L33 Psych 107 The Science of #Slaying It! in College
You have spent the last 12 or so years "slaying it" as a student. You likely have developed lots of effective strategies for succeeding in school. Recently, our understanding of what those successful strategies are has greatly expanded. But, how do we know what skills are particularly helpful to do well academically? From psychological research! In this class students will learn about the psychological research that has illuminated which strategies are most helpful when studying, when in the classroom, and when asking for help. We will focus on how to most effectively study but will discuss other strategies as well. Students will also be asked to apply these skills in the other classes that they're taking this semester, with the hope that they develop and refine the skills they already have and continue slaying it as a student. Prerequisite: open only to freshmen and sophomores. Permission of instructor required. Credit/No Credit option only.
Credit 1 unit.

L33 Psych 109 First-Year Opportunity: Research in Psychology
Weekly presentations by various members of the psychology faculty; introduces students to research areas and current issues. Attendance at all lectures required. Open to freshmen and sophomores only. Prerequisite: Psych 100B. Credit/no credit only.
Credit 1 unit. A&S: FYO A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 111 First-Year Opportunity: Mindfulness Science & Practice
Mindfulness is a term that is becoming increasingly used in popular culture to refer to a set of skills associated with increased attentional focus, successful stress-management, and improved health, sleep, and emotional well-being. This course will expose students to the various facets of mindfulness from both an applied and scientific perspective, by teaching mindfulness skills through a set of easy-to-learn practices and exercises, and by surveying of empirical research regarding mindfulness effects on cognition, emotion, brain function, and health. The goal of the seminar will be to provide practical skills that can contribute to personal development, emotional well-being, and academic success, while also developing critical thinking skills in learning how to read and evaluate primary scientific literature on mindfulness. Open to first-year students only.
Credit 1 unit. A&S: FYO

L33 Psych 185 First-Year Seminar: Race and Racism
This first-year seminar aims to introduce students to theoretical and empirical research on race and racism. It will provide an overview of historical, sociological, political, epidemiological, and especially social psychological perspectives on racial bias. We will examine mechanisms that contribute to prejudice, stereotyping and discrimination. We will review how bias uniquely affects particular groups, including Native, Asian, Latino, white and Black Americans. We end the course with discussions about interracial interactions.
Credit 3 units. A&S: FYS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 105 First-Year Opportunity: Psychology of Young Adulthood
This course will cover selected topics relevant to the developmental, social, personal, and cognitive issues that young adults confront during their college years. Material will be drawn mainly from the field of psychology, and the emphasis will be on the scientific basis of concepts and on empirically supported strategies for growth and development. The knowledge gained may contribute to academic success, personal development, and a more rewarding social and academic experience over the course of college and beyond. This 1-unit course is only open to first-year students. Credit/no credit only.
Credit 1 unit. A&S: FYO
L33 Psych 221 First-Year Seminar: Introduction to Memory Studies
This course focuses on memory not only as an individual phenomenon but also how our memories for historical events can be determined by the groups to which we belong. We will survey such topics as experimental methods and findings in the study of individual memory; questions of accuracy and vividness of memory; false and illusory memories; eyewitness memory reports that are used in trials; methods to greatly enhance learning and memory; and people with extraordinary memories. We then transition to the study of collective memory, or how our memories and identities are shaped by the groups to which we belong. The topics will include transmission of memories and identity through narratives; shared historical memories; battles over how the past is to be remembered; and revision of the memories of the past to meet concerns of the present. We also consider how memory is used in political arguments. Enrollment is restricted to 19 first-year students.
Credit 3 units. A&S: FYS A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 225 Internship in Psychology
This course provides an opportunity for students to gain practical, applied experience in a non-academic, community service agency. For a description of prerequisites, course goals, agency selection, registration policies, and course requirements, students should obtain a copy of “Internships in Psychology,” which is available in room 207B of Somers Family Hall or on the Psychological & Brain Sciences website (http://psychweb.wustl.edu/undergraduate). This course can be taken only once, and it is open to junior and senior Psychological & Brain Sciences majors only. Credit/no credit only. Prerequisite: Permission of instructor.
Credit 3 units.

L33 Psych 235 Practicum in Applied Behavior Analysis: Autism Spectrum Disorder
This is an opportunity for students to be trained in applied behavior analytic techniques and to work with a child with autism/pervasive developmental disorder. Training and supervision will be arranged and coordinated by the family of the child and their consultant. To receive credit, students must undertake a year’s work with the child, complete the minimum number of hours of training and therapy, and attend regular therapy meetings. In addition, students must meet with the practicum coordinator for the discussion of assigned readings and presentations on autism and therapy. The completion of a paper during the second semester is also required. For further information and a copy of the petition form, students should pick up the practicum brochure from the department. This course can only be taken once for credit, and it is offered as credit/no credit only. Enrollment is only available through the practicum coordinator.
Credit 3 units.

L33 Psych 246 Mindfulness in Psychology and Eastern Philosophies: Sophomore Seminar
This course explores the concept of mindfulness in psychology and in Eastern philosophies. We will discuss the scientific literature on mindfulness, as well as mindfulness as presented by Buddhist scholars. We will engage in several different mindfulness practices throughout the semester. Prerequisite: Psych 100B.

L33 Psych 261 Applying the Science of Learning
This course is intended to cover the science of human learning, with special focus on areas, theory, and research that have potential to improve how students learn. Thus, the course will provide selective coverage of theoretical and empirical work in the science of learning that can inform and improve student learning. The applicability of these themes to the students in this course will be explicitly developed through students’ explicit translation of the experimental findings from the literature to their own learning challenges. The course will be organized around three major integrated goals. First, the relevant basic theory and findings in select topics in the science of learning will be covered. Second, the implications of this work for improving learning outcomes in authentic educational contexts will be considered. Third, together we will develop concrete techniques and examples of how the principles that emerge can be adopted to significantly enhance outcomes of lifelong learning challenges. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 300 Introduction to Psychological Statistics
Descriptive statistics including correlation and regression. Inferential statistics including nonparametric and parametric tests of significance through two-way analysis of variance. Course emphasizes underlying logic and is not primarily mathematical, though knowledge of elementary algebra is essential. Psych 300 is required of all P&BS majors. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 301 Experimental Psychology
This course provides training in the logic and techniques of psychological research so as to provide students with experience in the design of psychology experiments and the interpretation of results. Topics include experimental design and control, library research, quantitative treatment of data, graphical presentation of results, and clarity of scientific writing. Lectures focus on general principles of experimentation, whereas the laboratory sections provide an introduction to a range of psychological phenomena through hands-on experience in experimentation. Each student also completes an independent research project. Declared psychology & brain sciences majors will have priority. Limited to 15 students per section. Prerequisites: Psych 100B and Psych 300.
Credit 4 units. A&S IQ: SSC Arch: SSC Art: SSC BU: SCI

L33 Psych 3011 Experimental Psychology
Psych 3011 is limited to students who have not taken Psych 300 and who want to enroll in Psych 300 and Experimental Psychology concurrently. Therefore, students who enroll in Psych 3011 must also register for Psychology 300. Psych 3011 fulfills the Psychology 301 requirement for the major. Topics in the two courses (i.e., Psych 300 and Psych 3011) will be coordinated in order to integrate the concepts from Statistics with those from Experimental Psychology. Experimental Psychology provides training in the logic and techniques of psychological research so as to provide students with experience in the design of psychology experiments and the interpretation of results. Topics include experimental design and control, library research, quantitative treatment of data, graphical presentation of results, and clarity of scientific writing. Lectures focus on general principles of experimentation, while the laboratory component provides an introduction to a range of psychological research.
phenomena through hands-on experience in experimentation. Each student also completes an independent research project of their own design under the supervision of a faculty member. Enrollment limited to 15 students. Declared psychology & brain sciences majors will have priority. Prerequisites: Psych 100B and concurrent enrollment in Psych 300.

Credit 4 units. A&S IQ: NSM Arch: NSM Art: NSM BU: BA, SCI

L33 Psych 304 Educational Psychology
This is a course in psychological concepts relevant to education that is organized around four basic issues: (1) how humans think and learn; (2) how children, adolescents, and adults differ in their cognitive and moral development; (3) the sense in which motivation and intention explain why people act as they do; and (4) how such key human characteristics as intelligence, motivation, and academic achievement can be measured.

Offered fall and spring semesters.
Same as L12 Educ 304
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 315 Introduction to Social Psychology
Introduction to the scientific study of individual behavior in a social context. Topics: person perception; stereotyping and prejudice; attitudes; memory; and political psychology, among other issues. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 321 Developmental Psychology
This course concentrates on the cognitive and social development of the person from conception to adolescence. Topics covered include: infant perception, attachment, cognitive development from Piagetian and information processing perspectives, aggression and biological bases of behavior. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 3211 Music Cognition
An introduction to modern research on music perception and cognition. The course covers four main topics: the perception of key, the psychoacoustics of dissonance, the relationship between attention and musical meter, and the process by which melodies establish, fulfill, and deny expectations. Students read and discuss research from both cognitive science and music theory, in addition to completing several projects.

Same as L27 Music 3221
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 325 Psychology of Adolescence
This course concentrates on brain, cognitive, and social development during adolescence. This period of development is marked by transition and change. Special topics will include the vulnerability of the adolescent brain and the development of sexual orientation. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 326 Introduction to the Psychology of Aging
Study of the processes of aging in the individual in terms of their behavioral effects. Age changes in biological functions, sensation, perception, intelligence, learning, memory and creativity are studied to understand the capacities and potentials of the mature and older person. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 330 Sensation and Perception
What’s involved in seeing and hearing? This course will cover perception from the physical stimuli (light and sound) that impinge upon the sensory receptors through the higher-level percepts that the stimuli generate. Demonstrations and illusions will be used as we learn about the anatomy and physiology of the sensory systems and study the brain mechanisms that are involved in vision and audition. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: BA, SCI

L33 Psych 333 Independent Study in Psychological & Brain Sciences
Prerequisites: Psych 100B and permission of a member of the faculty of the department (or other approved supervisor) who agrees to supervise the student's work. Credit to be arranged. A maximum of 6 units may be applied toward the major. The electronic Petition for Supervision of Independent Study form is available online (http://eyes.wustl.edu/psych333/). Students will be enrolled only after their form is approved by the faculty supervisor and forwarded to the undergraduate coordinator.

Credit/no credit only.
Credit variable, maximum 3 units.

L33 Psych 3401 Biological Psychology
An introduction to biological mechanisms underlying behavior. Topics include the physiology of nerve cells; anatomy of the nervous system; control of sensory and motor activity, arousal and sleep; motivation; and higher mental processes. Prerequisite: Psych 100B.

Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

L33 Psych 344 Principles of the Nervous System
This course will provide a broad introduction to neuroscience, starting at the level of cellular and molecular neuroscience and ultimately ending at systems and theoretical neuroscience, with emphasis on the organization of the mammalian central nervous system. Topics will include neuronal structure, the action potential, information transmission between neurons, sensory/motor systems, emotion, memory, disease, drugs, behavior, and network dynamics. A fundamental goal of this course is to provide students with the ability to approach complex problems using the scientific method and to understand the limits of knowledge. This course will also expose students to some of the neuroscience community at Washington University. Prerequisites: Biol 2960 and Biol 2970 recommended; Biol 3058 recommended or Psych 3401 and permission of the instructor. Same as L41 Biol 3411
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: SCI

L33 Psych 345 Genes, Environment, and Human Behavior
This class will examine how genetic influences impact various dimensions of human behavior, ranging from traits (e.g., personality) to psychiatric disorders. Topics to be covered include methods used to study genetic influence, how genetic predispositions interact with the environment, and ethical implications. Modern methods for gene-identification, such as genomewide association studies, polygenic risk scores and epigenetic experiments will be examined in detail. Emphasis will be placed on understanding core concepts (e.g., what is identity-by-descent) as well as application (e.g., calculate heritability, interpretation of results from published studies). Prerequisite: Psych 100B.
development in atypical populations; childhood bilingualism; and
development of written language skills. Prerequisites: Psych
100B and Ling 170D and junior or senior standing. Writing-
intensive. Credit 3 units. A&S IQ: SSC, WI: EN: S

L33 Psych 360 Cognitive Psychology
Introduction to the study of thought processing from an
information-processing approach. Emphasis will be placed
on theoretical models that are grounded in empirical support.
Topics include pattern recognition, attention, memory, reasoning,
language processes, decision making, and problem solving. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: NMS Arch: NMS Art: NMS BU: BA

L33 Psych 3604 Cognitive Neuroscience
A general introduction to the underlying principles and
mechanisms of brain function that give rise to complex human
cognitive behavior. Emphasis is placed on how emerging
methods and approaches from both neuroscience and cognitive
psychology have been integrated to yield new insights into the
organization and structure of higher mental processes. Topics
include perception, attention, memory, language and executive
control. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: NMS Arch: NMS Art: NMS BU: SCI

L33 Psych 361 Psychology of Learning
This course presents basic learning processes in animals, such as
conditioning, reinforcement, aversive control, and constraints
on learning. Comparisons and interactions between classical
and operant conditioning are discussed, and consideration is given to
learning theorists and theories, along with applications from the
laboratory to the "real world." Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: NMS Arch: NMS Art: NMS BU: SCI

L33 Psych 3645 Understanding Emotions
Emotions both shape and are shaped by our subjective
experiences, physiology, behaviors, cognitions, social
interactions, and health. Their complexity and significance make
the study of emotions particularly exciting and challenging. This
course offers an overview of theory and research on emotions
with content stretching across psychological disciplines,
including personality, social, clinical, developmental, and
neuropsychology. Course content will include definitions of
emotions, physiological changes associated with emotions, and
individual differences in emotional experience. The course will
also examine how culture, cognitions, and relationships affect
and are affected by emotions and how emotion is related to
physical and mental health. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC: BA: BA: SCI:

L33 Psych 367 Positive Psychology: The Science of Happiness
Reviews the relatively recent development in the field known as
“Positive Psychology.” Topics may include: happiness and life-
satisfaction, positive self-esteem, creativity, caring relationships,
love (passionate and otherwise), empathy, optimism, ambition,
moral character development, attachment, compassion,
forgiveness, helping, work ethics, and successful aging.
Designed to take a sampling of those aspects of psychology
that emphasize the positive side of human nature. Prerequisites:
Psych 100B, junior or senior standing.
Credit 3 units. A&S IQ: SSC Art: SSC Art: SSC BU: BA EN: S
with recognition that empathy has a “darker” side, one that can
with prosocial outcomes (e.g., reducing racial prejudice) but
also consider the conditions under which empathy is associated
there cultural differences in levels of this trait? To what extent
Why are some people generally more empathic than others? Are
the way, we consider answers to several interesting questions:
consequences of empathic motivation, defined broadly. Along
L33 Psych 396 Psychological Dynamics of Empathy
In this course, we will explore the antecedents and
sequences of empathic motivation, defined broadly. Along
the way, we consider answers to several interesting questions:
Why are some people generally more empathic than others? Are
there cultural differences in levels of this trait? To what extent
is empathy an “emotional” or “cognitive” phenomenon? We will
also consider the conditions under which empathy is associated
with prosocial outcomes (e.g., reducing racial prejudice) but
with recognition that empathy has a “darker” side, one that can
ironically exacerbate people's preexisting biases. The approach
to empathy will be highly interdisciplinary as we consider
research and theory within several fields within psychology
(e.g., social, personality, cognitive) as well as areas that draw
from other scholarly disciplines (e.g. social neuroscience, social
anthropology). Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: NSM: Art: NSM BU: SCI

L33 Psych 380 Human Learning and Memory
A survey of issues related to the encoding, storage and retrieval
of information in humans. Topics include memory improvement
strategies, people with extraordinary memories, memory illusions
and distortions, among other topics. Limited to 25 students.
Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: BA

L33 Psych 3885 The Mental Health Crisis in Higher
Education
During the last decade, college campuses have seen
unprecedented increases in the proportion of students suffering
from mental health problems. Many institutions have responded
by increasing the number of mental health counselors available
in student health centers, making the accommodations at
disability resource centers more robust, and providing safe
spaces for students to process incidents and events that have
triggered them. Are such interventions improving the well-
being of today's students, or might they actually be further
cumbering students' psychological health? This discussion-
based course will explore arguments made on all sides of
this provocative debate and examine research on the nature
of today's college students and what resources and services
most contribute to their psychological health and well-being.
Enrollment is limited to 15 students. Prerequisite: at least 6 units
of advanced home-based psychology courses.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 395 Prejudice, Stereotyping, & Discrimination
This course will trace prejudice, stereotyping, and discrimination
from its ordinary origins in social cognition to its most extreme
consequences in war and genocide. Topics include prejudice,
the causes of stereotyping and discrimination, the development
of prejudice in children, subtle and overt prejudice and
erotyping, group conflict, the role of social norms, the
experience of being a target of discrimination, and interventions
to reduce prejudice and discrimination. Areas covered include
racism, sexism, ageism, homophobia, ableism, colorism, and
religious discrimination. Prerequisite: Psych 100B.
Credit 3 units. A&S IQ: SSC, SC, SD Arch: SSC Art: SSC BU: BA EN: S

L33 Psych 396 Psychological Dynamics of Empathy
In this course, we will explore the antecedents and
sequences of empathic motivation, defined broadly. Along
the way, we consider answers to several interesting questions:
Why are some people generally more empathic than others? Are
there cultural differences in levels of this trait? To what extent
is empathy an "emotional" or "cognitive" phenomenon? We will
also consider the conditions under which empathy is associated
with prosocial outcomes (e.g., reducing racial prejudice) but
with recognition that empathy has a "darker" side, one that can

L33 Psych 374 Drugs, Brain and Behavior
This course reviews information pertaining both to medications
used to treat psychiatric disorders and to psychoactive drugs of
abuse. By learning principles of pharmacology and mechanisms of
action of these agents, students develop an enhanced
knowledge of the brain mechanisms underlying abnormal human
behavior. Prerequisites: Psych 100B and one of the following:
Psych 354 or Psych 3401 or Psych 344.
Credit 3 units. A&S IQ: NSM Art: NSM BU: SCI

L33 Psych 4046 Developmental Neuropsychology (Writing
Intensive)
The primary goal of this course is to acquaint students with
the basic features of common dementia subtypes, such as
Alzheimer's disease, frontotemporal dementias, vascular
dementia, Lewy body disease, Huntington's disease and
Parkinson's disease. The course will cover the clinical
manifestations (cognitive and behavioral symptoms, course,
prognosis), neuroanatomical signatures, pathophysiology,
intervention and treatment, and current research directions.
Students will gain a detailed understanding of the major
dementia subtypes as manifestations of underlying brain
pathology and anatomical patterns of brain damage. Upon
completion of the course, the student should be able to (1)
identify and distinguish the most common dementia subtypes
based on knowledge of clinical presentation and disease
mechanisms; (2) understand how underlying brain changes may
be linked to specific clinical manifestations; (3) understand how
therapeutic strategies are linked to pathophysiology; (4) engage
in scholarly discussion about the topics; and (5) read and critique
empirical research papers. Prerequisite: Psych 326 and either
Biol 3411, Psych 344, or Psych 3401.
Credit 3 units. A&S IQ: NSM, WI Art: NSM

L33 Psych 4048 Neuropsychology of Dementia
The primary goal of this course is to acquaint students with
the basic features of common dementia subtypes, such as
Alzheimer's disease, frontotemporal dementias, vascular
dementia, Lewy body disease, Huntington's disease and
Parkinson's disease. The course will cover the clinical
manifestations (cognitive and behavioral symptoms, course,
prognosis), neuroanatomical signatures, pathophysiology,
intervention and treatment, and current research directions.
Students will gain a detailed understanding of the major
dementia subtypes as manifestations of underlying brain
pathology and anatomical patterns of brain damage. Upon
completion of the course, the student should be able to (1)
identify and distinguish the most common dementia subtypes
based on knowledge of clinical presentation and disease
mechanisms; (2) understand how underlying brain changes may
be linked to specific clinical manifestations; (3) understand how
therapeutic strategies are linked to pathophysiology; (4) engage
in scholarly discussion about the topics; and (5) read and critique
empirical research papers. Prerequisite: Psych 326 and either
Biol 3411, Psych 344, or Psych 3401.
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: BA

L33 Psych 4075 Advanced Research Methods & Design
This course is an advanced foray into research design and
methods used in psychological science. This course is project-
based, writing-intensive, and will be supplemented heavily
with readings and discussions of topics of broad importance
to psychological research (e.g., reliability, validity, signal
detection theory, philosophy of science). These readings will
enhance students' abilities to think critically about psychological
research design and methods, as both a consumer and creator
of psychological research. During the course of the semester
they will complete two original research projects (e.g., an
observation study and an experimental study). Together with
their classmates they will devise research questions, design
studies to test their research questions, collect data, and
statistically analyze their results. Individually, students will write-
ap, and then revise, each research project in an APA-style
paper. The writing requirements for this course build on the skills
students acquired in Experimental Psychology and will further
their abilities to communicate scientific ideas more skillfully,
clearly and accurately. Prerequisite: L33 Psych 301 or 3011.
Credit 3 units. A&S IQ: NSM, WI Arch: NSM Art: NSM BU: BA
L33 Psych 4099 Human Evolutionary Psychology
How did evolution by natural selection shape the way human beings think and behave? Does evolution explain human cooperation and friendship, human morality, reproductive decisions and social interactions? What sex differences in cognition or behavior are caused by evolution? This course introduces the concepts and findings of evolutionary psychology, mostly through reading of primary sources — articles from psychology and biology journals — and discussion and presentation of empirical cases. Prerequisites: at least 6 units of Psychology level 300 or above, or Anthro 3383.
Credit 3 units. A&S IQ: SSC Arch; SSC Art; SSC EN: S

L33 Psych 413 Contemporary Topics in Social Psychology
Consideration of selected contemporary topics in social psychology. Participation in a research project of appropriate scope. Prerequisite: Psych 315.
Credit 3 units. A&S IQ: SSC Arch; SSC Art; SSC, SSC EN: S

L33 Psych 4175 Applied Statistical Analysis with R
This course is designed to introduce R as both a means of applied statistical analysis as well as a window into data organization and programming. The goal of the course is to teach the tools needed to take a raw dataset and to not only perform a statistical test in R but to arrange the dataset to perform a variety of tests, to choose the appropriate test, and to visualize the results. Students will gain practical knowledge of how to use statistics in research. Prerequisites: Psych 300, Math 2200, or Math 3200, or another approved University statistics course; or graduate standing in Psychology; or graduate standing in another department, with permission.
Credit 3 units. A&S IQ: NSM Arch; NSM Art: NSM

L33 Psych 4182 Perception, Thought and Action
This course focuses on current topics in visual perception, visual attention, and the control of action. Readings consist of recent journal articles. Class meetings emphasize presentation and discussion of the material in the readings. Limited to 15 students.
Prerequisites: Psych 100B and one of the following: Psych 301, Psych 330, Psych 3401, Psych 344, Psych 360, Psych 361, Psych 3604, Psych 380, Psych 433 or Psych 4604.
Credit 3 units. A&S IQ: NSM Arch; NSM Art: NSM BU: BA

L33 Psych 4226 The Psychology of Social Stigma
This seminar aims to introduce students to theoretical and empirical social psychological research on prejudice and social stigma. The topics covered will include examinations of why individuals stigmatize by exploring cognitive, evolutionary, self and system justification explanations. The course will examine the effects of stigmatization for low-status groups (stereotype threat, dis-identification, compensation and health outcomes). We will explore the role of stigma in intergroup interactions as well as variations in the experience of stigma. Finally, we will examine high-status groups’ perceptions of bias (e.g., perceptions of anti-white discrimination). Prerequisite: Social Psychology (Psych 315) or Prejudice (Psych 395).
Credit 3 units. A&S IQ: SSC, SC Arch; SSC Art; SSC BU: BA EN: S

L33 Psych 427 Social Gerontology
This course provides an introduction to aging and growing old, from an interdisciplinary perspective. Specific attention is paid to demographics, physical health and illness, mental health, interpersonal relations, work issues, living arrangements, ethics, and death and dying. Prerequisites: junior or senior standing and completion of 6 advanced units in Psych.
Credit 3 units. A&S IQ: SSC Arch; SSC Art; SSC EN: S

L33 Psych 4301 Contemporary Topics in Cognitive Development
Cognitive Developmental topics include: Piagetian abilities (e.g., conservation, formal reasoning), basic cognitive abilities (e.g., processing speed), executive functions (e.g., working memory), and other current topics (e.g., processing facial stimuli). Prerequisite: Psych 321 or 360.
Credit 3 units.

L33 Psych 4302 Cognitive Psychology Applied to Education
This course is intended to cover topics in the cognitive psychology of human memory, conceptual learning and comprehension with special focus on areas, theory and research that have potential application to education. The course provides selective coverage of theoretical and empirical work in cognitive psychology that provides potential to inform and improve educational practice. The applicability of these themes are explicitly developed and evaluated through the primary research literature using educationally oriented experimental paradigms. The course is of interest and benefit to education majors and to psychology majors interested in cognitive psychology and its applications. Prerequisites: junior/senior status; 9 units in psychology and Psych 100B or junior/senior status; 9 units in Education and Psych 100B.
Credit 3 units. A&S IQ: SSC EN: S

L33 Psych 4305 Psychological Science: Fact and Fiction
Skeptical analysis of psychological science as practiced and popularized in the media. Analysis of discrepancies between media and scientific claims regarding areas such as repressed memory, brain imaging, heritability and psychotherapy. Additional examination of scientific career demands such as peer review, journal publication and research funding. These topics are interwoven with a review of common errors in reasoning particularly with respect to probabilistic reasoning and the public misperception of the practice and principles of scientific psychology. Prerequisite: junior or senior standing and completion of 6 advanced units in psychology.
Credit 3 units. A&S IQ: SSC, WI Arch: HUM Art; SSC EN: S

L33 Psych 433 Psychology of Language
This seminar surveys current research and theory in psycholinguistics, covering the biological bases, cognitive bases and learning of language. We consider studies of normal children and adults, the performance of individuals with various types of language disorders, and computer simulations of language processes. Topics range from the perception and production of speech sounds to the management of conversations. Each student carries out an original research project on some aspect of psycholinguistics. Prerequisites: Ling 170D and Psych 100B.
Credit 3 units. A&S IQ: SSC Arch; SSC Art; SSC EN: S
L33 Psych 4351 Reading and Reading Development
This seminar surveys current research on reading and spelling skills and their development. Students will read and discuss journal articles that examine the cognitive and linguistic processes involved in reading, reading disorders, and educational issues. Prerequisite: Permission of instructor and previous coursework in psychology or psychology of language.
Credit 3 units. A&S IQ: SSC EN: S

L33 Psych 4352 Reading and Reading Development (Writing Intensive)
This writing-intensive seminar surveys current research on reading and spelling skills and their development. Students read and discuss journal articles and chapters that examine the cognitive and linguistic processes involved in reading, reading disorders, and educational issues. Prerequisites: Psych 100B and Ling 170D and junior or senior standing.
Credit 3 units. A&S IQ: SD, WI EN: S

L33 Psych 4355 Personality Development Across the Life Span
This seminar examines how individual differences develop over the life span – or, in other words, how we become who we are. The scope of the course covers a multitude of individual differences constructs (e.g., happiness, intelligence, goals), but a particular focus will be on personality traits. Questions that will be examined include the following: How early in the life span does one's personality emerge? How much do parents matter in shaping who you become? Does your personality change across the life span? Readings will cover theories of development at different life stages and empirical research from childhood to older adulthood.
Credit 3 units. A&S IQ: SSC BU: BA EN: S

L33 Psych 4413 Advanced Cognitive Neuroscience (Writing Intensive)
This course presents an intensive, case-study based approach to the underlying principles and mechanisms of brain function that give rise to complex human cognitive behavior. Emphasis will be placed on understanding and evaluating cutting-edge neuroscience research that has yielded new insights into the organization and structure of higher mental processes. Students will develop critical thinking and writing skills via a strong class participation component and a writing-intensive format. Topics include perception, attention, memory, language, emotion, and executive control. Writing Intensive. Declared psychology majors will be given priority over others to enroll. Prerequisite: Psych 3401, Psych 344/Biol 3411, or Psych 3604.
Credit 3 units. A&S IQ: NSM, WI Arch: NSM Art: NSM

L33 Psych 444B Independent Study for the Major in Psychological & Brain Sciences: Cognitive Neuroscience
Students in this course must be accepted into the Psychological & Brain Sciences (P&Bs) Cognitive Neuroscience major. Also required is the permission of a member of the faculty of the department (or another approved supervisor) who agrees to supervise the student's work. In addition to the approved research in the area of cognitive neuroscience, an APA-style research paper must be satisfactorily completed to obtain credit.
Petition for Supervision of P&BS 444B forms are available in Somers Family Hall, room 207B. Students will be enrolled only after they have completed the petition and returned it to the Undergraduate Coordinator in Psychology, room 207B.
Credit 3 units. A&S IQ: SSC EN: S

L33 Psych 444C Independent Study for a Concentration in Psychological and Brain Sciences
Students in this course must be accepted into a concentration in Psychological & Brain Sciences (P&BS). Written permission (Petition for Supervision of P&BS 444C) from a member of the faculty of the department (or another approved supervisor) who agrees to supervise the student's work is also required. In addition to the approved research for the concentration, an APA-style research paper must be satisfactorily completed to obtain credit. Petition for Supervision of P&BS 444C forms are available in Somers Family Hall, room 207B. Students will be enrolled only after they have completed both the Petition for a Concentration in P&BS and the Petition for Supervision of P&BS 444C and returned them to the Undergraduate Coordinator in room 207B.
Credit 3 units.

L33 Psych 4450 Functional Neuroimaging Methods
In this course, you will learn neuroimaging methods in the context of accurate, reproducible, and open science. There is no substitute for wrestling with data yourself, and so this is a hands-on course. Students will need to bring a laptop on which to install Matlab and conduct analyses. Some background in neuroimaging or programming will be helpful but is not required. Topics covered include experimental design, accounting for artifacts, single-subject models, and group models. By the end of the course, students will have used a computer script to analyze an fMRI dataset and have a good understanding of preprocessing and statistical analyses in fMRI. Limited to 24 students. Prerequisite: Psych 3604, Psych 4413, or graduate standing.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4541 Personality and Psychopathology
This course is an advanced seminar in the study of personality disorders. It will cover a range of conceptual and methodological issues involved in scientific efforts to understand ways in which pathological personality features disrupt people's lives. Students will learn about the similarities and distinctions between normal and pathological features of personality as well as the role that personality may play with regard to the causes and treatment of other kinds of mental disorder. A laboratory component of the class will focus on the development of practical skills in conducting research interviews designed to elicit information about personality and social adjustment. Prerequisite: Psych 354 and junior or senior standing.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4555 Emotion Regulation
The purpose of this course is to provide an introduction to the field of emotion regulation. We will discuss theoretical and empirical work on emotion regulation from various areas of psychology, including social, personality, developmental, clinical, and neuroscience. Example topics include definitional issues, goals and strategies, personal and interpersonal consequences, sociocultural influences, lifespan development, health and psychopathology. Prerequisites: Psych 100B and 9 units of advanced home-based psychology courses.
Credit 3 units. A&S IQ: SSC Arch: SSC Art: SSC EN: S
L33 Psych 4557 Biopsychosocial Aspects of Eating Disorders and Obesity
This seminar examines the epidemiology, etiology, prevention, and treatment of body image, eating disorders, and obesity. An emphasis will be placed on understanding the characteristic symptoms of excessive dieting, body image disturbance, and binge eating, not only as formal psychiatric syndromes but also as a representation of dysregulatory processes reflecting social-cultural, psychological, and biological disturbances. Students will also learn about the clinical characteristics, medical sequelae, and physical aspects of eating disorders and obesity. Prerequisites: Psych 100B and junior/senior standing plus 6 units of advanced home-based psychology courses. Credit 3 units. A&S IQ: SSC Arch; SSC Art; SSC EN: S

L33 Psych 4591 The Development of Social Cognition
This course explores what is known about the development of social cognition. Our starting point is infants’ capacity to navigate the social world, for instance, detecting agents, identifying social partners and learning from those around us. We consider what happens when the human ability to reason about others breaks down (as with autism), and what this can teach us about typical development. Each week we cover one topic and a related set of readings. Class meetings are devoted to active discussion and debate about the content of the readings. Students are required to write a weekly reaction paper to the readings to promote class discussion and give an in-class presentation on a novel research topic at the end of the semester. Graduate students may have additional course requirements. Prerequisites: Psych 100B and one of the following: Psych 315 or Psych 321 or Psych 360. Credit 3 units. A&S IQ: SSC BU: BA EN: S

L33 Psych 4592 Development of Social Cognition (Writing Intensive)
This course explores current issues in social cognitive development. We will examine the critical issues in the field, beginning with the roots of attachment in infancy and the human propensity to connect with others. We will then consider contemporary research concerning infants’ ability to navigate the social world. We will also consider what happens when the human capacity to reason about others breaks down, as in autism. Additional topics will include children’s reasoning about social groups, the development of bias and prejudice, and aspects of morality. We will look at these issues in the context of innate knowledge and the effects of one’s environment on children’s development. Each week we will cover a topic by reading a background chapter and a set of two journal articles. Class time will be devoted to active discussion of these readings, with lecture and class activities as needed, to complement the readings and set the stage for class discussion. This is a writing intensive course, thus a second goal is to improve your writing. There will be several writing assignments of varying length, some of which you will receive extensive feedback on from the instructor, and then prepare an improved final version. You will also give two presentations to the class: one that directly addresses writing and another on a research topic of your choice relevant to social cognitive development. Prerequisites: Psych 100B and either Psych 315, Psych 321, or Psych 360. Credit 3 units. A&S IQ: SSC, WI Arch; SSC Art; SSC EN: S

L33 Psych 461 Seminar in Selected Topics in Learning & Memory: Collective Memory
This course provides an overview and analysis of phenomena of people remembering as part of a group — one’s country, one’s state, one’s university, one’s family. Collective memories are critical for one’s identity, for knowing who we are and how to interpret the world around us. We will consider narcissistic tendencies of group memories in specific contexts (e.g., the Russian vs. American interpretation of world events; views of Trump supporters vs. Clinton supporters on events in the U.S.). The course will range from humanistic, anthropological, psychological, and sociological perspectives on memory. Prerequisites: Psych 100B and a course on human memory or permission of the instructor. Credit 3 units.

L33 Psych 4615 The Science of Paying Attention
What processes underlie humans’ ability to “pay” attention? This course will introduce students to theories of attention and cognitive control. Students will develop an understanding of empirical approaches to studying the control of attention, and examine factors that facilitate and impair humans’ ability to pay attention. A final section will examine attention and cognitive control challenges that accompany aging and select psychological disorders such as ADHD, and applications of attention and cognitive control research to the classroom, driving, and other contexts. Prerequisites: Psych 100B and Psych 301. Credit 3 units. A&S IQ: SSC Arch; SSC Art; SSC EN: S

L33 Psych 462 Psychology of Memory and Cognition
This course will explore the core readings that have shaped the way scientists tackle fundamental aspects of memory and cognition. These include cognitive methods, pattern recognition, attention, working memory, episodic memory, semantic memory, language acquisition and comprehension, decision making, problem solving, and expertise. Each week we will explore at least three "classic" readings on a given topic along with some more recent papers. The goal is to expose students to this foundational literature, and develop a better understanding of the zeitgeist that set the stage for these papers to change how researchers tackled specific problems. Prerequisites: Psych 360 or Psych 380. Credit 3 units. A&S IQ: SSC Arch; SSC Art; SSC EN: S

L33 Psych 4631 Introduction to Computational Cognitive Science
How does the mind work? Over the last few decades, cognitive psychologists have become increasingly interested in using computational models. These models are designed to describe cognitive processes and the behavior that is produced by them. This computational approach has several advantages. Computational theories of cognition are more specific than verbal theories. Therefore, they do not only afford precisely quantifying certain aspects of cognition, but they also make it possible to simulate cognitive processes. This course provides an introduction to several leading computational methods for understanding cognition, including model fitting and comparison, reinforcement learning, neural networks and Bayesian modeling. These methods will be applied to a wide range of cognitive phenomena, such as short-term memory, reinforcement learning, decision making, cognitive control, concept learning and visual perception. Prerequisites: Psych 100B and Psych 301/3011. Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM BU: BA
L33 Psych 4651 History and Modern Systems of Psychology
An introduction to the history of psychology. This course begins with a brief consideration of forces leading to the development of psychology in the mid-19th century. It examines the birth of modern psychology in Germany and the schools of psychology that emerged in the 20th century. Newer orientations and ideas are considered in the final segment of the course. We also consider the impact of psychology on American public life during the 20th century. Prerequisite: Psych 100B, junior or senior standing, and 6 units of advanced home-based psychology courses.
Credit 3 units. A&S IQ: HUM Art: HUM EN: H

L33 Psych 4746 Biological Pathways to Psychopathology: From Genes and the Environment to Brain and Behavior
This seminar will introduce students to methods and recent empirical literature evaluating links between genes, brain and behavior. This research is beginning to illuminate specific biological pathways shaping risk for psychopathology. In particular, the course focuses on the design, analysis and interpretation of multimodal research (e.g., fMRI, PET, EEG, pharmacology, molecular genetics, environmental assessment/manipulation) examining the biological underpinnings of behavior relevant to psychopathology. Primary journal articles, reviews, and book chapters are the readings for this seminar.
Prerequisites: Psych 100B and Psych 345 or Psych 3401 or Biol 2970.
Credit 3 units. A&S IQ: NSM Arch: SSC Art: SSC

L33 Psych 4765 Inside the Disordered Brain: Biological Bases of the Major Mental Disorders
How do subtle disturbances in brain circuits lead to abnormal behavior and psychopathology? This course provides students with a working knowledge of our rapidly evolving understanding of brain circuits that create order in our social, emotional, and cognitive worlds and how disorder within these circuits leads to a broad range of psychopathology, including depression, anxiety, phobias, PTSD, OCD, addiction, schizophrenia, psychopathy, and violence. Prerequisites: Psych 100B and either Psych 3401, Psych 354, or a basic biology/neuroscience course.
Credit 3 units. A&S IQ: NSM Arch: NSM Art: NSM

L33 Psych 488 The Cognitive Neuroscience of Film
To understand complex events in real life depends on perception, action and memory. To understand movies, people probably depend on similar psychological and neural mechanisms. This seminar uses results from psychology and neuroscience to try to better understand the experience of a movie viewer, and uses theory and practice to explore psychological hypotheses about perception. Prerequisite: Psych 360 or Psych 3604 or Psych 4604, or graduate standing in Psychology.
Credit 3 units. A&S IQ: NSM

L33 Psych 494 Behavioral Psychology Readings Group
This weekly journal-style readings class provides the opportunity to read and discuss seminal as well as current papers on the conceptual aspects of behavioral psychology and relevant research. Points of contact among behaviorism, cognitivism, and neuroscience and the natural lines of fracture will be examined. Prerequisites: Psych 100B and either Psych 360, Psych 361, or a philosophy course.

Credit 1 unit. A&S IQ: SSC Arch: SSC Art: SSC EN: S

L33 Psych 4971 Undergraduate Teaching
Limited opportunities for outstanding undergraduates to serve as teaching assistants for selected departmental courses. Prerequisites: Psychology & Brain Sciences majors only, junior/senior standing and permission of psych adviser, course instructor and departmental approval. Credit cannot be counted toward fulfilling the requirements for the major or minor in Psychology & Brain Sciences. Credit/no credit only. Enrollment by department only.
Credit 2 units.

L33 Psych 498 Study for Honors
Acceptance into the Honors Program is based on superior performance as evidenced by the student's record in undergraduate course work and the written agreement (Petition for Permission to Enroll) of a member of the faculty of the department (or other approved supervisor) to supervise an Honors project. The student must complete 6 units of Honors work (3 units of Psych 498 and 3 units of Psych 499), submit an acceptable written thesis, and be recommended by the department. Recommendation for an Honors degree is based on the evaluation of the written thesis and the student's overall performance as an undergraduate. Students in the Honors Program meet regularly in the Honors Seminar to discuss their research and become acquainted with the work of the other students. Psych 498 is a writing-intensive course. All students must meet with Dr. Sommers prior to registering. Prerequisite: Psych 301 or equivalent and permission of instructor.
Credit 3 units. A&S IQ: SSC, WI EN: S

L33 Psych 499 Study for Honors
Acceptance into the Honors Program is based on superior performance as evidenced by the student's record in undergraduate course work; the written agreement (Petition for Permission to Enroll) of a member of the faculty of the department (or another approved supervisor) to supervise an Honors project; and approval of the Honors Coordinator. The student must complete 6 units of Honors work (3 units of Psych 498 and 3 units of Psych 499), submit an acceptable written thesis, and be recommended by the department. Recommendation for an Honors degree will be based on the evaluation of the written thesis and the student's overall performance as an undergraduate. All students must meet with the Honors Coordinator prior to registering. Students in the Honors Program will meet regularly in the Honors Seminar to discuss their research and become acquainted with the work of the other students. Prerequisite: Psych 498.
Credit 3 units. A&S IQ: SSC Art: SSC EN: S
