Graduates of the BSSSE program are expected to know or have the following by the time of graduation:

Within a few years of graduation, BSSSE degree program recipients are expected to do the following:

a. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
b. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
c. An ability to communicate effectively with a range of audiences
d. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts
e. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
f. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
g. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

BSSSE Degree Requirements

The course sequence designed to achieve the type of education outlined above requires at least 120 units, satisfies the residency and other applicable requirements of Washington University and the McKelvey School of Engineering (http://bulletin.wustl.edu/undergrad/engineering/requirements/), and meets the program requirements below. All courses below must be taken for a letter grade unless otherwise specified.

a. Common Studies program of the McKelvey School of Engineering: This includes courses in engineering, mathematics, physics, chemistry, humanities, social sciences and technical writing. The required chemistry sequence is Chem 111A-Chem 151 (recommended) or Chem 105-Chem 151. Humanities and social sciences courses may be taken on a pass/fail basis.
b. Engr 4501 Engineering Ethics and Sustainability (1 unit)
c. Required courses in systems science and engineering: ESE 105 Introduction to Electrical and Systems Engineering (4 units); ESE 205 Introduction to Engineering Design (3 units); ESE 230 Introduction to Electrical and Electronic Circuits (4 units); ESE 318 Engineering Mathematics A (3 units) and ESE 319 Engineering Mathematics B (3 units); ESE 326 Probability and Statistics for Engineering (3 units); ESE 351 Signals and Systems (3 units); ESE 4031 Optimization for Engineered Planning, Decisions and Operations (3 units) or ESE 415 Optimization (3 units); ESE 441 Control Systems (3 units); and ESE 499 Systems Science and Engineering Capstone Design Project (3 units)
d. CSE 131 Introduction to Computer Science (3 units). Students are also encouraged to take CSE 247 Data Structures and Algorithms (3 units).
e. Two upper-level laboratory courses (6 units) from the following list:
   ESE 4480, ESE 4481, ESE 465, ESE 488, and ESE 449. The selection
   must contain at least one course from ESE 4480 and ESE 4481.

f. 12 units in elective courses in systems science and engineering are
   required: ESE 2971, ESE 359, ESE 400 through 428; ESE 437; ESE 440
   through 459; ESE 470 through 4971; ESE 502 through 529; ESE 540
   through 559; SWCD 5660 System Dynamics Modeling for Strategic
   Design. Up to 3 units of the following business courses may be
   part of the 12 units of systems science and engineering electives:
   SCOT 356 Operations and Manufacturing Management, SCOT 458
   Operations Planning and Control, SCOT 576 Foundations of Supply
   Chain Management, and SCOT 577 Information Technology and
   Supply Chain Management.

g. 12 units in engineering concentration outside of systems science
   and engineering are required. These units must all be taken in
   one of the following engineering areas: Biomedical Engineering,
   Chemical Engineering, Computer Science & Engineering, Electrical
   Engineering (ESE 102; ESE 230 through 239; ESE 260 through
   290; ESE 330 through 339; ESE 360 through 390; ESE 429 through
   439; ESE 460 through 469; 490 through 496; ESE 498; ESE 530
   through 539; ESE 560 through 589), or Mechanical Engineering
   & Materials Science. Of the 12 units, 9 units must be at the 200
   level or higher. Sequences for concentrations in economics,
   mathematics, physics, pre-medicine and other fields can be
   arranged with special departmental approval to meet a student’s
   specific needs. When a non-engineering discipline is chosen as the
   outside concentration, the student needs to pay special attention
   to the engineering topics unit requirement and make sure that
   enough engineering content is obtained from the other courses.
   The use of basic required courses to fulfill the requirement for
   an outside concentration is not permitted. Courses used for the
   outside concentration may be taken on a pass/fail basis.

h. The entire course sequence for the BSSSE, containing engineering
   topics of at least 45 units, must be completed. The number of
   engineering topics units assigned to undergraduate courses in
   the McKelvey School of Engineering vary from none (0) to the
   number of credits given to the course. For the precise number
   for each course, please refer to the table of Topics Units —
   Engineering Courses (http://engineering.wustl.edu/current-
   students/student-services/Pages/default.aspx) provided by
   Engineering Undergraduate Student Services. Courses taken on a
   pass/fail basis may be used for engineering topics units.

i. Limitations: No more than 6 units of the combined units of
   ESE 2971 Introduction to Research in ESE, ESE 400 Independent
   Study, ESE 497 Undergraduate Research (including 497A and 497B),
   and ESE 4971 Honors Thesis Research may be applied toward the
   SSE elective requirement (item 6 above) of the BSSSE degree. Any
   remaining combined units are allowed as free electives to satisfy
   the requirement for the total number of units.
