in the Non-BSBA Programs (p. 1163) section of this page.

## Joint Programs

### Bachelor of Science in Business and Computer Science

The Bachelor of Science in Business and Computer Science degree program provides an integrated educational experience that involves both the Olin Business School and the McKelvey School of Engineering. The objectives of this program are to provide students with the fundamental knowledge and perspectives of computer science and business and to expose them to the unique opportunities created by combining these disciplines. As one of the only such joint programs in the country, the Bachelor of Science in Business and Computer Science features unique curricular and cocurricular elements that help to create a distinctive program.

Please visit the Bachelor of Science in Business and Computer Science page (p. 1240) of this *Bulletin* for more information.

## Olin Graduate Programs

### Master of Business Administration (MBA)

A special five-year program — often referred to as the 3+2 program — that combines an undergraduate degree with the Master of Business Administration degree is available to a select number of undergraduates. Interested candidates should contact the Olin MBA Admissions office during their sophomore year by calling 314-935-7301 or emailing Olin Graduate Admissions (OlinGradAdmissions@wustl.edu).

### Specialized Master's Programs

A specialized master's degree is highly concentrated and singular in focus, providing intensive education in one business discipline. Olin Business School offers a variety of specialized master's programs that can be combined with an undergraduate degree. Visit our website for more information about dual undergraduate

and specialized master's programs. Interested candidates should contact the Olin MBA Admissions office during their sophomore year by calling 314-935-7301 or emailing Olin Graduate Admissions (OlinGradAdmissions@wustl.edu).

## Opportunities

### Academic Advising

Olin Business School provides students with expert academic advising and support. Olin undergraduate programs have academic advisors who serve as professional advisors to all undergraduate students on procedural matters, course planning, registration and other academic matters. Students are required to meet with their advisors at least once per semester to discuss course registration, but they are strongly encouraged to meet more frequently to allow advisors the opportunity to learn about the student's goals, plans and career objectives.

### Independent Study

Independent study under the direction of a faculty member is available on a selective basis. The purpose of independent study is to provide an opportunity for students to pursue subject matter beyond the specific course offerings found in the business school. Projects may be done for 1 to 6 units of credit, but normally no more than 3 units will be granted in any one semester. The Independent Study Form must be submitted to the student's academic advisor by the end of the second week of the academic semester. Students may apply a maximum of 6 units of independent study in business and 6 units from outside of Olin toward the 120 unit degree requirement.

For more information, please speak with an academic advisor for the Olin Business School undergraduate programs.

### Internship for Credit Opportunities

Olin Business School first-year students and sophomores who have summer internships can enroll in MGT 450A for academic credit. This online course is designed to deepen the overall learning that the student gains from an internship. Students enroll in this 1.5-credit course on a pass/fail basis. Although this course will be listed on a student's academic transcript, it will not count toward the 120 units needed for graduation.

Olin Business School juniors and seniors who have completed the core requirements and one advanced elective in the appropriate major field may apply to receive credit for internship experience through an independent study. Students must work under the direction of a faculty member to complete an academic paper or project. The Independent Study Form must be submitted to the student's academic advisor by the end of the second week of the academic semester.

### Global Programs

Upon graduation, students are working at some of the top institutions across the globe. This is why Olin has chosen to integrate meaningful, purposeful and impactful global experiences into its academics. Having an international experience signals to employers that our students

are in possession of valuable traits such as adaptability, comfort in ambiguity, and global leadership. All students have the opportunity to study abroad, providing they meet the eligibility requirements. Detailed information and eligibility requirements for study abroad are available on the Olin Global Programs website or in the Undergraduate Programs office.

Options include the following:

- **Olin International Internship Programs** combine classroom learning with a full-time internship placement of approximately 10 to 12 weeks. Students complete a significant research project in conjunction with the internship experience.
- **Olin Semester Study Abroad Opportunities** are offered across the globe in Asia, Europe and South America. Students choose courses on offer at local universities or study centers in the areas of business, language and general studies. Some programs require intensive language courses, although most are taught in English.
- **Short-Term and Summer Programs** last from two to eight weeks for 3 to 6 credits, including opportunities through the Center for Experiential Learning as well as Olin-run programs in Europe and Israel.

A unique aspect of many of our semester programs are the Academic Study Tours. Academic Study Tours are a required academic component for several of our study abroad programs, and students earn business credit for this experience. These tours are designed to develop research, analysis and presentation skills in an experiential format to allow students to apply theory, concepts and skills gained at Olin to consulting-type exercises abroad. They also allow students the opportunity to explore the business and culture of the region in which they are studying.

## Other Study Abroad Options

Students with second majors outside of business may consider study abroad programs sponsored by Overseas Programs in the College of Arts & Sciences to earn credit toward their non-business major.

## Global Mindset

Beginning with the BSBA Class of 2025 and beyond, a Global Mindset component will be part of the degree requirement. The Global Mindset component for the undergraduate BSBA degree is designed to support the Olin Pillars of providing world-changing business education, research, and impact. Through a Global Mindset experience, students will have the opportunity to expand their intellectual curiosity, gain confidence in their ability to make decisions under pressure, and enhance their leadership advantage in a rapidly changing global society. Students will be able to satisfy the Global Mindset component of their degree through a variety of experiences that expose them to new academic and professional ideas, peoples, cultures, and philosophies. This could be done through study abroad or with a carefully curated set of domestic experiences.

## Student Assistants to Professors

In this challenging program, outstanding students are chosen to assist various professors with their course development work or research efforts. Students may conduct library research, perform computer programming, develop new learning materials for class, assist other students with their writing skills, or tutor in various areas of the curriculum.

Participation as an assistant to a professor is voluntary and may begin as early as the first year. As a participant, students are paid the going rate for undergraduate student assistants. This experience also impresses company recruiters.

## Center for Experiential Learning

The Center for Experiential Learning (CEL) is an educational center at Olin Business School. The CEL facilitates real-world experiential learning courses. Last year, dozens of our expert advisors and faculty oversaw 140+ live consulting engagements with nearly 1,000 Washington University student participants. The CEL's partners include startups, nonprofits, multinational enterprises, and NGOs in St. Louis, across the country, and around the globe. Visit the Center for Experiential Learning website for more information.

## Center for Career Engagement

WashU's Center for Career Engagement (CCE) provides comprehensive career support, including career coaching and planning, career assessment and skills training, and access to a global community of leaders, recruiters, influencer networks, and WashU alumni. To get the most out of career support, students are encouraged to meet with coaches early in the school year to discuss their personal and professional goals.

Through the CCE, students can access 24/7 digital tools and resources, self-assessments, résumé and cover letter reviews, and networking sessions. In addition, they can connect to employer activities, including company information sessions, speaker panels, on-campus interviews, skill-building workshops, and career fairs.

Students are encouraged to join the Business Career Community, an industry-focused space dedicated to exploring careers, making connections, and inspiring confidence.

For more information, please visit the Center for Career Engagement website or call 314-935-5930.

## Majors

### Majors for BSBA Degree Candidates

In addition to the 42 core professional units required, which are listed on the Degree Requirements (p. 1190) page of this *Bulletin*, a BSBA degree candidate must complete at least 18 professional elective units. BSBA students may apply these professional electives toward a specific professional major. Majors in the business curriculum are opportunities to focus study in a specific field of business. All major courses must be taken in residence. Course work from an approved Washington University study abroad program will count as in-residence work. However, only one course per major may be taken through a study abroad experience.

BSBA students may select a major from the following disciplines:

#### The Major in Accounting

**Total units required: 15**

- Accounting Core: 6 units

Code	Title	Units
ACCT 3610	Intermediate Financial Accounting Theory I	3
ACCT 3620	Intermediate Financial Accounting II	3

- Accounting Electives: 9 units

Code	Title	Units
ACCT 366E	Carbon Accounting	1.5
ACCT 400C	Not-For-Profit Accounting	1.5
ACCT 400M	Ethics I	1.5
ACCT 400N	Ethics II	1.5
ACCT 455	Accounting Policy and Research	3
ACCT 464	Auditing	3
ACCT 466	Financial Statement Analysis	3
ACCT 467	Taxation of Individuals	3
ACCT 4680	Advanced Financial Accounting Problems	3
ACCT 472E	Taxation of Business Entities	3
ACCT 475E	International Taxation	1.5

#### The Major in Economics and Strategy

**Total units required: 12**

- Economics and Strategy Core: 12 units

Code	Title	Units
MEC 370	Game Theory for Business	3
MEC 400K	Research Analysis in Industry	3
MEC 470	Industrial Economics	3
MEC 471	Empirical Techniques for Industry Analysis	3

#### The Major in Entrepreneurship

**Total units required: 15**

- Entrepreneurship Core: 6 units

Code	Title	Units
MGT 421	Introduction to Entrepreneurship	3
or MGT 460L	Introduction to Social Entrepreneurship	
or MGT 106E	The Endgame for Entrepreneurship: Leveraging Capitalism for Good	
or BEYOND 105	The Endgame of Entrepreneurship: Leveraging Capitalism for Good	
or Econ 105	The Endgame of Entrepreneurship: Leveraging Capitalism for Good	
or FYP 105B	Beyond Boundaries: Endgame of Entrepreneurship	
MGT 424	Business Planning for New Enterprises [The Hatchery]	3
or MGT 477E	Launching and Scaling New Enterprises (The League)	

- Entrepreneurship Electives: 9 units (must select 3 units from each category)

*Industry Elective Choices (at least 3 units required):*

Code	Title	Units
ART 223K	Business of Fashion	3
CSE 131	Introduction to Computer Science	3
Econ 335	Money and Banking	3
FIN 549H	Special Topics: Real Estate Finance	1.5
INTL 320	Business, Innovation and Entrepreneurship in Israel	
MEC 320	Olin Grand Rounds: The Business and Practice of Medicine (formerly MGT 320)	3
MEC 460	Economics of Entertainment	3
MGT 380	Business Strategy	3
MGT 440	Sports Management	3
MGT 475E	Innovating for Defense	3
MGT 476E	Innovating for Healthcare	1.5

*Experiential Elective Choices (at least 3 units required):*

Code	Title	Units
INTL 351E	Global Entrepreneurship	
INTL 970	Entrepreneurship and Startups in Europe	3
MGT 200C	Venture Creation	3
MGT 401C	CEL Entrepreneurial Consulting Team	3
MGT 401P	CEL Practicum	3
EnSt 3060	Community Based Conservation: Madagascar Sustainability Initiative (formerly MGT 401M)	3
MGT 401S	Small Business Initiative	3
MGT 401T	Taylor Community Consulting Project	3
MKT 431E	Marketing Metrics	1.5

*Skills Elective Choices (at least 3 units required):*

Code	Title	Units
ACCT 466	Financial Statement Analysis	3
CSE 204A	Web Development	3
CSE 330S	Rapid Prototype Development and Creative Programming	3
CSE 438S	Mobile Application Development	3
FIN 400L	Private Equity Methods	1.5
FIN 400M	Private Equity Practice	1.5
MEC 370	Game Theory for Business	3
MEC 470	Industrial Economics	3
MGT 301	Legal Environment of Business Management	3
MGT 445E	Entrepreneurship Through Acquisition	1.5
MKT 378	Marketing Research	3
MKT 400E	Elements of Sales: Tools and Techniques	3
MKT 400I	Creating & Launching Innovative New Products	3
MKT 4095	Entrepreneurship Marketing Methods	1.5
MKT 431E	Marketing Metrics	1.5
MKT 482	Brand Management	3
OB 461	Negotiation	3

## The Major in Finance

**Total units required:** 12

- Finance Core: 9 units

Code	Title	Units
FIN 441	Investments	3
FIN 448	Advanced Financial Management	3
FIN 451	Options, Futures and Derivative Securities	3

- Finance Electives: 3 units

Code	Title	Units
FIN 400I	Mergers & Acquisitions	1.5
FIN 400J	Advanced Valuation	1.5
FIN 400L	Private Equity Methods	1.5
FIN 400M	Private Equity Practice	1.5
FIN 400W	Venture Capital Methods	1.5
FIN 400X	Venture Capital Practice	1.5
FIN 420	International Economics and Finance	3
FIN 428	Investment Praxis	3
FIN 439E	Real Estate Finance	1.5
FIN 443	International Finance	3
FIN 450F	Financial Technology: Methods and Practice	3
FIN 452	Advanced Derivative Securities	3
FIN 470A	Research Methods in Finance	3

## The Major in Financial Engineering

The financial engineering major is offered only as a second major option. Therefore, students in the BSBA program must select another business major in order to be eligible to pursue this major. Students must have a 3.3 or higher grade point average to pursue this second major; this includes the cumulative GPA, the Business GPA, and the Engineering GPA.

**Total units required:** 30 required units and 15 units of prerequisite course work

- Background Requirements: 15 units

Code	Title	Units
CSE 131	Introduction to Computer Science	3
DAT 121	Managerial Statistics II	3
or ESE 326	Probability and Statistics for Engineering	
or Econ 413	Introduction to Econometrics	
or Econ 413W	Introduction to Econometrics with Writing	
or SDS 439	Linear Statistical Models	
or SDS 493	Probability	
Math 217	Differential Equations	3
Math 233	Calculus III	3
Math 309	Matrix Algebra	3

Engineering Professional Requirements (15 units)

- Engineering Professional Core Requirements: 6 units minimum

Code	Title	Units
ESE 415	Optimization	3
ESE 417	Introduction to Machine Learning and Pattern Classification	3
or CSE 417T	Introduction to Machine Learning	

ESE 4261	Statistical Methods for Data Analysis with Applications to Financial Engineering	3
ESE 427	Financial Mathematics <sup>1,2</sup>	3
<b>Total Units</b>		<b>12</b>

- Engineering Electives:

Code	Title	Units
CSE 247	Data Structures and Algorithms	3
ESE 4031	Optimization for Engineered Planning, Decisions and Operations	3
ESE 513	Large-Scale Optimization for Data Science	3
ESE 520	Probability and Stochastic Processes	3

Olin Professional Requirements (15 units)

- Olin Professional Core Requirements: 9 units

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
FIN 340	Capital Markets and Financial Management	3
FIN 441	Investments	3
<b>Total Units</b>		<b>9</b>

- Olin Electives: 6 units required

Code	Title	Units
FIN 450F	Financial Technology: Methods and Practice	3
FIN 451	Options, Futures and Derivative Securities <sup>1,2</sup>	3
FIN 452	Advanced Derivative Securities	3
FIN 500Q	Quantitative Risk Management	3
FIN 500R	Topics in Quantitative Finance	1.5
FIN 532B	Data Analysis for Investments	1.5
FIN 539	Mathematical Finance	1.5
FIN 552	Fixed Income Derivatives	1.5

<sup>1</sup> ESE 427 must be taken after FIN 340 and can be used to satisfy the FIN 451 prerequisite of Olin Elective courses.

<sup>2</sup> FIN 451, ESE 427, or both must be taken to complete the second major.

## The Major in Health Care Management

**Total units required: 15**

- Health Care Management Core: 12 units

Code	Title	Units
MEC 320	Olin Grand Rounds: The Business and Practice of Medicine (formerly MGT 320)	3
MEC 321	Health Economics and Policy (formerly MGT 321)	3
MEC 322	Health Care Management (formerly MGT 322)	3
MEC 420	Research in Health Care Management (formerly MGT 420)	3

- Health Care Management Electives: 3 units

Code	Title	Units
Anthro 3090	Cultures of Health in Latin America	3
Anthro 3136	The Second Wave of The Pandemic: Science and Society	3
Anthro 3263	Bioprospecting	3
Anthro 3283	Introduction to Global Health	3
Anthro 3310	Health, Healing and Ethics: Introduction to Medical Anthropology	3
Anthro 3626	Adventures in Nosology: The Nature and Meaning of Disease	3
Anthro 3875	Pharmaceutical Personhood	3
Anthro 4134	The AIDS Epidemic: Inequalities, Ethnography, and Ethics	3
Anthro 4883	The Political Economy of Health	3
Biol 2010	Ampersand: The Science of Biotechnology	3
Phil 233F	Biomedical Ethics	3
Phil 3001	Philosophy of Medicine	3
WGSS 310	From Hysteria to Hysterectomy: Women's Health Care in America	3
WGSS 316	Feminist Health Studies	3

## The Major in Marketing

**Total units required: 12**

- Marketing Core: 3 units

Code	Title	Units
MKT 378	Marketing Research	3

- Marketing Electives: 9 units

*Group A Marketing Elective Choices (at least 6 units required):*

Code	Title	Units
MKT 377	Consumer Behavior	3
MKT 400G	Digital Marketing and Analytics	3
MKT 400L	Understanding and Conducting Business Experiments	3
MKT 470E	Pricing Strategies	3
MKT 480	Marketing Strategy	3
MKT 482	Brand Management	3

*Group B Marketing Elective Choices:*

Code	Title	Units
MKT 381E	Inclusive Marketing	1.5
MKT 400E	Elements of Sales: Tools and Techniques	3
MKT 400I	Creating & Launching Innovative New Products	3
MKT 400M	Sports Marketing	3
MKT 4095	Entrepreneurship Marketing Methods	1.5
MKT 431E	Marketing Metrics	1.5
MKT 477 or MKT 477S	International Marketing International Marketing Sydney	3
MKT 481	Advertising and Promotions	3

## The Major in Organization and Strategic Management

**Total units required:** 12 units

- Organization & Strategic Management Group A Elective Choices (at least 3 units required):

Code	Title	Units
OB 400C	Women in Leadership	1.5
OB 431E	Thinking Creatively and Leading Creative Teams	1.5
OB 461	Negotiation	3
OB 462	Leadership in Organizations	3
OB 468E	Mindfulness and Performance in the Workplace	1.5
OB 472	Defining Moments: Lessons in Leadership and Character from the Top (Formerly MGT 450V)	1.5

- Organization & Strategic Management Group B Elective Choices (at least 3 units required):

Code	Title	Units
MGT 380	Business Strategy	3
MGT 402	Ethical Issues in Managerial Decision Making	1.5
MGT 450R	Business & Government: Understanding and Influencing the Regulatory Environment	3
MGT 429E	Management and Corporate Responsibility	3
MGT 460H	Corporate and Global Strategy	3

- Organization & Strategic Management Group C Elective Choices (recommended for HR/HR consulting):

Code	Title	Units
MGT 478E	Ownership Insights: The Competitive Advantage of Family- and Employee-Owned Firms	1.5
OB 325	Human Resources Management	3
OB 434E	Talent Analytics	1.5
OB 435E	People Metrics	1.5

## The Major in Supply Chain, Operations, and Technology

*(Formerly Operations and Supply Chain Management)*

**Total units required:** 12 units

- Group A SCOT Elective Choices (at least 6 units required):

Code	Title	Units
DAT 301E	Data Analytics in Python	3
SCOT 400D	Supply Chain Management	3
SCOT 430E	Operations Fun: Data-Driven Optimization	3
SCOT 458	Operations Analytics	3

- Group B SCOT Elective Choices (at least 3 units required):

Code	Title	Units
MGT 380	Business Strategy	3
MGT 460H	Corporate and Global Strategy	3
MKT 378	Marketing Research	3
MKT 400L	Understanding and Conducting Business Experiments	3

## Minors

### Minors for BSBA Degree Candidates

Please note that all minors require 12 unique credits of course work.

BSBA students may select a minor from the following disciplines:

### The Minor in Business Analytics

**Total units required:** 15 units (12 must be unique)

- Required Courses:

Code	Title	Units
CSE 131	Introduction to Computer Science	3
DAT 400A	Data Management Tools for Business Decisions	3
DAT 301E	Data Analytics in Python	3
<b>Total Units</b>		<b>9</b>

- Business Analytics Group A Electives (at least 3 units required):

Code	Title	Units
FIN 470A	Research Methods in Finance	3
MEC 471	Empirical Techniques for Industry Analysis	3
MKT 400L	Understanding and Conducting Business Experiments	3

- Business Analytics Group B Electives:

Code	Title	Units
DAT 500S	Machine Learning Tools for Prediction of Business Outcomes	3
FIN 450F	Financial Technology: Methods and Practice	3
MGT 460I	Sports Business Analytics	3
MKT 378	Marketing Research	3
MKT 500T	Customer Analytics	3
OB 434E	Talent Analytics	1.5
OB 435E	People Metrics	1.5
SCOT 430E	Operations Fun: Data-Driven Optimization	3
SCOT 458	Operations Analytics	3

## The Minor in the Business of the Arts

**Total units required:** 12 units

- Core (at least 3 units required):

Code	Title	Units
MEC 460O	Business of Arts	3
MGT 432E	Business Management of Arts Organizations	3

- Experiential Learning (at least 3 units required):

Code	Title	Units
INTL 323	Business of Art: The European Capitals of Culture	3
MGT 401P	CEL Practicum	3

Electives: At least 6 units from the following:

Code	Title	Units
ART 223K	Business of Fashion	3
ART 324J	Fashion Promotion and Exhibition	3
E Lit 224	Publishing: History and Contexts	3
E Lit 486	The Business of Books	3
MEC 460	Economics of Entertainment	3
MGT 421 or MGT 460L	Introduction to Entrepreneurship Introduction to Social Entrepreneurship	3
MKT 377	Consumer Behavior	3
MKT 400E	Elements of Sales: Tools and Techniques	3
MKT 481	Advertising and Promotions	3
MKT 482	Brand Management	3

## The Minor in the Business of Entertainment

**Total units required:** 12 units

- Required Courses:

Code	Title	Units
MEC 460	Economics of Entertainment	3
<b>Total Units</b>		<b>3</b>

- Entertainment Group A Electives (at least 3 units required):

Code	Title	Units
AMCS 3490	Media Cultures	3
Film 220	Introduction to Film Studies	3
Film 225	Making Movies	3
Film 333	Making Movies II: Intermediate Narrative Filmmaking	3
Film 423	Histories of Media Convergence	3
MEC 310E	Business of Luxury Hospitality	3

- Entertainment Group B Electives (at least 3 units required):

Code	Title	Units
FIN 448	Advanced Financial Management	3
MEC 471	Empirical Techniques for Industry Analysis	3
MGT 301	Legal Environment of Business Management	3
MGT 432E	Business Management of Arts Organizations	3
MKT 378	Marketing Research	3
MKT 482	Brand Management	3

## The Minor in the Business of Social Impact

**Total units required:** 12 units

- Required Courses:

Code	Title	Units
MGT 460M	Business of Social Impact	1.5
OB 472	Defining Moments: Lessons in Leadership and Character from the Top (Formerly MGT 450V)	1.5
<b>Total Units</b>		<b>3</b>

- Business of Social Impact Group A Electives (at least 3 units required):

Code	Title	Units
EnSt 3060	Community Based Conservation: Madagascar Sustainability Initiative (formerly MGT 401M)	3
MGT 401S	Small Business Initiative	3
MGT 401T	Taylor Community Consulting Project	3

- Business of Social Impact Group B Electives (at least 3 units required):

Code	Title	Units
ACCT 366E	Carbon Accounting	1.5
ACCT 400C	Not-For-Profit Accounting	1.5
MGT 402	Ethical Issues in Managerial Decision Making	1.5
MGT 450R	Business & Government: Understanding and Influencing the Regulatory Environment	3
MGT 460L	Introduction to Social Entrepreneurship	3

- Business of Social Impact Group C Electives (at least 3 units required):

Code	Title	Units
ARCH 307X	Community Building	3
ARCH 490A	Explore & Contribute: Collaboration between Washington University & Henry Elementary School	3
EEPS 111	Introduction To Global Climate Change In the 21st Century	3
EEPS 202	Introduction to Earth, Environmental, and Planetary Science	3
EEPS 219	Energy and the Environment	3
EnSt 101	Earth's Future: Causes and Consequences of Global Climate Change	3
EnSt 252	Sustainability in Business	3
EnSt 310	Ecological Economics	3
EnSt 375	Urban Ecology	3
EnSt 405	Sustainability Exchange: Community and University Practicums	3
Pol Sci 2010	Introduction to Environmental Policy	3
Pol Sci 332B	Energy Politics	3
SOC 3410	Gender in Society	3
URST 299	The Study of Cities and Metropolitan America	3

## The Minor in the Business of Sports

**Total required units:** 12 units

- Required Courses: 6 units

Code	Title	Units
MGT 440	Sports Management	3
MGT 450G	The Business of Sports	3
<b>Total Units</b>		<b>6</b>

- Electives:

Code	Title	Units
DAT 500S	Machine Learning Tools for Prediction of Business Outcomes	3
FIN 448	Advanced Financial Management	3
MEC 460	Economics of Entertainment	3
MEC 471	Empirical Techniques for Industry Analysis	3
MGT 356E	Sports Entrepreneurship and Emerging Technologies	1.5
MGT 460I	Sports Business Analytics	3
MGT 460J	Legal Issues in Sports	1.5
MKT 378	Marketing Research	3
MKT 400E	Elements of Sales: Tools and Techniques	3
MKT 400M	Sports Marketing	3
MKT 482	Brand Management	3

## Non-BSBA Programs

### Pursuing a Second Major or Minor in Olin as a Non-BSBA Candidate

Students in other undergraduate divisions of Washington University may choose to complete a second major or a minor in a business discipline. This opportunity allows students to combine their academic interests between two schools. If students wish to pursue a second major or minor in business, they are required to follow the degree requirements for their primary school/major along with a set of core business or prerequisite requirements and 15 units of professional major/minor course work.

### Second Majors for Non-BSBA Candidates

#### Regulations for Second Majors

All non-BSBA students pursuing any business second major must do the following:

1. Declare their second major online through WebSTAC by the end of their junior year. To be eligible to declare a second major, students will need to complete Math 132 Calculus II plus two business courses before their declaration will be approved. A second major will not be awarded to a student unless proper declaration is made.
2. Second majors must complete the specific requirements listed for the individual major.

3. Second majors may not count one course toward two Olin majors or toward an Olin second major and minor.
4. Take all core and major specific courses for any business major for a grade.
5. An overall 2.0 average must be achieved in course work taken as part of the business major.
6. Complete a minimum of 24 graded business units through Olin Business School.
7. Take all major courses in residence. Course work from an approved Washington University study abroad program will satisfy this residency policy. However, second majors may only take one core course and one major course through a study abroad experience.
8. Meet the prerequisites to remain in an Olin course. Additional prerequisites may be needed to remain enrolled in certain courses. Please check course listings to ensure all prerequisites are met.
9. Complete DAT 120 or an approved substitution. Advanced Placement credit for SDS 2200 will not serve as a substitute for the DAT 120 requirement. (The following courses are not approved substitutions for DAT 120: ESE 328, SDS 3211 [formerly Math 3211], and Psych 300.)
10. Economics and strategy majors must take MEC 290 or Econ 4011, because Econ 1011 will not satisfy the prerequisite requirement for MEC 370.
11. Engineering students who have taken ESE 326 and who are majoring in finance will not be required to take DAT 120 or DAT 121. However, DAT 121 must be taken if listed as a prerequisite for non-finance courses.
12. School of Continuing & Professional Studies courses will not count toward any business major.

## Second Major Core Business Requirements

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
ACCT 2620	Principles of Managerial Accounting	3
DAT 120	Managerial Statistics I	3
or ESE 326	Probability and Statistics for Engineering	
or SDS 2200	Elementary Probability and Statistics	
or SDS 3200	Elementary to Intermediate Statistics and Data Analysis	
or Pol Sci 263	Data Science for Politics	
or Pol Sci 363	Quantitative Political Methodology	
DAT 121	Managerial Statistics II	3
or Econ 413	Introduction to Econometrics	
or Econ 413W	Introduction to Econometrics with Writing	
or SDS 439	Linear Statistical Models	
or SDS 493	Probability	
Math 132	Calculus II	3
MGT 100	Individual in a Managerial Environment	3
or MGT 380	Business Strategy	

MEC 290	Microeconomics	3
or Econ 4011	Intermediate Microeconomic Theory	
MEC 292	Global Economy	3
or Econ 1021	Introduction to Macroeconomics	
<b>Total Units</b>		<b>24</b>

## Second Major Options

Non-BSBA students may select a second major from the following disciplines:

### The Second Major in Accounting

**Total units required: 15**

- Accounting Core: 6 units

Code	Title	Units
ACCT 3610	Intermediate Financial Accounting Theory I	3
ACCT 3620	Intermediate Financial Accounting II	3

- Accounting Electives: 9 units

Code	Title	Units
ACCT 366E	Carbon Accounting	1.5
ACCT 400C	Not-For-Profit Accounting	1.5
ACCT 400M	Ethics I	1.5
ACCT 400N	Ethics II	1.5
ACCT 455	Accounting Policy and Research	3
ACCT 464	Auditing	3
ACCT 466	Financial Statement Analysis	3
ACCT 467	Taxation of Individuals	3
ACCT 4680	Advanced Financial Accounting Problems	3
ACCT 472E	Taxation of Business Entities	3
ACCT 475E	International Taxation	1.5

### The Second Major in Economics and Strategy

**Total units required: 12**

- Economics and Strategy Core: 12 units

Code	Title	Units
MEC 370	Game Theory for Business	3
MEC 400K	Research Analysis in Industry	3
MEC 470	Industrial Economics	3
MEC 471	Empirical Techniques for Industry Analysis	3

### The Second Major in Entrepreneurship

**Total units required: 15**

- Entrepreneurship Core: 6 units

Code	Title	Units
MGT 421	Introduction to Entrepreneurship	3
or MGT 460L	Introduction to Social Entrepreneurship	
or MGT 106E	The Endgame for Entrepreneurship: Leveraging Capitalism for Good	
or BEYOND 105	The Endgame of Entrepreneurship: Leveraging Capitalism for Good	
or Econ 105	The Endgame of Entrepreneurship: Leveraging Capitalism for Good	
or FYP 105B	Beyond Boundaries: Endgame of Entrepreneurship	
MGT 424	Business Planning for New Enterprises [The Hatchery]	3
or MGT 477E	Launching and Scaling New Enterprises (The League)	

- Entrepreneurship Electives: Choose at least one course from two of the three following tracks for a total of 9 elective units:

*Industry Elective Choices:*

Code	Title	Units
ART 223K	Business of Fashion	3
CSE 131	Introduction to Computer Science	3
Econ 335	Money and Banking	3
FIN 340	Capital Markets and Financial Management	3
INTL 320	Business, Innovation and Entrepreneurship in Israel *	
MEC 460	Economics of Entertainment	3
MEC 320	Olin Grand Rounds: The Business and Practice of Medicine (formerly MGT 320)	3
MGT 380	Business Strategy	3
MGT 440	Sports Management	3
MGT 475E	Innovating for Defense	3
MGT 476E	Innovating for Healthcare *	1.5
MKT 370	Principles of Marketing	3

*Experiential Elective Choices:*

Code	Title	Units
EnSt 3060	Community Based Conservation: Madagascar Sustainability Initiative (formerly MGT 401M)	3
INTL 351E	Global Entrepreneurship	
INTL 970	Entrepreneurship and Startups in Europe *	3
MGT 200C	Venture Creation	3
MGT 401C	CEL Entrepreneurial Consulting Team *	3
MGT 401P	CEL Practicum *	3
MGT 401S	Small Business Initiative *	3
MGT 401T	Taylor Community Consulting Project *	3

*Skills Elective Choices:*

Code	Title	Units
ACCT 466	Financial Statement Analysis *	3
CSE 204A	Web Development	3
CSE 330S	Rapid Prototype Development and Creative Programming	3
CSE 438S	Mobile Application Development	3
FIN 400L	Private Equity Methods *	1.5
FIN 400M	Private Equity Practice *	1.5
MEC 370	Game Theory for Business	3
MEC 470	Industrial Economics *	3
MGT 301	Legal Environment of Business Management	3
MGT 445E	Entrepreneurship Through Acquisition *	1.5
MKT 378	Marketing Research *	3
MKT 400E	Elements of Sales: Tools and Techniques *	3
MKT 400I	Creating & Launching Innovative New Products *	3
MKT 4095	Entrepreneurship Marketing Methods	1.5
MKT 431E	Marketing Metrics	1.5
MKT 482	Brand Management *	3
OB 461	Negotiation *	3

- \* Application or additional prerequisites are required to take this elective. Consult Course Listings for the prerequisites.

## The Second Major in Finance

**Total units required:** 15

- Finance Core: 12 units

Code	Title	Units
FIN 340	Capital Markets and Financial Management	3
FIN 441	Investments	3
FIN 448	Advanced Financial Management	3
FIN 451	Options, Futures and Derivative Securities	3

- Finance Electives: 3 units

Code	Title	Units
FIN 400I	Mergers & Acquisitions	1.5
FIN 400J	Advanced Valuation	1.5
FIN 400L	Private Equity Methods	1.5
FIN 400M	Private Equity Practice	1.5
FIN 400W	Venture Capital Methods	1.5
FIN 400X	Venture Capital Practice	1.5
FIN 420	International Economics and Finance	3
FIN 428	Investment Praxis	3
FIN 439E	Real Estate Finance	1.5
FIN 443	International Finance	3

FIN 450F	Financial Technology: Methods and Practice	3
FIN 452	Advanced Derivative Securities	3
FIN 470A	Research Methods in Finance	3

## The Second Major in Health Care Management

**Total units required: 15**

- Health Care Management Core: 12 units

Code	Title	Units
MEC 320	Olin Grand Rounds: The Business and Practice of Medicine (formerly MGT 320)	3
MEC 321	Health Economics and Policy (formerly MGT 321)	3
MEC 322	Health Care Management (formerly MGT 322)	3
MEC 420	Research in Health Care Management (formerly MGT 420)	3

- Health Care Management Electives: 3 units

Code	Title	Units
Anthro 3090	Cultures of Health in Latin America	3
Anthro 3136	The Second Wave of The Pandemic: Science and Society	3
Anthro 3263	Bioprospecting	3
Anthro 3283	Introduction to Global Health	3
Anthro 3310	Health, Healing and Ethics: Introduction to Medical Anthropology	3
Anthro 3626	Adventures in Nosology: The Nature and Meaning of Disease	3
Anthro 3875	Pharmaceutical Personhood	3
Anthro 4134	The AIDS Epidemic: Inequalities, Ethnography, and Ethics	3
Anthro 4883	The Political Economy of Health	3
Biol 2010	Ampersand: The Science of Biotechnology	3
Phil 233F	Biomedical Ethics	3
Phil 3001	Philosophy of Medicine	3
WGSS 310	From Hysteria to Hysterectomy: Women's Health Care in America	3
WGSS 316	Feminist Health Studies	3

## The Second Major in Marketing

**Total units required: 15**

- Marketing Core: 6 units

Code	Title	Units
MKT 370	Principles of Marketing	3
MKT 378	Marketing Research	3

- Marketing Electives: 9 units

*Group A Elective Choices (at least 6 units required):*

Code	Title	Units
MKT 377	Consumer Behavior	3
MKT 400G	Digital Marketing and Analytics	3
MKT 400L	Understanding and Conducting Business Experiments	3
MKT 470E	Pricing Strategies	3
MKT 480	Marketing Strategy	3
MKT 482	Brand Management	3

*Group B Elective Choices:*

Code	Title	Units
MKT 381E	Inclusive Marketing	1.5
MKT 400E	Elements of Sales: Tools and Techniques	3
MKT 400I	Creating & Launching Innovative New Products	3
MKT 400M	Sports Marketing	3
MKT 4095	Entrepreneurship Marketing Methods	1.5
MKT 431E	Marketing Metrics	1.5
MKT 477	International Marketing	3
or MKT 477S	International Marketing Sydney	
MKT 481	Advertising and Promotions	3

## The Second Major in Organization and Strategic Management

**Total units required: 15**

- Organization and Strategic Management Core Requirement: 3 units

Code	Title	Units
OB 360	Organization Behavior Within the Firm	3

- Organization and Strategic Management Electives: 12 units

*Leadership Group A Elective Choices (at least 3 units required):*

Code	Title	Units
OB 400C	Women in Leadership	1.5
OB 431E	Thinking Creatively and Leading Creative Teams	1.5
OB 461	Negotiation	3
OB 462	Leadership in Organizations	3
OB 468E	Mindfulness and Performance in the Workplace	1.5
OB 472	Defining Moments: Lessons in Leadership and Character from the Top (Formerly MGT 450V)	1.5

*Organization and Strategic Management Group B Elective Choices (at least 3 units required):*

Code	Title	Units
MGT 380	Business Strategy	3
MGT 402	Ethical Issues in Managerial Decision Making *	1.5
MGT 429E	Management and Corporate Responsibility	
MGT 450R	Business & Government: Understanding and Influencing the Regulatory Environment	3
MGT 460H	Corporate and Global Strategy	3

*Organization and Strategic Management Group C Elective Choices (recommended for HR/HR consulting):*

Code	Title	Units
MGT 478E	Ownership Insights: The Competitive Advantage of Family- and Employee-Owned Firms	1.5
OB 325	Human Resources Management *	3
OB 434E	Talent Analytics *	1.5
OB 435E	People Metrics *	1.5

\* Additional prerequisites are required to take this elective. Consult Course Listings for the prerequisites.

## The Second Major in Supply Chain, Operations, and Technology

*(Formerly Operations and Supply Chain Management)*

**Total units required:** 15 units

- SCOT Core: 6 units

Code	Title	Units
DAT 220	Analytics and Modeling for Business Decisions	3
SCOT 356	Operations and Manufacturing Management (formerly OSCM 356)	3

- SCOT Electives: 9 units minimum with at least 6 units from Group A

*SCOT Group A Elective Choices (at least 6 units required):*

Code	Title	Units
DAT 301E	Data Analytics in Python	3
SCOT 400D	Supply Chain Management	3
SCOT 430E	Operations Fun: Data-Driven Optimization	3
SCOT 458	Operations Analytics	3

*SCOT Group B Elective Choices:*

Code	Title	Units
MGT 380	Business Strategy	3
MGT 460H	Corporate and Global Strategy	3
MKT 378	Marketing Research *	3
MKT 400L	Understanding and Conducting Business Experiments	3

\* Additional prerequisites are required to take this elective. Consult Course Listings for the prerequisites.

## The Second Major in Financial Engineering

Financial engineering in a shared major between the McKelvey School of Engineering and Olin Business School. A second major in financial engineering is ideal for students who are interested in careers or graduate study in financial engineering, quantitative finance or related fields. This program covers courses in engineering, computer science and business. Students interested in this second major must have a 3.3 or higher grade point average; this includes the cumulative GPA, the Business GPA, and the Engineering GPA. The financial engineering major is offered to any undergraduate day division student as a second major option.

## Financial Engineering Requirements

**Total units required:** 30 required units and 15 units of prerequisite course work

- Background Requirements: 15 units

Code	Title	Units
CSE 131	Introduction to Computer Science	3
DAT 121	Managerial Statistics II	3
or ESE 326	Probability and Statistics for Engineering	
or Econ 413	Introduction to Econometrics	
or Econ 413W	Introduction to Econometrics with Writing	
or SDS 439	Linear Statistical Models	
or SDS 493	Probability	
Math 217	Differential Equations	3
Math 233	Calculus III	3
Math 309	Matrix Algebra	3

Engineering Professional Requirements (15 units)

- Engineering Professional Core Requirements: 6 units minimum

Code	Title	Units
ESE 415	Optimization	3
ESE 417	Introduction to Machine Learning and Pattern Classification	3
or CSE 417T	Introduction to Machine Learning	
ESE 4261	Statistical Methods for Data Analysis with Applications to Financial Engineering	3
ESE 427	Financial Mathematics <sup>1,2</sup>	3

- Engineering Electives:

Code	Title	Units
CSE 247	Data Structures and Algorithms	3
ESE 4031	Optimization for Engineered Planning, Decisions and Operations	3
ESE 513	Large-Scale Optimization for Data Science	3
ESE 520	Probability and Stochastic Processes	3

Olin Professional Requirements (15 units)

- Olin Professional Core Requirements: 9 units

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
FIN 340	Capital Markets and Financial Management	3
FIN 441	Investments	3
<b>Total Units</b>		<b>9</b>

- Olin Electives: 6 units required

Code	Title	Units
FIN 450F	Financial Technology: Methods and Practice	3
FIN 451	Options, Futures and Derivative Securities <sup>1,2</sup>	3
FIN 452	Advanced Derivative Securities	3
FIN 500Q	Quantitative Risk Management	3
FIN 500R	Topics in Quantitative Finance	1.5
FIN 532B	Data Analysis for Investments	1.5
FIN 539	Mathematical Finance	1.5
FIN 552	Fixed Income Derivatives	1.5

<sup>1</sup> ESE 427 must be taken after FIN 340 and can be used to satisfy the FIN 451 prerequisite of Olin Elective courses.

<sup>2</sup> FIN 451, ESE 427, or both must be taken to complete the second major.

## Minors for Non-BSBA Degree Candidates

### Regulations for Non-BSBA Minors

All non-BSBA students pursuing any business minor must do the following:

1. Declare their minor online through WebSTAC no later than the end of their junior year.
2. A minimum of a 2.0 average GPA in all business minor course work is required.
3. Satisfy all prerequisites. (It is preferred that prerequisites be completed at Washington University.) Additional prerequisites may be needed to remain enrolled in certain courses. Please check course listings to ensure all prerequisites are met.
4. Take all 15 units of required courses at Olin Business School. (Non-BSBA students may take one minor course through the overseas study abroad program for each minor.) Courses taken in the School of Continuing & Professional Studies or at another university do not satisfy the requirements for any of the five required minor courses.
5. Take all 15 units of required minor courses for grades (i.e., no pass/fail).
6. Minor prerequisites may be taken as pass/ fail. However, if a minor is switched to a second major or a BSBA degree, pass/fail courses cannot be used toward the second major.
7. 15 additional units are required to earn a second business minor. Students may not double count courses toward two Olin minors or an Olin second major and minor.

### Minor Options

Non-BSBA degree students are eligible to pursue a minor in one of the specific fields of business listed below:

#### The Minor in Accounting

##### Prerequisites:

- Calculus II: Math 132 Calculus II
- Microeconomics: MEC 290 Microeconomics, Econ 1011 Introduction to Microeconomics, or Econ 4011 Intermediate Microeconomic Theory
- Statistics I: DAT 120 Managerial Statistics I, SDS 2200 Elementary Probability and Statistics, SDS 3200 Elementary to Intermediate Statistics and Data Analysis, ESE 326 Probability and Statistics for Engineering, Pol Sci 263 Data Science for Politics, or Pol Sci 363 (AP credit for SDS 2200 [formerly Math 2200] will fulfill this prerequisite)

**Total units required:** 15 units

- Required Courses:

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
ACCT 2620	Principles of Managerial Accounting	3
ACCT 3610	Intermediate Financial Accounting Theory I	3
<b>Total Units</b>		<b>9</b>

- Accounting Electives (at least 6 units required):

Code	Title	Units
ACCT 3620	Intermediate Financial Accounting II	3
ACCT 366E	Carbon Accounting	1.5
ACCT 400C	Not-For-Profit Accounting	1.5
ACCT 400M	Ethics I	1.5
ACCT 400N	Ethics II	1.5
ACCT 455	Accounting Policy and Research*	3
ACCT 464	Auditing*	3
ACCT 466	Financial Statement Analysis	3
ACCT 467	Taxation of Individuals	3
ACCT 4680	Advanced Financial Accounting Problems*	3
ACCT 472E	Taxation of Business Entities	3
ACCT 475E	International Taxation	1.5

\* Additional prerequisites are required to take this elective. Consult Course Listings for the prerequisites.

## The Minor in Business Analytics

### Prerequisites:

- Calculus II: Math 132 Calculus II
- Financial Accounting: ACCT 2610 Principles of Financial Accounting
- Microeconomics: MEC 290 Microeconomics, Econ 1011 Introduction to Microeconomics, or Econ 4011 Intermediate Microeconomic Theory (MEC 471 requires MEC 290 or Econ 4011)
- Statistics I: DAT 120 Managerial Statistics I, SDS 2200 Elementary Probability and Statistics, SDS 3200 Elementary to Intermediate Statistics and Data Analysis, ESE 326 Probability and Statistics for Engineering, Pol Sci 263 Data Science for Politics, or Pol Sci 363 (AP credit for SDS 2200 [formerly Math 2200] will fulfill this prerequisite)
- Statistics II: DAT 121 Managerial Statistics II, Econ 413 Introduction to Econometrics, Econ 413W Introduction to Econometrics with Writing, SDS 439 Linear Statistical Models, or SDS 493 Probability
- Modeling: DAT 220 Analytics and Modeling for Business Decisions

**Total units required:** 15 units

- Required Courses:

Code	Title	Units
CSE 131	Introduction to Computer Science	3
DAT 301E	Data Analytics in Python	3
DAT 400A	Data Management Tools for Business Decisions	3
<b>Total Units</b>		<b>9</b>

- Business Analytics Group A Electives (at least 3 units required):

Code	Title	Units
FIN 470A	Research Methods in Finance*	3
MEC 471	Empirical Techniques for Industry Analysis*	3
MKT 400L	Understanding and Conducting Business Experiments	3

- Business Analytics Group B Electives:

Code	Title	Units

## The Minor in Finance

### Prerequisites:

- Calculus II: Math 132 Calculus II
- Microeconomics: MEC 290 Microeconomics, Econ 1011 Introduction to Microeconomics, or Econ 4011 Intermediate Microeconomic Theory
- Statistics I: DAT 120 Managerial Statistics I, ESE 326 Probability and Statistics for Engineering, SDS 2200 Elementary Probability and Statistics, SDS 3200 Elementary to Intermediate Statistics and Data Analysis, Pol Sci 263 Data Science for Politics, or Pol Sci 363 Quantitative Political Methodology (AP credit for SDS 2200 [formerly Math 2200] will fulfill this prerequisite)
- Statistics II: DAT 121 Managerial Statistics II, Econ 413 Introduction to Econometrics, Econ 413W Introduction to Econometrics with Writing, SDS 439 Linear Statistical Models, or SDS 493 Probability
  - Engineering students who have taken ESE 326 and who are minoring in finance will not be required to take DAT 120 or DAT 121 as the prerequisite for finance courses.

**Total units required:** 15 units

- Required Courses:

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
FIN 340	Capital Markets and Financial Management	3
FIN 441	Investments	3
FIN 448	Advanced Financial Management	3
Plus a 3-credit Finance elective		3
<b>Total Units</b>		<b>15</b>

## The Minor in Health Care Management

### Prerequisites:

- Calculus II: Math 132 Calculus II
- Microeconomics: MEC 290 Microeconomics, Econ 1011 Introduction to Microeconomics, or Econ 4011 Intermediate Microeconomic Theory

- Statistics I: DAT 120 Managerial Statistics I, SDS 2200 Elementary Probability and Statistics, SDS 3200 Elementary to Intermediate Statistics and Data Analysis, ESE 326 Probability and Statistics for Engineering, Pol Sci 263 Data Science for Politics, or Pol Sci 363 (AP credit for SDS 2200 [formerly Math 2200] will fulfill this prerequisite)

**Total units required:** 15 units

- Required Courses:

Code	Title	Units
MEC 320	Olin Grand Rounds: The Business and Practice of Medicine (formerly MGT 320)	3
MEC 321	Health Economics and Policy (formerly MGT 321)	3
MEC 322	Health Care Management (formerly MGT 322)	3
MEC 420	Research in Health Care Management (formerly MGT 420)	3
MGT 100	Individual in a Managerial Environment	3
<b>Total Units</b>		<b>15</b>

## The Minor in Managerial Economics

### Prerequisites:

- Calculus II: Math 132 Calculus II
- Statistics I: DAT 120 Managerial Statistics I, ESE 326 Probability and Statistics for Engineering, SDS 2200 Elementary Probability and Statistics, SDS 3200 Elementary to Intermediate Statistics and Data Analysis, Pol Sci 263 Data Science for Politics, or Pol Sci 363 Quantitative Political Methodology (AP credit for SDS 2200 [formerly Math 2200] will fulfill this prerequisite)
- Statistics II: DAT 121 Managerial Statistics II, Econ 413 Introduction to Econometrics, Econ 413W Introduction to Econometrics with Writing, SDS 439 Linear Statistical Models, or SDS 493 Probability

**Total units required:** 15 units

- Required Courses:

Code	Title	Units
MEC 290	Microeconomics	3
MEC 370	Game Theory for Business	3
MEC 400K	Research Analysis in Industry	3
MEC 470	Industrial Economics	3
MEC 471	Empirical Techniques for Industry Analysis	3
<b>Total Units</b>		<b>15</b>

## The Minor in Marketing

### Prerequisites:

- Calculus I: Math 131 Calculus I
- Microeconomics: MEC 290 Microeconomics, Econ 1011 Introduction to Microeconomics, or Econ 4011 Intermediate Microeconomic Theory

- Statistics I: DAT 120 Managerial Statistics I, ESE 326 Probability and Statistics for Engineering, SDS 2200 Elementary Probability and Statistics, ESE 326 Probability and Statistics for Engineering, Pol Sci 263 Data Science for Politics, or Pol Sci 363 (AP credit for SDS 2200 [formerly Math 2200] will fulfill this prerequisite)

**Total units required:** 15 units

- Required Courses:

Code	Title	Units
MKT 370	Principles of Marketing	3
MKT 470N or MKT 378	Applied Marketing Research * Marketing Research	3
<b>Total Units</b>		<b>6</b>

- Electives (9 units required):

SCOT 458	Operations Analytics	3

## Courses

Courses include the following:

- B50 ACCT (Accounting) (p. 1175)
- B52, B62 FIN (Finance) (p. 1176)
- B99 INTL (International Business) (p. 1178)
- B53 MGT (Management) (p. 1179)
- B54 MEC (Managerial Economics) (p. 1184)
- B55 MKT (Marketing) (p. 1186)
- B56, B66 OB (Organizational Behavior) (p. 1188)
- B57 SCOT (Supply Chain, Operations, and Technology) (p. 1189)
- B59 DAT (Data Analytics) (p. 1189)

---

## Accounting

Visit online course listings to view semester offerings for B50 ACCT.

---

### **B50 ACCT 2610 Principles of Financial Accounting**

Provides an overview of the financial accounting reporting process, with a primary focus on the analysis of economic events and their effect on the major financial statements (balance sheet, income statement, and statement of cash flows). Prerequisite: second semester freshman standing.

Credit 3 units.

---

### **B50 ACCT 2620 Principles of Managerial Accounting**

Emphasis on the accumulation and analysis of data for internal decision makers. Introduces the vocabulary and mechanics of managerial accounting and accounting techniques used by internal managers in planning, directing, controlling, and decision-making activities within their organizations. Prerequisite: ACCT 2610.

Credit 3 units.

---

### **B50 ACCT 300A Volunteer Income Tax Assistance**

Students assist low-income members of the community with preparing their tax returns through the VITA program. The Internal Revenue Service provides training materials and an online certification program that must be successfully completed prior to students engaging with clients. Students work with the Gateway EITC Community Coalition. Students who have taken ACCT 467: Taxation of Individuals will be well positioned to do well in the VITA program. Prerequisite: ACCT 2610.

Credit 1.5 units.

---

### **B50 ACCT 3610 Intermediate Financial Accounting Theory I**

The first of a two-course sequence in corporate financial reporting. Examines the environment of financial accounting, the standards-setting process, and the conceptual framework that underlies financial accounting in the United States. Topics: review accounting basics, events, and transactions that impact financial statements, comprehension of corporate financial reports, and examination of political and economic factors influencing accounting policy. Prerequisite: ACCT 2610.

Credit 3 units.

---

### **B50 ACCT 3620 Intermediate Financial Accounting II**

Continuation of ACCT 3610. Focus on the accounting and reporting of various stakeholders' claims against the corporate entity. Claims of shareholders, long-term creditors, employees and governmental bodies are examined. An in-depth understanding of applicable generally accepted accounting principles is developed by examining the strengths and weaknesses of these principles and alternative accounting practices. Prerequisite: ACCT 3610.

Credit 3 units.

---

### **B50 ACCT 366E Carbon Accounting**

This course provides the student with an understanding of the current structure of emissions reporting with an emphasis on carbon reporting. The course will give an overview of the regulatory bodies involved in setting standards for carbon reporting. We will discuss the various rating agencies and indices currently used by stakeholders (e.g., investors and activist funds). The course will provide details on what companies report and how they inform investing and consumption decisions. We will discuss the supply and demand for carbon emissions information and how those economic forces are likely to shape changes in carbon reporting and the decision-usefulness of carbon information. Prerequisite: ACCT 2610.

Credit 1.5 units.

---

### **B50 ACCT 400C Not-For-Profit Accounting**

Students will gain an understanding of the unique facets of not-for-profit accounting, including understanding not-for-profit financial statements, differences in not-for-profit GAAP, and the IRS Form 990. Prerequisite: ACCT 2610.

Credit 1.5 units.

---

### **B50 ACCT 400M Ethics I**

This course is designed to help the student understand ethical reasoning and behavior, and it will help them to define their own moral compass using case studies as the primary source of instruction. The primary goal is to make the student a role model for others in ethical behavior. Students will learn not just how to determine the proper ethical choice; more importantly, they will learn how to effectively implement the behavioral changes required to achieve solutions to ethical dilemmas. To quote (while paraphrasing) the authors of the textbook, "We strive in [these courses] not only to educate accounting students to be future leaders in the accounting profession but to stimulate [the student's] ethical perception and cultivate virtue thereby awakening [their] sense of duty and obligation to the public interest." Prerequisite: ACCT 2610.

Credit 1.5 units.

---

### **B50 ACCT 400N Ethics II**

This course was designed to help students develop a deeper understanding of ethical behavior, including dealing with fraud in financial statements, legal obligations of auditors, Wall Street expectations and earnings management, and what it takes to be an ethical leader. To quote the author, "...it comes down to one's sense of right and wrong and willingness to voice values to positively impact (the) auditor responsibility." This second segment of Ethical Decision Making in Accounting is offered for the purpose of creating ethical leaders in the accounting and auditing profession, the business community, and society and to instill that sense of right and wrong and the eagerness to put it into action. Prerequisite: ACCT 400M.

Credit 1.5 units.

---

#### **B50 ACCT 455 Accounting Policy and Research**

This course will enable students to develop their knowledge and appreciation of current debates that surround the accounting profession. Students will develop critical thinking skills regarding these issues and form and defend opinions about contemporary regulatory and market issues. The course will also provide an opportunity for students to learn important technical and research tools used by accounting practitioners. Finally, students will gain an appreciation of the primary methods underlying academic research in accounting. Prerequisites: ACCT 2610, ACCT 2620 and DAT 121. Credit 3 units.

---

#### **B50 ACCT 464 Auditing**

This course deals with the professional service industry of auditing. The auditing industry provides the service of objectively obtaining, evaluating, and communicating evidence regarding managerial assertions about economic events. Specifically, auditing ascertains the degree of correspondence between managerial assertions and established criteria. The course is organized around the basic categories of: (1) the economic role of external corporate auditing in securities markets, (2) the composition of the firms in the auditing industry, (3) the regulatory environment of auditing, (4) litigation issues facing the accounting/auditing industry, and (5) the requirements for conducting audits. Topics included in the last area include a consideration of the scope and application of Generally Accepted Auditing Standards (GAAS) and the general technology of auditing which are some general auditing topics typically covered on the CPA exam. Grading is based on homework, a group-based project, and two exams. Prerequisite: ACCT 3620. Credit 3 units.

---

#### **B50 ACCT 466 Financial Statement Analysis**

Designed to enhance your understanding of the process of evaluating financial statement information. Requires a basic familiarity with financial accounting and the assumptions underlying measurements reported in financial statements, an understanding of the economic and regulatory forces underlying corporate disclosure of financial statement information and their effects on financial statement information, and familiarity with data sources and analytical tools to extract and evaluate this data. Objectives are to develop familiarity with this type of analysis and to gain an appreciation for its limitations. Topics: profitability and risk analysis, credit risk models, forecasting, and valuation. Prerequisite: ACCT 3610. Credit 3 units.

---

#### **B50 ACCT 467 Taxation of Individuals**

This course provides an introduction to federal income taxation with primary emphasis on the tax implications of business transactions. The objectives of the course are to develop a basic understanding of federal income tax laws and to provide a framework for integrating income tax planning into the decision-making process. The course is of value to all students who need to recognize the important tax consequences of many common business transactions and is not intended solely for accounting majors or those students interested in becoming tax specialists. Prerequisite: ACCT 2610. Credit 3 units.

---

#### **B50 ACCT 4680 Advanced Financial Accounting Problems**

Examination of the nature and financial reporting aspects of various business transactions: corporate acquisitions, mergers, and the formation of other strategic alliances. Topics: accounting for business combinations and consolidations, joint ventures and foreign currency translation, accounting and financial reporting issues facing government entities. Prerequisite: ACCT 3620. Credit 3 units.

---

---

#### **B50 ACCT 472E Taxation of Business Entities**

This course involves an examination of tax laws at the federal, state, and international levels, with an emphasis on corporate taxpayers and partnerships. A data-driven approach will be used to show how various business transactions affect a business entity's tax liability. Attention will also be given to various ways in which business entities might structure transactions to avoid or reduce tax liability and how the choice of business entity type affects these decisions. Prerequisite: ACCT 2610. Credit 3 units.

---

#### **B50 ACCT 475E International Taxation**

In today's global economy, questions regarding what activity and income get taxed and which jurisdiction enjoys taxing priority have never been more important. Recent U.S. tax reform has caused a monumental shift in the U.S. taxation of multinational transactions and activities. U.S. and global legislative proposals continue to focus on the tax rules applicable to multinational enterprises as parameters around these topics continue to evolve. This course will be an introduction to international taxation, focusing on such topics as tax jurisdiction, source-of-income rules, transfer pricing, tax treaties, and international tax practice and procedure. Core course materials will be supplemented with discussion around current relevant transactions (particularly M&A transactions) in the business headlines. Prerequisite: ACCT 2610. Credit 1.5 units.

---

## Finance

Visit online course listings to view semester offerings for B52 FIN.

---

#### **B52 FIN 340 Capital Markets and Financial Management**

Students will learn how the decisions of a company affect shareholder value and what decisions can increase it. To understand the perspectives of shareholders, we will study basic principles of investing: time value of money, valuation of debt and equity securities, discounted cash flow as a foundation for stock prices, the impact of diversification and leverage on portfolio risk, the relationship between risk and expected return in securities markets, and capital market efficiency. We will use these principles to analyze capital investment decisions by estimating cash flows and discounting them at the appropriate cost of capital. We will also study how shareholder value is affected by a firm's financing decisions, such as the choice of using debt or equity capital. Prerequisites: ACCT 2610 and DAT 120. Credit 3 units. EN: S

---

#### **B52 FIN 400I Mergers & Acquisitions**

This course focuses on identifying ways to increase firm value through mergers and acquisitions (M&A). We will survey the drivers of success and failure in M&A transactions, develop your skills in deal design, explore the deal process, and develop LBO and merger models similar to those used by investment bankers. Other topics addressed in the course are M&A regulation, the sell-side and buy-side M&A process, valuations, takeover strategies and antitakeover defenses, structuring of transactions to minimize tax consequences, the acquisition method of accounting, merger arbitrage, and auction vs negotiation sale processes. Prerequisites: FIN 340 and completion or concurrent enrollment in FIN 448. Credit 1.5 units.

---

---

### **B52 FIN 400J Advanced Valuation**

This course covers advanced topics in valuation. Main topics covered will be the valuation of private firms and young businesses, and the valuation of financial services firms such as banks and insurance companies. The course applies both theory and practical valuation methods through the analysis of cases and real world examples.

Prerequisite: FIN 448.

Credit 1.5 units.

---

### **B52 FIN 400K Public Equity Investments**

This hands-on course provides a learning platform for how to invest in public equities like a bottoms-up, fundamental, buy-side analyst. The course focuses on the process of how many "Tiger Cubs" invest, but will also cover other investing approaches and styles as well. Learning objectives of the course include mastering three-statement modeling; developing the research process for an investment idea in public equities; interactions with real buy-side analysts and portfolio managers on their experience at hedge funds in NYC/SF; and concludes with students pitching an investment idea to a group of buy-side analysts and select number of portfolio managers. Ultimately, this course will provide a solid foundation on which students can successfully build as a buy-side analyst. Students must submit an application for approval to enroll in this course. See Campus Groups for application under Registration. Prerequisites: FIN 448 and instructor approval.

Credit 3 units.

---

### **B52 FIN 400L Private Equity Methods**

This course will provide the student with an understanding of the basic terminology, due diligence, and analytical methodologies critical to evaluating private equity investments. The course will also cover the history of private equity and the different roles of private equity, including growth capital, LBO/MBO, roll-up, and so on in the evolution of the firm. Private equity funds in the context of the overall market (i.e., strategic vs. financial acquirers) will be discussed as will be the role of leveraged lending and bank financing of financial sponsors. Private equity as an investment and its role in portfolio construction will also be analyzed. Finally, the legal structure of private equity funds in the context of firm control and governance will be reviewed. Prerequisite: FIN 448.

Credit 1.5 units.

---

### **B52 FIN 400M Private Equity Practice**

This course is the capstone for students interested in pursuing careers in private equity. Students will develop practical skills for investing in private companies. Students will partner with professionals in the St. Louis community to perform various activities, including transaction sourcing, evaluating investment opportunities and, where appropriate, negotiating, arranging financing, and closing investments. The course also heavily relies on bringing in professionals from the local community to provide real-world perspectives on private equity investing. Prerequisite: FIN 448 and FIN 400L.

Credit 1.5 units.

---

### **B52 FIN 400W Venture Capital Methods**

Students are exposed to the process of analyzing, valuing and structuring potential equity investments in privately-held, entrepreneurial, venture-stage businesses. The goal is to develop critical thinking skills in evaluating potential investments and understanding the dynamics of various risk factors predominant in such investments, including market risk, execution risk and technology risk. The classes will be a combination of individual readings, case learning, presentations and panel discussions by industry experts, and experiential learning in a team format. Classes will be case study driven and will focus on company-and fundspecific situations. Guest lecturers

will be used extensively and will provide content integral to the course. The final sessions of the class will be conducted as a presentation and analysis of a potential investment. Prerequisites: FIN 340 and either FIN 441 or MGT 421.

Credit 1.5 units.

---

### **B52 FIN 400X Venture Capital Practice**

This capstone course offers students interested in early-stage investing an immersive experience in angel and early-stage investment practices within private companies. Collaborating with professionals in the St. Louis community, students engage in activities spanning from identifying potential investment opportunities to closing deals, gaining practical skills essential for the field. Prerequisite: FIN 400W.

Credit 1.5 units.

---

### **B52 FIN 420 International Economics and Finance**

Analyses of a global financial centre and the current financial crisis, its origins and how the global markets are affected. Initially, the course looks at the rise of London (Section 1) or the Asian Markets (Section 2) to become one of the world's financial centres, outlining the historical developments and regulatory changes. Then, it focuses in more details on the role of the government in setting policy which affects financial services domestically and internationally. The course continues to look at specific functional areas - Hedge Funds, Private Equity, Structures Products, Liquidity and Central Banks. The module discusses in different sessions the current financial crises and what role different financial institutions and products played in its development. Prerequisite: Admission to either the London Internship Program or the Asia Pacific Internship Program.

Credit 3 units.

---

### **B52 FIN 428 Investment Praxis**

Students serve as managers of a portfolio, the Investment Praxis Fund, which is owned by the university. Students analyze investment opportunities in various industries and present recommendations to the class for possible purchases or sales of stocks, consistent with the style and objectives of the fund. Valuation tools, financial statement analysis and investment techniques are emphasized as part of a thorough analysis. The course focus is on developing and implementing investment ideas. Prerequisite: FIN 448.

Credit 3 units.

---

### **B52 FIN 439E Real Estate Finance**

This course provides a broad introduction to real estate finance and investments. Topics include both equity and debt. We begin with an overview of real estate markets in the United States. On the equity side students will be introduced to the fundamentals of real estate financial analysis, including pro forma analysis and cash flow models, and elements of mortgage financing and taxation. Ownership structures, including individual, corporate, partnerships and REITS will also be covered. On the debt side, we examine a number of financing tools in the context of the evolution of the secondary mortgage market, both residential and commercial. Those wishing to pursue more advanced topics in real estate finance could follow this course with Fixed Income and Mortgage-Backed Securities. Prerequisite: FIN 340.

Credit 1.5 units.

---

### **B52 FIN 441 Investments**

Introduces the theory and practice of investments from the point of view of an investment/portfolio manager. We will begin with a review of asset classes, financial history, and preferences for risk. Next, we will have a brief review of statistics and finance and we will review matrix algebra. We will then apply these tools to examine the trade-off between risk and return and to develop and implement Modern Portfolio Theory. The major topics covered will include the Capital

Asset Pricing Model (CAPM), Markowitz optimization, performance evaluation, market efficiency, and Arbitrage Pricing Theory (APT). The last portion of the course will be devoted to fixed income securities including interest rates, bond valuation, and bond immunization. Prerequisites: FIN 340, DAT 120 and DAT 121.  
Credit 3 units.

---

#### **B52 FIN 443 International Finance**

This course provides a framework for making financial decisions in an international context. Topics include relevant features of financial markets and instruments (e.g., foreign exchange, currency futures and options, swaps); exchange rates; corporate risk management; international investing; and capital budgeting issues. Prerequisite: FIN 340.  
Credit 3 units.

---

#### **B52 FIN 448 Advanced Financial Management**

Advanced study of corporate financial management. A major focus is the relationship between the internal decisions of the corporation and the valuation of the firm in the capital market. Topics: capital budgeting systems, capital structure, debt policy, cash and working capital management, short- and long-term financial planning. Prerequisites: FIN 340 and DAT 121.  
Credit 3 units.

---

#### **B52 FIN 450F Financial Technology: Methods and Practice**

This course will provide an overview of financial technology and will cover specific topics in this area. Topics covered include data-driven credit modeling, crypto currencies, digital wallets and block chains, robo advising, high-frequency trading, and crowd funding, and peer-to-peer lending. The course will also discuss regulatory aspects of FinTech. The course will cover different methods as well as practical applications. Prerequisite: FIN 340.  
Credit 3 units.

---

#### **B52 FIN 451 Options, Futures and Derivative Securities**

Examines the theory and practical application of derivative securities such as futures, options and swaps. Central to the theory of derivative security pricing is arbitrage and payoff replication. In practice, derivative securities provide a principal route to manage and, in particular, hedge financial risk. Futures, options and swaps on different types of underlying assets are examined with emphasis on pricing and application. Prerequisites: FIN 340, MATH 132 and DAT 121.  
Credit 3 units.

---

#### **B52 FIN 452 Advanced Derivative Securities**

This course focuses on implementation of models for pricing and hedging derivative securities in the equity, currency, and fixed-income markets. Students will learn to write programs in a programming environment such as MATLAB to implement the Black-Scholes model, binomial models, Monte-Carlo methods and finite-difference methods. The derivatives studied will include exotic equity and currency derivatives and caps, floors and swaptions. The goals of the course are to learn more about the various instruments that are traded, the various assumptions and methods that may be chosen in modeling them, and the importance of the assumptions in determining the prices and hedges that are chosen. The course will be especially useful to students pursuing careers in sales and trading who will interact with research departments and students pursuing careers in asset management. Prerequisite: FIN 451.  
Credit 3 units.

---

#### **B52 FIN 470A Research Methods in Finance**

The course is designed to prepare students for independent research in finance by exploring methods and techniques in a manner that will allow the students to implement them correctly and efficiently. The curriculum will emphasize practical applications of empirical methods used in financial research and how to implement them. Students in the course will learn empirical methods in corporate finance and asset pricing; obtain basic knowledge and familiarity of the databases used in common finance research; get exposure to recent research in finance which applies the methods covered; and learn how to implement the methods covered using relevant programming languages. Note: There will be significant overlap in the course tools used in both MEC 471 and FIN 470A. However, the applications and papers for each class will be entirely different. Prerequisites: MATH 132, DAT 121 and FIN 340.  
Credit 3 units.

---

#### **B62 FIN 549H Special Topics: Real Estate Finance**

This course provides a broad introduction to real estate finance and investments. Topics include both equity and debt. We begin with an overview of real estate markets in the United States. On the equity side students will be introduced to the fundamentals of real estate financial analysis, including pro forma analysis and cash flow models, and elements of mortgage financing and taxation. Ownership structures, including individual, corporate, partnerships and REITs will also be covered. On the debt side, we examine a number of financing tools in the context of the evolution of the secondary mortgage market, both residential and commercial. Those wishing to pursue more advanced topics in real estate finance could follow this course with Fixed Income and Mortgage-Backed Securities. Prerequisites: FIN 340 and approval of Graduate Programs Offices for undergraduates.  
Credit 1.5 units.

---

## **International Business**

Visit online course listings to view semester offerings for B99 INTL.

---

#### **B99 INTL 300A Planning for International Learning**

The primary focus of this course is on preparation for the study abroad/internship experience. Topics include the following: What does a global firm look for in a globally competent recruit; Development of goals and objectives for international experience; Develop a working knowledge of host country key features such as businesses, culture, and politics; Overview of logistics for abroad, including timeline expectations, visa, housing, travel, contact with Olin, and registration for return semester; Career Services resources on how to use study abroad/internship to obtain a summer job/internship. Prerequisite: admission to one of Olin's study abroad or international internship programs or permission of instructor.  
Credit 0.5 units.

---

#### **B99 INTL 300B Applying International Experiences**

Focus is on strengthening student experiences while on a study abroad/internship experience. Topics include the following: Minimalizing impact of culture shock and new academic programming through participation in on-site orientations; Maximizing academic advising services while abroad; Identifying opportunities to engage with the local culture; Connecting your individual personal and professional goals by revisiting actions and outcomes. Prerequisite: Enrolled in current Olin Study Abroad Program.  
Credit 0.5 units.

---

### **B99 INTL 323 Business of Art: The European Capitals of Culture**

This unique course is designed for students of the arts and students of business interested in the relationship between arts and management, culture and commerce, as a site of possibility. Based in two sites - London and Galway in the west of Ireland - the course looks through the lens of the European Capitals of Culture (ECoC) program, established in 1985. Visiting Galway 2020 will enable you to gain first-hand experience of how the vision of 'creative cities' - manifested through a yearlong program of events and initiatives - celebrates the arts and cultural engagement as 'drivers' for social and economic regeneration. Whilst London is an established center for business and the arts, Galway, is a smaller, regional city, which is hoping to use the awarding of the ECoC to grow in these areas. You will gain working knowledge of the complex needs of cultural producers, managers and entrepreneurs as leaders, facilitators and catalysts. You will come away with insights in to what is at stake for the people and environment in the spheres in which they operate. Whilst gaining knowledge of theoretical frameworks, the course has an emphasis on creativity and arts-based learning - debate, critique and visual and experiential methods. Preference is given to students minoring in Business of Arts. Credit 3 units.

---

### **B99 INTL 350E GLocal Learning: Engaging with the World Locally**

This course will fulfill three broad objectives for students. First, the course is designed provide students with a multidisciplinary approach and introductory understanding of what it means to be a member of the St. Louis international community. The second is to provide a useful overview of intercultural learning, focusing on how individuals can cultivate a global mindset through different models, including the Intercultural Competency Continuum and Intercultural Praxis Model. The third objective involves recognizing and developing student's self and team strengths and weaknesses in relation intercultural competencies. This course combines small group sessions, case studies and speakers working in areas that support the global St. Louis community to provide students with an interdisciplinary perspective on the international community in St. Louis. Guest lecturers and on-site visits will be used extensively, supplemented with possible on-site visits to provide content and context integral to the course, with time to engage in critical reflection and discussion topics. At the end of the class students will be able to use their growth from the course to recognize how to be a better collaborative partner of their colleagues and communities, with an awareness of the unique strengths and challenges international communities may face. Students will have created strong relationships outside of the WashU community, be able to identify successes, resources, and gaps in resources for the international business communities, and therefore, serve as a strong mentor or advocate for exchange students, their peers, and future colleagues. In addition to having identified areas of personal curiosity for continued growth, students will have improved their understanding of and taken ownership for continued progress in cultivating a global mindset. Prerequisites: Sophomore standing and completion or concurrent enrollment in MGT 100, MGT 200A or MGT 380. Credit 1.5 units.

---

### **B99 INTL 420 Business Research Internship**

This is the capstone course for overseas internship programs where students learn to apply rigorous statistical and analytical approaches to research questions in business, but not limited to questions relating to marketing, management, finance and economics, operations, and policy. Students will identify a research topic, and present this topic to Faculty supervisors for approval. The goal is to capitalize on the practical knowledge gained while interning abroad, and apply that to a research question in the area in which a student is interning. Students will be required to review the current literature on their topic, formulate

their own research question, identify potential data sources they can use to address these questions, and make recommendations to add to the body of knowledge on their chosen subject. Prerequisite: Admission to one of Olin's International Internship Programs. Credit 3 units.

---

## Management

Visit online course listings to view semester offerings for B53 MGT.

---

### **B53 MGT 100 Individual in a Managerial Environment**

As an introduction to the foundations of business, this course covers four major themes: (1) how markets work; (2) motivating and managing people; (3) business strategy and firm performance. This is a first-year level course and may not be completed beyond the sophomore year. Credit 3 units. EN: S

---

### **B53 MGT 106E The Endgame for Entrepreneurship: Leveraging Capitalism for Good**

Historically, profit has been a key driver of human behavior. In this course, students will learn to take advantage of the profit-seeking motive of capitalism while also learning from the mistakes and unintended consequences capitalism has caused throughout history. Students will apply these learnings toward profit-seeking solutions for the United Nations' Sustainable Development Goals, which are global challenges that call us to work together with boldness and urgency. We will explore how skills from entrepreneurship and venture creation can be used to improve water, climate, education and gender equality globally and here in St. Louis. In interdisciplinary teams, students will learn how to define a problem; listen to customers, competitors and collaborators; create value; measure impact; and communicate their vision. Bold entrepreneurial spirit and skills learned in this course will guide students in their further studies at Washington University and beyond. This course does not count for Economics major/minor elective credit. This course is for first-year (non-transfer) students only. Same as I60 BEYOND 105

Credit 3 units. A&S: FYBB A&S IQ: SSC Arch: SSC Art: SSC BU: BA, ETH EN: S

---

### **B53 MGT 150A Foundations of Business**

Provides first semester business students with an introduction to each of the functional areas of business as well as the entrepreneurial function. As they work to design their own enterprise, students will build skills in teamwork, communication, critical thinking, and an understanding of the complex interplay of business functions. Prerequisites: fall semester enrollment is only open to incoming business freshmen and students must be concurrently enrolled in MGT 100.

Credit 2 units.

---

### **B53 MGT 160E Morality and Markets**

What does it look like to live a moral life in today's market system? We know all too well what it does not look like. The news is filled with moral failures of leaders and executives at top firms. We like to believe that we would behave differently, but what kinds of pressures inform our moral choices? What pulls us, what pushes us, and what persuades us to act one way rather than another? These are the questions that a course combining business and literature can address in unique ways; the world of fiction helps us to examine the ethical dilemmas of the market we inhabit every day. In this course, we use great books, classics

of film and modern television, and the tools of modern psychology and business strategy to think critically about what is entailed in living a moral life in the midst of the modern market. This course is for first-year (non-transfer) students only.

Same as I60 BEYOND 161

Credit 3 units. A&S: FYBB A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

### **B53 MGT 200A Business Fundamentals for Non-Business Students**

This course is intended to help successfully position arts and sciences, engineering, and design majors for careers in organizations such as non-profits, entrepreneurial ventures, and corporations, among others. Students will learn key technical and professional skills that are valued and often required by employers. Topics addressed include working in teams, data-driven decision making, financial and business analysis, concepts for organizational strategy, professional communication, and career strategies. The course will use a combination of lectures, exercises, projects, and cases to introduce participants to these topics. The class is designed for Washington University undergraduates in Arts & Sciences, Engineering, and Design and Visual Arts who are preparing for internships or jobs. Recommended for sophomores and juniors. Business students cannot receive credit.

Credit 3 units. EN: S

---

### **B53 MGT 200C Venture Creation**

Venture Creation is designed for students who are interested in exploring the venture creation process, or the undertaking of creating a new business from scratch. The course allows students to experience entrepreneurship in a unique and innovative manner by integrating theory and practice in an interactive learning by doing process. The goal of the course is to assist and support students in the realization of a business vision from inception of an idea to fruition of a company producing value.

Credit 3 units.

---

### **B53 MGT 201 Management Communication**

Managers who write and speak effectively excel in business leadership. Persuasive and authentic communication is not only useful in advancing your business career; business employers also consider communication skills to be the most important attribute in people they hire. Effective communication involves more than mastering technical writing and presentation skills. Successful communicators use critical thinking to assess business scenarios and the audience who will hear or read a message; they craft communication in order to attain targeted results. This course gives you the opportunity to become a more polished communicator as you work toward the following goals: Applying rhetorical principles to management communication; Using critical thinking to analyze the audience, the organizational environment, and problems before choosing communication strategies; Implementing principles of plain language and effective design; Collaborating with colleagues to create a communication strategy for a live corporate client. Prerequisite: BSBA degree student standing or declared business second major or minor.

Credit 4 units.

---

### **B53 MGT 301 Legal Environment of Business Management**

Surveys the various areas of law that make up the legal environment of business. Develops a basic understanding of law as it relates to business, with traditional emphasis on private law and business transactions. This study of the micro law of business will review the detailed substantive rules in the areas of contracts, sales, products liability, agency, corporations, and partnership. In addition, a summary review of contemporary legal problems such as insider trading, discrimination in employment, sexual harassment, and ethics may be discussed, if time permits. Case studies are analyzed in order to give the student an understanding of how various laws apply to actual situations. Prerequisite: sophomore standing.

Credit 3 units.

---

### **B53 MGT 308 Introduction to Global Business**

Focus on the aspects of management of a business enterprise that are necessary to compete in the global marketplace. The course begins with a survey of the environmental context in which international companies operate (economic systems and cultural factors). This is followed by a review of International Trade Theory and Economics. This forms a basis for concentration in the second half of the course on strategies and structure for global operations. The course deals with the situations in Europe, Japan, Latin America and China through case studies and discussion of current topics and their relation to the fundamental aspects of global business management. Prerequisite: junior standing or permission of instructor.

Credit 3 units.

---

### **B53 MGT 356E Sports Entrepreneurship and Emerging Technologies**

This course is an introduction to the concepts, theories, and practices unique to sports entrepreneurship and emerging technology. This course seeks to understand the fundamentals of early-stage companies and their growth trajectories from idea to exit. This course covers key topics in sports entrepreneurship and technology, including the various stages of the startup, the art of the pitch, market data-driven decision making, investor relations, and valuation. It surveys the rapidly changing ecosystem of entrepreneurship and technology across the global sports industry. Artificial intelligence, machine learning, augmented reality, virtual reality, human performance, Esports/gaming, and venue tech as they relate to entrepreneurial concepts, practical applications, and principles will also be addressed.

Credit 1.5 units.

---

### **B53 MGT 380 Business Strategy**

The course adopts the perspective of the general manager -- the individual charged with developing and implementing the long-term strategy of a business. The course develops basic tools and concepts in strategy formulation, including competitive advantage, value creation and capture, industry analysis, capability assessment, competitive positioning, and strategy implementation. The course is designed to develop students' skills in both analyzing observed strategies and in formulating and implementing new ones. Prerequisite: MEC 290 or ECON 4011.

Credit 3 units. EN: S

---

### **B53 MGT 400S International Business Environment**

What is the relationship between the dominance of the financial interests centered in the City of London and the competitive performance of British industry? How does Britain reconcile an advanced capitalist economy alongside a traditional social and political structure? How great is the tension between domestic forces that seek closer economic and political integration with Europe and those pushing for greater engagement with Britain's former English-speaking colonies? Is British foreign policy driven more by economics than national security? This course addresses these and other important questions regarding British political economy by contextualizing current issues within the wider evolution of the country's political, economic and social systems since 1945. Prerequisite: Admission to the London Internship Program.

Credit 3 units.

---

### **B53 MGT 401C CEL Entrepreneurial Consulting Team**

The CElect program is a consultative experiential course that provides students the opportunity to work directly with start-up businesses. Early stage companies provide a unique environment for students to make a meaningful impact on the future trajectory of a growing

organization. CElect is an experiential learning course that matches teams of Washington University students with start-up ventures across various locations (locations specified by sections) to perform defined management consulting projects. In addition to the required orientation session(s) and concluding sessions, students will work directly with the professor and with their client company on a consistent, but variable, schedule depending on the needs over the course of the shortened semester. Please Note: There is a required orientation and/or travel for one section for Spring 2023 that begins prior to the start of the semester (please read section descriptions for more specific information), prior to the start of the semester. Students are required to be available for the class time listed each week, although meetings may be less frequent. Prerequisite: A current resume and <https://forms.gle/h9DZKD5k3UWd6TvZA> AND VIDEO SUBMISSION REQUIRED for acceptance consideration. Application must be completed by 10AM (CT) November 3. Enrollment is limited and selective. Please direct questions to Amy Soell, ([amysoell@wustl.edu](mailto:amysoell@wustl.edu)). Law Students: Prerequisite/co-requisite: Corporations. As a law student enrolled in CElect, you may not give legal advice to anyone unless you are directly supervised by a licensed attorney who approves of the advice in advance. Additionally, you may not prepare any legal documents except under the direct supervision of a licensed attorney. Giving advice, preparing legal documents, or rendering any legal services would be the unauthorized practice of law unless such services are under the direction and with approval of a licensed attorney. Law students CANNOT repeat this course more than once for law school credit. This course is cross-listed with the Business School, B63 MGT 501C. Grading for Law Students is modified pass/fail: HP (3.94), P, LP (2.98), F (2.50). Dropping this course may have an adverse impact your ability to register for other CEL courses in the future. Credit 3 units.

---

#### **B53 MGT 401P CEL Practicum**

The CEL Practicum is a consultative experiential course that provides students the opportunity to work directly with established for-profit and non-profit organizations at a regional, national, or international level. Students work in four to six person teams on strategic consulting projects that delve into specific critical problems faced by the institution or company they are assigned. Teams will apply insights from their coursework to real-world business problems with supportive faculty advising and regular peer coaching. Each student is expected to spend in excess of 100 hours during the semester on their specific project. While the class will not meet weekly, the listed class time will be used 4 to 5 times across the semester for the entire cohort to meet and learn tools relevant to these engagements, and identify best practices in engagements. Prerequisite: Applications are required. Copy and paste this link for application <https://forms.gle/tUk8CQiwbvYcxLTXA>; Application required deadline April 10, 8am (CT) Students will be notified of their acceptance to the program shortly after the application process, and will have an opportunity to rank their preferred project prior to the start of the semester. Dropping this course may have an adverse impact your ability to register for other CEL courses in the future. Credit 3 units.

---

#### **B53 MGT 401S Small Business Initiative**

The CEL offers students the opportunity to gain experience in the workings of local small businesses, defined as companies that have less than 1 million in revenue, a brick-and-mortar location, and at least 2-3 years of financial data. Students work in a four-to-six-person team on consulting projects, applying insights from their coursework to real-world business problems under faculty supervision. Each student is expected to spend a minimum of 150 hours during the semester on their project. Students' grades are based on deliverables throughout the semester including the final written and oral report at the conclusion of the project. Dropping this course after being introduced to a client may have an adverse impact on your ability to register for CEL courses in the future.

Credit 3 units.

---

#### **B53 MGT 401T Taylor Community Consulting Project**

The CEL's Taylor Community Consulting Program is a consultative experiential course that partners students with local, regional, and national non-profits to support their strategic development. Students work in four-six person teams on consulting projects, applying insights from their course work to real-world business problems under faculty supervision. Each student is expected to spend 150 hours during the semester project. Enrolled students will be sent client information shortly after registration. Client ranking information will be shared only to students who are enrolled in the course. Dropping this course may have an adverse impact your ability to register for other CEL courses in the future.

Credit 3 units.

---

#### **B53 MGT 402 Ethical Issues in Managerial Decision Making**

This course considers not only what ethical behavior means for a business entity, but how to: (i) balance competing ethical concerns against each other; and (ii) implement and sustain this balance across an organization. Readings and classwork zero in on the issues and situations most likely to put a manager in jail and the company in bankruptcy. Classes include Socratic discussion, simulations, analysis of video clips, and team tasks. The emphasis is on practical frameworks and tools managers can apply in the real world. Prerequisite: Senior standing.

Credit 1.5 units.

---

#### **B53 MGT 405A Asian Study Tour**

This course encompasses individual and team research, writing, presentation, and participation in Olin's Asian Study Tour. It includes required attendance and expected professional contributions to all corporate and government visits and briefings and other required individual and group activities. Prerequisite: Admission to the Asia Pacific Internship Program.

Credit 1.5 units.

---

#### **B53 MGT 405S International Business Environment: Sydney**

The aim of this course is to internalize and develop multicultural competency applied within personal, organizational and business contexts. Reaching this goal includes developing personal awareness, understanding important concepts, and developing multicultural skills. The ability to recognize and overcome common pitfalls that prevent people from operating effectively within -- and actually benefiting from -- multicultural contexts will be explored. Prerequisite: Admission to the Asia Pacific Internship Program.

Credit 3 units.

---

#### **B53 MGT 421 Introduction to Entrepreneurship**

Through case studies, frequent guest speakers, and the professor's own experience, the real world of entrepreneurship will be brought into the classroom to provide a context for students to learn the fundamentals of founding, operating, and exiting a start-up business. Students will learn new perspectives that will teach them to think like an entrepreneur. Those who are interested in the general study of entrepreneurship, those who want to be entrepreneurs, and those who would like to leverage entrepreneurial principles in other career paths are all good candidates for the course. This course can only be taken for a grade. Prerequisite: sophomore, junior, or senior standing in any school or college. Students can either enroll in either MGT 421 or MGT 460L. You can't receive credit for both courses.

Credit 3 units. EN: S

---

**B53 MGT 424 Business Planning for New Enterprises [The Hatchery]**

Students form teams to pursue their own or an outside entrepreneur's commercial or social venture. The first session will feature a "Team Formation" event where students and community members pitch their ideas and opportunities to the class. During the semester, the teams are supported and advised by the Instructor, Executive Coach, and Mentor(s) as they research and develop startup plans. Academic deliverables include two presentations to a panel of judges and a complete business plan for commercial ventures or sustainability plan for social ventures. The course is open to students from all disciplines and degree programs. Most of the work will be done outside the classroom with the support of the coaches, mentors, advisors and instructor. Classes will be held once per week for the first half of the semester. Workshops and rehearsals will be required in the second part of the term. Prerequisite: MGT 160E or MGT 421 or MGT 460L or MGT 477E or EECE 480 or I60 105 or ECON 105 or FYP 105B. Credit 3 units.

---

**B53 MGT 432E Business Management of Arts Organizations**

This course is for students who want to work in arts-related organizations and corporations. It will complement the Business of Arts course, which is directed to individual artists who need a business background and who may become entrepreneurs. The intent of this course is to provide business-oriented students who want to work in organizations producing a wide array of arts -- including the performing arts, architecture and design, art galleries (both museum and sales), fashion or media -- the knowledge of how these institutions are managed and financially run, in both the for-profit and non-profit areas. The course will build on basic business skills and combine lectures, case studies and expert professional interactions. This will include on-site visits and presentations. The course will also provide a framework for experiential learning practicum projects, which will be conducted simultaneously with various arts organizations. Prerequisite: MGT 100, MGT 200A, or MGT 380. Credit 3 units.

---

**B53 MGT 440 Sports Management**

This course examines business and management issues involved in the sports industry. This industry is very diverse, ranging from global sports events (such as the Olympic Games, World Cup Soccer, etc.) to major national competitions (such as the National Football League, Major League Baseball, etc.). Engaged in this industry are many different players, including franchises, governing leagues, sponsors, media, stadium owners, government, fans, and so forth. This course will take a practical look at the world of sports management and administration, with an eye on extracting key lessons for corporate management and administration. Credit 3 units.

---

**B53 MGT 445E Entrepreneurship Through Acquisition**

The purpose of this course is to provide students with an opportunity to explore being an entrepreneur by acquiring a company rather than starting one from scratch. The readings and class discussions will help students understand how to purchase a business, finance an acquisition, and operate and grow a business. The cases and conversations will help students understand what it is like being a young, first-time CEO and what types of challenges and issues will be encountered. Credit 1.5 units.

---

**B53 MGT 450A Internship in Business**

This is an online course designed to deepen the overall learning you gain from an internship. By completing structured assignments that relate to both the work completed during the internship and to elements of the broad-based Olin business curriculum, the value

of the internship will be markedly increased--for both students and employers. Internship in Business is a 1.5-credit Pass/Fail course for Olin Business School undergraduates. The course, credit, and pass/fail grading are transcript notations, but the hours earned for MGT 450A do not count toward the 120 hours minimum needed for graduation nor does the grade count towards your GPA. Students must submit application for approval [https://wustl.az1.qualtrics.com/jfe/form/SV\\_4VkJqUz3Apr5nU](https://wustl.az1.qualtrics.com/jfe/form/SV_4VkJqUz3Apr5nU). Prerequisite: Approval from Undergraduate Programs prior to enrolling in this course. Credit 1.5 units.

---

**B53 MGT 450G The Business of Sports**

This course provides an overview of the major aspects of the sports business industry, including but not limited to the following: (1) the primary revenues and expenditures of pro and college sports; (2) collective bargaining agreements; (3) sports media rights; (4) facility financing; (5) sports sponsorships and athlete endorsements; (6) the role that sports commissions play within communities; and (7) current events that affect the growth and evolution of the sports business industry. Credit 3 units.

---

**B53 MGT 450I International Internship in Business**

This online course deepens the overall learning a student gains from an international internship. By completing structured assignments that relate to both the work completed during the internship and to elements of the broad-based Olin business curriculum, the value of the internship increases markedly, for both the student and employers. Prerequisite: Admission to one of Olin's International Internship Programs. Credit 1.5 units.

---

**B53 MGT 450R Business & Government: Understanding and Influencing the Regulatory Environment**

The United States as well as many of the world's governments has entered a new episode with respect to the interaction of business and government. Now, more than ever, government regulations are attempting to spur job growth and the economy on one hand, but also is intruding into many aspects of business and the markets on the other hand. Business students must not only understand the shifting business government landscape, but also how to engage government officials and legislators to help shape policies that affect their firms and industries. As an introductory course, student will learn from business and government leaders how to interact with and affect the processes of regulation. Credit 3 units.

---

**B53 MGT 450Z European Study Tour**

This course encompasses Individual and team research, writing, presentation and participation in Olin's European Study Tour (EST), including Mock Parliament. It includes required attendance and expected professional contributions to all EST corporate and government visits and briefings and other EST individual and group activities. Offered only in the spring semester. Prerequisite: Admission to the Olin European International Program. Credit 1.5 units.

---

**B53 MGT 460H Corporate and Global Strategy**

Business-level strategy involves a firm's choices regarding how to compete in a particular single industry or market. Corporate strategy, on the other hand, involves choices about which sets of different industries or markets to compete in, and how to do so. It also involves choices about which kinds of activities to undertake within the firm,

and which to organize through contracts or alliances with other firms. Global strategy is a particular type of corporate strategy that involves choices about which geographic regions or national markets to compete in and how.

Credit 3 units.

---

### **B53 MGT 460I Sports Business Analytics**

This course introduces students to business analytics through sports-themed applications, academic research pertaining to sports topics, class readings, and guest lecturers from industry. Objectives for students include: 1) learning estimation and forecasting skills/trends used in sports; and 2) develop critical thinking skills necessary to assist managerial decision making to augment the performance of sports teams, leagues, or companies.

Credit 3 units.

---

### **B53 MGT 460J Legal Issues in Sports**

This course introduces the fundamentals of sports law. It teaches the basic tenets of a variety of legal disciplines through the lens of sport. It focuses on legal issues that have a direct relationship to sport with an emphasis on current legal sports issues in the news. In the tort arena, we will explore the potential liability of athletes for reckless violent actions toward their competitors, of sports teams and leagues for failing to adequately protect the health of participants (e.g. concussion lawsuits), of coaches, trainers and medical personnel at all levels for failing to properly train, monitor and assess athletes, of product manufacturers for injuries caused by defective sports equipment, and of teams for injuries to spectators, among other potential liabilities.

Credit 1.5 units.

---

### **B53 MGT 460L Introduction to Social Entrepreneurship**

Social entrepreneurs use innovative, market-based tools and responses to solve social and environmental problems. This interdisciplinary class attracts students from all disciplines to develop an entrepreneurial mindset and skill set to apply to local and global issues. Through readings, lectures, local and international guest speakers, case studies, classroom debates, and lean startup and business model canvas techniques, students will gain meaningful insight into how to create and capture social value. Students will develop the skills to develop and pitch a social venture that fits their passions and interests in the Olin Big Idea Bounce Pitch competition that brings students together across campuses to share their ideas and compete for prize money. In addition, students will explore the role entrepreneurship and social impact investing play in the social and economic development of healthy communities both nationally and internationally. Students may take either MGT 421 or this course.

Credit 3 units. EN: S

---

### **B53 MGT 460M Business of Social Impact**

This course is designed for students interested in understanding how social change and social impact can be achieved, borrowing tools and approaches from a broad spectrum of disciplines by asking the following questions: What is social impact and what is social change? How has the concept of social impact developed, where did it come from and how is it useful? How can social impact be meaningfully measured? What examples exist for cooperation and mutual support in the achievement of social impact? What role do for-profit organizations play in creating and promoting social impact? How do CSR, PPP and BOP achieve social impact? The course is based around social impact as a concept, measuring social impact and building institutions, and partnerships around social impact. It will be taught with a practical bent using examples from existing social impact organizations, including those of the professor. Guest speakers will provide case studies of social impact approaches from the local area.

Credit 1.5 units.

---

### **B53 MGT 475E Innovating for Defense**

This interdisciplinary entrepreneurial course gives students the unique opportunity to solve real problems facing the U.S. Department of Defense (DoD) and the U.S. Intelligence Community (IC). This course is open to all students who want to solve real problems for real stakeholders in real time. In consultation with course instructors, students will form their own interdisciplinary teams to explore a challenge experienced by a dedicated DoD problem sponsor who will be regularly engaged with the team. Student teams learn and use the Lean Startup methodology and the Mission Model Canvas made famous by Stanford University to iteratively cut through the complexity of the problem. Note: This course is sponsored by the U.S. DoD. It was originally developed at Stanford University and is now taught at 30+ U.S. universities. A student does NOT have to be a citizen of the United States to take this course; none of the DoD problems are classified.

Recommended completion of T55 ETEM 520.

Same as T55 ETEM 525

Credit 3 units.

---

### **B53 MGT 476E Innovating for Healthcare**

In this entrepreneurial course, students form teams and work on solving real problems facing the healthcare industry by producing solution prototypes that may also be commercialized by the students once the class is completed. The majority of the course work involves weekly customer interviews and team presentations on those findings. Using Lean Startup Theory, this course will provide an entrepreneurial platform that can develop solution prototypes that match the healthcare industry users' needs in just weeks, rather than months or years. Depending on the industry, grants or investors may provide follow-on funding to student teams for further refinement and the development of solution prototypes. The course is demanding; students will present during every class, work closely with their teams, and receive relentlessly direct feedback. Problem sponsors, mentors, industry liaisons, corporate partners, investors, and journalists may be in the room while students are solving real problems for real customers in real time. This is a course designed for all graduate and upper-level undergraduates in all WashU schools and programs. It takes an entrepreneurial, interdisciplinary approach to the healthcare industry's biggest challenges. Prerequisites: MGT 421; MGT 401C; and MGT 424 or MGT 460L are recommended for Olin students. It is assumed that students will come into the course with a basic understanding of ideation, research methods, corporate entities, funding sources, intellectual property, and related concepts.

Credit 1.5 units.

---

### **B53 MGT 477E Launching and Scaling New Enterprises (The League)**

This advanced entrepreneurship course acts as an accelerator, encouraging students to actually launch and scale a business. Students must apply at <https://sites.wustl.edu/theleague/> either with a business idea OR to join a student team that is about to launch their business. Students will be notified of their selection to join The League (of Extraordinary Entrepreneurs) shortly after the application deadline. Our most successful alumni in technology have agreed to be part of the class. This course covers leadership; crafting a story; product development; attracting customers; an innovative mindset; building successful teams; scaling to billion-dollar valuations and the mind of the high tech investor. The deliverables in the course include reflections on each of the "unicorn" guest speakers and how it applies to the students' ideas; actually launching their website and MVP of their product; meeting the growth goals the teams set for themselves; pitching real VC's and Angel Investors at the end of the course; and applying for a St. Louis Arch Grant Prerequisite: enrollment by application only.

Credit 3 units.

---

**B53 MGT 478E Ownership Insights: The Competitive Advantage of Family- and Employee-Owned Firms**

This course is designed to introduce students to the unique governance and financing issues faced by owners of closely held businesses, with particular emphasis on employee- and family-controlled firms. The core issue addressed in this course is that of sustainability: What actions are required of the current owners to increase the likelihood that the business will last beyond them? What best practices can we learn from successful employee-owned and multigenerational family businesses, some of which have been in existence for more than 150 years? There are three target audiences for this course: 1) students who may be or who are considering working for a closely held business, be it employee- or family-owned; 2) entrepreneurs who build successful businesses and want their businesses to be passed on to their employees or family members; and 3) students seeking to work in the private equity, investment banking, legal or wealth-management industries and who will be calling on this segment of the market. The course will be multidisciplinary and more qualitative than quantitative. Each class will have a lecture and case component; there will be guest speakers at each session. Students will be required to complete a case study in advance of each class (not more than two pages). There will be no final exam. Class attendance and active participation are expected. Credit 1.5 units.

---

**B53 MGT 490 Honors Seminar I**

The first of a two-course honors seminar. Students will have the opportunity to investigate current issues in business using an interdisciplinary approach to their research. Course content of the seminar varies from year to year. Prerequisites: senior standing and faculty invitation. Credit 3 units.

---

**B53 MGT 491 Honors Seminar II**

The second of a two-course honors seminar. Students will have the opportunity to investigate current issues in business utilizing an interdisciplinary approach to their research. Course content of the seminar will vary from year to year. Prerequisite: MGT 490. Credit 3 units.

---

## Managerial Economics

Visit online course listings to view semester offerings for B54 MEC.

---

**B54 MEC 290 Microeconomics**

Provides a rigorous analysis of the behavior of consumers and firms in competitive and monopoly markets; oligopoly markets are introduced. Consumer topics include preferences and utility, budget constraints, consumer optimal choice and demand curves. Firm topics include technology, cost minimization and profit maximization. The course concludes with price determination in monopoly and competitive markets, and an introduction to oligopoly and game theory. The focus of the course is on microeconomics as a decision making tool for consumers and managers. Prerequisite: Completion of Math 131 or concurrent enrollment in Math 132 or Math 233. Credit 3 units. EN: S

---

**B54 MEC 292 Global Economy**

Introduces the fundamentals of international economic analysis. Provides an economic foundation to the analysis of business decisions and strategies in the global setting. Topics include: introduction to the global economy; comparative advantage as the basis for international trade and sources of comparative advantage; economies of scale and imperfect competition as the basis for international trade; tariffs and

other instruments of trade policy; political, legal, and institutional factors influencing international trade; balance of payments; exchange rates and the foreign exchange market; international capital flows; national competitive advantage and industrial policies; global economic competition and business strategy. Prerequisites: MEC 290 or ECON 1011 and DAT 120. Credit 3 units. EN: S

---

**B54 MEC 292C Global Economy: South America**

This course introduces the fundamentals of international economic analysis and provides an economic foundation to the analysis of business decisions and strategies in the global setting. Topics include introduction to the global economy; comparative advantage as the basis for international trade and sources of comparative advantage; economies of scale and imperfect competition as the basis for international trade; tariffs and other instruments of trade policy; political, legal, and institutional factors influencing international trade; balance of payments; exchange rates and the foreign exchange market; international capital flows; national competitive advantage and industrial policies; and global economic competition and business strategy. Prerequisites: MEC 290 or ECON 1011, DAT 120, and admission to the Emerging Economies South American Program. Credit 3 units.

---

**B54 MEC 292S Global Economy - Australia**

Introduces the fundamentals of international economic analysis. Provides an economic foundation to the analysis of business decisions and strategies in the global setting. Topics include: introduction to the global economy; comparative advantage as the basis for international trade and sources of comparative advantage; economies of scale and imperfect competition as the basis for international trade; tariffs and other instruments of trade policy; political, legal, and institutional factors influencing international trade; balance of payments; exchange rates and the foreign exchange market; international capital flows; national competitive advantage and industrial policies; global economic competition and business strategy. Prerequisites: MEC 290 or ECON 1011, DAT 120, and admission to the Asia Pacific Internship Program. Credit 3 units.

---

**B54 MEC 310E Business of Luxury Hospitality**

This course builds on and applies a wide variety of skills students learn in the Olin core. It will explore the economics of the luxury hospitality business and the nature of competition in the restaurant, nightlife, hotel/resort and casino segments. Students will learn the business fundamentals of each industry, interact with industry leaders, and apply what they have learned to specific companies worldwide. Prerequisites: MEC 290 or ECON 4011. Credit 3 units.

---

**B54 MEC 320 Olin Grand Rounds: The Business and Practice of Medicine**

Grand rounds in medical schools are a forum for presenting new and challenging clinical problems and cases. The goal of Olin Grand Rounds is to focus on the challenges and solutions facing the business of medicine. The course will therefore provide an introduction to the current issues facing the health care sector that integrates management tools and clinical knowledge. The objective is to provide students new insights into how modern management tools can be combined with scientific and clinical knowledge to manage health care organizations more efficiently and practice medicine more effectively. Credit 3 units.

---

**B54 MEC 321 Health Economics and Policy**

The basic tenets of health economics will be covered. This course will place a unique emphasis on incorporating materials from three broad source categories -- textbook elements, "lay" press and media, and academic journal publications -- with the aim of fostering the application of rigorous, critical thought to media presentations of health care economics and policy issues.

Credit 3 units.

---

**B54 MEC 322 Health Care Management**

The goal of the course is to develop facility in applying basic tenets of general management to actual situations and dilemmas that might be faced by health care managers, consultants, financiers, investors, innovators, or providers in the course of their work. Issues addressed will include but not be limited to financial issues, management challenges, and conduct of operations. The first phase will cover the basic background on the structure and financing of the health care industry to include very brief reviews of critical topics like insurance and government-provided health care. A few basic frameworks will then be developed for students to apply to course topics moving forward, such as cost/benefit analyses and evaluation of risk. The remainder of the course will involve critical analyses of health care cases involving varied subjects and management challenges. Class sessions will emphasize student-led discussions.

Credit 3 units.

---

**B54 MEC 370 Game Theory for Business**

Provides students with a methodological framework to analyze strategic business situations. Building on a background in microeconomics and statistics, this course includes such topics as the following: modeling strategic problems, games with sequential moves, games with simultaneous moves, strategies and the derivation of strategic forms, general classes of games, uncertainty and information, strategy and voting, auctions, bargaining. Prerequisite: MEC 290 or ECON 4011.

Credit 3 units. EN: S

---

**B54 MEC 400K Research Analysis in Industry**

Research in Industry Analysis will build on the materials taught in MEC 370 (Game Theory) MEC 470 (Market Competition and Value Appropriate) and MEC 471 (Empirical Techniques in Industry Analysis), integrating them with methods of industry analysis used in practice and applying them to companies. Prerequisites: MEC 370, MEC 470 and MEC 471.

Credit 3 units.

---

**B54 MEC 420 Research in Health Care Management**

This is the capstone course for the Health Management major in which students learn to apply rigorous statistical and analytical approaches to research questions in health services, including but not limited to questions relating to management, finance and economics, operations, and policy. Faculty will identify several available research project options and present these options in class. The goal is to capitalize on the strength of the university medical school and affiliated medical centers, in addition to capitalizing on existing relationships between Olin and various health care firms to identify student research projects. Students will also be encouraged to formulate their own research questions and to identify potential data sources they could use to address these questions, if they so desire. Students will work in teams of three or four using the approaches developed for the Practicum and Hatchery courses.

Credit 3 units.

---

**B54 MEC 460 Economics of Entertainment**

This course will focus on the unusual economics of the entertainment industry and the associated management challenges. The sessions will cover the basic economics of entertainment, then focus specifically on the music and movie industries, plus one other that will vary from year to year. Classes will consist of lecture and discussion, as well as speakers from the relevant industries. The primary student deliverable will be a twenty minute documentary-style production in which student teams present findings of their research into specific industries within the broader industries studied in class, e.g., rock, classical or rap within music, blockbusters within music, etc. Prerequisite: MEC 290 or ECON 4011.

Credit 3 units. Arch: NLCU

---

**B54 MEC 4600 Business of Arts**

This course is for students who aspire to a career in the creative side of the Art Business, including visual art, dance, music, fashion, architecture, photography, writing/poetry, film, communication design, etc.; it may also be of interest to those who plan to work in the business side of Art, but in close connection with the creative side, e.g., A&R at a record label, or acquisitions in a movie or TV studio. It will complement MGT432E, Business Management of Arts Organizations. This course provides a diverse collection of business skills that form the foundation for the course's main deliverable: a multi-year plan for the development of an art business that will have commercial success sufficient to enable the artist to pursue their art as a profession. It includes interaction with successful artists, numerous presentations and experiential activities as the business plan develops throughout the semester.

Credit 3 units.

---

**B54 MEC 461E U.S. Macroeconomic Policies During Crises**

The course will cover six or seven different topics related to monetary policy, banking supervision and regulation, and financial markets. The course will feature notable speakers as well as lectures by assigned faculty. The goal is to present the best in contemporary thought regarding monetary and fiscal policy as well as public regulation of the financial sector.

Credit 1.5 units.

---

**B54 MEC 470 Industrial Economics**

Provides students with frameworks and capabilities for making intelligent decisions in evolving markets. Course begins with general game theory concepts, which form the basis for two main topics: models of competition in markets and value appropriation. Students will learn the basic framework, and apply it in the context of a detailed industry study. Specific topics may include firm interactions in stable and evolving market environments, industry life cycles, the evolution of new product markets, and strategic decision-making in developing markets. Prerequisite: MEC 370.

Credit 3 units.

---

**B54 MEC 471 Empirical Techniques for Industry Analysis**

Students will learn how to use data to answer a wide variety of questions regarding the incentives and behavior that generate market activity. We emphasize inference about the strategic decisions of firms and consumers. Students are introduced to new statistical and econometric tools by examining the application of these tools to current research in economics. Among the topics considered are the empirical implications of: strategic bidding in auctions, price discrimination and dispersion, differences across products, and the internal organization of firms. Prerequisites: MEC 290, DAT 120 and DAT 121.

Credit 3 units. EN: S

---

### **B54 MEC 494 Business and the Environment**

Course will examine the relationship between environmental economics and environmental policy. The course will focus on air pollution, water pollution, and hazardous wastes, with some attention given to biodiversity and global climate change. The course will examine critically two prescriptions that economics usually endorses: (1) "balancing" of benefits against costs (e.g., benefit-cost analysis) and the use of risk analysis in evaluating policy alternatives; (2) use of market incentives (e.g., prices, taxes, or charges) or "property rights" instead of traditional command-and-control regulations to implement environmental policy. Prerequisite: Econ 1011.

Same as L11 Econ 451

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

## Marketing

Visit online course listings to view semester offerings for B55 MKT.

---

### **B55 MKT 370 Principles of Marketing**

Marketing is the window to the customer, making the function a critical component of any successful organization. Through a mixture of lectures, case discussions and classroom exercises, this course will give students an overview of the best theories and practices in marketing management today. Specific topics will include: how to segment the customer base and choose target markets, how to create perceived value both from an economic and psychological perspective, how to differentiate a product or service from a competitor's offering, how to build and maintain a strong brand, and how to employ different marketing tools such as advertising, pricing, product design, service, and location. The class will also provide students with some basic tools for evaluating the financial impact of marketing activities. Prerequisites: Sophomore standing and MEC 290 or Econ 1011 or MGT 100.

Credit 3 units. Arch: NLCU EN: S

---

### **B55 MKT 377 Consumer Behavior**

Psychological, sociological, and social psychological principles as they apply to consumer response to product offerings, media communications, personal influence, and other environmental factors. Consumer buying behavior is analyzed from theoretical, empirical, and applied perspectives. Current applications of concepts employed by marketers are discussed in the context of both consumer and industrial marketing situations. Prerequisite: MKT 370.

Credit 3 units. Arch: NLCU EN: S

---

### **B55 MKT 378 Marketing Research**

MKT 378 course discusses how to quantify the basic marketing framework using basic primary research skills. The focus is in obtaining market knowledge through surveys, experiments and other direct learning methods. Prerequisites: MKT 370, DAT 120 and DAT 121 or concurrent enrollment in DAT 121. Non-business students who don't meet these prerequisites could take MKT 470N instead.

Credit 3 units.

---

### **B55 MKT 381E Inclusive Marketing**

Inclusive Marketing Strategies examines the importance of integrating inclusive thinking from the beginning of the strategic marketing process - and in every key decision that follows. The course will explore what we know about societal, cultural, demographic shifts and spending power and how these changes will affect our marketing approach and ultimate success. The course will feature discovery through strategic insights, current marketplace examples, group discussion and theory application.

Credit 1.5 units.

---

---

### **B55 MKT 400E Elements of Sales: Tools and Techniques**

This course will provide students with a thorough understanding of the sales function in a managerial context as well as the process of selling from prospecting through solution selling and account maintenance. Specific topics addressed include sales force structure, salesperson selection, evaluation, and compensation. Students will study sales technique, strategic selling, and key account management. Prerequisite: MKT 370.

Credit 3 units. Arch: NLCU

---

### **B55 MKT 400G Digital Marketing and Analytics**

This course teaches students how to utilize key technologies and data sets to drive business growth via digital channels, and how to properly measure investments. In addition to learning how to utilize various paid, earned, and owned digital media tactics, students learn how to build performance-driven websites and how to utilize digital data to better understand consumers and markets. This course is widely applicable to students seeking marketing, entrepreneurial, or strategy-driven careers. Prerequisite: MKT 370 and either DAT 120, Math 2200, Math 3200 or ESE 326.

Credit 3 units.

---

### **B55 MKT 400I Creating & Launching Innovative New Products**

This course teaches students how to successfully create and launch new solutions (i.e., products, services, and technologies) inclusive of the business models that power them. Students learn cutting-edge approaches to uncover opportunities, curate ideas, discover solutions, and then realize the potential via successful launch. In addition, they learn how to build innovative environments and build the culture needed within them. This course applies to students seeking careers as brand managers, product managers, product marketers, consultants, and those who aim to be entrepreneurs. Prerequisite: MKT 370.

Credit 3 units. Arch: NLCU

---

### **B55 MKT 400L Understanding and Conducting Business Experiments**

This course teaches students causal inference methods. Making good business and policy decisions often demands decision makers to move beyond discovering correlations in the data, and to understand the underlying processes that have generated these correlations. In fact, the range of business- and policy-relevant questions requiring causal inference is broader than commonly recognized, including topics like churn prediction in business settings. Therefore, a deep understanding of causal inference is crucial, especially in the era of expanding Artificial Intelligence capacities. Prerequisite: DAT 120.

Credit 3 units.

---

### **B55 MKT 400M Sports Marketing**

This is a specialized class focused on Sports Marketing. It is essential for anyone going into the field of Sports Marketing, but given the experience of the instructor, I would recommend it to anyone with an interest in the topic. Prerequisite: MKT 370.

Credit 3 units.

---

### **B55 MKT 4095 Entrepreneurship Marketing Methods**

Growing a startup requires sales and marketing strategies that are unique to those utilized by established organizations. This reality helps to explain why a scroll through LinkedIn or Twitter will likely introduce entrepreneurs to concepts such as "product-led growth" and "flywheels." It also explains why a search for "startup marketing" on Google will introduce them to ideas often referred to as "growth hacks." The challenge for founders as they work to apply these ideas is that they most often lack substance, specificity, and or actionable

insight. These examples highlight the nuance of successfully marketing a startup, entrepreneurs' demand to learn these nuances, and the difficulty of correctly learning how to do the right things and do them well. These challenges are compounded by the fact that startups are resource- and time-constrained so they must learn how to prioritize driving customer acquisition, retention, and loyalty. Finally, startups must have a technology roadmap and measurement framework to optimize over time. This course will ensure that Olin students have this knowledge and expertise while also putting them in a position to help existing startups better grow their businesses. It is recommended that students take MKT 4095, offered as a Mini A course which will prepare you for the experiential course MKT 431E, Marketing Metrics, offered as a Mini B course where you will work with a real client on a specific growth initiative, applying what was learned in this course. It is not required, just recommended. Prerequisites: MKT 370 or MGT 421 or MGT 424, MKT 4001 or ENG 324 or MGT 106E or L11 105 or I60 105. Credit 1.5 units.

---

#### **B55 MKT 431E Marketing Metrics**

Experiential Learning: Growing a startup is incredibly challenging. This reality helps to explain why a scroll through LinkedIn or Twitter will likely introduce entrepreneurs to concepts such as "product-led growth" and "flywheels." It also explains why a search for "startup marketing" on Google will introduce them to ideas often referred to as "growth hacks." These examples highlight the nuance of successfully marketing a startup, entrepreneurs' demand to learn these nuances, and the difficulty of correctly learning how to do the right things and do them well. Marketing Metrics provides students an opportunity to engage in active and applied learning through work on real-world, team-based projects, working with a real client. Each project is unique, but all are centered on driving data-driven, implementable solutions to help their client achieve their growth objectives. Prerequisite: Enrollment is limited to 35 students. Interested students should add their name to the waitlist in WebSTAC and will be sent a survey shortly after registration. Students will be notified of their acceptance prior to the start of the semester once the client list has been finalized. Credit 1.5 units.

---

#### **B55 MKT 470E Pricing Strategies**

This course will equip you with the concepts, techniques, and latest thinking on assessing and formulating pricing strategies. Through lectures, in-class discussions, case studies, group project/presentations, and pricing simulation games, you will learn to use the fundamental analytical tools, theories and conceptual frameworks to formulate proactive pricing strategies improving the firm's profitability. Topics of discussion include incremental contribution analysis, EVC analysis, segmentation and price customization, competitive pricing strategy, pricing innovative products, price promotion, psychological/behavioral issues in pricing, dynamic pricing, pricing and market making on the Internet, and pricing of digital products and services. Prerequisite: MKT 370. Credit 3 units.

---

#### **B55 MKT 470N Applied Marketing Research**

This course is designed to provide you with an appreciation of the role of marketing research (MR) in the formulation and solution of marketing problems. You will be developing an understanding of the marketing research process, and understand how to read reports and use output from marketing research to make managerial decisions. While the course will cover the process of engaging in marketing research, the emphasis is on understanding how to interpret output from marketing research so that you can gain greater mileage from marketing research reports that are run for your company, and on understanding what types of information can be collected so you will understand what types

of information you can commission once you step into a managerial role. BSBA students can't enroll in this course. Students may not receive credit for both MKT 378 and this course. Prerequisite: MKT 370, Math 131 and Math 2200. Credit 3 units.

---

#### **B55 MKT 477 International Marketing**

Addresses three fundamental decisions confronting a company whose operations extend beyond the domestic market: (1) choosing which foreign markets to penetrate; (2) determining the mode of market entry; and (3) devising the international marketing plan. Topics include global marketing planning; environmental and cultural influences on international marketing decisions; organizational and control issues in international marketing decisions; global marketing intelligence; foreign risk and feasibility studies; and issues of ethics in other countries. Prerequisite: MKT 370. Credit 3 units. EN: S

---

#### **B55 MKT 477S International Marketing Sydney**

Many companies, large & small, prepare a business environmental analysis for each country in which they do business. The analysis assesses the (consumer, industrial or organizational) demand in a particular country for merchandise like the company markets as well as the company's ability & willingness to supply that merchandise to that country. You will prepare a marketing environmental analysis for some merchandise (either a new or existing service or product) of your choice from a company of your choice in Australia. Prerequisites: MKT 370 and admission to the Asia Pacific Internship Program. Credit 3 units.

---

#### **B55 MKT 480 Marketing Strategy**

Successful business plans are dependent on well-defined and carefully crafted marketing strategies. In this course, students will explore the interconnections between business strategy and marketing strategy through a series of lectures, case discussions, and participation in an online marketing simulation exercise. The course also places heavy emphasis on the discussion of topical marketing issues faced by companies in the current environment. Students are required to read the relevant business press and bring real world issues into the class for brainstorming and interactive discussion. Through this process, students will become astute observers of the strategic trends in marketing across a variety of industries. Prerequisite: MKT 370 and completion or concurrent enrollment in DAT 121. Credit 3 units.

---

#### **B55 MKT 481 Advertising and Promotions**

This course focuses on an Integrated Marketing Communications (IMC) approach to advertising and other forms of commercial communications. The purpose is to provide future managers and practitioners with a foundation in communications theory, based on understanding the target's role in the demand chain for goods and services, as well as "hands on" experience in developing marketing communications plans. A practical understanding is provided of each of the range of marketing communications vehicles: consumer and business-to-business advertising, sales promotion/incentives, direct marketing, public relations, events and sponsorships, as well as online/interactive communications. Copy strategy, creative development, media planning, promotion strategy, and the evaluation of these programs are all addressed in this course. Industry experts will give guest lectures. We will have 4 companies in different industry sectors for which the class will develop marketing communications plans during the course. Prerequisite: MKT 370. Credit 3 units.

---

---

### **B55 MKT 482 Brand Management**

The course examines brand equity and explores brand architecture with the purpose of maximizing brand equity. It is suitable for those interested in careers in brand development. Prerequisites: MKT 370 and either completion or concurrent enrollment in MKT 378 or MKT 470N. Credit 3 units. Arch: NLCU

---

## **Organizational Behavior**

Visit online course listings to view semester offerings for B56 OB and B66 OB.

---

### **B56 OB 325 Human Resources Management**

Emphasis on development of attitudes and skills of managers and supervisors in solving human problems and in building and maintaining effective employer-employee relations. Major topic areas include: selection and placement, training, and compensation. Other topics include legal aspects of employment policies, labor relations, and other aspects of human resources management. Prerequisite: junior standing. Credit 3 units.

---

### **B56 OB 360 Organization Behavior Within the Firm**

This course provides a toolbox of skills that are necessary to be an effective team member and manager. It focuses on behavior at the individual, group, and organizational levels to provide a broad picture of management in organizations. Ongoing themes include motivation, team dynamics, organizational design, and corporate culture. Assignments, experiential exercises, and course materials are designed to build skills in team management, organization, and communication that will be useful for other group assignments as well as work experiences. Prerequisite: MGT 100 or sophomore standing. Credit 3 units.

---

### **B56 OB 400C Women in Leadership**

This courses uses a multi-faceted approach to learn about women and leadership. To better prepare students to lead in organizations, we will learn from notable leaders who will share their experiences and advice with the class. These conversations will be supplemented with cases and readings of women leaders pulled from a range of organizations as well as a review the current state of empirical evidence about the status of women as leaders. Finally, there will be time to engage in deep reflection about what students expect from their careers as well as a chance to consider the pathways they must take to become effective and inclusive leaders in increasingly diverse organizations. Prerequisite: Undergraduate standing. Credit 1.5 units.

---

### **B56 OB 431E Thinking Creatively and Leading Creative Teams**

This course is designed for students who want to improve their ability to develop creative solutions to tough business problems and to be able to inspire creativity in others. In a world of rapid change and increasing complexity, existing approaches simply won't do it anymore -- at least not for long. Thus, the ability to not only update and refresh existing products and services but also to generate ideas for new-to-the-world offerings becomes indispensable. Students who have mastered the skills of creative thinking and doing and who can foster those skills in others are therefore in a position to add tremendous value to their firms and, ultimately, to society. This course is designed to help students understand and begin to master those skills. Prerequisite: OB 360 is required for BSBA students. No prerequisite for non-BSBA students. Credit 1.5 units.

---

---

### **B56 OB 434E Talent Analytics**

Finding, developing, and retaining the best talent has always been the key to sustained success in business. Organizations today have potential access to far more useful information about people than ever before, but most struggle to access and use it effectively. In a highly competitive global market, rigorously analyzing data to enable timely and strategic decisions about talent provides a critical edge. In this course, students will learn how to use analytics to bring data and rigorous modelling to bear on people-related issues, such as recruiting, performance evaluation, leadership development and succession, job design, and compensation. Together, these factors can help organizations achieve their long-range strategic goals, rather than simply serving as administrative support functions. Prerequisites: OB 360 and DAT 220. Credit 1.5 units.

---

### **B56 OB 435E People Metrics**

Since metrics are at the core of people analytics, this course introduces students to the foundations of assessing behavior in organizations using novel measurement approaches and large datasets. Through classroom discussions and real-world applications, this course will enable students to add value to organizations through the development, use, and interpretation of innovative people metrics. Specifically, after taking this course, students will be able to develop a clear and logical conceptual measurement model. A conceptual measurement model is the foundation of creating novel and useful new approaches for assessing intrapersonal characteristics (e.g., personality) and interpersonal behavior (e.g., knowledge sharing, teamwork). This course was formerly known as OB 400F. Prerequisites: OB 360 and DAT 220. Credit 1.5 units.

---

### **B56 OB 461 Negotiation**

Skillful negotiation is an important aspect of management. This course is designed to improve a student's skills in analyzing and conducting negotiations in a variety of settings. Topics include two-party bargaining, multi-party bargaining, arbitration, and coalition formation. Prerequisite: OB 360. Credit 3 units.

---

### **B56 OB 462 Leadership in Organizations**

This course is designed to fulfill three broad objectives for students. The first is to provide a useful overview of the primary leadership perspectives, focusing on how each framework links individual leadership to organizational outcomes. The second objective involves student self-assessment of strengths and weaknesses in relation to the abilities and skills that are predictive of leadership effectiveness. The third goal of the course is to enable participants to articulate an effective strategic plan for individual leadership development. Course topics include perspectives on individual leadership effectiveness, leadership and motivation, developing subordinates, leading groups and teams, leading the resolution of conflict, and leading organizational change. Prerequisite: Sophomore standing. Credit 3 units.

---

### **B56 OB 468E Mindfulness and Performance in the Workplace**

Throughout corporate America and contemporary society, we frequently hear people touting the value of "mindfulness." What exactly is this concept, and how can it foster performance in the workplace and improve the quality of workers' lives? This course addresses these questions. More specifically, this course examines a large and growing body of research on mindfulness and mindful organizing, and it incorporates a number of cases and activities designed to hone students' attention-related skills and highlight applications of the

course material. By the completion of the course, students should be finely attuned to the nature and relevance of mindfulness for organizations and their members; they should also be able to think and behave more mindfully on an everyday basis.

Credit 1.5 units.

---

**B56 OB 472 Defining Moments: Lessons in Leadership and Character from the Top**

Most successful leaders can point to a handful of "defining moments" in their careers - key choice points that defined the trajectory of their character, their career, and/or their company. How can aspiring business leaders prepare themselves to face these defining moments with insight and integrity? How do leaders achieve business performance without sacrificing character or integrity? This course examines these questions by learning from notable leaders who exemplify both business excellence and personal character. Top executives from leading companies will sit down with us to talk about their "defining moments" and to engage with us in considering these questions. These conversations will be supplemented with contemporary cases and readings on leadership and character. Prerequisites: Senior status or juniors with permission of instructor. Credit 1.5 units.

---

**B66 OB 360P Organizational Behavior Within the Firm (Paris)**

This course provides a toolbox of skills that are necessary to be an effective team member and manager. It focuses on behavior at the individual, group, and organizational levels to provide a broad picture of management in organizations. Ongoing themes include motivation, team dynamics, organizational design, and corporate culture. Assignments, experiential exercises, and course materials are designed to build skills in team management, organization, and communication that will be useful for other group assignments as well as work experiences. This section is taught in Paris, France. Prerequisite: participation in the Business in Europe Study Abroad Program. Credit 3 units.

---

**B66 OB 400C Women in Leadership**

Using a multi-faceted approach to learn about women and leadership. To better prepare students to lead in organizations, we will learn from notable leaders who will share their experiences and advice with the class. These conversations will be supplemented with cases and readings of women leaders pulled from a range of organizations as well as a review the current state of empirical evidence about the status of women as leaders. Finally, there will be time to engage in deep reflection about what students expect from their careers, as well as a chance to consider the pathways they must take to become effective and inclusive leaders in increasingly diverse organizations. Credit 1.5 units.

---

**B66 OB 400D Thinking Creatively and Leading Creative Teams**

This course is designed for students who want to improve their ability to develop creative solutions to tough business problems and to be able to inspire creativity in others. In a world of rapid change and increasing complexity, existing approaches simply won't do it anymore - at least not for long. Thus, the ability not only to update and refresh existing products and services but also to generate ideas for new-to-the-world offerings becomes indispensable. Students who have mastered the skills of creative thinking and doing and can foster those skills in others are therefore in a position to add tremendous value to their firms and, ultimately, to society. This course is designed to help you understand and begin to master those skills. Prerequisite: OB 360. Credit 1.5 units.

---

## Supply Chain, Operations, and Technology

Visit online course listings to view semester offerings for B57 SCOT.

---

**B57 SCOT 356 Operations and Manufacturing Management**

Introduces a variety of common operations issues that are frequently dealt with in both manufacturing and service industries and that affect other functions of the business as well. Topics: inventory systems, process design and control, quality, facility location and layout, and forecasting. Prerequisites: ACCT 2610, MEC 290 or ECON 1011, and completion or concurrent enrollment in DAT 220.

Credit 3 units.

---

**B57 SCOT 400D Supply Chain Management**

A supply chain is a network of all firms and relationships that get a product to market, including the original acquisition of raw materials, production of the item at a manufacturing facility, distribution to a retailer, sale of the finished item to the customer, and any installation, repair, or service activities that follow the sale. How to effectively manage the supply chain is a central issue for all levels of management, regardless of industry. More demanding customers, the Internet and digital technology, growing competitive pressures, and globalization create new opportunities and challenges on how supply chains should be configured and managed. Many innovations and new business models have emerged, arising from application of information technology and reconfiguration of the supply chain network. Prerequisite: SCOT 356.

Credit 3 units.

---

**B57 SCOT 430E Operations Fun: Data-Driven Optimization**

The intent of this course of this course is to present a comprehensive look into the practical appeal of linear and integer programming. Each unit will focus on a particular class of optimization problems, and include a data-driven case study revolving around a real-world application. The topics of these case studies run the gamut from fantasy football line-up selection to Amazon delivery truck routing to picking the perfect McDonald's order. Prerequisites: DAT 220. DAT 301E or CS 131 strongly recommended.

Credit 3 units.

---

**B57 SCOT 458 Operations Analytics**

Examines the concepts and techniques essential for effective operations planning, scheduling, and control in various manufacturing and service organizations. Discusses the use of various models for inventory control, forecasting, production planning, and operations scheduling. Just-in-time techniques and material requirements planning systems will also be discussed. Prerequisite: SCOT 356.

Credit 3 units.

---

## Data Analytics

Visit online course listings to view semester offerings for B59 DAT.

---

**B59 DAT 120 Managerial Statistics I**

The first of a two-course sequence in business applications of statistics, focused on descriptive statistics, probability and distributions, inferential statistics, and linear regression. Approximately, the first quarter of the course is about descriptive statistics and applications of covariance. The second quarter is devoted to probability: basic

rules, conditional probabilities, Bayes' theorem, expected values, and probability distributions. This work is followed by an introduction to sampling distributions and inferential statistics. Confidence intervals and hypothesis testing are introduced to make inferences about parameters. The last one-fourth of the course focuses on simple linear regression. Throughout the course, functions, data analysis, VBA, and solver features of Excel are introduced. Prerequisite: completion or concurrent enrollment in MATH 132.  
Credit 3 units.

---

#### **B59 DAT 121 Managerial Statistics II**

The second of a two-course sequence in business applications of statistics, focused on forecasting. The course is devoted to the use of linear regression models in business, and ways to deal with problems of collinearity, outliers, non-linear relationships, and heteroscedasticity. Advanced topics including time series regression and logistic models are covered as time permits. There are quizzes and group projects in addition to a midterm and final. Prerequisites: DAT 120 or approved equivalent; MATH 132; and completion or current enrollment in MEC 290 or ECON 1011.  
Credit 3 units.

---

#### **B59 DAT 220 Analytics and Modeling for Business Decisions**

The primary goal of this course is to help students become effective problem solvers, smart consumers of data, and intelligent business decision makers in various management situations. The course utilizes structured problem-solving approaches that heavily rely on data for defining the problem, uncovering useful relationships between critical variables and outcomes, defining measures for evaluating alternatives, modeling underlying conceptual relationships, constraining resources, and proposing via a rigorous search process of exploration and exploitation "best fitting and robust" solutions for the given environment and its underlying uncertainties. Applications of those analytic tools will be illustrated using examples from various business functional areas, finance, marketing, operations, economics and strategy. Prerequisites: DAT 120 and completion or concurrent enrollment in DAT 121.  
Credit 3 units.

---

#### **B59 DAT 301E Data Analytics in Python**

This course is an introduction to data science in Python, which assumes no prior programming experience. The course is broken down into two units. In the first unit, students will be introduced to the basics of Python as a programming language. The second unit of the course is devoted to data analytics; students will use Python to explore and visualize real-world data sets from various industries including finance, sports, and technology. Prerequisite: Sophomore Standing  
Credit 3 units. EN: TU

---

#### **B59 DAT 400A Data Management Tools for Business Decisions**

This course prepares students for success in many business analyst roles. The tools covered in this course will prepare students well for roles in finance, accounting, quantitative marketing, information systems, operations, talent analytics, and others. As companies collect more data internally and augment this with external data sources, collecting, maintaining, and organizing data is becoming an essential skill for success in many roles. Developing creative reports and dashboards that are updated in real time are demanded in today's data-driven decision-making environment. While there are a plethora of tools available to support business analysts, this course focuses on VBA in Excel and SQL, two critical tools for reporting and dashboards. Students will also be introduced to Tableau, the state-of-the-art visualization software. These tools are introduced within the broader organizational data environment to provide an understanding of the role of the business analyst within the organization. Companies' data environments traditionally include enterprise resource planning (ERP)

systems, customer relationship management (CRM) systems, relational databases, external data sources, data warehouses, and data cubes. Understanding the roles of each component of the data environment enables students to utilize each effectively. Prerequisites: CSE 131 or DAT 301E and completion or concurrent enrollment in DAT 220.  
Credit 3 units.

---

## **Degree Requirements**

The Bachelor of Science in Business Administration degree is awarded to students by recommendation of the faculty. Standards established by the faculty for recommendation are as follows:

1. Satisfactory completion of requirements regarding required and elective courses, accumulation of a minimum of 120 units of course work, and satisfactory fulfillment of other requirements established in accordance with the rules and regulations of the Olin Business School.
2. Completion of the last 30 units in residence at Washington University for entering first-year students. Transfer students must complete a minimum of 60 units in residence at Washington University.
3. Students must earn a minimum 2.0 overall grade-point average and a 2.0 GPA in all professional course work taken at Olin Business School.
4. Students must be recommended by Olin Business School faculty for degree confirmation by the Board of Trustees.

## **Regulations**

1. Students must complete a minimum of 120 units, including 48 units outside of Olin Business School and 60 units from within the Olin Business School. Students who substitute a non-business course for a business requirement will still be required to enroll in another business course, as a minimum of 60 credits must be earned in Olin Business School.
2. BSBA students may earn a maximum of two majors to include two professional majors or one professional major and one major outside of Olin Business School.
3. BSBA students may earn one or two minors, depending on the number of majors they pursue. The options are two majors and one minor or one major and two minors.
4. BSBA students may enroll in one physical education course per semester.
5. BSBA students may transfer up to 6 credits per summer toward their BSBA degree requirements. Olin Business School does not accept any online course work for transfer credit (exceptions were granted for Summer 2020 and 2021).
6. BSBA students must complete 54 of the 60 professional units in residence. Course work taken as part of an approved Washington University international program will satisfy this residency policy.
7. BSBA students must complete all professional courses for each business major in residence. Course work taken as part of an approved Washington University international program will satisfy this residency policy.

8. BSBA students may double count only one course in a business major. For example, if a BSBA student is majoring in both marketing and entrepreneurship, they could not count MKT 378 and MKT 482 toward both majors.
9. ROTC units numbered 300 or above will count toward the student's 120 units required for graduation. These credits may count toward the advanced non-business requirements if the course is taken for a grade.
10. Students are obligated to complete the requirements and adhere to the policies in place at the time of matriculation into the BSBA program. However, faculty has and reserves the right to make changes to degree requirements, policies and procedures — including modifying or adding new requirements, policies and procedures — at any time.
11. For more policies, visit the Academic Regulations page (p. 1193) of this *Bulletin*.

## General Requirements (a minimum of 48 units)

Each student must complete a minimum of 48 units outside of Olin Business School to include the following specific requirements:

1. College Writing (3 units): Students must demonstrate proficiency in the reading and writing of the English language by satisfactorily completing one College Writing Program themed writing course with a grade of C- or better.
2. Calculus (3-6 units): Students must complete Math 131–Math 132 or other calculus courses approved by the Olin Business School.
3. Distribution Requirements (18 units): Students must complete 3 units of physical and life sciences, 3 units of humanities, 6 units of international studies, 3 units of behavioral analysis, and 3 units of ethics and values. Approved course selections are available in the university's course listings.
4. Advanced Electives (12 units): Students must complete at least 12 graded units of advanced course work. Advanced electives are defined as any course numbered 300 or higher that is offered as any day division course (excluding Olin courses). Advanced electives may also satisfy a distribution requirement.

## Professional Requirements (a minimum of 60 units)

### Core Requirements (42 units)

Code	Title	Units
ACCT 2610	Principles of Financial Accounting	3
ACCT 2620	Principles of Managerial Accounting	3
DAT 120	Managerial Statistics I	3
DAT 121	Managerial Statistics II	3
DAT 220	Analytics and Modeling for Business Decisions	3
FIN 340	Capital Markets and Financial Management	3

MEC 290	Microeconomics	3
MEC 292	Global Economy	3
or Econ 1021	Introduction to Macroeconomics	
MGT 100	Individual in a Managerial Environment *	3
MGT 150A	Foundations of Business **	2
MGT 201	Management Communication	4
MKT 370	Principles of Marketing	3
OB 360	Organization Behavior Within the Firm	3
SCOT 356	Operations and Manufacturing Management (formerly OSCM 356)	3
<b>Total Units</b>		<b>42</b>

\* Transfer students entering Olin Business School must take MGT 100 or MGT 380 to satisfy this requirement.

\*\*Transfer students entering Olin Business School after their first year are not required to take MGT 150A. However, a minimum of 60 credits must be earned in Olin Business School.

## Professional Electives (a minimum of 18 units)

Professional electives are non-required business courses offered by Olin Business School that may or may not lead toward a specific business major. Additional information about the specific requirements for each business major is available on the Olin Business School Majors page (p. 1158).

## Global Mindset Component (1.5-3 units)

The Global Mindset component for the undergraduate BSBA degree is designed to support the Olin Pillars of providing world-changing business education, research, and impact. Through a Global Mindset experience, students will have the opportunity to expand their intellectual curiosity, gain confidence in their ability to make decisions under pressure, and enhance their leadership advantage in a rapidly changing global society. Students will be able to satisfy the Global Mindset component of their degree through a variety of experiences that expose them to new academic and professional ideas, peoples, cultures, and philosophies. This could be done through an Olin-approved study abroad program or with a carefully curated set of experiences completed on campus and in the St. Louis community, including INTL 350E GLocal Learning: Engaging with the World Locally, a 1.5-credit course.

## Electives (units will vary)

Students must take enough electives to earn the minimum of 120 units.

## Typical Four-Year Curriculum for a BSBA Student

Typically, students must earn 30 units per year to stay on target with a four-year graduation plan and to earn the 120 minimum credits required.

### First Year

Fall	Units	Spring	Units
MGT 100	3	MEC 290	3
MGT 150A	2	Electives	6
Math 131 or higher*	3	DAT 120	3
English Composition**	3	Math 132 or elective	3
Electives	3-6

Electives	3-9	Electives	3-9

### Senior Year

Fall	Units	Spring	Units
Professional electives	6	Professional electives	6
Electives	9	Electives	9

\* Students may enroll in a higher level of calculus if their academic preparation suggests a different level of calculus would be appropriate.

\*\* BSBA students are assigned to enroll in their College Writing Program course in either the fall or spring semester of their first year. Some students may start at a different level of English preparation and may take their writing course as late as sophomore year.

## Academic Honors & Awards

**Scholars in Business Program:** The Scholars in Business program allows alumni, corporations and friends of Olin Business School to provide scholarship funds to students of high academic promise who require financial support to attend the university. Students are considered for this award when they apply for financial aid in the fall of each year. Donors and students meet each other at an annual Scholars in Business event.

**Dean's List:** Dean's List honors are awarded to undergraduates who have completed a minimum of 14 graded units and achieved a semester grade-point average of 3.6 or above. No Incomplete or "N" grades may be outstanding as part of the student's semester record.

**Beta Gamma Sigma Honor Society:** The top 7% of the junior class and the top 10% of the senior class will be considered for membership in Beta Gamma Sigma, provided that the student's cumulative GPA is in the top 7% or top 10% of their respective graduating class. A student's cumulative GPA will include their course work at Washington University as well as any course work taken out of residence. The student must have completed a minimum of 30 units at Washington University to be eligible.

**Latin Honors:** Graduating seniors in the top 5% of the class, based on overall university academic records, graduate summa cum laude. Seniors in the top 6% to 15% of the class graduate magna cum laude. These designations are recorded on the official university transcripts. All candidates for the BSBA degree in August, December or May will be considered as one group for purposes of final honors. Honors are determined in May for all graduates.

**Honors in Management:** The Honors in Management (HIM) Seminar is a two-semester sequence course that gives students the opportunity to work with senior-level faculty in a specialized format. In the fall semester, the HIM course will be team taught with various faculty members. For the spring semester, students will form teams to develop substantial research projects under the direction of one of the participating faculty for the remainder of the academic year. HIM students must successfully complete both MGT 490 and MGT 491 in order to receive the Honors in Management designation at graduation.

**Honors Thesis:** The Olin BSBA Honors Thesis challenges students to move beyond traditional course work and apply critical thinking skills to an academic business thesis. The Honors Thesis is a two-semester sequence in which the student engages in research and analysis during the first semester; with successful progress, the student writes, presents and defends their research during the subsequent semester. Students must apply and be approved to participate in this experience. All applicants must be senior BSBA degree students in good standing with a cumulative GPA of 3.7 or above.

## Academic Regulations

### Code of Conduct

The Olin Business School is a community of individuals with diverse backgrounds and interests who share certain fundamental goals. Primary among these goals is the creation and maintenance of an atmosphere conducive to learning and personal growth for everyone in the community. Becoming a member of the Olin and Washington University community is a privilege that brings certain responsibilities and expectations. It is imperative that all individuals associated with Olin and Washington University conduct themselves with the utmost integrity in all aspects of their lives, both on and off campus. Learn more about the Code of Conduct by reviewing the Olin Undergraduate Policies site.

### Attendance

Olin Business School allows each instructor of a course to decide how many absences the student may have and still pass the course. The Olin Business School expects faculty to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their instructors the reasons for any absences and to discuss with them the possibility of making up missed assignments.

### Enrollment

BSBA students must be enrolled in a minimum of 12 units to a maximum of 21 units each semester. Olin undergraduates will be assessed a full-time tuition charge for their course of study through eight semesters of enrollment.

### Units and Grades

A unit is a measure of quantity given for one hour of lecture or recitation course a week for one semester. A grade point is a measure of the quality of work done in the course. Grade points per course are calculated by multiplying the number of units of a course by the grade points earned. A student may retake a course if a higher grade is required or desired. The initial grade received in the course remains on the student's record, along with an R to indicate that the course was repeated. Credit is given only once for taking the course, and only the higher grade is used in computing the student's grade-point average. Please review the Undergraduate Study (p. 31) page to see how grades are used in calculating the grade point average.

### Auditing a Course

A student may take a maximum of one course per semester on a pass/fail/audit basis. Students may not audit a business course. However, a student may take non-business courses for audit with the approval of the professor. An audited course does not count toward the student's degree requirements. A grade of L indicates the satisfactory completion of an audit; unsatisfactory completion results in a grade of Z. Fees for auditing a course are assessed at the same rate as for all other courses.

### Pass/Fail Option

A student may take a maximum of one course per semester on a pass/fail/audit basis. A grade of P# (pass) indicates that credit has been awarded but the work was not subject to finer evaluation. The following policies are in effect starting Fall 2021. Courses taken previously will not retroactively be changed.

- All Olin professional, major, and minor courses must be taken for a letter grade. This includes any non-BU courses counting toward Olin's professional course work (i.e., Econ 1021 as a substitute for MEC 292). For second majors and minors outside of Olin, students should speak with their second major or non-Olin minor advisor.
- Olin courses taken pass/fail cannot count toward the 60 required business units. However, they will count toward the 120 units required for graduation.
- A maximum of 6 Olin units may be taken as pass/fail after a student has completed six full-time semesters of enrollment or if the student is in their senior year.
- Pass/fail cannot be used for Math 131, Math 132, College Writing, or the Ethics and Values distribution requirement.
- A maximum of 9 units of distribution or advanced electives can be taken pass/fail. The pass/fail course may only count toward one requirement. In other words, a single pass/fail course cannot be double counted toward a distribution and an advanced elective.
- Not all courses have the pass/fail option. Please check the course listings.

### Incomplete Grades

A student may be given an I (incomplete) when extenuating circumstances preclude the satisfactory completion of course work during the semester in which a particular course is taken. While an incomplete grade is sometimes appropriate, a student should make every effort to avoid the accumulation of incomplete grades. Incomplete grades are expected to be finished. Failure to finish an incomplete grade by the following semester will result in a failing grade.

### Course Conflicts

Per University Policy, students may not enroll in courses with any time conflict. Exceptions will only be made in the most extraordinary of circumstances. Any and all exceptions must be approved by the Office of the Provost and the student's home school. Questions should be answered by reviewing the University Policy.

### Minimum and Maximum Course Loads

Olin Business School students are required to enroll in a minimum of 12 units to a maximum of 21 units each semester at Washington University. For more information, please visit the Undergraduate Study (p. 31) page of this *Bulletin*.

## Repeating a Course

A student may retake a course if a higher grade is required or desired. The initial grade received in the course remains on the student's record. An R will be placed next to the course with the lower grade to indicate that the course was repeated. Credit is given only once for taking the course, and only the higher grade is used in computing the student's GPA.

## Academic Standing

Olin students are expected to maintain a high level of scholarship during their time at Washington University. Approximately three weeks after the end of a semester, the Academic Review Committee reviews the record of each enrolled student. Students must attain and maintain a minimum 2.0 GPA in their professional (business), semester, and cumulative GPAs to be in good academic standing. In addition, students must be making progress to complete their professional requirements within a reasonable time period. Failure to achieve minimum standards may result in the student's academic records being reviewed for academic action.

To learn more about academic standing, please review the University's policies (p. 31).

## Satisfactory Academic Progress for Title IV Federal Financial Aid

The minimum GPA requirements needed to maintain eligibility for Satisfactory Academic Progress are dictated by the specific program of study. In each case, per the requirements of 34 C.F.R. 668.34(a)(4)(ii), the federal student aid program requires a minimum of a C average to maintain eligibility for aid, but an individual degree or certificate program may have a higher minimum GPA for federal Satisfactory Academic Progress. Olin Business School requires a minimum 2.0 cumulative GPA for Satisfactory Academic Progress. (Additional information about Satisfactory Academic Progress is available from Student Financial Services.)

## Leave of Absence Process

If a student is an undergraduate in good standing at the completion of a term, they are eligible to apply to take a leave of absence from Olin Business School. Students should review the current edition of the BSBA Student Handbook for any additional information.

**Medical Leave of Absence:** A student wishing to take a medical leave of absence (MLOA) should first talk with a WashU Cares Leave Case Manager. The process for a student's request for an MLOA or for re-enrollment will be managed by WashU Cares. For more information, reach out to [studentmedleave@wustl.edu](mailto:studentmedleave@wustl.edu).

**Leave of Absence:** The student should first contact their academic advisor to discuss the situation. Students must submit a request for a leave of absence to their four-year academic advisor. A student on an approved leave of absence should submit a Reinstatement Form by March 1 for a fall semester return or October 1 for a spring semester return.

**Withdrawal from the University:** A student who wishes to formally withdraw from Washington University should meet with their business school advisor to file a Withdrawal Petition. If a student wishes to return after formally withdrawing from Olin Business School, that student must re-apply for admission.

## Transfer Credit

The Olin School expects that all degree requirement courses be taken at Washington University. However, students who are enrolled at Olin and wish to receive transfer credit for course work taken at another institution may request course approval. Transfer course approval must be received prior to the start of the transfer course. General guidelines are as follows:

- A grade of a C or better must be earned for all transfer credit to be accepted (including course work taken through a Washington University–approved study abroad program).
- The Olin School expects that all business courses will be taken at Washington University. Under certain circumstances, permission may be granted for a student to take a business course from another university with accreditation from the Association to Advance Collegiate Schools of Business (AACSB) International. For consideration to be given, a syllabus showing the text used must be submitted.
- All business major and minor course work must be taken in residence. Although major and minor course work can be taken through an approved study abroad program, only one course will be counted for each major and minor.
- The institution must meet accreditation requirements.
- A syllabus for each course must be submitted with the request for review.
- No credit will be granted for course work taken online through another university.
- 54 of the 60 Olin professional units must be taken in residence.
- A maximum of 6 units may be taken during a summer program from another university.
- Credit will not be given for course work taken at another institution during a student's last 30 credit units.
- No course work may be taken at a two-year institution after a student has accumulated 60 credit units of work.
- No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Conduct Code or Academic Integrity policy.
- No transfer credit will be accepted for courses taken while a student is on a leave of absence.

## School of Continuing & Professional Studies Courses

BSBA students may enroll in one course in the School of Continuing & Professional Studies per semester. However, these units will not count toward the 120 units needed for the BSBA degree nor toward the student's GPA.

## Pre-Matriculation Units

Pre-matriculation units are earned before the student's enrollment at Washington University as a first-year student. These units would include Advanced Placement (AP) examinations, International Baccalaureate (IB) programs, British Advanced (A) Levels, and college credit earned after the student's sophomore year in high school. These units will be noted on the student's transcript. The maximum number of pre-matriculation units awarded is 15. These pre-matriculation credits will transfer as general elective course work and will not satisfy any distribution requirements. If a student takes a course in residence for which they have already received AP credit, the AP credit will be removed automatically. All BSBA students and second majors will be required to take DAT 120 Managerial Statistics I, even when AP credit is earned for SDS 2200 Elementary Probability and Statistics.

## Olin Undergraduate Student Handbook

The Olin Undergraduate Student Handbook includes general academic policies and procedures for the undergraduate programs of the Olin Business School at Washington University. Please read and refer to the handbook to answer any questions about the undergraduate business program. If a student has questions about the interpretation of the policies and procedures or topics that are not in the handbook, they should consult their academic advisor.

## Administration

### Michael Mazzeo, PhD

Dean of Olin Business School  
PhD, Stanford University

### Paige LaRose

Senior Associate Dean of Undergraduate Programs

---

For more information about Olin's leadership, please visit Olin Business School Leadership.

## Majors (directory)

### Majors Offered by the Olin Business School for BSBA Degree Candidates

- Accounting (p. 1158)
- Economics and Strategy (p. 1158)
- Entrepreneurship (p. 1158)
- Finance (p. 1158)
- Financial Engineering (p. 1158)\*
- Health Care Management (p. 1158)
- Marketing (p. 1158)
- Organization and Strategic Management (p. 1158)
- Supply Chain, Operations, and Technology (p. 1158) (formerly Operations and Supply Chain Management)

\* The financial engineering major is offered to any undergraduate day division student as a second major option only.

### Majors Offered by the Olin Business School for Non-BSBA Students

- Accounting (p. 1163)
- Economics and Strategy (p. 1163)
- Entrepreneurship (p. 1163)
- Finance (p. 1163)
- Health Care Management (p. 1163)
- Marketing (p. 1163)
- Organization and Strategic Management (p. 1163)
- Supply Chain, Operations, and Technology (p. 1163) (formerly Operations and Supply Chain Management)

## Minors (directory)

### Minors Offered by the Olin Business School for BSBA Degree Candidates

- Business Analytics (p. 1161)
- Business of Arts (p. 1161)
- Business of Entertainment (p. 1161)
- Business of Social Impact (p. 1161)
- Business of Sports (p. 1161)

## Minors Offered by the Olin Business School for Non-BSBA Students

- Accounting (p. 1163)
- Business Analytics (p. 1163)
- Business of the Arts (p. 1163)
- Business of Entertainment (p. 1163)
- Business of Social Impact (p. 1163)
- Business of Sports (p. 1163)
- Entrepreneurship (p. 1163)
- Finance (p. 1163)
- Health Care Management (p. 1163)
- Managerial Economics (p. 1163)
- Marketing (p. 1163)
- Organization and Strategic Management (p. 1163)
- Strategy (p. 1163)
- Supply Chain, Operations, and Technology (p. 1163)

# Engineering

## Mission Statement

The mission of the McKelvey School of Engineering at Washington University in St. Louis is to promote independent inquiry in engineering research and education with an emphasis on scientific excellence, innovation and collaboration without boundaries.

WashU Engineers produce new knowledge that changes the world, and our faculty are educating students to explore and create in a world we cannot yet imagine. Through research and education, we are making a positive impact on the local community, the country and the world.

## Undergraduate Degree Programs

The McKelvey School of Engineering offers four-year, full-time programs of instruction leading to bachelor of science degrees in the following fields: biomedical engineering, chemical engineering, electrical engineering, environmental engineering, mechanical engineering, and systems science and engineering.

In addition, the Department of Computer Science and Engineering offers bachelor of science degrees in computer engineering, computer science, computer science + math, computer science + economics, data science, and business and computer science. The Bachelor of Science in Business and Computer Science (p. 1240) is an integrated joint-degree program offered through the Olin Business School and the McKelvey School of Engineering. Students in this program will be equipped with the fundamental knowledge and perspectives of computer science and business and will have unique opportunities to converge these two disciplines.

If a student is interested in an academic program broadly based on the engineering sciences, the McKelvey School of Engineering offers the Bachelor of Science (BS) Major in Applied Science degree with several options, including chemical engineering, electrical engineering, mechanical engineering, and systems science & engineering. These degree options provide more flexibility for students who do not intend to become licensed engineers and want to select their course work according to their personal educational objectives. For example, some students use this flexibility to gain technical background and training while pursuing or preparing for professional training in medicine, business or law. Although the flexibility exists to do so, it is not necessary to combine an applied science degree program with another major or degree. Students may also use this added flexibility to achieve a well-rounded undergraduate education by selecting courses from across the university while pursuing a degree in the McKelvey School of Engineering.

## BS in Engineering (Individually Designed Major)

The requirements to be admitted to an individually designed major (IDM) are more stringent than those for our other engineering degree programs. The IDM will not be available to students when they first enter Washington University, so it will not be listed on the admissions application as an option.

Students applying for an IDM should meet the following requirements:

- Have already completed at least one semester at Washington University
- Apply before the beginning of the junior year
- Have at least a 3.5 cumulative grade-point average at Washington University and be maintaining good standing in the McKelvey School of Engineering
- Find an Engineering faculty member who will agree to serve as their IDM advisor (The student and advisor will design a plan of study that lists the courses that must be successfully completed to earn the IDM. That plan must include at least 42 engineering units of credit.)
- Satisfy all other general engineering degree requirements
- Present (with the help of their advisor) the plan to a standing engineering committee (normally the Engineering Undergraduate Studies Committee), which will then assess the proposed plan and approve or deny the request

## Combined Majors and/or Multiple Degrees

### Multiple Majors in Engineering

All undergraduate divisions at Washington University allow students to pursue majors and degrees in more than one division. The following options are available:

### Second Degrees

A student in any undergraduate division of the university may be allowed by another division to pursue a second bachelor's degree. For this, the student must satisfactorily complete all of the degree requirements for *both* degrees in order to earn two diplomas. These requirements may include a residency requirement. For engineering majors, this residency requirement is described elsewhere on this page. In addition, the College of Arts & Sciences requires any student earning an AB degree and a bachelor's degree from another division to earn a minimum of 150 total units. If the additional residency and units requirement for a second degree are incompatible with a student's plan, then the student should consider a second major as a more convenient and equally viable alternative.

## Second Majors

A student pursuing a bachelor's degree in engineering may also pursue second majors offered by other undergraduate divisions. There are six second majors offered by the McKelvey School of Engineering: computer science, computer science + mathematics, data science, electrical engineering science, financial engineering and systems science. In addition, there are second majors offered by the College of Arts & Sciences and Olin Business School. Students may declare a second major online via WebSTAC up until the time they have filed an Intent to Graduate. Upon completion of the requirements, the student's transcript will show an engineering degree and all earned second majors. Only one diploma is granted; no reference to the second major is noted on the diploma.

## Minors

Undergraduate students are allowed to pursue minors offered by any undergraduate division of the university. A minor usually requires five to six courses. The minor program's home division sets the requirements for admission to and completion of the minor program. Students may declare a minor online via WebSTAC up until the time they have filed an Intent to Graduate. An engineering student who completes all of the requirements will have the award of the minor noted on the official transcript; no reference to the minor is noted on the diploma.

**Residency Rule for Engineering Minors:** No more than 6 units of credit transferred from another institution (outside of Washington University) can be used to meet the requirements of any minor offered by the McKelvey School of Engineering. The remaining units (up to the amount required for the minor) must be applicable units from Washington University. The review committee that oversees a minor has the authority to establish a more stringent residency rule.

## Interdivision Transfers

Washington University embraces a student's opportunity to change academic majors, even across different undergraduate divisions on campus. Exploration and flexibility are attributes of an excellent undergraduate experience.

In order to ensure a proper background for success in the James McKelvey School of Engineering, prior to an interdivision transfer request being accepted, students must do the following:

1. Complete at least one non-summer semester in residence at the Washington University Danforth Campus immediately prior to the requested semester of transfer.
2. Successfully complete an L59 CWP College Writing course or an equivalent approved transfer course.
3. Complete at minimum Math 132 Calculus II with a grade of B or better.
4. Complete at least one 3-credit course within the intended major being pursued with a grade of B or better. (Additional requirements for majors in the Department of Computer Science & Engineering are given below.)

5. Achieve a cumulative grade-point average of 3.0 or higher and grades of B or better in math and science courses and courses taken in the McKelvey School of Engineering (some departments may require a higher GPA), with no outstanding incomplete (I) grades.
6. Demonstrate a high regard for academic integrity. (Students found to be in violation of the Academic Integrity Policy may be required to delay their entry for a specified time as determined by the transfer dean.)
7. Meet with the transfer dean or a four-year advisor in Engineering Undergraduate Student Services (303 Lopata Hall) to ensure that the curriculum plan is on track for progress toward graduation.
8. Understand that undergraduate McKelvey Engineering students may only enroll in a limited number of School of Continuing & Professional Studies courses that have been preapproved by the Engineering Undergraduate Studies Committee. (Refer to our policy on School of Continuing & Professional Studies courses (p. 1311) for more information.)
9. Be aware that changing majors may result in the need to complete one or more additional semesters to graduate.

These are the minimum requirements. Each student is evaluated on a case-by-case basis.

There are additional minimum requirements to complete for the following degree programs:

- **BS in Data Science, CS+Math, CS+Econ, and Computer Engineering**
  - Complete CSE 247 Data Structures and Algorithms with a grade of B or better.
- **BS in Computer Science**
  - Complete CSE 132 Introduction to Computer Engineering, CSE 240 Logic and Discrete Mathematics, and CSE 247 Data Structures and Algorithms with grades of B or better.
- **BS in Business and Computer Science**
  - Maintain a minimum GPA of 3.5 overall and in all business and computer science courses.
  - Complete a minimum of two business and two computer science core courses that are required as part of the BS in Business and Computer Science curriculum.
  - Demonstrate the ability to complete the degree in a timely manner.

## Bachelor's/Master's Program in Engineering

This program provides students the opportunity to earn McKelvey master's degrees, including Sever master's degrees. Interested students are encouraged to discuss the program with faculty advisors by the end of their junior year in order to best develop a plan for their master's study.

Students must meet the admission requirements and application deadlines stipulated by McKelvey and the department of interest. A minimum 3.0 GPA is required for admission, but some programs may have higher GPA requirements. Each McKelvey department has the option to participate as well as to select which master's programs to offer students.

Scholarship support may be offered to students during their master's study. Financial policies and their related deadlines are established by the McKelvey Dean. Full-time student status is typically required to be eligible for scholarship support.

## McKelvey Undergraduates

The Bachelor's/Master's Program for current McKelvey undergraduate students normally takes one additional year to complete. When approved by the department, up to 6 units counted toward the undergraduate program requirements can be used to satisfy the graduate program requirements. However, at least 144 units must still be completed, and all stipulated degree requirements for all programs must be satisfied.

Undergraduate programs include all degree programs, second majors, and minors. Graduate programs include all master's degrees and graduate certificates. This means that the full undergraduate experience may only overlap with the full graduate experience by 6 units. All course sharing restrictions among undergraduate programs will still be enforced, and all restrictions among graduate programs will still be enforced.

To satisfy residency, McKelvey BS/MS students must complete a minimum of 84 applicable Washington University units. Students must also meet the minimum residency required by their graduate programs.

The cumulative GPA used to determine undergraduate final Latin honors will include all undergraduate and graduate course work completed up until the time Latin honors are officially determined.

## Non-McKelvey Undergraduates

Non-McKelvey Washington University undergraduate students (i.e., undergraduate students in Arts & Sciences, Olin, and Sam Fox) are also eligible to participate in the Bachelor's/Master's Program. These students earn a bachelor's degree from their non-McKelvey undergraduate school and complete a master's degree with McKelvey.

Admitted students are required to meet all application deadlines and admission requirements. They are limited to the course sharing between undergraduate program requirements and graduate program requirements outlined above and must meet the 144 units of required course work. The minimum residency required by their graduate program must be satisfied.

Admitted students might take longer than one year to complete the requirements for a McKelvey master's degree. A reasonable number of required prerequisite courses as defined by the department may be taken while admitted to the master's program, but these courses will

not be counted toward the McKelvey master's degree if they are courses not normally counted toward its requirements. Prerequisite courses will count in the student's GPA when determining probation/suspension eligibility and Satisfactory Academic Progress (SAP) standards.

## Other Bachelor's/Master's Programs

These programs allow engineering undergraduates to earn master's degrees outside of the McKelvey School of Engineering. Students in these 3/2 programs will pay the standard full-time undergraduate tuition rate for the fourth year, except for those in the MBA program, which charges a premium above the undergraduate tuition rate. Students will receive financial aid for the fourth year based on their eligibility for undergraduate financial aid awards, including Pell grants.

There is no commitment for undergraduate financial aid beyond the fourth year of study; students in 3/2 programs may apply to the professional programs for graduate student financial aid for study in the professional program beyond the fourth year.

This policy applies to the current 3/2 programs involving bachelor's/master's programs in engineering, social work and business and to any future Washington University 3/2 programs.

## BS/MBA Program

The McKelvey School of Engineering and the Olin Business School offer a five-year program leading to the Bachelor of Science engineering degree and the Master of Business Administration degree. The purpose of the program is to provide students with the opportunity to develop an educational background particularly in demand by industry.

Students should apply to this joint program by April 1 of their junior year. They must complete the application for admission to the Olin Business School, which is available through the business school. There is no GPA requirement, but students must take the Graduate Management Admission Test (GMAT). Registration materials for the test may be obtained through the business school. Applicants are judged on undergraduate performance, GMAT scores, summer and/or co-op work experience, recommendations and personal interviews.

The BS/MBA student's fourth-year curriculum is composed largely of business courses. The fifth-year curriculum is divided almost evenly between business and engineering courses. Because the merging of the two curricula results in very tight scheduling, it is possible that course overloads may be necessary to complete both programs in 10 semesters. Students are strongly urged to meet with their advisors to plan the remaining years of the program.

## Dual Degree Program

The McKelvey School of Engineering offers a dual degree program with numerous affiliated liberal arts colleges and universities. Qualified students earn both a non-engineering baccalaureate from the first school and a Washington University bachelor's degree in engineering by attending the affiliated institution for three or four years, then completing the program with two years of concentrated engineering study at Washington University.

If students are enrolled at an affiliated institution, they may apply for admission to dual degree study under this program, provided they are recommended by an official representative of their college or university and will receive or have received the non-engineering baccalaureate. For more information, please visit the Dual Degree Program website.

## Engineering Undergraduate Degree (Undergraduate Two-Year Option)

Students enter as undergraduate students and complete a liberal arts degree from their current school and an engineering undergraduate degree from Washington University. Participants are undergraduate students who commonly follow a 3/2 or a 4/2 schedule, entering Washington University after their junior or senior year. Please note that all students earning an undergraduate engineering degree are required to complete a minimum of 60 course units at Washington University.

## Engineering Undergraduate and Graduate Degrees (Graduate Three-Year Option)

Students enter as graduate students and complete both a liberal arts degree from their current school and then an engineering undergraduate degree and engineering master's degree in three years at Washington University. The engineering master's degree and the undergraduate degree can be in different areas. Participants commonly follow a 3/3 or 4/3 schedule, entering Washington University after their junior or senior year. Please note that all students earning both an undergraduate and graduate degree are required to complete a minimum of 84 course units at Washington University and adhere to the Bachelor's/Master's policies outlined above. The GRE is not required for admission.

## Study Abroad and International Experiences

Students in the McKelvey School of Engineering can study abroad in a number of countries and participate in several global experiences to help broaden their educational experience. These opportunities enable students to become global citizens who are better able to address current issues.

For information about these programs, please visit the McKelvey School of Engineering website.

## Cooperative Education and Internships

The McKelvey School of Engineering offers two options for completing academically relevant work experience while remaining enrolled as a student. The Engineering Co-op and the Engineering Internship each allow McKelvey students to gain in-depth engineering experience while working alongside practicing engineers.

The Engineering Co-op and the Engineering Internship are available to students enrolled in degree-seeking programs housed in McKelvey. Students pursuing degrees outside of McKelvey — even those seeking second majors or minors within McKelvey — are not eligible to participate. Each experience has additional eligibility criteria as outlined on the below linked site. An application and departmental approval are required.

For more information about the Engineering Co-op and the Engineering Internship, please visit the Engineering Co-op and Engineering Internship website.

## Pre-Medical Education

The McKelvey School of Engineering makes available, as options within its undergraduate degree programs, curricula that prepare students for entry into medical, dental or veterinary school while they pursue the undergraduate degree.

These curricula were formulated in recognition of the increasing importance in medicine of the methods and subject matter of the basic engineering sciences. The student who successfully completes one of the curricula will be well prepared for the study of medicine and will have, in addition, a solid background in engineering. Moreover, the student who decides not to go on to medical school will have an exceptionally wide selection of options, including not only those commonly open to the graduate in engineering but also those usually undertaken after graduate study in the life sciences. In accordance with the recommendations of the school's Pre-Medicine Committee, all curricula include — in addition to the normal degree requirements — the following courses:

- **Biology:** Biol 2960, Biol 2970
- **Biochemistry:** Biol 451
- **General Chemistry:** two semesters with lab
- **Organic Chemistry:** two semesters with lab
- **General Physics:** two semesters with lab
- **Psychology:** Psych 100B
- **Social Sciences:** one course related to health care access and disparities

Many medical schools have other assorted prerequisites, which can be found in the AMCAS Instruction Manual. Students may download the manual from the Association of American Medical Colleges (AAMC) website.

If students are interested in attending medical or dental school, they must consult and register with the Engineering Pre-Medicine Advisor before the end of their sophomore year. Engineering students should contact the pre-medical advisor in Engineering Undergraduate Student Services, Lopata Hall, Room 303.

There is extensive detailed information concerning the Medical College Admission Test, the choice of advanced biology or chemistry courses, and the choice of medical school that should be discussed prior to the beginning of the junior year. Students requesting a cover letter from the Pre-Medicine Committee must complete the Pre-Health Application Institutional Review (PIR) by April of the year in which they apply.

## Engineering Summer School

The McKelvey School of Engineering offers a variety of engineering courses each summer. Class times are varied to accommodate both traditional daytime students and those with full- or part-time employment. The engineering summer school calendar comprises one full eight-week evening session as well as several accelerated sessions of shorter duration.

If students are interested in enrolling in an engineering summer course, they can obtain further information in Lopata Hall, Room 303, or by phone at 314-935-6100.

## Student Services

### Engineering Undergraduate Student Services

Engineering Undergraduate Student Services, which is located in Lopata Hall, Room 303, has three main areas: Admissions, Advising Support, and Registrar. Our admissions officers work closely with the university Admissions Office to provide current and useful information to students and parents who are learning about our university, our community, and the opportunities available in the McKelvey School of Engineering. The advising staff has a comprehensive knowledge of all campus resources and can help with such items as tutoring, international studies, assistance with the registration process, and general advising. The registrar handles class scheduling, transfer and AP credit, course registration, graduation eligibility, and other student-records-related processes. Engineering Undergraduate Student Services serves all students, faculty and staff. For an appointment, call 314-935-6100.

### Engineering Communication Center

The Engineering Communication Center offers all engineering students, faculty and postdocs free help with their engineering communication needs. The faculty who staff the center work with individuals to define audiences and purposes, develop and organize ideas, create effective graphics and page design, and sharpen self-editing skills. Help is offered for résumés and employment correspondence, proposals, formal reports, lab reports, graduate program application statements, and presentations. For an appointment, call 314-935-4902 or email the Engineering Communication Center ([ecc@seas.wustl.edu](mailto:ecc@seas.wustl.edu)).

### The Career Center

The Career Center helps engineering students prepare for a lifetime of career management by offering innovative approaches to help prepare them for a successful co-op experience, internship and job search. The Career Center offers a variety of services and resources for engineering undergraduate and graduate students.

Whether students are looking for a summer internship, a co-op experience, or a full-time job, the center is here to help with in-person and virtual advising, email coaching, drop-in hours and live chat. The Career Center offers a breadth of resources, including an online job, co-op and internship database; mentoring programs; special events; professional development workshops; résumé reviews; career fairs and on-campus interviews.

The Career Center offers one-on-one career guidance to students at any stage of their career-planning process. Students are encouraged to meet with a career advisor early in their academic career and at least once each year to build a relationship. To schedule an advising appointment, please visit the Career Center website.

## Fields of Study

- Biomedical Engineering (p. 1201)
- Computer Science & Engineering (p. 1214)
- Electrical & Systems Engineering (p. 1248)
- Energy, Environmental & Chemical Engineering (p. 1273)
- Mechanical Engineering & Materials Science (p. 1287)
- University of Missouri-St. Louis/Washington University Joint Undergraduate Engineering Program (p. 1304)

## Biomedical Engineering About Biomedical Engineering

Biomedical engineering is an interdisciplinary field in which the concepts, methods and techniques of engineering are applied to solving problems in biology and medicine. It applies quantitative, analytical and integrative methods from the molecular level to that of the whole organism to further our understanding of basic biological processes and to develop innovative approaches for the prevention, diagnosis and treatment of disease.

A student majoring in biomedical engineering will have the opportunity to participate in the world-class research activities of engineering and medical faculty in biomaterials, imaging, cardiovascular engineering, cell and tissue engineering, molecular cellular and systems engineering, neural engineering, regenerative engineering, and women's health technologies. All students in biomedical engineering are encouraged to join and be active in the Biomedical Engineering Society.

## Mission Statement

Our departmental mission is to serve society as a center for learning and knowledge creation in engineering and science for the purpose of advancing biology and medicine.

Our overall educational objective is to prepare those receiving a bachelor's degree in biomedical engineering for a variety of career paths. To that end, our undergraduate curriculum is designed to provide technical proficiency as well as communication and other professional skills so that our graduates will be able to do the following:

- Pursue careers in the biomedical engineering industry or related fields
- Undertake advanced study (e.g., MS, PhD) in biomedical engineering or a related field in preparation for careers utilizing this further training
- Complete professional degrees (e.g., in medicine, dentistry, law or business) in preparation for careers utilizing those degrees

## Academic Programs

The Bachelor of Science in Biomedical Engineering (BS-BME) is designed to prepare graduates for the practice of engineering at a professional level. It is accredited by the Engineering Accreditation Commission of ABET.

The curriculum is structured around a basic core of 80 credits. In addition, a complementary set of courses totaling at least 40 credits completes the degree requirements.

To satisfy ABET requirements, all professional engineering curricula at the baccalaureate level must include the equivalent of one and one-half years of engineering topics, including engineering sciences and engineering design appropriate to biomedical engineering. The BS-BME degree at Washington University requires 47 credits of engineering topics. The basic core curriculum includes 32 engineering topics credits. Therefore, students pursuing a BS-BME degree will need 15 additional engineering topics credits beyond the basic core curriculum. They also may receive up to 6 credits of academic credit for a research or design project by registering for BME 400, BME 400A, BME 400B or BME 400C Independent Study. In addition, their course program must include sufficient laboratory experience to ensure competence in experimental design, data collection and data analysis. For more information regarding engineering topics credit requirements, please refer to the Undergraduate Curriculum webpage.

## Bachelor's/Master's (BS/MS) Program in Engineering

This program provides undergraduate students the opportunity to earn a McKelvey master's degree by combining undergraduate and graduate studies in an integrated curriculum. Interested engineering students should discuss the program with their BME academic and Engineering Undergraduate Students Services advisors by the end of their junior year in order to best develop a plan for their senior year leading into their master's year. For McKelvey undergraduates, this program normally takes one additional year to complete. More information is available on the McKelvey undergraduate Bulletin page. (p. 1197)

## Double Majors

An option available to students majoring in biomedical engineering is the double major, which leads to a second professional BS degree in one of the other engineering disciplines in four years. A BME degree in combination with a professional degree in one of the traditional engineering disciplines can be expected to enhance employment options in industry. Depending upon the second major chosen, total unit requirements may range from 140 to 148 (or less if the student enters with advanced placement credits). Hence, some summer work may be necessary in order to complete a double major within four academic years. To determine the specific requirements to be satisfied for both degrees, students are urged to consult with an advisor in the second department as early as possible.

## Premedical Preparation

Training in BME is also excellent preparation for various professional schools, particularly medical schools. Many students complete their premedical requirements while obtaining their BME degrees. Premedical preparation is not a major; rather, it allows students to fulfill the requirements needed for entry to medical school. Further information can be obtained by visiting the Premedicine webpage and by contacting the McKelvey School of Engineering's Health Professions Advisor, Jessica Allen, at [jessicaa@wustl.edu](mailto:jessicaa@wustl.edu).

## Cooperative Experience

Cooperative experience is available to upper-level students at numerous life science/technology companies both in the St. Louis area and nationwide. This experience is particularly valuable for students who wish to enter industry. However, since most companies ask that students spend the equivalent of one semester and a summer participating in these experiences, it may be difficult to complete the degree requirements in eight semesters, unless students enter with sufficient advanced placement credits and/or take summer courses.

*Please visit our website for the most current and up-to-date information.*

Phone: 314-935-7208

Website: <https://bme.wustl.edu/academics/undergraduate-programs/index.html>

## Faculty

### Chair

#### Lori A. Setton

Lucy and Stanley Lopata Distinguished Professor of Biomedical Engineering

PhD, Columbia University

Biomaterials for local drug delivery; tissue regenerations specific to the knee joints and spine

## Endowed Professor

### Rohit V. Pappu

Gene K. Beare Distinguished Professor of Biomedical Engineering  
PhD, Tufts University  
Macromolecular self assembly and function; computational biophysics

## Professors

### Dennis L. Barbour

MD, PhD, Johns Hopkins University  
Application of novel machine learning tools to diagnose and treat disorders of perception and cognition

### Cory Berkland

PhD, University of Illinois  
Developing new therapeutics and biomaterials for improving human health

### Jianmin Cui

PhD, State University of New York–Stony Brook  
Ion channels; channel structure-function relationship; biophysics

### Daniel Moran

PhD, Arizona State University  
Motor control; neural engineering; neuroprosthetics; movement biomechanics

### Baranidharan Raman

PhD, Texas A&M University  
Computational and systems neuroscience; neuromorphic engineering; pattern recognition; sensor-based machine olfaction

### Jin-Yu Shao

PhD, Duke University  
Cell mechanics; receptor and ligand interactions; molecular biomechanics

### Jon Silva

PhD, Washington University  
Ion channel biophysics

### Chao Zhou

PhD, University of Pennsylvania  
Optical coherence tomography

### Quing Zhu

Edwin H. Murty Professor of Engineering  
PhD, University of Pennsylvania  
Biophotonics and multimodality ultrasound and optical imaging

## Associate Professors

### Hong Chen

PhD, University of Washington  
Physical acoustics; therapeutic ultrasound and ultrasound imaging

### Song Hu

PhD, Washington University in St. Louis  
Optical and photoacoustic technologies for high-resolution structural, functional, metabolic and molecular imaging in vivo

### Michelle Oyen

PhD, University of Minnesota  
Bioengineering approaches to the study of pregnancy and childbirth; mechanical properties of hydrogel and hydrogel composite materials; biomimetic materials referencing both hard and soft natural tissues

### Jai S. Rudra

PhD, Louisiana Tech University  
Peptide-based biomaterials; immunoengineering; immunology of nanoscale aggregates; development of vaccines and immunotherapies

### Kurt A. Thoroughman

PhD, Johns Hopkins University  
Human motor control and motor learning; neural computation

## Assistant Professors

### Yifan Dai

PhD, Case Western Reserve University  
Decodes and encodes the physical chemistry of biological soft matter to understand biology and engineering precision medicine

### Nate Huebsch

PhD, Harvard University  
Cell-material Interactions, iPSC-based tissue modeling to study cardiac development and disease

### Abhinav Kumar Jha

PhD, University of Arizona  
Development of computational-imaging solutions for diagnosing and treating diseases

### Christine M. O'Brien

PhD, Vanderbilt University  
Developing optical spectroscopy and imaging tools to solve global problems in maternal-fetal health and reproductive diseases

### Alexandra Rutz

PhD, Northwestern University  
Engineering of electronic tissues using materials design and fabrication-based approaches

### Ismael Seáñez

PhD, California Institute of Technology  
Neuro-rehabilitation tools and programs that promote active use of residual mobility and maximize recovery through the use of body-machine interfaces

### Michael D. Vahey

PhD, Massachusetts Institute of Technology  
Biophysical mechanisms of infectious disease; fluorescence microscopy; microfluidics

## Principal Lecturer

### Patricia Widder

MS, Washington University

## Lecturer

### Katherine Schreiber

PhD, Saint Louis University

## Professor of Practice

### Joseph Klaesner

PhD, Vanderbilt University

## Senior Professor

### Larry Taber

PhD, Stanford University

Mechanics of growth and development; cardiac mechanics

## Senior Emeritus Professors

### Yoram Rudy

Fred Saigh Distinguished Professor of Engineering

PhD, Case Western Reserve University

Cardiac electrophysiology; modeling of the cardiac system

### Frank Yin

MD, PhD, University of California, San Diego

## Majors

### The Major in Biomedical Engineering

The BS in Biomedical Engineering requires completion of the courses in the Core Curriculum as well as five upper-level Tier courses beyond the Core, as described below. Students must meet all McKelvey School of Engineering and Washington University requirements, including the English proficiency requirement (please refer to the Engineering Degree Requirements (p. 1304) page). They must also satisfy ABET requirements for a professional degree, which require the accrual of 47 engineering topics units over their course work. A list of Topics Units - Engineering Courses is available on the Engineering Student Services website.

## The Basic Core

The Biomedical Engineering Core Curriculum consists of 80 credits, outlined below.

Courses	Units
<b>Physical Sciences</b>	
General Chemistry (Chem 111A or Chem 105, Chem 112A or Chem 106)(111A and 112A recommended)	6
General Chemistry Laboratory I, II (Chem 151, Chem 152)	4
General Physics (Physics 191, Physics 191L, Physics 192, Physics 192L)	8
	<b>18</b>
<b>Biological Science</b>	

Principles of Biology I (Biol 2960)	4
Physiological Control Systems (Biol 3058)	2
	<b>6</b>
<b>Mathematics</b>	
Calculus II & III (Math 132, Math 233)	6
Differential Equations (Math 217)	3
Engineering Mathematics A & B (ESE 318, ESE 319)	6
Probability and Statistics for Engineering (ESE 326)*	3
	<b>18</b>
<b>Engineering Science</b>	
Computer Science (CSE 131)	3
	<b>3</b>
<b>Biomedical Engineering</b>	
Introduction to Biomedical Engineering (BME 140)	3
Introduction to Biomedical Circuits (BME 220)**	4
Biomechanics (BME 240) and Biomechanics Lab (BME 240L)	4
Quantitative Physiology I, II (BME 301A, BME 301B)	8
Bioengineering Thermodynamics (BME 320B)	3
Transport Phenomena in BME (BME 366)	3
Senior Design A, B (BME 401A, BME 401B)	4
	<b>29</b>
<b>Other</b>	
Engineering Practice and Professional Values (Engr 4501, 3 Engr 4502 and Engr 4503)	3
Technical Writing (Engr 310)	3
	<b>6</b>
<b>Total Basic Core</b>	<b>80</b>

\* Engr 328 Engineering Statistics with Probability can be substituted for ESE 326 Probability and Statistics for Engineering.

\*\* ESE 230 Introduction to Electrical and Electronic Circuits can be substituted for BME 220 Introduction to Biomedical Circuits.

Students must complete **five upper-level Tier engineering courses (15 units), five humanities and social sciences courses (15 units), and three general electives courses (minimum 10 units)** beyond the Core Curriculum to complete the major and to prepare for particular fields of employment or education beyond the baccalaureate degree. At least two of the five Tier electives need to be drawn from the Tier I course list below; the remaining three can be chosen from Tier I or Tier II. Students must complete a minimum of **120 units** to meet the degree requirements.

## Tier I

For the most up-to-date Tier list, please refer to the BME website.

## Tier II

All upper-level (300-500) engineering and physics courses that carry 3 engineering topics units (with the exception of required courses such as BME 301A, BME 301B, BME 320B, and so on) count as Tier II electives.

## Minors

Please visit the following page for information about the biomedical engineering minor:

- Minor in Biomedical Data Science (p. 1213)

## Courses

Visit online course listings to view semester offerings for E62 BME.

---

### E62 BME 140 Introduction to Biomedical Engineering

An introduction to the vast and diverse field of biomedical engineering (BME), this very challenging course has two main purposes. One is to teach students -- via lectures, reading assignments, homework and exams, to think on their own, to solve problems and know how engineering principles are applied to the areas of bioelectricity, biomechanics, biomolecules, biotechnology and bioimaging. The second is to introduce students -- via guest lectures by school of medicine and engineering faculty, to some of the fascinating and challenging ongoing research in these areas. The course is challenging because students at this early stage, by and large, lack the knowledge base to understand either the engineering / biological aspects of the topical areas or the research being presented. Nevertheless, because future success depends on such, emphasis throughout is placed on developing self-learning as well as quantitative and analytical problem-solving skills, but at an appropriate level. By the end of the course it is hoped that students will have begun to acquire the skills and approaches necessary to succeed in the engineering curriculum as well as a much more in-depth and informed perspective of BME. Corequisites: Phys 197, Chem 111A, and college level calculus. Credit 3 units. EN: TU

---

### E62 BME 220 Introduction to Biomedical Circuits

Electricity is central to normal and abnormal biological function, spanning scales from the subcellular to whole systems. Scientists and engineers also use electrical engineering to design and implement interaction with biological tissue, from classical physiological experiments to cutting-edge brain-computer interfaces. This course will begin the study of bioelectrical engineering by introducing simple electrical elements, circuits, amplifiers, and instrumentation. Relevant biological examples and computer modeling will be used throughout. The lab component will provide hands-on laboratory practice with simple electrical elements, circuits, amplifiers, instrumentation, and computer modeling, with a focus on biomedical applications. BME 220 fulfills the circuits requirement for BME students in place of ESE 230. Prerequisite: L31 Phys 192/192L; Corequisite: Math 217. Credit 4 units. EN: TU

---

### E62 BME 220L Biomedical Circuits Laboratory

This course covers the lab portion only of E62 BME220. It is open only to those students who have completed an approved lecture-only circuits course and who need to fulfill the circuits lab requirement for the BS-BME degree. Students wishing to enroll will be placed on a waitlist and reviewed by the BME department. Credit 1 unit. EN: TU

---

### E62 BME 231 Foundations of Biomedical Computing

This elective course provides a basis for solving problems in biomedical engineering through coding and computation. Coding structures applied to concepts in linear algebra, statistics, and probability are introduced as a foundation to more advanced biomedical data science applications in machine learning and artificial intelligence. The course is taught using Python; no prior knowledge of Python is expected or required. Students should be comfortable with high school level algebra and geometry. This course is required as prerequisite for BME440, Biomedical Data Science, and is a required course for the Biomedical Data Science minor. Credit 3 units. EN: TU

---

### E62 BME 240 Biomechanics

Principles of static equilibrium and solid mechanics applied to the human anatomy and a variety of biological problems. Statics of rigid bodies with applications to the musculoskeletal system. Mechanics of deformable media (stress, strain; stretching, torsion, and bending) with introduction to nonlinear behavior, viscoelasticity, and growth in living tissue. Applications to cells, bone, muscle, arteries, the heart, and the cochlea. Prerequisites: L31 Phys 191 or 193. Credit 3 units. EN: TU

---

### E62 BME 240L Biomechanics Laboratory

This course will consist of hands-on laboratory experiments in topics relevant to bioengineering mechanics such as statics of rigid bodies, viscoelasticity, and stress/strain analysis of biological materials. A focus of the course will be extending fundamental mechanical principles to biological applications through experimentation. The course is designed to follow and enhance the material covered in BME 240. Additionally, students will have the opportunity to design their own experiments, explore topics of special interest, and present their findings. Prerequisite: concurrent or completed E62 BME 140. Credit 1 unit. EN: TU

---

### E62 BME 301A Quantitative Physiology I

A course (lectures, recitation and supervised laboratory sections) designed to elaborate the physiological background necessary for advanced work in biomedical engineering. A quantitative model-oriented approach to physiological systems is stressed. Topics include bioinstrumentation, eye movement, muscle mechanics, action potentials, sensory systems, neuroprosthetics. Prerequisites: BME 140, CSE 131, ESE 230, Biol 3058 (Previously Biol 3050 or 3059), ESE 319, or permission of instructor. Credit 4 units. EN: TU

---

### E62 BME 301B Quantitative Physiology II

A course (lecture and supervised laboratory sessions) designed to elaborate the physiological background necessary for advanced work in biomedical engineering. A quantitative model-oriented approach to physiological systems is stressed. Topics include electrocardiography; heart contractility and molecular bases; cell signaling, pulse wave propagation in arteries; pulmonary function; renal function; imaging, and systems biology. immune system; drug delivery. Prerequisites: BME 140, CSE 131, ESE 230, ESE 319, Biol 3058, or permission of instructor. Credit 4 units. EN: TU

---

### E62 BME 320B Bioengineering Thermodynamics

This course covers the foundations of thermodynamics with strong emphasis on concepts and the translation of concepts. Topics to be covered include the first and second laws of thermodynamics, probabilistic descriptions of entropy, consequences of the first and second laws in ideal and non-ideal single- and multicomponent systems, free energies as descriptors of equilibria in laboratory and biological systems, chemical equilibria, phase equilibria,

treatment of aqueous solvents and mixtures, colligative properties, thermodynamics of protein folding, and protein binding equilibria. The material, the lectures, and the homeworks emphasize learning that enables the translation of concepts into mathematical analysis. A strong background in differential calculus of multiple variables and differential equations (Math 217) is required. Emphasis is placed on regular homeworks and working in collaborative groups. The main textbook for the course will be "Molecular Driving Forces: Statistical Thermodynamics in Chemistry and Biology", 2nd edition by Ken A. Dill and Sarina Bromberg published by Garland Science. The lectures and course notes will also draw on other sources including the classical book by Herbert Callen. A weekly recitation section, BME 320A, is offered on Tuesdays between 4:00 PM and 5:30 PM. Students are strongly urged to attend lectures and the recitation section. Credit 3 units. EN: TU

---

#### **E62 BME 329 Biothermodynamics in Practice**

This course will include hands-on, laboratory experiments in topics relevant to bioengineering thermodynamics, such as heat transfer, relationships involving temperature and pressure, equilibria, mixing, and solution chemistry. A focus of the course will be extending fundamental scientific principles to biological applications. Students will have the opportunity to design their own experiments, explore topics of special interest, and present their findings. Prerequisites: L07 Chem 111A, L07 Chem 151, L31 Phys 191/191L, L31 Phys 192/192L Credit 3 units. EN: TU

---

#### **E62 BME 366 Transport Phenomena in Biomedical Engineering**

Many processes of importance in biology and medicine involve the transfer of mass, heat or momentum. Through the use of the differential control volume approach, the fundamental transport equations will be derived. Systematic derivation of differential equations appropriate for different types of transport problems will be explored. Solutions of the resulting differential equations for simple chemical/biological systems will then be sought. Macroscopic descriptions of fluid flow will be applied to the design of blood pumps for the heart. Unsteady mass transfer with diffusion, advection and chemical reactions will also be applied to the transport of proteins, metabolites and therapeutics throughout the body. Prerequisites: E62 BME 240, L24 Math 217, E35 ESE 318, E35 ESE 319 Credit 3 units. EN: TU

---

#### **E62 BME 400 Independent Study**

Independent investigation on topic of special interest. This course has no engineering topics units. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee Credit variable, maximum 6 units.

---

#### **E62 BME 400A Independent Study**

Independent investigation on a topic of special interest. This course has 1 unit of engineering topics. The student and mentor must justify the number of engineering topic units being requested and the BME Undergraduate Studies Committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee Credit 1 unit. EN: TU

---

#### **E62 BME 400B Independent Study**

Independent investigation on a topic of special interest. This course has 2 units of engineering topics. The student and mentor must justify the number of engineering topic units being requested and the BME Undergraduate Studies Committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee Credit 2 units. EN: TU

---

#### **E62 BME 400C Independent Study**

Independent investigation on a topic of special interest. This course has 3 units of engineering topics. The student and mentor must justify the number of engineering topic units being requested and the BME Undergraduate Studies Committee must approve the requested number of engineering topics. Prerequisites: junior or senior standing and approval of the BME Undergraduate Studies Committee Credit 3 units. EN: BME T, TU

---

#### **E62 BME 4015 Biomedical Data Science Capstone Design**

Previously described as BME 401DS. This course provides a client-centered design experience in biomedical data science. Students will work as individuals or in small teams with possible clients to define and scope an unmet need in biomedical data science. The students will work on an original solution or a redesign of an existing solution to address the unmet need. The design experience will involve application of knowledge and skills acquired in earlier coursework. It will also incorporate best practices in biomedical data science, including ethical considerations such as respect for persons, social license, and vulnerabilities; patient safety and privacy; and HIPAA compliance. Students will be guided through the design process and will produce and present appropriate deliverables for their project. This course is required for the Biomedical Data Science minor. Prerequisites: BME 440 or consent of instructor. Credit 3 units. EN: BME T

---

#### **E62 BME 401A Senior Capstone Design A**

A hands-on design experience to provide students practical application of engineering. Working in small teams, students will either meet with possible clients to discern a biomedical problem, or bring an original idea of their own to the class. The students will work on an original design or redesign of a component or system of biomedical engineering significance. The students will be taught how to craft a project scope with the required design specifications. The design experience will require application of knowledge and skills acquired in earlier coursework; it will incorporate engineering standards and realistic constraints that include most of the following considerations: economic, environmental, sustainability, manufacturability, ethical, health and safety, FDA, social, and political. Students will prepare written reports and present their designs orally to a panel of faculty members and industrial representatives. The final product of BME 401A will be a descriptive paper design of their solution. Prerequisite: BME Senior Standing Credit 2 units. EN: TU

---

#### **E62 BME 401B Senior Capstone Design B**

A hands-on design experience to provide students practical application of engineering. Working in small teams, students will work towards building a prototype of the student design which was a product of 401A. The students will be expected to design a verification and validation plan to test the prototype built. The design experience will require application of knowledge and skills acquired in earlier coursework and lab experiences; it will incorporate engineering standards and realistic constraints that include most of the following considerations: economic, environmental, sustainability, manufacturability, ethical, health and safety, FDA, social, and political. Students will prepare written reports and present their designs orally to a panel of faculty members and industrial representatives. The final product of BME 401B will be a prototype, and a descriptive paper describing their solution documenting how the prototype satisfies the design specifications, with the validation and verification results. Prerequisites: BME 401A Credit 2 units. EN: TU

---

---

### E62 BME 402 Senior Design II

BME 402 is a continuation of BME 401. Working in small groups, students will take a paper design completed in BME 401 and build a prototype. They will evaluate, optimize, and undertake the building of the design. The design experience will require the application of knowledge and skills acquired in earlier course work; it will incorporate engineering standards and realistic constraints that include most of the following considerations: economic, environmental, sustainability, manufacturability, ethical, health and safety, social and political. Students will prepare written reports and participate in oral design reviews involving a panel of faculty members and industrial representatives. Prototype construction is the final goal of the class. Prerequisites: BME 401, senior standing, and approval of the instructor. Credit 1 unit. EN: TU

---

### E62 BME 410 Service Learning Experience in Guangdong and Hong Kong

This pass/fail course is a 2-week international service-learning experience in conjunction with the faculty and students of our partner, Department of Biomedical Engineering at the Hong Kong Polytechnic University (PolyU). During the summer, students first attend an orientation at PolyU to learn about functional electrical stimulation (FES) and treating cerebral palsy with orthotic devices. The entire group then goes to a clinic in mainland China where they put into practice what they have learned, the former in patients who have suffered strokes and the latter in children with cerebral palsy - working in teams to diagnose, fit and fabricate orthotic devices. A written summary of the experience is the final product. Academic credits are awarded at the end of the fall semester following the summer experience. Credit 2 units.

---

### E62 BME 432 Physics of Biopolymers

This course will cover physics concepts from the statistical physics of polymers and polymer solutions to describe proteins, nucleic acids, and bioinspired polymers. Topics include statistical physics concepts, theoretical and numerical descriptions of polymers, applying these descriptions to biopolymers, the thermodynamics of polymer solutions, concepts of polymer dynamics, descriptions of polymeric materials and advanced topics in phase transitions and molecular design. The material will be fast-paced and involve rigorous mathematical descriptions, experimental design, interpretations of experimental data, and some numerical simulations. The course will be heavy on individual homework and team-based project work. Direct connections between concepts and modern topics in biology and biomaterials will be emphasized. Prerequisites: BME 320B or equivalent and a first course in transport phenomena. Credit 3 units. EN: TU

---

### E62 BME 440 Biomedical Data Science

This course will cover data analysis, statistical methods, AI, machine learning, predictive modeling, and data visualization, with applications to medicine and health. As part of the course, BME faculty will present biomedical data science topics from their research areas. Students will learn to prepare, transform, visualize, validate, model, and communicate information about datasets, and they will design and implement an independent project to address a biomedical data science problem. Prior Python experience required. Prerequisites: E35 ESE 318, E35 ESE 326, (E62 BME 231 or E81 CSE 217A), or equivalent courses. Credit 3 units. EN: TU

---

### E62 BME 442 Biomacromolecules Design and Engineering

Biological macromolecules (i.e., carbohydrates, lipids, proteins, and nucleic acids) are important components of the cell and its supporting matrix that perform a wide array of functions. This course will introduce the principles and recent advances in nucleic acid/gene engineering,

protein/peptide engineering, and chemical/enzymatic conjugation technologies; it will also discuss the application of engineered biomacromolecules in clinical therapeutics/diagnostics, biosensing, bioimaging, and biocatalysis. Students will learn material through lectures, reading, homework, scientific publications, and molecular visualization tools. Students will work individually or in pairs/groups to develop and lead discussions on engineering biomacromolecules and molecular characterization techniques. Prerequisite: Basic knowledge of genes and cloning. Credit 3 units. EN: TU

---

### E62 BME 443 Molecular and Cellular Engineering

The ability to engineer biological function at the cellular level holds tremendous potential for both basic and applied science. This course aims to provide knowledge and practical proficiency in the methods available for measuring and controlling the molecular organization of eukaryotic cells. Topics to be covered include genome engineering using viral- and CRISPR-Cas systems; spatial and temporal control of proteins and their interactions; methods for characterizing and engineering post-translational modifications; and the relationship between cellular organization and function in migration, immune cell target recognition, and differentiation. Examples from recent scientific literature will provide the foundation for these topics. Credit 3 units. EN: TU

---

### E62 BME 444 Biomedical Instrumentation

This course will include operational and instrumentation amplifiers for bioelectric event signal conditioning, interfacing and processing; instrumentation noise analysis and filter design; A/D converters and hardware and software principles as related to sampling, storing, processing, and display of biosignals; modeling, analysis, and operation of transducers, sensors, and electrodes, for physiological and imaging systems; and an introduction to ultrasound, X-ray, and optical imaging systems. In addition, students will be involved in three projects of designing and building instrumentation amplifier and filter systems, ultrasound systems, and optical systems. Prerequisites: BME 301A and BME 301B. Credit 3 units. EN: TU

---

### E62 BME 459 Intermediate Biomechanics

This course covers several of the fundamental theories of solid mechanics that are needed to solve problems in biomechanics. The theories of nonlinear elasticity, viscoelasticity, and poroelasticity are applied to a large range of biological tissues including bone, articular cartilage, blood vessels, the heart, skeletal muscle, and red blood cells. Other topics include muscle activation, the biomechanics of development and functional adaptation, and the mechanics of hearing. Prerequisites: BME 240 and ESE 318 and ESE 319 or equivalent, or permission of instructor. Same as E62 BME 559. Credit 3 units. EN: TU

---

### E62 BME 464 Orthopaedic Biomechanics-Cartilage/Tendon

Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on soft orthopaedic tissues (cartilage, tendon, and ligament). Topics include: mechanical properties of cartilage, tendon, and ligament; applied viscoelasticity theory for cartilage, tendon, and ligament; cartilage, tendon, and ligament biology; tendon and ligament wound healing; osteoarthritis. This class is geared to graduate students and upper level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisites: BME 240 or equivalent. Note: BME 590Z (463/563) Orthopaedic Biomechanics--Bones and Joints is NOT a prerequisite. Same as E37 MEMS 5564. Credit 3 units. EN: TU

---

**E62 BME 4642 Human-Machine Interfaces**

This course will provide an overview of neurorehabilitation technologies for individuals with neuromotor disorders. Topics will include the neurophysiology of human motor and sensory systems, motor control and adaptation, and neuroplasticity in the damaged brain and spinal cord. Human-machine interface systems including prostheses, orthoses and exoskeletons, wheelchairs, neuroprosthetics, brain-machine interfaces, and wearable robots will be discussed with an emphasis on their clinical applications for restoration of motor and sensory functions. Lecture material and assignments will draw from current scientific literature and research. All students will be placed on a waitlist. Registration will be split between undergraduate and graduate students. Prerequisite: BME 301 Quantitative Physiology I or equivalent introductory physiology course preferred.

Credit 3 units. EN: BME T, TU

---

**E62 BME 465 Biosolid Mechanics**

Introduction to the mechanical behaviors of biological tissues of musculoskeletal, cardiac and vascular systems. Topics to be covered include static force analysis and nonlinear optimization theory; linearly elastic models for stress-strain analysis and solutions to relevant problems in bioelasticity; models of active structures (e.g., muscles); strain energy methods and nonlinear tissue behaviors; and introductory theory for finite element analysis. Emphasis will be placed on modeling stress-strain relations with relevance to biological tissues. Prerequisites: BME 240 or equivalent and ESE 318 and ESE 319.

Credit 3 units. EN: TU

---

**E62 BME 469 Cardiac Electrophysiology**

This course is an introduction to cardiac electrophysiology with an emphasis on arrhythmia mechanisms, experimental methods, and clinical applications. Topics will include modeling of cardiac arrhythmias, mapping of cardiac electric activity, pacemakers and defibrillators, and ablation of cardiac tissue.

Credit 3 units. EN: TU

---

**E62 BME 470 Mathematics of Imaging Science**

This course will expose students to a unified treatment of the mathematical properties of images and imaging. This will include an introduction to linear vector space theory, operator theory on Hilbert spaces, and concepts from applied functional analysis. Further, concepts from generalized functions, Fourier analysis, and radon transform will be discussed. These tools will be applied to conduct deterministic analyses of imaging systems that are described as continuous-to-continuous, continuous-to-discrete, and discrete-to-discrete mappings from object properties to image data. In addition, imaging systems will be analyzed in a statistical framework where stochastic models for objects and images will be introduced. Familiarity with Engineering-level mathematics, Calculus, Linear algebra, introduction to Fourier analysis is expected. Prerequisite: Senior standing or permission of instructor.

Same as E62 BME 570

Credit 3 units.

---

**E62 BME 471 Bioelectric Phenomena**

This course is a quantitative introduction to the origins of bioelectricity, with an emphasis on neural and cardiac electrophysiology. Topics will include electric fields and current flow in volume conductors; cell membrane channels and their role in generating membrane potentials; and action potentials and their propagation in myelinated and unmyelinated axons as well as cardiac tissue. Minor topics of discussion will include both skeletal muscle and non-human (e.g., electric fish) sources of bioelectricity.

Credit 3 units. EN: TU

---

**E62 BME 472 Biological Neural Computation**

This course will consider the computations performed by the biological nervous system with a particular focus on neural circuits and population-level encoding/decoding. Topics include, Hodgkin-Huxley equations, phase-plane analysis, reduction of Hodgkin-Huxley equations, models of neural circuits, plasticity and learning, and pattern recognition & machine learning algorithms for analyzing neural data. Note: Graduate students in psychology or neuroscience who are in the Cognitive, Computational, and Systems Neuroscience curriculum pathway may register in L41 5657 for three credits. For non-BME majors, conceptual understanding, and selection/application of right neural data analysis technique will be stressed. Hence homework assignments/examinations for the two sections will be different, however all students are required to participate in a semester long independent project as part of the course. Calculus, Differential Equations, Basic Probability and Linear Algebra Undergraduates need permission of the instructor. L41 5657 prerequisites: Permission from the instructor

Same as E62 BME 572

Credit 3 units. EN: TU

---

**E62 BME 4735 Biomedical Engineering Entrepreneurship**

Students will learn about entrepreneurship, including IP, business development, and fundraising, through case studies.

Credit 3 units.

---

**E62 BME 4780 Engineering for Women's Health**

Engineering approaches have many uses in improving women's health, from basic science understanding through to clinical implementation. This course will start with an overview of female reproductive anatomy and physiology and continue with case studies from different engineering sub-fields as applied to women's health. Students will complete case studies and one in-depth project on women's health engineering topics.

Credit 3 units. EN: TU

---

**E62 BME 479 Biofabrication & Medical Devices**

This course will cover materials design and modern manufacturing methods for biofabricated tissues and medical devices (with a particular emphasis on bioelectronic devices). Topics will include additive manufacturing and their materials requirements along with how these methods have evolved to use biomaterials and cells, such as bioprinting. State-of-the-art in vitro and implantable devices for diagnostic and therapeutic purposes will be discussed with emphasis on how their properties have advanced from developments in materials and manufacturing. Lecture material and assignments will draw from both current market devices and the clinical standard-of-care as well as ongoing research and recent scientific literature. All students will be placed on a waitlist. Registration will be split between undergraduate and graduate students. Prerequisite: E62 BME 523 or equivalent biomaterials introductory course

Credit 3 units. EN: TU

---

**E62 BME 4902 Cellular Neurophysiology**

This course will examine the biophysical concepts of synaptic function with the focus on the mechanisms of neural signal processing at synapses and elementary circuits. The course combines lectures and discussion sessions of primary research papers. Topics include synaptic and dendritic structure, electrical properties of axons and dendrites, synaptic transmission, rapid and long-term forms of synaptic plasticity, information analysis by synapses and basic neuronal circuits, principles of information coding, mechanisms of learning and memory, function of synapses in sensory systems, models of synaptic disease states

such as Parkinson and Alzheimer's diseases. Additionally, a set of lectures will be devoted to modern electrophysiological and imaging techniques, and modeling approaches to study synapses and neural circuits. Prerequisite: Senior or graduate standing. Same as E62 BME 5902  
Credit 3 units. EN: TU

---

#### **E62 BME 494 Ultrasound Imaging**

Ultrasound imaging is the most widely used medical imaging modality in the world. This course offers an introduction to the medical ultrasound field. It exposes students to fundamental physical principles of ultrasound, ultrasound imaging, and ultrasound therapy. It will also introduce emerging ultrasound technologies in industry and clinics. Students will learn via lectures, homework, lab exercises, and a final project to gain knowledge, learn the ability to think critically, and develop problem-solving skills.  
Credit 3 units. EN: TU

---

#### **E62 BME 496 Design and Development of Optical Imaging Systems**

In this course, students will learn the design principles of optical imaging systems and learn to use optical simulation software, such as ZEMAX/OpticsStudio. There is also hands-on imaging system development components that will allow students to practice skills developed to make prototype imaging systems. Prerequisites: ESE 330, ESE438 or equivalent  
Credit 3 units. EN: TU

---

#### **E62 BME 501C BME Doctoral Seminar Series**

This is a credit option for BME students who attend regularly scheduled BME seminars (or approved substitute seminars). A satisfactory grade is obtained by submission of a two-page peer-reviewed paper written by one of the regularly scheduled BME seminar speakers whose seminar the student attended. Papers are to be submitted to the Graduate Student Administrator for review by the Director of Doctoral Studies. Prerequisite: Current BME student in the second year or beyond.  
Credit 1 unit.

---

#### **E62 BME 505 Professional and Personal Pathways to the PhD Program**

This course is designed to guide PhD students as they embark on their first year in the Biomedical Engineering program. Topics include choosing a thesis lab and mentor, creating individual development plans, career exploration, and building mentor relationships through networking.  
Credit 1 unit.

---

#### **E62 BME 506 Seminar in Imaging Science and Engineering**

This seminar course consists of a series of tutorial lectures on Imaging Science and Engineering with emphasis on applications of imaging technology. Students are exposed to a variety of imaging applications that vary depending on the semester, but may include multispectral remote sensing, astronomical imaging, microscopic imaging, ultrasound imaging, and tomographic imaging. Guest lecturers come from several parts of the university. This course is required of all students in the Imaging Science and Engineering program; the only requirement is attendance. This course is graded Pass/Fail. Prerequisite: Admission to Imaging Science and Engineering Program. Same as E81 CSE 596 (when offered) and E62 BME 506.  
Same as E35 ESE 596  
Credit 1 unit.

---

#### **E62 BME 5071 Radiobiology**

Effects of ionizing radiations on living cells and organisms, including physical, chemical, and physiological bases of radiation cytotoxicity, mutagenicity, and carcinogenesis. Textbook: Radiobiology for the radiologist. Eric Hall and Amato Giaccia. Two lectures per week. Prerequisites: Graduate student standing and one year each of biology, physics and organic chemistry, or approval of instructor  
Credit 2 units.

---

#### **E62 BME 5072 Radiation Therapy Physics**

Ionizing radiation use in radiation therapy to cause controlled biological effects in cancer patients. Physics of the interaction of the various radiation modalities with body-equivalent materials, and physical aspects of clinical applications. Lecture and Lab. Prerequisites: Graduate student standing or permission of instructor.  
Credit 3 units.

---

#### **E62 BME 519 Advanced Cognitive, Computational, and Systems Neuroscience**

This course will develop critical thinking and analysis skills with regard to topics in Cognitive, Computational and Systems Neuroscience. A focus of the course will be aimed toward quantitative literacy, statistical methodology, and experience with the tools and best practices needed to conduct state-of-the-art research in modern studies of brain and behavior. Particular topics include machine learning, Big Data, reproducibility, equitable research and scientific visualization. Students will be provided with foundational and theoretical tools to ensure maximal scientific rigor in their own research by enabling them to think carefully about core issues in experimental design, and about key challenges and controversies that arise in relation to hypothesis testing, statistical inference and data management. Prerequisites: graduate standing or permission of the instructor.  
Credit 3 units.

---

#### **E62 BME 523 Biomaterials Science**

An understanding of the interactions between biological systems and artificial materials is of vital importance in the design of medical devices. This course will introduce the principles of biomaterials science, unifying knowledge from the fields of biology, materials science, surface science, and colloid science. The course will be taught from the primary scientific literature, focusing on the study of protein/surface interactions and hydrogel materials. E37 MEMS 3610 OR MEMS 3601 OR permission of instructor  
Credit 3 units. EN: TU

---

#### **E62 BME 528 Translational Regenerative Medicine**

This course provides students with an opportunity to connect basic research with applications in translation for several tissues/disease models. Course sessions will alternate between literature on basic mechanisms of development/stem cell biology and applications led by researchers or clinicians working in each area. Areas of focus will include cardiovascular development/congenital heart disease and arrhythmia, lung, endocrinology/diabetes, gut/intestinal disorders, musculoskeletal, neural (peripheral and brain), liver, hematology, and eye. Emphasis on how discovery can be translated will be a major focus of the course. Students will be expected to review and present on primary literature in the field. Graduate Standing is required. Prerequisites: Graduate Standing Engineering or DBBS  
Credit 3 units.

---

#### **E62 BME 530A Molecular Cell Biology for Engineers**

This course is designed for upper-level undergraduates and first-year graduate students with a background in engineering. It covers the biology of cells of higher organisms: protein structure and function; cellular membranes and organelles; cell growth and oncogenic

transformation; cellular transport, receptors, and cell signaling; and the cytoskeleton, the extracellular matrix, and cell movement. Emphasis will be placed on examples relevant to biomedical engineering. In addition to lecture material, a focus will be placed on understanding the experimental techniques used in cell biology and the critical analysis of primary literature. Note that this course does not count for engineering topics credits and that it is meant to fulfill a life science requirement for engineering or physical sciences graduate students. Prerequisites: Biol 2960 and Biol 2970 or graduate standing. Credit 3 units.

---

**E62 BME 532 Physics of Biopolymers and Bioinspired Polymers**

This course will cover physics concepts from the statistical physics of polymers and polymer solutions to describe proteins, nucleic acids, and bioinspired polymers. Topics include statistical physics concepts, theoretical and numerical descriptions of polymers, applying these descriptions to biopolymers, the thermodynamics of polymer solutions, concepts of polymer dynamics, descriptions of polymeric materials and advanced topics in phase transitions and molecular design. The material will be fast-paced and involve rigorous mathematical descriptions, experimental design, interpretations of experimental data, and some numerical simulations. The course will be heavy on individual homework and team-based project work. Direct connections between concepts and modern topics in biology and biomaterials will be emphasized. Prerequisites: BME 320B or equivalent and a first course in transport phenomena. Same as E62 BME 432. Credit 3 units. EN: TU

---

**E62 BME 533 Biomedical Signal Processing**

This course is designed for graduate students with little or no background in biomedical signal processing, with an emphasis on time- and frequency-domain analyses of biomedical signals and their applications to a variety of real-world biomedical problems. Technical topics of this course include a review of linear signals and systems theory, biomedical system modeling, time-domain analysis, frequency transforms, frequency-domain analysis, linear filter design, signal truncation and sampling, discrete Fourier transform, and fast Fourier transform. Application topics include noise analysis of biomedical signals and frequency analysis and machine learning in biomedical image processing. Concepts learned in class will be applied using software tools to biomedical signals such as biological rhythms, EMG, ECG, EEG, and biomedical images. Prerequisites: graduate standing or consent of instructor. Credit 3 units. EN: TU

---

**E62 BME 537 Computational Molecular Biology**

This course is a survey of algorithms and mathematical methods in biological sequence analysis (with a strong emphasis on probabilistic methods) and systems biology. Sequence analysis topics include introduction to probability, probabilistic inference in missing data problems, hidden Markov models (HMMs), sequence alignment, and identification of transcription-factor binding sites. Systems biology topics include the mapping of gene regulatory networks, quantitative modeling of gene regulatory networks, synthetic biology, and applications of deep learning in computational biology. Prerequisite: CSE 131 or CSE 501N. Same as E81 CSE 587A. Credit 3 units. EN: BME T, TU

---

**E62 BME 538 Cell Signal Transduction**

This course will cover the elements of cell signal transduction important to human development, homeostasis and disease. Lectures will be combined with primary literature review to cover canonical signaling and current topics within the field. Spatial, time and dose-dependent aspects of signaling will be of particular focus. Topics

include G protein-coupled receptors, receptor tyrosine kinases, adhesion signaling, the MAPK cascade, lipid signaling, the DNA damage response, and autocrine, paracrine and juxtacrine signaling. Prerequisite: BME 530A or BME 5068. Credit 3 units.

---

**E62 BME 5401 Biomedical Data Science**

This course will cover data analysis, statistical methods, AI, machine learning, predictive modeling, and data visualization, with applications to medicine and health. As part of the course, BME faculty will present biomedical data science topics from their research areas. Students will learn to prepare, transform, visualize, validate, model, and communicate information about datasets, and they will design and implement an independent project to address a biomedical data science problem. Prior Python experience required. Prerequisites: E35 ESE 318, E35 ESE 326, (E62 BME 231 or E81 CSE 217A), or equivalent courses. Same as E62 BME 440. Credit 3 units. EN: TU

---

**E62 BME 542 Biomacromolecules Design and Engineering**

Biological macromolecules (i.e., carbohydrates, lipids, proteins, and nucleic acids) are important components of the cell and its supporting matrix that perform a wide array of functions. This course will introduce the principles and recent advances in nucleic acid/gene engineering, protein/peptide engineering, and chemical/enzymatic conjugation technologies; it will also discuss the application of engineered biomacromolecules in clinical therapeutics/diagnostics, biosensing, bioimaging, and biocatalysis. Students will learn material through lectures, reading, homework, scientific publications, and molecular visualization tools. Students will work individually or in pairs/groups to develop and lead discussions on engineering biomacromolecules and molecular characterization techniques. Prerequisite: Basic knowledge of genes and cloning. Same as E62 BME 442. Credit 3 units. EN: TU

---

**E62 BME 543 Molecular and Cellular Engineering**

The ability to engineer biological function at the cellular level holds tremendous potential for both basic and applied science. This course aims to provide knowledge and practical proficiency in the methods available for measuring and controlling the molecular organization of eukaryotic cells. Topics to be covered include genome engineering using viral- and CRISPR-Cas systems; spatial and temporal control of proteins and their interactions; methods for characterizing and engineering post-translational modifications; and the relationship between cellular organization and function in migration, immune cell target recognition, and differentiation. Examples from recent scientific literature will provide the foundation for these topics. Same as E62 BME 443. Credit 3 units. EN: TU

---

**E62 BME 5430 Systems Analysis of Biological Signaling**

This course covers biochemical and computational methods of cellular signaling pathway analysis. Topics include kinetics, differential equations, and sensitivity analysis, with emphasis on cellular and molecular vascular signaling in health and disease. Prerequisites: Biol 2960 and Math 217. Credit 3 units. EN: TU

---

**E62 BME 544 Biomedical Instrumentation**

This course will include operational and instrumentation amplifiers for bioelectric event signal conditioning, interfacing and processing; instrumentation noise analysis and filter design; A/D converters and hardware and software principles as related to sampling, storing,

processing, and display of biosignals; modeling, analysis, and operation of transducers, sensors, and electrodes, for physiological and imaging systems; and an introduction to ultrasound, X-ray, and optical imaging systems. In addition, students will be involved in three projects of designing and building instrumentation amplifier and filter systems, ultrasound systems, and optical systems. Prerequisites: BME 301A and BME 301B.

Same as E62 BME 444

Credit 3 units. EN: TU

---

### **E62 BME 5501 Translational Neuroengineering**

This course focuses on the design of bioelectric devices for use in clinical patients. Neural stimulators (e.g., deep brain, vagal) will be the basis for a case-study approach to designing and developing new bioelectrical medical devices. This project-based course will introduce the student to the use of finite element solvers to design novel stimulators. In addition to the engineering design aspects, issues such as product liability, FDA approval, and so on will be discussed.

Prerequisite: BME 471

Credit 3 units. EN: TU

---

### **E62 BME 5565 Mechanobiology of Cells and Matrices**

At the interface of the cell and the extracellular matrix, mechanical forces regulate key cellular and molecular events that profoundly affect aspects of human health and disease. This course offers a detailed review of biomechanical inputs that drive cell behavior in physically diverse matrices. In particular, cytoskeletal force-generation machineries, mechanical roles of cell-cell and cell-matrix adhesions, and regulation of matrix deformations are discussed. Also covered are key methods for mechanical measurements and mathematical modeling of cellular response. Implications of matrix-dependent cell motility in cancer metastasis and embryonic development are discussed. Prerequisite: graduate standing or permission of the instructor

Same as E37 MEMS 5565

Credit 3 units. EN: TU

---

### **E62 BME 559 Intermediate Biomechanics**

This course covers several of the fundamental theories of solid mechanics that are needed to solve problems in biomechanics. The theories of nonlinear elasticity, viscoelasticity, and poroelasticity are applied to a large range of biological tissues including bone, articular cartilage, blood vessels, the heart, skeletal muscle, and red blood cells. Other topics include muscle activation, the biomechanics of development and functional adaptation, and the mechanics of hearing. Prerequisites: BME 240 and ESE 318 and ESE 319 or equivalent, or permission of instructor.

Credit 3 units. EN: TU

---

### **E62 BME 564 Orthopaedic Biomechanics-Cartilage/Tendon**

Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on soft orthopaedic tissues (cartilage, tendon, and ligament). Topics include: mechanical properties of cartilage, tendon, and ligament; applied viscoelasticity theory for cartilage, tendon, and ligament; cartilage, tendon, and ligament biology; tendon and ligament wound healing; osteoarthritis. This class is geared to graduate students and upper level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisites: BME 240 or equivalent. Note: BME 590Z (463/563) Orthopaedic Biomechanics--Bones and Joints is NOT a prerequisite.

Same as E37 MEMS 5564

Credit 3 units. EN: TU

---

### **E62 BME 5642 Human-Machine Interfaces**

This course will provide an overview of neurorehabilitation technologies for individuals with neuromotor disorders. Topics will include the neurophysiology of human motor and sensory systems, motor control and adaptation, and neuroplasticity in the damaged brain and spinal cord. Human-machine interface systems including prostheses, orthoses and exoskeletons, wheelchairs, neuroprosthetics, brain-machine interfaces, and wearable robots will be discussed with an emphasis on their clinical applications for restoration of motor and sensory functions. Lecture material and assignments will draw from current scientific literature and research. All students will be placed on a waitlist. Registration will be split between undergraduate and graduate students. Prerequisite: BME 301 Quantitative Physiology I or equivalent introductory physiology course preferred.

Same as E62 BME 4642

Credit 3 units. EN: BME T, TU

---

### **E62 BME 565 Biosolid Mechanics**

Introduction to the mechanical behaviors of biological tissues of musculoskeletal, cardiac and vascular systems. Topics to be covered include static force analysis and nonlinear optimization theory; linearly elastic models for stress-strain analysis and solutions to relevant problems in bioelasticity; models of active structures (e.g., muscles); strain energy methods and nonlinear tissue behaviors; and introductory theory for finite element analysis. Emphasis will be placed on modeling stress-strain relations with relevance to biological tissues. Prerequisites: BME 240 or equivalent and ESE 318 and ESE 319.

Same as E62 BME 465

Credit 3 units. EN: TU

---

### **E62 BME 569 Cardiac Electrophysiology**

This course is an introduction to cardiac electrophysiology with an emphasis on arrhythmia mechanisms, experimental methods, and clinical applications. Topics will include modeling of cardiac arrhythmias, mapping of cardiac electric activity, pacemakers and defibrillators, and ablation of cardiac tissue.

Same as E62 BME 469

Credit 3 units. EN: TU

---

### **E62 BME 570 Mathematics of Imaging Science**

This course will expose students to a unified treatment of the mathematical properties of images and imaging. This will include an introduction to linear vector space theory, operator theory on Hilbert spaces, and concepts from applied functional analysis. Further, concepts from generalized functions, Fourier analysis, and radon transform will be discussed. These tools will be applied to conduct deterministic analyses of imaging systems that are described as continuous-to-continuous, continuous-to-discrete, and discrete-to-discrete mappings from object properties to image data. In addition, imaging systems will be analyzed in a statistical framework where stochastic models for objects and images will be introduced. Familiarity with Engineering-level mathematics, Calculus, Linear algebra, introduction to Fourier analysis is expected. Prerequisite: Senior standing or permission of instructor.

Credit 3 units.

---

### **E62 BME 572 Biological Neural Computation**

This course will consider the computations performed by the biological nervous system with a particular focus on neural circuits and population-level encoding/decoding. Topics include, Hodgkin-Huxley equations, phase-plane analysis, reduction of Hodgkin-Huxley equations, models of neural circuits, plasticity and learning, and pattern recognition & machine learning algorithms for analyzing neural data. Note: Graduate students in psychology or neuroscience who are in the Cognitive, Computational, and Systems Neuroscience curriculum pathway may register in L41 5657 for three credits. For non-BME

majors, conceptual understanding, and selection/application of right neural data analysis technique will be stressed. Hence homework assignments/examinations for the two sections will be different, however all students are required to participate in a semester long independent project as part of the course. Calculus, Differential Equations, Basic Probability and Linear Algebra Undergraduates need permission of the instructor. L41 5657 prerequisites: Permission from the instructor

Credit 3 units. EN: TU

---

#### **E62 BME 5735 Biomedical Engineering Entrepreneurship**

Students will learn about entrepreneurship, including IP, business development, and fundraising, through case studies.

Same as E62 BME 4735

Credit 3 units.

---

#### **E62 BME 575 Molecular Basis of Bioelectrical Excitation**

Ion channels are the molecular basis of membrane excitability in all cell types, including neuronal, heart, and muscle cells. This course presents the structure and the mechanism of function of ion channels at the molecular level. It introduces the basic principles and methods in the ion channel study as well as the structure-function relation of various types of channels. Exemplary channels that have been best studied will be discussed to illustrate the current understanding. Prerequisites: Knowledge of differential equations, electrical circuits, and chemical kinetics.

Credit 3 units. EN: TU

---

#### **E62 BME 5771 Biomedical Product Development**

Advances in science and technology have opened the healthcare field to innovation now more than any other time in history. Engineers and inventors can make real and rapid improvements to patient treatments, length of hospital stay, procedure time, cost containment, and accessibility to treatment. However, a successful transition from idea to implementation requires careful market analysis and strategy planning. This course will address the steps in this process, including personal and team strength assessment, medical need validation, brainstorming initial solutions, market analysis, solution evaluation, regulatory, patent, and intellectual property concerns, manufacturability, risk assessment and mitigation, and global considerations. Students will be expected to review resource material prior to coming to class in order to facilitate active class discussion and team-based application of the material during class; regular attendance will be key to course success. The course will focus on applying product development techniques to several real unmet medical needs; students will thus perform analysis and create reports and presentations for several different product solutions. Peer and faculty evaluations will provide feedback to improve individual technique. In addition, throughout the semester, local biomedical entrepreneurs will visit to share their expertise and experiences. Prerequisites: Graduate or professional student standing or permission of the instructor.

Credit 3 units.

---

#### **E62 BME 5772 Biomedical Business Development**

For medical innovators, a successful translation from product to market will require careful strategy and an understanding of the steps needed to form and fund a biotech business, either as a new startup or as an extension of the product line of an existing company. This course will address the steps in this process, including intellectual property concerns, R&D, clinical strategy, regulatory issues, quality management, reimbursement, marketing strategy, sales and distribution, operating plans, and approaches to funding. Prerequisites: Graduate or professional student standing or permission of the instructor.

Credit 3 units.

---

#### **E62 BME 5780 Engineering for Women's Health**

Engineering approaches have many uses in improving women's health, from basic science understanding through to clinical implementation. This course will start with an overview of female reproductive anatomy and physiology and continue with case studies from different engineering sub-fields as applied to women's health. Students will complete case studies and one in-depth project on women's health engineering topics.

Same as E62 BME 4780

Credit 3 units. EN: TU

---

#### **E62 BME 579 Biofabrication & Medical Devices**

This course will cover materials design and modern manufacturing methods for biofabricated tissues and medical devices (with a particular emphasis on bioelectronic devices). Topics will include additive manufacturing and their materials requirements along with how these methods have evolved to use biomaterials and cells, such as bioprinting. State-of-the-art in vitro and implantable devices for diagnostic and therapeutic purposes will be discussed with emphasis on how their properties have advanced from developments in materials and manufacturing. Lecture material and assignments will draw from both current market devices and the clinical standard-of-care as well as ongoing research and recent scientific literature. All students will be placed on a waitlist. Registration will be split between undergraduate and graduate students. Prerequisite: E62 BME 523 or equivalent biomaterials introductory course

Same as E62 BME 479

Credit 3 units. EN: TU

---

#### **E62 BME 5799 Independent Study for Candidates in the Master of Engineering Program**

Independent investigation on a topic of special interest. The student and mentor must justify the requested number of units. The MEng Program Director must approve the requested number of units.

Credit variable, maximum 6 units.

---

#### **E62 BME 5820 Fundamentals and Applications of Modern Optical Imaging**

Analysis, design, and application of modern optical imaging systems with emphasis on biological imaging. First part of course will focus on the physical principles underlying the operation of imaging systems and their mathematical models. Topics include ray optics (speed of light, refractive index, laws of reflection and refraction, plane surfaces, mirrors, lenses, aberrations), wave optics (amplitude and intensity, frequency and wavelength, superposition and interference, interferometry), Fourier optics (space-invariant linear systems, Huygens-Fresnel principle, angular spectrum, Fresnel diffraction, Fraunhofer diffraction, frequency analysis of imaging systems), and light-matter interaction (absorption, scattering, dispersion, fluorescence). Second part of course will compare modern quantitative imaging technologies including, but not limited to, digital holography, computational imaging, and super-resolution microscopy. Students will evaluate and critique recent optical imaging literature. Prerequisites: ESE 318 and ESE 319 or their equivalents; ESE 330 or PHY 421 or equivalent.

Same as E35 ESE 582

Credit 3 units. EN: TU

---

#### **E62 BME 589 Biological Imaging Technology**

This class will develop a fundamental understanding of the physics and mathematical methods that underlie biological imaging and critically examine case studies of seminal biological imaging technology literature. The physics section will examine how electromagnetic and acoustic waves interact with tissues and cells, how waves can be used to image the biological structure and function, image formation

methods and diffraction limited imaging. The math section will examine image decomposition using basis functions (e.g. Fourier transforms), synthesis of measurement data, image analysis for feature extraction, reduction of multi-dimensional imaging datasets, multivariate regression, and statistical image analysis. Original literature on electron, confocal and two photon microscopy, ultrasound, computed tomography, functional and structural magnetic resonance imaging and other emerging imaging technology will be critiqued. Same as E35 ESE 589  
Credit 3 units. EN: TU

---

#### **E62 BME 5901 Integrative Cardiac Electrophysiology**

Quantitative electrophysiology of the heart, integrating from the molecular level (ion channels, regulatory pathways, cell signaling) to the cardiac cell (action potential and calcium transient), multicellular tissue (cell-cell communication) and the whole heart. Prerequisite: Permission of Instructor  
Credit 3 units. EN: BME T, TU

---

#### **E62 BME 5902 Cellular Neurophysiology**

This course will examine the biophysical concepts of synaptic function with the focus on the mechanisms of neural signal processing at synapses and elementary circuits. The course combines lectures and discussion sessions of primary research papers. Topics include synaptic and dendritic structure, electrical properties of axons and dendrites, synaptic transmission, rapid and long-term forms of synaptic plasticity, information analysis by synapses and basic neuronal circuits, principles of information coding, mechanisms of learning and memory, function of synapses in sensory systems, models of synaptic disease states such as Parkinson and Alzheimer's diseases. Additionally, a set of lectures will be devoted to modern electrophysiological and imaging techniques, and modeling approaches to study synapses and neural circuits. Prerequisite: Senior or graduate standing.  
Credit 3 units. EN: TU

---

#### **E62 BME 591 Biomedical Optics I: Principles**

This course covers the principles of optical photon transport in biological tissue. This course covers the principles and applications of optical photon transport in biological tissue. Topics include a brief introduction to biomedical optics, single-scatterer theories, Monte Carlo modeling of photon transport, convolution for broad-beam responses, radiative transfer equation, diffusion theory and applications, sensing of optical properties and spectroscopy, and photoacoustic imaging principles and applications. Prerequisite: Familiarity with Differential equations and partial differential equations  
Credit 3 units. EN: TU

---

#### **E62 BME 5911 Cardiovascular Biophysics Journal Club**

This journal club is intended for beginning graduate students, advanced undergraduates, and MSTP students with a background in the quantitative sciences (engineering, physics, math, chemistry, etc). The subjects covered are inherently multidisciplinary. We will review landmark and recent publications in quantitative cardiovascular physiology, mathematical modeling of physiologic systems and related topics such as chaos theory and nonlinear dynamics of biological systems. Familiarity with calculus, differential equations, and basic engineering/thermodynamic principles is assumed. Knowledge of anatomy/physiology is optional.  
Credit 1 unit.

---

#### **E62 BME 5915 Journal Club in Neuroengineering**

Classic papers on neuroscience topics including membrane excitability, synaptic transmission and signaling will be discussed by students and the instructor. The course is designed to bring graduate students with engineering, computational, and biological background to the bases of translational neuroscience and neurotechnology.  
Credit 1 unit.

---

#### **E62 BME 592 Biomedical Optics II: Imaging**

This course covers optical imaging technologies. Topics include ballistic imaging, optical coherence tomography, Mueller optical coherence tomography, diffuse optical tomography, photoacoustic tomography, and ultrasound-modulated optical tomography. Prerequisites: L24 Math 217; E62 BME 591  
Credit 3 units. EN: BME T, TU

---

#### **E62 BME 594 Ultrasound Imaging**

Ultrasound imaging is the most widely used medical imaging modality in the world. This course offers an introduction to the medical ultrasound field. It exposes students to fundamental physical principles of ultrasound, ultrasound imaging, and ultrasound therapy. It will also introduce emerging ultrasound technologies in industry and clinics. Students will learn via lectures, homework, lab exercises, and a final project to gain knowledge, learn the ability to think critically, and develop problem-solving skills.  
Same as E62 BME 494  
Credit 3 units. EN: TU

---

#### **E62 BME 595 Drug Delivery Systems: Principles and Applications**

Drug delivery is a promising approach for transporting pharmaceutical treatments in the body to safely achieve the desired therapeutic effect, while reducing the undesired side effects. This course will introduce students to the fundamental concepts of drug pharmacokinetics and dynamics, the biological and physiochemical principles drug delivery systems are based on, and the advantages of such delivery systems. Additionally, we will introduce the design and development of advanced drug delivery platforms such as nano-carriers, cell/gene delivery systems, drug-polymer conjugates and their relevant clinical applications. Finally, we will be having guest speakers from the industry, the university, as well as the office of technology management for Interdisciplinary Innovation & Entrepreneurship.  
Credit 3 units.

---

## **The Minor in Biomedical Data Science**

The minor in Biomedical Data Science is designed to integrate data science principles — preparing, transforming, modeling, visualizing, validating, and communicating data — with the unique challenges and considerations of medicine and health care. The curriculum encompasses the following: (1) fundamental mathematics concepts such as linear algebra, probability, statistics, and computer modeling; (2) the specialized data science education necessary to practically approach the particular challenges of genomic data, sensor data, and health care data; and (3) the ethical considerations of privacy, equity, and access unique to medical data sharing and analysis.

A minor in Biomedical Data Science requires the completion of 18 units selected from the following courses. McKelvey Engineering students of all disciplines as well as students majoring in biology, physics, neuroscience, or other sciences are ideal candidates for this minor. All courses must be taken with a credit option to qualify for the minor.

## Curriculum

**Core Biomedical Engineering Courses** (required; all must be completed):

Code	Title	Units
BME 231	Foundations of Biomedical Computing (Spring/Summer; No prerequisite; First offering SP22)	3
BME 4015	Biomedical Data Science Capstone Design	3
BME 440	Biomedical Data Science (Fall; Prerequisite: BME 231; First offering FL22)	3

**Mathematics Course** (students must complete one from the following list):

Code	Title	Units
ESE 318	Engineering Mathematics A (Fall/Spring; Prerequisites: Math 233 and Math 217 or equivalent)	3
Math 309	Matrix Algebra (Fall/Spring; Prerequisite: Math 131)	3
MEMS 201	Numerical Methods and Matrix Algebra (Spring; Prerequisite: Math 217)	3

**Probability and Statistics Course** (students must complete one from the following list):

Code	Title	Units
ESE 326	Probability and Statistics for Engineering (Fall/Spring; Prerequisite: Math 233 or equivalent)	3
Engr 328	Engineering Statistics with Probability	3
SDS 2200	Elementary Probability and Statistics	3
SDS 3200	Elementary to Intermediate Statistics and Data Analysis	3

**Biomedical Engineering Upper Level Elective** (students must complete one from the following list):

Code	Title	Units
BME 470	Mathematics of Imaging Science (Fall; Prerequisite: Consent of instructor)	3
BME 472	Biological Neural Computation (Spring; Prerequisite: Consent of instructor)	3
BME 519	Advanced Cognitive, Computational, and Systems Neuroscience (Spring; Prerequisite: Consent of instructor)	3
BME 533	Biomedical Signal Processing (Spring; Prerequisite: Consent of instructor)	3

Additional courses may be added to these lists as new courses are developed. Questions about the Biomedical Data Science minor can be addressed to Professor Patricia Widder (pwidder9876@wustl.edu).

## Computer Science & Engineering

### About Computer Science & Engineering

The field of computer science and engineering studies the design, analysis, implementation and application of computation and computer technology. Computing plays an important role in virtually all fields, including science, medicine, music, art, business, law and human communication; hence, the study of computer science and engineering can be interdisciplinary in nature. Whether a student's goal is to become a practitioner or to take a few courses to develop a basic understanding of computing for application to another field, the Department of Computer Science & Engineering at Washington University is committed to helping students gain the background they need.

People are attracted to the study of computing for a variety of reasons. Consequently, the department offers a wide variety of academic programs, including a five-course minor, a second major, five undergraduate degrees, combined undergraduate and graduate programs, and several undergraduate research opportunities. Each academic program can be tailored to a student's individual needs.

The breadth of computer science and engineering may be best understood in terms of the general areas of *applications, software systems, hardware* and *theory*.

**Applications** are the ways in which computer technology is applied to solve problems, often in other disciplines. Most applications courses provide background not only in the applications themselves but also in how the applications are designed and implemented. Examples of application areas include artificial intelligence, computer graphics, game design and computational biology.

**Software systems** are collections of interacting software components that work together to support the needs of computer applications. Courses in this area help students gain a solid understanding of how software systems are designed and implemented. During the process, students develop their own software systems. Examples include operating systems, which manage computational resources; network protocols, which are responsible for the delivery of information; programming languages, which support the construction of software systems and applications; and compilers, which translate computer programs into executable form.

**Hardware** is the term used to describe the physical and mechanical components of a computer system. Courses in this area provide background in logic circuits, which carry out basic computations; computer architecture, which defines the organization of functional

components in a computer system; and peripheral devices such as disks, robot arms that are controlled by the computer system, and sensor systems that gather the information that computer systems use to interact with the physical world.

**Theory** is the study of the fundamental capabilities and limitations of computer systems. A knowledge of theory helps students choose among competing design alternatives on the basis of their relative efficiency and helps them to verify that their implementations are correct. Theory courses provide background in algorithms, which describe how a computation is to be carried out; data structures, which specify how information is to be organized within the computer; analytical techniques to characterize the time or space requirements of an algorithm or data structure; and verification techniques to prove that solutions are correct.

A well-rounded study of computing includes training in each of these areas. However, depending on a student's educational goals, the student may prefer to concentrate on certain areas for greater depth of knowledge. To help students balance their elective courses, most upper-level departmental courses are classified into one of the following categories: S for software systems, M for machines (hardware), T for theory, or A for applications. If a student's interests are concentrated in the first two areas, a computer engineering degree might be best. Students are encouraged to meet with a faculty advisor in the Department of Computer Science & Engineering to discuss their options and develop a plan consistent with their goals.

## Undergraduate Programs

The Department of Computer Science & Engineering (CSE) offers an array of courses that can be taken as requirements or electives for any of the undergraduate degree programs. We offer a Bachelor of Science in Computer Science (BSCS), a Bachelor of Science in Computer Engineering (BSCoE), a Bachelor of Science in Business and Computer Science (CS+Business), a Bachelor of Science in Computer Science + Mathematics (CS+Math), a Bachelor of Science in Computer Science + Economics (CS+Econ), and a Second Major in Computer Science. In addition to these six programs, CSE offers a pre-medical option and combined undergraduate/graduate programs. As a part of our program, each student is assigned an advisor who can help to design an individualized program, monitor a student's progress, and consult about curriculum and career options. Additional information can be found on our CSE website, or any of the CSE faculty can offer further guidance and information about our programs.

**BSCS:** The computer science major is designed for students planning a career in computing.

**BSCoE:** The computer engineering major encompasses studies of hardware, software and systems issues that arise in the design, development and application of computer systems.

**CS+Business:** This joint major provides students with the fundamental knowledge and perspectives of computer science and business and of the unique opportunities created by combining them.

**CS+Econ:** This applied science major (p. 1234) allows students interested in both economics and computer science to combine these two complementary disciplines efficiently.

**CS+Math:** This applied science major efficiently captures the intersection of the complementary studies of computer science and math.

**Second Major in Computer Science:** The second major provides an opportunity to combine computer science with another degree program. A second major in computer science can expand a student's career options and enable interdisciplinary study in areas such as cognitive science, computational biology, chemistry, physics, philosophy and linguistics. The second major is also well suited for students planning careers in medicine, law, business, architecture and fine arts.

**Pre-Medical Option within Computer Science:** Students may pursue a pre-medicine curriculum in conjunction with either the BS degree or the second major in computer science programs. Students interested in the pre-medical option should refer to the McKelvey School of Engineering (p. 1200) *Bulletin* page for details.

## Combined Undergraduate and Graduate Study

The Department of Computer Science & Engineering offers in-depth graduate study in many areas. Students entering the graduate programs require a background in computer science fundamentals. Washington University undergraduates seeking admission to the graduate degree program to obtain a master's degree in computer science or computer engineering do not need to take the Graduate Record Examination (GRE). For more information, contact the department office by email at [admissions@cse.wustl.edu](mailto:admissions@cse.wustl.edu) or by phone at 314-935-6132.

## The Joint Bachelor's/Master's Program

This program provides undergraduate students the opportunity to earn a McKelvey master's degree by combining undergraduate and graduate studies in an integrated curriculum. The combination of the two programs extends the flexibility of the undergraduate curriculum to more advanced studies, thereby enabling students to plan their entire spectrum of computing studies in a more comprehensive educational framework. For McKelvey undergraduates, this program normally takes one additional year to complete. More information is available on the McKelvey School of Engineering undergraduate Bulletin page (p. 1197).

## BS/MBA Program

The growing importance of computer-based information systems in the business environment has produced a sustained high demand for graduates with master's degrees in business administration and undergraduate majors in computer science and engineering.

Students should apply to this joint program by February 1 of their junior year. The application for admission to Olin Business School (p. 1155) is available through the business school. Applicants are judged on undergraduate performance, GMAT scores, summer and/or co-op work experience, recommendations and a personal interview.

## Undergraduate Courses

Course requirements for the minor and majors may be fulfilled by CSE 131 Introduction to Computer Science, CSE 132 Introduction to Computer Engineering, CSE 240 Logic and Discrete Mathematics, CSE 247 Data Structures and Algorithms, CSE 347 Analysis of Algorithms, and CSE courses with a letter suffix in any of the following categories: software systems (S), hardware (M), theory (T) and applications (A). In addition, with approval of the instructor, up to 6 units of CSE 400E Independent Study can be used toward the CSE electives of any CSE degree. Other CSE courses provide credit toward graduation but not toward the CSE elective requirements for the second major or the BSCS, BSCoE, CS+Math or CS+Business degrees. Undergraduates are encouraged to consider 500-level courses. If a student is interested in taking a course but is not sure if they have the needed prerequisites, the student should contact the instructor.

## Broadening Experiences

If a student wants to become involved in computer science or computer engineering research or to gain experience in industry while they are an undergraduate, there are many opportunities to do so. A few of these are listed below.

**Co-op:** McKelvey's Engineering Cooperative Education (Co-op) experience allows a student to get valuable experience working in industry while an undergraduate. A co-op experience can give students another perspective to their education and may lead to full-time employment. More information is available on the Engineering Co-op and Engineering Internship page of the McKelvey School of Engineering website.

**Research:** Participating in undergraduate research is a great way to learn more about a specific area. Research projects are available either for pay or for credit through CSE 400E Independent Study.

**Study Abroad:** Students in the McKelvey School of Engineering can study abroad in a number of countries and participate in several global experiences to help broaden their educational experience. These opportunities will help students become global citizens who are better able to address current issues.

The study of computer science and engineering is especially well suited and popular for study abroad. Students from our department routinely study abroad in Europe, the United Kingdom, Australia, Israel and many other places. Our department works closely with students to identify courses suitable for computer science credit.

For more information about these programs, please visit the McKelvey School of Engineering website.

## Research Opportunities

The Department of Computer Science & Engineering actively promotes a culture of strong undergraduate participation in research. Many undergraduates work in research labs with state-of-the-art equipment that provides them the opportunity to take part in computer science and computer engineering research. Sensor networks, high-speed routers, specialized FPGA hardware, wireless devices, RF tags,

digital cameras, robots, large displays and multiprocessors are just a few of the hardware devices undergraduates often use in their projects. Opportunities for exploring modern software development techniques and specialized software systems further enrich the range of research options and help undergraduates sharpen their design and programming skills.

## Advanced Placement/ Proficiency

Students receiving a 4 or 5 on the AP Computer Science A exam are awarded credit for CSE 131 Introduction to Computer Science. Any student can take the CSE 131 proficiency exam, and a suitable score will waive CSE 131 as a requirement.

Upon request, the computer science department will evaluate a student for proficiency for any of our introductory courses. If a student is determined to be proficient in a given course, that course will be waived (without awarding credit) in the student's degree requirements, and the student will be offered guidance in selecting a more advanced course. Questions should be directed to the associate chair at [associatechair@cse.wustl.edu](mailto:associatechair@cse.wustl.edu).

Phone: 314-935-6160  
Website: <https://cse.wustl.edu/academics/undergraduate/index.html>

## Faculty

### Chair

#### Roch Guérin

Harold B. and Adelaide G. Welge Professor of Computer Science  
PhD, California Institute of Technology  
Computer networks and communication systems

### Professors

#### Sanjoy Baruah

PhD, University of Texas at Austin  
Real-time and safety-critical system design, cyber-physical systems, scheduling theory, resource allocation and sharing in distributed computing environments

#### Aaron Bobick

James M. McKelvey Professor and Dean  
PhD, Massachusetts Institute of Technology  
Computer vision, graphics, human-robot collaboration

#### Michael R. Brent

Henry Edwin Sever Professor of Engineering  
PhD, Massachusetts Institute of Technology  
Systems biology, computational and experimental genomics, mathematical modeling, algorithms for computational biology, bioinformatics

**Jeremy Buhler**

PhD, Washington University  
Computational biology, genomics, algorithms for comparing and annotating large biosequences

**Roger D. Chamberlain**

DSc, Washington University  
Computer engineering, parallel computation, computer architecture, multiprocessor systems

**Yixin Chen**

PhD, University of Illinois at Urbana-Champaign  
Mathematical optimization, artificial intelligence, planning and scheduling, data mining, learning data warehousing, operations research, data security

**Patrick Crowley**

PhD, University of Washington  
Computer and network systems, network security

**Ron K. Cytron**

PhD, University of Illinois at Urbana-Champaign  
Programming languages, middleware, real-time systems

**Christopher D. Gill**

DSc, Washington University  
Parallel and distributed real-time embedded systems, cyber-physical systems, concurrency platforms and middleware, formal models and analysis of concurrency and timing

**Raj Jain**

Barbara J. & Jerome R. Cox Jr. Professor of Computer Science  
PhD, Harvard University  
Network security, blockchains, medical systems security, industrial systems security, wireless networks, unmanned aircraft systems, internet of things, telecommunications networks, traffic management

**Tao Ju**

PhD, Rice University  
Computer graphics, visualization, mesh processing, medical imaging and modeling

**Chenyang Lu**

Fullgraf Professor in the Department of Computer Science & Engineering  
PhD, University of Virginia  
Internet of things, real-time, embedded, and cyber-physical systems, cloud and edge computing, wireless sensor networks

**Neal Patwari**

PhD, University of Michigan  
Application of statistical signal processing to wireless networks, and radio frequency signals

**Weixiong Zhang**

PhD, University of California, Los Angeles  
Computational biology, genomics, machine learning and data mining, and combinatorial optimization

## Associate Professors

**Kunal Agrawal**

PhD, Massachusetts Institute of Technology  
Parallel computing, cyber-physical systems and sensing, theoretical computer science

**Roman Garnett**

PhD, University of Oxford  
Active learning (especially with atypical objectives), Bayesian optimization, and Bayesian nonparametric analysis

**Brendan Juba**

PhD, Massachusetts Institute of Technology  
Theoretical approaches to artificial intelligence founded on computational complexity theory and theoretical computer science more broadly construed

**Caitlin Kelleher**

Hugo F. & Ina Champ Urbauer  
Career Development Associate Professor  
PhD, Carnegie Mellon University  
Human-computer interaction, programming environments, and learning environments

**I-Ting Angelina Lee**

PhD, Massachusetts Institute of Technology  
Designing linguistics for parallel programming, developing runtime system support for multi-threaded software, and building novel mechanisms in operating systems and hardware to efficiently support parallel abstractions

**William D. Richard**

PhD, University of Missouri-Rolla  
Ultrasonic imaging, medical instrumentation, computer engineering

**Yevgeniy Vorobeychik**

PhD, University of Michigan  
Artificial intelligence, machine learning, computational economics, security and privacy, multi-agent systems

**William Yeoh**

PhD, University of Southern California  
Artificial intelligence, multi-agent systems, distributed constraint optimization, planning and scheduling

## Assistant Professors

**Ayan Chakrabarti**

PhD, Harvard University  
Computer vision computational photography, machine learning

**Chien-Ju Ho**

PhD, University of California, Los Angeles  
Design and analysis of human-in-the-loop systems, with techniques from machine learning, algorithmic economics, and online behavioral social science

**Ulugbek Kamilov**

PhD, École Polytechnique Fédérale de Lausanne, Switzerland  
Computational imaging, image and signal processing, machine learning and optimization

**Alvitta Ottley**

PhD, Tufts University  
Designing personalized and adaptive visualization systems, including information visualization, human-computer interaction, visual analytics, individual differences, personality, user modeling and adaptive interfaces

**Netanel Raviv**

PhD, Technion, Haifa, Israel  
Mathematical tools for computation, privacy and machine learning

**Ning Zhang**

PhD, Virginia Polytechnic Institute and State University  
System security, software security

## Teaching Professors

**Bill Siever**

PhD, Missouri University of Science and Technology  
Computer architecture, organization, and embedded systems

**Todd Sproull**

PhD, Washington University  
Computer networking and mobile application development

## Professor of the Practice

**Dennis Cosgrove**

BS, University of Virginia  
Programming environments and parallel programming

## Senior Lecturers

**Steve Cole**

PhD, Washington University in St. Louis  
Parallel computing, accelerating streaming applications on GPUs

**Marion Neumann**

PhD, University of Bonn, Germany  
Machine learning with graphs; solving problems in agriculture and robotics

**Jonathan Shidal**

PhD, Washington University  
Computer architecture and memory management

**Douglas Shook**

MS, Washington University  
Imaging sensor design, compiler design and optimization

## Lecturers

**Hila Ben Abraham**

PhD, Washington University in St. Louis  
Parallel computing, accelerating streaming applications on GPUs, computer and network security, and malware analysis

**Brian Garnett**

PhD, Rutgers University  
Discrete mathematics and probability, generally motivated by theoretical computer science

**James Orr**

PhD, Washington University  
Real-time systems theory and implementation, cyber-physical systems, and operating systems

## Senior Professor

**Jonathan S. Turner**

PhD, Northwestern University  
Design and analysis of internet routers and switching systems, networking and communications, algorithms

## Senior Faculty Emeritus

**Jerome R. Cox Jr.**

ScD, Massachusetts Institute of Technology  
Computer system design, computer networking, biomedical computing

## Professors Emeriti

**Takayuki D. Kimura**

PhD, University of Pennsylvania  
Communication and computation, visual programming

**Seymour V. Pollack**

MS, Brooklyn Polytechnic Institute  
Intellectual property, information systems

## Majors

Please visit the following pages for information about computer science and engineering majors:

- Bachelor of Science in Computer Engineering (p. 1232)
- Bachelor of Science in Computer Science (p. 1233)
- Bachelor of Science in Computer Science + Economics (p. 1234)
- Bachelor of Science in Computer Science + Mathematics (p. 1236)
- Bachelor of Science in Data Science (p. 1238)
- Bachelor of Science in Business and Computer Science (p. 1240)
- Second Major in Computer Science (p. 1242)
- Second Major in Computer Science + Mathematics
- Second Major in Data Science

## Minors

Please visit the following pages for information about computer science and engineering minors:

- Minor in Computer Science (p. 1246)
- Minor in Bioinformatics (p. 1246)
- Minor in Human-Computer Interaction (p. 1247)

## Courses

Visit online course listings to view semester offerings for E81 CSE.

Prerequisites are advisory in our course listings, but students are cautioned against taking a course without the necessary background. Note that if one course mentions another as its prerequisite, the prerequisites of the latter course are implied to be prerequisites of the former course as well. Students in doubt of possessing the necessary background for a course should correspond with the course's instructor.

---

### E81 CSE 100A Computer Science Department Seminar

This seminar will host faculty, alumni, and professionals to discuss topics related to the study and practice of computer science. Attendance is mandatory to receive a passing grade.

---

### E81 CSE 107 Data Science Playground

Data science plays an increasingly important role in research, industry, and government. Researchers seek to understand behavior and mechanisms, companies seek to increase profits, and government agencies make policies intended to improve society. While we are awash in an abundance of data, making sense of data is not always straightforward. At its core, students of data science learn techniques for analyzing, visualizing, and understanding data. However, students must also cultivate curiosity about data, including the data's provenance, ethical considerations such as bias, and skepticism concerning correlation and causality. In the beginning, students investigate a curated collection of data sets, asking questions they find interesting and exploring data using a popular platform for such studies. Thereafter, researchers on campus present their work in the context of data science, challenging students to explore data in the domain of their research areas. Throughout the course, students present their findings in their group and to the class. This course is offered in an active-learning setting in which students work in small teams. The course has no prerequisites, and programming experience is neither expected nor required. All credit for this pass/fail course is based on work performed in the scheduled class time. Credit 1 unit.

---

### E81 CSE 131 Introduction to Computer Science

An introduction to software concepts and implementation, emphasizing problem solving through abstraction and decomposition. Introduces processes and algorithms, procedural abstraction, data abstraction, encapsulation, and object-oriented programming. Recursion, iteration, and simple data structures are covered. Concepts and skills are mastered through programming projects, many of which employ graphics to enhance conceptual understanding. Java, an object-oriented programming language, is the vehicle of exploration. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisites: Comfort with algebra and geometry at the high school level is assumed. Patience, good planning, and organization will promote success. This course assumes no prior experience with programming. Credit 3 units. Arch: ETH, NS BU: SCI EN: TU

---

### E81 CSE 131R Seminar: Computer Science I

A seminar and discussion session that complements the material studied in CSE131. Provides background and breadth for the disciplines of computer science and computer engineering. Features guest lectures and highly interactive discussions of diverse computer science topics. Highly recommended for majors and for any student seeking a broader view of computer science or computer engineering. Pass/Fail only. Credit 1 unit.

---

### E81 CSE 132 Introduction to Computer Engineering

This course introduces students to fundamental concepts in the basic operation of computers, ranging from desktops and servers to microcontrollers and handheld devices. Subjects include digital and analog input/output, sensing the physical world, information representation, basic computer architecture and machine language, time-critical computation, machine-to-machine communication and protocol design. Students will use both desktop systems and handheld microcontrollers for laboratory experiments. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisite: CSE 131.

Credit 3 units. BU: SCI EN: TU

---

### E81 CSE 132R Seminar: Computer Science II

This course is a seminar and discussion session that complements the material studied in CSE 132. It provides background and breadth for the disciplines of computer science and computer engineering, and it features guest lectures and highly interactive discussions of diverse computer science topics. Highly recommended for majors and for any student seeking a broader view of computer science or computer engineering. Credit 1 unit.

---

### E81 CSE 204A Web Development

This course explores elementary principles for designing, creating, and publishing effective websites and web application front-ends. Topics include page layout concepts, design principles, HTML, CSS, JavaScript, front-end frameworks like Angular and React, and other development tools. Students apply the topics by creating a series of websites that are judged based on their design and implementation. Prerequisite: CSE 131 or equivalent experience.

Credit 3 units. BU: SCI EN: TU

---

### E81 CSE 217A Introduction to Data Science

This course provides an introduction to data science and machine learning, and it focuses on the practical application of models to real-world supervised and unsupervised learning problems. We will discuss methods for linear regression, classification, and clustering and apply them to perform sentiment analysis, implement a recommendation system, and perform image classification or gesture recognition. One of the main objectives of the course is to become familiar with the data science workflow, from posing a problem to understanding and preparing the data, training and evaluating a model, and then presenting and interpreting the results. We will also touch on concepts such as similarity-based learning, feature engineering, data manipulation, and visualization. The course uses Python, which is currently the most popular programming language for data science. This course does not teach programming in Python. Prerequisites: CSE 131, MATH 233, and CSE 247 (can be taken concurrently).

Credit 3 units. EN: TU

---

**E81 CSE 222S Internet of Things**

With the advent of the Internet of Things, we can address, control, and interconnect formerly isolated objects to create new and interesting applications. In this course we study fundamental technologies behind Internet-of-Things devices, and Accessories, which include smart watches, health monitors, toys, and appliances. In addition to learning about IoT, students gain hands-on experience developing multi-platform solutions that control and communicate with Things using via mobile device friendly interfaces. Students apply their knowledge and skill to develop a project of their choosing using topics from the course. Prerequisite: CSE 132.

Credit 3 units. EN: TU

---

**E81 CSE 231S Introduction to Parallel and Concurrent Programming**

This course explores concepts, techniques, and design approaches for parallel and concurrent programming. We study how to write programs that make use of multiple processors for responsiveness and that share resources reliably and fairly. Parallel programming concepts include task-level, functional, and loop-level parallelism. Concurrent programming concepts include threads, synchronization, and locks. We cover how to adapt algorithms to achieve determinism and avoid data races and deadlock. Concepts and skills are acquired through the design and implementation of software projects. Prerequisite: CSE 131.

Credit 3 units. EN: TU

---

**E81 CSE 232 Programming Skills Workshop**

This course provides an overview of practical implementation skills. Topics include compilation and linking, memory management, pointers and references, using code libraries, testing and debugging. Prerequisite: CSE 247.

Credit 1 unit.

---

**E81 CSE 237S Programming Tools and Techniques**

This course offers an introduction to the tools and techniques that allow programmers to write code effectively. Tools covered include version control, the command line, debuggers, compilers, unit testing, IDEs, bug trackers, and more. The course also places a heavy emphasis on code quality: how can we write code that is functional and that also meets quality standards? Peer review exercises will be used to show the importance of code craftsmanship. Prerequisite: CSE 131.

Credit 3 units. EN: TU

---

**E81 CSE 240 Logic and Discrete Mathematics**

Introduces elements of logic and discrete mathematics that allow reasoning about computational structures and processes. Generally, the areas of discrete structures, proof techniques, probability and computational models are covered. Topics typically include propositional and predicate logic; sets, relations, functions and graphs; direct and indirect proof methods, induction and recursion; finite state machines and regular languages. Prerequisite: CSE 131 [COMMON EXAMS ON XXX] Note that this course will be held in-person.

Credit 3 units. EN: TU

---

**E81 CSE 247 Data Structures and Algorithms**

Study of fundamental algorithms, data structures, and their effective use in a variety of applications. Emphasizes importance of data structure choice and implementation for obtaining the most efficient algorithm for solving a given problem. A key component of this course is worst-case asymptotic analysis, which provides a quick and simple method for determining the scalability and effectiveness of an algorithm. Online textbook purchase required. Prerequisite: CSE 131/501N, and fluency with summations, derivatives, and proofs by induction.

Credit 3 units. EN: TU

---

**E81 CSE 247R Seminar: Data Structures and Algorithms**

The content of this seminar will vary by semester, but it will generally complement the material taught in CSE 247 Data Structures and Algorithms. Corequisite: CSE 247.

Credit 1 unit. EN: TU

---

**E81 CSE 256A Introduction to Human-Centered Design**

This course provides an introduction to human-centered design through a series of small user interface development projects covering information foraging, learnability, and problem solving. Projects will begin with reviewing a relevant model of human behavior. Each project will then provide an opportunity to explore how to apply that model in the design of a new user interface. Prerequisite: CSE 131.

Credit 3 units. EN: TU

---

**E81 CSE 260M Introduction to Digital Logic and Computer Design**

Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture, hardware description languages, simulation); design of simple processors and memory subsystems; program execution in simple processors; basic techniques for enhancing processor performance; configurable logic devices.

Prerequisites: CSE 131

Credit 3 units. EN: TU

---

**E81 CSE 311A Introduction to Intelligent Agents Using Science Fiction**

The course uses science-fiction short stories, TV episodes, and movies to motivate and introduce fundamental principles and techniques in intelligent agent systems. Topics covered may include game theory, decision theory, machine learning, distributed algorithms, and ethics. Prerequisite: CSE 247.

Credit 3 units. EN: BME T, TU

---

**E81 CSE 314A Data Manipulation and Management**

As the base of data science, data needs to be acquired, integrated and preprocessed. This important step in the data science workflow ensures both quantity and quality of data and improves the effectiveness of the following steps of data processing. Students will gain an understanding of concepts and approaches of data acquisition and governance including data shaping, information extraction, information integration, data reduction and compression, data transformation as well as data cleaning. The course will further highlight the ethical responsibility of protecting the integrity of data and proper use of data. Prerequisites: CSE 131, CSE 217A; Corequisite: CSE 247

Credit 3 units. EN: BME T, TU

---

**E81 CSE 316A Social Network Analysis**

This course looks at social networks and markets through the eyes of a computer scientist. We will look at questions including, "Why are acquaintances rather than friends more likely to get us job opportunities?" and, "Why do the rich get richer?" We begin by studying graph theory (allowing us to study the structure) and game theory (allowing us to study the interactions) of social networks and market behavior at the introductory level. Among other topics, we will study auctions, epidemics, and the structure of the Internet (including web searches). This course examines the intersection of computer science, economics, sociology, and applied mathematics. Prerequisites: CSE 240 and CSE 247

Credit 3 units. EN: BME T, TU

---

**E81 CSE 330S Rapid Prototype Development and Creative Programming**

This course uses web development as a vehicle for developing skills in rapid prototyping. Students acquire the skills to build a Linux web server in Apache, to write a web site from scratch in PHP, to run an SQL database, to perform scripting in Python, to employ various web frameworks, and to develop modern web applications in client-side and server-side JavaScript. The course culminates with a creative project in which students are able to synthesize the course material into a project of their own interest. The course implements an interactive studio format: after a formal presentation of a topic, students develop a related project under the supervision of the instructor. Prerequisite: CSE 131 Revised: 2019-02-21

Credit 3 units. EN: BME T, TU

---

**E81 CSE 332S Object-Oriented Software Development Laboratory**

Intensive focus on practical aspects of designing, implementing and debugging software, using object-oriented, procedural, and generic programming techniques. The course emphasizes familiarity and proficiency with a wide range of C++ language features through hands-on practice completing studio exercises and lab assignments, supplemented with readings and summary presentations for each session. Prerequisites: CSE 131 and CSE 247

Credit 3 units. EN: BME T, TU

---

**E81 CSE 337A Retro Game Design**

Before they became "retro," games played on platforms of the 1970s and 1980s were just games. But early game-console hardware was designed with very particular ideas of what made a game a game, and under extreme constraints of cost and technical viability. Creators designed for these constraints, and their work then influenced the design of later hardware and software. This is a course about the history, design, and technology of one retro game console, the 1977 Atari Video Computer System (also known as the Atari VCS or the Atari 2600). The first popular home console, the Atari VCS is a truly weird computer: It "boasts" 128 bytes of RAM, no video buffer, and a custom graphics and sound chip designed to interface with then-universal cathode ray tube televisions. Against all odds, creators made fun and successful games within these extreme constraints. Just as an artist benefits from learning the fundamentals of their craft, so a game designer or developer can benefit from returning to these early and crude hardware platforms. In this course, students will learn the technical and creative history of the Atari, and they will also learn the fundamentals of programming its unfamiliar hardware. Students will carry out programming exercises, mostly in the assembly language instructions required to operate this unusual computer. They will then make their own games for the Atari, which will be able to run on the actual, 45-year-old hardware.

Same as L53 Film 337

Credit 3 units. A&S IQ: HUM Arch: HUM Art: HUM, VC BU: HUM EN: H

---

**E81 CSE 341T Parallel and Sequential Algorithms**

The course aims to teach students how to design, analyze and implement parallel algorithms. The emphasis is on teaching fundamental principles and design techniques that easily transfer over to parallel programming. These techniques include divide and conquer, contraction, the greedy method, and so on. Prerequisites: CSE 240, CSE 247, and Math 310.

Credit 3 units. EN: BME T, TU

---

**E81 CSE 347 Analysis of Algorithms**

This course introduces techniques for the mathematical analysis of algorithms, including randomized algorithms and non-worst-case analyses such as amortized and competitive analysis. It also introduces the standard paradigms of divide-and-conquer, greedy, and dynamic programming algorithms, as well as reductions, and it provides an introduction to the study of intractability and techniques to determine when good algorithms cannot be designed. Prerequisites: (CSE 240 or Math 310) and CSE 247

Credit 3 units. EN: BME T, TU

---

**E81 CSE 347R Analysis of Algorithms Recitation**

This course is the recitation component of CSE 347. Registration and attendance for 347R is mandatory for students enrolled in 347.

---

**E81 CSE 359A Signals, Data and Equity**

This course introduces the design of classification and estimation systems for equity -- that is, with the goal of reducing the inequities of racism, sexism, xenophobia, ableism, and other systems of oppression. Systems that change the allocation of resources among people can increase inequity due to their inputs, the systems themselves, or how the systems interact in the context in which they are deployed. This course presents background in power and oppression to help predict how new technological and societal systems might interact and when they might confront or reinforce existing power systems. Measurement theory -- the study of the mismatch between a system's intended measure and the data it actually uses -- is covered. Multiple examples of sensing and classification systems that operate on people (e.g., optical, audio, and text sensors) are covered by implementing algorithms and quantifying inequitable outputs. Prerequisite: ESE 105 or CSE 217A or CSE 417T. Background readings will be available.

Same as E35 ESE 359

Credit 3 units. EN: BME T, TU

---

**E81 CSE 361S Introduction to Systems Software**

This course is an introduction to the hardware and software foundations of computer processing systems. The course provides a programmer's perspective of how computer systems execute programs and store information. The course material aims to enable students to become more effective programmers, especially when dealing with issues of performance, portability and robustness. It also serves as a foundation for other system courses (e.g., those involving compilers, networks, and operating systems), where a deeper understanding of systems-level issues is required. Topics covered include machine-level code and its generation by optimizing compilers, performance evaluation and optimization, computer arithmetic, memory organization and management, and supporting concurrent computation. Prerequisites: CSE 131 and CSE 132.

Credit 3 units. EN: BME T, TU

---

**E81 CSE 362M Computer Architecture**

This course explores the interaction and design philosophy of hardware and software for digital computer systems. Topics include: Processor architecture, Instruction Set Architecture, Assembly Language, memory hierarchy design, I/O considerations, and a comparison of computer architectures. Prerequisite: CSE 260M.

Credit 3 units. EN: BME T, TU

---

**E81 CSE 365S Elements of Computing Systems**

All computers are made up of 0s and 1s. However, the conceptual gap between the 0s and 1s and the day to day operation of modern computers is enormously wide. This fast-paced course aims to bridge the divide by starting with simple logic gates and building up the levels of abstraction until one can create games like Tetris. There is no specific programming language requirement, but some experience with programming is needed. Prerequisite: CSE 247  
Credit 3 units. EN: BME T, TU

---

**E81 CSE 400 Independent Study**

This course allows the student to investigate a topic in computer science and engineering of mutual interest to the student and a mentor. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form (<https://wustl.box.com/s/gp2mffz8r7ql9rgsil5zfy5pz05b8tb>) declaring the agreement must be filed in the departmental office. This course carries university credit, but it does not count toward a CSE major or minor. To arrange for CSE major or minor credit for independent study, a student must enroll in CSE 400E instead of CSE 400. Consult also CSE 400E.  
Credit variable, maximum 6 units.

---

**E81 CSE 400E Independent Study**

Investigation of a topic in computer science and engineering of mutual interest to the student and a mentor. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form (<https://wustl.box.com/s/gp2mffz8r7ql9rgsil5zfy5pz05b8tb>) declaring the agreement must be filed in the departmental office. Credit earned for CSE400E can be counted toward a student's major or minor program, with the consent of the student's advisor. See also: CSE400  
Credit variable, maximum 6 units.

---

**E81 CSE 411A AI and Society**

AI has made increasing inroads in a broad array of applications, many that have socially significant implications. This course will study a number of such applications, focusing on issues such as AI used for social good, fairness and accountability of AI, and potential security implications of AI systems. Prerequisite: CSE 247.  
Credit 3 units. EN: BME T, TU

---

**E81 CSE 412A Introduction to Artificial Intelligence**

The discipline of artificial intelligence (AI) is concerned with building systems that think and act like humans or rationally on some absolute scale. This course is an introduction to the field, with special emphasis on sound modern methods. The topics include knowledge representation, problem solving via search, game playing, logical and probabilistic reasoning, planning, dynamic programming, and reinforcement learning. Programming exercises concretize the key methods. The course targets graduate students and advanced undergraduates. Evaluation is based on written and programming assignments, a midterm exam and a final exam. Prerequisites: CSE 247, ESE 326 ( or Math 3200 or Math 3211 or Engr 328), and Math 233. This course will be taught using Zoom and will be recorded.  
Credit 3 units. EN: BME T, TU

---

**E81 CSE 413A Web Privacy and Security**

This course introduces the fundamental concepts of web privacy and security. It explores the challenges and techniques related to protecting personal privacy online and securing web applications from threats and vulnerabilities. Why take this course: Given that the vast majority of user-facing software is consumed through the web platform, developing an understanding of the web ecosystem is crucial in improving user privacy and security, overall. Topics include: Webpage

execution (e.g., JavaScript execution), Browser security model (e.g., site isolation), Online tracking (e.g., cookies, fingerprinting), Privacy enhancing technologies (e.g., tracker blocking), Technology policy (privacy laws, policies). Prereqs: CSE 247  
Credit 3 units.

---

**E81 CSE 416A Data Science for Complex Networks**

This course examines complex systems through the eyes of a computer scientist. We will use the representative power of graphs to model networks of social, technological, or biological interactions. Network analysis provides many computational, algorithmic, and modeling challenges. We begin by studying graph theory, allowing us to quantify the structure and interactions of social and other networks. We will then explore how to practically analyze network data and how to reason about it through mathematical models of network structure and evolution. We will also investigate algorithms that extract basic properties of networks in order to find communities and infer node properties. Finally, we will study a range of applications including robustness and fragility of networks such as the internet, spreading processes used to study epidemiology or viral marketing, and the ranking of webpages based on the structure of the webgraph. This course combines concepts from computer science and applied mathematics to study networked systems using data mining. Prerequisites: CSE 247, ESE 326, MATH 309, and programming experience (note: we will parse data and analyze networks using Python)  
Credit 3 units. EN: BME T, TU

---

**E81 CSE 417T Introduction to Machine Learning**

The field of machine learning is concerned with the question of how to construct computer programs that automatically improve with experience. This course is a broad introduction to machine learning, covering the foundations of supervised learning and important supervised learning algorithms. Topics to be covered are the theory of generalization (including VC-dimension, the bias-variance tradeoff, validation, and regularization) and linear and non-linear learning models (including linear and logistic regression, decision trees, ensemble methods, neural networks, nearest-neighbor methods, and support vector machines). Prerequisites: CSE 247, ESE 326 ( or Engr 328) , Math 233, and Math 309 (can be taken concurrently).  
Credit 3 units. EN: BME T, TU

---

**E81 CSE 419A Introduction to AI for Health**

Artificial Intelligence (AI) has emerged as a powerful tool for solving complex health problems using advanced data-driven techniques. AI for health is fueled by both the advancement in AI methods and the increasing availability of health data. This course will introduce the interdisciplinary field of AI for health including applications of AI in various healthcare domains. Students will read and critique research papers and perform projects to develop AI models and solutions for health care.  
Credit 3 units.

---

**E81 CSE 422S Operating Systems Organization**

This course involves a hands-on exploration of core OS abstractions, mechanisms and policies in the context of the Linux kernel. Readings, lecture material, studio exercises, and lab assignments are closely integrated in an active-learning environment in which students gain experience and proficiency writing OS code, as well as tracing and evaluating OS operations via user-level programs and kernel-level monitoring tools. Topics include: system calls, interrupt handling, kernel modules, concurrency and synchronization, proportional and priority-based scheduling of processes and threads, I/O facilities, memory management, virtual memory, device management, and file system organization. Prerequisite: CSE 361S  
Credit 3 units. EN: BME T, TU

---

**E81 CSE 425S Programming Systems and Languages**

A systematic study of the principles, concepts and mechanisms of computer programming languages: their syntax, semantics and pragmatics; the processing and interpretation of computer programs; programming paradigms; and language design. Illustrative examples are selected from a variety of programming language paradigms.

Prerequisites: CSE 332S

Credit 3 units. EN: BME T, TU

---

**E81 CSE 427S Cloud Computing with Big Data Applications**

This course provides an overview of the tools necessary to harness big data on the cloud for real world analytic applications. Each lecture will cover an important cloud computing concept or framework, and will be accompanied by a lab. There will be an emphasis on hands-on experience through using each of the tools taught in this course in a small project. Topics include Cloud based security and storage, Linux, Docker and Kubernetes, Data modeling through JSON and SQL, Database concepts and storage architectures, distributed systems, and finally real-world applications. Labs will build on each other and require the completion of the previous week's lab. The course will end with a multi-week, open-ended final project. Prerequisites: CSE 131, CSE 247, and CSE 330.

Credit 3 units. EN: BME T, TU

---

**E81 CSE 428S Multi-Paradigm Programming in C++**

Intensive focus on how modern C++ language features support procedural, functional, generic, and object-oriented programming paradigms and allow those paradigms to be applied both separately and in combination. Topics covered will include various C++ language features and semantics, especially from the C++11 standard onward, with studio exercises and lab assignments designed to build proficiency in using them effectively within and across the different programming paradigms. Prerequisite: CSE 332S or CSE 504N; or graduate standing and basic proficiency in C++.

Credit 3 units. EN: TU

---

**E81 CSE 431S Translation of Computer Languages**

The theory of language recognition and translation is introduced in support of compiler construction for modern programming languages. Topics include syntactic and semantic analysis, symbol table management, code generation, and runtime libraries. A variety of parsing methods is covered, including top-down and bottom-up. Machine problems culminate in the course project, for which students construct a working compiler. Prerequisites: CSE 240 and CSE 247

Credit 3 units. EN: BME T, TU

---

**E81 CSE 433R Seminar: Capture The Flag (CTF) Studio**

This course provides a collaborative studio space for hands-on practice solving security-relevant puzzles in "Capture The Flag" (CTF) format. Students will engage CTF challenges individually and in teams, and online CTF resources requiring (free) account signup may be used. Students will be encouraged to attempt challenges commensurate with their ability, but no prior CTF experience or security knowledge is assumed. The goal of the course is to build skills in the fundamentals of security analysis, including usage of the Linux command line and console-based security tools, creativity in applying theoretical knowledge to practical challenges, and confidence in approaching under-specified problems. Prerequisite/corequisite: CSE 433S or equivalent.

Credit 1 unit.

---

**E81 CSE 433S Introduction to Computer Security**

Secure computing requires the secure design, implementation, and use of systems and algorithms across many areas of computer science. Fundamentals of secure computing such as trust models and cryptography will lay the groundwork for studying key topics in the security of systems, networking, web design, machine learning algorithms, mobile applications, and physical devices. Human factors, privacy, and the law will also be considered. Hands-on practice exploring vulnerabilities and defenses using Linux, C, and Python in studios and lab assignments is a key component of the course. Prerequisites: CSE 247 and either CSE 361 or CSE 332.

Credit 3 units. EN: BME T, TU

---

**E81 CSE 434S Reverse Engineering and Malware Analysis**

This course will focus on reverse engineering and malware analysis techniques. Reverse engineering -- the process of deconstructing an object to reveal its design and architecture -- is an essential skill in the information security community. Although hackers often use reverse engineering tools to discover and exploit vulnerabilities, security analysts and researchers must use reverse engineering techniques to find what a specific malware does, how it does it, and how it got into the system. In this course, we will explore reverse engineering techniques and tools, focusing on malware analysis. Students will use and write software during in-class studios and homework assignments to illustrate mastery of the material. Prerequisite: CSE 361S.

Credit 3 units. EN: TU

---

**E81 CSE 435S Database Management Systems**

A study of data models and the database management systems that support these data models. The design theory for databases is developed and various tools are utilized to apply the theory. General query languages are studied and techniques for query optimization are investigated. Integrity and security requirements are studied in the context of concurrent operations on a database, where the database may be distributed over one or more locations. The unique requirements for engineering design databases, image databases, and long transaction systems are analyzed. Prerequisite: CSE 247.

Credit 3 units. EN: BME T, TU

---

**E81 CSE 437R Technical Interviewing**

Students will study, give, and receive technical interviews in this seminar course. The focus will be on improving student performance in a technical interview setting, with the goal of making our students as comfortable and agile as possible with technical interviews. Professionals from the local and extended Washington University community will mentor our students in this seminar.

Credit 2 units.

---

**E81 CSE 437S Software Engineering Workshop**

An introduction and exploration of concepts and issues related to large-scale software systems development. Areas of exploration include technical complexities, organization issues, and communication techniques for large-scale development. Students participate through teams emulating industrial development. The projects cover the principal system development life-cycle phases from requirements analysis, to software design, and to final implementation. Issues relating to real-time control systems, human factors, reliability, performance, operating costs, maintainability and others are addressed and resolved in a reasonable manner. Book Requirement: <https://www.oreilly.com/library/view/kubernetes-up-and/9781492046523/>. Prerequisite: Junior or Senior standing, and CSE 330S.

Credit 3 units. EN: BME T, TU

---

---

**E81 CSE 438S Mobile Application Development**

Learn how to create iOS apps in the Swift programming language. This course covers a variety of topics in the development of modern mobile applications, with a focus on hands-on projects. Students will create multiple fully-functional apps from scratch. The course emphasizes object-oriented design patterns and real-world development techniques. Time is provided at the end of the course for students to work on a project of their own interest. Prerequisite: CSE 247. Credit 3 units. EN: BME T, TU

---

**E81 CSE 439S Mobile Application Development II**

In this course, students will work in groups to design, develop, test, publish, and market an iOS mobile application. Throughout the semester, students will operate in different roles on a team, serving as lead developer, tester, and project manager. Topics include how to publish a mobile application on an app store, APIs and tools for testing and debugging, and popular cloud-based SDKs used by developers. This course requires completion of the iOS version of CSE 438 Mobile Application Development or the appropriate background knowledge of the iOS platform. Credit 3 units. EN: TU

---

**E81 CSE 442T Introduction to Cryptography**

This course is an introduction to modern cryptography, with an emphasis on its theoretical foundations. Topics will include one-way functions, pseudorandom generators, public key encryption, digital signatures, and zero-knowledge proofs. Prerequisites: CSE 240 and CSE 247. Credit 3 units. EN: TU

---

**E81 CSE 447T Introduction to Formal Languages and Automata**

An introduction to the theory of computation, with emphasis on the relationship between formal models of computation and the computational problems solvable by those models. Specifically, this course covers finite automata and regular languages; Turing machines and computability; and basic measures of computational complexity and the corresponding complexity classes. Prerequisites: CSE 240 and CSE 247. Credit 3 units.

---

**E81 CSE 450A Video Game Programming**

This course teaches the core aspects of a video game developer's toolkit. Students work in groups and with a large game software engine to create and playtest a full-featured video game. Students will explore topics around the design of games through analysis of current games. Students have the opportunity to explore additional topics including graphics, artificial intelligence, networking, physics, and user interface design through their game project. Prerequisite: CSE247. Credit 3 units. EN: BME T, TU

---

**E81 CSE 451A Video Game Programming II**

This course is a continuation of CSE 450A Video Game Programming I. Students will work in groups and with a large game software engine to make a full-featured video game. Students will have the opportunity to work on topics in graphics, artificial intelligence, networking, physics, user interface design, and other topics. Prerequisites: CSE 450A and permission of instructor. Credit 3 units. EN: BME T, TU

---

**E81 CSE 452A Computer Graphics**

Introduction to computer graphics. The course covers fundamental concepts, data structures, and algorithms related to the construction, display, and manipulation of three-dimensional objects. Topics include scan-conversion, basic image processing, transformations, scene graphs, camera projections, local and global rendering, fractals, and parametric curves and surfaces. Students develop interactive graphics programs using C++ language. Prerequisite: CSE 332S and Math 309. Credit 3 units. EN: BME T, TU

---

**E81 CSE 454A Software Engineering for External Clients**

Teams of students will design and develop a solution to a challenging problem posed by a real-world client. Students will gain experience with a variety of facets of software development, such as gathering and interpreting requirements, software design/architecture, UI/UX, testing, documentation, and developer/client interactions. Prerequisite: E81 CSE 330S or E81 CSE 332S and at least junior standing. Credit 3 units. EN: BME T, TU

---

**E81 CSE 457A Introduction to Visualization**

Disciplines such as medicine, business, science, and government are producing enormous amounts of data with increasing volume and complexity. In this course, students will study the principles for transforming abstract data into useful information visualizations. They will learn about the state of the art in visualization research and development and gain hands-on experience with designing and developing interactive visualization tools for the web. They will also learn how to critique existing visualizations and how to evaluate the systems they build. Topics include design, data mapping, visual perception, and interaction. Prerequisite: CSE 330S. Credit 3 units. EN: BME T, TU

---

**E81 CSE 460T Switching Theory**

Advanced topics in switching theory as employed in the synthesis, analysis, and design of information processing systems. Combinational techniques: minimization, multiple output networks, state identification and fault detection, hazards, testability and design for test are examined. Sequential techniques: synchronous circuits, machine minimization, optimal state assignment, asynchronous circuits, and built-in self-test techniques. Prerequisite: CSE 260M. Credit 3 units. EN: BME T, TU

---

**E81 CSE 462M Computer Systems Design**

Introduction to modern design practices, including FPGA and PCB design methodologies. Student teams use Xilinx Vivado for HDL-based FPGA design and simulation and do schematic capture, PCB layout, fabrication, and testing of the hardware portion of a selected computation system. The software portion of the project uses Microsoft Visual Studio to develop a user interface and any additional support software required to demonstrate final projects to the faculty during finals week. Prerequisites: CSE 361S and 362M from Washington University in St. Louis or permission of the instructor. Revised: 2019-02-22. Credit 3 units. EN: BME T, TU

---

**E81 CSE 463M Digital Integrated Circuit Design and Architecture**

This is a project-oriented course on digital VLSI design. The course material focuses on bottom-up design of digital integrated circuits, starting from CMOS transistors, CMOS inverters, combinational circuits and sequential logic designs. Important design aspects of digital integrated circuits such as propagation delay, noise margins and power dissipation are covered in the class, and design challenges in sub-micron technology are addressed. The students design combinational and sequential circuits at various levels of abstraction using a state-

of-the-art CAD environment provided by Cadence Design Systems. The goal of the course is to design a microprocessor in 0.5 micron technology that will be fabricated by a semiconductor foundry. Prerequisites: CSE 260M and ESE 232. Credit 3 units. EN: BME T, TU

---

### **E81 CSE 465M Digital Systems Laboratory**

Hardware/software co-design; processor interfacing; procedures for reliable digital design, both combinational and sequential; understanding manufacturers' specifications; use of test equipment. Several single-period laboratory exercises, several design projects, and application of microprocessors in digital design. One lecture and one laboratory period a week. Prerequisites: ESE 260 Same as E35 ESE 465 Credit 3 units. EN: BME T, TU

---

### **E81 CSE 467S Embedded Computing Systems**

This course introduces the issues, challenges, and methods for designing embedded computing systems -- systems designed to serve a particular application and which incorporate the use of digital processing devices. Examples of embedded systems include cellular phones, appliances, game consoles, automobiles, and drones. Emphasis is given to aspects of design that are distinct to embedded systems. The course examines hardware, software, and system-level design. Hardware topics include microcontrollers, digital signal processors, memory hierarchy, and I/O. Software issues include languages, run-time environments, and program analysis. System-level topics include real-time operating systems, scheduling, power management, and wireless sensor networks. Students will perform a course project on a real embedded system testbed. Prerequisites: CSE 260M (and either CSE 132 or ESE 205). Credit 3 units. EN: TU

---

### **E81 CSE 468T Introduction to Quantum Computing**

This course introduces students to quantum computing, which leverages the effects of quantum-mechanical phenomena to solve problems. The course begins with material from physics that demonstrates the presence of quantum effects. Mathematical abstractions of quantum gates are studied with the goal of developing the skill to reason about existing quantum circuits and to develop new quantum circuits as required to solve problems. Students will develop a quantum-computer simulator and make use of open simulators as well as actual devices that can realize quantum circuits on the Internet. Prerequisites: CSE247, Math 309 and Math 3200 (or ESE 326 or Engr 328). Credit 3 units. EN: BME T, TU

---

### **E81 CSE 469S Security of the Internet of Things and Embedded System Security**

This course presents a "deep dive" into the emerging world of the Internet of Things from a cybersecurity perspective. With billions of internet-enabled devices projected to impact every nook and cranny of modern existence, the concomitant security challenge portends to become dazzlingly complex. Students will learn the fundamentals of IoT architecture and operations from a layered perspective and focus on identifying, assessing, and mitigating the threats and vulnerabilities therein. Through a blend of lecture and "hands-on" studios, students will gain proficiency in the range of approaches, methods, and techniques required to address embedded systems security and secure the internet of things using actual devices from both hardware and software perspectives and across a range of applications. Credit 3 units. EN: TU

---

### **E81 CSE 473S Introduction to Computer Networks**

A broad overview of computer networking. Topics include history, protocols, Hyper Text Transfer Protocol (HTTP), File Transfer Protocol (FTP), Simple Mail Transfer Protocol (SMTP), Domain Name System (DNS), peer-to-peer (P2P), transport layer design issues, transport layer protocols, Transmission Control Protocol (TCP), User Datagram Protocol (UDP), TCP congestion control, network layer, Internet Protocol version 4 (IPv4), Internet Control Message Protocol (ICMP), Internet Protocol version 6 (IPv6), routing algorithms, routing protocols, Open Shortest Path First (OSPF), Routing Information Protocol (RIP), Border Gateway Protocol (BGP), datalink layer and local area networks carrier sense multiple access with collision detection (CSMA/CD), Ethernet, virtual local area networks (VLANs), Point-to-Point Protocol (PPP), Multi-Protocol Label Switching, wireless and mobile networks, multimedia networking, security in computer networks, cryptography, and network management. Prerequisite: CSE 247; CSE 132 is suggested, but not required. Revised: 2019-02-22 Credit 3 units. EN: BME T, TU

---

### **E81 CSE 497 Senior Project I**

Implementation of a substantive project on an individual basis, involving one or more major areas in computer science. Problems pursued under this framework may be predominantly analytical, involving exploration and extension of theoretical structures, or may pivot around the design/development of solutions for particular applications drawn from areas throughout the University and/or community. In either case, the project serves as a focal point for crystallizing the concepts, techniques, and methodologies encountered throughout the curriculum. Students intending to take CSE 497-498 must submit a project proposal form (<https://cse.wustl.edu/undergraduate/PublishingImages/Pages/undergraduate-research/Independent%20Study%20Form%20400.pdf>) for approval by the department during the spring semester of the junior year. Prerequisite: senior standing. Credit 3 units.

---

### **E81 CSE 498 Senior Project II**

Implementation of a substantive project on an individual basis, involving one or more major areas in computer science. Problems pursued under this framework may be predominantly analytical, involving exploration and extension of theoretical structures, or may pivot around the design/development of solutions for particular applications drawn from areas throughout the University and/or community. In either case, the project serves as a focal point for crystallizing the concepts, techniques, and methodologies encountered throughout the curriculum. Students intending to take CSE 497-498 must submit a project proposal form (<https://cse.wustl.edu/undergraduate/PublishingImages/Pages/undergraduate-research/Independent%20Study%20Form%20400.pdf>) for approval by the department during the spring semester of the junior year. Prerequisite: senior standing. Credit 3 units.

---

### **E81 CSE 499 Undergraduate Honors Thesis**

Working closely with a faculty member, the student investigates an original idea (algorithm, model technique, etc.), including a study of its possible implications, its potential application, and its relationship to previous related work reported in the literature. Contributions and results from this investigation are synthesized and compiled into a publication-quality research paper presenting the new idea. Prerequisites: a strong academic record and permission of instructor. Credit 3 units.

---

---

**E81 CSE 500 Independent Study**

Proposal form can be located at <https://cse.wustl.edu/undergraduate/PublishingImages/Pages/undergraduate-research/Independent%20Study%20Form%20400.pdf>  
Credit variable, maximum 3 units.

---

**E81 CSE 501N Introduction to Computer Science**

An introduction to software concepts and implementation, emphasizing problem solving through abstraction and decomposition. Introduces processes and algorithms, procedural abstraction, data abstraction, encapsulation, and object-oriented programming. Recursion, iteration, and simple data structures are covered. Concepts and skills are mastered through programming projects, many of which employ graphics to enhance conceptual understanding. Java, an object-oriented programming language, is the vehicle of exploration. Active-learning sessions are conducted in a studio setting in which students interact with each other and the professor to solve problems collaboratively. Prerequisites: Comfort with algebra and geometry at the high school level is assumed. Patience, good planning, and organization will promote success. This course assumes no prior experience with programming.  
Same as E81 CSE 131  
Credit 3 units. Arch: ETH, NS BU: SCI EN: TU

---

**E81 CSE 502N Data Structures and Algorithms**

Study of fundamental algorithms, data structures, and their effective use in a variety of applications. Emphasizes importance of data structure choice and implementation for obtaining the most efficient algorithm for solving a given problem. A key component of this course is worst-case asymptotic analysis, which provides a quick and simple method for determining the scalability and effectiveness of an algorithm. Online textbook purchase required. Prerequisite: CSE 131/501N, and fluency with summations, derivatives, and proofs by induction.  
Same as E81 CSE 247  
Credit 3 units. EN: TU

---

**E81 CSE 503S Rapid Prototype Development and Creative Programming**

This course uses web development as a vehicle for developing skills in rapid prototyping. Students acquire the skills to build a Linux web server in Apache, to write a web site from scratch in PHP, to run an SQL database, to perform scripting in Python, to employ various web frameworks, and to develop modern web applications in client-side and server-side JavaScript. The course culminates with a creative project in which students are able to synthesize the course material into a project of their own interest. The course implements an interactive studio format: after a formal presentation of a topic, students develop a related project under the supervision of the instructor. Prerequisite: CSE 131 Revised: 2019-02-21  
Same as E81 CSE 330S  
Credit 3 units. EN: BME T, TU

---

**E81 CSE 504N Object-Oriented Software Development Laboratory**

Intensive focus on practical aspects of designing, implementing and debugging software, using object-oriented, procedural, and generic programming techniques. The course emphasizes familiarity and proficiency with a wide range of C++ language features through hands-on practice completing studio exercises and lab assignments, supplemented with readings and summary presentations for each session. Prerequisites: CSE 131 and CSE 247  
Same as E81 CSE 332S  
Credit 3 units. EN: BME T, TU

---

**E81 CSE 505N Introduction to Digital Logic and Computer Design**

Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture, hardware description languages, simulation); design of simple processors and memory subsystems; program execution in simple processors; basic techniques for enhancing processor performance; configurable logic devices.  
Prerequisites: CSE 131  
Same as E81 CSE 260M  
Credit 3 units. EN: TU

---

**E81 CSE 510A Deep Reinforcement Learning**

Deep Reinforcement Learning (RL) is a cutting-edge field at the intersection of artificial intelligence and decision-making. This course provides an in-depth exploration of the fundamental principles, algorithms, and applications of deep reinforcement learning. It covers basic algorithms, including value-based, policy-based, actor-critic, and model-based methods, as well as advanced topics, such as meta RL, offline RL, and multi-agent RL. By combining deep learning techniques with reinforcement learning, this course equips students with the necessary skills to build intelligent systems that can learn from experiences and make optimal decisions in complex environments. Evaluation of this course is based on written and programming assignments, and a final course project.  
Credit 3 units.

---

**E81 CSE 511A Introduction to Artificial Intelligence**

The discipline of artificial intelligence (AI) is concerned with building systems that think and act like humans or rationally on some absolute scale. This course is an introduction to the field, with special emphasis on sound modern methods. The topics include knowledge representation, problem solving via search, game playing, logical and probabilistic reasoning, planning, dynamic programming, and reinforcement learning. Programming exercises concretize the key methods. The course targets graduate students and advanced undergraduates. Evaluation is based on written and programming assignments, a midterm exam and a final exam. Prerequisites: CSE 247, ESE 326, Math 233  
Credit 3 units. EN: BME T, TU

---

**E81 CSE 513T Theory of Artificial Intelligence and Machine Learning**

Mathematical foundations for Artificial Intelligence and Machine Learning. An introduction to the PAC-Semantics ("Probably Approximately Correct") as a common semantics for knowledge obtained from learning and declarative sources, and the computational problems underlying the acquisition and processing of such knowledge. We emphasize the design and analysis of efficient algorithms for these problems, and examine for which representations these problems are known or believed to be tractable. Prerequisites: CSE 347  
Credit 3 units. EN: TU

---

**E81 CSE 514A Data Mining**

With the vast advancements in science and technology, the acquisition of large quantities of data is routinely performed in many fields. Examples of large data include various types of data on the internet, high-throughput sequencing data in biology and medicine, extraterrestrial data from telescopes in astronomy, and images from surveillance cameras in security settings. Analyzing a large amount of data through data mining has become an effective means of extracting knowledge from data. This course introduces the basic concepts

and methods of data mining and provides hands-on experience for processing, analyzing and modeling structured and unstructured data. Homework problems, exams, and programming assignments will be administered throughout the course to enhance students' learning. Prerequisites: CSE 247, ESE 326 (or Math 3200 or Engr 328), and Math 233.

Credit 3 units. EN: BME T, TU

---

### **E81 CSE 515T Bayesian Methods in Machine Learning**

This course will cover machine learning from a Bayesian probabilistic perspective. Bayesian probability allows us to model and reason about all types of uncertainty. The result is a powerful, consistent framework for approaching many problems that arise in machine learning, including parameter estimation, model comparison, and decision making. We will begin with a high-level introduction to Bayesian inference and then proceed to cover more advanced topics. These will include inference techniques (e.g., exact, MAP, sampling methods, the Laplace approximation), Bayesian decision theory, Bayesian model comparison, Bayesian nonparametrics, and Bayesian optimization. Prerequisites: CSE 417T and ESE 326.

Credit 3 units. EN: BME T, TU

---

### **E81 CSE 516A Multi-Agent Systems**

This course introduces the fundamental techniques and concepts needed to study multi-agent systems, in which multiple autonomous entities with different information sets and goals interact. We will study algorithmic, mathematical, and game-theoretic foundations, and how these foundations can help us understand and design systems ranging from robot teams to online markets to social computing platforms. Topics covered may include game theory, distributed optimization, multi-agent learning and decision-making, preference elicitation and aggregation, mechanism design, and incentives in social computing systems. Prerequisites: CSE 347 (may be taken concurrently), ESE 326 (or Math 3200), and Math 233 or equivalents. Some prior exposure to artificial intelligence, machine learning, game theory, and microeconomics may be helpful, but is not required.

Credit 3 units. EN: BME T, TU

---

### **E81 CSE 517A Machine Learning**

This course is the second course of a two course sequence on machine learning (CSE 417T and CSE517A). It assumes a fundamental understanding of the machine learning foundations (both theoretical and practical) and introduces probabilistic machine learning approaches in-depth as well as advanced topics at the frontier of the field. Topics to be covered include discriminative and generative probabilistic models, kernel methods (e.g., support vector machines, Gaussian processes), neural networks (deep learning), unsupervised learning techniques, and practical machine learning (e.g., feature engineering, dimensionality reduction, model comparison). Prerequisites: Math 233, CSE 247, ESE 326 or Math 3211, Math 309, and CSE 417T or ESE 417

Credit 3 units. EN: TU

---

### **E81 CSE 518A Human-in-the-Loop Computation**

This course is an exploration of the opportunities and challenges of human-in-the-loop computation, an emerging field that examines how humans and computers can work together to solve problems neither can solve alone yet. We will explore ways in which techniques from machine learning, game theory, optimization, online behavioral social science, and human-computer interactions can be used to model and analyze human-in-the-loop systems such as crowdsourcing markets, prediction markets, and user-generated content platforms. We will also look into recent developments in the interactions between humans and AIs, such as learning with the presence of strategic behavior and ethical issues in AI systems. Prerequisites: CSE 247, ESE 326, Math 233, and Math 309.

Credit 3 units. EN: BME T, TU

---

### **E81 CSE 519T Advanced Machine Learning**

This course provides a close look at advanced machine learning algorithms, including their theoretical guarantees (computational learning theory) and tricks to make them work in practice. In addition, this course focuses on more specialized learning settings, including unsupervised learning, semi-supervised learning, domain adaptation, multi-task learning, structured prediction, metric learning, and learning of data representations. Learning approaches may include graphical models, non-parametric Bayesian statistics, and technical topics such as sampling, approximate inference, and non-linear function optimization. Mathematical maturity and general familiarity with machine learning are required. Prerequisites: CSE 517A.

Credit 3 units. EN: TU

---

### **E81 CSE 520S Real-Time Systems**

This course covers software systems and network technologies for real-time applications such as automobiles, avionics, industrial automation, and the Internet of Things. Topics include real-time scheduling, real-time operating systems and middleware, quality of service, industrial networks, and real-time cloud computing. Prerequisite: CSE 361S.

Credit 3 units. EN: BME T, TU

---

### **E81 CSE 521S Wireless Sensor Networks**

Dense collections of smart sensors networked to form self-configuring pervasive computing systems provide a basis for a new computing paradigm that challenges many classical approaches to distributed computing. Naming, wireless networking protocols, data management, and approaches to dependability, real-time, security, and middleware services all fundamentally change when confronted with this new environment. Embedded sensor networks and pervasive computing are among the most exciting research areas with many open research questions. This course will study a large number of research papers that deal with various aspects of wireless sensor networks. Students will perform a project on a real wireless sensor network comprised of tiny devices, each consisting of sensors, a radio transceiver, and a microcontroller. Prerequisite: CSE 361S.

Credit 3 units. EN: BME T, TU

---

### **E81 CSE 522S Advanced Operating Systems**

This course offers an in-depth hands-on exploration of advanced uses of key OS abstractions, mechanisms and policies, with an increasing focus on understanding and evaluating their behaviors and interactions. Readings, lecture material, studio exercises, and a semester-long project chosen by students are closely integrated in an active-learning environment in which students gain experience and proficiency writing, tracing, and evaluating user-space and kernel-space code. Topics include how memory, processes and threads, virtual file systems, and other mechanisms can be used by hypervisors, containers, and other advanced OS abstractions, as well as forensic techniques for examining and managing system behavior. Prerequisite: CSE 422S.

Credit 3 units. EN: BME T, TU

---

### **E81 CSE 523S Systems Security**

This course examines the intersection between computer design and information security. While performance and efficiency in digital systems have improved markedly in recent decades, computer security has worsened overall in this time frame. To understand why, we will explore the role that design choices play in the security characteristics of modern computer and network systems. Students will use and write software to illustrate mastery of the material. Projects will include identifying security vulnerabilities, exploiting vulnerabilities, and detecting and defending against exploits. Prerequisites: CSE 361S

Credit 3 units. EN: BME T, TU

---

**E81 CSE 525T Computation in Economics and Social Choice**

This course covers the mathematical and algorithmic foundations of problems of reconciling agent preferences. By specifying the kinds of agents, alternatives, and objectives, this captures algorithm design problems as diverse as how to sell goods to buyers, how to match medical residents to hospitals, and how to elect representatives to legislatures. Topics include algorithm and mechanism design for the allocation of private goods; choosing public goods and shared alternatives; and participatory budgeting. Prerequisites: CSE 347, and CSE 541T or CSE 581T (concentration inequalities, NP-hardness, linear programming).

Credit 3 units.

---

**E81 CSE 527A Natural Language Processing**

Natural language processing (NLP) is an important part of artificial intelligence (AI), endowing computers with the ability to process human language. NLP techniques are used in applications such as question answering, automatic language translation, and extracting structured information from text. This course will introduce fundamental ideas and recent research trends in NLP. Students will gain theoretical and practical experience with various NLP techniques (e.g., deep learning) and applications. Pre-reqs: basic linear algebra, basic probability and statistics, basic machine learning (CSE 417T or ESE 417 or instructor consent) and Python programming.

Credit 3 units. EN: TU

---

**E81 CSE 527S Data-driven Privacy and Security**

It is becoming increasingly hard for users to use the internet while keeping their privacy and security intact. It is a routine practice for online services to surreptitiously collect excessive amounts of user data, use user data for undisclosed purposes, and even engage in blatant trading of user data. This research-oriented course takes a deep-dive into surfacing data collection by online services and its harms to users, exploring solutions that aim to mitigate these harms, investigating emerging threats that still need to be addressed, and reviewing new directions to systematically improve the state of user privacy and security on the internet. Major topics: Web privacy and security, IoT privacy and security, Large language model (LLM) security and privacy, and Technology policy.

Credit 3 units.

---

**E81 CSE 531A AI for Health**

Artificial Intelligence (AI) has emerged as a powerful tool for solving complex health problems using advanced data-driven techniques. AI for health is fueled by both the advancement in AI methods and the availability of health data provided by electronic health records (EHR) and wearables. This course will cover recent literature in the interdisciplinary field of AI for health. Students will read and critique research papers and perform a project on AI for health.

Credit 3 units.

---

**E81 CSE 532S Advanced Multiparadigm Software Development**

Intensive focus on advanced design and implementation of concurrent and distributed system software in C++. Topics covered include concurrency and synchronization features and software architecture patterns. Prerequisites: CSE 332S or graduate standing and strong familiarity with C++; and CSE 422S

Credit 3 units. EN: BME T, TU

---

**E81 CSE 533T Coding and Information Theory for Data Science**

Coding/information theory emerged in mid 20'th century as a mathematical theory of communication with noise. In latter decades it has developed to a vast topic encompassing most aspects of handling large datasets. The course will begin by surveying the classical mathematical theory and its basic applications in communication, and continue to contemporary applications in storage, computation, privacy, machine learning, and emerging technologies such as networks, blockchains, and DNA storage. The course is self-contained, but prior knowledge in algebra (such as Math 309 or ESE 318), discrete math (such as CSE 240 or Math 310), and probability (such as Math 2200 or ESE 326), as well as some mathematical maturity, is assumed. There will be 4-5 homework assignments, one in-person midterm, and a final reading assignment.

Credit 3 units. EN: BME T, TU

---

**E81 CSE 534A Large-Scale Optimization for Data Science**

Large-scale optimization is an essential component of modern data science, artificial intelligence, and machine learning. This graduate-level course rigorously introduces optimization methods that are suitable for large-scale problems arising in these areas. Students will learn several algorithms suitable for both smooth and nonsmooth optimization, including gradient methods, proximal methods, mirror descent, Nesterov's acceleration, ADMM, quasi-Newton methods, stochastic optimization, variance reduction, and distributed optimization. Throughout the course, we will discuss the efficacy of these methods in concrete data science problems, under appropriate statistical models. Students will be required to program in Python or MATLAB. Prerequisites: CSE 247, Math 309, (Math 3200 or ESE 326), ESE 415.

Same as E35 ESE 513

Credit 3 units. EN: TU

---

**E81 CSE 537T Trustworthy Autonomy**

Cyber-physical systems are becoming increasingly capable. These are systems consisting of digital and physical components. They are deployed to increase autonomy in critical settings where failure is costly, such as driving, aviation, medicine, and manufacturing. This course covers several approaches for assuring that such systems meet their specifications. We will discuss: (1) how to mathematically model these systems and their specifications, (2) how to formally verify and synthesize models which meet their specifications, and (3) how to address the challenges resulting from incorporating machine-learned components, such as neural networks, as perception and control components in these systems. Prerequisites: CSE240 and CSE247, or approval of instructor. Preferred prerequisites: Math 217, CSE 347, CSE 417T or ESE 417

Credit 3 units.

---

**E81 CSE 538T Modeling and Performance Evaluation of Computer Systems**

Modern computing systems consist of multiple interconnected components that all influence performance. The focus of this course is on developing modeling tools aimed at understanding how to design and provision such systems to meet certain performance or efficiency targets and the trade-offs involved. The course covers Markov chains and their applications to simple queues, and it proceeds to explore more complex systems, including server farms and how to optimize their performance through scheduling and task assignment policies. The course includes a brief review of the necessary probability and mathematical concepts. Prerequisite: ESE 326.

Credit 3 units. EN: BME T, TU

---

**E81 CSE 539S Concepts in Multicore Computing**

Nowadays, the vast majority of computer systems are built using multicore processor chips. This fundamental shift in hardware design impacts all areas of computer science - one must write parallel programs in order to unlock the computational power provided by modern hardware. The goal of this course is to study concepts in multicore computing. We will examine the implications of the multicore hardware design, discuss challenges in writing high performance software, and study emerging technologies relevant to developing software for multicore systems. Topics include memory hierarchy, cache coherence protocol, memory models, scheduling, high-level parallel language models, concurrent programming (synchronization and concurrent data structures), algorithms for debugging parallel software, and performance analysis. Prerequisites: CSE 247 and CSE 361S.

Credit 3 units. EN: BME T, TU

---

**E81 CSE 541T Advanced Algorithms**

Provides a broad coverage of fundamental algorithm design techniques with the focus on developing efficient algorithms for solving combinatorial and optimization problems. The topics covered include: review of greedy algorithms, dynamic programming, NP-completeness, approximation algorithms, use of linear and convex programming for approximation, and on-line algorithms. Throughout this course there is an emphasis on correctness proofs and the ability to apply the techniques taught to design efficient algorithms for problems from a wide variety of application areas. Prerequisites: CSE 347 Revised: 2019-02-21

Credit 3 units. EN: BME T, TU

---

**E81 CSE 542S Concurrency and Memory Safe System Software Development**

As multi-core processors and multi-threaded programming are ever more prevalent in modern computing systems, ensuring correctness of programs depends strongly on avoiding hazards that may arise from concurrency and memory management semantics in those contexts. This course focuses on the memory safety and concurrency safety models in Rust, with an emphasis on the language's syntax and semantics related to those models, both separately and in combination, as well as a general coverage of the language as a whole. Lectures and assigned readings will be augmented with studio exercises and laboratory assignments in which key language features will be explored and applied hands-on. Prerequisite: CSE 422S; or graduate standing and prior experience with concurrency, synchronization, and memory management.

Credit 3 units.

---

**E81 CSE 543S Advanced Secure Software Engineering**

The aim of this course is to provide students with broader and deeper knowledge as well as hands-on experience in understanding security techniques and methods needed in software development. Students complete an independent research project which will involve synthesizing multiple software security techniques and applying them to an actual software program or system.

Credit 3 units. EN: TU

---

**E81 CSE 543T Algorithms for Nonlinear Optimization**

The course will provide an in-depth coverage of modern algorithms for the numerical solution of multidimensional optimization problems. Unconstrained optimization techniques including Gradient methods, Newton's methods, Quasi-Newton methods, and conjugate methods will be introduced. The emphasis is on constrained optimization techniques: Lagrange theory, Lagrangian methods, penalty methods, sequential quadratic programming, primal-dual methods, duality theory, nondifferentiable dual methods, and decomposition methods.

The course will also discuss applications in engineering systems and use of state-of-the-art computer codes. Special topics may include large-scale systems, parallel optimization, and convex optimization.

Prerequisites: Calculus I and Math 309

Credit 3 units. EN: BME T, TU

---

**E81 CSE 544A Special Topics in Application**

The material for this course varies among offerings, but this course generally covers advanced or specialized topics in computer application.

Credit 3 units. EN: BME T, TU

---

**E81 CSE 544M Special Topics in Machines**

The material for this course varies among offerings, but this course generally covers advanced or specialized topics in computer science machines.

EN: BME T, TU

---

**E81 CSE 544S Special Topics in Systems**

The material for this course varies among offerings, but this course generally covers advanced or specialized topics in computer science systems.

Credit 3 units. EN: BME T, TU

---

**E81 CSE 544T Special Topics in Computer Science Theory**

The material for this course varies among offerings, but this course generally covers advanced or specialized topics in computer science theory.

Credit 3 units. EN: BME T, TU

---

**E81 CSE 546T Computational Geometry**

Computational geometry is the algorithmic study of problems that involve geometric shapes such as points, lines, and polygons. Such problems appear in computer graphics, vision, robotics, animation, visualization, molecular biology, and geographic information systems. This course covers data structures that are unique to geometric computing, such as convex hull, Voronoi diagram, Delaunay triangulation, arrangement, range searching, KD-trees, and segment trees. Also covered are algorithms for polygon triangulation, path planning, and the art gallery problem. Prerequisite: CSE 347.

Credit 3 units.

---

**E81 CSE 549T Theory of Parallel Systems**

The course covers various aspects of parallel programming such as algorithms, schedulers and systems from a theoretical perspective. We will cover both classic and recent results in parallel computing. Topics include parallel algorithms and analysis in the work/span model, scheduling algorithms, external memory algorithms and their analysis, cache-coherence protocols etc. The focus will be on design and analysis. Prerequisite: CSE 247

Credit 3 units. EN: BME T, TU

---

**E81 CSE 554A Geometric Computing for Biomedicine**

With the advance of imaging technologies deployed in medicine, engineering and science, there is a rapidly increasing amount of spatial data sets (e.g., images, volumes, point clouds) that need to be processed, visualized, and analyzed. This course will focus on a number of geometry-related computing problems that are essential in the knowledge discovery process in various spatial-data-driven biomedical applications. These problems include visualization, segmentation, mesh construction and processing, and shape representation and analysis. This course consists of lectures that cover theories and

algorithms, and it includes a series of hands-on programming projects using real-world data collected by various imaging techniques (e.g., CT, MRI, electron cryomicroscopy). Prerequisites: CSE 332 (or proficiency in programming in C++ or Java or Python) and CSE 247.  
Credit 3 units. EN: BME T, TU

---

### **E81 CSE 555A Computational Photography**

Computational Photography describes the convergence of computer graphics, computer vision, and the Internet with photography. Its goal is to overcome the limitations of traditional photography using computational techniques to enhance the way we capture, manipulate, and interact with visual media. In this course we will study many interesting, recent image based algorithms and implement them to the degree that is possible. Topics may include: cameras and image formation, human visual perception, image processing (filtering, pyramids), image blending and compositing, image retargeting, texture synthesis and transfer, image completion / inpainting, super-resolution, deblurring, denoising, image based lighting and rendering, high dynamic range, depth and defocus, flash / no flash photography, coded aperture photography, single / multi view reconstruction, photo quality assessment, non photorealistic rendering, modeling and synthesis using Internet data, and others. Pre-requisites: CSE 452A, CSE 554A, or CSE 559A

Credit 3 units. EN: BME T, TU

---

### **E81 CSE 555T Adversarial AI**

This course will introduce students to concepts, theoretical foundations, and applications of adversarial reasoning in Artificial Intelligence. Topics will include the use of machine learning in adversarial settings, such as security, common attacks on machine learning models and algorithms, foundations of game theoretic modeling and analysis in security, with a special focus on algorithmic approaches, and foundations of adversarial social choice, with a focus on vulnerability analysis of elections. Prerequisite: CSE417T  
Credit 3 units. EN: BME T, TU

---

### **E81 CSE 556A Human-Computer Interaction Methods**

An introduction to user centered design processes. The course covers a variety of HCI techniques for use at different stages in the software development cycle, including techniques that can be used with and without users. Students will gain experience using these techniques through in-class exercises and then apply them in greater depth through a semester long interface development project. Students who enroll in this course are expected to be comfortable with building user interfaces in at least one framework and be willing to learn whatever framework is most appropriate for their project. Over the course of the semester, students will be expected to present their interface evaluation results through written reports and in class presentations. Prerequisites: 3xxS or 4xxS  
Credit 3 units. EN: BME T, TU

---

### **E81 CSE 557A Advanced Visualization**

We are in an era where it is possible to have all of the world's information at our fingertips. However, the more information we can access, the more difficult it is to obtain a holistic view of the data or to determine what's important to make decisions. Computer-based visualization systems provide the opportunity to represent large or complex data visually to aid comprehension and cognition. In this course, we learn about the state of the art in visualization research and gain hands-on experience with the research pipeline. We also learn how to critique existing work and how to formulate and explore sound research questions. We will cover advanced visualization topics including user modeling, adaptation, personalization, perception, and visual analytics for non-experts. Prerequisite: CSE 457A or permission of instructor.

Credit 3 units. EN: BME T, TU

---

### **E81 CSE 559A Computer Vision**

This course introduces the fundamentals of designing computational systems that can "look at" images and reason about the physical objects and scenes they represent. Topics include the estimation of color, shape, geometry, and motion from images; image classification, segmentation, and object detection; and image restoration, enhancement, and synthesis. The focus of this course will be on mathematical foundations and practical algorithmic approaches, including: the physics and geometry of image formation; robust methods for estimating image motion and geometry; and deep-learning approaches for semantic image understanding. Students will be required to program in Python. Prerequisites: Any of: CSE 417T (ML), ESE417 (ML), CSE514A (Data Mining), CSE517A (ML).

Credit 3 units. EN: BME T, TU

---

### **E81 CSE 560M Computer Systems Architecture I**

An exploration of the central issues in computer architecture: instruction set design, addressing and register set design, control unit design, memory hierarchies (cache and main memories, virtual memory), pipelining, instruction scheduling, and parallel systems. The course emphasizes understanding the performance implications of design choices, using architecture modeling and evaluation using simulation techniques. Prerequisites: CSE 361S and CSE 260M.

Credit 3 units. EN: BME T, TU

---

### **E81 CSE 561A Large Language Models**

Large Language Models (LLMs) have revolutionized the field of artificial intelligence, offering unprecedented capabilities in understanding and generating human-like text. This is a research-oriented course that explores the capabilities and challenges of LLMs. Students will gain a comprehensive understanding of the underlying mechanisms that power these models, as well as reading frontier papers and working on projects to gain hands-on experience. Topics to be covered include LLM training, LLM capabilities, safety, ethical considerations, approaches to augment LLMs, efficiency of modeling and training LLMs, etc. Pre-reqs: basic understanding of machine learning (CSE 417 or ESE 417)  
Credit 3 units.

---

### **E81 CSE 563M Digital Integrated Circuit Design and Architecture**

This is a project-oriented course on digital VLSI design. The course material focuses on bottom-up design of digital integrated circuits, starting from CMOS transistors, CMOS inverters, combinational circuits and sequential logic designs. Important design aspects of digital integrated circuits such as propagation delay, noise margins and power dissipation are covered in the class, and design challenges in sub-micron technology are addressed. The students design combinational and sequential circuits at various levels of abstraction using a state-of-the-art CAD environment provided by Cadence Design Systems. The goal of the course is to design a microprocessor in 0.5 micron technology that will be fabricated by a semiconductor foundry. Prerequisites: CSE 260M and ESE 232.

Same as E81 CSE 463M

Credit 3 units. EN: BME T, TU

---

### **E81 CSE 566S High Performance Computer Systems**

Many applications make substantial performance demands upon the computer systems upon which those applications are deployed. In this context, performance is frequently multidimensional, including resource efficiency, power, execution speed (which can be quantified via elapsed run time, data throughput, or latency), etc. Modern computing platforms exploit parallelism and architectural diversity (e.g., co-processors such as graphics engines and/or reconfigurable logic) to achieve the desired performance goals. This course addresses the practical aspects of achieving high performance on modern

computing platforms. This includes questions ranging from how the computing platform is designed to how are applications and algorithms expressed to exploit the platform's properties. Particular attention is given to the role of application development tools. Prerequisite: Familiarity with software development in Linux preferred, graduate standing or permission of instructor.  
Credit 3 units. EN: BME T, TU

---

### **E81 CSE 567M Computer Systems Analysis**

A comprehensive course on performance analysis techniques. The topics include common mistakes, selection of techniques and metrics, summarizing measured data, comparing systems using random data, simple linear regression models, other regression models, experimental designs, 2<sup>k</sup> experimental designs, factorial designs with replication, fractional factorial designs, one factor experiments, two factor full factorial design w/o replications, two factor full factorial designs with replications, general full factorial designs, introduction to queueing theory, analysis of single queues, queueing networks, operational laws, mean-value analysis, time series analysis, heavy tailed distributions, self-similar processes, long-range dependence, random number generation, analysis of simulation results, and art of data presentation. Prerequisites: CSE 260M  
Credit 3 units. EN: BME T, TU

---

### **E81 CSE 569S Recent Advances in Computer Security and Privacy**

The aim of this course is to provide students with knowledge and hands-on experience in understanding the security techniques and methods needed for IoT, real-time, and embedded systems. Students complete an independent research project which will involve synthesizing multiple security techniques and applying them to an actual IoT, real-time, or embedded system or device.  
Credit 3 units. EN: BME T, TU

---

### **E81 CSE 570S Recent Advances in Networking**

This course covers the latest advances in networking. The topics include Networking Trends, Data Center Network Topologies, Data Center Ethernet, Server Virtualization, Storage Virtualization, Carrier Ethernet, Application Delivery Networking, Virtual Bridging, Big Data, Networking Issues for Big Data, LAN Extension and Virtualization using Layer 3 Protocols, Multi-Tenant Isolation and Network Virtualization in Cloud Data Centers, OpenFlow, OpenFlow Controllers and Tools, Software Defined Networking (SDN), Network Function Virtualization (NFV), Internet of Things (IoT), Networking Protocols for IoT, Blockchains, and Quantum Communications. Students also do a project/survey involving application of these topics.  
Credit 3 units. EN: BME T, TU

---

### **E81 CSE 571S Network Security**

This course covers principles and techniques in securing computer networks. Real world examples will be used to illustrate the rationales behind various security designs. There are three main components in the course, preliminary cryptography, network protocol security and network application security. Topics include IPSec, SSL/TLS, HTTPS, network fingerprinting, network malware, anonymous communication, and blockchain. The class project allows students to take a deep dive into a topic of choice in network security. Prerequisite: CSE 473S.  
Credit 3 units. EN: BME T, TU

---

### **E81 CSE 574S Recent Advances in Wireless and Mobile Networking**

This course provides a comprehensive treatment of wireless data and telecommunication networks. Topics include recent trends in wireless and mobile networking, wireless coding and modulation, wireless signal propagation, IEEE 802.11a/b/g/n/ac wireless local area networks, 60 GHz millimeter wave gigabit wireless networks, vehicular wireless networks, white spaces, Bluetooth and Bluetooth Smart, wireless

personal area networks, wireless protocols for the Internet of Things, cellular networks: 1G/2G/3G, LTE, LTE-Advanced, and 5G. Prerequisite: CSE 473S (Introduction to Computer Networks) or permission of the instructor.

Credit 3 units. EN: BME T, TU

---

### **E81 CSE 581T Approximation Algorithms**

Numerous optimization problems are intractable to solve optimally. The intractability of a problem could come from the problem's computational complexity, for instance the problem is NP-Hard, or other computational barriers. To cope with the inability to find an optimal algorithm, one may desire an algorithm that is guaranteed to return a solution that is comparable to the optimum. Such an algorithm is known as an approximation algorithm. Approximation algorithms are a robust way to cope with intractability and they are widely used in practice or are used to guide the development of practical heuristics. The area of approximation algorithms has developed a vast theory, revealing the underlying structure of problems as well as their different levels of difficulty. The majority of this course will focus on fundamental results and widely applicable algorithmic and analysis techniques for approximation algorithms. Prerequisite: CSE 347  
Credit 3 units. EN: BME T, TU

---

### **E81 CSE 584A Algorithms for Biosequence Comparison**

This course surveys algorithms for comparing and organizing discrete sequential data, especially nucleic acid and protein sequences. Emphasis is on tools to support search in massive biosequence databases and to perform fundamental comparison tasks such as DNA short-read alignment. Prerequisite: CSE 347 or permission of instructor. These techniques are also of interest for more general string processing and for building and mining textual databases. Algorithms are presented rigorously, including proofs of correctness and running time where feasible. Topics include classical string matching, suffix array string indices, space-efficient string indices, rapid inexact matching by filtering (including BLAST and related tools), and alignment-free algorithms. Students complete written assignments and implement advanced comparison algorithms to address problems in bioinformatics. This course does not require a biology background. Prerequisites: CSE 347 or instructor permission Revised: 2019-02-21  
Credit 3 units. EN: BME T, TU

---

### **E81 CSE 586A Analysis of Imaging Data**

This course focuses on an in-depth study of advanced topics and interests in image data analysis. Students will learn about hardcore imaging techniques and gain the mathematical fundamentals needed to build their own models for effective problem solving. Topics of deformable image registration, numerical analysis, probabilistic modeling, data dimensionality reduction, and convolutional neural networks for image segmentation will be covered. The main focus might change from semester to semester. Prerequisites: Math 309, ESE 326, and CSE 247.  
Credit 3 units.

---

### **E81 CSE 587A Algorithms for Computational Biology**

This course is a survey of algorithms and mathematical methods in biological sequence analysis (with a strong emphasis on probabilistic methods) and systems biology. Sequence analysis topics include introduction to probability, probabilistic inference in missing data problems, hidden Markov models (HMMs), sequence alignment, and identification of transcription-factor binding sites. Systems biology topics include the mapping of gene regulatory networks, quantitative modeling of gene regulatory networks, synthetic biology, and applications of deep learning in computational biology. Prerequisite: CSE 131 or CSE 501N.  
Credit 3 units. EN: BME T, TU

**E81 CSE 591 Introduction to Graduate Study in CSE**

Introduces students to the different areas of research conducted in the department. Provides an introduction to research skills, including literature review, problem formulation, presentation, and research ethics. Lecture and discussion are supplemented by exercises in the different research areas and in critical reading, idea generation, and proposal writing.  
Credit 3 units.

**E81 CSE 598 Masters Project**

Students electing the project option for their master's degree perform their project work under this course. In order to successfully complete this course, students must defend their project before a three person committee and present a 2-3 page extended abstract. Prerequisite: permission of adviser and submission of a research proposal form  
Credit variable, maximum 6 units.

**E81 CSE 599 Masters Research**

Students electing the thesis option for their master's degree perform their thesis research under this course. In order to successfully complete a master's thesis, students must enroll in 6 units of this course typically over the course of two consecutive semesters, produce a written thesis, and defend the thesis before a three person committee. Prerequisite: permission of adviser and submission of a research proposal form  
Credit variable, maximum 6 units.

# Bachelor of Science in Computer Engineering

Computer engineering encompasses studies of hardware, software, and systems issues that arise in the design, development, and application of computer systems. Computer engineers are particularly well suited to address the particular challenges that exist as computing systems interact with the real, physical world. This includes sensing, actuation, timing, security, and computing systems with widely varying form factors, ranging from servers to mobile devices to the "internet of things." The degree requires 120 units including core courses, technical electives, a capstone course, and common studies.

The Bachelor of Science in Computer Engineering degree is jointly administered by the Department of Computer Science and Engineering and the Department of Electrical and Systems Engineering.

Students working toward a Bachelor of Science in Computer Engineering degree must meet all requirements for an engineering degree (p. 1304) from the McKelvey School of Engineering. Required courses and technical electives cannot be taken on a pass/fail basis.

**• Core Requirements\*:**

The following courses are required of all computer engineering students:

Code	Title	Units
CSE 131	Introduction to Computer Science	3
CSE 132	Introduction to Computer Engineering	3
CSE 247	Data Structures and Algorithms	3
CSE 260M	Introduction to Digital Logic and Computer Design	3
or ESE 260	Introduction to Digital Logic and Computer Design	
CSE 361S	Introduction to Systems Software	3
CSE 362M	Computer Architecture	3
ESE 105	Introduction to Electrical and Systems Engineering	4
ESE 230	Introduction to Electrical and Electronic Circuits	4
ESE 232	Introduction to Electronic Circuits	3
ESE 326	Probability and Statistics for Engineering	3
<b>Total Units</b>		<b>32</b>

\* Each of these core courses must be passed with a grade of C- or better.

**• Technical Elective Requirements:**

21 units of technical electives that fulfill the following requirements:

1. At least two courses from the following list (the "hardware" list):

Code	Title	Units
ESE 330	Engineering Electromagnetics Principles	3
ESE 331	Electronics Laboratory	3
ESE 3301	Electromagnetics Laboratory: Spectrum from Radio to Photonics	3
ESE 351	Signals and Systems	3
ESE 433	Radio Frequency and Microwave Technology for Wireless Systems	3
ESE 436	Semiconductor Devices	3
ESE 4301	Quantum Mechanics for Engineers	3
ESE 431	Introduction to Quantum Electronics	3
ESE 441	Control Systems	3
ESE 444	Sensors and Actuators	3
ESE 446	Robotics: Dynamics and Control	3
ESE 4480	Control Systems Design Laboratory	3
ESE 4481	Autonomous Aerial Vehicle Control Laboratory	3
ESE 463	Digital Integrated Circuit Design and Architecture	3
ESE 465	Digital Systems Laboratory	3
ESE 471	Communications Theory and Systems	3
ESE 482	Digital Signal Processing	3

2. At least two courses from the following list (the "software" list):

Code	Title	Units
CSE 231S	Introduction to Parallel and Concurrent Programming	3
CSE 332S	Object-Oriented Software Development Laboratory	3
CSE 365S	Elements of Computing Systems	3
CSE 422S	Operating Systems Organization	3
CSE 425S	Programming Systems and Languages	3
CSE 431S	Translation of Computer Languages	3
CSE 433S	Introduction to Computer Security	3
CSE 434S	Reverse Engineering and Malware Analysis	3
CSE 467S	Embedded Computing Systems	3
CSE 468T	Introduction to Quantum Computing	3
CSE 473S	Introduction to Computer Networks	3

3. The remaining three courses can be any CSE course with an S, M, T, or A suffix; or CSE 347; or any ESE course at the 300 level or higher; or ESE 205, ESE 2180, or ESE 2190. Additional courses (beyond the two required) in the above lists count toward this requirement.

The above can include courses at the graduate level; however, they must still meet one of the two criteria above. Up to 6 units of independent study (CSE 400E, CSE 497-CSE 499, ESE 400, ESE 497) can count toward technical electives. There is no limit as to how many independent study courses can count toward the general 120 units.

• **Capstone Requirement:**

The capstone requirement can be met by taking either CSE 462M or ESE 498.

• **Common Studies Requirements:**

Code	Title	Units
Math 131	Calculus I	3
Math 132	Calculus II	3
Math 217	Differential Equations	3
Math 233	Calculus III	3
Physics 191	Physics I	3
Physics 191F	Physics I - First-Years Only	
Physics 191U	Physics I - Sophomores, Juniors, and Seniors Only	
Physics 191L	Physics I Laboratory	1
Physics 192	Physics II	3
Physics 192L	Physics II Laboratory	1
Natural sciences elective		3
College Writing		3
Engr 310	Technical Writing	3
Humanities and social sciences electives		18
<b>Total Units</b>		<b>47</b>

Upon completing a course in the calculus sequence (Math 131-Math 132-Math 233) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the mathematics department's back credit policy.

The natural sciences requirement is for 3 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies or Physics. These courses must be completed with a grade of C- or better.

The College Writing Program, humanities and social sciences requirements are those required of all students in the McKelvey School of Engineering.

## Bachelor of Science in Computer Science

The Bachelor of Science in Computer Science (BSCS) is designed for students planning a career in computing. Students working toward a BSCS degree must meet all requirements for an applied science degree (p. 1304) from the McKelvey School of Engineering. In addition, there are the following departmental course requirements:

• **Computer Science Core Requirements (21 units total):**

Code	Title	Units
CSE 131	Introduction to Computer Science	3
CSE 132	Introduction to Computer Engineering	3
CSE 240	Logic and Discrete Mathematics	3
or Math 310	Foundations for Higher Mathematics	
CSE 247	Data Structures and Algorithms	3
CSE 332S	Object-Oriented Software Development Laboratory	3
CSE 347	Analysis of Algorithms	3
CSE 361S	Introduction to Systems Software	3
<b>Total Units</b>		<b>21</b>

<sup>1</sup> Each of these core courses must be passed with a grade of C- or better.

• **Systems Requirement (3 units). Choose one of the following:**

Code	Title	Units
CSE 422S	Operating Systems Organization	3
CSE 425S	Programming Systems and Languages	3
CSE 431S	Translation of Computer Languages	3
CSE 433S	Introduction to Computer Security	3
CSE 434S	Reverse Engineering and Malware Analysis	3
CSE 473S	Introduction to Computer Networks	3

<sup>1</sup> The selected course must be passed with a grade of C- or better.

• **Methods Requirement (3 units). Choose one of the following:**

Code	Title	Units
CSE 256A	Introduction to Human-Centered Design	3
CSE 411A	AI and Society	3
CSE 412A	Introduction to Artificial Intelligence	3
CSE 416A	Data Science for Complex Networks	3
CSE 417T or ESE 417	Introduction to Machine Learning Introduction to Machine Learning and Pattern Classification	3
CSE 442T	Introduction to Cryptography	3
CSE 457A	Introduction to Visualization	3
CSE 468T	Introduction to Quantum Computing	3

<sup>1</sup> The selected course must be passed with a grade of C- or better.

• **Computer Science Technical Elective Requirements:**

Students must complete 15 additional units (five courses) of CSE Technical Electives, which can come from any CSE classroom course including Systems and Methods Courses.

• **Overall Degree Restrictions:**

Up to 6 units total can come from a combination of approved CSE Independent Study (CSE 400E, CSE 497, CSE 498, CSE 499) or approved courses from other departments (e.g., ESE 417). Courses taken in other departments must have significant technical computing content, including those outside of the McKelvey School of Engineering. Students must complete the Elective Request form to request review of non-CSE courses. Students with interests in a particular area of computing should refer to the technical elective course sequences for suggestions on which courses are relevant to that area.

At least two courses must be CSE classroom courses at the 400 level or higher.

All courses must be taken for a grade. Core, Systems, and Methods requirements require a C- or better. All other courses require a passing grade.

• **Math Requirements:**

Code	Title	Units
Math 131	Calculus I	3
Math 132	Calculus II	3
Math 233	Calculus III	3
Math 309 or ESE 2180	Matrix Algebra Linear Algebra and Component Analysis	3
ESE 326 or SDS 3200	Probability and Statistics for Engineering Elementary to Intermediate Statistics and Data Analysis	3

or SDS 3211	Statistics for Data Science I	
or DAT 120 & DAT 121	Managerial Statistics I and Managerial Statistics II	
<b>Total Units</b>		<b>15</b>

Upon completing a course in the calculus sequence (Math 131-Math 132-Math 233) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the Department of Mathematics' back credit policy.

• **Additional Departmental Requirements:**

Code	Title	Units
CWP 100	College Writing	3
Engr 310	Technical Writing	3
	Natural sciences electives	8
	Humanities and social sciences electives	18
<b>Total Units</b>		<b>32</b>

The College Writing Program, humanities, and social sciences requirements are required of all students in the McKelvey School of Engineering. For information about how to fulfill the school's English proficiency requirement, please visit the Degree Requirements page of this Bulletin (p. 1305).

The natural sciences requirement is for 8 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology; Biology; Chemistry; Earth, Environmental, and Planetary Sciences; Environmental Studies; or Physics. The College Writing Program and natural sciences courses must be completed with a grade of C- or better.

All courses taken to meet any of the above requirements (with the exception of the humanities and social sciences electives) cannot be taken on a pass/fail basis.

## Bachelor of Science in Computer Science + Economics

The College of Arts & Sciences and the McKelvey School of Engineering have developed a new major that allows students interested in both economics and computer science to combine these two complementary disciplines efficiently, without having to pursue them as two separate majors.

### Course Requirements\*

Code	Title	Units
Math 131	Calculus I (AP credit may satisfy this requirement)	3
Math 132	Calculus II (AP credit may satisfy this requirement)	3
Math 233	Calculus III	3
SDS 3200	Elementary to Intermediate Statistics and Data Analysis**	3

or ESE 326	Probability and Statistics for Engineering	
or SDS 3211	Statistics for Data Science I	
CSE 131	Introduction to Computer Science	3
CSE 240	Logic and Discrete Mathematics	3
or Math 310	Foundations for Higher Mathematics	
or Math 310W	Foundations For Higher Mathematics With Writing	
CSE 247	Data Structures and Algorithms	3
CSE 347	Analysis of Algorithms	3
Econ 1011	Introduction to Microeconomics (AP credit may satisfy this requirement)	3
Econ 1021	Introduction to Macroeconomics (AP credit may satisfy this requirement)	3
Econ 4011	Intermediate Microeconomic Theory	3
Econ 413	Introduction to Econometrics	3
or Econ 413W	Introduction to Econometrics with Writing	
<b>Total Units</b>		<b>36</b>

\* Each of these core courses must be passed with a grade of C- or better.

\*\*Of these options, SDS 3200 is the preferred course.

## Electives

Six upper-level approved courses from the Department of Economics and Computer Science & Engineering (CSE) are required: three from Economics and three from CSE. Students who have AP credits to satisfy the requirements for Econ 1011 Introduction to Microeconomics and/or Econ 1021 Introduction to Macroeconomics can instead take approved electives in either department, and they can add at most one approved course from outside both departments.

## Economics Electives

Three 3-unit economics electives drawn from any Econ 4011 Intermediate Microeconomic Theory prerequisite course, including Econ 4021 Intermediate Macroeconomic Theory, are required.

Economics electives of particular relevance include (but are not limited to) Econ 407 Market Design, Econ 4151 Applied Econometrics, Econ 4160 Topics in Econometrics: Microeconometrics, Econ 452 Industrial Organization, Econ 4567 Auction Theory and Practice, Econ 467 Game Theory, and Econ 484 Computational Macroeconomics.

## Computer Science Electives

Code	Title	Units
CSE 217A	Introduction to Data Science	3
CSE 311A	Introduction to Intelligent Agents Using Science Fiction	3
CSE 314A	Data Manipulation and Management	3
CSE 330S	Rapid Prototype Development and Creative Programming	3
CSE 332S	Object-Oriented Software Development Laboratory	3

CSE 341T	Parallel and Sequential Algorithms	3
CSE 400E	Independent Study (must be approved by CSE CS+Econ director)	3
CSE 411A	AI and Society	3
CSE 412A	Introduction to Artificial Intelligence	3
CSE 416A	Data Science for Complex Networks	3
CSE 417T	Introduction to Machine Learning	3
or ESE 417	Introduction to Machine Learning and Pattern Classification	
CSE 419A	Introduction to AI for Health	3
CSE 425S	Programming Systems and Languages	3
CSE 427S	Cloud Computing with Big Data Applications	3
CSE 435S	Database Management Systems	3
CSE 457A	Introduction to Visualization	3
CSE 514A	Data Mining	3
CSE 517A	Machine Learning	3
CSE 518A	Human-in-the-Loop Computation	3
CSE 543T	Algorithms for Nonlinear Optimization	3
CSE 557A	Advanced Visualization	3

## Additional Departmental Requirements

Code	Title	Units
CWP 100	College Writing	3
Engr 310	Technical Writing	3
	Humanities and social sciences electives	18
	Natural sciences electives	8

The College Writing Program, humanities, and social sciences requirements are those required of all students in the McKelvey School of Engineering. For information about how to fulfill the school's English proficiency requirement, please visit the Degree Requirements page (p. 1305).

The natural sciences requirement is for 8 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies or Physics. The College Writing Program and natural sciences courses must be completed with a grade of C- or better.

All courses taken to meet any of the above requirements (with the exception of the humanities and social sciences electives) cannot be taken on a pass/fail basis.

# Bachelor of Science in Computer Science + Mathematics

The McKelvey School of Engineering and the College of Arts & Sciences developed a major that efficiently captures the intersection of the complementary studies of computer science and math.

McKelvey Engineering students who declare this major must fulfill the core course requirements listed below and all other requirements for the Applied Science degree (p. 1304) in the McKelvey School of Engineering. They must also complete Engr 310 Technical Writing and 8 units of courses designated as NSM (Natural Sciences & Math) from Anthropology (L48 Anthro), Biology and Biomedical Sciences (L41 Biol), Chemistry (L07 Chem), Earth, Environmental, and Planetary Sciences (L19 EPSc), Physics (L31 Physics) or Environmental Studies (L82 EnSt).

Arts & Sciences students who declare this major must fulfill the distribution requirements and all other requirements for an AB degree (p. 1112) in addition to the specific requirements listed below.

## Core Course Requirements\*

Code	Title	Units
CSE 131	Introduction to Computer Science	3
CSE 240	Logic and Discrete Mathematics	3
CSE 247	Data Structures and Algorithms	3
Math 131	Calculus I (AP credit may satisfy this requirement) **	3
Math 132	Calculus II (AP credit may satisfy this requirement) **	3
Math 233	Calculus III **	3
Math 310 or Math 310W	Foundations for Higher Mathematics Foundations For Higher Mathematics With Writing	3
Math 309	Matrix Algebra	3
SDS 3200 or ESE 326 or SDS 3211	Elementary to Intermediate Statistics and Data Analysis Probability and Statistics for Engineering Statistics for Data Science I	3
CSE 347	Analysis of Algorithms	3
<b>Total Units</b>		<b>30</b>

\* Each of these core courses must be passed with a C- or better.

\*\* Students who complete the Math 203 Honors Mathematics I and Math 204 Honors Mathematics II sequence will be considered to have completed Math 131 Calculus I, Math 132 Calculus II, and Math 233 Calculus III. These students can also choose to take additional electives in place of Math 309 Matrix Algebra and Math 310 Foundations for Higher Mathematics.

## Electives

Seven upper-level courses from Math or Computer Science & Engineering can be chosen from the approved list, with the following caveats:

- At least three courses must be taken from CSE and at least three courses must be taken from Math.
- At most one preapproved course from outside both departments can be selected.
- CSE 400 Independent Study or CSE 400E Independent Study may be taken for a maximum of 3 units and must be approved by a CS +Math review committee.
- Students may count either Math 456 or ESE 427 as an elective toward the major, but not both. Likewise, students may count either CSE 417T or ESE 417 as an elective toward the major, but not both.

## List of Approved Electives Computer Science & Engineering

Code	Title	Units
CSE 217A	Introduction to Data Science	3
CSE 341T	Parallel and Sequential Algorithms	3
CSE 411A	AI and Society	3
CSE 412A	Introduction to Artificial Intelligence	3
CSE 416A	Data Science for Complex Networks	3
CSE 417T	Introduction to Machine Learning	3
CSE 427S	Cloud Computing with Big Data Applications	3
CSE 442T	Introduction to Cryptography	3
CSE 447T	Introduction to Formal Languages and Automata	3
CSE 457A	Introduction to Visualization	3
CSE 468T	Introduction to Quantum Computing	3
CSE 513T	Theory of Artificial Intelligence and Machine Learning	3
CSE 514A	Data Mining	3
CSE 515T	Bayesian Methods in Machine Learning	3
CSE 516A	Multi-Agent Systems	3
CSE 517A	Machine Learning	3
CSE 518A	Human-in-the-Loop Computation	3
CSE 533T	Coding and Information Theory for Data Science	3
CSE 534A	Large-Scale Optimization for Data Science	3
CSE 541T	Advanced Algorithms	3
CSE 543T	Algorithms for Nonlinear Optimization	3
CSE 544T	Special Topics in Computer Science Theory	3
CSE 546T	Computational Geometry	3
CSE 554A	Geometric Computing for Biomedicine	3
CSE 555T	Adversarial AI	3

CSE 559A	Computer Vision	3
CSE 581T	Approximation Algorithms	3
CSE 584A	Algorithms for Biosequence Comparison	3
CSE 587A	Algorithms for Computational Biology	3

### Mathematics

Code	Title	Units
Math 350	Topics in Applied Mathematics	3
Math 370	Introduction to Combinatorics	3
Math 371	Graph Theory	3
Math 407	An Introduction to Differential Geometry	3
Math 410	Introduction to Fourier Series and Integrals	3
Math 4111	Introduction to Analysis	3
Math 4121	Introduction to Lebesgue Integration	3
Math 4171	Topology I	3
Math 429	Linear Algebra	3
Math 430	Modern Algebra	3
Math 4351	Number Theory and Cryptography	3
Math 444	The Mathematics of Quantum Theory	3
Math 449	Numerical Applied Mathematics	3
Math 450	Topics in Applied Mathematics	3
Math 456	Topics in Financial Mathematics	3
Math 470	Topics in Graph Theory	3
Math 493C/SDS 493	Probability	3
Math 495C/SDS 495	Stochastic Processes	3

### Statistics and Data Science

Code	Title	Units
SDS 420	Experimental Design	3
SDS 434	Survival Analysis	3
SDS 439	Linear Statistical Models	3
SDS 459	Bayesian Statistics	3
SDS 460	Multivariate Statistical Analysis	3
SDS 4601	Statistical Learning	3
SDS 461	Time Series Analysis	3
SDS 462	Mathematical Foundations of Big Data	3
SDS 475	Statistical Computation	3
SDS 493/Math 493C	Probability	3
SDS 494	Mathematical Statistics	3
SDS 495/Math 495C	Stochastic Processes	3

### Electrical & Systems Engineering

Code	Title	Units
ESE 4031	Optimization for Engineered Planning, Decisions and Operations	3
ESE 415	Optimization	3
ESE 417	Introduction to Machine Learning and Pattern Classification	3

ESE 427	Financial Mathematics	3
ESE 429	Basic Principles of Quantum Optics and Quantum Information	3
ESE 520	Probability and Stochastic Processes	3

### Economics

Code	Title	Units
Econ 4151	Applied Econometrics	3
Econ 467	Game Theory	3

### Linguistics

Code	Title	Units
Ling 317	Introduction to Computational Linguistics	3
Ling 427	Computation and Learnability in Linguistic Theory	3

### Biology and Biomedical Sciences

Code	Title	Units
Biol 5657	Biological Neural Computation	3

### Biomedical Engineering

Code	Title	Units
BME 470	Mathematics of Imaging Science	3

### Additional Departmental Requirements

Code	Title	Units
Engr 310	Technical Writing	3
One themed writing course from the College Writing Program		3
Humanities and social sciences electives		18
Natural sciences electives		8

The College Writing Program, humanities, and social sciences requirements are those required of all students in the McKelvey School of Engineering. For information about how to fulfill the school's English proficiency requirement, please visit the Degree Requirements page (p. 1305).

The natural sciences requirement is for 8 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies or Physics. The College Writing Program and natural sciences courses must be completed with a grade of C- or better.

All courses taken to meet any of the above requirements (with the exception of the humanities and social sciences electives) cannot be taken on a pass/fail basis.

## Bachelor of Science in Data Science

The College of Arts & Sciences and McKelvey School of Engineering developed a new major that efficiently captures the intersection of mathematics and statistics with computer science for data science. The Bachelor of Arts in Data Science (BADs) will give students the formal foundation needed to understand the applicability and consequences of the various approaches to analyzing data with a focus on statistical modeling and machine learning.

McKelvey Engineering students who declare this major must fulfill the core course requirements listed below and all other requirements for the Applied Science degree (p. 1304) in the McKelvey School of Engineering. They must also complete Engr 310 Technical Writing and 8 units of courses designated as NSM (Natural Sciences & Math) from Anthropology (L48 Anthro), Biology and Biomedical Sciences (L41 Biol), Chemistry (L07 Chem), Earth, Environmental, and Planetary Sciences (L19 EEPS), Physics (L31 Physics), or Environmental Studies (L82 EnSt).

Arts & Sciences students who declare this major must fulfill the distribution requirements and all other requirements for an AB degree (p. 1112) in addition to the specific requirements listed below.

### Data Science Core Requirements (CR)

Code	Title	Units
Math 131	Calculus I	3
Math 132	Calculus II	3
Math 233	Calculus III	3
Math 309	Matrix Algebra	3
SDS 3211	Statistics for Data Science I	3
SDS 4211	Statistics for Data Science II	3
SDS 439	Linear Statistical Models	3
CSE 131	Introduction to Computer Science	3
CSE 217A	Introduction to Data Science	3
CSE 247	Data Structures and Algorithms	3
CSE 314A	Data Manipulation and Management	3
CSE 417T or SDS 460	Introduction to Machine Learning Multivariate Statistical Analysis	3
<b>Total Units</b>		<b>36</b>

#### Notes:

- Each of these core courses must be passed with a grade of C- or better.
- AP credit can be applied for Math 131 Calculus I, Math 132 Calculus II, and Math 233 Calculus III. Students who have completed Math 203 Honors Mathematics I and Math 204 Honors Mathematics II will have this requirement waived.

- CSE 131 Introduction to Computer Science may be waived after consultation with the director of undergraduate studies of the Department of Computer Science and Engineering.

### Data Science Technical Electives

Four courses can be chosen from the list of approved electives given below, with the following caveats:

- At least one course from Statistics and Data Science (at the 400 level or above)
- At least one course from CSE (ending in S, T, M, or A)
- At most one course at the 200 level

### List of Approved Data Science Technical Electives

#### Computer Science and Engineering

## Ethics and Professional Responsibility Requirement (EPR)

- 3 units of courses from the following list:

## List of EPR Course Options

Code	Title	Units
Engr 450F	Engineers in the Community (Engineering Ethics, Leadership and Conflict Management)	3
Engr 4501	Engineering Ethics and Sustainability	1
Engr 4502	Engineering Leadership and Team Building	1
Engr 4503	Conflict Management and Negotiation	1
Engr 520P	Presentation Skills for Scientists and Engineers	2
CSE 359A	Signals, Data and Equity (This course cannot be double-counted as an elective)	3
CSE 411A	AI and Society (Cannot be double-counted as an Elective)	3
MSB 512	Ethics in Biostatistics and Data Science	2

## Practicum Requirement

- Students must complete an approved comprehensive data science project or experience for their practicum requirement. The practicum must be approved by the committee of data science faculty.
- The practicum experience should be completed during the next-to-last semester of study (i.e., the first semester of senior year). It is important that practicum plans be submitted for review prior to starting the project or course work to ensure the proposed work is sufficient for the objectives of the practicum. After-the-fact approvals are possible but not guaranteed.
- Appropriate practicum work is possible via Independent Study (CSE 400E or SDS 400 Undergraduate Independent Study) or via project-focused classes, including (but not limited to) CSE 437S Software Engineering Workshop and CSE 454A Software Engineering for External Clients. Students should contact course instructors in advance to identify the degree of agency the student will have over project selection and requirements.
- Internships related to data science can be used to fulfill the practicum. If the internship is paid, it cannot count for credit, but can satisfy the requirements.
- To initiate the approval process, majors through the McKelvey School of Engineering should contact the CSE undergraduate coordinator (cse.undergrad@email.wustl.edu) in the CSE department, and majors through Arts & Sciences should contact the Associate Chair in the Statistics and Data Science Department, José Figueroa-López.

# Bachelor of Science in Business and Computer Science

The Bachelor of Science in Business and Computer Science degree program provides an integrated educational experience that involves both the Olin Business School and the McKelvey School of Engineering. The objectives of this program are to provide students with the fundamental knowledge and perspectives of computer science and business and to expose them to the unique opportunities created by combining these disciplines. As one of the only such joint programs in the country, the Bachelor of Science in Business and Computer Science features unique curricular and cocurricular elements that help to create a distinctive program.

## General Degree Requirements

- Complete at least 120 applicable units
- Earn at least a C (2.0 cumulative grade-point average) in all applicable courses taken at Washington University
- Earn at least a C (2.0 GPA) in each separate school of study
- Complete a minimum of 60 units at Washington University (at least 30 units must be "B" courses and at least 30 units must be "E" courses taken at Washington University)
- Complete the last 30 units at Washington University

## Foundation Course Requirements (31 units)

Code	Title	Units
Math 131	Calculus I (AP credit may satisfy this requirement)	3
Math 132	Calculus II (AP credit may satisfy this requirement)	3
Math 233	Calculus III	3
Math 309	Matrix Algebra (Prerequisite: Math 132)	3
DAT 120	Managerial Statistics I	3
	or ESE 326 Probability and Statistics for Engineering	
	or SDS 3200 Elementary to Intermediate Statistics and Data Analysis	
DAT 121	Managerial Statistics II	3
MGT 201	Management Communication	4
Engr 310	Technical Writing	3
	One College Writing Program course (themed writing course)	3
	One Natural Sciences course designated NSM (Natural Sciences and Mathematics)	3
<b>Total Units</b>		<b>31</b>

Upon completing a course in the calculus sequence (Math 131-Math 132-Math 233) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the mathematics department's back credit policy.

The Natural Sciences requirement is for 3 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies or Physics. These courses must be completed with a grade of C- or better.

The school's English proficiency requirement is satisfied only by a grade of C- or better in one of the themed college writing courses developed by the College Writing Program.

## Breadth/Free Elective Course Requirements (24 units)

- Humanities and Social Sciences (15 units): Any course with A&S attributes of Humanities (HUM), Language and Cultural Diversity (LCD), or Social and Behavioral Sciences (SSC). These courses must be taken with the credit grade option only (not pass/fail). At least one course must be an ethics course from the list of approved ethics courses (PDF).
- Free Electives (9 units): Any course from any day-school division, including prematriculation credit (e.g., AP credit). The free elective courses may be taken with the Pass/Fail grade option. A student may take a maximum of one course per semester as Pass/Fail. If a course is only offered as Pass/Fail, a student may choose another course to audit or take as Pass/Fail.

## Capstone/Integrated Learning Experience Requirements (6 units)

- 6 units of course work jointly approved by the faculty curriculum oversight committees of both Business and Engineering
- Junior Year Capstone: MGT 401C CEL Entrepreneurial Consulting Team
- Senior Year Capstone: CSE 437S Software Engineering Workshop, CSE 439S Mobile Application Development II, or CSE 451A Video Game Programming II

## Major Course Requirements (60 units)

- Business Course Requirements (30 units) as listed in the section below
- Computer Science Course Requirements (30 units) as listed in the section below

## Business Course Requirements (30 total units)

Choose one of the two clusters below:

## Business Analytics Cluster

Business Core Course Requirements (18 units):

Code	Title	Units
ACCT 2610	Principles of Financial Accounting (Prerequisites: Second-semester first-year standing)	3
DAT 220	Analytics and Modeling for Business Decisions (Prerequisites: DAT 120 and completion or concurrent enrollment in DAT 121)	3
FIN 340	Capital Markets and Financial Management (Prerequisites: Math 132, ACCT 2610, MEC 290 or ECON 1011, and completion or concurrent enrollment in DAT 121)	3
MEC 290	Microeconomics (Prerequisites: Math 131 or concurrent enrollment in Math 132 or Math 233)	3
MKT 370	Principles of Marketing (Prerequisites: Sophomore standing and MEC 290 or ECON 1011 or MGT 100)	3
SCOT 356	Operations and Manufacturing Management (formerly OSCM 356)	3
<b>Total Units</b>		<b>18</b>

Electives (choose 12 units):

Code	Title	Units
DAT 301E	Data Analytics in Python (Prerequisite: Sophomore standing)	3
FIN 448	Advanced Financial Management (Prerequisites: FIN 340 and DAT 121)	3
FIN 451	Options, Futures and Derivative Securities (Prerequisite: FIN 340)	3
MEC 471	Empirical Techniques for Industry Analysis (Prerequisites: MEC 290, DAT 120, and DAT 121)	3
MKT 378	Marketing Research (Prerequisites: MKT 370, DAT 120, and DAT 121 or concurrent enrollment in DAT 121)	3
MKT 400G	Digital Marketing and Analytics (Prerequisites: MKT 370 and either DAT 120, Math 2200, Math 3200, or ESE 326)	3
SCOT 430E	Operations Fun: Data-Driven Optimization (Prerequisites: DAT 220. DAT 301E or CS 131 strongly recommended)	3
SCOT 458	Operations Analytics (Formerly OSCM 458; Prerequisite: SCOT 356 or OSCM 356)	3

## Strategy & Leadership Cluster

Business Core Course Requirements (15 units):

Code	Title	Units
ACCT 2610	Principles of Financial Accounting (Prerequisite: Second-semester first-year standing)	3
FIN 340	Capital Markets and Financial Management (Prerequisites: Math 132, ACCT 2610, MEC 290, and completion or concurrent enrollment in DAT 121)	3
MEC 290	Microeconomics (Prerequisites: Math 131 or concurrent enrollment in Math 132 or Math 233)	3
MGT 100	Individual in a Managerial Environment	3
OB 360	Organization Behavior Within the Firm (Prerequisite: MGT 100 or sophomore standing)	3
<b>Total Units</b>		<b>15</b>

Electives (choose 15 units):

Code	Title	Units
MGT 380	Business Strategy (Prerequisite: MEC 290 or approved substitution.)	3
MGT 402	Ethical Issues in Managerial Decision Making (Prerequisite: senior standing.)	1.5
MGT 421	Introduction to Entrepreneurship (Prerequisite: sophomore, junior, or senior standing in any school or college.)	3
or MGT 460L	Introduction to Social Entrepreneurship	
MGT 460H	Corporate and Global Strategy	3
MEC 470	Industrial Economics (Prerequisite: MEC 370)	3
MEC 370	Game Theory for Business (Prerequisite: MEC 290)	3
OB 431E	Thinking Creatively and Leading Creative Teams (Prerequisite: OB 360)	1.5
OB 434E	Talent Analytics (Prerequisites: OB 360 and DAT 220.)	1.5
OB 435E	People Metrics (Prerequisites: OB 360 and DAT 220.)	1.5
OB 461	Negotiation (Prerequisite: OB 360.)	3
OB 462	Leadership in Organizations (Prerequisite: Sophomore standing)	3
OB 468E	Mindfulness and Performance in the Workplace	1.5
OB 472	Defining Moments: Lessons in Leadership and Character from the Top	1.5

## Computer Science Course Requirements (30 total units)

Computer Science Core Course Requirements (9 units, C- grade required):

Code	Title	Units
CSE 131	Introduction to Computer Science	3
CSE 247	Data Structures and Algorithms (Prerequisites: CSE 131 and fluency with summations, derivatives, and proofs by induction)	3
CSE 332S	Object-Oriented Software Development Laboratory (Prerequisite: CSE 247)	3
<b>Total Units</b>		<b>9</b>

Electives (choose 21 units):

Code	Title	Units
Choose seven courses from any CSE courses with an S, M, T, or A suffix. CSE 132, CSE 240, and CSE 347 will count as electives in this category. Note that ESE 417 will be accepted as a CSE elective as well.		

**Notes:**

- Students earning this degree will not be eligible to earn a second undergraduate degree or a second major in computer science, computer science + math, computer science + economics, data science, or a minor in computer science.
- Students earning this degree will not be eligible to earn a second undergraduate degree or second major in business. Students are eligible to earn a business minor.
- Students earning this degree will not be eligible to earn a second major in financial engineering.

## The Second Major in Computer Science

The second major provides an opportunity to combine computer science with another degree program. A second major in computer science can expand a student's career options and enable interdisciplinary study in areas such as cognitive science, computational biology, chemistry, physics, philosophy and linguistics. The second major is also well suited for students planning careers in medicine, law, business, architecture and fine arts. The requirements are as follows. There are no additional distribution or unit requirements for the second major.

### Computer Science Core Requirements\*

Code	Title	Units
CSE 131	Introduction to Computer Science	3
CSE 132	Introduction to Computer Engineering	3
CSE 240	Logic and Discrete Mathematics	3
or Math 310	Foundations for Higher Mathematics	
CSE 247	Data Structures and Algorithms	3

CSE 332S	Object-Oriented Software Development Laboratory	3
CSE 347	Analysis of Algorithms	3
<b>Total Units</b>		<b>18</b>

\* Each of these core courses must be passed with a grade of C- or better.

## Computer Science Technical Elective Requirements

At least 24 additional units in computer science or computer science-related courses with an S, M, T or A suffix must be completed, at least one of which must be a systems (S) course and at least one of which must be a machine (M) or application (A) course. In satisfying these technical electives, up to 6 units may be taken outside the CSE department. Independent work (CSE 400E, CSE 497, CSE 498, CSE 499) is possible by finding a suitable faculty mentor for the work. Such work can be classified as S, M, T or A with approval. Some or all of the 6 units may also be satisfied by taking courses in other departments, including those outside of the McKelvey School of Engineering. Students can seek approval for courses by contacting the associate chair.

### Math Requirement

Students must take calculus (Math 131), calculus II (Math 132), and probability (ESE 326, SDS 3200, or the sequence DAT 120-DAT 121).

## The Second Major in Computer Science + Mathematics

The McKelvey School of Engineering and the College of Arts & Sciences have developed a new second major that efficiently captures the intersection of the complementary studies of computer science and math.

McKelvey Engineering students who declare this major must fulfill the core course requirements listed below and all other requirements for the Applied Science degree (p. 1304) in the McKelvey School of Engineering. They must also complete Engr 310 Technical Writing and 8 units of courses designated as NSM (Natural Sciences & Math) from Anthropology (L48 Anthro); Biology and Biomedical Sciences (L41 Biol); Chemistry (L07 Chem); Earth, Environmental, and Planetary Sciences (L19 EPSc); Physics (L31 Physics); or Environmental Studies (L82 EnSt).

Arts & Sciences students who declare this major must fulfill the distribution requirements and all other requirements for an AB degree (p. 1112) in addition to the specific requirements listed below.

## Core Requirements

Code	Title	Units
CSE 131	Introduction to Computer Science	3
CSE 240	Logic and Discrete Mathematics	3
CSE 247	Data Structures and Algorithms	3
Math 131	Calculus I	3
Math 132	Calculus II	3
Math 233	Calculus III	3
Math 309	Matrix Algebra	3
Math 310	Foundations for Higher Mathematics	3
or Math 310W	Foundations For Higher Mathematics With Writing	
SDS 3200	Elementary to Intermediate Statistics and Data Analysis	3
or ESE 326	Probability and Statistics for Engineering	
or SDS 3211	Statistics for Data Science I	
CSE 347	Analysis of Algorithms	3
<b>Total Units</b>		<b>30</b>

- <sup>1</sup> Each of these core courses must be passed with a grade of C- or better.
- <sup>2</sup> Students who complete the Math 203 Honors Mathematics I–Math 204 Honors Mathematics II sequence will be considered to have completed Math 131 Calculus I, Math 132 Calculus II, and Math 233 Calculus III. These students can also choose to take additional electives in place of Math 309 Matrix Algebra and Math 310 Foundations for Higher Mathematics.

## Electives

Eight upper-level courses from Math or CSE can be chosen from an approved list, with the following caveats:

- At least three courses must be taken from CSE and at least three course must be taken from Math.
- Up to two preapproved courses from outside both departments can be selected.
- CSE 400 Independent Study or CSE 400E Independent Study may be taken for a maximum of 3 units and must be approved by a CS+Math review committee.

## List of Approved Electives Computer Science & Engineering

Code	Title	Units
CSE 217A	Introduction to Data Science	3
CSE 341T	Parallel and Sequential Algorithms	3
CSE 411A	AI and Society	3
CSE 412A	Introduction to Artificial Intelligence	3
CSE 416A	Data Science for Complex Networks	3
CSE 417T	Introduction to Machine Learning	3

CSE 427S	Cloud Computing with Big Data Applications	3
CSE 442T	Introduction to Cryptography	3
CSE 447T	Introduction to Formal Languages and Automata	3
CSE 457A	Introduction to Visualization	3
CSE 468T	Introduction to Quantum Computing	3
CSE 513T	Theory of Artificial Intelligence and Machine Learning	3
CSE 514A	Data Mining	3
CSE 515T	Bayesian Methods in Machine Learning	3
CSE 516A	Multi-Agent Systems	3
CSE 517A	Machine Learning	3
CSE 518A	Human-in-the-Loop Computation	3
CSE 533T	Coding and Information Theory for Data Science	3
CSE 534A	Large-Scale Optimization for Data Science	3
CSE 541T	Advanced Algorithms	3
CSE 543T	Algorithms for Nonlinear Optimization	3
CSE 544T	Special Topics in Computer Science Theory	3
CSE 546T	Computational Geometry	3
CSE 554A	Geometric Computing for Biomedicine	3
CSE 555T	Adversarial AI	3
CSE 559A	Computer Vision	3
CSE 581T	Approximation Algorithms	3
CSE 584A	Algorithms for Biosequence Comparison	3
CSE 587A	Algorithms for Computational Biology	3
CSE 659A	Advances in Computer Vision	3

## Mathematics

Code	Title	Units
Math 350	Topics in Applied Mathematics	3
Math 370	Introduction to Combinatorics	3
Math 371	Graph Theory	3
Math 407	An Introduction to Differential Geometry	3
Math 410	Introduction to Fourier Series and Integrals	3
Math 4111	Introduction to Analysis	3
Math 4121	Introduction to Lebesgue Integration	3
Math 4171	Topology I	3
Math 429	Linear Algebra	3
Math 430	Modern Algebra	3
Math 4351	Number Theory and Cryptography	3
Math 444	The Mathematics of Quantum Theory	3
Math 449	Numerical Applied Mathematics	3
Math 450	Topics in Applied Mathematics	3

Math 456	Topics in Financial Mathematics	3
Math 470	Topics in Graph Theory	3
Math 493C/SDS 493	Probability	3
Math 495C/SDS 495	Stochastic Processes	3

### Statistics and Data Science

Code	Title	Units
SDS 420	Experimental Design	3
SDS 434	Survival Analysis	3
SDS 439	Linear Statistical Models	3
SDS 459	Bayesian Statistics	3
SDS 460	Multivariate Statistical Analysis	3
SDS 461	Time Series Analysis	3
SDS 462	Mathematical Foundations of Big Data	3
SDS 475	Statistical Computation	3
SDS 493/Math 493C	Probability	3
SDS 494	Mathematical Statistics	3
SDS 495/Math 495C	Stochastic Processes	3

### Electrical & Systems Engineering

Code	Title	Units
ESE 4031	Optimization for Engineered Planning, Decisions and Operations	3
ESE 415	Optimization	3
ESE 417	Introduction to Machine Learning and Pattern Classification	3
ESE 427	Financial Mathematics	3
ESE 429	Basic Principles of Quantum Optics and Quantum Information	3
ESE 520	Probability and Stochastic Processes	3

### Economics

Code	Title	Units
Econ 4151	Applied Econometrics	3
Econ 467	Game Theory	3

### Biology and Biomedical Sciences

Code	Title	Units
Biol 5657	Biological Neural Computation	3

### Biomedical Engineering

Code	Title	Units
BME 470	Mathematics of Imaging Science	3

### Linguistics

Code	Title	Units
Ling 317	Introduction to Computational Linguistics	3
Ling 427	Computation and Learnability in Linguistic Theory	3

### Additional Departmental Requirements

Engr 310 Technical Writing	3
One themed writing course from the College Writing Program	3
Humanities and social sciences electives	18
Natural sciences electives	8

The College Writing Program, humanities, and social sciences requirements are those required of all students in the McKelvey School of Engineering. For information about how to fulfill the school's English proficiency requirement, please visit the Degree Requirements page of this Bulletin (p. 1305).

The natural sciences requirement is for 8 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology; Biology; Chemistry; Earth, Environmental, and Planetary Sciences; Environmental Studies; or Physics. The College Writing Program and natural sciences courses must be completed with a grade of C- or better.

All courses taken to meet any of the above requirements (with the exception of the humanities and social sciences electives) cannot be taken on a pass/fail basis.

## The Second Major in Data Science

The McKelvey School of Engineering and the College of Arts & Sciences developed a new major that efficiently captures the intersection of mathematics and statistics with computer science for data science.

### Data Science Core Requirements (CR)

Code	Title	Units
CSE 131	Introduction to Computer Science	3
CSE 217A	Introduction to Data Science	3
CSE 247	Data Structures and Algorithms	3
CSE 314A	Data Manipulation and Management	3
CSE 417T	Introduction to Machine Learning (or Math 4601 Statistical Learning)	3
Math 131	Calculus I	3
Math 132	Calculus II	3
Math 233	Calculus III	3
Math 309	Matrix Algebra	3
SDS 3211	Statistics for Data Science I	3
SDS 4211	Statistics for Data Science II	3
SDS 439	Linear Statistical Models	3
<b>Total Units</b>		<b>36</b>

## Data Science Technical Electives

Four courses from Mathematics & Statistics or Computer Science & Engineering can be chosen from an approved list, with the following caveats:

- At least one course from Mathematics & Statistics (at the 400 level or above)
- At least one course from CSE (ending in S, T, M, or A)
- At most one course at the 200 level

### List of Approved Electives

#### Mathematics and Statistics and Data Science

Code	Title	Units
Math 449	Numerical Applied Mathematics	3
Math 450	Topics in Applied Mathematics	3
Math 456	Topics in Financial Mathematics	3
Math 4601	Statistical Learning (Cannot be double-counted in CR)	3
Math 5047	Geometry/Topology III: Differential Geometry	3
SDS 322	Biostatistics	3
SDS 420	Experimental Design	3
SDS 434	Survival Analysis	3
SDS 4392	Advanced Linear Statistical Models	3
SDS 459	Bayesian Statistics	3
SDS 460	Multivariate Statistical Analysis	3
SDS 461	Time Series Analysis	3
SDS 462	Mathematical Foundations of Big Data	3
SDS 475	Statistical Computation	3
SDS 493	Probability	3
SDS 494	Mathematical Statistics	3
SDS 495	Stochastic Processes	3
SDS 5061	Theory of Statistics I	3
SDS 5062	Theory of Statistics II	3
SDS 5071	Advanced Linear Models I	3
SDS 5072	Advanced Linear Models II	3

#### Computer Science & Engineering

Code	Title	Units
CSE 237S	Programming Tools and Techniques	3
CSE 256A	Introduction to Human-Centered Design	3
CSE 311A	Introduction to Intelligent Agents Using Science Fiction	3
CSE 347	Analysis of Algorithms	3
CSE 359A	Signals, Data and Equity (Cannot be double-counted in EPR)	3
CSE 411A	AI and Society (Cannot be double-counted in EPR)	3

CSE 412A	Introduction to Artificial Intelligence	3
CSE 416A	Data Science for Complex Networks	3
CSE 417T	Introduction to Machine Learning (Cannot be double-counted in CR)	3
CSE 427S	Cloud Computing with Big Data Applications	3
CSE 435S	Database Management Systems	3
CSE 457A	Introduction to Visualization	3
CSE 514A	Data Mining	3
CSE 515T	Bayesian Methods in Machine Learning	3
CSE 517A	Machine Learning	3
CSE 518A	Human-in-the-Loop Computation	3
CSE 534A	Large-Scale Optimization for Data Science	3
CSE 543T	Algorithms for Nonlinear Optimization	3
CSE 559A	Computer Vision	3

#### Electrical and Systems Engineering

Code	Title	Units
ESE 4031	Optimization for Engineered Planning, Decisions and Operations	3
ESE 415	Optimization	3

#### Energy, Environmental & Chemical Engineering

Code	Title	Units
EECE 202	Computational Modeling in Energy, Environmental and Chemical Engineering	3

#### Linguistics

Code	Title	Units
Ling 317	Introduction to Computational Linguistics	3

#### Ethics and Professional Responsibility Requirement (EPR)

- 3 units of courses from an approved list

#### List of Approved Courses

Code	Title	Units
CSE 359A	Signals, Data and Equity (Cannot be double-counted as an Elective)	3
CSE 411A	AI and Society (Cannot be double-counted as an Elective)	3
Engr 4501	Engineering Ethics and Sustainability	1
Engr 4502	Engineering Leadership and Team Building	1
Engr 4503	Conflict Management and Negotiation	1

Engr 450F	Engineers in the Community (Engineering Ethics, Leadership and Conflict Management)	3
Engr 520P	Presentation Skills for Scientists and Engineers	2
MSB 512	Ethics in Biostatistics and Data Science	2

## Practicum Requirement

- Students must complete 3 units of an approved comprehensive data science project or experience. The practicum must be approved by the committee of data science faculty.
- The practicum experience should be completed during the next-to-last semester of study (i.e., the first semester of the senior year). It is important that practicum plans be submitted for review prior to starting the project or course work to ensure the proposed work is sufficient for the objectives of the practicum. After-the-fact approvals are possible but not guaranteed.
- Appropriate practicum work is possible via Independent Study (CSE 400E or Math 400) or via project-focused classes, including (but not limited to) CSE 437S Software Engineering Workshop and CSE 454A Software Engineering for External Clients. Students should contact the course instructors in advance to identify the degree of agency the student will have over project selection and requirements.
- Contact the CSE undergraduate coordinator (cse.undergrad@email.wustl.edu) in the CSE department office or the Math department office to initiate the approval process.

## The Minor in Computer Science

If a student's goal is a basic foundation in computer science for application to another field but they are not planning a career as a practicing computer scientist, the minor in computer science is a good choice. The minor consists of five CSE courses: four core courses and one elective. The core courses provide an introduction to computer science concepts and problem-solving techniques. The electives offer flexibility to integrate computer science studies with a major area. Students select the courses that are most important to them, whether their interests are in fine arts, linguistics, psychology, philosophy, law, business, medicine, the natural sciences or anything else.

**Units required:** 15

**Required courses (12 units):**

Code	Title	Units
CSE 131	Introduction to Computer Science	3
CSE 132	Introduction to Computer Engineering	3
CSE 247	Data Structures and Algorithms	3
CSE 332S	Object-Oriented Software Development Laboratory	3
<b>Total Units</b>		<b>12</b>

**One elective from the following list (3 units):**

Code	Title	Units
CSE 240	Logic and Discrete Mathematics	3
or Math 310	Foundations for Higher Mathematics	
CSE 330S	Rapid Prototype Development and Creative Programming	3
CSE 361S	Introduction to Systems Software	3

## Additional Information

All courses used for the computer science minor must be taken for a grade, and the student must earn a C- or better. Should the student decide to go further in the field, all courses in the computer science minor can be used toward a second major in computer science or a degree in computer science or computer engineering.

## The Minor in Bioinformatics

- **Total units required:** 23-24 units

Mindful of the emerging opportunities at the interface of biology and computer science, the Department of Biology and the Department of Computer Science & Engineering have fashioned the minor in bioinformatics.

## Core Courses

Code	Title	Units
Biol 2960	Principles of Biology I	4
Biol 2970	Principles of Biology II	4
CSE 131	Introduction to Computer Science	3
CSE 247	Data Structures and Algorithms	3
ESE 326	Probability and Statistics for Engineering	3
or SDS 2200	Elementary Probability and Statistics	
or SDS 3200	Elementary to Intermediate Statistics and Data Analysis	
or SDS 3211	Statistics for Data Science I	
or DAT 120	Managerial Statistics I	
& DAT 121	and Managerial Statistics II	
<b>Total Units</b>		<b>17</b>

## Advanced Biology Elective

Choose one of the following:

Code	Title	Units
Biol 3492	Laboratory Experiments with Eukaryotic Microbes	3
Biol 3493	Bacterial Bioprospecting and Biotechnology	3
Biol 4181	Population Genetics	3
Biol 4220	Practical Bioinformatics	4

Biol 4342	Research Explorations in Genomics	4
Biol 437	Laboratory on DNA Manipulation	4
Biol 4525	Structural Bioinformatics of Proteins (Writing Intensive)	4

## Computer Science & Engineering Elective

Choose one of the following:

Code	Title	Units
CSE 514A	Data Mining	3
CSE 584A	Algorithms for Biosequence Comparison	3
or Biol 5504	Algorithms for Biosequence Comparison	
CSE 587A	Algorithms for Computational Biology	3

## Additional Information

It is anticipated that, for certain students, some portion of the introductory sequence will overlap with the courses required for the major and that these courses will be applicable to both the major and the minor. Upper-level courses used to fulfill the minor requirements may not be used to fulfill the requirements of another major or minor in Arts & Sciences.

Arts & Sciences students should declare the minor within Arts & Sciences. They will be assigned an advisor in Biology. Per Arts & Sciences policy, students with a major in the Department of Biology are not eligible to declare this minor. Per Arts & Sciences policy, Arts & Sciences students must complete 9 units of upper-level course work toward the minor.

McKelvey, Olin, and Sam Fox students should declare the minor within the McKelvey School of Engineering. They will be assigned an advisor in Computer Science & Engineering.

A minimum grade of C- is required for all courses to count toward the minor. Students may apply no more than one course taken outside of Washington University toward the minor requirements. Courses earned through Washington University–approved study abroad programs are considered to be resident units and may count toward this minor where applicable with no limit.

## The Minor in Human-Computer Interaction

The human-computer interaction (HCI) minor is designed to give any undergraduate student at Washington University a multidisciplinary understanding of the principles and applications of HCI. This minor will introduce students to the techniques necessary to create effective user interfaces: requirements gathering, ideation, prototyping, visual design and evaluation. Students will explore these ideas in a variety of application contexts.

The HCI minor is intended for students who are interested in the design of user-centered interactive technologies and those desiring jobs that include user interface creation, product design, UX/UI design, app development, virtual and augmented realities, and so on. This minor should appeal to students in the College of Art — particularly designers and computationally intrigued artists — who are interested in gaining a more in-depth knowledge of back-end development skills. It will also be of interest to engineering students looking for more experience with aesthetics and front-end design skills. In addition to being useful for these primary audiences, this minor allows students from other departments on campus to support their studies with a clear track in a hybrid pursuit of design and programming.

## Course Work

Students must complete two pillar courses, one integration course and three approved electives. Courses listed below are considered approved elective offerings between the Sam Fox School and the McKelvey School of Engineering.

### • Pillar Courses\* (6 units):

Code	Title	Units
ART 138S	Visual Principles for the Screen	3
CSE 131	Introduction to Computer Science	3

### • Integration Courses\* (3 units):

Code	Title	Units
ART 236A	Interaction Design: Understanding Health and Well-Being	3
CSE 256A	Introduction to Human-Centered Design	3

\* Each of the pillar and integration courses must be completed with a grade of C- or better

### • Electives (9 units, with at least one course each from CSE and Art/Design):

Code	Title	Units
ART 241E	Digital Game Design	3
ART 326M	Game Design Principles & Practice	3
ART 332J	UX Research Methods for Design	3
ART 336B	Advanced Interaction Design	3
ART 336P	Conditional Design	3
ART 338I	Communication Design: Interaction Foundations	3
ART 432A	Interaction Design: User-Centered Applications	3
ART 440T	Advanced Visual Principles for the Screen	3
CSE 204A	Web Development	3
CSE 330S	Rapid Prototype Development and Creative Programming	3
CSE 438S	Mobile Application Development	3
CSE 450A	Video Game Programming	3

CSE 457A	Introduction to Visualization	3
CSE 556A	Human-Computer Interaction Methods	3
CSE 557A	Advanced Visualization	3
PNP 200	Introduction Cognitive Science	3
Psych 360	Cognitive Psychology	3

Additional approved elective courses can be found by viewing the Google Docs file maintained for this program.

## Electrical & Systems Engineering

### About Electrical & Systems Engineering

The mission of our undergraduate programs is to instill in students the knowledge and perspective — appropriate for both a professional career and the pursuit of advanced degrees — of fields that rely on key electrical engineering and systems principles and practices. Such principles and practices include rigorous quantitative reasoning and robust engineering design. This mission is accomplished by ensuring that students achieve both depth and breadth of knowledge in their studies and by maintaining a high degree of flexibility in the curriculum. Our programs also seek to provide good preparation for life, including the ability to communicate in written and oral forms and a desire to continue learning throughout life. In addition, these programs aim to provide the opportunity and training necessary for students to acquire the skills and attitudes to become leaders.

The department offers courses of study leading to degrees in both electrical engineering and systems science and engineering. Opportunities for study and research currently available in the department include semiconductor theory and devices, optoelectronics, nanophotonics, communication theory and systems, information theory, signal and image processing, tomographic imaging, linear and nonlinear dynamics and control, robotics, identification and estimation, multisensor fusion and navigation, computational mathematics, optimization, optimal control, autonomous systems, operations research and financial engineering. Students are encouraged to participate in research activities as soon as they have received training in the fundamentals appropriate for a given research area.

Electrical engineering is the profession for those intrigued with electrical phenomena and eager to contribute their skills to a society increasingly dependent on electricity and sophisticated electronic devices. It is a profession of broad scope, with many specialty careers designed for engineers who seek an endless diversity of career paths on the cutting edge of technology. The Institute of Electrical and Electronics Engineers publishes transactions on about 60 different topics, from aerospace and electronic systems to visualization and computer graphics. This is a breadth so great that no single electrical engineering department can hope to span it. Moreover, those fields themselves encompass still more fascinating specialties. We provide the basics; the future is the student's to shape.

Systems science and engineering is based on an approach that views an entire system of components as an entity rather than simply as an assembly of individual parts; each component is designed to fit properly with the other components rather than to function by itself. The engineering and mathematics of systems is a rapidly developing field. It is one of the most modern segments of applied mathematics as well as an engineering discipline. It is concerned with the identification, modeling, analysis, design and control of systems that are potentially as large and complex as the U.S. economy or as precise and vital as a space voyage. Its interests run from fundamental theoretical questions to the implementation of operational systems. It draws on the most modern and advanced areas of mathematics. A very important characteristic of the systems field is that its practitioners must, of necessity, interact within a wide interdisciplinary environment, not only with various engineers and scientists but also with economists, biologists and sociologists. Such interaction is both emphasized and practiced in the programs.

Our Department of Electrical & Systems Engineering offers a challenging basic curriculum, a broadly qualified faculty, and modern facilities so that students can receive a contemporary preparation for a career in electrical or systems engineering.

### Undergraduate Degree Programs

The Department of Electrical & Systems Engineering (ESE) offers four undergraduate degree programs: two professional degrees and two applied science degrees. The two professional degrees are the Bachelor of Science in Electrical Engineering (BSEE) and the Bachelor of Science in Systems Science & Engineering (BSSSE). These two programs are accredited by the Engineering Accreditation Commission of ABET. The two applied science degrees are the Bachelor of Science in Applied Science (Electrical Engineering) and the Bachelor of Science in Applied Science (Systems Science & Engineering). All programs have flexible curricula as well as specific requirements, and students may elect programs of study tailored to individual interests and professional goals.

In the professional BSEE curriculum, there are required courses in electrical circuits, signals and systems, digital systems and electromagnetic fields, along with laboratory and design courses, which provide students with a common core of experience. Subsequently, the student may orient the program toward breadth so that many disciplines within the profession are spanned or toward a specialty with more emphasis on depth in one or more disciplines. Areas of specialization include modern electronics, applied physics, telecommunications, control systems, and signal and image processing.

Students in the professional BSSSE degree program take required courses in engineering mathematics, signals and systems, operations research, and automatic control systems, along with laboratory and design courses. This program emphasizes the importance of real-world applications of systems theory; accordingly, students are required to take a concentration of courses in one of the traditional areas of engineering or science. There are numerous elective courses in control theory and systems, signal processing, optimization, robotics, probability and stochastic processes, and applied mathematics.

Students enrolled in any of the ESE undergraduate degree programs have a variety of opportunities to augment their educational experience at Washington University. Students may participate in the Pre-Medical Engineering program or in the Cooperative Education program. Some students pursue double majors, in which two sets of degree requirements — either within or outside the ESE department — are satisfied concurrently.

Students who seek a broad undergraduate education in electrical engineering or systems science and engineering but who plan on careers outside of engineering may pursue the applied science degrees: Bachelor of Science in Applied Science (Electrical Engineering) and Bachelor of Science in Applied Science (Systems Science & Engineering). These programs of study are appropriate for students planning to enter medical, law or business school and who desire a more technical undergraduate experience than what otherwise may be available to them.

The ESE department also offers a variety of educational opportunities for students enrolled in other departments. These include the second major in systems science and engineering and the second major in electrical engineering, which are open to students inside as well as outside of the McKelvey School of Engineering, such as the College of Arts & Sciences and Olin Business School. They also include the minor in quantum engineering, the minor in electrical engineering, the minor in energy engineering, the minor in mechatronics, the minor in robotics, and the minor in systems science & engineering.

## Bachelor's/Master's Programs in Electrical & Systems Engineering

Students enrolled in any of the undergraduate degree programs in the McKelvey School of Engineering may choose to extend their educational experience by enrolling in a five-year Bachelor's/Master's program. The Master of Science in Electrical Engineering (MSEE), the Master of Science in Systems Science and Mathematics (MSSSM), and the Master of Science in Engineering Data Analytics and Statistics (MSEDAS) degrees are participating graduate degrees, and these may be combined with any undergraduate degree that provides the appropriate background.

General requirements for the Bachelor's/Master's programs include the residency and other applicable requirements of the university and the McKelvey School of Engineering, which are found elsewhere in this Bulletin (p. 1197). In summary, students must complete all the degree requirements for both the undergraduate and graduate degrees.

Phone: 314-935-5565  
Website: <https://ese.wustl.edu/academics/undergraduate-programs/index.html>

## Faculty

### Chair

#### **Bruno Sinopoli**

Das Family Distinguished Professor  
PhD, University of California, Berkley  
Cyberphysical systems, analysis and design of networked embedded control systems, with applications to sensor actuators networks

### Endowed Professors

#### **Shantanu Chakrabarty**

Clifford W. Murphy Professor  
Vice Dean for Research and Graduate Education  
PhD, Johns Hopkins University  
Explores frontiers in analog and neuromorphic integrated circuits

#### **Jr-Shin Li**

Newton R. and Sarah Louisa Glasgow Wilson Professor of Engineering  
PhD, Harvard University  
Mathematical control theory, optimization, quantum control, biomedical application

#### **Joseph A. O'Sullivan**

Samuel C. Sachs Professor of Electrical Engineering  
Dean, UMSL/WashU Joint Undergraduate Engineering Program  
PhD, Notre Dame University  
Information theory, statistical signal processing, imaging science with applications in medicine and security, and recognition theory and systems

#### **Lan Yang**

Edward H. & Florence G. Skinner Professor of Engineering  
PhD, California Institute of Technology  
Nano/micro photonics, ultra high-quality optical microcavities, ultra-low-threshold microlasers, nano/micro fabrication, optical sensing, single nanoparticle detection, photonic molecules, photonic materials

### Professors

#### **Neal Patwari**

Professor  
PhD, University of Michigan  
Intersection of statistical signal processing and wireless networking for improving wireless sensor networking and radiofrequency sensing

### Associate Professors

#### **Xudong Chen**

PhD, Harvard University  
Develops revolutionary methods for analysis and control of large-scale multi-agent systems

#### **ShiNung Ching**

PhD, University of Michigan  
Systems and control in neural medicine, nonlinear and constrained control, physiologic network dynamics, stochastic control

**Andrew Clark**

PhD, University of Washington  
Focused on control and security of networked and cyber-physical systems

**Ulugbek Kamilov**

PhD, École Polytechnique Fédérale de Lausanne, Switzerland  
Advances imaging technology through research on computational imaging, computer vision, machine learning and optimization

**Matthew D. Lew**

PhD, Stanford University  
Microscopy, biophotonics, computational imaging, nano-optics

**Jung-Tsung Shen**

PhD, Massachusetts Institute of Technology  
Theoretical and numerical investigations on nanophotonics, optoelectronics, plasmonics, metamaterials

**Chuan Wang**

PhD, University of Southern California  
Flexible electronics, stretchable electronics, printed electronics, nanomaterials, nanoelectronics, optoelectronics

## Assistant Professors

**Ioannis (Yiannis) Kantaros**

PhD, Duke University  
Designs safe and distributed autonomy algorithms for large-scale multi-robot systems

**Mark Lawrence**

PhD, University of Birmingham  
Nanophotonics, nonlinear optics, metasurfaces

**Aravind Nagulu**

PhD, Columbia University  
Pioneering the area of novel wave propagation based on time-variance

**Janet Sorrells**

PhD, University of Illinois at Urbana-Champaign  
Developing new technologies in label-free nonlinear optical microscopy to enable new applications in biology and medicine

**Shen Zeng**

PhD, University of Stuttgart  
Systems and control theory, data-based analysis and control of complex dynamical systems, inverse problems, biomedical applications

## Senior Professors

**Paul S. Min**

PhD, University of Michigan  
Routing and control of telecommunication networks, fault tolerance and reliability, software systems, network management

**Robert E. Morley Jr.**

DSc, Washington University in St. Louis  
Computer engineering, lower-power VLSI design, computer architecture, signal processing, microprocessors systems design

**Hiro Mukai**

PhD, University of California, Berkeley  
Theory and computational methods for optimization, optimal control, systems theory, electric power system operations, differential games

**Daniel L. Rode**

PhD, Case Western Reserve University  
Optoelectronics and fiber optics, semiconductor materials, light-emitting diodes and lasers, semiconductor processing, electronics

**Ervin Y. Rodin**

PhD, University of Texas at Austin  
Optimization, differential games, artificial intelligence, mathematical modeling

**Heinz Schaettler**

PhD, Rutgers University  
Optimal control, nonlinear systems, mathematical models in biomedicine

**Barbara A. Shrauner**

PhD, Harvard University (Radcliffe)  
Plasma processing, semiconductor transport, symmetries of nonlinear differential equations

**Barry E. Spielman**

PhD, Syracuse University  
High-frequency/high-speed devices, radiofrequency and microwave integrated circuits, computational electromagnetics

**Tzyh Jong Tarn**

DSc, Washington University  
Quantum mechanical systems, bilinear and nonlinear systems, robotics and automation, life science automation

## Professors of Practice

**Dennis Mell**

MS, University of Missouri-Rolla  
Industrial automation, robotics and mechatronics, product design and development with design-for-manufacturability emphasis, prototyping, manufacturing

**Ed Richter**

MS, Washington University  
Signal processing applications implemented on a variety of platforms, including ASIC, FPGA, DSP, microcontroller and desktop computers

**Jason Trobaugh**

DSc, Washington University  
Ultrasound imaging, diffuse optical tomography, image-guided therapy, ultrasonic temperature imaging

## Teaching Professor

**James Feher**

PhD, Missouri University of Science and Technology  
Electrical engineering, computer science, mathematics and physics

## Senior Lecturers

### Martha Hasting

PhD, Saint Louis University  
Mathematics education

### Vladimir Kurenok

PhD, Belarus State University (Minsk, Belarus)  
Probability and stochastic processes, stochastic ordinary and partial differential equations, financial mathematics

### Tsitsi Madziwa-Nussinov

PhD, University of California, Los Angeles

### Jinsong Zhang

PhD, University of Miami  
Modeling and performance analysis of wireless sensor networks, multi-source information fusion, ambiguous and incomplete information processing

## Lecturers

### Dorothy Wang

PhD, Virginia Tech  
Fiber optic sensing and practical experience in sensor implementation and field test

### Ben Wormleighton

PhD, University of California, Berkeley  
Seeks to cultivate formative learning spaces and practices that develop creative and communal thinkers.

## Professors Emeriti

### R. Martin Arthur

Newton R. and Sarah Louisa Glasgow Wilson Professor of Engineering  
PhD, University of Pennsylvania  
Ultrasonic imaging, electrocardiography

### Arye Nehorai

The Eugene & Martha Lohman Emeritus Professor of Electrical Engineering  
PhD, Stanford University  
Statistical signal processing, machine learning, imaging, biomedicine

## Majors

Please visit the following pages for more information about our majors:

- Bachelor of Science in Electrical Engineering (p. 1263)
- Bachelor of Science in Systems Science & Engineering (p. 1264)
- Bachelor of Science in Computer Engineering (p. 1266)
- Bachelor of Science in Applied Science (Electrical Engineering) (p. 1267)
- Bachelor of Science in Applied Science (Systems Science & Engineering) (p. 1268)

- Second Major in Electrical Engineering (p. 1268)
- Second Major in Systems Science & Engineering (p. 1268)
- Second Major in Financial Engineering (p. 1269)

## Minors

Please visit the following pages for more information about our minors:

- Minor in Electrical Engineering (p. 1270)
- Minor in Energy Engineering (p. 1270)
- Minor in Mechatronics (p. 1271)
- Minor in Robotics (p. 1271)
- Minor in Systems Science & Engineering (p. 1272)
- Minor in Quantum Engineering (p. 1272)

## Courses

Visit online course listings to view semester offerings for E35 ESE.

---

### E35 ESE 105 Introduction to Electrical and Systems Engineering

This course will offer students a rigorous introduction to fundamental mathematical underpinnings of ESE and their relationship to a number of contemporary application areas. Major emphasis will be placed on linear algebra and associated numerical methods, including the use of MATLAB. Topics covered will include vector spaces, linear transformations, matrix manipulations and eigenvalue decomposition. Students will learn how this mathematical theory is enacted in ESE through the completion of four case studies spanning application areas: (i) Dynamical Systems and Control, (ii) Imaging, (iii) Signal Processing, and (iv) Circuits.

Credit 4 units. EN: TU

---

### E35 ESE 2001 Experience Research in ESE

This course provides students with an initial exposure to research in ESE. This is a mentored experience and requires the agreement of an ESE faculty member to serve in a mentorship role. Students must identify a mentor and obtain their agreement before registering for this course. Activities are to be designed by the student in conjunction with the faculty mentor, and will amount to 2-4 hours of commitment per week. Examples of such activities include, but are not limited to, observation of laboratory experiments, attendance of weekly group meetings, discussions with the mentor, or independent readings. The course is suitable for students at all levels.

Credit 1 unit.

---

### E35 ESE 205 Introduction to Engineering Design

This is a hands-on course in which students, in groups of two or three, will creatively develop projects and solve problems throughout the semester using tools from electrical and systems engineering. Groups will work under the supervision of an academic team consisting of faculty and higher-level students. Project objectives will be set by the academic team in collaboration with each student group. Evaluation will consider completion of these objectives as well as the originality and innovation of the projects. A weekly 90-minute lab with the academic team is required. Prerequisites: CSE 131, Physics 197, or equivalent. Corequisite Course(s): ESE 105, Phy192

Credit 3 units. EN: TU

---

---

### **E35 ESE 217 Differential Equations and Dynamical Systems**

#### **Modeling in Engineering**

This course will provide students with an introduction to differential equations in the context of electrical and systems engineering. Students will gain a foundation in the use of differential equations to describe, model and engineer systems and devices. The course will cover fundamental mathematical principles of ordinary differential equations including: (i) existence of solutions, (ii) elementary solution strategies, and (iii) the conceptual foundation for frequency domain solution techniques. An introduction to early concepts in dynamical systems theory, such as state-space analysis, equilibria and stability, will also be provided. Finally, students will obtain an initial introduction to partial differential equations in ESE in the context of wave propagation. Mathematical developments will be closely accompanied by computational implementations and numerical simulations. Further, students will engage several case studies, in which students will use the mathematical theory to perform analysis and design within ESE contexts spanning systems, circuits and applied physics. Prerequisites: ESE 105  
Credit 3 units.

---

### **E35 ESE 2180 Linear Algebra and Component Analysis**

Linear algebra is the foundation of scientific computing across many disciplines of engineering. This course will introduce the numerical and computational issues that arise from solving large-scale problems, with motivation from data science, machine learning, and signal processing. Topics to be covered include least-squares problems, eigenvalue/eigenvector analysis, singular value decomposition, component analysis, rotation of bases, and concepts of computational complexity and numerical stability. A focus of the class will be studying concepts from signal processing and machine learning such as K-means, Fourier analysis, wavelet analysis, and sampling within the framework of linear algebra. The course will include case studies touching on a broad range of topics including systems science, signals and imaging, devices and circuits, and quantum science/applied physics. Prerequisites: Linear algebra at the level of ESE 105; familiarity with Matlab.  
Credit 3 units.

---

### **E35 ESE 2190 Vector Calculus and Dynamics of Physical Systems**

This course will explore fundamental concepts in vector calculus and partial differential equations with a focus on their practical applications and conceptual understanding. We will derive the Laplace, diffusion, and wave equations and explore their solutions in different coordinate systems. The course will emphasize computational solutions and data visualization in case studies involving applications to areas such as electrostatics, heat conduction in solids, transmission lines, antennas, and wave propagation, providing hands-on experience in solving partial differential equations in real-world scenarios. Prerequisites: ESE 217 or Math 217, and ESE 2180, or permission of the instructor  
Credit 3 units.

---

### **E35 ESE 230 Introduction to Electrical and Electronic Circuits**

Electrical energy, current, voltage, and circuit elements. Resistors, Ohm's Law, power and energy, magnetic fields and DC motors. Circuit analysis and Kirchhoff's voltage and current laws. Thevenin and Norton transformations and the superposition theorem. Measuring current, voltage and power using ammeters and voltmeters. Energy and maximum electrical power transfer. Computer simulations of circuits. Reactive circuits, inductors, capacitors, mutual inductance, electrical transformers, energy storage, and energy conservation. RL, RC and RLC circuit transient responses. AC circuits, complex impedance, RMS current and voltage. Electrical signal amplifiers and basic operational amplifier circuits. Inverting, non-inverting, and difference amplifiers.

Voltage gain, current gain, input impedance, and output impedance. Weekly laboratory exercises related to the lectures are an essential part of the course. Prerequisite: L31 Phys192 and 192L Corequisite: L24 Math 217

Credit 4 units. EN: TU

---

### **E35 ESE 232 Introduction to Electronic Circuits**

Analysis and design of linear and nonlinear electronic circuits. Detailed analysis of operational amplifier circuits, including non-ideal characteristics. Terminal characteristics of active semiconductor devices. Incremental and DC models for diodes, metal-oxide-semiconductor field effect transistors (MOSFETs), and bipolar junction transistors (BJTs). Design and analysis of single- and multi-stage amplifiers. Introduction to CMOS logic as well as static and dynamic memory circuits. Students will be required to design, analyze, build and demonstrate several of the circuits studied, including frequency response analysis and use of simulation tools. Prerequisite: ESE 230.  
Credit 3 units. EN: TU

---

### **E35 ESE 260 Introduction to Digital Logic and Computer Design**

Introduction to design methods for digital logic and fundamentals of computer architecture. Boolean algebra and logic minimization techniques; sources of delay in combinational circuits and effect on circuit performance; survey of common combinational circuit components; sequential circuit design and analysis; timing analysis of sequential circuits; use of computer-aided design tools for digital logic design (schematic capture, hardware description languages, simulation); design of simple processors and memory subsystems; program execution in simple processors; basic techniques for enhancing processor performance; configurable logic devices. Prerequisites: CSE 131  
Same as E81 CSE 260M  
Credit 3 units. EN: TU

---

### **E35 ESE 2971 Introduction to Research in ESE**

This course provides students with an introductory experience with research in ESE. This is a mentored experience and requires the agreement of an ESE faculty member to serve in a mentorship role. Students must identify a mentor and obtain their agreement before registering for this course. Activities are to be designed by the student in conjunction with the faculty mentor, and will amount to 4-6 hours of commitment per week. The research activities will enable the student to gain a deeper understanding of ongoing research related to the mentor's field, or in an area mutually agreed upon by the mentor and the student. The student may also have an opportunity to actively participate in ongoing research activities, such as through assistance of graduate students or postdoctoral associates. Because activities may be unstructured, this course is will require strong time-management skills and self-discipline. The final grade will be determined on the basis of a set of deliverables that are agreed upon by the student and faculty member.

Credit 2 units.

---

### **E35 ESE 3050 Special Topics in Robotics: Practicum in Robotic Systems Design**

This is an exciting hands-on course where teams of students (in groups of 4-6) will put a broad range of their engineering skills to use by designing, constructing, and debugging a complex electro-mechanical robotic system. The robotic system will be targeted at some proposed real-world application. Each team will engineer and implement their own solution to the problem. This course is designed to teach students how to apply their theory-based classroom engineering knowledge by exposing students to the design/test/debug/iterate process needed to develop a working integrated system. Some of the topics/skills experienced in the class will include feedback control, real sensor/actuator implementation, circuit design/layout, soldering,

asynchronous programming, project management, Design-For-Manufacturability, and more. Students will use the WUSTL Maker Space in this class to learn other valuable hands-on skills (e.g. CAD, CNC machining, 3D printing, laser cutting, etc.). This course will consist of one weekly lecture and a weekly lab component. Course Prerequisites: ESE205 or instructor permission  
Credit 3 units. EN: TU

---

**E35 ESE 3090 Special Topics in Systems Engineering: Modeling and Design of Social Choice Systems**

Social choice systems are all around us, from how we decide to split the check to who becomes president. This course introduces many conceptual and computational problems in the study of systems of social choice and offers a variety of tools to understand them. We will consider both micro and macro social choice systems; for the latter drawing on modern statistical techniques to understand (and reframe) questions like "what is a fair map of congressional districts?" In order to address modeling and design challenges in social choice systems we will explore mathematical and software tools such as game theory, linear optimization, Monte Carlo / MCMC methods, and geographical data representation in Python. Prerequisites: ESE 105, or Math 309, or working knowledge of linear algebra and scientific computing, or permission of instructor.

Credit 3 units.

---

**E35 ESE 318 Engineering Mathematics A**

Laplace transforms; matrix algebra; vector analysis; eigenvalues and eigenvectors; vector differential calculus and vector integral calculus in three dimensions. Prerequisites: Math 233 and Math 217 or their equivalents.

Credit 3 units.

---

**E35 ESE 319 Engineering Mathematics B**

Power series and Frobenius series solutions of differential equations; Legendre's equation; Bessel's equation; Fourier series and Fourier transforms; Sturm-Liouville theory; solutions of partial differential equations; wave and heat equations. Prerequisites: Math 233 and Math 217 or their equivalents.

Credit 3 units.

---

**E35 ESE 326 Probability and Statistics for Engineering**

Study of probability and statistics together with engineering applications. Probability and statistics: random variables, distribution functions, density functions, expectations, means, variances, combinatorial probability, geometric probability, normal random variables, joint distribution, independence, correlation, conditional probability, Bayes theorem, the law of large numbers, the central limit theorem. Applications: reliability, quality control, acceptance sampling, linear regression, design and analysis of experiments, estimation, hypothesis testing. Examples are taken from engineering applications. Prerequisites: Math 233 or equivalent.

Credit 3 units. EN: TU

---

**E35 ESE 330 Engineering Electromagnetics Principles**

Electromagnetic theory as applied to electrical engineering: vector calculus; electrostatics and magnetostatics; Maxwell's equations, including Poynting's theorem and boundary conditions; uniform plane-wave propagation; transmission lines, TEM modes, including treatment of general lossless lines, and pulse propagation; introduction to guided waves; introduction to radiation and scattering concepts. Prerequisites: Physics 198 and ESE 318 En Math A. Co-requisite: ESE 319 En Math B.

Credit 3 units. EN: BME T, TU

---

**E35 ESE 3301 Electromagnetics Laboratory: Spectrum from Radio to Photonics**

Engineering electromagnetics focuses on applying electromagnetic theory to modern technologies including communication, sensing, imaging and medical engineering. This laboratory course provides students with hands-on and practical exposure to the topics covering the electromagnetic spectrum from microwave to optics. Weekly labs will cover topics such as the following: microwave propagation and coupling, transmission line, antenna, RF circuits, basic optoelectronic devices, Fourier optics, light microscopy, holography, light polarization, electro-optics and fiber optics. Students are expected to carry out tests and measurements; analyze, interpret and present experiment data; learn how to perform engineering analysis and design when electromagnetic principles are applied; and gain in-depth understanding of the physics and mathematics underlying the techniques. Corequisite: E35 ESE 330, E35 ESE 351

Credit 3 units. EN: BME T, TU

---

**E35 ESE 331 Electronics Laboratory**

Laboratory exercises provide students with a combination of hands-on experience involving electronic circuits. Students will use a variety of real instruments, analysis techniques and circuit simulation tools to summarize measurement results in written reports that clearly communicate laboratory results. A sequence of lab experiments provide hands-on experience in: properties of diodes and transistors, realistic operational amplifier characteristics, grounding and shielding techniques, signal analysis, and op amp based active filter design and characterization. Students will gain experience working with: sampling oscilloscopes to make measurements in the time and frequency domains, signal generators, digital multimeter and frequency measurements, and in creating circuits and making connections on contemporary circuit boards. The course concludes with a hands-on project to design, demonstrate and document the design of an electronic component. Prerequisite: ESE 232

Credit 3 units. EN: BME T, TU

---

**E35 ESE 332 Power, Energy, and Polyphase Circuits**

Fundamental concepts of power and energy; electrical measurements; physical and electrical arrangement of electrical power systems; polyphase circuit theory and calculations; principal elements of electrical systems such as transformers, rotating machines, control, and protective devices, their description and characteristics; elements of industrial power system design. Prerequisite: ESE 230.

Credit 3 units. EN: BME T, TU

---

**E35 ESE 351 Signals and Systems**

This course presents an introduction to concepts and methodology of linear dynamic systems in relation to discrete- and continuous-time signals. Topics include mathematical modeling; representation of systems and signals; Fourier, Laplace, and Z-transforms and convolution; input-output description of linear systems, including impulse response and transfer function; time-domain and frequency-domain system analysis, including transient and steady-state responses, system modes, stability, frequency spectra, and frequency responses; and system design, including filter, modulation, and sampling theorem. Continuity is emphasized from analysis to synthesis. MATLAB will be used. Prerequisites: Physics 117A-118A, Math 217, CSE 131, Matlab, matrix addition and multiplication, and ESE 105 or ESE 230; Corequisite: ESE 318.

Credit 3 units. EN: BME T, TU

---

**E35 ESE 359 Signals, Data and Equity**

This course introduces the design of classification and estimation systems for equity -- that is, with the goal of reducing the inequities of racism, sexism, xenophobia, ableism, and other systems of oppression. Systems that change the allocation of resources among people can

increase inequity due to their inputs, the systems themselves, or how the systems interact in the context in which they are deployed. This course presents background in power and oppression to help predict how new technological and societal systems might interact and when they might confront or reinforce existing power systems. Measurement theory -- the study of the mismatch between a system's intended measure and the data it actually uses -- is covered. Multiple examples of sensing and classification systems that operate on people (e.g., optical, audio, and text sensors) are covered by implementing algorithms and quantifying inequitable outputs. Prerequisite: ESE 105 or CSE 217A or CSE 417T. Background readings will be available.  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 362 Computer Architecture**

This course explores the interaction and design philosophy of hardware and software for digital computer systems. Topics include: Processor architecture, Instruction Set Architecture, Assembly Language, memory hierarchy design, I/O considerations, and a comparison of computer architectures. Prerequisite: CSE 260M.  
Same as E81 CSE 362M  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 400 Independent Study**

Opportunities to acquire experience outside the classroom setting and to work closely with individual members of the faculty. A final report must be submitted to the department. Not open to first-year or graduate students. Consult adviser. Hours and credit to be arranged.  
Credit variable, maximum 3 units.

---

### **E35 ESE 401 Fundamentals of Engineering Review**

A review and preparation of the most recent NCEES Fundamentals of Engineering (FE) Exam specifications is offered in a classroom setting. Exam strategies will be illustrated using examples. The main topics for the review include: engineering mathematics, statics, dynamics, thermodynamics, heat transfer, mechanical design and analysis, material science and engineering economics. A discussion of the importance and responsibilities of professional engineering licensure along with ethics will be included.  
Same as E37 MEMS 4001  
Credit 1 unit.

---

### **E35 ESE 403 Operations Research**

Introduction to the mathematical aspects of various areas of operations research, with additional emphasis on problem formulation. This is a course of broad scope, emphasizing both the fundamental mathematical concepts involved, and also aspects of the translation of real-world problems to an appropriate mathematical model. Subjects to be covered include linear and integer programming, network problems, and dynamic programming. Prerequisites: CSE 131, Math 309, and ESE 326, or permission of instructor.  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 4031 Optimization for Engineered Planning, Decisions and Operations**

The goal of the course is to introduce students to discrete optimization and decision-making methods as well as their application domains ranging from finance to robotics. This course will cover linear programming, integer programming, and dynamic programming from theoretical and application perspectives. Special emphasis will be given on modeling real-world problems as optimization problems as well as on designing techniques to address them. The use of methods will be demonstrated on numerous concrete examples (e.g.,

scheduling, operation management, robot planning and control) solved using MatLab or Python. Prerequisites: E35 ESE 105 (or both E81 CSE 131 and L24 Math 309), L24 Math 217; E35 ESE 326; or permission of the instructor.

Credit 3 units. EN: BME T, TU

---

### **E35 ESE 404 Applied Operations Research**

Application of operations research techniques to real-world problems. Emphasis is given to integer linear programming and computational methods. Real-world examples of integer programs will be studied in areas such as network flow, facility location, partitioning, matching, and transportation. Special emphasis will be placed on techniques used to solve integer programs. Prerequisites: ESE 403 and CSE 131.  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 405 Reliability and Quality Control**

An integrated analysis of reliability and quality control function in manufacturing. Statistical process control, acceptance sampling, process capability analysis, reliability prediction, design, testing, failure analysis and prevention, maintainability, availability, and safety are discussed and related. Qualitative and quantitative aspects of statistical quality control and reliability are introduced in the context of manufacturing. Prerequisite: ESE 326 or equivalent.  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 415 Optimization**

Optimization problems with and without constraints. The projection theorem. Notions of convexity. Lagrange multipliers and Kuhn-Tucker-type conditions. Duality. Computational methods. Applications of optimization in engineering. Prerequisites: Solid understanding of multivariable calculus notions, including gradients. Solid understanding of linear algebraic concepts, including eigen decomposition (eigenvalues & eigenvectors), matrix algebraic operations, and properties of symmetric matrices.  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 417 Introduction to Machine Learning and Pattern Classification**

This course provides a broad introduction to machine learning and statistical pattern classification. Students will study theoretical foundations of learning and several important supervised and unsupervised machine learning methods and algorithms, including linear model of regression and classification, logistic regression, Bayesian learning methods, neural networks, nearest neighbor method, support vector machines methods, clustering methods and principal component analysis. Students will also learn to use Python programming language to implement learned models and methods to solve pattern classification problems. Prerequisites: ESE 326, Math 233, and Python programming experience.  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 419 Special Topics in Optimization and Learning**

Credit 3 units. EN: TU

---

### **E35 ESE 425 Random Processes and Kalman Filtering**

Probability and random variables; random processes, autocorrelation, power spectral density; transient and steady-state analysis of linear dynamic systems and random inputs, filters, state-space, discretization; optimal estimation; the discrete Kalman filter; linearization and the extended Kalman filter for nonlinear dynamic systems; related MATLAB exercises. Prerequisite: ESE 326 and ESE 351 or equivalent.  
Credit 3 units. EN: BME T, TU

---

**E35 ESE 4261 Statistical Methods for Data Analysis with Applications to Financial Engineering**

Introduction to modern methods of statistical data analysis. Data will be used primarily from the financial industry. The course is both computational and mathematical in nature. Most facts will be stated in a rigorous manner, motivated by applications and justified at an intuitive level, but usually not proven rigorously. Emphasis will be on the relevance of concepts and the practical use of tools. A broad range of topics will be covered, including some standard techniques of univariate and multivariate data analysis (histograms, kernel density estimators, Q-Q plots), Monte Carlo simulations and calculations, analysis of heavy tailed data, use of copulas, various parametric and non-parametric regression models, both local and nonlocal, as well as analysis of time series data and Kalman filtering. Methods will be demonstrated on numerous concrete examples, with extensive use of the programming language R. Prerequisite: ESE 326  
Credit 3 units. EN: BME T, TU

---

**E35 ESE 427 Financial Mathematics**

This course is a self-contained introduction to financial mathematics at the undergraduate level. Topics to be covered include pricing of the financial instruments such as options, forwards, futures and their derivatives along with basic hedging techniques and portfolio optimization strategies. The emphasis is put on using of discrete, mostly binary models. The general, continuous case including the concepts of Brownian motion, stochastic integral, and stochastic differential equations, is explained from intuitive and practical point of view. Among major results discussed are the Arbitrage Theorem and Black-Scholes differential equations and their solutions. Prerequisites: ESE 326 or the consent of the instructor.  
Credit 3 units. EN: BME T, TU

---

**E35 ESE 429 Basic Principles of Quantum Optics and Quantum Information**

This course provides an accessible introduction to quantum optics and quantum engineering for undergraduate students. This course covers the following topics: Concept of photons, quantum mechanics for quantum optics, radiative transitions in atoms, lasers, photon statistics (photon counting, Sub-/Super-Poissonian photon statistics, bunching, anti-bunching, theory of photodetection, shot noise), entanglement, squeezed light, atom-photon interactions, cold atoms, atoms in cavities. The course will also provide an overview for quantum information processing: quantum computing, quantum cryptography, and teleportation. Prerequisite Course: ESE 318 or equivalent.  
Credit 3 units. EN: BME T, TU

---

**E35 ESE 4301 Quantum Mechanics for Engineers**

This course provides an accessible introduction to quantum mechanics and quantum engineering for undergraduate students. Examples are drawn from practical areas of applications of quantum engineering. This course covers the following topics and examples: quantum mechanics and nano-technology, Schrodinger's equation, electron transport in various potential profiles, quantum dots and defects, harmonic oscillator, nano-mechanical oscillator and quantum LC circuit, Stark effect in semiconductors, Bloch theorem, crystal and band structures, Kronig-Penney and tight-binding models, semiclassical and quantum descriptions of light-atom interactions, spontaneous and stimulated emissions, quantum flip-flops, approximate methods in quantum mechanics, spin, quantum gyroscope, spin transistor, and many-particle quantum mechanics for bosons and fermions. Prerequisites: Simple differential equations and matrix algebra at the level of ESE 318/319 Engineering Mathematics A/B or equivalent and familiarity with a modern scientific computing software package (e.g., MATLAB, Mathematica).  
Credit 3 units. EN: BME T, TU

---

**E35 ESE 431 Introduction to Quantum Electronics**

Describing the flow of electrical current in nanodevices involves a lot more than just quantum mechanics; it requires an appreciation of some of the most advanced concepts of non-equilibrium statistical mechanics. In the past decades, electronic devices have been shrinking steadily to nanometer dimensions, and quantum transport has accordingly become increasingly important not only to physicists but also to electrical engineers. Traditionally, these topics are spread out over many physics/chemistry/engineering courses that take many semesters to cover. The main goal of this course is to condense the essential concepts into a one-semester course that is accessible to both senior-level undergraduate and junior-level graduate students. This course will be accessible to students with diverse backgrounds in electrical engineering, physics, chemistry, biomedical engineering, and mathematics. Prerequisites: Math 217 or ESE 217, and ESE 105 or ESE 2180 or Math 309, and scientific computing ability, e.g., Matlab or Mathematica, or permission of instructor.  
Credit 3 units. Art: NSM EN: TU

---

**E35 ESE 433 Radio Frequency and Microwave Technology for Wireless Systems**

Focus is on the components and associated techniques employed to implement analog and digital radio frequency (RF) and microwave (MW) transceivers for wireless applications, including: cell phones; pagers; wireless local area networks; global positioning satellite based devices; and RF identification systems. A brief overview of system-level considerations is provided, including modulation and detection approaches for analog and digital systems; multiple-access techniques and wireless standards; and transceiver architectures. Focus is on RF and MW: transmission lines; filter design; active component modeling; matching and biasing networks; amplifier design; and mixer design. Prerequisite: ESE 330.  
Credit 3 units. EN: BME T, TU

---

**E35 ESE 434 Solid-State Power Circuits and Applications**

Study of the strategies and applications power control using solid-state semiconductor devices. Survey of generic power electronic converters. Applications to power supplies, motor drives, and consumer electronics. Introduction to power diodes, thyristors, and MOSFETs. Prerequisites: ESE 232, 351.  
Credit 3 units. EN: BME T, TU

---

**E35 ESE 435 Electrical Energy Laboratory**

Experimental studies of principles important in modern electrical energy systems. Topics include: AC power measurements, electric lighting, photovoltaic cells and arrays, batteries, DC-DC and DC-AC converters, brushed and brushless DC motors and three-phase circuits. Each experiment requires analysis, simulation with MultiSim, and measurement via LabVIEW and the Elvis II platform. Prerequisites: ESE 230 and 351  
Credit 3 units. EN: BME T, TU

---

**E35 ESE 436 Semiconductor Devices**

This course covers the fundamentals of semiconductor physics and operation principles of modern solid-state devices such as homo- or hetero-junction diodes, solar cells, inorganic/organic light-emitting diodes, bipolar junction transistors, and metal-oxide-semiconductor field-effect transistors. These devices form the basis for today's semiconductor and integrated circuit industry. In addition to device physics, semiconductor device fabrication processes, new materials, and novel device structures will also be briefly introduced. At the end of this course, students will be able to understand the characteristics, operation, limitations and challenges faced by state-of-the-art semiconductor devices. This course will be particularly useful for students who wish to develop careers in the semiconductor industry. Prerequisite: ESE 232.

Credit 3 units. EN: BME T, TU

---

### **E35 ESE 438 Applied Optics**

Topics relevant to the engineering and physics of conventional as well as experimental optical systems and applications explored. Items addressed include geometrical optics, Fourier optics such as diffraction and holography, polarization and optical birefringence such as liquid crystals, and nonlinear optical phenomena and devices. Prerequisite: ESE 330 or equivalent.

Credit 3 units. EN: BME T, TU

---

### **E35 ESE 439 Introduction to Quantum Communications**

This course covers the following topics: quantum optics, single-mode and two-mode quantum systems, nonlinear optics, and quantum systems theory. Specific topics include the following: Dirac notation quantum mechanics; harmonic oscillator quantization; number states, coherent states, and squeezed states; direct, homodyne, and heterodyne detection; linear propagation loss; phase insensitive and phase sensitive amplifiers; entanglement and teleportation; field quantization; quantum photodetection; phase-matched interactions; optical parametric amplifiers; generation of squeezed states, photon-twin beams, non-classical fourth-order interference, and polarization entanglement; optimum binary detection; quantum precision measurements; and quantum cryptography. Prerequisites: ESE 330, or PHY 421; Physics 217 or equivalent.

Credit 3 units. EN: TU

---

### **E35 ESE 441 Control Systems**

Introduction to the theory and practice of automatic control for dynamical systems. Dynamical systems as models for physical and observed phenomena. Mathematical representation of dynamical systems, such as state-space differential and difference equations, transfer functions, and block diagrams. Analysis of the time evolution of a system in response to control inputs, steady-state and transient responses, equilibrium points and their stability. Control via linear state feedback, and estimation using Leunberger observers. Relating the time response of a system to its frequency response, including Bode and Nyquist plots. Input-output stability and its relation to the stability of equilibrium points. Simple frequency-based controllers, such as PID and lead-lag compensators. Exercise involving the use of MATLAB/Simulink (or equivalent) to simulate and analyze systems. Prerequisites: CSE 131, and either ESE 351 or MEMS 431.

Credit 3 units. EN: BME T, TU

---

### **E35 ESE 444 Sensors and Actuators**

The course provide engineering students with basic understanding of two of the main components of any modern electrical or electromechanical system; sensors as inputs and actuators as outputs. The covered topics include transfer functions, frequency responses and feedback control. Component matching and bandwidth issues. Performance specification and analysis, Sensors: analog and digital motion sensors, optical sensors, temperature sensors, magnetic and electromagnetic sensors, acoustic sensors, chemical sensors, radiation sensors, torque, force and tactile sensors. Actuators: stepper motors, DC and AC motors, hydraulic actuators, magnet and electromagnetic actuators, acoustic actuators. Introduction to interfacing methods: bridge circuits, A/D and D/A converters, microcontrollers. This course is useful for those students interested in control engineering, robotics and systems engineering. Prerequisites: one of the following 4 conditions:(1) ESE 230, ESE 351 (corequisite); (2) ESE 230, ESE 318 and MEMS 255; (3) ESE 351 or MEMS 4310; (4) permission of instructor.

Credit 3 units. EN: BME T, TU

---

### **E35 ESE 446 Robotics: Dynamics and Control**

Homogeneous coordinates and transformation matrices. Kinematic equations and the inverse kinematic solutions for manipulators, the manipulator Jacobian and the inverse Jacobian. General model for robot arm dynamics, complete dynamic coefficients for six-link manipulator. Synthesis of manipulation control, motion trajectories, control of single- and multiple-link manipulators, linear optimal regulator. Model reference adaptive control, feedback control law for the perturbation equations along a desired motion trajectory. Design of the control system for robotics. Prerequisites: ESE 351 or MEMS 4310, knowledge of a programming language. Corequisite: ESE 441 or MEMS 4301

Credit 3 units. EN: BME T, TU

---

### **E35 ESE 448 Systems Engineering Laboratory**

This course involves the experimental study of real and simulated systems and their control. Topics include identification, input-output analysis, and design and implementation of control systems; noise effects; and the design and implementation of control laws for specific engineering problems. Knowledge of a programming language is expected. Corequisite: ESE 441 or permission of instructor.

Credit 3 units. EN: BME T, TU

---

### **E35 ESE 4480 Control Systems Design Laboratory**

This course involves the experimental study of real and simulated systems and their control. Topics covered will include modeling; identification; model validation and control of systems, including noise effects, using a two-link robotic manipulator as an experimental testbed; mathematical modeling of robotic systems; nonlinear and linearized models; input-output and state-space techniques; model validation and simulation; and stabilization using linear and nonlinear control techniques. Prerequisite: ESE 351 or MEMS 4310. Corequisite or prerequisite: ESE 441 or MEMS 4301

Credit 3 units. EN: BME T, TU

---

### **E35 ESE 4481 Autonomous Aerial Vehicle Control Laboratory**

This course covers the integration of dynamical systems and control engineering principles toward the manipulation of a quadrotor unmanned aerial vehicle (UAV), sometimes referred to as a drone. Students will analytically transform a nonlinear description of the UAV system used for dynamic simulation into a conventional, linear state space system. Students will use key control engineering concepts -- including system identification, state estimation and control synthesis -- to command their UAVs to hover, climb, and orbit. In addition to principles of estimation and identification, students will learn about the theory of guidance and navigation, with projects such as flight planning and execution, collision avoidance, and competitive or cooperative tasks (e.g., formation flight). The overall objective is to expose students to the fusion of control, estimation, and identification techniques that are fundamental to systems theory. Prerequisites: ESE 441 and knowledge of a programming language, or permission of instructor.

Credit 3 units. EN: BME T, TU

---

### **E35 ESE 449 Digital Process Control Laboratory**

Applications of digital control principles to laboratory experiments supported by a networked distributed control system. Lecture material reviews background of real-time programming, data acquisition, process dynamics, and process control. Exercises in data acquisition and feedback control design using simple and advanced control strategies. Experiments in flow, liquid level, temperature, and pressure control. Term project. Prerequisite: E35 ESE 441 or E44 EECE 401 or permission of instructor

Same as E44 EECE 424

Credit 3 units. EN: BME T, TU

---

### **E35 ESE 460 Switching Theory**

Advanced topics in switching theory as employed in the synthesis, analysis, and design of information processing systems. Combinational techniques: minimization, multiple output networks, state identification and fault detection, hazards, testability and design for test are examined. Sequential techniques: synchronous circuits, machine minimization, optimal state assignment, asynchronous circuits, and built-in self-test techniques. Prerequisite: CSE 260M  
Same as E81 CSE 460T  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 461 Design Automation for Integrated Circuit Systems**

Integrated circuit systems provide the core technology that power today's most advanced devices and electronics: smart phones, wearable devices, autonomous robots, and cars, aerospace or medical electronics. These systems often consist of silicon microchips made up by billions of transistors and contain various components such as microprocessors, DSPs, hardware accelerators, memories, and I/O interfaces, therefore design automation is critical to tackle the design complexity at the system level. The objectives of this course is to 1) introduce transistor-level analysis of basic digital logic circuits; 2) provide a general understanding of hardware description language (HDL) and design automation tools for very large scale integrated (VLSI) systems; 3) expose students to the design automation techniques used in the best-known academic and commercial systems. Topics covered include device and circuits for digital logic circuits, digital IC design flow, logic synthesis, physical design, circuit simulation and optimization, timing analysis, power delivery network analysis. Assignments include homework, mini-projects, term paper and group project. Prerequisites: ESE 232; ESE 260.  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 462 Computer Systems Design**

Introduction to modern design practices, including FPGA and PCB design methodologies. Student teams use Xilinx Vivado for HDL-based FPGA design and simulation and do schematic capture, PCB layout, fabrication, and testing of the hardware portion of a selected computation system. The software portion of the project uses Microsoft Visual Studio to develop a user interface and any additional support software required to demonstrate final projects to the faculty during finals week. Prerequisites: CSE 361S and 362M from Washington University in St. Louis or permission of the instructor. Revised: 2019-02-22  
Same as E81 CSE 462M  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 463 Digital Integrated Circuit Design and Architecture**

This is a project-oriented course on digital VLSI design. The course material focuses on bottom-up design of digital integrated circuits, starting from CMOS transistors, CMOS inverters, combinational circuits and sequential logic designs. Important design aspects of digital integrated circuits such as propagation delay, noise margins and power dissipation are covered in the class, and design challenges in sub-micron technology are addressed. The students design combinational and sequential circuits at various levels of abstraction using a state-of-the-art CAD environment provided by Cadence Design Systems. The goal of the course is to design a microprocessor in 0.5 micron technology that will be fabricated by a semiconductor foundry. Prerequisites: CSE 260M and ESE 232.  
Same as E81 CSE 463M  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 465 Digital Systems Laboratory**

Hardware/software co-design; processor interfacing; procedures for reliable digital design, both combinational and sequential; understanding manufacturers' specifications; use of test equipment. Several single-period laboratory exercises, several design projects, and application of microprocessors in digital design. One lecture and one laboratory period a week. Prerequisites: ESE 260  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 467 Embedded Computing Systems**

This course introduces the issues, challenges, and methods for designing embedded computing systems -- systems designed to serve a particular application and which incorporate the use of digital processing devices. Examples of embedded systems include cellular phones, appliances, game consoles, automobiles, and drones. Emphasis is given to aspects of design that are distinct to embedded systems. The course examines hardware, software, and system-level design. Hardware topics include microcontrollers, digital signal processors, memory hierarchy, and I/O. Software issues include languages, run-time environments, and program analysis. System-level topics include real-time operating systems, scheduling, power management, and wireless sensor networks. Students will perform a course project on a real embedded system testbed. Prerequisites: CSE 260M (and either CSE 132 or ESE 205).  
Same as E81 CSE 467S  
Credit 3 units. EN: TU

---

### **E35 ESE 469 Fundamentals of Machine Learning Hardware**

This course provides an overview of machine learning algorithms and hardware; inference engines; training engines; emerging hardware architectures; performance analysis; and testing of machine learning accelerators. Prerequisites: ESE 417 or equivalent, ESE 260 or equivalent, and working knowledge of MATLAB.  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 471 Communications Theory and Systems**

Introduction to the concepts of transmission of information via communication channels. Amplitude and angle modulation for the transmission of continuous-time signals. Analog-to-digital conversion and pulse code modulation. Transmission of digital data. Introduction to random signals and noise and their effects on communication. Optimum detection systems in the presence of noise. Elementary information theory. Overview of various communication technologies such as radio, television, telephone networks, data communication, satellites, optical fiber, and cellular radio. Prerequisites: ESE 351 and ESE 326.  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 474 Introduction to Wireless Sensor Networks**

This is an introductory course on wireless sensor networks for senior undergraduate students. The course will use a combination of lecturing and reading and discussion of research papers to help each student to understand the characteristics and operations of various wireless sensor networks. Topics covered include sensor network architecture, communication protocols on Medium Access Control and Routing, sensor network operation systems, sensor data aggregation and dissemination, localization and time synchronization, energy management, and target detection and tracking using acoustic sensor networks. Prerequisite: ESE 351 (Signals and Systems)  
Credit 3 units. EN: BME T, TU

---

---

**E35 ESE 482 Digital Signal Processing**

Introduction to analysis and synthesis of discrete-time linear time-invariant (LTI) systems. Discrete-time convolution, discrete-time Fourier transform, z-transform, rational function descriptions of discrete-time LTI systems. Sampling, analog-to-digital conversion, and digital processing of analog signals. Techniques for the design of finite impulse response (FIR) and infinite impulse response (IIR) digital filters. Hardware implementation of digital filters and finite-register effects. The Discrete Fourier Transform and the Fast Fourier Transform (FFT) algorithms. Prerequisite: ESE 351.  
Credit 3 units. EN: BME T, TU

---

**E35 ESE 488 Signals and Imaging Laboratory**

Hands-on design and analysis that motivates ESE research and courses in signals, communications and imaging. Projects in digital audio signal processing, communication systems, and computational imaging and inverse problems in optics. Prerequisite: ESE 351.  
Credit 3 units. EN: BME T, TU

---

**E35 ESE 497 Undergraduate Research**

Undergraduate research under the supervision of a faculty member. The scope and depth of the research must be approved by the faculty member prior to enrollment. Final deliverables include a poster presentation at a departmental event, submission of the poster in electronic form for archiving, and written documentation at the discretion of the instructor.  
Credit variable, maximum 3 units.

---

**E35 ESE 4971 Honors Thesis Research**

This is the premier research experience for students in ESE, offering a challenging but rewarding opportunity for committed students to work at the cutting edge of engineering research. This is a mentored experience and requires the agreement of an ESE faculty member to serve in a mentorship role. To register for this course, students must obtain the nomination of two faculty members, including their proposed mentor. Nomination must reflect strong academic preparation, interest in research and ability to manage time and work independently. During this course, students will work within their mentor's research group or laboratory to pursue one or more specific research aims. Research is expected to result in a podium presentation and a thesis document that will be archived. Students completing honors thesis will participate in a departmental recognition event.  
Credit 4 units.

---

**E35 ESE 498 Electrical Engineering Capstone Design Projects**

Capstone design project supervised by the course instructor. The project must use the theory, techniques, and concepts of the student's major: electrical engineering or systems science & engineering. The solution of a real technological or societal problem is carried through completely, starting from the stage of initial specification, proceeding with the application of engineering methods, and terminating with an actual solution. Collaboration with a client, typically either an engineer or supervisor from local industry or a professor or researcher in university laboratories, is encouraged. A proposal, an interim progress update, and a final report are required, each in the forms of a written document and oral presentation, as well as a Web page on the project. Weekly progress reports and meetings with the instructor are also required. Prerequisite: ESE senior standing and instructor's consent. Note: this course will meet at the scheduled time only during select weeks. If you cannot attend at that time, you may still register for the course.  
Credit 3 units. EN: BME T, TU

---

**E35 ESE 499 Systems Science and Engineering Capstone Design Project**

Capstone design project supervised by the course instructor. The project must use the theory, techniques, and concepts of the student's major: electrical engineering or systems science & engineering. The solution of a real technological or societal problem is carried through completely, starting from the stage of initial specification, proceeding with the application of engineering methods, and terminating with an actual solution. Collaboration with a client, typically either an engineer or supervisor from local industry or a professor or researcher in university laboratories, is encouraged. A proposal, an interim progress update, and a final report are required, each in the forms of a written document and oral presentation, as well as a Web page on the project. Weekly progress reports and meetings with the instructor are also required. Prerequisite: ESE senior standing and instructor's consent. Note: this course will meet at the scheduled time only during select weeks. If you cannot attend at that time, you may still register for the course.  
Credit 3 units. EN: BME T, TU

---

**E35 ESE 500 Independent Study**

Opportunities to acquire experience outside the classroom setting and to work closely with individual members of the faculty. A final report must be submitted to the department. Prerequisite: Students must have the ESE Research/Independent Study Registration Form approved by the department.  
Credit variable, maximum 3 units.

---

**E35 ESE 5001 Research Rotation for ESE Masters Students**

Masters students in Electrical and Systems Engineering may complete a rotation their first semester with research mentors acceptable to the Department. The rotations must be mutually agreeable to both the student and faculty member. The grade will be assigned based on a written report from the rotation. The rotation allows students to sample different research projects and laboratory working environments, to enable matching masters students and research mentors with whom they will carry out thesis research.  
Credit 3 units.

---

**E35 ESE 501 Mathematics of Modern Engineering I**

Matrix algebra: systems of linear equations, vector spaces, linear independence and orthogonality in vector spaces, eigenvectors and eigenvalues; Vector calculus: gradient, divergence, curl, line and surface integrals, theorems of Green, Stokes, and Gauss; Elements of Fourier analysis and its applications to solving some classical partial differential equations, heat, wave, and Laplace equation. Prerequisite: ESE 318 and ESE 319 or equivalent or consent of instructor. This course will not count toward the ESE doctoral program.  
Credit 3 units. EN: BME T, TU

---

**E35 ESE 502 Mathematics of Modern Engineering II**

This course covers Fourier series and Fourier integral transforms and their applications to solving some partial differential equations and heat and wave equations. It also presents complex analysis and its applications to solving real-valued problems, including analytic functions and their role, Laurent series representation, complex-valued line integrals and their evaluation (including the residual integration theory), and conformal mappings and their applications. Prerequisites: ESE 318 and ESE 319 or equivalent, or permission of instructor. This course will not count toward the ESE doctoral program.  
Credit 3 units. EN: BME T, TU

---

---

**E35 ESE 513 Large-Scale Optimization for Data Science**

Large-scale optimization is an essential component of modern data science, artificial intelligence, and machine learning. This graduate-level course rigorously introduces optimization methods that are suitable for large-scale problems arising in these areas. Students will learn several algorithms suitable for both smooth and nonsmooth optimization, including gradient methods, proximal methods, mirror descent, Nesterov's acceleration, ADMM, quasi-Newton methods, stochastic optimization, variance reduction, and distributed optimization. Throughout the course, we will discuss the efficacy of these methods in concrete data science problems, under appropriate statistical models. Students will be required to program in Python or MATLAB. Prerequisites: CSE 247, Math 309, (Math 3200 or ESE 326), ESE 415.

Credit 3 units. EN: TU

---

**E35 ESE 520 Probability and Stochastic Processes**

This course covers a review of probability theory; models for random signals and noise; calculus of random processes; noise in linear and nonlinear systems; representation of random signals by sampling and orthonormal expansions; and Poisson, Gaussian, and Markov processes as models for engineering problems. Prerequisite: ESE 326.

Credit 3 units. EN: BME T, TU

---

**E35 ESE 523 Information Theory**

Discrete source and channel model, definition of information rate and channel capacity, coding theorems for sources and channels, encoding and decoding of data for transmission over noisy channels. Corequisite: ESE 520.

Credit 3 units. EN: BME T, TU

---

**E35 ESE 524 Detection and Estimation Theory**

Study of detection and estimation of signals in noise. Linear algebra, vector spaces, independence, projections. Data independence, factorization theorem and sufficient statistics. Neyman-Pearson and Bayes detection. Least squares, maximum-likelihood and maximum a posteriori estimation of signal parameters. Conjugate priors, recursive estimation, Wiener and Kalman filters. Prerequisite: ESE 520.

Credit 3 units. EN: BME T, TU

---

**E35 ESE 527 Practicum in Data Analytics & Statistics**

In this course, students will learn through hands-on experience the application of analytics to support data-driven decisions. Through lectures and the execution of a project (to be defined at the beginning of the semester), students will learn to use descriptive, predictive, and prescriptive analytics. Lectures will focus on presenting analytic topics relevant to the execution of the project, including analytic model development, data quality and data models, review of machine learning algorithms (unsupervised, supervised, and semi-supervised approaches), model validation, insights generation and results communication, and code review and code repository. Students are expected to demonstrate the application of these concepts through the execution of a one-semester project. Students can propose their own projects or choose from a list of projects made available by the lecturer. Projects should reflect real-world problems with a clear value proposition. Progress will be evaluated and graded periodically during the semester, and the course will include a final presentation open to the academic community. Prerequisites: ESE 520 (or Math 493 and 494), ESE 417 or CSE 417T, ESE 415, and declaration of the MS in DAS.

Credit 3 units. EN: BME T, TU

---

**E35 ESE 531 Nano and Micro Photonics**

This course focuses on fundamental theory, design, and applications of photonic materials and micro/nano photonic devices. It includes review and discussion of light-matter interactions in nano and micro scales, propagation of light in waveguides, nonlinear optical effect and optical properties of nano/micro structures, the device principles of waveguides, filters, photodetectors, modulators and lasers. Prerequisite: ESE 330.

Credit 3 units. EN: BME T, TU

---

**E35 ESE 532 Introduction to Nano-Photonic Devices**

Introduction to photon transport in nano-photonic devices. This course focuses on the following topics: light and photons, statistical properties of photon sources, temporal and spatial correlations, light-matter interactions, optical nonlinearity, atoms and quantum dots, single- and two-photon devices, optical devices, and applications of nano-photonic devices in quantum and classical computing and communication. Prerequisite: ESE 330 and Physics 217, or permission of instructor.

Credit 3 units. EN: BME T, TU

---

**E35 ESE 5331 Nanophotonic Optical Media - From Metamaterials to Photonic Crystals and Beyond**

The nanometer length scale holds a unique significance for optical engineering because it is home to the wavelengths of visible and infrared light. The behavior of a light wave is particularly sensitive to structural features formed at or below the scale of its wavelength and, as a consequence, nanophotonics encompasses many new and useful phenomena not found in macroscopic systems. In this course, we will explore the physics of light-matter coupling before using it as a guide to engineer new optical material properties via nanofabrication, with applications in computing, telecommunications, biomedical sensing, solar energy harvesting, robotics and more. Key topics covered in the course include Mie resonant dielectric antennas, plasmonic antennas, negative and zero refractive index metamaterials, chiral metamaterials, metasurface lenses and holograms, nonlinear and time dependent metasurfaces, Bragg mirrors, 3D photonic crystals, photonic crystal slab waveguides and cavities, guided mode resonators, photonic crystal lasers.

Credit 3 units.

---

**E35 ESE 5332 Hardware & Devices: RF and Microwave Component and System Design**

The course aims to provide understanding of the passive and active design for modern-day RF and microwave wireless systems. The lecture-based learning in the course will be coupled with simulation in professional circuit simulators including ADS and Cadence Virtuoso, and literature review of recent advances in RFIC design. Topics in Passive Design include Transmission Line Theory, S-parameters, Smith Chart for matching network design, Inductors, Capacitors, Power Dividers, Directional Couplers, Isolators, and Circulators. Topics in Active Design include RF transistor modelling, Power Gain, Stability, Noise, Non-linearity, Low Noise Amplifiers, Mixers, small signal amplifiers, and Oscillators. Topics in System Design include Modern Receiver architectures and design considerations, course project.

Prerequisites: ESE 433 or equivalent

Credit 3 units.

---

**E35 ESE 536 Introduction to Quantum Optics**

This course covers the following topics: quantum mechanics for quantum optics, radiative transitions in atoms, lasers, photon statistics (photon counting, Sub-/Super-Poissonian photon statistics, bunching, anti-bunching, theory of photodetection, shot noise), entanglement,

squeezed light, atom-photon interactions, cold atoms, atoms in cavities. If time permits, the following topics will be selectively covered: quantum computing, quantum cryptography, and teleportation. Prerequisites: ESE 330 and Physics 217 or Physics 421  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 543 Control Systems Design by State Space Methods**

Advanced design and analysis of control systems by state-space methods: classical control review, Laplace transforms, review of linear algebra (vector space, change of basis, diagonal and Jordan forms), linear dynamic systems (modes, stability, controllability, state feedback, observability, observers, canonical forms, output feedback, separation principle and decoupling), nonlinear dynamic systems (stability, Lyapunov methods). Frequency domain analysis of multivariable control systems. State space control system design methods: state feedback, observer feedback, pole placement, linear optimal control. Design exercises with CAD (computer-aided design) packages for engineering problems. Prerequisite: ESE 351 and ESE 441, or permission of instructor.  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 544 Optimization and Optimal Control**

Constrained and unconstrained optimization theory. Continuous time as well as discrete-time optimal control theory. Time-optimal control, bang-bang controls and the structure of the reachable set for linear problems. Dynamic programming, the Pontryagin maximum principle, the Hamiltonian-Jacobi-Bellman equation and the Riccati partial differential equation. Existence of classical and viscosity solutions. Application to time optimal control, regulator problems, calculus of variations, optimal filtering and specific problems of engineering interest. Prerequisites: ESE 551, ESE 552.  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 545 Stochastic Control**

Introduction to the theory of stochastic differential equations based on Wiener processes and Poisson counters, and an introduction to random fields. The formulation and solution of problems in nonlinear estimation theory. The Kalman-Bucy filter and nonlinear analogues. Identification theory. Adaptive systems. Applications. Prerequisites: ESE 520 and ESE 551  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 546 Dynamics & Control in Neuroscience & Brain Medicine**

This course provides an introduction to systems engineering approaches to modeling, analysis and control of neuronal dynamics at multiple scales. A central motivation is the manipulation of neuronal activity for both scientific and medical applications using emerging neurotechnology and pharmacology. Emphasis is placed on dynamical systems and control theory, including bifurcation and stability analysis of single neuron models and population mean-field models. Synchronization properties of neuronal networks are covered and methods for control of neuronal activity in both oscillatory and non-oscillatory dynamical regimes are developed. Statistical models for neuronal activity are also discussed. An overview of signal processing and data analysis methods for neuronal recording modalities is provided, toward the development of closed-loop neuronal control paradigms. The final evaluation is based on a project or research survey. Prerequisites: ESE 553 or equivalent; ESE 520 or equivalent; ESE 351 or equivalent  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 547 Robust and Adaptive Control**

Graduate-level control system design methods for multi-input multi-output systems. Linear optimal based methods in robust control, nonlinear model reference adaptive control. These design methods are currently used in most industry control system design problems. These methods will be designed, analyzed, and simulated using Matlab. Linear Control Theory (review), Robustness Theory (Mu Analysis), Optimal Control and the Robust Servomechanism, H-infinity Optimal Control, Robust Output Feedback Controls, Kalman Filter Theory and Design, Linear Quadratic Gaussian with Loop Transfer Recovery, The Loop Transfer Recovery Method of Lavretsky, Mu Synthesis, Lyapunov Theory (review), LaSalle extensions, Barbalat's Lemma, Model Reference Adaptive Control, Artificial Neural Networks, On-line parameter estimation, convergence, and Persistence of Excitation. Prerequisite: ESE 543 Control Systems Design by State Space Methods or ESE 551 Linear Dynamic Systems or equivalent  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 551 Linear Dynamic Systems I**

Input-output and state-space description of linear dynamic systems. Solution of the state equations and the transition matrix. Controllability, observability, realizations, pole-assignment, observers and decoupling of linear dynamic systems. Prerequisite: ESE 351.  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 553 Nonlinear Dynamic Systems**

State space and functional analysis approaches to nonlinear systems. Questions of existence, uniqueness, and stability; Lyapunov and frequency-domain criteria;  $w$ -limits and invariance, center manifold theory and applications to stability, steady state response and singular perturbations. Poincare-Bendixson theory, the van der Pol oscillator and the Hopf Bifurcation theorem. Prerequisite: ESE 551.  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 559 Special Topics in Systems and Control**

This course provides a rigorous introduction to recent developments in systems and controls. Focus is on the discussion of interdisciplinary applications of complex systems that motivate emerging topics in dynamics and control as well as state-of-the-art methods for addressing the control and computation problems involving these large-scale systems. Topics to be covered include the control of ensemble systems, pseudospectral approximation and high-dimensional optimization, the mathematics of networks, dynamic learning and topological data analysis, and applications to biology, neuroscience, brain medicine, quantum physics, and complex networks. Both model-based and data-driven approaches are introduced. Students learn about state-of-the-art research in the field, and they ultimately apply their knowledge to conduct a final project. Prerequisites: Math 429 or equivalent, ESE 415, ESE 551, ESE 553, and ESE 520.  
Credit 3 units. EN: TU

---

### **E35 ESE 5591 Special Topics in Engineering and Neuroscience**

Credit 2 units. EN: TU

---

### **E35 ESE 5592 Data-Driven Control Methods and Reinforcement Learning**

Modeling and control approaches of the past decades are usually concerned with analytically described control systems with relatively mild complexity, which allows for a highly successful treatment by rigorous systems theoretic methods. Recent years, however, have witnessed a significant shift towards the consideration of far more complicated control systems in which purely analytical approaches are infeasible. This is a research-focused course that will introduce and explore systematic approaches towards augmenting the core

foundations of systems and control theoretic frameworks with data-integrating and learning-based capabilities to efficiently harness the vast amounts of valuable operational data and computing resources in order to solve challenging control tasks that escape the traditional setting. The starting point for these new developments are specific macroscopic considerations of dynamical systems associated with transfer operators and Koopman operators. After reviewing these operator-theoretic frameworks, we will explore a family of sample-based approaches that emerge out of the macroscopic viewpoint. These sample-based approaches not only mitigate drawbacks of the original operator-theoretic approaches but also facilitate more direct and efficient data-integrated paths for elucidating important features of dynamical systems with applications to control and estimation. Moreover, connections with established methods from Reinforcement Learning will be integrated into the course material. Prereqs: ESE 415 Optimization, ESE 551 Linear Dynamic Systems, ESE 553 Nonlinear Dynamic Systems  
Credit 3 units.

---

### **E35 ESE 560 Computer Systems Architecture I**

An exploration of the central issues in computer architecture: instruction set design, addressing and register set design, control unit design, memory hierarchies (cache and main memories, virtual memory), pipelining, instruction scheduling, and parallel systems. The course emphasizes understanding the performance implications of design choices, using architecture modeling and evaluation using simulation techniques. Prerequisites: CSE 361S and CSE 260M.  
Same as E81 CSE 560M  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 562 Analog Integrated Circuits**

This course focuses on fundamental and advanced topics in analog and mixed-signal VLSI techniques. The first part of the course covers graduate level materials in the area of analog circuit synthesis and analysis. The second part of the course covers applications of the fundamental techniques for designing analog signal processors and data converters. Several practical aspects of mixed-signal design, simulation and testing are covered in this course. This is a project-oriented course and it is expected that the students apply the concepts learned in the course to design, simulate and explore different circuit topologies. Prerequisite: E35 ESE 232  
Credit 3 units. EN: TU

---

### **E35 ESE 566A Modern System-on-Chip Design**

The System-on-Chip (SoC) technology is at the core of most electronic systems: smartphones, wearable devices, autonomous robots and cars, and aerospace and medical electronics. In these SoCs, billions of transistors can be integrated on a single silicon chip containing various components, such as microprocessors, DSPs, hardware accelerators, memories, and I/O interfaces. Topics include SoC architectures, design tools, and methods as well as system-level trade-offs between performance, power consumption, energy efficiency, reliability, and programmability. Students will gain an insight into the early stages of the SoC design process by performing the tasks of developing functional specifications, applying partitions and map functions to hardware and/or software, and then evaluating and validating system performance. Assignments include hands-on design projects. This course is open to both graduate and senior undergraduate students. Prerequisite: ESE 461.  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 567 Computer Systems Analysis**

A comprehensive course on performance analysis techniques. The topics include common mistakes, selection of techniques and metrics, summarizing measured data, comparing systems using random data, simple linear regression models, other regression models, experimental

designs, 2\*\*k experimental designs, factorial designs with replication, fractional factorial designs, one factor experiments, two factor full factorial design w/o replications, two factor full factorial designs with replications, general full factorial designs, introduction to queueing theory, analysis of single queues, queueing networks, operational laws, mean-value analysis, time series analysis, heavy tailed distributions, self-similar processes, long-range dependence, random number generation, analysis of simulation results, and art of data presentation. Prerequisites: CSE 260M  
Same as E81 CSE 567M  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 570 Coding Theory**

Introduction to the algebra of finite fields. Linear block-codes, cyclic codes, BCH and related codes for error detection and correction. Encoder and decoder circuits and algorithms. Spectral descriptions of codes and decoding algorithms. Code performances.  
Credit 3 units. EN: TU

---

### **E35 ESE 572 Signaling and Control in Communication Networks**

The operation of modern communications networks is highly dependent on sophisticated control mechanisms that direct the flow of information through the network and oversee the allocation of resources to meet the communication demands of end users. This course covers the structure and operation of modern signaling systems and addresses the major design trade-offs which center on the competing demands of performance and service flexibility. Specific topics covered include protocols and algorithms for connection establishment and transformation, routing algorithms, overload and failure recovery and networking dimensioning. Case studies provide concrete examples and reveal the key design issues. Prerequisites: Graduate standing and permission of instructor.  
Credit 3 units. EN: BME T, TU

---

### **E35 ESE 582 Fundamentals and Applications of Modern Optical Imaging**

Analysis, design, and application of modern optical imaging systems with emphasis on biological imaging. First part of course will focus on the physical principles underlying the operation of imaging systems and their mathematical models. Topics include ray optics (speed of light, refractive index, laws of reflection and refraction, plane surfaces, mirrors, lenses, aberrations), wave optics (amplitude and intensity, frequency and wavelength, superposition and interference, interferometry), Fourier optics (space-invariant linear systems, Huygens-Fresnel principle, angular spectrum, Fresnel diffraction, Fraunhofer diffraction, frequency analysis of imaging systems), and light-matter interaction (absorption, scattering, dispersion, fluorescence). Second part of course will compare modern quantitative imaging technologies including, but not limited to, digital holography, computational imaging, and super-resolution microscopy. Students will evaluate and critique recent optical imaging literature. Prerequisites: ESE 318 and ESE 319 or their equivalents; ESE 330 or PHY 421 or equivalent.  
Credit 3 units. EN: TU

---

### **E35 ESE 5830 Nonlinear Optical Microscopy**

This course will cover the theoretical and practical knowledge needed to design, construct, and use a nonlinear optical microscope. The course will focus on the relevant optical physics and instrumentation for different types of nonlinear optical microscopy, and additionally provide some information on applications and image processing. Topics include: ultrafast lasers, detectors, nonlinear susceptibility, nonlinear wave equation, quantum theory of nonlinear optics,

harmonic generation, multiphoton fluorescence, fluorescence lifetime, optical metabolic imaging, coherent Raman scattering, and multimodal nonlinear optical microscopy. Prerequisites: Electromagnetism, at the level of ESE 330, and familiarity with Python or Matlab  
Credit 3 units.

---

**E35 ESE 585A Sparse Modeling for Imaging and Vision**

Sparse modeling is at the heart of modern imaging, vision, and machine learning. It is a fascinating new area of research that seeks to develop highly effective data models. The core idea in sparse modeling theory is a novel redundant transform, where the number of transform coefficients is larger compared to the original data dimension. Together with redundancy comes an opportunity for seeking the sparsest possible representation or the one with the fewest non-zeros. This core idea leads to a series of beautiful theoretical and practical results with many applications, such as regression, prediction, restoration, extrapolation, compression, detection, and recognition. In this course, we will explore sparse modeling by covering theoretical as well as algorithmic aspects with applications in computational imaging and computer vision. Prerequisites: ESE 318, Math 233, Math 309, and Math 429 (or equivalents), as well as coding experience with MATLAB or Python.

Credit 3 units. EN: BME T, TU

---

**E35 ESE 589 Biological Imaging Technology**

This class will develop a fundamental understanding of the physics and mathematical methods that underlie biological imaging and critically examine case studies of seminal biological imaging technology literature. The physics section will examine how electromagnetic and acoustic waves interact with tissues and cells, how waves can be used to image the biological structure and function, image formation methods and diffraction limited imaging. The math section will examine image decomposition using basis functions (e.g. Fourier transforms), synthesis of measurement data, image analysis for feature extraction, reduction of multi-dimensional imaging datasets, multivariate regression, and statistical image analysis. Original literature on electron, confocal and two photon microscopy, ultrasound, computed tomography, functional and structural magnetic resonance imaging and other emerging imaging technology will be critiqued.

Credit 3 units. EN: BME T, TU

---

**E35 ESE 590 Electrical & Systems Engineering Graduate Seminar**

This satisfactory/unsatisfactory course is required for the master's, DSc, and PhD degrees in Electrical & Systems Engineering. A satisfactory grade is required for each semester of enrollment, and this is achieved by student attendance at regularly scheduled seminars. Master's students must attend at least three seminars per semester, except for first-year master's students, who must attend four. DSc and PhD students must attend at least five seminars per semester, except for first-year PhD students who must attend six. Part-time students are exempt except during their year of residency. Any student under continuing status is also exempt.

---

**E35 ESE 591 Biomedical Optics I: Principles**

This course covers the principles of optical photon transport in biological tissue. This course covers the principles and applications of optical photon transport in biological tissue. Topics include a brief introduction to biomedical optics, single-scatterer theories, Monte Carlo modeling of photon transport, convolution for broad-beam responses, radiative transfer equation, diffusion theory and applications, sensing of optical properties and spectroscopy, and photoacoustic imaging principles and applications. Prerequisite: Familiarity with Differential equations and partial differential equations

Same as E62 BME 591  
Credit 3 units. EN: TU

---

**E35 ESE 5931 Mathematics of Imaging Science**

This course will expose students to a unified treatment of the mathematical properties of images and imaging. This will include an introduction to linear vector space theory, operator theory on Hilbert spaces, and concepts from applied functional analysis. Further, concepts from generalized functions, Fourier analysis, and radon transform will be discussed. These tools will be applied to conduct deterministic analyses of imaging systems that are described as continuous-to-continuous, continuous-to-discrete, and discrete-to-discrete mappings from object properties to image data. In addition, imaging systems will be analyzed in a statistical framework where stochastic models for objects and images will be introduced. Familiarity with Engineering-level mathematics, Calculus, Linear algebra, introduction to Fourier analysis is expected. Prerequisite: Senior standing or permission of instructor.

Same as E62 BME 570

Credit 3 units.

---

**E35 ESE 5932 Computational Methods for Imaging Science**

Inverse problems are ubiquitous in science and engineering, and they form the basis for modern imaging methods. This course will introduce students to the mathematical formulation of inverse problems and modern computational methods employed to solve them. Specific topics covered will include regularization theory, compressive sampling, variational calculus, and a survey of relevant numerical optimization methods. The application of these methods to tomographic imaging problems will be addressed in detail. Prerequisite: ESE 5931 or permission of instructor.

Credit 3 units. EN: BME T, TU

---

**E35 ESE 5933 Theoretical Imaging Science**

Imaging science encompasses the design and optimization of imaging systems to quantitatively measure information of interest. Imaging systems are important in many scientific and medical applications and may be designed for one specific application or for a range of applications. Performance is quantified for any given task through an understanding of the statistical model for the imaging data, the data processing algorithm used, and a measure of accuracy or error. Optimal processing is based on statistical decision theory and estimation theory; performance bounds include the receiver operating characteristic and Cramer-Rao bounds. Bayesian methods often lead to ideal observers. Extensions of methods from finite-dimensional spaces to function space are fundamental for many imaging applications. A variety of methods to assess image quality and resulting imaging system optimization are covered. Prerequisite: permission of instructor.

Credit 3 units. EN: TU

---

**E35 ESE 5934 Practicum in Imaging Science**

Students develop research results in computational imaging and write a conference paper on the results. This course involves the process of research project design and implementation in imaging science, participation in research teams, the development of milestones for a project, and the process of meeting expectations. The role of machine learning, computational methods, theoretical methods, datasets, and experiments in imaging science research are covered. Prerequisite: Permission of instructor.

Credit 3 units. EN: TU

---

**E35 ESE 596 Seminar in Imaging Science and Engineering**

This seminar course consists of a series of tutorial lectures on Imaging Science and Engineering with emphasis on applications of imaging technology. Students are exposed to a variety of imaging applications that vary depending on the semester, but may include multispectral remote sensing, astronomical imaging, microscopic imaging, ultrasound imaging, and tomographic imaging. Guest lecturers come from several parts of the university. This course is required of all

students in the Imaging Science and Engineering program; the only requirement is attendance. This course is graded Pass/Fail. Prerequisite: Admission to Imaging Science and Engineering Program. Same as E81 CSE 596 (when offered) and E62 BME 506. Credit 1 unit.

**E35 ESE 599 Masters Research**

Prerequisite: Students must have the ESE Research Registration Form approved by the department. The form must contain a brief description of the work that is expected to be completed during the course. Credit variable, maximum 3 units.

**E35 ESE 600 Doctoral Research**

Credit variable, maximum 9 units.

**E35 ESE 601 Research Rotation for ESE Doctoral Students**

Doctoral students in Electrical and Systems Engineering are required to complete two rotations during their first year and may complete three rotations, with research mentors acceptable to the department. The rotations must be mutually agreeable to both the student and the faculty member. The grade will be assigned based on a written report from one of the rotations. The rotations allow students to sample different research projects and laboratory working environments and to enable the matching of doctoral students with the research mentors with whom they will carry out PhD dissertation research. Credit 3 units.

## Bachelor of Science in Electrical Engineering

The Bachelor of Science in Electrical Engineering (BSEE) degree program is accredited by the Engineering Accreditation Commission of ABET under the General Criteria and Electrical Engineering Program Criterion.

### Program Educational Objectives

Within a few years of graduation, BSEE degree program recipients are expected to do the following:

- Our graduates will be engaged as practicing professionals in a broad range of careers in industry or government or be pursuing advanced degrees in academic graduate education in engineering or a related field.
- Our graduates will function effectively as members of teams demonstrating sensitivity to professional and societal contexts, integrity and versatility.

### Student Outcomes

Graduates of the BSEE program are expected to know or have the following by the time of graduation:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. An ability to communicate effectively with a range of audiences
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

## BSEE Degree Requirements

To obtain the BSEE degree, students must complete a minimum of 120 units consistent with the residency and other applicable requirements of Washington University and the McKelvey School of Engineering (p. 1304) and subject to the program requirements below. All courses below must be taken for a letter grade unless otherwise specified.

Code	Title	Units
<b>Electrical Engineering Core Courses <sup>1</sup></b>		<b>38</b>

- <sup>1</sup> The BSEE degree requires a minimum of 45 units of engineering topics (typically satisfied by fulfilling EE core and elective requirements). A course carrying engineering topics units will be marked in the Course Listings with the EN:TU attribute.
- <sup>2</sup> Requirements for the EE electives:
- 15 units in electrical engineering subjects from the following list: ESE 2971, ESE 330–399, ESE 400, ESE 405, ESE 415, ESE 425, ESE 429–4971, and ESE 503–589. (Electives cannot be used to satisfy other requirements in the degree program.)
  - Students must take at least two courses from ESE 429, ESE 4301, ESE 431, ESE 433, ESE 436, ESE 438, ESE 441, ESE 461, ESE 471, and ESE 482.
  - No more than 6 units of the combined units of ESE 2971 Introduction to Research in ESE, ESE 400 Independent Study, ESE 497 Undergraduate Research, and ESE 4971 Honors Thesis Research may be applied.
  - No more than 3 credits of 500-level courses may be applied.
- <sup>3</sup> Two upper-level laboratory courses (6 units) from the following list: ESE 3301, ESE 331, ESE 4480, ESE 4481, ESE 465, and ESE 488. The selection must contain at least one course from ESE 3301, ESE 331, ESE 465, and ESE 488.
- <sup>4</sup> Students are also encouraged to take CSE 247 Data Structures and Algorithms (3 units).
- <sup>5</sup> Engineering and science breadth requirements: 9 units in engineering or science outside of electrical engineering. These units must be taken in the following areas: biomedical engineering, chemical engineering, computer science and engineering, mechanical engineering, systems science and engineering, economics, mathematics, physics, biology, chemistry, earth and planetary sciences, and pre-medicine. These units must be at the 200 level or higher and cannot be used to satisfy the Common Studies requirements or the computer science requirement. Courses in other fields can be arranged with special departmental approval. Engineering and science breadth courses may be taken on a pass/fail basis. See the McKelvey common studies page (p. 1304) for reference.

<sup>6</sup> Chem 111A is preferred, but Chem 105 will be allowed.

<sup>7</sup> Humanities and social sciences courses may be taken on a pass/fail basis.

For more information about the BS in Electrical Engineering curriculum, please visit the ESE website.

## Bachelor of Science in Systems Science & Engineering

Systems Engineering broadly covers how to integrate different components in engineering systems. Applications range from operations research and mathematical solutions to business problems to control engineering, the basic theory and practice used to control diverse systems such as jet airplanes, electric power grids, or the nation's economy. The Systems Science and Engineering program is ideal for students interested in math, physics and computing; business, finance or financial engineering; or applied mathematics.

The Bachelor of Science in Systems Science & Engineering (BSSSE) program lays the engineering and mathematical foundations for modeling, analyzing and designing complex systems and highlights their applications in contemporary engineering and scientific application domains. Graduates will be competent in employing a versatile, interdisciplinary systems perspective to translate practical problem formulations into mathematical models, recognizing structural commonalities across diverse systems, and solving analysis and design objectives using suitable methods at the core of systems science and engineering. The basic methodological knowledge at the core of systems science includes mathematical competence and knowledge of systems analysis, control, design methods, numerical methods, differential equations, dynamic systems theory, automatic control theory, system stability, estimation, optimization, modeling, identification, simulation and basic computer programming. Graduates will have an engineering outlook and be able to interact fully with other engineers. They will also possess sufficient proficiency in computer use to design algorithms for simulation, estimation, control and optimization.

The Bachelor of Science in Systems Science and Engineering (BSSSE) degree program is accredited by the Engineering Accreditation Commission of ABET under the General Criteria.

### Program Educational Objectives

Within a few years of graduation, BSSSE degree program recipients are expected to do the following:

- Our graduates will be engaged as practicing professionals in a broad range of careers in industry or government or be pursuing advanced degrees in academic graduate education in engineering or a related field.
- Our graduates will function effectively as members of teams demonstrating sensitivity to professional and societal contexts, integrity and versatility.

## Student Outcomes

Graduates of the BSSSE program are expected to know or have the following by the time of graduation:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. An ability to communicate effectively with a range of audiences
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

<sup>1</sup> The entire course sequence for the BSSSE, containing engineering topics of at least 45 units, must be completed. The number of engineering topics units assigned to undergraduate courses in the McKelvey School of Engineering vary from none (0) to the number of credits given to the course. For the precise number for each course, please refer to the table of Topics Units — Engineering Courses provided by Engineering Undergraduate Student Services. Courses taken on a pass/fail basis may be used for engineering topics units.

<sup>2</sup> Requirements for the BSSSE electives:

- a. 12 units in elective courses in systems science and engineering are required: ESE 2971, ESE 359, E35 ESE 400–428, ESE 437, ESE 400–459, ESE 470–4971, ESE 502–529; ESE 540–559, and SWCD 5660 System Dynamics Modeling for Strategic Design.
- b. Up to 3 units of the following business courses may be part of the 12 units of systems science and engineering electives: SCOT 356 Operations and Manufacturing Management, SCOT 458 Operations Analytics, SCOT 576 Foundations of Supply Chain Management, and SCOT 577 Information Technology and Supply Chain Management.

<sup>3</sup> Two upper-level laboratory courses (6 units) from the following list: ESE 4480, ESE 4481, ESE 465, ESE 488, and ESE 449. The selection must contain at least one course from ESE 4480 and ESE 4481.

<sup>4</sup> a. 12 units in outside concentration outside of systems science and engineering are required. These units must all be taken in one of the following engineering areas: Biomedical Engineering, Chemical Engineering, Computer Science & Engineering, Electrical Engineering (ESE 102, ESE 230–239, ESE 260–290, ESE 330–339, ESE 360–390, ESE 429–439, ESE 460–469, 490–496, ESE 498, ESE 530–539, ESE 560–589), or Mechanical Engineering & Materials Science.

- b. Sequences for concentrations in economics, mathematics, physics, pre-medicine and other fields can be arranged with special departmental approval to meet a student's specific needs. When a non-engineering discipline is chosen as the outside concentration, the student needs to pay special attention to the engineering topics unit requirement and make sure that enough engineering content is obtained from the other courses.
- c. Of the 12 units, 9 units must be at the 200 level or higher.
- d. Courses used for the outside concentration requirements cannot also be used for other BSSSE requirements.

- <sup>5</sup> Students are also encouraged to take CSE 247 Data Structures and Algorithms (3 units).
- <sup>6</sup> The recommended chemistry sequence is Chem 111A–Chem 151, but Chem 105–Chem 151 will be allowed.
- <sup>7</sup> Humanities and social sciences courses may be taken on a pass/fail basis.

For more information about the BS in Systems Science & Engineering curriculum, please visit the ESE website.

## Bachelor of Science in Computer Engineering

Computer engineering encompasses studies of hardware, software, and systems issues that arise in the design, development, and application of computer systems. Computer engineers are particularly well suited to address the particular challenges that exist as computing systems interact with the real, physical world. This includes sensing, actuation, timing, security, and computing systems with widely varying form factors, ranging from servers to mobile devices to the "internet of things." The degree requires 120 units including core courses, technical electives, a capstone course, and common studies.

The Bachelor of Science in Computer Engineering degree is jointly administered by the Department of Computer Science and Engineering and the Department of Electrical and Systems Engineering.

Students working toward a Bachelor of Science in Computer Engineering degree must meet all requirements for an engineering degree (p. 1304) from the McKelvey School of Engineering. Required courses and technical electives cannot be taken on a pass/fail basis.

### • Core Requirements\*:

The following courses are required of all computer engineering students:

Code	Title	Units
CSE 131	Introduction to Computer Science	3
CSE 132	Introduction to Computer Engineering	3
CSE 247	Data Structures and Algorithms	3
CSE 260M	Introduction to Digital Logic and Computer Design	3
or ESE 260	Introduction to Digital Logic and Computer Design	
CSE 361S	Introduction to Systems Software	3

CSE 362M	Computer Architecture	3
ESE 105	Introduction to Electrical and Systems Engineering	4
ESE 230	Introduction to Electrical and Electronic Circuits	4
ESE 232	Introduction to Electronic Circuits	3
ESE 326	Probability and Statistics for Engineering	3
<b>Total Units</b>		<b>32</b>

\* Each of these core courses must be passed with a grade of C- or better.

### • Technical Elective Requirements:

21 units of technical electives that fulfill the following requirements:

- 1. At least two courses from the following list (the "hardware" list):

Code	Title	Units
ESE 330	Engineering Electromagnetics Principles	3
ESE 331	Electronics Laboratory	3
ESE 3301	Electromagnetics Laboratory: Spectrum from Radio to Photonics	3
ESE 351	Signals and Systems	3
ESE 433	Radio Frequency and Microwave Technology for Wireless Systems	3
ESE 436	Semiconductor Devices	3
ESE 4301	Quantum Mechanics for Engineers	3
ESE 431	Introduction to Quantum Electronics	3
ESE 441	Control Systems	3
ESE 444	Sensors and Actuators	3
ESE 446	Robotics: Dynamics and Control	3
ESE 4480	Control Systems Design Laboratory	3
ESE 4481	Autonomous Aerial Vehicle Control Laboratory	3
ESE 463	Digital Integrated Circuit Design and Architecture	3
ESE 465	Digital Systems Laboratory	3
ESE 471	Communications Theory and Systems	3
ESE 482	Digital Signal Processing	3

- 2. At least two courses from the following list (the "software" list):

Code	Title	Units
CSE 231S	Introduction to Parallel and Concurrent Programming	3
CSE 332S	Object-Oriented Software Development Laboratory	3
CSE 365S	Elements of Computing Systems	3
CSE 422S	Operating Systems Organization	3
CSE 425S	Programming Systems and Languages	3
CSE 431S	Translation of Computer Languages	3
CSE 433S	Introduction to Computer Security	3

CSE 434S	Reverse Engineering and Malware Analysis	3
CSE 467S	Embedded Computing Systems	3
CSE 468T	Introduction to Quantum Computing	3
CSE 473S	Introduction to Computer Networks	3

3. The remaining three courses can be any CSE course with an S, M, T, or A suffix; or CSE 347; or any ESE course at the 300 level or higher; or ESE 205, ESE 2180, or ESE 2190. Additional courses (beyond the two required) in the above lists count toward this requirement.

The above can include courses at the graduate level; however, they must still meet one of the two criteria above. Up to 6 units of independent study (CSE 400E, CSE 497-CSE 499, ESE 400, ESE 497) can count toward technical electives. There is no limit as to how many independent study courses can count toward the general 120 units.

- **Capstone Requirement:**

The capstone requirement can be met by taking either CSE 462M or ESE 498.

- **Common Studies Requirements:**

Code	Title	Units
Math 131	Calculus I	3
Math 132	Calculus II	3
Math 217	Differential Equations	3
Math 233	Calculus III	3
Physics 191	Physics I	3
Physics 191F	Physics I - First-Years Only	
Physics 191U	Physics I - Sophomores, Juniors, and Seniors Only	
Physics 191L	Physics I Laboratory	1
Physics 192	Physics II	3
Physics 192L	Physics II Laboratory	1
Natural sciences elective		3
College Writing		3
Engr 310	Technical Writing	3
Humanities and social sciences electives		18
<b>Total Units</b>		<b>47</b>

Upon completing a course in the calculus sequence (Math 131-Math 132-Math 233) with a grade of C+ or better, the student may apply to receive credit for the preceding courses in the calculus sequence by following the mathematics department's back credit policy.

The natural sciences requirement is for 3 units designated NSM (Natural Sciences and Mathematics) from any of the following departments: Anthropology, Biology, Chemistry, Earth and Planetary Sciences, Environmental Studies or Physics. These courses must be completed with a grade of C- or better.

The College Writing Program, humanities and social sciences requirements are those required of all students in the McKelvey School of Engineering.

## Bachelor of Science in Applied Science (Electrical Engineering)

Students who do not plan to pursue a career in electrical engineering but who seek a strong foundation in the principles of electrical engineering may choose the Bachelor of Science in Applied Science (Electrical Engineering). The program ensures that the student learns the foundations of electrical engineering through breadth requirements. In addition, there is flexibility in selecting upper-level courses to meet the student's individual objectives. This program also may be attractive for students interested in obtaining multiple degrees, because the requirements are less strict than for the BSEE degree. Historically, students have matched a degree in electrical engineering with degrees in other engineering disciplines, in the natural sciences, in music, in history and in business; other combinations are possible. This also may be an attractive option for students planning graduate studies in a variety of disciplines, including medicine, law or business. This applied science degree is not accredited by the Engineering Accreditation Commission of ABET.

The degree requirements include the residency and general requirements of the university and the McKelvey School of Engineering as well as the following:

Code	Title	Units
<b>Required courses in Electrical Engineering</b>		<b>29</b>
ESE 105	Introduction to Electrical and Systems Engineering	4
ESE 2180	Linear Algebra and Component Analysis	3
ESE 2190	Vector Calculus and Dynamics of Physical Systems	3
ESE 230	Introduction to Electrical and Electronic Circuits	4
ESE 232	Introduction to Electronic Circuits	3
ESE 260	Introduction to Digital Logic and Computer Design	3
ESE 326	Probability and Statistics for Engineering	3
ESE 330	Engineering Electromagnetics Principles	3
ESE 351	Signals and Systems	3
Upper-level elective courses in electrical engineering (ESE 205, ESE 2971, ESE 330-399, ESE 400, ESE 405, ESE 407, ESE 415, ESE 425, ESE 429-499, ESE 503-589)		18
Free electives		28
Mathematics, science and engineering electives		24
Computer Science requirement (CSE 131)		3
Humanities and social sciences electives		18
<b>Total</b>		<b>120</b>

## Bachelor of Science in Applied Science (Systems Science & Engineering)

This program provides the student with the opportunity to prepare their academic career with maximum flexibility but also with enough organization to ensure substantive, consistent training in systems science methodology and outlook. This program is recommended if students wish to pursue a program that does not follow conventional lines. It is an especially advantageous degree for a double major in association with mathematics, physics, economics or another engineering discipline. The program can be planned to provide a desirable background for graduate work in biological, medical or management fields. This applied science degree is not accredited by the Engineering Accreditation Commission of ABET.

The degree requirements include the residency and general requirements of the university and the McKelvey School of Engineering as well as the following:

Code	Title	Units
<b>Required courses in Systems Science &amp; Engineering</b>		<b>26</b>
ESE 105	Introduction to Electrical and Systems Engineering	4
ESE 2180	Linear Algebra and Component Analysis	3
ESE 2190	Vector Calculus and Dynamics of Physical Systems	3
ESE 230	Introduction to Electrical and Electronic Circuits	4
ESE 326	Probability and Statistics for Engineering	3
ESE 351	Signals and Systems	3
ESE 4031 or ESE 415	Optimization for Engineered Planning, Decisions and Operations Optimization	3
ESE 441	Control Systems	3
Systems science and engineering electives (ESE 205, ESE 2971, ESE 359, ESE 400–428, ESE 437, ESE 440–459, ESE 470–499, ESE 502–529, ESE 540–559, and SWCD 5660)		18
Free electives		40
Mathematics, science and engineering electives		24
Computer Science requirement (CSE 131)		3
Humanities and social sciences electives		18
<b>Total</b>		<b>120</b>

The program must include at least 48 units at the 300 level or higher.

## The Second Major in Electrical Engineering

A second major in electrical engineering is ideal for students majoring in many areas, such as mathematics, physics, chemistry and biology. Students in the McKelvey School of Engineering as well as the other undergraduate divisions at Washington University now have the opportunity to pursue a second major in electrical engineering. Students are not allowed to add this second major to either the BS in Electrical Engineering or the BS in Applied Science (Electrical Engineering).

The requirements for a second major in electrical engineering are as follows:

Code	Title	Units
ESE 105	Introduction to Electrical and Systems Engineering	4
ESE 2180	Linear Algebra and Component Analysis	3
ESE 2190	Vector Calculus and Dynamics of Physical Systems	3
ESE 230	Introduction to Electrical and Electronic Circuits	4
ESE 232	Introduction to Electronic Circuits	3
ESE 260	Introduction to Digital Logic and Computer Design	3
ESE 326	Probability and Statistics for Engineering	3
ESE 330	Engineering Electromagnetics Principles	3
ESE 351	Signals and Systems	3
CSE 131	Introduction to Computer Science	3
<b>Total Units</b>		<b>32</b>

In addition, students must select 18 units of ESE electives from the following list: ESE 205, ESE 2971, ESE 330 through 399, ESE 400, ESE 405, ESE 407, ESE 425, ESE 429 through 499, ESE 503 through 589.

Students may petition to substitute electrical-science-oriented courses from other disciplines in Arts & Sciences (e.g., certain courses in physics or applied mathematics) for up to two of the above required courses. Within this second major in electrical engineering, areas of concentration are possible in devices and circuits, applied physics, signals and imaging, and control systems.

For more information, please contact the director of the program, Chuan Wang.

## The Second Major in Systems Science & Engineering

A second major in systems science and engineering is ideal for study in many areas, including physics, chemistry, economics, finance, supply chain management and computational biology. Students in the McKelvey School of Engineering as well as the other undergraduate

divisions at Washington University have the opportunity to pursue a second major in systems science and engineering in the Preston M. Green Department of Electrical & Systems Engineering in the McKelvey School of Engineering. Students are not allowed to add this second major to either the BS in SSE or the BS in Applied Science (SSE).

The requirements for a second major in systems science and engineering are as follows:

Code	Title	Units
ESE 105	Introduction to Electrical and Systems Engineering	4
ESE 2180	Linear Algebra and Component Analysis	3
ESE 2190	Vector Calculus and Dynamics of Physical Systems	3
ESE 230	Introduction to Electrical and Electronic Circuits	4
ESE 326	Probability and Statistics for Engineering	3
ESE 351	Signals and Systems	3
ESE 4031	Optimization for Engineered Planning, Decisions and Operations	3
or ESE 415	Optimization	
ESE 441	Control Systems	3
CSE 131	Introduction to Computer Science	3
<b>Total Units</b>		<b>29</b>

In addition, 18 units of ESE courses in the systems area are to be chosen from the following list: ESE 205, ESE 2971, ESE 400 through 428, ESE 437, ESE 440 through 459, ESE 470 through 499, ESE 502 through 529, ESE 540 through 559, SWCD 5660

Students may petition to substitute systems-oriented courses from other disciplines in Arts & Sciences for two of these six courses (for example, courses in computational physics, econometrics or computational mathematics).

Within this second major in systems science and engineering, areas of concentration are possible in robotics, control systems and operations research.

For more information, contact the director of the program, Shen Zeng.

## The Second Major in Financial Engineering

A second major in financial engineering is ideal for students who are interested in careers or graduate study in financial engineering, quantitative finance, or related fields. This program covers classes in engineering, computer science, and business. Students interested in the second major must have a 3.3 or higher grade point average to pursue this second major, which includes the cumulative GPA, the Business GPA, and the Engineering GPA. Students must complete 30 total units (15 Engineering units and 15 Olin Business units).

Code	Title	Units
<b>Background Course Work</b>		<b>15</b>
CSE 131	Introduction to Computer Science	3
ESE 326	Probability and Statistics for Engineering	3
or DAT 121	Managerial Statistics II	
or Econ 413	Introduction to Econometrics	
or Econ 413W	Introduction to Econometrics with Writing	
or SDS 439	Linear Statistical Models	
or SDS 493	Probability	
Math 217	Differential Equations	3
or ESE 217	Differential Equations and Dynamical Systems Modeling in Engineering	
or Math 312	Differential Equations and Dynamical Systems	
Math 233	Calculus III	3
Math 309	Matrix Algebra	3
or ESE 2180	Linear Algebra and Component Analysis	
or Math 429	Linear Algebra	

Students must complete 15 Engineering units. At least 6 of those units must be from the Engineering Core Courses:

Code	Title	Units
<b>Engineering Core Courses</b>		
ESE 415	Optimization	3
ESE 417	Introduction to Machine Learning and Pattern Classification	3
or CSE 417T	Introduction to Machine Learning	
ESE 4261	Statistical Methods for Data Analysis with Applications to Financial Engineering	3
ESE 427	Financial Mathematics	3
<b>Engineering Elective Courses</b>		
CSE 247	Data Structures and Algorithms	3
ESE 4031	Optimization for Engineered Planning, Decisions and Operations	3
ESE 513	Large-Scale Optimization for Data Science	3
ESE 520	Probability and Stochastic Processes	3

Students must complete 15 Olin Business units, including all 9 units of Olin Professional Core Courses and 6 elective units.

Code	Title	Units
<b>Olin Professional Core Courses</b>		<b>9</b>
ACCT 2610	Principles of Financial Accounting	3
FIN 340	Capital Markets and Financial Management	3
FIN 441	Investments	3
<b>Olin Electives</b>		<b>6</b>
FIN 450F	Financial Technology: Methods and Practice	3
FIN 451	Options, Futures and Derivative Securities	3

FIN 452	Advanced Derivative Securities	3
FIN 500Q	Quantitative Risk Management	3
FIN 500R	Topics in Quantitative Finance	1.5
FIN 532B	Data Analysis for Investments	1.5
FIN 539	Mathematical Finance	1.5
FIN 552	Fixed Income Derivatives	1.5

\* At least one of FIN 451 or ESE 427 must be taken to complete the second major. ESE 427, if taken after FIN 340, can be used to satisfy the FIN 451 prerequisite of Olin elective courses.

For more information, contact the director of the program, Vladimir Kurenok.

## The Minor in Electrical Engineering

This minor consists of fundamental courses in core electrical engineering areas of devices and circuits, applied physics, and signals and systems. Elective choices allow further depth in advanced devices, optics, signal processing, and control systems or greater breadth within electrical engineering.

**Units required:** 16

Code	Title	Units
ESE 230	Introduction to Electrical and Electronic Circuits	4
ESE 232 or ESE 330	Introduction to Electronic Circuits Engineering Electromagnetics Principles	3
ESE 351	Signals and Systems	3
<b>Total Units</b>		<b>10</b>

In addition, students must take 6 units from the following list: ESE 105, ESE 205, ESE 2180, ESE 2190, ESE 232, ESE 260, ESE 2971, ESE 330 through 399, ESE 400, ESE 405, ESE 407, ESE 425, ESE 429 through 499, ESE 503 through 589

For more information, contact the director for the minor, Chuan Wang.

## The Minor in Energy Engineering

**Objective:** The goal of this minor is to provide students with a course work experience that will enhance their background, knowledge and skills in the topical area of energy engineering. The minor encompasses courses in several fields of science and engineering, including the Department of Energy, Environmental & Chemical Engineering; the Department of Electrical & Systems Engineering; and the Department of Mechanical Engineering & Materials Science.

A minor in energy engineering requires the completion of 18 units selected from the following lists. It is open to any undergraduate student pursuing an engineering major, a major in the sciences (biology, chemistry, physics) in Arts & Sciences, or the environmental studies major.

Interested departments should expose students to energy and related concepts in their introductory courses.

**Basic and Applied Sciences** (fundamental content) (two courses):

Code	Title	Units
EECE 205	Process Analysis and Thermodynamics (fall) or MEMS 301 Thermodynamics	4 or 3
EECE 301	Transport Phenomena I: Basics and Fluid Mechanics (spring) or MEMS 3410 Fluid Mechanics	3
EECE 307	Transport Phenomena II: Energy and Mass Transfer (fall) or MEMS 3420 Heat Transfer	3 or 4
ESE 332	Power, Energy, and Polyphase Circuits (spring)	3

\* EECE 303 Transport III: Energy Transfer Processes also fulfilled this requirement, but this course is no longer offered.

**Social Science/Policy/Economics Elective** (students choose one course):

Code	Title	Units
Anthro 3472	Global Energy and the American Dream	3
EnSt 347	Sustainable Cities	3
EnSt 350W	Writing Skills for Environmental Professionals (spring)	3
EnSt 357	Multiparty Environmental Decision Making	3
EnSt 407	RESET - Renewable Energy Policy, Engineering and Business	3
EnSt 451	Environmental Policy (fall)	3

**Electives:**

Students choose three courses. One of the courses is required to be chosen from outside of the student's major degree department. A partner department may approve the use of a course listed under basic and applied sciences as an elective.

Code	Title	Units
EECE 311	Green Engineering (fall)	3
EECE 411	International Experience in EECE (summer/fall)	3
EECE 413	Energy Conversion and Storage	3
EECE 512	Combustion Phenomena (fall)	3
EECE 552	Biomass Energy Systems and Engineering (spring)	3

ESE 434	Solid-State Power Circuits and Applications (fall)	3
ESE 435	Electrical Energy Laboratory (spring)	3
MEMS 412	Design of Thermal Systems (spring)	3
MEMS 5422	Solar Thermal Energy Systems (summer)	3
MEMS 5423	Sustainable Environmental Building Systems (fall)	3
MEMS 5424	Thermo-Fluid Modeling of Renewable Energy Systems	3
MEMS 5705	Wind Energy Systems (spring)	3

## Committee to Oversee Energy Engineering Minor

Peng Bai (EECE, Coordinator); Bruno Sinopoli (ESE); David Peters (MEMS)

The committee ensures that any course added to the above lists contains a significant amount of energy topics and that the entire program is cohesive.

## The Minor in Mechatronics

Advancements in power electronics, electronic sensors, and computer hardware and software have led to an expanding role for "smart" systems, which combine electronic and mechanical components. Automotive examples illustrate this point. The replacement of carburetors by fuel injection systems is almost universal, and hybrid/electric cars are replacing traditional automobiles. Not only are auxiliary devices such as fuel pumps, air bags and air-conditioner compressors driven by electric motors controlled by microprocessors, but fundamental components such as intake and outtake valves soon will be driven in this way. The internal combustion engine itself may be replaced by fuel cells and motors. Medical devices, micro-electromechanical systems, robots, fly-by-wire aircraft and wind turbines also all rely on electronic sensing of mechanical parameters and actuation of motion. These examples suggest strongly that engineers who are adept in the design, analysis and simulation of electromechanical systems will be in demand. The minor in mechatronics is created to encourage our students to study this important subject and provide recognition to those who do so.

This program is primarily designed for students in the ESE and MEMS departments and has been approved by the two departments. It is available for others as well.

The proposed minor program consists of four required courses, two electives and one prerequisite:

### Four required courses:

Code	Title	Units
ESE 444	Sensors and Actuators	3
ESE 446	Robotics: Dynamics and Control	3
MEMS 255	Dynamics	3
MEMS 411	Mechanical Engineering Design Project (mechatronics project)	3
<b>Total Units</b>		<b>12</b>

### Two electives chosen from the following:

Code	Title	Units
ESE 436	Semiconductor Devices	3
ESE 482	Digital Signal Processing	3
MEMS 4301	Modeling, Simulation and Control	3
or ESE 441	Control Systems	
MEMS 4310	Vibrations	3

### Prerequisite:

Code	Title	Units
CSE 131	Introduction to Computer Science (basic programming course)	3

For more information about the minor, contact Dennis Mell (ESE) or Jackson Potter (MEMS).

## The Minor in Robotics

Robotic systems have a wide range of applications in modern technology and manufacturing. Robots can vary in complexity and use, from the microrobots used for surgical procedures to the moderate-sized robots common in manufacturing and undersea exploration to the macrorobots used for the disposal of nuclear waste and as arms on space-station modules. The program designed for a minor in robotics provides a fundamental understanding of robotic operation and preliminary training in the design and use of robots.

**Units required:** 18

### Prerequisites:

Code	Title	Units
CSE 131	Introduction to Computer Science	3
Math 217	Differential Equations	3
Physics 191 & 191L	Physics I and Physics I Laboratory	4
Physics 192 & 192L	Physics II and Physics II Laboratory	4

### Required courses:

Code	Title	Units
ESE 351	Signals and Systems	3
or MEMS 4310	Vibrations	
ESE 446	Robotics: Dynamics and Control	3
ESE 4480	Control Systems Design Laboratory	3
MEMS 255	Dynamics	3
<b>Total Units</b>		<b>12</b>

Two additional courses must be chosen with the approval of the director of the program for a minor in robotics. Suggested courses include the following:

Code	Title	Units
CSE 417T	Introduction to Machine Learning	3
CSE 546T	Computational Geometry	3
ESE 441	Control Systems	3
or MEMS 4301	Modeling, Simulation and Control	
MEMS 3110	Machine Elements	3

For more information about the minor, contact Dennis Mell (ESE) or Jackson Potter (MEMS).

## The Minor in Systems Science & Engineering

This minor consists of fundamental courses in control systems and operations research. In the area of control systems, students will be introduced to design techniques for controlling engineering and socioeconomic systems such as airplanes, automobiles, nuclear reactors, ecological systems, communication networks, the nation's economy and biological systems. In the area of operations research, students are introduced to techniques for optimally managing business resources and controlling business networks such as supply chains.

**Units required:** 15

Code	Title	Units
ESE 217	Differential Equations and Dynamical Systems Modeling in Engineering	3
ESE 4031	Optimization for Engineered Planning, Decisions and Operations	3
or ESE 415	Optimization	
ESE 441	Control Systems	3
<b>Total Units</b>		<b>9</b>

In addition, students must take 6 units from the following list: ESE 105, ESE 205, ESE 2180, ESE 2190, ESE 2971, ESE 351, ESE 4031, ESE 415, ESE 400 through 428, ESE 437, ESE 440 through 459, ESE 470 through 499, ESE 502 through 529, ESE 540 through 559

For more information, contact the director for the minor, Shen Zeng.

## The Minor in Quantum Engineering

Quantum engineering is an emerging field that fuses physics, engineering, and computer science. It incorporates radical new ideas for computing, materials, devices and sensors. Advances in quantum sensing, encryption, and computing will transform science and engineering and have a far-reaching impact on the industry, the economy, and other aspects of our society.

The Minor in Quantum Engineering integrates quantum knowledge — quantum physics, quantum information science, and quantum technologies — into the engineering education at Washington University. The curriculum encompasses both fundamental physics and the broad engineering skill set necessary to meet the practical challenges of the future.

Students with background in applied physics or electrical engineering are ideal candidates for this program, but the minor is open to any undergraduate student enrolled in a degree program at Washington University in St. Louis.

### Prerequisites

The course ESE 4301 Quantum Mechanics for Engineers is designed to be the entry course for the quantum engineering curriculum, which provides the foundations — that is, the mathematical and physical knowledge — required for all subsequent core courses. By design, this course is made to be accessible to second-year engineering undergraduates with knowledge of linear algebra and calculus at the level of ESE 318/ESE 319 Engineering Mathematics A/B or the equivalent.

### Required Courses

The Minor in Quantum Engineering requires the completion of 15 units from the courses listed below. At least two courses must be from the Core Courses list.

### Core Courses

Students select at least two courses from this list:

Code	Title	Units
ESE 429	Basic Principles of Quantum Optics and Quantum Information	3
or ESE 536	Introduction to Quantum Optics	
ESE 4301	Quantum Mechanics for Engineers	3
ESE 431	Introduction to Quantum Electronics	3
CSE 468T	Introduction to Quantum Computing	3

## Program Electives

Code	Title	Units
Physics 318	Introduction to Quantum Physics II	3
or Physics 471	Quantum Mechanics	
or Physics 523	Quantum Mechanics I	
ESE 436	Semiconductor Devices	3
ESE 439	Introduction to Quantum Communications	3
ESE 532	Introduction to Nano-Photonic Devices	3
ESE 582	Fundamentals and Applications of Modern Optical Imaging	3
Chem 401	Physical Chemistry I	3
Chem 533	Time-Dependent Quantum Mechanics & Spectroscopy	3
Chem 543	Physical Properties of Quantum Nanostructures	3
Math 444	The Mathematics of Quantum Theory	3
Math 528	Topics in Functional Analysis II	3
Physics 472	Solid State Physics	3
Physics 589	Selected Topics in Physics I	3

For more information, contact the director for the minor, Jung-Tsung Shen.

# Energy, Environmental & Chemical Engineering

## About Energy, Environmental & Chemical Engineering

Our department focuses on environmental engineering, energy systems engineering and chemical engineering. We provide integrated and multidisciplinary programs of scientific education. Our mission is accomplished by instilling a tradition of lifelong learning; offering a curriculum of fundamental education coupled with applications in advanced focal areas and strengthened by our breadth in other disciplinary areas; participating in cutting-edge research with faculty and industrial partners; and providing access to state-of-the-art facilities and instrumentation. Most undergraduate students in the department will pursue the BS in Chemical Engineering degree, accredited by the Engineering Accreditation Commission of ABET, or the BS in Environmental Engineering degree (launched spring 2019). Other students may pursue the BS in Applied Science degree with a major in chemical engineering. The department offers a minor in environmental engineering science, and, in collaboration with other engineering departments, we co-sponsor a minor in energy engineering and a minor in nanoscale science and engineering. Graduate degrees (Master of Engineering, Master of Science and Doctor of Philosophy) in Energy, Environmental & Chemical Engineering are also offered by the department.

Chemical engineers are involved in the transfer of scientific discoveries to modern technologies and novel products that benefit society and minimize the impact on the environment. They deal with multiscale aspects of generating clean energy, producing novel and superior materials, and utilizing the biological revolution to manufacture new products. They are involved in the development and manufacture of consumer products as well as in the design, operation and control of processes in a variety of industries (e.g., petroleum, petrochemical, chemical, consumer products, food, feed, pharmaceuticals). Their broad training in basic sciences (e.g., chemistry, physics, biology, mathematics) coupled with a strong foundation in chemical engineering principles (e.g., thermodynamics, mass and energy balances, transport phenomena, kinetics, separations, reaction engineering, control, product development, process design) makes them invaluable team members and leaders in any engineering enterprise. It also prepares them well for graduate studies in biochemical, biomedical, chemical, environmental and materials engineering. In addition, the BS in Chemical Engineering is a great starting point for pursuing a degree in business, law or medicine.

Environmental engineers apply scientific and engineering principles to assess, manage and design sustainable systems for the protection of human and ecological health. The designs and technologies that they develop provide safe and sufficient public water supplies, enable effective and efficient treatment and resource recovery from wastewater and other wastes, and control pollutant releases that protect water, soil and air quality. Environmental engineers also seek to understand the effect of technological advances on the environment and to identify opportunities to improve the environmental sustainability of new technologies. Environmental engineers have broad training in basic sciences, mathematics and computational approaches as well as an engineering foundation that includes mass and energy balances, thermodynamics, transport phenomena, and chemical, physical and biological treatment processes. The training of environmental engineers also includes natural science and environmental social science and the humanities. This training prepares environmental engineers to apply technological solutions within specific environmental and societal contexts. Environmental engineering graduates are prepared to enter professional practice and to pursue graduate study in environmental engineering and allied fields.

The curricula are planned to provide students with a strong background in basic engineering concepts while allowing students individual latitude to emphasize study in a specialized area or to obtain added breadth both within and outside of chemical or environmental engineering.

## Mission Statement

The mission of the department is to teach energy, environmental and chemical engineering principles and their application in an inspiring learning environment; to prepare students for engineering careers by developing the skills of critical thinking, analysis and communication proficiency; and to instill a sense of professional ethics and societal responsibility.

## Advising

The department takes pride in its mentoring of undergraduate students. Each student who declares chemical or environmental engineering as a (potential) major is assigned an academic advisor from the full-time department faculty. Typically, the same advisor follows the student's academic progress and serves as a mentor from the first year through graduation.

Phone: 314-935-5545  
Website: <https://eece.wustl.edu/academics/undergraduate-programs/index.html>

## Faculty

### Department Chair and Professor

#### Joshua Yuan

Lucy & Stanley Lopata Professor  
PhD, University of Tennessee  
Design-based engineering to address challenges in energy, the environment and health

### Endowed Professors

#### Richard L. Axelbaum

The Stifel & Quinette Jens Professor of Environmental Engineering Science  
PhD, University of California, Davis  
Combustion, advanced energy systems, clean coal, aerosols, nanoparticle synthesis, rechargeable battery materials, thermal science

#### Daniel E. Giammar

Walter E. Browne Professor of Environmental Engineering  
Director, Center for the Environment  
PhD, California Institute of Technology  
Aquatic chemistry, environmental engineering, water quality, water treatment

#### Zhen (Jason) He

Laura and William Jens Professor of Energy, Environmental & Chemical Engineering  
Director of Graduate Studies  
PhD, Washington University  
Environmental biotechnology, bioenergy production, biological wastewater treatment, resource recovery, bioelectrochemical systems, sustainable desalination technology, anaerobic digestion, forward osmosis, membrane bioreactors

#### Feng Jiao

Elvera and William R. Stuckenberg Professor  
Director, Center for Carbon Management  
PhD, University of St. Andrews  
Electrocatalysis, carbon dioxide utilization, electrochemical devices, energy storage

#### Randall Martin

Raymond R. Tucker Distinguished Professor  
PhD, Harvard University  
Characterizing atmospheric composition to inform effective policies surrounding major environmental and public health challenges ranging from air quality to climate change

#### Vijay Ramani

Vice Provost for Graduate Education and International Affairs  
Roma B. and Raymond H. Wittcoff Distinguished University Professor  
PhD, University of Connecticut  
Electrochemical engineering, energy conversion

#### Jay R. Turner

Head of the Division of Engineering Education  
Vice Dean for Education  
James McKelvey Professor of Engineering Education  
DSc, Washington University  
Air quality planning and management, aerosol science and engineering, green engineering

## Professors

#### Young-Shin Jun

PhD, Harvard University  
Aquatic processes, molecular issues in chemical kinetics, environmental chemistry, surface/physical chemistry, environmental engineering, biogeochemistry, nanotechnology

#### Xinhua Liang

PhD, University of Colorado Boulder  
Gas-phase synthesis, surface science and catalysis, nanostructured films and devices, energy and environmental applications

#### Yinjie Tang

PhD, University of Washington  
Metabolic modeling, fermentation engineering, algal bioprocesses

#### Jian Wang

Director of the Center for Aerosol Science and Engineering (CASE)  
PhD, California Institute of Technology  
Aerosol properties and processes, nucleation and new particle formation, aerosols in the marine environment, effects of aerosols on cloud microphysical properties and macrophysical structure

#### Fuzhong Zhang

PhD, University of Toronto  
Metabolic engineering, protein engineering, synthetic and chemical biology

## Associate Professors

#### Peng Bai

PhD, Tsinghua University, China  
Develop next-generation batteries; probe the in situ electrochemical dynamics of miniature electrodes down to nanoscales; capture the heterogeneous and stochastic nature of advanced electrodes; identify the theoretical pathways and boundaries for the rational design of materials, electrodes, and batteries through physics-based mathematical modeling and simulation

#### **Rajan Chakrabarty**

Harold D. Jolley Career Development Associate Professor  
PhD, University of Nevada, Reno  
Characterizing the radiative properties of carbonaceous aerosols in the atmosphere, researching gas-phase aggregation of aerosols in cluster-dense conditions

#### **Marcus Foston**

Director of Diversity Initiatives  
PhD, Georgia Institute of Technology  
Utilization of biomass resources for fuel and chemical production, renewable synthetic polymers, development of advanced aerosol instruments

#### **Elijah Thimsen**

PhD, Washington University in St. Louis  
Gas-phase synthesis of inorganic nanomaterials for energy applications, novel plasma synthesis approaches

### Assistant Professors

#### **Christopher Cooper**

PhD, Stanford University  
Responsive, soft materials for applications in energy storage, environmental sustainability and human health

#### **Jenna Ditto**

PhD, Yale University  
Chemical composition of indoor and outdoor air, indoor air chemistry, health impacts of air pollution exposure

#### **Fangqiong Ling**

PhD, University of Illinois at Urbana-Champaign  
Microbial ecosystem analysis and modelling, process modelling, machine learning, NextGen sequencing bioinformatics, environmental microbiology, bioreactor design

#### **Kimberly M. Parker**

PhD, Stanford University  
Investigation of environmental organic chemistry in natural and engineered systems

#### **Lu Xu**

PhD, Georgia Institute of Technology  
Air quality, climate change, atmospheric chemistry

### Research Assistant Professor

#### **Benjamin Kumfer**

DSc, Washington University  
Advanced coal technologies, biomass combustion, aerosol processes and health effects of combustion-generated particles

### Senior Lecturers

#### **Janie Brennan**

Director of Undergraduate Studies  
PhD, Purdue University  
Chemical engineering education, biomaterials

#### **Raymond Ehrhard**

BS, Missouri University of Science and Technology  
Water and wastewater treatment technologies, process energy management

#### **Trent Silbaugh**

PhD, University of Washington  
Chemical engineering education, catalysis, carbon capture and conversion

#### **Kristen Wyckoff**

PhD, University of Tennessee  
Environmental engineering education, stormwater runoff, environmental microbiology

### Lecturer

#### **Kurt Russell**

PhD, Purdue University  
Chemical engineering education, catalysis

### Affiliated Faculty

#### **Gary Moore**

Senior Lecturer for the Joint Engineering Program  
MS, Missouri University of Science and Technology  
Environmental management

### Adjunct Faculty

#### **Grigoriy Yablonsky**

PhD, Boreskov Institute of Catalysis  
Chemical reaction engineering and heterogeneous catalysis

### Emeritus Professor

#### **Milorad P. Dudukovic**

Laura and William Jens Emeritus Professor  
PhD, Illinois Institute of Technology  
Chemical reaction engineering, multiphase reactors, visualization of multiphase flows, tracer methods, environmentally benign processing

### Majors

Please visit the following pages for information about the energy, environmental and chemical engineering majors:

- Bachelor of Science in Chemical Engineering (p. 1282)
- Bachelor of Science in Environmental Engineering (p. 1283)
- Bachelor of Science in Applied Science (Chemical Engineering) (p. 1284)
- Double Majors and the Pre-Medical Program (p. 1284)

### Minors

Please visit the following pages for information about the energy, environmental and chemical engineering minors:

- Minor in Environmental Engineering Science (p. 1284)
- Minor in Energy Engineering (p. 1285)
- Minor in Nanoscale Science & Engineering (p. 1286)

## Courses

Visit online course listings to view semester offerings for E44 EECE.

---

### E44 EECE 100 Independent Study

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience.

Credit variable, maximum 3 units.

---

### E44 EECE 101 Introduction to Energy, Environmental and Chemical Engineering

Key technical issues that face our society and some of the emerging technologies that hold promise for the future are examined and discussed. Relationship to chemical engineering principles is emphasized. Prerequisite: Freshman standing or permission of instructor.

Credit 3 units. EN: TU

---

### E44 EECE 103 Topics in Energy, Environmental and Chemical Engineering

Key technical issues that face our society and some of the emerging technologies that hold promise for the future are examined and discussed. Emphasizes providing a broader context for content delivered in concurrent core chemical and environmental engineering courses. Prerequisite: Sophomore or higher standing or permission on instructor.

Credit 1 unit. EN: TU

---

### E44 EECE 200 Independent Study

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience.

Credit variable, maximum 3 units.

---

### E44 EECE 202 Computational Modeling in Energy, Environmental and Chemical Engineering

Computational tools to solve engineering, design and scientific problems encountered in thermodynamics, transport phenomena, separation processes and reaction kinetics. Introduction to programming skills in MATLAB and use of various MATLAB toolboxes. Theory and application of numerical methods for solution of common problems, including methods for root-finding/optimization, curve fitting (regression, interpolation, and spline), integration, differentiation, and ordinary differential equations and boundary value problems. Illustrative application examples. Prerequisites: E81 CSE 131 and L24 Math 217, or permission of instructor

Credit 3 units. EN: TU

---

### E44 EECE 204 Thermodynamics II in EECE

Molecular motions, kinetic theory of gases, kinetic theory of dense phases, chemical kinetics. Prerequisite: EECE 205 or permission of instructor.

Credit 3 units. EN: TU

---

### E44 EECE 205 Process Analysis and Thermodynamics

This course is an introduction to the use of mathematics and methods of engineering in the analysis of chemical and physical processes. It will address the use of balances (e.g., mass, energy, entropy) to describe processes with and without chemical reactions in both transient and steady-state conditions as well as classical thermodynamics focused on processes, first and second laws, and properties of pure substances. Prerequisite: L07 Chem 112A or Chem 106. Corequisite: L24 Math 217 or permission of instructor.

Credit 4 units. EN: TU

---

### E44 EECE 210 Introduction to Environmental Engineering

The objective of this course is to introduce students to the field of environmental engineering. The course will emphasize basic principles of mass and energy conservation which govern physical, chemical and biological processes. Applications include the estimation of contaminant concentrations and the design of environmental controls. Prerequisites: (L07 Chem 112A or L07 Chem 106), and L24 Math 132, or permission of instructor. Students considering taking this course without all prerequisites should contact the instructor for a list of concepts required for the course.

Credit 3 units. EN: BME T, TU

---

### E44 EECE 300 Independent Study

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience.

Credit variable, maximum 3 units.

---

### E44 EECE 301 Transport Phenomena I: Basics and Fluid Mechanics

Engineering principles involved in the exchange of heat and matter in chemical processes. Laws governing the flow of liquids and gases in laboratory and plant equipment. Corequisite: E35 ESE 318; Prerequisites: E44 EECE 205 or permission of instructor.

Credit 3 units. EN: BME T, TU

---

### E44 EECE 304 Mass Transfer Operations

Stagewise and continuous mass transfer operations, including distillation, gas absorption, humidification, leaching, liquid extraction, and membrane separations. Corequisites: E44 EECE 204, E44 EECE 202, or permission of instructor

Credit 3 units. EN: BME T, TU

---

### E44 EECE 305 Materials Science

Introduces the chemistry and physics of engineering materials. Emphasis on atomic and molecular interpretation of physical and chemical properties, the relationships between physical and chemical properties, and performance of an engineering material. Prerequisite: L07 Chem 111A or L07 Chem 105, or permission of instructor.

Credit 3 units. EN: BME T, TU

---

### E44 EECE 306 Biology in EECE

The course provides an introduction to molecular biology, biochemistry, microbiology, and biotechnology. The course focuses on an engineering approach to microbiology and molecular biology. Topics include basics of molecular biology, mathematical analysis of biological systems, genetic engineering, and biotechnological applications. Corequisite: E44 EECE 205, or permission of instructor

Credit 3 units. EN: TU

---

**E44 EECE 307 Transport Phenomena II: Energy and Mass Transfer**

This course covers introductory treatment of the principles of heat transfer by conduction, convection, and radiation; mathematical analysis of steady and unsteady conduction along with numerical methods; analytical and semi-empirical methods of forced and natural convection systems; boiling and condensation heat transfer; and principles of mass transfer (diffusion and convection) introduced by analogy to heat transfer. Prerequisite: E44 EECE 301; corequisite: E35 ESE 319.

Credit 4 units. EN: BME T, TU

---

**E44 EECE 308 Water Resources Engineering**

This course further develops student knowledge of water resources engineering specific to the movement of water through natural and built environments. Combines existing fluid mechanics knowledge with hydrology and hydrogeology to introduce students to the design and analysis of surface water, open channel flow, pipe flow, and groundwater systems. Students will have an opportunity to describe, model, and calculate surface water and stormwater runoff hydrology; design and analyze open channel flow; quantify flow in partially full pipes; predict and analyze groundwater flow conditions for confined and unconfined aquifers using hydrogeology; and calculate groundwater flow and well drawdown.

Credit 3 units.

---

**E44 EECE 309 Environmental Engineering Fate and Transport**

The objective of this course is to introduce students to the fundamental processes that control contaminant fate and transport in the natural and built environment. The course will highlight mass transport and transformation in surface water, soil and groundwater, and atmosphere. Students will be introduced to environmental transport modeling software to solve applied problems. Prerequisites: E44 EECE 210, E44 EECE 301, or permission of instructor.

Credit 3 units. EN: TU

---

**E44 EECE 311 Green Engineering**

Strategies and methods for waste minimization and pollutant emission reduction. Principles of green engineering. Environmental transport and fate modeling. Design of heat and mass exchange networks for energy and waste reduction. Prerequisite: L24 Math 217 or permission of instructor.

Credit 3 units. EN: BME T, TU

---

**E44 EECE 314 Air Quality Engineering with Lab**

Introduction to air quality and pollution control. Pollutant emissions, atmospheric chemistry, and fate. Air pollution meteorology and atmospheric dispersion. Application of chemistry, thermodynamics, and fluid mechanics in the selection and design of air pollution control equipment. Labs to measure air quality and demonstrate control principles. Prerequisite: E44 EECE 205 or permission of instructor

Credit 4 units. EN: TU

---

**E44 EECE 401 Chemical Process Dynamics and Control**

A state-of-the-art industrial virtual plant is used for the development of dynamic simulations, selection of instrumentation, statistical analysis of variability, and implementation of process control to improve process operation and efficiency. Prerequisite: E44 EECE 301, E44 EECE 304, or permission of instructor

Credit 3 units. EN: BME T, TU

---

**E44 EECE 402 ChE Capstone**

Application of engineering science and design, fundamentals of process and product development, computational techniques and economic principles to design of chemical and biological processes and procedures. A design project and/or an AIChE national design contest is included. Prerequisites: E44 EECE 304, E44 EECE 401, E44 EECE 403, E44 EECE 409, or permission of instructor.

Credit 3 units. EN: BME T, TU

---

**E44 EECE 403 Chemical Reaction Engineering**

Introduction to chemical reaction engineering principles and applications in process and product development. Evaluation of reaction rates from mechanisms and experimental data, quantification of pertinent transport effects and application to reactor and product design. Prerequisite: E44 EECE 204; Corequisite: E44 EECE 307 or permission of instructor

Credit 3 units. EN: BME T, TU

---

**E44 EECE 404 Environmental Engineering Capstone**

Methodology for formulating and solving open-ended design problems. The methodology is illustrated through a series of team projects drawn from multiple areas of environmental engineering practice. Topics addressed include the design process, cost estimation, consideration of codes and regulations, sustainability, and reliability. The course also provides content on professional practice, ethics, and professional licensure. Prerequisites: E44 EECE 314, E44 EECE 407, E44 EECE 409, or permission of instructor

Credit 3 units. EN: TU

---

**E44 EECE 405 Unit Operations Laboratory**

This course involves laboratory projects focused on the application of chemical engineering principles (e.g., transport, thermodynamics, separations). Student teams design multi-week experiments using unit operations equipment to solve realistic engineering problems, including the analysis of safety and instrumentation. The course has one laboratory period each week, with supplemental lecture sessions. Emphasis is on independent learning, teamwork, and technical communication skills. Prerequisites: E44 EECE 301, E44 EECE 304, and (E35 ESE 326 or E60 ENGR 328) Corequisites: E44 EECE 307, E44 EECE 403, E60 Engr 310 or permission of instructor.

Credit 4 units. EN: TU

---

**E44 EECE 407 Environmental Biotechnology**

This course aims to provide students with a background in current environmental biotechnology and to stimulate ideas about future potential new technologies. Students will gain qualitative and quantitative skills related to bioreactor designs in environmental applications (e.g., activated sludge, anaerobic digester, membrane bioreactors). Special focus will be placed on the application of mathematical models that are currently widely used in wastewater engineering, such as the International Water Association models. Hands-on experience with biological water treatment process modeling will be provided. Finally, students will be encouraged to explore links between environmental biotechnologies and a "one health" approach to public health. Prerequisites: (L41 Biol 2960 or E44 EECE 306), (E35 ESE 326 or E60 ENGR 328), E44 EECE 205, E44 EECE 210, or permission of instructor.

Credit 3 units. EN: BME T, TU

---

**E44 EECE 409 Process Design, Economics and Simulation**

This is a lecture and computer lab-based course covering engineering science and design, fundamentals of process and product development, process safety and sustainability, computational techniques, and economic principles used for the design of chemical, biological, and environmental processes and procedures. A guided design project is included. Prerequisite: E44 EECE 304 or E44 EECE 533 or permission of instructor.

Credit 2 units. EN: TU

---

**E44 EECE 411 International Experience in EECE**

This course will provide undergraduate students with an international experience related to energy, environmental and/or chemical engineering. The country visited will vary from year to year with one or more EECE faculty members developing the program in collaboration with McDonnell Global Energy and Environment Partnership (MAGEEP) universities. Example activities include conducting field or laboratory research, attending short courses taught by MAGEEP university faculty members, and visiting attractions relevant to the course focus (e.g., industrial facilities). Students will also gain an understanding of the local culture and history of the country visited. Course content will include a seminar series in the spring semester prior to the international experience, a two-to-three week visit to the location of study, and a follow-up student project and presentations during the fall semester which draws upon the experience. Students will enroll in EECE 411 for the fall semester following the trip.

Credit 3 units. EN: BME T, TU

---

**E44 EECE 413 Energy Conversion and Storage**

Renewable electricity from solar and wind will be the primary energy source for our future distributed energy and mobility system. At the foundation of that energy system are the electrochemical energy devices including fuel cells, electrolyzers and batteries. The objectives of this course are to introduce basic concepts and principles of electrochemistry as well as their potential applications. The chemical engineering fundamentals (e.g., mass & energy balances, thermodynamics, and mass & heat transport) will be applied to describe in mathematical terms the catalytic and mass transport processes. Prerequisites: (EECE 205 and EECE 301) or permission of instructor

Credit 3 units. EN: BME T, TU

---

**E44 EECE 416 Industrial Process Safety**

This course covers the analysis and management of fire and explosion hazards; control of human exposure to toxic materials; codes, standards, and regulations; transportation and disposal of noxious substances; analysis of drift from clouds, flares, and stacks; venting of pressure vessels; hazard evaluation and safety review of processes; and emergency plans for accidents and disasters. Prerequisites: E44 EECE 204 and E44 EECE 307, or graduate standing or permission of instructor.

Credit 3 units. EN: TU

---

**E44 EECE 423 Senior Thesis**

Research project to be selected by the student in senior standing with the permission and recommendation of a faculty supervisor and the approval of the department chair. At conclusion of project, student prepares a report in the form of a senior thesis.

Credit variable, maximum 6 units.

---

**E44 EECE 424 Digital Process Control Laboratory**

Applications of digital control principles to laboratory experiments supported by a networked distributed control system. Lecture material reviews background of real-time programming, data acquisition, process dynamics, and process control. Exercises in data acquisition

and feedback control design using simple and advanced control strategies. Experiments in flow, liquid level, temperature, and pressure control. Term project. Prerequisite: E35 ESE 441 or E44 EECE 401 or permission of instructor

Credit 3 units. EN: BME T, TU

---

**E44 EECE 425 Environmental Engineering Laboratory**

This course includes laboratory experiments to illustrate the application of engineering fundamentals to environmental systems. Applications of experimental design and data analysis principles are also included, and relevant analytical instrumentation and laboratory techniques are introduced. Laboratory work supported by theoretical analysis and modeling is performed as appropriate. Prerequisite: E44 EECE 210 or E44 EECE 205 Corequisite: E35 ESE 326 or E60 ENGR 328, or permission of instructor.

Credit 3 units. EN: BME T, TU

---

**E44 EECE 428 Introduction into Zymurgy**

This course will introduce students to beer brewing and fermentation by combining clear and detailed lectures with practical, hands-on brewing and laboratory tests. This course presents the fundamentals of the underlying chemistry critical to successful extract and all-grain brewing. Topics covered in this course include beer brewing terminology, brewing materials and supplies, laboratory tests, and basic chemical and biochemical interactions. The students will select and brew three batches of beer typically used in home brew recipes using a malt extract method and all grain methods. The class will attend field trips to a large brewer and a small craft brewer to gain experience in this growing industry. This class prepares students for further instruction and for positions as brewers in commercial breweries and microbreweries. Prerequisite: Age of 21 or approval by instructor. Students registering for this course will be placed on a waitlist. A separate course application will be provided to the students to be submitted to the course instructor for approval. Prerequisites: (L07 Chem 106 or L07 Chem 112A), L07 Chem 152, E44 EECE 205; Corequisites: E44 EECE 301, (E44 EECE 304 or E44 EECE 533); Students must be age 21 or obtain approval by instructor.

Credit 3 units. EN: TU

---

**E44 EECE 480 Entrepreneurial Engineering**

Quality education with a background in engineering and science can lead engineers to create innovations with high potential value. Nevertheless, unlocking value from innovation is not an entirely intuitive enterprise, and success is not guaranteed. This course is created to better prepare students for a future of innovation and entrepreneurial success. The course outline comprises three phases of entrepreneurship: the creative phase, the critical phase, and the crusader phase. It endeavors to provide students with useful skills and practical experiences that are relevant to each phase. Each week will include a brief presentation to set the direction, followed by short discussions of the assigned case studies and a review of fundamental principles from the core text. Student teams will regularly present work to the group, create success metrics, and chart progress. The Creative Phase: The class will work in small groups to create a new business concept. Students will learn brainstorming techniques, leadership, teamwork, and business model innovation. With core values set as a foundation, teams will present their proposed business models and rational basis for income forecasting. The Critical Phase: The class will identify and challenge assumptions to assess commercial viability. Students will find third-party market research to size up the opportunity and gather real customer feedback to refine their strategy. Skills gaps will be appreciated and negotiated solutions sought. Financial and growth metrics will be established to measure success, and threats will be faced. Students will present their SWOT analysis (strengths, weaknesses, opportunities, and threats) and link this to their revised strategy (business model). The Crusader Phase: Students will learn what is "acceptable risk" and develop a growth mindset (in contrast

with fixed mindset), gain power from emotional intelligence, deal with failures (decide to pivot or punt), and learn the difference between ideation and implementation. Students will make progress and get the word out, and they will prepare a short proposal for grant funding or investment with a suitable income stream. By the end of the semester, students will know how to create business model, how to work with teams, how to assess commercial viability, how to establish a rationale for financial forecast, how to assess skills and resource gaps, how to negotiate to fill in gaps, and how to write high-level proposals. Students will demonstrate their knowledge through written submissions and oral presentations.

Credit 3 units.

---

#### **E44 EECE 500 Independent Study**

Independent investigation on topic of special interest. Interested students are encouraged to approach and engage faculty to develop a topic of interest. A form declaring the agreement must be filed in the departmental office. Petitions are generally considered in the semester preceding the independent study experience. Prerequisite: graduate level standing.

Credit variable, maximum 9 units.

---

#### **E44 EECE 501 Transport Phenomena in EECE**

The aim of the course is for students to develop skills in applying principles of momentum, heat and mass transport in a unified manner to problems encountered in the areas of energy, environmental and chemical processes. A systems approach will be followed so that the general principles can be grasped and the skills to develop mathematical models of seemingly different processes will be emphasized. This provides the students with a general tool which they can apply later in their chosen field of research. Prerequisite: graduate level standing or permission of instructor

Credit 3 units.

---

#### **E44 EECE 502 Advanced Thermodynamics in EECE**

The objective of this course is to understand classical thermodynamics at a deeper level than is reached during typical undergraduate work. Emphasis will be placed on solving problems relevant to chemical engineering materials science. Prerequisite: E44 EECE 205 or graduate level standing or permission of instructor

Credit 3 units.

---

#### **E44 EECE 504 Aerosol Science and Technology**

Fundamental properties of particulate systems - physics of aerosols, size distributions, mechanics and transport of particles: diffusion, inertia, external force fields. Visibility and light scattering. Aerosol dynamics - coagulation, nucleation, condensation. Applications to engineered systems: Nanoparticle synthesis, atmospheric aerosols, combustion aerosols, pharmaceutical aerosols. Prerequisites: E44 EECE 301, E35 ESE 318 and E35 ESE 319 or graduate level standing or permission of instructor.

Credit 3 units. EN: BME T, TU

---

#### **E44 EECE 505 Aquatic Chemistry**

Aquatic chemistry governs aspects of the biogeochemical cycling of trace metals and nutrients, contaminant fate and transport, and the performance of water and wastewater treatment processes. This course examines chemical reactions relevant to natural and engineered aquatic systems. A quantitative approach emphasizes the solution of chemical equilibrium and kinetics problems. Topics covered include chemical equilibrium and kinetics, acid-base equilibria and alkalinity, dissolution and precipitation of solids, complexation of metals, oxidation-reduction processes, and reactions on solid surfaces. A primary objective of the course is to be able to formulate and solve chemical equilibrium problems for complex environmental systems. In

addition to solving problems manually to develop chemical intuition regarding aquatic systems, software applications for solving chemical equilibrium problems are also introduced. Prerequisite: Senior or graduate-level standing or permission of instructor. Students enrolling in this course should have a knowledge of general chemistry.

Credit 3 units. EN: BME T, TU

---

#### **E44 EECE 506 Bioprocess Engineering I: Fundamentals & Applications**

The course covers the fundamentals and provides the basic knowledge needed to understand and analyze processes in biotechnology in order to design, develop and operate them efficiently and economically. This knowledge is applied to understand various applications and bioprocesses, such as formation of desirable bio and chemical materials and products, production of bioenergy, food processing and waste treatment. The main objective of the course is to introduce the essential concepts and applications of bioprocessing to students of diverse backgrounds. An additional project is required to obtain graduate credit. Prerequisites: L41 Biol 2960 or E44 EECE 306 or graduate level standing permission of instructor.

Credit 3 units. EN: BME T, TU

---

#### **E44 EECE 507 Kinetics and Reaction Engineering Principles**

The course is aimed at a modern multiscale treatment of kinetics of chemical and biochemical reactions and application of these fundamentals to analyze and design reactors. Application of reaction engineering principles in the areas related to energy generation, pollution prevention, chemical and biochemical processes will be studied and illustrated with case studies and computer models. Description of the role of mass and heat transport in reacting systems is also provided with numerous examples. Prerequisites: (E44 EECE 503 or (E35 ESE 318 and E35 ESE 319)) and E44 EECE 403 or permission of instructor

Credit 3 units.

---

#### **E44 EECE 508 Research Rotation**

First-year doctoral students in EECE should undertake this rotation as a requirement prior to choosing a permanent research adviser. The rotation will require the student to work under the guidance of a faculty member.

---

#### **E44 EECE 509 Seminar in Energy, Environmental, and Chemical Engineering**

All graduate students in EECE should attend the departmental seminar series to gain exposure in various diverse fields of research. Students are also expected to participate in journal clubs and other discussion formats to discuss topical research areas. This course is required of all graduate students every semester of residency in the program.

Credit 1 unit.

---

#### **E44 EECE 510 Advanced Topics in Aerosol Science & Engineering**

This course will be focused on the discussion of advanced topics in aerosol science and engineering and their applications in a variety of fields, including materials science, chemical engineering, mechanical engineering, and environmental engineering. Prerequisite: EECE 504 or permission of instructor

Credit 3 units. EN: BME T, TU

---

#### **E44 EECE 512 Combustion Phenomena**

This course provides an introduction to fundamental aspects of combustion phenomena, including relevant thermochemistry, fluid mechanics, and transport processes as well as the interactions among them. Emphasis is on elucidation of the physico-chemical processes, problem formulation and analytic techniques. Topics

covered include non-premixed and premixed flames, deflagrations and detonations, particle combustion, flame extinction, flame synthesis, pollutant formation and methods of remediation. Contemporary topics associated with combustion are discussed throughout. Prerequisite: Senior or graduate standing or permission of instructor.  
Credit 3 units. EN: BME T, TU

---

#### **E44 EECE 514 Atmospheric Science and Climate**

This course will cover current research topics in atmospheric chemistry and climate change. Topics include atmospheric composition, chemistry, transport, dynamics, radiation, greenhouse gases, natural and anthropogenic primary pollution sources and secondary aerosol production, and measurement techniques. Focus will be placed on how our atmosphere and climate are altered in a world of changing energy production and land use. Suggested prerequisites: 1 year of general chemistry (Chem 111A-112A or 105-106) and 1 year of general physics (191/191L-191/192L). Prereqs: Junior, senior or graduate level standing or permission of instructor  
Credit 3 units. EN: BME T, TU

---

#### **E44 EECE 516 Measurement Techniques for Particle Characterization**

The purpose of this course is to introduce students to the principles and techniques of particle measurement and characterization. Practical applications of particle technology include air pollution measurement, clean manufacturing of semiconductors, air filtration, indoor air quality, particulate emission from combustion sources, and so on. The course will focus on the following: (1) integral moment measurement techniques; (2) particle sizing and size distribution measuring techniques; and (3) particle composition measurement techniques. Related issues such as particle sampling and transportation, instrument calibration, and particle standards will also be covered. Prerequisites: E44 EECE 504 or graduate level standing or permission of instructor  
Credit 3 units. EN: BME T, TU

---

#### **E44 EECE 520 Special Topics: Plasma Science and Engineering**

This course will focus on a select set of fundamentals and technology related to nonequilibrium plasmas, which are partially ionized gases. Fundamental discussion will focus on the set of state variables that define the plasma and the interaction of the plasma with surfaces, suspended dust particles, and chemically reactive molecular species. The technology used to generate and sustain plasma will be discussed. Diagnostic probes that can be used to ascertain key aspects of the discharge will be covered. Envisioned application areas for the knowledge include semiconductor processing and electrified chemical processing (e.g., advanced oxidation processes). Students enrolling in this course should have a knowledge of chemical engineering thermodynamics; the physics of electricity and magnetism and electrical circuits; aerosol science and technology; chemical reaction engineering and reactor design; and physical chemistry. Prerequisites: Graduate level standing or permission of instructor  
Credit 3 units. EN: TU

---

#### **E44 EECE 521 Air Quality Engineering with Lab**

Introduction to air quality and pollution control. Pollutant emissions, atmospheric chemistry, and fate. Air pollution meteorology and atmospheric dispersion. Application of chemistry, thermodynamics, and fluid mechanics in the selection and design of air pollution control equipment. Labs to measure air quality and demonstrate control principles. Prerequisite: E44 EECE 205 or permission of instructor Same as E44 EECE 314  
Credit 4 units. EN: TU

---

#### **E44 EECE 531 Environmental Organic Chemistry**

This course covers the fundamental physical-chemical examination of organic molecules (focused on anthropogenic pollutants) in aquatic (environmental) systems. Students learn to calculate and predict the chemical properties that are influencing the partitioning of organic chemicals within air, water, sediments and biological systems. This knowledge will be based on understanding intermolecular interactions and thermodynamic principles. Mechanisms of important thermochemical, hydrolytic, redox, and biochemical transformation reactions are also investigated, leading to the development of techniques (e.g., structure-reactivity relationships) for assessing environmental fate or human exposure potential. Prerequisites: (E44 EECE 210 or E44 EECE 205) and L07 Chem 261, or graduate level standing or permission of instructor.  
Credit 3 units. EN: BME T, TU

---

#### **E44 EECE 533 Physical and Chemical Processes for Water Treatment**

Water treatment is examined from the perspective of the physical and chemical unit processes used in treatment. The theory and fundamental principles of treatment processes are covered and are followed by the operation of treatment processes. Processes covered include gas transfer, adsorption, precipitation, oxidation-reduction, flocculation, sedimentation, filtration, and membrane processes. Prerequisite: E44 EECE 205 Corequisite: E44 EECE 210 or graduate level standing or permission of instructor  
Credit 3 units. EN: BME T, TU

---

#### **E44 EECE 534 Environmental Nanochemistry**

This course involves the study of nanochemistry at various environmental interfaces, focusing on colloid, nanoparticle, and surface reactions. The course would also (1) examine the thermodynamics and kinetics of nanoscale reactions at solid-water interfaces in the presence of inorganic or organic compounds and microorganisms; (2) investigate how nanoscale interfacial reactions affect the fate and transport of contaminants; (3) introduce multidisciplinary techniques for obtaining fundamental information about the structure and reactivity of nanoparticles and thin films, and the speciation or chemical form of environmental pollutants at the molecular scale; (4) explore connections between environmental nanochemistry and environmental kinetic analysis at larger scales. This course will help students attain a better understanding of the relationship between nanoscience/technology and the environment—specifically how nanoscience could potentially lead to better water treatments, more effective contaminated-site remediation, or new energy alternatives. Students enrolling in this course should have a knowledge of general chemistry. Prerequisites: Senior or graduate level standing or permission of instructor  
Credit 3 units. EN: BME T, TU

---

#### **E44 EECE 535 Environmental Data Science**

Many of the grand challenges that we face today require understanding and manipulation of processes at the interface of natural and manmade environments. Oftentimes, such knowledge is acquired through data. Skills to effectively visualize and analyze data and build predictive models are valued across different sectors of the society. This is an application-driven course. Prerequisites: L24 Math 217, E35 ESE 318 and (E35 ESE 326 or E60 ENGR 328) or graduate level standing or permission of instructor.  
Credit 3 units. EN: BME T, TU

---

#### **E44 EECE 537 Environmental Resource Recovery**

This course will focus on key concepts of resource recovery from wastes. Topics include energy, water, nutrient, and value-added compounds. The course will discuss technological advancements, environmental impacts, and techno-economic assessment of

environmental resource recovery. The cutting-edge recovery technologies in full-scale applications or laboratory studies will be introduced. Students will be trained for critical thinking and review of literature information, practice technical analysis and writing, and conduct a concept design of recovery systems using the data from local wastewater treatment facilities. The course is valuable as a prerequisite to more advanced research in environmental engineering, as a technical education to stimulate graduate students' interest in environmental sustainability, and as an introduction to environmental constraints that are increasingly important to other engineering disciplines. Prerequisites: E44 EECE 210 and E44 EECE 409 or graduate level standing or permission of instructor  
Credit 3 units. EN: TU

---

#### **E44 EECE 551 Metabolic Engineering and Synthetic Biology**

Synthetic Biology is a transformative view of biology from "observation approach" to "synthesis approach." It is new "engineering" discipline and aims to make the engineering of new biological function predictable, safe, and quick. It will pave a wide range of applications to transform our views on production of sustainable energy and renewable chemicals, environmental problems, and human disease treatments. The field intersects with Metabolic Engineering in areas such as the design of novel pathways and genetic circuits for product generation and toxic chemical degradation. In this course, the field and its basis are introduced. First, relevant topics in biology, chemistry, physics, and engineering are covered. Second, students will participate in brain-storming and discussion on new biology-based systems. Last, students will design and present new synthetic biology systems to solve real-world problems. No prerequisite. Both undergrad and graduate students can take this course.  
Credit 3 units. EN: BME T, TU

---

#### **E44 EECE 552 Biomass Energy Systems and Engineering**

This course offers background in the organic chemistry, biology and thermodynamics related to understanding the conversion of biomass. In addition includes relevant topics relating to biomass feedstock origin, harvest, transportation, storage, processing and pretreatment along with matters concerning thermo- and bio-chemical conversion technologies required to produce fuels, energy, chemicals, and materials. Also, various issues with respect to biomass characterization, economics and environmental impact will be discussed. The main objective of the course is to introduce concepts central to a large-scale integrated biomass bioconversion system. Prerequisites: Senior or graduate level standing or permission of instructor  
Credit 3 units. EN: BME T, TU

---

#### **E44 EECE 554 Molecular Biochemical Engineering**

This course is set for junior level graduate students to bridge the gap between biochemical engineering theory and academic research in bioengineering. It will cover common molecular biotechnologies (molecular biology, microbiology, recombinant DNA technology, protein expression etc), biochemical models (enzyme catalysis, microbial growth, bioreactor etc) and bioengineering methodologies (protein engineering, expression control systems etc). These theories and technologies will be introduced in a manner closely related to daily academic research or biochemical industry. Areas of application include biofuel and chemical production, drug discovery and biosynthesis, bioremediation, and environmental applications. This course also contains a lab section (20~30%) that requires students to apply the knowledge learned to design experiments, learn basic experimental skills and solve current research problems. Prerequisites: (E44 EECE 101 or E44 EECE 103), (L41 Biol 2960 or E44 EECE 306), L41 Biol 4810, or graduate level standing or permission of instructor.  
Credit 3 units. EN: BME T, TU

---

#### **E44 EECE 572 Advanced Transport Phenomena**

Analytical tools in transport phenomena: Scaling, perturbation and stability analysis. Numerical computations of common transport problem with MATLAB tools. Low Reynolds number flows and applications to microhydrodynamics. Turbulent flow analysis and review of recent advances in numerical modeling of turbulent flows. Convective heat and mass transfer in laminar and turbulent flow systems. Introduction to two phase flow and multiphase reactors. Pressure-driven transport and transport in membranes, electrochemical systems, double layer effects and flow in microfluid devices. Prerequisites: E44 EECE 501 or (E44 EECE 301 and E44 EECE 307), or permission of instructor  
Credit 3 units. EN: BME T, TU

---

#### **E44 EECE 573 Polymers for Energy, Sustainability, and Human Health**

Polymeric materials are critical to solving global challenges related to energy (e.g., batteries, membranes, and energy harvesting devices), sustainability (e.g., upcycling, compatibilizers, water purification, and bio-based plastics), and human health (e.g., wearable and implantable bioelectronics, stimuli-responsive soft robots, and hydrogels for drug delivery). This course covers how polymers are designed and processed across many length and time scales to achieve specific target properties for applications in energy, sustainability, and human health. Ideal and real chain conformations, persistence length, polymer architectures, scaling and blob theories, dispersity, networks and defects, and programmed interactions in heteropolymers will be covered. Analysis of polymer structure and dynamics will include: macroscopic and microscopic phase separation, crystallization and melting, glass transition behavior, rouse dynamics, linear viscoelasticity, processing methods, and network elasticity. Key polymer characterization methods including rheology and small- and wide-angle x-ray scattering will be introduced. The course will emphasize individual problem sets, in-class journal club participation, and team-based project work. Prerequisites: EECE 204 or MEMS 301 or equivalent; EECE 301 or MEMS 3410 or equivalent  
Credit 3 units.

---

#### **E44 EECE 574 Electrochemical Engineering**

This course will teach the fundamentals of electrochemistry and the application of the same for analyzing various electrochemical energy sources/devices. The theoretical frameworks of current-potential distributions, electrode kinetics, porous electrode and concentrated solution theory will be presented in the context of modeling, simulation and analysis of electrochemical systems. Applications to batteries, fuel cells, capacitors, copper deposition will be explored. Prerequisites: E44 EECE 501 or (E44 EECE 301 and E44 EECE 307) or permission of instructor  
Credit 3 units.

---

#### **E44 EECE 576 Chemical Kinetics and Catalysis**

This course reflects the fast, contemporary progress being made in decoding kinetic complexity of chemical reactions, in particular heterogeneous catalytic reactions. New approaches to understanding relationships between observed kinetic behaviour and reaction mechanism will be explained. Present theoretical and methodological knowledge will be illustrated by many examples taken from heterogeneous catalysis (complete and partial oxidation), combustion and enzyme processes. Prerequisite: senior or graduate student standing, or permission of instructor.  
Credit 3 units. EN: BME T, TU

#### E44 EECE 597 EECE Project Management

An introduction to the theory and practice of engineering project management, with an emphasis on projects related to environmental protection and occupational health and safety. Topics include: project definition and justification; project evaluation and selection; financial analysis and cost estimation; project planning, including scheduling, resourcing, and budgeting; project oversight, auditing, and reporting; and effective project closure. Students will be introduced to commonly used project management tools and systems, such as work breakdown structures, network diagrams, Gantt charts, and project management software. Topics will also include project management in different organizational structures and philosophies; creating effective project teams; and managing projects in international settings. Prerequisites: Enrolled in MEng program; senior or graduate level standing or permission of instructor

Credit 3 units.

#### E44 EECE 599 Masters Research

Credit variable, maximum 9 units.

## Bachelor of Science in Chemical Engineering

The Bachelor of Science in Chemical Engineering (BSChE) degree program is designed to provide students with comprehensive training in chemical engineering fundamentals. This degree program is accredited by the Engineering Accreditation Commission of ABET under the General Criteria and the Chemical Engineering Program Criteria. The BSChE degree requires the satisfactory completion of a minimum of 126 units as indicated in the BSChE Requirements table below. Of the courses listed in that table, the humanities and social sciences courses (except Engr 450X courses) may be taken pass/fail.

The program of study consists of 25 units of physical and biological sciences (i.e., biology, chemistry and physics); 24 units of mathematics and engineering computing; 38 units of core chemical engineering courses; 21 units of humanities, social sciences and technical writing; and 18 units of chemical engineering electives. The chemical engineering electives permit students to tailor their studies toward specific goals such as obtaining more depth in a chemical engineering subdiscipline (e.g., materials) or increasing breadth by choosing courses from different subdisciplines. Some of these 18 units may be taken in other engineering departments or in the natural sciences or physical sciences. Students, in collaboration with their advisors, design a course of study (subject to certain requirements) for the chemical engineering electives. Consult the EECE department website for more details, including the requirements that must be satisfied by these chemical engineering electives.

### BSChE Requirements

**Total Units Required:** 126

Biological Science	Units
Biology in EECE (EECE 306) or Principles of Biology I (Biol 2960)	3 or 4
<b>Unit Subtotal</b>	<b>3 or 4</b>

Mathematics & Computing	Units
Calculus II, III (Math 132, Math 233)	6
Differential Equations (Math 217)	3
Engineering Mathematics A, B (ESE 318, ESE 319)	6
Introduction to Computer Science (CSE 131)	3
Engineering Statistics with Probability (Engr 328) or Probability and Statistics for Engineering (ESE 326)	3
Computational Modeling in Energy, Environmental and Chemical Engineering (EECE 202)	3
<b>Unit Subtotal</b>	<b>24</b>

Chemical Engineering Core	Units
Introduction to Energy, Environmental and Chemical Engineering (EECE 101)	3
Process Analysis and Thermodynamics (EECE 205)	4
Thermodynamics II in EECE (EECE 204)	3
Transport Phenomena I: Basics and Fluid Mechanics (EECE 301)	3
Transport Phenomena II: Energy and Mass Transfer (EECE 307)	4
Mass Transfer Operations (EECE 304)	3
Materials Science (EECE 305)	3
Chemical Process Dynamics and Control (EECE 401)	3
Chemical Reaction Engineering (EECE 403)	3
Unit Operations Laboratory (EECE 405)	4
Process Design, Economics and Simulation (EECE 409)	2
ChE Capstone (EECE 402)	3
<b>Unit Subtotal</b>	<b>38</b>

Other	Units
Chemical Engineering electives (some of these courses can be taken outside the EECE department)	18
Engineering Ethics and Sustainability (Engr 4501)	1
Engineering Leadership and Team Building (Engr 4502)	1
Conflict Management and Negotiation (Engr 4503)	1
Humanities and social sciences electives	15
Technical Writing (Engr 310)	3
<b>Unit Subtotal</b>	<b>39</b>

### Program Educational Objective

The Program Educational Objective for the BSChE degree program is that, within a few years of graduation, graduates will do the following:

1. Thrive in their professional practice or graduate education, leveraging their knowledge and skills to address complex challenges in chemical engineering or their chosen field.
2. Foster a lifelong commitment to learning, growth, and professional development, seeking opportunities to advance their expertise and contribute to their chemical engineering practice or chosen field.
3. Be dedicated to positively advancing society by promoting equity, diversity, sustainability, and ethical practices in their professional endeavors.

## Bachelor of Science in Environmental Engineering

The Bachelor of Science in Environmental Engineering (BSEnVE) degree program is designed to provide students with comprehensive training in environmental engineering fundamentals. The program has been designed with the goal of receiving accreditation by the Engineering Accreditation Commission of ABET under the General Criteria and the Environmental Engineering Program Criteria. Accreditation can be sought once the program has had its first graduates; the program was launched at the start of the 2018-19 spring semester. The EnvE degree requires satisfactory completion of a minimum of 126 units as indicated in the BSEnVE Requirements table below. Of the courses listed in that table, the humanities and social sciences courses (except Engr 450X courses) may be taken pass/fail.

The program of study consists of 26 units of physical and biological sciences (i.e., biology, chemistry and physics); 21 units of mathematics and engineering computing; 43 units of core environmental engineering courses; 21 units of humanities, social sciences and technical writing; and 15 units of environmental engineering and science electives. The environmental engineering electives permit students to tailor their studies toward specific goals. Some of these 15 units may be taken in other engineering departments, and one course is explicitly required to be chosen from a set of natural science options. Students, in collaboration with their advisors, design a course of study (subject to certain requirements) for the environmental engineering and science electives. Consult the EECE department website for more details, including the requirements that must be satisfied by these environmental engineering and science electives.

### BSEnVE Requirements

**Total Units Required:** 126

Physical Sciences	Units
General Chemistry (Chem 111A or Chem 105, Chem 112A 6 or Chem 106) (111A and 112A Recommended)	
General Chemistry Laboratory (Chem 151, Chem 152)	4
General Physics (Physics 191 or Physics 193, Physics 192 6 or 8 or Physics 194)	

Physics Laboratory (Physics 191L or Physics 193L, Physics 192L or Physics 194L)	2
Organic Chemistry I (Chem 261)	4
<b>Unit Subtotal</b>	<b>22</b>

Biological Science	Units
Principles of Biology I (Biol 2960)	4
<b>Unit Subtotal</b>	<b>4</b>

Mathematics & Computing	Units
Calculus II, III (Math 132, Math 233)	6
Differential Equations (Math 217)	3
Engineering Mathematics A (ESE 318)	3
Introduction to Computer Science (CSE 131)	3
Engineering Statistics with Probability (Engr 328) or Probability and Statistics for Engineering (ESE 326)	3
Computational Modeling in Energy, Environmental and Chemical Engineering (EECE 202)	3
<b>Unit Subtotal</b>	<b>21</b>

Environmental Engineering Core	Units
Introduction to Energy, Environmental and Chemical Engineering (EECE 101)	3
Process Analysis and Thermodynamics (EECE 205)	4
Introduction to Environmental Engineering (EECE 210)	3
Transport Phenomena I: Basics and Fluid Mechanics (EECE 301)	3
Water Resources Engineering (EECE 308)	3
Environmental Engineering Fate and Transport (EECE 309)	3
Green Engineering (EECE 311)	3
Air Quality Engineering with Lab (EECE 314)	4
Environmental Biotechnology (EECE 407)	3
Environmental Engineering Laboratory (EECE 425)	3
Environmental Chemistry Selection (EECE 505 or EECE 531)	3
Physical and Chemical Processes for Water Treatment (EECE 533)	3
Process Design, Economics and Simulation (EECE 409)	2
Environmental Engineering Capstone (EECE 404)	3
<b>Unit Subtotal</b>	<b>43</b>

Other	Units
Environmental Engineering electives (some of these courses can be taken outside the EECE department)	12
Natural science elective	3
Engineering Ethics and Sustainability (Engr 4501)	1
Engineering Leadership and Team Building (Engr 4502)	1
Conflict Management and Negotiation (Engr 4503)	1

Environmental humanities or social sciences elective	3
Other humanities and social sciences electives	12
Technical Writing (Engr 310)	3
<b>Unit Subtotal</b>	<b>36</b>

## Program Educational Objective

The Program Educational Objective for the BSEnvE degree program is that, within a few years of graduation, graduates will do the following:

1. Thrive in their professional practice or graduate education, leveraging their knowledge and skills to address complex challenges in environmental engineering or their chosen field.
2. Foster a lifelong commitment to learning, growth, and professional development, seeking opportunities to advance their expertise and contribute to their environmental engineering practice or chosen field.
3. Be dedicated to positively advancing society by promoting equity, diversity, sustainability, and ethical practices in their professional endeavors.

## Bachelor of Science in Applied Science (Chemical Engineering)

This degree serves students who wish to be exposed to key chemical engineering principles yet seek a more flexible curriculum. In addition to the general requirements for a McKelvey Applied Science Degree (p. 1305), the Bachelor of Science in Applied Science (Chemical Engineering) requires 25 units of core courses as well as at least 8 units of upper-level chemical engineering courses from a list of options. Consult the EECE department website for the specific courses that can be taken to fulfill the requirements of this degree.

## Double Majors and the Pre-Medical Program

### Double Majoring in the EECE Department

The Applied Science/Chemical Engineering (BSAS-ChE) degree cannot be combined as a double major with either environmental engineering (BSEnvE) or chemical engineering (BSChE). Students may, in principle, double major in both environmental engineering (BSEnvE) and chemical engineering (BSChE), but this is not recommended for logistical and course load reasons. Specifically, in the third and fourth years, each of the two majors will have multiple required courses in the same semester, possibly at conflicting times. For example, both Capstone courses would be required.

For students wishing to combine chemical and environmental interests, it is recommended that they major in chemical engineering (BSChE) and minor in environmental engineering science.

## Double Majors & Premedicine

Some students may be able to take more than the 126-unit minimum during a four-year program, especially if they have Advanced Placement units. This permits the choice of additional free electives from such areas as biology, computer science, humanities, social sciences or other engineering courses. It also provides an opportunity to pursue a double major. The rules for combining majors in engineering and multiple majors involving other university divisions are described in the Combined Majors and/or Multiple Degrees (p. 1197) section of the McKelvey School of Engineering *Bulletin*.

Traditionally, the department's undergraduate degrees have been popular with students interested in medicine because the curriculum automatically satisfies many of the premedical requirements. Many of the additional needed courses can be taken as electives.

## The Minor in Environmental Engineering Science

The EECE department sponsors an undergraduate minor in environmental engineering science. This 21-unit program prepares the student to seek an entry-level position as an environmental engineer, scientist or analyst. The minor also provides a solid foundation for undertaking graduate study in environmental engineering. Visit the EECE department website for more information.

**Units required:** 21

**Required courses:**

Select from the following menus:

**Introduction\* (3 units):**

Code	Title	Units
EECE 101	Introduction to Energy, Environmental and Chemical Engineering (fall)	3
EECE 210	Introduction to Environmental Engineering (spring)	3

**Environmental Chemistry\*\* (3 units):**

Code	Title	Units
EECE 505	Aquatic Chemistry (fall)	3
EECE 531	Environmental Organic Chemistry (fall)	3

**Environmental Engineering electives\*\* (9 units):**

Code	Title	Units
EECE 308	Water Resources Engineering (fall)	3
EECE 309	Environmental Engineering Fate and Transport (spring)	3
EECE 311	Green Engineering (fall)	3
EECE 314	Air Quality Engineering with Lab (fall)	4
EECE 407	Environmental Biotechnology (fall)	3

EECE 425	Environmental Engineering Laboratory (spring)	3
EECE 504	Aerosol Science and Technology (fall)	3
EECE 514	Atmospheric Science and Climate (spring)	3
EECE 533	Physical and Chemical Processes for Water Treatment (spring)	3

Additional eligible courses (new courses, special offerings) will be posted on the EECE website as they become available.

**Natural Science (3 units):**

Code	Title	Units
Biol 381	Introduction to Ecology (spring)	3
EEPS 323	Biogeochemistry (spring)	3
EEPS 342	Environmental Systems	3
EEPS 386	The Earth's Climate System	3
EEPS 413	Introduction To Soil Science	3
EEPS 428	Hydrology (fall, most years)	3
EEPS 442	Aqueous Geochemistry	3

**Environmental Policy and Social Science (3 units):**

Code	Title	Units
Econ 451	Environmental Policy (fall)	3
EnSt 310	Ecological Economics (fall)	3
EnSt 346	Environmental Justice (spring)	3
EnSt 347	Sustainable Cities (spring)	3
EnSt 357	Multiparty Environmental Decision Making (spring)	3
EnSt 452	International Climate Negotiation Seminar (fall)	4
EnSt 461	Intro to Environmental Law	3
EnSt 539	Interdisciplinary Environmental Clinic (fall, spring)	var.; max 3

\* First-year students potentially interested in majoring in chemical engineering should take EECE 101; all other students working toward the minor in environmental engineering science should take EECE 210.

\*\*Students taking both environmental chemistry courses can count one of them toward the environmental engineering electives.

## Committee to Oversee Environmental Engineering Science Minor

Daniel Giammar (EECE, Coordinator); Kristen Wyckoff (EECE)

# The Minor in Energy Engineering

**Objective:** The goal of this minor is to provide students with a course work experience that will enhance their background, knowledge and skills in the topical area of energy engineering. The minor encompasses courses in several fields of science and engineering, including the Department of Energy, Environmental & Chemical Engineering; the Department of Electrical & Systems Engineering; and the Department of Mechanical Engineering & Materials Science.

A minor in energy engineering requires the completion of 18 units selected from the following lists. It is open to any undergraduate student pursuing an engineering major, a major in the sciences (biology, chemistry, physics) in Arts & Sciences, or the environmental studies major.

Interested departments should expose students to energy and related concepts in their introductory courses.

**Basic and Applied Sciences (fundamental content) (two courses):**

Code	Title	Units
EECE 205	Process Analysis and Thermodynamics (fall)	4 or 3
or MEMS 301	Thermodynamics	
EECE 301	Transport Phenomena I: Basics and Fluid Mechanics (spring)	3
or MEMS 3410	Fluid Mechanics	
EECE 307	Transport Phenomena II: Energy and Mass Transfer (fall)	3 or 4
or MEMS 3420	Heat Transfer	
ESE 332	Power, Energy, and Polyphase Circuits (spring)	3

\* EECE 303 Transport III: Energy Transfer Processes also fulfilled this requirement, but this course is no longer offered.

**Social Science/Policy/Economics Elective (students choose one course):**

Code	Title	Units
Anthro 3472	Global Energy and the American Dream	3
EnSt 347	Sustainable Cities	3
EnSt 350W	Writing Skills for Environmental Professionals (spring)	3
EnSt 357	Multiparty Environmental Decision Making	3
EnSt 407	RESET - Renewable Energy Policy, Engineering and Business	3
EnSt 451	Environmental Policy (fall)	3

**Electives:**

Students choose three courses. One of the courses is required to be chosen from outside of the student's major degree department. A partner department may approve the use of a course listed under basic and applied sciences as an elective.

Code	Title	Units
EECE 311	Green Engineering (fall)	3
EECE 411	International Experience in EECE (summer/fall)	3
EECE 413	Energy Conversion and Storage	3
EECE 512	Combustion Phenomena (fall)	3
EECE 552	Biomass Energy Systems and Engineering (spring)	3
ESE 434	Solid-State Power Circuits and Applications (fall)	3
ESE 435	Electrical Energy Laboratory (spring)	3
MEMS 412	Design of Thermal Systems (spring)	3
MEMS 5422	Solar Thermal Energy Systems (summer)	3
MEMS 5423	Sustainable Environmental Building Systems (fall)	3
MEMS 5424	Thermo-Fluid Modeling of Renewable Energy Systems	3
MEMS 5705	Wind Energy Systems (spring)	3

## Committee to Oversee Energy Engineering Minor

Peng Bai (EECE, Coordinator); Bruno Sinopoli (ESE); David Peters (MEMS)

The committee ensures that any course added to the above lists contains a significant amount of energy topics and that the entire program is cohesive.

## The Minor in Nanoscale Science & Engineering

Nanotechnology deals with materials, structures and devices with dimensions that are in the 1- to 100-nm length scale. These entities have properties (physical, chemical and biological) that are very different from their bulk counterparts, and they can be tuned to obtain novel and desired functionalities. The goal of this minor is to enhance the student's background, knowledge and skills in the topical area of nanotechnology. The minor includes courses in several fields of science and engineering; it encompasses all of the departments in the McKelvey School of Engineering as well as several departments in Arts & Sciences. It is open to undergraduate students pursuing an engineering degree or a related Arts & Sciences major (e.g., chemistry, physics, biology, environmental studies, pre-med).

The minor in nanoscale science and engineering involves the following components. Starting with courses covering the fundamentals, students gain knowledge in synthesis and applications as well as characterization, structure and modeling. Two additional requirements are the cleanroom lab class (MEMS 5801 Micro-Electro-Mechanical

Systems I) and the completion of a faculty-supervised independent study project over the course of at least two semesters. The mix of courses should provide the student with a significant background in nanotechnology, and it should promote independent thinking through the student's work on a research or educational project.

**Units required:** 18

**Required courses:** Select from the following menus:

**Fundamentals** (choose one course):

Code	Title	Units
Biol 4810	General Biochemistry I	3
Chem 401	Physical Chemistry I	3
Chem 465	Solid-State and Materials Chemistry	3
EECE 305	Materials Science	3
MEMS 3610	Materials Science	3
MEMS 5618	Electronic Behavior of Materials	3
Physics 217	Introduction to Quantum Physics	3
Physics 352	Physics of Biomolecules	3
Physics 472	Solid State Physics	3

**Synthesis and Applications** (choose one course):

Code	Title	Units
EECE 504	Aerosol Science and Technology	3
EECE 534	Environmental Nanochemistry	3
EECE 595	Principles of Methods of Micro and Nanofabrication	3
ESE 436	Semiconductor Devices (EECE 595::Principles of Methods of Micro and Nanofabrication)	3
ESE 438	Applied Optics	3
ESE 532	Introduction to Nano-Photonic Devices	3

MEMS 5603	Materials Characterization Techniques I	3
MEMS 5604	Materials Characterization Techniques II	3
MEMS 5612	Atomistic Modeling of Materials	3

**Cleanroom Laboratory/Theory Class** (choose one course):

Code	Title	Units
MEMS 5801	Micro-Electro-Mechanical Systems I	3
EECE 595	Principles of Methods of Micro and Nanofabrication	3

**Independent Study Project** (required):

Students should sign up for at least **two semesters** of independent study and work on a project related to nanotechnology under the supervision of a faculty member. A list of projects with potential faculty mentors will be circulated during the spring semester each year. Before completing the independent study project, students must be registered for the nanoscale science and engineering minor program, and they must have completed at least two of the courses from the above categories. Students can also come up with their own ideas for projects, but these require approval from the Nanoscale Science and Engineering Minor Committee and a faculty mentor. All independent study projects should address one of the following two criteria:

- Connect material processing to structural features on the length scale of 1 to 100 nm
- Connect structural features on the 1-to-100-nm length scale in a material to its physical or chemical properties

*The courses listed above will count for elective credit for all Engineering majors; however, students should check with their major advisors to confirm this.*

## Committee to Oversee Nanoscale Science and Engineering Minor

Rohan Mishra (MEMS, Coordinator), Elijah Thimsen (EECE)

# Mechanical Engineering & Materials Science

## About Mechanical Engineering & Materials Science

The Department of Mechanical Engineering & Materials Science (MEMS) offers the Bachelor of Science in Mechanical Engineering (BSME) and the Bachelor of Science in Applied Science (Mechanical Engineering). In addition, minors in aerospace engineering, energy engineering, environmental engineering science, materials science & engineering, nanoscale science & engineering, robotics, mechatronics, and mechanical engineering as well as in related scientific and engineering fields are available to students.

The MEMS curriculum emphasizes the core principles of mechanics (i.e., the study of forces, materials and motion) that underlie mechanical engineering. The common curriculum during the student's early academic development encourages breadth of understanding, interdisciplinary thinking and creativity. During their first, sophomore and early junior years, students are focused on learning fundamental concepts in statics, dynamics, fluid mechanics and thermodynamics. During the junior and senior years, students choose electives that

emphasize their specific interests and prepare them for a particular professional or academic career. The undergraduate curriculum for the BSME degree provides MEMS students with a strong base in fundamental mathematics, science and engineering. It exposes the students to diverse applications of mechanics and materials, and it provides them with the flexibility to explore creative ideas through undergraduate research and project-based courses.

Mechanical engineering is critical to a variety of important emerging technologies. Mechanical engineers design and develop artificial organs, prosthetic limbs, robotic devices, adaptive materials, efficient propulsion mechanisms, high-performance aerospace structures, and advanced renewable energy systems. The core concepts of mechanics, thermal systems and materials science are at the heart of these technologies.

## Mission Statement

The MEMS faculty is committed to providing the best possible undergraduate mechanical engineering education possible. We strive to nurture the intellectual, professional and personal development of the students, to continually improve the curriculum, to be professionally current, and to maintain state-of-the-art facilities for teaching and learning.

We seek to prepare students for professional practice with a scientifically grounded foundation in the major topics of mechanical engineering: solid mechanics, mechanical design, dynamics and vibrations, systems control, fluid mechanics, thermal science and materials science.

## Graduate Programs

The department offers programs for graduate study at both the master's and doctoral levels. All programs are designed to direct advanced study into an area of specialization and original research that includes recent scientific and technological advances.

A graduate degree can provide significant advantages and rewards to a mechanical engineer, including increased income and a wider range of career options. Graduate programs include professional, course-option master's degrees (MS and MEng) as well as research-based master's (MS) and doctoral (PhD) degrees. The undergraduate curriculum provides an excellent foundation for graduate study, and a careful selection of electives during the third and fourth years can facilitate the transition to graduate work. The master's degrees can be pursued on a part-time or full-time basis, whereas the PhD degrees are typically pursued by full-time students.

## Faculty

### Chair

**Philip V. Bayly**

The Lee Hunter Distinguished Professor of Mechanical Engineering  
PhD, Duke University  
Nonlinear dynamics, vibrations, biomechanics

### Associate Chairs

**David A. Peters (Mechanical Engineering)**

McDonnell Douglas Professor of Engineering  
PhD, Stanford University  
Aeroelasticity, vibrations, helicopter dynamics, aerodynamics

**Katharine M. Flores (Materials Science)**

Christopher I. Byrnes Professor of Engineering  
PhD, Stanford University  
Mechanical behavior of structural materials

### Endowed Professors

**Ramesh K. Agarwal**

William Palm Professor of Engineering  
PhD, Stanford University  
Computational fluid dynamics, computational physics

**Guy M. Genin**

Harold & Kathleen Faught Professor of Mechanical Engineering  
PhD, Harvard University  
Solid mechanics, fracture mechanics

**Jianjun Guan**

Earl E. & Myrtle E. Walker Professor of Engineering  
PhD, Zhejiang University  
Biomimetic biomaterials synthesis, scaffold fabrication

**Mark J. Jakiela**

Lee Hunter Professor of Mechanical Design  
PhD, University of Michigan  
Mechanical design, design for manufacturing, optimization, evolutionary computation

**Srikanth Singamaneni**

Lilyan and E. Lisle Hughes Professor of Mechanical Engineering  
PhD, Georgia Institute of Technology  
Microstructures of cross-linked polymers

### Professors

**Amit Pathak**

PhD, University of California, Santa Barbara  
Cellular biomechanics

**Jessica E. Wagenseil**

DSc, Washington University  
Arterial biomechanics

### Associate Professors

**Spencer P. Lake**

PhD, University of Pennsylvania  
Soft-tissue biomechanics

**Xianglin Li**

PhD, University of Connecticut  
Multiphase heat and mass transfer in energy systems; computational fluid dynamics

**J. Mark Meacham**

PhD, Georgia Institute of Technology  
Micro-/nanotechnologies for thermal systems and the life sciences

**Rohan Mishra**

PhD, The Ohio State University  
Computational materials science

**Patricia B. Weisensee**

PhD, University of Illinois at Urbana-Champaign  
Thermal fluids

### Assistant Professors

**Sang-Hoon Bae**

PhD, University of California, Los Angeles  
Materials growth, optoelectronics, renewable energy

**Matthew R. Bersi**

PhD, Yale University  
Biomedical engineering

### Professor of the Practice

**Swami Karunamoorthy**

DSc, Washington University  
Helicopter dynamics, engineering education

### Teaching Professors

**Emily J. Boyd**

PhD, University of Texas at Austin  
Thermofluids

**Ruth J. Okamoto**

DSc, Washington University  
Biomechanics, solid mechanics

### Research Professor

**Anders E. Carlsson**

PhD, Harvard University  
Biophysical Modeling, Mechanobiology

## Joint Faculty

### **Richard L. Axelbaum (Energy, Environmental & Chemical Engineering)**

Stifel & Quinette Jens Professor of Environmental Engineering Science  
PhD, University of California, Davis  
Combustion, nanomaterials

### **Christopher Cooper (Energy, Environmental & Chemical Engineering)**

PhD, Stanford University  
Responsive, soft materials for applications in energy storage, environmental sustainability and human health

### **Elliot L. Elson (Biochemistry & Molecular Biophysics)**

Professor Emeritus of Biochemistry & Molecular Biophysics  
PhD, Stanford University  
Biochemistry, molecular biophysics

### **Michael D. Harris (Physical Therapy, Orthopaedic Surgery, and Mechanical Engineering & Materials Science)**

PhD, University of Utah  
Whole body and joint-level orthopaedic biomechanics

### **Kenneth F. Kelton (Physics)**

Arthur Holly Compton Professor of Arts & Sciences  
PhD, Harvard University  
Study and production of titanium-based quasicrystals and related phases

### **Eric C. Leuthardt (Neurological Surgery and Biomedical Engineering)**

MD, University of Pennsylvania School of Medicine  
Neurological surgery

### **Lori Setton (Biomedical Engineering)**

Lucy and Stanley Lopata Distinguished Professor of Biomedical Engineering  
PhD, Columbia University  
Biomechanics for local drug delivery, tissue regeneration specific to the knee joints and spine

### **Matthew J. Silva (Orthopaedic Surgery)**

Julia and Walter R. Peterson Orthopaedic Research Professor  
PhD, Massachusetts Institute of Technology  
Biomechanics of age-related fractures and osteoporosis

### **Simon Tang (Orthopaedic Surgery and Biomedical Engineering)**

PhD, Rensselaer Polytechnic Institute  
Biological mechanisms

## Senior Professors

### **Phillip L. Gould**

PhD, Northwestern University  
Structural analysis and design, shell analysis and design, biomechanical engineering

### **Kenneth L. Jerina**

DSc, Washington University  
Materials, design, solid mechanics, fatigue, fracture

### **Shankar M.L. Sastry**

PhD, University of Toronto  
Materials science, physical metallurgy

### **Barna A. Szabo**

PhD, State University of New York at Buffalo  
Numerical simulation of mechanical systems, finite-element methods

## Senior Lecturer

### **J. Jackson Potter**

PhD, Georgia Institute of Technology  
Senior design

### **Louis G. Woodhams**

BS, University of Missouri–St. Louis  
Computer-aided design

## Lecturers

### **Chiamaka Asinugo**

MS, Washington University  
Mechanical engineering design

### **Sharniece Holland**

PhD, University of Alabama  
Additive manufacturing, mathematics

### **Jeffery Krampf**

MS, Washington University  
Fluid mechanics, modeling, design

### **H. Shaun Sellers**

PhD, Johns Hopkins University  
Mechanics, materials

## Adjunct Instructors

### **Ricardo L. Actis**

DSc, Washington University  
Finite element analysis, numerical simulation, aircraft structures

### **Robert G. Becnel**

MS, Washington University  
FE review

### **Andrew W. Cary**

PhD, University of Michigan  
Computational fluid dynamics

### **Richard S. Dyer**

PhD, Washington University  
Propulsion, thermodynamics, fluids

### **Timothy W. Jackson**

PhD, University of Washington  
Structural analysis, dynamics

---

**Richard R. Janis**

MS, Washington University  
Building environmental systems

**Gary D. Renieri**

PhD, Virginia Polytechnic Institute and State University  
Structural applications, composite materials

**Krishnan K. Sankaran**

PhD, Massachusetts Institute of Technology  
Metallic materials

**Michael C. Wendl**

DSc, Washington University  
Mathematical theory, computational methods in biology and engineering

## Majors

Please visit the following pages for more information about our undergraduate programs:

- Bachelor of Science in Mechanical Engineering (p. 1298)
- Bachelor of Science in Applied Science (Mechanical Engineering) (p. 1300)

## Minors

Please visit the following pages for information about our minors:

- Minor in Aerospace Engineering (p. 1300)
- Minor in Energy Engineering (p. 1285)
- Minor in Environmental Engineering Science (p. 1284)
- Minor in Materials Science & Engineering (p. 1301)
- Minor in Mechanical Engineering (p. 1302)
- Minor in Mechatronics (p. 1303)
- Minor in Nanoscale Science & Engineering (p. 1286)
- Minor in Robotics (p. 1303)

## Courses

Visit online course listings to view semester offerings for E37 MEMS.

---

**E37 MEMS 1001 Machine Shop Practicum**

Operation of basic machine tools including: lathe, drill press, grinder and mill. Machine tool use and safety are covered. Student shop privilege requires completion of this practicum.  
Credit 1 unit. EN: TU

---

**E37 MEMS 1004 Advanced Machine Shop Practicum**

Students will learn to use the vertical machining centers (LPM and 2op), bed mill, and CNC Lathe. Conversation programming and CAD/CAM programming will be taught. Learning to load and unload tooling, set tooling offset, reconcile tools within a program, satisfy machine operational requirements, and complete safety checks will be part of the learning experience. You will learn to read G-Code and M-Code generated by the CAM program and recognize machining events in real time. Pre-requisites: MEMS 1001 Machine Shop Practicum.  
Credit 1 unit. EN: TU

---

**E37 MEMS 101 Introduction to Mechanical Engineering and Mechanical Design**

Mechanical engineers face new challenges in the areas of energy, materials, and systems. This course introduces students to these areas through team-based, hands-on projects that emphasize engineering design, analysis, and measurement skills.

Credit 2 units. EN: TU

---

**E37 MEMS 103 Computer Aided Design - AutoCAD**

AutoCAD is the most used two-dimensional drawing software for Architectural and Engineering production drawings. Introduction to AutoCAD, title blocks, drawing setup, absolute and relative coordinates, drawing entities, layouts, drafting geometry, dimensioning, plotting drawings to scale, sectional and other special views, isometric pictorial views. Classwork involves typical drawings from industry.

Credit 1 unit. EN: TU

---

**E37 MEMS 2000 Introduction to Electrical and Electronic Circuits for Mechanical Engineering**

The purpose of the course is to introduce and expand student knowledge of the field of electrical circuits. The course will be tailored to better meet the needs of Mechanical Engineering students and should not be a substitution for the traditional ESE students. The course will be a lecture/lab environment and introduce students to various concepts necessary to analyze basic electrical circuits. The main objective is to give each student a comfort level in the subject of electrical circuits, which will serve as both a basis for further study and a valuable life-long asset. Topics to be covered include: electrical energy and power, current, voltage, and circuit elements (resistors, capacitors, inductors, diodes, transistors, and operational amplifiers), Ohm's law, magnetic fields and motors, Kirchhoff's laws, Thevenin/Norton, superposition, circuit analysis, maximum power transfer, RL circuits, RC circuits, RLC circuits, filters, basic operational amplifier circuits, AC/DC power supplies, Arduino microcontroller, level shifters, I2C bus interface, stepper motor drivers, servo motor/encoder system, and PWM. Prerequisites: Phys 192 or 194. Corequisite: Math 217. The class format will be a lecture/lab combination where major lab projects will be the basis for lecture material.

Credit 3 units.

---

**E37 MEMS 201 Numerical Methods and Matrix Algebra**

This course provides students with computational tools for solving mechanical, structural, and aerospace engineering problems. An introduction to MATLAB will be presented, including data input/output, program flow control, functions and graphics. Topics covered include matrices, determinants, rank, vector spaces, solutions of linear systems, interpolation and curve fitting, numeric differentiation and integration, eigenvalue and initial-value problems, nonlinear equations, and optimization. Each topic will be treated in the context of a typical engineering application. Prerequisite: Math 217.

Credit 3 units. EN: TU

---

**E37 MEMS 202 Computer-Aided Design**

An introduction to computer aided engineering design in the context of mechanical and structural engineering. Students learn the fundamentals of spatial reasoning and graphical representation. Freehand sketching skills, including pictorial and orthographic views, are applied to the design process. Computer modeling techniques provide accuracy, analysis, and visualization tools necessary for the design of structures, devices and machines. Topics include: detailing design for production, fasteners, dimensioning, tolerancing, creation of part and assembly drawings, computer aided design, analysis and optimization of parts and assemblies; solid modeling of complex surfaces, assembly modeling, assembly constraints, and interference checking.

Credit 2 units. EN: TU

---

**E37 MEMS 203 Advanced Computer-Aided Design**

Topics covered will include computer-aided design, analysis, and optimization of parts and assemblies; solid modeling of complex surfaces, creation of detail drawings, and dimensioning and tolerancing; assembly modeling, assembly constraints, and interference checking; motion constraints, force and acceleration analysis, and thermal analysis; and part optimization for weight, strength, and thermal characteristics using SOLIDWORKS software. Prerequisite: MEMS 202 or equivalent.

Credit 3 units. EN: TU

---

**E37 MEMS 205 Mechanics and Materials Science Laboratory**

Laboratory experiments and exercises focusing on mechanical properties of engineering materials; metallography; heat treatment; beam deflection; stress and strain measurement; properties and structure of engineering materials; calibration and use of instrumentation; acquisition, processing, and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports; and presentation of data. Prerequisite: MEMS 253 Corequisite: MEMS 3610

Credit 2 units. EN: TU

---

**E37 MEMS 253 Statics and Mechanics of Materials**

Principles of statics, solid mechanics, force systems and equilibrium. Equivalent systems of forces and distributed forces. Applications to trusses, frames, machines, beams, and cables. Mechanics of deformable solids and indeterminate problems. Stress, strain, deflection, yield and failure in beams, columns, and torsion members. Prerequisites: Physics 197 Co-requisites: Math 217

Credit 3 units. EN: TU

---

**E37 MEMS 255 Dynamics**

Review of vector algebra and calculus. Kinematics of a particle. Newton's laws and the kinetics of a particle. Work and energy. Impulse and momentum. Kinematics of rigid bodies. General theorems for systems of particles. Kinetics of rigid bodies. The inertia tensor. Computer problems form a significant part of the class. Corequisite: Math 217

Credit 3 units. EN: TU

---

**E37 MEMS 301 Thermodynamics**

This course of classical thermodynamics is oriented towards mechanical engineering applications. It includes properties and states of a substance, processes, cycles, work, heat, and energy. Steady-state and transient analyses utilize the First and Second Laws of Thermodynamics for closed systems and control volumes, as well as the concept of exergy. Prerequisites: Chem 105 or 111A, Math 132, Phys 197.

Credit 3 units. EN: BME T, TU

---

**E37 MEMS 305 Fluid Mechanics and Heat Transfer Laboratory**

Laboratory experiments and exercises focusing on fluid properties, flow phenomena, thermal science and heat transfer phenomena; calibration and use of instrumentation; acquisition, processing, and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports; and presentation of data. Prerequisites: MEMS 3410 Corequisite: MEMS 3420

Credit 2 units. EN: TU

---

**E37 MEMS 3110 Machine Elements**

This course includes weekly lectures and a bi-weekly lab. Lectures introduce the engineering design process, review stresses and failure theories, and present a variety of machine elements (such as bearings, shafts, gears, belts, springs, etc.) and their governing equations. In lab, students use a commercial CAD package (SolidWorks) to create and constrain models of machine assemblies, analyze stresses in machine components, and create animations to demonstrate machine motion. Course material is presented in the context of a semester-long engineering design problem that culminates in a final group project. Student teams generate their own design concept to embody in CAD and characterize it with engineering and analytical models. Prerequisite: MEMS 253 Corequisite: MEMS 3610

Credit 3 units. EN: BME T, TU

---

**E37 MEMS 312 Multidisciplinary Design & Prototyping**

This hands-on course introduces students to the engineering design process and a variety of prototyping tools and techniques. Skills are developed through weekly studios, individual exercises, and a design project performed in small groups. Lectures focus on design principles and real-world issues for engineered products. The theme for this semester is "environmental data collectors," seeking to create accurate, robust, low-cost, and easy-to-use devices that measure and record physical conditions (such as temperature, chemical content, noise, light, wind velocity, etc.) for ecological and environmental research.

Credit 3 units. EN: BME T, TU

---

**E37 MEMS 3410 Fluid Mechanics**

Fundamental concepts of fluids as continua. Topics include: viscosity, flow fields, velocity, vorticity, streamlines, fluid statics, hydrostatic forces, manometers, conservation of mass and momentum, incompressible inviscid flow, dimensional analysis and similitude, flow in pipes and ducts, flow measurement, boundary-layer concepts, flow in open channels. Corequisite: MEMS 255. Prerequisites: Math 233 and Math 217.

Credit 3 units. EN: BME T, TU

---

**E37 MEMS 3420 Heat Transfer**

This course provides an introductory treatment of the principles of heat transfer by conduction, convection, or radiation; analysis of steady and unsteady conduction with numerical solution methods; analytical and semi-empirical methods of forced and natural convection; boiling and condensation heat transfer; and radiation heat transfer. Prerequisites: MEMS 3410 and MEMS 301, ESE 319, and MEMS 201 or ESE 318.

Credit 3 units. EN: BME T, TU

---

**E37 MEMS 350 Solid Mechanics**

A continuation of MEMS 253 containing selected topics in the mechanics of deformable solids, presented at a level intermediate between introductory strength of materials and advanced continuum mechanics. Lectures will discuss elastic and elasto-plastic response, failure criteria, composites, beams, and structural stability, as well as an introduction of the tensorial formulation of stress and strain and the governing equations of 3-D linear elasticity. Mathematical methods from calculus, linear algebra and linear differential equations will be used. Computer problems form a significant part of the class. MEMS 255 not required. Prerequisite: MEMS 253; Corequisite: MEMS 201 or ESE 318.

Credit 3 units. EN: BME T, TU

---

**E37 MEMS 3610 Materials Science**

Introduction to properties, chemistry and physics of engineering materials; conduction, semiconductors, crystalline structures, imperfections, phase diagrams, kinetics, mechanical properties, ceramics, polymers, corrosion, magnetic materials, and thin films;

relationship of atomic and molecular structure to physical and chemical properties; selection of materials for engineering applications; relationships between physical properties, chemical properties and performance of engineering materials. Prerequisite: Chem 105 or 111A and 151

Credit 3 units. Arch: ETH, NS EN: BME T, TU

---

### **E37 MEMS 400 Independent Study**

Independent investigation on topic of special interest. Prerequisites: junior or senior standing and permission of department chair. Students must complete the Independent Study Approval Form available in the department office.

Credit variable, maximum 3 units.

---

### **E37 MEMS 4001 Fundamentals of Engineering Review**

A review and preparation of the most recent NCEES Fundamentals of Engineering (FE) Exam specifications is offered in a classroom setting. Exam strategies will be illustrated using examples. The main topics for the review include: engineering mathematics, statics, dynamics, thermodynamics, heat transfer, mechanical design and analysis, material science and engineering economics. A discussion of the importance and responsibilities of professional engineering licensure along with ethics will be included.

Credit 1 unit.

---

### **E37 MEMS 4050 Vibrations Lab**

Laboratory experiments, data analysis, and simulation, focusing on vibration of mechanical systems; kinematic and dynamic response; and design of mechanisms and machine components; displacements, velocities, and accelerations in mechanical systems and components; response to static and dynamic forces; transient and steady state response; design of mechanical components for power transmission; calibration and use of instrumentation; acquisition, processing, and analysis of data; principles of experimentation and measurement; statistical analysis of data; preparation of laboratory reports and presentation of data. MATLAB will be used for data analysis and simulation. Pre-requisites: MEMS 3110 Co-requisite: MEMS 4310.

Credit 1 unit. EN: TU

---

### **E37 MEMS 4101 Manufacturing Processes**

Manufacturing processes and machinery are explained and described. Topics include: analytical tools of machine science, heat transfer, vibrations and control theory are applied to the solution of manufacturing problems, analytical development and application of engineering theory to manufacturing problems, machine tools and automated production equipment.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 411 Mechanical Engineering Design Project**

Student groups work on an open-ended mechanical design problem and finish the semester by presenting a physical prototype and a formal report to an external review board. Groups are guided through the engineering design process by completing a set of project deliverables. The quality of these deliverables provides a basis for evaluation of individual and team performance. This course emphasizes the importance of user-centric design, communication and presentation skill, consideration of real-world constraints, sketching and creativity, prototyping, and data-driven decision making using engineering models and analyses. Prerequisites: MEMS 3110 & MEMS 3420

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 412 Design of Thermal Systems**

Analysis and design of advanced thermo-fluid systems. Student teams participate in the design process which could involve research, design synthesis, codes, standards, engineering economics, a design project report, and formal presentations. Topics include thermo-fluid systems and components such as: power, heating and refrigeration systems; pumps, fans, compressors, combustors, turbines, nozzles, coils, heat exchangers and piping. Prerequisite: MEMS 301 Thermodynamics

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 424 Introduction to Finite Element Methods in Structural Analysis**

Application of finite element methods to beams, frames, trusses and other structural components. Modeling techniques for different types of structural engineering problems. Topics in stress analysis, applied loads, boundary conditions, deflections and internal loads, matrix methods, energy concepts, structural mechanics and the development of finite element modeling methods. Prerequisites: MEMS 253, MEMS 350 and MEMS 201 (or ESE 318).

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 4301 Modeling, Simulation and Control**

Introduction to simulation and control concepts. Topics include: block diagram representation of single- and multi-loop systems, control system components, transient and steady-state performance, stability analysis, Nyquist, Bode, and root locus diagrams, compensation using lead, lag and lead-lag networks, design synthesis by Bode plots and root-locus diagrams, state-variable techniques, state-transition matrix, state-variable feedback. Prerequisite: MEMS 255, ESE 318 and ESE 319.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 4310 Vibrations**

Introduction to the analysis of vibrations in single- and multi-degree of freedom systems; free and forced vibration of multi-degree of freedom and distributed parameter mechanical systems and structures; methods of Laplace transform; complex harmonic balance; matrix formulation; Fourier series; and transient response of continuous systems by partial differential equations. Prerequisites: MEMS 255, ESE 319, and MEMS 201 or ESE 318

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 463 Nanotechnology Concepts and Applications**

The aim of this course is to introduce to students the general meaning, terminology and ideas behind nanotechnology and its potential application in various industries. The topics covered will include nanoparticles - properties, synthesis and applications, carbon nanotubes - properties, synthesis and applications, ordered and disordered nanostructured materials and their applications, quantum wells, wires and dots, catalysis and self-assembly, polymers and biological materials, nanoelectronics and nanophotonics, nanomanufacturing and functional nano-devices, health effects and nanotoxicity etc. Prerequisite: none, students with background in general physics, chemistry and biology should be able to comprehend the material.

Credit 3 units.

---

### **E37 MEMS 500 Independent Study**

Independent investigation on topic of special interest. Prerequisites: graduate standing and permission of the department chair. Students must complete the Independent Study Approval Form available in the department office.

Credit variable, maximum 3 units.

---

### **E37 MEMS 5001 Optimization Methods in Engineering**

Analytical methods in design. Topics include: mathematical methods, linear and nonlinear programming, optimality criteria, fully stressed techniques for the design of structures and machine components, topological optimization, search techniques and genetic algorithms. Knowledge of calculus and computer programming is expected.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 501 Graduate Seminar**

This is a required pass/fail course for masters and doctoral degrees. A passing grade is required for each semester of full-time enrollment. A passing grade is received by attendance at the weekly seminars.

---

### **E37 MEMS 5102 Materials Selection in Design**

Analysis of the scientific bases of material behavior in the light of research contributions of the last 20 years. Development of a rational approach to the selection of materials to meet a wide range of design requirements for conventional and advanced applications. Although emphasis will be placed on mechanical properties, acoustical, optical, thermal and other properties of interest in design will be discussed.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5104 CAE-Driven Mechanical Design**

An introduction to the use of computer-aided engineering (CAE) tools in the mechanical design process. Topics include: integrating engineering analysis throughout the process; multi-disciplinary optimization; and computer-aided design directed toward new manufacturing processes. Students will work with commercial and research software systems to complete several projects. Students should have experience and familiarity with a CAD tool, optimization and the finite element method. Prerequisite: MEMS 202 Computer-Aided Design or equivalent

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5301 Nonlinear Vibrations**

In this course students are introduced to concepts in nonlinear dynamics and vibration and application of these concepts to nonlinear engineering problems. Specific topics include: modeling of lumped and continuous nonlinear systems (strings, beams, and plates); vibrations of buckled structures; perturbation and other approximate analytical methods; the use and limitations of local linearization; properties of nonlinear behavior, such as dimension and Lyapunov exponents; stability of limit cycles; bifurcations; chaos and chaotic vibrations; experimental methods and data analysis for nonlinear systems. Concepts will be reinforced with a number of examples from recently published research. Applications will include aeroelastic flutter, impact dynamics, machine-tool vibrations, cardiac arrhythmias, and control of chaotic behavior.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5302 Theory of Vibrations**

Analytical methods in vibrations. Topics include: Duhamel's integral, Laplace and Fourier transforms, and Fourier series with applications to transient response, forced response, and vibration isolation, Lagrange's equations for linear systems, discrete systems, degrees of freedom, reducible coordinates, holonomic constraints, and virtual work, matrix methods and state variable approach with applications to frequencies and modes, stability, and dynamic response in terms of real and complex modal expansions, dynamic response of continuous systems by theory of partial differential equations, Rayleigh-Ritz and Galerkin energy methods, finite difference and finite element algorithms.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5401 General Thermodynamics**

General foundations of thermodynamics valid for small and large systems, and for equilibrium and non-equilibrium states. Topics include: definitions of state, work, energy, entropy, temperature, heat interaction, and energy interaction. Applications to simple systems, phase rule, perfect and semi-perfect gas, bulk-flow systems, combustion, energy and entropy balances, availability analysis for thermo-mechanical power generation, and innovative energy-conversion schemes. Prerequisite: Graduate standing or permission of instructor.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5403 Conduction and Convection Heat Transfer**

This course examines heat conduction and convection through various fundamental problems that are constructed from the traditional conservation laws for mass, momentum, and energy. Problems include the variable-area fin, the unsteady Dirichlet, Robbins, and Rayleigh problems, multi-dimensional steady conduction, the Couette flow problem, duct convection, and boundary layer convection. Though some numerics are discussed, emphasis is on mathematical technique and includes the extended power series method, similarity reduction, separation of variables, integral transforms, and approximate integral methods.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5404 Combustion Phenomena**

This course provides an introduction to fundamental aspects of combustion phenomena, including relevant thermochemistry, fluid mechanics, and transport processes as well as the interactions among them. Emphasis is on elucidation of the physico-chemical processes, problem formulation and analytic techniques. Topics covered include non-premixed and premixed flames, deflagrations and detonations, particle combustion, flame extinction, flame synthesis, pollutant formation and methods of remediation. Contemporary topics associated with combustion are discussed throughout. Prerequisite: Senior or graduate standing or permission of instructor. Same as E44 EECE 512

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5410 Fluid Dynamics I**

This course covers the fundamentals of incompressible fluid flow. Topics include: fundamental equations (continuity and Navier-Stokes Equations), basic solutions for steady and unsteady flows; laminar and turbulent boundary layer analysis; free shear flows; integral analysis, similarity solutions; turbulent flow on plates, pipes, and channels; computational fluid dynamics software

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5411 Fluid Dynamics II**

Governing equations and thermodynamics relations for compressible flow. Topics include: kinetic theory of gases, steady, one-dimensional flows with friction and heat transfer, shock waves, Rankine-Hugoniot relations, oblique shocks, reflections from walls and flow interfaces, expansion waves, Prandtl-Meyer flow, flow in nozzles, diffusers and inlets, two- and three dimensional flows, perturbation methods, similarity rules, compressible laminar and turbulent boundary layers, acoustic phenomena. Emphasis is relevant to air vehicles.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5412 Computational Fluid Dynamics**

Computational fluid dynamics relevant to engineering analysis and design. Topics include: fundamentals of finite-difference, finite-volume, and finite-element methods, numerical algorithms for parabolic, elliptic, and hyperbolic equations, convergence, stability, and consistency of numerical algorithms, application of numerical

algorithms to selected model equations relevant to fluid flow, grid-generation techniques, and convergence acceleration schemes. Prerequisites: Senior or graduate standing or permission of the instructor.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5413 Advanced Computational Fluid Dynamics**

Scope and impact of computational fluid dynamics. Governing equations of fluid mechanics and heat transfer. Three-dimensional grid-generation methods based on differential systems. Numerical methods for Euler and compressible Navier-Stokes equation. Numerical methods for incompressible Navier-Stokes equations. Computation of transonic inviscid and viscous flow past airfoils and wings. Analogy between the equations of computational fluid dynamics, computational electromagnetics, computational aeroacoustics, and other equations of computational physics. Non-aerospace applications - Bio-fluid mechanics, fluid mechanics of buildings, wind and water turbines, and other energy and environment applications. Prerequisites: MEMS 5412 or permission of the instructor.

Credit 3 units. EN: TU

---

### **E37 MEMS 5414 Aeroelasticity & Flow-Induced Vibrations**

This course deals with the interactions between aerodynamics, dynamics and structures in aerospace systems. Topics covered will include unsteady aerodynamics, finite-state aerodynamic models, classical fixed-wing flutter, rotary-wing aeroelasticity and experimental methods in aeroelasticity. Emphasis will be given to the prediction of flutter and limit cycles in aeroelastic systems

Credit 3 units. EN: TU

---

### **E37 MEMS 5417 Physical Acoustics**

The primary focus of this course is on plane waves as an introduction to acoustical concepts of propagation, reflection and transmission, refraction, normal modes, horn theory, and absorption and dispersion. The course also includes more complicated problems (e.g., those involving spherical and cylindrical waves) and selected topics in applied acoustics including materials/damping, imaging, nondestructive evaluation, and acoustic microfluidics.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5422 Solar Thermal Energy Systems**

Fundamentals of radiation heat transfers and solar radiation, including basic terminology, atmospheric scattering and absorption, radiation interactions with surfaces, and selective surfaces. Components, cycles, and materials of concentrating solar power plants, including parabolic trough and solar towers. Overview over thermal storage, other solar thermal technologies and photovoltaics. This course includes a final project. Prerequisite: MEMS 3420 or equivalent

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5423 Sustainable Environmental Building Systems**

Sustainable design of building lighting and HVAC systems considering performance, life-cycle cost and downstream environmental impact. Criteria, codes and standards for comfort, air quality, noise/vibration and illumination. Life cycle and other investment methods to integrate energy consumption/conservation, utility rates, initial cost, system/component longevity, maintenance cost and building productivity. Direct and secondary contributions to acid rain, global warming and ozone depletion.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5424 Thermo-Fluid Modeling of Renewable Energy Systems**

Overview of sustainable energy systems. Fundamentals of energy conversion. Renewable energy sources and energy conversion from wind, biomass, solar-thermal, geothermal, and ocean/waves. Applications to energy storage, fuel cells, green air and ground transportation, energy - efficient buildings. Energy-economics modeling, emissions modeling, global warming and climate change. Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5427 Fundamentals of Fuel Cells**

This course is intended for the graduate and senior undergraduate Mechanical Engineering/ Materials Science/Chemical Engineering students interested in obtaining a fundamental background in fuel cell systems. Several types of fuel cells will be discussed, and the fundamental thermodynamics, kinetics of electrochemistry processes, and charge and mass transfer of fuel cells will be introduced. The primary focus will be placed on low temperature fuel cells based on polymer based electrolytes. The design, operation, performance, and reliability/durability of fuel cell systems will be discussed in detail. Specific interests to mechanical engineers, including water management and thermal management, will be a main focus of this course. Furthermore, the state of art research and development of fuel cell technologies may be presented through reading assignments from current literature.

Credit 3 units.

---

### **E37 MEMS 5500 Elasticity**

Elastic constitutive relations for isotropic and anisotropic materials. Formulation of boundary-value problems. Application to torsion, flexure, plane stress, plane strain, and generalized plane stress problems. Solution of three-dimensional problems in terms of displacement potentials and stress functions. Solution of two-dimensional problems using complex variables and conformal mapping techniques. Variational and minimum theorems.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5501 Mechanics of Continua**

A broad survey of the general principles governing the mechanics of continuous media. Topics include: general vector and tensor analysis, rigid body motions, deformation, stress and strain rate, large deformation theory, conservation laws of physics, constitutive relations, principles of continuum mechanics and thermodynamics, two-dimensional continua. Prerequisite: ESE 501/502 or instructor's permission.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5502 Plates and Shells**

Introduction to the linear theory of thin elastic plates and shells. The emphasis is on application and the development of physical intuition. The first part of the course focuses on the analysis of plates under various loading and support conditions. The remainder of the course deals mainly with axisymmetric deformation of shells of revolution. Asymptotic methods are used to solve the governing equations. Applications to pressure vessels, tanks, and domes. Prerequisites: BME 240 or MEMS 253; ESE 318 and ESE 319 or equivalent.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5506 Experimental Methods in Solid Mechanics**

Current experimental methods to measure mechanical properties of materials will be covered. Lectures include theoretical principles, measurement considerations, data acquisition and analysis techniques. Lectures are complemented by laboratory sections using research equipment such as biaxial testing machines, pressure myographs, indentation devices for different scales, and viscometers.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5507 Fatigue and Fracture Analysis**

The course objective is to demonstrate practical methods for computing fatigue life of metallic structural components. The course covers the three major phases of metal fatigue progression: fatigue crack initiation, crack propagation and fracture. Topics include: stress vs. fatigue life analysis, cumulative fatigue damage, linear elastic fracture mechanics, stress intensity factors, damage tolerance analysis, fracture toughness, critical crack size computation and load history development. The course focus is on application of this technology to design against metal fatigue and to prevent structural failure. Prerequisite: MEMS 350

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5508 Image-based Measurement of Shape, Motion, and Deformation**

Many engineering analysis and design applications require the knowledge of how materials respond to applied loads. This course will provide an overview of various imaging and computer vision techniques to measure full-field object characteristics including shape, motion, and deformation. Selected topics will include basic geometrical optics, lenses and mirrors, single camera models and calibration, image processing, digital image correlation (in multiple dimensions), stereo vision, photogrammetry, strain calculations, and inverse methods. This course is intended for graduate and upper-level students interested in experimental solid mechanics and practical applications of image processing and analysis.

Credit 3 units.

---

### **E37 MEMS 5562 Cardiovascular Mechanics**

This course focuses on solid and fluid mechanics in the cardiac and cardiovascular system. Cardiac and cardiovascular physiology and anatomy. Solid mechanics of the heart, heart valves, arteries, veins, and microcirculation. Flow through the heart chambers and blood vessels. Prerequisites: graduate standing or permission of instructor.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5564 Orthopaedic Biomechanics-Cartilage/Tendon**

Basic and advanced viscoelasticity and finite strain analysis applied to the musculoskeletal system, with a primary focus on soft orthopaedic tissues (cartilage, tendon, and ligament). Topics include: mechanical properties of cartilage, tendon, and ligament; applied viscoelasticity theory for cartilage, tendon, and ligament; cartilage, tendon, and ligament biology; tendon and ligament wound healing; osteoarthritis. This class is geared to graduate students and upper level undergraduates familiar with statics and mechanics of deformable bodies. Prerequisites: BME 240 or equivalent. Note: BME 590Z (463/563) Orthopaedic Biomechanics--Bones and Joints is NOT a prerequisite.

Credit 3 units. EN: TU

---

### **E37 MEMS 5565 Mechanobiology of Cells and Matrices**

At the interface of the cell and the extracellular matrix, mechanical forces regulate key cellular and molecular events that profoundly affect aspects of human health and disease. This course offers a detailed review of biomechanical inputs that drive cell behavior in physically diverse matrices. In particular, cytoskeletal force-generation machineries, mechanical roles of cell-cell and cell-matrix adhesions, and regulation of matrix deformations are discussed. Also covered are key methods for mechanical measurements and mathematical modeling of cellular response. Implications of matrix-dependent cell motility in cancer metastasis and embryonic development are discussed. Prerequisite: graduate standing or permission of the instructor

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5566 Engineering Mechanobiology**

Engineering Mechanobiology is a new paradigm for understanding and manipulating the biological function of plants, animals, and their cells. Mechanical force has emerged as a critical component of all biological systems, providing mechanisms to sculpt plants and animals during morphogenesis, to enable cell migration, polarization, proliferation, and differentiation in response to physical changes in the environment, and to modulate the function of single molecules. This course provides a foundation for understanding these factors across plant and animal cells. The course begins with an introduction to plant and animal cell biology and principles of signaling, then progresses to an overview of the cell wall and ECM and an introduction to the mechanics and statistical mechanics of solid, viscoelastic, and fibrous continua. The course then focuses on the questions of how do cells feel, how do cells converse with the ECM and wall, and how do cells remember? Knowledge of undergraduate calculus and physics is expected.

Credit 3 units. EN: TU

---

### **E37 MEMS 5601 Mechanical Behavior of Materials**

A materials science based study of mechanical behavior of materials with emphasis on mechanical behavior as affected by processes taking place at the microscopic and/or atomic level. The response of solids to external or internal forces as influenced by inter atomic bonding, crystal/molecular structure, crystalline/non crystalline defects, and material microstructure will be studied. The similarities and differences in the response of different kinds of materials viz., metals and alloys, ceramics, polymers, and composites will be discussed. Topics covered include physical basis of elastic, visco elastic, and plastic deformation of solids; strengthening of crystalline materials; visco elastic deformation of polymers as influenced by molecular structure and morphology of amorphous, crystalline, and fibrous polymers; deformation and fracture of composite materials; mechanisms of creep, fracture and fatigue; high strain-rate deformation of crystalline materials; and deformation of non crystalline materials.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5602 Non-metallics**

Structure, mechanical, and physical properties of ceramics and cermets, with particular emphasis on the use of these materials for space, missile, rocket, high-speed aircraft, nuclear, and solid-state applications.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5603 Materials Characterization Techniques I**

An introduction to the basic theory and instrumentation used in transmission electron, scanning electron, and optical microscopy. Practical laboratory experience in equipment operations, experimental procedures, and material characterization.

Credit 3 units. EN: BME T, TU

---

### **E37 MEMS 5604 Materials Characterization Techniques II**

Introduction to crystallography and elements of X-ray physics. Diffraction theory and application to materials science including following topics: reciprocal lattice concept, crystal-structure analysis, Laue methods, rotating crystal methods, powder method, and laboratory methods of crystal analysis.

Credit 3 units. EN: BME T, TU

---

**E37 MEMS 5605 Mechanical Behavior of Composites**

Analysis and mechanics of composite materials. Topics include micromechanics, laminated plate theory, hydrothermal behavior, creep, strength, failure modes, fracture toughness, fatigue, structural response, mechanics of processing, nondestructive evaluation, and test methods. Prerequisite: Graduate standing or permission of the instructor.

Credit 3 units. EN: BME T, TU

---

**E37 MEMS 5606 Soft Nanomaterials**

Soft nanomaterials, which range from self-assembled monolayers (SAMs) to complex 3D polymer structures, are gaining increased attention owing to their broad range applications. The course intends to introduce the fundamental aspects of nanotechnology pertained to soft matter. Various aspects related to the design, fabrication, characterization and application of soft nanomaterials will be discussed. Topics that will be covered include but not limited to SAMs, polymer brushes, Layer-by-Layer assembly, responsive polymers structures (films, capsules), polymer nanocomposites, biomolecules as nanomaterials and soft lithography.

Credit 3 units. EN: BME T, TU

---

**E37 MEMS 5607 Introduction to Polymer Blends and Composites**

The course covers topics in multicomponent polymer systems (polymer blends and polymer composites) such as: phase separation and miscibility of polymer blends, surfaces and interfaces in composites, microstructure and mechanical behavior, rubber toughened plastics, thermoplastic elastomers, block copolymers, fiber reinforced and laminated composites, techniques of polymer processing with an emphasis on composites processing, melt processing methods such as injection molding and extrusion, solution processing of thin films, selection of suitable processing methods and materials selection criteria for specific applications. Advanced topics include: nanocomposites such as polymer/CNT composites, bioinspired nanocomposites, and current research challenges. Prerequisite: MEMS 3610 or equivalent or permission of instructor.

Credit 3 units. EN: BME T, TU

---

**E37 MEMS 5608 Introduction to Polymer Science and Engineering**

Topics covered in this course are: the concept of long-chain or macromolecules, polymer chain structure and configuration, microstructure and mechanical (rheological) behavior, polymer phase transitions (glass transition, melting, crystallization), physical chemistry of polymer solutions (Flory-Huggins theory, solubility parameter, thermodynamics of mixing and phase separation), polymer surfaces and interfaces, overview of polymer processing (extrusion, injection molding, film formation, fiber spinning) and modern applications of synthetic and bio-polymers.

Credit 3 units. EN: BME T, TU

---

**E37 MEMS 5610 Quantitative Materials Science & Engineering**

This course will cover the mathematical foundation of primary concepts in materials science and engineering. Topics covered include mathematical techniques in materials science and engineering; Fourier series; ordinary and partial differential equations; special functions; matrix algebra; and vector calculus. Each topic will be followed by its application to concepts in thermodynamics; kinetics and phase transformations; structure and properties of hard and soft matter; and characterization techniques. This course is intended especially for students pursuing graduate study in materials science.

Credit 3 units. EN: BME T, TU

---

**E37 MEMS 5611 Principles and Methods of Micro and Nanofabrication**

A hands-on introduction to the fundamentals of micro- and nano-fabrication processes with emphasis on cleanroom practices. The physical principles of oxidation, optical lithography, thin film deposition, etching and metrology methods will be discussed, demonstrated and practiced. Students will be trained in cleanroom concepts and safety protocols. Sequential micro-fabrication processes involved in the manufacture of microelectronic and photonic devices will be shown. Training in imaging and characterization of micro- and nano-structures will be provided. Prerequisite: graduate or senior standing or permission of the instructor

Credit 3 units. EN: BME T, TU

---

**E37 MEMS 5612 Atomistic Modeling of Materials**

This course will provide a hands-on experience using atomic scale computational methods to model, understand and predict the properties of real materials. It will cover modeling using classical force-fields, quantum-mechanical electronic structure methods such as density functional theory, molecular dynamics simulations, and Monte Carlo methods. The basic background of these methods along with examples of their use for calculating properties of real materials will be covered in the lectures. Atomistic materials modeling codes will be used to calculate various material properties. Prerequisites: MEMS 3610 or equivalent or permission of instructor.

Credit 3 units. EN: BME T, TU

---

**E37 MEMS 5613 Biomaterials Processing**

Biomaterials with 3D structures are important for tissue regeneration. The goal of this class is to introduce various types of biomaterials and fabrication approaches to create 3D structures. The relationship between material properties, processing methods, and design will be the primary focus. The topics include degradable biomaterials for scaffold fabrication, processing of tissue engineering scaffolds, processing of tissue engineering hydrogels, processing of drug delivery systems, and scaffold surface modification.

Credit 3 units. EN: BME T, TU

---

**E37 MEMS 5614 Polymeric Materials Synthesis and Modification**

Polymer is a class of widely used material. Polymer performance is highly dependent on its chemical properties. The goal of this class is to introduce methods for synthesis and modification of polymers with different chemical properties. The topics include free radical polymerization, reversible addition-fragmentation chain transfer polymerization, atom transfer radical polymerization, step growth polymerization, cationic polymerization, anionic polymerization, ring-opening polymerization, and bulk and surface modification of polymers.

Credit 3 units. EN: BME T, TU

---

**E37 MEMS 5615 Metallurgy and Design of Alloys**

The design of materials used in critical structures such as in airplanes entails optimizing and balancing multiple properties (e.g., strength, fracture toughness, corrosion resistance) to satisfy often conflicting requirements (e.g., better fuel efficiency, lower cost, operation in extreme conditions). Properties of metallic materials are determined by their "microstructure," which in turn is determined by their compositions and processing paths. An understanding of the multivariate relationships among compositions, processing parameters, microstructures, and properties is therefore essential to designing alloys and predicting their behavior in service. This course will discuss these relationships, with emphasis on the hierarchy of microstructural features, how they are achieved by processing, and how they interact to provide desirable property combinations -- essentially

the physical metallurgy of alloys. The discussion will be based on examples from alloys used in airframes, engines, and automobiles and on their design for state-of-the-art processes such as additive manufacturing. Prerequisite: MEMS 3610.

Credit 3 units. EN: BME T, TU

---

### E37 MEMS 5616 Defects in Materials

Defects in materials play a critical role in controlling the properties of solids, which makes them interesting and necessary to study. The objective of this course is to provide a broad overview of defects in crystalline solids, their effect on properties, and methods of characterizing them. Course topics include crystal structures, defect classification, defect interactions, the role of defects in controlling properties of materials, and characterization techniques.

Credit 3 units. EN: BME T, TU

---

### E37 MEMS 5617 Advanced Study of Solid-State Electronics

This course is designed for students who want to pursue advanced study in solid-state materials and electronic applications. It will provide fundamentals of 1) basic solid-state physics 2) phase equilibria and fabrication of emerging solid-state materials: 3D thin films (III-V, III-N, complex oxide) and low dimensional materials (0D, 1D, 2D) 3) electrical and photonic properties and 4) property manipulation: doping and strain engineering. Students will learn various emerging solid-state electronic devices such as HEMT, nano-materials based TFT, QD LEDs, nanogenerators, advanced solar cells and more. The goal of this course is to help students understand fundamentals to design new solid-state device architectures. The course is particularly beneficial for students who have an interest in the emerging semiconductor field.

Credit 3 units. EN: BME T, TU

---

### E37 MEMS 5618 Electronic Behavior of Materials

This course is designed for students who want to understand electronic behavior of materials which is related to electronic/semiconductor research and industry. It will provide fundamentals of 1) crystal structures and bonding of electronic materials, 2) electronic movement in various materials, 3) electronic behavior in junctions, 4) electronic, optic, and magnetic properties correlation, 5) various electronic applications such as solar cells, light-emitting diodes, and transistors. The goal of the course is to help students understand basic knowledge and fundamental about electronic behavior in materials. The course is particularly beneficial for students who have an interest in the semiconductor research and industry.

Credit 3 units.

---

### E37 MEMS 5619 Thermodynamics of Materials

Thermodynamics of mixtures and phase equilibria in materials systems. The course will review the laws of thermodynamics and introduce the principles of statistical mechanics along with thermodynamic variables and the relationships between them. It will cover thermodynamic equilibria in unary and multicomponent systems along with the construction of phase diagrams. The use of thermodynamics for understanding surfaces and interfaces, defects, chemical reactions, and other technical applications will be emphasized.

Credit 3 units.

---

### E37 MEMS 5700 Aerodynamics

This course introduces fundamental concepts of aerodynamics, equations of compressible flows, irrotational flows and potential flow theory, singularity solutions, circulation and vorticity, the Kutta-Joukowski theorem, thin airfoil theory, finite wing theory, slender body theory, subsonic compressible flow and the Prandtl-Glauert rule, supersonic thin airfoil theory, an introduction to performance, and basic concepts of airfoil design. Prerequisite: MEMS 3410 or permission of instructor.

Credit 3 units. EN: BME T, TU

---

### E37 MEMS 5701 Aerospace Propulsion

Propeller, jet, ramjet and rocket propulsion. Topics include: fundamentals of propulsion systems, gas turbine engines, thermodynamics and compressible flow, one-dimensional gas dynamics, analysis of engine performance, air breathing propulsion system, the analysis and design of engine components, and the fundamentals of ramjet and rocket propulsion.

Credit 3 units. EN: BME T, TU

---

### E37 MEMS 5703 Analysis of Rotary-Wing Systems

This course introduces the basic physical principles that govern the dynamics and aerodynamics of helicopters, fans and wind turbines. Simplified equations are developed to illustrate these principles, and the student is introduced to the fundamental analysis tools required for their solution. Topics include: harmonic balance, Floquet theory and perturbation methods.

Credit 3 units. EN: BME T, TU

---

### E37 MEMS 5704 Aircraft Structures

Basic elements of the theory of elasticity; application to torsion of prismatic bars with open and closed thin-wall sections; the membrane analogy; the principle of virtual work applied to 2D elasticity problems. Bending, shear and torsion of open and closed thin-wall section beams; principles of stressed skin construction, structural idealization for the stress analysis of wings, ribs and fuselage structures. Margin of safety of fastened connections and fittings. Stability of plates, thin-wall section columns and stiffened panels. Application of the finite element method for the analysis of fastened connections, structural fittings and problems of local stability of aircraft structural components.

Credit 3 units.

---

### E37 MEMS 5705 Wind Energy Systems

A comprehensive introduction to wind energy systems, a practical means of extracting green and sustainable energy. Topics include: a historical perspective of wind turbines; horizontal axis and vertical axis wind turbines; the basic parameters such as power rating and efficiency; the structural components ranging from blade and hub to nacelle and tower; wind turbine aerodynamics, aeroelasticity and control systems; blade fatigue; statistical wind modeling; unsteady airfoil aerodynamics and downstream wake; and environmental considerations such as noise and aesthetics. Prerequisite: senior or graduate standing in engineering, or permission of the instructor.

Credit 3 units. EN: BME T, TU

---

### E37 MEMS 5706 Aircraft Performance

This course introduces the principles and applications of aerodynamics to determine the performance of typical jet engine and propeller airplanes. The performance calculations include flight conditions of takeoff, climb, level flight, and landing. The topics covered also include range and endurance computation, turning flight, flight envelope, constraint analysis and design process. The knowledge and skill gained in this course can be readily applied in the preliminary design of an airplane. Prerequisite: senior or graduate standing in engineering, or permission of the instructor.

Credit 3 units. EN: BME T, TU

---

### E37 MEMS 5707 Flight Dynamics

The course objective is to introduce methods for analyzing and simulating flight vehicle dynamics and to assess performance characteristics. Topics will include: aerodynamics, structural dynamics, vehicle forces and moments, vehicle equations of motion, rigid body and flexible body considerations, model linearization, longitudinal

and lateral stability, stability and control augmentation, and aircraft handling qualities. The course focus is on the application of flight dynamics principles and MATLAB will be used extensively for modeling and simulation assignments and demonstrations.

Credit 3 units. EN: TU

---

#### **E37 MEMS 5801 Micro-Electro-Mechanical Systems I**

Introduction to MEMS: Microelectromechanical systems (MEMS) are ubiquitous in chemical, biomedical, and industrial (e.g., automotive, aerospace, printing) applications. This course will cover important topics in MEMS design, micro-/nanofabrication, and their implementation in real-world devices. The course will include discussion of fabrication and measurement technologies (e.g., physical/chemical deposition, lithography, wet/dry etching, and packaging), as well as application of MEMS theory to design/fabrication of devices in a cleanroom. Lectures will cover specific processes and how those processes enable the structures needed for accelerometers, gyros, FR filters, digital mirrors, microfluidics, micro total-analysis systems, biomedical implants, etc. The laboratory component will allow students to investigate those processes first-hand by fabricating simple MEMS devices.

Credit 3 units. EN: BME T, TU

---

#### **E37 MEMS 597 MEMS Research Rotation**

Independent research project that will be determined jointly by the doctoral student and the instructor. Assignments may include background reading, presentations, experiments, theoretical, and/or modeling work. The goal of the course is for the doctoral student to learn the background, principles, and techniques associated with research topics of interest and to determine a mutual fit for the student's eventual doctoral thesis laboratory.

Credit 3 units.

---

#### **E37 MEMS 598 Energy Analysis and Design Project**

The Energy Analysis and Design Project is designed to provide mechanical engineering skills in energy applications, renewable energy, and technologies related to energy which can involve heat transfer, thermodynamics, and fluid mechanics. The project topic can be chosen by the student or can be developed by both the student and faculty sponsor. The subsequent research and analysis, conducted under the guidance and direction of the faculty sponsor, results in a final project report that is approved by the faculty sponsor. The course is normally completed over one or two semesters. Recent projects have included: Energy Modeling and Efficiency Improvements: A Comparison of TRACE 700 and eQuest, Analysis of Hydroelectric Power, Optimization of Residential Solar Thermal Heating in the United States, Analysis of Ocean Thermal Energy Conversion Systems, Laboratory Plug Load Analysis and Case Study, Modeling and Optimizing Hydronic Radiant Heating and Cooling Systems using Comsol Multiphysics, CFD Analysis in HVAC Applications, Energy Analysis of Waste Disposal Methods, CFD Analysis of Containment Solutions for Data Center Cooling, Energy Recovery Ventilation, Comparative Study of Green Building Rating Systems, Grid Energy Storage, Protection of Permafrost Under the Qinghai-Tibet Railway by Heat Pipe Technology, Investing in Residential Solar Photovoltaic Systems, How Piping Layout Effects Energy Usage, and Comparison of Building Energy Savings Between China and the United States.

Credit variable, maximum 3 units.

---

#### **E37 MEMS 599 Masters Research**

Credit variable, maximum 6 units.

---

## **Bachelor of Science in Mechanical Engineering**

The mission of the undergraduate program in mechanical engineering is to prepare students within the broad and evolving field of mechanical engineering. The program instills in students a capacity for creative design through critical and analytical thought. The Bachelor of Science in Mechanical Engineering (BSME) is the first step toward a career in industry, academia or government; it encourages a commitment to independent lifelong learning and professional development. In addition to their technical studies, students learn to communicate their ideas clearly and to conduct themselves in an ethical and socially responsible manner.

### **Program Educational Objectives**

Program educational objectives are broad statements that describe what graduates are expected to attain within a few years of graduation. These objectives are based on the needs of the program's constituencies.

Within a few years of graduation, graduates of the BSME program are expected to do the following:

- Engage in professional practice and/or advanced study
- Further their knowledge and skills through education and/or professional development
- Serve society by using and communicating their knowledge and values

### **Student Outcomes**

The Mechanical Engineering program has the following student outcomes that describe what students are expected to know and be able to do by the time of graduation. These relate to the knowledge, skills and behaviors that students acquire as they progress through the program.

The student outcomes of the BSME program are as follows:

- An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
- An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
- An ability to communicate effectively with a range of audiences
- An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts
- An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives

- An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
- An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

## Curriculum

The curriculum is a four-year program leading to the first professional degree, the BSME, and it is accredited by the Engineering Accreditation Commission of ABET under the Commission's General Criteria and Program Criteria for Mechanical Engineering. The curriculum prepares the student for professional practice or postgraduate education in a broad spectrum of mechanical and other engineering or professional fields. It provides critical knowledge in solid mechanics, fluid mechanics, thermodynamics and heat transfer, materials science, dynamics and control, and design. It includes 34 units of mathematics and basic sciences, 58 units of engineering topics, and 28 units of general education for a total degree requirement of 120 units. The general education requirement includes 18 units of social science and humanities.

Core courses must be taken for credit (i.e., for a grade). The social science and humanities courses may be taken on a pass/fail basis. The undergraduate program provides the necessary foundations in these areas and the opportunity to specialize in topics of particular interest. Specialization is accomplished via the judicious choice of engineering electives taken as 300-, 400- or 500-level courses approved by the student's advisor. At the end of the four-year program, the student is ready to go on to graduate education or into research or professional practice.

### Basic Core Courses

### Humanities, Social Sciences and Writing

Code	Title	Units
Humanities and social sciences (refer to McKelvey School of Engineering degree requirements for details)		18
Engr 310	Technical Writing	3
Free elective		3
<b>Total Units</b>		<b>24</b>

### Mathematics and Basic Science

Code	Title	Units
Math 132	Calculus II	3
Math 217	Differential Equations	3
Math 233	Calculus III	3
MEMS 201 or ESE 318	Numerical Methods and Matrix Algebra Engineering Mathematics A	3
ESE 319	Engineering Mathematics B	3
ESE 326	Probability and Statistics for Engineering	3
Chem 111A or Chem 105	General Chemistry I Principles of General Chemistry I	3

Chem 151	General Chemistry Laboratory I	2
Physics 191 or Physics 193	Physics I Focused Physics I	3-4
Physics 191L or Physics 193L	Physics I Laboratory Focused Physics I Laboratory	1
Physics 192L	Physics II Laboratory	1
Physics 192 or Physics 194	Physics II Focused Physics II	3-4
Physical or Life Science (200 level or above natural science course in Biology; Chemistry; Physics; Earth, Environmental, and Planetary Sciences; or Environmental Studies)		3
<b>Total Units</b>		<b>34-36</b>

## Mechanical Engineering

Code	Title	Units
CSE 131	Introduction to Computer Science	3
MEMS 1001	Machine Shop Practicum	1
MEMS 101	Introduction to Mechanical Engineering and Mechanical Design	2
MEMS 2000	Introduction to Electrical and Electronic Circuits for Mechanical Engineering	3
MEMS 202	Computer-Aided Design	2
MEMS 205	Mechanics and Materials Science Laboratory	2
MEMS 253	Statics and Mechanics of Materials	3
MEMS 255	Dynamics	3
MEMS 301	Thermodynamics	3
MEMS 305	Fluid Mechanics and Heat Transfer Laboratory	2
MEMS 3110	Machine Elements	3
MEMS 3410	Fluid Mechanics	3
MEMS 3420	Heat Transfer	3
MEMS 350	Solid Mechanics	3
MEMS 3610	Materials Science	3
MEMS 4050	Vibrations Lab	2
MEMS 411	Mechanical Engineering Design Project	3
MEMS 412	Design of Thermal Systems	3
MEMS 4301	Modeling, Simulation and Control	3
MEMS 4310	Vibrations	3
MEMS senior electives		9
<b>Total Units</b>		<b>62</b>

\* MEMS 4050 will increase to 2 units in Fall 2026.

## Bachelor of Science in Applied Science (Mechanical Engineering)

The Bachelor of Science in Applied Science (Mechanical Engineering) program provides substantive and consistent training in mechanical engineering with maximum flexibility. This program is advantageous if a student wishes to pursue a more flexible program than the accredited Bachelor of Science in Mechanical Engineering (BSME) degree program.

Students who do not desire to become licensed engineers but who seek to acquire analytical engineering thinking skills may choose to pursue this program. The added degree flexibility allows these students to pursue additional second majors and/or minors and to increase their ability to participate in programs such as study abroad. It is especially suitable for a double major in combination with mathematics, physics, chemistry, biology, economics or another engineering discipline. The program can be planned to provide a background for graduate work in biological, medical or management fields. The Bachelor of Science in Applied Science is a nonprofessional degree; it is not accredited by the Engineering Accreditation Commission of ABET.

The degree requirements include the residency and general requirements of the university and the school. The Bachelor of Science in Applied Science (Mechanical Engineering) degree requirements are as follows:

- Complete a total of at least 120 applicable units
- Complete a minimum of 60 units at Washington University
- Complete at least 42 units at the 300 level or higher
- Complete at least 48 units in mathematics, natural science and engineering
- Complete at least 30 units of mechanical engineering (MEMS) courses
- Satisfy the McKelvey School of Engineering English composition requirement
- Satisfy the McKelvey School of Engineering humanities and social sciences requirement
- Satisfy the residency requirement of 30 units of 200-level or higher engineering courses
- Earn at least a 2.0 cumulative grade-point average in all applicable courses taken at Washington University
- Earn at least a 2.0 cumulative GPA in all engineering courses

### Pre-Medical Option

Research and practice in the biological and medical sciences increasingly involves advanced technology, including mechanical engineering. For those interested in a career in medicine, the pre-medical option in MEMS makes it possible to obtain an accredited Bachelor of Science while simultaneously meeting the admission requirements of most medical and dental schools. The program also

provides a foundation for graduate study and research in biomedical engineering. The essential requirements of the pre-medical option are two semesters of general biology (Biol 2960, Biol 2970); two semesters of general chemistry with a laboratory (Chem 111A, Chem 151, Chem 112A, Chem 152, Chem 261, Chem 262); and one semester of biochemistry (Biol 451). Psychology (Psych 100B) and sociology are highly recommended. One semester of organic chemistry may be counted as an upper-level MEMS elective; the student must take 6 units of other upper-level mechanical engineering electives to complete the 9-unit requirement. The pre-medical option is easier for those who have a high school background in biology or who, by reason of advanced placement in math/science, have reduced requirements in the Common Studies portion of the curriculum. For additional information about the pre-medical option, please refer to the Pre-Medical Education (p. 1200) section of this *Bulletin*, which is located in the introduction to the McKelvey School of Engineering's Undergraduate Programs. Interested individuals may also contact the pre-health advisor, Jessica Allen, at [jessicaa@wustl.edu](mailto:jessicaa@wustl.edu) for additional information.

## The Minor in Aerospace Engineering

Whether students are intent on a career in aviation or simply enthusiastic about space and flight, a minor in aerospace engineering can satisfy their scientific curiosity, prepare them for a job, or uncover opportunities for technical contributions. The minor in aerospace engineering is available to all undergraduates, but it is most attractive to those pursuing a degree in mechanical engineering. The minor in aerospace engineering requires a minimum of 15 units of courses selected from the list below; it is possible to earn the minor without increasing the number of units (120) required for the Bachelor of Science in Mechanical Engineering (BSME).

Aerospace engineering deals with the analysis, design and performance of flight vehicles such as transport and military aircraft, helicopters, missiles and launch vehicles, and spacecraft. Students learn about aerospace engineering by taking courses in aerodynamics, aircraft flight dynamics and control, aerospace propulsion, aerospace structures and aerospace vehicle design. Students may also have the opportunity to gain experience in aerospace engineering design through collaborative programs with local companies such as Boeing. Aerospace engineers from industry teach courses as adjunct instructors at Washington University, and many Washington University faculty members have extensive aerospace industry experience.

**Units required: 15**

**Required courses (6 units):**

Code	Title	Units
MEMS 4301 or ESE 441	Modeling, Simulation and Control Control Systems	3
MEMS 5700	Aerodynamics	3
<b>Total Units</b>		<b>6</b>

**Core courses (3-6 units):**

Code	Title	Units
MEMS 5701	Aerospace Propulsion	3
MEMS 5704	Aircraft Structures	3

**Electives (3-6 units):**

Any course from the aerospace MS concentration list (PDF) can be used as an aerospace minor elective.

To find out more about this minor, contact the department chair or the advisor for the minor in aerospace engineering, or visit the Minors page of the Mechanical Engineering & Materials Science website.

## The Minor in Materials Science & Engineering

Materials Science & Engineering (MSE) is an interdisciplinary field that applies the fundamental knowledge of the physical sciences to create engineering innovations. In general, the term *engineering* refers to actively designing a system for a given application; MSE enables the design of systems from the atoms up. MSE focuses on the interrelationship between a material's structure (from the subatomic level to the macro scale) and the properties or behaviors that the material exhibits. Materials synthesis and processing techniques enable engineers to control and change the material structure in order to obtain the desired properties. Understanding the structure-properties-processing relationship requires a fundamental knowledge of the underlying chemistry and physics, and it is key to obtaining materials with the desired performance for engineering applications in a wide variety of fields, from computing to medicine to energy.

The minor in MSE builds upon the fundamental insights into material structure and properties gained through required introductory courses in chemistry and materials science. Students then select at least two courses from specialization "pick lists" to gain depth in a particular application area. A free elective provides the opportunity to gain additional depth in the fundamentals or exposure to another application area.

For more information, students should contact the advisor for the Minor in Materials Science & Engineering: Professor Katharine Flores (floresk@wustl.edu) (MEMS).

Some courses have prerequisites. Students will be approved for the minor after discussing appropriate course selection with the advisor for the minor.

## Requirements

**Units required: 17**

Courses	Units
Three required courses	8
Two courses from specialization "pick lists"	6
One free elective	3
<b>Total Units</b>	<b>17</b>

## Required Courses\*

Code	Title	Units
Chem 111A	General Chemistry I	3
Chem 151 or MEMS 205	General Chemistry Laboratory I Mechanics and Materials Science Laboratory	2
MEMS 3610 or EECE 305	Materials Science Materials Science	3
<b>Total Units</b>		<b>8</b>

\* Students majoring in geology, geophysics, geochemistry or environmental earth science may substitute EEPS 352 Earth Materials for the required combination of Chem 111A and Chem 151. In this case, EEPS 352 may not be used to fulfill the specialization pick list or free elective requirements.

## Specialization "Pick Lists"

Students should select at least two courses (6 units) from any one of the following categories:

### Structural Materials

Code	Title	Units
MEMS 5506	Experimental Methods in Solid Mechanics	3
MEMS 5507	Fatigue and Fracture Analysis	3
MEMS 5601	Mechanical Behavior of Materials	3
MEMS 5605	Mechanical Behavior of Composites	3
MEMS 5615	Metallurgy and Design of Alloys	3
MEMS 5616	Defects in Materials	3

### Electronic/Optical Materials

Code	Title	Units
Chem 543	Physical Properties of Quantum Nanostructures	3
ESE 429	Basic Principles of Quantum Optics and Quantum Information	3
ESE 436	Semiconductor Devices	3
ESE 531	Nano and Micro Photonics **	3
MEMS 463	Nanotechnology Concepts and Applications	3
MEMS 5611 or MEMS 5801	Principles and Methods of Micro and Nanofabrication Micro-Electro-Mechanical Systems I	3
MEMS 5617	Advanced Study of Solid-State Electronics	3
MEMS 5618	Electronic Behavior of Materials	3
Physics 472	Solid State Physics	3

## Biomaterials/Soft Materials

Code	Title	Units
BME 479	Biofabrication & Medical Devices	3
BME 432	Physics of Biopolymers	3
or BME 532	Physics of Biopolymers and Bioinspired Polymers	
BME 523	Biomaterials Science	3
Chem 452	Synthetic Polymer Chemistry	3
Chem 462	Synthetic Polymer Chemistry Laboratory	3
MEMS 5606	Soft Nanomaterials	3
MEMS 5607	Introduction to Polymer Blends and Composites	3
MEMS 5608	Introduction to Polymer Science and Engineering	3
MEMS 5613	Biomaterials Processing	3
MEMS 5614	Polymeric Materials Synthesis and Modification	3

## Materials for Energy and Environmental Technologies

Code	Title	Units
Chem 426	Inorganic Electrochemistry and Photochemistry **	3
EECE 504	Aerosol Science and Technology	3
EECE 505	Aquatic Chemistry	3
EECE 574	Electrochemical Engineering	3

## Natural Materials

Code	Title	Units
EEPS 336	Minerals and Rocks in the Environment	3
EEPS 567	Planetary Materials	3

\*\* Offered sporadically.

## Free Electives

To complete the minor, students may select one additional course (3 units) from the categories above or from the list of courses below:

Code	Title	Units
Chem 465	Solid-State and Materials Chemistry ***	3
or Chem 5620	Solid-State and Materials Chemistry	
MEMS 4101	Manufacturing Processes	3
MEMS 5102	Materials Selection in Design	3
MEMS 5610	Quantitative Materials Science & Engineering	3
MEMS 5612	Atomistic Modeling of Materials	3
MEMS 5619	Thermodynamics of Materials	3
Physics 217	Introduction to Quantum Physics	3
Physics 318	Introduction to Quantum Physics II	3
Physics 537	Kinetics of Materials	3

\*\* Chem 465 and Chem 5620 are co-taught and cover the same material. Chem 465 is intended for undergraduates, while Chem 5620 is intended for graduate students. Students with credit for one of these courses may not be allowed to enroll in the other, and only one version of the course can be counted toward the minor.

Students may also fulfill the free elective with 3 credits of MEMS 400 Independent Study for an independent study project on an MSE topic. The project topic and description must be preapproved by the advisor for the minor.

Website: <https://mems.wustl.edu/academics/undergraduate/Minors.html>

## The Minor in Mechanical Engineering

The minor in mechanical engineering complements a major in a field related to mechanical engineering, such as biomedical engineering, electrical engineering, physics, chemistry or architecture. The minor is intended to provide students with a credential that could enhance their opportunities for employment or graduate study. Completion of the minor demonstrates that the student has pursued a structured program approved by the faculty of the Department of Mechanical Engineering & Materials Science.

Students pursuing the minor in mechanical engineering must complete a total of 15 units of course work as described below. Courses selected for the minor program may count toward program requirements of the student's major. The subjects selected for a minor in mechanical engineering are expected to constitute a coherent program within the field of mechanical engineering. Courses taken under the pass/fail grading option cannot be used for a minor program.

### Required courses:

Code	Title	Units
MEMS 253	Statics and Mechanics of Materials	3
or BME 240	Biomechanics	
MEMS 255	Dynamics	3
or Physics 411	Mechanics	
MEMS 350	Solid Mechanics	3
<b>Total Units</b>		<b>9</b>

### Two electives from the following list:

Code	Title	Units
MEMS 301	Thermodynamics	3
or BME 320B	Bioengineering Thermodynamics	
MEMS 3110	Machine Elements	3
MEMS 3410	Fluid Mechanics	3
MEMS 3610	Materials Science	3
MEMS 4310	Vibrations	3

To find out more about this minor, contact the department chair or the advisor for the minor in mechanical engineering or visit the Minors webpage.

## The Minor in Mechatronics

Advancements in power electronics, electronic sensors, and computer hardware and software have led to an expanding role for "smart" systems, which combine electronic and mechanical components. Automotive examples illustrate this point. The replacement of carburetors by fuel injection systems is almost universal, and hybrid/electric cars are replacing traditional automobiles. Not only are auxiliary devices such as fuel pumps, air bags and air-conditioner compressors driven by electric motors controlled by microprocessors, but fundamental components such as intake and outtake valves soon will be driven in this way. The internal combustion engine itself may be replaced by fuel cells and motors. Medical devices, micro-electromechanical systems, robots, fly-by-wire aircraft and wind turbines also all rely on electronic sensing of mechanical parameters and actuation of motion. These examples suggest strongly that engineers who are adept in the design, analysis and simulation of electromechanical systems will be in demand. The minor in mechatronics is created to encourage our students to study this important subject and provide recognition to those who do so.

This program is primarily designed for students in the ESE and MEMS departments and has been approved by the two departments. It is available for others as well.

The proposed minor program consists of four required courses, two electives and one prerequisite:

### Four required courses:

Code	Title	Units
ESE 444	Sensors and Actuators	3
ESE 446	Robotics: Dynamics and Control	3
MEMS 255	Dynamics	3
MEMS 411	Mechanical Engineering Design Project (mechatronics project)	3
<b>Total Units</b>		<b>12</b>

### Two electives chosen from the following:

Code	Title	Units
ESE 436	Semiconductor Devices	3
ESE 482	Digital Signal Processing	3
MEMS 4301	Modeling, Simulation and Control	3
or ESE 441	Control Systems	
MEMS 4310	Vibrations	3

### Prerequisite:

Code	Title	Units
CSE 131	Introduction to Computer Science (basic programming course)	3

For more information about the minor, contact Dennis Mell (ESE) or Jackson Potter (MEMS).

## The Minor in Robotics

Robotic systems have a wide range of applications in modern technology and manufacturing. Robots can vary in complexity and use, from the microrobots used for surgical procedures to the moderate-sized robots common in manufacturing and undersea exploration to the macrorobots used for the disposal of nuclear waste and as arms on space-station modules. The program designed for a minor in robotics provides a fundamental understanding of robotic operation and preliminary training in the design and use of robots.

**Units required:** 18

### Prerequisites:

Code	Title	Units
CSE 131	Introduction to Computer Science	3
Math 217	Differential Equations	3
Physics 191 & 191L	Physics I and Physics I Laboratory	4
Physics 192 & 192L	Physics II and Physics II Laboratory	4

### Required courses:

Code	Title	Units
ESE 351 or MEMS 4310	Signals and Systems Vibrations	3
ESE 446	Robotics: Dynamics and Control	3
ESE 4480	Control Systems Design Laboratory	3
MEMS 255	Dynamics	3
<b>Total Units</b>		<b>12</b>

Two additional courses must be chosen with the approval of the director of the program for a minor in robotics. Suggested courses include the following:

Code	Title	Units
CSE 417T	Introduction to Machine Learning	3
CSE 546T	Computational Geometry	3
ESE 441 or MEMS 4301	Control Systems Modeling, Simulation and Control	3
MEMS 3110	Machine Elements	3

For more information about the minor, contact Dennis Mell (ESE) or Jackson Potter (MEMS).

# University of Missouri- St. Louis/Washington University Joint Undergraduate Engineering Program

In 1993, Washington University and the University of Missouri–St. Louis held the first classes in the Joint Undergraduate Engineering Program. This partnership — the first of its kind in the United States — offers University of Missouri–St. Louis students the opportunity to benefit from the engineering program at Washington University and its century-long tradition of excellence. Effective in October 1999, the three bachelor's degrees (civil, electrical and mechanical engineering) offered in our joint program were accredited by the Engineering Accreditation Commission of ABET. In addition to being the first undergraduate engineering degrees offered in a public/private partnership, these are also the first such degrees to receive ABET accreditation.

The courses are organized for both full-time students and part-time students with daytime commitments who need to attend classes in the evening. Students who enter the program take about half of their course work — mathematics, physics, chemistry, humanities and social sciences — on the campus of the University of Missouri–St. Louis. The remaining half of the degree program, which consists of upper-level engineering courses and laboratories, is taken on the Washington University campus. Students may choose civil, electrical or mechanical engineering. Students receive their undergraduate engineering degrees from the University of Missouri.

For information about this program, please contact the University of Missouri–St. Louis Joint Undergraduate Engineering Program at 314-516-6800 or the Washington University McKelvey School of Engineering at 314-935-6510.

Website: <https://engineering.wustl.edu/about/UMSL-joint-undergraduate-engineering-program.html>

## Faculty

### Faculty Members at the University of Missouri–St. Louis

#### Dean

##### Joseph A. O'Sullivan

Samuel C. Sachs Professor of Electrical Engineering  
PhD, University of Notre Dame

#### Associate Dean

##### Haiyan Cai

PhD, University of Maryland

## Associate Director of Advising and Student Services

##### Mary E. McManus

MEd, University of Missouri–St. Louis

## Degree Requirements

Undergraduate Bachelor of Science (BS) degrees awarded by the McKelvey School of Engineering include several categories as listed below.

#### Engineering degrees include the following:

- BS in Biomedical Engineering
- BS in Chemical Engineering
- BS in Computer Engineering
- BS in Electrical Engineering
- BS in Environmental Engineering
- BS in Mechanical Engineering
- BS in Systems Science & Engineering

#### Computer science degrees include the following:

- BS in Computer Science
- BS in Computer Science + Mathematics
- BS in Computer Science + Economics
- BS in Data Science

#### Applied science degrees include the following:

- BS Major in Applied Science (Chemical Engineering)
- BS Major in Applied Science (Electrical Engineering)
- BS Major in Applied Science (Mechanical Engineering)
- BS Major in Applied Science (Systems Science & Engineering)

#### Joint degrees with other undergraduate divisions on campus include the following:

- BS in Business and Computer Science

## Engineering Bachelor of Science Degrees

To earn the BS in Biomedical Engineering, BS in Chemical Engineering, BS in Computer Engineering, BS in Electrical Engineering, BS in Environmental Engineering, BS in Mechanical Engineering, or BS in Systems Science & Engineering, a student must satisfy all of the following general distribution requirements:

1. Complete the engineering Common Studies courses outlined below with passing letter grades:
  - a. Calculus (Math 131, Math 132, Math 217 and Math 233)  
**Note 1:** The BS in Electrical Engineering and the BS in Systems Science & Engineering require ESE 217 instead of Math 217.
  - b. Physics (Physics 191, Physics 191L, Physics 192 and Physics 192L)

- c. Chemistry (Chem 111A or Chem 105 and Chem 151)  
**Note 1:** Some programs also require Chem 112A or Chem 106 and Chem 152.  
**Note 2:** The BS in Computer Engineering program permits alternate science courses to satisfy this requirement.  
**Note 3:** Chem 111A is required for Biomedical Engineering students; Chem 151 is required with Chem 111A and Chem 105.
  - d. Technical Writing (Engr 310)
2. Satisfy the specific degree requirements of one of the engineering degree programs as outlined in other sections of this *Bulletin*.
  3. Satisfy the requirements listed under All Undergraduate Degrees below.

## Computer Science and Applied Science Bachelor of Science Degrees

To earn the BS in Applied Science (Chemical Engineering), BS in Applied Science (Electrical Engineering), BS in Applied Science (Mechanical Engineering), BS in Applied Science (Systems Science & Engineering), BS in Computer Science, BS in Computer Science + Mathematics, BS in Computer Science + Economics, or the BS in Data Science, a student must satisfy all of the following general distribution requirements:

1. Complete at least 120 applicable units.
2. Complete at least 48 units of the 120 in mathematics, natural sciences and engineering.
3. Complete at least 42 units of the total 120 units at the 300 level or higher.
4. Satisfy the specific degree requirements of one of the applied science degree programs, as outlined in other sections of this *Bulletin*.
5. Satisfy the requirements outlined under All Undergraduate Degrees below.

**Note:** Diplomas for applied science degrees state "Bachelor of Science" and do not indicate the major on the diploma. The major (e.g., Chemical Engineering) is posted on the official transcript.

## All Undergraduate Degrees

**To earn any undergraduate degree in the McKelvey School of Engineering, a student must accomplish all of the following:**

1. Earn at least a C (2.0) cumulative grade-point average in all applicable courses taken at Washington University. All courses must be taken for a letter grade unless otherwise specified. Other course restrictions may apply, and students should closely review the remainder of this *Bulletin* as well as the degree audit system.
2. Earn at least the minimum total number of units specified for the particular degree. All degrees require students to complete at least 120 applicable units.
3. Earn at least a C (2.0) GPA in all engineering courses taken.
4. Satisfy all of the following residency requirements:

- a. Complete a minimum of 30 units of 200-level or higher courses from the school while matriculated at Washington University in a degree program. An approved engineering course transferring in as 200-level or higher from an exchange program or a study abroad experience sanctioned by the McKelvey School of Engineering may be counted as a school equivalent course for the purpose of satisfying this requirement.
  - b. Complete a minimum of 60 units at Washington University while matriculated at Washington University in a degree program. Exchange program or study abroad courses sanctioned by the school may be counted toward this requirement.
  - c. For students who pursue multiple engineering BS degrees, for each additional BS degree from the school, students must complete an additional 15 resident units of 200-level or higher courses from the school, which are in addition to the 30 units of 200-level or higher engineering courses that are listed in 4a above. No more than two BS degrees from the McKelvey School of Engineering may be earned by the same student.
  - d. For students enrolled in a Washington University undergraduate joint or combined degree program connected to a McKelvey academic department and an academic department outside of McKelvey, the McKelvey academic department may designate specific Washington University courses (200-level or higher) taken outside of the McKelvey School of Engineering to satisfy the residency requirement listed in 4a above. Such designated courses must be required for the core or elective portions of the major-specific requirements of the joint or combined degree program.  
**Note:** Some departments may have program-specific residency requirements that require students to complete a minimum number of units at Washington University for their specific degree programs. This is currently true in Computer Science & Engineering.
5. Complete the English proficiency requirement as well as the humanities and social sciences requirement of the McKelvey School of Engineering.

## English Proficiency Requirement

Every student must demonstrate proficiency in the reading and writing of the English language. First-year engineering students are given an opportunity to take a writing placement exam during the summer before they arrive to campus. Proficiency can be demonstrated by satisfactory performance on this writing placement exam administered by the McKelvey School of Engineering. Waivers of the English proficiency requirement via the writing placement exam do not carry degree credit.

Students who do not demonstrate satisfactory proficiency via the writing placement exam are required to enroll in a course or sequence of courses specified by the test's administrator. The school's English proficiency requirement is then satisfied only by a grade of C- or better in one of the themed college writing courses developed by the College Writing Program.

Before enrolling in one of the College Writing Program themed courses, some students may be required to complete CWP 1511 Critical Reading and Analytical Writing, CWP 1001 Foundations of Academic Writing or CWP 200 Writing Tutorial.

Courses taken at other institutions to satisfy the English proficiency requirement must be approved by the school's English proficiency coordinator. If the course is so approved, the student must pass with a grade of C- or better.

## Humanities and Social Sciences Requirement

To earn any bachelor's degree from the McKelvey School of Engineering, students must complete the school's humanities and social sciences requirement:

1. Minimum units: At least 18 units of humanities and social sciences courses must be completed with passing grades. Humanities and social sciences courses (other than transfer courses) may be taken for pass/fail credit.
2. Breadth: At least 6 units of the 18 must be in the humanities, and at least 6 units must be in the social sciences.
3. Upper-level courses: At least 3 units of the 18 units completed must be from one or more courses numbered 300 or higher.

**Note:** Joint degree programs may have different humanities/social science degree requirements.

Washington University courses labeled with the EN:H or EN:S attribute in the semester course listings will count, respectively, toward the humanities or social sciences requirement for engineering degrees. In general, most art courses (F10 and F20) will count toward the engineering school's humanities requirement, even if they do not have the specific EN:H designation. Some upper-level art courses are open only to students with an open art program.

Transfer courses must be approved through Engineering Undergraduate Student Services as acceptable transfer credit and as applicable humanities or social sciences courses. All transfer courses must be taken for credit (i.e., not pass/fail), and students must earn a C- or better in transfer courses for the credit to transfer to the school. Grades do not transfer.

Advanced Placement (AP) credit and International Baccalaureate (IB) credit approved through Engineering Undergraduate Student Services may be used to satisfy all or part of the breadth requirement (i.e., the humanities 6-unit requirement and/or the social science 6-unit requirement); however, AP and IB credit may not be used to satisfy the 18 minimum units needed to satisfy the school's overall humanities and social sciences requirement. Students may individually petition Engineering Undergraduate Student Services to have their AP or IB credit counted toward the humanities 6-unit requirement and/or the social sciences 6-unit requirement. Petitions will be reviewed to determine if they conform to guidelines established for awarding humanities and social sciences credit. Guidelines are approved by the Engineering Undergraduate Studies Committee.

## Engineering Topics Units

Bachelor's degree programs accredited by the Engineering Accreditation Commission of ABET require that the program require a minimum of 45 units of engineering topics. A course carrying engineering topics units will be marked in the Course Listings with the EN:TU attribute.

### Engineering Topics/Design Component

Engineering design is the process of devising a system, component or process to meet desired needs. It is a decision-making process (often iterative) in which basic sciences, mathematics and engineering sciences are applied to convert resources optimally to meet a stated objective. Among the fundamental elements of the design process are the establishment of objectives and criteria, synthesis, analysis, construction, testing and evaluation. The engineering design component of a curriculum must include most of the following features: development of student creativity, use of open-ended problems, development and use of modern design theory and methodology, formulation of design problem statements and specifications, consideration of alternative solutions, feasibility considerations, production processes, concurrent engineering design and detailed system descriptions. Further, it is essential to include a variety of realistic constraints, such as economic factors, safety, reliability, aesthetics, ethics and social impact.

### Engineering Topics/Science Component

The engineering sciences have their roots in mathematics and basic sciences but carry knowledge further toward creative application. These studies provide a bridge between mathematics and basic sciences on the one hand and engineering practice on the other. Such subjects include mechanics, thermodynamics, electrical and electronic circuits, materials science, transport phenomena and computer science (other than computer programming skills), along with other subjects, depending on the discipline. Although it is recognized that some subject areas may be taught from the standpoint of either basic sciences or engineering sciences, the ultimate determination of the engineering science content is based on the extent to which there is extension of knowledge toward creative application. In order to promote breadth, the curriculum must include at least one engineering course outside of the major disciplinary area.

### ABET Mathematics and Basic Science Requirement

Bachelor degree programs accredited by the Engineering Accreditation Commission of ABET require that the program require a minimum of 30 units of college-level mathematics and basic sciences (some with experimental experience) appropriate to the discipline. The basic sciences are defined as biology, chemistry and physics.

## Applicable Undergraduate Engineering Degree Requirements

Undergraduate engineering students are required to satisfy the engineering degree requirements that are published in the online undergraduate Bulletin (p. 11) in effect at the time they first enroll at the university as degree-seeking undergraduate students.

Undergraduate engineering students must complete all undergraduate degree requirements and graduate within 10 consecutive years of enrolling as degree-seeking undergraduate students at the university.

A student who does not graduate within 10 consecutive years will be required to satisfy the degree requirements that are in the most recently published online undergraduate *Bulletin* and to retake courses identified by the chair of the department in which the student is seeking the degree.

- When a student wishes to return to complete course work and earn a degree after the 10-year time period has passed, the most recent online undergraduate *Bulletin* is defined as the catalog in effect when the student re-enrolls in the McKelvey School of Engineering as an undergraduate student seeking a degree.
- When a student has left the university and wishes to complete course work at another university to then transfer back and graduate from the McKelvey School of Engineering and when more than 10 years have elapsed since the student was first enrolled as an undergraduate engineering degree-seeking student, the most recent online undergraduate *Bulletin* is defined as the catalog in effect when the student files an intent to graduate for an engineering undergraduate degree. The course work that the student intends to complete and transfer back to the McKelvey School of Engineering must be approved by the school before the student enrolls in the course work.

## Academic Honors & Awards

### Dean's List

The Dean's List is composed of first-year, sophomore, junior, and senior engineering students who, for the preceding semester, have achieved a 3.6 or higher grade point average based on a minimum of 12 units of applicable courses taken for letter grades (i.e., not Pass/Fail or Audit). An appropriate entry is added to these students' official transcripts.

No I (incomplete) or N (no grade reported) grades may be a part of the semester's record. For a student to be eligible for the fall Dean's List, all final grades must be posted by January 15. For the spring semester, all final grades must be posted by June 15 for a student to be considered. There is no Dean's List for summer terms.

## Latin Honors

For students graduating with undergraduate engineering degrees, Latin honors from the school will be awarded based on the cumulative Washington University GPA. In June, the GPA cutoffs used to select Latin honors for the upcoming year will be assigned by calculating cumulative averages from the three most recent graduation years. For the upcoming graduating class, the three-year average of the top 10% will determine which students are awarded summa cum laude; the three-year average of the next top 10% will determine which students are awarded magna cum laude; and the three-year average of the next top 10% will determine which students are awarded cum laude. Latin honors will be awarded to students whose cumulative GPAs at the time of graduation meet the predefined three-year average GPA cutoffs, which are determined during June of the prior year.

## 4.0 Cumulative GPA Recognition at Graduation

Graduating seniors with a 4.0 cumulative GPA who entered as first-year students (i.e., not transfer students) receive special acknowledgement at the annual McKelvey Recognition Ceremony in May. Students must have earned a 4.0 cumulative GPA, which is not due to GPA upward rounding (i.e., only A and A+ grades have been earned), at Washington University with no repeated courses (i.e., students who have not taken advantage of the course retake policy). Grades earned in approved transfer courses do not count in the cumulative GPA.

## Academic Policies

### Attendance

Each professor in the McKelvey School of Engineering decides how many absences a student may have and still pass the course. Professors are expected to give reasonable consideration to unavoidable absences and to the feasibility of making up work that has been missed. Students are expected to explain to their professors the reasons for any absences and to discuss with them the possibility of making up missed assignments.

### Units and Grades

A credit unit is the equivalent of one recitation or lecture hour a week for one semester or one laboratory of two and one-half hours a week for one semester. A student's work is rated in terms of the following system of grades and grade points:

Grade	Points per Unit
A or A+	4.0
A-	3.7
B+	3.3
B	3.0
B-	2.7
C+	2.3
C	2.0

C-	1.7
D+	1.3
D	1.0
D-	0.7
F	0.0
P#	Pass
F#	Failing
S	Satisfactory
U	Unsatisfactory
I	Course work incomplete
X	No final exam taken
W	Withdrawal
WLA	Withdraw leave of absence
R	Retaken course
L	Successful audit
Z	Unsuccessful audit
N	No grade submitted

## Auditing a Course

A student may register for some courses as an auditor. The criteria for a successful audit are determined by the course instructor, and the student should work with the instructor to ensure that these criteria are understood. Generally speaking, the completion of homework and the taking of exams are not required. The grade L signifies a successful audit, and the grade Z signifies an unsuccessful audit. Neither grade affects a student's grade-point average, and the course's units do not contribute to the student's total cumulative degree-seeking units. Audit courses do not count toward any degree, nor do they count toward full-time status determination. They do count toward the 21-unit cap per semester, and audit units are charged at the standard full-time or part-time per-unit rate. Class attendance is normally required to earn a grade of L; unsatisfactory attendance will result in a grade of Z. Computer science courses do not allow students with auditor status.

## Incomplete Grades

The grade I (incomplete) indicates that the work of a student has been generally acceptable but that extenuating circumstances led to certain requirements not having been met. The grade X is recorded when a student is absent from a midterm or final examination because of illness or other unavoidable reason, provided the work has been otherwise satisfactory.

Grades of X and I must be removed no later than the close of the next full semester a student is in residence. On failure to make up an X or I grade, the student will not receive credit for the course, and the grade will be changed to F unless the student has been explicitly excused by the associate dean.

A student should **not** re-enroll in a class to complete an I grade. Enrolling in the class a second time invokes the Course Retake Policy (p. 1308).

## Course Retake Policy

If an engineering student repeats a course at Washington University, only the second grade is included in the calculation of the GPA. Both enrollments and grades are shown on the student's official transcript. The symbol R next to the first enrollment's grade indicates that the course was later retaken. Credit toward the degree is allowed for the latest enrollment only.

If an engineering student repeats a course elsewhere (i.e., as a preapproved transfer course from another university), the student must take the course for credit and earn a C- or better for the units to transfer to Washington University. After an official transcript showing the final grade for the repeated course is received, the symbol R next to the first enrollment's grade indicates that the course was later retaken. The original grade will no longer figure into the student's GPA, nor will the transfer course grade figure into the GPA. The grade for the transfer course does not display on the student's Washington University record, but the units for the transfer course will count toward the degree program.

## Course Descriptions

The McKelvey School of Engineering is subdivided into five academic departments: Biomedical Engineering (E62); Computer Science & Engineering (E81); Electrical & Systems Engineering (E35); Energy, Environmental & Chemical Engineering (E44); and Mechanical Engineering & Materials Science (E37). Each department may offer courses leading to one or more bachelor's, master's or doctoral degrees.

The courses of instruction are numbered according to the following system:

- 100 to 199 are primarily for first-year students.
- 200 to 299 are primarily for sophomores.
- 300 to 399 are primarily for juniors.
- 400 to 499 are primarily for juniors and seniors, although certain courses may carry graduate credit.
- 500 and above are offered to graduate students and to juniors and seniors who have met all stated requirements. If there are no stated requirements, juniors and seniors should obtain permission of the instructor.

One unit of credit is given for each hour of lecture, and one unit is given for each two and one-half hours of laboratory. Each course description shows the course's credit. A table of all engineering courses (PDF) and, for each course, the division of its topics units is available and frequently updated on the school's website.

## Definition of Class Levels

For classification purposes, a student's undergraduate class level is defined according to the year in which they intend to graduate.

## Pass/Fail Option

All undergraduate engineering students are eligible to register each semester for up to 6 units with the pass/fail option, for up to a maximum of 18 units attempted. Some departments require students to take certain courses pass/fail; credits in these courses do not count toward either the semester limit of 6 units or the cumulative limit of 18 units. Other than these courses, **only elective courses may be taken with this option**, including courses in other divisions of the university but that are still contingent upon and subject to departmental requirements. Humanities, social sciences and some technical electives specifically allowed by individual engineering programs, as well as some engineering courses (both undergraduate and graduate that are not specifically required for the student's major program), may be taken with the pass/fail option. Some programs do not allow any courses (either required or elective) to be taken with the pass/fail option. Graduate courses taken on a pass/fail basis cannot be transferred later for credit toward a graduate degree.

Changes from the regular grade basis to pass/fail or vice versa may not be made after the last dates specified in the current Course Listings. The normal regulations for withdrawal or change to auditor status also apply to pass/fail courses.

It is the student's responsibility to discuss with the faculty member what constitutes a pass in a particular course. Although the general pass mark is a C-, instructors have the discretion to set the pass mark higher in their course(s).

A final grade of P# (pass) will earn degree credit where applicable. A final grade of F# (fail) will not earn degree credit. Neither P# nor F# will affect the GPA.

## Academic Standing

This policy applies to all McKelvey undergraduate degree-seeking students. Students who enter as Dual Degree 3-Year Option (3/3) students pursue a McKelvey undergraduate degree for two years and then a McKelvey master's degree during the third year. While pursuing the undergraduate degree during the first two years, this policy is applied to these students. McKelvey graduate academic standing rules are applied during the third year, when these students are primarily pursuing master's degree requirements.

A fundamental requirement for all students is to make sufficient academic progress toward degree completion. In order to make sufficient academic progress, students must earn adequate grades and complete enough units in order to satisfy degree requirements in a timely manner.

The following key performance indicators are used to determine whether a student pursuing an undergraduate degree in McKelvey remains in good academic standing at the end of each fall and spring semester:

- Minimum semester GPA of 2.0
- Minimum cumulative GPA of 2.0
- Completion of 12 units with passing letter grades (D- or higher) or "pass" with the pass/fail grade option

- Course units that will not count as being successfully completed include the following:
  - Courses with an incomplete grade
  - Courses taken for audit credit
  - Courses receiving a failing course grade
  - Courses withdrawn ("W")
  - Courses without any final grades posted

An inability to maintain each indicator above will result in a student being placed into one of the three academic standing categories described below, which is a signal that minimum standards for graduating are in danger of not being met. Unless a student demonstrates improvement, thereby indicating their ability to fulfill degree requirements within a reasonable time period, the student may be dismissed from the university.

If a performance indicator contributing to the status of an academic standing category is raised above the threshold (e.g., by the resolution of an incomplete grade or the change of a final grade), then that academic standing may be reconsidered if the student has not yet graduated. However, repeating a course which then results in the first grade earned in the course to no longer count in a GPA will not result in a past academic standing status to be reconsidered.

## Academic Concern

Any of the following performance indicators at the end of a semester will cause the student's standing to be reviewed and may cause the student to be placed on Academic Concern:

1. Receiving an incomplete final course grade (first occurrence and all subsequent occurrences)
2. Earning a semester GPA of less than 2.0 (first occurrence)
3. Earning fewer than a total of 12 units in a regular semester (first occurrence)

When a student qualifies for Academic Concern in more than one semester by earning a semester GPA of less than 2.0 (1.b. above) **and/or** by earning fewer than a total of 12 units in a regular semester (1.c. above), then the second (or additional) Academic Concern qualification will immediately convert to Academic Notice or Academic Time Away as described below. Academic Concern is noted only the first time that a student qualifies for an academic action based upon a semester GPA of less than 2.0 **and/or** earning fewer than 12 units.

*Example: In semester A, Justin earns less than a 2.0 semester GPA and is placed on Academic Concern. In semester B, Justin earns fewer than 12 units and is placed on Academic Notice.*

After an incomplete grade is changed to a grade, the semester GPA and cumulative GPA for that semester may be reevaluated in a future semester to determine if the student has become eligible for a different academic action for the semester the incomplete grade was changed. If a different academic standing category is identified, the student will be notified of the new academic standing category.

*Example: In semester A, Bailey earns an incomplete grade and is placed on Academic Concern. The incomplete work was not submitted, so the incomplete grade is converted to a failing F grade, which changed the semester A GPA to less than 2.0. Bailey would be notified that they are placed on an academic action (Academic Concern, Academic Notice, or Time Away, as appropriate) due to semester A GPA being less than 2.0.*

While a student placed on Academic Concern remains in good academic standing, this status is a signal to the student that academic performance is below minimum standards and, if continued, will likely cause the student to fall out of good standing. This status is not noted on the official transcript. Because it does not cause the student to fall out of good standing, it will not be incorporated into enrollment verifications requesting confirmation of academic standing.

## Academic Notice

Any of the following performance indicators at the end of a semester will cause the student's standing to be reviewed and may cause the student to be placed on Academic Notice:

1. Cumulative GPA of less than 2.0 (first occurrence and all subsequent occurrences)
2. Semester GPA of less than 2.0 (second occurrence and all subsequent occurrences)
3. Earning fewer than a total of 12 units in a regular semester (second occurrence and all subsequent occurrences)
4. First occurrence of 2.b and/or 2.c. above if a student had previously been placed on Academic Concern due to 1.b. and/or 1.c.

*Example: At the end of semester A, Rocky is placed on Academic Concern for earning fewer than 12 units. At the end of semester B, Rocky earns a semester GPA of less than 2.0 (their first semester below 2.0), and is then placed on Academic Notice.*

Academic Notice status indicates that a student is not in good academic standing. Although this status is not noted on the official transcript, it will be incorporated into enrollment verifications requesting confirmation of a student's standing.

## Academic Time Away

Any of the following performance indicators at the end of a semester will cause the student's standing to be reviewed and may cause the student to be placed on Academic Time Away, which is a pause in enrollment at Washington University:

1. Any third time a student becomes eligible for Academic Notice
2. Any second sequential semester a student becomes eligible for Academic Notice
3. Any semester in which a student was enrolled in courses but earns no degree credit that semester (e.g., fails all courses)

Academic Time Away status indicates that a student is not in good academic standing. Because this status is marked by a break in enrollment, this status is noted on the official transcript.

Academic Time Away is not viewed as punitive. Rather, it is an academic pause applied when it is clear that something is interfering with a student's ability to complete degree requirements. It is not in a student's best interest to continue with their studies unless changes are made that will enable successful and consistent academic progress toward graduation.

Students placed on Academic Time Away are given the option to appeal. Students choosing to appeal must follow a prescribed appeal process within provided specific deadlines. Students who successfully appeal their Academic Time Away will be allowed to continue their enrollment and their academic status category will change to Academic Notice. Students deciding not to appeal, or if their appeal is unsuccessful, will have their registration cancelled for the upcoming semester and their academic record will be closed. When this occurs, it is possible for the student to request reinstatement with McKelvey at a future time. Students in this situation will need to show that they have successfully completed challenging coursework at a different institution (normally, at least for one year), or be employed in a paid position (normally, at least for one year), or a combination of the two (school and work). Students who have been placed on Academic Time Away will be allowed to return when it appears that they are genuinely ready to successfully complete coursework at Washington University.

## Dual-Degree Students

A student who enters as a Dual-Degree 3-Year Option (3/3) student pursues a McKelvey undergraduate degree for two years and then a McKelvey master's degree the third year. While pursuing the undergraduate degree during the first two years, undergraduate academic standing rules are applied to the student. McKelvey graduate probation and suspension rules are applied during the third year, when the student is pursuing the master's degree.

## Satisfactory Academic Progress for Title IV Financial Aid

Federal regulations require that students receiving federal Title IV financial aid maintain Satisfactory Academic Progress (SAP). The minimum GPA requirements needed to maintain eligibility for SAP are dictated by the specific program of study. In each case, per the requirements of 34 C.F.R. 668.34(a)(4)(ii), the federal student aid program requires a minimum of a C average to maintain eligibility for aid, but an individual degree or certificate program may have a higher minimum GPA for federal SAP.

SAP is evaluated annually at the end of the spring semester. In order to maintain SAP and thus be eligible for federal financial aid, a student must maintain minimum requirements for cumulative GPA ( $\geq 2.0$  for undergraduates,  $\geq 2.70$  for master's students, and  $\geq 3.0$  for doctoral students). A student must also maintain minimum requirements for pace (credit earned for at least 67% of the credits attempted). In addition, the degree must be completed within the maximum time frame allowed for the program (defined as 150% of the required credits). Students who are not maintaining SAP will be notified by the McKelvey Registrar and, barring an approved appeal, are ineligible for aid for future semesters.

More information about Satisfactory Academic Progress is available from Student Financial Services.

## Full-Time and Part-Time Enrollment

Engineering undergraduate degree programs are full-time programs. All undergraduate students are automatically charged full-time tuition each semester. Full-time enrollment is 12 to 21 units of credit per semester. Courses taken in audit status do not count toward full-time enrollment status. Students may not enroll in more than 21 units without special permission. An additional per-unit tuition charge is assessed for enrolled units exceeding the 21-unit limit in a semester.

Part-time enrollment is not allowed unless it is formally approved by Disability Resources or Habib Health and Wellness Center. Students approved for part-time status may enroll in 1 to 11 units and are charged part-time tuition, along with all standard undergraduate fees. Each semester, these students should contact the Engineering Registrar and request to have their tuition adjusted to reflect their part-time enrolled units. Financial aid may not be available for part-time enrollment, so students should contact Student Financial Services to discuss their specific situations.

Seniors who need to enroll for an extra semester in order to graduate may request part-time enrollment and part-time tuition charges for that additional semester of study. These students will not have full-time student status if they are enrolled in less than 12 units. For students who enrolled as first-year students, part-time enrollment may be requested after their eighth academic semester of study. For dual-degree undergraduate students, part-time enrollment may be requested after their fourth academic semester of study. Prior to the add/drop deadline for the semester, these seniors may petition the Engineering Registrar to have their tuition adjusted to reflect their part-time enrolled units. Students approved for reduced tuition will have their bills adjusted after the add/drop deadline has passed. Summer sessions are not counted as academic semesters.

## Leaves of Absence

Engineering students may petition to take a leave of absence. For a leave of absence, students in good standing are assured re-enrollment within the next two years. Before returning, the student is to notify the McKelvey School of Engineering and submit a reinstatement form at least six weeks prior to the beginning of the appropriate term. A student wishing to take a medical leave of absence must have a recommendation for the medical leave of absence from Habib Health and Wellness Center submitted to the appropriate dean in the McKelvey School of Engineering prior to leaving and prior to re-enrollment. The dean will decide whether or not to grant the request for the medical leave of absence and re-enrollment upon reviewing the recommendations from the Habib Health and Wellness Center and the student's file.

## Tuition Refunds

All full-time undergraduate students in Engineering are assessed tuition at a full-time tuition rate and do not receive refunds for dropping individual courses. Students who officially withdraw from the university (drop all semester courses) will receive a tuition refund as outlined on the Undergraduate Tuition & Fees page (p. 50) of this *Bulletin*. After the date of the first class meeting, refunds are not granted for short courses, which run less than the full semester length.

## Transfer Credit

A student must get prior approval before taking a course at another university. After completing the course, the student must have an official copy of the transcript sent to the McKelvey School of Engineering for evaluation. If the credit is accepted, the course will appear on the transcript with the units but not the grade. Only units of credit for courses with a grade of C- or better will transfer. No transfer credit will be accepted for courses taken while a student is suspended from Washington University for violations of the University Student Conduct Code or the Academic Integrity policy. The transfer course approval process is outlined on the McKelvey School of Engineering website.

Transfer credit is never accepted for online courses.

## School of Continuing & Professional Studies Courses

Engineering students may receive credit for a limited number of School of Continuing & Professional Studies courses that have been approved by the Engineering Undergraduate Studies Committee. The approved courses listed below will display on official transcripts and the course units will count toward engineering degree requirements, but the grade will not be calculated in the students' GPAs. Approved courses must be taken for a letter grade, and students must earn a minimum grade of C- for the course units to count toward engineering degree requirements.

Current approved courses, which may be needed by students seeking admission into medical school, include the following:

- U29 Bio 4170 Endocrine Physiology
- U29 Bio 4241 Immunology

## Eligibility to Enroll in Other School of Continuing & Professional Studies Courses

School of Continuing & Professional Studies courses that do not appear on the approved list above may be taken under certain circumstances. The courses will display on official transcripts, but the units will not count toward engineering degree requirements, and the grade will not be calculated in the students' GPAs. Eligibility is restricted as outlined below:

1. First-year students may take U03 GS 125 College Success Seminar, but the course will not count toward engineering degree requirements.
2. Undergraduate engineering students may enroll in School of Continuing & Professional Studies biology courses (U29), but only the above-listed courses will count toward engineering degree requirements.
3. Undergraduate engineering students in their final year of study may enroll in one School of Continuing & Professional Studies course each semester. Again, these courses will not count toward engineering degree requirements.

## Exceptions

Exceptions to the above rules may exist for a student's declared degree program when working toward a non-Engineering minor or a joint-degree program.

## Military Training

Army and Air Force ROTC programs are available at Washington University.

A student in the McKelvey School of Engineering who takes an ROTC course will have the course name, number, credit units and grade entered on their official transcript. If the course is numbered 100 through 299, the course's units and grade will not apply toward the student's degree requirements; if the course is numbered 300 through 499 and the grade is D- or better, the course's units will apply toward the student's degree requirements (as a free elective), and the grade will be counted in the student's cumulative and semester GPAs. Credit may be awarded for no more than one course per semester, for a maximum of 16 units. The last course in the sequence, MILS 4020, will count for EN:S credit.

Course descriptions for Air Force ROTC and Army ROTC (p. 1320) can be found in the appropriate sections of this *Bulletin*.

## Sever Institute Courses

Sever graduate courses are allowed to count as general units and in the GPA for all undergraduate and graduate McKelvey students. The units earned in Sever graduate courses will count as general units needed to satisfy any McKelvey degree, and they will count toward the general Washington University residency requirement for undergraduate degrees. However, they will not count toward the engineering ("E" course) residency requirement for McKelvey undergraduate degrees. The GPA earned in Sever graduate courses will count toward the cumulative GPA, the semester GPA, the Dean's List, the class rank, and Latin honors. Unless approved by the McKelvey department offering the student's degree program, Sever graduate courses will not satisfy any course requirement (core or elective requirement) for any McKelvey undergraduate degree, graduate degree, second major, minor, or certificate program.

## Online Courses

Online courses taken by engineering undergraduate students will not count toward graduation requirements. Exceptions include only those courses with "E" course numbers offered by McKelvey and "L" course numbers offered by Arts & Sciences.

## Academic Integrity

All students in the McKelvey School of Engineering are expected to conform to high standards of conduct. Undergraduate Students should refer to the Washington University Undergraduate Student Academic Integrity Policy for an overview of expectations. To review our school statement on academic integrity as well as our process, visit the McKelvey Academic Integrity webpage.

## Academic Calendar

In addition to the university's academic calendar, McKelvey maintains an Engineering Academic Calendar with dates and deadlines that are specific to McKelvey students. This calendar includes course information, which is also helpful for non-McKelvey students taking engineering courses.

## Majors (directory)

Below is a list of majors offered by the McKelvey School of Engineering. Visit the following sections of this *Bulletin* for more information about a specific major. Students must log into WebSTAC and select the Major Programs link under Academics to switch their major program within Engineering or to declare a second major or minor online.

- Applied Science (Chemical Engineering) (p. 1284)
- Applied Science (Electrical Engineering) (p. 1267)
- Applied Science (Mechanical Engineering) (p. 1300)
- Applied Science (Systems Science & Engineering) (p. 1268)
- Biomedical Engineering (p. 1204)
- Business and Computer Science (p. 1240)
- Chemical Engineering (p. 1282)
- Computer Engineering (p. 1232)
- Computer Science (p. 1233)
- Computer Science + Economics (p. 1234)
- Computer Science + Math (p. 1236)
- Data Science (p. 1238)
- Electrical Engineering (p. 1263)
- Environmental Engineering (p. 1283)
- Individually Designed Major (p. 1197)
- Mechanical Engineering (p. 1298)
- Systems Science & Engineering (p. 1264)
- Second Major in Computer Science (p. 1242)
- Second Major in Computer Science + Mathematics (p. 1242)
- Second Major in Data Science (p. 1244)
- Second Major in Electrical Engineering (p. 1268)
- Second Major in Financial Engineering (p. 1269)
- Second Major in Systems Science & Engineering (p. 1268)
- Environmental Engineering Science (p. 1284)
- Human-Computer Interaction (p. 1247)
- Materials Science & Engineering (p. 1301)
- Mechanical Engineering (p. 1302)
- Mechatronics (p. 1271)
- Nanoscale Science & Engineering (p. 1286)
- Quantum Engineering (p. 1272)
- Robotics (p. 1271)
- Systems Science & Engineering (p. 1272)

## Minors (directory)

### Residency Rule for Engineering Minors

No more than 6 units of credit transferred from another institution (outside Washington University) can be used to meet the requirements of any minor offered by the McKelvey School of Engineering. The remaining units (up to the amount required for the minor) must be applicable units from Washington University taken for a letter grade. Classes taken with the pass/fail grade option do not meet requirements unless specifically allowed. The review committee that oversees a minor has the authority to establish a more stringent residency rule.

### Minors

Below is a list of minors offered by the McKelvey School of Engineering. Visit the following sections of this *Bulletin* for more information about a specific minor. Students must log into WebSTAC and select the Major Programs link under Academics to declare a minor online.

- Aerospace Engineering (p. 1300)
- Bioinformatics (p. 1246)
- Biomedical Data Science (p. 1213)
- Computer Science (p. 1246)
- Electrical Engineering (p. 1270)
- Energy Engineering (p. 1285)

# Beyond Boundaries Program

The minimum grade point average requirements needed to maintain eligibility for Satisfactory Academic Progress are dictated by the specific program of study. In each case, per the requirements of 34 C.F.R. 668.34(a)(4)(ii), the federal student aid program requires a minimum of a C average to maintain eligibility for aid, but an individual degree or certificate program may have a higher minimum GPA for federal Satisfactory Academic Progress. Beyond Boundaries Program students are required to maintain a 2.0 cumulative GPA. To be in good academic standing in the program on a semesterly basis, students are expected to complete a minimum of 12 units per semester with a minimum 2.0 semester GPA.

## Curriculum

### Phase A: Foundation (Years 1 and 2)

#### Year One (11 required credits)

Year one requirements include an introductory sequence that teaches writing, the framework of interdisciplinary study, and collaborative problem solving, as well as two Beyond Boundaries courses:

- Beyond Boundaries Seminar (2 credits total, fall and spring)
- Beyond Boundaries Courses (6 credits total, fall and/or spring)
- First Year College Writing (3 credits total, fall)
- Beyond Boundaries Workshops and Events (fall and spring)

#### Fall Semester:

- Beyond Boundaries Seminar (1 credit, Beyond Boundaries Program students only)
- One or two Beyond Boundaries Course(s) (3 or 6 credits)
- College Writing (3 credits)

#### Spring Semester:

- Beyond Boundaries Seminar (1 credit, Beyond Boundaries Program students only)
- One Beyond Boundaries Course (3 credits, unless two courses were taken in the fall)

### Year Two: Beyond Boundaries Programming and Self-Directed Interdisciplinary Learning

After program students have transferred to the academic division of their choosing and completed the curricular requirements of year one, their focus will shift to self-directed learning.

Components of year two will include the following:

- Participation in Beyond Boundaries Peer Mentoring
- Beyond Boundaries Workshops and Events
- Engagement in on- and off-campus activities, such as the following:
  - Speakers or exhibits
  - Networking events or workshops
  - Community service/volunteering events
  - Seminars or conferences
  - Internships/fellowships
  - Interdisciplinary courses/projects/programs

These various opportunities are designed to allow students the flexibility to achieve their academic and cocurricular goals outside of the Beyond Boundaries Program while keeping them connected to the program community.

Students who complete years one and two of the Beyond Boundaries Program receive a milestone notation on their transcript. Students may opt to continue this program into their third and fourth years.

For more information, please review the Beyond Boundaries Program's detailed description of self-directed learning (available via Box).

### Phase B: Focus (Years 3 and 4)

#### Year Three: Beyond Boundaries Programming and Self-Directed Interdisciplinary Learning

The components mentioned above in year 2 will also be applicable in years 3 and 4. In addition, students in this second phase of the program will begin receiving support as they start working on their interdisciplinary capstone projects and thesis papers.

#### Year Four

This final year will culminate in the completion of the previously mentioned program requirements, including the incorporation of a capstone project or thesis paper.

Students who meet the program requirements of this second phase of the program will receive an additional milestone notation on their official transcript.

## Courses

### Year One Courses for Beyond Boundaries Students

#### Beyond Boundaries Seminar (2 credits total)

The Beyond Boundaries Seminar is designed to support the student's development in interdisciplinary thinking and collaborative problem solving. Over the course of two semesters, students will engage in discussions, workshops, skill-building exercises, and panel presentations to grow their skills and knowledge in these areas. Over the course of the academic year, we will ask the following questions:

1. What role(s) do I want to play on collaborative problem-solving teams?
2. What skills, knowledge, and partnerships are necessary for interdisciplinary work?
3. How can I use my time at Washington University to grow these skills?

The knowledge gained is designed to contribute to academic success, personal development, and a more rewarding social and academic experience over the course of the college experience. This is a 1-credit course that is offered during both the fall and spring semesters during the first year of the program.

---

#### 160 BEYOND 100 Beyond Boundaries Seminar

The Beyond Boundaries Seminar is designed to support student's development in interdisciplinary thinking and collaborative problem solving. Over the course of two semesters, students will engage in discussions, workshops, skill building exercises and panel presentations to grow their skills and knowledge in these areas. Over the course of the academic year we will ask the following questions: 1. What role(s) do I want to play on collaborative problem-solving teams? 2. What skills and knowledge are necessary for interdisciplinary work? 3. How can I use my time at Washington University to grow these skills? This course is required for all first-year students in the Beyond Boundaries program and open only to first-year students in the Beyond Boundaries program.

Credit 1 unit. A&S: FYBB

---

#### College Writing (3 credits)

During the fall semester of the first year, Beyond Boundaries Program students will take a 3-unit common College Writing course; this is a requirement for most first-year students at Washington University. This course will focus on basic writing skills and communication across disciplines.

#### Beyond Boundaries Courses (3 credits each, open to *all* first-year students)

In addition to the courses mentioned above, first-year students in the Beyond Boundaries Program will be required to complete two Beyond Boundaries courses (over the course of their first year), for which they will have priority enrollment.

Beyond Boundaries courses, which are funded by the Office of the Provost and offered to first-year students *only*, are designed to prepare students for a rapidly evolving world characterized by social, political, scientific, and economic challenges that cannot be solved using knowledge from a single discipline. Team-taught by faculty from different schools across Washington University, Beyond Boundaries courses offer a window into how scholars from different disciplines approach big, critical topics such as our aging population, the nature of creativity, the phenomenon of climate change, and the art of medicine.

---

#### 160 BEYOND 101 Earth's Future: Causes and Consequences of Global Climate Change

Earth's Future: Causes and Consequences of Global Climate Change examines the following: 1) the physical basis for climate change; 2) how climates are changing and how we know and assess that climates are changing; and 3) the effects of climate change on natural and human systems. The course is team-taught and will involve participation by scholars across the university with expertise in specific subjects. This is a broad introductory course for first-year students, and it presumes no special subject matter knowledge on the part of the student. This course is for first-year (non-transfer) students only.

---

#### 160 BEYOND 102 The Business of Elections

This course will focus on understanding the primary and presidential elections -- particularly the 2024 election -- through a multidisciplinary approach that primarily involves political science and business. Campaigns are start-ups that rely on strategy, branding, influencing consumers (voters), financing and other concepts to achieve the election of their candidate. At the same time, American politics is highly polarized, with voters who are increasingly hostile to listening to the other side. Given this context, how does a campaign succeed as an entrepreneurial venture? This course will allow students to compare and contrast how different candidates' policies and platforms may affect different constituencies/sectors of the business/labor world as well as the economy, how the media portrays them, and what role they will play in the general election. This course is for first-year (non-transfer) students only. Students who are not first-year students will be automatically unenrolled from this course.

---

#### 160 BEYOND 105 The Endgame of Entrepreneurship: Leveraging Capitalism for Good

Historically, profit has been a key driver of human behavior. In this course, students will learn to take advantage of the profit-seeking motive of capitalism while also learning from the mistakes and unintended consequences capitalism has caused throughout history. Students will apply these learnings toward profit-seeking solutions for the United Nations' Sustainable Development Goals, which are global challenges that call us to work together with boldness and urgency. We will explore how skills from entrepreneurship and venture creation can be used to improve water, climate, education and gender equality

globally and here in St. Louis. In interdisciplinary teams, students will learn how to define a problem; listen to customers, competitors and collaborators; create value; measure impact; and communicate their vision. Bold entrepreneurial spirit and skills learned in this course will guide students in their further studies at Washington University and beyond. This course does not count for Economics major/minor elective credit. This course is for first-year (non-transfer) students only. Credit 3 units. ---

**160 BEYOND 115 Environmental Racism and the Health of Everyone**

Environmental inequalities threaten the health and well-being of low-income communities and communities of color who are increasingly on the frontlines in the fight against climate change, air and water pollution, food security, and many other urgent environmental problems. Like many urban areas, the St. Louis region faces egregious social, environmental and health disparities. In this course, we critically examine the role of racism and other structural policy inequalities that produce unequal environments and how those unequal environments contribute to public health disparities in St. Louis and beyond. We explore the use of public health data, policy options, and case studies that allow for evidence-based solutions to environmental racism and improved population health. This course that combines small group sessions, case studies and speakers working on environmental justice in the St. Louis region. We provide students with interdisciplinary perspectives and methods, challenging them to address racism and environmental policy through a population health lens. Student learning will be assessed through case studies, reflections, online assignments, and exams. This course is for first-year (non-transfer) students only. Students who are not first year students will be unenrolled from this course.

---

**160 BEYOND 120 Religious Freedom in America**

The intersection of religion and law in American society has sparked some of the fiercest cultural engagements in recent memory: Should a for-profit religious corporation have a right not to fund birth control for its employees? Can a public college expel campus religious groups whose membership is not open to all students? May a Muslim in prison grow a beard for religious reasons? Should a cake baker or a florist be permitted to refuse services for a gay wedding? Can a church hire and fire its ministers for any reason? These current debates and the issues that frame them are interwoven in the American story. This course introduces students to the major texts and historical arguments underlying that story. Drawing from the respective expertise of the instructors, the course will expose students to a variety of scholarly methods related to the issue: legal history and case law, intellectual history and canonical texts, social history and narrative accounts, and political philosophy and contemporary analyses. This course is for first-year (non-transfer) students only.

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM BU: ETH, HUM EN: H

---

**160 BEYOND 123 When I'm 64: Preparing Ourselves and Society for a Good Long Life**

Whether you know it or not, you're living in the midst of a revolution — a revolution that is going to change your personal and professional lives. Although old age may seem a long way off, you'll likely live to age 80 or beyond, with a 50% chance of seeing your 100th birthday. The demographic revolution you're going to live through will change the health care you receive, the house you live in, the car you drive, the jobs you do, and the relationships you have. This course will give you a competitive edge in understanding how you can harness what's happening to shape your career and lifestyle. In class, you'll

be introduced to leaders and ideas from many fields — medicine, engineering, architecture, public health, social work, law, business, art, and psychology — focused on the issues of our aging society. There will also be opportunities to tailor the class to your interests through events on and off campus, including movies, lectures, performances, field trips, and community projects. Each week, we'll gather for lectures and also break into small groups for discussion. This course will set you on a path to lead the aging revolution and transform the society of tomorrow.

Credit 3 units.

---

**160 BEYOND 125 St. Louis and the Documentary Image**

From magazines to maps to documentary movies and TV, we look to pictures to tell us the truth. But no image is ever completely objective; every visual reflection of the real world is mediated by technology, culture, politics, and memory. How do we—as viewers, as creators, as people—sort out the complicated claims pictures make on the world around us? Drawing on collaborations between four areas in two schools—Visual Arts, English, American Culture Studies, Film and Media Studies—this class will introduce students to theories and practices of visual nonfiction within the city of St. Louis. Through immersive, site-specific course units focused on a variety of approaches to visual nonfiction in different media, students will engage with the tumultuous history, material culture, and landscapes of St. Louis. The course will introduce first-year students both to their city and their university, preparing them to explore existing coursework in Arts & Sciences and the Sam Fox School. This course is for first-year (non-transfer) students only. Students who are not first-year students will be unenrolled from this course.

Credit 3 units. A&S IQ: HUM, SC Art: FAAM

---

**160 BEYOND 130 The Art of Medicine**

This interdisciplinary, cross-school course at the intersection of history, visual culture and the visual arts includes a roster of notable speakers and offers students a singular encounter with western medicine from ancient times to the present day. In tandem with the history of medicine, the course examines the capacity of the arts to frame medical practice and to raise questions and influence perceptions, both positively and negatively, of medical advancements. This course is for first-year (non-transfer) students only.

Credit 3 units. A&S: FYBB A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

**160 BEYOND 140 To Sustainability and Beyond: People, Planet, Prosperity (P3)**

This class examines the subject of sustainability from multiple perspectives to gain an appreciation for its interconnected environmental, social, and economic dimensions. We explore foundational concepts and principles through a variety of activities and assignments, including readings, discussions, group work, games, presentations, and projects. The goal is to integrate knowledge and methods from different disciplines to achieve a holistic understanding of sustainability problems and solutions. This course is for first-year (non-transfer) students only.

Credit 3 units. A&S: FYS A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

**160 BEYOND 160 Gender, Youth, and Global Health**

Through in-depth case studies, this course provides an introduction to gender-specific issues in the context of childhood and adolescence, poverty, and global health. Students will learn to identify how gender and gender differences affect conditions of life in the areas of reproductive health, nutrition, conflict, access to healthcare, and the social determinants of health, especially for young people. Students will learn to analyze health conditions and disparities in relation to both the micro dynamics of local worlds and the macro dynamics of large-scale social forces in the postcolonial global field. In addition, students

will come to understand the current challenges that global health practitioners and institutions confront in achieving gender equity and the current efforts toward closing the gap. These learning objectives will be achieved using lectures as well as discussion-based sessions and Skype-based interactions with NGOs and experts who are currently working in the field. This course is for first-year (non-transfer) students only.

---

### **I60 BEYOND 161 Morality and Markets**

What does it look like to live a moral life in today's market system? We know all too well what it does not look like. The news is filled with moral failures of leaders and executives at top firms. We like to believe that we would behave differently, but what kinds of pressures inform our moral choices? What pulls us, what pushes us, and what persuades us to act one way rather than another? These are the questions that a course combining business and literature can address in unique ways; the world of fiction helps us to examine the ethical dilemmas of the market we inhabit every day. In this course, we use great books, classics of film and modern television, and the tools of modern psychology and business strategy to think critically about what is entailed in living a moral life in the midst of the modern market. This course is for first-year (non-transfer) students only.

Credit 3 units. A&S: FYBB A&S IQ: HUM Arch: HUM Art: HUM EN: H

---

### **I60 BEYOND 175 Designing Creativity: Innovation Across Disciplines**

From "a-ha!" epiphanies to slow-developing discoveries, the creative process has been employed by innovators and artists in virtually every corner of the globe for centuries. This course will explore the study and practice of the creative process across many disciplines, with input from prominent thinkers and practitioners in the areas of medicine, neuroscience, law, engineering, architecture, human-centered design, business, stage design, and the performing arts. The course will also incorporate the practice of design thinking and creativity techniques via a lab component that will allow students to explore the development of innovative ideas in collaborative teams followed by project presentations to core faculty and classmates. This course is for first-year (non-transfer) students only.

Credit 3 units. A&S: FYBB A&S IQ: HUM Arch: HUM Art: FADM, HUM BU: HUM EN: H

---

## **First-Year Bear Bridge Courses (3 credits)**

During the spring semester, students in the Beyond Boundaries cohort have the opportunity to apply their interdisciplinary knowledge to important social and intellectual questions via one of two Bear Bridge courses (only open to program students). As mentioned previously, students can opt to take a Bear Bridge course in the spring instead of a second Beyond Boundaries course.

Bear Bridge courses are intended to do the following:

- Apply knowledge and experience from team-taught Beyond Boundaries courses in a project-based, applied context.
- Reinforce cohort experiences within the Beyond Boundaries Program. Students enrolled in the Beyond Boundaries Program will have additional curricular and cocurricular cohort building, and Bear Bridge courses will reinforce these connections.

- Prepare students for ongoing interdisciplinary approaches during their subsequent three years on campus. Bear Bridge courses offer students a set of tools that can be used to apply interdisciplinary approaches to informing their choice of major, their approach to their capstone project, and their self-identity as a scholar.

---

### **I60 BEYOND 110 Empathy First: Solutions with Heart**

Decisions that impact the daily lives of people are often made without consideration of the lived experience of those impacted, resulting in harm and eroded trust. Empathy is a critical tool for understanding the lived experience of others and creating better quality of life for all people. This course will introduce the integration of empathy into decisions through the methods, processes, and approaches used in design and social work. Students will examine how empathy is incorporated into the development and implementation of new solutions to wicked problems through conversations with experts in health, law, and business; community-based team projects; and reflection and discussion. Course activities will build cohort connections.

Credit 3 units. A&S: FYBB A&S IQ: SSC Arch: SSC Art: SSC EN: S

---

### **I60 BEYOND 111 Law, Race, and Design: Examining the St. Louis Story**

This interdisciplinary course focuses on the intersection of law, race, and design in St. Louis. From Dred Scott to Ferguson, St. Louis has served as a focal point for some of the most important issues in our country's long and still unfinished work toward racial equality. The law has played an important role in these developments; judicial opinions, city ordinances, and commission reports have shaped how we understand questions of race and equality. But the law is not simply the written word: it involves people, practices, places, and the stories we tell about them. How we communicate our stories ultimately affects how we understand those stories and how we understand ourselves. This course situates law within stories and equips students to communicate those stories in ways that draw from a range of communication design methodological tools. Using design research, thinking, and a human-centered design approach, this course will challenge students to connect the words of legal documents with the experiences of those whose lives are situated by them. There will be two required self-guided visits outside of normal class time, each of which should take 2.5 - 3 hours, including travel to and from the site. Accommodations for normal class sessions (either ending early or canceling class) will take place to offset some of this time commitment. This is a Bear Bridge course required for all first-year students in the Beyond Boundaries program; it is open only to students in the Beyond Boundaries program.

Credit 3 units. A&S IQ: HUM, SC Arch: HUM Art: HUM EN: H

# Interdisciplinary Opportunities

Washington University offers courses through interdisciplinary programs that include studies in a variety of disciplines that cross traditional academic boundaries and support academic areas outside of the schools.

- A limited opportunity for some Washington University students to enroll in courses at Saint Louis University and the University of Missouri-St. Louis is available through the Inter-University Exchange Program (p. 1318).
- ROTC (p. 1319) courses are offered in conjunction with the U.S. Air Force and U.S. Army.
- The Skandalaris Center (p. 1321) offers cocurricular programming and practical, hands-on training and funding opportunities to students and faculty in all disciplines and schools.

## Inter-University Exchange Program

The Inter-University Exchange (IE) program between Washington University, Saint Louis University (SLU), and the University of Missouri–St. Louis (UMSL) began in 1976 as an exchange agreement encouraging greater inter-institutional cooperation at the graduate level. Over time, this program has evolved to include undergraduate education. The basic provisions of the original agreement are still in place today, and participation continues to be at the discretion of each academic department or unit.

At Washington University, there are several schools that *do not participate* in this program (i.e., degree-seeking students in these schools are not eligible to participate in the IE program, and courses offered in these schools are not open to SLU and UMSL students attending Washington University through the IE program). They are the School of Law, the School of Medicine, the McKelvey School of Engineering, and the School of Continuing & Professional Studies. The Washington University schools that are open to participation in the IE program may have specific limitations or requirements for participation; details are available in those offices.

The following provisions apply to all course work taken by Washington University students attending SLU or UMSL through the IE program:

- Such courses can be used for the fulfillment of degree or major requirements. (Students should consult with their dean's office for information about how IE course work will count toward their grade-point average, units and major requirements.)
- Such courses are not regularly offered at Washington University.
- Registration for such courses requires preliminary approval of the student's major/department advisor, the student's division office or dean, and the academic department of the host university.
- Students at the host institution have first claim on course enrollment (i.e., a desired course at SLU or UMSL may be fully subscribed and unable to accept Washington University students).

- Academic credit earned in such courses will be considered as resident credit, not transfer credit.
- Tuition for such courses will be paid to Washington University at the prevailing Washington University rates; there is no additional tuition cost to the student who enrolls in IE course work on another campus. However, students are responsible for any and all fees charged by the host school.
- Library privileges attendant on enrolling in a course on a host campus will be made available in the manner prescribed by the host campus.

## Instructions

Washington University students must be enrolled full-time to participate in the IE program and have no holds, financial or otherwise, on their academic record at Washington University or at the host institution.

1. The student must complete the IE program application form. Forms are available from the Office of the University Registrar website.
2. The student must provide all information requested in the top portion of the form and indicate the course in which they wish to enroll.
3. The student must obtain the approval signature of the professor teaching the class or the department chair at SLU or UMSL, preferably in person.
4. The student also must obtain the approval signatures of their major advisor at Washington University and the appropriate individual in their dean's office.
5. Completed forms must be submitted to the Office of the University Registrar in the Women's Building a minimum of one week before the start of the term.

Course enrollment is handled administratively by the registrars of the home and host institutions. Washington University students registered for IE course work will see these courses on their class schedule and academic record at WebSTAC under departments I97 (SLU) and I98 (UMSL). Final grades are recorded when received from the host institution. The student does not need to obtain an official transcript from SLU or UMSL to receive academic credit for IE course work at Washington University.

Contact:	Office of the University Registrar
Phone:	314-935-5959
Email:	registrar@wustl.edu
Website:	<a href="http://registrar.wustl.edu/student-records/registration/the-inter-university-exchange-program">http://registrar.wustl.edu/student-records/registration/the-inter-university-exchange-program</a>

## Reserve Officers Training Corps (ROTC)

The number of ROTC credits that may be counted toward graduation requirements depends on the student's program of study. ROTC students should consult with their academic advisor to determine if or how ROTC course work will satisfy their graduation requirements.

For more information about specific schools, please visit the following pages:

- Undergraduate Arts & Sciences Academic Regulations (p. 1136)
- Undergraduate Business Degree Requirements (p. 1190)
- Undergraduate Engineering Academic Policies (p. 1312)

## Air Force ROTC — Aerospace Studies

### Professor

#### Michael J. Vyn

Lieutenant Colonel, USAF

**Military Aerospace Science.** Our Core Values: Integrity First, Service Before Self, Excellence In All We Do. Air Force operations are currently conducted in the technologically demanding environments of air, space and cyberspace.

Air Force ROTC (AFROTC) is an officer development program that produces the leaders of tomorrow's Air Force. The program's purpose is to train and develop outstanding college students to earn commissions as U.S. Air Force Officers. Numerous Washington University students have participated in AFROTC and gone on to distinguish themselves as Air Force aviators, engineers, lawyers, physicians and astronauts.

In AFROTC, Washington University students have the opportunity to be challenged within a unique leadership environment, with the potential to earn a commission as a second lieutenant. Participation in AFROTC is available to undergraduate and graduate Washington University students and does not obligate these students to serve in the U.S. Air Force.

AFROTC attracts the very best and brightest college students. The categorization of officer candidates within AFROTC is based on competitive selection criteria.

For more information, contact AFROTC:

Detachment 207 in St. Louis  
314-977-8328  
Detachment 207 website

U.S. Air Force ROTC  
888-4-AFROTC  
AFROTC website

For AFROTC scholarship information, refer to the Scholarship Funds (p. 48) section of this *Bulletin*.

## Army ROTC

**Military Science.** The Army ROTC program is designed to develop leaders for life. In doing so, it develops leadership, management and training skills, regardless of a student's career plans. Those who successfully complete the program earn commissions and serve as second lieutenants in the U.S. Army, Army Reserve or Army National Guard.

All students are eligible to participate in Army ROTC courses. Introductory courses are designed to develop a student's confidence, self-esteem and motivation. The intent is to develop and refine the student's leadership traits and skills to ensure their future success in military and nonmilitary environments. Instruction also includes the role of the military in national defense strategy. The number of ROTC credits that may be counted toward graduation requirements depends upon the student's program of study. ROTC students should consult with their academic advisor to determine if or how ROTC course work satisfies graduation requirements. Once a student accepts a scholarship or enters the advanced ROTC courses (300 and 400 levels), they incur a military obligation.

For more information, contact the Military Science Department, Washington University in St. Louis, 700 Rosedale Ave., Suite 1550, St. Louis, MO 63112; call 314-935-5521; visit the Washington University Army ROTC website; or email Lee Rodriguez (lee.e.rodriguez@wustl.edu), the Army ROTC Scholarships and Enrollment Officer.

For Army ROTC scholarship information, refer to the Financial Support section (p. 48) of this *Bulletin*.

## Requirements

### Airforce ROTC — Aerospace Studies Program Requirements

For more information, call the detachment for additional information about ROTC cadet in-processing and the first day of class at 314-977-8328. The Saint Louis University Air Force ROTC facility (main office) is located at 3450 Lindell Boulevard, Suite 1033, St. Louis, MO 63103.

### Army ROTC Program Requirements

Army ROTC provides the leadership skills needed to balance working with both civilians and enlisted personnel, instilling confidence as an officer, a leader, a trainer, and a mentor. Army ROTC prepares college students to succeed in any competitive environment. The leadership training and experiences that students have in Army ROTC will provide them with a foundation to become commissioned Army Officers upon graduation. Any undergraduate or graduate student can enroll in a Military Science course and participate only in the classes or in the additional military training, such as physical fitness training, leadership labs, and field training exercises.

### Air Force ROTC — Aerospace Studies

Visit online course listings to view semester offerings for I02 MAIR.

---

#### I02 MAIR 1010 Heritage and Values of the United States Air Force 1

This course is the first part of a two-course sequence designed to introduce students to the United States Air Force and provides an overview of the basic characteristics, missions, and organization of the Air Force. Leadership Laboratory is mandatory for Air Force ROTC cadets and it complements this course by providing students with followership experiences and prepares them for Field Training. Classroom activity 1 hour and 15 minutes per week; Leadership Laboratory 2 hours per week.

---

#### I02 MAIR 1020 Heritage and Values of the United States Air Force 2

This course is the second part of a two course sequence designed to introduce students to the United States Air Force and provides an overview of the basic characteristics, missions, and organization of the Air Force. Leadership Laboratory is mandatory for Air Force ROTC cadets and it complements this course by providing students with followership experiences and prepares them for Field Training. Classroom activity 1 hour and 15 minutes per week; Leadership Laboratory 2 hours per week.

---

#### I02 MAIR 2010 Team and Leadership Fundamentals 1

This course is the first part of a two-course sequence that focuses on laying the foundation for teams and leadership. Topics include skills that will allow cadets to improve their leadership on a personal level and within a team. Leadership Laboratory is mandatory for Air Force ROTC cadets and it complements this course by providing the first opportunity for applied leadership experiences and prepares them for Field Training. Classroom activity 1 hour and 15 minutes per week; Leadership Laboratory 2 hours per week. Prerequisites: I02 1010 and lab.

---

#### I02 MAIR 2020 Team and Leadership Fundamentals 2

This course is the second part of a two course sequence that focuses on laying the foundation for teams and leadership. Topics include skills that will allow cadets to improve their leadership on a personal level and within a team. Leadership Laboratory is mandatory for Air Force ROTC cadets and it complements this course by providing the first opportunity for applied leadership experiences and prepares them for Field Training. Classroom activity 1 hour and 15 minutes per week; Leadership Laboratory 2 hours per week. Prerequisites: I02 1020 and lab.

---

#### I02 MAIR 3010 Leading People and Effective Communication 1

This course is the first part of a two-course sequence that teaches advanced skills and knowledge in management and leadership. Special emphasis is placed on enhancing leadership skills and communication. A mandatory Leadership Laboratory complements this course for Air Force ROTC cadets. Leadership Laboratory provides advanced

leadership experiences and gives cadets opportunities to develop and apply leadership skills. Classroom activity 3 hours per week; Leadership Laboratory 2 hours per week. Prerequisites: I02 1010, 1020, 2010, 2020, and labs.

---

#### I02 MAIR 3020 Leading People and Effective Communication 2

This course is the second part of a two course sequence that teaches advanced skills and knowledge in management and leadership. Special emphasis is placed on enhancing leadership skills and communication. A mandatory Leadership Laboratory complements this course for Air Force ROTC cadets. Leadership Laboratory provides advanced leadership experiences and gives cadets opportunities to develop and apply leadership skills. Classroom activity 3 hours per week; Leadership Laboratory 2 hours per week. Prerequisites: I02 1010, 1020, 2010, 2020, 3010, and labs.

---

#### I02 MAIR 4010 National Security Affairs/Preparation for Active Duty

Cadets learn about the role of the professional military leader in a democratic society; societal attitudes toward the armed forces; the requisites for maintaining adequate national defense structure; the impact of technological and international developments on strategic preparedness and the overall policy-making process; and military law. In addition, cadets will study topics that will prepare them for their first active-duty assignment as officers in the Air Force. A mandatory Leadership Laboratory complements this course. Leadership Laboratory provides advanced leadership experiences and gives cadets opportunities to develop and apply fundamental leadership and management skills while planning and conducting corps activities. Classroom activity 3 hours per week; Leadership Laboratory 2 hours per week. Aerospace Studies courses (MAIR 3010 through MAIR 4020) are advanced courses designed to improve communication and management skills required of Air Force officers. Prerequisites: I02 1010, 1020, 2010, 2020, 3010, 3020, and labs.

---

#### I02 MAIR 4020 Preparation for Active Duty

Cadets learn about the role of the professional military leader in a democratic society; societal attitudes toward the armed forces; the requisites for maintaining adequate national defense structure; the impact of technological and international developments on strategic preparedness and the overall policy-making process; and military law. In addition, cadets will study topics that will prepare them for their first active-duty assignment as officers in the Air Force. A mandatory Leadership Laboratory complements this course. Leadership Laboratory provides advanced leadership experiences and gives cadets opportunities to develop and apply fundamental leadership and management skills while planning and conducting corps activities. Classroom activity 3 hours per week; Leadership Laboratory 2 hours per week. Aerospace Studies courses (MAIR 3010 through MAIR 4020) are advanced courses designed to improve communication and management skills required of Air Force officers. Prerequisites: I02 1010, 1020, 2010, 2020, 3010, 3020, 4010, and labs.

---

## Army ROTC

Visit online course listings to view semester offerings for I25 MILS.

---

#### I25 MILS 1010 Introduction to Leadership I

Examine the challenges and competencies that are critical for effective leadership. You will learn how the personal development of life skills such as cultural understanding, goal setting, time management, mental/physical resiliency, and stress management relate to leadership, officership, and the Army profession. Open to all students and enrollment does not require a commitment to join the US Army.

Credit 2 units.

---

### **I25 MILS 1020 Introduction to Leadership II**

Investigate leadership fundamentals such as problem-solving, listening, presenting briefs, providing feedback, and using effective writing skills. You will explore dimensions of leadership attributes and core leader competencies in the context of practical, hands-on, and interactive exercises. Learn fundamental military concepts and explore the Army's leadership philosophy. I25 MILS 1020 is open to all students and enrollment does not require a commitment to join the US Army. Credit 2 units.

---

### **I25 MILS 2010 Innovative Team Leadership**

Explore the dimensions of creative and innovative tactical leadership strategies and styles by examining team dynamics and leadership theories. The course continues to build on developing knowledge of leadership attributes and core leader competencies through the understanding of Army rank, structure, and duties as well as broadening knowledge of land navigation and squad tactics. Enrollment in I25 MILS 2010 does not require a commitment to join the US Army. Credit 3 units.

---

### **I25 MILS 2020 Foundations of Tactical Leadership**

Develop greater self-awareness as you assess your own leadership styles and practice communication and team building skills. Examine and practice the challenges of leading teams in the complex operational environment. Study dimensions of terrain analysis, patrolling, and operation orders. Explores the dynamics of adaptive leadership in the context of military operations. Enrollment in I25 MILS 2020 does not require a commitment to join the US Army. Credit 3 units.

---

### **I25 MILS 3010 Adaptive Team Leadership**

This is an academically challenging course where you will study, practice, and apply the fundamentals of Army leadership, officership, Army values and ethics, and small unit tactics. At the conclusion of this course, you will be capable of planning, coordinating, navigating, motivating, and leading a team or squad in the execution of a tactical mission during a classroom practical exercise (PE), a leadership lab, or during a military situational training exercise (STX) in a field environment. Prerequisites: successful completion of I25 MILS 1010, 1020, 2010, and 2020 or attendance at the Leader's Training Course (LTC). Contact the Military Science Department for more details. Credit 3 units.

---

### **I25 MILS 3020 Applied Team Leadership**

Continue to learn and apply the fundamentals of Army leadership, officership, Army values and ethics as you hone your leadership abilities in a variety of tactical environments and the classroom. Successful completion of this course will help prepare you for success at the ROTC Leader Development and Assessment Course (LDAC) which you will attend the summer following this course at Fort Lewis, Washington. You will receive systematic and specific feedback on your leadership attributes, values and core leader competencies from your instructors, other ROTC cadre, and senior cadets. Prerequisite: successful completion of I25 MILS 3010. Credit 3 units.

---

### **I25 MILS 4010 Adaptive Leadership**

This course focuses on practical application of adaptive leadership. Throughout the semester, students will apply the fundamentals of principles of training, the Army writing style, and military decision making. Students will study the special trust reposed to Army Officers

by the US Constitution and the President of the United States--a special trust given to no other civilian professions. Students will also study the Army officer's role in the Uniform Code of Military Justice, and the counseling and development of subordinates. Prerequisite: successful completion of the ROTC Leadership Development and Assessment Course (LDAC) or permission of instructor. Credit 3 units.

---

### **I25 MILS 4020 Leadership in a Complex World**

Explore the dynamics of leading in the complex situation of current military operations in the contemporary operating environment. Examine differences in customs and courtesies, military law, principles of war, and rules of engagement in the face of international terrorism. You will also explore aspects of interacting with non-government organizations, civilians on the battlefield and host nation support. Significant emphasis is placed on your transition to officership, preparing you for your branch school and first unit of assignment. Prerequisite: successful completion of I25 MILS 4010 or permission of instructor. Credit 3 units.

---

### **I25 MILS 4500 Modern American Military History**

A survey of US military involvement beginning with the Treaty of Versailles following World War I and concluding with the current Global War on Terror. Students will follow a chronological study of crucial battles of World War II, Korea, and Vietnam and conclude with in-depth case studies from Iraq and Afghanistan. The class focuses on both tactical and strategic lessons learned and the political and cultural influences that affect the way wars are fought. Prerequisite: sophomore status and good standing in the ROTC program. Credit 3 units.

---

### **I25 MILS 4501 Advanced American Military History**

This course is a continuation of the fall semester prerequisite Modern American Military History course, outlining major conflicts that have occurred throughout the course of American history in post WWII 20th and 21st Century. It aims to highlight the contemporary American military's efforts to modernize in a multi-polar international relations environment in its struggle to become the global hegemon. This course familiarizes students with the context of the current profession of arms. The philosophy guiding the curriculum is centered around how and why the military is structured in present form and how officership in particular has shaped the macro and micro aspects of combat over the last 75 years. Credit 3 units.

---

## **Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship**

The Skandalaris Center for Interdisciplinary Innovation and Entrepreneurship is the hub of creativity, innovation, and entrepreneurship at Washington University. We believe everyone can be entrepreneurial. Skandalaris provides programming where anyone can explore their creative and entrepreneurial interests, develop an entrepreneurial mindset, and go from ideation to launch.

## Mission

The Skandalaris Center fosters and empowers an inclusive community that finds opportunities in problems and transforms ideas into action. We build an ecosystem of education, research, and resources that engages all WashU students, faculty, alumni, and staff as entrepreneurial leaders and collaborators.

## Who We Serve

We work with the best and brightest at WashU — the change-makers, thought leaders, and visionaries — to solve the world's problems and meet local needs through innovation and entrepreneurship. As an interdisciplinary center, our initiatives serve students, faculty, staff, and alumni from all levels and disciplines.

## Our Initiatives

We develop programs for WashU entrepreneurs, creatives, innovators, and scholars. Our commitment to interdisciplinary innovation and entrepreneurship is motivated by the following beliefs:

- *Everyone can be creative.* We provide hands-on experiences and the creative means to solve problems.
- *Innovation is the backbone of entrepreneurship.* Our opportunities are designed to develop and share new ideas while connecting with other WashU entrepreneurs and innovators.
- *Good ideas are one opportunity away from success.* Our programs are created to help WashU entrepreneurs and innovators access the resources they need to take their ideas to the next level.
- *Knowledge and skills are key to innovation and entrepreneurship.* Our Center offers events and opportunities to help our community of WashU entrepreneurs, creatives, and innovators learn the ins and outs of innovation and entrepreneurship.

## Programs and Resources

- **Course: The Endgame of Entrepreneurship: Leveraging Capitalism for Good**  
This course is offered through the Beyond Boundaries Program. Students will learn to take advantage of the profit-seeking motive of capitalism while also learning from the mistakes and unintended consequences that capitalism has caused throughout history.
- **Experts on Call**  
This program provides an opportunity for the WashU community to connect with experts in the Skandalaris Center or remotely, free of charge.
- **Honors in Innovation & Entrepreneurship**  
Students who have shown exemplary involvement in innovation and entrepreneurship during their time at Washington University are recognized through this program. Honors are earned by accumulating points through a combination of curricular and cocurricular activities.
- **In-Residence Program**

This program provides WashU students, faculty, staff, and alumni with the opportunity to learn from and work with professionals with extensive industry experience.

- **PhD Citation in Entrepreneurship**  
This program provides opportunities for PhD students who are interested in developing skills and experiences in the areas of entrepreneurship and innovation.
- **Resources**  
The Skandalaris Center, Washington University, and external services and resources are available to support innovators and entrepreneurs.
- **Skandalaris Spaces**  
Our collaboration space is available for hosting meetings or events. Requests should be made a week in advance.
- **Skandalaris Startup Webinars, Panel Discussions, and Workshops**  
These webinars provide an exciting way for alumni to reconnect and share their experiences with entrepreneurship. We also offer free, noncredit workshops designed to encourage creativity, innovation, and entrepreneurship.
- **Startup Venture Promotion**  
The Skandalaris Center is happy to help Washington University in St. Louis students, faculty, staff, and alumni with promoting their startup ventures.
- **St. Louis Entrepreneurial Fellowship**  
This year-long program gives WashU students a chance to explore entrepreneurship at WashU and in St. Louis. The experience includes a spring semester seminar that explores innovation and entrepreneurship, a 10-week paid summer internship at a St. Louis startup, a fall semester capstone project, professional development opportunities, and programs and events to engage with entrepreneurs, founders, and innovators.
- **Student Entrepreneurial Program (StEP)**  
StEP provides a unique opportunity for students to own and operate a business on campus that serves the WashU community. Student owners can supplement the valuable business and entrepreneurial skills they learn in the classroom while gaining real-world experience as they manage and lead their own businesses.
- **Student Groups**  
There are many organizations that allow students to gain experience and make valuable interdisciplinary connections in the areas of creativity, innovation, and entrepreneurship.
- **Venture Development**  
The WashU community is invited to set an appointment with a member of our team for help with ideas and businesses at any stage. We will work with these individuals to brainstorm ideas, strengthen financial models, draft business plans, perfect pitches, and more.
- **Washington University Entrepreneurship Courses**  
Courses in entrepreneurship offered across the university are available to students at all levels and in all disciplines.

## Competitions

- **IdeaBounce**

IdeaBounce is both an online platform and an event for sharing venture ideas and making connections. This is an opportunity for participants to pitch their ideas (no matter how "fresh"), get feedback on them, and make connections. In-person events happen frequently throughout the fall and spring semesters.

- **Skandalaris Venture Competition (SVC)**

The SVC provides expert mentorship to new ventures and startups to ready them for commercializing their ideas, launching, and pitching to investors. Teams will develop materials focused on explaining the ideas that they are working on to a broad audience.

- **Who Can Apply:** Current Washington University students and alumni (within one year of graduation) with an early-stage venture or idea

- **Award:** Up to \$22,500

- **Global Impact Award (GIA)**

The GIA awards WashU-affiliated ventures with inventions, products, ideas, and business models that will have a broad and lasting impact on society.

- **Who Can Apply:** WashU students, postdocs, residents, and alumni who have graduated within the last 10 years

- **Award:** Up to \$50,000
